

CITY of BRISBANE

City Council Meeting Agenda

Thursday, November 18, 2021 at 7:30 PM • Virtual Meeting

Amended Agenda posted on 11/15/21

This meeting is compliant with the Ralph M. Brown act as amended by California Assembly Bill No. 361 effective September 16, 2021 providing for a public health emergency exception to the standard teleconference rules required by the Brown Act. The purpose of this is to provide a safe environment for the public, staff and Councilmembers, while allowing for public participation. The public may address the Council using exclusively remote public comment options. The Council may take action on any item listed in the agenda.

PUBLIC MEETING VIDEOS

Members of the public may view the City Council Meeting by logging into the Zoom Webinar listed below. City Council Meetings can also be viewed live and/or on-demand via the City's YouTube Channel, www.youtube.com/brisbaneca, or on Comcast Channel 27. Archived videos can be replayed on the City's website, <http://brisbaneca.org/meetings>.

TO ADDRESS THE COUNCIL

The City Council Meeting will be an exclusively virtual meeting. The City Council agenda materials may be viewed online at www.brisbaneca.org at least 24 hours prior to a Special Meeting, and at least 72 hours prior to a Regular Meeting.

Remote Public Comments:

Meeting participants are encouraged to submit public comments in writing in advance of the meeting. Aside from commenting while in the Zoom webinar the following email and text line will be also monitored during the meeting and public comments received will be noted for the record during Oral Communications 1 and 2 or during an Item.

CM O'Connell made a motion, seconded by CM Lentz, to approve the Consent Calendar Items B-J. The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O'Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

NEW BUSINESS

K. Consider Acceptance of 5 Year IT Strategic Plan from ClientFirst

Tom Jakobsen, Partner and David Krout, Managing Partner of ClientFirst presented on the City's 5 Year IT Strategic Plan. The plan calls for upgrades to the City's network and wiring in City Hall to allow for newer

software to be used more

efficiently by City employees. It reviews the need for a number of new software applications to increase the efficiency of city staff and to allow more interaction between the community and city information and processes. The projected first year cost of \$500,000 was included in the FY 21/22 budget.

After some Council questions and discussion, CM Mackin made a motion, seconded by CM Davis, to accept the 5 Year IT Strategic Plan from ClientFirst. The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O’Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

L. Consider Introduction of Ordinance No. 667, waiving first reading, amending Chapter 13.04 of the Brisbane Municipal Code pertaining to “Sewer System”

City Engineer Breault reported that it is being recommended to introduce Ordinance No. 667. The revisions proposed in Ordinance 667 are intended to make it less difficult for properties owner to obtain a shared sewer lateral agreement, and to make disclosure of a property connected to a shared lateral a requirement at the time of sale. The major change to existing §13.04.430 is to allow the Director of Public Works, working in concert with the City Attorney, to approve a joint sewer lateral, rather than taking the matter to Council.

After some Council questions and discussion, CM Mackin made a motion, seconded by CM Davis, to introduce Ordinance No. 667, waiving first reading, amending Chapter 13.04 of the Brisbane Municipal Code pertaining to “Sewer System.” The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O’Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

M. Consider Adoption of Resolution No. 2021-68 to Participate in Peninsula Clean Energy’s Public Facility Solar and Storage Procurement Process

Sustainability Manager Etherton reported that the purpose of Resolution NO. 2021-68 is to provide Peninsula Clean Energy Authority (Peninsula Clean Energy or PCE) confirmation of the City’s interest in participating in a collaborative procurement process for Solar Photovoltaic (PV) and battery storage for Mission Blue Center. There is no cost to the City to participate in the procurement process. The Solar PV System is expected to provide modest cost savings initially, which are expected to grow over time due to avoided increases in utility costs. If a Battery is included, it may require City funding or result in a monthly cost. Staff would return to City Council for approval of battery funding if needed.

After some Council questions and discussion with staff and representatives from Peninsula Clean Energy, CM Lentz made a motion, seconded by CM O’Connell, to adopt Resolution No. 2021-68 to Participate in Peninsula

Clean Energy's Public Facility Solar and Storage Procurement Process. The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O'Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

N. Donation Policy

(Council will determine whether to implement a donation policy for themselves and the commissions and committees)

Assistant City Manager Schillinger reported that according to the proposed donation policy, small unrestricted donations below \$5,000 can be received by the City Manager and can be used for any purpose the City Council has already approved. Unrestricted donations above \$5,000 or restricted donations above \$500 will need to be approved and received by the City Council. If staff wants to solicit donations directly from the public for programs, or infrastructure, staff will need to develop a donation plan. City staff will develop a Fund Raising Plan to ensure the fundraising is for a City priority project, it outlines what type and amounts of donations are anticipated, as well who the anticipated donors would be.

After some Council questions and discussion, CM O'Connell made a motion, seconded by CM Lentz, to approve the donation policy for Council, Commissions and Committees. The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O'Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

STAFF REPORTS

O. City Manager's Report on upcoming activities

City Manager Holstine reported on upcoming activities and provided the latest updates to the Council.

MAYOR/COUNCIL MATTERS

P. Countywide Assignments and Subcommittee Reports

Councilmembers reported on their activities in countywide assignments and subcommittees.

Q. City Council Meeting Schedule

The next City Council meeting is scheduled for October 21, 2021 and City Council workshop on October 24, 2021 at the Mission Blue Center. The meetings scheduled for December 2 and December 16, 2021 will be cancelled. And a City Council Special Meeting will be held on December 9th.

WRITTEN COMMUNICATIONS

The following written communications were received by the Council from September 23, 2021 through October 7, 2021:

- Robert D. Field, City Manager, City of San Bernardino (9/24/21) Opposition Letter - City of San Bernardino, CA
- Lexie Llefeyvre (9/27/21) Design
- Dana Dillworth (10/7/21) Closed Sessions

The motion was carried unanimously by all present.

Ayes: CM Davis, Lentz, Mackin, O'Connell and Mayor Cunningham.

Noes: None

Absent: None

Abstain: None

OLD BUSINESS

H. Short Term Rental Ordinance Implementation Update

Community Development Director Swiecki reported that the City of Brisbane adopted an ordinance which took effect in summer 2020 permitting short term rentals (STR) subject to a number of operational and performance standards. In early 2021 the City entered into a contract with a vendor, Host Compliance, to automate the STR permit process and monitor STR activity on multiple listing sites, allowing the City to initiate code enforcement as needed and pursue the collection of transient occupancy tax (TOT). He added that the system went live in early summer 2021 and the City has been systematically and proactively monitoring STR rental listings, initiating code enforcement and TOT collection as warranted. As of September, the City has collected approximately \$4,500 in TOT from STRs.

After some council questions and discussion, Council received the report and thanked staff for the update.

NEW BUSINESS

I. Update on Committee By-Laws

CM Holstine reported that Council liaisons to Complete Streets Safety Committee were concerned that having items heard and discussed when quorums are not achieved may be confusing to the public. It is

being recommended that Committee By-laws to restrict meetings so that only meetings that achieve a quorum may continue. It is also being recommended to add language to the "Rules and Procedures for City of Brisbane Commissions and Committees" that governs all of our Commissions and Committees. After Council questions, Barbara Ebel commented that this is good practice for committees and staff should communicate with committee members and commissioners about these recommendations.

Council directed staff to return with amended by-laws and Rules and Procedures for City of Brisbane Commissions and Committees that restrict meetings so that only meetings that achieve a quorum may continue.

STAFF REPORTS

J. City Manager's Report on upcoming activities

City Manager Holstine reported on the latest City news and special events in the City.

OLD BUSINESS

G. Update on Business Assistance Grant program and Review of Criteria for Second Round of Applications

CM Davis recused herself of this item and left the Zoom Webinar.

Assistant City Manager Schillinger reported that on May 20, 2021 the City Council allocated \$200,000 to assist small businesses in Brisbane that were negatively impacted by COVID-19. The current criteria is: 1. Businesses with annual gross revenues of \$5,000,000 or less 2. Loss of 25% of revenues for a recent 12-month period 3. Business commits to be open after the COVID19 emergency is over 4. Located in Brisbane and having a Brisbane Business License 5. Not a member of the City Council or a paid employee of the City Each qualifying business is eligible for \$5,000.

He added that the contractor, Brisbane Chamber of Commerce, identified 27 businesses that were eligible under the existing criteria. the City Council would like to distribute the remaining funds our contractor suggests that the City either:

- Reduce the loss amount to 15% of the business' revenue in a 12-month period to allow more businesses to qualify.
- Or, increase the grant amount to \$7,400 per eligible business under the existing criteria

businesses who opened up in 2020 with a lower grant amount.

Council members agree that funds have to be distributed immediately to the 27 grant eligible businesses.

After some council discussion, CM O'Connell made a motion, seconded by CM Mackin, to grant the 27 grant eligible businesses a larger grant amount from \$5,000 to \$6,000 and staff will bring to the Economic Development Subcommittee for discussion a distribution plan for the remaining funds. Motion passes by a 4-0 vote and 1 recusal.

Ayes: CM Lentz, Mackin, O'Connell and Mayor Cunningham

G. Approve Resolution No. 2021-70, Authorizing the Adoption of the San Mateo County Multijurisdiction Local Hazard Mitigation Plan

CITY COUNCIL AGENDA REPORT

Meeting Date: November 18, 2021

From: Director of Public Works/City Engineer

Subject: Reso. No. 2021-70, Adoption of MJLHMP

Community Goal/Result: Safe Community

Purpose

To remain compliant with mandates in the Disaster Mitigation Act of 2000.

Recommendation

Approve Resolution No. 2021-70, "Authorizing the Adoption of the San Mateo County Multijurisdiction Local Hazard Mitigation Plan."

Background

One of the conditions for public agencies to be eligible for hazard mitigation grants and certain disaster recovery funds is they adopt a local hazard mitigation plan that has been approved by the California Office of Emergency Services and by the Federal Emergency Management Agency. The requested action will be the third time Brisbane has updated its plan, with the last action taken on 9/15/16.

Discussion

This latest update to the local plan included many more agencies than simply the cities and county as in past evolutions, and is now titled the Multijurisdiction Local Hazard Mitigation Plan (MJLHMP). Public Works Director Breault and Associate Planner Robbins were the city's points of contact between this effort's steering committee/consultant team and city staff.

An attached redacted version of the staff report provided to the San Mateo County Board of Supervisors describes the planning effort and community outreach in detail.

Fiscal Impact

There is no fiscal impact for the approval of the MJLHMP; however, implementation of the MJLHMP will ultimately require funding and staff resources. Future funding requests will come before the Council for consideration as part of the CIP budget process, or on a case-by-case basis.

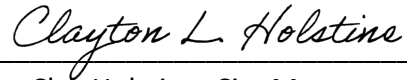

Measure of Success

An adopted MJLHMP.

1. SMC Board of Supervisor staff report (redacted)
2. Resolution No. 2021-70
3. 2021 San Mateo County MJLHMP Volume 1
4. 2021 San Mateo County MJLHMP Volume 2-Brisbane

Randy Breault, Public Works Director

Clay Holstine, City Manager

Redacted Board of Supervisors staff report

BACKGROUND:

Responding to federal mandates in the Disaster Mitigation Act of 2000 (Public Law 106-390), the 2021 San Mateo County Multijurisdictional Local Hazard Mitigation Plan (MJLHMP) updates the County's previous plan, adopted in 2016.

The planning area for the MJLHMP encompasses the entire geographic area of San Mateo County. The MJLHMP is a two-volume Federal Emergency Management Agency (FEMA) plan and the California Governor's Office of Emergency Services (Cal OES) approved the multi-agency multi-hazard mitigation plan.

The MJLHMP:

- Systematically assesses local natural and human-caused hazards, such as flooding, drought, wildfire, landslides, severe weather, terrorism, cyber threats, pandemic, and the impact of climate change.
- Identifies mitigation actions that will be implemented by the County and its planning partner jurisdictions to reduce the level of injury, property damage, and community disruption that might otherwise result from such hazards.
- Pools resources from throughout the County and creates a uniform local hazard mitigation plan that can be consistently implemented.
- Ensures eligibility for Federal Emergency Management Agency (FEMA) and Cal OES grants.

The MJLHMP development process included the following activities:

1. Identification of potential planning partners. Partners who chose to participate submitted Letters of Intent committing resources to the development effort;
2. Identification and assessment of the risks of natural and human-caused hazards;
3. Development of actions to mitigate the risks and a plan to implement the actions over the next five years;
4. Public involvement in the development and review of the MJLHMP; and
5. Review and approval of the MJLHMP by Cal OES and FEMA.

The 2021 MJLHMP builds on the adopted 2016 Plan, with multiple distinguishing features that ensure broader commitment to implementation and positive impact for the citizens of San Mateo County including:

- Expansion of Participating Partners: The 2016 MJLHMP included 28 planning partners; in 2021, it includes 36 partners,
- Inclusion of Every San Mateo County City/Town: In 2016, 18 Cities/Towns participated; in 2021, all 20 Cities/Towns in the County participated.
- Extensive Increase in Public Participation: In 2016, the County received 250 responses from the public to the survey; in 2021, over 2,000 responses were received.

- Incorporation of New and Critical Risk Areas: In 2016, the MJLHMP included approximately 500 mitigation actions; in 2021, it contains over 700 actions.

DISCUSSION:

In January 2021, the Department of Emergency Management (DEM) and Office of Sustainability (OOS) embarked on an ambitious effort to engage the community, community-based organizations, and city/town and special district partners to participate in a planning process to identify critical community and infrastructure risks and identify potential mitigating actions to ensure a more resilient San Mateo County.

In February 2021, a 36-member planning partnership was formed to develop the MJLHMP including:

- County departments (DEM, OOS, Public Works, Planning & Building, Parks, Information Services Department, Health, and Agriculture, Weights & Measures); and
- All 20 Cities and Towns in the County and 15 Special Districts (see Attachment C).

Utilizing \$225,000 in grant funding secured by San Mateo County DEM to support the development of the MJLHMP, DEM was the lead coordinating agency, in close partnership with OOS and Planning & Building, for this multi-jurisdictional effort.

All participating planning partners were responsible for assisting in the development of the hazard and vulnerability assessments and the mitigation action strategies for their respective jurisdictions. Each planning partner was responsible for the review and approval of their individual sections of the plan.

The MJLHMP presents the accumulated information in a unified framework to ensure a comprehensive and coordinated plan covering all planning partners within San Mateo County.

The project team developed a robust community outreach program and worked actively to address equity in the MJLHMP by establishing a framework with key actions for each step of the planning process. Elements of the equity approach included:

- **Ensuring diverse leadership:** The 13-member Steering Committee included 50% community partners from organizations such as Climate Resilient Communities, MidPen Housing Corporation, Puente, the County Commission on Disabilities, Senior Coastsiders, and the North Fair Oaks Community Alliance. The Steering Committee met six times from February to July and provided valuable input to the plan development process.
- **Applying an equity-lens to action development:** With input from the Steering Committee and our planning partners, the project team developed an equity screening tool and other resources to support the development of equitable hazard mitigation actions. Fourteen planning partners, including the County, applied the equity screening tool in their Annex Plans.
- **Engaging hard-to-reach populations.** OOS negotiated contracts with seven community-based organizations to assist with community outreach, education,

and administering the surveys in order to reach socially vulnerable populations. The organizations serve the following areas: unincorporated coastal communities, Half Moon Bay, Pacifica, East Palo Alto, Belle Haven, Menlo Park, North Fair Oaks, Daly City, South San Francisco, and San Bruno.

- **Translation and Interpretation Services:** The survey and outreach materials were translated into multiple languages to improve accessibility among populations with limited English proficiency. The website utilizes Google Translate for accessibility in multiple languages. Interpretation services were offered for public workshops.

On August 30, 2021, the County submitted its draft MJLHMP to Cal OES and FEMA for concurrent review. On October 13, 2021, FEMA notified the County of its approval of the MJLHMP pending adoption by the Board of Supervisors and the planning partners' governing bodies.

Once the MJLHMP has been adopted, the jurisdictions will collectively and individually become eligible to apply for hazard mitigation project funding from the suite of grant programs under FEMA's Hazard Mitigation Assistance (HMA) program.

The MJLHMP is considered a living document. As awareness of additional hazards develop and new strategies and projects are conceived to offset or prevent loss due to natural hazards, the MJLHMP will be evaluated and revised on an annual basis during the 5-year plan timeframe. As a living document, the MJLHMP information can be integrated and used in conjunction with other emergency and related plans, such as Emergency Operation Plans (EOPs).

County Counsel has reviewed and approved the corresponding resolution approving the San Mateo County Multijurisdictional Hazard Mitigation Plan.

ENVIRONMENTAL REVIEW

County Counsel determined that environmental review is not required for approval of the MJLHMP given that it is not considered a project subject to California Environmental Quality Act (CEQA) review. However, as future mitigation action projects are developed, they will be individually reviewed by County staff to determine if they are deemed a "project" under CEQA.

RESOLUTION NO. 2021-70

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BRISBANE AUTHORIZING THE ADOPTION OF THE SAN MATEO COUNTY MULTIJURISDICTION LOCAL HAZARD MITIGATION PLAN

WHEREAS, all of San Mateo County has exposure to natural hazards that increase the risk to life, property, environment, and the economy; and

WHEREAS, pro-active mitigation of known hazards before a disaster event can reduce or eliminate long-term risk to life and property; and

WHEREAS, the Disaster Mitigation Act of 2000 (Public Law 106-390) established new requirements for pre- and post-disaster hazard mitigation programs; and

WHEREAS, a coalition of San Mateo County stakeholders with like planning objectives has been formed to pool resources and create consistent mitigation strategies to be implemented within each partner's identified capabilities within the San Mateo County Planning Area; and

WHEREAS, the coalition has completed a planning process that engages the public, assesses the risk and vulnerability to the impacts of natural hazards, develops a mitigation strategy consistent with a set of uniform goals and objectives, and creates a plan for implementing, evaluating, and revising this strategy.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF BRISBANE RESOLVES AS FOLLOWS:

- 1.) Volume I (Planning-Area-Wide-Elements) and Volume II (Planning Partner Annexes-City of Brisbane) of the 2021 San Mateo County Local Multijurisdictional Local Hazard Mitigation Plan dated October 2021 are hereby adopted.
- 2.) Will use the adopted and approved portions of the Local Hazard Mitigation Plan to guide pre- and post- disaster mitigation of the hazards identified.
- 3.) Will coordinate the strategies identified in the Local Hazard Mitigation Plan with other planning programs and mechanisms under its jurisdictional authority.

- 4.) Will continue its support of the on-going countywide mitigation efforts and continue to participate in the Planning Partnership as described by the Local Hazard Mitigation Plan.
- 5.) Will help to promote and support the mitigation successes of all Planning Partners.

Karen Cunningham, Mayor

CONTENTS

Executive Summary	xix
--------------------------------	------------

Part 1. BACKGROUND AND METHODS

1. Introduction.....	1-1
1.1 Why Prepare This Plan?	1-1
1.2 Who Will Benefit from This Plan?.....	1-2
1.3 How to Use This Plan.....	1-2
2. San Mateo County Hazard Mitigation Planning.....	2-1
2.1 Previous Plans	2-1
2.2 Reasons for the 2021 Update.....	2-2
2.3 Plan Changes Crosswalk	2-4
3. Plan Development Methodology	3-1
3.1 Formation of the Core Planning Team	3-1
3.2 Establishment of the Planning Partnership.....	3-2
3.3 Defining the Planning Area	3-3
3.4 The Steering Committee	3-3
3.5 Coordination with Other Agencies	3-4
3.6 Review of Existing Programs.....	3-4
3.7 Public Involvement.....	3-5
3.8 Plan Development Chronology/Milestones.....	3-13
4. San Mateo County Profile	4-1
4.1 Historical Overview.....	4-1
4.2 Physical Setting	4-3
4.3 Development	4-6
4.4 Demographics.....	4-13
4.5 Economy.....	4-18
5. Hazards of Concern	5-1
5.1 Major Past Hazard Events	5-1
5.2 Identified Hazards of Concern.....	5-2
6. Relevant Laws, Ordinances and Programs	6-1
6.1 Relevant Federal and State Agencies, Programs and Regulations	6-1
6.2 Local Plans, Reports and Codes	6-6
6.3 Local Capability Assessment	6-6
6.4 Hazard Mitigation Capabilities for Future Development	6-8

Part 2. RISK ASSESSMENT

7. Risk Assessment Methodology.....	7-1
7.1 Risk Assessment Tools.....	7-1
7.2 Risk Assessment Approach	7-2
7.3 Sources of Data Used in Modeling and Exposure analyses	7-5
7.4 Limitations.....	7-6
8. Dam Failure.....	8-1
8.1 General Background.....	8-1

8.2 Hazard Profile.....	8-3
8.3 Exposure.....	8-8
8.4 Vulnerability.....	8-10
8.5 Future Trends in Development.....	8-12
8.6 Scenario	8-12
8.7 Issues	8-12
9. Drought.....	9-1
9.1 General Background.....	9-1
9.2 Hazard Profile.....	9-5
9.3 Exposure.....	9-11
9.4 Vulnerability.....	9-11
9.5 Future Trends in Development.....	9-13
9.6 Scenario	9-13
9.7 Issues	9-14
10. Earthquake.....	10-1
10.1 General Background.....	10-1
10.2 Hazard Profile.....	10-6
10.3 Exposure.....	10-12
10.4 Vulnerability.....	10-13
10.5 Future Trends in Development.....	10-28
10.6 Scenario	10-29
10.7 Issues	10-29
11. Flood.....	11-1
11.1 General Background.....	11-1
11.2 Hazard Profile.....	11-6
11.3 Exposure.....	11-19
11.4 Vulnerability.....	11-23
11.5 Future Trends in Development.....	11-27
11.6 Scenario	11-28
11.7 Issues	11-28
12. Landslide/Mass Movements.....	12-1
12.1 General Background.....	12-1
12.2 Hazard Profile.....	12-3
12.3 Exposure.....	12-7
12.4 Vulnerability.....	12-10
12.5 Future Trends in Development.....	12-12
12.6 Scenario	12-13
12.7 Issues	12-13
13. Sea Level Rise.....	13-1
13.1 General Background.....	13-1
13.2 Hazard Profile.....	13-1
13.3 Exposure.....	13-5
13.4 Vulnerability.....	13-7
13.5 Future Trends in Development.....	13-10
13.6 Scenario	13-10
13.7 Issues	13-11

14. Severe Weather	14-1
14.1 General Background.....	14-1

DEFINITIONS/ACRONYMS

°F—Degrees Fahrenheit

0.2 percent-annual-chance flood—The flood that has a 0.2 percent chance of being equaled or exceeded in any given year; often referred to as the 500-year flood

1 percent-annual-chance flood—The flood that has a 1 percent chance of being equaled or exceeded in any given year; often referred to as the 100-year flood

AB—Assembly Bill

ABAG—Association of Bay Area Governments

active shooter—A criminal attempt to kill people in a confined and populated area.

ADA—Americans with Disabilities Act

ART—Adapting to Rising Tides Program

API—Advanced Persistent Threat

ATC—(Federal) Air Traffic Controller

asset—Any man-made or natural feature that has value, including people; buildings; infrastructure, such as bridges, roads, sewers, and water systems; lifelines, such as electricity and communication resources; and environmental, cultural, or recreational features such as parks, wetlands, and landmarks.

BART—Bay Area Rapid Transit System

base flood—The flood having a 1% chance of being equaled or exceeded in any given year, also known as the “100-year” or “1 percent annual chance” flood. The base flood is a statistical concept used to ensure that all properties subject to the National Flood Insurance Program (NFIP) are protected to the same degree against flooding.

basin—The area within which all surface water—whether from rainfall, snowmelt, springs, or other sources—flows to a single water body or watercourse. The boundary of a river basin is defined by natural topography, such as hills, mountains, and ridges. Basins are also referred to as “watersheds.”

BAWSCA—Bay Area Water Supply Conservation Agency

benefit/cost analysis—A systematic, quantitative method of comparing projected benefits to projected costs of a project or policy. It is used as a measure of cost effectiveness.

benefit—A net project outcome and is usually defined in monetary terms. Benefits may include direct and indirect effects. For the purposes of benefit/cost analysis of proposed mitigation measures, benefits are limited to specific, measurable, risk reduction factors, including reduction in expected property losses (buildings, contents, and functions) and protection of human life.

BLM—Bureau of Land Management

CAL FIRE—California Department of Forestry and Fire Protection

Cal OES—California Office of Emergency Services

capability assessment—An analysis of a community’s capacity to address threats associated with hazards. The assessment includes two components: an inventory of an agency’s mission, programs, and policies, and an analysis of its capacity to carry them out.

CCR—California Code of Regulations

CDBG-DR—Community Development Block Grant Disaster Recovery grants

CDC—Centers for Disease Control and Prevention

CEQA—California Environmental Quality Act

CFR—Code of Federal Regulations

cfs—cubic feet per second

CHP—California Highway Patrol

CIP—Capital Improvement Program

Climate Action Plan—A climate action plan is a detailed and strategic framework for measuring, planning, and reducing greenhouse gas emissions and related climatic impacts. ... Climate action plans, at a minimum, include an inventory of existing emissions, reduction goals or targets, and analyzed and prioritized reduction actions.

Climate Adaptation Plan—The process of adjustment to the impacts of climate change, including actions taken to reduce the negative impacts of climate change, or to take advantage of emerging opportunities.

climate change—A change in global or regional climate patterns, in particular a change apparent from the mid to late 20th century onwards and attributed largely to the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels.

Community Rating System (CRS)—A voluntary program under the NFIP that rewards participating communities (provides incentives) for exceeding the minimum requirements of the NFIP and completing activities that reduce flood hazard risk by providing flood insurance premium discounts.

critical facilities—Facilities and infrastructure that are critical to the health and welfare of the population. These become especially important after any hazard event occurs.

CSA—County Service Area

CWA—Clean Water Act

cyber-terrorism—An attempt to damage, disrupt, or gain unauthorized access to a computer, computer system or electronic communications network.

dam failure—An uncontrolled release of impounded water due to a partial or complete breach in a dam (or levee) that impacts its integrity.

dam—Any artificial barrier or controlling mechanism that can or does impound or divert water.

DART—Deep ocean Assessment and Reporting of Tsunamis

debris flow—Dense mixtures of water-saturated debris that move down-valley, looking and behaving much like flowing concrete. They form when loose masses of unconsolidated material are saturated, become unstable, and move down slope. The source of water varies but includes rainfall, melting snow or ice, and glacial outburst floods.

DEM—Department of Emergency Management

DFIRM—Digital Flood Insurance Rate Map

DHS—Department of Homeland Security

Disaster Mitigation Act (DMA; Public Law 106-390)—The latest federal legislation enacted to encourage and promote proactive, pre-disaster planning as a condition of receiving certain federal financial assistance.

drought—The cumulative impacts of long periods of dry weather. These can include deficiencies in surface and subsurface water supplies and general impacts on health, well-being, and quality of life.

DSOD—Division of Safety of Dams (California state agency)

EAP—emergency action plan

earthquake—The shaking of the ground caused by an abrupt shift of rock along a fracture in the earth or a contact zone between tectonic plates.

Ecology—the branch of biology that deals with the relations of organisms to one another and to their physical surroundings.

Ecosystem Services—An ecosystem service is any positive benefit that wildlife or ecosystems provide to people. The benefits can be direct or indirect—small or large.

EPA—Environmental Protection Agency

Epidemic—The spread of an infectious disease beyond a local population, reaching people in a wider geographical area. Several factors determine whether an outbreak will become an epidemic: the ease with which the disease spreads from vectors, such as animals, to people, and the ease with which it spreads from person to person.

Equity—the absence of avoidable or remediable differences among groups of people, whether those groups are defined socially, economically, demographically, racially, or geographically.

Equity Lens—The purpose of an equity lens is to be deliberately inclusive as an organization makes decisions. It introduces a set of questions into the decision that help the decision makers focus on equity in both their process and outcomes.

EPA—U.S. Environmental Protection Agency

ESA—Endangered Species Act

exposure—Exposure is defined as the number and dollar value of assets considered to be at risk during the occurrence of a specific hazard.

extent—The extent is the size or location of an area affected by a hazard. For hazards that do not have a clearly defined extent, this definition expands to the strength or magnitude (severity) of the hazard. For hazards in this plan that do not have mapping, extent is addressed by the severity discussion of the hazard profile.

extreme cold—Temperatures from winter storms associated with freezing rain, sleet, snow and strong winds that may cause hypothermia or frostbite.

extreme heat—Temperatures that hover 10 °F or more above the average high temperature for a region and last for several days.

extreme wind—A windstorm featuring violent winds, generally of short-duration involving straight-line winds or gusts over 50 mph, strong enough to cause property damage.

FBI—Federal Bureau of Investigation

federal disaster declaration—Declarations for events that cause more damage than state and local governments and resources can handle without federal government assistance. A federal disaster declaration puts into motion long-term federal recovery programs, some of which are matched by state programs, to help disaster victims, businesses, and public entities.

FEMA—Federal Emergency Management Agency

FERC—Federal Energy Regulatory Commission

FHSZ—Fire Hazard Severity Zone

flash flood—A flash flood occurs with little or no warning when water levels rise at an extremely fast rate

Flood Insurance Rate Map (FIRM)—The official maps on which the Federal Emergency Management Agency delineate the Special Flood Hazard Area.

Flood Insurance Study—A report published by the Federal Insurance and Mitigation Administration for a community in conjunction with the community's Flood Insurance rate Map. The study contains such background data as the base flood discharges and water surface elevations that were used to prepare the FIRM. In most cases, a community FIRM with detailed mapping will have a corresponding flood insurance study.

floodplain—The land area along the sides of a river that becomes inundated with water during a flood.

flood—The inundation of normally dry land resulting from the rising and overflowing of a body of water.

FRA—Federal Responsibility Area

freeboard—The margin of safety added to the base flood elevation.

frequency—How often a hazard of specific magnitude, duration, and/or extent is expected to occur on average. Statistically, a hazard with a 100-year frequency is expected to occur about once every 100 years on average and has a 1 percent chance of occurring any given year. Frequency reliability varies depending on the type of hazard considered.

Fujita scale of tornado intensity—Scale for rating tornado wind speeds, estimated on the basis of damage sustained. The scale rates the intensity or severity of tornado events using numeric values from F0 to F5 based on tornado wind speed and damage. An F0 tornado (wind speed less than 73 miles per hour (mph)) indicates minimal damage (such as broken tree limbs), and an F5 tornado (wind speeds of 261 to 318 mph) indicates severe damage.

g—Gravity (%g, percent acceleration force of gravity)

geographic information system (GIS)—A computer software application that relates data regarding physical and other features on the earth to a database for mapping and analysis.

goal—A general guideline that explains what is to be achieved. Goals are usually broad-based, long-term, policy-type statements and represent global visions. Goals help define the benefits that a plan is trying to achieve. The success of a hazard mitigation plan is measured by the degree to which its goals have been met (that is, by the actual benefits in terms of actual hazard mitigation).

greenhouse gases—Methane, nitrous oxide and other gases that trap heat and warm the Earth, as a greenhouse traps heat from the sun.

ground shaking—The result of rapid ground acceleration caused by seismic waves passing beneath buildings, roads, and other structures.

hazard—A source of potential danger or adverse condition that could harm people and/or cause property damage.

hazardous material—A substance or combination of substances (biological, chemical, radiological, and/or physical) that, because of its quantity, concentration, or physical, chemical or infectious characteristics, has the potential to cause harm to humans, animals, or the environment, either by itself or through interaction with other factors.

Hazards U.S. Multi-Hazard Loss Estimation Program (Hanus)—A GIS-based program used to support the development of risk assessments as required under the DMA. The Hanus software program assesses risk in a quantitative manner to estimate damage and losses associated with natural hazards.

HIFLD—Homeland Infrastructure Foundation-Level Data

high-hazard dam—Dams that can cause loss of human life from the failure or improper operation of the dam.

HMI—Hazard Mitigation Insurance

IBC—International Building Code

intensity—The measure of the effects of a hazard.

inventory—The assets identified in a study region comprise an inventory. Inventories include assets that could be lost when a disaster occurs and community resources are at risk. Assets include people, buildings, transportation, and other valued community resources.

IPCC—Intergovernmental Panel on Climate Change

IRC—International Residential Code

ISO—Insurance Services Office

IT—Information Technology

IUCN—International Union for Conservation of Nature

LiMWA—Limit of Moderate Wave Action

liquefaction—Loosely packed, water-logged sediments losing their strength in response to strong shaking, causing major damage during earthquakes.

local government—Any county, municipality, city, town, township, public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a nonprofit corporation under State law), regional or interstate government entity, or agency or instrumentality of a local government; any Indian tribe or authorized tribal organization, or Alaska Native village or organization; and any rural community, unincorporated town or village, or other public entity.

LRA—Local responsibility area

magnitude—The measure of the strength of an earthquake.

MCE—Maximum credible earthquake

meteorological drought—Precipitation at levels below normal over a period of time. Meteorological measurements are the first indicators of drought and are usually region-specific.

mitigation actions—Specific actions to achieve goals and objectives that minimize the effects from a disaster and reduce the loss of life and property.

mitigation—A preventive action taken in advance of an event to reduce or eliminate risk to life or property.

MM—Modified Mercalli Scale

mph—Miles per hour

Mw—Moment Magnitude Scale

N/A—Not applicable

NASA—National Aeronautics and Space Administration

Nature Based Solutions—defined by IUCN as “actions to protect, sustainably manage, and restore natural or

modified ecosystems, that address societal challenges effectively and adaptively, simultaneously providing human well-being and biodiversity benefits”.

NCEI—National Centers for Environmental Information

NEHRP—National Earthquake Hazard Reduction Program

NFIP—National Flood Insurance Program

NFPA—National Fire Protection Association

NMDC—National Drought Mitigation Center

NOAA—National Oceanic and Atmospheric Administration

NWS—National Weather Service

OCO_F—Our Coast, Our Future

ONI—Ocean Niño Index

pandemic—An epidemic of infectious disease that has spread through human populations across a large region, multiple continents, or worldwide.

PCB—Polychlorinated biphenyls

peak ground acceleration (PGA)—A measure of the highest amplitude of ground shaking that accompanies an earthquake, based on a percentage of the force of gravity.

PG&E—Pacific Gas and Electric

PGA—Peak Ground Acceleration

ppm—Part per million

preparedness—**Actions** that strengthen the capability of government, people, and communities to respond to disasters.

probability of occurrence—A statistical measure or estimate of the likelihood that a hazard will occur. This probability is generally based on past hazard events in the area and a forecast of events that could occur in the future. A probability factor based on yearly values of occurrence is used to estimate probability of occurrence.

PTWC—Pacific Tsunami Warning Center

radiological incidents—An incident involving radioactive materials that can occur wherever radioactive materials are used, stored, or transported.

RCRA—Resource Conservation and Recovery Act

repetitive loss property—Any NFIP-insured property that, since 1978 and regardless of any changes of ownership during that period, has experienced—Four or more paid flood losses in excess of \$1000.00; or two paid flood losses in excess of \$1000.00 within any 10-year period since 1978; or three or more paid losses that equal or exceed the current value of the insured property.

Recurrence Interval—The recurrence interval (sometimes called the return period) is based on the probability that the given event will be equaled or exceeded in any given year.

risk assessment—The process of measuring potential loss of life, personal injury, economic injury, and property damage resulting from hazards. This process assesses

the vulnerability of people, buildings, and infrastructure to hazards

risk ranking—Process to score and rank hazards based on the probability that they will occur and the impact they will have if they do.

risk—The estimated impact that a hazard would have on people, services, facilities, and structures in a community. Risk measures the likelihood of a hazard occurring and resulting in an adverse condition that causes injury or damage. Risk is often expressed in relative terms such as a high, moderate, or low likelihood of sustaining damage above a particular threshold due to occurrence of a specific type of hazard. Risk also can be expressed in terms of potential monetary losses associated with the intensity of the hazard.

riverine—Of or produced by a river. Riverine floodplains have readily identifiable channels.

Robert T. Stafford Act—The statutory authority for most federal disaster response activities, especially as they pertain to FEMA and its programs (Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law 100-107). Signed into law November 23, 1988; amended by the Disaster Relief Act of 1974 (Public Law 93-288).

SCADA—Supervisory Control and Data Acquisition

SEMS—Standardized Emergency Management System

SFHA—Special Flood Hazard Area

SFPUC—San Francisco Public Utilities Commission

significant-hazard dam—**Dams** that can cause economic loss, environmental damage or disruption of lifeline facilities, or can impact other concerns, but not necessarily loss of life.

SoVI—Social Vulnerability Index

Social Vulnerability—Social vulnerability refers to potential harm to people. It involves a combination of factors that determine the degree to which someone's life and livelihood are put at risk by a discrete and identifiable event in nature or in society.

special flood hazard area—The base floodplain delineated on a Flood Insurance Rate Map. The SFHA is mapped as a Zone A in riverine situations and zone V in coastal situations. The SFHA may or may not encompass all of a community's flood problems

SPI—Standardized Precipitation Index

SRA—State responsibility area

stakeholder—**Business** leaders, civic groups, academia, non-profit organizations, major employers, managers of critical facilities, farmers, developers, special purpose districts, and others whose actions could impact hazard mitigation.

subsidence—The caving in or sinking of an area of land.

surface fault rupture—An offset of the ground surface when fault rupture extends to the Earth's surface.

terrorism—The unlawful use or threatened use of force or violence against people or property with the intention of intimidating or coercing societies or governments.

Terrorism is either foreign or domestic, depending on the origin, base, and objectives of the terrorist or organization.

thunderstorm—A storm with lightning and thunder produced by cumulonimbus clouds. Thunderstorms usually produce gusty winds, heavy rains, and sometimes hail. Thunderstorms are usually short in duration (seldom more than 2 hours).

TOD—Transit-Oriented Development

tornado—A violently rotating column of air extending between and in contact with a cloud and the surface of the earth. Tornadoes are often (but not always) visible as funnel clouds.

transportation incident—A major incident related to a means of transportation such air, rail or highway travel resulting in death, serious injury, or extensive property loss or damage.

UN—United Nations

USDA—U.S. Department of Agriculture

USDM—U.S. Drought Monitor

USGS—U.S. Geological Survey

vulnerability—Assessment of how exposed or susceptible an asset is to damage. Vulnerability depends on an asset's construction, contents, and the economic value of its functions.

watershed—An area that drains downgradient from areas of higher land to areas of lower land to the lowest point.

windstorm—Generally short-duration events involving straight-line winds or gusts exceeding 50 mph. These gusts can produce winds of sufficient strength to cause property damage.

WUI—Wildland Urban Interface

Zone C, Zone X—Areas determined to be outside the 1 percent and 0.2 percent annual chance floodplains.

zoning ordinance—**Ordinance** that designates allowable land use and intensities for a local jurisdiction.

EXECUTIVE SUMMARY

Hazard mitigation is the use of long-term and short-term policies, programs, projects, and other activities to alleviate the death, injury, and property damage that can result from a disaster. San Mateo County developed an updated hazard mitigation plan in partnership with the following local governments within the county:

- Town of Atherton
- City of Belmont
- City of Brisbane
- City of Burlingame
- Town of Colma
- City of Daly City
- City of East Palo Alto
- City of Foster City
- City of Half Moon Bay
- Town of Hillsborough
- City of Menlo Park
- City of Millbrae
- City of Pacifica
- Town of Portola Valley
- City of Redwood City
- City of San Bruno
- City of San Carlos
- City of San Mateo
- City of South San Francisco
- Town of Woodside
- Coastside County Water District
- Colma Fire Protection District
- Highlands Recreation District
- Menlo Park Fire Protection District
- Midpeninsula Regional Open Space District
- Mid-Peninsula Water District
- Montara Water & Sanitary District
- North Coast County Water District
- San Mateo Community College District
- San Mateo County Flood & Sea Level Rise Resiliency District
- San Mateo County Harbor District
- San Mateo County Office of Education
- San Mateo Resource Conservation District
- Westborough Water District
- Woodside Fire Protection District

The hazard mitigation plan defines measures to reduce risks from natural disasters in the San Mateo County planning area, which consists of the entire county, including unincorporated areas, incorporated cities, and special purpose districts. The plan complies with federal and state hazard mitigation planning requirements to establish eligibility for funding under Federal Emergency Management Agency (FEMA) grant programs for all planning partners. It updates the County's previous plan, the *2016 San Mateo County Hazard Mitigation Plan*.

PLAN DEVELOPMENT APPROACH

Organization

A core planning team consisting of a contract consultant and San Mateo County staff was assembled to facilitate this plan update. A planning partnership was formed by engaging eligible local governments and making sure they understood their expectations for compliance under the updated plan. A steering committee was assembled to

oversee the plan update, consisting of both governmental and non-governmental stakeholders within the planning area. Coordination with other local, state, and federal agencies involved in hazard mitigation occurred throughout the plan update process. Organization efforts included a review of the County's 2016 hazard mitigation plan, the California statewide hazard mitigation plan, and existing programs that may support hazard mitigation actions.

Equity Focus

Disparities in health outcomes, inequities in living conditions, and lack of political power place many low income communities, people of color, people with disabilities, pregnant women, and historically disadvantaged people, among others, at greater risk from hazards. The County prepared a framework for addressing equity through the 2021 hazard mitigation planning process. The County developed a resource paper titled "Recommendations for Addressing Equity in Hazard Mitigation Planning" to educate planning partners and the Steering Committee on disparities of underserved communities in hazard planning. Each partner received tools to apply the equity lens perspective. The use of these tools was left to the discretion of each planning partner. Partners who chose to apply the equity lens include the County, nine cities, and four special purpose districts.

Public Outreach

The planning team implemented a multi-media public involvement strategy utilizing the outreach capabilities of the planning partnership that was approved by the Steering Committee. The strategy included public meetings, a hazard mitigation survey, a project website, the use of social media, and multiple media releases.

Plan Document Development

The planning team and Steering Committee assembled a document to meet federal hazard mitigation planning requirements for all partners. The updated plan contains two volumes. Volume 1 contains components that apply to all partners and the broader planning area. Volume 2 contains all components that are jurisdiction-specific. Each planning partner has a dedicated annex in Volume 2.

Adoption

Once pre-adoption approval has been granted by the California Office of Emergency Services and FEMA Region IX, the final adoption phase will begin. Each planning partner will individually adopt the updated plan.

RISK ASSESSMENT

Risk assessment is the process of measuring the potential loss of life resulting from natural hazards, as well as personal injury, economic injury, and property damage, in order to determine the vulnerability of people, buildings, and infrastructure. For this update, risk assessment models were enhanced with new data and technologies. The Steering Committee used the risk assessment to rate risk and to gauge the potential impacts of each hazard of concern in the planning area. The risk assessment included the following:

- Hazard identification and profiling
- Assessment of the impact of hazards on physical, social, and economic assets
- Identification of particular areas of vulnerability
- Estimates of the cost of potential damage.

Based on the risk assessment, hazards were rated for the risk they pose to the overall planning area. Figure ES-1 and Figure ES-2 show two sets of scores and ratings for the entire San Mateo County planning area: a baseline set of results, and a modified set of results that accounts for the equity lens.

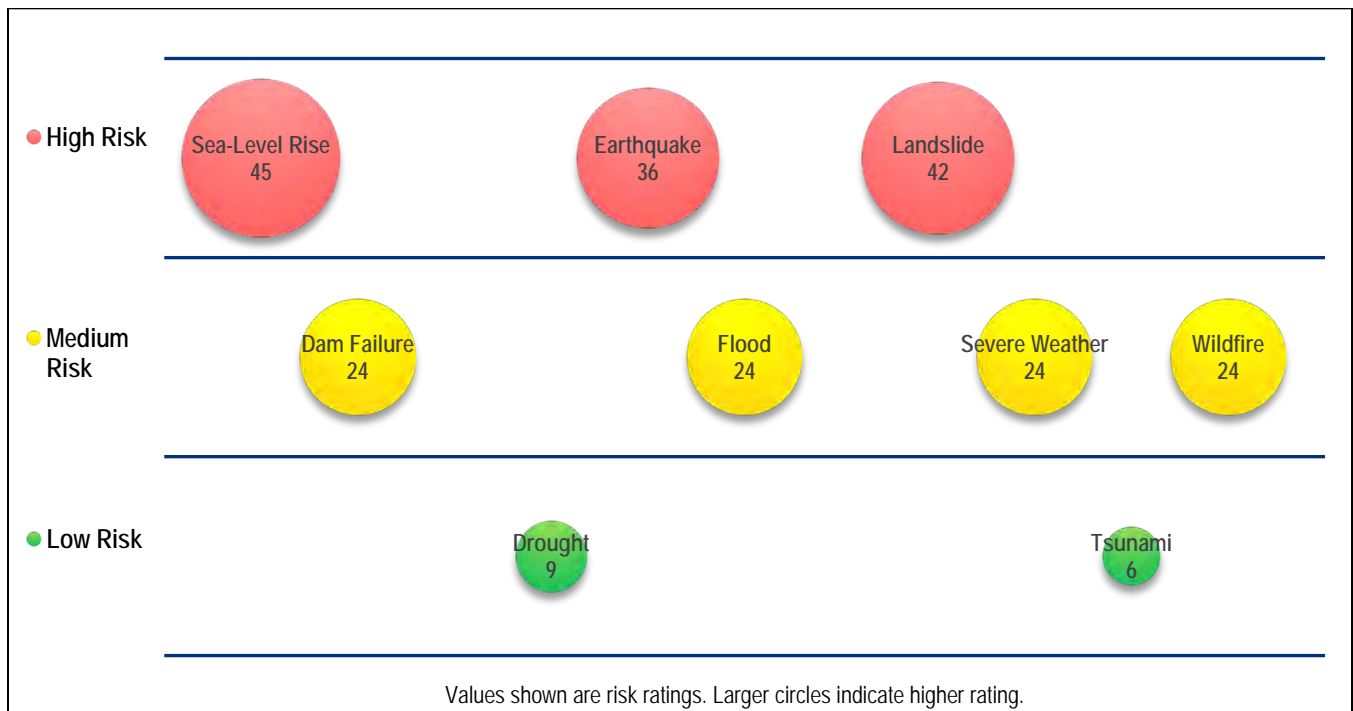

Figure ES-1. Countywide Hazard Risk Rating (Baseline)

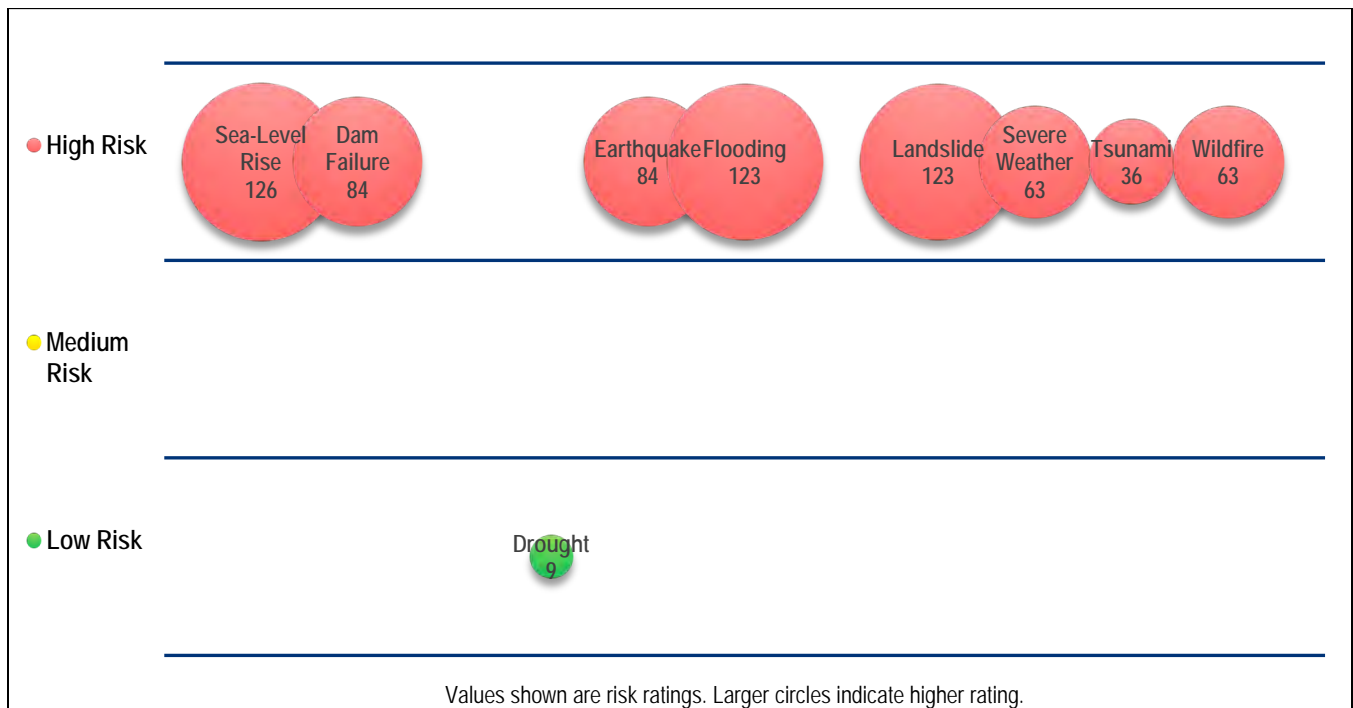

Figure ES-2. Countywide Hazard Risk Rating (Equity Lens)

The results indicate the following general patterns:

- The application of an equity lens as developed for this plan for the countywide risk ranking increases the risk level for every hazard of concern except drought. The change is due to the higher resolution of data for the population impact component of the risk ranking protocol.
- With or without the equity lens, sea-level rise has the highest overall risk score in the countywide ranking.

Each planning partner also rated hazards for its own area. Figure ES-3 summarizes how the participating planning partners rated each hazard; the results shown represent equity lens ratings for partners who chose to apply the equity lens and baseline ratings for those who did not. The results indicate the following general patterns:

- The hazard rated as high risk for the greatest number of planning partners is earthquake, which was rated as a high risk for all partners but one.
- The hazard rated as medium risk for the greatest number of planning partners is severe weather, which was rated as a medium risk for all partners but one.
- The drought and tsunami hazards were rated low risk by the greatest number of planning partners.

Figure ES-3. Summary of Risk Rating for Individual Planning Partners

MITIGATION GOALS AND OBJECTIVES

The Steering Committee reviewed and made updates to the guiding principles, goals, and objectives from the *2016 San Mateo County Hazard Mitigation Plan*. The following guiding principles guided the Steering Committee and planning partners in selecting actions contained in this plan update:

- Provide a dynamic, actionable approach to hazard planning that integrates with other planning mechanisms to enhance or support hazard mitigation.
- Invite and enhance the public's awareness and understanding of hazards and their input on hazard prioritization and mitigation.
- Create a decision-making tool for policy and decision makers.
- Prioritize multi-benefit actions that reduce risk to vulnerable communities, protect those most at risk, and advance equity, including across racial, ethnic, and rural/urban lines.
- Promote compliance with state and federal program requirements.
- Ensure inter-jurisdictional coordination on hazard mitigation activities.
- Integrate the concepts of climate change into the hazard mitigation planning process.
- Support economic viability, including for those who are most economically vulnerable, after a hazard event.
- Ensure a safe, respectful, non-discriminatory, and inclusive response to hazard events.

Goals

The Steering Committee and planning partners established the following goals for the plan update:

- Protect life and property, including protecting the health and safety of communities.
- Engage the whole community to better understand the hazards of the region and ways to reduce their personal vulnerability to those hazards.
- Promote hazard mitigation as an integrated public policy and as a standard business practice.
- Integrate climate change strategies to increase resiliency of community lifelines (critical facilities) from the impact of climate change.
- Protect and preserve the environment.
- Develop and implement hazard mitigation strategies that use public funds in an efficient and cost-effective way.
- Develop hazard mitigation strategies that eliminate disparities and provide access to quality services for all unserved, underserved, under-resourced, and ineffectively serviced individuals and families.
- Improve community emergency management capability.

The effectiveness of a mitigation strategy is assessed by determining how well these goals are achieved.

Objectives

Each objective meets multiple goals, serving as a stand-alone measurement of the effectiveness of a mitigation action. The objectives also are used to help establish priorities. The objectives are as follows:

1. Improve understanding of the locations, potential impacts, and linkages among threats, hazards, vulnerability, and measures needed to protect life, safety, and health.

2. Establish and maintain partnerships among all levels of government, the private sector, community groups, and institutions of higher learning that improve and implement methods to protect life and property.
3. Conduct culturally competent and transparent community outreach activities that:
 - a. Increase stakeholder awareness and understanding of hazard risk, mitigation options, and preparedness strategies
 - b. Enable community members to inform risk assessment and ranking, prioritization of mitigation actions and implementation measures and investments
 - c. Are clear on how they incorporate input throughout the process by providing regular reports.
4. Prevent or reduce mitigation-related disparities affecting under-served and under-represented communities through plans, investments, and engagement.
5. Develop and provide updated information about threats, hazards, vulnerabilities, climate change, and mitigation strategies to state, regional, and local agencies, as well as private-sector and community groups.
6. Encourage incorporation of hazard mitigation measures into repairs, major alterations, new development, and redevelopment practices, especially in socially vulnerable communities.
7. Promote and implement hazard mitigation plans and projects based on best available data and science that are consistent with state, regional, and local climate action and adaptation goals, policies, and programs.
8. Advance community resilience through preparation, adoption, and implementation of state, regional, and local hazard mitigation plans and projects.
9. Encourage life and property protection measures for all communities, with particular attention to socially vulnerable communities that have less capacity to adapt or to strengthen structures and community lifelines (critical facilities) located in hazard areas.
10. Actively promote effective coordination of regional and local hazard mitigation planning and action among state agencies, cities, counties, special districts, tribal organizations, councils of governments, community-led planning efforts, metropolitan planning organizations, and regional transportation organizations to create resilient and sustainable communities.
11. Improve systems that provide warning and emergency communications, including evaluation of their inclusiveness and accessibility.
12. Build the capacity of the County, the planning partners, and community-based organizations to ensure effective and meaningful engagement throughout the process and equitable outcomes of hazard mitigation action efforts.
13. Retrofit, purchase, and/or relocate structures in high hazard areas, and consider appropriate redevelopment policies in areas known to be repetitively damaged that will maximize public benefits and reduce negative impacts, particularly in socially vulnerable communities.
14. Where feasible, identify and implement strategies that use nature-based solutions.

MITIGATION ACTION PLAN

The planning partners selected mitigation actions to work toward achieving the goals set forth in this plan update. Mitigation actions presented in this update are activities designed to reduce or eliminate losses resulting from natural hazards. The update process resulted in the identification of 699 mitigation actions for implementation by

individual planning partners, as presented in Volume 2 of this plan. In addition, the Steering Committee and planning partners identified countywide actions benefiting the whole partnership, as listed in Table ES-1.

Table ES-1. Area-Wide Hazard Mitigation Actions

Action Number and Description	Priority for Implementation		Priority for Pursuing Outside Funding
	Baseline	Equity Lens	
CW-1—Continue to maintain a multilingual and culturally appropriate website that will house the multijurisdictional local hazard mitigation plan, progress reports and all components of the plan's maintenance strategy to provide planning partners and the public with ongoing access to the plan and its implementation.	High	High	Low
CW-2—Continue to leverage/support/enhance multilingual and culturally appropriate, ongoing, regional public education and awareness programs, such as SMCAAlert, ZoneHaven, and CERT, as a method to educate the public on risk, risk reduction, and community resilience.	High	High	Low
CW-3—Provide technical support and coordination for available grant funding opportunities to the planning partnership.	High	High	Low
CW-4: Develop a standardized GIS dataset for modeling hazards and impacts for regional and jurisdictional assessment purposes. Implement a program to digitally map historical hazard events and future hazard events and impacts.	High	High	Low
CW-5—Develop a multilingual and culturally appropriate business outreach program, in concert with existing business organizations and planning partners, to educate businesses on risk and risk reduction and to identify policies and programs to help businesses become more resilient.	High	High	Low
CW-6: Develop model policy templates to assist with coordinated development and implementation of resiliency policies, such as the Safety Elements.	High	High	Low

IMPLEMENTATION

The Steering Committee developed an implementation and maintenance strategy that includes monitoring of the plan's implementation, annual progress reporting, a strategy for continued public involvement, plan integration with other relevant plans and programs, and establishment of a subcommittee to oversee implementation progress relative to Community Rating System credits, for jurisdictions that belong to the Community Rating System.

Full implementation of the recommendations of this plan will require time and resources. The measure of the plan's success will be its ability to adapt to changing conditions. San Mateo County and its planning partners will assume responsibility for adopting the recommendations of this plan and committing resources toward implementation. The framework established by this plan commits all planning partners to pursue actions when the benefits of a project exceed its costs. The planning partnership developed this plan with extensive public input, and public support of the actions identified in this plan will help ensure the plan's success.

Part 1. BACKGROUND AND METHODS

G.

1. INTRODUCTION

1.1 WHY PREPARE THIS PLAN?

1.1.1 Federal Guidance

Hazard mitigation is defined as any action taken to reduce or alleviate the loss of life, personal injury, and property damage that can result from a disaster. It involves long- and short-term actions implemented before, during and after disasters. Hazard mitigation activities include planning efforts, policy changes, programs, studies, improvement projects, and other steps to reduce the impacts of hazards.

The federal Disaster Mitigation Act (DMA) emphasizes planning for disasters before they occur. The DMA requires state and local governments to develop hazard mitigation plans as a condition for federal disaster grant assistance. Regulations developed to fulfill the DMA's requirements are included in Title 44 of the Code of Federal Regulations (44 CFR).

The responsibility for hazard mitigation lies with not only with local, state, and federal governments, but also with private property owners and commercial and institutional interests. The DMA encourages cooperation among state and local authorities in pre-disaster planning. The enhanced planning network called for by the DMA helps local governments to articulate accurate needs for mitigation, resulting in faster allocation of funding and more cost-effective risk-reduction projects.

The DMA also promotes sustainability in hazard mitigation. To be sustainable, hazard mitigation needs to incorporate sound management of natural resources and address hazards and mitigation in the largest possible social and economic context.

1.1.2 Local Concerns

Natural and human-caused hazards affect people, property, the environment, and the economy of San Mateo County. Climate change, drought, earthquakes, floods, landslides, severe weather, tsunamis, wildfires, and dam failures have exposed San Mateo County community members and businesses to the financial and emotional costs of recovering after natural disasters. Additionally, human-caused hazards such as hazardous material releases, pipeline and tank leaks, terrorism, airline incidents, and cyber threats have the potential to further affect the county. The risk associated with both natural and human-caused hazards increases as more people move to or visit areas affected by those hazards.

The inevitability of hazards and the growing population and activity within San Mateo County create an urgent need to develop strategies, coordinate resources, and increase public awareness to reduce risk and prevent loss from future hazard events. Identifying risks posed by hazards and developing strategies to reduce the impact of a

hazard event can assist in protecting life and property of people, communities, and visitors. Local community members and businesses can work together with the County to create a hazard mitigation plan that addresses the potential impacts of hazard events.

The *San Mateo County Multijurisdictional Local Hazard Mitigation Plan* is the latest update to a hazard mitigation plan for San Mateo County. In preparing it, the County has partnered with local cities and special-purpose districts. One of the benefits of multijurisdictional planning is the ability to pool resources and eliminate redundant activities within a planning area that has uniform risk exposure and vulnerabilities. The Federal Emergency Management Agency (FEMA) encourages multijurisdictional planning under its guidance for the DMA. The plan will help guide and coordinate mitigation activities throughout the planning area.

1.1.3 Purposes for Planning

This update identifies resources, information, and strategies for reducing risk from natural hazards. Elements and strategies in the plan were selected because they meet a program requirement and because they best meet the needs of the planning partners and their community members. This is not an emergency response or management plan, although it can be used to identify weaknesses and refocus emergency response planning. The focus of this plan is on better decision-making to avoid future risk and on activities that will eliminate or reduce current risks.

The planning effort identified risks posed by hazards and developed strategies to reduce the impact of hazard events on people and property in San Mateo County. The plan was also developed to meet the following objectives:

- Meet or exceed program requirements specified under the DMA.
- Enable San Mateo County to continue using federal grant funding to reduce risk through mitigation.
- Meet the needs of San Mateo County as well as state and federal requirements.
- Create a risk assessment that focuses on San Mateo County hazards of concern.
- Coordinate existing plans and programs so that high-priority initiatives and projects to mitigate possible impacts of a disaster are funded and implemented.
- Establish an “equity lens” approach to this plan update process as an option for all planning partners (see Section 2.2.3 for a description of equity and the equity lens).

1.2 WHO WILL BENEFIT FROM THIS PLAN?

All community members, visitors, and businesses in San Mateo County are the ultimate beneficiaries of this hazard mitigation plan update. The plan identifies strategies and actions to reduce risk for those who live in, work in, go to school in, and visit San Mateo County. It provides a viable planning framework for all foreseeable natural hazards. Participation by key stakeholders in developing the plan helped ensure that outcomes will be mutually beneficial. The plan’s goals and recommendations can lay the groundwork for development and implementation of local mitigation activities and partnerships.

1.3 HOW TO USE THIS PLAN

This plan has been set up in two volumes so that elements that are jurisdiction-specific can easily be distinguished from those that apply to the whole planning area:

- **Volume 1**—Volume 1 includes all federally required elements of a disaster mitigation plan that apply to the entire planning area. This includes the description of the planning process, public involvement strategy, goals and objectives, countywide hazard risk assessment, countywide mitigation actions, and a plan maintenance strategy. The following appendices provided at the end of Volume 1 include information or explanations to support the main content of the plan:
 - Appendix A. Hazard Mitigation Planning Equity Recommendations
 - Appendix B. Summary of Federal and State Agencies, Programs and Regulations
 - Appendix C. Summary of Federal and State Agencies, Programs and Regulations
 - Appendix D. Mapping Methods & Data Sources
 - Appendix E. Detailed Risk Assessment Results
 - Appendix F. FEMA Approval and Partner Adoption Resolutions
- **Volume 2**—Volume 2 includes all federally required jurisdiction-specific elements, in annexes for each participating jurisdiction. It includes a description of the participation requirements established by the Steering Committee, as well as instructions and templates that the partners used to complete their annexes. Volume 2 also includes “linkage” procedures for eligible jurisdictions that did not participate in development of this plan but wish to adopt it in the future.

Each planning partner will adopt Volume 1 in its entirety, its own jurisdiction-specific annex in Volume 2, and at least the introduction and appendices to Volume 2. Partners may at their discretion adopt Volume 2 in its entirety.

2. SAN MATEO COUNTY HAZARD MITIGATION PLANNING

2.1 PREVIOUS PLANS

2.1.1 2010 Association of Bay Area Governments Regional Planning Effort

Seventeen jurisdictions in San Mateo County were covered under the 2010 Association of Bay Area Governments (ABAG) regional planning effort. The planning process used to develop the updated ABAG plan was as follows:

- **Reevaluate the functional areas of the 2005 plan based on prioritizing mitigation for long-term recovery issues**—This reevaluation was accomplished through a series of issue-oriented forums at meetings of its main policy standing committee, the Regional Planning Committee.
- **Regional mitigation priority setting by cities, counties, and special districts with public involvement**—This objective was met through a series of workshops where strategies were reviewed for relevance and clarity. Three regional workshops were held to review draft priorities, and the draft priorities were posted online for public comment.
- **Develop chapters to highlight functional areas**—To make a better connection between the functional areas in the 2010 plan, chapters were developed to address mitigation strategies and how they achieved functionality.
- **Raise public awareness**—Public awareness was achieved through a series of campaigns, including an “op-ed” hazard mitigation piece on the anniversary of the Loma Prieta earthquake, securing an opportunity for free print ad and community service space, and public meetings focusing on specific aspects of the plan.
- **Focused outreach in partnership with local jurisdictions**—The 2010 planning process allowed for two opportunities for public comment.

2.1.2 2016 San Mateo County Hazard Mitigation Plan

The first multijurisdictional hazard mitigation planning effort that focused solely on San Mateo County was undertaken in 2016. Twenty-nine planning partners (San Mateo County, 18 cities or towns, and 10 special purpose districts) fully participated in this plan update process. The 2016 plan included planning requirements that applied to all participating partners in Volume 1 and addressed the jurisdiction-specific requirements in Volume 2. The plan assessed the dam failure, drought, earthquake, flood, landslide, severe weather, tsunami, and wildfire hazards. It also included profiles for human-caused hazards and climate change. The plan provided a robust risk assessment using the best available data and science to support Hazus modeling for the flood, tsunami, and earthquake hazards. In total, the plan identified and prioritized 620 mitigation actions. FEMA approved the plan on September 14, 2016.

2.2 REASONS FOR THE 2021 UPDATE

2.2.1 Federal Eligibility

Title 44 of the Code of Federal Regulations (44 CFR) stipulates that hazard mitigation plans must present a schedule for monitoring, evaluating, and updating the plan. This schedule provides an opportunity to reevaluate recommendations, monitor the impacts of actions that have been accomplished, and determine if there is a need to change the focus of mitigation strategies. The Robert T. Stafford Act requires that jurisdictions have current hazard mitigation plans to pursue and receive federal funding.

2.2.2 Changes in Development

Upon updating, hazard mitigation plans must be revised to reflect changes in development within the planning area during the previous performance period of the plan, as stated in 44 CFR Section 201.6(d)(3). The plan must describe changes in development in hazard-prone areas that increased or decreased vulnerability since the last plan was approved. If no changes in development altered the overall vulnerability, then plan updates may validate the information in the previously approved plan. The intent of this requirement is to ensure that the mitigation strategy continues to address the risk and vulnerability of existing and potential development and takes into consideration possible future conditions that could affect vulnerability.

According to the State of California Department of Finance, the San Mateo County planning area experienced a 0.5 percent increase in population between 2016 and 2020. (California Department of Finance, 2021). This plan update assumes that some new development triggered by increased population occurred in hazard areas. Because all such new development would have been regulated pursuant to local programs and codes, it is assumed that vulnerability did not increase even if exposure did. San Mateo County and its incorporated cities and towns have general plans that govern land-use decisions and policy-making, as well as specialty ordinances such as building codes and flood-management regulations based on state and federal mandates. More detailed information on the types and location of new construction over the last five years is available in the city and county annexes in Volume 2 of this plan.

The following are significant development and demographic changes in San Mateo County since the previous hazard mitigation plan update:

- Based on development permit data for new construction provided by the municipal planning partners (see Volume 2), the general building stock increased by 2,600 structures, or 1.4 percent. This does not include accessory dwelling units, which are often classified as alterations to an existing property rather than new construction.
- The valuation of the general building stock increased by \$31.6 billion, or 14.2 percent (County of San Mateo Assessor, 2021)
- As of January 1, 2021, the reported population for San Mateo County was 765,245, a decrease in population of 0.24 percent from 2016 and a decrease of 0.75 percent from the previous year (California Department of Finance, 2021)

2.2.3 Focus on Public Engagement and Equity

The County's 2016 hazard mitigation plan met the federal requirements for community engagement, but the engagement strategy fell short of County of San Mateo standards. The 2021 planning process was developed to

enhance the dialogue between community members, local government, and other stakeholders and to use this dialogue to further existing equity goals.

The first step to integrate equity into hazard mitigation is recognizing that disparities in health outcomes, inequities in living conditions, and lack of political power place many low income communities, people of color, people with disabilities, pregnant women, and historically disadvantaged people, among others, at greater risk from hazards and limits their capacity to adapt, respond and recover. With these factors in mind, the County's framework for addressing equity through the 2021 hazard mitigation planning process had five components:

- Decision making
 - Adopt equity goals and objectives
 - Ensure diverse representation
- Outreach and engagement
 - Promote diverse community participation
 - Use trusted messengers
 - Translate materials
 - Meet people where they are
 - Ensure a transparent process
- Hazard analysis
 - Analyze social vulnerability indicators
 - Identify historical injustices
 - Overlay hazards and key indicators to find hot spots
- Mitigation actions
 - Identify actions that mitigate disparities (e.g. language and evacuation barriers)
- Implementation
 - Build community partnerships for implementation of actions
 - Track outcomes to ensure accountability

What is equity?

Equity ensures fair outcomes, treatment, and opportunities for all people, ensuring everyone gets what they need to enjoy full, healthy lives. It is the process of reducing disparities that are systematically associated with social advantage/ disadvantage. (Bay Area Climate Adaptation Network, 2021)

What is an equity lens?

Using an equity lens means being deliberately inclusive when making decisions. It introduces a set of questions to help decision makers focus on equity in both their process and their outcomes.

What is social vulnerability?

Social vulnerability is defined by the characteristics that influence an individual's or group's ability to prepare for, respond to, cope with, or recover from a hazard event. Understanding where populations have increased vulnerability and exposure to natural hazards can help emergency managers take actions to lessen impacts to these communities before an event or distribute needed recovery dollars after an event.

The County developed an equity resource paper titled "Recommendations for Addressing Equity in Hazard Mitigation Planning" to present this framework and to educate planning partners and the Steering Committee on disparities of underserved communities, particularly in hazard planning. The paper is provided in Appendix A. Outreach efforts for the current update included a specific focus on socially vulnerable communities and hard-to-reach populations.

FEMA defines social vulnerability as characteristics that influence an individual's or group's ability to prepare for, respond to, cope with, or recover from an event. They note "...heightened vulnerability...may be compounded by deficiencies in infrastructure While not predictive, understanding where populations have increased vulnerability and exposure to natural hazards can help emergency managers take actions to lessen impacts to these communities before an event or distribute needed recovery dollars after an event."

Recognizing the multijurisdictional scope for this plan and the variation in core capability and capacity of the planning partnership, components of this framework were made optional for the planning partnership. Each partner received tools to apply the equity lens perspective and well as guidance on how to use them. These

protocols are included in the equity resource paper in Appendix A. The use of these tools was not mandated and was left to the discretion of each planning partner. The following planning partners committed to applying the equity lens protocol defined for this plan update process:

- Municipalities:
 - County of San Mateo
 - Brisbane
 - Daly City
 - East Palo Alto
 - Half Moon Bay
 - Menlo Park
 - Pacifica
 - Redwood City
 - San Carlos
 - South San Francisco
- Independent special districts:
 - Mid-Pen Regional Open Space
 - Montara Sanitary District
 - San Mateo County Community College District
 - San Mateo County Flood & Sea Level Rise Resiliency District

2.3 PLAN CHANGES CROSSWALK

The updated plan differs from the previous plan in a variety of ways. Table 2-1 indicates the major changes between the two plans as they relate to 44 CFR planning requirements.

Table 2-1. Plan Changes Crosswalk

44 CFR Requirement	2016 Plan	Updated Plan
<p>Requirement §201.6(b): In order to develop a more comprehensive approach to reducing the effects of natural disasters, the planning process shall include:</p> <ul style="list-style-type: none"> • An opportunity for the public to comment on the plan during the drafting stage and prior to plan approval. • An opportunity for neighboring communities, local and regional agencies involved in hazard mitigation activities, and agencies that have the authority to regulate development, as well as businesses, academia and other private and non-profit interests to be involved in the planning process; and • Review and incorporation, if appropriate, of existing plans, studies, reports and technical information. 	<p>The 2016 plan followed an outreach strategy utilizing multiple media developed and approved by the Steering Committee. This strategy involved:</p> <ul style="list-style-type: none"> • Public participation on an oversight Steering Committee. • Establishment of a plan informational website. • Press releases. • Use of a public information survey <p>Stakeholders were identified and coordinated with throughout the process. A comprehensive review of relevant plans and programs was performed by the planning team.</p>	<p>The 2021 plan built upon the success from the 2016 and expanded the outreach strategy to support the equity objectives for the plan update process. These enhancements included:</p> <ul style="list-style-type: none"> • Establishing the Steering Committee with 50 percent of its members from government agencies and 50 percent from non-government organizations. • Distributing two surveys • Use of multi-lingual surveys • The development of a "StoryMap" to support the plan's implementation • Contracted support from eight community based organizations to increase survey responses and deliver multi-lingual community presentations in socially vulnerable areas and with hard-to-reach populations • Robust mitigation plan website <p>As with the 2016 plan, the 2021 planning process identified key stakeholders and coordinated with them throughout the process. A comprehensive review of relevant plans and programs was performed by the planning team.</p>
<p>§201.6(c)(2): The plan shall include a risk assessment that provides the factual basis for activities proposed in the strategy to reduce losses from identified hazards. Local risk assessments must provide sufficient information to enable the jurisdiction to identify and prioritize appropriate mitigation actions to reduce losses from identified hazards.</p>	<p>Part 2 of Volume 1 presents a comprehensive risk assessment for the planning area that looks at eight hazards of concern: dam failure, drought, earthquake, flood, landslide, severe weather, tsunami, and wildfire. This section also includes an aggregate profile of human-caused hazards and climate change.</p>	<p>The same methodology, using new, updated data, was deployed for the 2021 plan update. An equity lens factor was established using FEMA's Social Vulnerability Index to support risk ranking. All hazard profiles were updated with the best available data and science, which in some cases (dam failure) resulted in increased risk for the planning area because of better data. Sea level rise was added as a fully assessed hazard of concern, and the profile on climate change impacts was enhanced.</p>
<p>§201.6(c)(2)(i): [The risk assessment shall include a] description of the ... location and extent of all natural hazards that can affect the jurisdiction. The plan shall include information on previous occurrences of hazard events and on the probability of future hazard events.</p>	<p>Volume 1 presents a comprehensive risk assessment of each hazard of concern. Each hazard was profiled as follows:</p> <ul style="list-style-type: none"> • Hazard profile, including maps of extent and location, historical occurrences, frequency, severity, and warning time • Secondary hazards • Exposure of people, property, critical facilities, and environment • Vulnerability of people, property, critical facilities, and environment • Future trends in development • Scenarios • Issues 	<p>The same format, using updated data, was deployed for the 2021 plan update.</p>

44 CFR Requirement	2016 Plan	Updated Plan
§201.6(c)(2)(ii): [The risk assessment shall include a] description of the jurisdiction's vulnerability to the hazards described in paragraph (c)(2)(i). This description shall include an overall summary of each hazard and its impact on the community	Vulnerability was assessed for all hazards of concern. The Hazus computer model (version 2.2) was used for the earthquake, flood and tsunami hazards. These were abbreviated Level 2 analyses using planning partner and County data. Site-specific data on County-identified critical facilities was entered into the Hazus model. Hazus outputs were generated for other hazards by applying an estimated damage function to affected assets. The asset inventory was extracted from the Hazus model. Best available data was used for all analyses.	The same methodology was deployed for the 2021 plan update, using updated data. Hazus version 4.2 was utilized for all analyses. Analyses were expanded for the dam failure and sea-level rise hazards. All analyses utilized best available data and science.
§201.6(c)(2)(ii): [The risk assessment] must also address National Flood Insurance Program insured structures that have been repetitively damaged floods	The repetitive loss section was provided to meet Disaster Mitigation Act and Community Rating System planning requirements. The update includes a comprehensive analysis of repetitive loss areas that includes an inventory of the number and types of structures in the repetitive loss area. Repetitive loss areas were delineated, causes of repetitive flooding were cited, and these areas were reflected on maps.	The 2021 plan included a Community Rating System level-of-detail repetitive loss area analysis based on 2016 repetitive loss data and the 2017 Community Rating System Coordinator's Manual.
Requirement §201.6(c)(2)(ii)(A): The plan should describe vulnerability in terms of the types and numbers of existing and future buildings, infrastructure and critical facilities located in the identified hazard area.	A complete inventory of the numbers and types of buildings exposed was generated for each hazard of concern at the Census block/tract level. This data was updated with relevant current assessor's data where available. Each hazard chapter provides a discussion on future development trends as they pertain to each hazard.	The same methodology was deployed for the 2021 plan update, using updated data. The Steering Committee elected to revise the definition of critical facilities and infrastructure to follow FEMA's "lifeline" construct. The critical facilities inventory was adjusted accordingly.
Requirement §201.6(c)(2)(ii)(B): [The plan should describe vulnerability in terms of an] estimate of the potential dollar losses to vulnerable structures identified in paragraph (c)(2)(i)(A) and a description of the methodology used to prepare the estimate.	Estimates of dollar loss were generated for all hazards of concern. These were generated by Hazus for the earthquake, flood, and tsunami hazards. For the other hazards, loss estimates were generated by applying a regionally relevant damage function to the exposed inventory. In all cases, a damage function was applied to an asset inventory. The asset inventory was the same for all hazards and was generated in the Hazus model.	The same methodology was deployed for the 2021 plan update, using updated data. Hazus modeling was expanded for dam failure and sea-level rise hazard profiles
Requirement §201.6(c)(2)(ii)(C): [The plan should describe vulnerability in terms of] providing a general description of land uses and development trends within the community so that mitigation options can be considered in future land use decisions.	A qualitative analysis of future trends in development was applied to all hazards of concern.	The same methodology was deployed for the 2021 plan update, using updated data. In addition, a look at the change in risk due to new development over the performance period of the plan was performed for each hazard of concern.

44 CFR Requirement	2016 Plan	Updated Plan
§201.6(c)(3): The plan shall include a mitigation strategy that provides the jurisdiction's blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources, and its ability to expand on and improve these existing tools.	The 2016 plan included both countywide initiatives and jurisdiction-specific initiatives. The plan identified 7 guiding principles, 7 goals and 11 objectives. Objectives were utilized to help prioritize the actions. Each planning partner fully assessed the capabilities and capacities to implement actions.	The same methodology for setting goals, objectives and actions was applied to the 2021 plan update. The Steering Committee reviewed and reframed the guiding principles, goals, and objectives. Each planning partner used the progress reporting from the plan maintenance and evaluated the status of actions identified in the 2016 plan. Actions that were completed or no longer considered to be feasible were removed. The rest of the actions were carried over to the 2021 plan and in some cases, new actions were added to the action plan.
Requirement §201.6(c)(3)(i): [The hazard mitigation strategy shall include a] description of mitigation goals to reduce or avoid long-term vulnerabilities to the identified hazards.	The Steering Committee identified 7 guiding principles, 7 goals and 11 objectives. Objectives were utilized to prioritize actions.	The Steering Committee reviewed and reframed the guiding principles, goals, and objectives. The 2021 plan now has 9 guiding principles, 8 goals and 14 objectives. The reframing of these components focused on the addition of the equity lens to the plan.
Requirement §201.6(c)(3)(ii): [The mitigation strategy shall include a] section that identifies and analyzes a comprehensive range of specific mitigation actions and projects being considered to reduce the effects of each hazard, with particular emphasis on new and existing buildings and infrastructure.	The plan included a catalog of mitigation best management practices that was developed through a facilitated process with the Steering Committee looking at strengths, weaknesses, obstacles, and opportunities within the planning area. Once the action plans were identified and prioritized, each planning partner categorized each action under six mitigation categories.	The same catalog of mitigation best management practices was utilized, with enhancements by the Core Planning Team. The same prioritization protocol was applied, with the addition of a social equity priority for planning partners that chose the equity lens option. The mitigation category review was expanded to 8 categories with the addition of "climate resilient" and "community capacity building" categories.
Requirement: §201.6(c)(3)(ii): [The mitigation strategy] must also address the jurisdiction's participation in the National Flood Insurance Program, and continued compliance with the program's requirements, as appropriate.	All municipal planning partners that participate in the National Flood Insurance Program identified an action stating their commitment to maintain compliance and good standing under the program. An assessment of program capabilities was included in the capability assessment of each municipal planning partner.	The same methodology was deployed for the 2021 plan update, using updated data.
Requirement: §201.6(c)(3)(iii): [The mitigation strategy shall describe] how the actions identified in section (c)(3)(ii) will be prioritized, implemented and administered by the local jurisdiction. Prioritization shall include a special emphasis on the extent to which benefits are maximized according to a cost benefit review of the proposed projects and their associated costs.	Each recommended initiative is prioritized using a qualitative methodology that looked at the objectives the project will meet, the timeline for completion, how the project will be funded, the impact of the project, the benefits of the project and the costs of the project. Two priorities were identified for each action: an implementation priority and a grant pursuit priority.	The same methodology was deployed for the 2021 plan update, using updated data. For planning partners that chose the equity lens option, a third social equity priority was added.

44 CFR Requirement	2016 Plan	Updated Plan
Requirement §201.6(c)(4)(i): [The plan maintenance process shall include a] section describing the method and schedule of monitoring, evaluating, and updating the mitigation plan within a five-year cycle.	The plan included a plan maintenance strategy that included protocols for: <ul style="list-style-type: none"> • Steering Committee role • Annual progress reporting • Plan updates • Continuing public involvement • Incorporation of the plan into other plans and programs 	The strategy was enhanced to include a twice per year review of the status of actions, with one of the meetings to confirm the annual progress report. All other components were unchanged. A subcommittee will be established for Community Rating System participating communities to meet progress reporting requirements.
Requirement §201.6(c)(4)(ii): [The plan shall include a] process by which local governments incorporate the requirements of the mitigation plan into other planning mechanisms such as comprehensive or capital improvement plans, when appropriate.	The plan details recommendations for incorporating it into other planning components such as: <ul style="list-style-type: none"> • Emergency response plans • Natural hazard elements of community plans • Capital improvement programs • Municipal codes • Community design guidelines • Landscape design guidelines • Stormwater management programs • Water system vulnerability assessments • Any additional plans as they are reviewed and updated during the performance period of the plan. 	This component of the plan maintenance strategy from the 2016 plan was carried over to the 2021 plan update.
Requirement §201.6(c)(4)(iii): [The plan maintenance process shall include a] discussion on how the community will continue public participation in the plan maintenance process.	The plan details a strategy for continuing public involvement such as: <ul style="list-style-type: none"> • Website • Libraries • Publication of a progress report 	This component of the plan maintenance strategy from the 2016 plan was carried over to the 2021 plan update.
Requirement §201.6(c)(5): [The local hazard mitigation plan shall include] documentation that the plan has been formally adopted by the governing body of the jurisdiction requesting approval of the plan (e.g., City Council, County Commissioner, Tribal Council).	All planning partners that fully met their participation requirements as defined by the planning process formally adopted the plan.	All planning partners that fully met their participation requirements as defined by the planning process formally adopted the plan.

3. PLAN DEVELOPMENT METHODOLOGY

The process followed to develop this hazard mitigation plan had the following primary objectives:

- Form a core planning team
- Establish a planning partnership
- Define the planning area
- Establish a steering committee
- Coordinate with other agencies
- Review existing programs
- Engage the public.

3.1 FORMATION OF THE CORE PLANNING TEAM

San Mateo County hired Tetra Tech, Inc. to assist with development and implementation of the plan. The Tetra Tech project manager and lead planner reported to the director of the County Department of Emergency Management and to the Multijurisdictional Local Hazard Mitigation Plan project manager. A planning team was formed to lead the planning effort, consisting of the following members:

- Dan Belville, Director, County of San Mateo Department of Emergency Management
- Ann Ludwig, Project Manager, County of San Mateo Department of Emergency Management
- Joe LaClair, Planning Services Manager, County of San Mateo Planning and Building Department (retired in March 2021)
- Melissa Ross, Planning Services Manager, County of San Mateo Planning and Building Department
- Katie Faulkner, Planner III, County of San Mateo Planning and Building Department
- Rumika Chaudhry, GIS and Open Data Supervisor, County of San Mateo GIS/Information Services
- Marcus Griswold, Senior Climate Adaptation Specialist, County of San Mateo Office of Sustainability (until May 2021)
- Hilary Papendick, Climate Change Program Manager, County of San Mateo Office of Sustainability
- David Cosgrave, Division Chief, Coastside Fire Protection District
- Carolyn Bloede, Director, County of San Mateo Office of Sustainability
- Rob Flaner, Project Manager, Tetra Tech
- Bart Spencer, Lead Project Planner, Tetra Tech

- Carol Baumann, Risk Assessment Lead, Tetra Tech
- Jeana Wiser, Public Outreach Lead, Tetra Tech
- Des Alexander, Profiling Lead, Tetra Tech

3.2 ESTABLISHMENT OF THE PLANNING PARTNERSHIP

San Mateo County opened this planning effort to all planning partners from the 2016 planning effort and any eligible local governments within the County not covered by a hazard mitigation plan. A kickoff meeting was conducted by the core planning team on February 1, 2021, where a presentation was made to introduce the mitigation plan update and solicit planning partner commitment to the plan update process.

Each jurisdiction wishing to join the planning partnership was asked to provide a “letter of intent to participate” that designated a point of contact for the jurisdiction and confirmed the jurisdiction’s commitment to the process and understanding of expectations. The planning partners that provided a letter of intent to participate in the plan update process are shown in Table 3-1. Volume 2 of this plan identifies which of these jurisdictions completed this process to be covered by this plan.

Table 3-1. Planning Partners

Jurisdiction	Point of Contact	Title
Cities/County		
Atherton	Dan Larsen	Commander
Belmont	Kacey Treadway	Emergency Services Specialist
Brisbane	Randy Breault	Public Works Director/City Engineer
Burlingame	Martin Quan	Senior Civil Engineer
Colma	Michael P. Laughlin	City Planner
Daly City	Joel Abelson	Battalion Chief
East Palo Alto	Daniel Berumen	Senior Planner
Foster City	Kacey Treadway	Emergency Services Specialist
Half Moon Bay	Corie Stocker	Management Analyst
Hillsborough	Mandy Brown	Senior Management Analyst
Menlo Park	Brian Henry	Assistant Public Works Director
Millbrae	Bill Reilly	Emergency Manager
Pacifica	Chris Clements	Police Captain
Portola Valley	Jeremy Dennis	Town Manager
Redwood City	Dave Pucci	Acting Fire Chief
San Bruno	Jovan Grogan	City Manager
San Carlos	Nicole MacDonald	Senior Management Analyst
San Mateo (city)	Kacey Treadway	Emergency Services Specialist
South San Francisco	Ken Anderson	Senior Emergency Services Manager
Woodside	Sean Rose	Public Works Director
San Mateo County	Dan Belville	Director, Department of Emergency Management

Jurisdiction	Point of Contact	Title
Special Purpose Districts		
Coastside County Water District	Mary Rogen	General Manager
Colma Fire Protection District	Geoffrey Balton	Fire Chief
Highlands Recreation District	Derek Schweigart	General Manager
Menlo Park Fire Protection District	Andres Acevedo	Program Director, Office of Emergency Management
Midpeninsula Regional Open Space District	Brandon Stewart	Land and Facilities Services Manager
Mid-Peninsula Water District	Rene Ramirez	Operations Manager
Montara Water & Sanitary District	Clemens Heldmaier	General Manager
North Coast County Water District	Adrianne Carr	General Manager
San Mateo Community College District	Ben'Zara Minkin	Emergency Manager
San Mateo County Flood & Sea Level Rise Resiliency District	Makena Wong	Associate Project Manager
San Mateo County Harbor District	James B. Pruett	General Manager
San Mateo County Office of Education	Molly Henricks	Coordinator, School Safety & Risk Prevention
San Mateo Resource Conservation District	Sheena Sidhu	Conservation Program Manager for Forest Health and Fire Resiliency
Westborough Water District	Darryl Barrow	General Manager
Woodside Fire Protection District	Don Bullard	Fire Marshal

3.3 DEFINING THE PLANNING AREA

The planning area was defined as the County of San Mateo, which consists of the mid-to southern land mass of the San Francisco Peninsula. The planning area includes San Mateo County's 20 incorporated jurisdictions, special districts, and the unincorporated areas of the County.

3.4 THE STEERING COMMITTEE

Hazard mitigation planning enhances collaboration and support among diverse parties whose interests can be affected by hazard losses. A Steering Committee was formed to oversee all phases of the plan. The members of this committee included San Mateo County staff, community members, and other stakeholders from community-based organizations, special districts, cities, and other groups within the planning area. The planning team assembled a list of candidates representing interests within the planning area that could have recommendations for the plan or be affected by its recommendations. The team confirmed a committee of 13 members. Table 3-2 lists the Steering Committee members.

Leadership roles and ground rules were established during the Steering Committee's initial meeting on February 22, 2021. The Steering Committee agreed to meet monthly as needed throughout the course of the plan's development and more frequently during the mitigation initiative development phase. The planning team facilitated each Steering Committee meeting, which addressed a set of objectives based on the work plan established for the plan update. The Steering Committee met six times from February 2021 through July 2021. Meeting agendas, recordings of meetings, and meeting minutes, including attendance logs, are posted on the County's hazard mitigation plan website at <https://cmo.smcgov.org/event-information>. All Steering Committee meetings were open to the public, and agendas were posted in advance of the meetings.

Table 3-2. Steering Committee Members

Jurisdiction/Agency	Name	Title
San Mateo County Department of Emergency Management	Dan Belville	Director (Chair)
MidPen Housing Corporation	Andrew Bielak	Associate Director of Housing Development
CAL Fire San Mateo Division	David Cosgrave	Division Chief
City of Daly City	John Gamez	Captain, Police Department
San Mateo County Health System, Commission on Disabilities	Robert Hall	President
City of Redwood City	Terence Kyaw	Director, Public Works Services Department
Puente	Rita Mancera	Executive Director (Co-Chair)
San Mateo County Community College District	Ben'Zara Minkin	Emergency Manager
North Fair Oaks Community Alliance	Ever Rodriguez	President
Climate Resilient Communities	Violet Saena	Director
San Mateo County Public Health	Belen Seara	Senior Community Health Planner
SamTrans	Amelia Timbers	Principal Planner, Sustainability
Senior Coastsiders	Sandra Winter	Executive Director

3.5 COORDINATION WITH OTHER AGENCIES

44 CFR requires that opportunities for involvement in the planning be provided to neighboring communities, agencies involved in hazard mitigation, agencies that regulate development, businesses, academia, and other interested groups (Section 201.6.b.2). The initial coordination activity was an invitation to agencies to provide representatives to participate on the Steering Committee. As the plan update process proceeded, the following agencies were invited to participate and were kept apprised of plan development milestones:

- San Mateo County Manager's Office
- San Mateo County Department of Planning and Building
- San Mateo County Office of Sustainability
- San Mateo County Health Department
- San Mateo County Public Works Department
- CAL FIRE San Mateo Division
- Participating jurisdictions

These agencies received meeting announcements, agendas, and minutes by e-mail throughout the plan update process. They supported the effort by attending meetings or providing feedback on issues. All the agencies were provided an opportunity to comment on this plan update, primarily through the hazard mitigation plan website. Each was sent an e-mail message informing them that draft portions of the plan were available for review. In addition, the complete draft plan was sent to the California Governor's Office of Emergency Services (Cal OES) and FEMA Region IX for a pre-adoption review to ensure program compliance.

3.6 REVIEW OF EXISTING PROGRAMS

Hazard mitigation planning must include review and incorporation, if appropriate, of existing plans, studies, reports, and technical information (44 CFR, Section 201.6(b)(3)). The following plans and programs can affect mitigation within the planning area:

- California Fire Code
- 2019 California Building Code
- California State Hazard Mitigation Forum
- Local Capital Improvement Programs
- Local Codes and Standards
- Local Emergency Operations Plan
- Local General Plans including the Housing and Safety Elements
- Local Coastal Program Policies.
- County of San Mateo Sea-Level Rise Vulnerability Assessment
- San Mateo County, South Coast Sea-Level Rise Vulnerability Assessment and Adaptation Plan
- Climate Adaptation Plans
- Climate Action Plans
- Long-term Recovery Plans

Many of these relevant plans, studies, and regulations are cited in the capability assessment provided in Volume 2 of this plan for each participating jurisdiction. Chapter 6 of this volume provides an overview of state and federal programs that can interface with hazard mitigation and an introduction to local capabilities assessment.

3.7 PUBLIC INVOLVEMENT

Broad public participation in the planning process helps ensure that diverse points of view about the planning area's needs are considered and addressed. The public must have opportunities to comment on disaster mitigation plans during the drafting stages and prior to plan approval (44 CFR, Section 201.6(b)(1)). The Community Rating System (CRS) expands on these requirements by making credits available for optional public involvement activities. The strategy for involving the public in this plan update emphasized the following elements:

- Adopt an early commitment to place equity at the top of the priority list for all planning-related activities throughout the update process.
- Identify and involve representatives of many different County communities.
- Open Steering Committee meetings to members of the public for ongoing input.
- Use accessible and widely shared surveys to evaluate whether and how the public's perception of risk and support of hazard mitigation has changed since the initial planning process.
- Use input from a comprehensive public engagement strategy to inform all phases of the plan update process.
- Invite public participation at all public meetings.
- Attempt to reach as many planning area community members as possible using local media, including social media and local/regional communications channels.

3.7.1 Equity Approach

The project team prioritized active work to address equity in the *Multijurisdictional Local Hazard Mitigation Plan* by establishing a framework with key actions for each step of the planning process. Elements of the equity approach included:

- **Ensuring diverse leadership**—The Steering Committee membership included 50 percent community partners from organizations such as Climate Resilient Communities, MidPen Housing Corporation, Puente, the County Commission on Disabilities, Senior Coastsiders, and the North Fair Oaks Community Alliance.

- **Applying an equity-lens to action development**—With input from the Steering Committee and planning partners, the Core Planning Team developed an equity screening tool and other resources to support the development of equitable hazard mitigation actions.
- **Engaging hard-to-reach populations**—In April, the Office of Sustainability began negotiated contracts with eight community-based organizations to assist with community outreach, education, and administering the surveys in order to reach socially vulnerable populations. The organizations serve the following areas: unincorporated coastal communities, Half Moon Bay, Pacifica, East Palo Alto, Belle Haven, Menlo Park, North Fair Oaks, Daly City, San Mateo, South San Francisco, and San Bruno.
- **Translation and Interpretation Services**—The survey and outreach materials were translated into multiple languages to improve accessibility among populations with limited English proficiency. The website uses Google Translate for accessibility in multiple languages. Interpretation services were offered for the first public workshop and will also be offered for the second workshop on August 12.

3.7.2 Stakeholders and the Steering Committee

Stakeholders are the individuals, agencies, community-based organizations, and jurisdictions that have a vested interest in this plan’s recommendations. The effort to include stakeholders in this process included stakeholder participation on the Steering Committee, 50 percent of whose members represent organizations such as Climate Resilient Communities, MidPen Housing Corporation, Puente, the County Commission on Disabilities, Senior Coastsiders, and the North Fair Oaks Community Alliance. Other stakeholders targeted for Steering Committee membership included the following:

- San Mateo County and local jurisdiction departments relevant to hazard mitigation planning
- Members of the academic, transportation, and public health communities

3.7.3 Website

At the beginning of the plan update process, the County established a hazard mitigation website (<https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan>) to serve as a one-stop shop for information about the update process (see Figure 3-1).

Throughout the planning effort, the website was used to keep the public informed on milestones and to solicit input. At the same time, the website was used as a major resource for members of the community, planning partners, and other stakeholders to access information and resources about hazard mitigation planning, equity, and climate change as it impacts natural hazards.

The site’s address was publicized in all press releases, mailings, surveys, and public meetings. Information on the plan development process, the Steering Committee, the survey, and phased drafts of the plan was made available to the public on the site throughout the process. San Mateo County intends to keep a website active after the plan is complete to keep the public informed about successful mitigation projects and future plan updates.

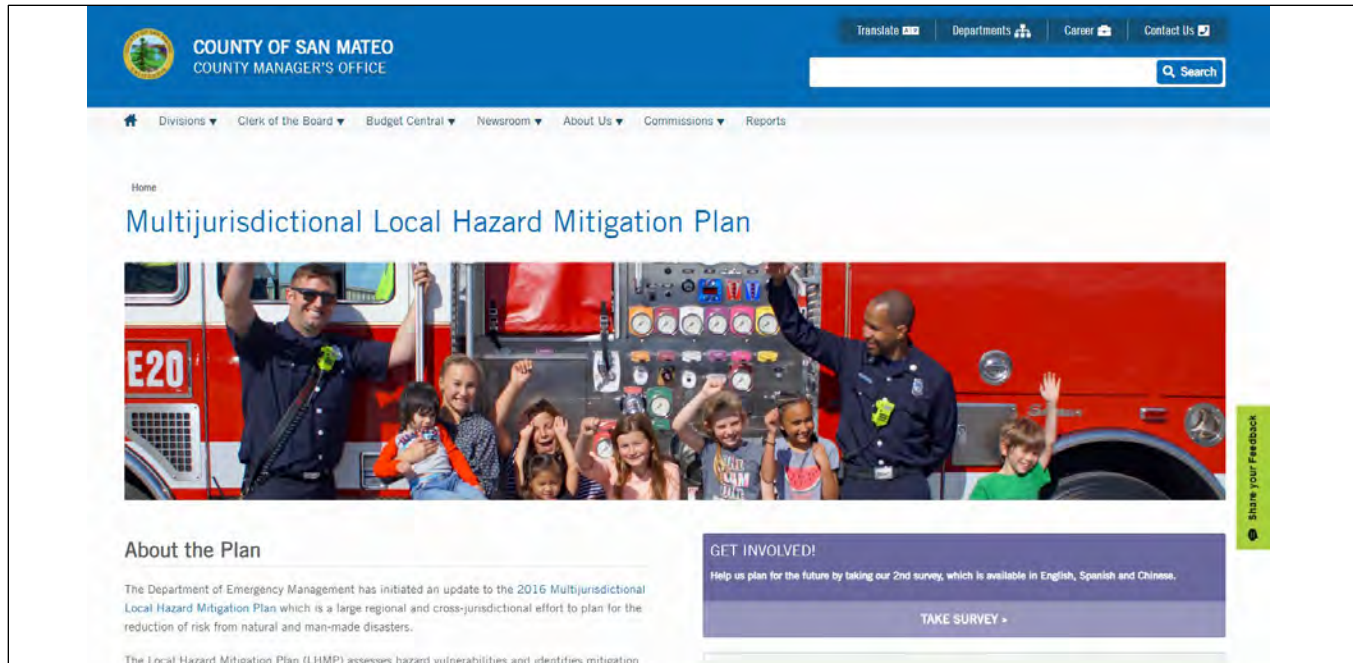

Figure 3-1. Hazard Mitigation Plan Web Site

3.7.4 Hazard Mitigation Surveys

The planning team developed two community hazard mitigation surveys with guidance from the Steering Committee:

- Survey #1 was used to gauge household and individual preparedness for natural hazards and the level of knowledge of tools and techniques that assist in reducing risk and loss from natural hazards. This survey was designed to help identify areas vulnerable to one or more natural hazards. The answers to its 30 questions helped guide the Steering Committee in affirming goals and objectives and supported the planning partnership in developing and prioritizing mitigation strategies.
- Survey #2 was used to gather input from members of the community about potential mitigation strategies to reduce risks to natural hazards. Its questions focused on three top hazards of concern in San Mateo County: earthquakes, wildfire, and extreme heat. The survey expanded on two central questions:
 - How can we help reduce the risks of hazards in your community?
 - How can we help your family and neighbors get organized and prepared before a disaster?

Survey Monkey, a web-based survey tool, was used to develop, track, and analyze the survey results. Survey #1 was conducted from March 2021 to May 2021. Survey #2 was conducted from June 2021 to July 2021. Multiple methods were used to solicit survey responses:

- A web-based version of Survey #1 was made available on the plan website in six languages: English, Spanish, Mandarin, Tagalog, Tongan, Arabic (see Figure 3-2).
- A web-based version of Survey #2 was made available on the plan website in three languages: English, Spanish, and Chinese (see Figure 3-3).
- Attendees at all public/community meetings and open houses were asked to complete a survey.

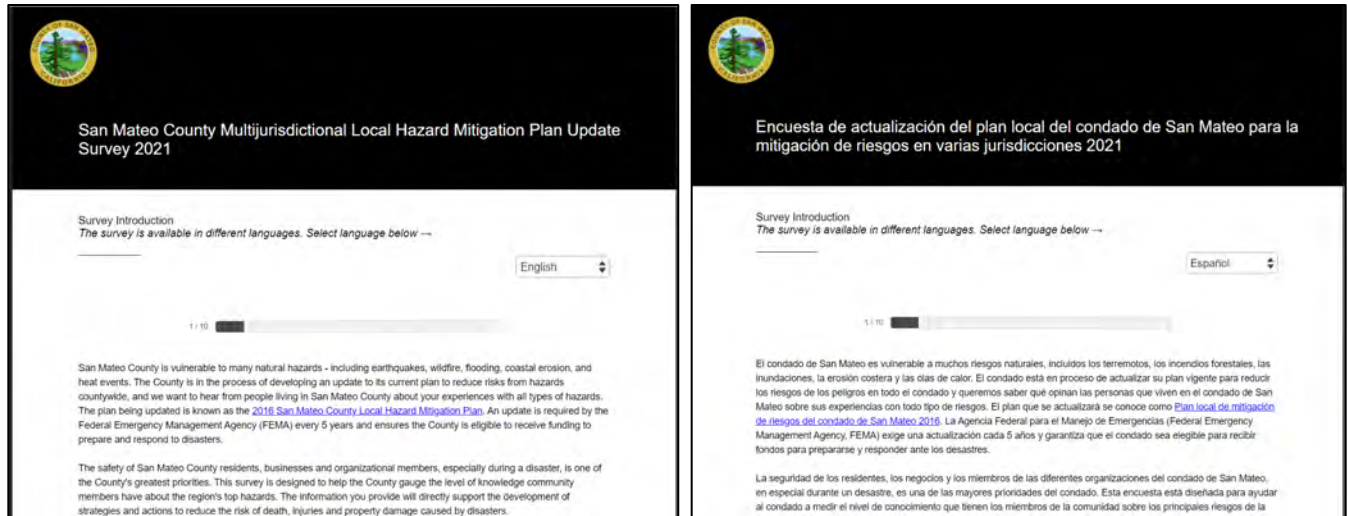

Figure 3-2. Sample Pages from Survey #1 Distributed to the Public (English and Spanish versions)

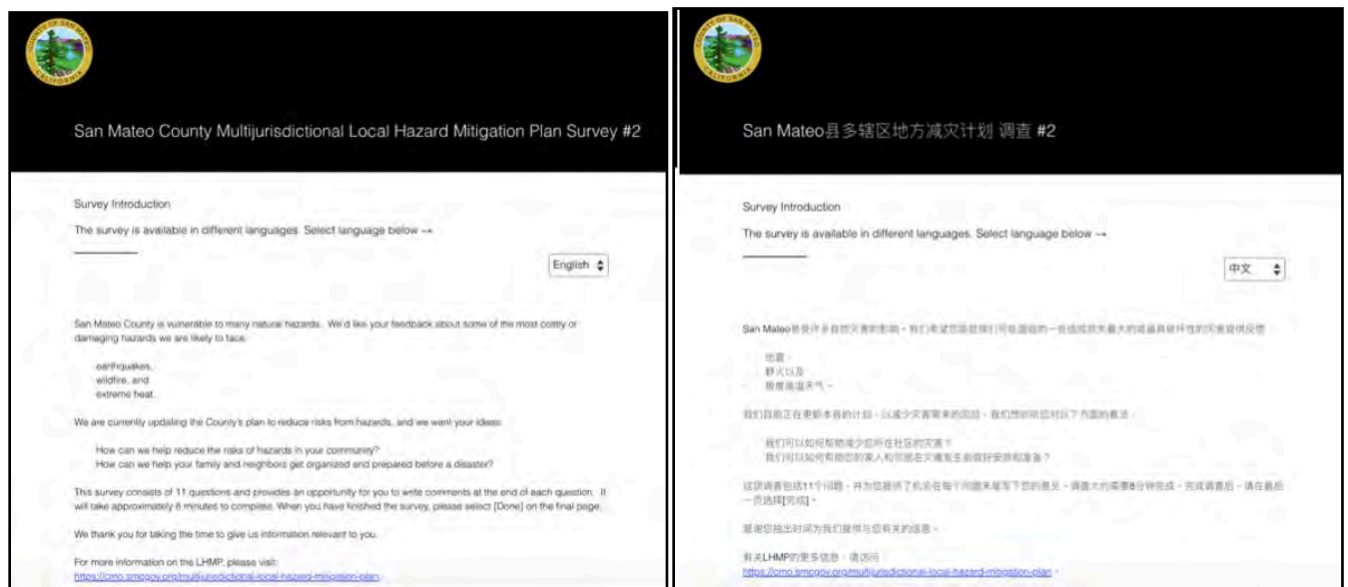

Figure 3-3. Sample Pages from Survey #2 Distributed to the Public (English and Chinese versions)

- Press releases were distributed to local media urging community members to participate.
- San Mateo County and participating planning partners advertised the surveys on social media (Facebook, Instagram, Nextdoor, and Twitter).
- Contracted community-based organizations were provided with a PDF-version of the survey for printing, and distributed paper copies of surveys at community events and COVID-19 vaccine clinics.

The County tracked survey responses by zip code throughout the survey collection period to ensure broad and diverse participation throughout all jurisdictions in the County. Both surveys and a summary of results are included in Appendix B.

3.7.5 Public Meetings and Community Partners

The planning process provided numerous public meeting opportunities. Some public meetings were directly related to the planning process and others were supportive of the planning process, reaching community members who would otherwise not be directly involved with hazard mitigation planning. Over 20 public meetings were directly organized by the County to target outreach and solicit feedback from a diverse range of County stakeholders and community members. To expand the reach of the planning outreach, the County partnered with eight community-based organizations to target socially vulnerable members of the community:

- Bay Area Community Health Advisory Council
- Ayundando Latinos a Sonar
- Senior Coastsiders
- Sustainable South Coast
- Center for Independence of Individuals with Disabilities
- El Concilio of San Mateo County
- Nuestra Casa
- Climate Resilient Communities

Each community partner held its own community outreach events and meetings, in coordination with County and planning partner staff, amplifying the reach of the public outreach efforts. Table 3-3 lists the County-managed public meetings. Figure 3-4 shows a screenshot of a typical virtual public meeting. A report summarizing the outreach efforts is included in Appendix B.

Table 3-3. Summary of Outreach Activities

Dates	Activity	Participants/ Target Audience
February 22	Steering Committee Meeting #1	Steering Committee, Planning Partners & Public
March 15	Media Release #1 announcing the project kickoff for the hazard mitigation update and release of Survey #1, including social media (Facebook, Instagram, Nextdoor)	Public
March 20	South Coast Sustainable SC4 Amateur Radio Club	Coastside community; Public; 50 participants
March 22	Steering Committee Meeting #2	Steering Committee, Planning Partners & Public
March 25	Survey Outreach for unhoused populations	Senior Coastsiders (Public); 5 participants
March 25	Public Workshop #1: Risk Assessment and Story Map	Public
April 12	Monthly Meeting #1 (presentation from County staff)	Bay Area Community Health Advisory Council (Public); 22 participants; 90% African American
April 13	Email blast to listserv	Bay Area Community Health Advisory Council (Public); 155 people reached
April 19	Staff meeting	Center for Independence of Individuals with Disabilities (CID) (Public)
April 24	Center for Independence of Individuals with Disabilities (CID) Emergency Preparedness Program/ Food Distribution Event	CID (Public); 8 participants
April 26	Steering Committee Meeting #3	Steering Committee, Planning Partners & Public
April 29	CID Support Group	Public; survey response support; 3 participants
April 30	CID Virtual Peer Support Group Meeting	Public; 1:1 accessibility support; 1 participant
May 10	Monthly Meeting #2 (presentation from County staff)	Bay Area Community Health Advisory Council (Public)
May 10	Presentation to SAM Board (County staff participating)	Public

Dates	Activity	Participants/ Target Audience
May 13	Evergreen Seniors event (panel from various coastal jurisdictions)	Senior Coastsiders (Public); 12 participants
May 24	Steering Committee Meeting #4	Steering Committee, Planning Partners & Public
June 3	Wildfire Risk and Resilience in San Mateo County, sponsored by OneShoreline and the League of Women Voters	Public
June 4 – July 11	Media release announcing Survey #2 to community members seeking input on mitigation actions, including social media (Facebook, Instagram, Nextdoor)	Public
June 7 & 10	Center for Independence of Individuals with Disabilities Staff Meeting and Peer Support Group	Outreach to Vulnerable Community Members; 15 participants
June 10	Nuestra Casa Environmental Justice Academy Focus Group	Outreach to Vulnerable Community Members; 25 participants (17 Spanish/8 English)
June 14	Bay Area Community Health Advisory Council Meeting	Outreach to Vulnerable Community Members; 22 participants; 90% African Americans
June 17	CID Support Group	Public; 6 participants
June 23	South Coast Sustainable Focus Group	Outreach to Vulnerable Community Members; 57 participants
June 23	Climate Resilient Communities Event	Public with focus on East Palo Alto, Belle Haven and North Fair Oaks Communities
June 24	South Coast Sustainable Focus Group	Puente; Public; 15 participants; farmworkers and Latinx; Spanish language translation
June 24	North Fair Oaks Community Council	Public
June 28	Steering Committee Meeting #5	Steering Committee, Planning Partners & Public
July 13	Pescadero Municipal Advisory Committee	Public
July 26	Steering Committee Meeting #6	Steering Committee, Planning Partners & Public
August 5	Media release #3 announcing release of the draft hazard mitigation plan update and Public Workshop #2	Public
August 12	Public Workshop #2: Review of draft Multijurisdictional Local Hazard Mitigation Plan	Steering Committee, Planning Partners & Public

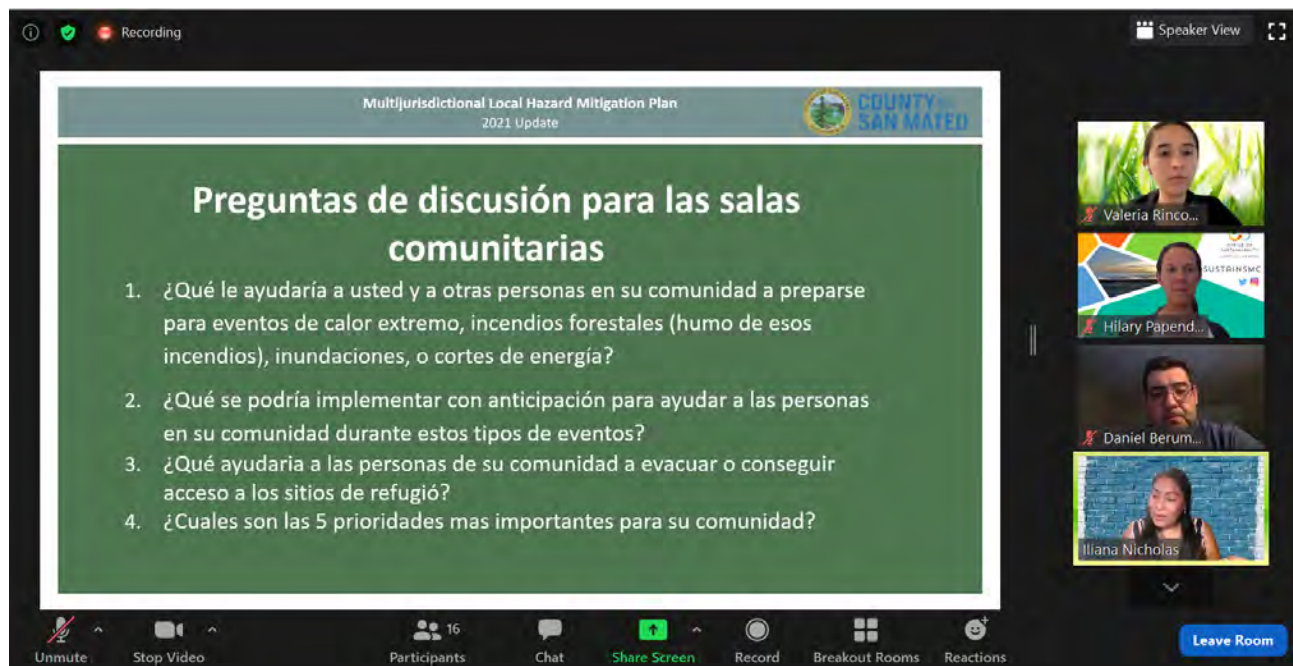

Figure 3-4. Screenshot from June 2021 Climate Resilience Communities Virtual Meeting

3.7.6 Final Public Comment Period

A preliminary draft of the updated plan was made available to the general public for review and comment during an advertised 19-day public comment period. The principle means to receive comments on the draft plan was the Hazard Mitigation Plan website, where a form based on the Survey Monkey platform allowed the public to comment on specific sections of both volumes of the plan. A virtual public workshop to present the draft plan and inform the public on how to comment on it was held on July 12, 2021.

3.7.7 Media Outreach

The following press releases were distributed as key milestones were achieved or before major events:

- March 15, 2021—Announcement of project kick-off, including Survey #1
- June 4, 2021—Announcement of project update and Survey #2
- August 5, 2021—Announcement of draft plan availability and 2-week public comment period

Each press release was supplemented by meeting announcements on the project website. Copies of these press releases can be found in Appendix B.

3.7.8 Public Involvement Results

In total, focus groups, presentations and meetings and individual engagements reached over 600 people. Social media postings completed by community-based organizations achieved 30,300 impressions (the number of times an ad appears on a screen). The following sections provide detailed results of the public outreach activities.

Summary of Survey #1 Findings

The planning team summarized the findings from responses to Survey #1 as follows:

- Number of completed surveys = 1,299 (most were completed via the internet; some were completed as paper surveys and entered manually into Survey Monkey)
- Surveys were received from every municipality and unincorporated County community (see Figure 3-5).
- Respondents rated the following hazards as those that concern them the most (in order of concern): climate change, wildfire, drought, public health, air quality, earthquakes, and power failures.
- 85 percent of respondents were either extremely concerned, very concerned, or concerned about impacts from climate change in the planning area.
- 81 percent of respondents stated that if likely impacts from natural hazards were explicitly disclosed to them prior to purchasing a home, their decision would be influenced by that kind information.
- Over 60 percent of respondents stated that the presence of natural hazard risk was not disclosed to them at the time of home purchase.
- The concept of incentives to promote hazard mitigation actions on a personal scale was strongly supported, with over 80 percent of the respondents supporting a property tax break or incentive to encourage them to spend money to retrofit their homes.
- Over 50 percent of respondents were not sure if they had hazard-specific insurance coverage (i.e. flood or earthquake).

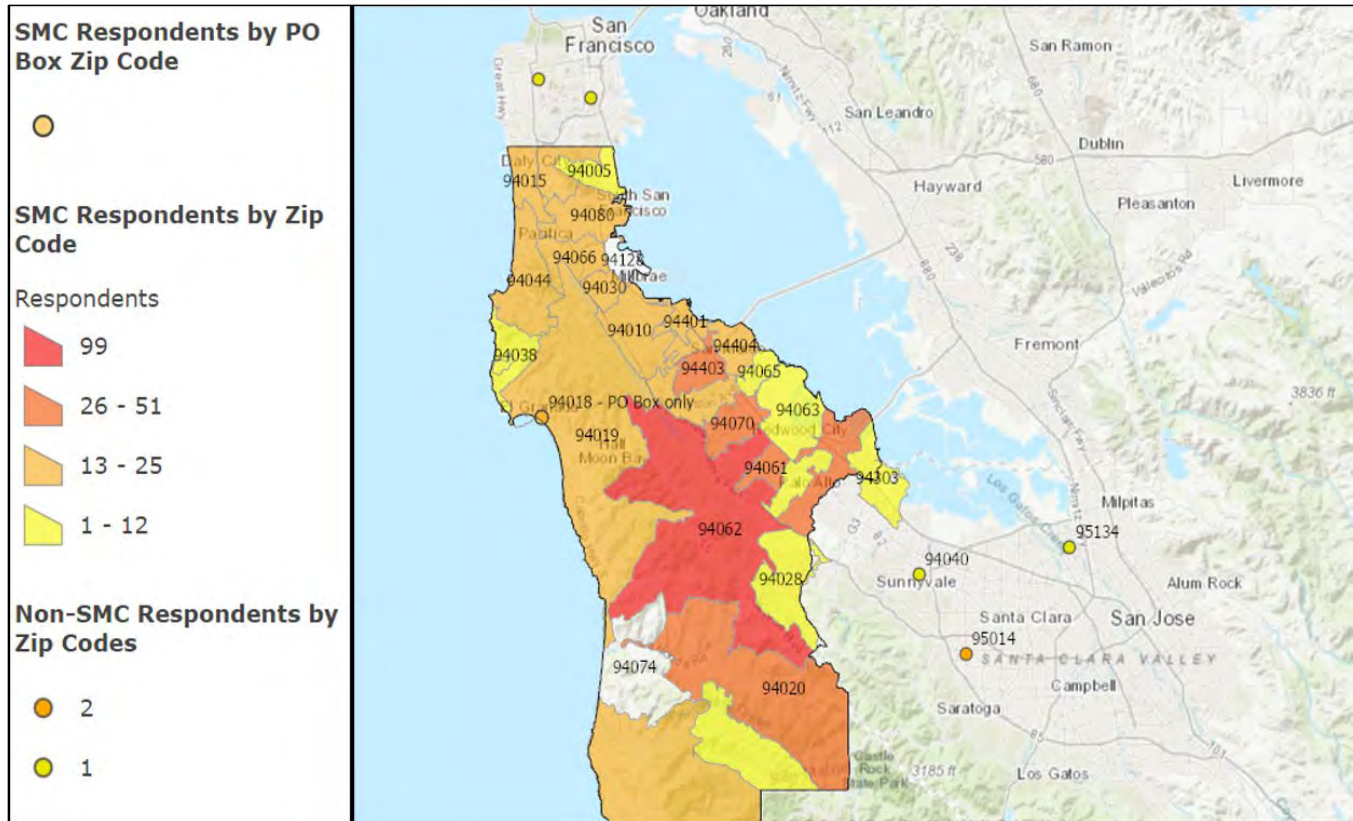

Figure 3-5. Survey #1 Survey Responses by Zip Code

- The majority of the surveys were completed by people who live in households with greater than \$230,001 in annual income, by people age 61 or older, and by people who identify as white.
- 475 write-in comments were received from the surveys.

All survey results were provided to the Steering Committee for review in support of confirming the mission statement, goals, objectives, and countywide actions for this plan update. The results also were included in the toolkit provided to each planning partner to help frame mitigation actions and public outreach strategies to include in their action plans. The survey and a summary of results are included in Appendix B.

Summary of Survey #2 Findings

The planning team summarized the findings from responses to Survey #2 as follows:

- Number of completed surveys = 703 (all completed via the internet):
 - 82.1% (577) English
 - 17.6% (124) Spanish
 - 0.3% (2) Chinese
- Survey responses were received from 16 cities and seven unincorporated communities within the County, with the majority of participants coming from Half Moon Bay (18.8%), Pacifica (12.8%), and Redwood City (11.4%). Figure 3-6 shows the distribution of survey responses by zip code.

Figure 3-6. Survey #2 Survey Responses by Zip Code

- The survey asked the same question for each of the three top hazards: “To help prepare for an extreme heat/earthquake/wildfire event, what would be most helpful to me is...” Over 70% of survey respondents replied that the top choice for all three is: “Knowing my community can provide safe, accessible emergency shelters for my family and neighbors if we need to leave our homes during such events”

The survey and a summary of results are included in Appendix B.

Final Public Comment Period

In total, 54 comments on the draft plan were received via the Survey Monkey platform and/or the email address posted on the Hazard Mitigation Plan website. Of these, 36 were specific to individual planning partners. The Core Planning Team forwarded these comments to the appropriate planning partners. Comments related to the scope and scale of this hazard mitigation plan resulted in edits to the plan. The Core Planning Team maintained a “comment tracker” to keep an internal record on the comments received and the formal response to them.

Meeting Attendance and Participation

Table 3-4 summarizes attendance and comments received from the public meetings.

3.8 PLAN DEVELOPMENT CHRONOLOGY/MILESTONES

4. SAN MATEO COUNTY PROFILE

San Mateo County covers 455 square miles over four regions: North County, South County, Mid-County, and the Coastsides. The county is bounded on the north by San Francisco City and County, on the east by San Francisco Bay, on the south by Santa Clara County and Santa Cruz County, and on the west by the Pacific Ocean. The dense urbanization of the Bayside stands in marked contrast to the agricultural areas, parks and preserves, and undeveloped lands of the rural Coastsides region. The planning area is shown in Figure 4-1.

4.1 HISTORICAL OVERVIEW

The area that is now San Mateo County was first inhabited by the Ramaytush subdivision of the Ohlone people of the central and northern California coast. After Mexico seceded from Spain in 1822, California became a territory of Mexico in 1824. Mexican governors of California granted the land encompassing current San Mateo County to soldiers and political allies. During Mexican times, foreigners from the United States and elsewhere began settling in the San Mateo area. Mexico ceded California to the United States through the Treaty of Guadalupe Hidalgo in 1848, and the discovery of gold in California caused an influx of new settlers through 1852.

When San Mateo County officially became a county in 1856, splitting from San Francisco County, development in San Mateo County halted, as economic development was focused on the north. The isolation was particularly felt in coastal areas of the county, where geological features made development difficult.

Efforts to draw the coastal area out of isolation in the late 1800s and early 1900s by constructing the Ocean Shore Railroad came to a halt with the 1906 San Francisco earthquake, when 4,000 feet of rails, along with engines, railroad cars and construction equipment, ended up in the ocean. It was two years before this section of the coast rails was rebuilt.

On the bayside of the county, the 1906 earthquake created a new middle class, as earthquake survivors relocated to San Mateo County for more affordable housing and a stable commute via a newly established streetcar. Ten new towns were established between 1908 and 1927, and in 1928, the San Francisco Bureau of Governmental Research identified San Mateo County's bayside as an area for future industrial growth.

The San Francisco Peninsula experienced substantial growth during World War II and the post-war periods as the military invested in defense projects and military installations around the area. After World War II, many veterans previously stationed in the area decided to settle in San Mateo County. Most of the resulting population increase occurred on the bayside. The County's population grew to 236,000 by 1950, to 444,000 by 1960, and to 557,000 by 1970 (National Park Service, 2010).

Data Sources: San Mateo Co.

4.2 PHYSICAL SETTING

4.2.1 Geography and Topography

The Santa Cruz Mountain range bisects San Mateo County, essentially creating three regions:

- The Bayside largely consist of mudflats, marshes, artificial fill, and broad, flat alluvial plains. The low-lying Bayside region gradually increases in slope toward the Santa Cruz Mountains, eventually becoming rolling foothills. The San Andreas Fault parallels the Santa Cruz Mountain range, delineating the threshold of the Bayside and beginning of the Santa Cruz mountainside.
- The Santa Cruz Mountains are generally rugged with dense forest and steep slopes, often exceeding 50 percent. This area is characterized by large amounts of open space, recreational areas, and trails, including Wunderlich Park, Huddart Park, and the Fifield-Cahill Ridge Trail.
- The Coast-side of San Mateo County consists of sloping foothills of the Santa Cruz Mountains to nearly sea-level coastal terraces along the Pacific Ocean. The difference in topography along the coastline itself ranges from wide, sandy beaches to rocky coves. In some places, high, rocky cliffs have emerged from the gradual erosion of coastal terraces.

Elevation ranges from sea level along the coast and bay to 2,572 feet above sea level at the Santa Cruz Mountains.

4.2.2 Natural Resources

San Mateo County's natural resources range from forested mountains to bayside marshlands and coastal ecosystems. These natural resources face pressure from development, invasive species, natural hazards, and climate change. The Bay Area is home to 35 species protected under the Endangered Species Act (Center for Biological Diversity, 2021). These resources are an integral part of the economy, sense of place, and traditional culture of the island communities. They need to be considered in hazard mitigation planning, because they are affected by natural hazards and can influence the way that hazards alter the built environment.

4.2.3 Water Resources

The bayside of San Mateo County has experienced high amounts of urban development, which required flood control modifications within nearby watersheds. Streams that once naturally flooded and meandered around hillsides before reaching the San Francisco Bay were hardscaped and straightened into channels. However, the coast side of San Mateo County consists mostly of open space and agricultural land with sparsely distributed towns. Most watersheds on the coast side have little to no flood control modifications; however, water diversions, lack of riparian zone management, and water quality issues all present challenges for these resources. There are nine major watersheds in San Mateo County (County of San Mateo Public Works, 2021):

- **Gazos Creek Watershed**—Gazos Creek is a priority watershed for steelhead and coho salmon recovery. Major tributaries include Old Woman's Creek and Middle Fork Gazos Creek.
- **Pilarcitos Creek Watershed**—Major tributaries include Arroyo Leon and Mills Creek. The San Francisco Public Utilities Commission manages the Pilarcitos Reservoir in the upper watershed.
- **Pescadero Creek Watershed**—The Pescadero Creek Watershed is the largest watershed in San Mateo County. It consists of two major sub-watersheds: Pescadero Creek and Butano Creek. The watershed also contains an impressive marsh inhabited by several native and protected species such as steelhead, California red-legged frog, and San Francisco garter snake.

- **Colma Creek Watershed**—The headwaters of Colma Creek are on San Bruno Mountain. The lower reaches of Colma Creek are managed by the San Mateo County Flood Control District
- **San Francisquito Creek Watershed**—Major tributaries include Los Trancos Creek, Corte Madera Creek, and Bear Gulch Creek. Los Trancos and San Francisquito form the boundary between San Mateo and Santa Clara counties.
- **San Gregorio Watershed**—Major tributaries include El Corte de Madera Creek, Alpine Creek, and La Honda Creek. A small lagoon forms at the mouth of San Gregorio Creek during the dry season.
- **San Mateo Watershed**—The San Mateo Creek Watershed includes three reservoirs: San Andreas Lake, and Upper and Lower Crystal Springs Reservoirs, managed by the San Francisco Public Utilities Commission.
- **Belmont Creek Watershed**—Belmont Creek watershed originates east of the Pulgas Ridge in the hills above Hallmark Drive and covers 1,952 acres (3.1 sq mi).
- **Atherton Creek Watershed**—Atherton creek flows from headwaters just west of Interstate 280 to Alameda de las Pulgas. Further downstream, the creek is highly modified and flows through a concrete channel to El Camino Real and then a combination of concrete channel and culverts to San Francisco Bay. Several small tributaries drain into Atherton Creek above Alameda de las Pulgas, but further downstream the drainage network consists of underground culverts or storm drains.

4.2.4 Climate

The climate of San Mateo County is characterized by dry, mild summers and moist, cool winters. About 80 percent of the total annual precipitation occurs during from November through March. Table 4-1 summarizes normal climate data from 1945 through 2016 at Western Regional Climate Center weather station at San Francisco International Airport.

Table 4-1. Normal Precipitation and Temperatures, 1945 – 2020

	Precipitation (inches)	Temperature (°F)		
		Minimum	Average	Maximum
Annual	19.94	49.3	57.3	65.2
Winter (December – February)	11.62	42.6	50.4	59.1
Summer (June – August)	.19	52.8	62.6	72.0
Spring (March – May)	4.65	46.2	56.0	66.7
Autumn (September – November)	3.48	47.4	60.1	73.4

Weather Station: San Francisco International Airport

4.2.5 Vegetation

San Mateo County's land managing agencies and stewards have the responsibility of caring for a diverse mix of ecosystems, including estuarine, marine, oak woodland, redwood forest, coastal scrub, and oak savannah. Home to more than 112,000 acres of protected lands, the county's open spaces provide community members and visitors with water, recreation opportunities, scenic vistas, wildlife habitat, and vital refuges for threatened, endangered, and special status species. The county's natural resources provide numerous ecological, economic, and social benefits that are vitally linked to the county's communities.

4.2.6 Geology

The San Francisco Peninsula is a relatively narrow band of rock at the north end of the Santa Cruz Mountains separating the Pacific Ocean from San Francisco Bay. It represents one mountain range in a series of northwesterly-aligned mountains forming the Coast Ranges geomorphic province, which stretches from the Oregon border nearly to Point Conception. In the San Francisco Bay area, most of the Coast Ranges have developed on a basement of tectonically mixed Cretaceous- and Jurassic-age (70- to 200-million years old) rocks of the Franciscan Complex. These basement rocks are capped locally by younger sedimentary and volcanic rocks. Most of the Coast Ranges are covered by younger surficial deposits that reflect geologic conditions for about the last million years (City of San Mateo, 2004).

The major fault in the region is the San Andreas Fault. Lateral and vertical movement on the many splays of the San Andreas Fault system and other secondary faults has produced a dominant northwest-oriented topographic trend throughout the Coast Ranges. This trend reflects the boundary between the North American plate to the east and the Pacific plate to the west. The San Andreas Fault system is about 40 miles wide in the Bay Area and extends from the San Gregorio fault at the coastline to the Coast Ranges-Central Valley blind thrust at the western edge of the Great Central Valley. The San Andreas Fault is the dominant structure in the system, nearly spanning the length of California, and capable of producing the highest magnitude earthquakes. Many other subparallel or branch faults within the San Andreas system are equally active and capable of generating large earthquakes. Right-lateral movement dominates on these faults, but an increasingly large amount of thrust faulting resulting from compression across the system is now being identified (City of San Mateo, 2004).

4.2.7 Soils

Uplands comprise about 80 percent of the planning area. The following four soil associations have been mapped and described in the uplands (U.S. Soil Conservation Service, 1961):

- Hugo-Butano—Steep and very steep, brownish, moderately deep and deep soils on sedimentary rocks under coniferous forest.
- Miramar-Sheridan—Steep and very steep, dark-colored, shallow to deep soils on acid igneous rocks under shrubs and forest.
- Sweeney-Mindego—Sloping to very steep, dark-colored, moderately deep soils on basic igneous rocks under grass or forest.
- Lobitos-Santa Lucia-Gazos—Sloping to very steep, grayish-brown, very shallow to deep soils on sedimentary rocks under shrubs and grass with some trees.

Soils of the marine terraces, alluvial fans, and floodplains comprise less than 20 percent of the planning area, but they contain most of the agricultural land and many of the home sites of the survey area. Three soil associations have been mapped in these lower areas (U.S. Soil Conservation Service, 1961):

- Tierra-Colma—Gently sloping to steep, dark-colored, shallow to deep soils on high, dissected marine terraces; composed of weathered sedimentary rocks or alluvium from them; under grass and shrubs.
- Watsonville-Elkhorn—Nearly level to sloping, grayish, shallow to deep soils formed on low marine terraces composed of alluvium from sedimentary rocks or mixed sources; under grass.
- Tunitas-Lockwood—Nearly level to sloping, grayish or brownish, deep soils on fans and floodplains composed of alluvium from various rocks; under grass with some shrubs and trees.

4.3 DEVELOPMENT

4.3.1 Land Use

A key element in risk assessment is to look at existing land use in hazard areas that have a delineated extent, since land use affects the level of risk. For example, an agricultural, low-density use faces a lower risk in a floodplain than a high-density, residential use. Each municipality in San Mateo County has its own land use plan.

Unincorporated San Mateo County's land is used primarily for resource management. Permitted uses include agricultural, commercial, and residential types of development. The County has adopted residential, commercial, industrial, and other resource management land uses to promote community values for the benefit of future generations. Table 4-2 list San Mateo County's objectives and designations for land use in unincorporated areas. Figure 4-2 shows the distribution of land use in unincorporated San Mateo County.

Table 4-2. Land Use Objectives and Designations for Unincorporated San Mateo County

	Land Use Objectives	Land Use Designations
Urban Unincorporated Areas	<ul style="list-style-type: none"> • Maximize the efficiency of public facilities, services, and utilities • Minimize energy consumption • Encourage the orderly formation and development of local government agencies • Protect and enhance the natural environment • Revitalize existing developed areas • Discourage urban sprawl. 	<ul style="list-style-type: none"> • Residential • Commercial • Office • Industrial • Airport • Institutional • Recreation • General Open Space.
Rural Unincorporated Areas	<ul style="list-style-type: none"> • Preserve natural resources • Provide for the managed productive use and monitoring of resources • Provide outdoor recreation • Protect public health and safety. 	<ul style="list-style-type: none"> • Agriculture • Lower Density Residential • Recreation • General Open Space • Timber Production • Solid Waste Disposal Facility.

4.3.2 Building Count, Occupancy Class and Estimated Replacement Value

Table 4-3 presents planning area building counts by occupancy class. Table 4-4 summarizes estimated replacement value for building structures and contents combined.

4.3.3 Critical Facilities

A critical facility is a structure, facility, or other improvement that, because of its function, service area, or uniqueness, provides service that enables the continuous operation of critical business and government functions, and is critical to human health and safety or economic security. Critical facilities are essential to the health and welfare of the population. They become especially important after a hazard event.

Critical facilities typically include police and fire stations, schools, and emergency operations centers. They also include infrastructure such as roads and bridges that provide ingress and egress and allow emergency vehicles access to those in need, as well as utilities that provide water, electricity, and communication services to the community. Also included are facilities and railroads that hold or carry significant amounts of hazardous materials with a potential to impact public health and welfare in a hazard event.

The Steering Committee recommended that this plan update use a definition of critical facilities that aligns with FEMA’s “community lifelines” concept. The following categories of lifelines are defined as critical facilities:

- **Communications**—Infrastructure, alerts, warnings, messages, 911 and dispatch, responder communications, and financial services
- **Energy**—Power (grid), temporary power, and fuel
- **Food, Water and Shelter**—Evacuations, schools, food/potable water, shelter, durable goods, water infrastructure, and agriculture
- **Hazardous Materials**—Facilities, hazardous debris, pollutants, and contaminants
- **Health and Medical**—Medical care (hospitals), patient movement, public health, fatality management, health care, and supply chain
- **Safety and Security**—Law enforcement/security, search and rescue, fire services, government service, responder safety, and imminent hazard mitigation
- **Transportation**—Highway/roadway, mass transit, railway, aviation, maritime and pipeline

Table 4-5 summarizes critical facilities in the planning area. General locations of identified critical facilities are shown on Figure 4-3 and Figure 4-4.

4.3.4 Development Trends

An understanding of population and development trends can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place to protect human health and community infrastructure. The Disaster Mitigation Act requires that communities consider land use trends, which can alter the need for, and priority of, mitigation options over time. Land use and development trends significantly affect exposure and vulnerability to various hazards. For example, significant development in a hazard area increases the building stock and population exposed to that hazard.

New development that has occurred in the last five years and potential future development in the next five years, as identified by each jurisdiction, are addressed in the jurisdictional annexes in Volume 2 of this plan. This section describes general countywide trends.

Areas targeted for future growth and development have been identified across the county. According to the Association of Bay Area Governments (ABAG), the County of San Mateo is expected to grow considerably in the next 10 years, with an estimated population of 862,800 by 2030—a 10 percent increase from the current population. Significant residential and non-residential development are expected, with increasing establishment of technology companies throughout the County likely in the near future. While coastal communities will experience some degree of future exposure based on anticipated land use, most of the future impact will be in the bayside communities.

On May 20, 2021, the ABAG Executive Board approved the *Final Regional Housing Needs Allocation Methodology and Draft Allocations*. The current housing allocation for the 21 listed jurisdictions in San Mateo County (including the unincorporated areas) is 47,687 housing units. Very low income and above moderate-income housing types make up a sizeable portion of this allocation (ABAG, 2021). All cities and the County are currently updating their housing elements. This will assess housing needs from 2023 to 2031 and establish policies and programs to address them. The housing element must also demonstrate that the unincorporated County has sites that can be developed or redeveloped to meet the County's regional housing needs allocation.

In fiscal year 2019-20, the County's Planning and Building Department processed 2,294 building permits, barely less than its goal of 2,300, despite almost two months of mandated closure due to the COVID-19 pandemic. Most of these permits were obtained via the new online permit center. The department estimates that the total number of building permits to be issued in fiscal year 2020-21 will be close to the target of 2,300. The current County budget includes significant continued spending on capital projects, including the San Mateo Medical Center, County Office Building 3, Pescadero Fire Station 59, Tower Road Fire Station 17 replacements, and Memorial Park Facility Improvements. Each municipal planning partner to this plan has performed a building permit assessment for the performance period since the 2016 plan. These assessments are included in Volume 2 of this plan.

Development in San Mateo County will likely be impacted by the COVID-19 pandemic over the next few years. The current County budget reflects \$6.3 billion over the next two years for ongoing efforts against COVID-19, including the administration of vaccines, prevention and mitigation measures, and recovery programs to help people, businesses, and community organizations. As multiple sectors recover from the pandemic, San Mateo County will need to address housing concerns for those who are experiencing homelessness. The current budget reflects the acquisition of hotels and the building of a navigation center to house those experiencing homelessness.

4.4 DEMOGRAPHICS

4.4.1 Population Characteristics

San Mateo County has the 14th largest population of California's 58 counties, with an estimated 2020 population of 773,244. The sections below provide details on population history and distribution by jurisdiction within the planning areas.

Recent Population by Jurisdiction

Table 4-6 shows the population of the County and its incorporated cities from 1990 to 2020. Daly City and the City of San Mateo are the largest cities in San Mateo County, together accounting for 27.6 percent of the planning area's population in 2010 and 27.4 percent in 2020. Unincorporated areas accounted for 8.6 percent of the planning area's population in 2010 and about 8.5 percent in 2020. Overall growth in unincorporated areas was about 7.3 percent from 2010 to 2020; Daly City grew about 8.0 percent during the same timeframe, and the City of San Mateo grew by about 6.0 percent.

Table 4-6. Recent Population by Jurisdiction

	Population

Total	649,623	707,163	718,451	771,061

Source: California Department of Finance, 2021

Historical Growth Rate

Population changes are useful socio-economic indicators. A growing population generally indicates a growing economy, while a decreasing population signifies economic decline. Figure 4-5 shows the percentage population growth rate per decade from 1970 through 2020 for San Mateo County and for the state. The planning area's population growth of about 5.4 percent through the 1970s increased to 10.6 percent in the 1980s. Population growth slowed slightly in the 1990s and dropped sharply to 1.6 percent between 2000 and 2010. The period from 2010 through 2020 saw an increase in population of about 7.3 percent for San Mateo County while the State of California experienced 6.9 percent growth.

Source: California Department of Finance, 2021

Figure 4-5. State of California and San Mateo County Population Growth per Decade

Daily Commuting Population

County data indicates that San Mateo County has had a greater percentage of people working outside of their place of residence (79.2 percent) than the Bay Area (61.9 percent), California (60 percent), and the United States (43.7 percent). This has remained consistent from 2005 through 2019.

According to the Census Bureau's American Community Survey for 2019, about 56.8 percent of San Mateo County's employed population worked in San Mateo County and 42.8 percent worked outside of the county. San Francisco City and County receives the highest number of commuting workers in the nation, and the highest number of commuters to San Francisco are from San Mateo County, followed by Alameda County.

The majority of commuters to San Mateo County came from San Francisco, followed by Santa Clara County, and Alameda County. Some commuters travel to San Mateo County from as far as Sacramento and Tuolumne Counties. About 150,000 out-of-county commuters work in San Mateo County, and more than 100,000 commuters pass through the county as part of their daily commute to San Francisco, the North Bay Area, Alameda County, or the South Bay Area.

This large commuter contingent has impacts on planning for the County's infrastructure and service needs, as well as on planning for hazard mitigation and emergency management. Commuters may be familiar with the area

immediately surrounding their place of business or regular route to work but may be less familiar with the services and resources provided to the population during a disaster event.

The American Community Survey estimates that 66.5 percent of workers in the County commute alone by vehicle to work.

4.4.2 Demographic Indicators for Social Vulnerability

Some populations are at greater risk from hazard events because of decreased resources or physical abilities. People living near or below the poverty line, the elderly, individuals with disabilities, women, children, ethnic minorities, and renters all experience, to some degree, more severe effects from disasters than the general population. These vulnerable populations may vary from the general population in risk perception, living conditions, access to information before, during and after a hazard event, capabilities during an event, and access to resources for post-disaster recovery. Indicators of vulnerability—such as disability, age, poverty, and minority race and ethnicity—often overlap spatially and often in the geographically most vulnerable locations. Detailed spatial analysis to locate areas where there are higher concentrations of vulnerable community members can help to extend focused public outreach and education to the most vulnerable community members.

Indicators from Census data are commonly used to assess social vulnerability. For the social vulnerability demographic profile component for this plan, the following indicators were selected:

- **Population Under 15 Years of Age**—Children, especially in the youngest age groups, often cannot protect themselves during a disaster because they lack the necessary resources, knowledge, or life experiences to effectively cope with the situation. Hazard mitigation planning needs to be tailored such that the community is prepared to ensure that children are safe during disaster events and that families with children have access to necessary information and tools.
- **Population Over 65 years of Age**—People 65 years old and older are likely to require financial support, transportation, medical care, or assistance with ordinary daily activities, especially during disasters. They are more likely to be vision, hearing, and/or mobility impaired, more likely to experience mental impairment or dementia, and more likely to live in assisted-living facilities where emergency preparedness is at the discretion of facility operators. Hazard mitigation needs to account for such needs.
- **People of Color**—Social and economic marginalization of certain racial and ethnic groups, including real estate discrimination, has resulted in greater vulnerability of these groups to all types of hazards. Based on data from a number of studies, African Americans, Native Americans, and populations of Asian, Pacific Islander, or Hispanic origin are likely to be more vulnerable than the broader community. Research shows that minorities are less likely to be involved in pre-disaster planning and experience higher mortality rates during disaster events. Post-disaster recovery often exhibits cultural insensitivity. Since higher proportions of ethnic minorities live below the poverty line than the majority white population, poverty can compound vulnerability. Hazard mitigation plans need to identify the spatial distribution of these population groups and direct resources to reduce their vulnerability to hazards.
- **Limited English-Speaking Households**—For populations with limited English proficiency, disaster communication may be difficult, especially in communities for whom translators and accurate translations of advisories may be scarce. Such households are likely to rely on relatives and local social networks (i.e., friends and neighbors) for information for preparing for a disaster event.
- **Persons with Disabilities**—Persons with disabilities or other access and functional needs are more likely to have difficulty responding to a hazard event than the general population. Family, neighbors, and local government are the first level of response to assist these individuals, and coordination of efforts to meet

their access and functional needs is paramount to life safety efforts. Emergency managers need to distinguish between functional and medical needs to plan for incidents that require evacuation and sheltering. Knowing the percentage of population with access and functional needs allows emergency management personnel and first responders to anticipate the services needed by that population.

- **Families Below the Poverty Level**—Economically disadvantaged families have limited ability to absorb losses due to hazard impacts. Wealth enables families to absorb and recover from losses more quickly, due to insurance, savings, and often the availability of low-cost credit. People with lower incomes tend not to have access to these resources. At the same time, poorer families are likely to inhabit poor quality housing and reside in locations that are most vulnerable to hazard events. Economically disadvantaged neighborhoods are also likely to have relatively poor infrastructure and facilities, which exacerbate the disaster consequences for community members there.

These indicators were selected based on the equity priorities established by the County, and the availability of datasets at a small enough resolution to determine probable characteristics of populations within identified hazard areas. The following sections estimate the age, race, language, and disability indicators for San Mateo County; poverty levels are presented in Section 4.5. Additional data sets that have been aggregated were utilized to support the equity lens for the risk assessment, as explained in detail in Chapter 7.

Age Distribution

The overall age distribution for the County is shown in Figure 4-6. Based on U.S. Census 2019 data estimates, 16.5 percent of the planning area's population is 65 or older, compared with the state average of 14.8 percent. Census data indicate that 26.6 percent of the over-65 population have disabilities of some kind, and 6.0 percent have incomes below the poverty line. It is also estimated that 16.8 percent of the population is 14 or younger, which varies slightly from the state's average of 18.7 percent. Children under the age of 18 account for 6.2 percent of individuals who are below the poverty line.

Race, Ethnicity and Language

Figure 4-7 shows the race/ethnicity distribution in the planning area according to the *San Mateo County Stigma Baseline Survey* (Strata Research, Inc., 2020; based on U.S. Census Bureau 2018 American Community Survey 5-Year Estimates). U.S. Census data show that the planning area has a 35.9 percent foreign-born population. The Census estimates 16.7 percent of community members speak English "less than very well" and lists the following as the five languages most commonly spoken at home (number of people in parentheses) (U.S. Census, 2021):

- English (401,961)
- Spanish (125,880)
- Chinese (64,021)
- Tagalog (45,801)
- Hindi (8,103)

Persons with Disabilities or with Access and Functional Needs

According to the 2019 Census estimates, persons with disabilities or with access and functional needs make up 7.6 percent of the total civilian non-institutionalized population of San Mateo County.

4.5 ECONOMY

4.5.1 Living Wage

The Massachusetts Institute of Technology (MIT) has developed a calculator to estimate the living wage needed to support different types of families. It estimates geographically specific living wages, as an hourly rate, required to acquire basic minimum necessities such as health, housing, and transportation. Table 4-7 presents summary information from the calculator for San Mateo for 2020.

Table 4-7. 2020 Hourly Living Wage Calculation for San Mateo County

	One Adult	One Adult + One Child	Two Adults	Two Adults + One Child
Living Wage	\$28.00	\$55.59	\$41.13	\$49.45
Poverty Wage	\$6.13	\$8.29	\$8.29	\$10.44
Minimum Wage ^a	\$12.00			

a. 2020 California Minimum Wage for Employers with 25 Employees or Less

Source: Massachusetts Institute of Technology, 2020

4.5.2 Household Income

Based on U.S. Census Bureau estimates, per capita income in the planning area in 2019 was \$68,949, and the median household income was \$138,500. It is estimated that 16.9 percent of households receive annual incomes between \$100,000 and \$149,999, 46 percent receive annual incomes above \$150,000, and 8.3 percent make less than \$25,000 per year. According to the 2019 Census estimates, 3.1 percent of households and 6.0 percent of individuals had income that fell below the poverty line.

4.5.3 Employment by Sector

Figure 4-8 shows the breakdown of employment by industry sector in the planning area, as reported in the 2019 American Community Survey.

Figure 4-8. Industry in the Planning Area

4.5.4 Large Employers

San Mateo County is home to diverse businesses, from international corporations to small shops and manufacturers. As the social media realm continues to expand, some county businesses such as Facebook's headquarters in Menlo Park become tourist attractions. California state data lists the following as the largest employers in San Mateo County (California Employment Development Department, 2021):

- Bart Daly City Station
- Electric Charging Station
- Electronic Arts Inc.
- Facebook Inc.
- Fisher Investments (San Mateo)
- Fisher Investments (Woodside)
- Forced Dump Debris Box Service
- Genentech Inc.
- Gilead Sciences Inc.
- Kaiser Permanente Redwood City
- Kaiser Permanente South San Francisco
- LSA Global
- Mills-Peninsula Medical Center
- Motif Inc.
- Oracle Corporation
- Palo Alto VA Hospital Medical Center
- Plateau Systems
- San Francisco International Airport
- San Mateo County Behavior
- San Mateo County Tax Collector
- San Mateo Medical Center
- Sciex LLC
- SRI International
- Visa Inc.
- YouTube LLC

4.5.5 Employment by Occupation

Figure 4-9 shows the breakdown of employment by occupation in the planning area, as reported in the 2019 American Community Survey.

Figure 4-9. Occupations in the Planning Area

4.5.6 Unemployment

According to the American Community Survey, 68.8 percent of the planning area's population 16 and older is in the labor force. Figure 4-10 compares unemployment trends from the State of California and San Mateo County from 2010 through 2020. San Mateo County's unemployment rate decreased each year from 2010 – 2019. At its lowest in 2019, unemployment was at 2.1 percent, before rising precipitously to 6.9 percent in 2020, the year of the COVID-19 pandemic. The state unemployment rate remained higher than the County's throughout this period and experienced a similar fall and rise.

5. HAZARDS OF CONCERN

Defining the hazards that present the greatest risk to the planning area is the first step in assessing overall risk to the community. The planning team and Steering Committee reviewed available information to determine what types of hazards may affect the planning area, how often they can occur, and their potential severity. This effort defined hazards of concern, for which individual risk assessments are presented in this hazard mitigation plan.

5.1 MAJOR PAST HAZARD EVENTS

A list of historical federal disaster declarations affecting the planning area offers an initial indication of the types of hazards most likely to pose risks to the community. Federal disaster declarations are typically issued for hazard events that cause more damage than state and local governments can handle without assistance from the federal government, although no specific dollar loss threshold has been established for these declarations. A federal disaster declaration puts federal recovery programs into motion to help disaster victims, businesses, and public entities. Some of the programs are matched by state programs. Federal disaster, emergency, or fire management assistance declarations were issued for 22 events since 1954 in the planning area, as listed in Table 5-1.

Table 5-1. Federal Disaster Declarations for Hazard Events that Affected the Planning Area

Type of Event	Disaster Declaration #	Date
Wildfires (CZU Lightning Complex)	DR-4558	August 16 – September 26, 2020
COVID-19 Pandemic	DR-4482	January 20, 2020 – present
Severe Winter Storms, Flooding, and Mudslides	DR-4308	February 1 – 23, 2017
Severe Winter Storms, Flooding, and Mudslides	DR-4305	January 18 – 23, 2017
Severe Storms, Flooding, Landslides, and Mudslides	DR-1646	March 29 – April 16, 2006
Severe Storms, Flooding, Mudslides, and Landslides	DR-1628	December 17, 2005 – January 3, 2006
Severe Winter Storms and Flooding	DR-1203	February 2 – April 30, 1998
Severe Storms, Flooding, Mud, and Landslides	DR-1155	December 28, 1996 – April 1, 1997
Severe Winter Storms, Flooding, Landslides, Mud Flows	DR-1046	February 13, 1995 – April 19, 1995
Severe Winter Storms, Flooding, Landslides, Mud Flows	DR-1044	January 3 – February 10, 1995
Severe Freeze	DR-894	December 19, 1990 – January 3, 1991
Loma Prieta Earthquake	DR-845	October 17 – December 18, 1989
Severe Storms, Flooding	DR-758	February 12 – March 10, 1986
Coastal Storms, Floods, Slides, Tornadoes	DR-677	January 21 – March 30, 1983
Severe Storms, Flood, Mudslides, High Tide	DR-651	December 19, 1981 – January 8, 1983
Flooding	DR-145	February 25, 1963
Severe Storms	DR-138	October 24, 1962
Flooding	DR-122	March 6, 1962
Flooding	DR-82	April 4, 1958

Type of Event	Disaster Declaration #	Date
Wildfires	DR-65	December 29, 1956
Flooding	DR-47	December 23, 1955
Flooding	DR-15	February 5, 1954

Review of these events helps identify hazards of concern and targets for risk reduction activities. However, many natural hazard events do not trigger federal disaster declaration protocol but have significant impacts on their communities. These events are also important to consider in identifying hazards of concern and establishing their recurrence intervals. Individual jurisdictional annexes in Volume 2 list the events that affected each planning partner.

5.2 IDENTIFIED HAZARDS OF CONCERN

The Steering Committee considered the full range of natural hazards that could affect the planning area and then selected those that present the greatest concern for risk assessment in this plan. The process incorporated a review of state and local hazard planning documents as well as information on the frequency of, magnitude of, and costs associated with hazards that have struck the planning area or could do so. Anecdotal information regarding natural hazards and the perceived vulnerability of the planning area's assets to them was also used. Based on the review, this plan addresses the following hazards of concern (presented in alphabetical order; the order of listing does not indicate the hazards' relative severity):

- Climate change
- Dam failure
- Drought
- Earthquake
- Flood
- Landslide/mass movements
- Sea-level rise
- Severe weather
- Tsunami
- Wildfire

Additionally, other "hazards of interest" are qualitatively profiled but not fully assessed. The Steering Committee determined that these other hazards, though not required to be evaluated under federal guidelines for hazard mitigation plans, are important to recognize qualitatively in this plan. Profiles, without quantitative risk assessments, are provided for the following hazards:

- Public health and pandemic
- Terrorism
- Cyber threats
- Communication failure
- Hazardous materials release
- Pipeline and tank failure
- Aircraft incidents.

6. RELEVANT LAWS, ORDINANCES AND PROGRAMS

Existing regulations, agencies and programs at the federal, state, and local level can support or impact hazard mitigation actions identified in this plan. Hazard mitigation plans are required to include a review and incorporation, if appropriate, of existing plans, studies, reports, and technical information as part of the planning process (44 CFR, Section 201.6(b)(3)). Information presented in this section can be used to review local capabilities to implement the action plan this hazard mitigation plan presents. Individual review by each planning partner of existing local plans, studies, reports, and technical information is presented in the annexes in Volume 2.

6.1 RELEVANT FEDERAL AND STATE AGENCIES, PROGRAMS AND REGULATIONS

State and federal regulations and programs that need to be considered in hazard mitigation are constantly evolving. For this plan, a review was performed to determine which regulations and programs are currently most relevant to hazard mitigation planning. The findings are summarized in Table 6-1 and Table 6-2. Short descriptions of each program are provided in Appendix C.

Table 6-1. Summary of Relevant Federal Agencies, Programs and Regulations

Agency, Program or Regulation	Hazard Mitigation Area Affected	Relevance
Americans with Disabilities Act	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable federal acts.
Bureau of Land Management	Wildfire Hazard	The Bureau funds and coordinates wildfire management programs and structural fire management and prevention on BLM lands.
Civil Rights Act of 1964	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable federal acts.
Clean Water Act	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable federal acts.
Community Development Block Grant Disaster Resilience Program	Action Plan Funding	This is a potential alternative source of funding for actions identified in this plan.
Community Rating System	Flood Hazard	This voluntary program encourages floodplain management activities that exceed the minimum National Flood Insurance Program requirements.
Disaster Mitigation Act	Hazard Mitigation Planning	This is the current federal legislation addressing hazard mitigation planning.
Emergency Relief for Federally Owned Roads Program	Action Plan Funding	This is a possible funding source for actions identified in this plan.
Emergency Watershed Program	Action Plan Funding	This is a possible funding source for actions identified in this plan.
Endangered Species Act	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable federal acts.

Agency, Program or Regulation	Hazard Mitigation Area Affected	Relevance
Federal Energy Regulatory Commission Dam Safety Program	Dam Failure Hazard	This program cooperates with a large number of federal and state agencies to ensure and promote dam safety.
Federal Wildfire Management Policy and Healthy Forests Restoration Act	Wildfire Hazard	These documents mandate community-based collaboration to reduce risks from wildfire.
National Dam Safety Act	Dam Failure Hazard	This act requires a periodic engineering analysis of most dams in the country
National Environmental Policy Act	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable federal acts.
National Fire Plan (2001)	Wildfire Hazard	This plan calls for joint risk reduction planning and implementation by federal, state and local agencies.
National Flood Insurance Program	Flood Hazard	This program makes federally backed flood insurance available to homeowners, renters, and business owners in exchange for communities enacting floodplain regulations
National Incident Management System	Action Plan Development	Adoption of this system for government, nongovernmental organizations, and the private sector to work together to manage incidents involving hazards is a prerequisite for federal preparedness grants and awards
National Landslide Preparedness Act	Risk Assessment of Landslide Hazard	This act authorized a national landslide hazards reduction program and a 3D elevation program, providing tools and data to assess the landside hazard.
Presidential Executive Order 11988 (Floodplain Management)	Flood Hazard	This order requires federal agencies to avoid long and short-term adverse impacts associated with modification of floodplains
Presidential Executive Order 11990 (Protection of Wetlands)	Action Plan Implementation	FEMA hazard mitigation project grant applications require full compliance with applicable presidential executive orders.
U.S. Army Corps of Engineers Dam Safety Program	Dam Failure Hazard	This program is responsible for safety inspections of dams that meet size and storage limitations specified in the National Dam Safety Act.
U.S. Army Corps of Engineers Flood Hazard Management	Flood Hazard, Action Plan Implementation, Action Plan Funding	The Corps of Engineers offers multiple funding and technical assistance programs available for flood hazard mitigation actions
U.S. Fire Administration	Wildfire Hazard	This agency provides leadership, advocacy, coordination, and support for fire agencies and organizations.
U.S. Fish and Wildlife Service	Wildfire Hazard	This service's fire management strategy employs prescribed fire throughout the National Wildlife Refuge System to maintain ecological communities.

Table 6-2. Summary of Relevant State Agencies, Programs and Regulations

Agency, Program or Regulation	Hazard Mitigation Area Affected	Relevance
AB 9: Fire safety: Wildfires: Fire Adapted Communities	Wildfire Hazard	Establishes the Regional Forest and Fire Capacity Program to support regional leadership to build local and regional capacity and develop, prioritize, and implement strategies and projects that create fire-adapted communities and landscapes by improving watershed health, forest health, community wildfire preparedness, and fire resilience.
AB 32: The California Global Warming Solutions Act	Action Plan Development	Establishes a state goal of reducing greenhouse gas emissions to 1990 levels by 2020
AB 38: Fire safety: Low-Cost Retrofits: Regional Capacity Review: Wildfire Mitigation	Wildfire Hazard	Directs the California Natural Resources Agency to review the regional capacity of each county that contains a very high fire hazard severity zone and establishes a comprehensive wildfire mitigation and assistance program.
AB 70: Flood Liability	Flood Hazard	A city or county may be required to partially compensate for property damage caused by a flood if it unreasonably approves new development in areas protected by a state flood control project
AB 162: Flood Planning	Flood Hazard	Cities and counties must address flood-related matters in the land use, conservation, and safety and housing elements of their general plans.
AB 267: California Environmental Quality Act: Exemption: Prescribed Fire, Thinning, and Fuel Reduction Projects.	Wildfire Hazard	Extends to January 1, 2026, the exemption from requirements of the California Environmental Quality Act for prescribed fire, thinning, or fuel reduction projects on federal lands to reduce the risk of high-severity wildfire that had been reviewed under the National Environmental Policy Act.
AB 380: Forestry: Priority Fuel Reduction Projects	Wildfire Hazard	Requires the Department of Forestry and Fire Protection to identify priority fuel reduction projects annually and exempts the identified priority fuel reduction projects from certain legal requirements.
AB 431: Forestry: Timber Harvesting Plans: Defensible Space: Exemptions	Wildfire Hazard	Extends to January 1, 2026, the exemption from a requirement to complete a timber harvest plan for maintaining defensible space between 150 feet and 300 feet from a habitable structure.
AB 497: Forestry and Fire Protection: Local Assistance Grant Program: Fire Prevention Activities: Street and Road Vegetation Management	Wildfire Hazard	Appropriates funds for local assistance grants for fire prevention activities with priority for projects that manage vegetation along streets and roads to prevent the ignition of wildfire.
AB 575: Civil Liability: Prescribed Burning Activities: Gross Negligence	Wildfire Hazard	Provides that a private entity engaging in a prescribed burning activity that is supervised by a person certified as burn boss is liable for damages to a third party only if the prescribed burning activity was carried out in a grossly negligent manner.
AB 642: Wildfires	Wildfire Hazard	Makes changes to support cultural and prescribed fire, including the creation of a Cultural Burning Liaison at the Department of Forestry and Fire Protection, and requires a proposal for creating a prescribed fire training center.
AB 747: General Plans—Safety Element	Hazard Mitigation Planning	The safety elements of cities' and counties' general plans must address evacuation routes and include any new information on flood and fire hazards and climate adaptation and resiliency strategies.
AB 800: Wildfires: local general plans: safety elements: fire hazard severity zones.	Wildfire Hazard	Establishes provisions for wildfire hazard mapping and applications for that mapping in General Plan Safety Elements.
AB 1255: Fire prevention: Department of Forestry and Fire Protection: Grant Programs	Wildfire Hazard	Requires the Natural Resources Agency to develop a guidance document that describes goals, approaches, opportunities, and best practices in each region of the state for ecologically appropriate, habitat-specific fire risk reduction. Requires consultation with counties related to the Department of Forestry and Fire Protection's local fire prevention grant program.

Agency, Program or Regulation	Hazard Mitigation Area Affected	Relevance
AB 1295: Residential development Agreements: Very High-Risk Fire Areas	Wildfire Hazard	Prohibits the legislative body of a city or county from entering into a residential development agreement for property in a very high fire risk area as designated by a local agency or a fire hazard severity zone classified by the director of CAL FIRE.
AB 1439: Property Insurance Discounts	Wildfire Hazard	Requires residential or commercial property insurance policies to include a discount if a local government where the insured property is located funds a local wildfire protection or mitigation program.
AB 1500: Safe Drinking Water, Wildfire Prevention, Drought Preparation, Flood Protection, Extreme Heat Mitigation, and Workforce Development Bond Act of 2022.	Drought, Flood, Extreme Heat and Wildfire Hazards	Authorizes, upon voter approval, the issuance of bonds to finance projects for safe drinking water, wildfire prevention, drought preparation, flood protection, extreme heat mitigation, and workforce development programs.
AB 2140: General Plans—Safety Element	Hazard Mitigation Planning	Enables state and federal disaster assistance and mitigation funding to communities with compliant hazard mitigation plans.
AB 2800: Climate Change—Infrastructure Planning	Action Plan Development	Requires state agencies to take into account the impacts of climate change when developing state infrastructure.
Alquist-Priolo Earthquake Fault Zoning Act	Earthquake Hazard	Restricts construction of buildings used for human occupancy on the surface trace of active faults.
California Coastal Management Program	Flood, Landslide/Mass Movement, Tsunami and Wildfire Hazards	Requires coastal communities to prepare coastal plans and requires that new development minimize risks to life and property in areas of high geologic, flood, and fire hazard.
Board of Forestry and Fire Protection Fire Safe Regulations	Wildfire Hazard	The Fire Safe Regulations set the floor for fire safety standards for perimeters and access to residential, commercial, and industrial building construction.
California Department of Forestry and Fire Protection (CAL FIRE)	Wildfire Hazard	CAL FIRE has responsibility for wildfires in areas that are not under the jurisdiction of the Forest Service or a local fire organization.
California Department of Parks and Recreation	Wildfire Hazard	State Parks Resources Management Division has wildfire protection resources available to suppress fires on State Park lands.
California Department of Water Resources	Flood Hazard	Department of Water Resources is the state coordinating agency for floodplain management.
California Division of Safety of Dams	Dam Failure Hazard	Division of Safety of Dams monitors the dam safety program at the state level and maintains a working list of dams in the state.
California Environmental Quality Act	Action Plan Implementation	Establishes a protocol of analysis and public disclosure of the potential environmental impacts of development projects. Any project action identified in this plan will seek full California Environmental Quality Act compliance upon implementation.
California Fire Alliance	Wildfire Hazard	The alliance works with communities at risk from wildfires to facilitate the development of community fire loss mitigation plans.
California Fire Plan	Wildfire Hazard	This plan's goal is to reduce costs and losses from wildfire through pre-fire management and through successful initial response.
California Fire Safe Council	Wildfire Hazard	This council facilitates the distribution of National Fire Plan grants for wildfire risk reduction and education.
California Fire Service and Rescue Emergency Mutual Aid Plan	Wildfire Hazard	This plan provides guidance and procedures for agencies developing emergency operations plans, as well as training and technical support.

Agency, Program or Regulation	Hazard Mitigation Area Affected	Relevance
California General Planning Law	Hazard Mitigation Planning	This law requires every county and city to adopt a comprehensive long-range plan for community development, and related laws call for integration of hazard mitigation plans with general plans.
California Multi-Hazard Mitigation Plan	Hazard Mitigation Planning	Local hazard mitigation plans must be consistent with their state's hazard mitigation plan.
California Residential Mitigation Program	Earthquake Hazard	This program helps homeowners with seismic retrofits to lessen the potential for damage to their houses during an earthquake.
California State Building Code	Action Plan Implementation	Local communities must adopt and enforce building codes, which include measures to improve buildings' ability to withstand hazard events.
Disadvantaged and Low-Income Communities Investments	Action Plan Funding	This is a potential source of funding for actions located in disadvantaged or low-income communities.
Division of the State Architect's AB 300 List of Seismically At-Risk Schools	Earthquake Hazard, Action Plan Development	The Division of the State Architect recommends that local school districts conduct detailed seismic evaluations of seismically at-risk schools identified in the inventory that was required by AB 300.
Governor's Executive Order S-13-08 (Climate Impacts)	Action Plan Implementation	This order includes guidance on planning for sea level rise in designated coastal and floodplain areas for new projects.
Office of the State Fire Marshal	Wildfire Hazard	This office has a wide variety of fire safety and training responsibilities.
Senate Bill 12: Local government: planning and zoning: wildfires.	Wildfire Hazard	Requires safety elements to be reviewed and updated as necessary to include a retrofit strategy to reduce the risk of property loss and damage during wildfires. Requires the planning agency to submit the adopted strategy to the Office of Planning and Research for inclusion in a central clearinghouse.
Senate Bill 92: Dam Emergency Action Plans; Public Resources Portion of Biennial Budget Bill	Dam Failure Hazard	This bill requires dams (except for low-risk dams) to have emergency action plans that are updated every 10 years and inundation maps updated every 10 years, or sooner if specific circumstances change.
Senate Bill 97: Guidelines for Greenhouse Gas Emissions	Action Plan Implementation	This bill establishes that greenhouse gas emissions and the effects of greenhouse gas emissions are appropriate subjects for California Environmental Quality Act analysis.
Senate Bill 99: General Plans: Safety Element: Emergency Evacuation Routes	Action Plan Implementation	This bill requires the safety element to include information to identify residential developments in hazard areas that do not have at least two emergency evacuation routes.
Senate Bill 379: General Plans: Safety Element—Climate Adaptation	Action Plan Implementation	This bill requires cities and counties to include climate adaptation and resiliency strategies in the safety element of their general plans.
Senate Bill 1000: General Plan Amendments—Safety and Environmental Justice Elements	Action Plan Implementation	Under this bill, review and revision of general plan safety elements are required to address only flooding and fires (not climate adaptation and resilience), and environmental justice is required to be included in general plans.
Senate Bill 1241: General Plans: Safety Element—Fire Hazard Impacts	Wildfire Hazard	This bill requires cities and counties to make findings regarding available fire protection and suppression services before approving a tentative map or parcel map.
Standardized Emergency Management System	Action Plan Implementation	Local governments must use this system to be eligible for state funding of response-related personnel costs.
Western Governors Association Ten-Year Comprehensive Strategy	Wildfire Hazard	This strategy implementation plan prepared by federal and Western state agencies outlines measures to restore fire-adapted ecosystems and reduce hazardous fuels.

6.2 LOCAL PLANS, REPORTS AND CODES

Plans, reports, and other technical information were identified and provided directly by participating jurisdictions and stakeholders or were identified through independent research by the planning consultant. These documents were reviewed to identify the following:

- Existing jurisdictional capabilities.
- Needs and opportunities to develop or enhance capabilities, which may be identified within the local mitigation strategies.
- Mitigation-related goals or objectives considered during the development of the overall goals and objectives.
- Proposed, in-progress, or potential mitigation projects, actions and initiatives to be incorporated into the updated jurisdictional mitigation strategies.

The following local regulations, codes, ordinances, and plans were reviewed in order to develop complementary and mutually supportive goals, objectives, and mitigation strategies that are consistent across local and regional planning and regulatory mechanisms:

- General plans (land use, housing, safety, and open space elements)
- Building codes
- Zoning and subdivision ordinances
- National Flood Insurance Program flood damage prevention ordinances
- Stormwater management plans
- Emergency management and response plans
- Land use and open space plans
- Climate action plans
- Community wildfire protection plans

6.3 LOCAL CAPABILITY ASSESSMENT

All participating jurisdictions compiled an inventory and analysis of existing authorities and capabilities called a “capability assessment.” A capability assessment creates an inventory of a jurisdiction’s mission, programs, and policies, and evaluates its capacity to carry them out. This assessment identifies potential gaps in the jurisdiction’s capabilities.

The planning partnership views all core jurisdictional capabilities as fully adaptable to meet a jurisdiction’s needs. Every code can be amended, and every plan can be updated. Such adaptability is itself considered to be an overarching capability. If the capability assessment identified an opportunity to add a missing core capability or expand an existing one, then doing so has been selected as an action in the jurisdiction’s action plan, which is included in the individual annexes presented in Volume 2 of this plan.

Capability assessments for each planning partner are presented in the jurisdictional annexes in Volume 2. The sections below describe the specific capabilities evaluated under the assessment.

6.3.1 Legal and Regulatory Capabilities

Jurisdictions have the ability to develop policies and programs and to implement rules and regulations to protect and serve community members. Local policies are typically identified in a variety of community plans, implemented via a local ordinance, and enforced through a governmental body.

Jurisdictions regulate land use through the adoption and enforcement of zoning, subdivision, and land development ordinances, building codes, building permit ordinances, floodplain, and stormwater management ordinances. When effectively prepared and administered, these regulations can lead to hazard mitigation.

6.3.2 Fiscal Capabilities

Assessing a jurisdiction's fiscal capability provides an understanding of the ability to fulfill the financial needs associated with hazard mitigation projects. This assessment identifies both outside resources, such as grant-funding eligibility, and local jurisdictional authority to generate internal financial capability, such as through impact fees.

6.3.3 Administrative and Technical Capabilities

Legal, regulatory, and fiscal capabilities provide the backbone for successfully developing a mitigation strategy; however, without appropriate personnel, the strategy may not be implemented. Administrative and technical capabilities focus on the availability of personnel resources responsible for implementing all the facets of hazard mitigation. These resources include technical experts, such as engineers and scientists, as well as personnel with capabilities that may be found in multiple departments, such as grant writers.

6.3.4 National Flood Insurance Program Compliance

Flooding is the costliest natural hazard in the United States and, with the promulgation of recent federal regulation, homeowners throughout the country are experiencing increasingly high flood insurance premiums. Community participation in the National Flood Insurance Program (NFIP) opens up opportunity for additional grant funding associated specifically with flooding issues. Assessment of the jurisdiction's current NFIP status and compliance provides planners with a greater understanding of the local flood management program, opportunities for improvement, and available grant funding opportunities.

6.3.5 Public Outreach Capability

Regular engagement with the public on issues regarding hazard mitigation provides an opportunity to directly interface with community members. Assessing this outreach and education capability illustrates the connection between the government and community members, which opens a two-way dialogue that can result in a more resilient community based on education and public engagement.

6.3.6 Participation in Other Programs

Other programs, such as the Community Rating System, Storm/Tsunami Ready, and Firewise USA, can enhance a jurisdiction's ability to mitigate, prepare for, and respond to natural hazards. These programs indicate a jurisdiction's desire to go beyond minimum requirements set forth by local, state, and federal regulations in order to create a more resilient community. These programs complement each other by focusing on communication,

mitigation, and community preparedness to save lives and minimize the impact of natural hazards on a community.

6.3.7 Development and Permitting Capability

Identifying previous and future development trends is achieved through a comprehensive review of permitting since completion of the previous plan and in anticipation of future development. Tracking previous and future growth in potential hazard areas provides an overview of increased exposure to a hazard within a community.

6.3.8 Adaptive Capacity

An adaptive capacity assessment evaluates a jurisdiction's ability to anticipate impacts from future conditions. By looking at public support, technical adaptive capacity, and other factors, jurisdictions identify their core capability for resilience against issues such as sea level rise. The adaptive capacity assessment provides jurisdictions with an opportunity to identify areas for improvement by ranking their capacity high, medium, or low.

6.3.9 Integration Opportunity

The assessment looked for opportunities to integrate this mitigation plan with the legal/regulatory capabilities identified. Capabilities were identified as integration opportunities if they can support or enhance the actions identified in this plan or be supported or enhanced by components of this plan. Planning partners considered actions to implement this integration as described in their jurisdictional annexes.

6.4 HAZARD MITIGATION CAPABILITIES FOR FUTURE DEVELOPMENT

The identification of hazards of concern and the areas that they affect allows local communities to review expected future development to assess whether it would be at risk from those identified hazards. Avoiding such future risk is a core element of local hazard mitigation. Through the capability assessment described in Section 6.3, all planning partners identified their ability to address risks to future development posed by identified planning area hazards of concern.

San Mateo County and all incorporated cities included in this hazard mitigation plan have general plans, adopted under state law, to ensure that their governing bodies take actions that the community has determined to be the most orderly, beneficial, and supportive of the community vision. Decision-makers will guide development through the application of broad-based strategies to every issue pertaining to growth. These strategies provide direction to public and private planning processes, with guidelines for making consistent rational decisions for future development. The County intends to discourage development in vulnerable areas and to encourage higher regulatory standards on the local level.

All planning partners have committed to link their general plans to this hazard mitigation plan. This will create an opportunity for wise land use decisions as future growth impacts hazard areas. The partners all reviewed their general plans under the capability assessments performed for this effort. Deficiencies identified by these reviews can be identified as mitigation actions to increase the capability to deal with future trends in development.

Part 2. RISK ASSESSMENT

G.

7. RISK ASSESSMENT METHODOLOGY

The risk assessments in this plan describe the risks associated with each identified hazard of concern. The following steps were used to define the risk of each hazard:

- **Identify and profile each hazard**—The following information is given for each hazard:
 - A summary of past events that have impacted the planning area
 - Geographic areas most affected by the hazard
 - Event frequency estimates
 - Severity descriptions
 - Warning time likely to be available for response.
- **Determine exposure to each hazard**—Exposure was assessed by overlaying hazard maps with an inventory of structures, facilities, and systems to decide which of them would be exposed to each hazard.
- **Assess the vulnerability of exposed facilities**—Vulnerability of exposed structures and infrastructure was evaluated by estimating potential impacts on people and damage to property and the environment in the event of a hazard incident.

The risk assessments performed for this plan evaluated risk for individual incorporated cities and for the unincorporated portion of the county.

7.1 RISK ASSESSMENT TOOLS

7.1.1 Mapping

National, state, and county databases were reviewed to locate available spatially based data relevant to this planning effort. Maps were produced using geographic information system (GIS) software to show the spatial extent and location of hazards when such datasets were available. These maps are included in the hazard profile chapters of this document and the jurisdiction-specific annexes in Volume 2. Details regarding the data sources and methodologies employed in these mapping efforts is located in Appendix D.

7.1.2 Modeling

Overview

FEMA developed the standardized GIS-based software program Hazards U.S. (Hazus) to identify areas that face the highest risk by estimating losses caused by earthquakes, hurricanes, floods, and tsunamis. Hazus is used to support risk assessments, mitigation planning, and emergency planning and response. It provides a wide range of inventory data, such as demographics, building stock, critical facilities, transportation and utility infrastructure, and multiple models to estimate potential losses from natural disasters. The program maps and calculates hazard

data and damage and economic loss estimates for buildings and infrastructure. Its advantages include the following:

- Provides a consistent methodology for assessing risk across geographic and political entities.
- Provides a way to save data so that it can readily be updated as population, inventory, and other factors change and as mitigation planning efforts evolve.
- Facilitates the review of mitigation plans because it helps to ensure that FEMA methodologies are incorporated.
- Supports grant applications by calculating benefits using FEMA definitions and terminology.
- Produces hazard data and loss estimates that can be used in communication with local stakeholders.
- Is administered by the local government and can be used to manage and update a hazard mitigation plan throughout its implementation.

Levels of Detail for Evaluation

Hazus provides default data for inventory, vulnerability, and hazards; this default data can be supplemented with local data to provide a more refined analysis. The model can carry out three levels of analysis, depending on the format and level of detail of information about the planning area:

- **Level 1**—All of the information needed to produce an estimate of losses is included in the software's default data. This data is derived from national databases and describes in general terms the characteristic parameters of the planning area.
- **Level 2**—More accurate estimates of losses require more detailed information about the planning area. To produce Level 2 estimates of losses, detailed information is required about local geology, hydrology, hydraulics and building inventory, as well as data about utilities and critical facilities. This information is needed in a GIS format.
- **Level 3**—This level of analysis generates the most accurate estimate of losses. It requires detailed engineering and geotechnical information to customize it for the planning area.

7.2 RISK ASSESSMENT APPROACH

7.2.1 Hazard Profile Development

Hazard profiles were developed through web-based research and review of previous reports and plans, including community general plans and state and local hazard mitigation plans. Frequency and severity indicators include past events and the expert opinions of geologists, emergency management specialists, and others.

7.2.2 Optional Equity Lens—Social Vulnerability Index

Social vulnerability is the susceptibility of social groups to the adverse impacts of natural hazards, including disproportionate death, injury, loss, or disruption of livelihood. Social vulnerability considers the social, economic, demographic, and housing characteristics of a community that influence its ability to prepare for, respond to, cope with, recover from, and adapt to environmental hazards.

The update process for this plan included an optional equity lens that participating jurisdictions could choose to apply in development of their hazard mitigation action plans. For that lens, Tetra Tech used indicators from

FEMA's social vulnerability index (SoVI) adjusted for the San Mateo County planning area. The SoVI, developed by the University of South Carolina's Hazards and Vulnerability Research Institute, is a location-specific assessment of social vulnerability based on the following variables:

- % African American (Black) population
- % Asian population
- % children living in married couple families
- % civilian labor force unemployed
- % employment in extractive industries (e.g., farming)
- % employment in service occupations
- % families earning more than \$200,000 income per year
- % families with female-headed households with no spouse present
- % female
- % female participation in the labor force
- % Hispanic population
- % households receiving Social Security benefits
- % housing units with no car available
- % Native American population
- % persons living in poverty
- % population living in mobile homes
- % population living in nursing facilities
- % population over 25 with <12 years of education
- % population speaking English as second language (with limited English proficiency)
- % population under 5 years or age 65 and over
- % population without health insurance (County SoVI only)
- % renter-occupied housing units
- % unoccupied housing units
- Average number of people per household
- Community hospitals per capita (County SoVI only)
- Median age
- Median dollar value of owner-occupied housing units
- Median gross rent for renter-occupied housing units
- Per capita income

The social vulnerability score represents the relative level of social vulnerability for a given Census tract. A higher social vulnerability score results in a higher risk score (Federal Emergency Management Agency, 2021a). Figure 7-1 shows the SoVI data for San Mateo County. Metrics were assigned to each SoVI classification to support risk ranking of each fully assessed hazard of concern. See Chapter 19 for further discussion of these metrics.

7.2.3 Exposure and Vulnerability

Flood, Dam Failure, Earthquake, and Tsunami

Community exposure and vulnerability to the following hazards were evaluated using Hazus:

- **Dam Failure, Flood, and Tsunami**—A Level 2 user-defined analysis was performed for general building stock and for critical facilities. Current mapping for the planning area was used to delineate hazard areas for flood, dam failure, and tsunami and estimate potential losses. To estimate damage that would result from these inundation-based hazards, Hazus uses pre-defined relationships between water depth at a structure and resulting damage, with damage given as a percent of total replacement value. Curves defining these relationships have been developed for damage to structures and for damage to typical contents within a structure. By inputting inundation depth data and known property replacement cost values, dollar-value estimates of damage were generated.

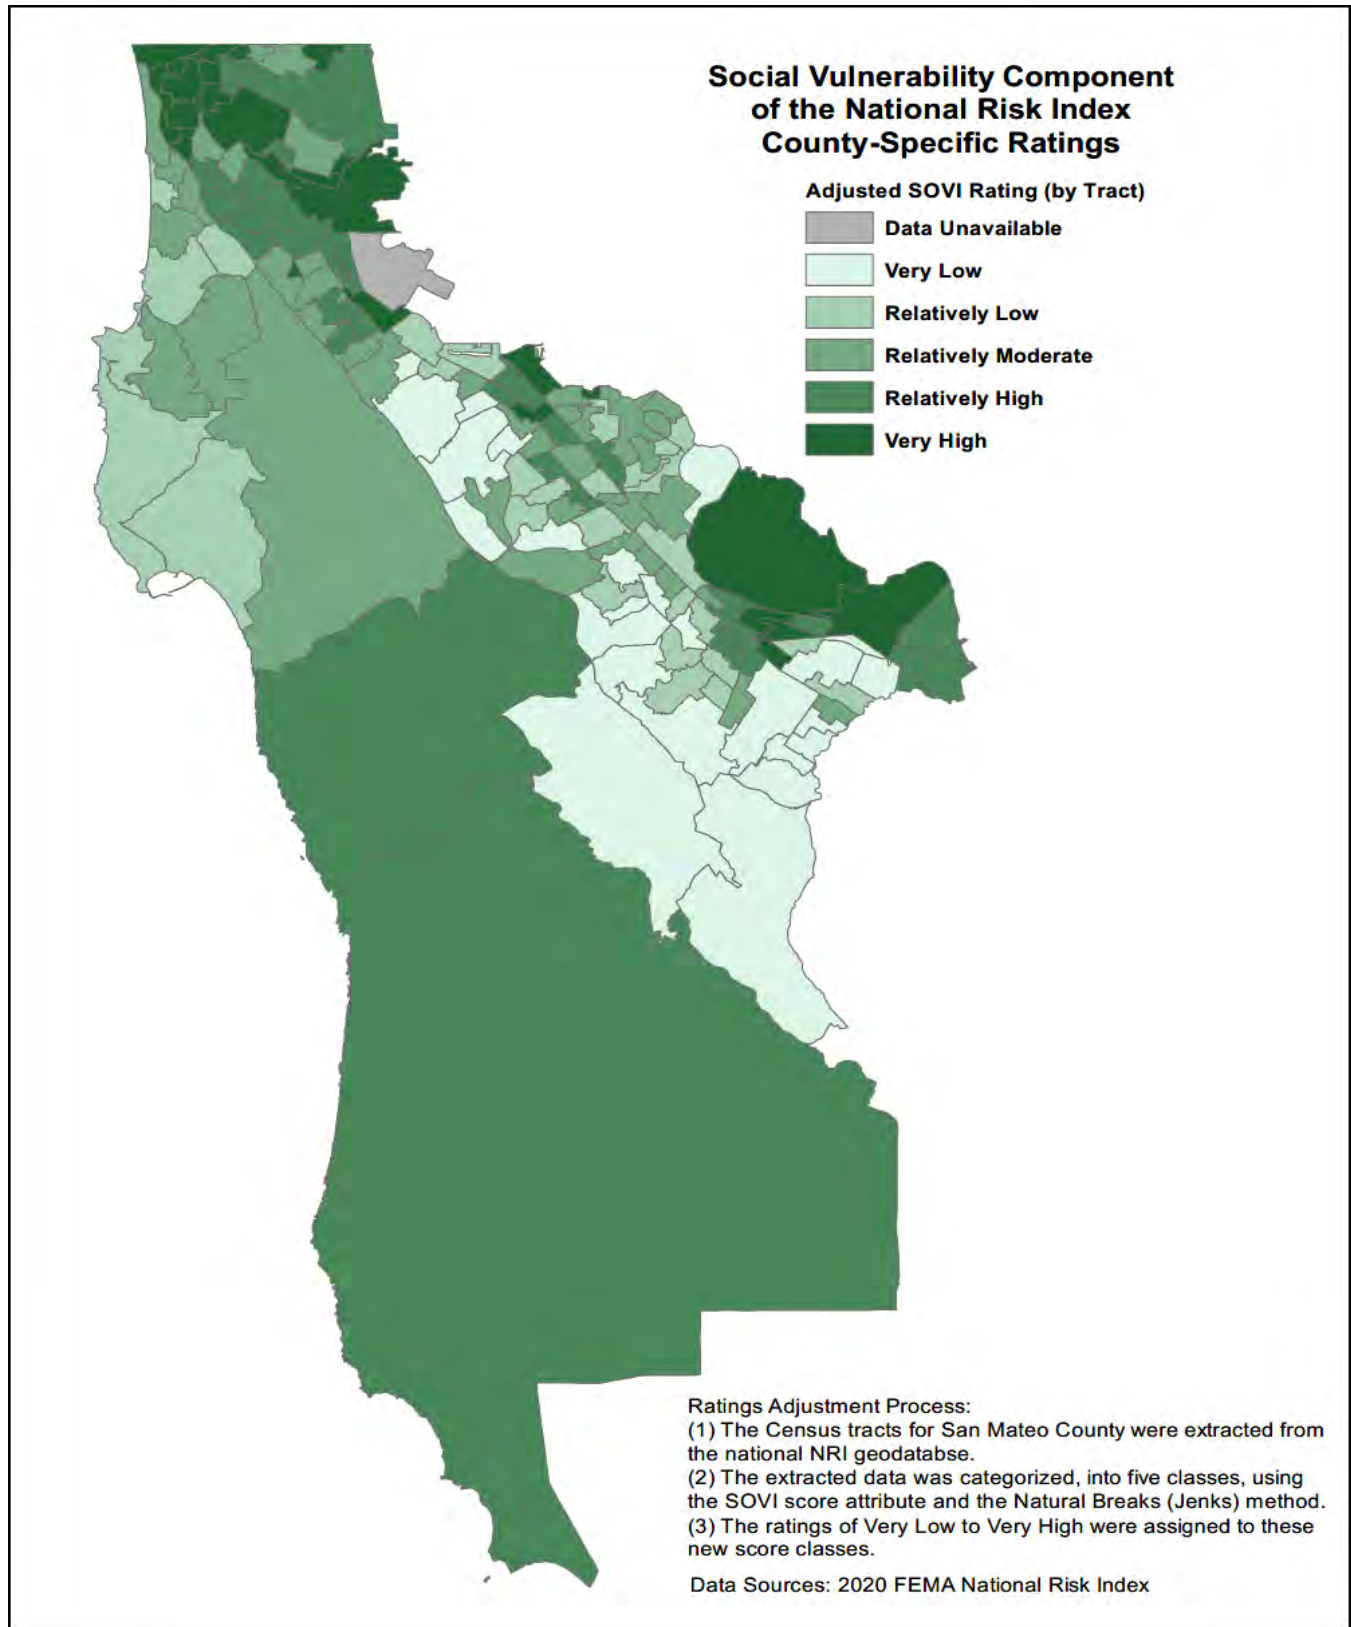

Figure 7-1. SoVI Map for San Mateo County

- **Earthquake**—A Level 2 analysis was performed to assess earthquake exposure and vulnerability for four scenario events and one probabilistic event:
 - A Magnitude-6.93 event on the Butano Fault with an epicenter 17.5 miles south of Redwood City
 - A Magnitude-7.14 event on the Monte Vista Shannon Fault with an epicenter 16 miles south-southeast of Redwood City
 - A Magnitude-7.38 event on the San Andreas Fault with an epicenter 4 miles west of Belmont
 - A Magnitude-7.44 event on the San Gregorio Fault with an epicenter 4 miles south of Half Moon Bay
 - The standard Hazus 100-year probabilistic event

Sea Level Rise, Landslide/Mass Movements, Severe Weather, and Wildfire

Historical datasets were not adequate to model future losses for these hazards of concern. However, areas and inventory susceptible to some of the hazards of concern were mapped by other means to evaluate exposure. A qualitative analysis was conducted for other hazards using the best available data and professional judgment.

Drought

The risk assessment methodologies used for this update focus on damage to structures. Because drought does not impact structures, the risk assessment for this hazard was more limited and qualitative than the assessment for the other hazards of concern.

7.3 SOURCES OF DATA USED IN MODELING AND EXPOSURE ANALYSES

7.3.1 Building and Cost Data

Replacement cost is the cost to replace the entire structure with one of equal quality and utility. Replacement cost is based on industry-standard cost-estimation models published in the 2020 edition of *RS Means Square Foot Costs*. It is calculated using the RS Means square foot cost for a structure, which is based on the Hazus occupancy class (i.e., multi-family residential or commercial retail trade), multiplied by the square footage of the structure. The construction class and number of stories for single-family residential structures also factor into determining the square foot costs.

Replacement cost values and detailed structure information derived from parcel and building footprint data were loaded into Hazus. When available, an updated inventory was used in place of the Hazus defaults for critical facilities and infrastructure.

7.3.2 Hazus Data Inputs

The following hazard datasets were used for the Hazus Level 2 analysis conducted for the risk assessment:

- **Flood**—The effective Digital Flood Insurance Rate Map (DFIRM) for the planning area was used to delineate flood hazard areas and estimate potential losses from the FEMA 1-percent-annual chance and 0.2-percent-annual-chance (100- and 500-year) flood events. Using the DFIRM floodplain boundaries and base flood (1-percent-annual chance flood) elevation information, and the County's 5-foot digital elevation model data, flood depth grids were generated and integrated into the Hazus model.
- **Dam Failure**—Dam failure inundation area boundaries and depth grids for were provided by the California Department of Water Resources for 13 dams: Bear Gulch, Coastways, Crocker, Emerald Lake 1 Lower, Felt Lake, Laurel Creek, Lower Crystal Springs, Notre Dame, Pilarcitos, Pomponio

Ranch, San Andreas, Searsville, and Spencer Lake. The individual dam depth grids were combined—using the maximum depth where the dam inundation areas overlapped—and the combined depth grid was integrated into the Hazus model.

- **Tsunami**—Tsunami hazard area data provided by the California Geological Survey and the County’s 5-foot digital elevation model data were used to develop inundation depth grids that were integrated into the Hazus model.
- **Earthquake**—Earthquake ShakeMaps and probabilistic data prepared by the U.S. Geological Survey (USGS) were used for the analysis of this hazard. A National Earthquake Hazard Reduction Program (NEHRP) soils map from the California Department of Conservation, Association of Bay Area Governments’ (ABAG) liquefaction susceptibility data, and susceptibility to deep-seated landslides data from the California Geological Survey were also integrated into the Hazus model.

7.3.3 Other Local Hazard Data

Locally relevant information on hazards was gathered from a variety of sources. Frequency and severity indicators include past events and the expert opinions of geologists, emergency management specialists, and others. Data sources for specific hazards were as follows:

- **Sea-Level Rise**—Sea-level rise data were provided by the Our Coast, Our Future (OCOF) tool developed by the USGS and Point Blue, and the Adapting to Rising Tides (ART) program prepared by the San Francisco Bay Conservation and Development Commission. The exposure analysis used the OCOF scenario of 200 cm (78 inches) of rise with a 100-year storm for the Pacific Ocean coastline and the ART scenario of 108 inches of rise for the San Francisco Bay shoreline.
- **Drought**—No GIS format drought hazard area datasets were identified for San Mateo County.
- **Landslide/Mass Movements**—The California Geological Survey provided data on susceptibility to deep-seated landslides. Areas categorized as very high and high susceptibility (Categories X, XI, VIII, and VII) were used in the exposure analysis.
- **Severe Weather**—No GIS format severe storm area datasets were identified for San Mateo County.
- **Wildfire**—The California Department of Forestry and Fire Protection (CAL FIRE) provided data on fire hazard severity zones in local and state responsibility areas. Very high and high fire hazard severity zones were used in the exposure analysis.

7.3.4 Data Source Summary

Data sources on critical facilities used for the risk assessment for this plan are listed in Table 7-1; sources for all other data used in the assessment are in Table 7-2

7.4 LIMITATIONS

Loss estimates, exposure assessments and hazard-specific vulnerability evaluations rely on the best available data and methodologies. Uncertainties are inherent in any loss estimation methodology and arise in part from incomplete scientific knowledge concerning natural hazards and their effects on the built environment.

San Mateo County digital elevation model (5-foot resolution)	San Mateo County	2017	Digital (GIS)
Social Vulnerability Index component of the National Risk Index	FEMA	2020	Digital (GIS)

Uncertainties also result from the following:

- Approximations and simplifications necessary to conduct a study
- Incomplete or outdated inventory, demographic, or economic parameter data
- The unique nature, geographic extent, and severity of each hazard
- Mitigation measures already employed
- The amount of advance notice community members have to prepare for a specific hazard event.

These factors can affect loss estimates by a factor of two or more. Therefore, potential exposure and loss estimates are approximate and should be used only to understand relative risk. Over the long term, the planning partners will collect additional data to assist in estimating potential losses associated with other hazards.

8. DAM FAILURE

8.1 GENERAL BACKGROUND

8.1.1 Definition and Classification of Dams

A dam is an artificial barrier that can store water, wastewater, or liquid-borne materials for many reasons—flood control, human water supply, irrigation, livestock water supply, energy generation, containment of mine tailings, recreation, or pollution control. Many dams fulfill a combination of these functions. They are an important resource in the United States. In California, dams are regulated by the State of California Division of Safety of Dams. Additional regulatory oversight of dams is cited in Chapter 5 and described in Appendix C.

The California Water Code (Division 3) defines a dam as any artificial barrier, together with appurtenant works, that does or may impound or divert water, and that either:

- Is 25 feet or more in height from the natural bed of the stream or watercourse at the downstream toe of the barrier (or from the lowest elevation of the outside limit of the barrier if it is not across a stream channel or watercourse) to the maximum possible water storage elevation; or
- Has an impounding capacity of 50 acre-feet or more.

Dams can be classified according to their purpose, the construction material or methods used, their slope or cross-section, the way they resist the force of the water pressure, or the means used for controlling seepage. Materials used to construct dams include earth, rock, tailings from mining or milling, concrete, masonry, steel, timber, plastic, rubber, and combinations of these.

8.1.2 Causes of Dam Failure

Partial or full failure of dams has the potential to cause massive destruction to the ecosystems and communities located downstream. Partial or full failure can occur as a result of one or a combination of the following reasons (FEMA, 2015):

- Overtopping caused by floods that exceed the dam capacity (inadequate spillway capacity)
- Prolonged periods of rainfall and flooding
- Deliberate acts of sabotage (terrorism)
- Structural failure of materials used in dam construction
- Movement and/or failure of the foundation supporting the dam
- Settlement and cracking of concrete or embankment dams

- Piping and internal erosion of soil in embankment dams
- Inadequate or negligent operation, maintenance, and upkeep
- Failure of upstream dams on the same waterway
- Earthquake (liquefaction/landslides).

Many dam failures in the United States have been secondary results of other disasters. The most common causes are earthquakes, landslides, extreme storms, equipment malfunction, structural damage, foundation failures, and sabotage. Poor construction, lack of maintenance and repair, and deficient operational procedures are preventable or correctable by a program of regular inspections. Terrorism and vandalism are serious concerns that all operators of public facilities must plan for; these threats are under continuous review by public safety agencies.

8.1.3 Planning Requirements

State of California

All dams whose inundation areas may impact the planning area have emergency action plans (EAPs) on file. The EAPs must include the following (Cal OES, 2018):

- Emergency notification flow charts
- Information on a four-step response process
- Description of agencies' roles and actions in response to an emergency incident
- Description of actions to be taken in advance of an emergency
- Inundation maps
- Additional information such as revision records and distribution lists.

After the EAPs are approved by the state, the law requires dam owners to send the approved EAPs to relevant stakeholders. Local public agencies can then adopt emergency procedures that incorporate the information in the EAP in a manner that conforms to local needs and includes methods and procedures for alerting and warning the public and other response and preparedness related items (Cal OES, 2018).

Federal Energy Regulatory Commission

Dams that fall under the jurisdiction of the Federal Energy Regulatory Commission (FERC) also have specified planning requirements. FERC has the largest dam safety program in the United States. It cooperates with a large number of federal and state agencies to ensure and promote dam safety and, more recently, homeland security. FERC requires licensees to prepare emergency action plans and conducts training sessions on how to develop and test these plans. The plans are designed to serve as an early warning system if there is a potential for, or a sudden release of water from, a dam failure or accident to the dam. The plans include operational procedures that may be used, such as reducing reservoir levels and reducing downstream flows and procedures for notifying affected community members and agencies responsible for emergency management. These plans are frequently updated and tested to ensure that in emergency situations everyone knows what to do, thus saving lives and minimizing property damage.

8.1.4 Secondary Hazards

Dam failure can cause secondary hazards of landslides, bank erosion, and destruction of downstream habitat. Dam failure may worsen the severity of a drought by releasing water that might have been used as a potable water source. A loss of water supply could exacerbate the wildfire hazard by hindering an impacted area's ability to fight fire.

8.2 HAZARD PROFILE

8.2.1 Past Events

The only recorded dam failure in San Mateo County was the failure of a small dam in the community of El Granada in 1926. According to the 2018 State of California Multi-Hazard Mitigation Plan, there have been nine failures of federally regulated dams elsewhere in the state since 1950. Overtopping caused two of the nine dam failures in the state, and the others were caused by seepage or leaks. The most catastrophic event was the failure of the St. Francis Dam in Los Angeles County, which failed in 1928 and killed an estimated 450 people. If a dam is determined to be unsafe, the California Department of Water Resources Division of Safety of Dams (DSOD) requires reduction of the water level to allow for partial collapse without catastrophic loss of water.

The state's most recent dam emergency occurred in February 2017 when the Oroville Dam in Butte County was on the verge of overflow. The dam's concrete spillway was damaged by erosion and a massive hole developed. The auxiliary spillway was used to prevent overtopping of the dam, and it experienced erosion problems also. Evacuation orders were issued in advance of a potential large uncontrolled release of water from Lake Oroville, but such a release did not occur. After this incident, state officials ordered that flood-control spillways be reinspected on 93 California dams with potential geologic, structural or performance issues that could jeopardize their ability to safely pass a flood event. The San Andreas Dam near Millbrae and San Bruno was one of the dams reinspected.

8.2.2 Location

List of High-Hazard Dams

According to DSOD, 24 dams are in San Mateo County. Twelve of these, plus another nearby in Santa Clara County, could endanger lives and property if an uncontrolled release or catastrophic failure occurs. Table 8-1 lists dams with potential to endanger lives and property in the County. Their locations are shown on Figure 8-1.

The Lower Crystal Springs Dam is the largest dam in San Mateo County, making it a higher priority for regulation and preventative maintenance by county, state, and federal officials. This dam impounds water to form the Lower Crystal Springs Reservoir, which serves as a water supply for San Francisco and most cities in San Mateo County. Although located directly on the San Andreas Fault, the dam survived both the 1906 San Francisco earthquake and 1989 Loma Prieta earthquake. In 2010, DSOD inspected the Lower Crystal Springs Dam to investigate effects of an 8.3 magnitude earthquake and determined dam failure to be a low probability. Despite this low probability, the County and dam owner, San Francisco Public Utilities Commission, are seeking to enhance safety and quality of the dam. Significant upgrades to the dam and a nearby overpass bridge occurred between 2010 and 2015 to restore maximum storage capacity of the reservoir. The project involved widening the spillway, raising the parapet wall, and replacing the stilling basin with a new and larger facility (San Mateo County OES, 2015).

Figure 8-1. Locations of Dams in San Mateo County

Table 8-1. San Mateo County Dams with Potential to Endanger Lives and Property

Name	National ID#	Water Course	Owner	Year Built	Dam Type	Crest Length (feet)	Height (feet)	Storage Capacity (acre-feet)	Drainage area (sq. mi.)
Extremely High Downstream Hazard									
Bear Gulch	CA00658	Tributary, San Francisco Bay	California Water Service Company	1896	Earth	730	61	672	0.2
Emerald Lake 1 Lower	CA00668	Lower Emerald Lake	Emerald Lake Country Club	1885	Earth	280	57	45	0.25
Felt Lake ^a	CA00670	Tributary, Los Trancos Creek	Stanford University	1930	Earth	590	67	900	0.2
Lower Crystal Spring	CA00127	San Mateo Creek	SF PUC Water Department	1888	Gravity	600	140	57,910	28.71
Pilarcitos	CA00128	Pilarcitos Creek	SF PUC Water Department	1866	Earth	520	103	3,100	3.8
San Andreas	CA00129	Tributary, San Mateo Creek	SF PUC Water Department	1870	Earth	727	107	19,027	4.4
Searsville	CA00669	Corte Madera Creek	Stanford University	1890	Gravity	260	68	952	14.8
Spencer Lake	CA00673	Tributary, San Francisco Bay	Town of Hillsborough	1876	Earth	400	87	73	0.2
High Downstream Hazard									
Coastways	^c		Coastways Ranch						
Crocker	CA00672	Sanchez Creek	Town of Hillsborough	1890	Earth	200	45	22	0.26
Laurel Creek	CA00901	Laurel Creek	City of San Mateo	1969	Earth	287	40	55	0.9
Notre Dame	CA00674	Belmont Creek	City of Belmont	^b	Earth	210	51	120	0.53
Pomponio Ranch	^c		Private Entity						

a. Felt Lake is within Santa Clara County, approximately 1,300 feet from San Mateo boundary lines. It has been included here due to its proximity to the county.

b. Year built unavailable.

c. Coastways and Pomponio Ranch dams are not included in the national inventory

Sources: San Mateo County OES 2015; U.S. Army Corps of Engineers National Inventory of Dams 2016; DSOD 2020

Inundation Mapping

A key element for EAPs required for dams in California is a map defining the potential downstream inundation should the dam fail. The DSOD reviews and approves inundation maps prepared by licensed civil engineers and submitted by dam owners for extremely high, high, and significant hazard dams and their critical appurtenant structures. Inundation maps approved by DSOD are a tool used to develop emergency action plans. They provide general information for emergency planning. For this risk assessment, available dam failure inundation mapping prepared by DSOD was combined into a single inundation area. The combined dam failure inundation area is shown in Figure 8-2. Simultaneous failure of all dams is highly unlikely, but the assessment provides information adequate for planning purposes.

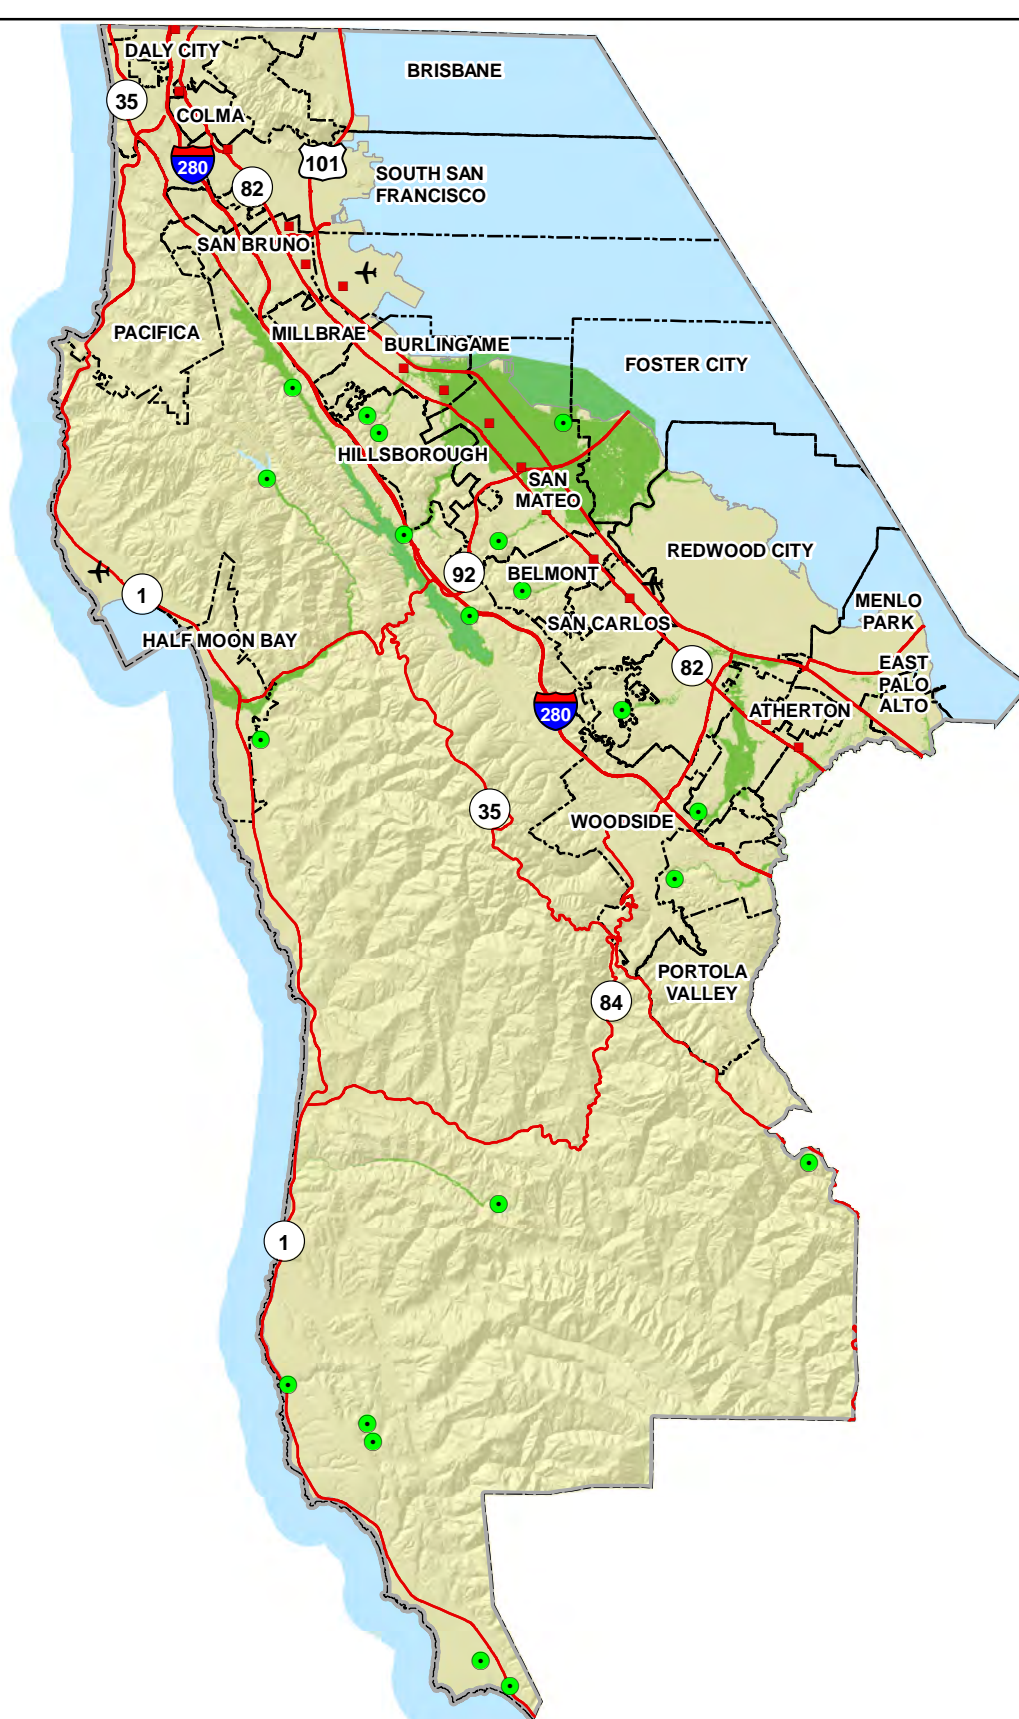

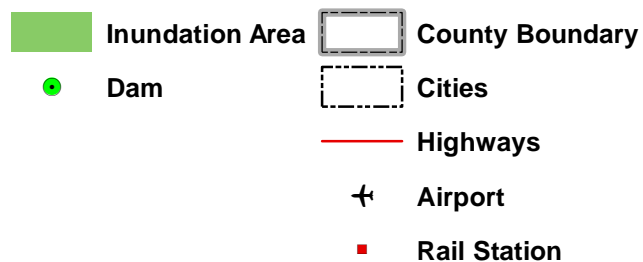

Figure 8-2. Dam Failure Inundation Area Used for Risk Assessment

Data Sources: San Mateo Co.
CA DWR

8.2.3 Frequency

Dam failure events are infrequent and usually coincide with or follow events such as earthquakes, landslides and excessive rainfall and snowmelt. Although the recent Oroville event raised public concern about dam failure, the probability of such failures remains low in today's regulatory environment. The single recorded dam failure in the planning area—in El Granada in 1926—represents a frequency of about one event in 100 years.

All dams face a “residual risk” of failure, which represents the risk that conditions may exceed those for which the dam was designed. For example, dams may be designed to withstand a probable maximum precipitation, defined as “theoretically, the greatest depth of precipitation for a given duration that is physically possible over a given storm area at a particular geographical location at a certain time of the year” (Hansen, 1982). The chance of occurrence of a precipitation event of a greater magnitude than that represents residual risk for such dams. This in turn represents a theoretical probability of future occurrence for a dam failure event, though the probability of an event exceeding the assumed maximum is not generally calculated as part of dam design.

8.2.4 Severity

Dam failure can be catastrophic to all life and property downstream. California's Division of Safety of Dams has developed a hazard potential classification system for state-jurisdiction dams, as shown on Table 8-2. This system is modified from federal guidelines, which recommend three-tier classification. The California system adds a fourth hazard classification of “extremely high.” Dams classified as extremely high hazard may impact highly populated areas or critical facilities or have short evacuation warning times (California Division of Safety of Dams, 2017).

Table 8-2. State of California Downstream Hazard Potential Classification

Hazard Category	Direct Loss of Life	Economic, Environmental, and Lifeline Losses
Low	None expected	Low and principally limited to dam owner's property
Significant	None expected	Yes
High	Probable (one or more expected)	Yes, but not necessary for this classification
Extremely High	Considerable	Yes, major impacts on critical facilities or property

Source: California Division of Safety of Dams, 2017

8.2.5 Warning Time

Advance Warning of Failure

Warning time for dam failure varies depending on the cause of the failure. Events of extreme precipitation or massive snowmelt can be predicted in advance, so evacuations can be planned with sufficient time. In the event of a structural failure due to earthquake, there may be no or limited warning time. The USGS Earthquake Hazards Program has several dam-safety related earthquake programs, including dam-specific earthquake monitoring programs in California to help monitor safety concerns following seismic events.

San Mateo County and its planning partners have established protocols for emergency warning and response through its adopted emergency operations plan. The San Mateo Department of Emergency Management maintains copies of the most recent dam EAP and inundation maps, and it has used this information to plan notification needs for downstream areas in the event of a failure (San Mateo County OES, 2015).

Time for Failure to Occur

The process of the dam failure affects warning time. Earthen dams do not tend to fail completely or instantaneously. Once a breach is initiated, discharging water erodes the breach until either the reservoir water is depleted, or the breach resists further erosion. Concrete gravity dams also tend to have a partial breach as one or more monolith sections are forced apart by escaping water. The time of breach formation ranges from a few minutes to a few hours.

8.3 EXPOSURE

Exposure and vulnerability to dam failure hazard were assessed by overlaying the mapped combined inundation area in Figure 8-2 with planning area features including general building stock and critical facilities. Detailed results by jurisdiction are included in Appendix E; countywide summaries are provided below.

8.3.1 Population and Property

Table 8-3 summarizes the estimated population living in the evaluated dam failure inundation areas and the estimated property exposure. Figure 8-3 shows the structure type of buildings in the inundation area. Residential properties makeup 94.6 percent of this exposure.

Table 8-3. Exposed Population and Property in Evaluated Dam Failure Inundation Areas

Population	
Population Exposed	111,185
% of Total Planning Area Population	14.4%
Property	
Acres of Inundated Area	15,429
Number of Buildings Exposed	26,867
Value of Exposed Structures	\$16,136,073,660
Value of Exposed Contents	\$11,261,306,886
Total Exposed Property Value	\$27,397,380,546
Total Exposed Value as % of Planning Area Total	14.3%

8.3.2 Critical Facilities

Figure 8-4 shows critical facilities located in the dam failure inundation zone by facility type. The total count of critical facilities in the dam failure inundation zone (299) represents 13.4 percent of the planning area total of 2,236. Exposed critical facilities include the following major roads:

- State Highway 1 (Pacific Coast Highway)
- State Highway 82 (El Camino Real)
- State Highway 84 (Woodside Road)
- State Highway 92
- State Highway 109 (University Avenue, East Palo Alto)
- State Highway 114 (Willow Road, Menlo Park)
- US Highway 101
- Interstate 280

Figure 8-3. Number of Structures within the Dam Failure Inundation Area by Occupancy Class

Figure 8-4. Critical Facilities in Dam Failure Inundation Zones and Countywide

8.3.3 Environment

The environment would be exposed to a number of risks in the event of dam failure. The inundation could introduce many foreign elements into local waterways, possibly destroying downstream habitat and exerting detrimental effects on many species of animals.

8.4 VULNERABILITY

The vulnerability of people, property, and critical facilities was evaluated for the mapped dam failure inundation area. Detailed results by jurisdiction are included in Appendix E; countywide summaries are provided below.

8.4.1 Population

Vulnerable populations are all populations downstream from dam failures that are incapable of escaping the area before floodwaters arrive. Impacts on persons and households for the combined dam failure inundation area were estimated through the Level 2 Hazus analysis. This population includes categories identified for the SoVI rating (see Section 7.2.2), as detailed by jurisdiction in Appendix E and summarized for the overall planning area in Table 8-4.

Table 8-4. Distribution of Population Exposed to Dam Failure Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	12,222	10.8%
Relatively High	29,701	26.2%
Relatively Moderate	40,010	35.4%
Relatively Low	24,952	22%
Very Low	6,301	5.6%

Additional countywide results of the Hazus analysis are as follows:

- Number of displaced households = 93,665
- Number of persons requiring short-term shelter = 7,209

8.4.2 Property

Vulnerable properties are those closest to the dam failure inundation zone. These properties would experience the largest, most destructive surge of water. Low-lying areas are also vulnerable since they are where the dam waters would collect. Properties in the dam failure inundation zone that are built to National Flood Insurance Program minimum construction standards may have some level of protection against dam failure inundation, depending on the velocity and elevation of the inundation waters. These properties also are more likely to have flood insurance. Table 8-5 summarizes the loss estimates for dam failure.

8.4.3 Critical Facilities

Hazus estimated damage to critical facilities in the dam failure inundation zones as summarized in Figure 8-5.

Table 8-5. Loss Estimates for Dam Failure

Structure Debris (tons)	1,240,544
Buildings Impacted ^a	26,780
Structure Value Damaged	\$4,787,170,491
Content Value Damaged	\$5,002,136,295
Total Value Damaged	\$9,789,306,786
<i>Damage as % of Total Value</i>	5.1%

a. "Impacted" means water over the 1st floor of the structure

**Figure 8-5. Estimated Damage to Critical Facilities from Dam Failure**

Typical vulnerabilities of affected critical facilities include the following:

- Transportation routes are vulnerable to dam inundation and have the potential to be wiped out, creating isolation issues and significant disruption to travel. Those that are most vulnerable are those that are already in poor condition and would not be able to withstand a large water surge.
- Utilities such as overhead power lines, cable, and phone lines in the inundation zone could be vulnerable. If phone lines were lost, significant communication issues may occur in the planning area due to limited cell phone reception in many areas.
- Emergency response would be hindered due to the loss of transportation routes the inundation zone.
- Some protective-function facilities in the safety and security category located in the inundation zone could be lost.
- Recovery time to restore many critical functions after an event may be lengthy.

8.4.4 Environment

The environment would be vulnerable to a number of risks in the event of dam failure. The inundation could introduce foreign elements into local waterways, resulting in destruction of downstream habitat and detrimental effects on many species of animals, especially endangered species.

8.5 FUTURE TRENDS IN DEVELOPMENT

The planning partners' general plans and other planning activities provide guidance related to hazard mitigation and future development. Dam failure is currently not addressed as a stand-alone hazard in the safety elements of the municipal partners' general plans, but flooding is. Flood-related policies in the general plans will help to reduce the risk associated with dam failure for all future development in the planning area. Municipalities participating in this plan have established comprehensive policies regarding sound land use in identified flood hazard areas. Most of the areas vulnerable to the more severe impacts from dam failure intersect the mapped flood hazard areas. However, there are structures on the perimeter of the dam failure inundation outside of the regulated floodplain that are not subject to floodplain management codes and standards. These structures would be more vulnerable than those constructed with floodplain codes and standards.

8.6 SCENARIO

An earthquake in the region could lead to liquefaction of soils around a dam, without warning during any time of the day. A human-caused incident such as a terrorist attack also could trigger a catastrophic failure of a dam that would impact the planning area. Failure of a high hazard dam in the County would likely result in loss of life, roadways, structures, and property, and exert severe impacts on the local economy. While the possibility of failure is remote, results would be devastating. The worst-case scenario would involve failure of the Lower Crystal Springs Dam. In addition to severe property damage and potential injuries, loss of water from the Crystal Springs Reservoir could lead to reduction in available potable water for the County and the Bay Area. Coupled with the ongoing drought throughout the state and already low water supply availability, this damage could lead to significant water shortages.

8.7 ISSUES

The most significant issues associated with dam failure involve properties and populations within inundation zones. Flooding as a result of a dam failure would significantly impact these areas. Warning time for dam failure plausibly would be limited. Moreover, dam failure is frequently associated with other natural hazard events such as earthquakes, landslides, or severe weather, which limits predictability of dam failure and compounds the hazard. Important issues associated with dam failure hazards are as follows:

- A significant number of the structures located in the dam failure inundation zone are located outside of special flood hazard areas, meaning that they are not constructed to withstand floodwaters and are less likely to be covered by flood insurance. Even structures that have been designed with flood hazards in mind may not be able to withstand the height and velocity of flow from a dam failure event.
- Addressing security concerns and the need to inform the public of the risk associated with dam failure is a challenge for public officials.
- California law requires that a property's location in a dam failure inundation be disclosed to a seller if the seller or the seller's agent has knowledge of the property's location within the hazard area or if the local

jurisdiction has compiled a list of parcels that are in the inundation area and has posted at the offices of the county recorder, county assessor, and county planning agency a notice that identifies the location of the list. It is unknown if this list has been compiled for the planning area.

- Dam failure inundation areas are often not considered special flood hazard areas under the National Flood Insurance Program, so flood insurance coverage in these areas is not common.
- Dam infrastructure may require repair and improvement to withstand climate change impacts, such as changing in the timing and intensity of rain events.
- Federally regulated dams have an adequate level of oversight and sophistication in the development of emergency action plans for public notification in the unlikely event of failure. However, the protocol for notification of downstream community members of imminent failure needs to be tied to local emergency response planning.
- In the event of a dam failure that interrupted land line phone service, significant issues with communication could occur.
- Inundation mapping in a digital format to support the risk assessment was available only for state-regulated high-hazard dams in the planning area. Such mapping was not available for federal dams.
- Limited financial resources for dam maintenance during economic downturns result in decreased attention to dam structure operational integrity, because available funding is often directed to more urgent needs. This could increase potential for maintenance failures.
- Mapping for federally regulated dams is already required and available; however, mapping for non-federally regulated dams that estimates inundation depths is needed to better assess risks associated with failure of these dams.
- Although mapping is required for federally regulated dams, development downstream of dams and upgrades to older dams may have altered inundation areas; however, these inundation maps may not have been updated for significant periods of time. Encouraging property owners of dams to update EAPs and inundation maps will ensure availability of the most accurate data to assist emergency planners and local officials.
- Most dam failure mapping required at federal levels requires determination of the probable maximum flood. While the probable maximum flood represents a worst-case scenario, it is generally the event with the lowest probability of occurrence. Mapping of dam failure scenarios for non-federal-regulated dams that are less extreme than the probable maximum flood, but have a higher probability of occurrence, can be valuable to emergency managers and community officials downstream of these facilities. This type of mapping can illustrate areas potentially impacted by more frequent events to support emergency response and preparedness actions.
- The concept of residual risk associated with structural flood control projects should be considered in the design of capital projects and the application of land use regulations.
- There may be dams located in the planning area that do not meet regulatory thresholds for jurisdiction under State of California or federal programs.
- State and national dam lists are inconsistent regarding the number of dams in San Mateo County. These lists should be evaluated and corrected where needed. Currently, the National Inventory of Dams maintained by the U.S. Army Corps of Engineers lists 24 dams within the County, while DSOD has record of 21.

9. DROUGHT

9.1 GENERAL BACKGROUND

Drought is a significant decrease in water supply relative to what is needed to meet typical demand in each location. It is a normal phase in the cycle of Mediterranean climates such as that of San Mateo County, originating from a deficiency of precipitation over an extended period, usually a season or more. This leads to a water shortage for some activity, group, or environmental sector. Drought is generally defined based on four ways of measuring it (National Drought Mitigation Center, 2021):

- **Meteorological drought**—Based on precipitation deficit compared to normal. Anomalies of precipitation may last from several months to several decades. How long they last depend on interactions between the atmosphere and the oceans, soil moisture and land surface processes, topography, internal dynamics, and the accumulated influence of global weather systems.
- **Agricultural drought**—Based on agricultural impacts due to reduced precipitation and water supply (e.g., crop loss, herd culling, etc.)
- **Hydrological drought**—Based on measurements of stream flows, groundwater, and reservoir levels relative to normal conditions
- **Socioeconomic drought**—Based on direct and indirect socio-economic impacts on society and the economy. Socioeconomic drought occurs when the demand for an economic good exceeds supply as a result of a weather-related shortfall in water supply. If a community has stored enough water to meet its needs in the event of a shortage of rainfall, then it may not experience socioeconomic drought even though its geographic area experiences meteorological drought.

9.1.1 Monitoring Drought

National Oceanic and Atmospheric Administration Drought Indices

The National Oceanic and Atmospheric Administration has developed several indices to measure drought impacts and severity and to map their extent and locations:

- The ***Crop Moisture Index*** measures weekly short-term drought to quantify drought impacts on agriculture during the growing season.
- The ***Palmer Z Index*** measures monthly short-term drought.
- The ***Palmer Drought Severity Index*** measures the duration and intensity of long-term drought-inducing circulation patterns. Long-term drought is cumulative, so the intensity of drought during a given month is dependent on the current weather patterns plus the cumulative patterns of previous months. Weather patterns can change quickly from a long-term drought pattern to a long-term wet pattern, and the Palmer Drought Index can respond fairly rapidly.

- The hydrological impacts of drought (e.g., reservoir levels, groundwater levels, etc.) take longer to develop and it takes longer to recover from them. The ***Palmer Hydrological Drought Index*** quantifies long-term hydrological effects. It responds more slowly to changing conditions than the Palmer Drought Index.
- While the Palmer indices consider precipitation, evapotranspiration and runoff, the ***Standardized Precipitation Index*** considers only precipitation. In the Standardized Precipitation Index, an index of zero indicates the median precipitation amount; the index is negative for drought and positive for wet conditions. The Standardized Precipitation Index is computed for time scales ranging from one month to 24 months.

Figure 9-1 shows examples of these indices as of early June 2021.

U.S. Drought Monitor

The U.S. Drought Monitor (USDM) is a map that is updated weekly to show the location and intensity of drought across the country. The USDM uses a five-category system:

- D0—Abnormally Dry
 - Short-term dryness slowing planting, growth of crops
 - Some lingering water deficits
 - Pastures or crops not fully recovered
- D1—Moderate Drought
 - Some damage to crops, pastures
 - Some water shortages developing
 - Voluntary water-use restrictions requested
- D2—Severe Drought
 - Crop or pasture loss likely
 - Water shortages common
 - Water restrictions imposed
- D3—Extreme Drought
 - Major crop/pasture losses
 - Widespread water shortages or restrictions
- D4—Exceptional Drought
 - Exceptional and widespread crop/pasture losses
 - Shortages of water creating water emergencies

The USDM categories show experts' assessments of conditions related to drought. These experts check variables including temperature, soil moisture, water levels in streams and lakes, snow cover, and meltwater runoff. They also check whether areas are showing drought impacts such as water shortages and business interruptions. Associated statistics show what proportion of various geographic areas are in each category of dryness or drought, and how many people are affected. U.S. Drought Monitor data goes back to 2000.

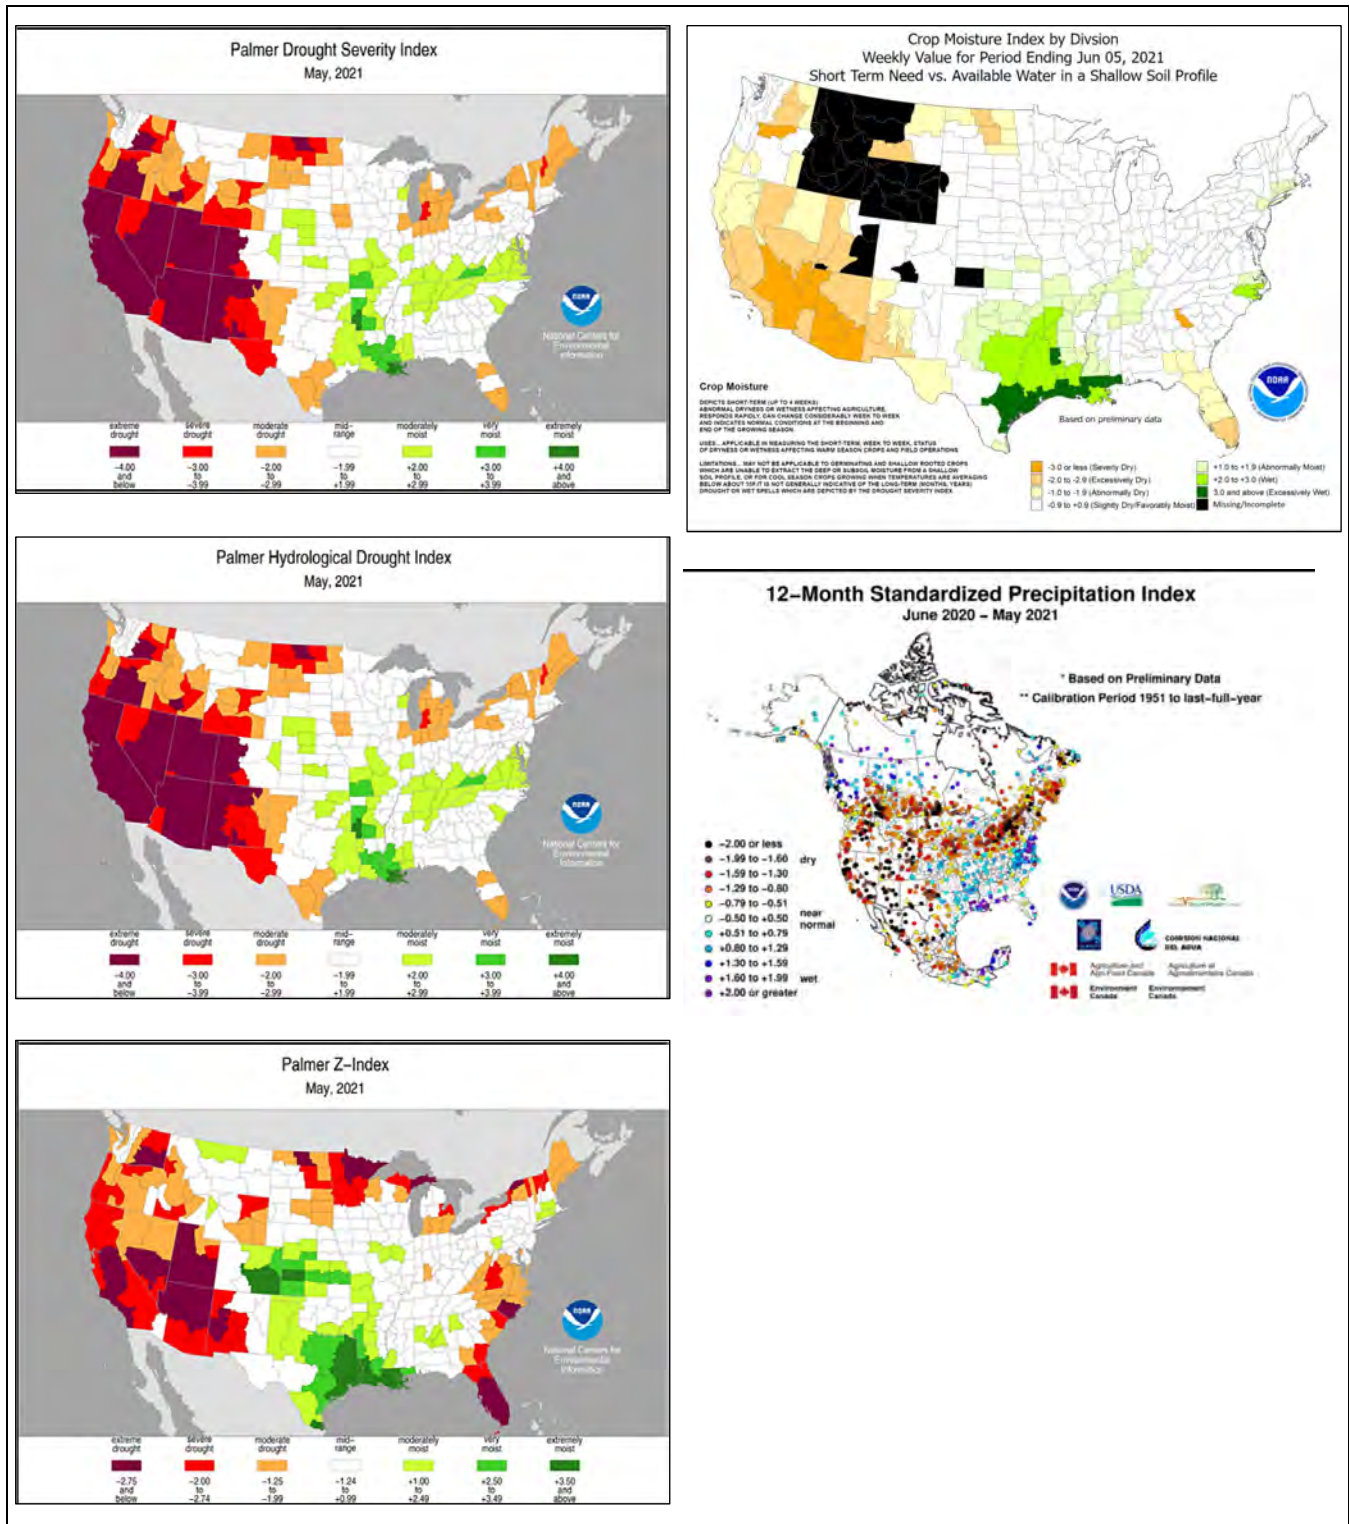

Figure 9-1. Example Drought Index Maps (for June 2021)

9.1.2 Drought Impacts

Drought can have a widespread impact on the environment and the economy, although it typically does not result in loss of life or damage to structures, as do other natural disasters. The National Drought Mitigation Center uses three categories to describe likely drought impacts:

- **Economic Impacts**—These impacts of drought cost people (or businesses) money. Farmers' crops are destroyed; low water supply necessitates spending on irrigation or drilling of new wells; water-related businesses (such as sales of boats and fishing equipment) may experience reduced revenue; power shutoffs may occur.
- **Environmental Impacts**—Plants and animals depend on water. When a drought occurs, their food supply can shrink, and their habitat can be damaged. Drought also has the potential to increase the risk of wildfire.
- **Social Impacts**—Social impacts include public safety, health, power failures, conflicts between people when there is not enough water to go around, and changes in lifestyle.

The demand that society places on water systems and supplies—such as expanding populations, irrigation, and environmental needs—contributes to drought impacts. Drought can lead to difficult decisions regarding the allocation of water, as well as stringent water use restrictions, water quality problems, and inadequate water supplies for fire suppression. There are also issues such as growing conflicts between agricultural uses of surface water and in-stream uses, surface water and groundwater interrelationships, and the effects of growing water demand on uses of water.

Vulnerability of an activity to drought depends on its water demand and the water supplies available to meet the demand. The impacts of drought vary between sectors of the community in both timing and severity:

- **Water supply**—The water supply sector encompasses urban and rural drinking water systems that are affected when a drought depletes ground water supplies due to reduced recharge from rainfall.
- **Power supply**—Production of all types of energy requires water. Because the energy sector is dependent on water availability, drought can severely impact energy systems.
- **Agriculture and commerce**—The agriculture and commerce sector includes the reduction of crop yield and livestock sizes due to insufficient water supply for crop irrigation and maintenance of ground cover for grazing.
- **Environment, public health, and safety**—The environmental, public health, and safety sector is affected by wildfires, which are detrimental to the forest ecosystem and hazardous to the public. It also experiences the impacts of desiccating streams, such as the reduction of in-stream habitats for native species.

Drought generally does not affect groundwater sources as quickly as surface water supplies, but groundwater supplies generally take longer to recover. Reduced precipitation during a drought means that groundwater supplies are not replenished at a normal rate. This can lead to a reduction in groundwater levels and problems such as reduced pumping capacity or wells going dry. Droughts can affect groundwater storage as reserves are drawn down in anticipation of drought impacts. Such conjunctive use assists in drought resilience, but it can take years to replenish the water that was stored. Shallow wells are more susceptible than deep wells. Reduced replenishment of groundwater affects streams. Much of the flow in streams comes from groundwater, especially during the summer when there is less precipitation and after snowmelt ends. Reduced groundwater levels mean that even less water will enter streams when stream flows are lowest.

9.1.3 Defined Drought Stages in California

During critically dry years, the California State Water Resources Control Board can mandate water entitlements on water right holders to address statewide water shortages. Table 9-1 shows the state drought management program stages mandated to water right holders.

Table 9-1. State Drought Management Program

Drought Stage	State Mandated Customer Demand Reduction	Rate Impacts
Stage 0 or 1	<10%	Normal rates
Stage 2	10 to 15%	Normal rates; Drought surcharge
Stage 3	15 to 20%	Normal rates; Drought surcharge
Stage 4	>20%	Normal rates, Drought surcharge

9.1.4 Secondary Hazards

The secondary impact most commonly associated with drought is wildfire. A prolonged lack of precipitation dries out vegetation, which becomes increasingly susceptible to ignition as the duration of the drought extends. In addition, lack of sufficient water resources can stress trees and other vegetation, making them more vulnerable to infestation from pests, which in turn, can make them more vulnerable to ignition. Prolonged droughts can impact underground aquifers, thus impacting groundwater supplies. Algae blooms can occur in surface water reservoirs that are stressed by drought impacts.

9.2 HAZARD PROFILE

9.2.1 Planning Area Water Supply and Drought Response

Water Supply Infrastructure

San Mateo County receives 92 percent of its water through the regional Hetch Hetchy Water System, with the remainder of the County's water supply coming from surface, ground, and recycled water (San Mateo County OES, 2015). The water system was so-named because 85 percent of the water supply comes from the Sierra Nevada snowmelt stored in the Hetch Hetchy reservoir along the Tuolumne River in Yosemite National Park; the remaining 15 percent comes from runoff in the Alameda and Peninsula watersheds.

The Hetch Hetchy Water System (see Figure 9-2) was approved in 1913 under the Raker Act, which allowed use of federal lands in the Sierra Nevada Mountains to build that water system. The system was constructed by San Francisco over 20 years, with first delivery of water in 1934. Although San Francisco owns the system, it was designed from the beginning to serve as a regional water supply system.

In 2002, the San Francisco Public Utilities Commission (SFPUC) adopted a \$2.9 billion capital improvement plan to enhance the water system. Need for the improvements had been recognized after the Loma Prieta earthquake in 1989 and drought in the 1990s. Much of the water supply system is 75 to 100 years old and does not meet modern seismic codes, and major pipelines cross earthquake faults. A 2000 SFPUC study found that a major earthquake could cripple the water supply system for up to 30 days. SFPUC has highlighted nine priority projects for implementation, completion of which should help ensure relative continuity of operations of the water supply system following a large seismic event.

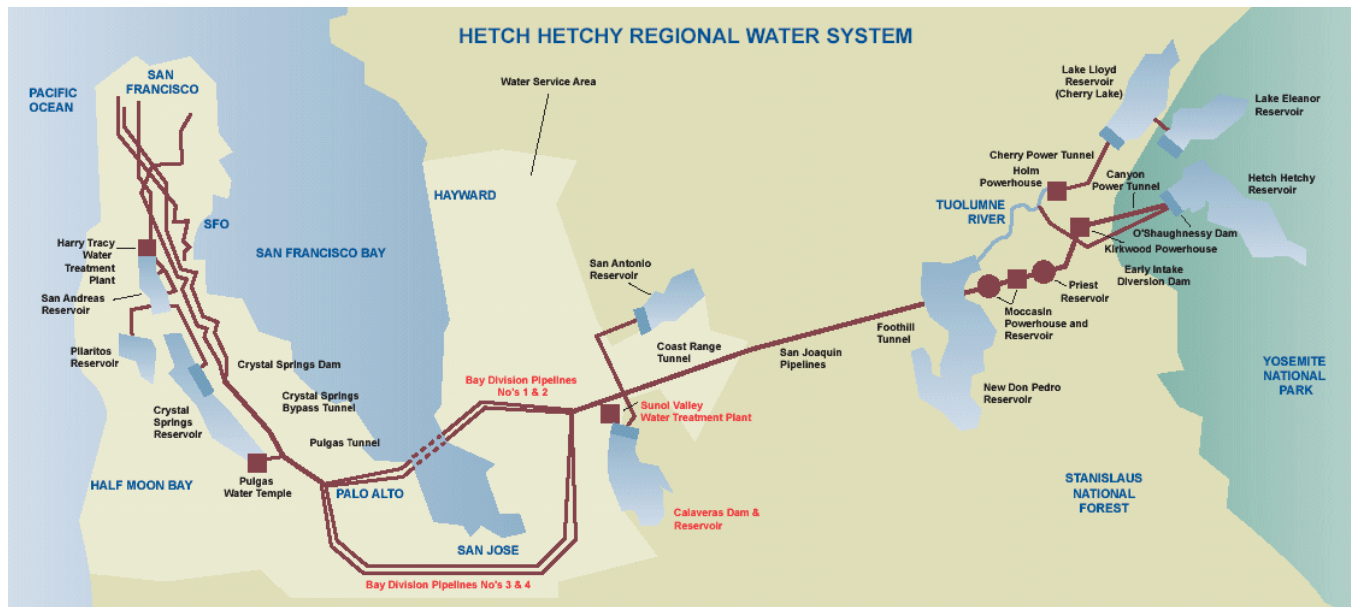

Figure 9-2. Hetch Hetchy Water System

San Mateo County maintains the infrastructure for County Service Area (CSA) 7 and CSA 11, the two local water systems within its borders:

- CSA 7 includes an intake and pump in Alpine Creek, a water treatment plant, a 500,000-gallon storage tank, and a distribution system. The treatment plant was constructed in the early 1990s, but parts of the distribution system date to the 1920s.
- CSA 11 was established in 1988 and consists of two wells, one 135,000-gallon distribution tank, and a distribution system. Water flows from the distribution tank through the water system under force of gravity; no distribution pumps are required. CSA 11 was determined to be necessary after relatively high concentrations of nitrate and other naturally occurring salts were found in local groundwater sources, raising concern that continued use of previously used small domestic wells could lead to unintended health consequences.

Water Supply Strategy

The Bay Area Water Supply Conservation Agency (BAWSCA) is the main water provider for much of the Bay Area. It allows San Mateo County and its cities, water districts, and private utilities to coordinate to ensure the continual water supply necessary to maintain health, safety, and economic wellbeing of the community. BAWSCA agencies manage two-thirds of water consumption from the Hetch Hetchy Water System, providing water to 2.4 million people in San Francisco, Santa Clara, Alameda, and San Mateo Counties. In San Mateo County, BAWSCA services Brisbane, Burlingame, Daly City, East Palo Alto, Hillsborough, Menlo Park, Millbrae, Redwood City, San Bruno, Coastside County Water District, Estero Municipal Improvement District, Guadalupe Valley Municipal Improvement District, Mid-Peninsula Water District, Westborough Water District, and California Water Service Company (private utility).

BAWSCA applies a long-term water supply strategy for its customers throughout the Bay Area. This strategy recognizes that drought year shortfalls can be significant, resulting in system-wide cutbacks of up to 20 percent. Impacts of water shortages are regional and can lead to secondary detrimental economic effects. BAWSCA

focuses on identifying options for filling all or portions of the drought year supply shortfall. BAWSCA also developed a *Water Conservation Implementation Plan* with the following objectives (Bay Area Water Supply Conservation Agency, 2009):

- Help BACSWA member agencies evaluate potential water savings and cost-effectiveness associated with additional water conservation measures.
- Determine potential present and future water savings from a range of new conservation measures.
- Determine BAWSCA's role in helping member agencies achieve individual water conservation goals.
- Develop a regional plan for water conservation measures to serve as a guideline for member agencies.

In August 2017, BAWSCA released a drought report outlining state and local drought response actions in three categories:

- Demand management actions to reduce water use, including public information and water conservation programs
- Water supply actions
- Regulatory and policy support.

While BAWSCA is the primary water service agent in the County, it is not the only option for community members and businesses. The County Public Works Department operates CSA No. 7 and CSA No. 11. These service areas provide potable water to approximately 70 customers in the La Honda community and 90 customers in the Pescadero community, respectively. CSA 7 also supplies two County facilities—Camp Glenwood Boys Ranch and Sam McDonald Park.

Moreover, some County residents have domestic wells on their property. The South Central Regional Office of California Department of Water Resources monitors wells for San Mateo County to help protect groundwater quality. According to the California Natural Resources Agency database of well completion reports by County, there were 10,747 wells within San Mateo County as of May 28, 2020.

Defined Drought Levels

Neither San Mateo County nor BAWSCA has defined “drought level.” County and regional drought response is determined case by case, and response priorities are typically based on imminence of potential water shortages. BAWSCA has developed both Tier 1 and Tier 2 Drought Implementation Plans; however, these plans do not specify specific trigger levels. The Tier 1 plan is for SFPUC and BAWSCA; the Tier 2 plan is for BAWSCA member agencies. The Tier 2 plan includes calculations to determine water allocations for member agencies during water shortages. Drought stages defined by the California State Water Resources Control Board (see Table 9-1) can serve as a reference for County and stakeholder agencies when determining need for response.

9.2.2 Past Events

California Department of Water Resources hydrologic data from the early 1900s shows multi-year droughts from 1912 to 1913, 1918 to 1920, 1922 to 1924, and 1928 to 1934. The 1929 to 1934 drought established the criteria for designing storage capacity and yield for large Northern California reservoirs. The following sections describe the most recent prolonged droughts that have impacted the planning area.

2020 to Present Drought

The U.S. Department of Agriculture declared a drought disaster that include San Mateo County on April 21, 2020. April 2021 was the third driest April in the past 127 years (National Integrated Drought Information System, 2021). As of June 2021, San Mateo County was at the D3—Extreme Drought level, putting the county at risk for wildfire on a year-round basis (National Integrated Drought Information System, 2021). On April 15, 2021, the SFPUC sent wholesale customers a letter on water supply availability estimates for 2021 and current hydrological conditions. The letter stated the following conditions and projections at that time (San Francisco Public Utilities Commission, 2021):

- The Hetch Hetchy watershed was experiencing very dry conditions
- The April 1 snow course index was about 60 percent of the median historical snowpack level.
- San Francisco needed about 554,000 acre-feet to fill the entire water system by July 1, 2021.
- Snowmelt forecasts indicated that the Hetch Hetchy reservoir would fill during the year.
- The water bank was not expected to fill.

2012 to 2017 Drought

California's last drought set several records for the state. The period from 2012 to 2014 ranked as the driest three consecutive years for statewide precipitation. Calendar year 2014 set new records for statewide average temperatures and for low water allocations from the State Water Project. Calendar year 2013 set minimum annual precipitation records for many communities. Detailed executive orders and regulations addressed water conservation and management. The statewide drought emergency was lifted in April 2017.

This drought had significant effects on the southern coastline of San Mateo County because many community members in this area rely on creeks and wells that have stopped flowing. Rural communities in the County faced stringent limitations on bathing, using toilets, and washing items, and many ranches and farms in the area saw significant economic downturns. Urban parts of the San Francisco Bay area experienced limitations in order to conserve water, but not to the extent imposed on rural community members (SFGate 2014).

During this drought, San Mateo County and its cities implemented initiatives to maintain the quantity and quality of water resources in the County:

- San Mateo Countywide Water Pollution Program
- Groundwater Protection Program
- Land Use and Septic Wells Program
- Recreational Water Quality Program
- Small Drinking Water Systems Program
- Municipal Facilities Water Conservation Efforts.

2007 to 2009 Drought

The state proclaimed a statewide drought emergency on June 4, 2008, after spring 2008 was the driest spring on record. On February 27, 2009, the state proclaimed a state of emergency for the entire state as severe drought continued. The largest court-ordered water restriction in state history (at the time) was imposed.

1987 to 1992 Drought

California received precipitation well below average levels for four consecutive years. While the Central Coast was most affected, the Sierra Nevada range in Northern California and the Central Valley counties were also affected. During this drought, only 56 percent of average runoff for the Sacramento Valley was received. In 1991, the State Water Project sharply decreased deliveries to water suppliers. By February 1991, all 58 counties in California were experiencing drought. Urban areas as well as agricultural areas were impacted.

1976 to 1977 Drought

California had a severe drought due to lack of rainfall during the winters of 1976 and 1977. 1977 was the driest period on record in California at that time, with the previous winter recorded as the fourth driest in California's hydrological history at that time. The cumulative impact led to widespread water shortages and severe water conservation measures statewide. Only 37 percent of average Sacramento Valley runoff was received, with just 6.6 million acre-feet recorded. Over \$2.6 billion in crop damage was recorded in 31 counties. FEMA declared a drought emergency (Declaration 3023-EM) on January 20, 1977, for 58 California counties.

9.2.3 Location

Drought is a regional phenomenon that has the potential to impact the entire planning area. A drought affects all aspects of the environment and the community simultaneously and has the potential to impact every person in the planning area directly or indirectly, as well as adversely affecting the local economy.

9.2.4 Frequency

Drought has a high probability in the planning area:

- From 2000 through May 2021, some part of San Mateo County experienced a USDM rating of D1 or higher in 437 out of 1,117 weeks—slightly more than one out of every three weeks (see Figure 9-3).
- The county been included in U.S. Department of Agriculture (USDA) drought disaster declarations in six of the past seven years.
- The county has experienced seven significant multi-year droughts in the last 40 years (1980 to 2020), amounting to a severe drought every 5 to 6 years on average.

Source: U.S. Drought Monitor

Figure 9-3. Percent of San Mateo County Affected by Each USDM Rating, 2000 – 2021

9.2.5 Severity

The severity of any given drought depends on the degree of moisture deficiency, the duration, and the size and location of the affected area. The longer the duration of the drought and the larger the area impacted, the more severe the potential impacts.

U.S. Drought Monitor Ratings

San Mateo County has a history of severe droughts. As shown in Figure 9-3, at least part of the county has experienced extreme (D3) or exceptional (D4) droughts more than once since 2000.

Drought Impact Reporter

The National Drought Mitigation Center developed the Drought Impact Reporter in response to the need for a national drought impact database for the United States. Information comes from a variety of sources: on-line, drought-related news stories and scientific publications, members of the public who visit the website and submit a drought-related impact for their region, members of the media, and staff of government agencies. The database is being populated beginning with the most recent impacts and working backward in time.

The Drought Impact Reporter indicates 1,208 impacts from drought that specifically affected San Mateo County from January 2011 through May 2021, 90 percent of them based on media reports (Drought Impact Reporter, 2021). The following are the reported numbers of impacts by category (some incidents are assigned to more than one impact category):

- Agriculture—287
- Business and Industry—99
- Energy—11
- Fire—190
- Plants and Wildlife—324
- Relief, Response, and Restrictions—545
- Society and Public Health—316
- Tourism and Recreation—122
- Water Supply and Quality—686

9.2.6 Warning Time

Predicting drought depends on the ability to forecast precipitation and temperature. Scientists currently do not know how to predict drought more than a month in advance for most locations. Only generalized warning can take place due to the numerous variables that scientists have not pieced together well enough to make accurate and precise predictions.

Determination of when drought begins is based on impacts on water users and assessments of available water supply, including water stored in reservoirs or groundwater basins. Different water agencies have different criteria for defining drought. Some issue drought watch or drought warning announcements.

9.3 EXPOSURE

All people, property and environments in the planning area would be exposed to some degree to the impacts of moderate to extreme drought conditions.

9.4 VULNERABILITY

9.4.1 Population

The entire population of the County is vulnerable to drought events. Drought can affect people's health and safety, including health problems related to low water flows, poor water quality, or dust. Droughts can also lead to loss of human life. Other possible impacts include recreational risks; effects on air quality; diminished living conditions related to energy, air quality, and hygiene; compromised food and nutrition; and increased incidence of illness and disease (Centers for Disease Control and Prevention, 2020).

The County of San Mateo, BAWSCA, regional water purveyors, and other regional stakeholders have devoted considerable time and effort to protect life, safety, and health during times of consecutive dry years. Steps have been taken to analyze and account for anticipated water shortages. With coordination from its cities, the County has the ability to minimize and reduce impacts on community members and water consumers in San Mateo County. No significant life or health effects are anticipated as a result of drought in San Mateo County.

9.4.2 Property

No structures will be directly affected by drought conditions, though some structures may become vulnerable to wildfires, which are more likely following years of drought. Droughts can have significant impacts on other types of property such as landscaped areas and economically important natural resources. Drought causes the most significant economic impacts on industries that use water or depend on water for their business, most notably agriculture and related sectors (forestry, fisheries, and waterborne activities), power plants, and oil refineries. In addition to losses in yields in crop and livestock production, drought is associated with increased insect infestations, plant diseases, and wind erosion. Drought can lead to other losses because so many sectors are affected - losses that include reduced income for farmers and reduced business for retailers and others who provide goods and services to farmers. This leads to unemployment, increased credit risk for financial institutions, capital shortfalls, and loss of tax revenue. Prices for food, energy, and other products may also increase as supplies decrease.

9.4.3 Critical Facilities

Critical facilities as defined for this plan will continue to be operational during a drought. Critical facility features such as landscaping may not be maintained due to limited water resources, but the risk to critical facility core functions is low.

9.4.4 Environment

Groundwater and Streams

Drought generally does not affect groundwater sources as quickly as surface water supplies, but groundwater supplies generally take longer to recover. Reduced precipitation during a drought means that groundwater

supplies are not replenished at a normal rate. This can lead to a reduction in groundwater levels and problems such as reduced pumping capacity or wells going dry. Shallow wells are more susceptible than deep wells. Reduced replenishment of groundwater affects streams. Much of the flow in streams comes from groundwater, especially during the summer when there is less precipitation and after snowmelt ends. Reduced groundwater levels mean that even less water will enter streams when stream flows are lowest. Where stream flows are reduced, development that relies on surface water may seek to establish new groundwater wells, which could further increase groundwater depletion.

Other Potential Losses

Environmental losses from drought are associated with damage to plants, animals, wildlife habitat, and air and water quality; forest and range fires; degradation of landscape quality; loss of biodiversity; and soil erosion. Some of the effects are short-term and conditions quickly return to normal following the end of the drought. Other environmental effects linger for some time or may even become permanent. Although environmental losses are difficult to quantify, growing public awareness and concern for environmental quality has forced public officials to focus greater attention and resources on these effects. The following are potential impacts of drought:

- Wildlife habitat may be degraded through the loss of wetlands, lakes and vegetation. The degradation of landscape quality, including increased soil erosion, may lead to a more permanent loss of biological productivity.
- Drought conditions greatly increase the likelihood of wildfires, the major threat to timber resources.
- Water shortages and severe drought conditions would have a significant impact on Native American tribes' way of life in fishing and farming subsistence.
- Scenic resources in the County are vulnerable to the increased likelihood of wildfires associated with droughts.
- Drying up or dying off of forests could reduce ecological and eco-tourist values.
- Any shortage of water supply can have significant economic impacts.

9.4.5 Economic Impact

Drought causes the most significant economic impacts on industries that use water or depend on water for their business, most notably, agriculture and related sectors (forestry, fisheries, and waterborne activities). In addition to losses in yields in crop and livestock production, drought is associated with increased insect infestations, plant diseases, and wind erosion. Drought can lead to other losses because so many sectors are affected—losses that include reduced income for farmers and reduced business for retailers and others who provide goods and services to farmers. This leads to unemployment, increased credit risk for financial institutions, capital shortfalls, and loss of tax revenue. Prices for food, energy, and other products may also increase as supplies decrease.

When a drought occurs, the agricultural industry faces greatest risk of economic impact and damage. During droughts, crops do not mature, resulting in smaller crop yields, undernourishment of wildlife and livestock, decreases in land values, and ultimately financial losses to farmers. Agriculture production has been a significant and growing factor in San Mateo County, especially as agricultural effects on the economy start to normalize (after a period of decline).

Direct effects (excluding indirect and induced spending benefits) can be evaluated based on information in USDA reports. According to the 2017 Census of Agriculture, 241 farms were present in San Mateo County,

encompassing 45,972 acres of total farmland. The average farm size was 191 acres. San Mateo County farms had a total market value of products sold of \$79.4 million, averaging \$329,562 per farm. The Census indicated that 187 farm operators reported farming as their primary occupation. Table 9-2 lists acreage of agricultural land exposed to the drought hazard.

Table 9-2. Agriculture Land and % Change in San Mateo County in 2017

Number of Farms	% Change since 2012	Land in Farms (acres)	% Change since 2012	Average Size of Farm (acres)	% Change since 2012
241	-28%	45,972	-5%	191	+32%

Source: 2017 USDA Census of Agriculture, County Profile

In 2017, the following were the top categories of agricultural products sold in San Mateo County:

- Nursery, greenhouse, floriculture, and sod at \$61.6 million
- Vegetables, melons, potatoes, and sweet potatoes at \$12.2 million
- Fruits, tree nuts, and berries at \$3.3 million.

San Mateo County was fifth highest ranked in the state and the country in sales of Brussels sprouts; it was eighth highest ranked in the state for sales of cut Christmas trees; and 11th highest ranked in the state for floriculture and bedding crops.

A prolonged drought can affect a community's economy significantly. Increased demand for water and electricity may result in shortages and higher costs of these resources. Industries that rely on water for business may be impacted the most (e.g., landscaping businesses). Although most businesses will still be operational, they may be affected aesthetically—especially the recreation and tourism industry. Moreover, droughts within another area could affect food supply and the price of food for community members within the county.

9.5 FUTURE TRENDS IN DEVELOPMENT

The planning partners' general plans and other planning activities provide guidance related to hazard mitigation and future development. General plans include policies directing land use and dealing with issues of water supply and the protection of water resources. These plans provide the capability at the local municipal level to protect future development from the impacts of drought. In addition, water providers in the planning area have plans and programs in place to balance competing needs for water resources within the planning area.

9.6 SCENARIO

A multi-year drought that impacts the entire west or the State of California, similar to the 2012 to 2017 drought, is the worst-case scenario for the planning area. The 2012-2017 drought and the wildfires and floods that followed it caused extensive damage to natural systems. If another severe drought occurs before these systems have a chance to recover, it could exacerbate the stress already placed on existing planning area water resources. Surrounding counties, also under drought conditions, could increase their demand for the water supplies on which San Mateo County also relies, triggering social and political conflicts. The higher density population of the Bay Area increases likelihood of such conflicts, despite existence of the BACSWA drought implementation plans. Additionally, the longer drought conditions last in or near the County, the greater the effect on the local economy; water-dependent industries especially will undergo setbacks.

9.7 ISSUES

The planning team has identified the following drought-related issues:

- Alternative water supplies need to be identified and developed, as well as alternative strategies to allocate and distribute existing water sources.
- Alternative techniques (groundwater recharge, water recycle, local capture and reuse, desalination, and transfer) could stabilize and offset Sierra Nevada snowpack water supply shortfalls.
- Development of local or regional (BACSWA) drought-level indicators to correspond with Drought Implementation Plans or other water conservation measures.
- Drought in the county could increase and expand fire-prone areas and adversely affect the timber economy.
- Water planning should consider impacts of additional drawdowns on groundwater supplies as pressure on surface water increases during drought.
- The effectiveness of long-term reliable water supply strategy projects, water conservation incentive projects, and water system capital improvement project upgrades should be monitored.
- More studies need to be done regarding overall county water usage and how it relates to the economy to prepare for a worst-case scenario drought.
- Planning must address the degree of future development in drought-prone areas.
- Drought frequencies and durations may increase due to climate change.
- Water conservation should be actively promoted, even during non-drought periods.
- Frequent or prolonged droughts may limit the County's and community members' ability to successfully recover from or prepare for more occurrences.

10. EARTHQUAKE

10.1 GENERAL BACKGROUND

An earthquake is the vibration of the earth's surface following a release of energy in the earth's crust. This energy can be generated by a sudden dislocation of the crust or by a volcanic eruption. Most destructive quakes are caused by dislocations of the crust. The crust may first bend and then, when the stress exceeds the strength of the rocks, break and snap to a new position. In the process of breaking, vibrations called "seismic waves" are generated. These waves travel outward from the source of the earthquake at varying speeds.

10.1.1 Earthquake Location

The location of an earthquake is commonly described by its focal depth and the geographic position of its epicenter. The focal depth of an earthquake is the depth from the Earth's surface to the region where an earthquake's energy originates (the focus or hypocenter). The epicenter of an earthquake is the point on the Earth's surface directly above the hypocenter.

10.1.2 Earthquake Geology

Tectonic Plates

The Earth's crust, which is the rigid outermost shell of the planet, is broken into seven or eight major tectonic plates (depending on how they are defined) and many minor plates. Where the plates meet, they move in one of three ways along their mutual boundary: convergent (two plates moving together), divergent (two plates moving apart), or transform (two plates moving parallel to one another). Earthquakes, volcanic activity, mountain-building, and oceanic trench formation occur along these plate boundaries. Subduction is a geological process that takes place at convergent boundaries of tectonic plate, in which one plate moves under another. Regions where this process occurs are known as subduction zones, and they have the potential to generate highly damaging earthquakes.

California is seismically active because of movement of the North American Plate, east of the San Andreas Fault, and the Pacific Plate to the west, which includes the state's coastal communities. The transform (parallel) movement of these tectonic plates against one another creates stresses that build as the rocks are gradually deformed. The rock deformation, or strain, is stored in the rocks as elastic strain energy. When the strength of the rock is exceeded, rupture occurs along a fault. The rocks on opposite sides of the fault slide past each other as they spring back into a relaxed position. The strain energy is released partly as heat and partly as elastic waves called seismic waves. The passage of these seismic waves produces the ground shaking in earthquakes.

The sliding movement of earth on either side of a fault is called fault rupture. Fault rupture begins below the ground surface at the earthquake hypocenter, typically between 3 and 10 miles below the ground surface in California. If an earthquake is large enough, the fault rupture will travel to the ground surface, potentially destroying structures built across its path.

Faults

Geologists have found that earthquakes reoccur along faults, which are zones of weakness in the earth's crust. When a fault experiences an earthquake, there is no guarantee that all the stress has been relieved. Another earthquake can still occur. In fact, relieving stress along one part of a fault may increase it in another part.

Faults are more likely to have future earthquakes on them if they have more rapid rates of movement, have had recent earthquakes along them, experience greater total displacements, and are aligned so that movement can relieve the accumulating tectonic stresses. Geologists classify faults by their relative hazards. "Active" faults, which represent the highest hazard, are those that have ruptured to the ground surface during the Holocene period (about the last 11,000 years). "Potentially active" faults are those that displaced layers of rock from the Quaternary period (the last 1,800,000 years).

Determining if a fault is "active" or "potentially active" depends on geologic evidence, which may not be available for every fault. The majority of the seismic hazards are on well-known active faults. However, inactive faults, where no displacements have been recorded, also have the potential to reactivate or experience displacement along a branch sometime in the future. An example of a fault zone that has been reactivated is the Foothills Fault Zone. The zone was considered inactive until evidence of an earthquake (approximately 1.6 million years ago) was found near Spenceville, California. Then, in 1975, an earthquake occurred on another branch of the zone near Oroville, California (now known as the Cleveland Hills Fault). The State Division of Mines and Geology indicates that increased earthquake activity throughout California may cause tectonic movement along currently inactive fault systems.

10.1.3 Earthquake-Related Hazards

According to the U.S. Geological Survey (USGS) Earthquake Hazards Program, an earthquake hazard is anything associated with an earthquake that may affect people's normal activities. This includes the following:

- **Surface Faulting**—Displacement that reaches the earth's surface during slip along a fault. Commonly occurs with shallow earthquakes, those with an epicenter less than 20 kilometers.
- **Ground Motion (shaking)**—The movement of the earth's surface from earthquakes or explosions. Ground motion or shaking is produced by waves that are generated by sudden slip on a fault or sudden pressure at the explosive source and travel through the earth and along its surface.
- **Landslide**—A movement of surface material down a slope.
- **Liquefaction**—A process by which water-saturated sediment temporarily loses strength and acts as a fluid. Earthquake shaking can cause this effect.
- **Tectonic Deformation**—A change in the original shape of a material due to stress and strain.
- **Tsunami**—A sea wave of local or distant origin that results from large-scale seafloor displacements associated with large earthquakes, major submarine slides, or violent underwater volcanic eruptions.

10.1.4 Earthquake Classifications

Earthquakes are typically classified in one of two ways: By the amount of energy released, measured as magnitude; or by the impact on people and structures, measured as intensity.

Magnitude

An earthquake's magnitude is a measure of the energy released at the source of the earthquake. Magnitude is commonly expressed by ratings on the moment magnitude scale (M_w), the most common scale used today (USGS, 2017). This scale is based on the total moment release of the earthquake (the product of the distance a fault moved and the force required to move it). The scale is as follows:

- Great— $M_w > 8$
- Major— $M_w = 7.0 - 7.9$
- Strong— $M_w = 6.0 - 6.9$
- Moderate— $M_w = 5.0 - 5.9$
- Light— $M_w = 4.0 - 4.9$
- Minor— $M_w = 3.0 - 3.9$
- Micro— $M_w < 3$

Intensity

The most commonly used intensity scale is the modified Mercalli intensity scale. Ratings of the scale as well as the perceived shaking and damage potential for structures are shown in Table 10-1. The modified Mercalli intensity scale is generally represented visually using shake maps, which show the expected ground shaking at any given location produced by an earthquake with a specified magnitude and epicenter. An earthquake has only one magnitude and one epicenter, but it produces a range of ground shaking at sites throughout the region, depending on the distance from the earthquake, the rock and soil conditions at sites, and variations in the propagation of seismic waves from the earthquake due to complexities in the structure of the earth's crust. A shake map shows the variation of ground shaking in a region immediately following significant earthquakes.

Table 10-1. Mercalli Scale and Peak Ground Acceleration Comparison

Modified Mercalli Scale	Perceived Shaking	Potential Structure Damage		Estimated PGA ^a (%g)
		Resistant Buildings	Vulnerable Buildings	
I	Not Felt	None	None	<0.17%
II-III	Weak	None	None	0.17% - 1.4%
IV	Light	None	None	1.4% - 3.9%
V	Moderate	Very Light	Light	3.9% - 9.2%
VI	Strong	Light	Moderate	9.2% - 18%
VII	Very Strong	Moderate	Moderate/Heavy	18% - 34%
VIII	Severe	Moderate/Heavy	Heavy	34% - 65%
IX	Violent	Heavy	Very Heavy	65% - 124%
X - XII	Extreme	Very Heavy	Very Heavy	>124%

a. PGA = peak ground acceleration. Measured in percent of g, where g is the acceleration of gravity

10.1.5 Ground Motion

Earthquake hazard assessment is based on expected ground motion. During an earthquake when the ground is shaking, it also experiences acceleration. The peak acceleration is the largest increase in velocity recorded by a particular station during an earthquake. Estimates are developed of the annual probability that certain ground motion accelerations will be exceeded; the annual probabilities can then be summed over a time period of interest.

The most commonly mapped ground motion parameters are horizontal and vertical peak ground accelerations (PGA) for a given soil type. PGA is a measure of how hard the earth shakes, or accelerates, in a given geographic area. Instruments called accelerographs record levels of ground motion due to earthquakes at stations throughout a region. PGA is measured in g (the acceleration due to gravity) or expressed as a percent acceleration force of gravity (%g). These readings are recorded by state and federal agencies that monitor and predict seismic activity.

Maps of PGA values form the basis of seismic zone maps that are included in building codes such as the International Building Code. Building codes that include seismic provisions specify the horizontal force due to lateral acceleration that a building should be able to withstand during an earthquake. PGA values are directly related to these lateral forces that could damage “short period structures” (e.g., single-family dwellings). Longer period response components determine the lateral forces that damage larger structures with longer natural periods (e.g., apartment buildings, factories, high-rises, bridges). Table 10-1 lists damage potential and perceived shaking by PGA factors, compared to the Mercalli scale.

10.1.6 USGS Earthquake Mapping Programs

ShakeMaps

The USGS Earthquake Hazards Program produces maps called ShakeMaps that map ground motion and shaking intensity following significant earthquakes. ShakeMaps focus on the ground shaking caused by the earthquake, rather than on characteristics of the earthquake source, such as magnitude and epicenter. An earthquake has only one magnitude and one epicenter, but it produces a range of ground shaking at sites throughout the region, depending on the distance from the earthquake, the rock and soil conditions at sites, and variations in the propagation of seismic waves from the earthquake due to complexities in the structure of the earth’s crust.

A ShakeMap shows the extent and variation of ground shaking immediately across the surrounding region following significant earthquakes. Such mapping is derived from peak ground motion amplitudes recorded on seismic sensors, with interpolation where data are lacking based on estimated amplitudes. Color-coded instrumental intensity maps are derived from empirical relations between peak ground motions and Modified Mercalli intensity. In addition to the maps of recorded events, the USGS creates the following:

- Scenario ShakeMaps of hypothetical earthquakes of an assumed magnitude on known faults
- Probabilistic ShakeMaps, based on predicted shaking from all possible earthquakes over a 10,000-year period. In a probabilistic map, information from millions of scenario maps are combined to make a forecast for the future. The maps indicate the ground motion at any given point that has a given probability of being exceeded in a given timeframe, such as a 100-year (1-percent-annual chance) event.

National Seismic Hazard Map

National maps of earthquake shaking hazards provide information for creating and updating seismic design requirements for building codes, insurance rate structures, earthquake loss studies, retrofit priorities and land use

planning. After thorough review of the studies, professional organizations of engineers update the seismic-risk maps and seismic design requirements contained in building codes (Brown et al., 2001). The USGS updated the National Seismic Hazard Maps in 2018. New seismic, geologic, and geodetic information on earthquake rates and associated ground shaking were incorporated into these revised maps. The 2018 map, shown in Figure 10-1, represents the best available data as determined by the USGS.

Source: USGS, 2021

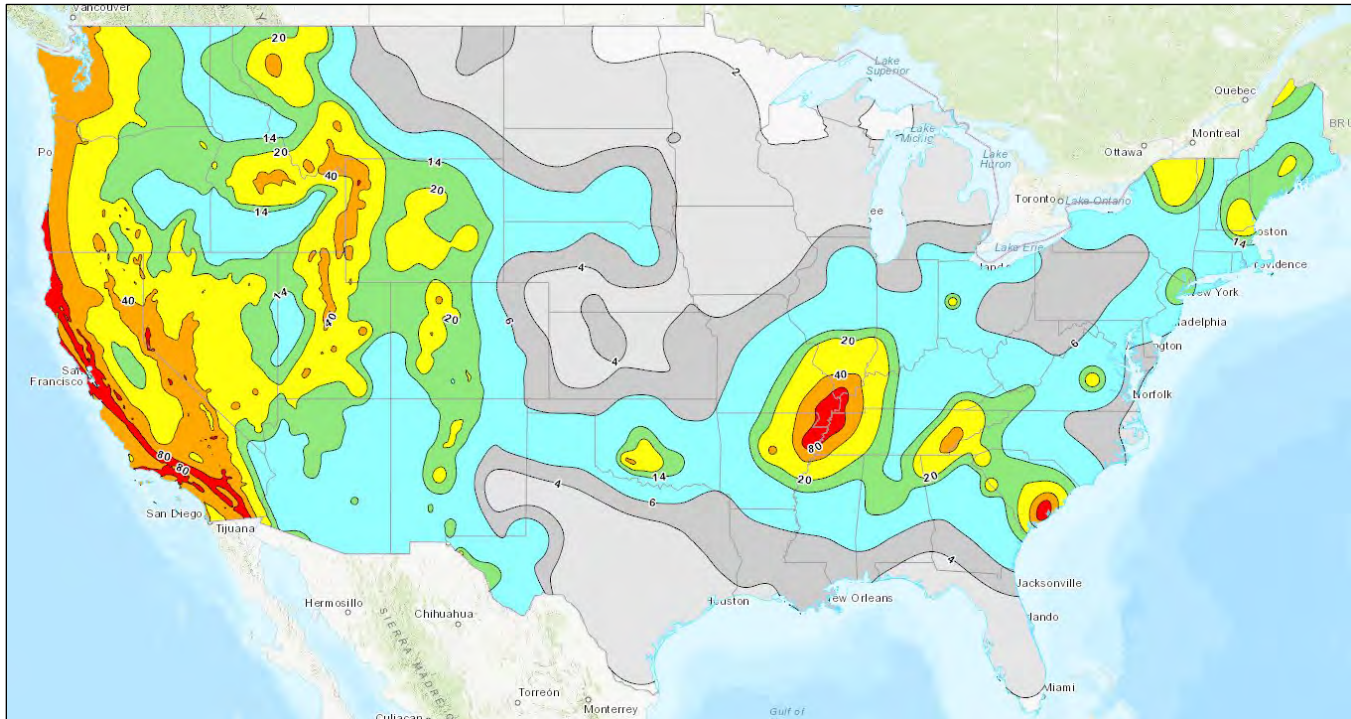

Figure 10-1. Peak Acceleration (%g) with 2% Probability of Exceedance in 50 Years

10.1.7 Liquefaction and Soil Types

Soil liquefaction occurs when water-saturated sands, silts or gravelly soils are shaken so violently that the individual grains lose contact with one another and float freely in the water, turning the ground into a pudding-like liquid. Building and road foundations lose load-bearing strength and may sink into what was previously solid ground. Unless properly secured, hazardous materials can be released, causing significant damage to the environment and people.

A program called the National Earthquake Hazard Reduction Program (NEHRP) creates maps based on soil characteristics to help identify locations subject to liquefaction. NEHRP soil types define the locations that will be significantly impacted by an earthquake. Table 10-2 summarizes NEHRP soil classifications. NEHRP Soils B and C typically can sustain ground shaking without much effect, dependent on the earthquake magnitude. The areas that are commonly most affected by ground shaking have NEHRP Soils D, E and F. In general, these areas are also most susceptible to liquefaction. The areas that are most commonly affected by ground shaking have NEHRP Soils D, E and F.

Table 10-2. NEHRP Soil Classification System

NEHRP Soil Type	Description	Mean Shear Velocity to 30 m (m/s)
A	Hard Rock	1,500
B	Firm to Hard Rock	760-1,500
C	Dense Soil/Soft Rock	360-760
D	Stiff Soil	180-360
E	Soft Clays	< 180
F	Special Study Soils (liquefiable soils, sensitive clays, organic soils, soft clays >36 m thick)	

10.1.8 Secondary Hazards

Earthquakes can cause disastrous landslides. River valleys are vulnerable to slope failure, often as a result of loss of cohesion in clay-rich soils. Earthen dams and levees are highly susceptible to seismic events, and the impacts of their eventual failures can be considered secondary risk exposure to earthquakes. Depending on the location, earthquakes can also trigger tsunamis. Additionally, fires can result from gas lines or power lines that are broken or downed during the earthquake. It may be difficult to control a fire, particularly if the water lines feeding fire hydrants are also broken.

10.2 HAZARD PROFILE

10.2.1 Past Events

Table 10-3 lists recent earthquakes with a magnitude of 5.0 or greater within 100 miles of San Mateo County. The last significant (greater than magnitude 6.0) seismic event in the San Mateo vicinity was the 7.1 magnitude San Andreas Loma Prieta Earthquake in 1989, which originated 10 miles northeast of Santa Cruz. Other significant local earthquakes include the 1906 earthquake in San Francisco and the 2014 Napa earthquake. Although the 1906 earthquake is most associated with the City of San Francisco, San Mateo County was also greatly affected.

Table 10-3. Recent Earthquakes Magnitude 5.0 or Larger Within 100-Mile radius

Date	Magnitude	Epicenter Location
8/24/2014	6.0	6 miles southwest of Napa, CA
10/31/2007	5.6	10 miles northeast of San Jose, CA
8/10/2001	5.50	9 miles west of Portola, CA
9/3/2000	5.17	8 miles northwest of Napa, CA
10/17/1989	7.1	10 miles northeast of Santa Cruz, CA
3/31/1986	5.70	12 miles east-northeast of Milpitas, CA

Source: USGS, 2021a

10.2.2 Location

Fault Locations

San Mateo County is in a region of high seismicity because of the presence of the San Andreas Fault that bisects the county, the Hayward Fault across the bay to the east, and the San Gregorio Fault to the west. The primary

seismic hazard for the county is potential ground shaking from these three large faults. Table 10-4 lists additional faults in the Bay Area. Figure 10-2 shows locations and event probabilities for Bay Area fault lines.

Table 10-4. Additional Faults within a 50-Mile Radius

Fault	Approximate Distance (miles/direction)
Calaveras	17 miles from East Palo Alto
Greenville	23 miles from Menlo Park
Mount Diablo Thrust	27 miles from South San Francisco
Concord-Green Valley	30 miles from South San Francisco
Rogers Creek (Part of Hayward Fault System)	35 miles from South San Francisco

San Andreas Fault

The San Andreas Fault is a transform boundary that spans 810 miles from the East Pacific rise in the Gulf of California through the Mendocino fracture zone off the shore of northern California. The fault is estimated to be 28 million years old. The San Andreas Fault is an example of a transform boundary exposed on a continent. The fault forms the tectonic boundary between the Pacific Plate and the North American Plate, and its motion is right-lateral strike-slip.

The San Andreas Fault is typically referenced in three segments. The southern segment extends from its origin at the East Pacific Rise to Parkfield, California, in Monterey County. The central segment extends from Parkfield to Hollister, California. The northern segment extends northwest from Hollister, through San Mateo County, to its junction with the Mendocino fracture zone and the Cascadia subduction zone in the Pacific Ocean.

The San Andreas Fault crosses the center of the county, passing through the population centers of Daly City and San Bruno and posing considerable risk for surface fault rupture within those cities. The San Andreas Fault has a 21 percent chance of generating a magnitude 6.7 or greater earthquake in the next 30 years.

The last earthquake with a magnitude over 5.0 with an epicenter in San Mateo County was the 1957 Daly City earthquake, with a magnitude of 5.3. While the epicenter of the magnitude 7.8 earthquake in 1906 on the San Andreas Fault was not within the county, it still caused extreme ground shaking. A similar earthquake in the future would likely do the same, especially in the heavily populated Bayside, much of which is underlain by alluvial deposits, bay mud, and artificial fill. A rupture along the peninsula would cause extremely violent ground shaking throughout the county. The bay margins are likely to experience liquefaction in a major earthquake.

Monte Vista-Shannon Fault

The Monte Vista-Shannon fault zone is a predominantly a southwest-dipping oblique slip fault that extends about 28 miles along the northeastern margin of the Santa Cruz Mountains from the vicinity of Los Trancos Creek southeast to the Alamitos Creek area, near Calero Reservoir (USGS, 2020).

Butano Fault

The Butano Fault is a 23-mile-long fault that falls along Pescadero Creek in San Mateo County. It merges with the San Andreas fault from the northwest and the Sargent fault from the southeast. It appears to have a symmetrical relation to the San Andreas fault and may have similar seismic potential (USGS, 1974).

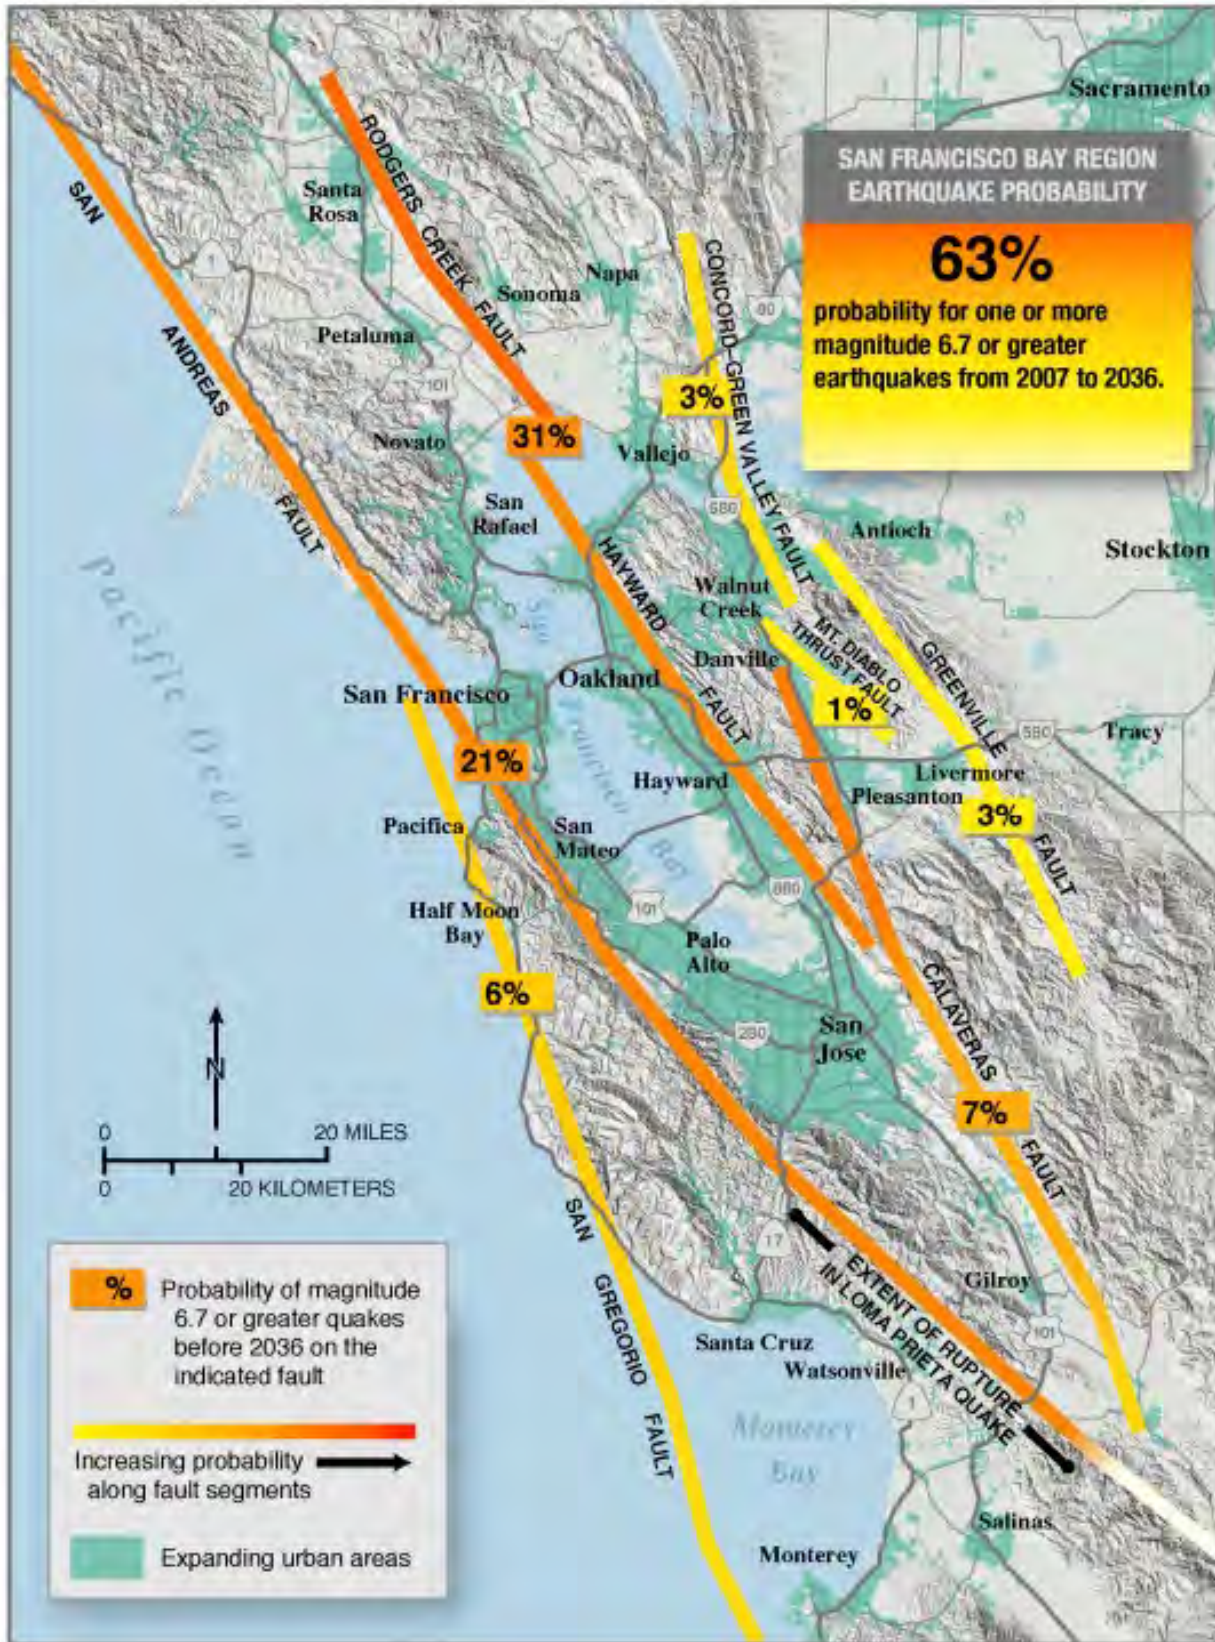

Figure 10-2. Significant Known Faults in the Bay Area

Hayward Fault

The Hayward Fault is a 45-mile-long fault that parallels the San Andreas Fault on the East Bay. The Hayward Fault extends through some of the Bay Area's most populated areas, including San Jose, Oakland, and Berkeley. The Hayward Fault is a right lateral slip fault.

The Hayward Fault has a 31-percent chance of producing a magnitude 6.7 or greater earthquake in the next 30 years. An earthquake of this magnitude has regional implications for the entire Bay Area, as the Hayward Fault crosses numerous transportation and resource facilities, such as highways and the Hetch Hetchy Aqueduct. Disruption of the Hetch Hetchy system has the potential to severely impair water service to San Mateo County. The Hayward Fault is increasingly becoming a hazard priority throughout the Bay region because of its increased chance for activity and its intersection with multiple highly populated areas and critical facilities.

San Gregorio Fault

The San Gregorio Fault is a northwest-trending right-lateral slip deformation near the western edge of San Mateo County, crossing briefly over uninhabited land in San Mateo County around Pillar Point at Half Moon Bay. The fault runs from southern Monterey Bay through Bolinas Bay, where its north section intersects with the San Andreas Fault offshore north of San Francisco. San Gregorio is the principal active fault west of the San Andreas for the Bay Area region.

The San Gregorio Fault is one of the less studied fault lines, the result of its primary location offshore and its proximity to the better-known San Andreas Fault and Hayward Fault. Its probability of experiencing a magnitude 6.7 or greater earthquake within the next 30 years is 6 percent—significantly less than San Andreas Fault or Hayward Fault. However, the location of the fault poses a significant threat to San Mateo County.

NEHRP Soil Type and Liquefaction Mapping

Figure 10-3 shows NEHRP soil classifications in San Mateo County. Figure 10-4 shows areas that have moderate, high or very high susceptibility to liquefaction.

Alquist-Priolo Zone Maps

Alquist-Priolo zone maps provide regulatory zones for potential surface fault rupture where fault lines intersect with future development and populated areas. The purpose of these maps is to assist in the geologic investigation before construction begins to ensure that the resulting structure will not be located on an active fault. Daly City and San Bruno are located in designated Alquist-Priolo Zones for the San Andreas Fault.

Alquist-Priolo maps were referenced, but not specifically used, in the assessment of risk for this plan as a result of the existence of current extensive studies and regulations and ongoing monitoring and update of Alquist-Priolo Zones by the State of California. This plan assumes that the studies conducted, and information provided by the State of California are the best available data for surface rupture risk and could not be improved through a separate assessment for this plan. Alquist-Priolo maps are available to the public at:

<http://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps>.

Data Sources: San Mateo Co.,
ABAG (USGS)

10.2.3 Frequency

Historical records of earthquake occurrences give some indication of future probabilities. Seismic activity was more frequent from 1830 to 1930 than it has been since. This leads some scientists to suspect that pressure is building up along the faults in the Bay Area that can result in a large quake. Such a quake could have dramatic and devastating effects throughout the Bay Area. The USGS reports the following earthquake probabilities for the Bay Area over next 30 years (U.S. Geological Survey, n.d.):

- 72 percent probability of an earthquake measuring magnitude 6.7
- 51 percent probability of an earthquake measuring magnitude 7
- 20 percent probability of an earthquake measuring magnitude 7.5

The *Third Uniform California Earthquake Rupture Forecast* identified recurrence intervals for four deterministic scenarios applicable to San Mateo County (Working Group on California Earthquake Probabilities, 2021):

- San Andreas Fault scenario, recurrence interval = 160 years
- San Gregorio Fault Scenario = 481 years
- Butano Fault Scenario = 2,881 years
- Monte Vista Fault Scenario = 1,894 years

10.2.4 Severity

The severity of an earthquake can be expressed in terms of intensity or magnitude (see Section 10.1.3). The State of California Department of Conservation probabilistic ground shaking maps, based on current information about fault zones, show the PGA that has a certain probability of being exceeded in a 50-year period. San Mateo County is in a high-risk area, with a 10-percent probability in a 50-year period of ground shaking from a seismic event exceeding 60 percent of gravity in some parts of the County. Figure 10-5 shows the expected peak horizontal ground accelerations for this probability.

10.2.5 Warning Time

There is no current reliable way to predict the day or month that an earthquake will occur at any given location. Research is being done with warning systems that detect the lower energy compressional waves (P waves) that precede the secondary waves (S waves) experienced as an earthquake. Earthquake early warning systems may provide a few seconds' or a few minutes' notice that a major earthquake is about to occur. The warning time is very short, but it could allow for someone to get under a desk, pause hazardous or high-risk work, or initiate protective automated systems in critical facilities.

10.3 EXPOSURE

10.3.1 Population

The entire population of the planning area is potentially exposed to direct damage from earthquakes or indirect impacts such as business interruption, road closures, and loss of function of utilities.

Figure 10-5. Peak Ground Acceleration with 10% Probability of Exceedance in 50 Years

10.3.2 Property

According to County Assessor records, there are 194,052 buildings in the planning area. Most of the buildings (95 percent) are residential. All buildings are considered to be exposed to the earthquake hazard.

10.3.3 Critical Facilities

Since the entire planning area has exposure to the earthquake hazard, all critical facilities components are considered to be exposed. The breakdown of the numbers and types of facilities is presented in Table 4-5. Critical facilities constructed on NEHRP Type D and E soils are particularly at risk from seismic events. Figure 10-6 shows the number of critical facilities built on these soils in the planning area, by type of facility.

10.3.4 Environment

The entire planning area is exposed to the earthquake hazard, including all natural resources, habitat and wildlife.

10.4 VULNERABILITY

Earthquake vulnerability data for the risk assessment was generated using a Hazus Level 2 (user-defined) analysis for the events listed in Table 10-5. The analysis results are summarized in the sections below, and more detailed information, broken down by municipality, can be found in Appendix E.

Intensity scale described as: (perceived shaking / potential damage)

10.4.1 Population

Community Members of High-Risk Areas

The degree of vulnerability is dependent on many factors, including the age and construction type of the structures people live in, the soil types their homes are constructed on, their proximity to fault location, etc. It is estimated that 38.6 percent of San Mateo County's population resides on soil classes considered susceptible to ground shaking from earthquakes (NEHRP Class D and E soils). An analysis was performed of the population living in these susceptible areas using the SoVI ratings (see Section 7.2.2). Detailed results by jurisdiction are in Appendix E. Table 10-6 summarizes results for the overall planning area.

Table 10-6. Distribution of Population Exposed to Earthquake Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	37,073	12.72%
Relatively High	86,842	29.79%
Relatively Moderate	74,000	25.39%
Relatively Low	59,263	20.33%
Very Low	34,301	11.7%

Estimated Impacts on Persons and Households

Hazus estimated impacts on persons and households in the planning area for the four selected earthquake scenarios as summarized in Table 10-7.

Table 10-7. Estimated Earthquake Impact on Persons

Scenario	Displaced Households		Persons Requiring Short-Term Shelter	
	Number	% of Total	Number	% of Total
100-Year Probabilistic	587	0.08%	342	0.04%
San Andreas Fault Scenario	1,977	0.26%	967	0.13%
San Gregorio Fault Scenario	264	0.03%	121	0.02%
Butano Fault Scenario	15	0.002%	6	0.0008%
Monte Vista Fault Scenario	513	0.07%	249	0.03%

10.4.2 Property

Building Age

Table 10-8 identifies significant milestones in building and seismic code requirements that directly affect the structural integrity of development. Using U.S. Census estimates of housing stock age, estimates were developed of the number of housing units constructed before each of these dates. More than 7 percent of the planning area's housing units were constructed after the Uniform Building Code was amended in 1994 to include seismic safety provisions. Housing units built before 1933 when there were no building permits, inspections, or seismic standards, account for 7.6 percent. Many of the housing units in the planning area are detached, single-family residences of wood construction, which generally perform well during earthquake events.

Table 10-8. Age of Housing Units in Planning Area

Time Period	Number of Current Planning Area Housing Units Built in Period	% of Total Housing Units	Significance of Time Frame
Pre-1933	15,588	8.0%	Before 1933, there were no explicit earthquake requirements in building codes. State law did not require local governments to have building officials or issue building permits.
1933-1940	10,025	5.2%	In 1940, the first strong motion recording was made.
1941-1960	87,547	45.1%	In 1960, the Structural Engineers Association of California published guidelines on recommended earthquake provisions.
1961-1975	40,454	20.8%	In 1975, significant improvements were made to lateral force requirements.
1976-1994	24,970	12.9%	In 1994, the Uniform Building Code was amended to include provisions for seismic safety.
1994 – present	15,468	8.0%	Seismic code is currently enforced.
Total	194,052	100%	

Note: Number and percent estimates are approximation as housing unit age information does not correspond directly with the time periods indicated. In addition, there are significant margins of error associated with the Census estimates.

Soft-Story Buildings

A soft-story building is a multi-story building with one or more floors that are “soft” because of structural design. If a building has a floor that is 70-percent less stiff than the floor above it, it is considered a soft-story building. This soft story creates a major weak point in an earthquake. Since soft stories are typically associated with retail spaces and parking garages, they are often on the lower stories of a building. When they collapse, they can take the whole building down with them, causing serious structural damage that may render the structure unusable.

These floors can be especially dangerous in earthquakes because they cannot cope with the lateral forces caused by the swaying of the building during a quake. As a result, the soft story may fail, causing what is known as a soft-story collapse. Soft-story collapse is one of the leading causes of earthquake damage to private residences.

Exposure rates and vulnerability analysis associated with soft-story construction in the planning area are not currently known. ABAG and other agencies in the Bay Area have programs generating this type of data, but it is not known when such data will be available for San Mateo County. This type of data will need to be generated to support future risk assessments of the earthquake hazard.

Unreinforced Masonry Buildings

Unreinforced masonry buildings are constructed from materials such as adobe, brick, hollow clay tiles, or other masonry materials and do not contain an internal reinforcing structure, such as rebar in concrete or steel bracing for brick. Unreinforced masonry buildings pose a significant danger during an earthquake because the mortar holding masonry together is typically not strong enough to withstand significant earthquakes. Additionally, the brittle composition of these houses can break apart and fall away or buckle, potentially causing a complete collapse of the building.

In San Mateo County, unreinforced masonry buildings are generally brick buildings that were constructed before modern earthquake building codes and designs were enacted. The State of California enacted a law in 1986 that required all local governments in Seismic Zone 4 (nearest to active earthquake faults) to inventory unreinforced

masonry buildings. The law encourages local governments to adopt local mandatory strengthening programs, delineate seismic retrofit standards, and put into place measures to reduce the number of people in unreinforced masonry buildings.

According to ABAG, housing units in unreinforced masonry buildings account for only 1-percent of the total Bay Area housing stock and 2.9-percent of the total Bay Area multi-family stock.

Loss Potential

Table 10-9 summarizes Hazus estimates of earthquake damage in the planning area for the four scenarios. The debris estimate includes only structural debris; it does not include additional debris that may accumulate, such as from trees. In addition, these estimates do not include losses that would occur from any local tsunamis or fires stemming from an earthquake.

Table 10-9. Estimated Impact of Earthquake Scenario Events in the Planning Area

	100-Year Probabilistic Earthquake	San Andreas Fault Scenario	San Gregorio Fault Scenario	Butano Fault Scenario	Monte Vista Fault Scenario
Estimated Loss					
Structural	\$10,073,424,657	\$22,126,733,755	\$12,276,099,854	\$4,677,853,811	\$14,347,471,821
Contents	\$4,604,600,185	\$9,173,501,156	\$5,192,968,440	\$2,135,742,033	\$6,067,256,924
Total	\$14,678,024,842	\$31,300,234,912	\$17,469,068,294	\$6,813,595,844	\$20,414,728,745

10.4.3 Critical Facilities

Level of Damage

Hazus classifies the vulnerability of critical facilities to earthquake as no damage, slight damage, moderate damage, extensive damage, or complete damage. Hazus was used to assign a category to each critical facility in the planning area for the assessed earthquake scenarios. Summary results are shown in Figure 10-12 through Figure 10-16.

Time to Return to Functionality

Hazus estimates the time to restore critical facilities to fully functional use. Results are presented as probability of being functional at specified time increments: 1, 3, 7, 14, 30 and 90 days after the event. For example, Hazus may estimate that a facility has 5 percent chance of being fully functional at Day 3, and a 95 percent chance of being fully functional at Day 90. The analysis of critical facilities in the planning area was performed for the assessed earthquake scenarios. The results are summarized in Figure 10-17 through Figure 10-21. These figures show the average functionality for all critical facilities in each category.

Hazardous Materials

Hazardous material releases from fixed facilities and transportation-related releases can occur during an earthquake.

Transportation

Roads have the potential to be significantly damaged during an earthquake. Access to major roads is crucial to life and safety after a disaster event as well as to response and recovery operations. Disruption in transportation systems is of particular concern to coastal community members, as a major event has the potential to isolate communities from critical assistance and aid. Additionally, Bay Area Rapid Transit (BART) provides transportation service to the northern portion of San Mateo County from South San Francisco to Millbrae and the San Francisco Airport. Much of the BART transportation infrastructure in San Mateo County is underground. BART tunnels may collapse during a high magnitude event, leading to loss of life and potential release of hazardous materials.

Earthquakes can significantly damage bridges, which often provide the only access to some neighborhoods. Since soft soil regions generally follow floodplain boundaries, bridges that cross water courses are vulnerable. Key factors in the degree of vulnerability are the facility's age and type of construction, which indicate the standards to which the facility was built.

Water and Sewer Infrastructure

Water and sewer infrastructure would likely suffer considerable damage in the event of an earthquake. This factor is difficult to analyze based on the amount of infrastructure and because water and sewer infrastructure are usually linear easements, which are difficult to thoroughly assess in Hazus. Without further analysis of individual system components, it should be assumed that these systems are exposed to breakage and failure.

10.4.4 Environment

Environmental problems as a result of an earthquake can be numerous. Secondary hazards will likely have some of the most damaging effects on the environment. Earthquake-induced landslides can significantly damage surrounding habitat. It is also possible for streams to be rerouted after an earthquake. Rerouting can change the water quality, possibly damaging habitat and feeding areas. Streams fed by groundwater wells can dry up because of changes in underlying geology.

10.5 FUTURE TRENDS IN DEVELOPMENT

The planning area population could increase by as much as 10 percent by 2030. As populations grow, it is critical that the services supporting these communities—such as water, sewer, power, roads, hospitals, and public safety agencies—are able to maintain or quickly resume functionality after a disaster. Land use in the planning area will be directed by general plans adopted under California's General Planning Law. The safety elements of the general plans establish standards and plans for the protection of the community from hazards, including seismic hazards. The information in this plan provides a tool to ensure that there is no increase in exposure in areas of high seismic risk. Development in the planning area will be regulated through building standards and performance measures so that the degree of risk will be reduced. Geologic hazard areas are heavily regulated under California's General Planning Law. The International Building Code establishes provisions to address seismic risk.

San Mateo County and participating cities strictly enforce all seismic building codes and design standards to prevent loss of life and property caused by earthquake. Municipal planning partners are encouraged to establish general plans with policies directing land use and dealing with issues of seismic safety. These plans provide the capability at the local municipal level to protect future development from the impacts of earthquakes. Public education, cooperation with the development community, and individual preparedness are essential as the planning area welcomes new community members and businesses.

10.6 SCENARIO

Based on history and geology, the planning area will be frequently impacted by earthquakes. The worst-case scenario is a higher-magnitude event (7.5 or higher) with an epicenter within 50 miles of the county. The San Andreas fault scenario modeled for this risk assessment would mimic this scenario. Earthquakes of this magnitude or higher could lead to massive structural failure of property on soils prone to liquefaction. Building and road foundations would lose load-bearing strength. Injuries could occur from debris, such as parapets and chimneys that could topple or be shaken loose and fall on those walking or driving below. Levees and revetments built on these poor soils would likely fail, representing a loss of critical facilities. An earthquake event of this magnitude located off the coast could cause a significant local tsunami that would further damage structures and jeopardize lives. An earthquake may also cause minor landslides along unstable slopes, which put at risk major roads and highways that act as sole evacuation routes. This would be even more likely if the earthquake occurred during the winter or early spring.

10.7 ISSUES

Important issues associated with an earthquake include the following:

- More information is needed on the exposure and performance of soft-story construction within the planning area.
- It is estimated that over 70 percent of the planning area's building stock was built prior to 1975, when seismic provisions became uniformly applied through building code applications. Many structures may need seismic retrofits in order to withstand a moderate earthquake. Residential retrofit programs, such as Earthquake Brace+Bolt, may be able to assist in the costs of these efforts.
- Based on the modeling of critical facility performance performed for this plan, a high number of facilities in the planning area are expected to suffer complete or extensive damage from scenario events. These facilities are prime targets for structural retrofits.
- Critical facility owner should be encouraged to create or enhance Continuity of Operations Plans using the information on risk and vulnerability contained in this plan.
- Geotechnical standards should be established that take into account the probable impacts from earthquakes in the design and construction of new or enhanced facilities.
- There are a large number of earthen dams within the planning area. Dam failure warning and evacuation plans and procedures should be reviewed and updated to reflect the dams' risk potential associated with earthquake activity in the region. The County levees should also be included in any assessments for earthquake risk.
- Earthquakes could trigger other natural hazard events such as dam failures, flood, fire, and landslides, which could severely damage the County.

- A worst-case scenario would be the occurrence of a large seismic event during a flood or high-water event. Levees would fail at multiple locations, increasing the impacts of the individual events.
- Community members are expected to be self-sufficient up to 3 days after a major earthquake without government response agencies, utilities, private-sector services, and infrastructure components. Education programs are currently in place to facilitate development of individual, family, neighborhood, and business earthquake preparedness. Government alone can never make this region fully prepared. It takes individuals, families, and communities working in concert with one another to truly be prepared for disaster.
- After a major seismic event, San Mateo County is likely to experience disruptions in the flow of goods and services resulting from the destruction of major transportation infrastructure across the broader region.

11. FLOOD

11.1 GENERAL BACKGROUND

11.1.1 Types of Flooding in the Planning Area

Four types of flooding primarily affect San Mateo County: riverine, stormwater runoff, flash floods, and coastal floods. The following subsections describe each type.

Riverine Floods

Riverine flooding is overbank flooding of rivers and streams. Natural processes of riverine flooding add sediment and nutrients to fertile floodplain areas. Flooding in large river systems typically results from large-scale weather systems that generate prolonged rainfall over a wide geographic area, causing flooding in hundreds of smaller streams, which then drain into the major rivers. Two types of flood hazards are generally associated with riverine flooding:

- **Inundation**—Inundation occurs when floodwater is present and debris flows through an area not normally covered by water. These events cause minor to severe damage, depending on velocity and depth of flows, duration of the flood event, quantity of logs and other debris carried by the flows, and amount and type of development and personal property along the floodwater's path.
- **Channel Migration**—Erosion of banks and soils worn away by flowing water, combined with sediment deposition, causes migration or lateral movement of a river channel across a floodplain. A channel can also abruptly change location (termed “avulsion”); a shift in channel location over a large distance can occur within as short a time as one flood event.

The frequency and severity of flooding for river systems are based on discharge probability. The discharge probability is the probability that a certain river discharge (flow) level will be equaled or exceeded in a given year. Flood studies use historical records to determine the probability of occurrence for different discharge levels and storm surge levels. These measurements reflect statistical averages only; it is possible for multiple floods with a low probability of occurrence (such as a 1-percent-annual-chance flood) to occur in a short time period. For riverine flooding, the same flood event can have flows at different points on a river that correspond to different probabilities of occurrence.

Shallow area flooding is a special type of riverine flooding. FEMA defines shallow flood hazards as areas inundated by the 1-percent-annual-chance flood with flood depths of only 1 to 3 feet. These areas are generally flooded by low-velocity sheet flows of water.

Coastal Floodplains

Coastal floods are characterized by inundation of normally dry lands by ocean waters. Storm surge associated with severe storms, tsunamis, or extreme high tide events can result in shallow flooding of low-lying coastal areas. Storm surge floods typically result in coastal erosion, salinization of freshwater sources, and contamination of water supplies. These floods are also responsible for significant agricultural losses, loss of life, and damage to public and private structures and infrastructure. The San Mateo County coastline extends 55 miles and hosts both residential and agricultural communities. The Pacific Ocean is the most likely source of coastal flooding in the County, although flooding from the San Francisco Bay is also a possibility during significant events.

San Mateo County has mitigated some of its vulnerability to coastal flooding through a series of levees originally installed for salt evaporation ponds in the southeastern part of the County and for flood protection in the north and central parts of the County. These levees were not designed to withstand floods of magnitude greater than the 1-percent-annual-chance flood (San Mateo County OES, 2015).

Stormwater Runoff Floods

Stormwater flooding is a result of local drainage issues and high groundwater levels. Locally, heavy rain, especially during high lunar tide events, may induce flooding within areas other than delineated floodplains or along recognizable channels due to presence of storm system outfalls inadequate to provide gravity drainage into the adjacent body of water. If local conditions cannot accommodate intense precipitation through a combination of infiltration and surface runoff, water may accumulate and cause flooding problems. Flooding issues of this nature generally occur within areas with flat gradients, and generally increase with urbanization, which speeds accumulation of floodwaters because of impervious areas. Shallow street flooding can occur unless channels have been improved to account for increased flows.

Urban drainage flooding is caused by increased water runoff due to urban development and drainage systems. Drainage systems are designed to remove surface water from developed areas as quickly as possible to prevent localized flooding on streets and within other urban areas. These systems utilize a closed conveyance system that channels water away from an urban area to surrounding streams, and bypasses natural processes of water filtration through the ground, containment, and evaporation of excess water. Because drainage systems reduce the amount of time surface water takes to reach surrounding streams, flooding in those streams can occur more quickly and reach greater depths than prior to development within that area.

Flash Floods

The National Weather Service defined a flash flood as follows (National Weather Service, 2009):

“a rapid and extreme flow of high water into a normally dry area, or a rapid water level rise in a stream or creek above a predetermined flood level, beginning within 6 hours of the causative event (e.g., intense rainfall, dam failure). However, the actual time threshold may vary in different parts of the country. Ongoing flooding can intensify to flash flooding in cases where intense rainfall results in a rapid surge of rising flood waters”

Flash floods can tear out trees, undermine buildings and bridges, and scour new channels. In urban areas, flash flooding is an increasingly serious problem due to removal of vegetation and replacement of ground cover with impermeable surfaces such as roads, driveways, and parking lots. The greatest risk from flash floods is occurrence with little to no warning. Major factors in predicting potential damage are intensity and duration of rainfall, and steepness of watershed and streams.

11.1.2 FEMA Regulatory Flood Zones

FEMA defines flood hazard areas through statistical analyses of records of river flow, storm tides, and rainfall; information obtained through consultation with the community; floodplain topographic surveys; and hydrologic and hydraulic analyses. Flood hazard areas are delineated on Digital Flood Insurance Rate Maps (DFIRMs), which are official maps of a community on which the Federal Insurance and Mitigation Administration has delineated both special flood hazard areas (SFHAs) and risk premium zones. DFIRMS identify the following:

- Locations of specific properties in relation to SFHAs
- Base flood (1-percent annual chance flood) elevations at specific sites
- Flood magnitudes in specific areas
- Undeveloped coastal barriers where flood insurance is not available
- Regulatory floodways and floodplain boundaries (1-percent and 0.2-percent annual chance floodplain boundaries).

The SFHA is the land area on a DFIRM covered by floodwaters of the base flood. In SFHAs, National Flood Insurance Program (NFIP) floodplain management regulations must be enforced and purchase of flood insurance is mandatory.

The NFIP defines the base flood elevation as the floodwater elevation during a base flood event (a flood that has a 1-percent chance of occurring in any given year). A structure within a 1-percent annual chance floodplain has a 26-percent chance of undergoing flood damage during the term of a 30-year mortgage. The 1-percent annual chance flood is a regulatory standard adopted by federal agencies and most states to administer floodplain management programs. The 1-percent annual chance flood is used by the NFIP as the basis for insurance requirements nationwide. DFIRMs also depict 0.2-percent annual chance flood designations (500-year events).

DFIRM, FIRMs, and other flood hazard information identify the expected spatial extent of flooding from a 1-percent or 0.2-percent annual chance event, defining specific areas as follows:

- **Zones A1-30 and AE**—SFHAs that are subject to inundation by the base flood, determined using detailed hydraulic analysis. Base flood elevations are shown within these zones.
- **Zone A (Also known as Unnumbered A-zones)**—SFHAs where no base flood elevations or depths are shown because detailed hydraulic analyses have not been performed.
- **Zone AO**—SFHAs subject to inundation by types of shallow flooding where average depths are between 1 and 3 feet. These are normally areas prone to shallow sheet flow flooding on sloping terrain.
- **Zone VE, V1-30**—SFHAs along coasts that are subject to inundation by the base flood with additional hazards due to waves with heights of 3 feet or greater. Base flood elevations derived from detailed hydraulic analysis are shown within these zones.
- **Zone B and X (shaded)**—Zones where the land elevation has been determined to be above the base flood elevation, but below the 500-year flood elevation. These zones are not SFHAs.
- **Zones C and X (unshaded)**—Zones where the land elevation has been determined to be above both the base flood elevation and the 500-year flood elevation. These zones are not SFHAs.

Coastal SFHAs are of concern to San Mateo County, particularly along the areas of the coastline at or slightly above sea level. DFIRMS depict two coastal flood hazard zones:

- Zone VE, as described above
- Zone AE, where flood elevation includes wave heights less than 3 feet.

Post-storm field visits and laboratory tests throughout coastal areas of the United States have consistently confirmed that wave heights as low as 1.5 feet can cause significant damage to structures built without consideration of coastal hazards. DFIRMs recently published also include a line showing the limit of moderate wave action (LiMWA), the inland limit of the area expected to receive 1.5-foot or greater breaking waves during the 1-percent annual-chance flood event beyond the coastal VE zones and into the AE zone (Figure 11-1).

Source: FEMA 2014c

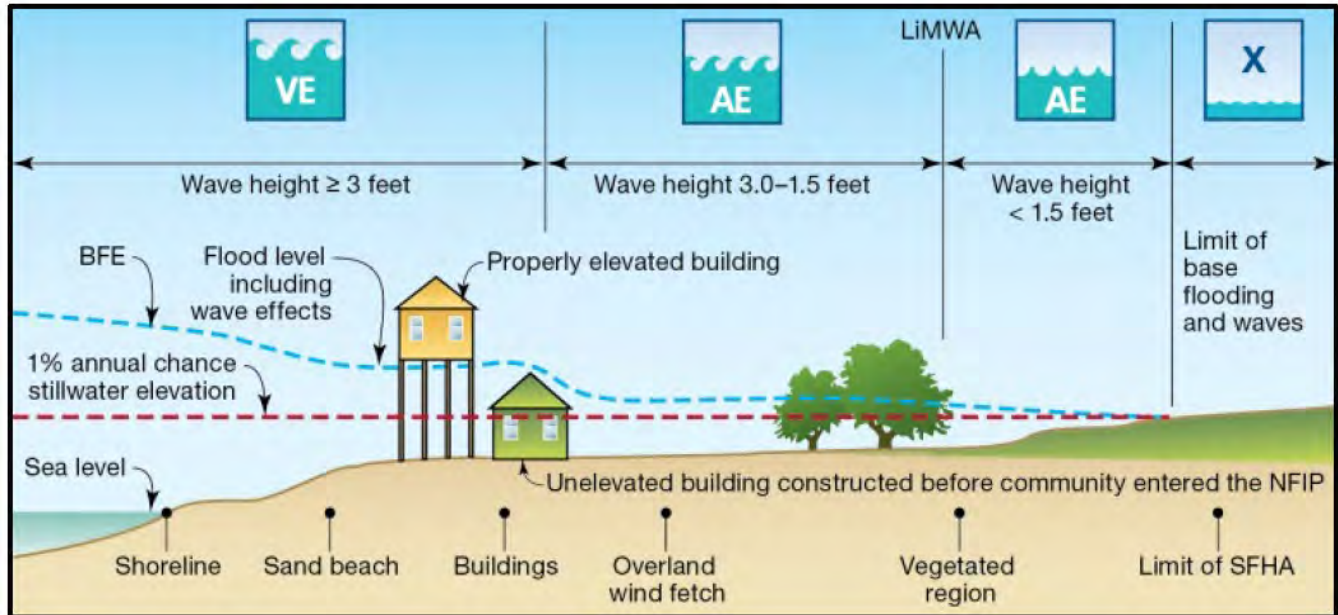

Figure 11-1. Limit of Moderate Wave Action

Addition of LiMWA area to DFIRMs allows communities and individuals to better understand flood risks to their properties. The LiMWA area alerts property owners on the coastal side of the line that being within Zone AE, their properties may be affected by 1.5-foot or higher breaking waves, and may therefore be at significant risk during a 1-percent-annual-chance flood event. While not formally defined in NFIP regulations or mapped as a flood zone, the area between Zone VE and the LiMWA is called the Coastal A Zone. This area is subject to flood hazards associated with floating debris and high-velocity flow that can erode and scour building foundations and, in extreme cases, cause foundation failure (Federal Emergency Management Agency, 2014).

The current effective DFIRM for the County of San Mateo does not delineate LiMWA areas. Future map updates will include this information and should be used to develop additional coastal flooding mitigation items.

11.1.3 Floodplains

A floodplain is the area adjacent to a river, creek, lake or the ocean that becomes inundated during a flood. Riverine floodplains may be broad, as when a river crosses an extensive flat landscape, or narrow, as when a river is confined in a canyon.

When floodwaters recede after a flood event, they leave behind layers of rock and mud. These gradually build up to create a new floor of the floodplain. Floodplains generally contain unconsolidated sediments (accumulations of sand, gravel, loam, silt, and/or clay), often extending below the bed of the stream. These sediments provide a natural filtering system, with water percolating back into the ground and replenishing groundwater. These are often important aquifers, the water drawn from them being filtered compared to the water in the stream. Fertile, flat reclaimed floodplain lands are commonly used for agriculture, commerce and residential development.

Connections between a river and its floodplain are most apparent during and after major flood events. These areas form a complex physical and biological system that not only supports a variety of natural resources but also provides natural flood and erosion control. When a river is separated from its floodplain with levees and other flood control facilities, natural, built-in benefits can be lost, altered, or significantly reduced.

Floodplain Ecosystems and Beneficial Functions

Floodplains can support ecosystems that are rich in plant and animal species. A floodplain can contain 100 or even 1,000 times as many species as a river. Wetting of the floodplain soil releases an immediate surge of nutrients: those left over from the last flood, and those that result from the rapid decomposition of organic matter that has accumulated since then. Microscopic organisms thrive, and larger species enter a rapid breeding cycle. Opportunistic feeders (particularly birds) move in to take advantage. The production of nutrients peaks and falls away quickly, but the surge of new growth endures for some time. This makes floodplains valuable for agriculture. Species growing in floodplains are markedly different from those that grow outside floodplains. For instance, riparian trees (trees that grow in floodplains) tend to be very tolerant of root disturbance and very quick-growing compared to non-riparian trees.

Floodplains have many natural beneficial functions, and disruption of them can have long-term consequences for entire regions. Some well-known, water-related functions of floodplains (noted by FEMA) include:

- Natural flood and erosion control
- Provide flood storage and conveyance
- Reduce flood velocities
- Reduce flood peaks
- Reduce sedimentation
- Surface water quality maintenance
- Filter nutrients and impurities from runoff
- Process organic wastes
- Moderate temperatures of water
- Provide groundwater recharge
- Promote infiltration and aquifer recharge
- Reduce frequency and duration of low surface flows

Areas in the floodplain that typically provide these natural functions are wetlands, riparian areas, sensitive areas, and habitats for rare and endangered species.

Effects of Human Activities

Because they border water bodies, floodplains have historically been popular sites to establish settlements. Human activities tend to concentrate in floodplains for a number of reasons: water is readily available; riverine floodplain land is fertile and suitable for farming; transportation by water is easily accessible; land is flatter and easier to develop; and there is value placed in ocean views. But human activity in floodplains frequently interferes with the natural function of floodplains. It can affect the distribution and timing of drainage, thereby increasing flood problems. Human development can create local flooding problems by altering or confining drainage channels or causing erosion of natural flood protection systems such as dunes. Flood potential can be increased in

several ways: reducing a stream's capacity to contain flows; increasing flow rates or velocities downstream; and allowing waves to extend further inland. Human activities can interface effectively with a floodplain as long as steps are taken to mitigate the activities' adverse impacts on floodplain functions.

11.1.4 Secondary Hazards

The most problematic secondary hazard for riverine flooding is bank erosion, in some cases more harmful than actual flooding. This is especially true in the upper courses of rivers with steep gradients, where floodwaters may pass quickly and without much damage, but scour banks, edging properties closer to the floodplain or causing them to fall in. Flooding is also responsible for hazards such as landslides when high flows over-saturate soils on steep slopes, causing them to fail. Hazardous materials spills are also a secondary hazard of flooding if storage tanks rupture and spill into streams, rivers, or storm sewers.

11.2 HAZARD PROFILE

11.2.1 Federal Flood Program Participation

National Flood Insurance Program (NFIP)

Table 11-1 lists flood insurance statistics that help identify vulnerability within the planning area. More than 5,200 policies are in force providing more than \$1.6 billion in insurance. According to FEMA statistics, flood insurance claims were paid between January 1, 1978, and November 30, 2020, for a total of \$10.3 million, an average of \$11,580 per claim.

Properties constructed after adoption of a FIRM or DFIRM are considered less vulnerable to flooding because they were constructed after adoption of regulations and codes to decrease vulnerability. Properties built before adoption of a FIRM or DFIRM are more vulnerable to flooding because either they do not meet code or are within hazardous areas. The first flood maps of the planning area became available as early as 1971; however, most FIRMs were not available until the 1980s.

All municipal partners to this plan participate in the NFIP. Their current standing under the NFIP is described in the capability assessment section of their annexes in Volume 2 (Chapters 1 to 21).

Community Rating System

Five planning partners currently participate in the CRS program. Table 11-2 summarizes the CRS status of each. Many of the mitigation actions identified in this plan are creditable activities under the CRS program. Therefore, successful implementation of this plan offers the potential to enhance the CRS classification.

11.2.2 Principal Flooding Sources

Natural stream channels in rural parts of San Mateo County typically can accommodate average rainfall amounts and mild storm systems; however, severe floods occur in years of abnormally high rainfall or unusually severe storms. During those periods of severe floods, high-velocity floodwaters carry debris over long distances, block stream channels, and create severe localized flooding. To control these floodwaters when they reach more urban areas, the County and its cities have developed various flood control districts and flood improvements, such as culverts, bridges, levees, channel alterations, and underground storm drains (San Mateo County OES, 2015).

Table 11-1. Flood Insurance Statistics

Jurisdiction	Date of Entry	# of Flood Insurance Policies, as of 12/31/2020	Insurance in Force	Total Annual Premiums	Claims, 11/1978 to 11/30/2020	Value of Claims Paid, 11/1978 to 11/30/2020
Atherton	10/28/1977	57	\$19,395,000	\$27,845	9	\$244,589
Belmont	03/09/1982	69	\$25,611,000	\$128,234	29	\$170,678

East Palo Alto	060708	10/1/11	7	15	5
Pacifica	060323	5/1/13	7	15	5
San Carlos	060327	5/1/13	9	5	5
San Mateo County	060311	10/1/10	9	5	5

Principal flooding sources for San Mateo County as identified on FEMA flood maps include the following streams and water bodies:

- Alpine Creek
- Belmont Creek
- Butano Creek
- Colma Creek
- Crystal Springs Channel
- Denniston Creek
- El Granada Creek
- Holly Street Channel
- La Honda Creek
- Lomita Channel
- Montara Creek
- Pacific Ocean
- Pescadero Creek
- San Bruno Channel
- San Francisquito Creek
- San Gregorio Creek
- San Vicente Creek
- Woodhams Creek

Over 20 creeks, channels, and water bodies, including those identified as principal flooding sources, were assessed as part of the County's FIS. In addition to the waterways above, the FIS identified areas at risk for potential tsunami inundation. The Cities of Half Moon Bay and Pacifica are both associated with potential tsunami issues. Additional information regarding the tsunami hazard is in Chapter 15.

Investigation of San Mateo County's vulnerability to flooding can also include assessments of watershed locations. Every watershed has unique qualities that affect its response to rainfall. San Mateo County contains 34 watersheds, all of which are relatively small and drain into either the Pacific Ocean or San Francisco Bay. Unincorporated areas in the County contain 21 major watersheds. Except for Crystal Springs and San Francisquito, which both drain into the San Francisco Bay, all the rural watersheds drain into the Pacific Ocean (San Mateo County OES, 2015).

11.2.3 Principal Flood Problems

The 2019 Flood Insurance Study (FIS) for San Mateo includes a description of the principal flood problems that have been noted for San Mateo County, by flooding source, as summarized in Table 11-3.

Table 11-3. Summary of Flood Problems

Source	Description of the Flood Problem
All Sources	Flooding is predominantly shallow along streams on the bayside of San Mateo County. Spills from channels flow independently through the urbanized areas, usually following streets, and result in flood depths of less than 1 foot. Occasionally, railroad or highway embankments form barriers, resulting in deeper ponding or sheet flow flooding. Flooding on the ocean side of the county is predominantly confined to well-defined riverine valleys, with flood surface extending uniformly across the floodplain
Colma Creek	The Daly City storm drain terminates in a junction structure near the intersection of F Street and El Camino Real. Because the downstream storm drain has only one-half the waterway area of the upstream storm drain, the excess flow is forced from the storm drain through a side channel into the Colma Mobile Home Park on the northwestern side of the intersection, where it ponds.
San Bruno, Crystal Springs, and Lomita Channels	Shallow flooding zones between the Bayshore Freeway and the mainline of the railroad are the result of overland flows from San Bruno Channel and Crystal Springs Channel. These flows merge behind the railroad embankment and eventually cross the railroad tracks as independent flows. Approximately 220 cubic feet per second (cfs) flows into the area north and west of the Crystal Springs Channel and is pumped into the channel at a rate of 35 cfs. The Crystal Springs Channel itself has a capacity of 200 cfs and is adequate for the flows reaching it. Approximately 740 cfs flows into the area south of the Crystal Springs Channel and west of the Bayshore Freeway. This flow moves south until it reaches Lomita Channel, where it is pumped into the Millbrae (High Line) Canal and flows to San Francisco Bay. The Crystal Springs Channel (200-cfs flow) and the Belle Air storm drain (750-cfs flow) merge at San Bruno Avenue and flow northeasterly to San Francisco Bay in the San Bruno Channel (1,000-cfs flow). The shallow flooding zone adjacent to the San Bruno Channel is caused by local runoff.

Source	Description of the Flood Problem
Belmont Creek and Holly Street Channel	Overflows from Belmont Creek in the City of Belmont flow generally toward Francisco Bay. This overland flow can follow numerous routes, and the entire area on the bayside of the railroad tracks is subject to shallow flooding. At the railroad, the overland flow is split, and the greater part is diverted to the east. Additional overflow occurs near Harbor Street and Old County Road at a railroad loading spur. The Bayshore Freeway and Holly Street off-ramp form a barrier to the easterly flow, causing shallow ponding in the Industrial Way area. This ponding has been greatly reduced by recently completed drainage projects.
San Francisquito Creek	San Francisquito Creek overflows at two locations in the City of Menlo Park. The overflow travels east toward the bay along streets leading away from the creek channel. At the Bayshore Freeway, this shallow flooding crosses into the county area and continues toward the bay. There are no other spills from San Francisquito Creek into the county area. Tidal flooding from the bay during the 1-percent annual chance flood can overtop the levee system in the City of East Palo Alto and cause flooding in the residential area adjacent to San Francisquito Creek. Flooding has resulted in this area because of inadequate or nonexistent stormwater facilities.
Montara Creek	Montara Creek is generally confined to its channel, with overtopping at most culvert crossings. The culvert at Harte Street is heavily silted, forcing the water out of the channel and over the road; a few residences are affected. The embankment at State Highway 1 forms a dam, resulting in deep flooding; however, no existing structures are affected.
San Vicente Creek	San Vicente Creek overflows to the north at Etheldore Street, causing shallow flooding through several existing structures adjacent to State Highway 1 before the overflow returns to the channel along Cypress Avenue. Additional flooding occurs near the ocean front because of inadequate culvert capacity.
Denniston Creek	Denniston Creek is contained within a well-defined channel until it reaches State Highway 1, where limited culvert capacity results in shallow overflow and ponding southward behind the highway to a low point near Sonora Avenue, where it flows overland to the ocean. The channel through the developed part of Princeton is overgrown and culverts are of limited capacity; however, the resulting flooding is minimal.
El Granada Creek	El Granada Creek consists of a very shallow channel through the most developed oceanside area of the county. Undersized culverts in the channel in many places cause general flooding of roads and residences near the creek. This flooding is contained by the remnants of the natural floodplain through the community.
Woodhams, La Honda, Alpine, and San Gregorio Creeks	All creeks in the La Honda community flow in well-defined and often steep channels. Flooding occurs across various stream terraces that are adjacent to culverts or channel restrictions. On San Gregorio Creek, a combination of meandering channel and numerous private bridges creates similar terrace flooding situations.
Pescadero and Butano Creeks	Pescadero and Butano Creeks are in a river valley formed by two large drainages. Each creek has a well-defined channel that meanders through a broad floodplain bounded by hills on either side. This floodplain has little gradient and therefore is inundated by overflows from Pescadero Creek and joining flows of Butano Creek. Most of the Town of Pescadero is in this floodplain and is inundated during floods. The U.S. Army Corps of Engineers estimated the cost of damage in Pescadero caused by the December 1955 flood to have been \$352,000, including rescue and emergency efforts. The 1998 flood brought record floods to this watershed. Over 6 inches of rain fell over two days and a peak flow of 10,600 cfs was recorded at the USGS gage on Pescadero Creek. High water marks taken after the flood show a flood elevation of 14.6 feet just downstream of the Pescadero Creek Road bridge.
Pacific Ocean	Flooding from the Pacific Ocean at Miramar and Martins Beaches is typically associated with the simultaneous occurrence of very high tides, large waves, and storm swells during winter. Ocean-front development has not been compatible with the natural instability of the shoreline and the intense winter weather. Tsunamis create some of the most destructive natural water waves. Storms from the southwest produce the storm pattern most commonly responsible for the most serious coastal floods. Strong winds and high tides that create storm surges are also accompanied by heavy rains. In some instances, high tides back up river flows, causing flooding at river mouths. In January 1978, storms emanated from a more southerly direction than normal, and some of the better-protected beaches were damaged. Jetties and breakwater barriers were overtopped and, in some cases, undermined. Direct wave damage occurred to many beachfront homes. Accelerated erosion coupled with saturated ground conditions and rain weakened the foundations of homes on the top of beach bluffs. Seawalls and temporary barriers failed to protect beach front properties. The winter of 1983 brought an extremely unusual series of high tides, storm surges, and storm waves, which caused considerable damage along the northern California coast.

11.2.4 Past Events

Table 11-4 lists San Mateo County flood events identified in the NOAA National Centers for Environmental Information (NCEI) Severe Storms Database, which goes back to 1996, as well as previous flood events affecting the County for which federal disaster declarations were issued. Descriptions of some of the most significant local flood events (from NCEI) are presented in the sections that follow.

Table 11-4. History of Flood Events

Date	Event	Locations	Deaths or Injuries	Property Damage

a. Death, injury, and damage data not provided in the sources used to identify these events.

Source: NCEI Storm Events Database 2021, FEMA Disaster Declaration website, NBC Bay Area 2014, The Daily Journal 2017

December 10, 1996

Widespread urban flooding was reported throughout the County, and Highway 101 was reportedly underwater as a result of the flooding event.

January 1, 1997

Southwest portions of San Mateo County underwent heavy rainfall of approximately ½ inch per hour for several hours. Ground saturation prevented rainfall absorption. Pescadero Creek reached flood stage by late morning. By 10:00 a.m., La Honda Road was closed due to ground saturation and a resulting mudslide. Butano Creek flooded, closing Pescadero Road.

February 3, 1997

A levee breached along a dry creek bed, Arroyo Mocha. The breach caused damage to roads and property and resulted in the death of an individual. Cascading effects caused flash flooding along San Francisquito Creek and Pescadero Creek.

February 14, 2000

Widespread rain with 24-hour accumulations of more than 5 inches occurred over the area during February 13th into February 14th. Urban and small stream flooding occurred in most counties of the area, including San Mateo. A number of houses in Daly City had to be abandoned and eventually destroyed due to mudslides that resulted from consecutive years of above-average rain.

December 31, 2005

Widespread flooding occurred throughout San Mateo County as a result of small stream overflow and poor drainage. Most damage occurred in East Palo Alto, the City of San Mateo, Daly City, Colma, Brisbane, San Bruno, South San Francisco, and Pacifica. Approximately 3 inches of rain fell on the area over a 24-hour period.

January 20, 2010

A significant storm brought strong winds and heavy rain to the San Francisco and Monterey Bay areas. This storm developed over the Pacific Ocean with a strong parent low pressure based in the Gulf of Alaska. Areas of flooding occurred, causing problems mainly for vehicles. Heavy rain induced Pulgas Creek to overflow its banks and flood some classrooms at Central Middle School in San Carlos. Also, several streets were blocked off in low-lying areas just west of US Highway 101, including Taylor Avenue in San Carlos and parts of Rolison Road in Redwood City. In Atherton, officials closed March Road from Middlefield Road to Fair Oaks Avenue because a creek had begun to flood. Heavy rain caused Harbor Boulevard at the underpass of State Route 82 to flood, submerging a car to the base of its windows. The road was barricaded to stop anyone else from driving into the water. Belmont Creek flooding led to evacuation of a car repair business as 3 inches of water covered the floor.

February 6, 2015

A strong winter storm impacted California following nearly a month and a half of no rain and the driest January on record. The storm brought heavy rain, gusty winds, and damage to trees and power lines, along with some minor flooding of urban areas. Rainfall amounts were heaviest in the mountains, with 5-10 inches or more occurring. Heavy rain resulted in flooding of Southbound US 101 off-ramp in Atherton.

December 2015/January 2016

To mitigate impacts of flooding, the San Mateo County Department of Public Works and cities in the county set up two dozen sites where community members could pick up free sandbags (Patch.com, 2016). El Niño rains in January 2016 brought more rain into the Bay Area in two days than during the previous three Januarys combined (Mercury News, 2016). In general, San Mateo County avoided severe damage and flooding from the rains. La Honda recorded the largest amount of rainfall in the County, at 1.5 inches. Other than debris, some power outages, and transportation accidents, San Mateo County did not report any major issues. Response personnel for the cities monitored debris build-up, helping to reduce potential events.

March 1, 2018

An upper-level system with a strong cold front moved through the Bay Area. This system brought widespread rainfall causing localized roadway flooding, strong winds, lightning, and small hail. Gusts in the mountains reached 60 mph and hail was seen up to a half-inch in diameter. The bulk of the precipitation and subsequent impacts were seen in early March (National Centers for Environmental Information, 2021).

April 7, 2018

A late season atmospheric river impacted the area in early April. A very moist air mass made landfall across the North Bay before moving southward across the rest of the Bay Area. Enough rain fell to cause minor/nuisance flooding across much of the region. Numerous flood advisories were issued. Storm total rainfall amounts up to 7 inches were reported (National Centers for Environmental Information, 2021).

January 6, 2020

A potent cold front swept through the region on January 16, bringing widespread rain, gusty winds, low elevation snow, and thunderstorms. This system brought caused roadway flooding, downed trees, small hail, and snow at elevations as low as 2,400 feet. Numerous flights were delayed or canceled at San Francisco International Airport (National Centers for Environmental Information, 2021).

11.2.5 Location

Mapped Flood Zones

Flooding in San Mateo County has been documented by gage records, high water marks, damage surveys, and personal accounts. This documentation was the basis for the April 2019 Flood Insurance Study that is incorporated in the current effective DFIRMs. The DFIRMs are the most detailed and consistent data source available for determining flood extent. The April 2019 Flood Insurance Study is the sole source of data used in this risk assessment to map extents and locations of flood hazard areas, as shown on Figure 11-2.

Repetitive Loss

A repetitive loss property is defined by FEMA as an NFIP-insured property that has experienced any of the following since 1978, regardless of any changes in ownership:

- Four or more paid losses more than \$1,000
- Two paid losses more than \$1,000 within any rolling 10-year period
- Three or more paid losses that equal or exceed the current value of the insured property.

The government has instituted programs encouraging communities to identify and mitigate the causes of repetitive losses. Studies have found that many of these properties are outside any mapped 1 percent annual chance floodplain. The key identifiers for repetitive loss properties are the existence of NFIP insurance policies and claims paid by the policies.

FEMA further designates as severe repetitive loss any NFIP-insured single-family or multi-family residential building for which either of the following is true:

- The building has incurred flood-related damage for which four or more separate claims payments have been made, with the amount of each claim (including building and contents payments) exceeding \$5,000, and with the cumulative amount of such claims payments exceeding \$20,000
- At least two separate claims payments (building payments only) have been made under NFIP coverage, with the cumulative amount of claims exceeding the market value of the building.

To qualify as a severe repetitive loss property, at least two of the claims must be within 10 years of each other, and claims made within 10 days of each other are counted as one claim. In determining severe repetitive loss status, FEMA considers the loss history since 1978, or from the building's construction if it was built after 1978, regardless of any changes in the ownership of the building.

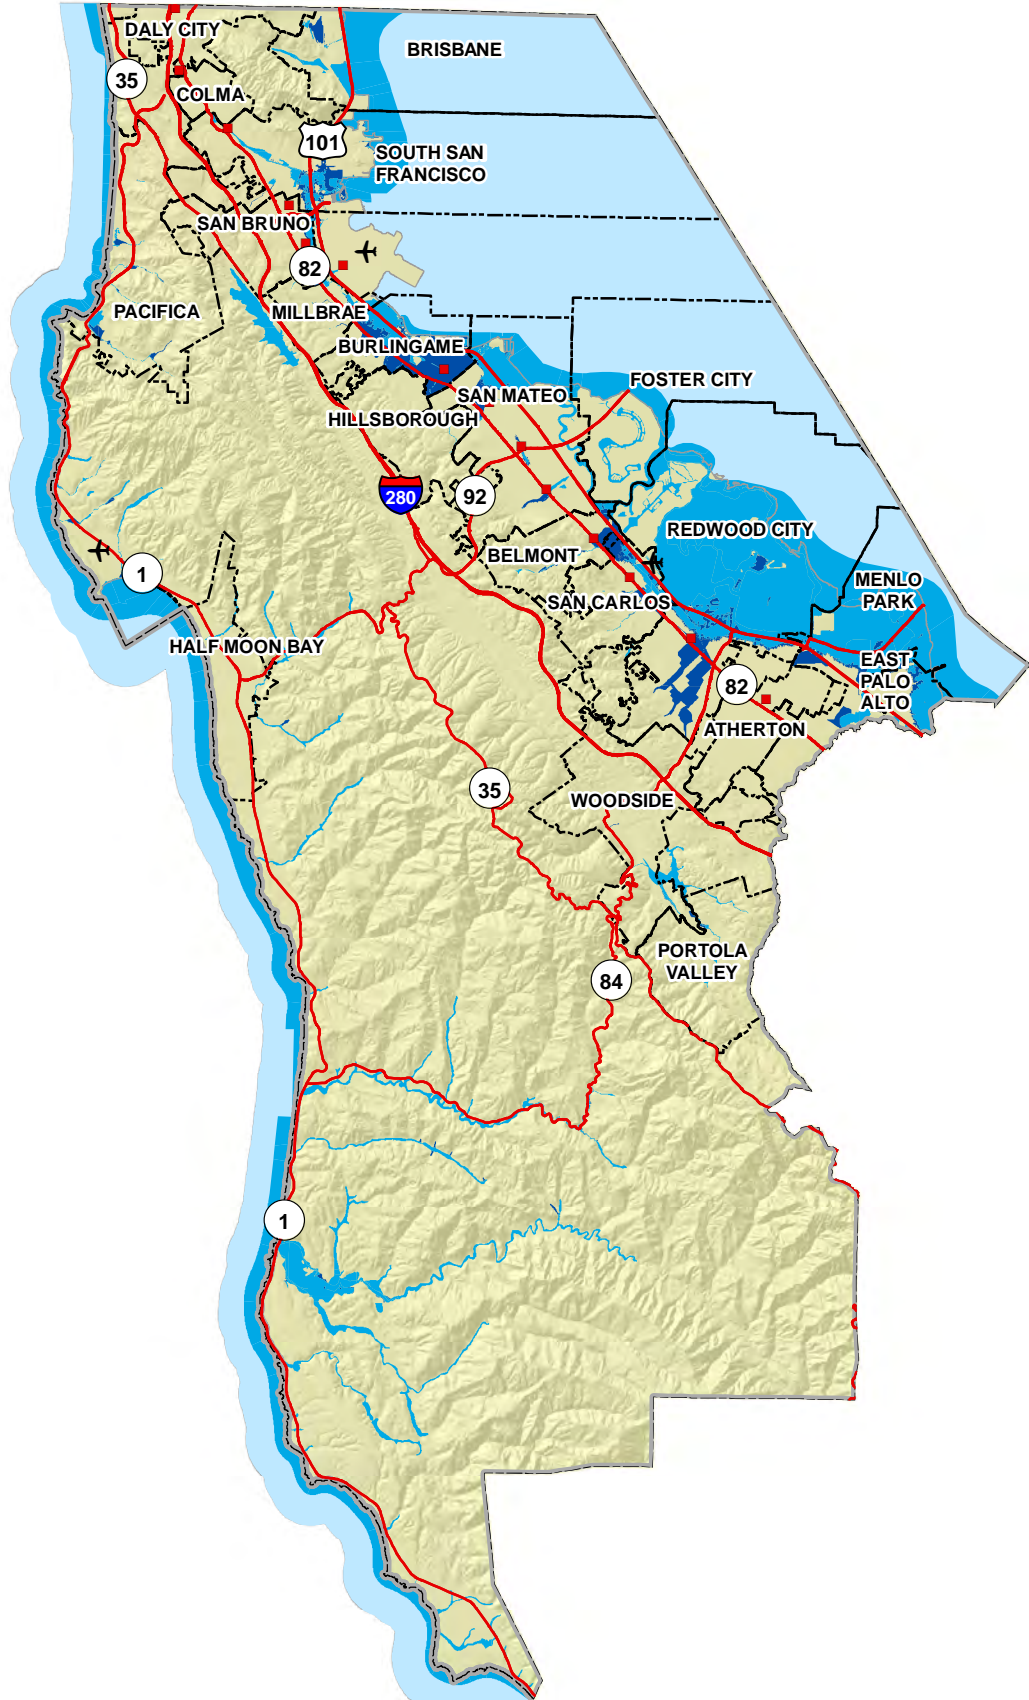

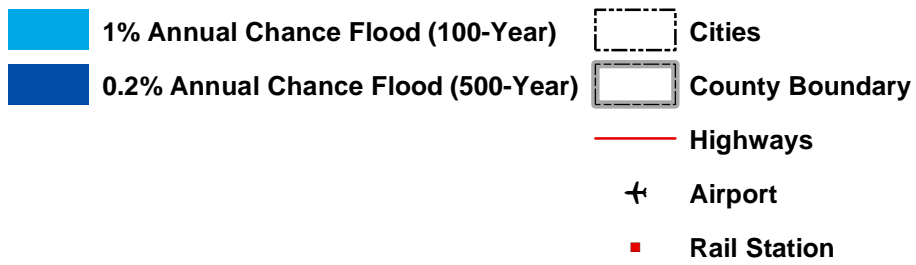

Figure 11-2. FEMA Flood Hazard Areas

FEMA-sponsored programs, such as the CRS, require participating communities to identify repetitive loss areas. A repetitive loss area is the portion of a floodplain holding structures that FEMA has identified as meeting the definition of repetitive loss. Identifying repetitive loss areas helps to identify structures that are at risk but are not on FEMA's list of repetitive loss structures because no flood insurance policy was in force at the time of loss.

FEMA's list of repetitive loss properties identifies 15 such properties in the San Mateo County planning area, as of June 15, 2021, as summarized in Table 11-5. These properties likely were flooded by flood events typical for the floodplain reflected in the current mapping.

Table 11-5. Repetitive Loss Properties in San Mateo County

Jurisdiction	Repetitive Loss Properties	Total Number of Losses	Payment Made for Losses			
			Building	Contents	Total	Average per Claim
Daly City	1	4	\$48,085	\$47,210	\$95,296	\$23,824
Millbrae	1	4	\$49,237	\$0	\$49,237	\$12,309
Portola Valley	1	2	\$384,097	\$210,900	\$594,997	\$297,499
South San Francisco	1	5	\$131,107	\$199,578	\$330,685	\$66,137
San Mateo County	12	30	\$540,985	\$271,517	\$812,502	\$27,083
Total	16	45	\$1,153,511	\$729,205	\$1,882,717	\$426,852

Source: June 15, 2021 FEMA Repetitive Loss Summary, FEMA Region IX, Bureau Statistical Agent

FEMA recently changed its policies on providing repetitive loss properties information due to implications of the federal Privacy Act. The "routine use" provision for acquiring the data, which requires certifications on how the data will be used, was not well-defined at the time of this plan update. Repetitive loss data for all planning partners could not be acquired in time for analysis and assessment for this plan. Therefore, the resolution of the repetitive loss data available to support this plan update is limited to property counts only. No location or dates of loss data was available. San Mateo County and its planning partners understand the importance of a thorough analysis of the repetitive flood loss problem. The County and its planning partners will seek to meet FEMA requirements for access to this data through plan implementation. Future updates to this plan will seek to have enhanced resolution for more detailed analysis.

11.2.6 Frequency

San Mateo County has undergone 35 significant flooding events since 1996, most of which have been flash floods. This correlates to a recurrence of 1, or an annual probability of occurrence of 100 percent. Smaller floods may occur more frequently and be categorized under a different hazard event type, typically Severe Weather or Severe Storms. Recurrence intervals and average annual numbers of events in San Mateo County were calculated based on data from 1996 to 2020 in the Storm Events Database. Coastal floods have a 10 percent chance of occurring in any given year, flash floods have a 55.6 percent chance, and other floods have a 40 percent chance of occurrence.

11.2.7 Severity

River Flooding

The principal factors affecting flood damage are flood depth and velocity. The deeper and faster flood flows become, the more damage they can cause. Shallow flooding with high velocities can cause as much damage as

deep flooding with slow velocity—especially when a channel migrates over a broad floodplain, redirecting high velocity flows and transporting debris and sediment. Flood severity is often evaluated by examining peak discharges. Peak flows used by FEMA to map floodplains within the planning area are listed in Table 11-6.

Table 11-6. Summary of Peak Discharges—San Mateo County

Source/Location	Drainage Area (square miles)	Discharge (cubic feet/second)			
		10-Percent	2-Percent	1-Percent	0.2- Percent

Coastal Flooding

The frequency and severity of coastal flooding are based on storm surge height, which is the height of water accounting for waves. The 2019 FEMA FIS for San Mateo County mapped 59 transects along the Pacific Ocean, identifying 10-, 50-, 100- and 500-year still-water elevations for each transect. Table 11-7 summarizes the high, low and mean elevations observed for each return interval along the Pacific Ocean coastline, representing the steady state water depth not accounting for breaking waves. These are the projected elevations of floodwaters in the absence of waves resulting from wind or seismic effects.

Table 11-7. Summary of Still-Water Elevations the Pacific Ocean

	Still-Water Elevation ^a (feet)			
	10-Year	50-Year	100-Year	500-Year
Low	9.1	10.2	10.7	11
Mean	20.2	23.5	24.6	26.9
High	31.3	36.8	38.5	42.7

11.2.8 Warning Time

Because of the sequential pattern of weather conditions needed to cause serious flooding, occurrence of a flood without warning is unusual. Warning times for floods can be between 24 and 48 hours. Potential flood warning time depends on the time between the rainfall and the first occurrence of flooding. Flash flooding can be less predictable, but populations in potential hazard areas can be warned in advance of flash flooding danger. The National Weather Service (NWS) issues watches and warnings based on river flow forecasts. NWS uses the following flood extent or severity categories, based on property damage and public threat:

- **Minor Flooding**—Minimal or no property damage, but possibly some public threat or inconvenience.
- **Moderate Flooding**—Some inundation of structures and roads near streams. Some necessary evacuations of people and/or transfer of property to higher elevations.
- **Major Flooding**—Extensive inundation of structures and roads. Significant evacuations of people and/or transfer of property to higher elevations.

When a watch is issued, the public should prepare for the possibility of a flood. When a warning is issued, the public is advised to stay tuned to a local radio station for further information and be prepared to take quick action. A warning means a flood is imminent, generally within 12 hours, or is occurring. Local media broadcast NWS warnings. Thresholds for flood warnings on rivers in San Mateo County are as follows:

- Lower Crystal Springs Reservoir at Dam:
- Action state, minor flooding/initial flood stage, and major flood stage data are not available.
- Moderate flooding is 284 feet.
- San Francisquito Creek At Stanford University:
- Action state is 8 feet.
- Moderate flooding is 9.5 feet.
- Minor flooding/initial flood and major flood stages are not available.

11.3 EXPOSURE

A quantitative assessment of exposure to the flood hazard was conducted using the flood mapping shown in Figure 11-2 and the asset inventory developed for this plan. Population exposure was estimated by calculating the number of buildings in the FEMA-mapped floodplain as a percent of total planning area buildings, and then applying this percentage to the estimated planning area population. Detailed results by municipality are provided in Appendix E; results for the total planning area are presented below.

11.3.1 Population and Property

Table 11-8 summarizes the estimated population living in the mapped flood zones and the estimated property exposure. Figure 11-3 and Figure 11-4 show the county-wide distribution of structures in the mapped flood zones by occupancy class. In both the 1 percent-annual-chance flood zone and the 0.2 percent-annual-chance flood zone, the exposed structures are primarily residential or commercial.

Table 11-8. Exposed Population and Property in Mapped Flood Zones

	1% Annual Chance Flood Zone	0.2% Annual Chance Flood Zone
Population		
Population Exposed	39,298	85,294
% of Total Planning Area Population	5.1%	11%
Acres of Floodplain	30,028	34,501
Property		
Acres of Floodplain	30,028	34,501
% of Total Area	6.31%	7.256%
Number of Buildings Exposed	9,639	21,157

Value of Exposed Contents	\$10,382,411,224	\$18,845,017,220
Total Exposed Property Value	\$21,589,919,184	\$40,433,558,283
Total Exposed Value as % of Planning Area Total	11.2%	21.1%

Figure 11-3. Number of Structures by Occupancy Class in the 1 Percent-Annual-Chance Flood Zone

Figure 11-4. Number of Structures by Occupancy Class in the 0.2 Percent-Annual-Chance Flood Zone

11.3.2 Critical Facilities

Critical facilities exposed to the flood hazard represent 20.2 percent (452 facilities) of the total critical facilities in the planning area for the 1-percent-annual-chance flood hazard and 24.7 percent (552 facilities) for the 0.2-percent-annual-chance flood hazard. The breakdown of exposure by facility type is shown in Figure 11-5. Linear infrastructure exposed includes utility lines and roads.

Figure 11-5. Critical Facilities in Mapped Flood Hazard Areas and Countywide

Toxic Release Inventory Reporting Facilities

Toxic Release Inventory (TRI) facilities are known to manufacture, process, store, or otherwise use certain chemicals above minimum thresholds. If damaged by a flood, these facilities could release chemicals that cause cancer or other human health effects, significant adverse acute human health effects, or significant adverse environmental effects (U.S. Environmental Protection Agency, 2021). During a flood event, containers holding these materials can rupture and leak into the surrounding area, disastrously affecting the environment and community members. One facility within the 1-percent-annual-chance flood zone is a TRI reporting facility.

Roads

The following major roads within the planning area pass through the 1-percent-annual-chance flood zone (100-year floodplain), and thus are exposed to flooding:

- State Highway 1
- State Highway 82
- State Highway 84
- State Highway 92
- State Highway 109
- State Highway 114
- US Highway 101
- Interstate 380

Some of these roads were built above the flood level, and others function as levees to prevent flooding. Still, during severe flood events, these roads can be blocked or damaged, preventing access to some areas.

Bridges

Flooding events can significantly impact road bridges, important because many provide the only ingress and egress to some neighborhoods. An analysis indicated that 62 bridges are within or cross over the 1-percent-annual-chance flood zone (100-year floodplain).

Levees

Historically, levees have been used to control flooding in portions of San Mateo County. The County constructed levees both for flood protection (in the north and central portions of the County) and for salt evaporation ponds (in the southeast portion of the County). The County does not believe these levees could withstand intensities of a 1-percent-annual-chance flood. Additionally, coastal flooding from San Francisco Bay circumvents levees near the Bay, leading to flooding within the residential area next to San Francisquito Creek on the east side of the City. These risk estimates are based on current flood levels and do not account for potential sea level rise, which would exacerbate vulnerability and even further reduce ability of the levees to prevent/control flooding. Details on San Mateo County levees could not be supplemented by the U.S. Army Corps of Engineers National Levee Database. Although the database contains records of the majority of levees within the Corps' system, it does not include records of all levees in the United States, which include the levees in San Mateo County.

Levee failures could place large numbers of people and great amounts of property at risk. Unlike dams, levees do not serve any purpose beyond providing flood protection and (less frequently) recreational space for community members. A levee failure could be devastating, depending on severity of flooding and amount of land development present. In addition to damaging buildings, infrastructure, trees, and other large objects, levee failure can result in significant water quality and debris disposal issues. Severe erosion is also a consideration.

Presence and effects of levee systems in San Mateo County are not reflected on the DFIRM, meaning that areas, structures, and populations vulnerable to failures of those levees cannot be determined. However, because the County estimates that the levees in their current state could not withstand a 1-percent-chance annual flood, reflections of effects of the levees on the DFIRM would not be reliable anyway. The 2016 preliminary DFIRMs do account for estimated sea level rise; however, because not yet finalized, these maps could not be utilized to contribute to vulnerability estimates of flooding within leveed areas. Following approval of the 2016 DFIRMs, San Mateo County will consider the extent to which the levees must be updated as a future mitigation action item, and consider protection from sea level rise. Action may not be considered until the next hazard mitigation plan update, and levee vulnerability will also be explored in further detail.

Water and Sewer Infrastructure

Water and sewer systems can be affected by flooding. Floodwaters can back up drainage systems, causing localized flooding. Culverts can be blocked by debris from flood events, also triggering localized urban flooding. Floodwaters can enter and thus contaminate drinking water supplies. Sewer systems can back up, spilling wastewater into homes, neighborhoods, rivers, and streams.

11.3.3 Environment

Riparian areas, the zones along the edge of a river or stream that are influenced by or are an influence upon the water body, are particularly exposed to the flood hazard. The exposed environment includes wildlife that relies on riparian areas.

11.4 VULNERABILITY

The vulnerability assessment indicates estimated damage for the 1-percent and 0.2-percent-annual-chance flood hazards. Detailed results by jurisdiction are included in Appendix E; countywide summaries are provided below.

11.4.1 Population

Vulnerable Groups

Vulnerable populations are all populations within the floodplain whose abilities to escape the area before floodwaters arrive are limited. This population includes all categories identified for the SoVI rating (see Section 7.2.2). Impacts on persons and households for the 1-percent and 0.2-percent-annual-chance flood hazards were estimated through the Level 2 Hazus analysis. Countywide results are provided in Table 11-9.

Table 11-9. SoVI Index Population Distribution for the 1-Percent and 0.2-Percent-Annual-Chance Flood

SoVI Rating	1% Annual Chance Flood Zone		0.2% Annual Chance Flood Zone	
	Population Exposed	% of Exposed Population	Population Exposed	% of Exposed Population
Very High	11,700	29.58	14,930	16.8
Relatively High	19,397	49.04	36,802	41.41
Relatively Moderate	1,830	4.63	10,288	11.58
Relatively Low	3,260	8.24	21,220	23.88
Very Low	3,370	8.51	5,637	6.33
Total	39,557	100	88,877	100

Displacement and Shelter Needs

Flood impacts on persons and households were estimated for each event through the Level 2 Hazus analysis. Table 11-10 summarizes the results.

Table 11-10. Estimated Flood Impacts on Persons and Households

	Number of Displaced Households	Number of Community members Requiring Short-Term Shelter
1% Annual Chance Flood Zone	17,146	1,158
0.2% Annual Chance Flood Zone	51,178	3,740

Hazus estimated that a FEMA 100-year flood could displace up to 1,965 people, with 75 of those people needing short-term shelter. For a Hazus-generated 500-year flood, it is estimated that up to 6,264 people could be displaced, with 290 needing short-term shelter.

Public Health and Safety

Floods and their aftermath present the following threats to public health and safety:

- **Unsafe food**—Floodwaters contain disease-causing bacteria, dirt, oil, human and animal waste, and farm and industrial chemicals. Their contact with food items, including food crops in agricultural lands, can make that food unsafe to eat. Refrigerated and frozen foods are affected during power outages caused by flooding. Foods in cardboard, plastic bags, jars, bottles, and paper packaging may be unhygienic with mold contamination.
- **Contaminated drinking and washing water and poor sanitation**—Flooding impairs clean water sources with pollutants. The pollutants also saturate into the groundwater. Flooded wastewater treatment plants can be overloaded, resulting in backflows of raw sewage. Private wells can be contaminated by floodwaters. Private sewage disposal systems can become a cause of infection if they overflow.
- **Mosquitoes and animals**—Floods provide new breeding grounds for mosquitoes in wet areas and stagnant pools. The public should dispose of dead animals that can carry viruses and diseases only in accordance with guidelines issued by local animal control authorities. Leptospirosis—a bacterial disease associated predominantly with rats—often accompanies floods in developing countries, although the risk is low in industrialized regions unless cuts or wounds have direct contact with disease-contaminated floodwaters or animals.
- **Mold and mildew**—Excessive exposure to mold and mildew can cause flood victims—especially those with allergies and asthma—to contract upper respiratory diseases, triggering cold-like symptoms. Molds grow in as short a period as 24 to 48 hours in wet and damp areas of buildings and homes that have not been cleaned after flooding, such as water-infiltrated walls, floors, carpets, toilets and bathrooms. Very small mold spores can be easily inhaled by human bodies and, in large enough quantities, cause allergic reactions, asthma episodes, and other respiratory problems. Infants, children, elderly people and pregnant women are considered most vulnerable to mold-induced health problems.
- **Carbon monoxide poisoning**—In the event of power outages following floods, some people use alternative fuels for heating or cooking in enclosed or partly enclosed spaces, such as small gasoline engines, stoves, generators, lanterns, gas ranges, charcoal or wood. Built-up carbon monoxide from these sources can poison people and animals.
- **Hazards when reentering and cleaning flooded homes and buildings**—Flooded buildings can pose significant health hazards to people entering them. Electrical power systems can become hazardous. Gas

leaks can trigger fire and explosion. Flood debris—such as broken bottles, wood, stones and walls—may cause injuries to those cleaning damaged buildings. Containers of hazardous chemicals may be buried under flood debris. Hazardous dust and mold can circulate through a building and be inhaled by those engaged in cleanup and restoration.

- **Mental stress and fatigue**—People who live through a devastating flood can experience long-term psychological impact. The expense and effort required to repair flood-damaged homes places severe financial and psychological burdens on the people affected. Post-flood recovery can cause, anxiety, anger, depression, lethargy, hyperactivity, and sleeplessness. There is also a long-term concern among the affected that their homes can be flooded again in the future.

Current loss estimation models such as Hazus are not equipped to measure public health impacts such as these. The best level of mitigation for these impacts is to be aware that they can occur, educate the public on prevention, and be prepared to deal with them in responding to flood events.

11.4.2 Property

Hazus calculates losses to structures from flooding by looking at depth of flooding and type of structure. Using historical flood insurance claim data, Hazus estimates the percentage of damage to structures and their contents by applying established damage functions to an inventory. For this analysis, local data on facilities was used instead of the default inventory data provided with Hazus.

Table 11-11 summarizes Hazus estimates of flood damage in the planning area. The debris estimate includes only structural debris and building finishes; it does not include additional debris that may result from a flood event, such as from trees, sediment, building contents, bridges, or utility lines. The 110,657 tons of estimated debris from a 1-percent-annual-chance flood event is enough to fill 4,426 25-ton trucks.

Table 11-11. Estimated Impact of a Flood Event in the Planning Area

Damage Type	100-Year Flood	500-Year Flood
Structure Debris (Tons)	110,657	218,401
Buildings Impacted ^a	6,640	11,479
Total Value (Structure + Contents) Damaged	\$1,284,385,554	\$2,844,179,068
Damage as % of Total Replacement Value	0.7%	1.5%

a. "Impacted" means floodwater projected over the lowest floor.

11.4.3 Critical Facilities

Estimated Damage

Hazus was used to estimate the percent of damage to the building and contents of critical facilities, using depth/damage function curves. The results are summarized in Figure 11-6 and Figure 11-7.

Impacts on Hazardous Materials

During a flood event, containers holding hazardous materials can rupture and leak into the surrounding area. These facilities could release chemicals that cause cancer or other human health effects, significant adverse acute human health effects, or significant adverse environmental effects.

Figure 11-6. Estimated Damage to Critical Facilities from 1% Annual Chance Flood

Figure 11-7. Estimated Damage to Critical Facilities from 0.2% Annual Chance Flood

Impacts on Utilities and Infrastructure

Roads that are blocked or damaged can isolate community members and can prevent access throughout the planning area, including for emergency service providers needing to get to vulnerable populations or to make repairs. Bridges washed out or blocked by floods or debris also can cause isolation. Underground utilities can be damaged. Levees can fail or be overtopped, inundating the land that they protect. Floodwaters can back up drainage systems, causing localized flooding. Culverts can be blocked by debris from flood events, also causing localized urban flooding. Floodwaters can get into drinking water supplies, causing contamination. Sewer systems can be backed up, causing wastewater to spill into homes, neighborhoods, rivers, and streams.

11.4.4 Environment

Flooding can impact the environment in negative ways. Migrating fish can wash into roads or over dikes into flooded fields, with no possibility of escape. Pollution from roads, such as oil, and hazardous materials can wash into rivers and streams. During floods, these can settle onto normally dry soils, polluting them for agricultural uses. Human development, such as bridge abutments, levees or logjams from timber harvesting, can increase stream bank erosion, causing rivers and streams to migrate into non-natural courses.

Many species of mammals, birds, reptiles, amphibians, and fish live in the planning area in plant communities that are dependent upon streams, wetlands and floodplains. Wildlife and fish are impacted when plant communities are eliminated or fundamentally altered to reduce habitat. Since water supply is a major limiting factor for many animals, riparian communities are of special importance.

Loss estimation platforms such as Hazus are not currently equipped to measure environmental impacts of flood hazards. The best gauge of vulnerability of the environment would be a review of damage from past flood events. Loss data that segregates damage to the environment was not available at the time of this plan. Capturing this data from future events could be beneficial in measuring the vulnerability of the environment for future updates.

11.5 FUTURE TRENDS IN DEVELOPMENT

Any areas of future growth and development could be impacted by the flood hazard if located within identified hazard areas. The County intends to discourage development within vulnerable areas and/or to encourage higher regulatory standards on the local level.

The County and its planning partners are equipped to handle future growth in flood hazard areas. All municipal planning partners have general plan safety elements that address frequently flooded areas and have committed to linking their general plans to this hazard mitigation plan update. This will create an opportunity for wise land use decisions as future growth impacts flood hazard areas. In addition, partners who are participating in good standing in the NFIP have agreed to regulate new development in the mapped floodplain according to standards that equal or exceed those specified under 44 CFR Section 60.3. This will ensure that any development allowed in the floodplain will be constructed such that the flood risk exposure is eliminated or significantly reduced.

Additionally, with 25 percent of municipalities in the County participating in the CRS program, there is incentive to adopt consistent, appropriate, higher regulatory standards in communities with the highest degree of flood risk. All municipal planning partners have committed to maintain their good standing under the NFIP through initiatives identified in this hazard mitigation plan. Communities participating or considering participation in the CRS program will be able to refine this commitment using CRS programs and templates as a guide.

11.6 SCENARIO

Historically, floods have regularly affected San Mateo County. The County can expect noteworthy flooding about once a year, with a flash flood approximately every 2 years. Duration and intensity of heavy winter rains and El Niño storms that cause flooding may increase due to climate change. The floodplains mapped and identified by San Mateo County will continue to take the brunt of these floods. County community members prepare themselves for flooding by seeking and receiving information, and by pursuing mitigation. Impacts of flood events should decrease as the County, local cities, and community members continue to promote and implement hazard mitigation and preparedness.

The worst-case scenario would be a series of heavy rains or storm events during an El Niño event or winter rainy season, particularly if the rains also occur at high tide. These rains could flood numerous areas within a short time. This could overwhelm the response and floodplain management capability within the planning area, as the planning area would be subject immediately to flash flooding and coastal flooding, with subsequent influences on the County's streams. Major roads could be blocked, preventing critical access for many community members and critical functions. High in-channel flows could cause water courses to scour, possibly washing out roads and creating more isolation problems. In the event of multi-basin flooding, San Mateo County would not be able to make repairs quickly enough to restore critical facilities and assets.

11.7 ISSUES

The planning team has identified the following flood-related issues relevant to the planning area:

- Accuracy of existing flood hazard mapping by FEMA regarding true flood risk within the planning area is questionable. This is most prevalent within areas protected by levees not accredited by the FEMA mapping process.
- Over 60 percent of the population within the 1 percent annual chance floodplain have either very high or relatively high social vulnerability.
- Extent of flood protection currently provided by flood control facilities (dams, dikes, and levees) is not known due to lack of established national policy on flood protection standards.
- The levee system within the planning area is not consistently adequate to mitigate effects of a 1-percent annual chance flood.
- Risk associated with the flood hazard overlaps risks associated with other hazards such as earthquakes, landslides, and coastal erosion. This provides opportunity to seek mitigation alternatives with multiple objectives that can reduce risks from multiple hazards.
- Land-use practices are not consistent with the scope of regulatory floodplain management within the planning area.
- How climate change will affect flood conditions in San Mateo County is uncertain.
- More information is needed regarding flood risk to support the concept of risk-based analysis of capital projects.
- To determine cost-effectiveness of future mitigation projects, sustained effort is necessary to gather damage reports and historical damage data such as high-water marks on structures.
- Ongoing flood hazard mitigation will require funding from multiple sources.

- A coordinated hazard mitigation effort is necessary among jurisdictions affected by flood hazards within the County.
- Floodplain community members must continue to seek and receive information about flood preparedness and resources available during and after floods.
- The concept of residual risk should be considered in design of future capital flood control projects and should be communicated to community members living in the floodplain.
- Promotion of flood insurance as a means of protecting private property owners from economic impacts of frequent flood events should continue.
- Existing floodplain-compatible uses such as agricultural and open space must be maintained. Pressure is constant to convert these existing uses to more intense uses within the planning area during times of moderate to high growth.
- The economy affects a jurisdiction's ability to manage its floodplains. Budget cuts and personnel losses can strain resources needed to support floodplain management.

12. LANDSLIDE/MASS MOVEMENTS

12.1 GENERAL BACKGROUND

A landslide is a mass of rock, earth or debris moving down a slope. Landslides may be minor or very large, and can move at slow to very high speeds. Mudslides are rivers of rock, earth, organic matter, and other soil materials saturated with water. They develop in the soil overlying bedrock on sloping surfaces when water rapidly accumulates in the ground, such as during heavy rainfall or rapid snowmelt.

Landslides in hillside terrain can pose serious hazard to downslope property and structures. They can disrupt roadways and other infrastructure lifelines, destroy private property, and cause flooding, bank erosion, and rapid channel migration. A slide can move rapidly down slopes or through channels, and can strike with little or no warning. It can travel miles from its source, growing as it descends, picking up trees, boulders, cars, and anything else in its path. Although slides behave as fluids, they convey many times the hydraulic force of water due to the mass of material they carry.

In spite of their destructive potential, landslides can serve beneficial functions to the natural environment. They supply sediment and large wood to the channel network and can contribute to complexity and dynamic channel behavior critical for aquatic and riparian ecological diversity.

12.1.1 Landslide/Mass Movement Causes

Slides are caused by a combination of geological and climate conditions and the influence of urbanization. They can be initiated by storms, earthquakes, fires, volcanic eruptions or human modification of the land. Vulnerable natural conditions are affected by human development and the infrastructure that supports it. In some cases, irrigation increases the landslide potential. The following factors can contribute to slide formation:

- Change in slope of the terrain
- Increased load on the land
- Shocks and vibrations
- Change in water content
- Groundwater movement
- Frost action
- Weathering of rocks
- Removing or changing the type of vegetation covering slopes.

While small landslides are frequently a result of human activity, the largest landslides are often naturally occurring phenomena with little or no human contribution. The sites of large landslides are typically areas of previous landslide movement that are periodically reactivated by significant precipitation or seismic events.

12.1.2 Landslide/Mass Movement Types

Common types of slides are shown in Figure 12-1. The most common is the shallow colluvial slide, occurring particularly in response to intense, short-duration storms. The largest and most destructive are deep-seated slides, although they are less common than other types.

Figure 12-1. Common Types of Landslide

12.1.3 Landslide/Mass Movement Risk Areas

Landslides are typically a function of soil type and steepness of slope. Soil type is a key indicator for landslide potential and is used by geologist and geotechnical engineers to determine soil stability for construction standards. In general, landslide hazard areas are where the land has characteristics that contribute to the risk of the downhill movement of material, such as the following:

- A slope greater than 33 percent
- A history of landslide activity or movement during the last 10,000 years

- Stream or wave activity, which has caused erosion, undercut a bank or cut into a bank to cause the surrounding land to be unstable
- The presence or potential for snow avalanches
- The presence of an alluvial fan, indicating vulnerability to the flow of debris or sediments
- The presence of impermeable soils, such as silt or clay, mixed with granular soils, such as sand or gravel.

The best predictor of where slides might occur is the location of past movements. Past landslides can be recognized by their distinctive topographic shapes, which can remain in place for thousands of years. Most landslides recognizable in this fashion range from a few acres to several square miles. Most show no evidence of recent movement and are not currently active. A small proportion of them may become active in any given year, with movements concentrated within all or part of the landslide masses or around their edges. The recognition of ancient dormant landslide sites is important in the identification of areas susceptible to flows and slides because they can be reactivated by earthquakes or by exceptionally wet weather. Also, because they consist of broken materials and frequently involve disruption of groundwater flow, these dormant sites are vulnerable to construction-triggered sliding.

12.1.4 Secondary Hazards

Landslides and mass movements that block rivers or streams can contribute to flooding.

12.2 HAZARD PROFILE

12.2.1 Past Events

Landslides have occurred regularly within San Mateo County; one such event led to the deaths of three children in 1982, and several events have required apartment evacuations along coastal bluffs. Table 12-1 lists known landslide events that affected San Mateo County between 1980 and 2020.

Table 12-1. Landslide Events in San Mateo County

Date	Event Type	FEMA Declaration Number	Location
December 19, 1981 – January 8, 1983 Impacts: Not reported	Severe Storms, Flood, Mudslides, High Tide	DR-651	San Mateo County
January 4, 1982 Impacts: After an intense storm, many small to major landslides occurred in steep sections of the western and northern County, mostly in low population areas. Three children died after a strip of hillside slid hundreds of feet and destroyed two homes in Pacifica. The County recorded millions of dollars in property damage from the landslides.	Landslides, Severe Storm	N/A	San Mateo County (Pacifica and Various)
January 21 – March 30, 1983 Impacts: Not reported	Coastal Storms, Floods, Slides, Tornadoes	DR-677	San Mateo County
January 3 – February 10, 1995 Impacts: Not reported	Severe Winter Storms, Flooding, Landslides, Mud Flows	DR-1044	San Mateo County

Date	Event Type	FEMA Declaration Number	Location
February 1995	Late Winter Storms (Severe Winter Storms, Flood, Landslide, Mudflows)	1046-DR-CA	San Mateo County
Impacts: All California counties except Del Norte were included in this declaration.			
December 28, 1996 – April 1, 1997	Severe Storms, Flooding, Mud, and Landslides	DR-1155	San Mateo County
Impacts: Not reported			
February 1998	Landslides	N/A	San Mateo County
Impacts: The main slide in La Honda began moving continuously by February 11 and accelerated after a period of rain. Three houses at the head of the slide were red tagged, as were five other houses on or near it. San Mateo County drilled three wells in a road crossing the slide and began pumping wells. The County also dug plastic-lined trenches to facilitate drainage. Seven homes on Esplanade Drive in Pacifica were evacuated after a 30-foot cliff retreated 10 feet to the rear edge of the homes.			
February 2, 1998	El Niño (Flood and Landslides)	DR-1203	San Mateo County (Various Cities)
Impacts: San Mateo County recorded \$55 million in damage to public and private properties. La Honda, Moss Beach, Pacifica, Daly City, and Portola Valley listed \$38 million in damage. Hundreds of hillsides failed. The pre-existing Polhemus landslide (earth slump) reactivated. Shoreline retreat occurred in Daly City, Pacifica, Tunitas Creek, and Moss Beach.			
Dec. 17, 2005 – Jan. 12, 2006	Winter Storms (Severe Storms, Flood, Mudslides, Landslides)	DR-1628	San Mateo County
Impacts: Damage estimates for the region exceeded \$100 million. Three homes were nearly wiped out by mudslides.			
March 29 – April 1, 2006	Spring Storms (Severe Storms, Flood, Landslides, Mudslides)	DR-1646	San Mateo County
Impacts: Damage not available.			
April 1, 2006	Debris Flow	N/A	San Francisco Peninsula Coast
Impacts: The hardest hit areas were water-soaked hillsides in Brisbane, Broadmoor, and El Granada. In total, 83 damage sites were documented throughout San Mateo County. A slide caused Highway 1 at Devil's Slide to be closed for several months.			
April 4, 2006	Debris Flow	N/A	Santa Cruz Mountains (Zone)
Impacts: Heavy and persistent rains in the Santa Cruz mountains during the first half of April caused many landslides. Damage was estimated at nearly \$13 million, with at least \$6 million charged to county road damage.			
April 22, 2006	Landslide	N/A	Half Moon Bay
Impacts: Landslide downed fiber optic phone lines, leading to phone service outages in several San Mateo County coastal cities.			
December 6, 2014	Landslide	N/A	CA-84 East, between Old La Honda Rd., and Highway 35/Skyline Blvd.
Impacts: A landslide led to a traffic alert for motorists on CA-84 East, where only one lane was open for traffic.			
January 18 – 23, 2017	Severe Winter Storms, Flooding, and Mudslides	DR-4305	San Mateo County
Impacts: Not reported			
February 1 – 23, 2017	Severe Winter Storms, Flooding, and Mudslides	DR-4308	San Mateo County
Impacts: Not reported

Sites of Repeated Landslides

In addition to the one-time events listed in Table 12-1, the following ongoing problem areas have been reported:

- The southwestern portion of the County has experienced repeated damage from debris flows, including the Tunitas Creek, San Gregorio, and Pescadero watersheds. Debris flows are widespread on the natural

slopes west of Skyline Ridge. They have been observed in Alpine Road, Crystal Springs, San Bruno Mountain, and Point San Pedro, as well as the County's coastal sea cliffs.

- Highway 1 has been closed by landslides multiple times at Devils Slide. In 1995 and 2006, landslides led to extended closures. The new Tom Lantos Tunnel, opened in March 2013, allows the highway to bypass Devils Slide and reduce vulnerability.

Post-Fire Debris Flows

Wildfire can significantly alter the hydrologic response of a watershed to the extent that even modest rainstorms can produce dangerous flash floods and debris flows. California's first major rainfall event of the winter after the historic 2020 wildfire season prompted evacuation orders and flood watches and warnings for several recent burn areas in the state. The biggest debris-flow impacts were in Monterey County and include major damage along the Big Sur Coast closing Highway 1 indefinitely (Dolan Fire) and damage to numerous homes causing at least one injury (River Fire). Minor home damage occurred in the Bond Fire in Orange County, and small non-destructive debris flows were observed in the CZU Lightning Complex burn area in Santa Cruz and San Mateo Counties. The USGS has extent maps available for each of these events (USGS, 2021b).

12.2.2 Location

In 2011, the California Geological Survey used a combination of regional rock strength and slope data to create classes of susceptibility to deep-seated landslides statewide. The analysis assumed that susceptibility to deep-seated landslides is low on very low slopes in all rock materials and increases with slope and in weak rocks. The analysis also factored in locations of past landslides. Figure 12-2 shows the mapped susceptibility classes (none, low, moderate, high, and very high) for San Mateo County.

12.2.3 Frequency

In San Mateo County, landslides typically occur during and after severe storms, so the potential for landslides largely coincides with the potential for sequential severe storms that saturate steep, vulnerable soils. Most weather-induced landslides in the county occur in the winter after the water table has risen. Landslides that result from earthquakes can occur at any time. The probability of a landslide in the county in any given year is high. Table 12-1 lists 10 federal disaster declarations related to landslides in the County between 1981 and 2017, an average of one such major event every three or four years.

12.2.4 Severity

Landslides destroy property and infrastructure and can claim human lives. They have the potential of destabilizing the foundation of structures, which may result in monetary loss for community members. Slope failures in the United States result in an average of 25 to 50 lives lost per year (USGS, 2020a). Slides can pose a serious hazard to properties on or below hillsides. They can cause block access to roads, which can isolate community members and businesses and delay commercial, public, and private transportation. This can result in economic losses for businesses. Vegetation or poles on slopes can be knocked over, resulting in possible losses to power and communication lines. Landslides also can damage rivers or streams, potentially harming water quality, fisheries, and spawning habitat.

Historically, landslides in San Mateo County have proven to be very severe, with landslide activity being responsible for at least 14 deaths since 1982 (Bay Area News Group, 2016).

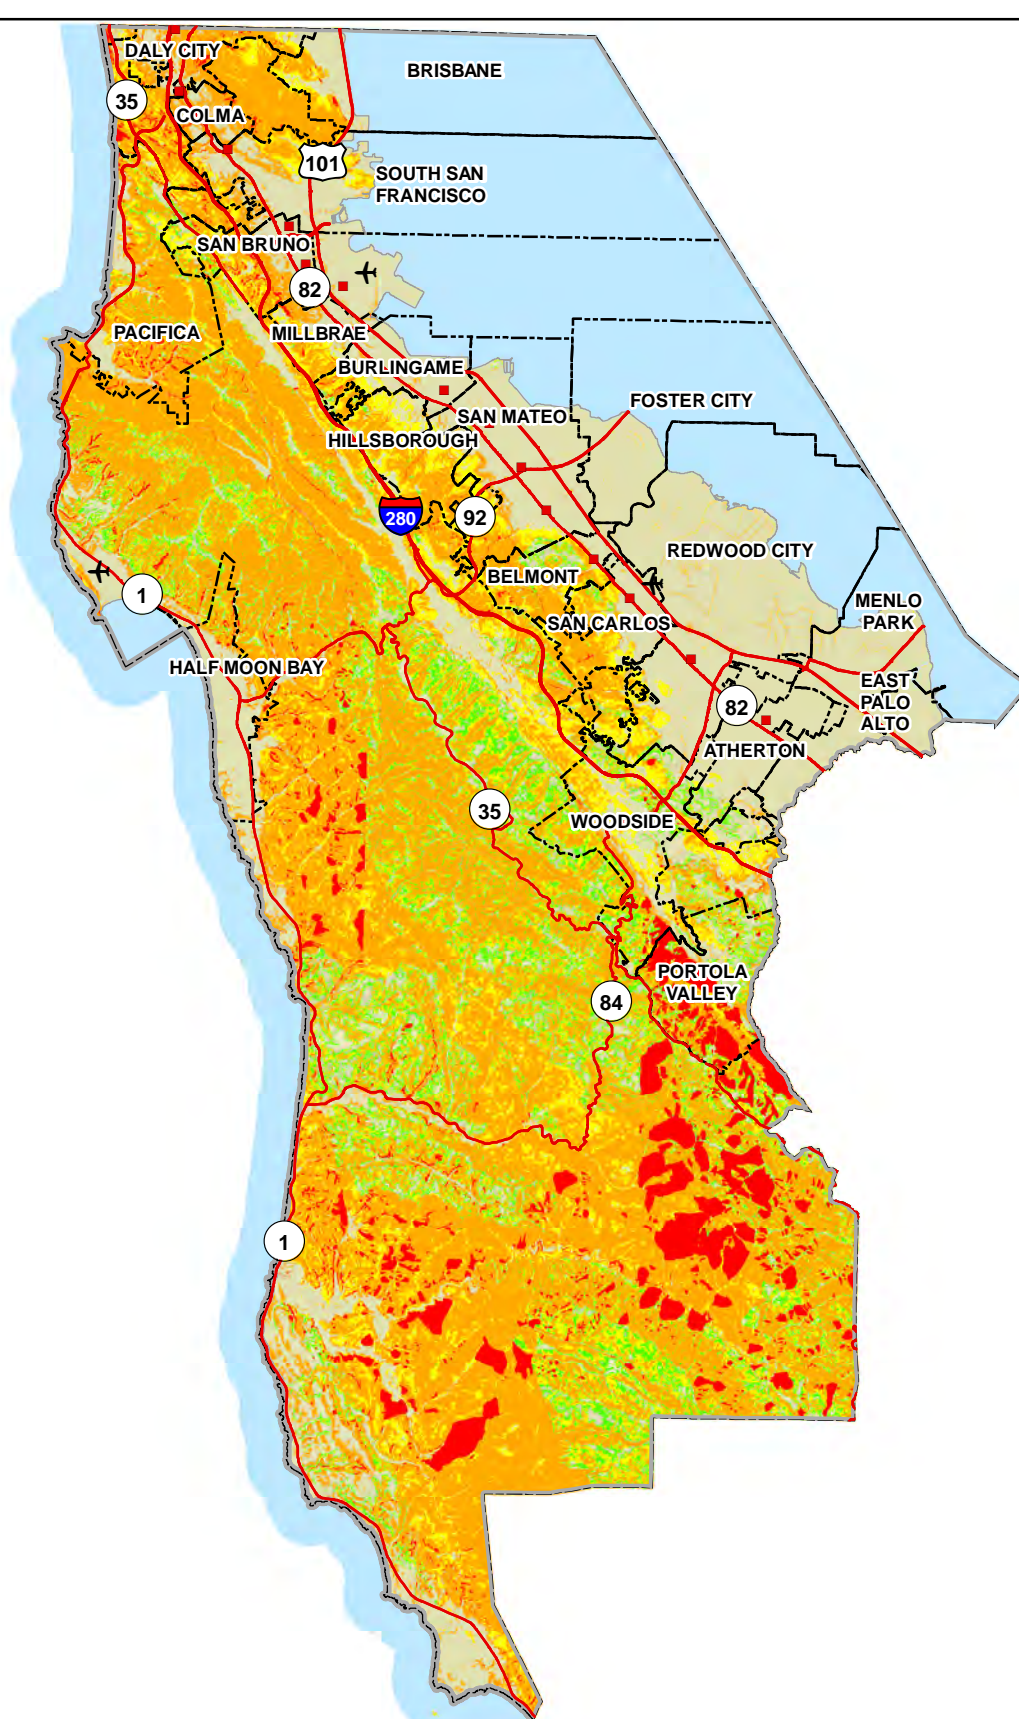

Figure 12-2. Susceptibility to Deep-Seated Landslides

Data Sources: San Mateo Co.,
CGS

12.2.5 Warning Time

Landslides can occur suddenly or slowly. The velocity of slide may range from a slow creep of inches per year to many feet per second, depending on slope angle, material, and water content. Generally accepted warning signs for landslide activity include the following:

- Springs, seeps, or saturated ground in areas that have not typically been wet before
- New cracks or unusual bulges in the ground, street pavements, or sidewalks
- Soil moving away from foundations
- Ancillary structures such as decks and patios tilting or moving relative to the main house
- Tilting or cracking of concrete floors and foundations
- Broken water lines and other underground utilities
- Leaning telephone poles, trees, retaining walls or fences
- Offset fence lines
- Sunken or down-dropped road beds
- Rapid increase in creek water levels, possibly accompanied by increased turbidity (soil content)
- Sudden decrease in creek water levels though rain is still falling or just recently stopped
- Sticking doors and windows and visible open spaces indicating frames out of plumb
- A faint rumbling sound that increases in volume as the landslide nears
- Unusual sounds, such as trees cracking or boulders knocking together.

Some methods used to monitor landslides can provide an idea of the type of slide and the amount of time prior to failure. Assessing the geology, vegetation, and amount of predicted precipitation for an area can help in predictions of what areas are at risk during general time periods. Currently, there is no practical warning system for individual landslides, however. The standard operating procedure is to monitor situations on a case-by-case basis and respond after an event has occurred.

12.3 EXPOSURE

12.3.1 Population and Property

A quantitative assessment of exposure to the landslide hazard was conducted using the landslide susceptibility mapping and the asset inventory developed for this plan, with an emphasis on zones with the highest degree of susceptibility (high and very high risk). Population exposure was estimated by calculating the number of buildings in each hazard area as a percent of total planning area buildings, and then applying this percentage to the estimated planning area population. Table 12-2 summarizes the estimated countywide population living in the mapped landslide susceptibility areas and the estimated property exposure. Detailed results by jurisdiction are provided in Appendix E.

Figure 12-3 shows the occupancy class defined by Hazus for all buildings in three mapped landslide hazard areas. Some building uses are more vulnerable to landslides, such as single-family homes, while others are less vulnerable, such as agricultural land or parks. Residential properties make up 98 percent of this exposure.

Table 12-2. Exposed Population and Property in Mapped Landslide Hazard Zones

	Moderate Landslide Risk (Susceptibility Categories V and VI)	High Landslide Risk (Susceptibility Categories VII, VIII, IX)	Very High Landslide Risk (Susceptibility Category X; Includes existing landslides)
Population			
Population Exposed	103,691	203,952	10,292
% of Total Planning Area Population	13.4%	26.4%	1.3%
Property			
Number of Buildings Exposed	26,392	49,986	2,622
Value of Exposed Structures	\$10,299,418,332	\$19,743,419,969	\$1,120,484,064
Value of Exposed Contents	\$7,093,905,932	\$13,187,783,453	\$843,456,811
Total Exposed Property Value	\$17,393,324,265	\$32,931,203,421	\$1,963,940,875
Total Exposed Value as % of Planning Area Total	9.1%	17.2%	1%

**Figure 12-3.** Building Occupancy Classes in the Mapped Landslide Hazard Zones

12.3.2 Critical Facilities

The breakdown of exposure of critical facilities by susceptibility class and facility type is shown in Figure 12-4.

Figure 12-4. Critical Facilities in Mapped Landslide Susceptibility Classes and Countywide

A significant amount of roads, bridges, and utilities can be exposed to landslides. The following major roads intersect mapped landslide hazard areas:

- State Highway 1
- State Highway 92
- Interstate 380
- State Highway 84
- State Highway 82
- US Highway 101
- Interstate 280

There are 26 bridges in San Mateo County with exposure to the landslide hazard. Landslides can knock out bridge abutments or weaken the soil supporting a bridge, obstructing the bridge or making it hazardous for use. Bridges in areas of high landslide risk often provide the only ingress and egress to large areas.

12.3.3 Environment

All natural areas within the high susceptibility zones for landslide are considered to be exposed to the hazard.

12.4 VULNERABILITY

Vulnerability estimates for the landslide hazard are described qualitatively. No loss estimation of these facilities was performed because damage functions have not been established for the landslide hazard.

12.4.1 Population

All people exposed to the landslide hazard are potentially vulnerable to landslide impacts. Populations with access and functional needs as well as elderly populations and the very young are more vulnerable to the landslide hazards as they may not be able to evacuate quickly enough to avoid the impacts of a landslide.

To apply an equity lens to this assessment, an analysis was performed using the SoVI ratings (see Section 7.2.2) of the population living in high or very high landslide susceptibility zones. Detailed results by jurisdiction are in Appendix E. Table 12-3 summarizes results for the overall planning area.

Table 12-3. Distribution of Population Exposed to Landslide Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	49,222	25.84%
Relatively High	48,485	25.46%
Relatively Moderate	52,477	27.56%
Relatively Low	19,557	10.27%
Very Low	20,708	10.87%

12.4.2 Property

Estimates of potential losses associated with landslides were developed representing 1 percent, 10 percent, 30 percent, and 50 percent of the replacement value of structures exposed to the landslide hazard. This allows emergency managers to assess potential economic impact based on assumptions about the percent of damage to the general building stock. Damage in excess of 50 percent is considered to be substantial by most building codes and typically requires total reconstruction of the structure. Table 12-4 shows potential losses in the areas with the highest degree of landslide susceptibility.

Table 12-4. Loss Estimation for Landslide

	Exposed Value	Loss Value	Loss as % of Total Planning Area Replacement Value
Moderate Landslide Susceptibility Zone			
Loss = 1% of Exposed Value	\$17.4 billion	\$173.9 million	Less than 1%
Loss = 10% of Exposed Value		\$1.7 billion	Less than 1%
Loss = 30% of Exposed Value		\$5.2 billion	2.72%
Loss = 50% of Exposed Value		\$8.7 billion	4.53%
High Landslide Susceptibility Zone			
Loss = 1% of Exposed Value	\$32.9 billion	\$329.3 million	Less than 1%
Loss = 10% of Exposed Value		\$3.3 billion	1.72%
Loss = 30% of Exposed Value		\$9.9 billion	5.15%
Loss = 50% of Exposed Value		\$16.5 billion	8.58%
Very High Landslide Susceptibility Zone			
Loss = 1% of Exposed Value	\$2.0 billion	\$19.6 million	Less than 1%
Loss = 10% of Exposed Value		\$196.4 million	Less than 1%
Loss = 30% of Exposed Value		\$589.2 million	Less than 1%
Loss = 50% of Exposed Value		\$982 million	Less than 1%

12.4.3 Critical Facilities

Highly susceptible areas of the county include mountain and coastal roads and transportation infrastructure. Access to major roads is crucial to life-safety after a disaster and can help to provide resilience during response and recovery operations. Landslides have the potential to block roads, isolating all or part of the County. Roadway blockages caused by landslides can create traffic problems, resulting in delays for emergency vehicles and public and private transportation. These blockages could result in economic losses for businesses.

At this time, all infrastructure and transportation corridors identified as exposed to the landslide hazard are considered vulnerable until more information becomes available. A more in-depth analysis of the mitigation measures taken by landslide-exposed critical facilities to prevent damage from landslides should be done to determine if they could withstand impacts of a mass movement.

12.4.4 Environment

Natural Resources

Landslides can destroy natural assets that are highly valued by the community:

- Landslides that fall into streams may significantly impact fish and wildlife habitat, as well as affecting water quality.
- Hillsides that provide wildlife habitat can be lost due to landslides.
- Endangered species and their critical habitat in the planning area may be located in landslide hazard areas.

Agricultural and Timber Resources

Agricultural resources include rangelands, timberlands, cultivated farmlands and dairy lands. Landslides can have major consequences to such resources, primarily timberland, due to the large percentage of such land in remote

locations on steep slopes. Roads accessing timberlands are often susceptible to slides and frequently are contributing factors to landslides. Mass movement activity on these roads can remove them from production.

Cultural Resources

Landslides can destroy cultural resources such as artifacts and structures.

Scenic Resources

San Mateo County features a broad range of scenic resources, including the coastline and Pacific Ocean, mountains, hills, ridgelines, inland water features, forests, agricultural features, and distinctive rural communities. Many of these resources or access routes to them are vulnerable to landslides.

12.4.5 Landslide Management

Landslides can create immediate, critical threats to public safety. Engineering solutions to protect structures on or adjacent to large active landslides are often extremely or prohibitively expensive. Effective landslide management should include the following elements:

- Continuing investigation to identify natural landslides, understand their mechanics, assess their risk to public health and welfare, and understand their role in ecological systems
- Regulation of development in or near existing landslides or areas of natural instability through the San Mateo County Code and city ordinances.
- Preparation for emergency response to landslides to facilitate rapid, coordinated action among San Mateo County, local cities, and state and federal agencies, and to provide emergency assistance to affected or at-risk community members.
- Evaluation of options including landslide stabilization or structure relocation where landslides are identified that threaten critical public structures or infrastructure

12.5 FUTURE TRENDS IN DEVELOPMENT

Land use controls (such as prohibiting development on unstable soils or steep slopes) are the most cost-effective way to prevent loss of life and property. The County and its planning partners are equipped to handle future growth within landslide hazard areas. All municipal planning partners have general plans that address landslide risk areas in their safety elements. All partners have committed to linking their general plans to this hazard mitigation plan update. This will create an opportunity for wise land use decisions as future growth impacts landslide hazard areas.

The California Building Standards Code has adopted the International Building Code (IBC) by reference. The IBC includes provisions for geotechnical analyses in steep slope areas that have soil types considered susceptible to landslide hazards. These provisions assure that new construction is built to standards that reduce the vulnerability to landslide risk. Building construction and grading activities are subject to County code that require a geotechnical report or slope stability analysis under specific slope conditions. The County requires a site evaluation prior to building plan check. Geologic maps are reviewed during the site evaluation and where building or grading is proposed in areas mapped with landslides, expansive soils, liquefaction potential, or fault rupture hazards, a geotechnical report is required, and design mitigations identified.

12.6 SCENARIO

Major landslides in San Mateo County most typically occur as a result of soil conditions affected by severe storms, groundwater, or human development. The worst-case scenario for landslide hazards in the planning area would generally correspond to a severe storm with heavy rain that caused flooding. Landslides are more likely during the late winter when the water table is high. After heavy rains from November to December, soils become saturated with water. As water seeps downward through upper soils that may consist of permeable sands and gravels and as it accumulates on impermeable silt, it will weaken and destabilize the slope. A short intense storm could cause saturated soil to move, resulting in landslides. As rains continue, the groundwater table rises, adding to the weakening of the slope. Gravity, poor drainage, a rising groundwater table, and poor soil exacerbate hazardous conditions.

Landslides are becoming a greater concern as development moves outside of city centers and into areas with less developed infrastructure. Most landslides would be isolated events affecting specific areas. It is probable that private and public property, including infrastructure, would be affected. Landslides could affect bridges that pass over landslide-prone ravines and knock out rail service through the County. Road obstructions caused by landslides would create isolation problems for community members and businesses in sparsely developed areas. Property owners exposed to steep slopes may suffer damage to property or structures. Landslides carrying vegetation such as shrubs and trees may cause a break in utility lines, cutting off power and communications to community members.

Continued heavy rains and flooding would complicate the problem further. As emergency response resources are applied to problems with flooding, it is possible they will be unavailable to assist with landslides across San Mateo County.

12.7 ISSUES

Important issues associated with landslides in the planning area include the following:

- The data and science regarding mapping and assessing landslide hazards are constantly evolving. As new data and science become available, assessments of landslide risk should be re-evaluated.
- Over 50 percent of the population exposed to the combination of very high and high landslide susceptibility have either “very high” or “relatively high” social vulnerability.
- The impact of climate change on landslides is uncertain. If climate change affects atmospheric conditions, the exposure to landslide risks in San Mateo County could increase.
- There are existing homes in landslide risk areas throughout the County. The degree of vulnerability of these structures depends on the codes and standards applied in constructing the structures.
- Future development could lead to more homes in landslide risk areas.
- Landslides may cause negative environmental consequences, including water quality degradation.
- The risk associated with the landslide hazard overlaps the risk associated with other hazards, including earthquake, flooding, and wildfire. The County has an opportunity to seek mitigation alternatives with multiple objectives that can reduce risk for multiple hazards.
- As the frequency and severity of wildfires increase in the State of California, the probability for post-fire debris flows will increase within the planning area.

- California's Disclosures in Real Property Transactions law requires disclosure if a property is in a landslide hazard area. Such disclosure is dependent upon knowledge by the seller or the seller's real estate agent or the posting of a landslide hazard map at the offices of the County recorder, County assessor, and County planning agency and a notice identifying the location of the map and any changes to it.
- Coastal bluff erosion is particularly susceptible to ocean wave height and the direction of wave approach. El Niño conditions often result in substantial increases in the of coastal bluff retreat. Roads and residential developments are most exposed to these hazards.

13. SEA LEVEL RISE

13.1 GENERAL BACKGROUND

Sea-level rise is caused primarily by two factors related to global warming: the added water from melting ice sheets and glaciers; and the expansion of seawater as it warms. In the past century, global mean sea level has increased by 7 to 8 inches, with human influence the dominant cause of observed atmospheric and oceanic warming. Given current trends in greenhouse gas emissions and increasing global temperatures, sea level rise is expected to accelerate in the coming decades, with scientists projecting an increase in sea level in the San Francisco area by 2100 of anywhere from 1.0 to 10.2 feet (California Natural Resources Agency, 2018).

The most damaging events over the next few decades are likely to be dominated by large El Niño-driven storm events in combination with high tides and large waves. Impacts will generally become more frequent and more severe in the latter half of this century.

13.2 HAZARD PROFILE

San Mateo County is highly vulnerable to the effects of rising sea levels. If left unmanaged, future flooding and coastal erosion could pose considerable risks to life, safety, critical facilities, the County's natural and recreational assets, and the economy. The assessed value of parcels in the project area exposed to near-term (present-day) flooding exceeds \$1 billion, and the assessed value of parcels exposed to erosion and flooding in the long term (50–100 years) totals nearly \$40 billion. More than 30,000 residential parcels and 3,000 commercial parcels may also be vulnerable in the long term (County of San Mateo, 2018).

Flooding, erosion, and sea level rise directly threaten people and property in the sea level rise hazard areas. They also have indirect effects on all communities in the County, even those on high ground, because assets and infrastructure in the sea level rise areas provide critical services and functions to communities outside these areas. The County is already exposed to coastal flooding when large rain events coincide with high tides on the San Francisco Bay, making it imperative to take steps to reduce risk (County of San Mateo, 2018).

13.2.1 Previous Documents and Resources

County of San Mateo Sea Level Rise Vulnerability Assessment

The County of San Mateo's 2018 *Sea Level Rise Vulnerability Assessment* used best available existing data to assess the County's vulnerability to sea level rise. It supports a sea level rise preparedness strategy that does the following (County of San Mateo, 2018):

- Identifies risks to life and safety

- Recognizes the natural and beneficial functions of the County's natural areas
- Considers impacts and benefits to community populations, especially those with increased vulnerability

The project used sea level rise inundation data from the Our Coast, Our Future tool developed by the U.S. Geological Survey (USGS) and Point Blue, which provided the best available sea level rise data for the County at the time of the report. Three scenarios indicate the projected extent of flooding should the project area experience a 1 percent annual chance storm with or without sea level rise:

- The baseline scenario shows flooding with a 1 percent annual chance storm.
- The mid-level scenario shows flooding with a 1 percent chance annual storm and 3.3 feet of sea level rise.
- The high-end scenario shows flooding with a 1 percent chance annual storm and 6.6 feet of sea level rise.

This report identifies what is vulnerable to sea level rise among built and natural assets, explores public health and risks from cascading impacts, and discusses what these factors mean for policy and planning purposes. Its findings highlight that many of the assets have cross-cutting vulnerabilities (i.e., multiple, and indirect sources of vulnerability) and may have more than one point of exposure to sea level rise (County of San Mateo, 2018).

Our Coast, Our Future

Our Coast, Our Future (OCOF) is a collaborative project focused on providing coastal California resource managers and land use planners locally relevant, online maps and tools to help understand, visualize, and anticipate vulnerabilities to sea level rise and storms. The OCOF incorporates factors such as water levels, wave heights, flooding, and erosion to assess vulnerabilities to sea level rise and storms in the San Francisco Bay and on the outer coast from Half Moon Bay to Bodega Bay. The following are available on the OCOF website:

- Seamless digital elevation model at 2-meter horizontal resolution for the San Francisco Bay Area
- 40 sea level rise and storm scenarios, plus a King Tide scenario for San Francisco Bay, using the USGS Coastal Storm Modeling System
- FAQ and video tutorials, including general project information, geographic coverage, data used, model development, and how to use the flood map
- Interactive maps of flood extent, depth, and duration, wave heights, and current velocity, as well as the option to compare scenarios and view georeferenced King Tide photos
- Online and downloadable data access tailored to end users' information needs.

Adapting to Rising Tides

The Adapting to Rising Tides (ART) program was established in 2010 to identify how current and future flooding along the Alameda County shoreline will affect communities, infrastructure, ecosystems, and economy. It was a project of the San Francisco Bay Conservation and Development Commission, NOAA's Office for Coastal Management, local, regional, state and federal agencies and organizations, and non-profit and private associations.

Since then, the ART program has continued with cross-jurisdictional projects that build local and regional capacity in the San Francisco Bay Area to plan for and implement adaptation responses. The program tests and refines adaptation planning methods to integrate sustainability and decision-making from start to finish and foster collaborations that lead to action on adaptation. Each ART program project provides data, maps and analysis about the assets, asset categories and sectors evaluated.

13.2.2 Past Events

Sea level rise is a dynamic phenomenon that is constantly evolving, the impacts of which are not associated or reported as singular events. It is already affecting Bay Area communities. In the last century, San Francisco Bay water levels have risen 8 inches.

13.2.3 Location

San Mateo County is a peninsula county, meaning it is subject to two types of sea-level rise hazard exposures:

- The eastern side of the County is exposed to the San Francisco Bay, which is more of a closed system.
- The western side of the County is exposed to the Pacific Ocean and the more dynamic sea-level rise conditions associated with wave action.

The inundation areas used for this assessment are a combination of scenarios from OCOF (6.6 feet of Pacific Ocean coastline sea-level rise by 2100, with 100-year storm) and the ART program (9 feet of San Francisco Bay coastline sea-level rise by 2100). Mapped inundation areas were aggregated for a singular sea-level rise assessment. Figure 13-1 shows the extent and location of these combined areas.

13.2.4 Frequency

The probability of sea-level rise inundation in San Mateo County by 2100 is high. The sea-level rise projections for 2100 in the OCOF and ART program scenarios used for this assessment correlate to 0.98 to 1.35 inches per year over the next 80 years. Sea level rise projections are periodically revised as climate models are improved and updated with new data and observations.

13.2.5 Severity

The severity of sea-level rise to the County of San Mateo will become greater over the next 30 to 80 years. The severity could be exacerbated by the following conditions:

- **Daily tidal inundation**—As sea level rises, the amount of land and infrastructure subjected to daily inundation by high tides—also known as increases in mean higher high water—will increase. This would result in increased permanent future inundation of low-lying area.
- **Annual high tide inundation (King Tides)**—King Tides are abnormally high, predictable astronomical tides that occur about twice per year. They are the highest tides that occur each year during the winter and summer when the Earth, moon and sun are aligned. Winter King Tides may be amplified by stormy weather, making them even more significant. King Tides result in temporary inundation associated with nuisance flooding, such as inundation of low-lying roads, boardwalks, and waterfront promenades.
- **Extreme high tide inundation (storm surge)**—When Pacific Ocean storms coincide with high tides, storm surge can elevate Pacific Ocean and San Francisco Bay water levels and produce extreme high tides. Such storm surge events occurred on January 27, 1983, December 3, 1983, February 6, 1998, January 8, 2005, and December 31, 2006. Extreme high tides can cause severe inundation of low-lying roads, boardwalks, and promenades. They can exacerbate coastal and riverine flooding, cause upstream flooding, and interfere with stormwater outfalls.

Figure 13-1. Sea Level Rise for San Mateo County

Inundation areas are a combination of Our Coast Our Future 200cm (6.6 feet) of SLR with 100-year storm for the Pacific Ocean coastline, and Adapting to Rising Tides 108 inches (9 feet) of SLR for the San Francisco Bay coastline.

-  Inundation Area
-  Cities
-  County Boundary
-  Highways
-  Airport
-  Rail Station

Data Sources: San Mateo Co., ART, OCOF

- **El Niño winter storms**—During El Niño winters, atmospheric and oceanographic conditions in the Pacific Ocean produce severe winter storms that bring intense rainfall and storm conditions to the Bay Area. Tides are often elevated 0.5 to 1.0 feet above normal along the coast, and wind setup can elevate water levels even further. Typical impacts include inundation of low-lying roads, boardwalks, and waterfront promenades; storm drain backup; wave damage to coastal structures; and erosion of natural shorelines. El Niño winter conditions prevailed in 1977–1978, 1982–1983, 1997–1998, 2009–2010, and 2015–2016.
- **Ocean swell and wind-wave events (storm waves)**—Pacific Ocean storms and strong thermal gradients can produce strong winds that blow across the ocean and the Bay. When the wind blows over long reaches of open water, large waves can be generated that impact the shoreline and cause damage. Typical impacts include wave damage along the shoreline, particularly to coastal structures such as levees, docks, piers, wharves, and revetments; backshore inundation due to wave overtopping of structures; and erosion of natural shorelines.

In the planning area, the potential for new or prolonged flooding as sea level rises will not be confined to the shoreline. Sea level rise will increase the likelihood of major flood events because higher water levels in tidal creeks and flood control channels will reduce capacity to discharge rainfall runoff. While some creeks and coastal infrastructure already flood when rainstorms coincide with high tides, rising sea levels will increasingly cause flooding during smaller, more frequent rainfall events.

13.2.6 Warning Time

Sea-level rise is not a hazard that requires near-team advance warning to support response and recovery operations. Programs such as the NOAA sea-level rise program are keeping an active watch on the sea-level rise phenomena to keep communities such as San Mateo County informed of the progression. This stream of information will feed programs to help the County to be prepared for and mitigate the long-term impacts from sea-level rise.

13.3 EXPOSURE

A quantitative assessment of exposure to the aggregated sea-level rise inundation area using the ART and OCOF mapping was developed to support the assessment of the sea-level rise hazard. Population exposure was estimated by calculating the number of buildings in each hazard area as a percent of total planning area buildings, and then applying this percentage to the estimated planning area population.

13.3.1 Population and Property

Table 13-1 summarizes the estimated citywide population living in the mapped sea level rise risk areas and the estimated property exposure. Figure 13-2 shows the structure type of buildings in the inundation area. See Appendix E for a detailed breakdown of sea level rise exposure by jurisdiction.

Table 13-1. Exposed Population and Property in Sea-Level Rise Zones

	Aggregate sea-level rise Zone
Population	
Population Exposed	147,577
% of Total Planning Area Population	19.09%
Property	
Number of Buildings Exposed	34,385
Value of Exposed Structures	29,877,430,719
Value of Exposed Contents	25,528,820,493
Total Exposed Property Value	55,406,251,212
Total Exposed Value as % of Planning Area Total	28.87%

**Figure 13-2.** Number of Structures within the Sea Level Rise Inundation Area by Occupancy Class

13.3.2 Critical Facilities

Vulnerable assets in the planning area along the Pacific Coast and San Francisco Bay include critical facilities (police stations, hospitals, wastewater treatment plants, and schools), essential regional transportation networks and infrastructure (Bay Area Rapid Transit, Caltrain, Highway 101, State Route 1), and regional natural and recreational assets (Pacifica State Beach, the California Coastal Trail, and the Ravenswood Pond Complex) (County of San Mateo, 2018). The breakdown of critical facilities exposure by sea level rise inundation zone and facility type is shown in Figure 13-3. There are 157 critical facilities exposed to some degree to the aggregated sea level rise inundation area.

13.3.3 Environment

All sea level rise inundation areas are exposed and vulnerable to impacts. Many of the sea-level rise inundation areas include important environmental and natural resources, which are often important elements in nature based sea-level rise and flooding strategies.

Figure 13-3. Critical Facilities in Mapped Sea-Level-Rise Inundation Areas and Countywide

13.4 VULNERABILITY

13.4.1 Population

All people exposed to the sea-level rise hazard are potentially vulnerable to its impacts. To apply an equity lens to this assessment, an analysis was performed using the SoVI ratings (see Section 7.2.2) of the population living in the mapped sea level rise inundation areas. Detailed results by jurisdiction are in Appendix E. Table 13-2 summarizes results for the overall planning area.

Table 13-2. Distribution of Population Exposed to Sea-Level Rise Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	18,425	13.56%
Relatively High	40,980	30.17%
Relatively Moderate	43,456	31.99%
Relatively Low	25,653	18.88%
Very Low	7,336	5.4%

13.4.2 Property

Losses associated with sea-level rise were estimated based on estimated depth of sea-level rise inundation using the depth-damage functions in the Hazus flood model. Mean depths of inundation for all structures exposed to sea-level rise were determined via geospatial analysis. The results are shown in Table 13-3. The average depth above the lowest floor is 5 feet.

Table 13-3. Mean Depths of Flooding for Sea-Level Rise Scenarios

	Mean Depth	Range of Values
San Francisco Bay coast (ART data—108 inches sea-level rise)	7.37 feet	0 – 15.49 feet
Pacific Ocean coast (OCOF coastal data—6.6 ft sea-level rise with 100-yr storm)	2.18 feet	0.03 – 5.41 feet

Based on this average, generic damage curves were averaged by structure type to estimate a percent damage for structures and for contents. The values determined were 39.4 percent and 23.4 percent, respectively. These percent damage curves were then applied to the exposed values for structure and contents, to estimate loss. Table 13-4 shows the resulting loss estimates for the mapped sea level rise inundation zones.

Table 13-4. Loss Estimation for Sea-Level Rise

Buildings Impacted ^a	34,385
Structure Value Damaged	\$11,771,707,703
Content Value Damaged	\$5,973,743,995
Total Value Damaged	\$17,745,451,699
Damage as % of Total Value	9.25%

a. "Impacted " means water over the 1st floor of the structure

13.4.3 Critical Facilities

At this time, all critical facilities identified as exposed to the sea level rise hazard are considered vulnerable until more information becomes available. A more in-depth analysis should be done of the mitigation measures taken by the 157 critical facilities exposed to sea level rise to determine if they could withstand impacts of inundation.

13.4.4 Environment

Even a small increase in sea levels can have devastating effects on coastal habitats. It can cause destructive erosion, wetland flooding, aquifer and agricultural soil contamination with salt, and lost habitat for fish, birds, and plants. The sections below describe key environmental impacts associated with sea level rise.

Beaches

Approximately 13 miles of beaches in the County are exposed to sea level rise hazards. Some parts of the County's coastline are eroding faster than others. For example, Surfer's Beach has lost around 140 feet of beach since 1964. In addition to providing essential habitat for local fauna, beaches are an important recreational asset for all County residents. They also provide tourism-related economic benefits (County of San Mateo, 2018).

Animal Species

The County's natural environment supports a wide range of shorebirds, waterfowl, and other terrestrial and aquatic species, including ones listed as threatened or endangered. In particular, the threatened western snowy plover is vulnerable because it requires ground for nesting and its habitat is sensitive to temporary and permanent flooding. As dry ground decreases with sea level rise (assuming no management actions), western snowy plover habitat may become limited. The following species and groups of animals are of particular concern with respect to sea level rise alone (i.e., other climate factors are not considered); they are not listed in order of vulnerability (County of San Mateo, 2018):

- Ashy storm petrel
- Black oystercatcher
- Black rail
- California mussel
- Cassin's auklet
- Cavity nesting birds
- Mole crab
- Ochre sea star
- Red abalone
- Sea palm
- Surface nesting birds
- Western snowy plover

Groundwater

Sea level rise is anticipated to increase the groundwater table and could pose potential vulnerabilities and impacts on groundwater resources in the County, particularly in areas where municipal water supplies depend on groundwater (County of San Mateo, 2018).

Kelp

Eleven acres of kelp forests are present in the County and could be vulnerable to sea level rise. Sea-level rise may affect kelp forest communities through decreased light availability and forced shoreward migration. Sea level rise may also change the shape of the coastline and substrate composition (e.g., rocky versus sandy shores), and thus affect the availability and living conditions of macroalgae and their associated species (County of San Mateo, 2018).

Rocky Intertidal Habitat

Rocky intertidal habitat, such as that at the Fitzgerald Marine Reserve, is identified in *Climate Change Vulnerability Assessment for the North-Central California Coast and Ocean* as moderately sensitive to sea level rise. The habitat is also affected by hard armoring of the coastline and roads that prevent inland migration of beaches. These sensitivities are compounded by other natural and human-related factors, including temperature, invasive species, pH, and pollution (County of San Mateo, 2018).

Wetlands

Wetlands are an important natural asset in the County. They protect the shoreline from flooding and erosion from storms, and they are an important recreational and educational resource to the community. Wetlands contribute to a community's resilience to flooding by providing a storm surge buffer, erosion control, water-quality maintenance, and fish and wildlife habitat.

Wetlands are not very sensitive to temporary inundation, but they are more sensitive to permanent inundation from sea level rise, which could permanently convert them to tidal mudflat. However, wetlands may be able to build up sediment, or accrete at a pace equal to sea level rise (reflective of their adaptive capacity), which would prevent their permanent loss. This accretion would depend on an adequate supply of sediment, the extent to which the shoreline is developed, and how quickly the water level rises. These conditions are affected by human and natural processes upstream of San Francisco Bay and by coastal shoreline management practices on the Coastsides.

For example, coastline hardening or infrastructure (such as a jetty) in one place can exacerbate erosion elsewhere. In total, over 7,000 acres of wetlands (more than 80 percent of all wetlands assessed in the project area) could be lost to temporary or permanent flooding or erosion. This area includes the Pillar Point Marsh, Bair Island, and the Ravenswood Pond Complex (County of San Mateo, 2018).

Wetlands also provide flood protection benefits, and sea level rise could lead to a reduction in those benefits as wetlands become converted to mudflats with rising water levels (Hayden et al., 2019).

13.5 FUTURE TRENDS IN DEVELOPMENT

The overall land area of San Mateo County will decrease as sea level rise permanently inundates the County's lowest areas. This will have significant impacts on land use and planning in local communities. Local general plans as well as climate action/adaptation plans in the planning area will guide this future development. State mandates have sought to strengthen land use application in areas impacted by sea level rise. Local general plans should be referenced and cross-referenced with the results of this plan to mitigate future development in areas most vulnerable to sea level rise.

California legislation (such as AB-32, AB-2800, SB-97 and SB-379, described in Chapter 6) equips local governments with planning tools to address sea level rise impacts as future development pressures interface with the sea-level rise hazard areas.

13.6 SCENARIO

Sea levels along the San Mateo County coast will rise over the next 80 years and beyond, and the county and coastal and Bay facing cities will be adversely impacted by that rise. The impacts are already happening and will

progress over time. The planning partners are already preparing for these impacts using programs such as the recently completed *Sea-Level Rise Vulnerability Assessment* and other local coastal plans and other current projections customized for the immediate region. Mitigating the impacts from sea-level rise will take resources and tough land use decisions over the next 30 years, starting immediately.

The San Mateo County Flood and Sea Level Rise Resiliency District, known as OneShoreline, is an independent government agency working to make San Mateo County more resilient to the impacts of sea level rise, flooding, and coastal erosion. It was established with funding from the County and 20 incorporated cities within it. In addition to planning, OneShoreline is securing funding for and will build projects that protect communities, enhance the environment, and create recreational opportunities.

13.7 ISSUES

The planning team has identified the following sea-level-rise-related issues:

- The County should consider the adoption of higher regulatory standards to mitigate impacts of sea-level rise on redevelopment.
- The data and science that measure sea-level rise impacts progress rapidly. The County should commit to staying in line with the best available data and science on sea-level rise as it evolves.
- The costs to mitigate impacts from sea-level rise will be extensive and potentially beyond the County's means.
- Risk communication will be crucial to the successful mitigation of this hazard.
- Potential environmental losses include biodiversity and habitat for endangered plant and animal species
- Potential social losses include natural flood protection and natural recreation areas.
- Future permanent inundation of currently dry areas could disrupt local and regional commutes and travel.
- Saltwater intrusion of wastewater treatment plants could disrupt biological treatment process and significantly impede or shut down the treatment process.

14. SEVERE WEATHER

14.1 GENERAL BACKGROUND

Severe weather refers to any dangerous meteorological phenomena with the potential to cause damage, serious social disruption, or loss of human life. It includes thunderstorms, downbursts, tornadoes, waterspouts, snowstorms, ice storms, and dust storms, among other events. Severe weather is not the same as extreme weather, which refers to unusual weather events at the extremes of the historical distribution for a given area.

The most common severe weather events that have historically impacted the planning area are heavy rains (atmospheric rivers), extreme heat, fog, thunderstorms, tornadoes, and windstorms. Public safety power shutoff (PSPS) events represent a newer weather-related phenomenon in California; they are associated with weather conditions suitable for extreme fire risk. For this risk assessment, the term “severe weather” refers to all these event types in aggregate. They are assessed as a single hazard for the following reasons:

- Records indicate that each of these weather event types has impacted the planning area to some degree, and all have similar frequencies of occurrence.
- None of these weather event types have a clearly defined location, so no quantitative geospatial analysis is available to support exposure or vulnerability analysis; the analyses for this hazard are qualitative.

The following sections provide general descriptions of the local weather types of concern, in alphabetical order.

14.1.1 Atmospheric Rivers

Atmospheric rivers are relatively narrow regions in the atmosphere that are responsible for most of the horizontal transport of water vapor outside of the tropics. Those with the largest amounts of water vapor and the strongest winds can create extreme floods if they stall over watersheds vulnerable to flooding. These events can disrupt travel, induce mud slides, and cause catastrophic damage to life and property. However, not all atmospheric rivers cause damage—most are weak, and simply provide beneficial rain or snow that is crucial to water supply.

14.1.2 Extreme Heat

Extreme heat affects community members’ safety and increases community costs and energy generation as it continues. Extreme heat events can lead to an increase in heat-related illnesses and deaths, according to the California Department of Public Health’s *San Mateo County Profile Climate Change and Health*. They can also cause drought, exacerbate wildfires, and impact water supplies. Frequent losses may be associated with the urban heat island effect and overheating of energy, heating, ventilation, and air conditioning systems. Heat can lead to

brownouts or power loss due to impact on local infrastructure – such as the increased demand for air conditioning, rolling blackouts and PSPS events. Extreme heat events may degrade the quality of roadways and railways, resulting in closures and travel delays.

Extreme heat events are among the deadliest weather hazards facing communities. They are the primary weather-related cause of death in the United States. In a 10-year record of weather fatalities across the nation (2006 – 2015), excessive heat claimed more lives each year than floods, lightning, tornadoes, and hurricanes. According to the California Climate Adaptation Strategy, heat waves have claimed more lives in California than all other declared disaster events combined. Older adults, children, and sick or overweight individuals are at greater risk from extreme heat.

Extreme Heat Terminology

- **Extreme Heat:** A period of high heat and humidity with temperatures above 90 °F for at least two to three days.
- **High-Heat Days:** Days when temperatures exceed 100 °F.
- **Heat Wave:** Five consecutive days when temperatures exceed 100 °F.
- **Cooling Degree Days:** Every degree that the mean daily temperature is above 65 °F. This value is an indicator of how much energy must be expended to keep facilities at a comfortable temperature
- **Urban Heat Island:** Areas that typically lack vegetation (e.g., trees) and have dark, paved surfaces (e.g., parking lots) that absorb more heat and retain it for longer than adjacent, greener areas.

14.1.3 Fog

Fog is a cloud near the ground. Fog forms when air close to the ground can no longer hold all the moisture it contains. This occurs either when air is cooled to its dew point or the amount of moisture in the air increases. Heavy fog is particularly hazardous because it can restrict surface visibility. Severe fog incidents can close roads, cause vehicle accidents and airport delays, and impair the effectiveness of emergency response. Financial losses associated with transportation delays caused by fog have not been calculated in the United States, but it is known to be substantial. Fog can occur almost anywhere during any season and is classified based on how it forms, which is related to where it forms. Certain seasons are more likely to have foggy days or nights based on a number of factors, including topography.

Fog in the Bay Area has different origins depending on the time of year. In the summer, the area is characterized by cool marine air and persistent coastal stratus and fog. In winter, ground fog forms in the moist regions of the Sacramento River Delta and arrives to the region via Suisun and San Pablo Bays and San Francisco Bays on cool easterly drainage winds. While this type of fog is less frequent than summer fogs, it is typically denser and more likely to lead to significantly reduced visibility (Golden Gate Weather Services, 2009).

Although fog seems like a minor hazard, it can have significant impacts. The California Highway Patrol (CHP) alone has records of at least four officers whose deaths were indirectly caused by or exacerbated by dense fog and poor visibility (California Highway Patrol, 2021).

14.1.4 Public Safety Power Shutoff

Some combinations of weather conditions—particularly high winds, extreme heat, and low humidity—pose increased risks of wildfire. In 2012, the California Public Utilities Commission ruled that California Public Utilities Code gives electric utilities authority to shut off electric power to protect public safety, since power supply systems have the potential ignite wildfires (California Public Utilities Commission 2021). Such shutoffs are referred to as public safety power shutoff events. Given the long, connected nature of power supply systems, a

shutoff event targeted to a small at-risk area can affect a larger area outside the risk zone. The duration of a shutoff is tied directly to the severe weather that triggers it; the shutoff typically ends within 24 hours after the severe weather has passed (Pacific Gas & Electric n.d.).

14.1.5 Thunderstorms

A thunderstorm is a rain event that includes thunder and lightning. A thunderstorm is classified as “severe” when it contains one or more of the following: hail with a diameter of three-quarter inch or greater, winds gusting in excess of 50 knots (57.5 mph), or a tornado. Approximately 10 percent of the 100,000 thunderstorms that occur nationally every year are classified as severe.

Three factors cause thunderstorms to form: moisture, rising unstable air (air that keeps rising when disturbed), and a lifting mechanism to provide the disturbance. The sun heats the surface of the earth, which warms the air above it. If this warm surface air is forced to rise (hills or mountains can cause rising motion, as can the interaction of warm air and cold air or wet air and dry air) it will continue to rise as long as it weighs less and stays warmer than the air around it. As the air rises, it transfers heat from the surface of the earth to the upper levels of the atmosphere (the process of convection). The water vapor it contains begins to cool and it condenses into a cloud. The cloud eventually grows upward into areas where the temperature is below freezing. Some of the water vapor turns to ice and some of it turns into water droplets. Both have electrical charges. Ice particles usually have positive charges, and rain droplets usually have negative charges. When the charges build up enough, they are discharged in a bolt of lightning, which causes the sound waves we hear as thunder. Thunderstorms have three stages (see Figure 14-1):

Figure 14-1. The Thunderstorm Life Cycle

- The *developing stage* of a thunderstorm is marked by a cumulus cloud that is being pushed upward by a rising column of air (updraft). The cumulus cloud soon looks like a tower (called towering cumulus) as the updraft continues to develop. There is little to no rain during this stage but occasional lightning. The developing stage lasts about 10 minutes.
- The thunderstorm enters the *mature stage* when the updraft continues to feed the storm, but precipitation begins to fall out of the storm, and a downdraft begins (a column of air pushing downward). When the downdraft and rain-cooled air spread out along the ground, they form a gust front, or a line of gusty

winds. The mature stage is the most likely time for hail, heavy rain, frequent lightning, strong winds, and tornadoes. The storm occasionally has a black or dark green appearance.

- Eventually, a large amount of precipitation is produced and the updraft is overcome by the downdraft beginning the *dissipating stage*. At the ground, the gust front moves out a long distance from the storm and cuts off the warm moist air that was feeding the thunderstorm. Rainfall decreases in intensity, but lightning remains a danger.

There are four types of thunderstorms:

- **Single-Cell Thunderstorms**—Single-cell thunderstorms usually last 20 to 30 minutes. A true single-cell storm is rare, because the gust front of one cell often triggers the growth of another. Most single-cell storms are not usually severe, but a single-cell storm can produce a brief severe weather event. When this happens, it is called a pulse severe storm.
- **Multi-Cell Cluster Storm**—A multi-cell cluster is the most common type of thunderstorm. The multi-cell cluster consists of a group of cells, moving as one unit, with each cell in a different phase of the thunderstorm life cycle. Mature cells are usually found at the center of the cluster and dissipating cells at the downwind edge. Multi-cell cluster storms can produce moderate-size hail, flash floods, and weak tornadoes. Each cell in a multi-cell cluster lasts only about 20 minutes; the multi-cell cluster itself may persist for several hours. This type of storm is usually more intense than a single cell storm.
- **Multi-Cell Squall Line**—A multi-cell line storm, or squall line, consists of a long line of storms with a continuous well-developed gust front at the leading edge. The line of storms can be solid, or there can be gaps and breaks in the line. Squall lines can produce hail up to golf-ball size, heavy rainfall, and weak tornadoes, but they are best known as the producers of strong downdrafts. Occasionally, a strong downburst will accelerate a portion of the squall line ahead of the rest of the line. This produces what is called a bow echo. Bow echoes can develop with isolated cells as well as squall lines. Bow echoes are easily detected on radar but are difficult to observe visually.
- **Super-Cell Storm**—A super-cell is a highly organized thunderstorm that poses a high threat to life and property. It is similar to a single-cell storm in that it has one main updraft, but the updraft is extremely strong, reaching speeds of 150 to 175 miles per hour. Super-cells are rare. The main characteristic that sets them apart from other thunderstorms is the presence of rotation. The rotating updraft of a super-cell (called a mesocyclone when visible on radar) helps the super-cell to produce extreme weather events, such as giant hail (more than 2 inches in diameter), strong downbursts of 80 miles an hour or more, and strong to violent tornadoes.

Lightning, which occurs in all thunderstorms, is an electrical discharge that results from the buildup of positive and negative charges within a thunderstorm. When the buildup becomes strong enough, lightning appears as a “bolt.” This flash of light usually occurs within the clouds or between the clouds and the ground. A bolt of lightning instantaneously reaches temperatures approaching 50,000 °F. The rapid heating and cooling of air near the lightning causes thunder.

In the United States, about 100 people are struck and killed by lightning each year. Lightning also causes forest and brush fires and deaths and injuries to livestock and other animals. According to the National Lightning Safety Institute, lightning causes more than 26,000 fires in the United States each year. The institute estimates property damage, increased operating costs, production delays, and lost revenue from lightning and secondary effects to be in excess of \$6 billion per year. Impacts can be direct or indirect. “Lightning sieges” are extreme lightning events in which lightning strikes multiple points at once. In August 2020, an estimated 12,000 lightning strikes caused a set of fires known as the CZU Lightning Complex in San Mateo and Santa Cruz counties.

14.1.6 Tornadoes

A tornado is a violently rotating column of air extending between, and in contact with, a cloud and the surface of the earth. Tornadoes are often (but not always) visible as a funnel cloud. On a local-scale, tornadoes are the most intense of all atmospheric circulations and wind can reach destructive speeds of more than 300 miles per hour (mph). A tornado's vortex is typically a few hundred meters in diameter, and damage paths can be up to 1 mile wide and 50 miles long. Tornadoes can occur throughout the year at any time of day but are most frequent in the spring during the late afternoon. As shown in Figure 14-2, California has a relatively low risk compared to states in the midwestern and southern United States. Tornado severity classified on the Fujita Tornado Damage Scale is shown in Table 14-1.

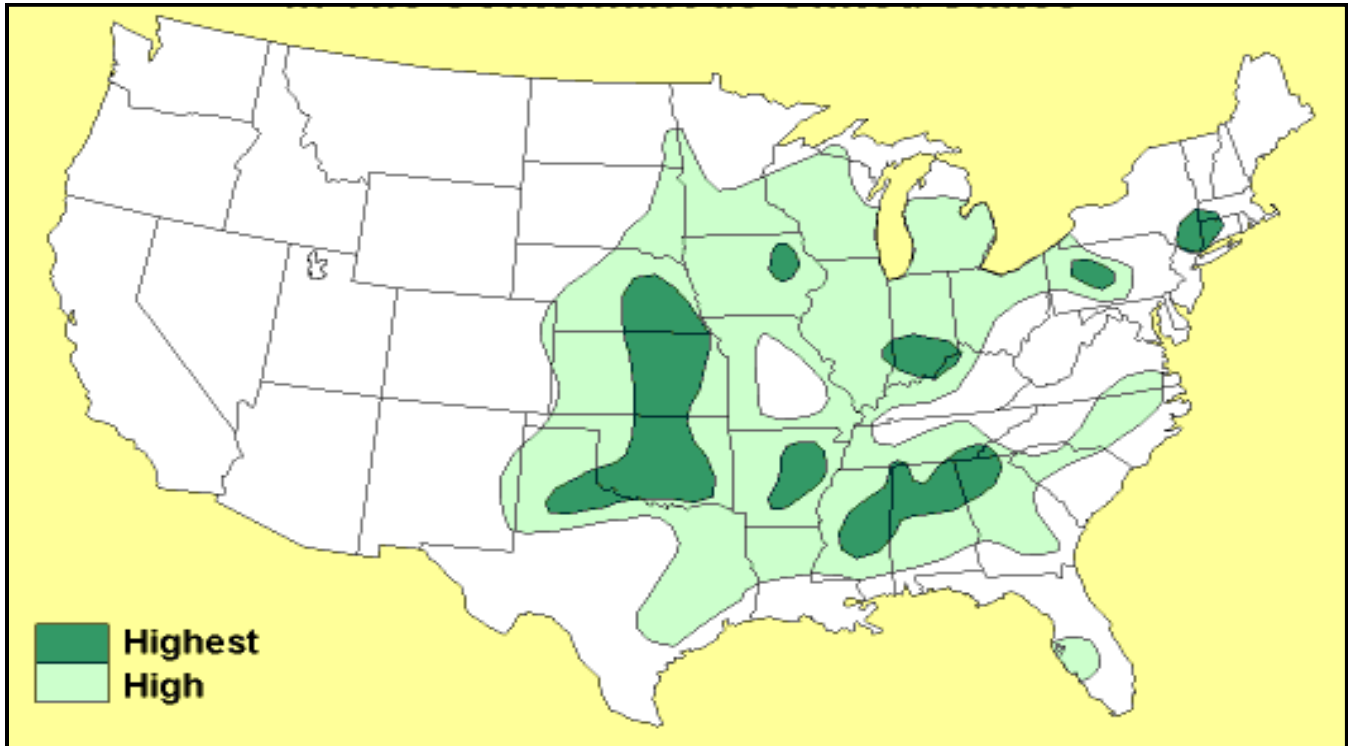

Figure 14-2. Tornado Risk Areas in the Coterminous United States

Table 14-1. Operational Enhanced Fujita Scale

Enhanced Fujita Number	3-Second Gust (mph)
0	65-85
1	86-110
2	111-135
3	136-165
4	166-200
5	Over 200

Source: NOAA, 2018a

14.1.7 Windstorms

Windstorms are generally short-duration events involving straight-line winds or gusts of over 50–60 mph, strong enough to cause property damage. Damage from such winds accounts for half of all severe weather reports in the lower 48 states. Wind speeds can reach up to 100 mph and can produce a damage path extending for hundreds of miles. The Beaufort Wind Chart (Table 14-2) provides terminology and a description of potential wind impacts at different levels (National Severe Storms Laboratory, 2018).

Table 14-2. Beaufort Wind Chart

Beaufort Number	Range (mph)	Terminology	Description
0	0	Calm	Calm. Smoke rises vertically.
1	1-3	Light air	Wind motion visible in smoke.
2	4-7	Light breeze	Wind felt on exposed skin. Leaves rustle.
3	8-12	Gentle breeze	Leaves and smaller twigs in constant motion.
4	13-18	Moderate breeze	Dust and loose paper is raised. Small branches begin to move.
5	19-24	Fresh breeze	Smaller trees sway
6	25-31	Strong breeze	Large branches in motion. Whistling heard in overhead wires. Umbrella use is difficult.
7	32-38	Near gale	Whole trees in motion. Some difficulty when walking into the wind.
8	39-46	Gale	Twigs broken from trees. Cars veer on road.
9	47-54	Sever gale	Light structure damage.
10	55-63	Storm	Trees uprooted. Considerable structural damage.
11	64-73	Violent storm	Widespread structural damage.
12	74-95	Hurricane	Considerable and widespread damage to structures.

Source: Lewis, 2018

There are seven types of damaging winds:

- **Straight-line winds**—Any thunderstorm wind that is not associated with rotation; this term is used mainly to differentiate from tornado winds. Most thunderstorms produce some straight-line winds as a result of outflow generated by the thunderstorm downdraft.
- **Downdraft**—A small-scale column of air that rapidly sinks toward the ground.
- **Downburst**—A strong downdraft with horizontal dimensions larger than 2.5 miles resulting in an outward burst or damaging winds on or near the ground. Downburst winds may begin as a microburst and spread out over a wider area, sometimes producing damage similar to a strong tornado. Although usually associated with thunderstorms, downbursts can occur with showers too weak to produce thunder.
- **Microbursts**—Microbursts are small concentrated downbursts that produce an outward burst of damaging winds at the surface. Microbursts are generally less than 2.5 miles across and short-lived, lasting only 5 to 10 minutes, with maximum wind speeds up to 168 mph. There are two kinds of microbursts: wet and dry. A wet microburst is accompanied by heavy rain at the surface. Dry microbursts, common in places like the high plains and the intermountain west, occur with little or no precipitation reaching the ground.
- **Gust front**—The leading edge of rain-cooled air that clashes with warmer thunderstorm inflow. Gust fronts are characterized by a wind shift, temperature drop, and gusty winds out ahead of a thunderstorm. Sometimes the winds push air above them, forming a shelf cloud or detached roll cloud.

- **Derecho**—A widespread thunderstorm wind caused when new thunderstorms form along the leading edge of an outflow boundary (the boundary formed by horizontal spreading of thunderstorm-cooled air). The word “derecho” is of Spanish origin and means “straight ahead.” Thunderstorms feed on the boundary and continue to reproduce. Derechos typically occur in summer when complexes of thunderstorms form over plains, producing heavy rain and severe wind. The damaging winds can last a long time and cover a large area.
- **Bow Echo**—A linear wind front bent outward in a bow shape. Damaging straight-line winds often occur near the center of a bow echo. Bow echoes can be 200 miles long, last for several hours, and produce extensive wind damage at the ground.

Windstorms can result in collapsed or damaged buildings, damaged or blocked roads and bridges, damaged traffic signals, streetlights, and parks, and other damage. Wind speeds as low as 32 mph can cause structural damage, and winds of 100 mph can destroy wood-frame structures. They can also cause direct losses to buildings, people, and vital equipment. There are direct consequences to the local economy resulting from windstorms and the associated physical damage and interrupted services.

Wind pressure can create a direct and frontal assault on a structure, pushing walls, doors, and windows inward. Conversely, passing currents can create lift and suction forces that act to pull building components and surfaces outward. As positive and negative forces impact a building’s doors, windows, and walls, the result can be roof or building component failures and considerable structural damage. The effects of winds are magnified in the upper levels of multi-story structures.

Debris carried along by extreme winds can contribute directly to loss of life and indirectly to the failure of protective building envelopes. Falling trees and branches can damage buildings, power lines, and other property and infrastructure. Tree limbs breaking in winds of only 45 mph can be thrown over 75 feet, so overhead power lines can be damaged even in relatively minor windstorm events. During wet winters, saturated soils cause trees to become less stable and more vulnerable to uprooting from high winds. Utility lines brought down by summer thunderstorms have also been known to cause fires, which start in dry roadside vegetation. Electric power lines falling down to the pavement create the possibility of lethal electric shock.

Downed trees and power lines, and damaged property also can be major hindrances to emergency response and disaster recovery. Emergency response operations can be complicated when roads are blocked or when power supplies are interrupted. Industry and commerce can suffer losses from interruptions in electric service and from extended road closures.

14.1.8 Secondary Hazards

Major riverine or urban flooding can result from heavy rain (see Chapter 11 for more information on flooding). Rain falling on saturated soils on slopes or on areas recently burned by wildfire may lead to landslides (see Chapter 12 for more information on landslides). Lightning during thunderstorms presents a risk of starting a wildfire (see Chapter 16 for more information on wildfires). Storms can also exacerbate existing areas of vulnerability, such as increasing the frequency of erosion along coastal cliffs.

Poor air quality is a secondary impact of severe weather. During heat waves, the air becomes stagnant and traps emitted pollutants, often resulting in increases in surface ozone. Heat waves and drought also dry out vegetation and provide more fuel for wildfires whose smoke is a serious medical hazard. One type of cold wave also allows air pollution to accumulate (National Centers for Environmental Information, 2021a).

14.2 HAZARD PROFILE

14.2.1 Past Events

Appendix F lists past severe weather events in San Mateo County as recorded by NOAA since 1950. Table 14-3 summarizes those for which deaths, injuries, or property damage were reported or a federal disaster declaration was issued.

14.2.2 Location

Severe weather events have the potential to happen anywhere in San Mateo County. Communities in low-lying areas next to streams or lakes are more susceptible to flooding. Regions near San Francisco Bay are more likely to experience fog. Wind events are most damaging to areas that are heavily wooded. PSPS events can occur anywhere that relies on electrical power from an outside source. There is no clearly defined extent and location mapping available for atmospheric rivers, fog, or tornado. The extent discussion for these hazards is addressed under in Section 14.2.4 (Severity).

Extreme Heat

Climate Ready San Mateo County has created an interactive tool that includes climate scenarios for extreme heat, showing average temperatures and average number of high heat days per year across the county (County of San Mateo Office of Sustainability, 2021). The countywide temperature distribution for a base year (1995) is shown in Figure 14-3. Highest temperatures are found in the urban lowlands along the south Bay shore and in an area extending southeast from the coastline between Pescadero and San Gregorio. Temperatures are cooler along the mountain ridge extending northwest to southeast across the center of the county.

Windstorms

All of San Mateo County is subject to high winds from thunderstorms, tornadoes, and other severe weather events. According to the FEMA Winds Zones of the United States map (Figure 14-4), San Mateo County is located in Wind Zone I, where wind speeds can reach up to 130 mph. The map indicates the strength of windstorms in the United States, and the general location of the most wind activity. This is based on 40 years of tornado data and 100 years of hurricane data, collected by FEMA.

Tornadoes

Tornadoes have been documented in every state in the United States, and on every continent with the exception of Antarctica. Approximately 1,200 tornadoes occur in the United States each year, with the central portion of the country experiencing the most. Tornadoes can occur at any time of the year, with peak seasons at different times for different states (National Severe Storms Laboratory, 2018). As noted earlier, the State of California and San Mateo County have a lower risk for tornados than elsewhere in the country. Tornado risk within the County is fairly equal across the region; historical tornado events have been documented on both the bayside and coastal region of the County. Community members near the Pacific Ocean or the San Francisco Bay (as opposed to the central area of the County) may be at a slightly higher risk for tornados; however, historical data is not sufficiently exhaustive enough to confirm this potential trend. Tornadoes are usually localized; however, severe thunderstorms can result in conditions favorable to the formation of numerous or long-lived tornadoes.

Table 14-3. Severe Weather Events in San Mateo County Since 1950

Date	Type	Deaths or Injuries	Property Damage	Disaster Declaration #
April 1, 1958	Tornado	0	\$825,030	N/A
October 24, 1962	Severe storms	Not reported	Not reported	DR-138
December 19, 1981 – January 8, 1983	Severe storms, flood, mudslides, high tide	Not reported	Not reported	DR-651

Figure 14-4. Wind Zones in the United States

Fog

The Pacific, Atlantic Canada, and New England coastlines, along with the valleys and hills in the Appalachian Mountains, are the areas most prone to fog on the North American continent (Keller, 2008). San Mateo County, therefore, is more likely to experience fog than many other parts of the country.

Additionally, the Bay Area, including San Mateo County, has a unique topography that when combined with the California climate and nearby bay/maritime resources, creates multiple microclimates. Microclimates are small but distinct climates within a larger area. Temperature differences of as much as 10 to 20°F can be found only miles apart in the Bay Area, and those differences can grow significantly from one end of the region to another. In spring 2001, Half Moon Bay documented temperatures in the 50s while Antioch in Contra Costa County had temperatures of around 100°F (SF Gate, 2001).

Microclimates are significant in the case of fog events because some locations can experience fog while clear skies predominate only a few miles away. Western breezes may bring fog from the ocean, but it will be blocked from passing certain points by mountainous ridges. Even the type of fog in microclimates may vary; some regions are more prone to experience radiation fog, while others only receive a canopy of high fog. This is usually based on the proximity of the location to mountains, ridges, fault lines, and water sources, among other factors.

Heavy Rain

The frequency of heavy rain events remained fairly consistent between 1910 and the 1980s; however, it has risen substantially since then. Certain locations have noted more significant increases in heavy rain events than others. Most notably, the Northeast and Midwest have experienced the greatest changes, although the Southeast, Great Plains, Northwest, Alaska, and Southwest have also noted increases. Although San Mateo County experiences heavy rain events, it is at a reduced level compared to other parts of the country.

Thunderstorms

Thunderstorms affect relatively small localized areas, rather than large regions like winter storms and extreme temperature events. Thunderstorms can strike in all regions of the United States; however, they are most common in the central and southern states. The atmospheric conditions in these regions of the country are ideal for generating these powerful storms. It is estimated that there are as many as 40,000 thunderstorms each day worldwide. The most thunderstorms are seen in the southeast United States, with Florida having the highest incidences (80 to over 100 thunderstorm days each year). San Mateo County can experience an average of 10 thunderstorm days each year.

The entire extent of San Mateo County is exposed to some degree of lightning hazard, though exposed points of high elevation have significantly higher frequency of occurrence. As noted earlier, lightning instances in the County have only been associated with other storm events and not as a standalone hazard.

14.2.3 Frequency

All Events

The planning area can expect to experience adverse impacts from some type of severe weather event at least annually. Using the historical data presented in Appendix F, recurrence probabilities for the primary local types of severe weather events are as shown in Table 14-4.

Table 14-4. Recurrence Probabilities for Severe Weather Events

Severe Weather Event	Time Frame (Years)	# of Events over Timeframe	Recurrence Interval	% Annual Chance
Heavy Rain (Atmospheric River)	70	18	233 years	0.43
Extreme Heat	14	5	32 years	3
Fog	70	8	601 years	0.17
Public Safety Power Shutoffs	*3	*7	1 years	100
Thunderstorms	70	23	175 years	0.57
Tornados	70	4	1,132 years	0.09
Windstorms	70	118	1 year	100

Based on PG&E Statistics for the Bay Area

High-Heat Days

All of San Mateo County is projected to experience more high-heat days (above 100 °F) in the future. Air temperatures are expected to increase by 5 °F by 2070 due to climate change. Climate Ready developed extreme heat models using data from Cal Adapt and the California Department of Water Resources. The data were analyzed to identify changes between a baseline year of 1995 and projected changes due to climate change over a 35-year period (through 2030) and a 75-year period (through 2070). The heat-specific datasets were integrated into a model that assessed how temperature increases would negatively impact communities, key infrastructure, and facilities across the County.

Table 14-5 shows the average number of high-heat days by jurisdiction as observed in 1995 (baseline year) and projected for 2030 and 2070. Modeling suggests the average number of high heat days will increase for many jurisdictions across the county, some by as many as four days.

Table 14-5. High-Heat Days per Year in San Mateo County

	High-Heat Days per Year		
	1995	2030	2070
Atherton	2	3	6

San Mateo City	1	2	4
South San Francisco	1	1	1
Woodside	2	3	5
Unincorporated County	1	2	3
Average	1	2	3

*Unincorporated San Mateo County

The greatest changes in number of high heat days from 1995 to 2070 are projected to occur in Atherton, East Palo Alto, Foster City, Menlo Park, North Fair Oaks, and Redwood City. Impacts in these areas could be especially

severe if all six days of high heat occurred consecutively, resulting in a heat wave. On average countywide, the average number of high-heat days is expected to increase from one per year in 1995 to three per year in 2070. Figure 14-5 shows the distribution of high heat days projected for 2030 and for 2070 in San Mateo County due to climate change.

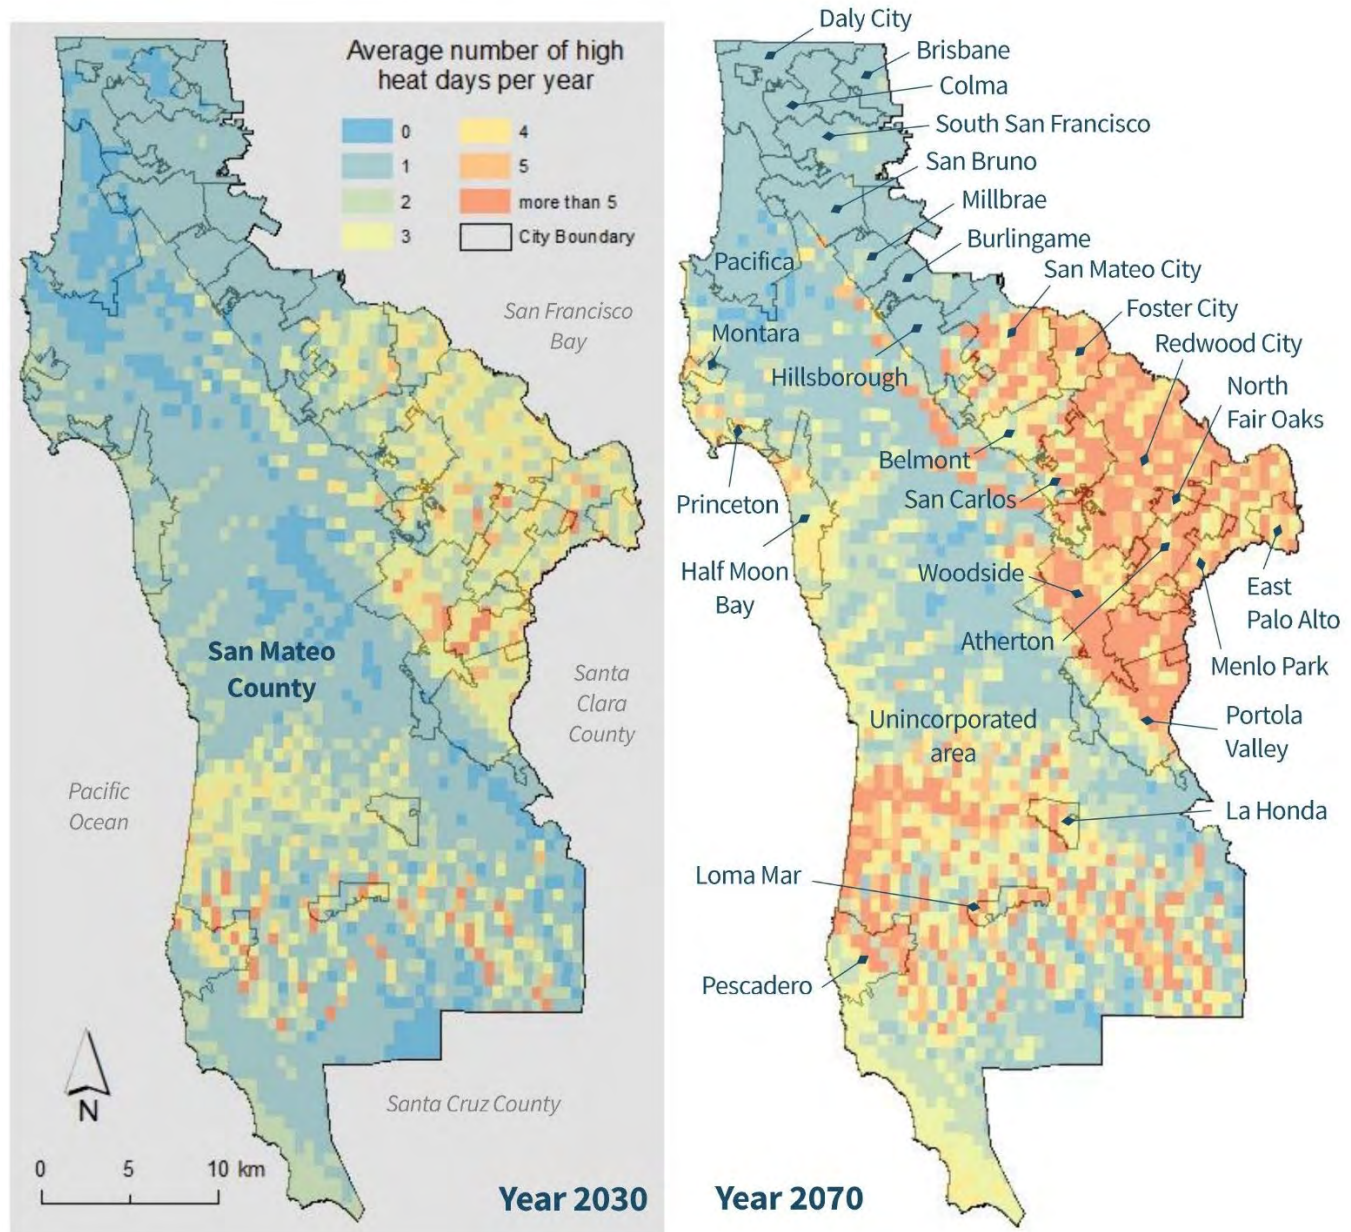

Figure 14-5. Extreme Heat Projections for San Mateo County

14.2.4 Severity

The most common problems associated with severe storms are immobility and loss of utilities. Fatalities are uncommon but can occur, especially in extreme heat events. Roads may become impassable due to flooding, downed trees, or a landslide. Power lines may be downed due to high winds, and services such as water or phone

may not be able to operate without power. Lightning can cause severe damage and injury. Physical damage to homes and facilities can be caused by wind or flooding.

Extreme Heat

Extreme heat can be dangerous to anyone without proper hydration or cooling, and can trigger health conditions, such as heat exhaustion, heat stroke and respiratory problems. One reason for this is that higher temperatures contribute to the build-up of harmful air pollutants. The impacts of heat are higher for vulnerable populations, including elderly, children, pregnant women, people with disabilities, outdoor and agricultural workers, and homeless people. Extreme heat has disproportionate impacts on socially vulnerable communities, on individuals who do not live or work in climate-controlled conditions (i.e., farm and outdoor workers), who rely on public or multi-modal means of transportation like walking or biking, or that have pre-existing medical conditions or disabilities.

Extreme heat can adversely impact transportation infrastructure, such as causing the softening and expansion of asphalt surfaces, resulting in buckling, potholed and rutted roads. Impacts on roadways and rail lines can lead to closures and travel delays in the short term and accelerate the breaking down of infrastructure in the long term.

Sustained temperatures above 100°F may cause train tracks to expand, resulting in the buckling of rail lines and the derailling of trains. Several factors determine whether speed restrictions will be placed on a commuter railway during an extreme heat event, including the duration of high air temperatures, the resulting temperature of the metal tracks, the exposure of the tracks to direct sun, and the compression of the tracks by running trains. BART and Caltrain cannot operate at full capacity during high heat events due to risks such as the buckling of railway networks that may result in train derailment or the malfunction of track and signal sensors, resulting in route closures or delays. The reduced quality of roadways may impact bus routes, while the duration riders can wait at bus stops may increase by extreme heat, increasing exposure of commuters to high temperatures. Extreme heat can impact resident's ability to bike to work, causing increased pressure on public transportation.

Fog

While fog is not likely to damage property or lead to large impacts on the population within the planning area, reduced visibility caused by fog can impact transportation in the planning area. Highway accidents involving fog are often chain-reaction collisions involving dozens or even hundreds of vehicles, frequently accompanied by high casualty figures.

Windstorms

Windstorms can be a frequent problem in the planning area and have been known to cause damage to utilities. The predicted wind speed given in wind warnings issued by the National Weather Service (NWS) is for a one-minute average; gusts may be 25 to 30 percent higher. Lower wind speeds typical in the lower valleys are still high enough to knock down trees and power lines and cause other property damage. Higher elevations in the County can experience much higher winds under more varied conditions.

Tornadoes

Tornadoes are potentially the most dangerous of local storms, but they are not common in the planning area. If a major tornado were to strike within the populated areas of the County, damage could be widespread. Businesses could be forced to close for an extended period or permanently, fatalities could be high, many people could be

homeless for an extended period, and routine services such as telephone or power could be disrupted. Buildings may be damaged or destroyed. Because the County has never experienced a tornado more severe than an EF1, however, such severity is unlikely.

Heavy Rain (Atmospheric Rivers)

Heavy rain in San Mateo County can have significant impacts, including crop damage, soil erosion, and increased risk of flood. Stormwater runoff from heavy rains can also impair water quality by washing pollutants into water bodies. Soil erosion, particularly along the coast, is a significant concern for San Mateo County, and is further explored in the landslide and flood hazard profiles. The largest impacts from atmospheric river events would be flooding associated with the abundance of rainfall. The severity of this hazard is addressed in the flood chapter of this plan, in Section 11.2.7.

Thunderstorms

Thunderstorms carry the same risks as heavy rain events, and depending on the type of storm, they can also serve as breeding grounds for tornados, lightning, and heavy winds, increasing risk of injury and property damage (Keller, 2008).

Lightning severity is typically investigated for both property damage and life safety (injuries and fatalities). The number of reported injuries from lightning is likely to be low, and County infrastructure losses can equate to up to thousands of dollars each year. The relationship of lightning to wildfire ignitions in the County increases the significance of this hazard. There are no recorded instances of lightning appearing alone (without a storm) in San Mateo County, and any lightning damage is likely to be compounded by other storm damage.

PSPS Events

The total costs of a PSPS event are not limited to the amount spent by the executing utility; they also encompass the societal harm that comes from losing electricity, which is more challenging to quantify. For residential customers, costs could come from replacing spoiled food, losing air conditioning (particularly for vulnerable populations), emotional distress, etc. For commercial and industrial customers, the main cost comes from lost revenue and production, but also includes the costs of installing backup power. Hospitals may rely on backup generation, and municipal governments might have to coordinate responses without power. When choosing to de-energize, the utility is choosing to create a controlled “disaster” in lieu of risking a larger, uncontrollable line-sparked wildfire, for which they would be liable. These conflicting interests between individual customers, public safety, and fiscal solvency have forced utilities to make difficult choices beyond those typically expected for an electric company (Wharton University, 2020).

14.2.5 Warning Time

Meteorologists can often predict the likelihood of a severe storm or other severe weather event. This can give several days of warning time. However, meteorologists cannot predict the exact time of onset or severity of the storm. Some storms may come on more quickly and have only a few hours of warning time. The San Francisco Bay Area Weather Forecast Office of the NWS monitors weather stations and issue watches and warnings when appropriate to alert government agencies and the public of possible or impending weather events. The watches and warnings are broadcast over NOAA weather radio and are forwarded to the local media for retransmission using the Emergency Alert System.

14.3 EXPOSURE AND VULNERABILITY

All people and property and the entire environment of the planning area are exposed to some degree to the severe weather hazard.

14.3.1 Population

The most common problems associated with severe weather events are immobility and loss of utilities. Although all populations in the planning area are exposed to severe weather events, some populations are more vulnerable. Vulnerable populations are the elderly, low income or linguistically isolated populations, people with life-threatening illnesses, and community members living in areas that are isolated from major roads. Power outages can be life threatening to those dependent on electricity for life support. Populations living at higher elevations with large stands of trees or power lines may be more susceptible to wind damage and black out, while populations in low-lying areas are at risk for possible flooding. In general, populations who lack adequate shelter during severe weather events, those who are reliant on sustained sources of power in order to survive, and those who live in isolated areas with limited ingress and egress options are the most vulnerable.

To apply an equity lens to this assessment, an analysis was performed using the SoVI ratings (see Section 7.2.2) of the entire planning area population. Detailed results are in Appendix E and are summarized for the overall planning area in Table 14-6.

Table 14-6. Distribution of Population Exposed to Severe Weather Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	133,222	18.54%
Relatively High	192,062	26.73%
Relatively Moderate	175,116	24.37%
Relatively Low	118,629	16.51%
Very Low	99,422	13.85%

Socially vulnerable communities may be particularly at risk of extreme heat due to increased prevalence of preexisting health conditions and greater reliance on public transportation, and because they tend to live urban areas with limited vegetation, exposing them more acutely to the stresses of heat. In addition to living in hotter neighborhoods, socially vulnerable communities tend to face barriers adapting to extreme heat events, such as the increased cost of operating an in-home air conditioning unit at a higher level or for an extended period of time, or they may lack access to a cooling center. In addition, socially vulnerable communities may not be able to afford to cool work or living spaces or may be forced to choose between air conditioning and necessities like food and rent. People with limited English proficiency, people with disabilities and older adults may be more vulnerable as they may not receive heat outreach information and emergency notifications due to language or other accessibility obstacles. Extreme heat-related illnesses and fatalities are preventable if adequately prepared for.

14.3.2 Property

All property is vulnerable during severe weather events, but properties in poor condition or in particularly vulnerable locations may risk the most damage. The most common impacts of specific weather event types on property are as follows:

- **Windstorm**—Mobile homes can be seriously damaged by wind gusts over 80 mph, even if they are anchored (National Severe Storms Laboratory, 2018). Properties at higher elevations or on ridges may be more prone to wind damage. Falling trees can result in significant damage to structures.
- **Tornado**—A major tornado could cause widespread damage to property in the planning area, but such an event is unlikely. Tornadoes of sufficient magnitude to cause significant property damage have not historically occurred with the planning area (no recorded events with a magnitude greater than F0), so the vulnerability of the planning area to this hazard is considered to be low.
- **Fog**—Fog is not likely to damage property, with the exception of motor vehicles that get into accidents because of poor visibility.
- **Heavy Rain**—Damage from heavy rain in the planning area is most likely to be related to secondary hazards accompanying the event, such as flooding or landslides
- **Thunderstorms**—Damage from thunderstorms in the planning area is most likely to be related to secondary hazards accompanying the event, such as flooding, landslides, or damaging winds. If lightning directly strikes a building, it may cause substantial damage and may even set the structure on fire.

No modeling is available for quantitative loss estimations for the severe weather hazard. Instead, loss estimates were developed representing 1 percent, 3 percent, and 5 percent of the replacement value of exposed structures:

- Loss of 1 percent of planning area replacement value—\$1.9 billion
- Loss of 3 percent of planning area replacement value—\$ 5.7 billion
- Loss of 5 percent of planning area replacement value—\$9.6 billion

14.3.3 Critical Facilities

All critical facilities are vulnerable during severe weather events, especially those that lack backup power generation capabilities. When facilities supplying power to planning area land line telephone systems are frequently disrupted, significant issues arise with communication in the planning area. In addition, some facilities are particularly vulnerable to specific types of severe weather events:

- **Windstorms**—Facilities located near trees or power lines that are likely to fall are also vulnerable. Roads and other transportation infrastructure could be blocked by downed trees or other debris.
- **Tornado**—Critical facilities in the direct path of a tornado would be particularly vulnerable.
- **Heavy Rain or Thunderstorm**—Facilities located in areas prone to localized or major flooding are vulnerable. Transportation systems are vulnerable to disruption from secondary hazards such as flooding or landslides.
- **Extreme Heat**—Transportation systems are vulnerable to the impacts of extreme heat on facility function.

14.3.4 Environment

The environment is highly vulnerable to severe weather events. Natural habitats such as streams and trees exposed to the elements during a severe storm risk major damage. Prolonged rains can saturate soils and lead to slope failure. Flood events caused by severe weather can produce river channel migration or damage riparian habitat. Storm surges can erode beachfront bluffs and redistribute sediment loads.

14.4 FUTURE TRENDS IN DEVELOPMENT

All future development will be affected by severe weather events. The ability to withstand impacts lies in sound land use practices and consistent enforcement of codes and regulations for new construction. The planning partners have adopted the International Building Code in response to California mandates. This code is equipped to deal with the impacts of severe weather events. Land use policies identified in general plans within the planning area also address many of the secondary impacts (flood and landslide) of the severe weather hazard. With these tools, the planning partners are well equipped to deal with future growth and the associated impacts of severe weather.

Many of the impacts associated with severe weather hazards can be addressed through proactive planning and the use of best available information in making land use decisions. San Mateo County achieves this goal through the implementation of its Shared Vision. Participating cities can incorporate these concerns into their general plans. Implementation of these guidelines and goals, along with other programs such as building code enforcement, public information, and early warning, will help San Mateo County manage the likely impacts of severe weather as the County expands and grows.

14.5 SCENARIO

Impacts of severe weather can be significant, particularly when secondary hazards of flood and landslide occur. A worst-case event would involve prolonged high winds accompanied by thunderstorms. Such an event would have both short-term and longer-term effects. Initially, schools and roads would be closed due to power outages caused by high winds and downed tree obstructions. In more rural areas, some subdivisions could experience limited ingress and egress. Prolonged rain could produce flooding, overtopped culverts with ponded water on roads, and landslides on steep slopes. Significant erosion and landslides along the coast may occur, further increasing the vulnerability of community members living right on the edge of coastal cliffs. Flooding and landslides could obstruct roads and bridges, isolating community members. Fog after the storm, resulting from the heavy moisture still in the area, could increase traffic accidents as visibility worsens.

14.6 ISSUES

Severe local storms are probably the most common widespread hazard. They affect large numbers of people in the planning area when they occur. Severe storms can quickly overwhelm city and county resources. Community members should be prepared for these types of storms: family plans should be developed, disaster kits should be put in homes, workplaces, schools and cars, and every family member should be taught how to shut off household utilities. Initiating early dismissal from schools and business is an effective mitigation measure and should be encouraged.

Severe weather cannot be prevented, but measures can be taken to mitigate the effects. Critical facilities can be hardened to prevent damage during an event. The secondary effect of flooding can be addressed through decreasing runoff and water velocity. Important issues associated with severe weather in the San Mateo County planning area include the following:

- Redundancy of power supply throughout the planning area must be evaluated to better understand what areas may be vulnerable.

- Although primarily thought of as an urban area, the County has a larger physical land mass containing rural communities and must also consider the needs of these community members (as well as their possible isolation during storm events).
- Public education on dealing with the impacts of severe weather needs to continue to be provided so that community members can be better informed and prepared for severe weather events. In particular, fog should be considered, since fog may be downplayed despite its potential for transportation accidents.
- Debris management (downed trees, etc.) must be addressed, because debris can impact the severity of severe weather events, requires coordination efforts, and may require additional funding.
- The effects of climate change may result in an increase of heavy rain or more intense storm events and will likely lead to increased temperatures and changes in overall precipitation amounts.
- Older building stock in the planning area is built to low code standards or none at all. These structures could be highly vulnerable to severe winter weather effects.
- Urban forest management programs should be evaluated to help reduce impacts from forest-related damages.

15. TSUNAMI

15.1 GENERAL BACKGROUND

A tsunami is a series of high-energy waves that radiate outward like pond ripples from an area where a generating event occurs, arriving at shorelines over an extended period. Tsunamis can be induced by earthquakes, landslides, and submarine volcanic explosions (see Figure 15-1). Tsunamis are typically classified as local or distant, depending on the location of their source in comparison to where waves occur:

- The waves nearest to the generating source represent a local tsunami. Such events have minimal warning time, leaving few options except to run to high ground after a strong, prolonged local earthquake. Damage from the tsunami adds to damage from the triggering earthquake due to ground shaking, surface faulting, liquefaction, and landslides.
- The waves far from the generating source represent a distant tsunami. Distant tsunamis may travel for hours before striking a coastline, giving a community a chance to implement evacuation plans if a warning is received.

Figure 15-1. Common Sources of Tsunamis

In the open ocean, a tsunami may be only a few inches or feet high, but it can travel with speeds approaching 600 miles per hour. As a tsunami enters the shoaling waters near a coastline, its speed diminishes, its wavelength decreases, and its height increases greatly. At the shoreline, tsunamis may take the form of a fast-rising tide, a cresting wave, or a bore (a large, turbulent wall-like wave). The bore phenomenon resembles a step-like change in the water level that advances rapidly (from 10 to 60 miles per hour). The first wave is usually followed by several larger and more destructive waves.

15.1.1 Factors Affecting Tsunami Impact

The configuration of the coastline, the shape of the ocean floor, and the characteristics of advancing waves play important roles in the destructiveness of the waves. Bays, sounds, inlets, rivers, streams, offshore canyons,

islands, and flood control channels may alter the level of damage. Offshore canyons can focus tsunami wave energy, and islands can filter the energy. A tsunami wave entering a flood control channel could reach a mile or more inland, especially if it enters at high tide. The orientation of the coastline determines whether the waves strike head-on or are refracted from other parts of the coastline. A wave may be small at one point and much larger at others. The inundation area for a tsunami event is often described as runup as illustrated in Figure 15-2.

Source: UNESCO, Retrieved from Different Directions: Tsunami, n.d.

Figure 15-2. Runup Distance and Height in Relation to the Datum and Shoreline

15.1.2 Secondary Hazards

Seiches are a potential secondary hazard from tsunamis. Seiches are standing waves oscillating in a body of water, and they can form in any enclosed or semi-enclosed body of water, including San Francisco Bay. They typically result from strong winds and rapid changes in atmosphere pressure, which push the water from one end of the enclosure to the other. When the wind stops, the water rebounds to the other side and then continues to oscillate for hours or days. Tsunamis, earthquakes, and severe storm fronts can also cause seiches.

The destructive potential associated with seiches is exemplified through one from 1844, where a 22-foot seiche in Lake Erie breached a 14-foot sea wall, killed 78 people, and dammed the ice to the extent that the Niagara Falls temporarily stopped flowing (NOAA, 2021a). While seiches are not as common in the San Francisco Bay as they are in the Great Lakes, bayside communities should still be mindful of this potential hazard and recommend community members avoid close proximity to the bay for several days after a tsunami.

15.2 HAZARD PROFILE

15.2.1 Past Events

Table 15-1 lists known tsunami events that have struck the County or one of its jurisdictions since 1859. The California Department of Conservation maintains a list of tsunamis in the state, including San Francisco or other Bay Area entities. Some tsunamis have struck San Francisco or other parts of the Bay Area but not San Mateo County; those events were not identified in Table 15-1.

Table 15-1. Tsunami Events in San Mateo County

Date	FEMA Declaration		Description
	Number	San Mateo County Designated?	
September 24, 1859	N/A	N/A	A tsunami originating in Northern California hit Half Moon Bay, with a waves 4.6 meters high.
April 1, 1946	N/A	N/A	An M-7.3 earthquake in the East Aleutian Islands (Alaska) triggered a tsunami that struck California. Wave heights of 2.6 meters were recorded in Half Moon Bay.
May 22, 1960	N/A	N/A	An M-9.5 earthquake in Central Chile triggered a tsunami that reached San Mateo County. Wave heights of 1.2 meters were recorded in Pacifica.
March 28, 1964	N/A	N/A	An M-9.2 earthquake off the Gulf of Alaska triggered a tsunami that reached San Mateo County. Wave heights of 1.4 meters were recorded in Pacifica. The tsunami arrived in San Francisco 5 hours and 6 minutes after the triggering event.
February 27, 2010	N/A	N/A	An M-8.8 earthquake in Central Chile triggered a tsunami that reached San Mateo County. Wave heights of 0.6 meter were recorded in Half Moon Bay.
March 11, 2011	DR-1968	No	A magnitude 8.9 earthquake near Honshu, Japan generated a tsunami significantly affecting California on March 11, 2011. Wave heights were recorded at 0.7 meters in Half Moon Bay and 1 meter in Pacifica. The tsunami damaged six boat slips and three docks, and snapped a wooden piling at the Berkeley Marina.

Sources: FEMA, NOAA Storm Events Database, California Department of Conservation

More than 80 tsunamis have been recorded or observed in California, according to state records; however, many of these events were small and led to little or no damage. All tsunamis from the past century have been distant, not local. That is, they have all resulted from earthquakes far across the Pacific basin (as opposed to earthquakes near the American coastline). The most noteworthy tsunamis in California include:

- **January 26, 1700 (Local Tsunami)**—An estimated M-9 earthquake ruptured the entire length of the Cascadia Subduction Zone, causing tsunami waves up to 50 feet in parts of northern California. Scientists have reconstructed the event from geologic evidence and oral Native American histories, as well as Japanese documents describing a tsunami that hit Japan's coastline that same day.
- **December 21, 1812 (Local Tsunami)**—A tsunami struck the Santa Barbara and Ventura coastlines not long after an earthquake was felt in the area. The tsunami inundated lowland areas and damaged local ships. Some debate exists as to whether the tsunami was earthquake-induced or the result of a submarine landslide triggered by the earthquake.
- **April 1, 1946 (Distant Tsunami)**—An M-8.8 earthquake in the Aleutian Islands generated a tsunami that caused damage along the coast of California, including flooding more than 1,000 feet inland in Half Moon Bay.

- **March 28, 1964 (Distant Tsunami)**—An M-9.2 earthquake in Anchorage, Alaska, generated a tsunami that struck the Pacific Northwest and northern California. Twelve people were killed in California, and a surge approximately 20-feet high flooded 29 city blocks of Crescent City.
- **March 11, 2011 (Distant Tsunami)**—An M-9.0 earthquake in Tohoku, Japan generated a moderate tsunami in California. While the tsunami did not cause significant flooding, it did lead to one death and more than \$100 million in damages to 27 harbors statewide. The most significant damage occurred in Crescent City and Santa Cruz.

15.2.2 Location

The California Department of Conservation maintains detailed tsunami inundation maps for San Mateo County and other parts of the State. These maps are generated through computer modeling of the areas most likely to be affected by a tsunami event and serve as an important preparedness tool. The tsunami hazard areas identified in the mapping are based on a suite of tsunami sources, both local and distant, and does not, therefore, represent risk from a single sources event. Tsunami risk areas are shown in Figure 15-3.

15.2.3 Frequency

The frequency of tsunamis is related to the frequency of the events that cause them, so it is similar to the frequency of seismic or volcanic activities or landslides. Generally, four or five tsunamis occur every year in the Pacific Basin, and those that are most damaging are generated in the Pacific waters off South America rather than in the northern Pacific.

Based on risk factors for the County and past occurrences, it is highly likely that tsunamis will continue to strike the coastline in San Mateo County. Tsunami probabilities are tied to earthquake and other geologic events; however, not all earthquakes or submarine landslides will trigger a tsunami.

15.2.4 Severity

A tsunami's size and speed, as well as the coastal area's form and depth, affect the impact of the tsunami. At some locations, the advancing turbulent wave front will be the most destructive part of the tsunami wave. In other situations, the greatest damage will be caused by the outflow of water back to the sea between crests, sweeping away items on the surface and undermining roads, buildings, bulkheads, and other structures. This outflow action can carry enormous amounts of highly damaging debris, resulting in further destruction. Ships and boats, unless moved away from shore, may be forced against breakwaters, wharves, and other craft, or be washed ashore and left grounded after the withdrawal of the seawater (National Tsunami Hazard Mitigation Program, 2001).

15.2.5 Warning Time

Warning System

The tsunami warning system for the Pacific Ocean evolved from a program initiated in 1946. It is a cooperative effort involving 26 countries with numerous seismic stations, water level stations and information distribution centers. The National Weather Service operates two information distribution centers: The Pacific Tsunami Warning Center in Ewa Beach, Hawaii; and the National Tsunami Warning Center covering the California coast in Palmer, Alaska. The warning centers issue tsunami watches, warnings, and advisories. A watch is issued when a large earthquake has occurred far away from the region and the threat is still being determined.

Figure 15-3. Tsunami Risk Areas for San Mateo County

A warning is issued when damaging tsunami waves inundating dry land are expected. An advisory is issued when tsunami waves less than 1 meter high and dangerous strong currents will occur in harbors. The warning system is activated when a Pacific basin earthquake of magnitude 6.5 occurs or an earthquake is widely felt along the North American coast. When this occurs, the following sequence of actions occurs:

- Data is interpolated to determine epicenter and magnitude of the event.
- If the earthquake is of the right type, depth, magnitude, and is far away from California coast, a TSUNAMI WATCH is typically issued for the California coastline.
- A TSUNAMI WATCH is upgraded to a TSUNAMI WARNING if tsunami wave heights are forecast to be 1 meter or larger. A TSUNAMI ADVISORY is issued if tsunami wave heights are forecast to be 0.3 meters to less than 1 meter.
- Tsunami travel times are calculated, and the warning is transmitted to disseminating agencies who relay it to the public.
- The National Tsunami Warning Center will cancel/expire watches, warnings, or advisories if tide gauges and buoys indicate no significant tsunami was generated or if tsunami waves no longer meet the criteria for at least 3 hours.

This system is not considered to be effective for communities close to the tsunami source, because the first wave would arrive before the data can be processed and analyzed, and communications systems may be impacted by the precipitating event. In this case, strong ground shaking would provide the first warning of a potential tsunami and evacuations should begin immediately.

Visible Indications

Tsunamis are difficult to detect in the open ocean; with waves generally less than 3 feet high. The first visible indication of an approaching tsunami may be either a rise or drop in water surface levels (National Tsunami Hazard Mitigation Program, 2001):

- A drop in water level (draw down) can be caused by the trough preceding the advancing, large inbound wave crest. Rapid draw down can create strong currents in harbor inlets and channels that can severely damage coastal structures due to erosive scour around piers and pilings. As the water's surface drops, piers can be damaged by boats or ships straining at or breaking their mooring lines. The vessels can overturn or sink due to strong currents, collisions with other objects, or impact with the harbor bottom.
- The advancing tsunami may initially arrive as a strong surge increasing the sea level. This can be similar to the rising tide, but the tsunami surge rises faster and does not stop at the shoreline. Even if the wave height appears to be small, 3 to 6 feet for example, the strength of the accompanying surge can be deadly. Waist-high surges can cause strong currents that float cars, small structures, other debris, and hazardous materials. Boats and debris are often carried inland by the surge and left stranded when the water recedes.

Estimated Travel Times

The NOAA National Center for Environmental Information website provides maps that show estimated travel times to coastal locations for various tsunami-generating events. Figure 15-4 shows one example of the travel time for a tsunami generated in Aburatsu, Japan to reach the planning area—approximately 11 hours.

Source: National Centers for Environmental Information, 2018

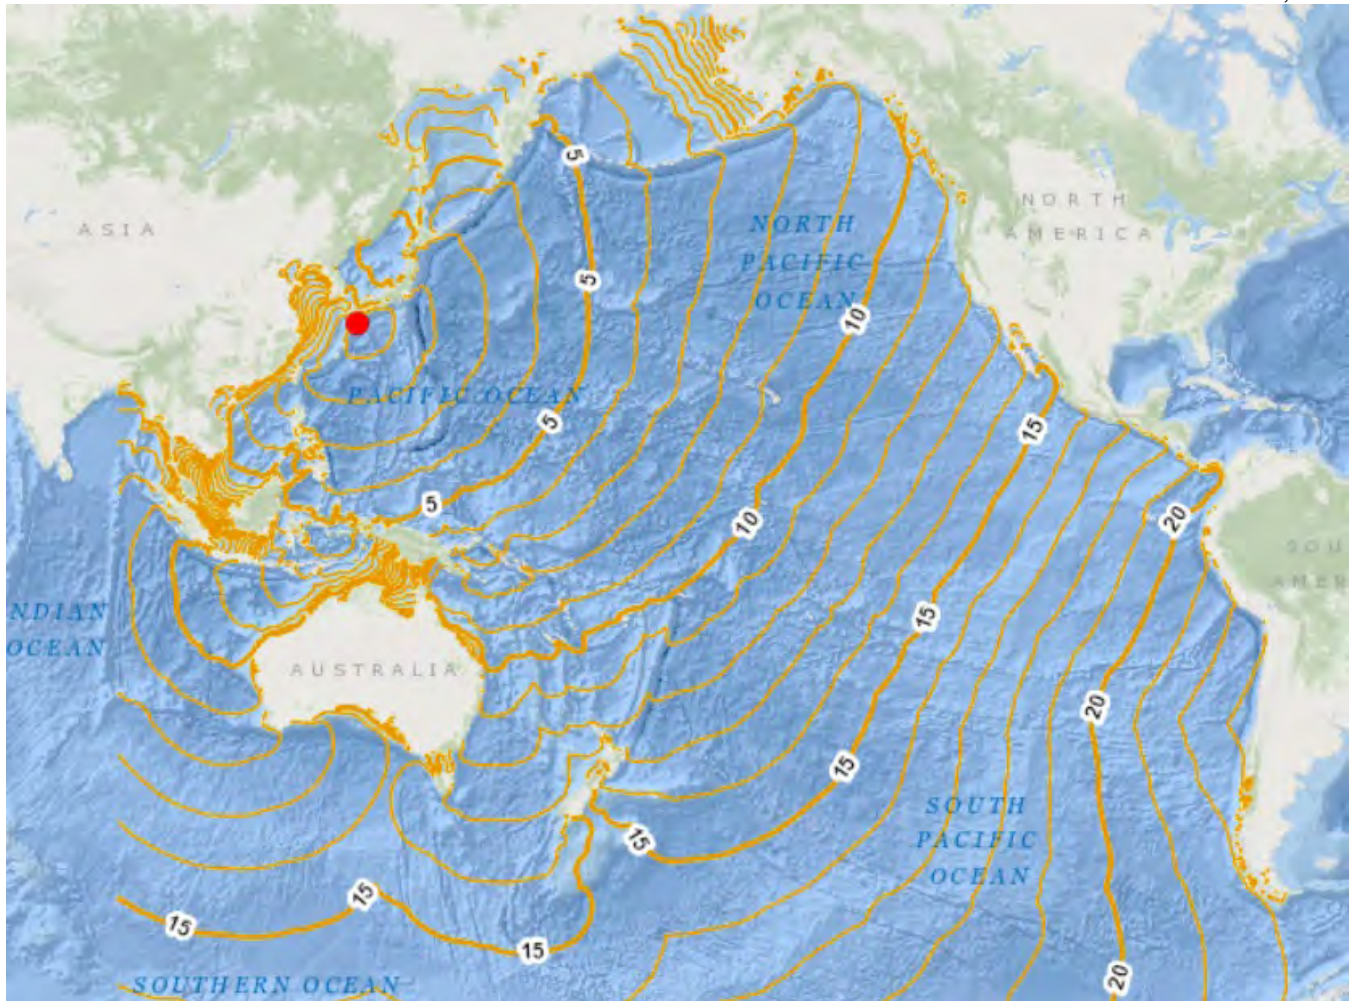

Figure 15-4. Potential Tsunami Travel Times in the Pacific Ocean, in Hours

15.3 EXPOSURE

Exposure and vulnerability to tsunami hazard were assessed by overlaying the mapped inundation area in Figure 15-3 with planning area features including general building stock and critical facilities. Detailed results by jurisdiction are included in Appendix E; countywide summaries are provided below.

15.3.1 Population and Property

Table 15-2 summarizes the estimated population living in the evaluated tsunami inundation areas and the estimated property exposure. Figure 15-5 shows the structure type of buildings in the inundation area. Residential properties make up 88 percent of this exposure.

Table 15-2. Exposed Population and Property in Evaluated Tsunami Inundation Areas

Population	
Population Exposed	12,085
% of Total Planning Area Population	1.6%
Property	
Acres of Inundated Area	80,060
Number of Buildings Exposed	4,083
Value of Exposed Structures	\$3,713,391,742
Value of Exposed Contents	\$3,130,163,691
Total Exposed Property Value	\$6,843,555,434
Total Exposed Value as % of Planning Area Total	3.6%

**Figure 15-5. Number of Structures within the Tsunami Inundation Area by Occupancy Class**

15.3.2 Critical Facilities

Figure 15-6 shows critical facilities located in the tsunami inundation zone by facility type. The total count of critical facilities in the inundation zone (191) represents 8.5 percent of the planning area total of 2,236.

Hazardous Material Facilities

The planning area includes two structures in the tsunami hazard areas that contain hazardous materials. Containers holding these materials can rupture and leak into the surrounding area during a tsunami event, having a disastrous effect on the environment as well as community members.

Figure 15-6. Critical Facilities in Tsunami Inundation Zones and Countywide

Roads

Roads are the primary resource for evacuation to higher ground before and during a tsunami. Blocked or damaged roads can prevent access or cause isolation for community members and emergency service providers. Geospatial analysis indicates the following major roads pass through the tsunami inundation areas and may be exposed to the tsunami hazard:

- State Highway 1
- State Highway 92
- US Highway 101

Bridges

Geospatial analysis identified 11 bridges that would be exposed to the tsunami hazard. Bridges exposed to tsunami events can be extremely vulnerable because of the forces transmitted by the wave run-up and by the impact of debris carried by the wave action.

Water/Sewer/Utilities

Water and sewer systems can be affected by the flooding associated with tsunami events. Floodwaters can back up drainage systems, causing localized flooding. Culverts can be blocked by debris from flood events, also causing localized urban flooding. Floodwaters can enter drinking water supplies, causing contamination. Sewer systems can be backed up, causing wastes to spill into homes, neighborhoods, rivers and streams. The forces of tsunami waves can damage aboveground utilities by knocking down power lines and radio/cellular communication towers. Power generation facilities can be severely impaired by both the impact of the wave action and the inundation of floodwaters.

15.3.3 Environment

All waterways and beaches would be exposed to the effects of a tsunami; inundation of water and introduction of foreign debris could be hazardous to the environment. All wildlife inhabiting the area also is exposed.

15.4 VULNERABILITY

15.4.1 Population

Vulnerable populations are all populations within the tsunami inundation areas that are incapable of escaping the area before floodwaters arrive. An analysis was performed using Hazus and the SoVI ratings (see Section 7.2.2) of the population living in the mapped tsunami inundation areas. Detailed results by jurisdiction are in Appendix E. Table 15-3 summarizes results for the overall planning area.

Table 15-3. Distribution of Population Exposed to Tsunami Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	452	4.16%
Relatively High	911	8.39%
Relatively Moderate	4,229	38.98%
Relatively Low	5,258	48.47%
Very Low	0	0

Additional countywide results of the Hazus analysis are as follows:

- Number of displaced households = 7,362
- Number of people requiring short-term shelter = 415

15.4.2 Property

Property Impacted

The impact of tsunami waves and the scouring associated with debris that may be carried in the water could be damaging to all structures along beaches, low-lying coastal areas, tidal flats, and river deltas. The most vulnerable are those in the front line of tsunami impact and those that are structurally unsound. The Hazus analysis indicated that 73 percent of the exposed structures (2,978 structures) would be impacted by the modeled scenario event.

Damage Estimates

Table 15-4 summarizes Hazus estimates of tsunami damage in the planning area. The estimated damage value is associated with the tsunami wave only; it does not include additional damage that may occur as a result of debris battering structures as the tsunami wave rushes in and out of the inundation area or fires caused by an earthquake and tsunami event. The debris estimate includes only structural debris and building finishes; it does not include additional debris that may result from a tsunami event, such as from boats, trees, sediment, building contents, bridges, or utility lines.

Table 15-4. Estimated Impact of a Tsunami Event in the Planning Area

Structure Debris (tons)	31
Buildings Impacted ^a	2,978
Structure Value Damaged	\$785,192,914
Content Value Damaged	\$803,298,822
Total Value Damaged	\$1,588,491,736
Damage as % of Total Value	0.8%

a. "Impacted" assumes floodwater over lowest finished floor

Structures that were built to current floodplain regulations in the tsunami inundation area may have some level of protection, particularly if they were built to withstand wave action. In the unincorporated County, an estimated 79 percent of the housing units were built before the County entered the National Flood Insurance Program and began enforcing floodplain regulations. It is unknown how many of these structures are located in tsunami inundation areas. In addition to structure damage, ships moored at piers and in harbors often are swamped and sunk or are left battered and stranded high on the shore.

15.4.3 Critical Facilities

Damage Estimates

Figure 15-7 shows the estimated damage to critical facilities from a tsunami event. The average amount of damage to structures, measured as a percentage of total value, ranges from 5 to 36 percent of total value and average damage to contents ranges from 15 to 100 percent, depending on critical facility category.

Figure 15-7. Critical Facility Damage in the Tsunami Inundation Zone

Vulnerable Infrastructure

In addition to the vulnerable critical facilities identified by the Hazus analysis, the following infrastructure is also generally vulnerable to damage:

- **Water Proximate Infrastructure**—Breakwaters and piers collapse, sometimes because of scouring actions that sweep away their foundation material and sometimes because of the sheer impact of the tsunami waves.
- **Flood Control Systems**—Floodwaters can back up drainage systems, causing localized flooding. Culverts can be blocked by debris from tsunami events, also causing localized urban flooding.
- **Utility Systems**—Floodwaters can get into drinking water supplies, causing contamination. Sewer systems can be backed up, causing waste to spill into homes, neighborhoods, rivers, and streams. Tsunami waves can knock down power lines and radio/cellular communication towers. Power generation facilities can be severely impacted by wave action and by inundation from floodwater.

15.4.4 Environment

Environmental impacts on local waterways and wildlife would be most significant in areas closest to the point of impact. Areas near gas stations, industrial areas and facilities storing hazardous materials are vulnerable. The vulnerability of aquatic habitat and associated ecosystems in low-lying areas close to the coastline is high. Tsunami waves can carry destructive debris and pollutants that can have devastating impacts on all facets of the environment. Millions of dollars spent on habitat restoration and conservation in the planning area could be wiped out by one significant tsunami. A tsunami event has the potential to alter the shoreline, depending on the force of the run-up.

Most environmental and ecological impacts from tsunamis derive from direct damage from the waves, which can physically remove vegetation and wildlife, increase sediment load, and smother vegetation that is not physically carried away. Other environmental impacts from tsunamis include chemical changes from saltwater intruding into freshwater sources; eutrophication (enrichment) of water from increased runoff; and decomposition of vegetation, wildlife, rotting property (boats or buildings) and unrecovered remains. Non-biodegradable waste, such as plastics, can lead to a buildup in marine debris, and toxic wastes, if inadequately stored, may be released into the environment. Lastly, exotic wildlife may be introduced or may escape into the local ecosystem.

15.5 FUTURE TRENDS IN DEVELOPMENT

The County and its planning partners are equipped to handle future growth within tsunami inundation areas. The inundation maps provided by the California Department of Conservation offer jurisdictions a way to guide development away from tsunami-prone areas. Additionally, all partners have committed to integrating their general plans to this hazard mitigation plan. By coordinating their general plans, municipalities and the County will be better able to make wise land use decisions as future growth impacts tsunami hazard areas.

New standards for building designs in Alaska, Washington, Oregon, California, and Hawaii that account for tsunami loads and effects have recently been adopted by the American Society of Civil Engineers (ASCE 7-16, Chapter 6), referenced in the 2018 International Building Code (IBC), and included California's state building code (2019 State of California Building Code Appendix M). This will help to promote structures more resilient to the impacts from tsunami as new development occurs within identified tsunami risk areas.

15.6 SCENARIO

The tsunami scenario with the greatest potential impact on the planning area is a tsunami triggered by a major seismic event along the Cascadia subduction zone. Historical records suggest that tsunami wave heights on the order of 15 to 60 feet could be generated by a Cascadia subduction event (see Figure 15-8). The most destructive tsunami will be associated with a local source Cascadia event and will be preceded by strong ground shaking. Significant damage will result from the ground shaking, tsunami wave forces, and impacts associated with debris. A major tsunami event in the region would have devastating impacts on the people, property, and economy of the planning area.

A tsunami from a more local earthquake, such along the San Andreas fault, might be less severe than a Cascadia subduction event. Tsunamis are less commonly associated with strike-slip faults such as the San Andreas system. However, a local source tsunami presents a high risk to people, as there would not be time to initiate evacuation; the first surge could arrive in as little as 10 minutes. Strong ground shaking preceding the tsunami could damage buildings, communications and electric utility infrastructure, roads, and bridges, further impairing the community's ability to evacuate safely.

15.7 ISSUES

The planning team has identified the following issues related to the tsunami hazard for the planning area:

- To truly measure and evaluate the probable impacts of tsunamis on planning, hazard mapping based on probabilistic scenarios must continue to be updated regularly. The science and technology in this field are emerging. Accurate probabilistic tsunami mapping will need to be a key component for tsunami hazard mitigation programs to be effective.

Source: National Centers for Environmental Information, 2018

Figure 15-8. 1700 Cascadia Subduction zone Earthquake Tsunami Event

- Present building codes and guidelines do not adequately address the impacts of tsunamis on structures. Planning partners, especially the Cities of Half Moon Bay and Pacifica, should review their building code and consider requirements for tsunami-resistant construction standards in vulnerable areas.
- As tsunami warning technologies evolve, the tsunami warning capability within the planning area will need to be enhanced to provide the highest degree of warning to planning partners with tsunami risk exposure.
- Special attention will need to be focused on the vulnerable communities in the tsunami zone and on hazard mitigation through public education, outreach, and warning capabilities. This issue may be especially important for visitors to San Mateo County.
- Risk from tsunami inundation is not subject to the State of California real estate disclosure law at this time.
- Structures in the planning area built before the cities and County entered the NFIP may not be designed to resist tsunami forces.
- With future impacts from climate change, the issue of sea level rise may become an important consideration as probable tsunami inundation areas are identified through future studies.

16. WILDFIRE

16.1 GENERAL BACKGROUND

A wildfire is any uncontrolled fire on undeveloped land that requires fire suppression. Wildfires can occur naturally and are important to many ecosystem processes, but most are started by people.

16.1.1 CAL FIRE Wildfire Mapping

Fire Hazard Severity Zones

CAL FIRE has modeled and mapped wildfire hazard zones using a computer model that designates moderate, high or very high fire hazard severity zones (FHSZ). FHSZ ratings are derived from a combination of fire frequency (how often an area burns) and expected fire behavior under severe weather conditions. CAL FIRE's model derives fire frequency from 50 years of fire history data. Fire behavior is based on factors such as the following:

- **Fuel**—Fuel may include living and dead vegetation on the ground, along the surface as brush and small trees, and above the ground in tree canopies. Lighter fuels such as grasses, leaves and needles quickly expel moisture and burn rapidly, while heavier fuels such as tree branches, logs and trunks take longer to warm and ignite. Trees killed or defoliated by forest insects and diseases are more susceptible to wildfire.
- **Weather**—Relevant weather conditions include temperature, relative humidity, wind speed and direction, cloud cover, precipitation amount and duration, and the stability of the atmosphere. When the temperature is high, relative humidity is low, wind speed is increasing and coming from the east (offshore flow), and there has been little or no precipitation so vegetation is dry, conditions are very favorable for extensive and severe wildfires. These conditions occur more frequently inland where temperatures are higher and fog is less prevalent.
- **Terrain**—Topography includes slope and elevation. The topography of a region influences the amount and moisture of fuel; the impact of weather conditions such as temperature and wind; potential barriers to fire spread, such as highways and lakes; and elevation and slope of landforms (fire spreads more easily uphill than downhill).

FIRE HAZARD SEVERITY AS DETERMINED BY CAL FIRE

CAL FIRE classifies areas of the state as having a moderate, high, or very high fire hazard, based on how a fire would behave in a given area and the probability of flames and embers threatening buildings.

For wildland areas, the FHSZ model uses burn probability and expected fire behavior based on weather, fuel (the vegetation in the area), and terrain. For urban areas, hazard levels are based on vegetation density, distance from wildlands, and the levels assigned to surrounding zones.

Each area gets a score for flame length, embers, and the likelihood of the area burning. Scores of smaller areas are then averaged over larger zones that encompass them.

The model also is based on frequency of fire weather, ignition patterns, and expected rate-of spread. It accounts for flying ember production, which is the principal driver of the wildfire hazard in densely developed areas. A

related concern in built-out areas is the relative density of vegetative fuels that can serve as sites for new spot fires within the urban core and spread to adjacent structures. The model refines the zones to characterize fire exposure mechanisms that cause ignitions to structures. Significant land-use changes need to be accounted for through periodic model updates. Detailed discussions of the zones and how they are developed are available on the CAL FIRE website.

Wildfire Protection Responsibility Areas

Hundreds of agencies have fire protection responsibility for wildland and wildland-urban interface (WUI) fires in California. Local, state, tribal, and federal organizations have primary legal (and financial) responsibility for wildfire protection. In many instances, two fire organizations have dual primary responsibility on the same parcel of land—one for wildfire protection, and the other for structural or “improvement” fire protection. According to the *2013 California State Hazard Mitigation Plan*, this layering of responsibility and resulting dual policies, rules, practices, and legal ordinances can cause conflict or confusion. To address wildfire jurisdictional responsibilities, the California state legislature in 1981 adopted Public Resource Code Section 4291.5 and Health and Safety Code Section 13108.5 establishing the following responsibility areas:

- **Federal Responsibility Areas (FRAs)**—FRAs are fire-prone wildland areas that are owned or managed by a federal agency such as the U.S. Forest Service, National Park Service, Bureau of Land Management, U.S. Fish and Wildlife Service, or U.S. Department of Defense. Primary financial and rule-making jurisdictional authority rests with the federal land agency. In many instances, FRAs are interspersed with private land ownership or leases. Fire protection for developed private property is usually not the responsibility of the federal land management agency; structural protection responsibility is that of a local government agency.
- **State Responsibility Areas (SRAs)**—SRAs are lands in California where CAL FIRE has legal and financial responsibility for wildfire protection and where CAL FIRE administers fire hazard classifications and building standard regulations. SRAs are defined as lands that meet the following criteria:
 - Are county unincorporated areas
 - Are not federally owned
 - Have wildland vegetation cover rather than agricultural or ornamental plants
 - Have watershed or range/forage value
 - Have housing densities not exceeding three units per acre.
 - Where SRAs contain built environment or development, the responsibility for fire protection of those improvements (non-wildland) is that of a local government agency.
- **Local Responsibility Areas (LRAs)**—LRAs include land in cities, cultivated agriculture lands, and non-flammable areas in unincorporated areas, and lands that do not meet the criteria for SRA or FRA. LRA fire protection is typically provided by city fire departments, fire protection districts, and counties, or by CAL FIRE under contract to local governments. LRAs may include flammable vegetation and WUI areas where the financial and jurisdictional responsibility for improvement and wildfire protection is that of a local government agency.

16.1.2 State Codes and Policies for Mitigating the Fire Hazard

Urbanization tends to alter the natural fire regime and can lead to expansion of urbanized areas into wildland areas. State and local policies and regulations require landowners to carry out activities such as maintaining

defensible space and reducing vulnerability to damage or loss from wildfire. The most important policies and regulations related to residential wildfire safety in California are as follows:

- **General Plan Safety Element Review: Government Code 65302.5**—The Board of Forestry and Fire Protection must provide recommendations to a local jurisdiction’s general plan safety element at the time that the general plan is being amended. Board recommendations include goals and policies that provide for contemporary fire-prevention standards for the jurisdiction. This is not a direct and binding fire-prevention requirement for individuals.
- **Sprinkler Systems: California Residential Code, Chapter 3, Section R313**—All new dwellings, dwelling units, and one- and two-family townhomes must be equipped with an automatic fire-sprinkler system that can protect the entirety of the dwelling. Dwellings and homes constructed prior to January 1, 2011, that do not have a sprinkler system may be retrofitted, but it is not required.
- **Fire Safety Standards: California Public Resources Code 4290 and 14 California Code of Regulations (CCR) 1270**—These regulations govern roads, driveway width, clearance, turnarounds, signing, and water related to fire safety throughout California. Public Resources Code 4290 is typically enacted through regulation at the county level, as described below.
- **Wildland-Urban Interface Building Standards: California Government Code 51189**—The Office of the State Fire Marshal is required to create building standards for wildfire resistance. Construction of buildings in the wildland-urban interface must use fire-resistant materials to save life and property. As of 2011, the standards relevant to fire-safe construction for all new structures in the SRA are the California Building Code, Chapter 7A (for commercial construction) and the California Residential Code, Chapter 3, Section R327 (for residential construction).
- **State Responsibility Area: Public Resources Code 4102, 4125-4229 and 14 CCR 1220**—These statutes and regulations establish the locations where CAL FIRE has the financial responsibility for preventing and suppressing fires. These designations define financial arrangements for fire protection services and establish the locations where fire safe and defensible space laws or regulations apply.
- **Hazardous Fire Areas: Public Resources Code 4251-4255 and 14 CCR 1200**—These laws and regulations allow petitioners to the Board of Forestry and Fire Protection or CAL FIRE to establish hazardous fire areas, providing for area closures and other restrictions for fire prevention.
- **Defensible Vegetation Clearing Around Structures: Public Resources Code 4291/14 CCR 1299**—Public Resources Code 4291 regulates fuel management around a property. It states that a person who owns or controls a building or structure in or adjoining to forest, brush, or grass covered lands shall follow certain guidelines outlined in the code. At least 100 feet of defensible space is required. The owner of the property is liable for making these changes to protect habitable structures. The 100 feet is separated into two zones, with the closer zone, 30 feet out from the structure, being managed more intensively.

16.1.3 Secondary Hazards

Wildfires can generate a range of secondary effects, which in some cases may cause more widespread and prolonged damage than the fire itself. Fires can cause direct economic losses in the reduction of harvestable timber and indirect economic losses in reduced tourism. Wildfires cause the contamination of reservoirs, destroy transmission lines and contribute to flooding. They strip slopes of vegetation, exposing them to greater amounts of runoff. This in turn can weaken soils and cause failures on slopes. Major landslides can occur several years after a wildfire. Most wildfires burn hot and for long durations that can bake soils, especially those high in clay content, thus increasing the imperviousness of the ground. This increases the runoff generated by storm events, thus increasing the chance of flooding.

16.2 HAZARD PROFILE

16.2.1 Ecology

Ecosystems in the planning area include several that are susceptible to wildfire (2018 *Santa Cruz County/San Mateo County Community Wildfire Protection Plan*):

- Dense second-growth redwood and mixed conifer forests typically having forest floor accumulations of litter and downed woody material
- Coastal scrub communities consisting of low vegetation up to 6 feet in height, typically occurring on coastal hills and bluffs
- Wind-swept summits
- Scrub vegetation that is dense and difficult to pass through
- Flammable, environmentally sensitive northern maritime chaparral communities in isolated areas on southwest facing slopes and at higher elevations, 12 to 20 feet tall and impenetrable at maturity, adapted to and dependent upon periodic crown fires
- Grasslands in rural San Mateo County, especially in areas of upland grazing.

Due to local topography, fuels (forest, chaparral, and grasslands vegetation) and weather conditions, San Mateo and Santa Cruz Counties are conducive to periodic large wildfire events. According to a 2010 survey of counties in the western United States by the Headwaters Economics Institute, San Mateo County has 39 square miles of WUI area, with 33 percent of it having homes. There are 14,704 homes in San Mateo County in the WUI. This represents 5.4 percent of all residences in the county.

16.2.2 Past Events

While San Mateo County has a prolific fire history, few of its fires have caused sufficient damage to trigger a state or federal disaster declaration. Notable fires of record are the November 1929 fire near Montara that destroyed 25 homes, a church, and cattle, and the August 2020 CZU Lightning Complex in Santa Cruz and San Mateo Counties, caused by a reported 12,000 bolts of lightning.

Two federal disaster declarations related to wildfire have included San Mateo County:

- Declaration DR-65 (Wildfires), December 29, 1956
- Declaration DR-4558 (Wildfires; CZU Lightning Complex), August 16 – September 26, 2020

CAL FIRE maintains statistics on historical wildfire activity through its annual reporting (Redbooks). Wildfire statistics include state and county information, cause and size, acres burned, and dollar damage, among other details. Figure 16-1 shows the wildfire activity for San Mateo County between 2000 and 2019, the most recent annual report available. CAL FIRE has Redbooks available for every year back through 1942.

Note: from 2016 on, data for San Mateo County is combined with data for Santa Cruz County.

Figure 16-1. CAL FIRE Wildfire Activity Statistics for San Mateo County

Figure 16-2 shows the Fire History for fires larger than 10 acres within Santa Cruz and San Mateo County identified in the 2018 *Santa Cruz/San Mateo County Community Wildfire Protection Plan*.

16.2.3 Location

Figure 16-3 shows the very high FHSZ and other severity zones for LRA and SRA for San Mateo County. These maps are the basis for this wildfire risk assessment. City-level very high FHSZ maps are also available on CAL FIRE's website for Belmont, Half Moon Bay, Hillsborough, Portola Valley, Redwood City, San Carlos, San Mateo, and Woodside.

The geography, weather patterns, and vegetation in the Bay Area provide ideal conditions for recurring wildfires. Especially vulnerable are the SRA between Shelter Cove, Moss Beach, Half Moon Bay, Sky Londa, and Crystal Springs Lake. The southern half of the County is mostly rated as moderate or high, with some very high sections, including in La Honda. LRA rated as very high include land immediately west of Crystal Springs Lake, land near Woodside and Sky Londa, and land about halfway between Half Moon Bay and Moss Beach. Very high LRA are adjacent to very high-risk SRA.

16.2.4 Frequency

Based on risk factors for the County and past occurrences, it is highly likely that wildfires will continue to occur in San Mateo County. Wildfires are influenced by both weather and human activities. Based on its history of past events, San Mateo County has a high chance of a wildfire in any given year. The most common causes of wildfires, based on the most recent past events, will be "undetermined," equipment use, miscellaneous, and power line/electric power.

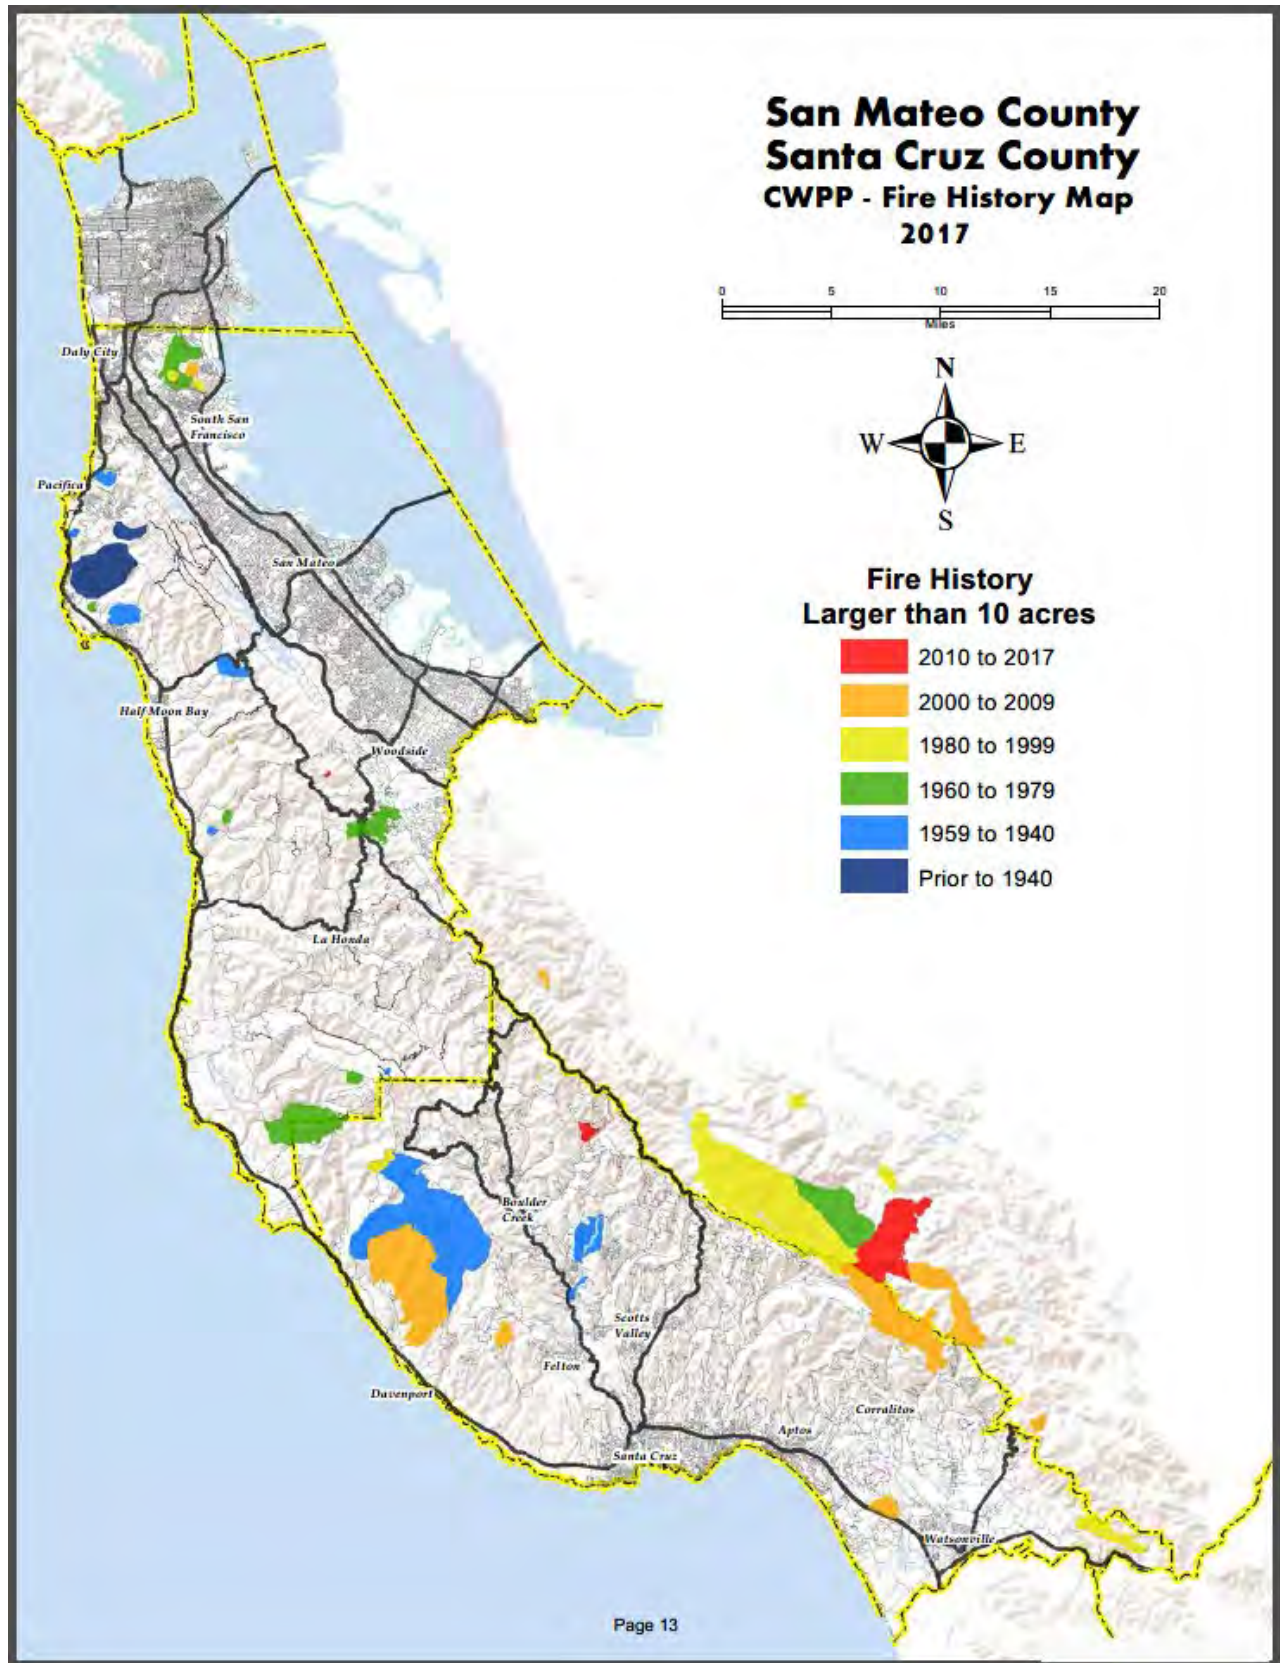

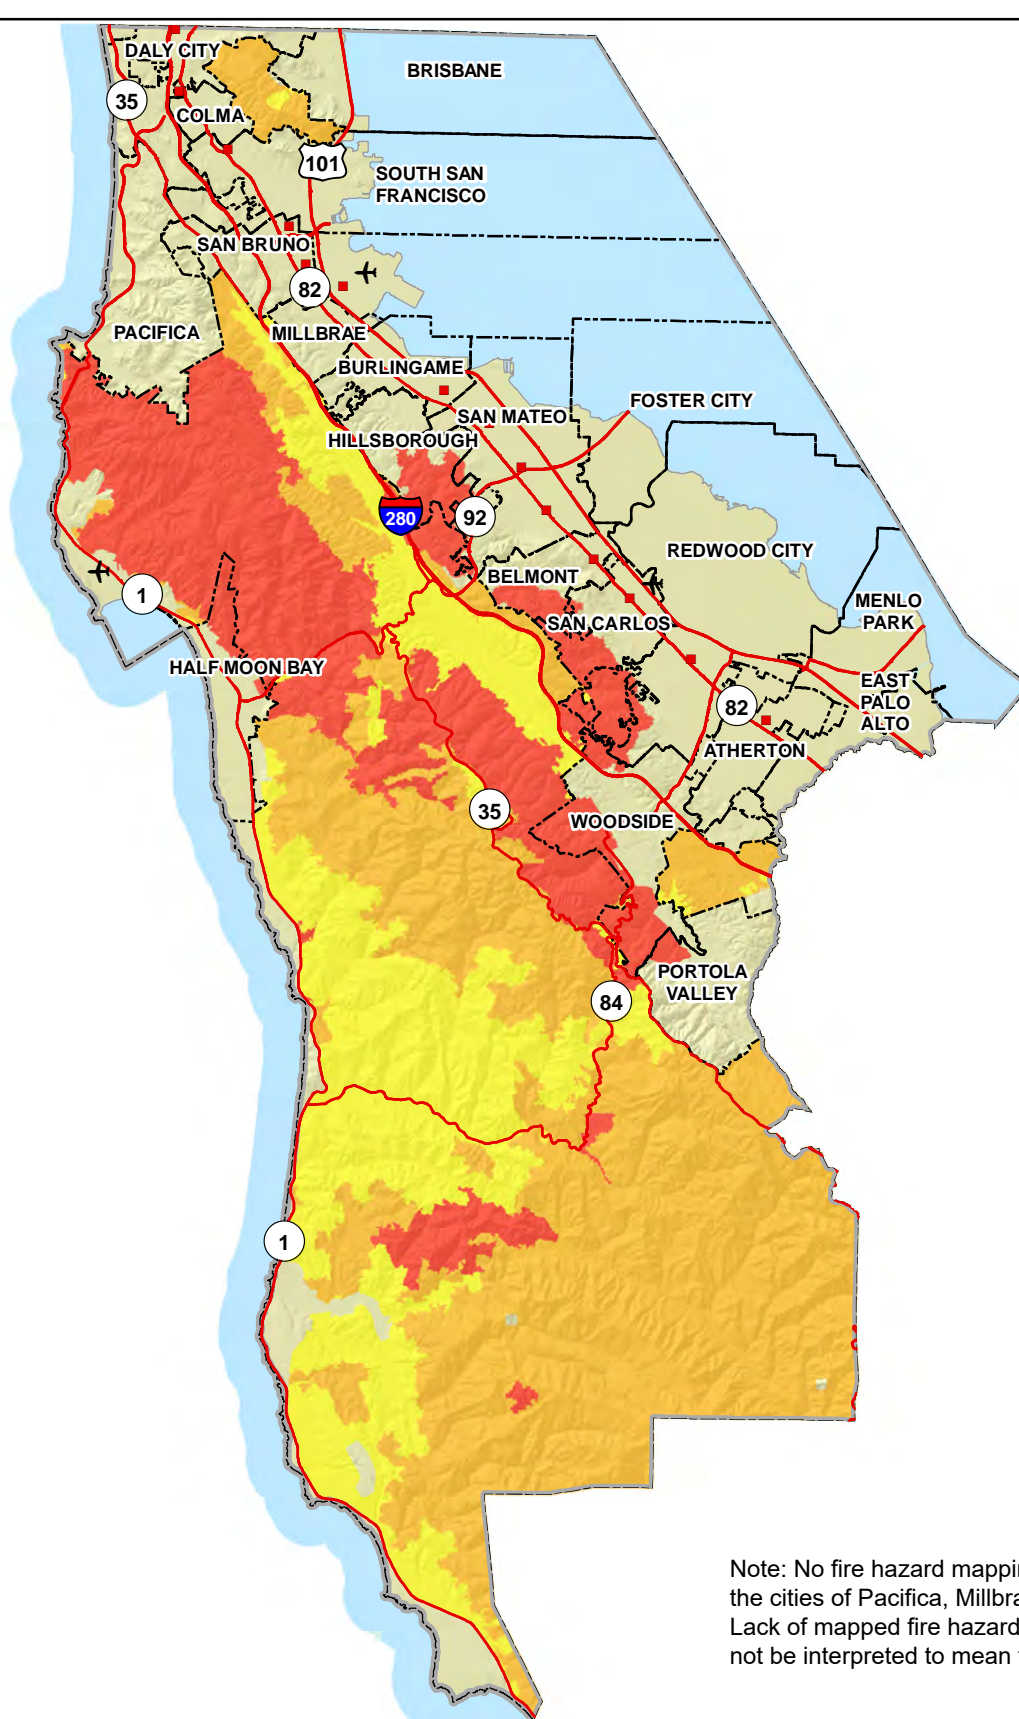

Figure 16-2. Fire History Larger than 10 Acres, Santa Cruz and San Mateo Counties

Note: No fire hazard mapping data is available for the cities of Pacifica, Millbrae, and San Bruno. Lack of mapped fire hazard in these cities should not be interpreted to mean that no hazard exists.

Figure 16-3. Fire Hazard Severity Zones in San Mateo County

Data Sources: San Mateo Co.,
CAL FIRE

16.2.5 Severity

The most recent deadly fire in San Mateo County was the CZU Lightning Complex fires, which burned in San Mateo and Santa Cruz County starting on August 16, 2020. This fire destroyed 1,490 structures, damaged 140 others, and caused 1 injury and 1 fatality. Fires burned in both Butano and Big Basin Redwoods state parks, where a number of historic buildings were destroyed, including the visitor's center at Big Basin. The total acreage burned was 86,509. CAL FIRE tracks the deadliest, largest, and most destructive wildfires that have occurred in the state, with the lists last updated in late April 2021. The CZU Lightning Complex fire is listed as the 12th most destructive California wildfire.

Although San Mateo County has not had many major wildfire events, nearby Alameda County has demonstrated some worst-case scenario fires that could occur in other Bay Area counties. The October 1991 Oakland/Berkeley Hills "Tunnel Fire" was the most damaging fire and the second most deadly fire in California at the time it occurred. This WUI fire resulted in 25 lives lost, including a fire battalion chief and an Oakland police officer, 148 people injured, and 2,900 structures destroyed. The blaze started from a grass fire in the Berkeley Hills and burned 1,600 acres. The estimated private property loss was \$1.7 billion at the time, according to the Insurance Information Institute.

16.2.6 Warning Time

Wildfires are mostly caused by humans, intentionally or accidentally. There is no way to predict when one might break out. Since fireworks often cause brush fires, extra diligence is warranted around the Fourth of July when the use of fireworks is highest. Dry seasons and droughts are factors that greatly increase fire likelihood. Dry lightning may trigger wildfires. Severe weather can be predicted, so special attention can be paid during weather events that may include lightning. Reliable National Weather Service lightning warnings are available on average 24 to 48 hours prior to a significant electrical storm.

If a fire does break out and spread rapidly, community members may need to evacuate within days or hours. A fire's peak burning period generally is between 1 p.m. and 6 p.m. Once a fire has started, fire alerting is reasonably rapid in most cases. The rapid spread of cellular and two-way radio communications in recent years has further contributed to a significant improvement in warning time.

16.3 EXPOSURE

A quantitative assessment of exposure to the wildfire hazard was conducted using the hazard mapping shown in Figure 16-3 and the asset inventory developed for this plan. Population exposure was estimated by calculating the number of buildings in the mapped hazard areas as a percent of total planning area buildings, and then applying this percentage to the estimated planning area population. Detailed results by municipality are provided in Appendix E; results for the total planning area are presented below.

16.3.1 Population and Property

Table 16-1 summarizes the estimated population living in the moderate-high and high wildfire hazard zones and the estimated property exposure. In addition to the populations living in wildfire risk areas, people working or recreating in resource lands, such as hikers, are exposed to the wildfire risk. Firefighting crews are exposed as they work to combat fires and to protect property. All county community members are potentially exposed to the health-related impacts of reduced air quality from wildland fires.

Table 16-1. Exposed Population and Property in Mapped Wildfire Hazard Zones

	Very High-High Wildfire Hazard Zone	Moderate Wildfire Hazard Zone
Population		
Population Exposed	43,282	2,000
% of Total Planning Area Population	5.6%	0.3%
Property		
Number of Buildings Exposed	12,511	727
Value of Exposed Structures	\$6,336,441,287	\$1,030,006,736
Value of Exposed Contents	\$4,436,672,332	\$895,582,972
Total Exposed Property Value	\$10,773,113,620	\$1,925,589,708
Total Exposed Value as % of Planning Area Total	5.6%	1%

Figure 16-4 and Figure 16-5 show the county-wide distribution of structures in the mapped wildfire hazard zones by occupancy class. In both the moderate-high and high hazard zones, the exposed structures are primarily residential or commercial, with other occupancy classes making up less than 1 percent of the total number of exposed structures.

Figure 16-4. Number of Structures by Occupancy Class in the Very High-High Wildfire Hazard Area

Figure 16-5. Number of Structures by Occupancy Class in the Moderate Wildfire Hazard Area

16.3.2 Critical Facilities

Critical facilities in the very high and high wildfire hazard severity zones represent 9.5 percent of the total critical facilities in the planning area. The breakdown of exposure by facility type is shown in Figure 16-6.

Figure 16-6. Critical Facilities in Mapped Fire Hazard Severity Zones and Countywide

Currently there are six hazardous material containment sites identified in high or very high wildfire severity zones. During a wildfire event, containers with these materials could rupture because of the excessive heat and act as fuel for the fire, causing rapid spreading and escalating the fire to unmanageable levels. In addition, they could leak into surrounding areas, saturating soils and seeping into surface waters, and have a disastrous effect on the environment.

In the event of wildfire, there would likely be little damage to the majority of infrastructure. Most road and railroads would be without damage except in the worst scenarios. Power poles are the most at risk to wildfire because most are made of wood and susceptible to burning. In the event of a wildfire, pipelines could provide a source of fuel and lead to a catastrophic explosion.

16.3.3 Environment

All natural resources and habitats in mapped fire hazard severity zones are exposed to the risk of wildfire.

16.4 VULNERABILITY

16.4.1 Population

All people exposed to the wildfire hazard are potentially vulnerable to wildfire impacts. Persons with access and functional needs, the elderly and very young may be especially vulnerable to a wildfire if there is not adequate warning time for them to evacuate if needed. In addition, people outside the mapped risk areas are susceptible to health hazards associated with smoke and air pollution from wildfires, especially sensitive populations including children, the elderly, and those with respiratory and cardiovascular diseases. In addition, wildfires threaten the health and safety of those fighting the fires.

An analysis was performed using Hazus and the SoVI ratings (see Section 7.2.2) of the population living in high or very high fire hazard severity zones. Detailed results by jurisdiction are in Appendix E. Table 16-2 summarizes results for the overall planning area.

Table 16-2. Distribution of Population Exposed to Wildfire Hazard by SoVI Rating

SoVI Rating	Population Living in Exposed Areas Having the SoVI Rating Shown	
	Number of People	% of Total Exposed Population
Very High	0	0
Relatively High	3,400	9.16%
Relatively Moderate	8,287	22.32%
Relatively Low	6,345	17.09%
Very Low	19,099	51.43%

16.4.2 Property

All property exposed to the wildfire hazard is vulnerable. Structures that were not constructed to standards designed to protect a building from a wildfire may be especially vulnerable. As of 2008, California State Building code requires minimum standards be met for new buildings in fire hazard severity zones. Most housing in the planning area—84 percent—was built prior to this code requirement. It is unknown how many of these structures are in fire hazard zones.

Estimates were developed to indicate the loss that would occur if wildfire damage were equal to 10, 30 or 50 percent of the exposed property value, as summarized in Table 16-3. Damage in excess of 50 percent is considered to be substantial by most building codes and typically requires total reconstruction of the structure.

16.4.3 Critical Facilities

Critical facilities not built to fire protection standards, utility poles and lines, and facilities containing hazardous materials are most vulnerable to the wildfire hazard. Most roads would not be damaged except in the worst scenarios, although roads and bridges can be blocked by debris or other wildfire-related conditions and become impassable.

Table 16-3. Loss Estimates for Fire Hazard Severity Zones

	Exposed Value	Loss Value	Loss as % of Total Planning Area Replacement Value
Moderate FHSZ			
Loss = 1% of Exposed Value	\$1.9 Billion	\$83,256,446	0.04%
Loss = 10% of Exposed Value		\$832,564,462	0.43%
Loss = 30% of Exposed Value		\$2,497,693,386	1.30%
Loss = 50% of Exposed Value		\$4,162,822,310	2.17%
High FHSZ			
Loss = 1% of Exposed Value	\$2.4 Billion	\$24,474,690	0.01%
Loss = 10% of Exposed Value		\$244,746,900	0.13%
Loss = 30% of Exposed Value		\$734,240,700	0.38%
Loss = 50% of Exposed Value		\$1,223,734,500	0.64%
Very High FHSZ			
Loss = 1% of Exposed Value	\$8.3 Billion	\$19,255,897	0.01%
Loss = 10% of Exposed Value		\$192,558,971	0.10%
Loss = 30% of Exposed Value		\$577,676,912	0.30%
Loss = 50% of Exposed Value		\$962,794,854	0.50%

Additionally, heavy vehicle traffic during incidents and in post-fire recovery and rebuild can have significant impact on road surfaces. The following critical facilities are located in very high and high severity zones and their vulnerability could complicate response and recovery efforts during and following an event:

- **Hazardous Materials and Fuel Storage**—During a wildfire event, these materials could rupture due to excessive heat and act as fuel for the fire, causing rapid spreading and escalating the fire to unmanageable levels. In addition, they could leak into surrounding areas, saturating soils and seeping into surface waters, and have a disastrous effect on the environment.
- **Communication Facilities**—If these facilities are damaged and become inoperable, it would exacerbate already difficult communication in the planning area.

16.4.4 Environment

Fire is a natural and critical ecosystem process in most terrestrial ecosystems, affecting the types, structure, and spatial extent of native vegetation. However, in some circumstances it can also cause severe environmental impacts, such as the following:

- **Damaged Fisheries**—Critical fisheries can suffer from increased water temperatures, sedimentation, and changes in water quality.
- **Soil Erosion**—The protective covering provided by foliage and dead organic matter is removed, leaving the soil fully exposed to wind and water erosion. Accelerated soil erosion occurs, causing landslides and threatening aquatic habitats.
- **Spread of Invasive Plant Species**—Non-native woody plant species frequently invade burned areas. When weeds become established, they can dominate the plant cover over broad landscapes, and become difficult and costly to control.

- **Disease and Insect Infestations**—Unless diseased or insect-infested trees are swiftly removed, infestations and disease can spread to healthy forests and private lands. Timely active management actions are needed to remove diseased or infested trees.
- **Destroyed Endangered Species Habitat**—Wildfire can have negative consequences for endangered species by degrading their habitat.
- **Soil Sterilization**—Some wildfires burn so hot that they can sterilize the soil. Topsoil exposed to extreme heat can become water repellant, and soil nutrients may be lost.
- **Reduced Timber Harvesting**—Timber can be destroyed and lead to smaller available timber harvests.
- **Reduced Agricultural Resources**—Wildfire can have disastrous consequences on agricultural resources, removing them from production and necessitating lengthy restoration programs.
- **Damaged Cultural and Historical Resources**—The destruction of cultural and historic resources may occur, scenic vistas can be damaged, and access to recreational areas can be reduced.

Parks and recreational areas in San Mateo County have greater vulnerability to wildfires than do more developed regions. San Bruno Mountain Park, a landmark of local and regional significance, is one of the more noteworthy of this type of area. It stands as an open-space island amid the peninsula's urban northern end of the Santa Cruz Mountain Range. Its ridgeline has numerous slopes exceeding 50 percent and elevations from 250 feet to over 1,300 feet. Fourteen species of rare or endangered plants, along with numerous endangered and threatened butterflies, make their home on San Bruno Mountain. The San Bruno Mountain State and County Park Master Plan, last updated in 2001, recommends development of a fire management plan to cover fire management policies and procedures, public education, reduction of the existing heavy fuel load, and how to best utilize fire for the enhancement of endangered species' habitats.

16.5 FUTURE TRENDS IN DEVELOPMENT

Urbanization tends to alter the natural fire regime and can lead to expansion of urbanized areas into wildland areas. Placement of additional housing in the wildland/urban interface areas located in high or very high relative fire hazard zones can increase the fire threat, particularly in historical fire corridors. Development in these areas can burden existing fire protection services, particularly in areas dependent on volunteer firefighters. Additionally, fire risk can be exacerbated by impacts from other hazards such as drought and extreme heat. Secondary impacts can be addressed with access to vulnerable areas by fire suppression personnel and equipment.

The expansion of development into high wildfire hazard areas can be managed with strong land use and building codes. The planning area is well equipped with these tools, and this planning process has asked each planning partner to assess its capabilities with regards to the tools. As San Mateo County experiences future growth, it is anticipated that the exposure to this hazard will remain as assessed or even decrease over time due to these capabilities.

Most of the homes in San Mateo County's WUI areas were constructed before 2008, when California's WUI Building Code (California Code Chapter 7A) went into effect. This code requires ignition-resistant building materials in WUI areas. Structures built before it took effect and those without adequate vegetation management are at higher risk to wildland fire ignition.

The State of California has enacted significant legislation that attempts to manage and mitigate wildfire risk. Appendix C provides a summary of this legislation, much of which will have an impact on future development

that interfaces a wildfire hazard severity zone. In addition, the planning partners' general plans include policies that address managing development in relative fire hazard zones. The planning area is well equipped with these tools, and this planning process has asked each planning partner to assess its capabilities with regards to the tools. As the planning area experiences future growth, it is anticipated that the exposure to this hazard will remain as assessed or even decrease over time due to these capabilities.

16.6 SCENARIO

A major wildfire in the planning area might begin with a wet spring, adding to fuels already present on the forest floor. Flashy fuels would build throughout the spring. The summer could see the onset of insect infestation. A dry summer could follow the wet spring, exacerbated by dry hot winds. Carelessness with combustible materials or a tossed lit cigarette, or a sudden lightning storm could trigger a multitude of small isolated fires.

The embers from these smaller fires could be carried miles by hot, dry winds. The deposition zone for these embers could be deep in forested areas. Fires that start in flat areas move slower, but wind still pushes them. It is not unusual for a wildfire pushed by wind to burn the ground fuel and later climb into the crown and reverse its track. This is one of many ways that fires can escape containment, typically during periods when response capabilities are overwhelmed. These new small fires would most likely merge. Suppression resources would be redirected from protecting the natural resources to saving more remote subdivisions.

The worst-case scenario would include an active fire season throughout the American west, spreading resources thin. Firefighting teams would be exhausted or unavailable. Many federal assets would be responding to other fires that started earlier in the season.

To further complicate the problem, heavy rains could follow, causing flooding and landslides and releasing tons of sediment into rivers, permanently changing floodplains and damaging sensitive habitat and riparian areas. Such a fire followed by rain could release millions of cubic yards of sediment into streams for years, creating new floodplains and changing existing ones. With the forests removed from the watershed, stream flows could easily double. Floods that could be expected every 50 years may occur every couple of years. With the streambeds unable to carry the increased discharge because of increased sediment, the floodplains and floodplain elevations would increase.

16.7 ISSUES

The major issues for wildfire are the following:

- Public education and outreach to people living in or near the fire hazard zones should include information about and assistance with mitigation actions such as defensible space and advance identification of evacuation routes and safe zones.
- Wildfires could cause landslides as a secondary natural hazard.
- Climate change could affect the wildfire hazard.
- Future growth into interface areas should continue to be managed.
- Area fire districts need to continue to train on wildland-urban interface events.
- Vegetation management activities should include enhancement through expansion of the target areas as well as additional resources.

- CAL FIRE fire hazard mapping does not include data for the cities of Millbrae, Pacifica and San Bruno. This does not imply that there is no fire risk for these communities; it only indicates a lack of data available to support the assessment for these areas. Future updates to the plan should seek to address this data gap.
- Regional consistency is needed for higher building code standards such as residential sprinkler requirements and prohibitive combustible roof standards.
- Firefighters in remote and rural areas are faced with limited water supply and lack of hydrant taps. Rural areas are adapting to these conditions by developing a secondary water source. Areas that once were considered rural could become urban with incorporation and annexation, coupled with development
- Fire departments should seek to expand certifications and qualifications for personnel.
- Firefighters should all be trained in basic wildfire behavior and basic fire weather, and all company officers and chief level officers should be trained in the wildland command and strike team leader level.

17. CLIMATE CHANGE

17.1 GENERAL BACKGROUND

17.1.1 What is Climate Change?

Climate, consisting of patterns of temperature, precipitation, humidity, wind and seasons, plays a fundamental role in shaping natural ecosystems and the human economies and cultures that depend on them. “Climate change is a long-term change in the average weather patterns that have come to define Earth’s local, regional and global climates. These changes have a broad range of observed effects that are synonymous with the term. Changes observed in Earth’s climate since the early 20th century are primarily driven by human activities, particularly fossil fuel burning, which increases heat-trapping greenhouse gas levels in Earth’s atmosphere, raising Earth’s average surface temperature (NASA, 2021).

The well-established worldwide warming trend of recent decades and its related impacts are caused by increasing concentrations of carbon dioxide and other greenhouse gases in the earth’s atmosphere. Greenhouse gases are gases that trap heat in the atmosphere, resulting in a warming effect. Carbon dioxide is the most commonly known greenhouse gas; however, methane, nitrous oxide and fluorinated gases also contribute to warming. Emissions of these gases come from a variety of sources, such as the combustion of fossil fuels, agricultural production, and changes in land use. According to the National Aeronautics and Space Administration (NASA), carbon dioxide concentrations measured about 280 parts per million (ppm) before the industrial era began in the late 1700s and have risen dramatically since then, surpassing 400 ppm in 2013 for the first time in recorded history (see Figure 17-1).

17.1.2 How Climate Change Affects Hazard Mitigation

Climate change is already affecting the people, property, economy, and ecosystems of the planning area in a variety of ways and will continue to do so. The most important effect for the development of this plan is that climate change will have a measurable impact on the occurrence and severity of natural hazards.

An essential aspect of hazard mitigation is predicting the likelihood of future hazard events. Typically, predictions are based on statistical projections from records of past events. This approach assumes that the likelihood of hazard events remains essentially unchanged over time. Thus, averages based on the past frequencies of, for example, floods are used to estimate future frequencies: if a river has flooded an average of once every 5 years for the past 100 years, then it can be expected to continue to flood an average of once every 5 years.

Source: NASA, 2020

Figure 17-1. Global Carbon Dioxide Concentrations Over Time

For hazards that are affected by climate change, the assumption that future behavior will be equivalent to past behavior is not valid if climate conditions are changing and therefore accelerating or amplifying natural hazard frequency and intensity. As flooding is generally associated with precipitation frequency and quantity, for example, the frequency of flooding will not remain constant if broad precipitation patterns change. The California 4th Climate Assessment predicts high year-to-year variability with prominent “booms” and “busts” resulting in very wet and very dry years. Specifically, as hydrology changes, storms currently considered to be the 100-year flood might strike more often than their name suggests, leaving many communities at greater risk and introducing risk to communities that historically have been considered low risk.

The risks of landslide, severe storms, and wildfire are all impacted by climate change. For this reason, an understanding of the relationship between climate change and the efforts to mitigate natural hazards is critical. Information about how climate patterns are changing provides insight on the reliability of future hazard projections used in mitigation analysis.

17.1.3 Current Indicators of Climate Change

Global Indicators

The major scientific agencies of the United States—including NASA and the National Oceanic and Atmospheric Administration (NOAA)—have presented evidence that climate change is occurring. NASA summarizes key evidence as follows (NASA, 2020a):

- Global Temperature Rise**—The planet’s average surface temperature has risen about 1.62 °F since the late 19th century, a change driven largely by increased carbon dioxide and other human-made emissions into the atmosphere. Most of the warming occurred in the past 35 years, with the five warmest years on record taking place since 2010.

- **Warming Oceans**—The oceans have absorbed much of this increased heat, with the top 2,300 feet of ocean showing warming of more than 0.4 °F since 1969.
- **Shrinking Ice Sheets**—The Greenland and Antarctic ice sheets have decreased in mass. Greenland lost an average of 286 billion tons of ice per year between 1993 and 2016, and Antarctica lost about 127 billion tons of ice per year during the same time period. The rate of Antarctica ice mass loss has tripled in the last decade.
- **Glacial Retreat**—Glaciers are retreating almost everywhere around the world—including in the Alps, Himalayas, Andes, Rockies, Alaska and Africa.
- **Decreased Snow Cover**—Satellite observations reveal that the amount of spring snow cover in the Northern Hemisphere has decreased over the past five decades and that the snow is melting earlier
- **Sea Level Rise**—Global sea level rose about 8 inches in the last century. The rate in the last two decades is nearly double that of the last century and is accelerating slightly every year.
- **Declining Arctic Sea Ice**—Both the extent and thickness of Arctic sea ice has declined rapidly over the last several decades
- **Extreme Events**—The number of record high temperature events in the United States has been increasing since 1950, while the number of record low temperature events has been decreasing. The U.S. has also witnessed increasing numbers of intense rainfall events.
- **Ocean Acidification**—Since the beginning of the Industrial Revolution, the acidity of surface ocean waters has increased by about 30 percent. The amount of carbon dioxide absorbed by the upper layer of the oceans is increasing by about 2 billion tons per year.

California Indicators

Monitoring and research efforts across California have generated data that describe changes already underway in the state. Notable examples across the state include the following (Office of Environmental Health Hazard Assessment, 2020):

- Dissolved oxygen in Southern California coastal waters is declining
- In the last four years, Lake Tahoe's waters warmed at a rate about 10 times faster than the long-term rate.
- Since 1950, the northern Sierra Nevada showed an overall snowpack decline of 7.4 inches.
- Unusually warm waters occurred in the Pacific Ocean in 2014-2015, leading to widespread impacts on marine life. This marine heat wave first appeared as a large area of exceptionally high sea surface temperatures in the Gulf of Alaska in November 2013 and later extended along the entire west coast of North America.
- The surface area of seven Sierra Nevada glaciers has decreased dramatically since the beginning of the 20th century. In 2014, the size of these glaciers ranged from 14 to 52 percent of their 1903 area.
- Since 1906, the fraction of annual snowmelt runoff that flows into the Sacramento River between April and July has decreased by about 9 percent.
- Compared to the 1930s, forests across much of California today have lower densities of large trees, and higher densities of small trees. Water stress, which increases in a warming climate, poses a greater risk to large trees than to small trees.
- Annual tree mortality in California forests increased in 2014, and steep increases in mortality followed in subsequent years; the highest number, 62 million tree deaths, was recorded in 2016.

- Heat-related deaths and illnesses in California increased dramatically in 2006 following a record-breaking heat wave. At least 140 deaths occurred between July 15 and August 1. Deaths related to this heat wave were largely attributed to elevated nighttime temperatures.
- The number of acres burned by wildfires statewide has been increasing since 1950. Large fires affecting 1,000 acres or more account for most of the area burned each year.

San Mateo County and Bay Area Indicators

The California Climate Assessment, led by the Governor's Office of Planning and Research, California Natural Resources Agency, and the State of California Energy Commission, has produced nine regional climate impact and adaptation solution reports. San Mateo County is covered in the San Francisco Bay Area Region. Notable examples of climate impacts in San Mateo County and the broader Bay Area Region include the following (*California 4th Climate Assessment; San Francisco Bay Area Report*, 2019):

- Overall, the Bay Area's average annual maximum temperature increased by 1.7 °F from 1950 to 2005.
- Several studies suggest that coastal fog along the California coast is less frequent than before.
- Sea level in the Bay Area has risen over 8 inches in the last 100 years.
- The 2015-2016 El Niño, one of the three largest in the historical record, resulted in winter wave energy that was over 50 percent larger than the typical winter in the Bay Area, driving significant outer coast beach erosion.
- The 2012-2016 California drought led to the most severe moisture deficits in the last 1,200 years and a 1-in-500-year low in Sierra snowpack. The record low snowpack resulted in \$2.1 billion in economic losses and 21,000 jobs lost in the agricultural and recreational sectors statewide and exacerbated an ongoing trend of groundwater overdraft.

17.1.4 Projected Future Impacts

Climate change projections contain inherent uncertainty, largely derived from the fact that they depend on future greenhouse gas emission scenarios. Generally, the uncertainty in greenhouse gas emissions is addressed by the presentation of differing scenarios: low-emissions or high-emissions scenarios. In low-emissions scenarios, greenhouse gas emissions are reduced substantially from current levels. In high-emissions scenarios, greenhouse gas emissions generally increase or continue at current levels. Uncertainty in outcomes is generally addressed by averaging a variety of model outcomes. Despite this uncertainty, climate change projections present valuable information to help guide decision-making for possible future conditions.

Global Projections

The Intergovernmental Panel on Climate Change (IPCC), which includes more than 1,300 scientists from the United States and other countries, project that Earth's average temperatures will raise between 2.5°F and 10°F by over the next 100 years (NASA, 2020a). Some research has concluded that every increase of 2°F in average global average temperature can have the following impacts (National Research Council, 2011):

- 3 to 10 percent increases in the amount of rain falling during the heaviest precipitation events, which can increase flooding risks
- 200 to 400 percent increases in the area burned by wildfire in parts of the western United States
- 5 to 10 percent decreases in stream flow in some river basins

- 5 to 15 percent reductions in the yields of crops as currently grown.

Sea level is rising at increasing rates due to global warming of the atmosphere and oceans and melting of the glaciers and ice sheets. Rising sea level and projections of stronger and more frequent El Niño events and tropical cyclones in waters surrounding Hawai'i all indicate a growing vulnerability to coastal flooding and erosion. While the IPCC's "business as usual" scenario, in which greenhouse gas emissions continue at the current rate of increase, predicts up to 3.61 feet of global sea level rise by 2100 (IPCC 2019), other observations and projections suggest that these ranges do not capture the full range of physically plausible global average sea level rise over the 21st century (NOAA, 2017). The National Climate Assessment completed by NOAA suggested that sea levels could rise as much as 8.2 feet by the end of the century if rapid loss of Antarctic ice occurred (U.S. Global Change Research Program, 2018). Figure 17-2 shows the projected rate of global sea level rise under different greenhouse gas scenarios (NOAA 2017).

Source: NOAA, 2021

Figure 17-2. Possible Future Sea Levels for Different Greenhouse Gas Pathways

Projections for California and San Mateo County

The 2018 *California 4th Climate Assessment* outlines the following top climate change impact concerns for the state of California:

- **Wildfires**—Climate change will make forests more susceptible to extreme wildfires. By 2100, if greenhouse gas emissions continue to rise, one study found that the frequency of extreme wildfires burning over 25,000 acres would increase by nearly 50 percent, and that average area burned statewide would increase by 77 percent by the end of the century. In areas with the highest fire risk, wildfire insurance is estimated to see costs rise by 18 percent by 2055 and the fraction of property insured would decrease.
- **Sea-Level Rise**—A new model estimates that, under mid to high sea-level rise scenarios, 31 to 67 percent of Southern California beaches may completely erode by 2100 without large-scale human interventions. Statewide damage could reach nearly \$18 billion from inundation of residential and commercial buildings under 20 inches of sea-level rise, which is close to the 95th percentile of potential sea-level rise by the

middle of this century. A 100-year coastal flood, on top of this level of sea-level rise, would almost double the costs.

The assessment's 2019 San Francisco Bay Area Report outlines the following climate change impact concerns for San Mateo County and its surrounding region:

- Even with substantial global efforts to reduce greenhouse gas emissions, the Bay Area will likely see a significant temperature increase by mid-century
- Precipitation in the Bay Area will continue to exhibit high year-to-year variability with very wet and very dry years. The Bay Area's largest winter storms will likely become more intense, and potentially more damaging, in the coming decades.
- Future increases in temperature, regardless of whether total precipitation goes up or down, will likely cause longer and deeper California droughts, posing major problems for water supplies, natural ecosystems, and agriculture.
- Even with high levels of emissions reductions, research suggests that at least 6 feet of sea level rise is inevitable over the next several centuries due to the lag of sea level rise in response to increasing global temperatures.
- Bay Area public health is threatened by a number of climate-related changes, including more extreme heat events, increased air pollution from ozone formation and wildfires, longer and more frequent droughts, and flooding from sea level rise and high-intensity rain events.
- High levels of socioeconomic inequity in the Bay Area create large differences in the ability of individuals to prepare for and recover from heat waves, floods, and wildfires. Financial resources as well as improved social structures are important to enhance community resilience and reduce these disparities.
- Heat waves pose increased health risks due to urban heat islands and lack of local experience and cooling infrastructure (air conditioning) in bayside cities. These risks are compounded for low-income communities.
- The future climate of the Bay Area will become less suitable for evergreen forests—redwoods and Douglas fir—and more favorable for heat-adapted vegetation such as chaparral shrub land.
- The most threatening effect of climate change to Bay Area wildlife is the impact of rising sea levels on wetlands because of the limited potential for wetlands to move inland and become established. At the same time, less rainfall, more summer heat, and increased drought will hurt amphibians and reptiles, while heat and wildfires may negatively affect upland birds, mammals, amphibians, and reptiles.
- Future land use decisions will significantly influence the Bay Area's efforts to address climate change, affecting building and transportation energy, urban water demand, and wildfire ignitions. For example, the critical lack of affordable housing in the core of the region is forcing households further south, north, and inland, with negative consequences on energy and the environment.

Cal-Adapt, a publicly available resource that offers information on how climate change might affect local communities, provides visualization tools that present the most current data available whenever possible. The Local Climate Change Snapshot tool allows the Cal-Adapt data to be customized by location. The output report includes data reflecting modeled historical data, observed data, medium emissions data (RCP 4.5), and high emissions data (RCP 8.5). Climate change projections present valuable information to help guide decision-making for possible future conditions. The following sections summarize information presented by Cal-Adapt for San Mateo's local climate snapshot.

Precipitation

California's climate varies between wet and dry years. Research suggests that for much of the state, wet years will become wetter and dry years will become drier. Dry years are also likely to be followed by dry years, increasing the risk of drought. While it is not expected that California will see average annual precipitation changing significantly in the next 50 to 75 years, precipitation will likely be delivered in more intense storms and within a shorter wet season. Figure 17-3 displays the anticipated maximum daily precipitation amount for each year through 2100.

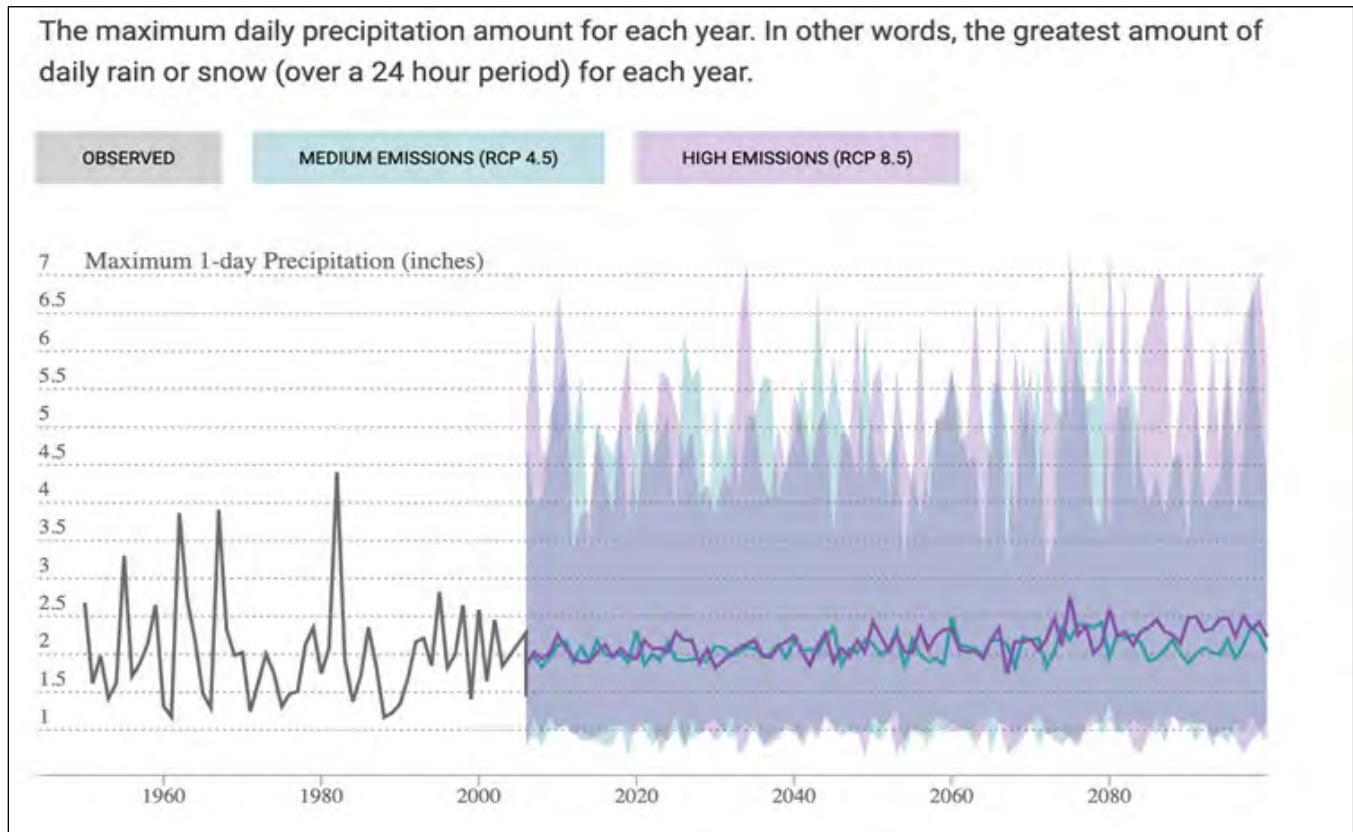

Figure 17-3. Maximum 1-Day Precipitation in San Mateo County

Temperature

Overall temperatures are projected to rise in California throughout this century. While the entire state will experience temperature increases, local impacts will vary greatly, with many communities and ecosystems already experiencing the effects of rising temperatures. Figure 17-4 displays the anticipated number of high-heat days through 2100.

Snowpack

If heat-trapping emissions continue unabated, more precipitation will fall as rain instead of snow, and the snow that does fall will melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90 percent. How much snowpack will be lost depends in part on future precipitation patterns, the projections for which remain uncertain.

Figure 17-4. High-Heat Days in San Mateo County

Even under wetter climate projections, the loss of snowpack would pose challenges to water managers, hamper hydropower generation, and nearly eliminate skiing and other snow-related recreational activities. The San Francisco Bay Area will experience direct impacts from a reduction in snowpack. Under a high emissions scenario, average Sierra Nevada snowpack is projected to decline by nearly 20 percent in the next two or three decades, 30 to 60 percent by mid-century, and over 80 percent by late century. Figure 17-5 displays historical, mid-century, and end century projected Sierra Nevada snowpack.

Sea Level Rise

Global models indicate that California will see substantial sea level rise during this century, with the exact magnitude depending on such factors as global emissions, the rate at which oceans absorb heat, melting rates and movement of land-based ice sheets, and local coastal land subsidence or uplift. See Chapter 13 for the complete profile of sea-level rise as a hazard of concern under this risk assessment

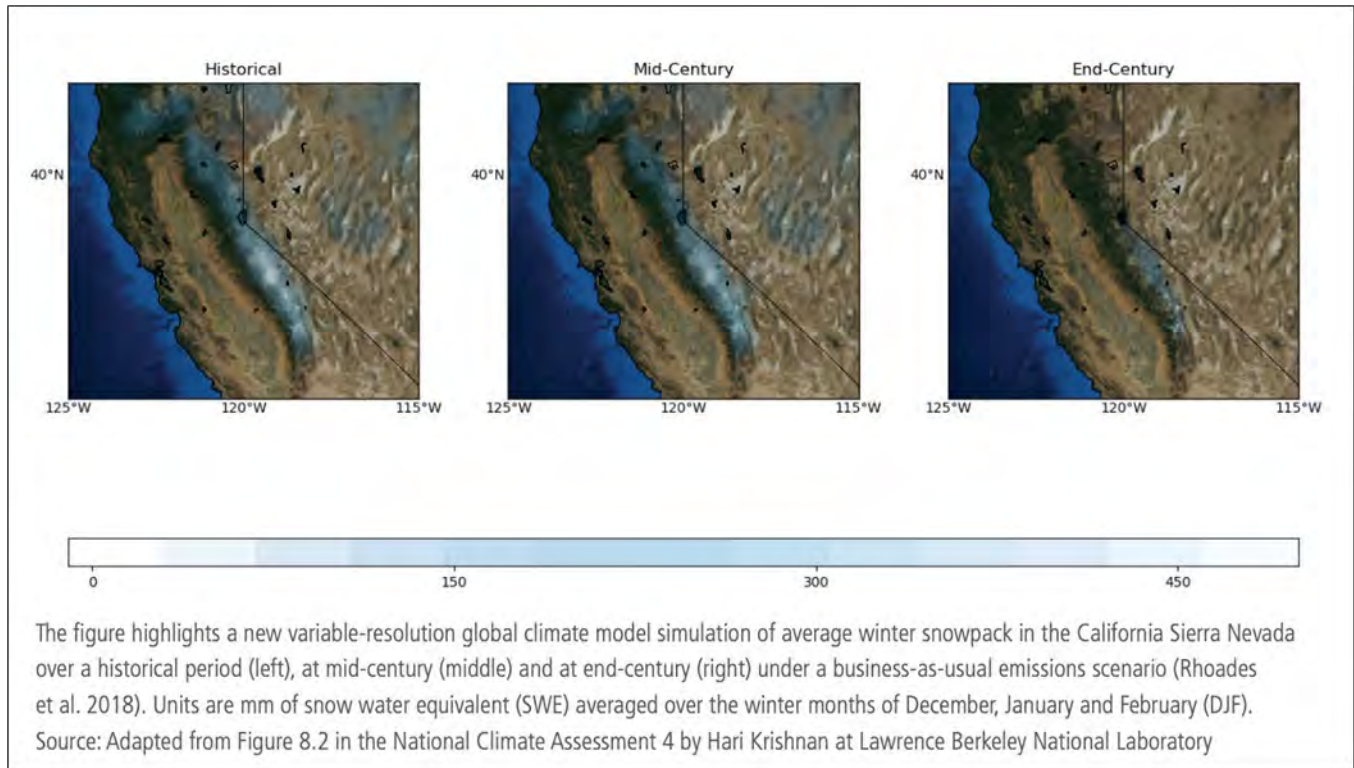

Figure 17-5. Average Winter Snowpack in the Sierra Nevada, Model Simulation

Wildfire

The frequency, severity and impacts of wildfire are sensitive to climate change and to many other factors, such as development patterns, wind patterns, and pest infestations. Therefore, it is difficult to project specific effects of climate change on wildfires. As recent years have shown, much of California can expect an increased risk of wildfire, with a wildfire season that starts earlier, runs longer, and features more extreme fire events. Figure 17-6 displays the anticipated annual average area burned through 2100.

17.1.5 Responses to Climate Change

Communities and governments worldwide are working to address, evaluate and prepare for climate changes that are likely to impact communities in coming decades. Generally, climate change discussions encompass two separate but inter-related considerations: mitigation and adaptation. The term “mitigation” can be confusing because its meaning changes across disciplines:

- Mitigation in emergency management—as generally addressed in this hazard mitigation plan—is typically defined as the effort to reduce loss of life and property by lessening the impact of disasters.
- Mitigation in climate change discussions is defined as a human intervention to reduce impacts on the climate system. It includes strategies to reduce greenhouse gas sources and emissions and enhance greenhouse gas sinks.

In this chapter, mitigation is used as defined by the climate change community. In the other chapters of this plan, mitigation is primarily used in an emergency management context.

Figure 17-6. Annual Average Area Burned, Model Simulation

Adaptation refers to adjustments in natural or human systems in response to the actual or anticipated effects of climate change and associated impacts. These adjustments may moderate harm or exploit beneficial opportunities. Mitigation and adaptation are related, as the world's ability to reduce greenhouse gas emissions will affect the degree of adaptation that will be necessary. Some initiatives and actions can both reduce greenhouse gas emissions and support adaptation to likely future conditions.

Societies across the world are facing the need to adapt to changing conditions associated with natural disasters and climate change. Farmers are altering crops and agricultural methods to deal with changing rainfall and rising temperature; architects and engineers are redesigning buildings; planners are looking at managing water supplies to deal with droughts or flooding.

Adaptive capacity goes beyond human systems, as some ecosystems are able to adapt to change and to buffer surrounding areas from the impacts of change. Forests can bind soils and hold large volumes of water during times of plenty, releasing it through the year; floodplains can absorb vast volumes of water during peak flows; coastal ecosystems can hold out against storms, attenuating waves and reducing erosion. Other ecosystem services—such as food provision, timber, materials, medicines and recreation—can provide a buffer to societies in the face of changing conditions. Ecosystem-based adaptation is the use of biodiversity and ecosystem services as part of an overall strategy to help people adapt to the adverse effects of climate change. This includes the sustainable management, conservation and restoration of specific ecosystems that provide key services.

Assessment of the current efforts and adaptive capacity of the planning partners participating in this hazard mitigation plan are included in the jurisdiction-specific annexes in Volume 2.

17.2 IMPACTS ON HAZARDS OF CONCERN

The following sections provide information on how each identified hazard of concern for this planning process may be impacted by climate change and how these impacts may alter current exposure and vulnerability to these hazards for the people, property, critical facilities, and the environment in the planning area.

17.2.1 Dam Failure

Climate Change Impacts on the Hazard

The *California Fourth Climate Change Assessment* identifies expected changes to rainfall and winter storm patterns. On average, changes in California's annual precipitation levels are not expected to be dramatic; however, the increase in frequency and intensity for the largest storms (atmospheric rivers) may pose increasing risks to San Mateo County critical facilities, including dams. Dams are designed partly based on assumptions about a river's flow behavior, expressed as hydrographs. Changes in weather patterns can have significant effects on the hydrograph used for the design of a dam. If the hydrograph changes, it is conceivable that the dam can lose some or all of its designed margin of safety, also known as freeboard.

If freeboard is reduced, dam operators may be forced to release increased volumes earlier in a storm cycle in order to maintain the required margins of safety. Such early releases of increased volumes can increase flood potential downstream. According to the California Department of Water Resources, flood flows on many California rivers have been record-setting since the 1950s. This means that water infrastructure, such as dams, have been forced to manage flows for which they were not designed. The California Division of Dam Safety has indicated that climate change may result in the need for increased safety precautions to address higher winter runoff, frequent fluctuations of water levels, and increased potential for sedimentation and debris accumulation from changing erosion patterns and increases in wildfires. According to the Division, climate change also will impact the ability of dam operators to estimate extreme flood events (California Department of Water Resources, 2008).

Dams are constructed with safety features known as "spillways." Spillways are put in place on dams as a safety measure in the event of the reservoir filling too quickly. Spillway overflow events, often referred to as "design failures," result in increased discharges downstream and increased flooding potential. Although climate change will not increase the probability of catastrophic dam failure, it may increase the probability of design failures, leading to the need for dam spillways to be designed to handle larger volumes of water over long time periods.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the dam failure hazard resulting from climate change:

- **Population**—Population exposure and vulnerability to the dam failure hazard will likely increase as a result of climate change.
- **Property**—Property exposure and vulnerability to the dam failure hazard will likely increase as a result of climate change.
- **Critical facilities**—The exposure and vulnerability of critical facilities are likely to change as result of climate change. Dam owners and operators are sensitive to the risk and may need to alter maintenance and operations to account for changes in the hydrograph, increased frequency of atmospheric river events and increased sedimentation.

- Environment—The exposure and vulnerability of the environment to dam failure is likely to change as a result of climate change. Ecosystem services may be used to mitigate some factors that could increase the risk of design failures, such as increasing the natural water storage capacity in watersheds above dams.

17.2.2 Drought

Climate Change Impacts on the Hazard

Future increases in temperature, regardless of whether total precipitation goes up or down, will likely cause longer and deeper California droughts, posing major problems for water supplies, natural ecosystems, and agriculture. Global and local water resources are already experiencing the following stresses without climate change:

- Growing populations
- Increased competition for available water
- Poor water quality
- Environmental claims
- Uncertain reserved water rights
- Groundwater overdraft
- Aging urban water infrastructure.

With a warmer climate, droughts could become more frequent, more severe, and longer lasting. The 2012-2016 California drought led to the most severe moisture deficits in the last 1,200 years and a 1-in-500 year low in Sierra snowpack. Consecutive years of low or no snowpack are especially worrisome (*California 4th Climate Assessment, SF Bay Region*, 2019).

It is expected that San Mateo County's precipitation patterns will continue to exhibit high year-to-year variability, with very wet and very dry years. Meaning, there is ample opportunity for multiple, consecutive very dry years. The California 4th Climate Assessment for the SF Bay Region predicts, under a high emissions scenario, average Sierra Nevada snowpack is likely to decline by nearly 20% in the next 2-3 decades, 30% to 60% in mid-century, and by over 80% in late century.

By addressing current stresses on water supplies and by building a flexible, robust program, the County will be able to respond more adeptly to changing conditions and to survive dry years.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the drought hazard resulting from climate change:

- Population—Population exposure and vulnerability to drought are likely to change as a result of climate change. It is expected that greater numbers of people may need to engage in behavior change, such as water saving efforts, to offset expected increasing drought conditions. Broad public health concerns are important considerations and likely impacts, such as limited access to clean water sources.
- Property—Property exposure and vulnerability may increase as a result of increased drought resulting from climate change, although this would most likely occur in non-structural property such as agriculture

and landscaping. It is unlikely that structure exposure and vulnerability would increase as a direct result of drought, although secondary impacts of drought, such as wildfire, may increase and threaten structures.

- **Critical facilities**—Critical facility exposure and vulnerability are unlikely to increase as a result of increased drought resulting from climate change. Still, critical facility operators may need to be more sensitive to changes in drought patterns and alter standard management practices and actively manage resources, particularly in water-related service sectors
- **Environment**—The vulnerability of the environment may increase as a result of increased drought resulting from climate change. Prolonged or more frequent drought resulting from climate change may stress ecosystems in the region, which include many special-status species.

17.2.3 Earthquake

Climate Change Impacts on the Hazard

The impacts of global climate change on earthquake probability are unknown. Some scientists say that melting glaciers could induce tectonic activity. As ice melts and water runs off, tremendous amounts of weight are shifted on the earth's crust. As newly freed crust returns to its original, pre-glacier shape, it could cause seismic plates to slip and stimulate volcanic activity, according to research into prehistoric earthquakes and volcanic activity. NASA and USGS scientists found that retreating glaciers in southern Alaska may be opening the way for future earthquakes (NASA, 2004).

Secondary impacts of earthquakes could be magnified by climate change. Soils saturated by repetitive storms or heavy precipitation may experience liquefaction or an increased propensity for slides during seismic activity due to the increased saturation. Dams storing increased volumes of water due to changes in the hydrograph could fail during seismic events and impact the people and property nearby.

Exposure, Sensitivity and Vulnerability

Because impacts on the earthquake hazard are not well understood, increases in exposure and vulnerability of local resources are not able to be determined.

17.2.4 Flood

Climate Change Impacts on the Hazard

Use of historical hydrologic data has long been the standard of practice for designing and operating water supply and flood protection projects. For example, historical data are used for flood forecasting models and to forecast snowmelt runoff for water supply. This method of forecasting assumes that the climate of the future will be similar to that of the period of historical record. However, the hydrologic record cannot be used to predict changes in frequency and severity of extreme climate events such as floods. Scientists project greater storm intensity with climate change, resulting in more direct runoff and flooding. High frequency flood events in particular will likely increase with a changing climate. What is currently considered a 1-percent-annual-chance also may strike more often, leaving many communities at greater risk. Going forward, model calibration must happen more frequently, new forecast-based tools must be developed, and a standard of practice that explicitly considers climate change must be adopted.

Climate change is already impacting water resources, and resource managers have observed the following:

- Historical hydrologic patterns can no longer be solely relied upon to forecast the water future.
- Precipitation and runoff patterns are changing, increasing the uncertainty for water supply and quality, flood management and ecosystem functions.
- Extreme climatic events will become more frequent, necessitating improvement in flood protection, drought preparedness and emergency response.

The amount of snow is critical for water supply and environmental needs, but so is the timing of snowmelt runoff into rivers and streams. Rising snowlines caused by climate change will allow more mountain areas to contribute to peak storm runoff. Changes in watershed vegetation and soil moisture conditions will likewise change runoff and recharge patterns. As stream flows and velocities change, erosion patterns will also change, altering channel shapes and depths, possibly increasing sedimentation behind dams, and affecting habitat and water quality. With potential increases in the frequency and intensity of wildfires due to climate change, there is potential for more floods following fire, which increase sediment loads and water quality impacts.

The *California 4th Climate Assessment* predicts that intense atmospheric rivers will occur more frequently as mean temperatures rise.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the flood hazard resulting from climate change:

- Population and Property—Population and property exposure and vulnerability may increase as a result of climate change impacts on the flood hazard. Runoff patterns may change, resulting in flooding in areas where it has not previously occurred.
- Critical facilities—Critical facility exposure and vulnerability may increase as a result of climate change impacts on the flood hazard. Runoff patterns may change, resulting in risk to facilities that have not historically been at risk from flooding. Changes in the management and design of flood protection critical facilities may be needed as additional stress is placed on these systems. Planners will need to factor a new level of safety into the design, operation, and regulation of flood protection facilities such as dams, bypass channels and levees, as well as the design of local sewers and storm drains.
- Environment—The exposure and vulnerability of the environment may increase as a result of climate change impacts on the flood hazard. Changes in the timing and frequency of flood events may have broader ecosystem impacts that alter the ability of already stressed species to survive.

17.2.5 Landslide

Climate Change Impacts on the Hazard

Climate change may impact storm patterns, increasing the probability of more frequent, intense storms with varying duration. Increase in global temperature is likely to affect the snowpack and its ability to hold and store water. Warming temperatures also could increase the occurrence and duration of droughts, which would increase the probability of wildfire, reducing the vegetation that helps to support steep slopes. Each these factors would increase the probability of landslides. In Bay Area hills, the risk of landslides is a function of the interaction between precipitation, soil conditions, and seismic activity. Climate change creates increased likelihood of extreme precipitation and wildfire events; both create increased risk of slope failures for the coming century. (*California 4th Climate Assessment*, 2019).

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the landslide hazard resulting from climate change:

- **Population and Property**—Population and property exposure and vulnerability would be likely to increase because of climate change impacts on the landslide hazard. These events may occur more frequently and may see increases to the size of the hazard area itself.
- **Critical facilities**—Critical facility exposure and vulnerability would be likely to increase due to climate change impacts on the landslide hazard. Critical facility owners and operators may experience more frequent disruption to service provisions resulting from landslide hazards. For example, transportation systems may experience more frequent delays if movements blocking these systems occur more frequently.
- **Environment**—Exposure and vulnerability of the environment would be likely to change because of climate change. More frequent movements and volume in river systems may impact water quality and sediment and have negative impacts on stressed species.

17.2.6 Sea Level Rise

Climate Change Impacts on the Hazard

Climate change is expected to have a large effect on sea level rise. Warming ocean temperatures cause water to expand, with a resulting rise in sea level. Sea level also rises as increasing temperatures melt polar ice caps at an increasingly expedited rate. Sea level rise will likely result in non-rain flood conditions, as well as the extension of tsunami inundation areas further into San Mateo County communities. Infrastructure systems that support San Mateo County businesses and communities will also likely be impacted as rising sea levels expose infrastructure to salt water.

Exposure, Sensitivity and Vulnerability

As land area in San Mateo County continues to experience inundation by sea level rise over the next several decades, exposure and vulnerability to sea level rise are highly likely to increase for population, property, critical facilities, and the environment. Changes to the sea level rise hazard from climate change will likely result in greater economic vulnerability in a larger number of communities, businesses, and economic centers in San Mateo County, as well as their supporting infrastructure systems. Sea level rise inundation will also impact the property value of many properties, as coast-side and bay-side areas of the County experience sea level rise inundation.

17.2.7 Severe Weather

Climate Change Impacts on the Hazard

Climate change presents a challenge for managing severe weather risks. According to the 2018 U.S. National Climate Change Assessment, the United States saw twice as many high temperature records as low temperature records over the previous two decades. At the same time, heavy rainfall events are becoming more frequent and more severe. The increase in average surface temperatures will likely lead to more intense heat waves. Heat waves and the number of high-heat days are already increasing in San Mateo County. According to Cal-Adapt,

high-heat days are likely to increase from a historical average of 4 days annually in San Mateo County to 11 to 20 days by the end of the century. This would be coupled with an increase in heat waves and warm nights.

Climate change impacts on other severe weather events such as thunderstorms and high winds are still not well understood.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the severe weather hazard resulting from climate change:

- **Population and Property**—Population and property exposure and vulnerability would be likely to increase as a direct result of climate change impacts on the severe weather hazard. Severe weather events will likely occur more frequently, therefore most likely increasing exposure and vulnerability at the same time. Secondary impacts, such as the extent of localized flooding, may increase, impacting greater numbers of people and structures.
- **Critical facilities**—Critical facility exposure and vulnerability would be likely to increase as a result of climate change impacts on the severe weather hazard. Critical facility owners and operators may experience more frequent disruption to service provision. For example, more frequent and intense storms may cause more frequent disruptions in power service.
- **Environment**—Exposure and vulnerability of the environment would be likely to increase as a result of climate change impacts on the severe weather hazard. More frequent storms and heat events and more intense rainfall may place additional stress on already stressed systems.

17.2.8 Tsunami

Climate Change Impacts on the Hazard

The impacts of global climate change on tsunami probability are unknown. Some scientists say that melting glaciers could induce tectonic activity, inducing earthquakes that result in tsunamis. Other scientists have indicated that underwater avalanches (also caused by melting glaciers), may result in tsunamis. Even if climate change does not increase the frequency with which tsunamis occur, it may result in more destructive waves. As sea levels continue to rise, tsunami inundation areas would likely reach further into communities than current mapping indicates.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the severe weather hazard resulting from climate change:

- **Population, Property, and Critical Facilities**—Population, property, and critical facility exposure and vulnerability to the tsunami hazard may increase as a result of climate change related sea level rise. As sea levels rise, tsunami impact areas may reach into parts of the community that were previously believed to be outside of the tsunami risk area. This reach will depend on the size of the tsunami, the local topography, and the extent of sea level rise.
- **Environment**—Exposure and vulnerability of the environment to tsunamis may be impacted by the effects of climate change. In particular, sea level rise could alter the shape of existing shoreline, putting different structures and ecosystems closer to the shoreline and potential tsunami impacts. These assets

would not have the same protection against tsunamis due to a shorter time period to adapt. Additionally, ice crust melt could lead to a rise of the earth's crust, especially at higher latitudes, causing more submarine landslides and a greater vulnerability to tsunamis.

17.2.9 Wildfire

Climate Change Impacts on the Hazard

Climate change has the potential to affect multiple elements of the wildfire system: fire behavior, ignitions, fire management, and vegetation fuels. Hot dry spells create the highest fire risk. Increased temperatures may intensify wildfire danger by warming and drying out vegetation.

Changes in climate patterns may impact the distribution and perseverance of insect outbreaks that create dead trees (increase fuel). When climate alters fuel loads and fuel moisture, forest susceptibility to wildfires changes. Climate change may also increase winds that spread fires. Faster fires are harder to contain, and thus are more likely to expand into residential neighborhoods.

Exposure, Sensitivity and Vulnerability

The following summarizes changes in exposure and vulnerability to the wildfire hazard resulting from climate change:

- Population, Property and Critical facilities—Wildfire risk in San Mateo County is expected to more than double by the end of the century and increase nearly 100 percent at mid-century. As a result, it is likely that exposure and vulnerability to the wildfire hazard will increase as a result of climate change. The application and enforcement of codes and standards to mitigate the risks from wildfire hazards could help to decrease this risk as development moves into existing wildfire hazard areas.
- Environment—It is possible that the exposure and vulnerability of the environment will be impacted by changes in wildfire risk due to climate change. Natural fire regimes may change, resulting in more or less frequent or higher intensity burns. These impacts may alter the composition of the ecosystems in areas in and surrounding planning area. If more acres are burned every year, wildlife may be more stressed as the suitable habitat is lost.

17.3 ISSUES

The major gaps in current knowledge and understanding about how climate change will impact San Mateo County's hazards are the following:

- Planning for climate change related impacts can be difficult due to inherent uncertainties in projection methodologies.
- Average temperatures are expected to continue to increase in the planning area, which may lead to a host of primary and secondary impacts, such as an increased incidence of heat waves.
- Expected changes in precipitation patterns are still poorly understood and could have significant impacts on the water supply and flooding in the planning area.
- Some impacts of climate change are poorly understood, such as potential impacts on the frequency and severity of earthquakes, thunderstorms, and tsunamis.

- Heavy rain events may result in inland stormwater flooding after stormwater management systems are overwhelmed.
- Permanent and temporary inundation resulting from sea level rise has the potential to impact portions of the population and assets in the planning area.
- There are many unknowns to living with wildfire in a changing climate. Continued research and modeling are necessary to better understand the impacts of climate change on the fire environment throughout the planning area and to inform adaptation strategies
- Climate change has the potential to impact the following:
 - The vulnerability of municipal and on-site water supplies
 - The severity of wildfires and acres burned
 - The adequacy of access and evacuation routes
 - Long response times for limited fire suppression resources
 - Heat wave duration coupled with wildfire smoke, especially as they affect disadvantaged populations unlikely to have air conditioning.

18. OTHER HAZARDS OF INTEREST

The hazards of concern assessed in Chapters 8 through 17 and rated and ranked in Chapter 19 are those that present significant risks in the planning area. Additional hazards, both natural and human-caused, were identified by the Steering Committee as having some potential to impact the planning area, but at a much lower risk level than the hazards of concern. These other hazards are identified as hazards of interest.

The sections below provide short profiles of each hazard of interest, including qualitative discussion of their potential to impact San Mateo County. No formal risk assessment of these hazards was performed, and no mitigation initiatives have been developed to address them. However, all planning partners for this plan should be aware of these hazards and should take steps to reduce the risks they present whenever it is practical to do so.

18.1 PUBLIC HEALTH AND PANDEMIC

18.1.1 Overview

According to the World Health Organization, a pandemic involves the worldwide spread of a new disease. While an epidemic remains limited to one city, region, or country, a pandemic extends beyond national borders and can become a worldwide occurrence. Authorities consider a disease to be an epidemic when the number of people with the infection is higher than the forecast number within a specific region. If an infection becomes widespread in several countries at the same time, it may turn into a pandemic. A new virus strain or subtype that easily transmits between humans can cause a pandemic. Bacteria that become resistant to antibiotic treatment may also be behind the rapid spread.

Pandemics occur when new diseases develop the ability to spread rapidly. Humans may have little or no immunity against a new virus. Often, a new virus cannot spread between animals and people, but if it mutates it may start to spread easily, and a pandemic may result. Seasonal flu epidemics generally occur because of a viral subtype that is already circulating among people. Novel subtypes, on the other hand, generally cause pandemics. These subtypes will not previously have circulated among humans. A pandemic affects a higher number of people and can be more deadly than an epidemic. It can also lead to social disruption, economic loss, and general hardship on a wider scale (Medical News Today, 2020).

The severity of disease outbreaks and pandemics vary. Respiratory diseases show strong seasonal patterns varying substantially from summer to winter. Transmission rates depend on local weather and environment, and case fatality rates (CFRs) depend on local conditions such as care system quality and capacity, and the general health and immunity of the local population.

Diseases with Potential to Pose Public Health Hazards

The California Department of Public Health has identified the conditions described in Table 18-1 as human diseases that could contribute to a serious epidemic in the state.

Table 18-1. Naturally Spread Diseases Seen in California

Description	Examples
Animal Transmitted	
These are diseases that are transmitted to humans by domestic or non-domestic animals.	<ul style="list-style-type: none"> • Brucellosis (undulant fever) • Campylobacteriosis • Cat scratch disease • Cryptosporidiosis • Escherichia coli (E. coli) • Giardiasis • Middle Eastern Respiratory Syndrome (MERS) • Plague • Psittacosis (ornithosis, parrot fever) • Q Fever • Rabies • Ringworm • Salmonellosis • Toxoplasmosis • Tularemia
Bloodborne	
Viruses, bacteria and parasites that can be carried in blood and cause disease are known as bloodborne pathogens. Transmission of these diseases may be from direct blood contact, needle sticks, intravenous drug use, sexual behavior, insects or other vectors.	<ul style="list-style-type: none"> • Ebola • Hepatitis C • Malaria
Community-Acquired Infections	
Community-acquired infections are infections that are contracted outside of a hospital (or are diagnosed within 48 hours of admission) without any previous health care encounter.	<ul style="list-style-type: none"> • Adenovirus • Bed Bugs • Body Lice • Campylobacteriosis • Conjunctivitis (pink eye) • Common cold viruses • Enterovirus, non-polio • Hand, foot, and mouth disease • Head Lice ('ukus) • Impetigo • Influenza (flu) • Invasive Group A Streptococcus (necrotizing fasciitis) • Legionnaires' Disease/Pontiac Fever • Methicillin-Resistant Staphylococcus Aureus (MRSA) • Norovirus • Pinworm disease • Respiratory syncytial virus • Ringworm • Scabies • Smallpox • Staphylococcus aureus • Strep throat/scarlet fever • Streptococcus, Group B • Tularemia • Viral meningitis
Foodborne	
Foodborne diseases can be spread when food becomes contaminated with fecal matter containing bacteria, viruses, or parasites. This contamination can happen at a farm, manufacturing plant, restaurant, or home. Foodborne diseases usually result in gastrointestinal illness, which can include symptoms such as diarrhea, vomiting, nausea, stomachache, and fever. People who are ill with a foodborne disease can give the infection to others, so proper hygiene and hand washing practices are essential to limit the spread of disease. People experiencing gastrointestinal symptoms should not prepare or handle food for others.	<ul style="list-style-type: none"> • Amebiasis • Angiostrongyliasis (rat lungworm) • Anisakiasis • Botulism • Brucellosis (undulant fever) • Campylobacteriosis • Cholera • Ciguatera fish poisoning • Cryptosporidiosis • Cyclosporiasis • Escherichia coli (E. coli) • Giardiasis • Listeriosis • Norovirus • Salmonellosis • Scombroid • Shigellosis • Tularemia • Typhoid Fever • Vibriosis • Yersinia enterocolitica

Description	Examples
Influenza	
Influenza is an infectious viral disease of birds and mammals commonly transmitted through airborne aerosols such as coughing or sneezing. Symptoms are chills, headache, fever, nausea, muscle pain and occasionally pneumonia.	<p>Flu pandemics in the late 19th and 20th centuries:</p> <ul style="list-style-type: none"> • Russian flu • 1918 Spanish flu • Asian flu • Hong Kong flu • A/H1N1 or the swine flu. <p>Avian flu strains H5N1 and H7N9 caused human deaths but did not escalate to pandemic proportions.</p>
Mosquito-Transmitted	
<p>Mosquitoes found in California are capable of spreading many diseases to humans and animals, including:</p> <ul style="list-style-type: none"> • Malaria • Yellow fever • Dengue • Chikungunya • Zika • Canine heartworm • West Nile virus • Other encephalitis viruses <p>Historically, California has experienced local transmission of malaria, western equine encephalomyelitis, St. Louis encephalitis, California encephalitis viruses, canine heartworm, and West Nile virus. Canine heartworm and West Nile virus continue to have frequent local transmission in California, with West Nile virus human cases numbering in the hundreds every year. With increased global travel, the potential exists for the introduction or reintroduction of many mosquito-borne diseases into California.</p>	
Respiratory Viruses	
Respiratory viruses are responsible for influenza-like illness. They can also cause the common cold. The virus that caused the Covid-19 pandemic is a respiratory virus. People at high risk (those with certain underlying conditions, the elderly, the very young, and pregnant women) can develop severe illness that results in hospitalization or death. The best way protection is proper hygiene and avoiding contact with sick individuals. The best way for those who are infected to protect others is to cover their nose and mouth when sneezing and coughing, use good hand hygiene, and stay home from work or school.	<ul style="list-style-type: none"> • Adenovirus • Coronaviruses • Influenza • Parainfluenza • Parvovirus B19 • Respiratory Syncytial Virus • Rhinovirus (Common Cold) • Measles • Pertussis (whooping cough)
Waterborne Diseases	
Diseases caused by micro-organisms transmitted in water can be spread while bathing, washing, drinking water, or eating food exposed to contaminated water.	<ul style="list-style-type: none"> • Cholera • Giardiasis • Legionnaires' Disease /Pontiac Fever • Leptospirosis • Typhoid Fever • Vibriosis
Sexually Transmitted Disease	
HIV/AIDS, chlamydia, gonorrhea, and syphilis are the predominant sexually transmitted infections handled by the Hawai'i State Department of Health Harm Reduction Services Branch, whose responsibilities include awareness, prevention, and control of these infections.	<ul style="list-style-type: none"> • Chlamydia • Genital warts • Gonorrhea • Hepatitis A, B, and C • Herpes • Human Immunodeficiency Virus/Acquired Immunodeficiency Syndrome (HIV/AIDS) • Human papillomavirus • Syphilis • Zika

Responses to Public Health Emergencies

A disease with a high CFR may require a suppressive strategy (i.e. quarantine, or lockdown), whereas when CFR is low, either naturally or because of available interventions such as vaccines, a mitigation strategy is likely to be more effective at reducing total deaths will resulting in substantially less economic damage (Davies, 2020).

Contact tracing is a public health practice that health departments use to identify and notify people who have been exposed to someone with an infectious disease. Public health workers reach out to these exposed people to tell them that they have been in close contact with an infected person and to give them information and support to help them keep themselves and their loved ones safe. Public health departments have used contact tracing for decades to fight the spread of infectious diseases like measles, tuberculosis, syphilis, and HIV (Centers for Disease Control and Prevention, 2021).

There is not much warning time for health or pandemic events. The most commonly relied upon warning signal is the appearance of early cases of a disease within a population. The Health Alert Network is the CDC's primary method of sharing cleared information about urgent public health incidents with public information officers; federal, state, territorial, tribal, and local public health practitioners; clinicians; and public health laboratories. The Health Alert Network collaborates with federal, state, territorial, tribal, and city/county partners to develop protocols and stakeholder relationships that will ensure a robust interoperable platform for the rapid distribution of public health information (Centers for Disease Control and Prevention, 2021a).

Climate Change Impacts on the Hazard

Climate change is expected to have an impact on health hazards. Projected increases in hot days and extreme heat events will increase the risk of heat-associated deaths. Air quality impacts and drier conditions may exacerbate respiratory and cardiovascular conditions through greater concentrations of pollution and allergens. Prolonged droughts from climate change can also affect the quality of drinking water (Centers for Disease Control and Prevention, 2020).

The *California 4th Climate Assessment* finds that Bay Area public health is threatened by a number of climate-related changes, including more extreme heat events, increased air pollution from ozone formation and wildfires, longer and more frequent droughts, and flooding from sea level rise and high-intensity rain events. Heat waves alone pose increased health risks due to urban heat islands and lack of local experience and cooling infrastructure (air conditioning) in bayside cities. These risks are compounded for low-income communities.

18.1.2 Application to San Mateo County

San Mateo County, like the rest of the United States, was included in the March 2020 FEMA major disaster declaration for the COVID-19 coronavirus pandemic. As of June 2021, the total cases in the county were 42,438, with much of the explosion of cases occurring in the late months of 2020 and early months of 2021 (San Mateo County Health, 2021). During the COVID-19 pandemic, San Mateo County Health Department partnered with Qualtrics on creating web-based surveys to aid in case investigation and contact tracing processes (San Mateo County Health, 2021a).

San Mateo County also dealt with effects from the 1918 Spanish Flu pandemic. Camp Fremont in Menlo Park reported the first death in September 1918. By December of that year, 131 community members had died of the flu (McGovern, 2020).

The Health Alert Center for San Mateo County allows community members to view all alerts and emergencies put out by the County Health Department (San Mateo County Health, 2021b).

18.2 TERRORISM

Terrorism is the use of force or violence against persons or property in violation of criminal laws for purposes of intimidation, coercion, or ransom. Terrorists often use threats to accomplish the following (Federal Emergency Management Agency, 2021):

- Create fear among the public.
- Try to convince community members that their government is powerless to prevent terrorism.
- Get immediate publicity for their causes.

Acts of terrorism include threats of terrorism; assassinations; kidnappings; hijackings; bomb scares and bombings; cyber-attacks (computer-based); and the use of chemical, biological, nuclear, and radiological weapons. High-risk targets for acts of terrorism include military and civilian government facilities, international airports, large cities, and high-profile landmarks. Terrorists might also target large public gatherings, water and food supplies, utilities, and corporate centers. Terrorists can spread fear by sending explosives or chemical and biological agents through the mail (Federal Emergency Management Agency, 2021).

The San Mateo County Sheriff's Homeland Security Division works daily to prepare and protect community members from a range of threats. These threats include terrorism, natural disasters, hazardous materials, global disease outbreaks and other emergencies. These operations are carried out 24/7 through the Area Office of Emergency Services and the Emergency Services Bureau.

18.3 CYBER ATTACKS

Cyber-attacks are malicious attempts to access or damage a computer or network system. Cyber-attacks can lead to loss of money or the theft of personal, financial, and medical information that can damage personal reputation and safety. Cyber-attacks can fall under the definition of terrorism if they are large enough in scale to cause widespread social and economic impacts.

In December 2019 the Grand Jury of the Superior Court of California sent an online survey to public entities in San Mateo County. More than 25 of the public entities responding reported that they have been a victim of one or more ransomware attacks (malware designed to encrypt files on a device). Experts agree that there will be more attempts to violate the integrity of local governments' electronic infrastructure (San Mateo Court, 2019).

18.4 COMMUNICATION FAILURE

The failure of communication systems is widely known to occur in almost all extreme conditions. The breakdown of telecommunications infrastructure, whether complete or partial, causes inefficiency and delays in emergency relief efforts and response, which leads to loss of life and preventable injuries. Due to increasing dependence upon communication systems during extreme events, the risk of communication failure is high, despite increasing immunity and protection of these means against disasters, harsh environments, and calamities. An extreme event situation with a severely disrupted telecommunications infrastructure amplifies chaos and uncertainty. Poor

communications between responders can severely hamper assessment and relief efforts and prevent affected populations from connecting with responders and relatives (El Khaled and Mcheick, 2019).

The Public Safety Communications Command Staff of San Mateo County directly reports to the Communications Center Director. The assistant director and three managers head up the Operations Division, which is comprised of all Communications Center operations and its staff. Each manager is assigned a functional area of expertise—personnel, police, or fire/emergency medical services operations and communications (County of San Mateo Public Safety Communications, 2021).

18.5 HAZARDOUS MATERIALS RELEASE

The improper leak, spillage, discharge, or disposal of hazardous materials or substances (such as explosives, toxic chemicals, and radioactive materials) poses a significant threat to human health and safety, campus property, and the surrounding environment.

Hazardous material releases may be caused by a range of incidents, including an industrial or transportation accident, or deliberate criminal act. They can also occur as a result of or in tandem with natural hazard events such as earthquakes and other geologic hazards, floods, windstorms, and winter storms. In addition to causing additional life safety threats, these compound hazard events can greatly complicate and hinder response efforts and result in major environmental impacts. The large-scale release of hazardous materials in combination with events such as flooding or windstorms can increase the spread of contamination threat zones to large geographic areas and amplify the potential long-term impacts on human and ecological health (Planning for Hazards, 2021).

The Unified Hazardous Waste and Hazardous Materials Management Regulatory Program was established in 1993 to protect public health and safety, restore and enhance environmental quality, and sustain economic vitality. San Mateo County Environmental Health Services was designated by the State Secretary for Environmental Protection in 1996 as the Certified Unified Program Agency for San Mateo County. A complete list of active and inactive hazardous waste regulated facilities is now available on the County's Open Data site. The list is updated monthly. Site-specific information can be found on the State's Regulated Site Portal. This site includes activities related to hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. It is maintained by the California Environmental Protection Agency and the information is updated monthly (San Mateo County Health, 2021).

18.6 PIPELINE AND TANK FAILURE

On September 9, 2010, a natural gas pipeline owned by Pacific Gas & Electric exploded in the Crestmoor neighborhood of San Bruno. Eight people were killed, at least 50 were injured, and at least 38 homes were destroyed in the explosion (Fox News, 2015).

An equipment failure involves a pipeline component or device other than pipe. Sometimes a part on a piece of equipment fails resulting in a release of hazardous materials, and sometimes the piece of equipment itself fails to perform its function properly, resulting in a release. The following are typical types of equipment that can be involved:

- **Pumps and Compressors**—Pumps and compressors are used to move hazardous liquid and natural gas through pipelines.

- **Meters and metering equipment**—Meter stations are used on pipelines to measure the amount of product being received or delivered. Many pieces of specialized equipment in addition to the meters themselves are required at these facilities.
- **Remote or manually operated block and control valves**—Pipelines contain numerous valves of many types, both on the pipeline itself and at stations, terminals, and tank farms.
- **Relief valves and other overpressure control devices**—These devices are installed on a pipeline to prevent rupture of the pipeline due to unexpected pressure surges.
- **Tanks**—Most pipeline systems include numerous aboveground storage tanks to store hazardous liquids. Tanks are equipped with level gauges that warn operators that the tank is near its maximum capacity. Instrumentation can fail and tanks can overfill, resulting in a spill of hazardous liquid to the environment. While extremely rare, catastrophic failures of storage tanks themselves have occurred.
- **Miscellaneous Components and Devices**—Flanges, fittings, couplings, instrument tubing, gauges, thermowells, samplers, and chemical analyzers are among the pipeline components that can seep or leak (or very occasionally rupture).

Regulations require that operators inspect mainline and other critical valves, inspect and test relief valves, and inspect breakout tanks periodically. Additionally, regulations require certain mitigative measures to be in place should a leak occur. For example, should a leak occur at a storage tank, the containment surrounding one or more tanks must have a free volume equivalent to the capacity of the largest tank. Facilities housing pumps must have alarm systems that warn of the buildup of hydrocarbons within the enclosed space. Regulations require that operators perform rigorous risk assessments of their most critical pipeline facilities in order to fully understand potential failure modes, likelihoods, and consequences, and to establish appropriate preventive and mitigative activities (U.S. Department of Transportation, 2021).

18.7 AIRCRAFT INCIDENTS

Aircraft incidents are occurrences associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and the time all such persons have disembarked, and in which any person suffers death or serious injury or the aircraft receives substantial damage (Cornell Law School, 2021).

On July 6, 2013, Asiana Airlines Flight 214 from Incheon International Airport in South Korea, a Boeing 777-200ER, crashed on final approach into San Francisco International Airport. Of the 307 people on board, 3 died and 187 were injured, 49 of them seriously. Among the seriously injured were four flight attendants who were thrown onto the runway while still strapped in their seats when the tail section broke off after striking the seawall short of the runway (National Transportation Safety Board, 2014).

19. PLANNING AREA RISK RANKING

A risk ranking was performed for the hazards of concern described in this plan. This risk ranking assesses the probability of each hazard's occurrence as well as its likely impact on the people, property, and economy of the planning area. The risk ranking was conducted via facilitated brainstorming sessions with the Steering Committee. Estimates of risk were generated with data from Hazus using methodologies promoted by FEMA. Additionally, to support the social equity lens for this plan update, a social vulnerability ranking factor and weighting was established to support planning partners wishing to apply an equity lens to their risk ranking and project identification and prioritization.

19.1 PROBABILITY OF OCCURRENCE

The probability of occurrence of a hazard is indicated by a factor determined by the likelihood of annual occurrence, based on past hazard events in the area:

- High—Hazard event is likely to occur within 25 years (Probability Factor = 3)
- Medium—Hazard event is likely to occur within 100 years (Probability Factor = 2)
- Low—Hazard event is not likely to occur within 100 years (Probability Factor = 1)
- No exposure—There is no probability of occurrence (Probability Factor = 0)

Figure 19-1 summarizes the probability assessment for each hazard of concern for this plan. The probability factor is the same for the baseline ranking and the equity lens ranking.

Figure 19-1. Probability Factors for Hazards of Concern

19.2 IMPACT

Hazard impacts were assessed in three categories: impacts on people, impacts on property and impacts on the local economy. Numerical impact factors were assigned as follows:

- **People**—Values were assigned based on the percentage of the total *population exposed* to the hazard event. The rating of this impact assumes, for simplicity and consistency, that all people exposed to a hazard because they live in a hazard zone will be equally impacted when a hazard event occurs. Planners can use an element of subjectivity when assigning values for impacts on people. Impact factors for people were assigned as follows:
 - High—50 percent or more of the population is exposed to a hazard (Impact Factor = 3)
 - Medium—25 percent to 49 percent of the population is exposed to a hazard (Impact Factor = 2)
 - Low—25 percent or less of the population is exposed to the hazard (Impact Factor = 1)
 - No impact—None of the population is exposed to a hazard (Impact Factor = 0)
- **Property**—Values were assigned based on the percentage of the total *property value exposed* to the hazard event:
 - High—30 percent or more of the total assessed property value is exposed to a hazard (Impact Factor = 3)
 - Medium—15 percent to 29 percent of the total assessed property value is exposed to a hazard (Impact Factor = 2)
 - Low—14 percent or less of the total assessed property value is exposed to the hazard (Impact Factor = 1)
 - No impact—None of the total assessed property value is exposed to a hazard (Impact Factor = 0)
- **Economy**—Values were assigned based on the percentage of the total *property value vulnerable* to the hazard event. Values represent estimates of the loss from a major event of each hazard in comparison to the total assessed value of the property exposed to the hazard. For some hazards, such as wildfire, landslide and severe weather, vulnerability was considered to be the same as exposure due to the lack of loss estimation tools specific to those hazards. Loss estimates separate from the exposure estimates were generated for the earthquake and flood hazards using Hazus.
 - High—Estimated loss from the hazard is 20 percent or more of the total assessed property value (Impact Factor = 3)
 - Medium—Estimated loss from the hazard is 10 percent to 19 percent of the total assessed property value (Impact Factor = 2)
 - Low—Estimated loss from the hazard is 9 percent or less of the total assessed property value (Impact Factor = 1)
 - No impact—No loss is estimated from the hazard (Impact Factor = 0)

The impacts of each hazard category were assigned a weighting factor to reflect the significance of the impact. These weighting factors are consistent with those typically used for measuring the benefits of hazard mitigation actions: impact on people was given a weighting factor of 3; impact on property was given a weighting factor of 2; and impact on the operations was given a weighting factor of 1. Figure 19-2 and Figure 19-3 summarize the unweighted and weighted impact factors, respectively, for each hazard.

Figure 19-2. Impact Factors for Hazards of Concern

Figure 19-3. Weighted Impact Factors for Hazards of Concern

19.3 EQUITY LENS APPLICATION

For the equity lens risk ranking, the “impact on people” factor was enhanced using FEMA’s social vulnerability index (SoVI). For each hazard, an impact factor was assigned for each of the five SoVI classifications, and the total impact on people was calculated as the sum of those factors. For each SoVI classification, the impact factor was determined by the percentage of exposed population within that classification. The maximum impact factor was assigned if the percentage exceeds the exposed-population threshold for that classification; otherwise, the minimum impact factor was assigned. For higher SoVI classifications, the maximum and minimum impact factors are higher and the exposed-population thresholds are lower, as shown in Table 19-1. The weighting factor for impact on people with an equity lens is the same as for the baseline impact on people (3).

Table 19-1. Equity Lens Impact Factors for Impacts on People

SoVI Classification	Exposed-Population Threshold ^a	Maximum Impact Factor	Minimum Impact Factor
Very High	15%	5	4
Relatively High	25%	4	3
Relatively Moderate	35%	3	2
Relatively Low	50%	2	1
Very Low	75%	1	0
No Impact ^b	0	0	0

- a. Classification score is based on whether the percent of population exposed to the hazard in the SoVI classification (relative to the total exposed population) exceeds the threshold. If so, then the maximum impact factor is assigned; otherwise, the minimum impact factor is assigned.
- b. No impact is defined as the entire planning area having no population exposed to the hazard.

Application of the equity lens for risk ranking was considered optional for all planning partners. Volume 2 of this plan indicates which planning partners chose to apply the lens. The county-wide results of the ranking of impacts applying the equity lens are shown for informational purposes in Figure 19-4 and Figure 19-5, with and without the weighting factors.

Figure 19-4. Impact Factors for Hazards of Concern with Equity Lens

Figure 19-5. Weighted Impact Factors for Hazards of Concern with Equity Lens

19.4 RISK RATING AND RANKING

The risk rating for each hazard was determined by multiplying the probability factor by the sum of the weighted impact factors for people, property, and operations, as summarized in Figure 19-6 and Figure 19-7. Based on these ratings, a priority of high, medium, or low was assigned to each hazard. Figure 19-8 and Figure 19-9 show the hazard risk ranking.

Figure 19-6. Total Risk Rating for Hazards of Concern (Baseline)

Figure 19-7. Total Risk Rating for Hazards of Concern (Equity Lens)

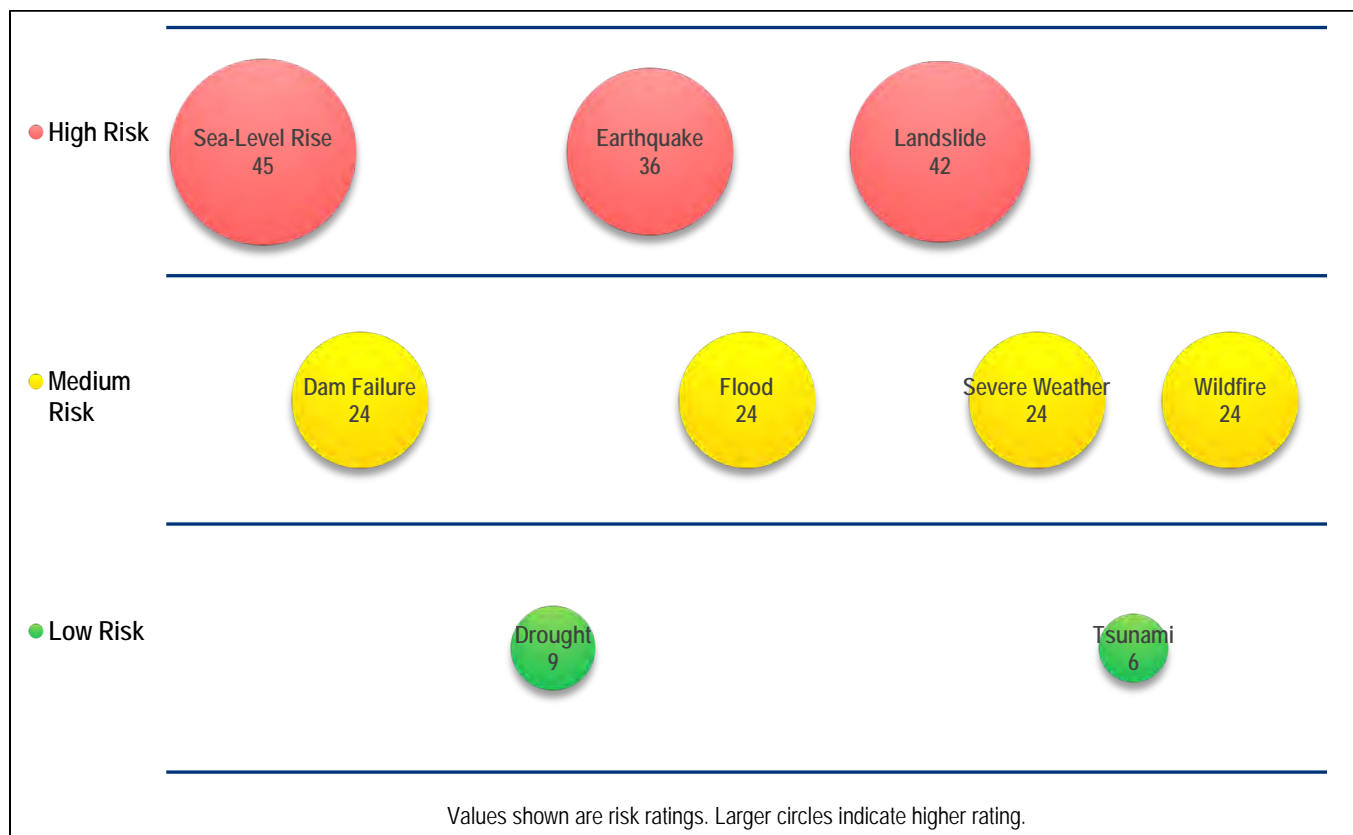

Figure 19-8. Hazard Risk Ranking (Baseline)

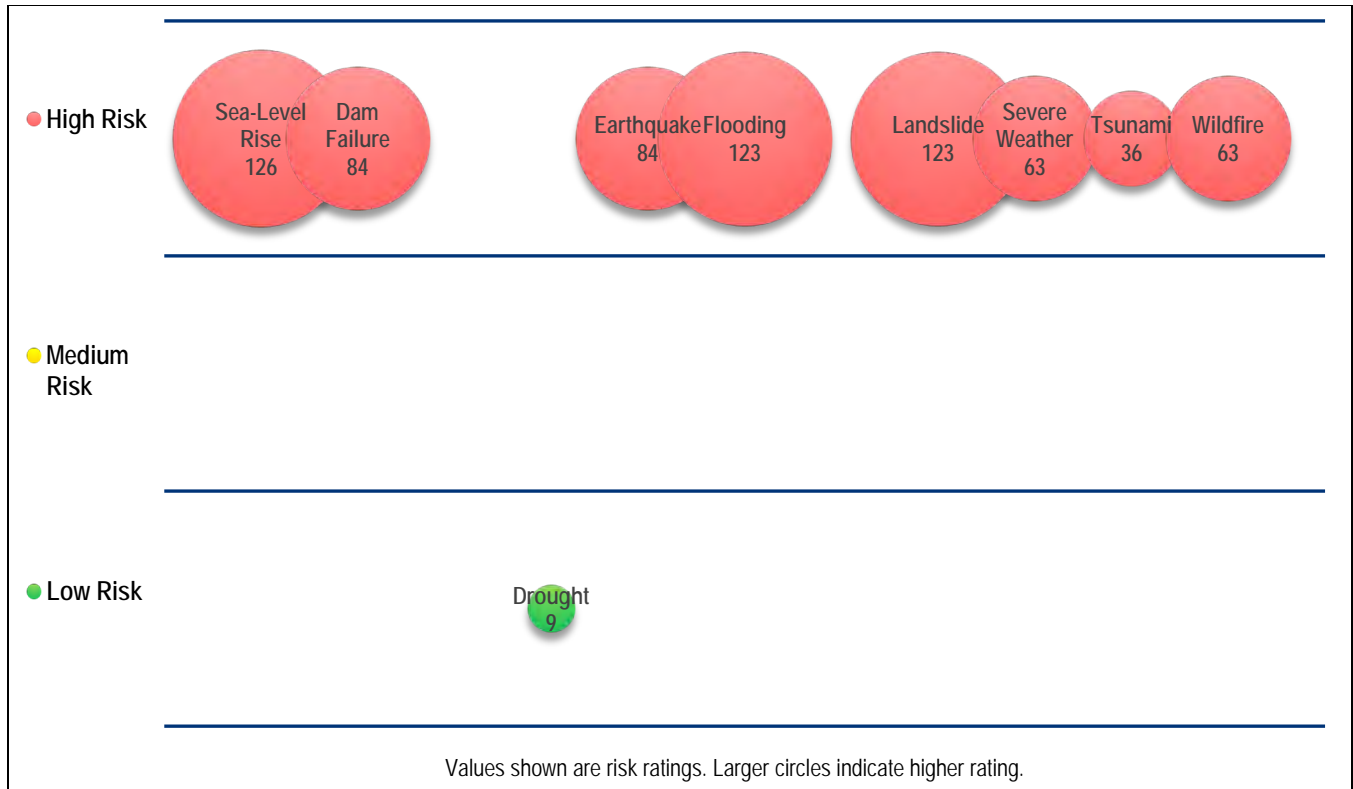

Figure 19-9. Hazard Risk Ranking (Equity Lens)

Part 3. MITIGATION PLAN

20. MISSION STATEMENT, GOALS AND OBJECTIVES

Hazard mitigation plans must identify goals for reducing long-term vulnerabilities to identified hazards (44 CFR Section 201.6(c)(3)(i)). The Steering Committee reviewed the guiding principle, goals, and objectives from the previous hazard mitigation plan for San Mateo County. This review was supported by results Survey # 1 as well as public input received through the Steering Committee process. It was determined that the previous plan's guiding principle, goals, and objectives still reflect community priorities and the results of the risk assessment. Therefore, only minor changes were made, to clarify intent and meaning.

The guiding principle, goals, objectives, and actions in this plan all support each other. Goals were selected to support the guiding principle. Objectives were selected that met multiple goals. Actions (presented in Chapter 22) were prioritized based on their ability to meet multiple objectives.

20.1 GUIDING PRINCIPLES

A guiding principle focuses the range of objectives and actions to be considered. A guiding principle is not a goal because it does not describe a hazard mitigation outcome and it is broader than a hazard-specific objective. The guiding principles for the *San Mateo County Multijurisdictional Local Hazard Mitigation Plan* are as follows:

- Provide a dynamic, actionable approach to hazard planning that integrates with other planning mechanisms to enhance or support hazard mitigation.
- Invite and enhance the public's awareness and understanding of hazards and their input on hazard prioritization and mitigation.
- Create a decision-making tool for policy and decision makers.
- Prioritize multi-benefit actions that reduce risk to vulnerable communities, protect those most at risk, and advance equity, including across racial, ethnic, and rural/urban lines.
- Promote compliance with state and federal program requirements.
- Ensure inter-jurisdictional coordination on hazard mitigation activities.
- Integrate the concepts of climate change into the hazard mitigation planning process.
- Support economic viability, including for those who are most economically vulnerable, after a hazard event.
- Ensure a safe, respectful, non-discriminatory, and inclusive response to hazard events.

20.2 GOALS

The following are the mitigation goals for this plan:

- Protect life and property, including protecting the health and safety of communities.
- Engage the whole community to better understand the hazards of the region and ways to reduce their personal vulnerability to those hazards.
- Promote hazard mitigation as an integrated public policy and as a standard business practice.
- Integrate climate change strategies to increase resiliency of community lifelines (critical facilities) from the impact of climate change.
- Protect and preserve the environment.
- Develop and implement hazard mitigation strategies that use public funds in an efficient and cost-effective way.
- Develop hazard mitigation strategies that eliminate disparities and provide access to quality services for all unserved, underserved, under-resourced, and ineffectively serviced individuals and families.
- Improve community emergency management capability.

The effectiveness of a mitigation strategy is determined by how well these goals are achieved.

20.3 OBJECTIVES

Each selected objective meets multiple goals, serving as a stand-alone measurement of the effectiveness of a mitigation action, rather than as a subset of a goal. The objectives also are used to help establish priorities. The objectives are as follows:

1. Improve understanding of the locations, potential impacts, and linkages among threats, hazards, vulnerability, and measures needed to protect life, safety, and health.
2. Establish and maintain partnerships among all levels of government, the private sector, community groups, and institutions of higher learning that improve and implement methods to protect life and property.
3. Conduct culturally competent and transparent community outreach activities that:
 - a. Increase stakeholder awareness and understanding of hazard risk, mitigation options, and preparedness strategies
 - b. Enable community members to inform risk assessment and ranking, prioritization of mitigation actions and implementation measures and investments
 - c. Are clear on how they incorporate input throughout the process by providing regular reports.
4. Prevent or reduce mitigation-related disparities affecting under-served and under-represented communities through plans, investments, and engagement.
5. Develop and provide updated information about threats, hazards, vulnerabilities, climate change, and mitigation strategies to state, regional, and local agencies, as well as private-sector and community groups.
6. Encourage incorporation of hazard mitigation measures into repairs, major alterations, new development, and redevelopment practices, especially in socially vulnerable communities.
7. Promote and implement hazard mitigation plans and projects based on best available data and science that are consistent with state, regional, and local climate action and adaptation goals, policies, and programs.

8. Advance community resilience through preparation, adoption, and implementation of state, regional, and local hazard mitigation plans and projects.
9. Encourage life and property protection measures for all communities, with particular attention to socially vulnerable communities that have less capacity to adapt or to strengthen structures and community lifelines (critical facilities) located in hazard areas.
10. Actively promote effective coordination of regional and local hazard mitigation planning and action among state agencies, cities, counties, special districts, tribal organizations, councils of governments, community-led planning efforts, metropolitan planning organizations, and regional transportation organizations to create resilient and sustainable communities.
11. Improve systems that provide warning and emergency communications, including evaluation of their inclusiveness and accessibility.
12. Build the capacity of the County, the planning partners, and community-based organizations to ensure effective and meaningful engagement throughout the process and equitable outcomes of hazard mitigation action efforts.
13. Retrofit, purchase, and/or relocate structures in high hazard areas, and consider appropriate redevelopment policies in areas known to be repetitively damaged that will maximize public benefits and reduce negative impacts, particularly in socially vulnerable communities.
14. Where feasible, identify and implement strategies that use nature-based solutions.

21. MITIGATION BEST PRACTICES

21.1 MITIGATION BEST PRACTICES

Catalogs of hazard mitigation best practices were developed that present a broad range of alternatives to be considered for use by the planning partners, in compliance with 44 CFR (Section 201.6(c)(3)(ii)). One catalog was developed for each hazard of concern evaluated in this plan (except sea level rise, for which mitigation measures are presented in the following section on adaptive capacity). The catalogs present alternatives that are categorized in two ways:

- By who would have responsibility for implementation:
 - Individuals (personal scale)
 - Businesses (corporate scale)
 - Government (government scale).
- By what the alternative would do:
 - Manipulate the hazard
 - Reduce exposure to the hazard
 - Reduce vulnerability to the hazard
 - Build local capacity to respond to or prepare for the hazard.

Hazard mitigation actions recommended in this plan were selected from an analysis of the alternatives presented in the catalogs. Some actions were developed independently by planning partners. The catalogs provide a baseline of mitigation alternatives that are backed by a planning process, are consistent with the established goals and objectives, and are generally within the capabilities of the planning partners to implement. They provide a list of what could be considered to reduce risk from natural hazards. Not all actions listed are feasible for this plan. Planning partners selected actions based their ability to implement the action. Actions in the catalog that are not included in partners' action plans were not selected for one or more of the following reasons:

- The action is not feasible.
- The action is already being implemented.
- The planning partner does not have the capability to implement the action.
- There is an apparently more cost-effective alternative.
- The action does not have public or political support.

The catalogs for each hazard are presented in Table 21-1 through Table 21-8.

Table 21-8. Alternatives to Mitigate the Wildfire Hazard

Personal-Scale	Corporate-Scale	Government-Scale
<ul style="list-style-type: none"> • Manipulate the hazard: <ul style="list-style-type: none"> ❖ Clear potential fuels on property such as dry overgrown underbrush and diseased trees • Reduce exposure: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures ❖ Locate outside of hazard area ❖ Mow regularly • Reduce vulnerability: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures and provide water on site ❖ Use fire-resistant building materials ❖ Create defensible spaces around home • Build local capacity: <ul style="list-style-type: none"> ❖ Employ techniques from the National Fire Protection Association's Firewise USA program to safeguard home ❖ Identify alternative water supplies for fire fighting ❖ Install/replace roofing material with non-combustible roofing materials and implement other strategies to harden homes from embers and flame impingement 	<ul style="list-style-type: none"> • Manipulate the hazard: <ul style="list-style-type: none"> ❖ Clear potential fuels on property such as dry underbrush and diseased trees • Reduce exposure: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures and infrastructure ❖ Locate outside of hazard area • Reduce vulnerability: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures and infrastructure and provide water on site ❖ Use fire-resistant building materials ❖ Use fire-resistant plantings in buffer areas of high wildfire threat. • Build local capacity: <ul style="list-style-type: none"> ❖ Support Firewise USA community initiatives. ❖ Create /establish stored water supplies to be utilized for firefighting. 	<ul style="list-style-type: none"> • Manipulate the hazard: <ul style="list-style-type: none"> ❖ Clear potential fuels on property such as dry underbrush and diseased trees ❖ Implement best management practices on public lands • Reduce exposure: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures and infrastructure ❖ Locate outside of hazard area ❖ Enhance building code to include use of fire resistant materials in high hazard area. • Reduce vulnerability: <ul style="list-style-type: none"> ❖ Create and maintain defensible space around structures and infrastructure ❖ Use fire-resistant building materials ❖ Use fire-resistant plantings in buffer areas of high wildfire threat. ❖ Consider higher regulatory standards (such as Class A roofing) ❖ Establish biomass reclamation initiatives ❖ Reintroduce fire (controlled or prescribed burns) to fire-prone ecosystems ❖ Manage fuel load through thinning and brush removal ❖ Establish integrated performance standards for new development to harden homes. • Build local capacity: <ul style="list-style-type: none"> ❖ More public outreach and education efforts, including an active Firewise USA program ❖ Possible weapons of mass destruction funds available to enhance fire capability in high-risk areas ❖ Identify fire response and alternative evacuation routes and establish where needed ❖ Seek alternative water supplies ❖ Become a Firewise USA community ❖ Use academia to study impacts/solutions to wildfire risk ❖ Establish/maintain mutual aid agreements between fire service agencies ❖ Develop, adopt, and implement integrated plans for mitigating wildfire impacts in wildland areas bordering on development ❖ Consider the probable impacts of climate change on the risk associated with the wildfire hazard in future land use decisions ❖ Establish a management program to track forest and rangeland health ❖ Provide incentives to for existing structures to be hardened against wildfire.

21.2 ADAPTIVE CAPACITY

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or to respond to consequences” (IPCC, 2014). This term is typically used while discussing climate change adaptation. In addition to hazard-specific capacity building, the following list provides general alternatives that planning partners considered to build capacity for adapting to both current and future risks:

- Incorporate climate change adaptation into relevant local and regional plans and projects.
- Establish a climate change adaptation and hazard mitigation public outreach and education program.
- Build collaborative relationships between regional entities and neighboring communities to promote complementary adaptation and mitigation strategy development and regional approaches.
- Establish an ongoing monitoring program to track local and regional climate impacts and adaptation strategy effectiveness.
- Increase participation of low-income, immigrant, non-English-speaking, racially and ethnically diverse, and special-needs community members in planning and implementation.
- Ask local employers and business associations to participate in local efforts to address climate change and natural hazard risk reduction.
- Conduct a communitywide assessment and develop a program to address health, socioeconomic, and equity vulnerabilities.
- Focus planning and intervention programs on neighborhoods that currently experience social or environmental injustice or bear a disproportionate burden of potential public health impacts.
- Use performance metrics and data to evaluate and monitor the impacts of climate change and natural hazard risk reduction strategies on public health and social equity.
- Develop coordinated plans for mitigating future flood, landslide, and related impacts through concurrent adoption of updated general plan safety elements and local hazard mitigation plans.
- Update safety elements to reflect existing hazards and projected climate change impacts on hazards.
- Implement general plan safety elements through zoning and subdivision practices that restrict development in floodplains, landslide, and other natural hazard areas.
- Identify and protect locations where native species may shift or lose habitat due to climate change impacts (sea level rise, loss of wetlands, warmer temperatures, drought).
- Collaborate with agencies managing public lands to identify, develop, or maintain corridors and linkages between undeveloped areas.
- Promote economic diversity.
- Incorporate consideration of climate change impacts as part of infrastructure planning and operations.
- Conduct a climate impact assessment on community infrastructure.
- Identify gaps in legal and regulatory capabilities and develop guidelines to address those gaps.
- Identify and pursue new sources of funding for mitigation and adaptation activities.
- Hire new staff or provide training to current staff to ensure an adequate level of administrative and technical capability to pursue mitigation and adaptation activities.

22. RECOMMENDED PLANNING-AREA-WIDE ACTIONS

22.1 RECOMMENDED MITIGATION ACTIONS FOR ALL PARTNERS

The Core Planning Team reviewed the catalogs of hazard mitigation alternatives and selected planning-area-wide actions to be included in a hazard mitigation action plan for all planning partners. The selection of area-wide actions was based on the risk assessment of identified hazards of concern and the defined hazard mitigation goals and objectives. Table 22-1 lists the recommended hazard mitigation actions that make up the action plan.

The timeframe indicated in the table is defined as follows:

- Short Term = to be completed in 1 to 5 years
- Long Term = to be completed in greater than 5 years
- Ongoing = currently being funded and implemented under existing programs.

Additional jurisdiction-specific action plans for each planning partner are included in the partner annexes in Volume 2 of this hazard mitigation plan.

22.2 AREA-WIDE ACTION PLAN PRIORITIZATION

The actions recommended in the action plan were prioritized based on the following factors:

- Cost and availability of funding
- Benefit, based on likely risk reduction to be achieved
- Number of plan objectives achieved
- Timeframe for project implementation
- Eligibility for grant funding programs

Two priorities were assigned for each action:

- A high, medium, or low priority for implementing the action
- A high, medium, or low priority for pursuing grant funding for the action.

The sections below describe the analysis of benefits and costs and the assignment of the two priority ratings.

Table 22-1. Action Plan—Countywide Mitigation Initiatives

Applies to new or existing assets	Hazards Mitigated	Objectives Met	Lead Agency	Support Agency	Estimated Cost	Sources of Funding	Timeline
CW-1: Continue to maintain a multilingual and culturally appropriate website that will house the multijurisdictional local hazard mitigation plan, progress reports and all components of the plan's maintenance strategy to provide planning partners and the public with ongoing access to the plan and its implementation.							
New and Existing	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	2, 3, 4, 5, 9, 10, 12	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing
CW-2: Continue to leverage/support/enhance multilingual and culturally appropriate, ongoing, regional public education and awareness programs, such as SMCAAlert, ZoneHaven, and CERT, as a method to educate the public on risk, risk reduction, and community resilience.							
New and Existing	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	2, 3, 4, 5, 9, 10, 11, 12	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing
CW-3: Provide technical support and coordination for available grant funding opportunities to the planning partnership.							
New and Existing	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing
CW-4: Develop a standardized GIS dataset for modeling hazards and impacts for regional and jurisdictional assessment purposes. Implement a program to digitally map historical hazard events and future hazard events and impacts (for example, new fire hazard severity mapping and social vulnerability data produced by federal, state, or local sources that would apply to the entire planning area).							
New	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	1, 2, 5, 6, 7, 12	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing
CW-5: Develop a multilingual and culturally appropriate business outreach program, in concert with existing business organizations and planning partners, to educate businesses on risk and risk reduction and to identify policies and programs to help businesses become more resilient.							
New and Existing	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	2, 3, 4, 5, 9, 10, 12	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing
CW-6: Develop model policy templates to assist with coordinated development and implementation of resiliency policies, such as the Safety Elements.							
New	Dam Failure, Drought, Earthquake, Flood, Landslide, Severe Weather, Sea-Level Rise, Tsunami, Wildfire	1, 2, 5, 6, 7, 12	San Mateo County DEM	Planning Partners	Low	Operating Budgets	Ongoing

22.2.1 Benefit and Cost

The action plan must be prioritized according to a benefit/cost analysis of the proposed actions (44 CFR, Section 201.6(c)(3)(iii)). For this hazard mitigation plan, a qualitative benefit-cost review was performed for each action by assigning ratings for benefit and cost as follows:

- **Cost:**
 - **High**—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, bonds, grants, and fee increases).
 - **Medium**—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.

- **Low**—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- Benefit:
 - **High**—Action will provide an immediate reduction of risk exposure for life and property.
 - **Medium**—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - **Low**—Long-term benefits of the action are difficult to quantify in the short term.

To assign priorities, each action with a benefit rating equal to or higher than its cost rating (such as high benefit/medium cost, medium benefit/medium cost, medium benefit/low cost, etc.) was considered to be cost-beneficial. This is not the detailed level of benefit/cost analysis required for some FEMA hazard-related grant programs. Such analysis would be performed at the time a given action is being submitted for grant funding.

22.2.2 Implementation Priority

Implementation priority ratings were assigned as follows:

- **High Priority**—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
- **Medium Priority**—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years), once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
- **Low Priority**—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known grant funding. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for grant funding from programs that have not yet been identified.

22.2.3 Outside Funding Pursuit Priority

Outside funding pursuit priority ratings were assigned as follows:

- **High Priority**—An action that meets identified funding eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible for funding from an outside local government source.
- **Medium Priority**—An action that meets identified outside funding source eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
- **Low Priority**—An action that has not been identified as meeting any outside funding source eligibility requirements.

22.2.4 Social Equity Priority

For planning partners that chose to apply an equity lens to their prioritization scheme, the following parameters were established:

- **High Priority**—The mitigation action is designed to reduce harm to multiple socially vulnerable groups in the County from one or more of the hazards identified in the hazard mitigation plan.
- **Medium Priority**— The mitigation action is designed to reduce harm to a single socially vulnerable population in the County from at least one hazard identified in the hazard mitigation plan.
- **Low Priority**— The mitigation action fails to advance social equity in any measurable way in the County

22.2.5 Prioritization Summary for Countywide Actions

Table 22-2 lists the priority of each action.

Table 22-2. Mitigation Action Priority

Action #	# of Objectives Met	Benefit	Cost	Do Benefits Equal or Exceed Costs?	Is Action Eligible for an Outside Funding Source?	Can Action be Funded Under Existing Programs/ Budgets?	Implementation Priority	Outside Funding Pursuit Priority	Equity Priority
CW-1	7	Medium	Low	Yes	Unknown	Yes	High	Low	High
CW-2	8	Medium	Low	Yes	Unknown	Yes	High	Low	High
CW-3	14	Medium	Low	Yes	Unknown	Yes	High	Low	High
CW-4	7	Medium	Low	Yes	Unknown	Yes	High	Low	High
CW-5	7	Medium	Low	Yes	Unknown	Yes	High	Low	High
CW-6	7	Medium	Low	Yes	Unknown	Yes	High	Low	High

22.3 CLASSIFICATION OF AREA-WIDE MITIGATION ACTIONS

Each recommended action was classified based on the hazard it addresses and the type of mitigation it involves.

Table 22-3 shows these classifications. Mitigation types used for this categorization are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education and Awareness**—Actions to inform community members and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.
- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.

Table 22-3. Analysis of Mitigation Actions

Hazard	Actions That Address the Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education and Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resiliency	Community Capacity Building
High Risk Hazards								
Sea Level Rise	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Earthquake	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Landslide	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Medium Risk Hazards								
Dam Failure	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Flood	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Severe Weather	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Wildfire	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Low Risk Hazards								
Drought	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6
Tsunami	CW-4, CW-6		CW-1, CW-2, CW-5					CW-1, CW-2, CW-3, CW-4, CW-6

- **Climate Resiliency**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff training, memorandums of understanding, development of plans and studies, and monitoring programs.

23. PLAN ADOPTION AND IMPLEMENTATION

23.1 PLAN ADOPTION

A hazard mitigation plan must document that it has been formally adopted by the governing bodies of the jurisdictions requesting federal approval of the plan (44 CFR Section 201.6(c)(5)). For multijurisdictional plans, each jurisdiction requesting approval must document that it has been formally adopted. This plan will be submitted for a pre-adoption review to Cal OES and FEMA Region IX prior to adoption. Once pre-adoption approval has been provided, all planning partners will formally adopt the plan. DMA compliance and its benefits cannot be achieved until the plan is adopted. Copies of the resolutions adopting this plan for all planning partners can be found in Appendix G of this volume.

23.2 PLAN MAINTENANCE STRATEGY

Plan maintenance is the formal process for achieving the following:

- Ensuring that the hazard mitigation plan remains an active and relevant document and that the planning partnership maintains its eligibility for applicable funding sources
- Monitoring and evaluating the plan annually and producing an updated plan every five years
- Integrating public participation throughout the plan maintenance and implementation process
- Incorporating the mitigation strategies outlined in the plan into existing planning mechanisms and programs, such as any relevant comprehensive land-use planning process, capital improvement planning process, and building code enforcement and implementation.

To achieve these ends, a hazard mitigation plan must present a plan maintenance process that includes the following (44 CFR Section 201.6(c)(4)):

- A method and schedule for monitoring, evaluating, and updating the mitigation plan within a 5-year cycle
- An approach for how the community will continue public participation in the plan maintenance process.
- A process by which local governments will incorporate the requirements of the mitigation plan into other planning mechanisms when appropriate

Table 23-1 summarizes the plan maintenance strategy.

Table 23-1. Plan Maintenance Matrix

Task	Approach	Timeline	Lead Responsibility	Support Responsibility
Monitoring	Prepare status updates and action implementation tracking as part of annual progress reporting.	Annually after the adoption and final approval of the plan by FEMA.	San Mateo County DEM	Designated point of contact for each planning partner
	As grant opportunities present themselves, consider options to pursue grants to fund actions identified in this plan	As grants become available	San Mateo County DEM	Designated point of contact for each planning partner
Annual Progress Reporting	Review the status of previous actions as submitted by the monitoring task lead and assess the effectiveness of the plan; compile the annual progress report; assess appropriate action for preparing next hazard mitigation plan update.	Annually after final plan approval by FEMA, or upon a major disaster or a comprehensive update to a general plan	San Mateo County and all planning partners	Designated point of contact for each planning partner
CRS Subcommittee	Review and approve the annual progress reports for the CRS participating communities within the planning partnership	Annually	<ul style="list-style-type: none"> • Burlingame • East Palo Alto • Pacifica • San Carlos • San Mateo County 	San Mateo County DEM
Plan Update	Reconvene the planning partners, at a minimum, every 5 years to guide a comprehensive update to review and revise the plan.	Every 5 years or upon comprehensive update to general plan or major disaster	The governing body for all planning partners covered by this plan	Designated point of contact for each planning partner
Continuing Public Involvement	Provide the public access to the implementation of this plan, principally through the plan website. https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan	Annually	San Mateo County DEM	All planning partners will provide a link to County's hazard mitigation plan website on their own websites
Plan Integration	Integrate relevant information from hazard mitigation plan into other plans and programs where viable as opportunities arise	Ongoing	The governing body for all planning partners covered by this plan	Designated point of contact for each planning partner

23.2.1 Plan Implementation and Monitoring

San Mateo County Department of Emergency Management (DEM) will be the agency responsible for monitoring the plan, and each partner will track the status of all mitigation actions in its own action plan. Staff or departments with primary responsibility are identified in each jurisdictional annex (see Volume 2).

23.2.2 CRS Subcommittee

Under FEMA's Community Rating System (CRS) program, communities can receive CRS credit for hazard mitigation plans that meet criteria established under the program. A key element of that credit is annual progress reporting and the review process used for the annual progress report. CRS Activity 510 credit criteria specify that the annual evaluation report must be prepared by the same planning committee that prepared the plan or by a successor committee with a similar membership charged with plan monitoring and implementation evaluation.

A CRS Subcommittee will be formed that will assume the responsibility of reviewing and preparing the progress report in a format suitable to meet CRS documentation requirements. The principal role of the CRS Subcommittee will be to review the annual progress report and provide input to San Mateo County DEM on possible

enhancements to be considered at the next update, while preparing the documentation needed for each CRS community's annual recertification. Since the progress reporting and the oversight committee are CRS requirements, it was the direction of the Steering Committee for this update that the responsibility for meeting those requirements should fall to the planning partners that are currently participating in the CRS program:

- Burlingame
- East Palo Alto
- Menlo Park
- Pacifica
- San Carlos
- San Mateo County

The makeup of the subcommittee will at a minimum, include representation from these CRS participating communities, led by San Mateo County.

Future plan updates will be overseen by a new steering committee similar to the one that participated in this update process, so keeping an interim subcommittee intact will provide a head start on future updates.

23.2.3 Annual Progress Report

A Maintenance Working Group will be created that consists of participating planning partners. The Maintenance Working Group will convene a bi-annual meeting to evaluate the progress on the action plan over a six-month and 12-month performance period. This review will include items such as the following:

- Summary of any hazard events that occurred during the performance period and impact of these events on the planning area
- Review of mitigation success stories
- Review of continued public involvement
- Brief discussions about why targeted strategies were not completed
- Reevaluation of the action plan to establish if the timeline for projects needs to be amended
- Recommendations for new projects
- Changes in or potential for new funding options
- The impact of any other planning programs or initiatives that involve hazard mitigation

Participating partners will be responsible for forwarding this information for the Maintenance Working Group to include in a formal report on the plan's progress. The Maintenance Working Group will prepare a progress report during the 2021-2022 planning period. This report will be retained by the County DEM, with copies forwarded to planning partners, Cal OES, and Tetra Tech. This report should be used as follows:

- The reporting period will cover a 12-month period from September 1, 2021 through August 31, 2022 and annually every year following until August 31, 2025. Only four annual progress reports will be prepared; an updated plan will be prepared for the fifth year, rather than a progress report.

- The plan implementation lead (DEM) will send out reminder emails to all planning partners no later than three months before the due date.
- Planning partners will submit their status updates and sections of the annual report no later than one month prior to the due date.
- The plan maintenance lead will prepare the annual report, including planning partner information, no later than one month following the progress reporting due date.
- DEM will be responsible for ensuring that the report is posted to the County's hazard mitigation website.
- The report will describe public outreach and engagement made during the reporting period.
- The Maintenance Working Group will use the information in the annual report to identify projects of interest for the following year and to apply for mitigation or resiliency grants.
- The Maintenance Working Group will present to the County Board of Supervisors and will provide the information to the planning partners for them to provide to their governing bodies to inform them of the progress of mitigation and resiliency efforts implemented during the reporting period.

Annual progress is not a requirement of 44 CFR, but it may enhance the planning partners' opportunity for grant funding. Failure to implement this component of the plan maintenance strategy will not jeopardize a planning partner's compliance under the DMA; it may jeopardize its opportunity to partner and leverage funding opportunities with other planning partners. The Maintenance Working Group will follow up with planning partners that do not participate in the annual reporting as deemed necessary by the San Mateo County DEM.

23.2.4 Plan Update

The plan maintenance process includes a schedule for monitoring and producing an updated plan every five years. Local hazard mitigation plans must be reviewed, revised if appropriate, and resubmitted for approval in order to remain eligible for benefits under the DMA (44 CFR, Section 201.6.d.3). The planning partnership intends to update the hazard mitigation plan on a 5-year cycle from the date of initial plan adoption. This cycle may be accelerated to less than 5 years based on the following triggers:

- A presidential disaster declaration that impacts the planning area
- A hazard event that causes loss of life
- An update of the County or participating city's general plan

This plan's format allows sections to be reviewed and updated when new data become available, resulting in a plan that will remain current. It will not be the intent of future updates to develop a completely new hazard mitigation plan for the planning area. To avoid plan expiration, the partnership will strive to initiate the plan update process with sufficient time to complete the update before the plan expires; it is recommended that the process begin a year and a half before the expiration date). The update will, at a minimum, include the following elements:

- The update process will be convened through a steering committee.
- The hazard risk assessment will be reviewed and, if necessary, updated using best available information and technologies.

- The action plans will be reviewed and revised to account for any actions completed, dropped, or changed and to account for changes in the risk assessment or new partnership policies identified under other planning mechanisms (such as the general plan).
- The draft update will be sent to appropriate agencies and organizations for comment.
- The public will be given an opportunity to comment on the update prior to adoption.
- Planning partners' governing bodies will adopt their portions of the updated plan.

23.2.5 Continuing Public Involvement

The public will continue to be apprised of the plan's progress through the San Mateo County DEM website, including providing copies of annual progress reports on the website. All planning partners have agreed to provide links to the County hazard mitigation plan website on their individual jurisdictional websites to increase avenues of public access to the plan. The County has agreed to maintain the hazard mitigation plan website. This site will house the final plan and serve as a one-stop site for information regarding the plan, the partnership and plan implementation.

Upon initiation of future update processes, a new public involvement strategy will be initiated based on guidance from a new steering committee. This strategy will be based on the needs and capabilities of the planning partnership at the time of the update. At a minimum, this strategy will include the use of local media outlets within the planning area.

StoryMap

ArcGIS StoryMaps are a story authoring web-based application for sharing maps in the context of narrative text and other multimedia content. They allow the public to interface with property-specific information on risk identified by a local hazard mitigation plan. A StoryMap that was constructed during the course of this plan update process will be used to support the implementation of the plan by providing the public continuing access to the plan and its maintenance process. The StoryMap will remain with the County and continue as a template to support visual and data-based communication about the hazards relevant to San Mateo County.

Following the completion of the plan update process, the Story Map will be released to the public and promoted through social media and the project website. It will include risk assessment results for all relevant hazards, an interactive hazard mapping tool, and a report function to produce comprehensive hazard exposure summaries for any given property, block, or defined area. The Story Map expanded opportunities for public outreach and the ways in which members of the public could interact with hazard data as the hazard mitigation plan update was underway. Figure 23-1 shows a page from the StoryMap for the *San Mateo County Multijurisdictional Local Hazard Mitigation Plan*.

23.2.6 Incorporation into Other Planning Mechanisms

The mitigation actions recommended in this plan will be incorporated into existing planning mechanisms and programs, such as comprehensive land-use planning processes, capital improvement planning, and building code enforcement and implementation. The information on hazard, risk, vulnerability, and mitigation contained in this plan is based on the best science and technology available at the time this update was prepared.

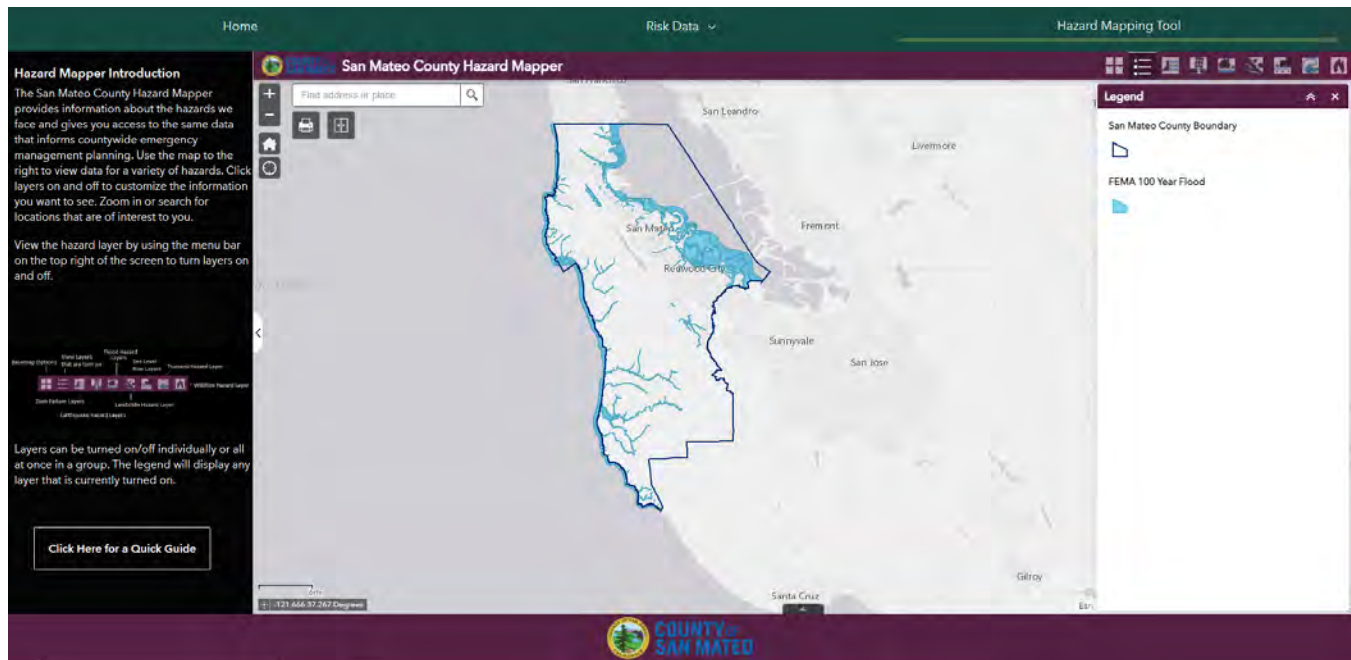

Figure 23-1. Example Story Map Cover Page

The general plans of the County and the city planning partners are considered to be integral parts of this plan. The County and partner cities, through adoption of general plans and zoning ordinances, have planned for the impact of natural hazards. The hazard mitigation plan update provided the County and the cities with an opportunity to review and expand on policies contained within these planning mechanisms. The planning partners used their general plans and the hazard mitigation plan as complementary documents that work together to achieve the goal of reducing risk exposure to the community members of the San Mateo County. An update to a general plan may trigger an update to the hazard mitigation plan.

All municipal planning partners support the creation of a linkage between the hazard mitigation plan and their individual general plans by identifying a mitigation action as such and giving that action a high priority. Other planning processes and programs to be coordinated with the recommendations of the hazard mitigation plan may include the following:

- Emergency response plans
- Training and exercise of emergency response plans
- Debris management plans
- Recovery plans
- Capital improvement programs
- Municipal codes
- Community design guidelines
- Water-efficient landscape design guidelines
- Stormwater management programs
- Water system vulnerability assessments

- Community wildfire protection plans
- Comprehensive flood hazard management plans
- Resiliency plans
- Community Development Block Grant Disaster Recovery action plans
- Public information/education plans.

Some action items do not need to be implemented through regulation. Instead, they can be implemented through the creation of new educational programs, continued interagency coordination, or improved public participation. As information becomes available from other planning mechanisms that can enhance this plan, that information will be incorporated via the update process.

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix A. Hazard Mitigation Planning Equity Recommendations

Recommendations for Addressing Equity in Hazard Mitigation Planning

Background Report for the San Mateo County Multijurisdictional Local Hazard Mitigation Plan 2021 Update

This report was prepared by the San Mateo County Office of Sustainability, Planning and Building, and the County Manager's Office with support of the MJLHMP Core Planning Team.

Recommendations for Addressing Equity in Hazard Mitigation Planning

San Mateo County Multijurisdictional Local Hazard Mitigation Plan (MJLHMP) 2021 Update

Purpose Statement

San Mateo County is in the process of updating the 2016 Local Hazard Mitigation Plan, which is a regional and cross-jurisdictional effort to plan for the reduction of risk from natural and man-made disasters. Hazard mitigation planning seeks to protect life and property, prevent harm to communities and strengthen infrastructure so it can withstand hazards and climate impacts. The more effectively we plan to mitigate hazards now, the more we reduce impacts on our communities as well as our response and recovery time, increasing our resilience. Socially vulnerable communities are hit hardest during disasters and need the most support to recover (Jerolleman 2019). San Mateo County also faces new hazards, as the impacts of climate change place an increasing number of communities at risk and multi-hazard situations are further complicated by the COVID pandemic, requiring new strategies. The Federal Emergency Management Agency (FEMA) is increasingly encouraging jurisdictions to think through inequities in their areas and to support vulnerable communities through more equitable hazard mitigation planning guidance ([FEMA 2020](#)).

This report supports the County and Annex Partners by offering tools, actionable examples, and an overview of when and how to incorporate equity considerations throughout the process of updating the County's Multijurisdictional Local Hazard Mitigation Plan (MJLHMP) to better address risks to vulnerable populations. Furthermore, this report provides a roadmap to implement the MJLHMP's equity and community engagement principles, goals and objectives.

PART 1: Equity in the Context of Hazard Mitigation

There are many approaches to defining and evaluating equity, but at its core, equity is about everyone getting what we need to survive and thrive. According to the [World Health Organization](#) (WHO), *equity* is the absence of avoidable or remediable differences among groups of people, whether those groups are defined socially, economically, demographically, or geographically. It is also a process of addressing historic and current inequities to strive for greater equality. There is an extensive field of practice related to equity and planning processes, climate equity and disaster equity. There are increasing efforts focused on Hazard Mitigation and equity including efforts from [The Natural Hazards Center](#) at University of Colorado at Boulder, National Association for the Advancement of Colored People ([NAACP](#)), and the [Institute for Diversity and Inclusion in Emergency Management](#).

The Bay Area Climate Adaptation Network (BayCAN) Equity Working Group's [Equitable Adaptation Guide](#) (Salz et al. 2020) states that "*Equity* ensures fair outcomes, treatment, and opportunities for all people, ensuring everyone gets what they need to enjoy full, healthy lives. It is the process of reducing disparities that are systematically associated with social advantage/disadvantage." The first step to integrate equity into hazard mitigation is recognizing that disparities in health outcomes, inequities in living conditions, and lack of political power place many low income communities, people of color, people with disabilities, pregnant women, and historically disadvantaged people, among others, at greater risk of hazards and limits their capacity to adapt, respond and recover.

[FEMA's Guide to Expanding Mitigation](#) highlights how local governments can partner with communities to strive for equity in hazard mitigation, including the planning and project development process. The guide recommends taking a "Whole Community" approach and involving historically underserved populations in the planning and decision-making processes, and also recommends the inclusion of those with access and functional needs, businesses, faith-based and community organizations, nonprofit groups, schools, academia, media outlets, and all levels of government, including state, local, tribal, territorial, and federal partners that have a shared responsibility in emergency preparedness and mitigation.

When incorporating equity and inclusion approaches it is optimal to work with leaders of the groups that you are seeking to better include. Particularly with a highly structured planning process like the MJLHMP it is important to communicate that your jurisdiction is seeking to *increase* inclusion or *incorporate more* equitable approaches. Equity and inclusion can mean different things to communities and government entities, so it is important both to implement the most inclusive practices possible in your situation while not overpromising and disappointing your partners.

What is Social Vulnerability?

FEMA's National Risk Index defines *social vulnerability* as the susceptibility of social groups to the adverse impacts of hazards, including disproportionate death, injury, loss, or disruption of livelihood. In addition, FEMA's Guide to Expanding Mitigation adds that social vulnerability can influence an individual's or group's ability to prepare, respond, cope, or recover from an event.

They note that heightened vulnerability may be compounded by deficiencies in infrastructure and conclude that "While not predictive, understanding where populations have increased vulnerability and exposure to natural hazards can help emergency managers take actions to lessen impacts to these communities before an event or distribute needed recovery dollars after an event."

More locally, [Climate Ready SMC](#) defines *socially vulnerable communities* as "Populations with increased vulnerability to climate impacts due to existing inequities. Examples include people whose disabilities are not accommodated, people who live in more polluted neighborhoods and people whose race, religion or sexual orientation is targeted for discrimination."

San Mateo County Coastline

1.2 Understanding Social Vulnerability in Your Jurisdiction

Each jurisdiction (county, city or special district) either has or serves socially vulnerable populations. FEMA recognizes that the following populations may be disproportionately impacted by disasters:

- Underserved communities with a low socioeconomic status
- People of color
- Tribal and first nation communities
- Women
- Members of the LGBTQ+ community
- Individuals experiencing homelessness or displacement
- Rural communities
- Elderly and youth
- People with limited English proficiency
- Service workers and migrant laborers
- People with limited cognitive or physical abilities
- Institutionalized populations (in prisons and nursing homes)
- Renters

Social vulnerability exists in every part of San Mateo County, even in our most affluent and relatively homogenous communities. Below are some examples of how a member of a socially vulnerable group may face barriers, increased risks and unique challenges from hazards and disasters:

Examples of how social vulnerability increases risks from hazards

- Undocumented immigrants may not feel safe accessing shelters or relief, as was the case during the North Bay Fires. Transgender people may be refused shelter appropriate to their gender.
- Communities of color and/or transgender people may not feel safe seeking help from police.
- Members of the Muslim and/or Jewish community who follow strict prayer and dietary practices may not feel comfortable accessing shelters or emergency food supplies.
- Indigenous community members may feel that culturally essential areas or resources are not being prioritized for mitigation.
- Low-income people may not be able to afford air filtration devices, generators, air conditioners, or to replace spoiled food resulting from power outages.
- Informal workforce and outdoor workers may not be included if sheltering in place is necessary while they are working at an employer's work place or home.

Disruption of access to basic needs

- Transit dependent populations will need assistance to evacuate rapidly.
- Community members who depend on food from formal and informal food banks may not be able to access adequate food if a disaster or hazard disrupts food distribution.
- Community members may be unable to access their go to resources such as their faith community and community organizations with cultural, linguistic and accessibility competencies.

1.3 Sources of Social Vulnerability Data in San Mateo County and Nationwide

The [Community Vulnerability Index \(CVI\)](#) is an initiative of the County Manager's Office which aims to demonstrate the geographical distribution of the overall vulnerability of the residents of the county based on census tract level data (2010-2016) from United States Census Bureau's American Community. Indicators include:

- No Health Insurance Coverage
- Education – High School or Higher
- Supplemental Security Income
- Gross Rent as a Percentage of Income – Households Spending 35% or More
- Poverty
- Unemployment
- Disability

Figure 1. List of helpful data mapping tools and resources related to social vulnerability:

CDC Social Vulnerability Index:

CDC Social Vulnerability Index (CDC SVI) uses 15 U.S. census variables to help local officials identify communities that may need support before, during, or after disasters. The census variables includes factors such as poverty, lack of vehicle access, and crowded housing. <https://www.atsfdr.cdc.gov/placeandhealth/svi/index.html>

Get Healthy San Mateo County:

<http://www.gethealthysmc.org/data>

California Healthy Places Index:

<https://healthyplacesindex.org/>

CCHViz:

The Climate Change & Health Vulnerability Indicators for California provides tools to better understand people and places that are more susceptible to adverse health impacts associated with climate change, specifically extreme heat, wildfire, sea level rise, drought, and poor air quality.

CalEnviroScreen 3.0

A screening tool that identifies communities most affected by and vulnerable to the effects of sources of pollution & population-based disparities. Aggregates state-wide environmental, health, and socioeconomic information to produce scores for every census tract in the state. When overlaid with climate impact and hazards exposure data, can provide insight into built and environmental exposure factors that contribute to vulnerability.

San Mateo County Climate Ready Viewer:

APEN Mapping Resilience Report

The report contains a grid comparing 40 mapping frameworks and their indicators on pages 58 and 59.

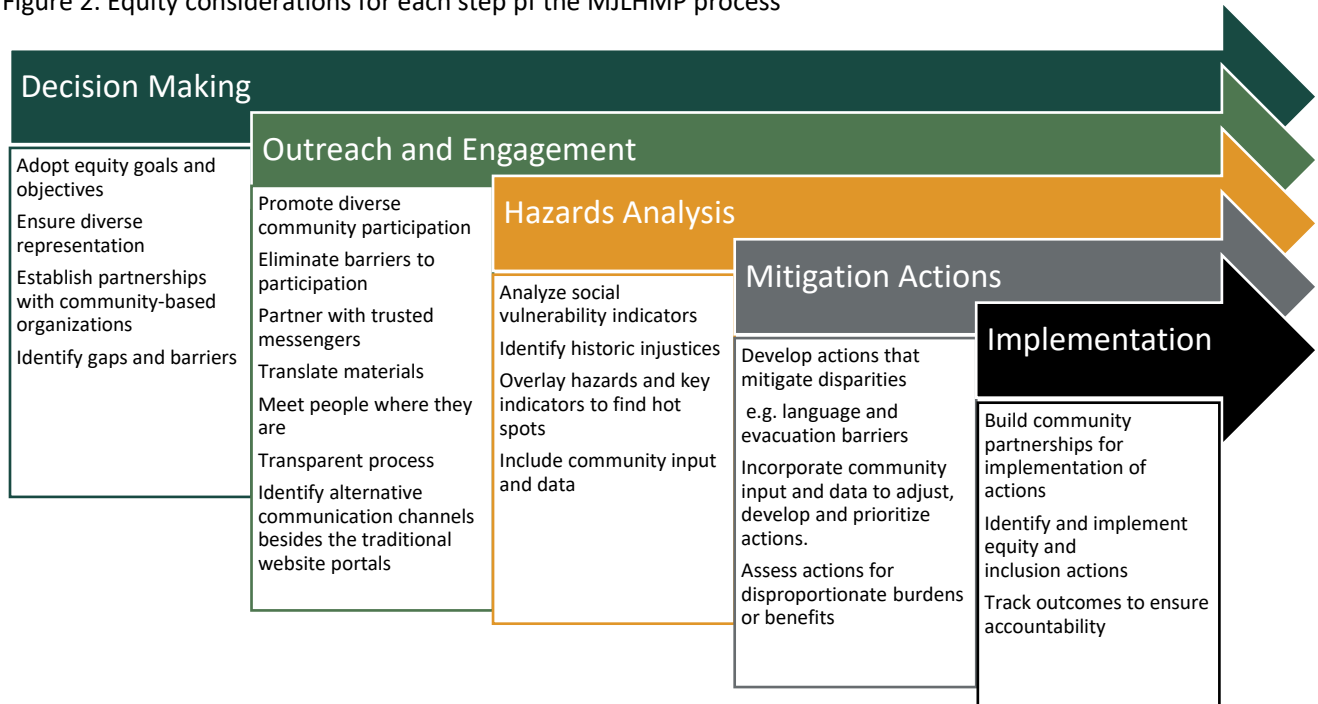

TIP: Look for data at the block group level to see more detailed local nuances such as this [SMC Community Affairs Census Map](#).

1.4 Framework to Integrate Equity into the MJLHMP Process

While San Mateo County does not yet have a comprehensive equity framework, the County has incorporated equity into the [SMC Recovery Initiative](#), the County's response to COVID-19. In many ways, hazard mitigation strives to prevent impacts that response and recovery efforts address so much of the recovery framework is applicable to LHMP planning. The following framework was adapted from the Recovery Initiative for the use of planning partners to incorporate equity into the MJLHMP process.

Figure 2. Equity considerations for each step of the MJLHMP process

Using an equity lens is new for most of us. It can be difficult to identify ways to operationalize equity in to a structured public planning process. The following grid provides detailed examples of equity considerations and recommended actions tailored for different aspects of the LHMP process.

Table 1. Examples of how to use an equity lens in hazard mitigation planning

Framework	Equity Considerations	Recommended Actions
Decision Making and Solutions: MJLHMP and Annex Pre-Planning and management	<ul style="list-style-type: none"> Who sits at the decision-making table? Are there systematic barriers to participation in the planning process? How will community and stakeholders be involved, and mutual communication be established? Scan for gaps – are needs of key socially vulnerable groups addressed? 	<ul style="list-style-type: none"> ✓ Establish equity principles and objectives to guide the MJLHMP process. ✓ Include community-based leaders on the MJLHMP Steering Committee including in plan development and review to identify gaps and opportunities for action. ✓ Establish partnerships with community-based organizations to inform process, identify actions, and foster mutual communication. ✓ Plan for integrating community feedback into plan update.

Accountability, Communication and Community Engagement	<ul style="list-style-type: none"> ○ How to include and deliver outcomes for those underrepresented in decision making or most affected by inequities? ○ How will we be accountable to the community from planning process throughout implementation? ○ <i>See guidelines on Part #2 of report</i> 	<ul style="list-style-type: none"> ✓ Use American Community Survey data and work with community-based organizations to identify who is in your community. ✓ Implement specific engagement for hard to reach, socially vulnerable and traditionally underserved populations. ✓ Implement mechanisms to report back to community members about how their input was addressed.
Understanding Data: Hazard analysis and risk assessment	<ul style="list-style-type: none"> ○ How does inequity increase the impact of the hazard or climate impact? ○ How will race, ethnicity, gender identity, income, languages spoken, disability, age, or medically sensitive people be affected by a disaster or climate impact? Are any of these groups concentrated in high risk areas? ○ Did we miss anything because we are not familiar with day to day life or what it is like to experience a disaster in a socially vulnerable community? ○ <i>See guidelines on Part #3 of the report and refer to Appendix A for details on the approach to be used by Tetra Tech for the MJLHMP 2021 update.</i> 	<ul style="list-style-type: none"> ✓ Engage with community stakeholders to identify socially vulnerable neighborhoods and population groups and assure that locally-relevant hazards, risks and social vulnerability are included in the analysis. ✓ Analyze social vulnerability, hazards and climate data together (required by SB379). ✓ Consider race, ethnicity, gender identity, income, languages spoken, disability, age, medically sensitive people, especially regarding the individual or group's ability to prepare for, survive and recover from a disaster or climate impact. ✓ Assess long-standing and multi-generational inequities, e.g. redlining, underinvestment, hazardous waste sites. ✓ Consider ways to measure cost of risks and hazards beyond property value, which undervalues the impact of asset loss to socially vulnerable communities.
Burdens and Benefits: Drafting mitigation measures and updating the plan	<ul style="list-style-type: none"> ○ Would low-income households or communities of color experience a disproportionate burden? Will affluent communities receive disproportionate benefit? ○ Have historical inequities led to more substantial infrastructure needs in some communities? ○ Will the proposed measures result in displacement of vulnerable community members? 	<ul style="list-style-type: none"> ✓ Evaluate past mitigation measures and adjust or add to them to be more equitable and address gaps and new risks affecting vulnerable populations. ✓ Incorporate previously developed community solutions when possible. ✓ Update approach to hazards which have increased in severity and are hitting socially vulnerable community members hard, such as fire, pandemic, heat, smoke related to wildfires, and power outages. ✓ Identify physical barriers and old/lack-of infrastructure in vulnerable and underserved communities. ✓ Involve community-based organizations in evaluation of benefits and burdens.
Next Steps: Throughout and at the end of the process	<ul style="list-style-type: none"> ○ How can barriers to inclusion be addressed so the process can be more thorough and inclusive now and in the future? 	<ul style="list-style-type: none"> ✓ Leverage existing and build new relationships with community leaders and stakeholders to support equity and inclusion efforts. ✓ Act responsively when equity considerations are identified.

PART 2: Using an Equity Lens for Hazard Mitigation Community Engagement

Effective outreach and community engagement increases buy-in and support for the MJLHMP process. [FEMA's Hazard Mitigation Planning Handbook](#) identifies these as key components of successful outreach:

SUCCESSFUL OUTREACH

- Informs and learns about hazards, climate impacts, local risk and social vulnerability
- Invites interested parties to contribute their views and ideas for mitigation
- Identifies conflicts and incorporates different perspectives and priorities early in the process
- Secures data an input that improves overall quality and accuracy of the plan
- Ensures transparency and builds trust
- Maximizes opportunities for implementation through greater consensus and acceptance
- Identifies and eliminates barriers to participation and assures hard to reach and traditionally underserved communities can access the process

Many planning processes traditionally have used a set of traditional engagement methods, including English-language surveys, workshops and presentations. These forms of engagement are often are hard to access for the general public and especially so for socially vulnerable communities. All cities in San Mateo County have populations that are hard to reach or who have difficulty accessing these engagement methods. Examples include residents that can't access online resources, older adults, youth, people with disabilities, residents with limited education or literacy, residents who face differential treatment due to their race, ethnicity, religion or other social characteristic, such as low income. Below are strategies to increase inclusivity and collect a more thorough set of input through accessibility and inclusion practices.

Trail Work at Memorial Park in San Mateo County

2.1 Hard to Reach Community Engagement Strategies

BUILD PARTNERSHIPS AND TRUST

- ☑ Attend existing community meetings and partner with local organizations and leaders.
- ☑ Reach out to colleagues in other departments or partner organizations that work with hard to reach communities more frequently such as parks and recreation, libraries, community centers and faith organizations.
- ☑ Be prepared for potential existing community frustrations; route community concerns unrelated to the MJLHMP to the appropriate parties.
- ☑ The San Mateo County Office of Sustainability can provide support to MJLHMP planning partners by being a resource for questions about equity and inclusion tools and approaches, and to facilitate connection to community organizations to strengthen capacity to engage hard to reach populations.
- ☑ Prioritize socially vulnerable communities in areas at high risk for hazards and climate impacts.
- ☑ Hire or provide resources to community-based organizations in your jurisdiction who have existing relationships to lead or support engagement efforts when possible. Collaboration between subject matter and community experts is an optimal way to tailor engagement methods and materials.

CULTURALLY APPROPRIATE COMMUNICATION

- ☑ Review material for accessible language and consider disability access. Will the terms mean the same thing they mean to topical specialists as they do to different types of audiences? Consider education level needed to access the information.
- ☑ Bridge from plan to real life community concerns by learning about key community issues in advance and then talking about the plan in terms that are resonant to the community. Community leaders or elected officials are familiar with community concerns and can assist you in framing communication.
- ☑ Provide locally, culturally, linguistically appropriate community engagement that will resonate with each hard to reach population in your community.
- ☑ Community members may not understand what we mean by hazard or climate impact, so give examples: "the plan seeks to prevent harm from fire, flood, earthquake, pandemic, etc."
- ☑ Examples must be relevant to the audience or inclusive of the audience. Assume participants will include some that can't afford to pay for insurance or other mitigation measures.

PART 3: Integrating Social Vulnerability into Hazards Analysis and Considerations for Mitigation Planning

It is important to understand which individuals, populations, and communities will be most impacted by a hazard in order to reduce risk and create equitable outcomes. The following section discusses the hazards that have the potential to affect San Mateo County and indicators of social vulnerability specific to each hazard. The hazards currently addressed in the [2016 San Mateo County LHMP](#) include Climate Change, Dam Failure, Drought, Earthquakes, Flood, Landslide, Severe Weather, Tsunami, Wildfire, and several Human-Caused Hazards. The 2021 San Mateo County LHMP will likely also include Health and Pandemics as well as Heat under the Extreme Weather hazard category.

Tetra Tech, the consultant providing support with the SMC MJLHMP update, has developed a detailed approach for integrating social vulnerability data into the hazard analysis, as explained in detail on Appendix A. San Mateo County planning partners are encouraged to choose this enhanced protocol for risk ranking that integrates social vulnerability data (Appendix A), which will also screen each mitigation action they identify for equity considerations. This approach was successfully utilized on the City of Portland's Hazard Mitigation Plan.

DEFINITIONS

"Hazard" is an event or physical condition that has the potential to cause fatalities, injuries, property damage, infrastructure damage, agricultural losses, damage to the environment, interruption of business, or other types of harm or loss (Cal OES 2018).

"Risk" is the potential for damage or loss created by the interaction of hazards with assets such as buildings, infrastructure, or natural and cultural resources (Cal OES 2018).

"Vulnerability" is the level of exposure of human life and property to damage from natural and human-made hazards. For buildings and other structures, "vulnerability" means susceptibility to damage given the inherent characteristics of a particular structure (Cal OES 2018).

3.1 Vulnerability Indicators Applicable to All Hazards:

- **Income:** Low income populations are often more exposed to nature disasters (Boustia et al. 2017) and have fewer financial resources to prepare and recover from disasters. Low-income neighborhoods also have compounding challenges such as higher impact of COVID (essential workers and density), historic underinvestment in infrastructure, zoning which allows or has allowed greater air, water and soil pollution or hazardous waste, greater likelihood of being in a flood zone, and a greater likelihood of being exposed to greater [heat impacts \(mid to South County\)](#).
- **Race and Ethnicity:** According to a literature review in the Journal Disasters (Fothergill et. al, 1999) "...racial and ethnic communities in the US are more vulnerable to natural disasters, due to factors such as language, housing patterns, building construction, community isolation and cultural insensitivities."
- **Children and youth:** Youth are dependent on adults for many things and tend to be highly dependent on their phones.
- **Older adults:** Older adults may depend on paratransit and need electricity for medications and health devices.

- **People with disabilities:** Some people with disabilities require electrical power for devices that perform life and death functions such as assisting breathing.
- **People in poor health or with chronic diseases:** For example, the Environmental Protection Agency (EPA) has identified key populations [“sensitive”](#) to wildfire smoke including people with asthma and cardiovascular disease. People who require dialysis or insulin face post-disaster challenges.
- **Limited English proficiency or linguistic isolation:** Non-English speakers may not understand emergency alerts unless local authorities provide information/alerts in all locally spoken languages.
- **Pregnant women:** American College of Obstetricians and Gynecologists (ACOG) identifies continuation of prenatal care as a priority, including sites that are prepared to offer care post-disaster and communication to women in the third trimester ([ACOG 2010](#)).
- **Women:** According to ACOG, “Women involved in disasters are also at an increased risk for sexual assault and should be provided a safe and secure environment in evacuation shelters.” ([ACOG, 2010](#))
- **Lack of vehicle access/transit dependent:** Transit-dependent populations will require assistance during an evacuation and maybe unable to evacuate rapidly. Children, older adults, and people with a disability are more likely to be transit-dependent.
- **People who are unhoused:** Unhoused people face hazards and disasters without any protections, may not be able to access needed services and shelter, and may not receive alerts.
- **Undocumented immigrants:** Undocumented immigrants may not feel safe accessing shelters or relief.
- **Political disenfranchisement:** Consideration should be given to continuity of access to voting for those displaced by disaster or who lose their documentation in a disaster.
- **LGBTQI:** For example, transgender youth may face unique challenges and need tailored support in a disaster situation as documented by this [news report](#) (Compton 2017). Shelter infrastructure may be organized in a way that excludes or endangers transgender people.
- **Rural Communities:** Rural areas can face increased risks from older infrastructure and are less likely to receive recovery. Cost-benefit analyses can be biased in favor of densely populated areas ([Jerollman 2021](#)).
- **Unincorporated communities:** Areas with substandard infrastructure that have pockets of vulnerable Black Indigenous People of Color (BIPOC) communities in them.

Climate Change

Climate change will intensify the impacts of many of the other hazards listed below, and therefore shares the same indicators of vulnerability.

Dam Failure

In San Mateo County dam failures could impact already socially vulnerable communities [in some parts](#) of the County. Dam Failure is an uncontrolled release of impounded water due to structural deficiencies in a dam, which can be catastrophic to human life and property downstream. While no dam failures have previously occurred in San Mateo County, 13 of the 21 dams in the County could endanger lives and property in the case of a failure. While the entire population within a dam failure inundation zone is considered exposed and vulnerable, the most vulnerable include economically disadvantaged and the population over age 65 (San Mateo County 2016). Dams were designed to withstand expected levels of pressure from water; with increasing precipitation due to climate change could increase water pressure beyond planned tolerances ([New York Times, 2020](#)).

Drought

Drought is the cumulative impacts of several dry years on water users, which can include deficiencies in surface and subsurface water supplies, and effects on health, wellbeing, and quality of life. San Mateo County has experienced four significant droughts in the last 45 years, and droughts are likely to continue to occur in San Mateo County (San Mateo County 2016). Drought can lead to farmworker job loss ([Mcclurg 2015](#)), food insecurity ([Mbow 2017](#)), and can impact communities reliant on groundwater for drinking water.

Earthquakes

An earthquake is the shaking of the ground caused by an abrupt shift of rock along a fracture in the earth or a contact zone between tectonic plates. California is seismically active because it sits on the boundary between two of the earth's tectonic plates. The last significant seismic event recorded in the San Mateo vicinity, occurred in 1989 during the San Andreas Loma Prieta Earthquake. Two groups who are particularly vulnerable to earthquake hazards are low income households and people over 65 years of age ([San Mateo County 2016](#)).

Flood

A flood is the inundation of normally dry land resulting from the rising and overflowing of a body of water. Heavy rains are the most frequent cause of flooding within San Mateo County jurisdictions, although coastal jurisdictions may also undergo flooding as a result of high winds, high tides, storm surge, and tsunami events ([San Mateo County 2016](#)). Additional indicators of vulnerability to flooding include:

- Poor housing quality
- Lack of housing affordability
- Housing tenure
- Communities with industrial/hazardous sites
- Communities with older infrastructure
- Previously redlined communities
- Lack of green spaces and vegetation
- Increased impermeable surfaces
- Limited number of roadways

Landslide/Mass Movements

According to the U.S. Geological Survey (USGS), the term "landslide" includes a wide range of ground movement, such as rock falls, deep failure of slopes, and shallow debris flows. Landslides and mudslides can be initiated by storms, earthquakes, fires, or human modification of the land. Landslides have occurred regularly within San Mateo County and can pose a serious hazard to properties on or below hillsides. Landslides can result in the destruction of foundations, offset of roads, breaking of underground pipes, or overriding of downslope property and structures.

Severe Weather/Extreme Weather

Severe weather refers to any dangerous meteorological phenomena with the potential to cause damage, serious social disruption, or loss of human life. It includes atmospheric rivers, extreme heat, extreme cold, lightning sieges, poor air quality, among other events. Indicators of vulnerability to extreme heat include:

- Outdoor workers & farmworkers
- Residents living in older homes
- People who are unhoused
- People susceptible to health impacts from poor air quality
- Lack of air conditioning
- Deforestation and lack of green spaces and tree cover
- Lack of basic information on what to do during high heat days and smoky days
- Lack of community shelters or resiliency hubs for cooling and smoke relief
- Lack of a local or county/district emergency plan being in place
- Lack of access to affordable health care
- Paved surfaces and urban heat island effect

Tsunami

A Tsunami is a series of traveling ocean waves of extremely long wavelength, usually caused by displacement of the ocean floor and typically generated by seismic or volcanic activity or by underwater landslides. In the past California has been struck by several minor tsunamis and several major tsunamis and San Mateo County specifically has been struck by several minor tsunamis. The populations most vulnerable to the tsunami hazard are the elderly, disabled, and very young who reside or recreate near beaches, low-lying coastal areas, tidal flats, and stream or river deltas that empty into oceangoing waters. Visitors recreating in or around inundation areas would also be vulnerable, as they may not be as familiar with residents or appropriate responses to a tsunami or ways to reach higher ground.

Wildfire (& Air Quality)

A wildfire is any uncontrolled fire occurring on undeveloped land that requires fire suppression. The potential for significant damage to life and property exists in areas designated as wildland-urban interface (WUI) areas, where development is adjacent to densely vegetated areas. Based on risk factors for the County and past occurrences, it is highly likely that wildfires will continue to occur in San Mateo County. Additional indicators of vulnerability to wildfire include:

- Electricity-dependent populations
- People susceptible to health impacts of air pollution
- Poor housing quality
- Workers in the informal economy
- Lack of green spaces and vegetation
- Industry/hazardous site

Figure 3: Example of overlapping social and wildfire risks in San Mateo County. The image below shows a concentration of very low income (as defined by [US HUD](#) for SMC) households in gray within the boundary of the San Gregorio Large Fire Potential Scenario in pink based on [SMC Climate Ready modeling](#). Low income community members could encounter a variety of distinctive challenges in a fire scenario due to lack of funds to address both evacuation and basic needs.

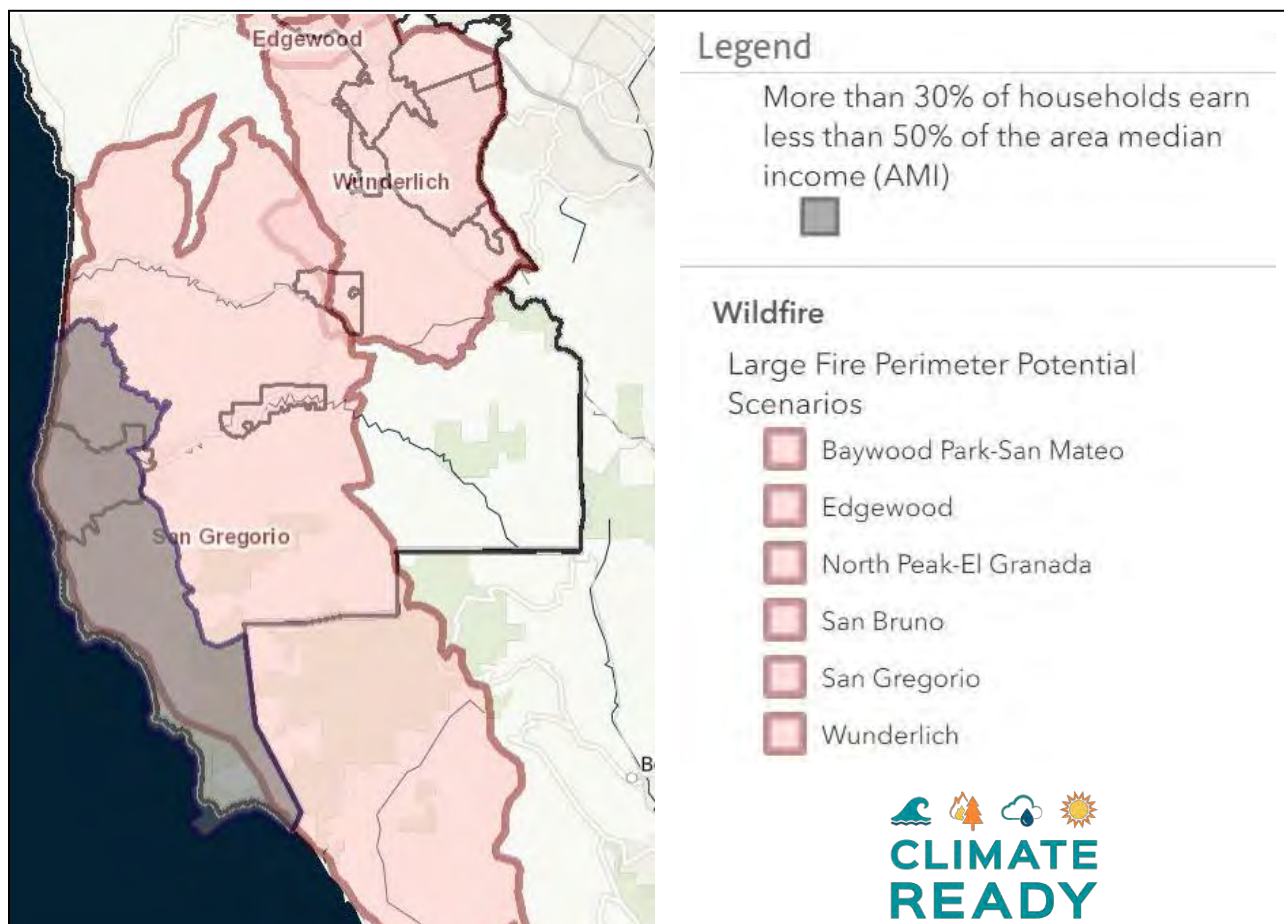

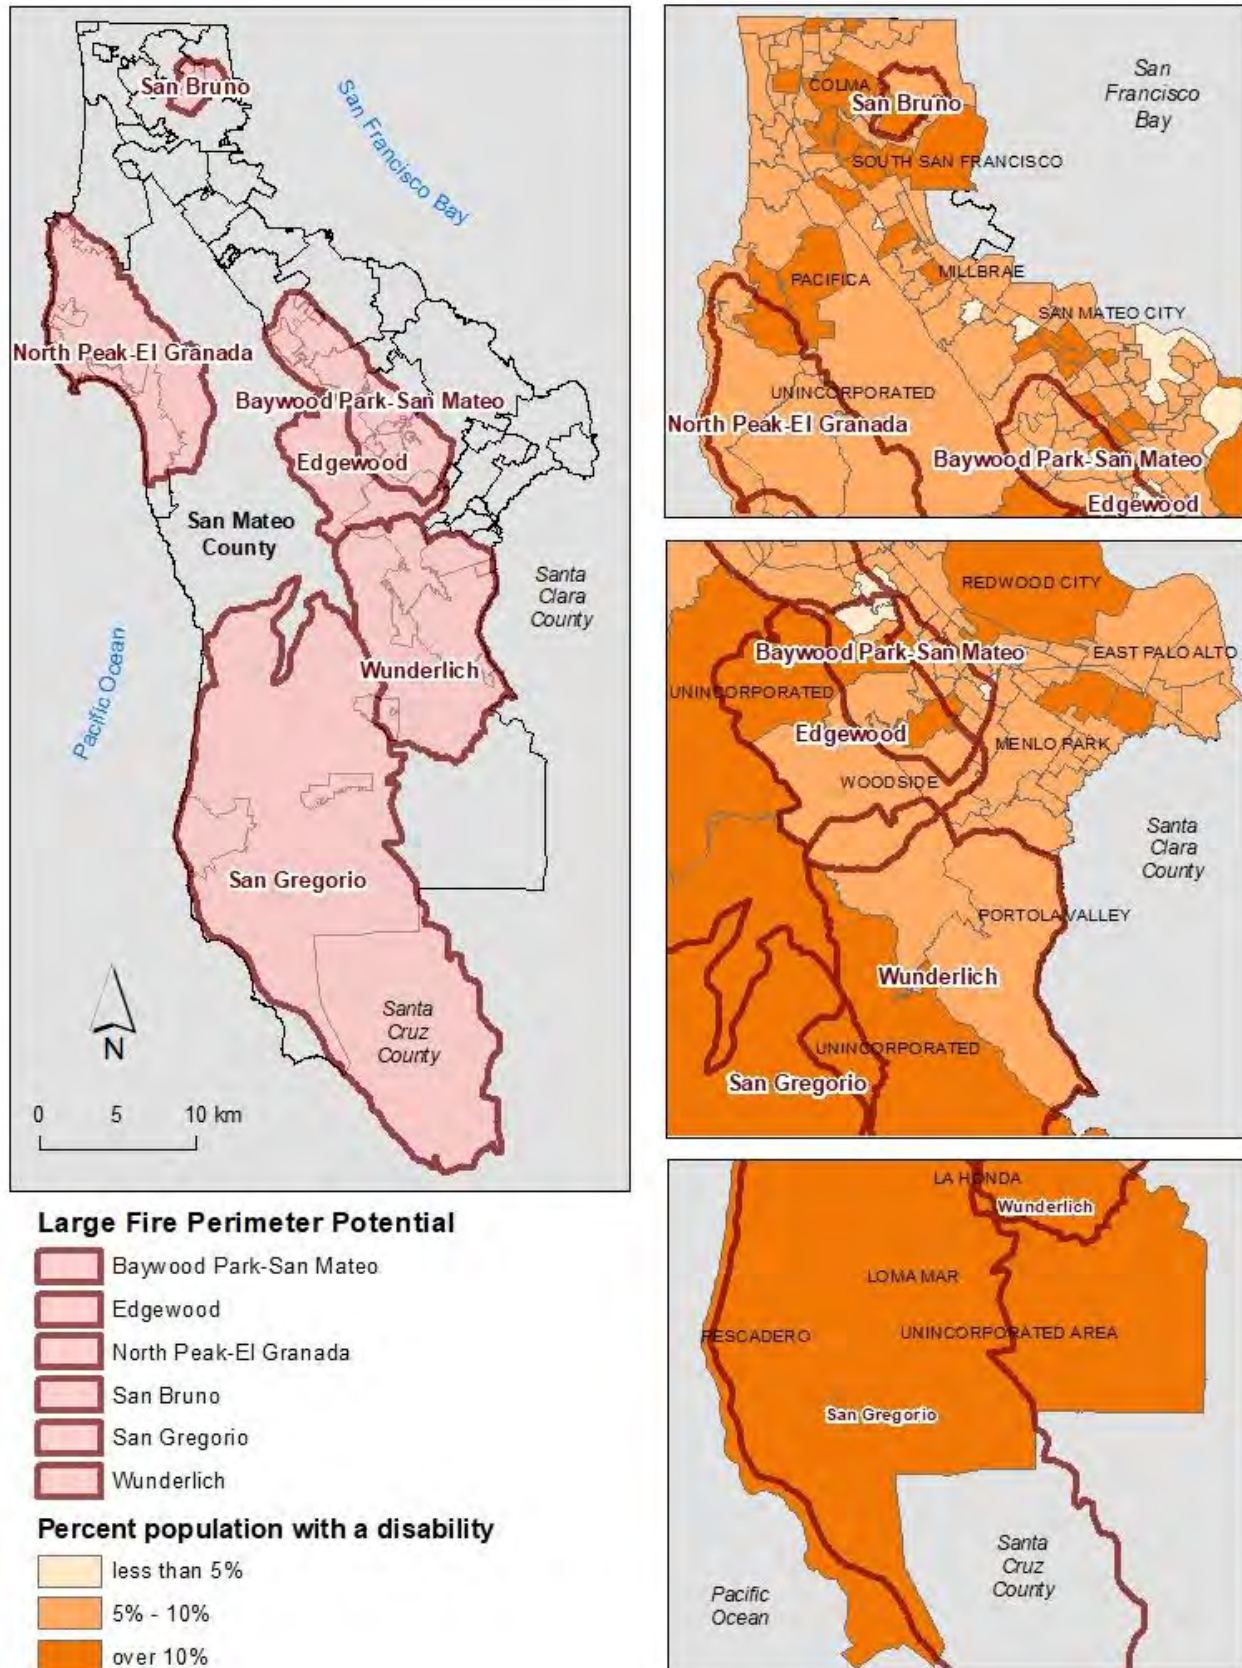

Figure 4: Example of overlapping wildfire risks, based on modelling from [Climate Ready SMC](#), and population with disabilities in San Mateo County, represented by the orange blocks.

Appendix A. Recommendations for Incorporating an “Equity Lens” into the San Mateo County Multijurisdictional Hazard Mitigation Plan

The following information summarizes the options that Tetra Tech is recommending to the Core Planning Team (CPT) for the update to the San Mateo County Multijurisdictional Hazard Mitigation Plan, on how to integrate a social equity lens into the standard hazard mitigation planning process, without impacting the timeline. Before presenting these recommendations, the key points Tetra Tech would like to emphasize are:

- This is a multi-jurisdictional scope plan that included both municipal and special purpose district planning partners. While both are defined as “local governments” under the Disaster Mitigation Act of 2000, each has very different responsibilities and roles mitigating the impacts from hazards.
- Addressing social vulnerability is not a requirement for Local Hazard Mitigation Plans prescribed under 44CFR, section 201.6.
- There are distinct limitations regarding data available to assess social vulnerability in the context of what is required for a local hazard mitigation plan.

With these points in mind, the recommendations provided below have been separated into Standard elements and Optional elements. The standard elements are ways the plan can enhance acknowledging the concepts and principles of an “equity lens” without disrupting the standard protocols applied for risk ranking and action planning. The optional elements are enhancements that would impact the risk ranking and action planning protocols and would be considered “optional” by each planning partner based on their desire to utilize the equity lens concepts for this plan update. Tetra Tech feels very strongly that the only way for this process to not appear as being a forced directive from the County, is to give each planning partner the option to adopt the proposed protocols. The Overview of the recommendations are as follows:

Standard Elements

Regional Profile: Volume 1, Part 1, Chapter 4 of the plan provides a regional profile of the entire planning area broken down into the following sections:

- Historical Overview
- Major Past Hazard Events
- Physical Setting
- Development
- Demographics
- Economy

Recommendation: Following the “demographic” section of Chapter 4, create a new section titled “Social Vulnerability and Hazard Mitigation”. This section will be utilized to frame how the social vulnerability lens will be applied to this hazard mitigation plan update. This section should clearly outline the Planning Partnership’s understanding of social vulnerability, identify the metrics (indicators) that will be utilized to measure it, and identify the gaps in data that create challenges for inclusion in the mitigation planning process. This section of the plan will be very important as it will set the table for how social equity will be addressed by this plan. Where the equity lens will be applied and where it won’t. It will very clearly state the limitations in assessing social vulnerability based on the type of data available and how it can or cannot interface with standard best management practices for hazard mitigation planning risk assessment and ranking. It is also this section where we could attempt to address “historic injustices” in a qualitative, overarching manner, dependent upon data available to support this discussion.

Hazard Profiles: Volume 1, Part II, Chapters 7-17 of the plan are the risk assessment portions of the plan that will include a chapter for each identified hazard of concern. Note: that natural hazards will be fully assessed pursuant to the requirements of 44CFR, section 201.6, while other hazards of interest will be profiled, but not fully assessed. The profile for each hazard that is fully assessed is broken down as follows:

- General Background
- Hazard Profile
 - Past Events
 - Location
 - Frequency
 - Severity
 - Warning Time
 - Compounding Factors and Secondary Hazards
- ***Exposure***
 - ***Population***
 - Property
 - Critical Facilities and Infrastructure
 - Environment
- Vulnerability
 - Population
 - Property
 - Critical Facilities and Infrastructure
 - Environment
- Economic Impact
- Future Trends in Development
- Scenario
- Issues

Recommendation: Under the “Exposure” section for each fully assessed hazard profile, a new sub-section will be added titled “Social Vulnerability Indicators”. Under this section, the exposure by social vulnerability indicators will be discussed as it pertains to the extent and location of the hazard being profiled. Tetra Tech recommends utilizing the “Social Vulnerability” indicators defined by FEMA under its National Risk Indexing program (NRI)

<https://hazards.geoplatform.gov/portal/apps/MapSeries/index.html?appid=ddf915a24fb24dc8863eed96bc3345f8>

Social Vulnerability as defined under FEMA’s National Risk Index:

Social Vulnerability is the susceptibility of social groups to the adverse impacts of natural hazards, including disproportionate death, injury, loss, or disruption of livelihood.

The NRI data will be processed so that the risk indexing will be relative to San Mateo County and not based on the comparison to national averages. Please note that only NRI datasets will be utilized. There will be no creation of “hybrids” using local data.

The reasons for utilizing this data would be that it already has data available nationwide in a format suitable for hazard mitigation planning risk assessment. It is important to note that using an existing data set that has already been vetted and validated is ideal considering the expedited timeline for this process. We simply do not have the time to create and vet new social vulnerability indices. Please note that not all hazards have a clearly defined extent and location, so for those hazards that don’t, this discussion would focus on the indices for the entire planning area. This will be a spatial exercise utilizing best available data for each indicator identified.

No attempt will be made to quantify social vulnerability under the “vulnerability” section of each hazard profiled. This will be due to the inconsistencies that would result from trying to intersect regional data (census tract or block level data) with the building specific, point-based data that is the basis for the vulnerability assessments for

the plan. This would be clearly explained in Chapter 6 of the plan that defined the methodologies applied for the risk assessment of the plan.

Public Outreach Strategy: The Public Outreach strategy for this plan update process should be framed with an equity lens, and strive to include the following elements that can be completed within the expedited timeline:

- Provide information in easy to digest form and ensure the understanding of information shared by the community at large
- Promote diverse community participation. This should be done through the identification of, and outreach to, trusted community-based organizations.
- Utilize trusted messengers: similar to above
- Translate outreach materials
- Meet people where they are
- Transparent process: We have included the Tt-produced graphic to show which step in the process we are in (added to website). The steering committee meetings will be open to the public, two resident surveys, and resident public meetings.
- Provide the public with links to other relevant websites that the County wants to promote.

Optional Elements

Risk Ranking: Volume 1, Part II, Chapter 19 of the plan currently has a risk ranking protocol that defines “risk” as Probability x Impact where impacts are defined as the impact on the people, property, economy and environment of a planning area. Metrics have been defined for each component that result in each hazard getting a risk score, so that the hazards that were fully assessed can be compared. Risk ranking in this plan takes place on 2 fronts. First, the hazards are ranked for the entire planning area using aggregate data from the risk assessment. Next, each planning partner will rank the risk for their specific jurisdiction utilizing risk assessment data specific to their jurisdiction.

Recommendation: As an optional element, Tetra Tech would recommend establishing 2 versions of the risk ranking protocol. One version would be the standard protocol that is currently being applied under the 2016 plan. The other, would enhance that protocol to include a social vulnerability element utilizing FEMA’s National Risk Index (NRI). So, for example:

- **Standard Protocol: Probability x (impacts on People + Property + Economy)**
- **Enhanced Protocol: Probability x {impacts on (People + NRI Social Vulnerability Rating) + Property + Economy}**

The enhanced protocol would need to be developed by Tetra Tech looking at appropriate weighting to the metrics (the NRI social vulnerability rating). The results for both approaches would be categorized as “high, medium or low”. The objective for this dual process would be for it to seamlessly integrate into the planning process without creating any delays in the process. It is important to note that having 2 options for ranking risk would create 2 different scoring regimes for the ranking of risk. However, as long as these metrics are clearly defined and protocols established, it should not lead to any confusion within the plan or the planning partnership.

Action Planning: Each planning partner is required to identify and prioritize at least 1 action that addresses each hazard that was ranked as “high” under the risk ranking protocol defined for the plan. This does not mean that the action plan is limited to only addressing high ranked hazards, it just means that it must at a minimum. For those planning partners that were covered under the 2016 plan, they must fully reconcile their actions from the

prior plan and determine which actions are to be carried over to this plan update. For each action, the jurisdiction must identify:

- The hazard(s) the action will address
- Whether the Action will address new or existing assets
- The lead agency responsible for implementation
- Any support agencies
- The objectives the action will meet
- The sources of funding for the action
- Timeline for completion

Recommendation: For those planning partners that chose the enhanced protocol for risk ranking, they will screen each action they identify for equity considerations that may result in a reframing of the action. This approach was utilized with success on the City of Portland’s Hazard Mitigation Plan. Tetra Tech developed 2 tools to support this process: an equity screening review tool (*Table 1.0*) and an equity screening question matrix (*Table 2.0*). Both tools were applied by the departments in the development and framing of each action in the action plan.

Both tools could be adapted specifically to address the needs for the San Mateo County planning effort. It is important to note that this recommendation includes no changes to the prioritization of the action. Tetra Tech feels that the current prioritization protocol is adequate and is supportive of both options being proposed. For those partners that chose to use the Enhanced protocol, their action plan matrix would be expanded to include the identification of which “equity category” (Procedural, Distributive, or Structural) each action meets.

Table 1.0. Equity Screening Review Tool

	Procedural	Distributive	Structural
Programs/ Services	How was the target audience included in the design of the program? What actions will be taken to ensure that services and programs are physically and programmatically accessible and inclusive? What are the criteria for participation or receipt of benefits?	Is the program or service designed to meet the needs of underserved and underrepresented communities? If not, what would need to be changed to ensure their equitable participation? How will program dollars be allocated to ensure inclusive and accessible service delivery? Does the cost structure of the program result in disparate use? /Does the fee structure of the service result in increased burdens for low-income communities?	Does this program/service create unintended consequences for communities that are underserved and underrepresented? How will they be mitigated? Is there an opportunity to extend additional benefits through this program/service that can help support the healing of past harms to communities? Does the program empower and build capacity of a community?
Capital Investments	What are the criteria for prioritizing projects and investments? Does the data and information used consider the demographic, geographic and real-world experience of residents and businesses in the area? If data gaps exist, what are you using to guide decisions? What process will be used to get input from the community? How will you reach underserved populations?	Will the investment provide improved safety, health, access, or opportunity for the communities who need it most? How will the underserved people who currently live and work in the area benefit from the investment?	What measures will be taken to mitigate the potential impacts of involuntary displacement in the project? How will business or employment opportunity created through the project be extended to communities of color, people with disabilities, and low-income people? How will community benefits be negotiated?
Regulation	Has analysis been done on the impacts to communities of color, people with disabilities, low-income populations, seniors, children, renters, and other historically underserved or excluded groups? How will impacted communities be able to learn about and understand changes with the regulation? How will the regulation be enforced?	Will the regulation provide improved safety, health, access, or opportunity for the communities who need it most? How will the regulation alleviate any cost-burden for those who are already in a position where it is difficult to pay?	Does the regulation create or inhibit opportunity for communities of color, people with disabilities, and low-income populations? Will enforcement disproportionately negatively affect low-income communities or communities of color? How will this be mitigated?
Planning	How will impacted communities be involved in the planning process? What measures will be taken to ensure the process is fair and inclusive?	How does the plan prioritize and address the needs of the most impacted or vulnerable in the community? Does the plan improve safety, health, access, or opportunity for the communities who need it most? How will resources shift to ensure equitable implementation of the plan?	What measures will be taken to mitigate the potential impacts of involuntary displacement? How will policies support community development? What support is needed to build the community's ownership and self-determination with the plan?

- Procedural equity—ensuring that processes are fair and inclusive in the development and implementation of any program or policy
- Distributive equity—ensuring that resources or benefits and burdens of a policy or program are distributed fairly, prioritizing those with highest need first.
- Structural equity—a commitment and action to correct past harms and prevent future negative consequences by institutionalizing accountability and decision-making structures that aim to sustain positive outcomes

Source: BPS Presentation, Climate Action Plan and Equity: Connecting the Dots with the Community

Table 2.0. Equity Screening Question Matrix

Evaluation Question	Response
1. What issue/problem/risk is the action designed to address? And what are the expected benefits?	Issue: Benefits:
2. Who is the target audience/beneficiary for this action? Who is affected if no action is taken?	
3. How would you classify the mitigation action? (Programs/Service; Capital Investment; Regulation; Planning). <i>Refer to questions in table above based on your answer to this question.</i>	
4. Will any community groups be involved in the design/implementation of this action? (i.e. potential partners)	
5. Will this action reduce risk from natural hazards for the following groups? How?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
6. How could this action benefit the following groups? Or How could this action be modified so that there are benefits?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
7. How could this action burden/negatively impact/leave out the following groups, for example through communication, transportation, physical or programmatic barriers?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
8. If you have identified burdens, barriers, or negative impacts, or opportunities for benefits please <u>revisit the action</u> to identify strategies to reduce or eliminate burdens or negative impacts; remove communication, transportation, physical or programmatic barriers; or enhance potential benefits.	
9. Have you identified a performance metric for evaluating progress on this action? How will you know when this action is complete? (please provide) Have you considered outcomes for communities of color, people with disabilities, low-income families, people with limited English proficiency, renters, seniors, and children?	

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix B. Public Outreach Information

**SAN MATEO COUNTY
REPORT ON
OUTREACH EFFORTS
FOR HAZARD MITIGATION
PLAN UPDATE**

REPORT: Hard-to-Reach Community Input and Mitigation Actions Ideas for the San Mateo County's 2021 Multijurisdictional Local Hazard Plan Update

July 19, 2021

This report was prepared by the San Mateo County Office of Sustainability, Planning and Building.

Hard-to-Reach Community Input and Mitigation Actions Ideas for the San Mateo County's 2021 Multijurisdictional Local Hazard Plan Update

Introduction

This report summarizes the input gathered through community engagement with hard-to-reach and socially vulnerable populations throughout San Mateo County for the County of San Mateo's Multijurisdictional Local Hazard Mitigation Plan Update.

The San Mateo County Office of Sustainability (OOS) conducted outreach activities designed to include socially vulnerable groups that are typically under-represented populations in LHMP planning in order to benefit from the experience and expertise of socially vulnerable community members and to support planning staff to incorporate social vulnerability considerations in mitigation actions.

OOS selected eight organizations in a competitive process to support outreach and engagement from March to July 2021. The organizations engaged frontline, traditionally underserved and/or socially vulnerable populations and communities that have not been effectively included in many traditional planning processes in the past.

The goal was to better understand what hazards were impacting these communities and how the impact was affected by social vulnerability, and then to gather community mitigation action ideas that would minimize community risk. For a description of the organizations and the communities they serve and an overview of events, see Appendix A.

Populations Reached

The community members engaged primarily included low-income communities, people of color including Latinos, African Americans, Pacific Islanders and others, rural and urban communities, monolingual community members, previously redlined communities, undocumented people, people with disabilities and medical needs, older adults, farmworkers and unhoused residents. Additional engagement to these and other hard to reach populations should be conducted in future planning. Several of the events were conducted in Spanish and some of the communications were modified to support access by people with disabilities.

Community members were engaged and put at ease because of the leading role of trusted and culturally and linguistically competent community-based organizations and online activities were accessible to transit-dependent urban and rural people. The recommendations made by the communities should be understood in the context of daily experiences of barriers, hardships, and creativity, leadership and resilience to overcome them. More detail about these frequently intersecting and compounding barriers is included in the Social Vulnerability section.

Summary of Community Mitigation Ideas by Hazard

WILDFIRES

Information in Spanish delivered by trusted CBOs

Well-publicized **evacuation routes and shelters** access for people with disabilities

Bilingual text alert system for evacuation warnings

Emergency preparedness training and how to stay safe if you can't evacuate

Defensible spaces assistance for seniors, people with disabilities

DROUGHT

Drought resistant landscaping and rain barrels in households

Habitat restoration and incentives for people to replace lawns

Greywater use, policies for new construction in commercial & multifamily building

Underground water storage, groundwater recharge, updating wastewater treatment plants to clean water to potable standards

Rain water catchment and dual plumbing to utilize grey water for landscaping in large land / commercial properties

HEALTH & PANDEMIC

Send test & vaccine info through SMC Alert, help vaccination appointments

Partner with CBOs to **communicate with people with disabilities & medical needs**

Foster community building and offer support for isolated seniors and other isolated people

Integrate mental health & trauma support into training for emergency responders

Free bus, home pick-ups and paratransit evacuations to shelters during an emergency

HEAT & POOR AIR QUALITY

Combined cooling & clean air centers accessible to people with disabilities

Partner with CBOs to **improve public messaging**, bilingual SMC Alerts

Programs: Solar + storage, updating HVAC systems, backup generators, home weatherization, tree planting

Community team to inspect homes for air leaks, thermal loss, to prevent heat & smoke intrusion

Education for employers on the risks for outdoor workers, provide protective equipment

FLOODING

Creek dredging, drainage ditch maintenance

Policies to allow **building higher**

Incentives for landlords to upgrade rentals and farmworker housing

Fixing roads, adding rain gutters, sidewalks, and **evacuation routes signage**

Subsidies to raise and flood-proof homes; county-sponsored contractor help

EARTHQUAKES

Handbook of numbers to call for help in case of an disaster

Pre-made emergency kits or list of items for an emergency kit

Text alert system for evacuation warnings

Safety and preparedness training especially for people living in apartments

Retrofit homes, apartment complexes not up to current building code standards

Summary of Key Mitigation Themes

COMMUNICATION and CAPACITY BUILDING

- Increase multilingual and multimodal communication, improve text alert systems.
- Invest in local broadcast media capacity to use during an emergency.
- Partner with trusted CBOs to improve outreach and provide preparedness training.
- Foster two-way communication and collaboration with organized and spontaneous community-led hazard mitigation and emergency preparedness efforts.

POLICY and INFRASTRUCTURE

- Consider disability access, vulnerable populations, language barriers and financial barriers to assure inclusive implementation in emergency planning.
- Address infrastructure needs for communities facing chronic hazards (such as heat and flooding), historic underinvestment in infrastructure or difficulty getting to resources elsewhere.
- Invest in solar power generators, batteries and power storage.
- Add more shelters and cooling/clean air centers and power charging sites.
- Provide more advance warning of known hazards and lower thresholds to open sites.
- Address the long-term viability of highway 1 due to sea level rise and erosion.

ELIMINATING ACCESS BARRIERS

- Address needs of low literacy people, people with disabilities and medical needs, low income people, undocumented residents, transit dependent populations, renters, vulnerable workers, communities with limited routes in and out and/or limited resilience resources, and people temporarily or permanently without access to the internet and/or telephone service.
- Address current infrastructural and institutional access barriers, such as related to sidewalks, buildings, construction, etc. to aid evacuation for people with disabilities, older adults, people with medical needs, strollers and bicycles, during hazard events.
- Provide free or affordable and conveniently located supplies, such as sandbags or air filters, and subsidized or loaned equipment, such as back-up batteries.
- Provide free coordinated evacuation including at the door pick-ups for people with disabilities and transit dependent people.

MANAGING MULTIPLE HAZARDS

- Planning and capacity to manage a combination of heat, smoke, COVID-19 and or power outage. Assure clean air and cooling in shelters and cooling centers.

See Appendix B for additional themes and details.

Mitigation Ideas by Hazards

The following section summarizes community recommendations for hazard mitigation.

Extreme Heat and Poor Air Quality

Heat and poor air quality due to wildfire smoke was one of the most commented upon topics.

General Recommendations: Most were centered on the need to have more cooling and clean air centers throughout the County that are accessible to people with disabilities, have stated policies welcoming undocumented residents, and better outreach including disability access information. People suggested mobile centers to deploy in vulnerable communities and using schools, libraries and churches as centers and shelters. Participants asked for improved communication about heat warnings and excessive heat events and for a list of cooling centers available ahead of extreme heat so that people with disabilities and medical conditions can have more time to prepare and respond.

Preparedness and Equipment Solutions: Providing free or loaner equipment such as fans and air purifiers, distributing better extension cords or surge protectors, and free pool access for residents on high heat days. People suggested having something like a Community Emergency Response Team (CERT) to inspect homes for air leaks, thermal loss, and to certify that structures are working as efficiently as possible to prevent heat and smoke intrusion.

Infrastructure Solutions: Ideas included investing in updating HVAC systems and solar plus storage for public facilities and shelters to address power shutoffs associated with heat events, providing backup generators for elderly and at-risk individuals, home weatherization for vulnerable communities, and tree planting as a strategy to reduce heat in communities lacking trees and shade.

Communications Solutions: In terms of communications, ideas included partnering with community-based organizations to improve public messaging around the impacts of extreme heat and preparedness strategies by implementing multilingual outreach to raise awareness about what they could do and where to go during a heat or poor air quality emergency, especially in unincorporated communities. Another solution recommended was to identify residents to be block representatives that can disseminate information to neighbors and notice who might need help. Using text messaging and phone calls to provide this information is the best way to reach the Latino community, and there is a need to assure all SMC Alert messages are bilingual. Multiple community members requested a list of cooling centers available ahead of extreme heat. Special information and education are needed to help employers understand the dangers of working outdoors during a heat or poor air quality event, as well as providing workers with protective equipment.

Wildfire

Wildfire was identified as one of the hazards of most concern by community members.

Information gaps and concerns: Lack of clear communication was one of the main issues identified, especially by Coastside communities. People mentioned that they did not have clear information about how and when to evacuate or where to go during the CZU-Lightning Fire in 2020, specifically lacking information in Spanish. Furthermore, they stated that the information provided and CalFire guidance was not easy to access or to understand for elders and low-income residents. Several people expressed

concern about the difficulty to use ZoneHaven. More shelters are also needed on the Coastsides along with accessible and affordable transportation to the sites.

Communications and Education Solutions: Ideas included more information in Spanish delivered by trusted community organizations, well-publicized evacuation routes, promoting the Firewise USA program to increase awareness and preparedness regarding wildfires, and sending multilingual messages via the text alert systems for wildfire evacuation warnings. Suggestions related to emergency preparedness training included education on how to stay safe from fire and smoke if you can't evacuate, since farm and outdoor workers, especially on the Coastsides, are often required to keep working even during a wildfire situation.

Defensible Space: People said that creating and maintaining defensible spaces was difficult for seniors, people with disabilities or those who cannot afford or don't know how to clear defensible space around homes. Some organizations on the Coastsides provide a home repair program that could be expanded to provide some services in this regard.

Other Wildfire Solutions: More funding for volunteer fire brigades was recommended. To address the lack of personnel to fight fires or to maintain defensible spaces in public lands/open spaces, people suggested an internship towards firefighting career path working with prisoners, homeless residents, and high school students. Ideas to address lack of water to fight wildfires included capturing stormwater runoff, building more water reservoirs and establishing pre-existing agreements for private water providers to be reimbursed.

Flooding

Policy Solutions: Policy related ideas include changing regulations to allow building higher, subsidies or training on how to flood-proof your home that include County-sponsored contractor help, providing low-cost loans to raise homes and post-disaster funding for repairs and appliances after a flood event to help people get back on their feet. Other ideas are related with providing incentives for landlords or lowering permitting fees to upgrade rental housing and farmworker housing, plus promoting community drain clearing and flood-conscious architecture.

Infrastructure Solutions: Ideas included assuring good road conditions and securing effective rain gutters prior to a disaster, completing drainage ditch maintenance, providing sidewalks for roads that don't have them to assure pedestrian safety, and creating evacuation routes signage and signage indicating whether it is safe to drive through flooded areas in communities prone to flooding. On the Coastsides, suggestions included to continue Butano Creek bank restoration, and creek dredging.

Health and Pandemic

Overall, community members wanted to see health, medical, and disability considerations addressed throughout hazard mitigation and emergency planning and implementation.

Community Capacity: There was interest in increasing community-based capacity, for example training residential block leaders to conduct wellness checks and act as emergency contacts for neighbors. Community members noted that they developed their own strategies to respond rapidly and cope with COVID-19 with neighbors and community organizations and they want government to learn from and engage with these strategies.

Medical and Disability Needs: The needs of residents with health and mental health conditions as well as disabilities were highlighted as needing special attention in emergency planning, shelters and cooling/clean air centers and evacuation.

Communications and Outreach: Community members wanted COVID-19 information, particularly about where to get tests and vaccinations, to be more readily available and distributed in a more visible way such as through SMC-Alert or through a one-stop-shop website and app including real time information during an emergency. Guidance on wearing masks, getting tested and getting vaccinated was seen as inadequate if community members could not afford or even find masks, or get testing and vaccination appointments. Community members wanted masks for those who couldn't afford them and resources for getting vaccinated and tested to accompany these messages.

Earthquake

Earthquake Preparedness Solutions: Participants called out a need for earthquake safety training and basic preparedness information, especially for people living in apartment buildings. Participants suggested promoting the use of emergency kits by either distributing pre-made emergency kits or providing people with a list of items that should be included in an emergency kit. Another idea was to include a handbook of numbers to call for help in case of an earthquake or other disaster.

Infrastructure Solutions: Other suggestions included teaching people how to retrofit their homes and the need to address big apartment complexes that are in bad shape and/or not up to current building code standards.

Drought

Water Conservation Solutions: At the household level, water conservation ideas to address shortages included encouraging drought-resistant landscaping and rain barrels in households, retrofitting to save water in residential areas. Infrastructure solutions at the county and city scale included increasing water storage capacity, underground water storage, groundwater recharge, updating wastewater treatment plants in order to clean water to potable standards, and allowing access to non-potable water for large users like golf courses. Nature-based solutions include habitat restoration and incentives for people to replace lawns.

Policy Solutions: Policy considerations include the removal of restrictions for greywater use programs, water use policies for new construction in commercial and multifamily building, and cities setting targets to conserve water. Other ideas include low-impact development (LID) requirements for all new residential and commercial construction, requiring large land and commercial properties to have rainwater catchment and plumbing that allows for reuse of grey water for landscape purposes.

Communications Solutions: Broadcast information on programs such as Lawn Be Gone and Rain Garden Rebate Options from the Bay Area Water Supply and Conservation Agency (BAWSCA).

Multiple Overlapping Hazards

Many people described the challenges they faced in the summer of 2020 when extreme heat, smoke from wildfires, and the pandemic all happened at the same time with overlapping Public Safety Power Shutoffs (PSPS). This combination of events meant that people couldn't take the usual measures to get relief from the individual hazards. For example, people couldn't open their windows to get relief from the heat because then the harmful smoky air would get into their homes or run fans when the power

was out. Going to a cooling center with air filters to get relief from the heat and smoke would put them at greater risk of catching COVID-19. In normal times people would usually go to the coast and beach for relief from the heat, but the beaches were closed due to COVID-19.

- Provide clean air and cooling in shelters and cooling centers. A need for capacity to manage a combination of heat and smoke or heat, smoke and COVID-19 plus access to power was raised frequently.
- Assistance with roof replacements for both fire protection and solar installations.
- Use a messaging text alert system, such as SMC Alert, for evacuation warnings related to wildfires, flooding and earthquakes, and for heat advisories and extreme heat warnings.
- Conduct outreach to disabled community about signing up for alerts.
- Develop/replace farmworker housing to withstand extreme storms, floods, quakes, and fire.
- Overlapping power outages were a substantial challenge. See more recommendations in the Power Outage section.

Overarching Social Vulnerability Considerations

This initiative received extensive input and solution suggestions from community members that address how to prevent social vulnerability (see box) from increasing hazard risk. Most participant input could be addressed by adapting the principle of Universal Design, that is to design all hazard mitigation and emergency planning to be accessible for all community members by devising solutions to social vulnerability-driven and other barriers to access.

Community input: mitigate hazards and social barriers together - examples

Plan for improvements in emergency communications to assure socially vulnerable groups can access and feel comfortable accessing emergency operations including evacuation and shelters.

- Assure information is accessible, relevant and helpful to and reaches low income people, monolingual non-English speakers, people of color, people with disabilities and medical needs, youth and older adults.
- Include on site and online publicly posted inclusion policies confirming undocumented people will be served equally.

Conduct emergency planning that mainstreams the needs of and addresses barriers for low-income and socially vulnerable people and assures inclusive implementation.

- Comprehensive integration of disability access, access to power, medicines, service and comfort animals throughout Emergency Planning with a focus on developing staff leadership, adding disability community oversight, coordinated evacuation and mainstreaming disability access and access to uninterrupted power for people with physical and mental disabilities and those with medical needs.
- Comprehensive planning for people who cannot access private transportation due to cost or availability of transit, rural or remote location, lack of paratransit, inability to drive at night, one car households and youth, older adults, people with disabilities and others who do not drive.
- Comprehensive planning for financial barriers, for example low-income people may not be able to afford air filtration devices, generators, air conditioners, or to replace spoiled food resulting from power outages.
- Comprehensive planning for vulnerable workers such as the informal workforce, agricultural and outdoor workers and their employers.

Conclusion

This report summarizes feedback gathered through targeted outreach and engagement activities to socially vulnerable communities and hard-to-reach community members. Working in partnership with eight community-based organizations, Office of Sustainability staff gathered feedback from over 600 people and reached 30,000 people through social media and email listservs.

The feedback highlighted community members' interest in being involved and active participants in hazard mitigation, and emergency planning and response activities in their communities. Many of the comments from community members were around suggestions for improving hazard-related communications. In summary, community members requested more frequent alerts and information in Spanish and other languages. Addressing barriers faced by one group is likely to help other groups, for example increased disability access could greatly benefit older adult populations, and people recovering from hazard caused or other temporary injuries. The outreach and engagement efforts conducted as part of the Multijurisdictional Hazard Mitigation Plan is part of an ongoing effort to understand community needs and improve hazard mitigation and response for all individuals in the county and especially those most vulnerable to hazards.

Appendix A. Overview of Community Partners in MJLHMP Outreach

The County of San Mateo Office of Sustainability developed an RFQ to expand the capacity to engage hard to reach and socially vulnerable communities for the Multijurisdictional Local Hazard Mitigation Plan process. Eight organizations were selected in a competitive process. Some of the key competencies being sought were:

- Organizations with established relationships of trust with their communities.
- Capacity to meet community members where they gather and in culturally appropriate ways
- Provide culturally and linguistically appropriate community engagement
- Convening culturally, linguistically and accessible focus groups
- Familiarity with the concerns of areas with overlapping social vulnerability and hazard risk.

The county developed tailored scopes of work with each organization based on their recommendations on how to best reach their communities. A summary of events is at the end of this section.

Ayudando Latinos A Soñar

- Ayudando Latinos A Soñar, known as ALAS (wings) is dedicated to giving creative expression to Latino youth and families of Half Moon Bay. Their mission celebrates “the rich cultures, traditions and values of Mexico and Latin America” which are incorporated in all their work including cultural arts, education, mental health, farmworker support, social justice advocacy, and COVID crisis response programs. ALAS was part of the City of Half Moon Bay Climate Action and Adaptation Plan supported as a Climate Ready Pilot Project which developed culturally appropriate ways to engage the community on climate and natural hazard issues.
- ALAS provides support to the Latino community, many of whom are monolingual Spanish-speakers, from Half Moon Bay to Montara.
- ALAS reached 65 community members through engagement at food distributions, a mother’s group and other existing programs serving Coastal Latino immigrant individuals and families in English and Spanish. Social media posts on Facebook and Twitter (1,322 followers) and email blasts were shared.

Bay Area Community Health Advisory Council

- The Bay Area Community Health Advisory Council (BACHAC) is dedicated to eliminating health disparities across generations and diverse communities through education and services. Since its founding in 1995, BACHAC has fostered a cross-sector coalition and volunteer corps dedicated to increasing awareness of and reducing the debilitating effects of health concerns that disproportionately affect communities of color
- BACHAC includes and serves community members of color and allies concerned about health equity. African Americans, Pacific Islanders, Latinos. Countywide including City of San Mateo, Daly City and East Palo Alto.
- 356 individuals were reached through a combination of presentations and discussions at monthly meetings, email distribution, and at vaccine clinics (English and Spanish) and 620 individuals were reached through email outreach.

Center for Independence for Individuals with Disabilities

- Center for Independence for Individuals with Disabilities’ (CID) mission is to provide support services, community awareness, and systems change advocacy to promote full and

equal community integration and participation for people with disabilities. CID supports older adults and people with disabilities during the activation of a Public Safety Power Shutoff (PSPS) event or other emergency. The goal is to enable them to remain safe while independent in their residences and communities. CID coordinates various programs for those who depend on power for durable medical equipment or for their livelihood.

- CID is a center for independent living run by and for people with disabilities countywide.
- CID reached 916 individuals through email newsletters, Facebook, and Twitter and 34 individuals through focus and support groups as well as individual engagement to provide for specific access needs. Collaboration to increase accessibility of County presentation.

Climate Resilient Communities

- Climate Resilient Communities (CRC) specializes in community-led resilience in underserved communities. In 2019, they developed and coordinated the East Palo Alto Climate Change Community Team (CCCT). The CCCT completed a Climate Change Community Survey and Community Adaptation Pilot Project (community-led vulnerability assessment and resilience planning) funded by San Mateo County. In 2020, CRC partnered with the North Fair Oaks Climate Ready Team and where we currently coordinating the team's efforts to address environmental justice and climate change issues. CRC is an independent organization fiscally sponsored by Acterra.
- Populations served: Residents of East Palo Alto, Belle Haven and North Fair Oaks. Latino, Pacific Islander and African American community members.
- Collaboration to develop culturally appropriate community engagement through a community meeting 6/23. Participants include the general public (English and Spanish speaking residents of East Palo Alto, North Fair Oaks and Belle Haven) held jointly with a focus group engagement for community members and leaders actively working on climate resilience and civic participation.

El Concilio of San Mateo County

- ECSMC has worked with, for and in low-income/vulnerable communities since 1980. ECSMC's signature Promotora model ensures community engagement in assessment and planning of programs. ECSMC implements multiple federal, state, local, and privately funded low-income programs inside SMC. ECSMC is nationally recognized as a leader in representing low-income issues and helps to shape policies effecting low-income residents across the State. Some of their programs include: PG&E Energy Savings Assistance Program (ESA), Peninsula Minor Home Repair, Community Help and Awareness of Natural Gas and Electric Services (CHANGES), Telecommunications Education and Assistance in Multiple-Languages (TEAM) Program, PCE Outreach and Education Grant, Green Business Program Outreach, Low-Income COVID-19 Outreach, Climate Ready North Fair Oaks, Broadband Awareness and Adoption and Family and Individual Support Services.
- Populations served: Countywide including residents of South San Francisco, East Palo Alto, Belle Haven and North Fair Oaks. Low income residents including Latino, Chinese, and African American community members.
- 72 participants in low income serving programs were engaged to take the LHMP hazards survey. The great majority of participants indicated their ethnicity / race as Latino or from a

specific Latino country and a few participants indicated Caucasian, Filipino, Vietnamese, Chinese and Palestinian. Participants included residents of North Fair Oaks (37), South San Francisco (22), San Bruno (6) and East Palo Alto, East Menlo Park, Redwood City, San Mateo and Burlingame.

Nuestra Casa

- Nuestra Casa has conducted outreach and education projects in the Bay Area for almost 20 years. They are best known for rapid response to immigrant community needs and specialize in community outreach and education services to marginalized populations. Their programs and campaigns help immigrant community members understand their rights and connect to safety net resources. Their Environmental Justice includes the Parent Academy and food distribution among other programs and fosters community member capacity to understand, develop, and prioritize local solutions to address environmental equity and justice issues. Nuestra Casa works with Promotoras as the backbone of every program. They live, work, and worship in the communities served.
- Nuestra Casa primarily Spanish-speaking Latinos in East Palo Alto, eastern Menlo Park (Belle Haven), Redwood City and North Fair Oaks.
- Nuestra Casa led a joint workshop on mitigation actions in Spanish and English for 25 participants. They conducted extensive outreach through food banks in East Palo Alto and North Fair Oaks, utilizing paper surveys to increase access for Spanish speaking participants.

Senior Coastsiders

- Senior Coastsiders provides opportunities, support and resources for older adults and adults with disabilities living on the Coastsides, from Montara to Pescadero and Skyline to the Sea. We celebrate the value of seniors and act as a community resource for information, caregiver support and innovative approaches to successful aging.
- Senior Coastsiders serves older adults and adults with disabilities living on the Coastsides, from Montara to Pescadero and Skyline to the Sea, including Chinese-speaking residents and unhoused residents.
- Senior Coastsiders social media, media and email outreach went to 27,729 Coastal older adults and members of the general public including a subset of Chinese speakers (40) and a subset of unhoused local residents. Senior Coastsiders hosted a workshop for older adults and other coastal residents with presentations by City of Half Moon Bay and County staff attended by 12 individuals and hosted an outdoor engagement for unhoused residents reaching 5 individuals.

South Coast Sustainable

- South Coast Sustainable is a coalition of community leaders who work intentionally to build trust with neighbors and other stakeholders. We understand the nuances of rural culture, where people still prefer to share information face-to-face at the post office, market, and taqueria. We can reach the hidden communities, road by road, and can shape messages and information in ways that will be best received by the intended audience.
- South Coast Sustainable serves residents of the South Coast including the Latino community and partners closely with Puente de la Costa Sur.
- SCS reached 630 rural individuals through social media and email outreach and 98 individuals through online meetings and individual in person engagement such as through the Pescadero PopUp Market and SC4 Amateur Radio Club.

Overview of MJLHMP Event Outreach					
Date	Organization	Event	People reached	Demographics	Language
3/20/2021	South Coast Sustainable	SC4 Amateur Radio Club	50	Coastside community	English
3/25/2021	Senior Coastsiders	Survey Outreach for Unhoused Populations	5	Unhoused residents (Coastside)	English
4/12/2021	BACHAC	Monthly Meeting #1 (presentation from County staff)	22	90% African American	English
5/13/2021	Senior Coastsiders	Evergreen Seniors (panel from various coastal jurisdictions)	12	Coastside Seniors & community	English
6/7/2021	Center for Individuals with Disabilities	Meeting of Staff and Board members	15	People with disabilities	English - for visual disability access
6/10/2021	Nuestra Casa	Environmental Justice Academy focus group	25	17 Spanish / 8 English	English and Spanish
6/14/2021	BACHAC	Monthly Meeting #2 (presentation from County staff)	22	90% African American	English
6/17/2021	Center for Individuals with Disabilities	CID Virtual Peer Support Group Meeting	6	People with disabilities	English
6/23/2021	Climate Resilient Communities	Community leaders and community members focus group NFO, Belle Haven, East Palo Alto	44	27 Latino, 6 Pacific Islanders and 6 African Americans, 5 Caucasians	English and Spanish
6/24/2021	South Coast Sustainable	Coastside focus groups with Puente de la costa Sur	15	Coastside community, farmworkers, Latinx	Spanish
04/05 - 05/05	South Coast Sustainable	Sustainable Pescadero meetings on 04/05 and 05/05	32	Coastside community	English
06/03 - 06/29	South Coast Sustainable	Coastside focus groups	24	Coastside community	English and Spanish
Total			272		

Appendix B: Summary of What We Heard: Mitigation Themes

Communication & Education

In general, people indicated that they were not receiving notifications at all or in their language and wanted to be notified ahead of an anticipated disaster. They wanted information about what actions they could take to protect themselves, what resources are available to them and advance information about resources and expected duration of predictable events like a PSPS. Suggestions also include early outreach to people in hazard areas to help them understand the risk where they live and how to prepare.

People wanted more information and education (both for themselves and for the larger community) on the following topics:

- Existing emergency plans
- Evacuation plans and what to do and bring if you are required to evacuate
- Emergency kits
- How and where to obtain supplies needed during a disaster (for example, masks in a pandemic)
- Shelter locations, including the accessibility of shelters for people and service/comfort animals
- Assistance programs for people with disabilities and/or people who require access to power
- More education about specific hazards and information for employers on the danger of working outdoors during extreme weather or wildfire smoke events

Participants suggested a variety of different communication methods and noted the need to use multiple forms of communication to reach everyone. Suggested communications methods included:

- Website and app (one-stop shop)
- Email
- Social media
- Workshops / Zoom meetings
- Posters
- Flyers & Pamphlets
- Posting information at hotels
- Community groups
- Neighbor to neighbor
- Door to door
- Libraries
- Outreach in frequently visited places such as schools, markets, clinics.
- Newspapers
- Radio
- Magnets/stickers with emergency numbers to call for information
- Calls to elders who are not tech savvy or to those who have language barriers
- Signage in hazard areas
- Alert Systems

Participants also commented on the best ways to package hazard information. They said that information needed to be easy to digest, illustrated/accessible to low literacy community members, and provided in multiple languages. They suggested that meetings and workshops should be short and designed for families. Participants also flagged the need to provide tailored outreach to specific populations like people with disabilities, people living in rural areas, and people who are elderly or don't have access to the internet. People also mentioned the need to plan for communication when the internet and cell phone service goes out.

Several comments reflected on a need for government be involved in the local fast-moving conversations about hazards in person, online, and via community-based organizations at the local community level to share resources when they are most needed. Participants wanted to educate the community on how to reach out to local government, and to let people know it is ok to call your city/county and ask for help. Another suggestion was for better coordination between agencies, so information does not contradict.

Emergency Planning and Community Role

There was interest in community-wide involvement in Emergency Planning to include partnerships with trusted community-based organizations, increased investment in community capacity building in socially vulnerable neighborhoods and more community-tailored communication, outreach and opportunity for leadership and input. People expressed that government processes should include youth and residents.

There were many concerns about effective inclusion of socially vulnerable populations in Emergency Planning. Participants asked for approaches including:

- Expert staff, responder training, and oversight by people with disabilities, to assure effective inclusion of people with disabilities and medical needs including technology, disability legal rights, etc. during an emergency.
- It was noted that older adults, monolingual people and low-literacy people need assistance to access response and recovery resources, especially those that require filling out applications.
- More trauma/ mental health training and services during emergencies.
- A clearly communicated policy that undocumented immigrants would be served respectfully.

There were many comments asking for an emergency plan, wanting to know where it was and wishing there was more outreach about emergency plans and opportunities to participate in the planning. Community members also requested designated emergency areas, evacuation routes and advance lists of cooling centers.

There was desire for the County to be more proactive in “solving hazard issues, creating disaster plans, and increasing community awareness of the plans” and concern that Office of Emergency Services only responds when “the threat level is very high”, indicating that response thresholds for heat, smoke and COVID, did not seem adequate to communities experiencing hazard impacts. In particular, community members were concerned that they didn’t know whether and where cooling centers would open and felt there were not enough of them, they were not open when needed, and that they should also address clean air. Many community members indicated they could not afford to buy air conditioners, air purifiers or fans and funding or loaned equipment was recommended.

There were numerous comments about how community members would like to be involved in planning for hazards, particularly for emergency communications, evacuation, preparedness and response. Support for block organizing and local preparedness capacity building such as Block Action Teams (BAT) and Community Emergency Response Teams (CERT) was recommended. For context fewer of these programs are active in socially vulnerable communities and they may need to be adapted to be culturally and linguistically competent and accessible to people with disabilities.

There were recommendations to work with community-based organizations and promotoras (Latino community outreach workers) to reach community members due to their established relationships of

trust and their localized cultural expertise to support preparedness, response and to help community members to prepare for current and coming climate impacts. They had many additional suggestions reflected in the Emergency Planning, Evacuations, Shelters and other sections.

Evacuation

Community members wanted to be informed about evacuation plans, to be able to access the plans and to be consulted in plan development. Participants with disabilities and medical needs indicated that currently some individuals choose not to evacuate due to accessibility barriers and concerns. They recommended coordinated evacuation of people with disabilities including disability community oversight – key issues include accessibility to people with the full range of disabilities including non-physical disabilities, access to power, escorting those who need assistance to shelters, medicines, support network, transportation, and service / comfort animals. It was recommended to develop criteria to aid evacuation prioritization (related to people with disabilities).

Further the need to address current every day, baseline conditions and institutional access barriers was elevated as important to have in place to ensure access for evacuation for people with disabilities, older adults, people with medical needs, such as:

- In all evacuation operations and communications including accessible transition from evacuation to shelter and
- Through infrastructure improvements such as installing sidewalks, traffic islands and ramps and
- Through guidelines for signage, construction and other operations to eliminate temporary and project-related barriers.

There was also concern about evacuation for transit-dependent people that is affordable accessible, and at the needed times and places. A Senior Coastsiders' program was mentioned as a best practice: a buddy system pairing seniors or other community members who drive with those who don't in the event of an emergency. There was concern that current traffic congestion would need to be decreased to aid evacuation which was mentioned in Belle Haven/Menlo Park and on the Coastside, where there is desire for additional ways to evacuate from the Coast. Coastal residents requested more local services, such as shelter in place and outdoor sheltering options so transportation off the Coast is not needed.

Disability Access and Medical Needs

Comprehensive Access: Comprehensive disability access implementation was recommended including new staff positions with detailed knowledge of how to help people with diverse disabilities including non-physical disabilities, technology needs and legal rights. Dedicated staff and detailed training on these topics for first responders and emergency personnel including shelter and cooling center staff was also strongly recommended. Address current infrastructural and institutional access barriers, such as related to sidewalks, buildings, construction, etc. to aid evacuation for people with disabilities, older adults, people with medical needs during hazard events.

Additional accessibility needs included the following:

- Access to power including batteries with appropriate life span, back-up generators for people who would have difficulty traveling, and hotel, and hotel rooms with power.
- Limited resources on the Coast was noted as a major challenge with a participant noting there were no open gas stations and one hotel room using generator power during a PSPS event.
- Improving mechanisms for people to learn about where shelters are during an emergency that addresses disability access, access for folks that can't access the internet or phone system, and

which utilizes best practices customized for specific community and disability needs, such as partnerships with community organizations.

Evacuation: Coordinated evacuation including disability community oversight was recommended. Training for first responders, emergency and shelter personnel to include laws governing service animals, comfort animals versus pets including questions they are not legally allowed to ask was recommended to encourage more participation. It was suggested that people with medical needs or disabilities should be enabled to use Zonehaven to request help. Evacuation plans should include continuous access to power, medical devices and medicines including refrigeration for some medicines, escorting those who need assistance to get to shelters. Multiple participants recommended coordinated transportation solutions including free bus and paratransit evacuations and home pick-ups and/or affordable paratransit, given current paratransit is inadequate to get people out in an emergency situation.

Communication: Communication about hazards, especially power outages/PSPS and heat events, should take place as far in advance as possible generally and to allow extra time needed for people with disabilities and medical needs to prepare and coordinate assistance. Improve mechanisms for people to learn about where shelters are during an emergency that addresses disability access, including for those that can't access the internet or phone system. Conduct a survey to find out how people with disabilities obtain information and outreach and education with the disabled community about signing up for alerts and disaster preparedness. Collaborate with relevant organizations to better communicate with people with disabilities and medical needs.

Shelters (including Cooling/Clean Air centers)

There were many comments expressing concern about the availability of local shelters and cooling/clean air centers, whether shelters would welcome or meet needs of socially vulnerable community members, and desire to know where shelters and cooling centers would be and how to find out when and where they are open. Recommendations included:

- Increase number of, open time and publicity for cooling centers. Community members want to be able to access them more frequently (i.e. at lower temperatures and fewer days of heat), more locally, and want to know under what conditions they open and who opens them.
- Provide clean air and cooling in shelters and cooling centers. A need for capacity to manage a combination of hazards such as heat, smoke, power outage and COVID-19 was raised frequently.
- Desire for consistent definition / implementation of disability access to shelters and cooling / clean air centers and training for staff.
- Desire for communication of policy that undocumented people will be welcomed by shelters, cooling / clean air centers.
- Improving mechanisms for people to learn about where shelters are during an emergency that addresses disability access, access for folks that can't access the internet or phone system, and which utilizes best practices customized for community needs, such as partnerships with trusted community-based organizations, description of images for people who are visually impaired, door to door outreach, etc. (See communications)
- Assure Shelter information and access is available to people who are monolingual in a language other than English.

- More shelters desired on the Coastside and more than one Red Cross shelter needed on the South Coast.
- Promote shelter-in-place preparedness where access to shelters is limited
- Develop outdoor shelter locations where shelter access is limited such as on the Coast (golf course, the farm fields, parking lots).

Preparedness

Many people asked for education and training on how to prepare for and stay safe during a disaster. In particular, a participant wanted information on how to stay safe if you can't evacuate during a wildfire. Another suggestion was for education specific to people with disabilities about how to prepare for a disaster (e.g. medicines, emergency contacts, transportation, service & comfort animals). Participants also called out the need for trainings in Spanish (like for CPR classes), and the need to promote the CERT trainings in Spanish through the LISTOS program.

Community members also discussed the need for help obtaining supplies for an emergency event. Many participants mentioned emergency kits and the need to distribute free emergency kits to low-income community members. One suggestion was to include self-care and emergency information in a kit as well as supplies. Participants suggested that the County should stock up on air conditioning and air purifiers to give out to people who can't afford or find them in an emergency. Other participants suggested helping people get affordable/comfortable protective equipment, for example helping laborers get better clothing and eye protection for Spare the Air days.

Participants recommended nurturing connections within a community so that neighbors will have the support of their neighbors during emergencies and organizing emergency teams of community members to help their community in an emergency. The County's Department of Emergency Management could support these efforts with resources and trainings.

Housing and Home Improvements

Many participants suggested providing people with assistance in making improvements to their homes and properties that would reduce the risks from hazards like earthquakes, flooding, extreme storms, heat, wildfires, smoke, and drought. Specific suggested improvements included:

- Clearing defensible space around homes and buildings
- Drought resistant landscaping and rain barrels
- Bring buildings up to current code
- Flood-proofing homes
- Installing air conditioning and providing air purifiers
- Checking for and fixing air leaks in buildings
- Checking homes for thermal loss and proper installation
- Cleaning air filters
- Providing cooling centers in large apartment complexes

Participants suggested the following methods to help with improvements:

- Financial assistance such as low-cost loans, grants, and/or subsidies
- Incentives such as lower permitting fees or more density credits
- County-sponsored contractors or a list of good contractors
- Education and training about risk reducing improvements

- Team (such as CERT) or program that certifies that structures
- Requirements for large apartment complexes to provide air conditioning or cooling centers
- Provide financial resources for low income families who are impacted by disasters

Participants also specifically mentioned the need to develop and replace farmworker housing to withstand hazards, to provide help to seniors for hazard related property improvements, and the need to make improvements in apartment buildings.

Infrastructure Improvements

Countywide suggestions for infrastructure improvement include:

- Low impact development or green infrastructure for all new residential and commercial construction
- Change regulations to allow building higher, which would allow buildings to be raised out of the level of potential flooding (this comment came from the South Coast)
- Invest in improving PG&E infrastructure to prevent PSPS events
- More shelters, cooling / clean air centers, pools for cooling
- Take better care of nature to reduce the threat of wildfires, as right now there is a lack of maintenance of public lands and open space

Participants from the South Coast had several suggestions infrastructure improvements, including:

- Underground utilities so that power lines are not impacted by strong winds and falling trees
- Dredge creeks and maintain drainage ditches to reduce flooding
- Creek bank restoration, and specifically to continue the Butano Creek bank restoration
- Build more water reservoirs and water storage capacity, both for use during droughts and for fighting wildfires
- Capture stormwater runoff for later irrigation or fire fighting
- Provide batteries or back up power for communication infrastructure (internet, cell phone, ham radio networks, and radio) and for water treatment plants (water supply can be impacted during power shutoffs)
- Invest in local broadcast media capacity and equipment that can be used during an emergency, especially when the phone and internet services fail
- Invest in microgrids and solar power; use large parking lots (like at schools) as locations for generating solar power
- Run the power lines from the Pescadero high school to town when doing the water extension
- More evacuation routes from the Coast

Suggestions from participants in the East Palo Alto, Menlo Park and Redwood City areas for infrastructure improvements included:

- Raise parking lots and driveways to address flooding issues
- Build a bigger wall to hold back flooding
- Install effective rain gutters in roads to keep them safe during a flood
- Increase ways in and out of communities with limited egress and which can be cut off by flooding or other hazard
- Community members also wanted to see improved road conditions, including repair of potholes and upgrades or designs to reduce or eliminate flooding

Power Outages

Community members had many concerns and suggestions related to the increasingly frequent PSPS events and other power outages, including:

- Invest in solar power, solar generators, solar and battery, power storage. Need for more access to generators and more reliable sources of power. Cross reference to Infrastructure: undergrounding utility lines, back up battery / power for communications, PG&E and microgrids.
- Need for more power charging stations more densely distributed throughout the Coast. Need more PG&E resource centers – one in La Honda is not adequate. Need more than one hotel room with power on the Coast. Need open gas stations during PSPS.
- Continuity in access to power for people with disabilities and medical needs, older adults and other at-risk individuals.
- Accessible and affordable transportation to shelters, hotels or power charging sites during PSPS is needed for people who need power with disabilities or medical needs for medical and assistive devices.
- Communications: need better estimates of the length of the power outage.
- Food preservation – providing coolers was suggested.
- People reported extensive use of online resources accessed via computer or mobile phone so access to power is critical to access to information. Multiple comments desired a phone line to speak to an actual person.
- Bayside residents also reported power outages that were not related to PSPS events.
- A North Fair Oaks resident noted the need for equitable access to PG&E services.

MEDIA RELEASES ISSUED FOR HAZARD MITIGATION PLAN UPDATE

NEWS

March 15, 2021

For Immediate Release**THE COUNTY OF SAN MATEO LAUNCHES
2021 MULTIJURISDICTIONAL LOCAL HAZARD MITIGATION PLAN UPDATE
MULTIPLE OPPORTUNITIES AVAILABLE FOR PUBLIC INPUT**

The County of San Mateo, led by the Office of Emergency Services, has begun to develop the County's updated Multijurisdictional Local Hazard Mitigation Plan to address threats such as earthquake, flooding, extreme heat, and landslide.

**The County needs your help identifying solutions to the problems
associated with natural hazards.**

For Phase 1, the public is invited to participate in the hazard mitigation plan by:

1) filling out a survey about San Mateo County's natural hazard risks

<https://www.surveymonkey.com/r/RG5GTPS>,

2) attending the first virtual public workshop on Thursday, March 25 at 4:00 PM

<https://cmo.smcgov.org/events/march-25-2021-preparing-hazards-san-mateo-county-local-hazard-mitigation-plan-public-workshop>; and/or

3) attending a virtual Steering Committee meeting on March 22 at 2:00 PM

<https://cmo.smcgov.org/events/march-22-2021-hazard-mitigation-plan-update-steering-committee-meeting>.

An updated Multijurisdictional Local Hazard Mitigation Plan will serve as a meaningful template for a more resilient and sustainable San Mateo County. The plan looks at how the County of San Mateo and its planning partners can reduce its impact of natural hazards such as earthquake, flooding, extreme heat, and landslide. Once approved by the Federal Emergency Management Agency (FEMA), the plan ensures the County of San Mateo and its partners remain eligible for pre- and post-disaster mitigation project grant funding through FEMA's Hazard Mitigation Assistance programs and other non-emergency disaster assistance like FEMA's new Building Resilient Infrastructure and Communities (BRIC) program. The County of San Mateo's current Multijurisdictional Local Hazard Mitigation Plan expires in September 2021 (the Plan is updated every five years), so the 2021 update will remain active until 2025.

The planning process will be organized into three phases. Each phase will include opportunities for public input and feedback:

Phase 1 | March 2021 – April 2021

Take a survey!

Attend the first Public Workshop: March 25, 2021 at 4:00 PM

Attend a Steering Committee Meeting: March 22, 2021 and April 26, 2021 at 2:00 PM

Email comments: MJLHMP@smcgov.org

Phase 2 | May - June 2021

Review the StoryMap : an evolving and interactive component of the project website

Attend a Steering Committee Meeting: May 24, 2021 and June 28, 2021 at 2:00 PM

Email comments: MJLHMP@smcgov.org

Phase 3 | July - August 2021

Review the StoryMap: an evolving and interactive component of the project website

Attend the second Public Workshop: July 22, 2021 at 4:00 PM

Attend a Steering Committee Meeting: July 26, 2021 and August 23, 2021 at 2:00 PM

Review the *Draft* plan and submit comments. The plan will be posted to the website.

Email comments: MJLHMP@smcgov.org

More public engagement opportunities may become available throughout the process and, if so, will be posted to the project website: <https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan>

For more information about the County of San Mateo's Multijurisdictional Local Hazard Mitigation Plan or to learn about ways to participate in the development of the LHMP:

- Visit the project's website at: <https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan>;
- Send an email to MJLHMP@smcgov.org; and/or
- Contact Ann Ludwig, Project Manager at 510-734-9831.

NEWS

June 4, 2021
For Immediate Release

County of San Mateo Launches 2021 Multijurisdictional Local Hazard Mitigation Plan Update

Public Invited to Provide Input on Preparing for Natural Hazard Events

REDWOOD CITY — The County of San Mateo, led by the Office of Emergency Services, is in the process of developing the county's updated Multijurisdictional Local Hazard Mitigation Plan (LHMP) to address natural hazards such as earthquake, fire, flooding, extreme heat, and landslide.

The County seeks the public's help in identifying solutions to the problems associated with natural hazards and invites residents to participate in the hazard mitigation plan by:

- 1) filling out a survey on actions the County and its partner agencies can take to help community members prepare for natural hazard events (<https://www.surveymonkey.com/r/MHJ5YDJ>);
- 2) attending the next virtual public workshop on Thursday, Aug. 12, 2021, at 4 p.m. (<https://smcgov.zoom.us/meeting/register/tJYtceqoqzvjGdxF5Dt4Kt1yufuxwVgp99TJ>); and/or
- 3) reviewing the Draft Multijurisdictional Plan when it is released on Aug. 5, 2021. (<https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan>).

The County of San Mateo's current Multijurisdictional Local Hazard Mitigation Plan expires in September 2021. An updated Multijurisdictional Local Hazard Mitigation Plan will serve as a meaningful template for a more resilient and sustainable San Mateo County. The 2021 update will remain active through 2025.

Once approved by the Federal Emergency Management Agency (FEMA), the updated plan ensures the County of San Mateo and its planning partners remain eligible for pre- and post-disaster mitigation project grant funding through FEMA's Hazard Mitigation Assistance programs and other non-emergency disaster assistance like FEMA's new Building Resilient Infrastructure and Communities (BRIC) program.

For more information about the Multijurisdictional Local Hazard Mitigation Plan or to learn about ways to participate in the development of the LHMP:

- visit the project's website at: <https://cmo.smcgov.org/multijurisdictional-local-hazard-mitigation-plan>;
- send an email to MJLHMP@smcgov.org; and/or
- contact Ann Ludwig, Project Manager at 510-734-9831.

SURVEY #2 EXECUTIVE SUMMARY

SMC Multijurisdictional Local Hazard Mitigation Plan – Survey #2

San Mateo County (SMC) released Survey #2 for the SMC Multijurisdictional Local Hazard Mitigation Plan on June 4, 2021. The survey focused on three costly or damaging hazards likely to occur in the area: earthquakes, wildfire, and extreme heat. The survey was closed on July 11, 2021. The following provides an executive summary of the survey and its results, followed by the full export of survey responses.

KEY INSIGHTS

Most Popular Sources

The top 2 sources used by participants to stay informed about potential emergency situations and disaster preparedness included:

- **SMCAAlert (78.4%)**
- **Emails and websites from state, county or cities, public utilities, such as PG&E, or non-profits, such as the Red Cross (63.0%)**

Responses that showed up frequently in the comments included:

- **Nextdoor**
- **Media - Radio/TV/Social Media**

Most Helpful Mitigation

During an earthquake, wildfire event, or extreme heat event, most participants responded that **“Knowing my community can provide safe, accessible emergency shelters for my family and neighbors...”** would be the most helpful to them.

Responses that showed up frequently in the comments included:

- **Safe evacuation planning**
- **Communication plan in case of power loss**

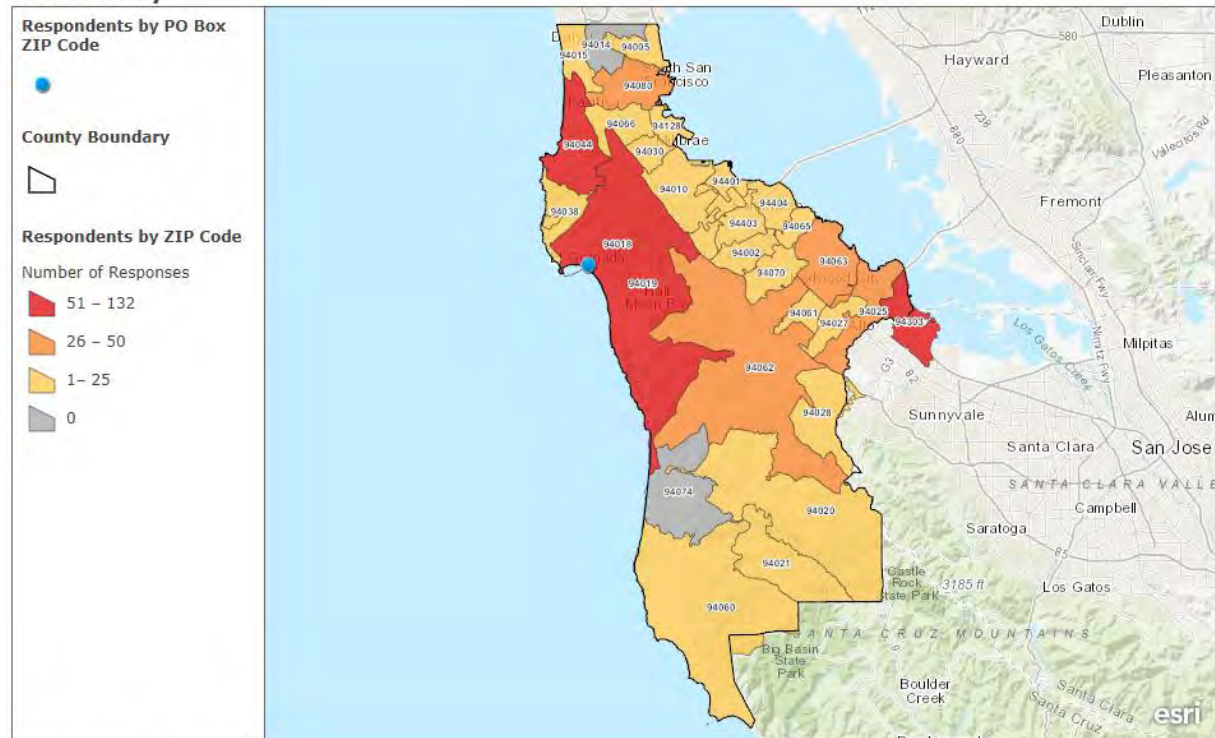

- Education, expertise, and resources surrounding building safety and general preparedness
- Fuel reduction plan
- Financial help for cooling systems

PARTICIPANTS

Location

- 23 cities
- Most participants from Half Moon Bay (18.8%), Pacifica (12.8%), and Redwood City (11.4%)
- A list of responses by City can be found in Appendix A

LHMP Survey

Final update to LHMP survey 2

Esri, HERE, Garmin, USGS, NGA, EPA, USDA, NPS

How they Heard about Survey

- Top responses for how participants heard about the survey included:
 - Social Media (16.8%)
 - County Media Release (9.6%)
 - El Concilio of San Mateo County (9.5%)

- Nuestra Casa (9.3%)
- Ayudando Latinos A Soñar (ALAS) (8.4%)
- Most participants (40.1%) selected the “Other” category, of which **54.8%** specified CERT
- Considering the number of total responses to this question (677), **22.0%** of participants indicated CERT as the source through which they heard about the survey

Demographics

Age: Most participants were 61 or older (41.4%)

Primary Language: The primary language spoken in the household of most participants was English (75.7%), followed by Spanish (22.3%)

Income: Though there was a wide spread, most participants responded that their household income was between:

- \$30,001 and \$50,000 (16.1%)
- Greater than \$230,001 (12.5%)

In general,

- **46.6%** of participants indicated an income range falling at or below \$90,000
- **47.5%** of participants indicated an income range falling above \$90,001
- **5.9%** of participants indicated “Other,” with most noting that they preferred not to answer

Hispanic, Latino, or Spanish origin

Source: 2019 ACS 1-Year Estimates

- Compared to **76.0%** of the County's population, **69.8%** of survey respondents did not identify with Hispanic, Latino, or Spanish origin
- Among participants who identified with Hispanic, Latino, or Spanish origin:
 - **20.9%** identified with Mexican, Mexican-American, or Chicano origin, as compared to **14.4%** of the County's population
 - **5.9%** identified with Other Hispanic, Latino, or Spanish origin, as compared to **9.1%** of the County's population

Race

Source: 2019 ACS 1-Year Estimates

- Individuals identifying as White were generally overrepresented among participants (making up **63.5%** of survey participants and approximately **49.7%** of the County's population)
- Among the following Race categories, there was underrepresentation of over 5%, between survey participants and the County's population:
 - Individuals identifying as Chinese made up **1.8%** of survey participants, while making up approximately **12.2%** of the County's population (-10.4%)
 - Individuals identifying as Filipino made up **1.6%** of survey participants, while making up approximately **9.0%** of the County's population (-7.4%)

- **23.5%** of individuals marked their Race as “Other,” with many written-in comments indicating “Mexican”/”Mexicano”; “Latina”/”Latino”/”Latin American”; and “Hispano”/”Hispana”/”Hispanic”

Q3 To prepare for an earthquake, what would be most helpful to me is.... (Check all that apply)

Answered: 674 Skipped: 29

ANSWER CHOICES	RESPONSES	
Knowing my community can provide safe, accessible emergency shelters for my family and neighbors if our homes are damaged in an earthquake.	76.0%	512
Knowing I can find useful information about how to prepare for an earthquake, what I can do to protect myself and my family, and where I can get assistance in my preferred language.	59.6%	402
Finding a single source of information for getting advice and financial assistance to make my home earthquake safe.	46.4%	313
Total Respondents: 674		

#	PLEASE PROVIDE OTHER IDEAS HERE:	DATE
1	Provide real time evacuation route updates	7/11/2021 12:38 PM
2	In the event of "the big one", for how long should we prepare to be sheltered in place (with pets) without power, water, gas and possibly sewer?	7/9/2021 1:15 PM
3	Communication assistance for multiple housing units - condo developments	7/8/2021 3:16 PM
4	Knowing that my local water supply is secure from damage and that we have enough production and storage for long term power and pipeline interruptions. Second would be knowing that food supplies would be able to be delivered into our isolated areas.	7/8/2021 8:22 AM
5	A warning system for earthquake, fire, tsunami like the ones in Japan where loudspeakers are clear and located in every neighborhood. I also like the 5pm daily chime/jingle to test the system (not once weekly tests).	7/8/2021 8:02 AM
6	Knowing local shelters	7/7/2021 8:52 PM
7	Connect With Pacifica	7/7/2021 7:36 PM
8	Truly affordable earthquake insurance	7/7/2021 1:01 PM
9	Maybe promoting more neighborhood watch groups would help neighbors help each other in an emergency. I know CERT has a program but I don't think it's been implemented very much here in Pacifica. What if you formed a CERT committee to help organize more neighborhood groups to aid in case needed. Also, have CERT re-freshers to keep us up to date on procedures.	7/7/2021 10:31 AM

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

being on a phone tree for information about the disaster when it is happening. 7/7/2021 7:55 AM

11 Regular training in earthquake preparedness; an individualized earthquake prep plan on each street, earthquake drills at the local level. 7/7/2021 7:06 AM

12 Cert 7/7/2021 7:01 AM

13 Free home assessment for earthquake damage vulnerability 7/7/2021 6:26 AM

14 Emergency Neighborhood capto 7/6/2021 2:49 PM

15 —info for those who don't drive &/or have mobility disabilities —apartment renter-specific info would be helpful 7/3/2021 9:14 AM

16 Single location for ALL 7/2/2021 4:40 PM

17 I would love to be able to look at more pictures of the various ways foundations can have been retrofitted, to know if my contractor did it all correctly when we added a 2nd story in 1995. I tried to find out, but the building department could not assure me. Were the codes good enough in 1995? Would the building inspector have checked? My contractor was NOT good with waterproofing, although they were honorable men, not trying to cheat me. They just did not have enough experience. I think I hired someone to do retrofit, but not sure now. Some estimates were very expensive, and I think I never decided to have it done, cause the building department thought I probably didn't need to. 7/2/2021 10:34 AM

18 We need more information and action about design issues, especially multi story homes, apartments with "soft stories" and homes built on hillsides. 7/2/2021 9:32 AM

19 A community plan for organization when there is no cell, no internet. That will be our reality in a bad quake and we are not prepared. 7/2/2021 12:32 AM

20 Or resources - especially power, water, food, communications to the coast 7/2/2021 12:28 AM

21 Knowing how road access to evacuate to our mountain home, if possible. 7/1/2021 9:31 PM

22 I rent and don't have a lot of confidence the house I live in is adequately prepared for a quake. I'd like a system in place that can assure renters their apartments have been inspected and are compliant/prepared. Something an owner would have to do to prove to prospective renters the apartment is safe. 7/1/2021 5:25 PM

23 We've done brace and bolt. 7/1/2021 3:40 PM

24 How I can get out of HMB FAST! 7/1/2021 1:30 PM

25 Knowing my community will be able to provide clean water 7/1/2021 12:08 PM

26 Mandando mucha informacion a nuestras escuelas relacionadas a estos temas, para tener acceso a ella más fácilmente. 7/1/2021 11:59 AM

27 More public safety demonstrations and information presented by firefighters and EMTs, as well as geologists/hydrologists/etc 7/1/2021 9:57 AM

28 Assistance with information and vetted service providers and video training on how to make earthquake improvements to homes for seniors 7/1/2021 8:51 AM

29 All 3 of these options should be an easily accessible single source, a source that people actually use - not buried somewhere on the SM County website 7/1/2021 8:26 AM

30 Why do I have to have a preferred language or choice 1? Wouldn't every question need this? Shouldn't the survey itself have a preferred language clause? Malarkey. 7/1/2021 7:18 AM

and retrofits for EQ safety--permit fees waved, or subsidies, even, for including repairs/improvements in permitted projects

36	Single source is a great idea.	6/28/2021 7:59 PM
37	CERT	6/28/2021 7:54 PM
38	CERT	6/28/2021 7:53 PM
39	CERT	6/28/2021 7:47 PM
40	A property inspection?	6/28/2021 7:39 PM
41	Knowing the buildings around me in my neighborhood are as safe as can be to prevent major earthquake damage	6/28/2021 3:20 PM
42	Living on the coast, where can we find information if highway 92 and/or highway 1 are closed and we are largely cut off from the rest of the bay area.	6/28/2021 3:14 PM
43	Information on what each individual/family needs to do and what cities/the county/state will be doing.	6/28/2021 2:39 PM
44	Assistance to make/get earthquake/emergency kits for low income folks	6/28/2021 1:54 PM
45	Regular CERT meetings and updates	6/28/2021 11:20 AM
46	0% interest / \$0 payment state loans for earthquake hardening, preparedness supplies, and more. Growing up in CA, I am already well informed, thankyouverymuch.	6/28/2021 9:12 AM
47	Knowing that I do not have to be separated from my pet if we need to seek shelter. Having a list of pet friendly (large dog) shelters and resources for pets during an emergency.	6/28/2021 8:27 AM
48	Knowing what the earthquake plans are... Will food be brought in to the airport, where the potential shelters are, etc...	6/28/2021 8:14 AM
49	Alternative, renewable sources of electrical power, telecommunications, water purification	6/27/2021 7:06 PM
50	Ensuring the county will prioritize getting off the Coast safely.	6/27/2021 5:46 PM
51	Personally, I am not too concerned with earthquakes. Single family, wood-frame, hoses ten to do quite well. It's our LPG and water lines that pose the larger risks.	6/27/2021 4:03 PM
52	There is a dearth of information regarding the availability of contractors who actually have bona fide experience with respect to earthquake inspections and preparedness. A similar issues exists with respect to post-disaster repairs and how problematic it is to find qualified contractors.	6/27/2021 12:40 PM
53	Providing plans to enable residents to exit to other areas as needed. This includes special efforts to keep 92 clear for evacuation and keeping the Devil's Slide Tunnel open in an emergency.	6/27/2021 11:41 AM
54	SOMEONE tasked within each city hall who could address this subject. hold public outdoor briefings in the town center. like a TOWN CRIER who can speak to keeping us informed AND SAFE!!!!!!	6/27/2021 11:08 AM
55	It is important to have a source of information that would be operational when power is out and there is no internet. KHMB - 100.9 - should be given information that can be broadcast to the San Mateo County Coastside from Montara thru Half Moon Bay. They need to be included in emergency planning by local and county officials!!!	6/27/2021 10:06 AM
56	Source for emergency info about road closures and power outages, evacuation routes. Also knowledge of where community shelter and water will be located, if we are isolated on the coastside post-quake.	6/27/2021 9:56 AM
57	That we could evacuate safely during a crowded sunny beach day when we have thousands of visitors-	6/27/2021 9:25 AM
58	My cert training! I have my earthquake supplies and I am ready! Also ready to assist my neighbors!	6/27/2021 9:14 AM
59	Rework San Mateo County Fire to be a functional organization, not another half baked state failure. Reassign SMC OES to SMC Fire. Then have SMC OES rework local assistance	6/27/2021 9:10 AM

502

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

information from the ground up. Basically, do the opposite of what SMC has been doing the last 25 years.

60	The Earthquake drill day was great. I think it could be fun to have an Earthquake Kit prep day- where most of the supplies that could be needed could be available and people could gather all the things they need at one time. I'm not sure how that would roll out. Maybe free to people who cannot afford it and registration required. If someone can afford it, they would pay for the supplies.	6/27/2021 9:00 AM
61	Apartment dwellers here: it would be most helpful to have our City organized on earthquake preparedness. Having neighborhood preparedness is essential, but the City isn't investing in our preparedness plans. We feel abandoned especially knowing we are due for the next big one.	6/26/2021 2:47 PM
62	Supporting CERT, LAEG, DART and other local groups/agencies/City departments so there is more outreach and training in the local area to help folks at a grass-roots level to be prepared for all of these eventualities.	6/25/2021 9:17 PM
63	A printed and regularly updated handbook summarizing all useful information that can be kept on hand at home. Nothing online or mobile will be useful in the event of a natural disaster, so a printed booklet would be the only thing useful in such an emergency.	6/25/2021 2:08 PM
64	Talleres o material por correo para que la Comunidad se entere de los recursos	6/23/2021 7:59 PM
65	Make sure there is cellular service available. Clear communication for and to the community. During the fires, there were updates to the media that was not informative to our community.	6/23/2021 6:56 PM
66	Red Cross present in community	6/23/2021 4:13 PM
67	To know there is a local source of potable water should an earthquake damage our wells. To know our roads will be cleared quickly of slides, trees, debris should they become blocked.	6/23/2021 3:28 PM
68	Knowing that local schools/daycares are safe (understanding requirements and protocols pertaining to schools/daycares better) -- can only control so much within the home but could be even more vulnerable if earthquake occurs when kids are out of the home	6/23/2021 2:32 PM
69	Block by block emergency plans.	6/23/2021 1:50 PM
70	all our notifications and emergency systems rely on electricity and/or cell phones. not all of us have generators and cell phone service.	6/23/2021 8:08 AM
71	Knowing the emergency evacuation routes, and what resources are available at the other end.	6/22/2021 5:41 PM
72	list of community resources available to support from neighboring cities in case my city is down.	6/22/2021 9:50 AM
73	Knowing that elderly and disabled people in my community are going to be taken care of!	6/21/2021 6:55 PM
74	Having emergency shelters is the biggest concern, but I do hope everyone will be vaccinated.	6/21/2021 2:34 PM
75	no soy dueño de casa	6/21/2021 12:01 PM
76	a viable neighborhood-based structure for support and communication.	6/19/2021 4:05 PM
77	我不知道。	6/18/2021 7:03 AM
78	Disaster preparedness should include locked shipping containers with emergency supplies at all local schools & parks, so that in a widespread disaster, the open space (athletic fields, parking lots, classrooms) associated with schools & parks can be used for emergency shelter & triage activities.	6/15/2021 7:49 AM
79	Single source is ideal, but presenting all the info at once is overwhelming. Better to have individual guides for earthquakes (home safety before, earthquake supply kit, actions to do after)	6/14/2021 2:50 PM
80	Knowing that sufficient emergency supplies are stored close enough to my home and office to satisfy immediate food, medical and shelter needs without having to depend on supplies being shipped in.	6/12/2021 7:40 PM
81	The shelters should be trauma informed and have financial assistance - I'm sure there are best practices to research	6/12/2021 6:09 PM

503

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

Signs in my community directing residents to the "MASSING AREA" if there is an evacuation or all communication methods are "down". 6/12/2021 4:02 PM

83	Communications is usually the big challenge, and the possible inability to access our stored information which is no on our phone.	6/12/2021 2:55 AM
84	Read the earthquake hazard mitigation plan	6/11/2021 6:25 PM
85	one point of informational contact to mitigate "Fake News"	6/11/2021 5:54 PM
86	Earthquake exercise training and drills so that all my neighbors don't come to me for help or to steal my food. They each should have made preparations for such a disaster.	6/10/2021 10:10 PM
87	CERT do neighborhood block by block CERT organization outreach. LA county has a program that does this. The pandemic experience is an example of how fragile our supply system is when an event causes increased demand for essential items. Let's seize this opportunity to encourage people to prepare.	6/10/2021 9:41 PM
88	Who in my immediate neighborhood may be CERT Trained, or a ham radio operator.	6/10/2021 6:26 PM
89	Relying on the community to provide what I need is certainly the most convenient for me--but that would also incentivize me to rely on the community instead of myself. I don't think its realistic for people to assume "my community" will take care of me. Ideally information to prepare will be in one place, but in practice I find that there are lots of angles on preparedness and it is unrealistic to expect one site to accommodate all needs/interests.	6/10/2021 12:25 PM
90	A variation on the shelter resources, I'd like to suggest capacity, processes, and tools be put in place, tested and organized for post-disaster response. A streamlined, reliable single-track for all to get info, access help, etc. The response provided by Red Cross is inadequate locally.	6/10/2021 11:28 AM
91	Knowing about a centralized website, simple to find with listed resources, info and generating alerts	6/8/2021 1:08 PM
92	Incentives to help renters, landlords, low income homeowners, funding for community groups that help low income renters and homeowners	6/8/2021 12:16 PM
93	Knowing where to buy a kit if earthquake supplies	6/7/2021 8:48 PM
94	subsidized earthquake insurance for my house	6/7/2021 12:03 PM

G.

Q4 To help prepare for a wildfire event, what would be most helpful to me is... (Check all that apply)

Answered: 672 Skipped: 31

ANSWER CHOICES	RESPONSES	
Knowing my community can provide safe, accessible emergency shelters for my family and neighbors if we need to leave our homes during a wildfire or a wildfire smoke event.	69.0%	464
Knowing I can find useful information about emergency evacuation routes in my preferred language.	60.7%	408
Knowing I can find useful information about how to prepare for a wildfire event, what I can do to protect myself and my family, and where I can get emergency assistance in my preferred language.	56.0%	376
Finding a single source of information for getting advice and financial assistance to create defensible space by removing excessive vegetation around my home and in my neighborhood.	45.7%	307
Total Respondents: 672		

#	PLEASE PROVIDE OTHER IDEAS HERE:	DATE
1	Knowing how to manage unruly members of my community with respect to their addictions to illegal fireworks.	7/9/2021 1:15 PM
2	Zonehaven was a nightmare to use for a source, and we live in Pacifica. God help the people in the firezone last year who were forced to use it during an emergency!	7/8/2021 10:13 PM
3	Living on the coast, having emergency evacuation routes and sufficient warning about wildfires is of critical importance to me.	7/8/2021 4:55 PM
4	Follow most of the rest of the state and make ALL fireworks illegal in Pacifica. It's irresponsible to allow/condone any these days. City Council doesn't see/care about the danger to residents, inherent egress issues and effect on regional resources.	7/8/2021 3:12 PM
5	Knowing that my local water supply is secure from damage and that we have enough production and storage for long term power and pipeline interruptions.	7/8/2021 8:22 AM
6	Having police enforce laws to help prevent illegal fireworks	7/8/2021 8:18 AM
7	See my comment about an emergency system located in every neighborhood above.	7/8/2021 8:02 AM
8	Detailed evacuation plan for Pacifica. We have only one road north and south in Linda Mar. Odds are Devils Slide tunnel will be closed in a wildfire.	7/8/2021 7:01 AM

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

	Well-publicized evacuation routes	7/7/2021 8:52 PM
10	Connect With Pacifica	7/7/2021 7:36 PM
11	Pacifica needs emergency evacuation planning. When issues on highway 1 occur, Pacifica PD and Highway Patrol point fingers at each other, but do not respond. During the planned power outage in 2019, it took 2 hours to get from Linda Mar to Sharp Park (typically a 5-10 minute journey). Highway 1 is our only exit. Please plan better and require Police, Highway Patrol, or ideally, both take ownership of traffic control during emergencies.	7/7/2021 2:58 PM
12	The Vallemar district in Pacifica is particularly vulnerable. In addition to removing excessive vegetation and helping residents financially with large clean-up projects, the city should enforce parking restrictions and speed limits on our very narrow streets. Emergency vehicles are severely hampered here.	7/7/2021 1:01 PM
13	my neighborhood doesn't have a lot option for evacuation, existing routes will be overcrowded	7/7/2021 12:49 PM
14	We need to severely limit new construction in town to help prevent a disaster. There's no way all of us can escape should there be a big fire or EQ, much less to accommodate all the new housing proposed.	7/7/2021 10:31 AM
15	A timely, urgent text alert (like Amber Alert, but always works!) for earthquake assist and wildfire evac warnings.	7/7/2021 8:41 AM
16	Knowing that my city and county is taking responsibility for clearing fuel (dead trees, branches and brush) from city owned property! Cattle Hill in Pacifica is a disaster waiting to happen!!!	7/7/2021 8:05 AM
17	I couldn't access zonehaven to learn my evacuation route and practice it. Is the soft ware on all devices for this?	7/7/2021 7:45 AM
18	Regular training at the local level about how to prepare for a wildfire in the area and training in how to prevent fires and how to protect one's home. How to escape in the event of a fire.	7/7/2021 7:06 AM
19	Ban all fireworks, and find new ways to enforce Illegal fireworks.	7/7/2021 7:01 AM
20	Confidence that an evacuation route will be available and managed. Pacifica is a series of 'giant cul de sacs, most neighborhoods have one road in/out, leading to highway 1. The south end of town is particularly vulnerable, with HWY1 being the ONLY route out. A minor fender bender can cause back ups for miles and paralyze traffic. Under emergency circumstances/wild fire, many of these neighborhoods could be a death trap.	7/7/2021 6:40 AM
21	knowing how I can help.	7/6/2021 2:54 PM
22	Periodic presentations at senior centers, community centers, YMCAs and PTA programs by EMTs and Firefighters	7/6/2021 2:49 PM
23	If the Brisbane Marina is the evacuation location for most residents of Brisbane, we need a safe alternative to getting there. Currently, it is presumed that the Kinder Morgan tanks would not be an aspect or a risk during an emergency situation. How are residents supposed to get to the Marina if the Lagoon Rd connection is compromised?	7/3/2021 7:21 PM
24	again, as above: —info for those who don't drive &/or have mobility disabilities —apartment renter-specific info would be helpful	7/3/2021 9:14 AM
25	As a renter, I have no control over outdoor space and vegetation around my building.	7/2/2021 10:02 PM
26	Once again ONE site - Easy to remember - SMAC EMERGENCY RESPONSE.org	7/2/2021 4:40 PM
27	I live in the suburbs, close to the Bay, and love the plants surrounding my house! None are fire risk plants, and I would NOT want to remove them. I would want to have OTHER information about preparing for fire. We do have 2 air cleaners as the smoke from the far away wildfires was awful the past 2 years.	7/2/2021 10:34 AM
28	Don't live in wildfire-prone area	7/2/2021 9:31 AM
29	Again, having a community plan for evac in a wildfire, including blocking tourists from 92 and 1 during a fire. CZU fire was terrifying: both access routes blocked by Brach traffic while we waited for evac signal. Should have blocked all out of town traffic.	7/2/2021 12:32 AM
30	I never hear about any cooling stations on the coast. It's not something we would need often but triple digits here would be disastrous.	7/1/2021 7:39 PM

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

31

	I live on the bay side and probably feel too safe from wildfire. It would be good to know exactly how safe we are, if at all. Or how/why/under what conditions seemingly safe suburbs could burn. It would also be good to know what add on effects a wildfire in the county would impact the bayside, for instance, evacuation times, routes, or how to stay off the streets if the coastside were to be evacuated. Or some system for how we could help evacuees in general or provide housing. I'd like to feel more like part of a team--we are all creating increased conditions for wildfire by our behavior, we should all be included in the response even if we, in particular, are in actually danger of wildfire per se.	7/1/2021 5:25 PM
32	Communication systems that will not go down at the slightest event. Even with a basic power outage we lose cell service and have no way to seek help.	7/1/2021 4:39 PM
33	An intergrated Peninsula fire alert system. I live in southern SMC on SCL border. But can only get emergency notices from SMC, SCC but not SCL.. Distressing with fire season. The CZU Lightening complex was a mile south of my house but got mixed messages from SMC alert about evac; despite seeing the smoke and flames clearly (we 'd on our own). More integration less Fifedoms please	7/1/2021 3:12 PM
34	Map on where wildfires are	7/1/2021 2:55 PM
35	Knowing emergency information will still be accessible if the community looses power and internet. Understanding the real risks of fires destroying our homes as fires occur with constant and transparent communication. Understanding when to evacuate. Knowing the community is doing everything possible to prevent fires from reaching our community, and from starting, and from spreading.	7/1/2021 1:14 PM
36	Take away the permit fees to remove trees on residential lots	7/1/2021 9:31 AM
37	Reporting system to report neighbors not complying with defensible space requirements	7/1/2021 8:49 AM
38	Again, all of these should be an easily accessible single source of information. Not buried somewhere on the San Mateo County website. Also to know that in an actual emergency our roads and road shoulders are clear to allow for evacuation, and not parked with tourists cars.	7/1/2021 8:26 AM
39	Pet friendly services/shelters	7/1/2021 7:20 AM
40	Tener extinguidores en casa	6/30/2021 11:36 PM
41	Wildfire smoke is also a hazard in our area. Children were asked to report to school and then allowed to be picked up after arriving at schools. It made no sense ! Lung safety and health should be a priority and collaboration with SSF District should be topic of discussion when planning for emergencies.	6/30/2021 9:43 PM
42	Where to go in case we need to evacuate	6/30/2021 5:13 PM
43	Funds and even labor to help those who don't have the tools, fitness, money, or truck to do the fire fuel clearing for a defensible space. Free consults for those who need help figuring out what to do, how to start. Expedited and incentivized permitting for projects related to house hardening for wildfire, such as fireproof siding and roofing, double-paned windows, enclosing decks...	6/30/2021 11:26 AM
44	knowing the county and state are doing their best to clear non native vegetation such as eucalyptus, cypress, and dead Monterey pines, beetle infestation of pines and dead vegetation accruing over the past 40 or more years along emergency egresses along hwys 1 and 92.	6/29/2021 7:25 PM
45	More fuel reduction programs	6/29/2021 8:08 AM
46	Where does someone report weed abatement issues?	6/28/2021 8:05 PM
47	CERT	6/28/2021 7:54 PM
48	A property fire safety inspection	6/28/2021 7:39 PM
49	cut down all the eucalyptus trees that will spread fires or at the very least clean the underbrush in more wooded areas	6/28/2021 3:16 PM
50	Living on the coast, where can we find information if highway 92 and/or highway 1 are closed and we are largely cut off from the rest of the bay area.	6/28/2021 3:14 PM
51	Communication from the City and County on what THEY are doing with the parks and	6/28/2021 2:39 PM

507

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

wildlands that surround so many areas. Information and resources for clearing brush, proper and safe tree trimming practices, etc. (This might also include information from CalTrans on what they are doing by roadsides, key evacuation routes.)

52	Communication systems need drastic improvement. SMC alert never even sent out messages during August 2020 CZU fires. We were getting updates through neighbors on Nextdoor, but county didn't have any communications about what was going on and if we needed to worry about fire coming into our area.	6/28/2021 1:54 PM
53	Visit to my home from a CALFIRE employee to advise on best actions we can take to improve our defensible space. Emergency shelters for pets in the event evacuation is required.	6/28/2021 11:20 AM
54	having a fuel reduction plan that did not require time and money to obtain permits	6/28/2021 9:24 AM
55	The best preparation is MITIGATING RISK. REMOVE EVERY DAMNED EUCALYPTUS IN THE COUNTY. Then *make* PG&E underground all lines, everywhere, and update their substations and other infrastructure.	6/28/2021 9:12 AM
56	Family including animals. Finding a way out. Our infrastructure is questionable at most with one road and too many ignitable trees.	6/27/2021 7:35 PM
57	Evacuation routes should include Pillar Point Harbor and HMB Airport	6/27/2021 7:06 PM
58	Information and timelines of forest fuel reduction projects for our surrounding areas. And how to get multiple agencies to work together when they all own land in surrounding areas eg CalTrans, State Parks, GGNRA, San Mateo County	6/27/2021 4:40 PM
59	Don't need information--need more action by San Mateo agencies to reduce fire hazards in El Granada. The Eucalyptus trees are a well know hazard and they need to be removed	6/27/2021 4:13 PM
60	At the moment I am most concerned with the availability of evacuation routes in a wildfire situation. Currently we have one route from our home to a highway, which also has limited options.	6/27/2021 4:03 PM
61	Have the County remove the eucalyptus trees in El Granada, because they are a terrifying fire hazard.	6/27/2021 2:03 PM
62	Comcast provides telco services to more than half of the folks who live on the Coastsides. It has chosen not to deploy redundant fiber for its network here on the Coastsides and the only route for its fiber infrastructure passes through territory that is quite susceptible to wild fire. This also impacts Verizon Wireless and dependent MVNO wireless carriers. Also, all of the outside of plant equipment for all of the telcos will stop functioning after eight hours without power. More needs to be done to secure our communications infrastructure.	6/27/2021 12:40 PM
63	Vegetation removal plans for POST and county owned right of ways in my area.	6/27/2021 11:31 AM
64	the director of the Lesley Foundation sends memos out to all residents keeping us apprised of this information. mandating us to be have an emergency pack so that we could be evacuated within an hour and a half. SHE HAS KEPT US SO SAFE DURING THE PANDEMIC as well as her team!!!!	6/27/2021 11:08 AM
65	See previous comment concerning KHMB Radio.	6/27/2021 10:06 AM
66	Information about vegetation safety priorities for homeowners in neighborhoods. Should we be clearing backyard trees? What to worry about if we live near the stands of eucalyptus?	6/27/2021 9:56 AM
67	We need a community fire prevention program that mitigates wildfire risk. This should include regular fire inspections of neighborhoods to identify obvious fire risks. Identifiable risks can be seen all over Montara, El Granada and surrounding areas. Some risks include 1) Vacant lots covered in debris, 2) Dangerous trees encroaching on utility lines and sidewalks and 3) Blighted properties. You would never see these problems in other Bay Area cities. It's time to implement a real fire prevention program with enforcement actions as needed.	6/27/2021 9:40 AM
68	The escape routes off the coast in the case of wildfire are few. All of them are ringed by trees.	6/27/2021 9:29 AM
69	I do worry about being able to evacuate Half Moon Bay in the event of a wildfire. We have only 3 options: 92 which is surrounded by dense brush and trees and seems like a horrible danger if a fire were imminently approaching, and Highway 1 North or South. I know there is potentially another way out of Half Moon Bay: El Granada Blvd up to the Watershed Access Roads. The county should give consideration to making this route available in the event of an emergency.	6/27/2021 9:29 AM

508

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

Another idea would be to have caches of food and water available near the beaches. In the event of a real fire emergency, many people in Half Moon Bay would have to flee to the beaches to escape fire. Having supplies there in advance would be good planning.

70	Knowing there is enough water supply for fire suppression That we could evacuate safely during a crowded sunny beach day when we have thousands of visitors-	6/27/2021 9:25 AM
71	I am trained to help set up a Red Cross shelter.	6/27/2021 9:14 AM
72	Hold CalFire accountable for shifting resources out of the county when they're needed most.	6/27/2021 9:10 AM
73	Similar to #3, have a day or event where people put together their go bag, except this one would be prepared at home. A list of shelters that will accept pets of all kinds.	6/27/2021 9:00 AM
74	Help with implementing wildfire mitigation strategies. Streamlining regulatory framework for implementation of home hardening.	6/27/2021 8:55 AM
75	Know evacuation routes off the coast	6/27/2021 8:54 AM
76	I have had a fire marshall inspect my house for fire safety. He was very helpful. We also need the state to clear deadfall from their property that borders many homes in Montara.	6/27/2021 8:45 AM
77	knowing best methods of communication when power and cell phones are out	6/27/2021 8:45 AM
78	Again, the City. Our municipality isn't aggressive enough with managing the dead trees. As a property manager, I see the condition of our trees, and to a certain extent vegetation, that isn't being cleared out. Our city could also turn up the heat on Caltrans to remove the dead trees along the freeways.	6/26/2021 2:47 PM
79	Ditto	6/25/2021 9:17 PM
80	Suggestion: During last year's wildfire event, backup batteries at most mobile cell broadcast units / towers were compromised since they failed completely after a short power outage. With technology today, there is NO excuse for such a short backup time. I highly recommend the community ensure backup cellular units can maintain broadcast power for 5-10x longer than existed in 2020. To overlook this would be a massive failure during the next wildfire event.	6/25/2021 2:08 PM
81	Knowing what mitigation efforts are planned by city and county nearby... I have no idea if they are fixing the obvious huge hazards locally.	6/25/2021 11:21 AM
82	The county should hit more public works employees/road maintenance workers who can create defensible space around the area/near properties	6/24/2021 10:46 PM
83	Publicize and identify land owners who need to clear fire fuel. Help land owners reduce fuel such as brush, tall grass, dead and or thick forest.	6/23/2021 6:56 PM
84	There isn't a lot of clear guidance about the responsibility for clearing brush. We live adjacent to the state park and they do not clear brush which puts our homes at risk	6/23/2021 4:17 PM
85	Having the County mow and clear hazardous vegetation fuel along and clear dead trees from all roads in the WUI to prevent fires from vehicle sparks, cigarette butts thrown from vehicles, and to maintain safe evacuation routes BEFORE FIRE SEASON. Also prompt CalTrans to do the same. Fine people who throw cigarette butt, light fireworks, and start any type of fire in the WUI except as designated campsites.	6/23/2021 3:28 PM
86	Getting guidance on air purifiers -- how many are needed in home/ what levels of particulate removal we should look for	6/23/2021 2:32 PM
87	Same as above, very localized plans.	6/23/2021 1:50 PM
88	Knowing how and where to get emergency information in case of either fire or earthquake. Also - is a booklet giving that information already updated and available?	6/23/2021 1:11 PM
89	financial aid? chipper program was good-can this be a bi-yearly service? brush disposal is an issue-what if you don't own a truck? what if you can't burn it? Is there a way to grind it up and compost it?	6/23/2021 8:08 AM
90	Knowing the people who are causing the fires (doing fireworks, dripping cigarette butts, etc) are going to be seriously disciplined	6/21/2021 6:55 PM
91	I have to provide updates to my parents that live in other states, so a single point of info to	6/21/2021 2:34 PM

509

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

pass on to them would be most helpful. They are worried about the fires, as are we.

92	Hillsborough has instigated a Wildland Urban Interface Fire Safety Program. All properties in the WUI designated area are inspected once a year. I feel I am up to date on creating defensible space around my home.	6/18/2021 1:53 PM
93	Knowing Belmont has a well-funded and concerted brush clearance and fuels reduction program.	6/15/2021 8:12 PM
94	Honestly, what would be more impactful to me is if we actually took steps to reduce the wildfire and PSPS risk, rather than trying bandaid solutions. We need to hold PG&E accountable and get them to address the infrastructure issues that make this a scary place to live in terms of losing power.	6/15/2021 12:47 PM
95	Knowing how wildfire can effect me even though I live in the middle of Menlo Park, away from hills and forests.	6/15/2021 10:40 AM
96	Point #1: Emergency evacuation routes need to be marked on the actual roadway (signs, distinctive red/white pavement arrows, etc). Ability of Apple/Google Maps to quickly/easily display evacuation routes would be NICE-TO-HAVE but would cell network be fully functional? Point #2: Bureaucratic & legal obstacles to wildland maintenance (brush clearing, controlled burns, 100-200 feet safe space creation, etc) do _NOT_ at all. Property owner has de facto right-of-way to clear brush on other lands (e.g. state/local park lands) to create the safe space around their property.	6/15/2021 7:49 AM
97	The hills between 280 and Alameda de las Plugas have large, heavily vegetated open spaces. These will become increasing subject to summer and fall fire risk as droughts frequency and extreme heat events become more common. City planners should identify who owns these parcels and lay out updated brush/fire management plans. Don't let these become the source of a "Coffee Park" event on the peninsula.	6/13/2021 10:00 AM
98	What is the risk for city lots? there is some communications work necessary on what our true risk is today	6/12/2021 6:09 PM
99	Signs in my community showing the preferred evacuation routes.	6/12/2021 4:02 PM
100	More details about how to protect against wildfire smoke - what personal protective devices to keep on hand, how to choose an air purifier, where to use it in the home, etc.	6/12/2021 10:20 AM
101	Having access to standard fire hose and nozzle in order to fight a fire as a volunteer when professionals are unable to be everywhere at once.	6/12/2021 2:55 AM
102	Need to improve roads to ensure people can get out of the coast in case of an emergency	6/11/2021 7:47 AM
103	A way to contact and work together with neighbors who co-abut town open spaces with high fire hazard on mitigations	6/11/2021 6:03 AM
104	Re second sentence about info "in my preferred language," although English is the only communication mode for most, there are many other language speakers in our county. I'm sure many bilingual speakers in those language groups would help with translation of necessary information.	6/10/2021 10:10 PM
105	Include air quality info and what we should do at various levels.	6/10/2021 6:26 PM
106	Provide trained volunteers to assess a home's preparedness level (from firesafe landscaping to earthquake safety to back-up supplies). Again, relying on the community to provide what I need is very convenient--but that would also incentivize me to rely on the community instead of myself. I don't think its realistic for people to assume "my community" will take care of me. Ideally information to prepare will be in one place, but in practice I find that there are lots of angles on preparedness and it is unrealistic to expect one site to accommodate all.	6/10/2021 12:25 PM
107	Also subsidies and other financial assistance to do the home hardening and retrofits to protect home (to all, not limited to low-income residents) (grants for home-hardening landscaping , incentives to replace siding with stucco, etc). Also, Tree removal permitting at the County and wildfire-prone cities needs to be reconciled ASAP to allow homeowners to trim/remove heritage or otherwise protected trees that are a fire danger.	6/10/2021 11:28 AM
108	leveraging existing community run programs by providing additional financial support and eliminating financial barriers for those who have them. Addressing eucalyptus and flammable material on the coast.	6/8/2021 12:16 PM

510

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

109	For the county and city to proactively identify areas to trim vegetation and growth (action plan with priorities)	6/7/2021 8:48 PM
110	guarantee that my current home insurer will cover any wildfire damage	6/7/2021 12:03 PM

G.

Q5 To help prepare for an extreme heat event, what would be most helpful to me is... (Check all that apply)

Answered: 639 Skipped: 64

ANSWER CHOICES	RESPONSES	
Knowing my community can provide safe, accessible emergency shelters for my family and neighbors if we need to leave our homes during extreme heat events.	67.1%	429
Knowing I can find useful information about what to expect on extreme heat days, what I can do to protect myself and my family, and where I can get emergency assistance in my preferred language.	58.4%	373
Finding a single source of information for getting advice and financial assistance on home cooling and air purification devices and to help my family and neighbors enroll or qualify for energy saving or renewable energy programs.	48.5%	310
Total Respondents: 639		

#	PLEASE PROVIDE OTHER IDEAS HERE:	DATE
1	I'm hoping the State and County are doing all they can this year to PREVENT FIRES! How about using helicopters to water dry forests, especially forests that adjoin Communities. There's a large unused pond in Quarry Park, El Granada. Maybe that water could be used. Get rid of BBQ pits in all parks & campgrounds during this drought period & post signs no fires in parks due to drought and high fire danger.	7/8/2021 4:10 PM
2	Knowing that my local water supply is secure from damage and that we have enough production and storage for long term power and pipeline interruptions. Local solar and/or wind power generation, such as neighborhood micro grids, to help insulate against electrical transmission line shut down.	7/8/2021 8:22 AM
3	Connect With Pacifica	7/7/2021 7:36 PM
4	We're self sufficient.	7/7/2021 4:05 PM
5	I'm not sure this question really applies to Pacifica since we don't really have extreme heat days....	7/7/2021 10:31 AM
6	Trainings in how we can reduce carbon emissions and safe the planet.	7/7/2021 7:06 AM
7	Help with neighbors with financial difficulties- to clear yards full of junk	7/7/2021 6:22 AM
8	Knowing my community has effectively cleared all public spaces from debris, near dead trees & bushes.	7/6/2021 2:49 PM

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

Same as above. All three on one site with all info including entering zip code for closet shelter and services - water etc. 7/2/2021 4:40 PM

10	Would love to have included how folks can make a temporary cooling device from a box fan and a pan of ice or water. We do NOT plan on purchasing an air conditioner as we have ceiling fans and floor fans and it never gets that hot downstairs in my house. It would be a waste of money and electricity to install such. Plus air conditioned air is so not fresh!	7/2/2021 10:34 AM
11	The extreme heat days will become worse and worse. We need to tactically prepare for all these emergencies, but more importantly be strategic by dealing with the climate crisis	7/2/2021 9:32 AM
12	Rebates to install heat pump hvac systems	7/2/2021 6:41 AM
13	Not a risk on the coast. Focus on fires, and communication during power outage, which also causes internet and cell outages.	7/2/2021 12:32 AM
14	Cooling centers	7/2/2021 12:28 AM
15	Cooking stations	7/1/2021 7:39 PM
16	Financial help for home cooling would be fantastic. Where do I sign up? Thank you all for the survey and the work you do. It's important.	7/1/2021 5:25 PM
17	Preventing blackouts in our community on hot days. Holding PG&E responsible for failing and outdated equipment. Working with the county, state, and federal government on global warming prevention and mitigation measures.	7/1/2021 1:14 PM
18	Distribution of food, water, and medicine free for anyone who wants it, as well as air conditioners, fans, ice, and air purifiers	7/1/2021 9:57 AM
19	Again, a single source of information for all of these options.	7/1/2021 8:26 AM
20	Pets included in evacuation plans and available shelters	7/1/2021 7:20 AM
21	Knowing the power grid and power generation had a plan to simply provide their service.	7/1/2021 7:18 AM
22	Encontrar aires acondicionados a precios accesibles para estar preparados	6/30/2021 11:36 PM
23	I me personally am not so worried about this, for being able to take care of myself and family	6/30/2021 11:26 AM
24	Our home, like so many around here, does not have air conditioning. Our home was built to passively stay cool in all but the most extreme heat days. However, if there is also wildfire smoke it may not be safe to open our windows at night to cool our home. We will appreciate information about converting to a heat pump HVAC system (from gas furnaces) that will enable us to cool and heat our home without generating carbon pollution. If there are rebates available we would like to find an easy way to learn about this, as well as available products, installers, etc.	6/29/2021 3:02 PM
25	Television	6/28/2021 8:07 PM
26	CERT	6/28/2021 7:53 PM
27	Not a problem for me.	6/28/2021 7:39 PM
28	Easy to implement ideas for cooling that can function without power and how to save energy/power during these events.	6/28/2021 2:39 PM
29	we are fine at home, we are prepared for this one	6/28/2021 9:24 AM
30	0% interest / \$0 payment state loans to support installing AC infrastructure, but only if a lid can be kept on installers' price gouging.	6/28/2021 9:12 AM
31	Keeping a limit on how many outsiders come to the coast. Our roads and beaches get too crowded and if god forbid there was a natural disaster, how are we all to escape and what road would we take?	6/27/2021 7:35 PM
32	Extreme heat is not really a major Coastsides concern.	6/27/2021 7:06 PM
33	Not an issue on the coast	6/27/2021 4:13 PM
34	I am not aware of a single air-conditioned room within five miles of Montara that can accommodate more than 50 people during a heat event. Has anyone spoken with the operator	6/27/2021 12:40 PM

513

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

of the Harbor Village Mall in HMB to see what kind of support it could provide during a heat or other kind of emergency event. Also, does it have backup generators or at least generator hookups on site? A heat event that was coupled with an extended power outage would also take hundreds if not thousands of wells offline, which would further impact the ability of people to hydrate and/or cool down.

35	i know the drill to keep my apartment cool despite high heat. i'm a 21 year resident of CA, but lived in hot and humid climates for 57 years.	6/27/2021 11:08 AM
36	See previous comment concerning KHMB Radio.	6/27/2021 10:06 AM
37	Extreme heat equates to power issues. Identify sources of power, food, water for long outages on the coastside.	6/27/2021 9:56 AM
38	That we could evacuate safely during a crowded sunny beach day when we have thousands of visitors-	6/27/2021 9:25 AM
39	I feel pretty prepared thanks to CERT and ham radio. One of the things this survey leaves out is how if we cannot communicate how the ham radio operators can communicate to us and our neighbors! We all came together during the fire. We were able to tell people to go to the high school and where they could get their cell phones charged!	6/27/2021 9:14 AM
40	knowing that responsible agencies are keeping tourists away on red flag days in order to keep roads less congested in case of need for evacuation	6/27/2021 8:45 AM
41	Our apartment is usually 5-10 degrees hotter than outside. In extreme heat events, we jump in our bathtub with cold water, or place a cold wet towel in the freezer for a few minutes. We usually don't leave our apartment or this local area because of the pandemic, so it would be helpful to have the City, or perhaps the County to provide ideas to help our homeless neighbors. We see them every day. What would help them stay safe, right? A mist fan bottle full of cold water? Something that would not melt immediately like ice cream, plus many are diabetic, and something they could use again. FYI: This survey sounds geared towards SFR owners - are they the dominant constituency you've targeted? Cause otherwise, I know you'd use different language. I hope I'm wrong.	6/26/2021 2:47 PM
42	Ditto	6/25/2021 9:17 PM
43	Don't replicate what is commonly available, but rather concentrate on innovative solutions for the community. There is no need to replicate what is already available and/or known to be available from other sources of information.	6/25/2021 2:08 PM
44	What steps are city and county taking to reduce heat island effects, plant trees, reduce blacktop, etc proactively to reduce local urban hot spots????	6/25/2021 11:21 AM
45	Resources to make my home more resistant to heat. Such as insulation, information on outside window shading, air filtration.	6/23/2021 10:51 PM
46	Understand that PGE is unreliable and don't move to reliance on electricity as the only power source availability in the county.	6/23/2021 6:56 PM
47	Provide incentives to people to purchase generators or solar systems so they have power during a PSPS. Provide cooling centers for people and their pets.	6/23/2021 3:28 PM
48	More rebates for switching to fossil-fuel free cooling/heating	6/23/2021 2:34 PM
49	Having information about available cooling sites would be helpful. Last year, I tried to find something but nothing was up to date. Told me about library and senior center, both of which were closed due to Covid	6/23/2021 2:30 PM
50	Having more cooling shelters (and warming shelters in the winter) and a reliable method to notify citizens. The most vulnerable citizens probably don't have email and cellphones.	6/22/2021 5:41 PM
51	Knowing that elderly and disabled people in my community are going to be taken care of! Also the third one about financial assistance is huge! We didn't have AC for a long time because it's so expensive. But with each year getting hotter and hotter and having to stay indoors because of the smoke from the wildfires, last year was intolerable. We just had to bite the bullet and get AC. Would have been nice to have financial support. I'm sure there are many others like us.	6/21/2021 6:55 PM
52	Updating the grid or some sort of infrastructure maintenance seems necessary to battle the upcoming heat and extreme heat events. Energy-saving/renewal programs are of the utmost	6/21/2021 2:34 PM

514

San Mateo County Multijurisdictional Local Hazard Mitigation Plan Survey #2

G.

importance to help with this problem.

53	saber estos beneficios finaciaron tambien incluyen a lacomunidad sin documentos	6/21/2021 11:52 AM
54	Knowing that PG&E has beefed up the grid sufficiently to prevent brown-outs and power outages.	6/15/2021 8:12 PM
55	Electric grid reliability is most important; however, focus on renewable green energy does _NOT_ improve electric grid reliability. Nor do bureaucratic obstacles to electric grid maintenance assist with such.	6/15/2021 7:49 AM
56	Air purifier information and air filters information ; best apps to measure outside AQI to determine whether to stay in or not.	6/14/2021 7:38 PM
57	Partnering with air conditioned public spaces: e.g., libraries, malls	6/14/2021 2:50 PM
58	I'd like to see a cybersecurity risk analysis and plan. What is the risk of dam water being released in a cybertakeover? Or if our drinking water was contaminated?	6/12/2021 6:09 PM
59	Attic insulation to reflect the heat out.	6/12/2021 2:55 AM
60	Many individuals that succumb to heat are the elderly and youth. Many of those individuals do not have and/or cannot afford A/C. They also work hard jobs or live in homes without A/C available. This is a hard problem that needs more individuals (e.g., neighborhood associations) to work with/persuade/help them at least get fans!	6/10/2021 10:10 PM
61	An extreme heat event is unlikely for my region (Coastside).	6/10/2021 6:30 PM
62	Easier to plan for heat events. In general, libraries are a great place to cool off, but during COVID we really had no where to go during planned power outages on hot days.	6/10/2021 12:25 PM
63	Zoom sessions would be helpful.	6/9/2021 11:07 AM
64	providing units or incentives for home cooling for low income residents. Incentivize early purchase before the rush.	6/8/2021 12:16 PM
65	Knowing when power will be shut off	6/7/2021 8:48 PM
66	guarantee that PG&E will not shut down/brownout power during an extreme heat event financial support/subsidies for purchase of sizable home batteries to provide ongoing power during an excessive heat event	6/7/2021 12:03 PM

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix C. Summary of Federal and State Agencies, Programs and Regulations

C. SUMMARY OF FEDERAL AND STATE AGENCIES, PROGRAMS AND REGULATIONS

Existing laws, ordinances, plans and programs at the federal and state level can support or impact hazard mitigation actions identified in this plan. Hazard mitigation plans are required to include a review and incorporation, if appropriate, of existing plans, studies, reports, and technical information as part of the planning process (44 CFR, Section 201.6(b)(3)). The following federal and state programs have been identified as programs that may interface with the actions identified in this plan. Each program enhances capabilities to implement mitigation actions or has a nexus with a mitigation action in this plan. Information presented in this section can be used to review local capabilities to implement the actions found in the jurisdictional annexes of Volume 2. Each planning partner has individually reviewed existing local plans, studies, reports, and technical information in its jurisdictional annex, presented in Volume 2.

FEDERAL

Americans with Disabilities Act

The Americans with Disabilities Act (ADA) seeks to prevent discrimination against people with disabilities in employment, transportation, public accommodation, communications, and government activities. Title II of the ADA deals with compliance with the Act in emergency management and disaster-related programs, services, and activities. It applies to state and local governments as well as third parties, including religious entities and private nonprofit organizations.

The ADA has implications for sheltering requirements and public notifications. During an emergency alert, officials must use a combination of warning methods to ensure that all community members have all necessary information. Those with hearing impairments may not hear radio, television, sirens, or other audible alerts, while those with visual impairments may not see flashing lights or other visual alerts. Two technical documents for shelter operators address physical accessibility needs of people with disabilities, as well as medical needs and service animals.

The ADA intersects with disaster preparedness programs in regards to transportation, social services, temporary housing, and rebuilding. Persons with disabilities may require additional assistance in evacuation and transit (e.g., vehicles with wheelchair lifts or paratransit buses). Evacuation and other response plans should address the unique needs of community members. Local governments may be interested in implementing a special-needs registry to identify the home addresses, contact information, and needs for community members who may require more assistance.

FEMA hazard mitigation project grant applications require full compliance with applicable federal acts. Any action identified in this plan that falls within the scope of this act will need to meet its requirements.

Bureau of Land Management

The U.S. Bureau of Land Management (BLM) funds and coordinates wildfire management programs and structural fire management and prevention on BLM lands. BLM works closely with the Forest Service and state and local governments to coordinate fire safety activities. The Interagency Fire Coordination Center in Boise, Idaho serves as the center for this effort.

Civil Rights Act

The Civil Rights Act of 1964 prohibits discrimination based on race, color, religion, sex or nation origin and requires equal access to public places and employment. The Act is relevant to emergency management and hazard mitigation in that it prohibits local governments from favoring the needs of one population group over another. Local government and emergency response must ensure the continued safety and well-being of all community members equally, to the extent possible. FEMA hazard mitigation project grant applications require full compliance with applicable federal acts. Any action identified in this plan that falls within the scope of this act will need to meet its requirements.

Clean Water Act

The federal Clean Water Act (CWA) employs regulatory and non-regulatory tools to reduce direct pollutant discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. These tools are employed to achieve the broader goal of restoring and maintaining the chemical, physical, and biological integrity of the nation's surface waters so that they can support "the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water."

Evolution of CWA programs over the last decade has included a shift from a program-by-program, source-by-source, and pollutant-by-pollutant approach to more holistic watershed-based strategies. Under the watershed approach, equal emphasis is placed on protecting healthy waters and restoring impaired ones. Numerous issues are addressed, not just those subject to CWA regulatory authority. Involvement of stakeholder groups in the development and implementation of strategies for achieving and maintaining water quality and other environmental goals is a hallmark of this approach.

The CWA is important to hazard mitigation in several ways. There are often permitting requirements for any construction within 200 feet of water of the United States, which may have implications for mitigation projects identified by a local jurisdiction. Additionally, CWA requirements apply to wetlands, which serve important functions related to preserving and protecting the natural and beneficial functions of floodplains and are linked with a community's floodplain management program. Finally, the National Pollutant Discharge Elimination System is part of the CWA and addresses local stormwater management programs. Stormwater management plays a critical role in hazard mitigation by addressing urban drainage or localized flooding issues within jurisdictions.

FEMA hazard mitigation project grant applications require full compliance with applicable federal acts. Any action identified in this plan that falls within the scope of this act will need to meet its requirements.

Community Development Block Grant Disaster Resilience Program

In response to disasters, Congress may appropriate additional funding for the U.S. Department of Housing and Urban Development Community Development Block Grant programs to be distributed as Disaster Recovery grants (CDBG-DR). These grants can be used to rebuild affected areas and provide seed money to start the recovery process. CDBG-DR assistance may fund a broad range of recovery activities, helping communities and neighborhoods that otherwise might not recover due to limited resources. CDBG-DR grants often supplement disaster programs of FEMA, the Small Business Administration, and the U.S. Army Corps of Engineers. Housing and Urban Development generally awards noncompetitive, nonrecurring CDBG-DR grants by a formula that considers disaster recovery needs unmet by other federal disaster assistance programs. To be eligible for CDBG-DR funds, projects must meet the following criteria:

- Address a disaster-related impact (direct or indirect) in a presidentially declared county for the covered disaster
- Be a CDBG-eligible activity (according to regulations and waivers)
- Meet a national objective.

Incorporating preparedness and mitigation into these actions is encouraged, as the goal is to rebuild in ways that are safer and stronger. CDBG-DR funding is a potential alternative source of funding for actions identified in this plan.

Community Rating System

The CRS is a voluntary program within the NFIP that encourages floodplain management activities that exceed the minimum NFIP requirements. Flood insurance premiums are discounted to reflect the reduced flood risk resulting from community actions meeting the following three goals of the CRS:

- Reduce flood losses.
- Facilitate accurate insurance rating.
- Promote awareness of flood insurance.

For participating communities, flood insurance premium rates are discounted in increments of 5 percent. For example, a Class 1 community would receive a 45 percent premium discount, and a Class 9 community would receive a 5 percent discount. (Class 10 communities are those that do not participate in the CRS; they receive no discount.) The discount partially depends on location of the property. Properties outside the special flood hazard area receive smaller discounts: a 10-percent discount if the community is at Class 1 to 6 and a 5-percent discount if the community is at Class 7 to 9. The CRS classes for local communities are based on 18 creditable activities in the following categories:

- Public information
- Mapping and regulations
- Flood damage reduction
- Flood preparedness.

CRS activities can help to save lives and reduce property damage. Communities participating in the CRS represent a significant portion of the nation's flood risk; over 66 percent of the NFIP's policy base is located in

these communities. Communities receiving premium discounts through the CRS range from small to large and represent a broad mixture of flood risks, including both coastal and riverine flood risks.

Disaster Mitigation Act

The DMA is the current federal legislation addressing hazard mitigation planning. It emphasizes planning for disasters before they occur. It specifically addresses planning at the local level, requiring plans to be in place before Hazard Mitigation Assistance grant funds are available to communities. This plan is designed to meet the requirements of DMA, improving eligibility for future hazard mitigation funds.

Emergency Relief for Federally Owned Roads Program

The U.S. Forest Service's Emergency Relief for Federally Owned Roads Program was established to assist federal agencies with repair or reconstruction of tribal transportation facilities, federal lands transportation facilities, and other federally owned roads that are open to public travel and have suffered serious damage by a natural disaster over a wide area or by a catastrophic failure. The program funds both emergency and permanent repairs. Eligible activities under this program meet some of the goals and objectives for this plan and the program is a possible funding source for actions identified in this plan.

Emergency Watershed Program

The USDA Natural Resources Conservation Service (NRCS) administers the Emergency Watershed Protection (EWP) Program, which responds to emergencies created by natural disasters. Eligibility for assistance is not dependent on a national emergency declaration. The program is designed to help people and conserve natural resources by relieving imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences. EWP is an emergency recovery program. Financial and technical assistance are available for the following activities (Natural Resources Conservation Service, 2018):

- Remove debris from stream channels, road culverts, and bridges
- Reshape and protect eroded banks
- Correct damaged drainage facilities
- Establish cover on critically eroding lands
- Repair levees and structures
- Repair conservation practices.

This federal program could be a possible funding source for actions identified in this plan.

Endangered Species Act

The federal Endangered Species Act (ESA) was enacted in 1973 to conserve species facing depletion or extinction and the ecosystems that support them. The act sets forth a process for determining which species are threatened and endangered and requires the conservation of the critical habitat in which those species live. The ESA provides broad protection for species of fish, wildlife and plants that are listed as threatened or endangered. Provisions are made for listing species, as well as for recovery plans and the designation of critical habitat for listed species. The ESA outlines procedures for federal agencies to follow when taking actions that may jeopardize listed species and

contains exceptions and exemptions. It is the enabling legislation for the Convention on International Trade in Endangered Species of Wild Fauna and Flora. Criminal and civil penalties are provided for violations of the ESA and the Convention.

Federal agencies must seek to conserve endangered and threatened species and use their authorities in furtherance of the ESA's purposes. The ESA defines three fundamental terms:

- Endangered means that a species of fish, animal or plant is “in danger of extinction throughout all or a significant portion of its range.” (For salmon and other vertebrate species, this may include subspecies and distinct population segments.)
- Threatened means that a species “is likely to become endangered within the foreseeable future.” Regulations may be less restrictive for threatened species than for endangered species.
- Critical habitat means “specific geographical areas that are...essential for the conservation and management of a listed species, whether occupied by the species or not.”

Five sections of the ESA are of critical importance to understanding it:

- Section 4: Listing of a Species—The National Oceanic and Atmospheric Administration Fisheries Service (NOAA Fisheries) is responsible for listing marine species; the U.S. Fish and Wildlife Service is responsible for listing terrestrial and freshwater aquatic species. The agencies may initiate reviews for listings, or community members may petition for them. A listing must be made “solely on the basis of the best scientific and commercial data available.” After a listing has been proposed, agencies receive comment and conduct further scientific reviews for 12 to 18 months, after which they must decide if the listing is warranted. Economic impacts cannot be considered in this decision, but it may include an evaluation of the adequacy of local and state protections. Critical habitat for the species may be designated at the time of listing.
- Section 7: Consultation—Federal agencies must ensure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of a listed or proposed species or adversely modify its critical habitat. This includes private and public actions that require a federal permit. Once a final listing is made, non-federal actions are subject to the same review, termed a “consultation.” If the listing agency finds that an action will “take” a species, it must propose mitigations or “reasonable and prudent” alternatives to the action; if the proponent rejects these, the action cannot proceed.
- Section 9: Prohibition of Take—It is unlawful to “take” an endangered species, including killing or injuring it or modifying its habitat in a way that interferes with essential behavioral patterns, including breeding, feeding or sheltering.
- Section 10: Permitted Take—Through voluntary agreements with the federal government that provide protections to an endangered species, a non-federal applicant may commit a take that would otherwise be prohibited as long as it is incidental to an otherwise lawful activity (such as developing land or building a road). These agreements often take the form of a “Habitat Conservation Plan.”
- Section 11: Citizen Lawsuits—Civil actions initiated by any citizen can require the listing agency to enforce the ESA's prohibition of taking or to meet the requirements of the consultation process.

FEMA hazard mitigation project grant applications require full compliance with applicable federal acts. Any action identified in this plan that falls within the scope of this act will need to meet its requirements.

Federal Energy Regulatory Commission Dam Safety Program

The Federal Energy Regulatory Commission (FERC) cooperates with a large number of federal and state agencies to ensure and promote dam safety. More than 3,000 dams are part of regulated hydroelectric projects in the FERC program. Two-thirds of these are more than 50 years old. As dams age, concern about their safety and integrity grows, so oversight and regular inspection are important. FERC inspects hydroelectric projects on an unscheduled basis to investigate the following:

- Potential dam safety problems
- Complaints about constructing and operating a project
- Safety concerns related to natural disasters
- Issues concerning compliance with the terms and conditions of a license.

Every five years, an independent engineer approved by the FERC must inspect and evaluate projects with dams higher than 32.8 feet (10 meters), or with a total storage capacity of more than 2,000 acre-feet.

FERC monitors seismic research and applies it in performing structural analyses of hydroelectric projects. FERC also evaluates the effects of potential and actual large floods on the safety of dams. During and following floods, FERC visits dams and licensed projects, determines the extent of damage, if any, and directs any necessary studies or remedial measures the licensee must undertake. The FERC publication *Engineering Guidelines for the Evaluation of Hydropower Projects* guides the FERC engineering staff and licensees in evaluating dam safety. The publication is frequently revised to reflect current information and methodologies.

FERC requires licensees to prepare emergency action plans and conducts training sessions on how to develop and test these plans. The plans outline an early warning system if there is an actual or potential sudden release of water from a dam due to failure. The plans include operational procedures that may be used, such as reducing reservoir levels and reducing downstream flows, as well as procedures for notifying affected community members and agencies responsible for emergency management. These plans are frequently updated and tested to ensure that everyone knows what to do in emergency situations.

Federal Wildfire Management Policy and Healthy Forests Restoration Act

Federal Wildfire Management Policy and Healthy Forests Restoration Act (2003). These documents call for a single comprehensive federal fire policy for the Interior and Agriculture Departments (the agencies using federal fire management resources). They mandate community-based collaboration to reduce risks from wildfire.

National Dam Safety Act

Potential for catastrophic flooding due to dam failures led to passage of the National Dam Inspection Act in 1972, creation of the National Dam Safety Program in 1996, and reauthorization of the program through the Dam Safety Act in 2006. National Dam Safety Program, administered by FEMA requires a periodic engineering analysis of the majority of dams in the country; exceptions include the following:

- Dams under jurisdiction of the Bureau of Reclamation, Tennessee Valley Authority, or International Boundary and Water Commission
- Dams constructed pursuant to licenses issued under the Federal Power Act

- Dams that the Secretary of the Army determines do not pose any threat to human life or property.

The goal of this FEMA-monitored effort is to identify and mitigate the risk of dam failure so as to protect lives and property of the public. The National Dam Safety Program is a partnership among the states, federal agencies, and other stakeholders that encourages individual and community responsibility for dam safety. Under FEMA's leadership, state assistance funds have allowed all participating states to improve their programs through increased inspections, emergency action planning, and purchases of needed equipment. FEMA has also expanded existing and initiated new training programs. Grant assistance from FEMA provides support for improvement of dam safety programs that regulate most of the dams in the United States.

National Environmental Policy Act

The National Environmental Policy Act requires federal agencies to consider the environmental impacts of proposed actions and reasonable alternatives to those actions, alongside technical and economic considerations. The National Environmental Policy Act established the Council on Environmental Quality, whose regulations (40 CFR Parts 1500-1508) set standards for compliance. Consideration and decision-making regarding environmental impacts must be documented in an environmental impact statement or environmental assessment. Environmental impact assessment requires the evaluation of reasonable alternatives to a proposed action, solicitation of input from organizations and individuals that could be affected, and an unbiased presentation of direct, indirect, and cumulative environmental impacts. FEMA hazard mitigation project grant applications require full compliance with applicable federal acts. Any action identified in this plan that falls within the scope of this act will need to meet its requirements.

National Fire Plan

The 2001 National Fire Plan was developed based on the National Fire Policy. A major aspect of the National Fire Plan is joint risk reduction planning and implementation carried out by federal, state and local agencies and communities. The National Fire Plan presented a comprehensive strategy in five key initiatives:

- Firefighting—Be adequately prepared to fight fires each fire season.
- Rehabilitation and Restoration—Restore landscapes and rebuild communities damaged by wildfires.
- Hazardous Fuel Reduction—Invest in projects to reduce fire risk.
- Community Assistance—Work directly with communities to ensure adequate protection.
- Accountability—Be accountable and establish adequate oversight, coordination, program development, and monitoring for performance.

National Flood Insurance Program

The National Flood Insurance Program (NFIP) makes federally backed flood insurance available to homeowners, renters, and business owners in participating communities that enact floodplain regulations. Participation and good standing under NFIP are prerequisites to grant funding eligibility under the Robert T. Stafford Act.

Flood Study and Mapping

For most participating communities, FEMA has prepared a detailed Flood Insurance Study. The study presents water surface elevations for floods of various magnitudes, including the 1-percent-annual-chance flood and the 0.2-percent-annual-chance flood.

Base flood elevations and the boundaries of the flood hazard areas are shown on Flood Insurance Rate Maps, which are the principle tool for identifying the extent and location of the flood hazard. Flood Insurance Rate Maps are the most detailed and consistent data source available, and for many communities they represent the minimum area of oversight under the local floodplain management program. Structures permitted or built in a jurisdiction before its first flood map was approved are called “pre-FIRM” structures, and structures built afterwards are called “post-FIRM.” The insurance rate is different for the two types of structures. In recent years, Flood Insurance Rate Maps have been digitized as Digital Flood Insurance Rate Maps, which are more accessible to community members, local governments and stakeholders.

Requirements for Development Regulations

NFIP participants must, at a minimum, regulate development in floodplain areas in accordance with NFIP criteria. Before issuing a permit to build in a floodplain, participating jurisdictions must ensure that three criteria are met:

- New buildings and those undergoing substantial improvements must, at a minimum, be elevated to protect against damage by the 1-percent-annual-chance flood.
- New floodplain development must not aggravate existing flood problems or increase damage to other properties.
- New floodplain development must exercise a reasonable and prudent effort to reduce its adverse impacts on threatened salmonid species.

NFIP participation is limited to local governments that possess permit authority and have the ability to adopt and enforce regulations that govern land use. This does not typically apply to special purpose districts.

Repetitive Loss Properties and Areas

A repetitive loss property is defined by FEMA as an NFIP-insured property that has experienced any of the following since 1978, regardless of any changes in ownership:

- Four or more paid losses in excess of \$1,000
- Two paid losses in excess of \$1,000 within any rolling 10-year period
- Three or more paid losses that equal or exceed the current value of the insured property.

Repetitive loss properties make up 1 to 2 percent of flood insurance policies in force nationally, yet they account for 40 percent of the nation’s flood insurance claim payments. The government has instituted programs encouraging communities to identify and mitigate the causes of repetitive losses. A recent report on repetitive losses by the National Wildlife Federation found that 20 percent of these properties are outside any mapped 100-year floodplain. The key identifiers for repetitive loss properties are the existence of flood insurance policies and claims paid by the policies.

FEMA-sponsored programs, such as the CRS, require participating communities to identify repetitive loss areas. A repetitive loss area is the portion of a floodplain holding structures that FEMA has identified as meeting the

definition of repetitive loss. Identifying repetitive loss areas helps to identify structures that are at risk but are not on FEMA's list of repetitive loss structures because no flood insurance policy was in force at the time of loss.

National Incident Management System

The National Incident Management System (NIMS) is a systematic approach for government, nongovernmental organizations, and the private sector to work together to manage incidents involving hazards. The NIMS provides a flexible but standardized set of incident management practices. Incidents typically begin and end locally, and they are managed at the lowest possible geographical, organizational, and jurisdictional level. In some cases, success depends on the involvement of multiple jurisdictions, levels of government, functional agencies, and emergency responder disciplines. These cases necessitate coordination across a spectrum of organizations. Communities using NIMS follow a comprehensive national approach that improves the effectiveness of emergency management and response personnel across the full spectrum of potential hazards (including natural hazards, technological hazards, and human-caused hazards) regardless of size or complexity.

Although participation is voluntary, federal departments and agencies are required to make adoption of NIMS by local and state jurisdictions a condition to receive federal preparedness grants and awards. The content of this plan is considered to be a viable support tool for any phase of emergency management. The NIMS program is considered as a response function, and information in this hazard mitigation plan can support the implementation and update of all NIMS-compliant plans within the planning area.

National Landslide Preparedness Act

The 2021 National Landslide Preparedness Act authorized a national landslide hazards reduction program and a 3D elevation program within the USGS. This broadened the existing Landslide Hazards Program (under the Natural Hazards Mission Area) and the 3D Elevation Program (under the National Geospatial Program). The act required coordination among federal agencies through an Interagency Coordinating Committee on Landslide Hazards representing USGS and other agencies. The act calls for development of a national strategy for landslide loss reduction and a publicly accessible national landslide database of landslide hazard and risk.

Presidential Executive Order 11988, Floodplain Management

Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. It requires federal agencies to provide leadership and take action to reduce the risk of flood loss, minimize the impact of floods on human safety, health, and welfare, and restore and preserve the natural and beneficial values of floodplains. The requirements apply to the following activities:

- Acquiring, managing, and disposing of federal lands and facilities
- Providing federally undertaken, financed, or assisted construction and improvements
- Conducting federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing.

Presidential Executive Order 11990, Protection of Wetlands

Executive Order 11990 requires federal agencies to provide leadership and take action to minimize the destruction, loss or degradation of wetlands, and to preserve and enhance the natural and beneficial values of wetlands. The requirements apply to the following activities:

- Acquiring, managing, and disposing of federal lands and facilities
- Providing federally undertaken, financed, or assisted construction and improvements
- Conducting federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing.

All actions identified in this plan will seek full compliance with all applicable presidential executive orders.

Rural Development Program

The mission of the U.S. Department of Agriculture (USDA) Rural Development Program is to help improve the economy and quality of life in rural America. The program provides project financing and technical assistance to help rural communities provide the infrastructure needed by rural businesses, community facilities, and households. The program addresses rural America's need for basic services, such as clean running water, sewage and waste disposal, electricity, and modern telecommunications and broadband. Loans and competitive grants are offered for various community and economic development projects and programs, such as the development of essential community facilities including fire stations. This program is a potential source of funding for actions identified in this plan.

U.S. Army Corps of Engineers Dam Safety Program

The U.S. Army Corps of Engineers operates and maintains approximately 700 dams nationwide. It is also responsible for safety inspections of some federal and non-federal dams in the United States that meet the size and storage limitations specified in the National Dam Safety Act. The Corps has inventoried dams; surveyed each state and federal agency's capabilities, practices and regulations regarding design, construction, operation and maintenance of the dams; and developed guidelines for inspection and evaluation of dam safety. The Corps maintains the National Inventory of Dams, which contains information about a dam's location, size, purpose, type, last inspection and regulatory status.

U.S. Army Corps of Engineers Flood Hazard Management

The following U.S. Army Corps of Engineers authorities and programs related to flood hazard management:

- The Floodplain Management Services program offers 100-percent federally funded technical services such as development and interpretation of site-specific data related to the extent, duration and frequency of flooding. Special studies may be conducted to help a community understand and respond to flood risk. These may include flood hazard evaluation, flood warning and preparedness, or flood modeling.
- For more extensive studies, the Corps of Engineers offers a cost-shared program called Planning Assistance to States and Tribes. Studies under this program generally range from \$25,000 to \$100,000 with the local jurisdiction providing 50 percent of the cost.

- The Corps of Engineers has several cost-shared programs (typically 65 percent federal and 35 percent non-federal) aimed at developing, evaluating and implementing structural and non-structural capital projects to address flood risks at specific locations or within a specific watershed:
 - The Continuing Authorities Program for smaller-scale projects includes Section 205 for Flood Control, with a \$7 million federal limit and Section 14 for Emergency Streambank Protection with a \$1.5 million federal limit. These can be implemented without specific authorization from Congress.
 - Larger scale studies, referred to as General Investigations, and projects for flood risk management, for ecosystem restoration or to address other water resource issues, can be pursued through a specific authorization from Congress and are cost-shared, typically at 65 percent federal and 35 percent non-federal.
 - Watershed management planning studies can be specifically authorized and are cost-shared at 50 percent federal and 50 percent non-federal.
- The Corps of Engineers provides emergency response assistance during and following natural disasters. Public Law 84-99 enables the Corps to assist state and local authorities in flood fight activities and cost share in the repair of flood protective structures. Assistance is provided in the following categories:
 - Preparedness—The Flood Control and Coastal Emergency Act establishes an emergency fund for preparedness for emergency response to natural disasters; for flood fighting and rescue operations; for rehabilitation of flood control and hurricane protection structures. Funding for Corps of Engineers emergency response under this authority is provided by Congress through the annual Energy and Water Development Appropriation Act. Disaster preparedness activities include coordination, planning, training and conduct of response exercises with local, state and federal agencies.
 - Response Activities—Public Law 84-99 allows the Corps of Engineers to supplement state and local entities in flood fighting urban and other non-agricultural areas under certain conditions (Engineering Regulation 500-1-1 provides specific details). All flood fight efforts require a project cooperation agreement signed by the public sponsor and the sponsor must remove all flood fight material after the flood has receded. Public Law 84-99 also authorizes emergency water support and drought assistance in certain situations and allows for “advance measures” assistance to prevent or reduce flood damage conditions of imminent threat of unusual flooding.
 - Rehabilitation—Under Public Law 84-99, an eligible flood protection system can be rehabilitated if damaged by a flood event. The flood system would be restored to its pre-disaster status at no cost to the federal system owner, and at 20-percent cost to the eligible non-federal system owner. All systems considered eligible for Public Law 84-99 rehabilitation assistance have to be in the Rehabilitation and Inspection Program prior to the flood event. Acceptable operation and maintenance by the public levee sponsor are verified by levee inspections conducted by the Corps on a regular basis. The Corps has the responsibility to coordinate levee repair issues with interested federal, state, and local agencies following natural disaster events where flood control works are damaged.

These authorities and programs are all available to the planning partners to support any related mitigation actions.

U.S. Bureau of Reclamation Safety Evaluation of Existing Dams Program

The U.S. Bureau of Reclamation’s Safety Evaluation of Existing Dams Program was officially implemented in 1978 with passage of the Reclamation Safety of Dams Act (Public Law 95-578). This act was amended in 1984 under Public Law 98-404, in 2000 under Public Law 106-377, in 2002 under Public Law 107-117, and in 2004 under Public Law 108-439. Program development and administration of dam safety activities is the responsibility of the Bureau of Reclamation’s Dam Safety Office located in Denver, Colorado.

Dams must be operated and maintained in a safe manner, ensured through inspections for safety deficiencies, analyses utilizing current technologies and designs, and corrective actions if needed based on current engineering practices. In addition, future evaluations should include assessments of benefits foregone with the loss of a dam. For example, a failed dam can no longer provide needed fish and wildlife benefits.

The primary emphasis of the Safety Evaluation of Existing Dams program is to perform site evaluations and to identify potential safety deficiencies on Bureau of Reclamation and other Interior Department dams. The basic objective is to quickly identify dams which pose an increased threat to the public, and to quickly complete the related analyses in order to expedite corrective action decisions and safeguard the public and associated resources.

The program focuses on evaluating and implementing actions to resolve safety concerns at Bureau of Reclamation dams. Under this program, the Bureau of Reclamation completes studies and identifies and implements needed corrective action on Bureau of Reclamation dams. The selected course of action relies on assessments of risks and liabilities with environmental and public involvement input to the decision-making process.

U.S. Fire Administration

There are federal agencies that provide technical support to fire agencies/organizations. For example, the U.S. Fire Administration, which is a part of FEMA, provides leadership, advocacy, coordination, and support for fire agencies and organizations.

U.S. Fish and Wildlife Service

The U.S. Fish and Wildlife Service fire management strategy uses prescribed fire to maintain early successional fire-adapted grasslands and other ecological communities throughout the National Wildlife Refuge system.

STATE

AB 32: The California Global Warming Solutions Act

This bill identifies the following potential adverse impacts of global warming:

“... the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.”

AB 32 establishes a state goal of reducing greenhouse gas emissions to 1990 levels by 2020 (a reduction of approximately 25 percent from forecast emission levels), with further reductions to follow. The law requires the state Air Resources Board to do the following:

Establish a program to track and report greenhouse gas emissions.

Approve a scoping plan for achieving the maximum technologically feasible and cost-effective reductions from sources of greenhouse gas emissions.

Adopt early reduction measures to begin moving forward.

Adopt, implement and enforce regulations—including market mechanisms such as “cap and-trade” programs—to ensure that the required reductions occur.

The Air Resources Board has adopted a statewide greenhouse gas emissions limit and an emissions inventory, along with requirements to measure, track, and report greenhouse gas emissions by the industries it determined to be significant sources of greenhouse gas emissions.

AB 70: Flood Liability

This bill provides that a city or county may be required to contribute a fair and reasonable share to compensate for property damage caused by a flood to the extent that it has increased the state's exposure to liability for property damage by unreasonably approving new development in a previously undeveloped area that is protected by a state flood control project, unless the city or county meets specified requirements.

AB 162: Flood Planning

This California State Assembly Bill passed in 2007 requires cities and counties to address flood-related matters in the land use, conservation, and safety and housing elements of their general plans. The land use element must identify and annually review the areas covered by the general plan that are subject to flooding as identified in floodplain mapping by either FEMA or the state California Department of Water Resources. During the next revision of the housing element on or after January 1, 2009, the conservation element of the general plan must identify rivers, creeks, streams, flood corridors, riparian habitat, and land that may accommodate floodwater for the purpose of groundwater recharge and stormwater management. The safety element must identify information regarding flood hazards, including:

- Flood hazard zones
- Maps published by FEMA, the California Department of Water Resources, the U.S. Army Corps of Engineers, the Central Valley Flood Protection Board, and the Governor's Office of Emergency Services (Cal OES)
- Historical data on flooding
- Existing and planned development in flood hazard zones.

The general plan must establish goals, policies and objectives related to flooding risks, including:

- Avoiding or minimizing the risks of flooding new development
- Evaluating whether new development should be located in flood hazard zones
- Identifying construction methods to minimize damage.

AB 162 establishes goals, policies and objectives related to flooding risks. It establishes procedures for the determination of available land suitable for urban development, which may exclude lands where FEMA or the California Department of Water Resources has concluded that the flood management infrastructure is not adequate to avoid the risk of flooding.

AB 747: Required Information for General Plan Safety Elements

This bill requires California communities with general plans to address evacuation routes in the safety element of the general plan. Information on the evacuation routes and their capacity, safety and viability under a range of emergency scenarios must be provided. For communities that have not adopted a local hazard mitigation plan, the safety element must be updated with this information by January 1, 2022. For those with a local hazard mitigation

plan, the requirement applies upon the next revision of the hazard mitigation plan on or after January 1, 2022. Communities that have adopted a local hazard mitigation plan, emergency operations plan, or other document that fulfills the goals and objectives of this law may comply with this requirement by summarizing and incorporating by reference the other plan or document in the safety element.

In subsequent revisions to the safety element, communities also will be required to identify new information relating to flood and fire hazards and climate adaptation and resiliency strategies applicable to the city or county that was not available during the previous revision of the safety element. These subsequent updates must occur upon each revision of the general plan housing element or local hazard mitigation plan and not less than once every eight years.

AB 2140: General Plans—Safety Element

This bill provides that the state may allow for more than 75 percent of public assistance funding under the California Disaster Assistance Act only if the local agency is in a jurisdiction that has adopted a local hazard mitigation plan as part of the safety element of its general plan. The local hazard mitigation plan needs to include elements specified in this legislation. In addition, this bill requires Cal OES to give preference for federal mitigation funding to cities and counties that have adopted local hazard mitigation plans. The intent of the bill is to encourage cities and counties to create and adopt hazard mitigation plans.

AB 2800: Climate Change—Infrastructure Planning

This California State Assembly bill passed in 2016 and until July 1, 2020, requires state agencies to take into account the current and future impacts of climate change when planning, designing, building, operating, maintaining, and investing in state infrastructure. The bill, by July 1, 2017, and until July 1, 2020, requires an agency to establish a Climate-Safe Infrastructure Working Group to examine how to integrate scientific data concerning projected climate change impacts into state infrastructure engineering.

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act was enacted in 1972 to mitigate the hazard of surface faulting to structures for human occupancy. The Alquist-Priolo Earthquake Fault Zoning Act's main purpose is to prevent construction of buildings used for human occupancy on the surface trace of active faults. Before a new project is permitted, cities and counties require a geologic investigation to demonstrate that proposed buildings will not be constructed on active faults. The act addresses only the hazard of surface fault rupture and is not directed toward other earthquake hazards, such as liquefaction or seismically induced landslides. The law requires the State of California Geologist to establish regulatory zones around the surface traces of active faults and to issue appropriate maps. The maps are distributed to all affected cities, counties, and state agencies for their use in planning and controlling new or renewed construction. Local agencies must regulate most development projects within the zones. Projects include all land divisions and most structures for human occupancy. All seismic hazard mitigation actions identified in this plan will seek full compliance with the Alquist-Priolo Earthquake Fault Zoning Act.

California Coastal Management Program

The California Coastal Management Program under the California Coastal Act requires each city or county lying wholly or partly within the coastal zone to prepare a local coastal plan. The specific contents of such plans are not

specified by state law, but they must be certified by the Coastal Commission as consistent with policies of the Coastal Act (Public Resources Code, Division 20). The Coastal Act has provisions relating to geologic hazards, but does not mention tsunamis specifically. Section 30253(1) of the Coastal Act states that new development shall minimize risks to life and property in areas of high geologic, flood, and fire hazard. Development should be prevented or limited in high hazard areas whenever possible. However, where development cannot be prevented or limited, land use density, building value, and occupancy should be kept at a minimum. Any mitigation project identified in this plan that intersects the mapped coastal zone will be consistent with the recommendations of the local coastal plan.

California Department of Forestry and Fire Protection

CAL FIRE has responsibility for wildfires in areas of the county that are not under the jurisdiction of the Forest Service or a local fire organization, including lands designated as State Responsibility Areas. CAL FIRE also has fire protection responsibilities by contract and mutual aid agreements. For example, CAL FIRE provides year-round fire protection under Amador Plan agreements with certain local government agencies (Public Resources Code §4144). Through these agreements, CAL FIRE provides local structural and wildfire protection or dispatch services to a community and maintains a staffing level that otherwise would be available only during the fire season. The local entity pays the additional cost of the service.

California Department of Parks and Recreation (State Parks)

State Parks manages portions of the California coastline including coastal wetlands, estuaries, beaches, and dune systems. The State Parks Resources Management Division has limited wildfire protection resources available to suppress fires on State Park lands.

California Department of Water Resources

In California, the Department of Water Resources is the coordinating agency for floodplain management. The department works with FEMA and local governments by providing grants and technical assistance, evaluating community floodplain management programs, reviewing local floodplain ordinances, participating in statewide flood hazard mitigation planning, and facilitating annual statewide workshops. Compliance is monitored by FEMA regional staff and by the Department of Water Resources.

California Division of Safety of Dams

California's Division of Safety of Dams (a division of the Department of Water Resources) monitors the dam safety program at the state level and maintains a working list of dams in the state. When a new dam is proposed, Division engineers and geologists inspect the site and the subsurface. Upon submittal of an application, the Division reviews the plans and specifications prepared by the owner to ensure that the dam is designed to meet minimum requirements and that the design is appropriate for the known geologic conditions. After approval of the application, the Division inspects all aspects of the construction to ensure that the work is done in accordance with the approved plans and specifications. After construction, the Division inspects each dam to ensure that it is performing as intended and is not developing problems. The Division periodically reviews the stability of dams and their major appurtenances in light of improved design approaches and requirements, as well as new findings regarding earthquake hazards and hydrologic estimates in California. Over 1,200 dams are inspected by Division engineers on a yearly schedule to ensure performance and maintenance of dams (California Division of Safety of Dams, 2017).

California Environmental Quality Act

The California Environmental Quality Act (CEQA) was passed in 1970, shortly after the federal government enacted the National Environmental Policy Act, to institute a statewide policy of environmental protection. CEQA requires state and local agencies in California to follow a protocol of analysis and public disclosure of the potential environmental impacts of development projects. CEQA makes environmental protection a mandatory part of every California state and local agency's decision-making process.

CEQA establishes a statewide environmental policy and mandates actions all state and local agencies must take to advance the policy. Jurisdictions conduct analysis of the project to determine if there are potentially significant environmental impacts, identify mitigation measures, and possible project alternatives by preparing environmental reports for projects that requires CEQA review. This environmental review is required before an agency takes action on any policy, program, or project. Any project action identified in this plan will seek full CEQA compliance upon implementation.

California Fire Alliance

The California Fire Alliance (CFA) was established in response to directives from the 2001 National Fire Plan. The CFA pursues four strategies to deal with the National Fire Plan's community assistance initiative:

- Work with communities at risk from wildfires to develop community-based planning leadership and facilitate the development of community fire loss mitigation plans, which transcend jurisdiction and ownership boundaries.
- Assist communities in development of fire loss mitigation planning, education and projects to reduce the threat of wildfire losses on public and private lands.
- Develop an information and education outreach plan to increase awareness of wildfire protection program opportunities available to communities at risk.
- Work collaboratively to develop, modify and maintain a comprehensive list of communities at risk.

California Fire Plan

The State Board of Forestry and CAL FIRE have prepared a comprehensive update of the California Fire Plan for wildfire protection. The planning process included defining a level of service measurement; considering assets at risk; incorporating the cooperative interdependent relationships of wildfire protection providers; providing for public stakeholder involvement; and creating a fiscal framework for policy analysis. The California Fire Plan's overall goal is to reduce costs and losses from wildfire in the state by protecting assets at risk through pre-fire management and by reducing the spread of fire through more successful initial response.

California Fire Safe Council

In 1993, the statewide Fire Safe Council, consisting of private and public membership, was formed to educate and encourage Californians to plan and prepare for wildfires by reducing the risk of fire to property, communities, and natural/structural resources. In 2002, this group created a nonprofit organization and board of directors, called the California Fire Safe Council. The Council works with the California Fire Alliance to facilitate the distribution of National Fire Plan grants for wildfire risk reduction and education (www.grants.firesafecouncil.org). The Council also provides assistance to local Fire Safe Councils through its website (www.firesafecouncil.org), the distribution

of educational materials, and technical assistance, primarily through regional representatives. More than 130 local Fire Safe Councils have formed in California to plan, coordinate, and implement fire prevention activities.

California Fire Service and Rescue Emergency Mutual Aid Plan

The Governor's Office of Emergency Services Fire and Rescue Branch administers the California Fire Service and Rescue Emergency Mutual Aid Plan. The agency provides guidance and procedures for agencies developing emergency operations plans, as well as training and technical support, primarily to overall emergency service organizations and urban search and rescue teams.

California General Planning Law

California state law requires that every county and city prepare and adopt a comprehensive long-range plan to serve as a guide for community development. The general plan expresses the community's goals, visions, and policies relative to future land uses, both public and private. The general plan is mandated and prescribed by state law (Cal. Gov. Code §65300 et seq.), and forms the basis for most local government land use decision-making.

The plan must consist of an integrated, internally consistent set of goals, policies, and implementation measures. In addition, the plan must focus on issues of the greatest concern to the community and be written in a clear and concise manner. City and county actions, such as those relating to land use allocations, annexations, zoning, subdivision and design review, redevelopment, and capital improvements, must be consistent with the plan.

California Multi-Hazard Mitigation Plan

Under the DMA, California must adopt a federally approved state multi-hazard mitigation plan to be eligible for certain disaster assistance and mitigation funding. The intent of the State of California Multi-Hazard Mitigation Plan is to reduce or prevent injury and damage from hazards in the state through the following:

- Documenting statewide hazard mitigation planning in California
- Describing strategies and priorities for future mitigation activities
- Facilitating the integration of local and tribal hazard mitigation planning activities into statewide efforts
- Meeting state and federal statutory and regulatory requirements.

The plan is an annex to the State Emergency Plan, and it identifies past and present mitigation activities, current policies and programs, and mitigation strategies for the future. It also establishes hazard mitigation goals and objectives. The plan will be reviewed and updated annually to reflect changing conditions and new information, especially information on local planning activities.

Under 44 CFR Section 201.6, local hazard mitigation plans must be consistent with their state's hazard mitigation plan. In updating this plan, the Steering Committee reviewed the California State Hazard Mitigation Plan to identify key relevant state plan elements (see Section 3.7).

California Residential Mitigation Program

The California Residential Mitigation Program was established in 2011 to help Californians strengthen their homes against damage from earthquakes. The program is a joint powers authority created by Cal OES and the

California Earthquake Authority, which is a not-for-profit, publicly managed, privately funded provider of home earthquake insurance to California homeowners and renters.

Earthquake Brace + Bolt was developed to help homeowners lessen the potential for damage to their houses during an earthquake. A residential seismic retrofit strengthens an existing older house, making it more resistant to earthquake activity such as ground shaking and soil failure. The seismic retrofitting involves bolting the house to its foundation and adding bracing around the perimeter of the crawl space. Most homeowners hire a contractor to do the retrofit work, and owners of houses in ZIP Codes with house characteristics suitable for this type of retrofit are eligible for up to \$3,000 toward the cost. A typical retrofit by a contractor may cost between \$3,000 and \$7,000, depending on the location and size of the house, contractor fees, and the amount of materials and work involved. If the homeowner is an experienced do-it-yourselfer, a retrofit can cost less than \$3,000.

California State Building Code

California Code of Regulations Title 24 (CCR Title 24), also known as the California Building Standards Code, is a compilation of building standards from three sources:

- Building standards that have been adopted by state agencies without change from building standards contained in national model codes
- Building standards that have been adopted and adapted from the national model code standards to meet California conditions
- Building standards authorized by the California legislature that constitute extensive additions not covered by the model codes adopted to address particular California concerns.

The state Building Standards Commission is authorized by California Building Standards Law (Health and Safety Code Sections 18901 through 18949.6) to administer the processes related to the adoption, approval, publication, and implementation of California's building codes. These building codes serve as the basis for the design and construction of buildings in California. The national model code standards adopted into Title 24 apply to all occupancies in California, except for modifications adopted by state agencies and local governing bodies. Since 1989, the Building Standards Commission has published new editions of Title 24 every three years.

On January 1, 2014, California Building Code Accessibility Standards found in Chapter 11B incorporated the 2010 Americans with Disabilities Act (ADA) Standards as the model accessibility code for California. The purpose was to ensure consistency with federal guidelines. As a result of this incorporation, the California standards will fully implement and include 2010 ADA Standards within the California Building Code while maintaining enhanced levels of accessibility already provided by existing California accessibility regulations. All planning partners that have building code and permit authority have adopted building codes that are in full compliance with the California State Building Code.

Disadvantaged and Low-income Communities Investments

Senate Bill (SB) 535 directs state and local agencies to make investments that benefit California's disadvantaged communities. It also directs the California Environmental Protection Agency to identify disadvantaged communities for the purposes of these investments based on geographic, socio-economic, public health, and environmental hazard criteria. Assembly Bill (AB) 1550 increased the percent of funds for projects located in disadvantaged communities from 10 to 25 percent and added a focus on investments in low-income communities and households. This program is a potential alternative source of funding for actions identified in this plan.

Division of the State Architect's AB 300 List of Seismically At-Risk Schools

In 2002, California's Division of the State Architect completed an inventory of public school buildings built before 1978 that identifies buildings with characteristics that might make them unsafe in future earthquakes. This inventory provides a list of potentially at-risk schools known as the AB 300 list (the inventory was authorized by Assembly Bill 300 in 1999). Using available information on school buildings' dates of construction, seismic retrofits, and structural systems (wood-frame, concrete shear wall, or steel moment frame, etc.), the inventory categorized California public school buildings into one of two categories: those expected to perform well in future earthquakes; and those that are not expected to perform well and require more detailed seismic evaluation.

The Division of the State Architect recommends that public schools on this list undergo detailed seismic evaluations to determine if they pose life safety risks, but the state has neither required nor funded school districts to do this.

Governor's Executive Order S-13-08

Governor's Executive Order S-13-08 enhances the state's management of climate impacts from sea level rise, increased temperatures, shifting precipitation and extreme weather events. There are four key actions in the executive order:

- Initiate California's first statewide climate change adaptation strategy to assess expected climate change impacts, identify where California is most vulnerable, and recommend adaptation policies. This effort will improve coordination within state government so that better planning can more effectively address climate impacts on human health, the environment, the state's water supply and the economy.
- Request that the National Academy of Science establish an expert panel to report on sea level rise impacts in California, to inform state planning and development efforts.
- Issue interim guidance to state agencies for how to plan for sea level rise in designated coastal and floodplain areas for new projects.
- Initiate a report on critical infrastructure projects vulnerable to sea level rise.

Office of the State Fire Marshal

The Office of the State Fire Marshal is a division of CAL FIRE that has a wide variety of fire safety and training responsibilities and provides technical support to fire agencies/organizations.

Senate Bill 92: Public Resources Portion of Biennial Budget Bill

The State of California updated its requirements regarding emergency action plans (EAPs) via Senate Bill 92, which became effective in June 2017 as part of the state Legislature's biennial budget process. The bill required dam owners to submit EAPs to Cal OES and the Department of Water Resources for approval by January 1, 2018 (for extremely high hazard dams), January 1, 2019 (for high-hazard dams), and January 1, 2021 (for significant hazard dams). The EAPs were to include the following (California Government Code Section 8589.5; Cal OES, 2018):

- Emergency notification flow charts
- Information on a four-step response process

- Description of agencies' roles and actions in response to an emergency incident
- Description of actions to be taken in advance of an emergency
- Inundation maps
- Additional information such as revision records and distribution lists.

After the EAPs are approved by the state, the law requires dam owners to send the approved EAPs to relevant stakeholders. Local public agencies can then adopt emergency procedures that incorporate the information in the EAP in a manner that conforms to local needs and includes methods and procedures for alerting and warning the public and other response and preparedness related items (State of California, 2018).

SB 92 also requires dams other than low-risk dams to have current inundation mapping, which must be updated every 10 years, or sooner if specific circumstances change. EAPs also must be updated every 10 years. It provides the Department of Water Resources with enforcement tools, including fines and operational restrictions for failure to comply. Cal OES is required by the law to work with state and federal agencies, dam owners, planners, and the public to make dam failure inundation maps available to community members interested in learning their dam failure inundation risk.

Senate Bill 97: Guidelines for Greenhouse Gas Emissions

Senate Bill 97, enacted in 2007, amends CEQA to clearly establish that greenhouse gas emissions and the effects of greenhouse gas emissions are appropriate subjects for CEQA analysis. It directs the Governor's Office of Planning and Research to develop draft CEQA guidelines for the mitigation of greenhouse gas emissions or their effects by July 1, 2009 and directs the California Natural Resources Agency to certify and adopt the CEQA Guidelines by January 1, 2010.

Senate Bill 99: Evacuation Route Planning

Senate Bill 99, enacted in 2019, requires that cities' and counties' general plans address evacuation routes from any hazard area identified in the safety element. Under this law, the safety element must include information to identify residential developments in hazard areas that do not have at least two emergency evacuation routes. Each city or county must update its safety element with the new information upon the next revision of its housing element on or after January 1, 2020.

Senate Bill 379: General Plans: Safety Element—Climate Adaptation

Senate Bill 379 builds upon the flood planning inclusions into the safety and housing elements and the hazard mitigation planning safety element inclusions in general plans outlined in AB 162 and AB 2140, respectively. SB 379 focuses on a new requirement that cities and counties include climate adaptation and resiliency strategies in the safety element of their general plans beginning January 1, 2017. In addition, this bill requires general plans to include a set of goals, policies and objectives, and specified implementation measures based on the conclusions drawn from climate adaptation research and recommendations.

Senate Bill 1000: General Plan Amendments—Safety and Environmental Justice Elements

In 2016, Senate Bill 1000 amended California's Planning and Zoning Law in two ways:

The original law established requirements for initial revisions of general plan safety elements to address flooding, fire, and climate adaptation and resilience. It also required subsequent review and revision as necessary based on new information. Senate Bill 1000 specifies that the subsequent reviews and revision based on new information are required to address only flooding and fires (not climate adaptation and resilience).

Senate Bill 1000 adds a requirement that, upon adoption or revision of any two other general plan elements on or after January 1, 2018, an environmental justice element be adopted for the general plan or environmental justice goals, policies and objectives be incorporated into other elements of the plan.

Senate Bill 1241: General Plans: Safety Element—Fire Hazard Impacts

In 2012, Senate Bill 1241 passed requiring that the safety elements of all future general plans address fire risk in state responsibility areas and very high fire hazard severity zones. The bill requires cities and counties to make findings regarding available fire protection and suppression services before approving a tentative map or parcel map.

Standardized Emergency Management System

CCR Title 19 establishes the Standardized Emergency Management System (SEMS) to standardize the response to emergencies involving multiple jurisdictions. SEMS is intended to be flexible and adaptable to the needs of all emergency responders in California. It requires emergency response agencies to use basic principles and components of emergency management. Local governments must use SEMS by December 1, 1996, to be eligible for state funding of response-related personnel costs under CCR Title 19 (Sections 2920, 2925 and 2930). The roles and responsibilities of individual agencies contained in existing laws or the state emergency plan are not superseded by these regulations. This hazard mitigation plan is considered to be a support document for all phases of emergency management, including those associated with SEMS.

Western Governors Association Ten-Year Comprehensive Strategy

The *Western Governors Association Ten-Year Comprehensive Strategy: A Collaborative Approach for Reducing Wildfire Risks to Communities and the Environment* (August 2001) is strategy implementation plan prepared by federal and Western state agencies that outlines measures to restore fire-adapted ecosystems and reduce hazardous fuels.

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix D. Mapping Methods & Data Sources

D. MAPPING METHODS & DATA SOURCES

DAM FAILURE INUNDATION MAPPING

Dam breach inundation maps, including inundation boundaries and depth grids, were downloaded from the California Department of Water Resources' website - <https://fmds.water.ca.gov/maps/damim/>. As required by California Water Code section 6161, the Division of Safety of Dams (DSOD) at the Department of Water Resources reviews and approves inundation maps prepared by licensed civil engineers and submitted by dam owners for extremely high, high, and significant hazard dams and their critical appurtenant structures. Inundation maps are based on a hypothetical failure of a dam or critical appurtenant structure and the information depicted on the maps is approximate. The dams and failure scenarios are as follows:

- Bear Gulch (National Dam ID CA00658) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 10/10/2018.
- Coastways (National Dam ID CA01007) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 3/18/2021.
- Crocker (National Dam ID CA00672) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 7/22/2019.
- Emerald Lake 1 Lower (National Dam ID CA00668) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 2/15/2019.
- Felt Lake (National Dam ID CA00670) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 12/30/2019.
- Laurel Creek (National Dam ID CA00901) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 10/29/2018.
- Lower Crystal Springs – Main Dam (National Dam ID CA00127) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 9/10/2020.
- Lower Crystal Springs – Outlet 1 (National Dam ID CA00127) - Scenario shows an inundation extent for a sunny day failure of Outlet 1. File downloaded from DSOD website generated on 9/10/2020.
- Notre Dame (National Dam ID CA00674) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 10/13/2020.
- Pilarcitos (National Dam ID CA00128) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 7/22/2019.
- Pomponio Ranch (National Dam ID CA01008) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 4/1/2021.

- San Andreas (National Dam ID CA00129) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 7/6/2020.
- Searsville (National Dam ID CA00669) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 2/24/2021.
- Spenser Lake (National Dam ID CA00673) - Scenario shows an inundation extent for a sunny day failure of Main Dam. File downloaded from DSOD website generated on 7/22/2019.

EARTHQUAKE MAPPING

Liquefaction Susceptibility

The Liquefaction dataset presents a map and database of Quaternary deposits and liquefaction susceptibility areas the urban core of the San Francisco Bay region. It supersedes the equivalent area of U.S. Geological Survey Open-File Report 00-444 (Knudsen and others, 2000), which covers the larger 9-county San Francisco Bay region. The report consists of (1) a spatial database, (2) two small-scale colored maps (Quaternary deposits and liquefaction susceptibility), (3) a text describing the Quaternary map and liquefaction interpretation (part 3), and (4) a text introducing the report and describing the database (part 1). The nine counties surrounding San Francisco Bay straddle the San Andreas fault system, which exposes the region to serious earthquake hazard (Working Group on California Earthquake Probabilities, 1999). Much of the land adjacent to the Bay and the major rivers and streams is underlain by unconsolidated deposits that are particularly vulnerable to earthquake shaking and liquefaction of water-saturated granular sediment. This new map provides a consistent detailed treatment of the central part of the 9-county region in which much of the mapping of Open-File Report 00-444 was either at smaller (less detailed) scale or represented only preliminary revision of earlier work. Like Open-File Report 00-444, the current mapping uses geomorphic expression, pedogenic soils, inferred depositional environments, and geologic age to define and distinguish the map units. Further scrutiny of the factors controlling liquefaction susceptibility has led to some changes relative to Open-File Report 00-444: particularly the reclassification of San Francisco Bay mud (Qhbm) to have only MODERATE susceptibility and the rating of artificial fills according to the Quaternary map units inferred to underlie them. The report is the product of cooperative work by the National Earthquake Hazards Reduction Program (NEHRP) and National Cooperative Geologic Mapping Program of the U.S. Geological Survey, William Lettis and Associates, Inc. (WLA), and the California Geological Survey. An earlier version was submitted to the U.S. Geological Survey by WLA as a final report for a NEHRP grant (Witter and others, 2005). The mapping has been carried out by WLA geologists under contract to the NEHRP Earthquake Program (Grant 99-HQ-GR-0095) and by the California Geological Survey. For detailed information about the map the USGS has an open report, "Maps of Quaternary Deposits and Liquefaction Susceptibility in the Central San Francisco Bay Region, California. U.S. Geological Survey Open File Report 2006-1037 Version 1.1. <http://pubs.usgs.gov/of/2006/1037/>

National Earthquake Hazard Reduction Program (NEHRP) Soils

NEHRP soils information is derived from a shear wave velocity (Vs30) data produced by the California Geological Survey in 2015. The Vs30 data represents simplified geologic units that have been correlated to the time-averaged shear-wave velocity in the upper 30 meters of the earth's surface. The geologic units were compiled from published maps that range in scale from 1:250,000 to 1:24,000. (Wills, et. al., 2015)

Probabilistic Peak Ground Acceleration Maps

Probabilistic peak ground acceleration data, by Census tract, are generated by Hazus 4.2 SP03. In Hazus' probabilistic analysis procedure, the ground shaking demand is characterized by spectral contour maps developed by the U.S. Geological Survey (USGS) as part of a 2018 update of the National Seismic Hazard Maps. USGS probabilistic seismic hazard maps are revised about every six years to reflect newly published or thoroughly reviewed earthquake science and to keep pace with regular updates of the building code. Hazus includes maps for eight probabilistic hazard levels: ranging from ground shaking with a 39 percent probability of being exceeded in 50 years (100-year return period) to the ground shaking with a 2 percent probability of being exceeded in 50 years (2,500-year return period).

Shake Maps

A shake map is designed as a rapid response tool to portray the extent and variation of ground shaking throughout the affected region immediately following significant earthquakes. Ground motion and intensity maps are derived from peak ground motion amplitudes recorded on seismic sensors (accelerometers), with interpolation based on estimated amplitudes where data are lacking, and site amplification corrections. Color-coded instrumental intensity maps are derived from empirical relations between peak ground motions and Modified Mercalli intensity. For this plan, shake maps were prepared by the USGS for four earthquake scenarios:

- An earthquake on the Butano fault with the following characteristics:
 - Magnitude: 6.93
 - Epicenter: N 37.24 W 122.15
 - Depth: 7.7 km
- An earthquake on the Monte Vista – Shannon fault with the following characteristics:
 - Magnitude: 7.14
 - Epicenter: N 37.27 W 122.09
 - Depth: 9.1 km
- An earthquake on the San Andreas (Peninsula) fault with the following characteristics:
 - Magnitude: 7.38
 - Epicenter: N 37.52 W 122.36
 - Depth: 7.8 km
- An earthquake on the San Gregorio (North) fault with the following characteristics:
 - Magnitude: 7.44
 - Epicenter: N 37.41 W 122.43
 - Depth: 7.0 km

FLOOD MAPPING

Flood hazard areas are from the countywide effective FEMA Digital Flood Insurance Rate Map (DFIRM) dated April 5, 2019.

LANDSLIDE MAPPING

Susceptibility to Deep-Seated Landslides data provided by the California Geological Survey. The map, and associated data, show the relative likelihood of deep-seated landsliding based on regional estimates of rock strength and steepness of slopes. On the most basic level, weak rocks and steep slopes are most likely to generate landslides. The map uses detailed information on the location of past landslides, the location and relative strength of rock units, and steepness of slope to estimate susceptibility to deep-seated landsliding (0 to X, low to high). The USGS 2009 National Elevation Dataset (NED) with 10-m grid size was used as the base map. This landslide susceptibility map is intended to provide infrastructure owners, emergency planners and the public with a general overview of where landslides are more likely to occur. (Wills, et. al., 2011)

SEA LEVEL RISE MAPPING

Projected sea-level rise data are from the USGS Coastal Storm Modeling System, accessed via the Our Coast, Our Future web platform (Point Blue Conservation Science and USGS). The projections were generated using the latest downscaled climate projections and calibrated hydrodynamic models by the Coastal Storm Modeling System project team led by Patrick Barnard, at the USGS Pacific Coastal and Marine Science Center.

The Adapting to Rising Tides, Bay Area Sea Level Rise Analysis and Mapping Project, produces consistent inundation data and mapping products for all nine San Francisco Bay Area counties. The sea-level rise inundation mapping products capture permanent inundation and temporary flooding impacts from sea-level rise scenarios from 0 to 66 inches and extreme high tide events from the 1-year to the 100-year extreme tide (San Francisco Bay Conservation and Development Commission, 2017).

TSUNAMI MAPPING

Tsunami hazard area data are produced collectively by tsunami modelers, geologic hazard mapping scientists, and emergency planning specialists from the California Geological Survey, the California Governor's Office of Emergency Services, the Tsunami Research Center at the University of Southern California, and AECOM Technical Services. The Tsunami Hazard areas are developed for all populated areas at risk to tsunamis in California and represent a combination of the maximum considered tsunamis for each area. Local agencies, organizations, and other stakeholders assisted the State in the development of the hazard area as they will be used for evacuation planning at the community level.

The accompanying metadata file describes the tsunami mapping methods as follows:

Recent tsunami modeling uses probabilistic tsunami hazard analysis to compute tsunami waves from sources from around the Pacific Ocean and results in inundation models that are associated with different probabilities of exceedance over time. The tsunami modeling process allows for wave evolution over a variable bathymetry and topography used for inundation mapping. The California Geological Survey, Seismic Hazards Program, Tsunami Unit selected the 975-year average return period tsunami model, with a 5% probability of exceedance in 50 years, as a basis for the minimum hazard level; this minimum hazard level, along with a suite of maximum credible events, helped define the extent for inundation mapping.

For the probabilistic modeling the bathymetric/topographic data that are used in the tsunami models consist of a series of nested elevation grids. Deep ocean modeling is prepared using SRTM30+ bathymetric data (30 arc-second resolution). National Centers for Environmental Information coastal digital elevation models with a 1/3 arc-second (~10-meters) resolution and a "Mean High Water" vertical

datum is used as the near-shore grids since these data represent a more conservative sea level for the intended use of the tsunami modeling and mapping.

In order to enhance the 10-meter resolution inundation data, we use higher-resolution digital topographic data (e.g., 1-meter resolution LiDAR digital elevation models) to refine the location of the maximum inundation area. The location of the inundation area is refined by using digital imagery (e.g. recent National Agriculture Imagery Program imagery) and digital terrain data on a GIS platform with consideration given to historic inundation information. This information is verified, where possible, with workshops and fieldwork coordinated with local county personnel.

Data from the California Geological Survey (CGS) Tsunami Inundation Maps for Emergency Planning (2009) and the enhanced high resolution mapping of the 975 year return period probabilistic tsunami inundation model results are initially used as a minimum spatial constraint for the placement of the Tsunami Hazard Area. Guidance from local stakeholders, including emergency managers, first responders, and subject matter experts is used to help advise CGS on the placement of the final hazard area in places that would help the public and government safely evacuate during a tsunami event.

The accuracy of the hazard area shown on these maps and in these data is/are subject to limitations in the accuracy and completeness of the mapping conducted by the California Geological Survey. While an attempt has been made to define a maximum tsunami hazard extent at any location along the coastline, it remains possible that the actual Tsunami Hazard Area may be greater as required by the local agencies.

WILDFIRE MAPPING

PRC 4201 - 4204 and Govt. Code 51175-89 directed the California Department of Forestry and Fire Protection, Fire and Resource Assessment Program (CALFIRE - Fire and Resource Assessment Program) to map areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. These zones, referred to as fire hazard severity zones (FHSZ), define the application of various mitigation strategies to reduce risk associated with wildland fires. CAL FIRE remapped Fire Hazard Severity Zones (FHSZ) for State Responsibility Areas (SRA) and very high FHSZ recommendations in Local Responsibility Areas (LRA) in 2005 – 2008 to provide updated map zones, based on new data, science, and technology. Mapping of the areas referred to as very high FHSZ was based on data and models of, potential fuels over a 30-50 year time horizon and their associated expected fire behavior, and expected burn probabilities to quantify the likelihood and nature of vegetation fire exposure (including firebrands) to buildings. The goal of the mapping effort was to create more accurate fire hazard zone designations such that mitigation strategies would be implemented in areas where hazards warrant these investments. The fire hazard zones provide specific designation for application of defensible space and building standards consistent with known mechanisms of fire risk to people, property, and natural resources.

(1) Population estimates from 2020 population from State of California, Department of Finance, E-4 Population Estimates for Cities, Counties, and the State, 2011-2020, with 2010 Census Benchmark. Sacramento, California, May 2020.

(2) Values based off of 2020 tax assessor data from San Mateo County.

(3) Percent of residential buildings exposed multiplied by the Estimated Population.

Appendix F. San Mateo County Severe Weather Events Since 1950

F. SAN MATEO COUNTY SEVERE WEATHER EVENTS SINCE 1950

The table below lists past severe weather events in San Mateo County as recorded by NOAA since 1950. Although 225 events were reported to NOAA, only extreme heat, tornadoes, dense fog, thunderstorms with wind speeds over 50 knots, and windstorms with winds over 50 knots are listed in the table.

Date	Type	Deaths or Injuries	Property Damage
April 1, 1958	Tornado	0	\$825,030
A tornado with a 0.2 mile length and 67 yard width impacted San Mateo County. This tornado does not have an associated magnitude.			
October 24, 1962	Severe Storms	Not reported	Not reported
Federal disaster declaration issued (DR-138)			
December 19, 1981 – January 8, 1983	Severe Storms, Flood, Mudslides, High Tide	Not reported	Not reported
Federal disaster declaration issued (DR-651)			
January 21 – March 30, 1983	Coastal Storms, Floods, Slides, Tornadoes	Not reported	Not reported
Federal disaster declaration issued (DR-677)			
February 12 – March 10, 1986	Severe Storms, Flooding	Not reported	Not reported
Federal disaster declaration issued (DR-758)			
March 10, 1986	Tornado	0	\$30
A F0 tornado with a 0.2 mile length and 50 yard width impacted San Mateo County. The small waterspout moved ashore from the Pacific Ocean, flipped a car, and did minor property damage at a seaside restaurant at Moss Beach.			
December 19, 1990 – January 3, 1991	Severe Freeze	Not reported	Not reported
Federal disaster declaration issued (DR-894)			
January 3 – February 10, 1995	Severe Winter Storms, Flooding, Landslides, Mud Flows	Not reported	Not reported
Federal disaster declaration issued (DR-1044)			
February 13, 1995 – April 19, 1995	Severe Winter Storms, Flooding, Landslides, Mud Flows	Not reported	Not reported
Federal disaster declaration issued (DR-1046)			
March 4, 1996	Heavy Rain	0	\$0
1.48 inches of rain fell in Redwood City. The rain accumulated on the roof of Office Depot causing it to collapse.			
December 28, 1996 – April 1, 1997	Severe Storms, Flooding, Mud, and Landslides	Not reported	Not reported
Federal disaster declaration issued (DR-1155)			

Date	Type	Deaths or Injuries	Property Damage
January 2, 1998 Rain-slick roads caused several car accidents.	Heavy Rain	12 Injuries	\$0
January 11, 1998 Heavy rain contributed to a car accident. One fatality was recorded as a result of this event.	Heavy Rain	1 Death	\$0
February 2 – April 30, 1998 Federal disaster declaration issued (DR-1203)	Severe Winter Storms and Flooding	Not reported	Not reported
February 7, 1998 A F0 tornado with a 0.2-mile length and 50-yard width impacted San Mateo County. The weak tornado ripped up some trees. It appears to have begun as a waterspout and moved onshore.	Tornado	0	\$0
February 13, 2000 Widespread rain with 24-hour accumulations of more than 5 inches occurred over the area on Feb 13 – 14. Urban and small stream flooding occurred in most counties of the area. Many roads including Highway 1 and Highway 116 were closed. Twenty-nine people were evacuated in Pescadero due to high waters. A number of houses in Daly City were abandoned and eventually destroyed due to mudslides. The roof of a Home Depot collapsed due to the accumulation of heavy rain.	Heavy Rain	0	\$2,000,000
December 15, 2002 December was one of the wettest on record at many locations throughout the area. The most serious storm episode was December 13 – 21. A very strong and moist jet stream across the Pacific Ocean brought a series of storms into California. Locally heavy rain pounded the North Bay counties for days.	Heavy Rain	0	\$0
October 19, 2004 A thunderstorm produced a 60 mph wind gust that snapped two large trees, with one falling on a house.	Thunderstorm Wind	0	\$50,000
March 20, 2005 A F1 tornado with a 3-mile length and 30-yard width impacted San Mateo County. The tornado damaged approximately 60 structures.	Tornado	0	\$800,000
December 1, 2005 A strong winter storm brought a 64 mph gust to San Francisco Airport.	High Wind	0	\$0
December 17, 2005 – January 3, 2006 Federal disaster declaration issued (DR-1628)	Severe Storms, Flooding, Mudslides, and Landslides	Not reported	Not reported
December 18, 2005 A wind gust reached 71 mph at Angel Island during a winter storm.	High Wind	0	\$0
December 31, 2005 A wind gust measured 58 mph at San Francisco Airport during a strong winter storm.	High Wind	0	\$0
February 27, 2006 A storm system produced winds of varying levels throughout the region. In Half Moon Bay, wind gusts of 59 mph were recorded. In Daly City, wind gusts of 63 mph were recorded. A 73 year old woman was killed in Boulder Creek when wind gusts estimated at 70 mph tore the top off a redwood tree and hurled it into her yard, where she was walking her dog.	High Wind	1 Death	\$0
March 29 – April 16, 2006 Federal disaster declaration issued (DR-1646)	Severe Storms, Flooding, Landslides, and Mudslides	Not reported	Not reported

Date	Type	Deaths or Injuries	Property Damage
July 22, 2006	Heat	0	None Reported
A large dome of High Pressure brought hot conditions to the SF Bay Shoreline - with a moist southeast flow keeping temperatures unusually warm overnight. High temperatures reached as high as 103 degrees with low temperatures at night only falling into the lower 70s.			
January 4, 2008	High Wind	0	\$0
A very strong cyclone slammed into the San Francisco and Monterey Bay areas bringing flooding rains, high winds, record high surf and coastal flooding. Hundreds of thousands of residences and businesses were without power, some for several days due to high winds toppling power lines. Property damage in the millions was reported. Winds gusted to 66 mph at Pigeon Point, 67 mph at San Francisco Airport, 58 mph and 81 mph at Pillar Point, 58 mph at Oakland Airport, and 72 mph in Daly City.			
February 15, 2009	High Wind	0	\$25,000
An eastern Pacific storm produced strong wind and heavy rain as it moved through the San Francisco Bay Area. Over 61,000 Bay Area customers lost power. High wind knocked down numerous trees in the Santa Cruz Mountains causing Highway 9 at Highway 236 to close at 6:30 a.m. and knocked down power lines closing Thurber Lane at Twelfth Avenue during the morning. Trees and branches slowed traffic along Highway 17, Bear Creek Road and Middle Ellen Road.			
April 14, 2009	High Wind	0	\$80,000
High winds along the San Francisco Bay Area shoreline caused numerous power outages and downed trees. A big-rig blew over in the westbound lane of the San Mateo Bridge closing the entire bridge for more than an hour. Shortly afterwards a 70-foot fishing vessel was blown into the bridge after losing power. The Redwood City Mesonet observation site reported a gust to 50 knots.			
May 2, 2009	Dense Fog	0	\$25,000
Dense fog along with a slippery road surface caused eight traffic collisions along Highway 17 in the Santa Cruz County mountains. No major injuries were reported.			
May 17, 2009	Heat	0	\$10,000
High pressure aloft centered over Reno, NV along with weak offshore flow at the surface caused temperatures to rise to near 100 degrees in the inland valleys of north-central California. Heat exhausted individuals, blown electric transformers and power outages accompanied the heat. Temperatures rose into the upper 80s to mid-90s across the peninsula of the San Francisco Bay Area.			
October 13, 2009	High Wind	0	\$3,400,000
Heavy rain combined with very strong wind through Northern and Central California to cause numerous trees, tree limbs, and power and telephone poles to fall. Pacific Gas and Electric reported over 277,000 customers had lost power in the San Francisco and Monterey Bay areas with \$13 million dollars in damage. Record-breaking heavy rain led to flooding and debris flows. Fierce winds downed trees on Rapley Ranch Road near State Route 35, on State Route 35 near Mountain House Restaurant in Kings Mountain, and along State Route 84 at the junction of State Route 35. A huge oak tree crushed a house in Redwood City and brought down power lines. Also in Redwood City, dozens of trees were toppled, including at least two that hit houses or parked cars. In San Mateo County, at least 47 trees and 31 sets of power lines were knocked over. In Pescadero, a large tree was blown onto North Street at Pescadero Road, blocking both lanes of traffic. Wind also caused power outages all across San Mateo County. About 58,000 community members lost power during the storm.			
October 13, 2009	Heavy Rain	3 Injuries, 1 Death	\$100,000
This powerful rainstorm overwhelmed pipes and manholes in San Mateo, San Carlos, and Millbrae causing over 127,000 gallons of untreated sewage to flow into streets and creeks. Over 55,000 gallons of raw sewage spilled into San Francisco Bay. The California Highway Patrol responded to a three car collision on Highway 1 at Devil's Slide. Heavy rain and strong winds were a contributing factor of the crash. A 74-year-old woman lost her life in the accident.			
January 18, 2010	Thunderstorm Wind	0	\$0
Squall line thunderstorms moved across the San Francisco International Airport producing wind gusts to 59 mph. Numerous power lines and trees were knocked down when strong wind combined with saturated soil.			
January 18, 2010	High Wind	0	\$230,000
High wind knocked over power poles along San Mateo County's coast causing 12,000 customers to lose power. Downed power lines were reported in Half Moon Bay, at the intersection of Cedar and Acacia Avenues, along the 700 block on Main Street, and at Park Avenue in Moss Beach; and in Pacifica. The wind also caused damage to fixtures on the roof at the Half Moon Bay City Hall, and it dislodged a patio roof behind Sam's Chowder House, damaging solar panels used to power the restaurant. The Half Moon Airport Mesonet site reported a wind gust of 69 mph at 10:00 a.m. PST. At least 12,000 customers lost power in San Mateo County.			

Date	Type	Deaths or Injuries	Property Damage
January 19, 2010	High Wind	0	\$40,000
High wind blew an oak tree down onto a car while a woman was driving it along Old La Honda Road near Woodside. The woman was unhurt and the car sustained minor damage. In Woodside, State Route 84 was closed at Grandview Drive due to downed trees. The ASOS at the San Francisco International Airport reported a peak wind gust of 62 mph at 6:09 a.m. PST. And, the Bay Area Air Quality Management District's Point San Pablo Mesonet site reported a peak wind gust of 59 mph at 6:00 a.m. PST. The Spring Valley RAWS site reported a peak wind gust of 73 mph at 6:00 a.m. PST. And, the Pigeon Point automated site reported a peak wind gust of 62 mph at 5:00 a.m. PST. Power outages occurred throughout the area forcing Canada College in Redwood City, the College of San Mateo and Stanford University to cancel classes.			
January 20, 2010	High Wind	0	\$260,000
Strong winds brought trees and power lines down across the San Francisco Bay Area. In Menlo Park, a driver was injured when the top of a Redwood tree came crashing through his windshield as he was driving on Santa Cruz Avenue near Hillview Middle School. Strong wind brought trees and power lines down onto State Route 1 just north of the Santa Cruz and San Mateo County line. The road was closed for two hours.			
January 20, 2010	Thunderstorm Wind	1 Injury	\$0
The third in a series of significant storms brought strong winds and heavy rain to the San Francisco and Monterey Bay areas. This storm, the strongest of the week, developed over the Pacific Ocean with a strong parent low pressure based in the Gulf of Alaska. Around 159,000 customers lost power across the San Francisco Bay area with nearly 22,000 customers without power in the Monterey Bay area. Numerous power lines and trees were knocked down when strong wind combined with saturated soil. Also, areas of flooding occurred causing mainly problems for vehicles. A RAWS site at Spring Valley reported a wind gust to 64 mph at 9:19 a.m. PST.			
February 16, 2010	Dense Fog	N/A	N/A
The NWS issued a dense fog advisory for the Bay Area, with notice of visibility being less than a quarter-mile in many areas.			
December 28, 2010	High Wind	0	\$15,000
Damaging wind brought a tree down onto State Route 9 causing its closure from one mile south to 2.9 miles south of the south Junction of State Route 236. The Highway was closed from 6:20 p.m. to 10:29 p.m. PST.			
February 15, 2011	High Wind	0	\$150,000
Strong and gusty wind developed ahead of a long wave trough. Southwesterly to westerly winds began to increase late in the afternoon and peaked in the late evening. A mesonet automated weather reporting system measured a wind gust of 60 mph at midnight. Other automated observation systems around the area above 1,000 feet in elevation reported gusts up to 83 mph. The wind caused large trees and power lines to fall. Also, road closures occurred due to the downed trees and power lines. Overall, more than 6,500 customers lost power in the San Francisco Bay Area.			
November 27, 2011	Dense Fog	N/A	N/A
Dense fog advisories were issued for multiple bridges around the Bay Area, including the San Mateo Bridge, the Dumbarton Bridge, the Benicia Bridge and the Carquinez Bridge. Inland roads were expected to have heavy fog and poor visibility until mid-afternoon.			
November 29, 2011	Dense Fog	N/A	N/A
Dense fog advisories were issued for Bay Area bridges, including the San Mateo and Bay Bridges. Overall visibility for the region ranged between a half-mile to 300 feet.			
March 14, 2012	Heavy Rain	5 Injuries	\$50,000
Two accidents shut down Highway 1 for brief periods. One occurred on March 14 which was a head-on crash just south of Devil's Slide. Two sedans were involved with minor injuries to the two drivers. The other occurred on March 16 when two trucks collided at 10:45 am west of the turnoff for Ox Mountain landfill. Three riders suffered minor cuts and bruises.			
November 28, 2012	High Wind	0	\$1,000
A wind gust of 61 mph was measured at Spring Valley RAWS, at elevation of 1,075 feet, causing numerous downed trees and some power outages.			

Date	Type	Deaths or Injuries	Property Damage
December 21, 2012	Heavy Rain	0	\$0
A series of storm systems, part of a large Atmospheric River type of pattern, impacted the area during late December 2012. From December 21 through 26, heavy rain, gusty winds, flooding, and mudslides occurred across the Bay Area in these consecutive events. Downed trees, powerlines, and flooded roadways impacted community members over the Christmas holiday season.			
April 8, 2013	Heavy Rain	0	\$1,000
High winds impacted operations at San Francisco International Airport overnight with wind gusts measured at 60 mph. High winds blew out the front window of a house in Daly City.			
February 28, 2014	Heavy Rain	0	\$0
A Pacific storm system moved across the Bay Area on February 28. It dropped several inches of rainfall and brought gusty winds to the area. This resulted in flooding of urban areas, small streams and creeks, and damage to power lines and trees, and a few localized mud and rockslides.			
November 10, 2014	Dense Fog	N/A	N/A
Dense fog surrounded the San Francisco Bay Area, including San Mateo County.			
November 28, 2014	Dense Fog	N/A	N/A
The California Highway Patrol issued dense fog advisories for a number of Bay Area bridges, including San Mateo Bridge, and on U.S. Highway 101. Patchy, thick fog and poor visibility was reported and estimated to last until 9 a.m.			
December 11, 2014	Heavy Rain	0	\$0
An Atmospheric River event brought heavy rain and gusty winds with a strong winter storm that impacted the Bay Area for several days in mid-December.			
February 9, 2015	Heavy Rain	0	\$0
A strong winter storm finally impacted California following nearly a month and a half of no rain and the driest January on record. The storm brought heavy rain, gusty winds, and damage to trees and power lines along with some minor flooding of urban areas. A 72 hour rainfall total of 5.43 inches was measured from Emerald Lake Hills at elevation 472 feet. This was the highest storm total in San Mateo County.			
March 10, 2015	Dense Fog	N/A	N/A
The NWS issued dense fog advisories for all valleys and coastal locations in the San Francisco and Monterey Bay areas. Visibility reports were estimated to be a quarter-mile or less, and officials noted that visibility could drop to zero in parts of the San Francisco Bay Area.			
January 18 – 23, 2017	Severe Winter Storms, Flooding, and Mudslides	Not reported	Not reported
Federal disaster declaration issued (DR-4305)			
February 1 – 23, 2017	Severe Winter Storms, Flooding, and Mudslides	Not reported	Not reported
Federal disaster declaration issued (DR-4308)			
September 1, 2017	Excessive heat	3	None reported
A strong upper level ridge brought widespread hot temperatures to the Bay Area leading up to and through Labor Day Weekend. Numerous daily and monthly records were broken as well as a few all-time record max temperatures. Three San Mateo county community members died over the weekend as a result of the heat.			
October 2018	PSPS	N/A	N/A
PG&E induced outage due to extreme weather conditions			
June 10, 2019	Excessive Heat	0	None reported
The combination of high pressure and strong offshore flow resulted in an early season heat wave across the Bay Area from June 9th to the 11th. Multiple daily records were broken across the region and multiple power outages were reported due to the heat. The heat wave across the region triggered power outages knocking out service to 26,400 people across 9 counties on Monday followed by an additional 30,400 on Tuesday			

Date	Type	Deaths or Injuries	Property Damage
August 19, 2020	Excessive Heat	0	None reported
A prolonged and oppressive heat wave swept the Central Coast and Bay Area for almost a week from August 14th to August 19th with widespread record-breaking temperatures observed across the region. This was caused by a strong high-pressure system over the Desert Southwest that expanded westward into California. This dome of heat brought hot temperatures to the area for several days. Multiple days of triple digit afternoon highs were recorded inland with some coastal locations even reaching the mid-90s. Several days of hot and dry weather further dried fuels over the area increasing fire danger. During this event, a surge of monsoonal and tropical moisture from a former Tropical Storm advected northward with sufficient instability to generate multiple high based and dry thunderstorms that produced several thousand lightning strikes over the Greater Bay Area.			
September to November 2019	PSPS	N/A	N/A
PG&E induced outage due to extreme weather conditions			

Notes: ASOS = Automated Surface Observing Systems; F# = Fujita Scale, followed by magnitude of tornado; mph = miles per hour; N/A =-- Not Applicable; NWS = National Weather Service; PST = Pacific Standard Time; RAWWS = Remote Automatic Weather Stations

Appendix C. Annex Instructions and Templates

ACRONYMS

The following acronyms are used throughout the annexes in this volume:

- AB—Assembly Bill
- AFG—Assistance for Firefighter Grant
- ACWA—Association of California Water Agencies
- BART—Bay Area Rapid Transit
- BAWSCA—Bay Area Water Supply & Conservation Agency
- BCEGS—Building Code Effectiveness Grading Schedule
- BMP—best management practice
- BRIC—Building Resilient Infrastructure and Communities
- C/CAG—City/County Association of Governments of San Mateo County
- Cal OES—California Office of Emergency Services
- CAL FIRE—California Department of Forestry and Fire Protection
- CBC—city building code
- C&CB—Core Capacity and Capability Building funding under BRIC
- CCFD—Central County Fire Department
- CCR—California Code of Regulations
- CCWD—Coastside County Water District
- CDAA—California Disaster Assistance Act
- CDC—Center for Disease Control
- CDFA—California Department of Food and Agriculture
- CDD—Community Development Department
- CEQA—California Environmental Quality Act
- CERPP—Citizens' Emergency Response and Preparedness Program
- CERT—Community Emergency Response Team
- CFPD—Colma Fire Protection District
- CFR—Code of Federal Regulations
- CIP—capital improvement program
- CMAP—Climate Mitigation and Adaptation Plan
- COOP/COG—continuity of operations plan and continuity of government
- CPAW—Community Partners for Wildfire Assistance
- CSM—College of San Mateo
- CWPP—community wildfire protection plan
- CWSRF—EPA Clean Water State Revolving Fund
- DEM—San Mateo County Department of Emergency Management
- DWR—Department of Water Resources
- EAP—emergency action plan
- EIR—Environmental Impact Report
- EMID—Estero Municipal Improvement District
- EMPG—Emergency Management Performance Grant
- EOC—emergency operations center
- EOP—emergency operations plan
- EPA—Environmental Protection Agency
- FEMA—Federal Emergency Management Agency
- FMA—Flood Mitigation Assistance Grant Program
- FMAG—Fire Management Assistance Grants

- FPD—fire protection district
- FSLRRD—Flood & Sea Level Rise Resiliency District
- GHG—greenhouse gas
- GIS—geographic information system
- HMA—Hazard Mitigation Assistance
- HMB—Half Moon Bay
- HMGP—Hazard Mitigation Grant Program
- HMP—hazard mitigation plan
- HRD—Highlands Recreation District
- HSGP—Homeland Security Grant Program
- IBC—International Building Code
- ISO—Insurance Services Office (insurance underwriter)
- JPA—joint powers authority
- LCP—Local Coastal Program
- LHMP—local hazard mitigation plan
- LUP—land use plan
- MJLHMP—Multijurisdictional Local Hazard Mitigation Plan
- MPFPD—Menlo Park Fire Protection District
- MPWD—Mid-Peninsula Water District
- MRP—Municipal Regional Stormwater Permit
- MWSD—Montara Water and Sanitary District
- NCCWD—North Coast County Water District
- NEPA—National Environmental Policy Act
- NFIP—National Flood Insurance Program
- NIMS—National Incident Management System
- NOAA—National Oceanic and Atmospheric Administration
- NRCS—Natural Resources Conservation Service
- OPC—California Ocean Protection Council
- POC—point of contact
- RCD—resource conservation district
- RHNA—Regional Housing Needs Allocation
- RICAPS—Regionally Integrated Climate Action Planning Suite
- SAFER—Staffing for Adequate Fire and Emergency Response Grants
- SB—Senate Bill
- SCC—California State Coastal Conservancy
- SFHA—special flood hazard area
- SFO—San Francisco International Airport
- SFPUC—San Francisco Public Utilities Commission
- SLR—sea-level rise
- SMCCD—San Mateo Community College District
- SMCFire or SMCFD—San Mateo County Fire Department
- SMCO—San Mateo County
- SMRCD—San Mateo Resource Conservation District
- SSF—South San Francisco
- SSFFD—South San Francisco Fire Department
- SSMP—Sanitary Sewer Management Plan
- SWRCB—California State Water Resources Control Board
- TEP—Training and Exercise Program
- THIRA—Threat & Hazard Identification & Risk Assessment
- TMDL—total maximum daily load
- UASI—Urban Area Security Initiative
- USDA—U.S. Department of Agriculture

- UWMP—urban water management plan
- WFPD—Woodside Fire Protection District
- WUI—wildland urban interface
- WWD—Westborough Water District

INTRODUCTION

BACKGROUND

The Federal Emergency Management Agency (FEMA) encourages multi-jurisdictional planning for hazard mitigation. All participating jurisdictions must meet the requirements of Chapter 44 of the Code of Federal Regulations (44 CFR):

“Multi-jurisdictional plans (e.g., watershed plans) may be accepted, as appropriate, as long as each jurisdiction has participated in the process and has officially adopted the plan.” (Section 201.6(a)(4)).

For the *San Mateo County 2021 Multi-Jurisdictional Local Hazard Mitigation Plan*, a planning partnership was formed to leverage resources and to meet requirements of the federal Disaster Mitigation Act for as many eligible local governments as possible. The Disaster Mitigation Act defines a local government as follows:

“Any county, municipality, city, town, township, public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a nonprofit corporation under State law), regional or interstate government entity, or agency or instrumentality of a local government; any Indian tribe or authorized tribal organization, or Alaska Native village or organization; and any rural community, unincorporated town or village, or other public entity.”

In addition, federally recognized tribes may participate in local/tribal multi-jurisdictional plans as long as the requirements of Section 201.7 of 44 CFR are met for tribal components of the plan.

Two types of planning partners participated in this process for the *2021 Multi-Jurisdictional Local Hazard Mitigation Plan*, with distinct needs and capabilities:

- Incorporated municipalities
- Special districts

Each participating planning partner prepared a jurisdiction-specific annex to this plan. These annexes, as well as information on the process by which they were created, are contained in this volume.

THE PLANNING PARTNERSHIP

Initial Solicitation and Letters of Intent

A planning team made up of San Mateo County and consultant staff solicited the participation of all eligible municipalities and special districts at the outset of this project. A kickoff meeting was held on January 5, 2021, to identify potential stakeholders and planning partners for this process. The purpose of the meeting was to introduce

the planning process to jurisdictions in the County that could have a stake in the outcome of the planning effort. All eligible local governments in the planning area were invited to attend. The goals of the meeting were as follows:

- Provide an overview of the Disaster Mitigation Act.
- Review the *2016 San Mateo County Hazard Mitigation Plan* and planning partnership
- Outline the work plan for this hazard mitigation plan.
- Describe the benefits of multi-jurisdictional planning.
- Outline planning partner expectations.
- Solicit planning partners.
- Solicit volunteers/recommendations for the steering committee.

Local governments wishing to join the planning effort were asked to provide the planning team with a “letter of intent to participate” that agreed to the planning partner expectations (see Appendix A) and designated lead and alternate points of contact for their jurisdiction. In all, the planning team received formal commitment from 37 planning partners in addition to the County. A map showing the location of participating special purpose districts is provided at the end of this introduction. Maps showing risk assessment results for participating cities are provided in the individual annexes for each city. Risk assessment maps for all planning areas countywide are provided in Volume 1 of this hazard mitigation plan.

Planning Partner Expectations

The planning team developed the following list of planning partner expectations, which were provided and discussed at the kickoff meeting (see Appendix A for details):

- Complete a “letter of intent to participate.”
- Designate lead and primary points of contact for this effort.
- Support and participate in the selection and function of the Steering Committee.
- Provide support required to implement the public involvement strategy.
- Participate in the process through opportunities such as:
 - Steering Committee meetings
 - Public meetings or open houses
 - Workshops and planning partner specific training sessions
 - Public review and comment periods prior to adoption.
- Attend the mandatory Phase 3 jurisdictional annex workshop.
- Complete the jurisdictional annex.
- Perform a “consistency review” of all technical studies, plans and ordinances specific to hazards.
- Review the risk assessment and identify hazards and vulnerabilities specific to the jurisdiction.
- Review and determine if the mitigation recommendations chosen in Volume 1 will meet the needs of the jurisdiction.

- Create an action plan that identifies each project, who will oversee the task, how it will be financed, and when it is estimated to occur.
- Formally adopt the hazard mitigation plan.

By adopting this plan, each planning partner also agrees to the plan implementation and maintenance protocol established in Volume 1. Failure to meet these criteria may result in a partner being dropped from the partnership by the Steering Committee, and thus losing eligibility under the scope of this plan.

Final Coverage

Two jurisdictions that submitted letters of intent to participate withdrew from the planning process prior to its completion. The rest fully met the participation requirements for this update, completed an annex template, and will be covered by the updated hazard mitigation plan upon FEMA approval and adoption by their governing bodies. This final coverage will apply to the following jurisdictions:

- Cities/County
 - Town of Atherton
 - City of Belmont
 - City of Brisbane
 - City of Burlingame
 - Town of Colma
 - City of Daly City
 - City of East Palo Alto
 - City of Foster City
 - City of Half Moon Bay
 - Town of Hillsborough
 - City of Menlo Park
 - City of Millbrae
 - City of Pacifica
 - Town of Portola Valley
 - City of Redwood City
 - City of San Bruno
 - City of San Carlos
 - City of San Mateo
 - City of South San Francisco
 - Town of Woodside
 - San Mateo County
- Special Purpose Districts
 - Coastside County Water District
 - Colma Fire Protection District
 - Highlands Recreation District
 - Menlo Park Fire Protection District
 - Midpeninsula Regional Open Space District
 - Mid-Peninsula Water District
 - Montara Water & Sanitary District
 - North Coast County Water District
 - San Mateo Community College District
 - San Mateo County Flood & Sea Level Rise Resiliency District
 - San Mateo County Harbor District
 - San Mateo County Office of Education
 - San Mateo Resource Conservation District
 - Westborough Water District
 - Woodside Fire Protection District

Linkage Procedures

Eligible local jurisdictions that did not participate in development of this multi-jurisdictional plan may comply with Disaster Mitigation Act requirements by linking to this plan following procedures outlined in Appendix B.

PARTNER ANNEX DEVELOPMENT

Capability Assessment

All participating jurisdictions compiled an inventory and analysis of existing authorities and capabilities called a “capability assessment.” A capability assessment creates an inventory of a jurisdiction’s mission, programs, and policies, and evaluates its capacity to carry them out. This assessment identifies potential gaps in the jurisdiction’s capabilities. If the capability assessment identified an opportunity to add a missing core capability or expand an existing one, then doing so has been selected as an action in the jurisdiction’s action plan. The sections below describe the specific capabilities evaluated under the assessment.

Planning and Regulatory Capabilities

Jurisdictions can develop policies and programs and implement rules and regulations to protect and serve residents. Local policies are typically identified in planning documents, implemented via a local ordinance, and enforced by a governmental body. Because the planning and regulatory authority of municipal partners is generally broader than that of special-purpose districts, the assessment of these capabilities is more detailed for the municipal partners.

Development and Permitting Capability

This set of capabilities is not applicable to special purpose districts and was assessed only for municipal partners (cities and the County). Municipal jurisdictions regulate land use through the adoption and enforcement of zoning, subdivision, and land development ordinances, building codes, building permit ordinances, floodplain, and stormwater management ordinances. When effectively prepared and administered, these regulations can lead to hazard mitigation.

Fiscal Capabilities

Assessing a jurisdiction’s fiscal capability provides an understanding of the ability to fulfill the financial needs associated with hazard mitigation projects. This assessment identifies both outside resources, such as grant-funding eligibility, and local jurisdictional authority to generate internal financial capability, such as through impact fees.

Administrative and Technical Capabilities

Without appropriate personnel, the mitigation strategy may not be implemented. Administrative and technical capabilities focus on the availability of personnel resources responsible for implementing all the facets of hazard mitigation. These resources include technical experts, such as engineers and scientists, as well as personnel with capabilities that may be found in multiple departments, such as grant writers.

Education and Outreach Capability

Regular engagement with the public on issues regarding hazard mitigation provides an opportunity to directly interface with community members. Assessing this outreach and education capability illustrates the connection between the government and community members, which opens a two-way dialogue that can result in a more resilient community based on education and public engagement.

Compliance with National Flood Insurance Program Requirements

The National Flood Insurance Program (NFIP) is not available to special purpose districts, so this set of capabilities was assessed only for municipal partners (cities and the County). Flooding is the costliest natural hazard in the United States and homeowners face increasingly high flood insurance premiums. Community participation in the NFIP opens up opportunity for additional grant funding associated specifically with flooding issues. Assessment of a jurisdiction’s current NFIP status and compliance provides a greater understanding of the local flood management program, opportunities for improvement, and available grant funding opportunities.

Participation and Classification in Other Programs

Other programs, such as the Community Rating System, Storm/Tsunami Ready, and Firewise USA, can enhance a jurisdiction’s ability to mitigate, prepare for, and respond to natural hazards. These programs indicate a jurisdiction’s desire to go beyond minimum requirements set forth by local, state, and federal regulations in order to create a more resilient community. These programs complement each other by focusing on communication, mitigation, and community preparedness to save lives and minimize the impact of natural hazards on a community. The programs reviewed here are applicable to municipal partners only so they are not included in the capability assessments for special-purpose districts.

Adaptive Capacity

An adaptive capacity assessment evaluates a jurisdiction’s ability to anticipate impacts from future conditions. By looking at public support, technical adaptive capacity, and other factors, jurisdictions identify their core capability for resilience against issues such as sea level rise. The adaptive capacity assessment provides jurisdictions with an opportunity to identify areas for improvement by ranking their capacity high, medium, or low.

Mitigation Action Plan Development

Risk Ranking

In the risk-ranking exercise, each planning partner was asked to review the ranked risk specifically for its jurisdiction, based on the impact on its population and/or facilities. Municipalities based this ranking on probability of occurrence and the potential impact on people, property, and the economy. Special purpose districts based this ranking on probability of occurrence and the potential impact on their constituency, their vital facilities, and the facilities’ functionality after an event. Additionally, to support the social equity lens for this plan update, a social vulnerability ranking factor and weighting was established to support planning partners wishing to apply an equity lens to their risk ranking and project identification and prioritization. The risk-ranking methodology for partner annexes was the same as that used for the countywide risk ranking, as described in Volume 1.

The objectives of this exercise were to familiarize the partnership with how to use the risk assessment as a tool to support other planning and hazard mitigation processes and to help prioritize types of mitigation actions that should be considered. Hazards that were ranked as “high” and “medium” for each jurisdiction as a result of this exercise were considered to be priorities for identifying mitigation actions, although jurisdictions also identified actions to mitigate “low” ranked hazards, as appropriate.

Information Reviewed to Develop Action Plan

The tool kits were used during the workshops and in follow-up work conducted by the planning partners. A large portion of the workshop focused on how the tool kit should be used to develop the mitigation action plan. Planning partners were specifically asked to review the following to assist in the identification of actions:

- The Jurisdiction’s Capability Assessment—Reviewed to identify capabilities that the jurisdiction does not currently have but should consider pursuing or capabilities that should be revisited and updated to include best available information; also reviewed to determine how existing capabilities can be leveraged to increase or improve hazard mitigation in the jurisdiction.
- The Jurisdiction’s National Flood Insurance Program Compliance Table—Reviewed to identify opportunities to increase floodplain management capabilities.
- The Jurisdiction’s Review of Its Adaptive Capacity for Climate Change—Reviewed to identify ways to leverage or continue to improve existing capacities and to improve understanding of other capacities.
- The Jurisdiction’s Identified Opportunities for Future Integration—Reviewed to identify specific integration actions to be included in the mitigation strategy.
- Jurisdiction-Specific Vulnerabilities—Reviewed to identify actions that will help reduce known vulnerabilities.
- The Mitigation Best Practices Catalog—Reviewed to identify actions that the jurisdiction should consider including in its action plan.
- Public Input—Reviewed to identify potential actions and community priorities.

Action Plan Prioritization

The actions recommended in the action plan were prioritized based on the following factors:

- Cost and availability of funding
- Benefit, based on likely risk reduction to be achieved
- Number of plan objectives achieved
- Timeframe for project implementation
- Eligibility for grant funding programs

Two priorities were assigned for each action:

- A high, medium, or low priority for implementing the action (with and without considerations of social equity)
- A high, medium, or low priority for pursuing grant funding for the action.

The sections below describe the analysis of benefits and costs and the assignment of the two priority ratings.

Benefit/Cost Review

The action plan must be prioritized according to a benefit/cost analysis of the proposed actions (44 CFR, Section 201.6(c)(3)(iii)). For this hazard mitigation plan, a qualitative benefit-cost review was performed for each action by assigning ratings for benefit and cost as follows:

- Cost:
 - **High**—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, bonds, grants, and fee increases).
 - **Medium**—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.
 - **Low**—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- Benefit:
 - **High**—Action will provide an immediate reduction of risk exposure for life and property.
 - **Medium**—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - **Low**—Long-term benefits of the action are difficult to quantify in the short term.

To assign priorities, each action with a benefit rating equal to or higher than its cost rating (such as high benefit/medium cost, medium benefit/medium cost, medium benefit/low cost, etc.) was considered to be cost-beneficial. This is not the detailed level of benefit/cost analysis required for some FEMA hazard-related grant programs. Such analysis would be performed at the time a given action is being submitted for grant funding.

Implementation Priority

Implementation priority ratings were assigned as follows:

- **High Priority**—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
- **Medium Priority**—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years), once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
- **Low Priority**—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known grant funding. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for grant funding from programs that have not yet been identified.

Social Equity Implementation Priority

For planning partners that chose to apply an equity lens to their prioritization scheme, the following parameters were established:

- **High Priority**—The mitigation action is designed to reduce harm to multiple socially vulnerable groups in the County from one or more of the hazards identified in the hazard mitigation plan.
- **Medium Priority**—The mitigation action is designed to reduce harm to a single socially vulnerable population in the County from at least one hazard identified in the hazard mitigation plan.
- **Low Priority**—The mitigation action fails to advance social equity in any measurable way in the County

Grant Pursuit Priority

Grant pursuit priority ratings were assigned as follows:

- **High Priority**—An action that meets identified grant eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible for grant funding.
- **Medium Priority**—An action that meets identified grant eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
- **Low Priority**—An action that has not been identified as meeting any grant eligibility requirements.

Classification of Actions

Each recommended action was classified based on the hazard it addresses and the type of mitigation it involves. Mitigation types used for this classification are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education and Awareness**—Actions to inform residents and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.
- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.
- **Climate Resiliency**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea-level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff training, memorandums of understanding, development of plans and studies, and monitoring programs.

Annex-Preparation Process

Templates

Templates were created to help the planning partners prepare their jurisdiction-specific annexes. Separate templates were created for the two types of jurisdictions participating in this plan. The templates were created so that all criteria of Section 201.6 of 44 CFR for local governments would be met based on the partners' capabilities and mode of operation. Separate templates were available for partners updating a previous hazard mitigation plan and those developing a first-time hazard mitigation plan. These templates were deployed in three phases during the course of this plan update process. These phases are described as follows:

- **Phase 1**—Profile, Trends, Previous Plan Status
 - Deployed: February 19, 2021
 - Due: March 19, 2021
- **Phase 2**—Capability Assessment and Information Sources
 - Deployed: April 2, 2021
 - Due: May 21, 2021
- **Phase 3**—Risk Ranking, Action Plan, and Information Sources
 - Deployed: June 11, 2021
 - Workshops: June 14 – 16, 2021
 - Due: July 23, 2021

The templates were set up to lead all partner through steps to generate Disaster Mitigation Act-required elements specific to their jurisdictions. The templates and their instructions are included in Appendix C of this volume.

Tool Kit

Each planning partner was provided with a tool kit to assist in completing the annex template and developing an action plan. The tool kits contained the following:

- The 2016 San Mateo County Hazard Mitigation Plan annexes
- A catalog of mitigation best practices and adaptive capacity
- The guiding principle, goals and objectives developed for the update to the plan
- A list of jurisdiction-specific issues noted during the risk assessment
- Information on the FEMA Hazard Mitigation Assistance grant program
- Information on past hazard events that have impacted the planning area
- County-wide and jurisdiction-specific maps for hazards of concern
- Special district boundary maps showing the sphere of influence for each special purpose district partner
- The risk assessment results developed for this plan
- Information on climate change and expected impacts in the planning area

- Jurisdiction-specific annex templates, with instructions for completing them
- FEMA guidance on plan integration
- The results of a public survey conducted as part of the public involvement strategy
- A copy of the presentation that was given at the workshop sessions.

Workshop

All partners were required to participate in a technical assistance workshop, where key elements of the template were discussed and the templates were subsequently completed by a designated point of contact for each partner and a member of the planning team. Multiple online workshops were held the week of June 14, 2021 and attended by at least one representative from each planning partner, addressed the following topics:

- The templates and the tool kit
- Natural events history
- Jurisdiction-specific issues
- Risk ranking
- Status of prior actions
- Developing your action plan
- Cost/benefit review
- Prioritization protocol
- Next steps.

4. CITY OF BRISBANE

4.1 HAZARD MITIGATION PLANNING TEAM

Primary Point of Contact

Randy Breault, Director - Public Works & OES
50 Park Place Brisbane, CA 94005
415-508-2131
e-mail address: rbreault@brisbaneca.org

Alternate Point of Contact

Jeremiah Robbins, Associate Planner
50 Park Place Brisbane, CA 94005
415-508-2122
e-mail address: jrobbins@brisbaneca.org

This annex was developed by the local hazard mitigation planning team, whose members are listed in Table 4-1.

Table 4-1. Local Mitigation Planning Team Members

Name	Title
Randy Breault	Director Public Works & OES
John Swiecki	Community Development Director
Ken Johnson	Senior Planner
Julia Ayres	Senior Planner
Jeremiah Robbins	Associate Planner
Adrienne Etherton	Sustainability Manger

4.2 JURISDICTION PROFILE

4.2.1 Location and Features

The city is located on the western edge of San Francisco Bay, with a western boundary generally delineated by San Bruno Mountain. Neighboring agencies to the north include Daly City and the City & County of San Francisco. South San Francisco is at the city's southern limit. Although the city's total land base is listed as 20.44 sq. miles, 17 sq. miles of this amount is covered by the San Francisco Bay; the city's eastern boundary with Contra Costa County is located in the Bay. The city is commonly identified as being located at latitude 37.69°N longitude 122.39°W.

Brisbane's climate is mild during the summer when temperatures tend to be in the 60's and cool during the winter when temperatures tend to be in the 50's. Summers are long, arid, and mostly clear while winters are short, cold, and wet. Over the course of the year, the temperature typically varies from 46 to 72 degrees Fahrenheit but is rarely below 39 degrees Fahrenheit or above 82 degrees Fahrenheit. The warmest month of the year is September with an average high temperature of 72.6 degrees Fahrenheit, while the coldest month of the year is January and an average low temperature of 45.4 degrees Fahrenheit.

The annual average precipitation at Brisbane is 21.7 inches. Winter months tend to be wetter than summer months with January being the wettest month of the year with an average rainfall of 4.3 inches. Brisbane’s relative location to San Bruno Mountain tends to deflect seasonal fog to the north and south, away from the city.

4.2.2 History

Brisbane was originally part of the Rancho Canada de Guadalupe la Visitacion y Rodeo Viejo, a large tract of land that included Guadalupe Valley, the Bayshore District of Daly City, the Visitacion Valley District of San Francisco, and San Bruno Mountain. Visitacion City, as Brisbane was originally known, was surveyed in 1908, adjacent to a new Southern Pacific Railroad line that offered a faster and more direct route to San Francisco. The town site remained largely undeveloped for many years, largely due to the “Panic of 1907,” a nationwide financial banking crisis/economic recession. During the 1920s, the area’s name was changed to Brisbane. Growth occurred slowly – by 1940, the town had grown to a population of just 2,500. The subject of home rule and city formation was a controversial subject among Brisbane residents during the 1940s and 1950s with some residents desiring a stronger voice in local politics, while others were concerned about losing their town’s close-knit charm to another layer of government. Finally, an incorporation committee was formed in 1960, and after six months of study, recommended that the town vote to incorporate a 2.5 square mile area. On September 12, 1961, the residents of Brisbane supported the incorporation committee’s recommendations, with 710 residents voting in favor of incorporation and 296 opposed.

4.2.3 Governing Body Format

The City of Brisbane is governed by a five member City Council elected at large. A Mayor is chosen every year by the Council and the City Manager is appointed by the Council as Chief Administrator. The City has two standing commissions and three committees whose members are appointed by the City Council. The City consist of eight departments: Administrative Services, Community Development, Fire, Marina, Police, Public Works, Parks and Recreation, and the City Manager’s Office. A full description of the Council, Commissions, and Departments can be found under the “Government” tab at www.brisbaneca.org.

The City Council will by Resolution adopt the final approved version of the Brisbane Annex to the San Mateo County LHMP; Brisbane Office of Emergency Services will oversee its implementation.

4.3 CURRENT TRENDS

4.3.1 Population

According to the California Department of Finance, the population of Brisbane as of January 2020 was 4,633. Since 2016, the population has declined at an average annual rate of 0.35 percent.

4.3.2 Development

Anticipated development levels are low to moderate for the 5-year plan period, and such development would primarily occur as infill. A total of 389 potential infill housing sites were identified through either current zoning or rezoning in the City’s 2015-2022 Housing Element, enough to meet the City’s Regional Housing Needs Allocation (RHNA) for the current eight-year Housing Element cycle. The City developed and approved a precise plan (Parkside at Brisbane Village Precise Plan) in 2018 to establish a residential overlay zoning district near the

City's center adjacent to the Community Park and the existing downtown neighborhood commercial districts. The Parkside Precise Plan allows for redevelopment of industrial warehouse sites to residential and could accommodate a minimum of 228 of the 389 units identified in the Housing Element, but interest in redeveloping these sites has been low.

Similarly, there are a limited number of commercial sites that are unutilized and may potentially be developed as infill over the next 5 years. These primarily consist of three sites within the Sierra Point subarea, east of U.S. Highway 101. Two of the three sites are currently under construction and are expected to be completed within the next five years. Combined, the two sites under construction would include approximately 1 million square feet of research and development and commercial office. In addition, along Bayshore Boulevard, there are a number of smaller sites that could potentially accommodate commercial development, but due to site constraints, interest in development of these sites has been historically low.

Planning for the next Housing Element cycle, 2023-2031, is now underway and the City is projecting a RHNA of at least 1,600 units. The primary opportunity for new housing is within the City's most northern area known as the Baylands, a roughly 684-acre former railyard and landfill site located between U.S. 101 and Bayshore Boulevard. The City amended its General Plan in 2020, following passage of Measure JJ in 2018, to allow up to 2,200 residential units and 7 million square feet of commercial development on the Baylands. The City is currently preparing an Environmental Impact Report (EIR) for the Brisbane Baylands Specific Plan, where the applicant's is proposing development of 1,800 to 2,200 residential units and approximately 7 million square feet of commercial use, along with an acquisition of an annual water supply from the Oakdale Irrigation District. However, the EIR has not yet been certified and entitlements have not been granted by the City. Given the scale of the development and the stage in the entitlement process, it is not anticipated that development of the Baylands will begin within this plan period.

Table 4-2 summarizes development trends in the performance period since the preparation of the previous hazard mitigation plan, as well as expected future development trends.

Table 4-2. Recent and Expected Future Development Trends

Criterion	Response
Has your jurisdiction annexed any land since the preparation of the previous hazard mitigation plan? <i>If yes, give the estimated area annexed and estimated number of parcels or structures.</i>	No
Is your jurisdiction expected to annex any areas during the performance period of this plan? <i>If yes, describe land areas and dominant uses.</i> <i>If yes, who currently has permitting authority over these areas?</i>	Yes Four parcels collectively referred to as the Brisbane or Guadalupe Quarry on the northern slope of the Southeast Ridge of the San Bruno Mountain, consisting of open space and a quarry. San Mateo County
Are any areas targeted for development or major redevelopment in the next five years? <i>If yes, briefly describe, including whether any of the areas are in known hazard risk areas</i>	Yes The 145-acre Guadalupe Valley Quarry is located within a "Moderate to High" fire severity zone. It falls within the boundaries of the San Bruno Mountain Habitat Conservation Plan and is also within a State Designated Mineral Resources Area; 80 acres are within the active mining area, while 60 acres are open space and habitat lands.

Criterion	Response					
How many permits for new construction were issued in your jurisdiction since the preparation of the previous hazard mitigation plan?		2016	2017	2018	2019	2020
	Single Family	4	2	5	1	1
	Multi-Family	0	0	0	1	0
	Other (commercial, mixed use, etc.)	0	0	4	1	5
	Total	4	2	9	3	6
Provide the number of new-construction permits for each hazard area or provide a qualitative description of where development has occurred.	<ul style="list-style-type: none"> • Special Flood Hazard Areas: 1 • Landslide: 0 • High Liquefaction Areas: 9 • Tsunami Inundation Area: 0 • Wildfire Risk Areas: 0 					
Describe the level of buildout in the jurisdiction, based on your jurisdiction's buildable lands inventory. If no such inventory exists, provide a qualitative description.	<p>Brisbane currently has approximately 2,500 parcels, but only a limited number of vacant, buildable sites outside of the Baylands. Our Housing Element identifies over fifty vacant sites currently zoned for residential, with another half dozen vacant sites in mixed-use zoning districts, but it also identifies sites that could accommodate up to 389 additional residential units. The limited number of commercial sites that remain vacant are primarily located within the Sierra Point subarea, which is currently seeing increased construction activities. The City's largest commercial zoning district, a 365-acre business park, has almost no vacant land remaining but there is potential for existing structures to enlarge and businesses to intensify. And once a Specific Plan is adopted for the Baylands, the 684-acre site would have the potential for up to 2,200 residential units and approximately 7 million square feet of commercial space.</p>					

4.4 CAPABILITY ASSESSMENT

This section describes an assessment of existing capabilities for implementing hazard mitigation strategies. The introduction at the beginning of this volume of the hazard mitigation plan describes the components included in the capability assessment and their significance for hazard mitigation planning. This section summarizes the following findings of the assessment:

- An assessment of legal and regulatory capabilities is presented in Table 4-3.
- Development and permitting capabilities are presented in Table 4-4.
- An assessment of fiscal capabilities is presented in Table 4-5.
- An assessment of administrative and technical capabilities is presented in Table 4-6.
- An assessment of education and outreach capabilities is presented in Table 4-7.
- Information on National Flood Insurance Program (NFIP) compliance is presented in Table 4-8.
- Classifications under various community mitigation programs are presented in Table 4-9.
- The community’s adaptive capacity for the impacts of climate change is presented in Table 4-10.

Findings of the capability assessment were reviewed to identify opportunities to expand, initiate or integrate capabilities to further hazard mitigation goals and objectives. Where such opportunities were identified and determined to be feasible, they are included in the action plan. The “Analysis of Mitigation Actions” table in this annex identifies these as community capacity building mitigation actions.

Table 4-3. Legal and Regulatory Capability

	Local Authority	Other Jurisdiction Authority	State Mandated	Integration Opportunity?
Codes, Ordinances, & Requirements				
Building Code	Yes	No	Yes	No
<i>Comment: Title 15 of Brisbane Municipal Code (BMC), first adopted 1989 with regular revisions thereafter (latest 10/15/20)</i>

Table 4-4. Development and Permitting Capability

Criterion	Response
Does your jurisdiction issue development permits?	Yes
• If no, who does? If yes, which department?	Community Development
Does your jurisdiction have the ability to track permits by hazard area?	Yes
Does your jurisdiction have a buildable lands inventory?	No

Table 4-5. Fiscal Capability

Financial Resource	Accessible or Eligible to Use?
Community Development Block Grants	No
Capital Improvements Project Funding	Yes
Authority to Levy Taxes for Specific Purposes	Yes - per requirements of CA Prop 218
User Fees for Water, Sewer, Gas or Electric Service	Yes - various fees across the utilities
Incur Debt through General Obligation Bonds	Yes
Incur Debt through Special Tax Bonds	Yes
Incur Debt through Private Activity Bonds	Yes
Withhold Public Expenditures in Hazard-Prone Areas	Yes, but no withholdings enacted
State-Sponsored Grant Programs	Yes (e.g., Cal OES HMGP)
Development Impact Fees for Homebuyers or Developers	Yes
Other	No

Table 4-6. Administrative and Technical Capability

Staff/Personnel Resource	Available?	Department/Agency/Position
Planners or engineers with knowledge of land development and land management practices	Yes	Public Works - Director Community Development - Director
Engineers or professionals trained in building or infrastructure construction practices	Yes	Public Works Director Community Development - Building Official
Planners or engineers with an understanding of natural hazards	Yes	Public Works - Director Community Development - Director
Staff with training in benefit/cost analysis	Yes	Public Works - Senior Civil Engineer
Surveyors	Yes	All surveying provided under contract
Personnel skilled or trained in GIS applications	Yes	Public Works - Engineering Technician
Scientist familiar with natural hazards in local area	Yes	Utilize resources of local USGS staff
Emergency manager	Yes	City Office of Emergency Services
Grant writers	Yes	Administrative Services - Management Analyst
Other	No	N/A

Table 4-7. Education and Outreach Capability

Criterion	Response
Do you have a public information officer or communications office?	Yes - Communications Manager in City Manager's Office
Do you have personnel skilled or trained in website development?	Yes - Communications Manager in City Manager's Office
Do you have hazard mitigation information available on your website? • If yes, briefly describe.	Yes On OES department site
Do you use social media for hazard mitigation education and outreach? If yes, briefly describe.	Yes Regular updates are provided in our weekly blog with links to the main website. The city's website hosted the community survey for this LHMP update.

Criterion	Response
Do you have any citizen boards or commissions that address issues related to hazard mitigation? • If yes, briefly describe.	Yes County's Emergency Services Council
Do you have any other programs already in place that could be used to communicate hazard-related information? • If yes, briefly describe.	Yes Weekly blog and website
Do you have any established warning systems for hazard events? • If yes, briefly describe.	No N/A

Table 4-8. National Flood Insurance Program Compliance

Criterion	Response
What local department is responsible for floodplain management?	Public Works & Community Development
Who is your floodplain administrator? (department/position)	Community Development/Building Official
Are any certified floodplain managers on staff in your jurisdiction?	No
What is the date that your flood damage prevention ordinance was last amended?	Latest revision 2/21/19
Does your floodplain management program meet or exceed minimum requirements? <i>If exceeds, in what ways?</i>	Meet
When was the most recent Community Assistance Visit or Community Assistance Contact?	4/25/14
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? <i>If so, state what they are.</i>	No
Are any RiskMAP projects currently underway in your jurisdiction? <i>If so, state what they are.</i>	No
Do your flood hazard maps adequately address the flood risk within your jurisdiction? <i>If no, state why.</i>	Yes
Does your floodplain management staff need any assistance or training to support its floodplain management program? <i>If so, what type of assistance/training is needed?</i>	No
Does your jurisdiction participate in the Community Rating System (CRS)? <i>If yes, is your jurisdiction interested in improving its CRS Classification?</i> <i>If no, is your jurisdiction interested in joining the CRS program?</i>	No No
How many flood insurance policies are in force in your jurisdiction? ^a <i>What is the insurance in force?</i> <i>What is the premium in force?</i>	32 \$16,353,300 \$181,576
How many total loss claims have been filed in your jurisdiction? ^a <i>What were the total payments for losses?</i>	6 \$5,818

a. According to FEMA statistics as of March 31, 2021

Table 4-9. Community Classifications

	Participating?	Classification	Date Classified
FIPS Code	Yes	0608108310	N/A
DUNS#	Yes	967492711	N/A
Community Rating System	No	N/A	N/A
Building Code Effectiveness Grading Schedule	No	N/A	N/A
Public Protection	No	N/A	N/A
Storm Ready	No	N/A	N/A
NWS Weather Ready Nation Ambassador	Yes	N/A	N/A
Firewise	No	N/A	N/A
Tsunami Ready	No	N/A	N/A

Table 4-10. Adaptive Capacity for Climate Change

Criterion	Jurisdiction Rating ^a
Technical Capacity	
Jurisdiction-level understanding of potential climate change impacts <i>Comment: The City has a Sustainability Manager, an Open Space & Ecology Committee, and works closely with San Mateo County Office of Sustainability staff and their efforts.</i>	High
Jurisdiction-level monitoring of climate change impacts <i>Comment: Following regional, state, and other reporting on impacts, but little direct monitoring happening at the local level</i>	Medium
Technical resources to assess proposed strategies for feasibility and externalities <i>Comment:</i>	High
Jurisdiction-level capacity for development of greenhouse gas emissions inventory <i>Comment: City partners with County Office of Sustainability whose staff &/or consultants compile GHG inventories; city staff has input and reviews</i>	Medium
Capital planning and land use decisions informed by potential climate impacts <i>Comment:</i>	Medium
Participation in regional groups addressing climate risks <i>Comment: Active participants in County RICAPS and Climate Ready Collaborative, BayREN, CA Climate & Energy Forum, and others</i>	High
Implementation Capacity	
Clear authority/mandate to consider climate change impacts during public decision-making processes <i>Comment:</i>	Medium
Identified strategies for greenhouse gas mitigation efforts <i>Comment: Adopted CAP and continually evaluating/refining strategies</i>	High
Identified strategies for adaptation to impacts <i>Comment: Most local focus to date has been on mitigation, with participation in countywide adaptation discussions</i>	Medium
Champions for climate action in local government departments <i>Comment: City priority</i>	High
Political support for implementing climate change adaptation strategies <i>Comment: City Council priority</i>	High
Financial resources devoted to climate change adaptation <i>Comment: Some financial resources devoted to mitigation on a per-project basis, none to adaptation to date</i>	Low
Local authority over sectors likely to be negative impacted <i>Comment:</i>	Medium

Criterion	Jurisdiction Rating ^a
Public Capacity	
Local residents' knowledge of and understanding of climate risk <i>Comment: A mix of highly aware and knowledgeable residents as well as others that are less informed</i>	Medium
Local residents support of adaptation efforts <i>Comment: No significant adaptation efforts have been taken; thus, it is unclear the level of public support</i>	Unsure
Local residents' capacity to adapt to climate impacts <i>Comment: Concern for lower-income residents and/or seniors - unconditioned homes facing increasing temps/heat waves, need for improvements to avoid/withstand wildfires and/or power shutoffs</i>	Medium
Local economy current capacity to adapt to climate impacts	Medium
Local ecosystems capacity to adapt to climate impacts <i>Comment: Rare and endangered plants and animals (butterflies) in the area</i>	Medium

- a. High = Capacity exists and is in use; Medium = Capacity may exist, but is not used or could use some improvement;
Low = Capacity does not exist or could use substantial improvement; Unsure= Not enough information is known to assign a rating.

4.5 INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as general planning and capital facilities planning, and that relevant information from those sources is used in hazard mitigation. This section identifies where such integration is already in place, and where there are opportunities for further integration in the future. Resources listed at the end of this annex were used to provide information on integration. The progress reporting process described in Volume 1 of the hazard mitigation plan will document the progress of hazard mitigation actions related to integration and identify new opportunities for integration.

4.5.1 Existing Integration

Some level of integration has already been established between local hazard mitigation planning and the following other local plans and programs:

- General Plan, Chapter X, “Community Health and Safety”**—State law requires a General Plan to address protection of a community from the risks of natural hazards. Brisbane’s plan exceeds this requirement by also speaking to human-caused hazards that are a part of urban life. The introduction to the safety element notes, “The underlying assumption of preparing the safety policy is that the City can reduce hazards if the probability of hazardous conditions is known in advance and plans for dealing with such conditions have been prepared.” The requirements of this section align with the LHMP’s goal of identifying natural hazards and of identifying strategies to mitigate them. The city’s Safety Element was last updated in 2019 and incorporates the LHMP by reference, pursuant to AB 2140 (Hancock, 2006).
- Brisbane Municipal Code - Chapter 2.28, “Disaster Services Council”** - This section of the municipal code creates a disaster services council and the positions of Director and Assistant Director of Emergency Services. The legislated purposes of this chapter are to “. . . provide for the preparation and carrying out of plans for the protection of persons and property within the city in the event of an emergency; the direction of the emergency organization; and the coordination of the emergency functions of the city with all other public agencies, corporations, organizations, and affected private persons. Given that the local Office of Emergency Services has overall responsibility for implementing the LHMP, the creation of the Disaster Services Council and Office of Emergency Services is directly in alignment with the LHMP’s goal of establishing a coordinated approach to implementing the plan.

- **California Environmental Quality Act, “Brisbane Baylands Final Environmental Impact Report”** - The Brisbane City Council certified the Final (Program) Environmental Impact Report on July 19, 2018 for a General Plan amendment to allow development on an approximately 684-acre project site that is directly connected to the San Francisco Bay by way of two primary drainage facilities. CEQA review is in line with the LHMP’s goal of identify natural hazards and identifying mitigation for it. For instance, there are specific chapters of the Final Environmental Impact Report that delve deeply into associated impacts of the project based on air quality, seismology, surface water hydrology, greenhouse gas emissions, etc. The City will prepare a project-level EIR for the forthcoming Brisbane Baylands Specific Plan which will identify project-specific potential impacts and appropriate mitigation measures addressing a range of potential hazard issue areas.
- **North County Fire Authority 2004 Wildland Pre-Fire Attack Plan** - The cities of Daly City, Pacifica and Brisbane have entered into a JPA where administrative oversight and training of fire departments is provided by Daly City to the other cities. Two of the signatory cities are located in a potential urban wildland fire boundary on San Bruno Mountain. In response to this, North County Fire Authority developed and conducts an annual exercise plan that encompasses familiarization training with the boundary, integration of multiple fire responders (including CAL FIRE land and air crews), and citizen evacuation awareness. Extensive pre-planning to mitigate the effects of a fire on San Bruno Mountain is clearly consistent with the goals of the LHMP.
- **City of Brisbane 2018 Emergency Operations Plan** - The City’s Emergency Operations Plan (EOP) outlines how Brisbane – its government, stakeholder agencies, community-based organizations (CBO), business community, and residents – coordinate a response to major emergencies and disasters. It was designed to be consistent with Homeland Security Presidential Directive (HSPS-5), the National Incident Management System (NIMS), the California Standardized Emergency Management System (SEMS), and Incident Command System (ICS) requirements. This plan, augmented by the LHMP, identifies operational strategies, and plans for managing inherently complex and potentially catastrophic events, and addresses preparedness, response, recovery, and mitigation.
- **Capital Improvement Plan** - The City’s capital improvement plan (CIP), developed in 2004 and updated annually, includes projects that can help mitigate potential hazards. The City will act to ensure consistency between the LHMP and the current and future capital improvement plans. The LHMP may identify new possible funding sources for capital improvement projects and may result in modifications to proposed projects based on results of the risk assessment and may result in the addition of identified projects to the approved for funding category of the CIP.

4.5.2 Opportunities for Future Integration

The capability assessment presented in this annex identified the following plans and programs that do not currently integrate hazard mitigation information but provide opportunities to do so in the future:

- **General Plan** – The City of Brisbane’s last, comprehensive update of its General Plan occurred in 1994. While the General Plan has been selectively amended from time to time, a comprehensive update is planned for 2024 and the City has already kicked off the 2023-2030 Housing Element update. Sustainable development will be a key conceptual framework for updates to the General Plan and Housing Element, reflecting the City’s recognition of the serious threats from global warming and climate change, but also from local hazards such as landslides, fires, earthquakes, flooding, and sea-level rise. These major updates, along with a minor update to the Safety Element in 2021, provides Brisbane an opportunity to fully integrate the goals, risk assessment and/or recommendations of the LHMP, maintain compliance with AB 2140, and ensure compliance with SB 379; the City acknowledges that any planned updates to its General Plan would greatly benefit from the integration of elements of the LHMP.

- **Sea Change San Mateo County Initiative** – The city was an active participant in a coalition of governments that completed a sea level rise vulnerability assessment to test and plan for the future resilience of our community. The results of the report provided information on the hazard and potential mitigations for multiple sea level rise scenarios and identified applicable city and county planning and policy documents that could integrate or incorporate its findings, including the LHMP. This effort along with other planning initiatives from the County’s Office of Sustainability, with the San Mateo County Flood Control District Flood Resilience Program, with a Grand Jury report on Sea Level Rise, and with final impetus from the C/CAG Countywide Water Coordination Committee resulted in the creation of the Flood and Sea Level Rise Resiliency District. The City of Brisbane along with the County of San Mateo and the 20 other cities in SMC are all signatory to the MOU associated with creation of this District. City staff will coordinate proposed projects with the District as their projects and ours become known.
- **Capital Improvement Projects** – Capital improvement project proposals may take into consideration hazard mitigation potential as a means of evaluating project prioritization under the CIP.
- **2003 Storm Drainage Master Plan** – The largest dollar amount of structural projects identified in this plan are located in the planning application area known as the Baylands (see third bulleted item above in “Existing Integration”). If and when that project successfully completes the myriad planning processes and results in a development, the majority of the SD improvements necessary to mitigate flooding in this area have already been pre-studied. Pre-identification of natural hazards (i.e., flooding) and requiring mitigation of same while a land area is being developed from its current status as a brownfield is clearly consistent with the LHMP.
- **2015 Climate Action Plan** – Brisbane’s holistic approach to addressing climate change was recognized when we became the first California city to win a Gold Beacon Award from the Institute for Local Government. The continuing implementation of the CAP is consistent with the LHMP’s goal of mitigating natural hazards, in that it works to slow the impacts of climate change, and the associated risks of increased sea levels, higher summer temperatures, prevalence, and strength of storms, etc.
- **City of Brisbane Emergency Operations Plan** – The City’s EOP is regularly updated by staff and will build on the goals and objectives identified in the LHMP. This includes potential updates to the EOP’s chapter on Continuity of Government and Recovery Planning section. The City has already identified two standby generator projects necessary for the Continuity of Operations Plan, one of which was previously completed under a FEMA grant.
- **Brisbane Baylands Specific Plan Environmental Impact Report** – The City has determined that a new EIR needs to be prepared to evaluate the environmental effects of the proposed Brisbane Baylands Specific Plan because of the age of the studies prepared for the Program EIR, substantial differences between the development currently proposed for the Brisbane Baylands and the development that was evaluated in the Program EIR, and changes in CEQA guidelines that went into effect in 2019. The EIR being prepared by the City of Brisbane will build on the information and analyses set forth in the earlier certified Program EIR with new and updated environmental impact analyses, including identification and mitigation of natural hazards, and would clearly benefit from incorporation of elements of the LHMP.
- **Baylands Sustainability Framework** – Brisbane’s City Council approved a sustainability framework for the Baylands in 2015. The framework, which is organized around the ten One Planet Living principles developed by BioRegional, identifies key sustainability principles to be addressed in future Baylands development and creates an approach to implement these principles. The document is expected to continually evolve over the course of the Baylands project to reflect new information, new funding mechanisms, new policies and technologies, and improvements to the project design and presents an opportunity for the City to incorporate or implement the goals and objectives of the LHMP.

4.6 RISK ASSESSMENT

4.6.1 Jurisdiction-Specific Natural Hazard Event History

Table 4-11 lists past occurrences of natural hazards for which specific damage was recorded in this jurisdiction. Other hazard events that broadly affected the entire planning area, including this jurisdiction, are listed in the risk assessments in Volume 1 of this hazard mitigation plan.

Table 4-11. Past Natural Hazard Events

Type of Event	FEMA Disaster #	Date	Damage Assessment
Severe Winter Storms	DR 4308	April 1, 2017	None submitted - \$153,750 FEMA grant received for fire station standby genset
Severe Storm	N/A	February 6, 2015	none submitted
Severe Storm	N/A	December 2015	none submitted
Drought	N/A	January 17, 2014 – ?	none submitted
Drought	N/A	February 27, 2009	none submitted
Severe Storms	DR 1646	Spring 2006	\$340,000
Severe Storms	DR 1628	December 2005 – January 2006	\$350,000 (includes Emergency Relief Funds from FHWA)
Wildfire (San Bruno Mountain)	-	Late Summer 2002	Not available
El Niño (Severe Storms)	DR 1203	February 2, 1998	not available
Loma Prieta Earthquake	845-DR-CA	October 17, 1989	not available
Severe Storms	651-DR-CA	January 1982	not available
Landslide	N/A	Winter 1980	not available - 12 homes damaged
Flood and Storms	not available	Fall 1962	not available

4.6.2 Hazard Risk Ranking

Table 4-12 presents a local ranking of all hazards of concern for which this hazard mitigation plan provides complete risk assessments. As described in detail in Volume 1, the ranking process involves an assessment of the likelihood of occurrence for each hazard, along with its potential impacts on people, property, and the economy. Mitigation actions target hazards with high and medium rankings.

Table 4-12. Hazard Risk Ranking (Social Equity Lens applied)

Rank	Hazard	Risk Ranking Score	Risk Category
1	Earthquake	42	High
2	Wildfire	0	High*
3	Flood	24	Medium
4	Severe weather	24	Medium
5	Sea Level Rise / Climate Change	9	Low
6	Drought	9	Low
7	Dam Failure	0	Low
8	Tsunami	0	Low
9	Landslide/Mass Movements	51	Low**

* Changed due to proximity to San Bruno Mountain WUI area

** No history of landslides

The following changes were made to Table 4-12 based on local knowledge:

- Earthquake was re-ranked from 2 to 1, as the older non-retrofitted homes in Central Brisbane are at risk during strong shaking events.
- Wildfire was re-ranked from 9 to 2, and changed to High, based on the city’s adjacency to the San Bruno Mountain Urban Wildland Interface.
- Landslide/Mass Movements was re-ranked from 1 to 9 and changed to Low. (Note the change to 9 was only meant to place it in Low category, without having to renumber the remaining low hazards.). This change is based on local knowledge that the areas subject to landslide have only a small number of buildings existing on them; any new buildings would include geotechnical engineering designs to avoid landslides once developed.
- Flood was assumed to include the expected impact to the land area known a Sierra Point based on rising tides and subsequent access concerns for this area.

4.6.3 Jurisdiction-Specific Vulnerabilities

Volume 1 of this hazard mitigation plan provides complete risk assessments for each identified hazard of concern. This section provides information on a few key vulnerabilities for this jurisdiction. Available jurisdiction-specific risk maps of the hazards are provided at the end of this annex.

Repetitive Loss Properties

Repetitive loss records are as follows:

- Number of FEMA-identified Repetitive-Loss Properties: 0
- Number of FEMA-identified Severe-Repetitive-Loss Properties: 0
- Number of Repetitive-Loss Properties or Severe-Repetitive-Loss Properties that have been mitigated: 0

Other Noted Vulnerabilities

The following jurisdiction-specific issues have been identified based on a review of the results of the risk assessment, public involvement strategy, and other available resources:

Due to the city limits being contiguous with the State & County Park of San Bruno Mountain, most of our southern and western city limit is a wildland urban interface potential fire area. The adjacent State parkland has been designated a State Responsibility Area, where the State of California is financially responsible for the prevention and suppression of wildfires. Fires have periodically occurred in this area since recorded time prior to the city’s incorporation in 1961, with the most recent major event occurring in 2006. Although these events have fortunately not expanded to require a state proclamation or federal declaration of disaster, the potential impact of fires originating in the wildland and impacting the urban area of Brisbane is an ongoing focus of concern.

The city’s mountainous topography and older roadway network has created at least one location that is exceptionally difficult to access by emergency equipment (specifically, fire engines & ladder trucks are unable to utilize this roadway). This roadway also adjoins an area that experienced a significant mudslide in 1980. A reconfiguration of Glen Park Way at its intersection with Humboldt Road is necessary to ensure ingress for emergency responders and egress for evacuees, particularly in the event of an urban wildland interface fire.

The scientific community is in a majority consensus that sea-level rise (SLR) is an upcoming vulnerability that will have to be addressed. The largest question as we prepare for SLR is to determine the timeframe and a most probable upper boundary of SLR that needs to be accommodated. Brisbane is participating in a San Mateo County led effort, “Sea Change San Mateo County”, which has produced preliminary model results indicating that portions of our land mass known as “Sierra Point” (housing an office park and the city’s 580-slip marina) could be overtopped under certain scenarios. One, and possibly two, pump stations are in potential SLR induced flooding zones.

City Hall needs a new/upgraded standby generator to accommodate the relocation of the city’s primary Emergency Operations Center to this location, especially in light of FEMA’s pending NIMS update that proposes to create “Center Management Systems” that are expected to be supported primarily by day-to-day staff working from their traditional assigned workspace (i.e., City Hall).

Mitigation actions addressing these issues were prioritized for consideration in the action plan for this annex.

4.7 STATUS OF PREVIOUS PLAN ACTIONS

Table 4-13 summarizes the actions that were recommended in the previous version of the hazard mitigation plan and their implementation status at the time this update was prepared.

Table 4-13. Status of Previous Plan Actions

Action Item	Completed	Removed; No longer Feasible	Carried Over to Plan Update	
			Check if Yes	Action # in Update
BB-1 —Where appropriate, support retrofitting structures against earthquake. Comment: This is an ongoing action item			✓	BRS-1
BB-2 —Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions within the community. Comment: Completed 2/7/19 by Reso 2019-05 including the LHMP to the Health and Safety Element of the city’s General Plan.	✓			N/A
BB-3 —Develop and implement a program to capture perishable data after significant events (e.g. high water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan. Additionally, develop a cost tracking system that will ensure maximum FEMA/CDAA reimbursement from recovery through response phases of disasters. Comment: No action completed on this item due to a lack of resources.			✓	BRS-3
BB-4 —Support the Countywide initiatives identified in Volume I of the hazard mitigation plan. Comment: This is an ongoing action item.			✓	BRS-4
BB-5 —Actively participate in the plan maintenance protocols outlined in Volume I of the hazard mitigation plan. Comment: This is an ongoing action item.			✓	BRS-5

Action Item	Completed	Removed; No longer Feasible	Carried Over to Plan Update	
			Check if Yes	Action # in Update
BB-6 —Continue to maintain good standing and compliance under the National Flood Insurance Program (NFIP). This will be accomplished through the implementation of floodplain management programs that will, at a minimum, meet the requirements of the NFIP: Enforcement of the flood damage prevention ordinance Participate in floodplain identification and mapping updates Provide public assistance/information on floodplain requirements and impacts. Comment: This is an ongoing action item.			✓	BRS-6
BB-7 —Continue to update local building codes with IBC and state building code revisions, and apply these standards to public and private renovation, replacement, and development. Comment: This is an ongoing action item.			✓	BRS-7
BB-8 —Continue to refine a post-disaster recovery plan and a debris management plan. Comment: Recovery plan is in a draft format. Debris management plan will be developed after completion of the current countywide effort.			✓	BRS-8
BB-9 —Critical Facility Upgrade. Provide new standby generator for Fire Station 81 and provide upgraded standby generator at City Hall to accommodate relocation of EOC to that facility. Comment: Station 81 genset project was completed 8/27/20 with partial funds from FEMA grant DR-4308-229. The city continues to pursue opportunities/options for upgrading city hall standby power.	✓		✓	BRS-9
BB-10 —Critical Fuel Supply. Provide local fuel supply (none presently exists in the community) capable of supporting 3-5 days of fuel needs for emergency responders and standby generators (including those at water & sewer pump stations). Comment: While this item remains in the list of candidate projects in the staff's biannual CIP proposals, it is yet to be funded.			✓	BRS-10
BB-11 —Emergency responder ingress/egress. Design and construct a new intersection at Glen Park Way/Humboldt Road that will allow emergency responders access from the southern portion of the community, which is adjacent to an urban wildland interface. Comment: Preliminary layout/design of the alternatives indicate there are challenges with impact to an existing protected canyon.			✓	BRS-11
BB-12 —Mutual Aid. Continue to participate in the San Mateo County Operational Area Emergency Services Organization, the San Mateo County Emergency Managers Association, and the San Mateo County Public Works Mutual Aid Agreement to leverage the city's ability to respond to emergencies. Comment: This is an ongoing action item.			✓	BRS-12
BB-13 —Disaster Response Staff Training. Continue to identify and provide training for response personnel. Comment: A significant amount of staff training was conducted late 2019, which served the city well during the response to COVID.			✓	BRS-13
BB-14 —Sea Level Rise Vulnerability Assessment. Continue participation in the San Mateo County led effort, "Sea Change San Mateo County", to develop an understanding of future vulnerability. Comment: This is an ongoing action item. Also note that San Mateo County has formed a Flood and Sea Level Rise Resiliency District (FSLRRD) as a direct result of this earlier, initial assessment.			✓	BRS-14
Action G-1 —Where appropriate, support retrofitting, purchase, or relocation of structures in hazard-prone areas to prevent future structure damage. Give priority to properties with exposure to repetitive losses. Comment: Reworded as there were no current record of properties with repetitive losses from natural hazards when this action item was first placed in the LHMP in 2016, and there have been no occurrences since that time..				BRS-1

4.8 HAZARD MITIGATION ACTION PLAN

Table 4-14 lists the identified actions, which make up the hazard mitigation action plan for this jurisdiction. Table 4-15 identifies the priority for each action. Table 4-16 summarizes the mitigation actions by hazard of concern and mitigation type.

Table 4-14. Hazard Mitigation Action Plan Matrix

Benefits New or Existing Assets	Objectives Met	Lead Agency	Support Agency	Estimated Cost	Sources of Funding	Timeline ^a
Action BRS-1 — Where appropriate, support retrofitting, purchase or relocation of structures located in hazard areas, prioritizing those that have experienced repetitive losses and/or are located in high- or medium-risk hazard areas. <u>Hazards Mitigated:</u> Earthquake, Wildfire, Flood, Severe Weather, Landslide, Climate Change, Drought, Tsunami						
Existing	2, 6, 7, 10, 13, 14	Planning & Community Development (PCD)	N/A	High	HMGP, BRIC, FMA	Ongoing
Action BRS-2 — Advance the long-term resilience of the development of the Brisbane Baylands to sea level rise and extreme storms, as well as provide environmental, recreation, and community/connectivity enhancements where possible. <u>Hazards Mitigated:</u> Climate Change, Flood, Severe Weather						
Existing & New	6, 7, 8, 10, 14	Public Works, PCD	SMC Flood & Sea Level Rise District	High	Private Developer, State Grants (Caltrans, Prop 68, SFBRA Measure AA), Federal Grants (FEMA BRIC/HMGP, HUD)	Long-term
Action BRS-3 — Develop and implement a program to capture perishable data after significant events (e.g. high water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan. Additionally, develop a cost tracking system that will ensure maximum FEMA/CDAA reimbursement from recovery through response phases of disasters. <u>Hazards Mitigated:</u> All Hazards						
New & Existing	1, 2, 4, 5	BRS Office of Emergency Services (OES)	N/A	Low	Staff Time, General Funds	Short-term
Action BRS-4 — Support the Countywide initiatives identified in Volume I of the hazard mitigation plan. <u>Hazards Mitigated:</u> Earthquake, Wildfire, Flood, Severe Weather, Landslide, Climate Change, Drought, Tsunami						
New & Existing	1-14	OES	PCD	Low	Staff Time, General Funds	Ongoing
Action BRS-5 — Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan. <u>Hazards Mitigated:</u> Earthquake, Wildfire, Flood, Severe Weather, Landslide, Climate Change, Drought, Tsunami						
New & Existing	1-14	OES	PCD	Low	Staff Time, General Funds	Short-term
Action BRS-6 — Continue to maintain good standing and compliance under the NFIP through implementation of floodplain management programs that, at a minimum, meet the NFIP requirements: <ul style="list-style-type: none"> Enforce the flood damage prevention ordinance. Participate in floodplain identification and mapping updates. Provide public assistance/information on floodplain requirements and impacts. <u>Hazards Mitigated:</u> Flood						
New & Existing	1, 2, 5, 8, 10, 13	Public Works	PCD	Low	Staff Time, General Funds	Ongoing

Benefits New or Existing Assets	Objectives Met	Lead Agency	Support Agency	Estimated Cost	Sources of Funding	Timeline ^a
Action BRS-7 — Continue to update local building codes with IBC and state building code revisions, and apply these standards to public and private renovation, replacement, and development.						
<u>Hazards Mitigated:</u>	Earthquake, Flood, Landslide, Severe Weather, Wildfire					
New	1, 2, 6	PCD	OES	Low	Staff Time, General Funds	Short-term
Action BRS-8 — Continue to refine a post-disaster recovery plan and a debris management plan.						
<u>Hazards Mitigated:</u>	All Hazards					
Existing	1, 2, 6	OES	N/A	Low	Staff Time, General Funds	Long-Term
Action BRS-9 — Critical Facility Upgrade. Provide upgraded standby generator at City Hall to accommodate relocation of EOC to that facility.						
<u>Hazards Mitigated:</u>	Earthquake, Flood, Landslide, Severe Weather, Wildfire					
Existing	1, 4, 6	OES	Public Works	Medium	HMA Grant, General Funds	Short-term
Action BRS-10 — Critical Fuel Supply. Provide local fuel supply (none presently exists in the community) capable of supporting 3-5 days of fuel needs for emergency responders and standby generators (including those at water & sewer pump stations).						
<u>Hazards Mitigated:</u>	Earthquake, Severe Weather, Wildfire					
Existing	1, 4, 6	Public Works	OES	Medium	HMA Grant, General Funds	Long-Term
Action BRS-11 — Emergency responder ingress/egress. Design and construct a new intersection at Glen Park Way/Humboldt Road that will allow emergency responders access from the southern portion of the community, which is adjacent to an urban wildland interface.						
<u>Hazards Mitigated:</u>	Earthquake, Landslide, Severe Weather, Wildfire					
Existing	1, 4, 5, 7	OES	Public Works	High	HMA Grant, General Funds	Long-Term
Action BRS-12 — Mutual Aid. Continue to participate in the San Mateo County Operational Area Emergency Services Organization, the San Mateo County Emergency Managers Association, and the San Mateo County Public Works Mutual Aid Agreement to leverage the city's ability to respond to emergencies.						
<u>Hazards Mitigated:</u>	Earthquake, Wildfire, Flood, Severe Weather, Landslide, Climate Change, Drought, Tsunami					
Existing	1, 2, 3, 4, 5, 6, 8, 9, 12	OES	Public Works	Low	Staff Time, General Funds	Ongoing
Action BRS-13 — Disaster Response Staff Training. Continue to identify and provide training for response personnel.						
<u>Hazards Mitigated:</u>	Earthquake, Wildfire, Flood, Severe Weather, Landslide, Climate Change, Drought, Tsunami					
Existing	1, 2, 3, 4, 5, 6, 7, 10, 12	OES	All city staff as participants	Low	Staff Time, General Funds	Ongoing
Action BRS-14 — Sea Level Rise Vulnerability Assessment. Continue participation in the San Mateo County led effort, "Sea Change San Mateo County", to develop an understanding of future vulnerability. This participation will also include city-specific efforts to identify and pursue strategies to increase adaptive capacity to climate change						
<u>Hazards Mitigated:</u>	Flood, Extreme Weather, Climate Change					
Existing & New	1, 2, 3, 4, 5, 6, 7, 10, 12	Public Works	PCD	Low	FSLRRD and city staff time	Long-term
Action BRS-15 — Identify, pursue, and support SMC Flood & Sea Level Rise Dist. strategies and infrastructure projects that enhance resiliency to natural disasters and incorporate green design elements into hazard mitigation projects, where feasible, including assets identified in the Caltrans District 4 Adaptation Priorities Report.						
<u>Hazards Mitigated:</u>	Flood, Severe Weather, Climate Change, Drought, Landslide, Tsunami					
Existing & New	1, 2, 4, 5, 6, 7, 8, 9, 13, 14	Public Works	SMC Flood & Sea Level Rise Dist.	Medium	Staff Time, General Funds	Ongoing

Benefits New or Existing Assets	Objectives Met	Lead Agency	Support Agency	Estimated Cost	Sources of Funding	Timeline ^a
Action BRS-16 — Consider the hazard mitigation plan in future updates to the City's General Plan Land Use, Circulation, and Housing Elements, and other plans, ordinances, and programs that dictate land use decisions in the community, where feasible.						
<u>Hazards Mitigated:</u> All Hazards						
New & Existing	1, 3, 4, 5, 6, 7, 8, 9, 10, 13, 14	PCD	N/A	Low	Staff Time, General Funds	Ongoing
Action BRS-17 — Incorporate consideration of the FEMA 100-year tide and sea level rise, and climate change-driven extreme storms, into land use planning and shoreline development. This includes new policies by local jurisdictions, and County and City actions regarding their General Plans, Climate-related Plans, and the development applications.						
<u>Hazards Mitigated:</u> Climate Change, Flood, Severe Weather						
New & Existing	1, 2, 5, 6, 7, 8, 9, 13, 14	PCD	SMC Flood & Sea Level Rise Dist.	Low	Staff Time, General Funds	Ongoing

a. Short-term = Completion within 5 years; Long-term = Completion within 10 years; Ongoing= Continuing new or existing program with no completion date

Acronyms used here are defined at the beginning of this volume.

Tsunami	BRS-16	BRS-1	BRS-4, 5, 12	BRS-15				BRS-3, 8, 13, 15, 16

*NOTE: Dam Failure not included in this matrix as there are no dams within or adjacent to the City of Brisbane.

a. See the introduction to this volume for explanation of mitigation types.

4.9 PUBLIC OUTREACH

Table 4-17 lists public outreach activities for this jurisdiction.

Table 4-17. Local Public Outreach

Local Outreach Activity	Date	Number of People Involved
The Survey Prepared for This Effort Was Distributed to The Following Social Media Platforms:		
Nextdoor	6/22/21	1,754
Instagram	6/22/21	1,359
Facebook	6/22/21	1,215
Twitter	6/22/21	1,824

4.10 INFORMATION SOURCES USED FOR THIS ANNEX

The following technical reports, plans, and regulatory mechanisms were reviewed to provide information for this annex.

- **City of Brisbane Municipal Code (BMC)**—The municipal code was reviewed for the full capability assessment and for identifying opportunities for action plan integration.
- **City of Brisbane BMC Chapter 15.56 Floodplain Management**—The flood damage prevention ordinance was reviewed for compliance with the National Flood Insurance Program.
- **City of Burlingame Emergency Operations Plan**
- **Please also refer to the documents listed in Table 4-3.**

The following outside resources and references were reviewed:

- **Hazard Mitigation Plan Annex Development Toolkit**—The toolkit was used to support the identification of past hazard events and noted vulnerabilities, the risk ranking, and the development of the mitigation action plan.

4.11 FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

- Ongoing and future studies by the San Mateo County Flood and Sea Level Rise Resiliency District, coupled with ongoing efforts by FEMA are necessary to fully understand the risk posed by sea level rise and climate change.

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix A. Planning Partner Expectations

A. PLANNING PARTNER EXPECTATIONS

The federal Disaster Mitigation Act (DMA) of 2000 (Public Law 106-390), commonly known as the 2000 Stafford Act amendments, was approved by Congress on October 10, 2000. This act required state and local governments to develop hazard mitigation plans as a condition for federal grant assistance. Among other things, this legislation reinforces the importance of pre-disaster infrastructure mitigation planning to reduce disaster losses nationwide. DMA 2000 is aimed primarily at the control and streamlining of the administration of federal disaster relief and programs to promote mitigation activities. Prior to 2000, federal legislation provided funding for disaster relief, recovery, and some hazard mitigation planning. The DMA improves upon the planning process by emphasizing the importance of communities planning for disasters before they occur.

The Disaster Mitigation Act defines a “local government” as:

Any county, municipality, city, town, public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a nonprofit corporation under State law), regional or interstate government entity, or agency or instrumentality of a local government; any Indian tribe or authorized tribal organization, or Alaska Native village or organization; and any rural community, unincorporated town or village, or other public entity

Any local government wishing to pursue funding afforded under FEMA Hazard Mitigation Grant Programs must have an approved hazard mitigation plan in order to be eligible to apply for these funds.

One of the goals of the multi-jurisdictional approach to hazard mitigation planning is to achieve compliance with the Disaster Mitigation Act (DMA) for all participating members in the planning effort. DMA compliance must be certified for each member in order to maintain eligibility for the benefits under the DMA. Whether our planning process generates ten individual plans or one large plan that has a chapter for each partner jurisdiction, the following items must be addressed by each planning partner to achieve DMA compliance:

- Participate in the process. It must be documented in the plan that each planning partner “participated” in the process that generated the plan. There is flexibility in defining “participation.” Participation can vary based on the type of planning partner (i.e.: City vs. a Special Purpose District). However, the level of participation must be defined and the extent for which this level of participation has been met for each partner must be contained in the plan context.
- Consistency Review. Review of existing documents pertinent to each jurisdiction to identify policies or recommendations that are not consistent with those documents reviewed in producing the “parent” plan or have policies and recommendations that complement the hazard mitigation initiatives selected (i.e.: comp plans, basin plans or hazard specific plans).
- Action Review. For plan updates, a review of the strategies from your prior action plan to determine those that have been accomplished and how they were accomplished; and why those that have not been accomplished were not completed.

- Update Localized Risk Assessment. Personalize the Risk Assessment for each jurisdiction by removing hazards not associated with the defined jurisdictional area or redefining vulnerability based on a hazard's impact to a jurisdiction. This phase will include:
 - A ranking of the risk
 - A description of the number and type of structures at risk
 - An estimate of the potential dollar losses to vulnerable structures
 - A general description of land uses and development trends within the community, so that mitigation options can be considered in future land use decisions.
- Capability assessment. Each planning partner must identify and review their individual regulatory, technical, and financial capabilities with regards to the implementation of hazard mitigation actions.
- Personalize mitigation recommendations. Identify and prioritize mitigation recommendations specific to each jurisdiction's defined area.
- Create an Action Plan.
- Incorporate Public Participation. Each jurisdiction must present the Plan to the public for comment at least once, within two weeks prior to adoption.
- Plan must be adopted by each jurisdiction.

One of the benefits to multi-jurisdictional planning is the ability to pool resources. This means more than monetary resources. Resources such as staff time, meeting locations, media resources, technical expertise will all need to be utilized to generate a successful plan. In addition, these resources can be pooled such that decisions can be made by a peer group applying to the whole and thus reducing the individual level of effort of each planning partner. This will be accomplished by the formation of a steering committee made up of planning partners and other "stakeholders" within the planning area. The size and makeup of this steering committee will be determined by the planning partnership. This body will assume the decision-making responsibilities on behalf of the entire partnership. This will streamline the planning process by reducing the number of meetings that will need to be attended by each planning partner. The assembled Steering Committee for this effort will meet monthly on an as needed basis as determined by the planning team, and will provide guidance and decision making during all phases of the plan's development.

With the above participation requirements in mind, each partner is expected to aid this process by being prepared to develop its section of the plan. To be an eligible planning partner in this effort, each planning partner shall provide the following:

- A. A "Letter of Commitment" or resolution to participate to the Planning Team (see Exhibit A).
- B. Designate a lead point of contact for this effort. This designee will be listed as the hazard mitigation point of contact for your jurisdiction in the plan.
- C. Support and participate in the selection and function of the Steering Committee selected to oversee the development of this plan.
- D. Provide support in the form of mailing list, possible meeting space, and public information materials, such as newsletters, newspapers, or direct mailed brochures, required to implement the public involvement strategy developed by the Steering Committee.
- E. Participate in the process. There will be many opportunities as this plan evolves to participate. Opportunities such as:
 - i) Steering Committee meetings

- ii) Public meetings or open houses
- iii) Workshops/ planning partner specific training sessions
- iv) Public review and comment periods prior to adoption

At each and every one of these opportunities, attendance will be recorded. Attendance records will be used to document participation for each planning partner. No thresholds will be established as minimum levels of participation. However, each planning partner should attempt to attend all possible meetings and events.

- F. There will be one mandatory workshop that all planning partners will be required to attend. This workshop will cover the proper completion of the jurisdictional annex template which is the basis for each partner's jurisdictional chapter in the plan. Failure to have a representative at this workshop will disqualify the planning partner from participation in this effort. The schedule for this workshop will be such that all committed planning partners will be able to attend.
- G. After participation in the mandatory template workshop, each partner will be required to complete their template and provide it to the planning team in the time frame established by the Steering Committee. Failure to complete your template in the required time frame may lead to disqualification from the partnership.
- H. Each partner will be expected to perform a "consistency review" of all technical studies, plans, ordinances specific to hazards to determine the existence of any not consistent with the same such documents reviewed in the preparation of the parent plan.
- I. Each partner will be expected to review the Risk Assessment and identify hazards and vulnerabilities specific to its jurisdiction. Contract resources will provide the jurisdiction specific mapping and technical consultation to aid in this task, but the determination of risk and vulnerability will be up to each partner.
- J. Each partner will be expected to review and determine if the mitigation recommendations chosen in the parent plan will meet the needs of its jurisdiction. Projects within each jurisdiction consistent with the parent plan recommendations will need to be identified and prioritized, and reviewed to determine their benefits vs. costs.
- K. Each partner will be required to create its own action plan that identifies each project, who will oversee the task, how it will be financed and when it is estimated to occur.
- L. Each partner will be required to formally adopt the plan.

Templates and instructions to aid in the compilation of this information will be provided to all committed planning partners. Each partner will be expected to complete their templates in a timely manner and according to the timeline specified by the Steering Committee.

NOTE: Once this plan is completed, and DMA compliance has been determined for each partner, maintaining that eligibility will be dependent upon each partner implementing the plan implementation-maintenance protocol identified in the plan. At a minimum, this means completing the ongoing plan maintenance protocol identified in the plan. Partners that do not participate in this plan maintenance strategy may be deemed ineligible by the partnership, and thus lose their DMA eligibility.

Eligible entities that do not wish to participate in the multi-jurisdictional planning process or fail to meet the requirements contained in this document may choose to link to the plan in pursuit of future adoption after the completion of the current effort.

Exhibit A

Example Letter of Commitment

Dan Belville, Director
 San Mateo County Office of Emergency Services
 501 Winslow St.
 Redwood City, CA 94063

Re: Letter of Commitment as a Participating Jurisdiction in the San Mateo County Multijurisdictional Hazard Mitigation Plan Update Plan 2021

Dear Office of Emergency Services,

As the Federal Emergency Management Agency's (FEMA) local hazard mitigation plan requirements under 44 CFR §201.6 identify criteria for multi-jurisdictional mitigation plans including the participation and collaboration of regional planning and mitigation partners, this letter of commitment is submitted to confirm the participation of <insert agency name> as a Planning Partner in the *San Mateo County Multijurisdictional Hazard Mitigation Plan Update Plan 2021*.

As a condition of participation, <insert agency name> agrees to meet the requirements for mitigation plans identified in 44 CFR §201.6, and to provide timely cooperation and participation to produce a FEMA-approved hazard mitigation plan with the County of San Mateo.

<insert agency name> understands that it must engage in the following planning processes, as detailed in FEMA's *Local Multi-Hazard Mitigation Planning Guidance* dated March 1, 2013. Planning processes include, but are not limited to the following:

- Review of existing 2016 San Mateo County Multijurisdictional Hazard Mitigation Plan
- Identification of local hazards, risk assessment, and vulnerability analysis
- Participation in the formulation of mitigation goals and actions
- Participation in community engagement and public outreach in the development of the plan
- Timely response to requests for information by the coordinating agency and consultants, and adherence to established deadlines
- Formal adoption of the hazard mitigation plan by the planning partner jurisdiction's governing body
- Tracking and monthly submission of personnel hours spent on the hazard mitigation planning effort

Sincerely,

Name _____

a. Retired towards the end of the planning process

Exhibit C. Overview of Hazus

Overview of Hazus (Multi-Hazard)

Hazus, is a nationally applicable standardized methodology and software program that contains models for estimating potential losses from earthquakes, floods, tsunamis, and hurricane winds. Hazus was developed by the Federal Emergency Management Agency (FEMA) under contract with the National Institute of Building Sciences (NIBS). NIBS maintains committees of wind, flood, earthquake and software experts to provide technical oversight and guidance to Hazus development. Loss estimates produced by Hazus are based on current scientific and engineering knowledge of the effects of hurricane winds, floods, and earthquakes.

Estimating losses is essential to decision-making at all levels of government, providing a basis for developing mitigation plans and policies, emergency preparedness, and response and recovery planning.

Hazus uses state-of-the-art geographic information system (GIS) software to map and display hazard data and the results of damage and economic loss estimates for buildings and infrastructure. It also allows users to estimate the impacts of hurricane winds, floods, tsunamis, and earthquakes on populations. The latest release, Hazus 4.0, is an updated version of Hazus that incorporates many new features which improve both the speed and functionality of the models. For information on software and hardware requirements to run Hazus 4.0, see Hazus Hardware and

Software Requirements.

Hazus Analysis Levels

Hazus provides for three levels of analysis:

- A Level 1 analysis yields a rough estimate based on the nationwide database and is a great way to begin the risk assessment process and prioritize high-risk communities.

- A Level 2 analysis requires the input of additional or refined data and hazard maps that will produce more accurate risk and loss estimates. Assistance from local emergency management personnel, city planners, GIS professionals, and others may be necessary for this level of analysis.
- A Level 3 analysis yields the most accurate estimate of loss and typically requires the involvement of technical experts such as structural and geotechnical engineers who can modify loss parameters based on the specific conditions of a community. This level analysis will allow users to supply their own techniques to study special conditions such as dam breaks and tsunamis. Engineering and other expertise is needed at this level.

Three data input tools have been developed to support data collection. The Comprehensive Data Management System helps users collect and manage local building data for more refined analyses than are possible with the national level data sets that come with Hazus. The system has expanded capabilities for multi-hazard data collection. Hazus includes an enhanced Building Inventory Tool allows users to import building data and is most useful when handling large datasets, such as tax assessor records. The Flood Information Tool helps users manipulate flood data into the format required by the Hazus flood model. All Three tools are included in the Hazus MR1 Application DVD.

Hazus Models

The Hazus Hurricane Wind Model gives users in the Atlantic and Gulf Coast regions and Hawaii the ability to estimate potential damage and loss to residential, commercial, and industrial buildings. It also allows users to estimate direct economic loss, post-storm shelter needs and building debris. In the future, the model will include the capability to estimate wind effects in island territories, storm surge, indirect economic losses, casualties, and impacts to utility and transportation lifelines and agriculture. Loss models for other severe wind hazards will be included in the future. Details about the Hurricane Wind Model.

The Hazus Flood Model is capable of assessing riverine and coastal flooding. It estimates potential damage to all classes of buildings, essential facilities, transportation and utility lifelines, vehicles, and agricultural crops. The model addresses building debris generation and shelter requirements. Direct losses are estimated based on physical damage to structures, contents, and building interiors. The effects of flood warning are taken into account, as are flow velocity effects. Details about the Flood Model.

The Hazus Earthquake Model, The Hazus earthquake model provides loss estimates of damage and loss to buildings, essential facilities, transportation and utility lifelines, and population based on scenario or probabilistic earthquakes. The model addresses debris generation, fire-following, casualties, and shelter requirements. Direct losses are estimated based on physical damage to structures, contents, inventory, and building interiors. The earthquake model also includes the Advanced Engineering Building Module for single- and group-building mitigation analysis. Details about the Earthquake Model.

The Hazus Tsunami Model represents the first new disaster module for the Hazus software in almost 15 years and is the culmination of work completed on the Hazus Tsunami Methodology Development (FEMA, 2013) by a team of tsunami experts, engineers, modelers, emergency planners, economists, social scientists, geographic information system (GIS) analysts, and software developers. A Tsunami Oversight Committee provided technical direction and review of the methodology development. New features with the model include:

- **Territory Analysis:** This release represents the first time that analysis will be available for U.S. territories (Guam, American Samoa, Commonwealth of Northern Mariana Islands and U.S. Virgin Islands).
- **New Point Format:** The Hazus General Building Stock for the Tsunami release will use a new National Structure Inventory point format (details in User Release Notes available with download).
- **Case Studies:** The Tsunami Module will require user-provided data, so the Hazus Team has provided five case study datasets for users, which will be available on the MSC download site.
- **Two Types of Damage Analysis:** Users will be able to run both near-source (Earthquake + Tsunami) and distant-source (Tsunami only) damage analysis.

Additionally, Hazus can perform multi-hazard analysis by providing access to the average annualized loss and probabilistic results from the hurricane wind, flood, and earthquake models and combining them to provide integrated multi-hazard reports and graphs. Hazus also contains a third-party model integration capability that provides access and operational capability to a wide range of natural, man-made, and technological hazard models (nuclear and conventional blast, radiological, chemical, and biological) that will supplement the natural hazard loss estimation capability (hurricane wind, flood, tsunami and earthquake) in Hazus.

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix B. Procedures for Linking to Hazard Mitigation Plan

B. PROCEDURES FOR LINKING TO HAZARD MITIGATION PLAN

Not all eligible local governments are included in the 2021 Multijurisdictional Local Hazard Mitigation Plan. Some or all of these non-participating local governments may choose to “link” to the Plan at some point to gain eligibility for programs under the federal Disaster Mitigation Act (DMA). The following “linkage” procedures define the requirements established by the planning team for dealing with an increase in the number of planning partners linked to this plan. No currently non-participating jurisdiction within the defined planning area is obligated to link to this plan. These jurisdictions can choose to do their own “complete” plan that addresses all required elements of Section 201.6 or Section 201.7 of Chapter 44 of the Code of Federal Regulations (44 CFR).

INCREASING THE PARTNERSHIP THROUGH LINKAGE

Eligibility

Eligible jurisdictions located in the planning area may link to this plan at any point during the plan’s performance period (5 years after final approval). Eligibility will be determined by the following factors:

- The linking jurisdiction is a local or tribal government as defined by the Disaster Mitigation Act.
- The boundaries or service area of the linking jurisdiction is completely contained within the boundaries of the planning area established during the 2020-2021 hazard mitigation planning process.
- The linking jurisdiction’s critical facilities were included in the critical facility and infrastructure risk assessment completed during the 2020 – 2021 plan development process..

Requirements

It is expected that linking jurisdictions will complete the requirements outlined below and submit their completed template to the lead agency San Mateo County Department of Emergency Management for review within six months of beginning the linkage process:

- The eligible jurisdiction requests a “Linkage Package” by contacting the Point of Contact (POC) for the plan:
 Dan Belville
 San Mateo County Department of Emergency Management
 501 Winslow St.
 Redwood City, CA 94063
- The POC will provide a linkage procedure package that includes linkage information and a linkage tool-kit:

- Linkage Information
 - Procedures for linking to the multi-jurisdictional hazard mitigation plan
 - Planning partner's expectations for linking jurisdictions
 - A sample "letter of intent" to link to the multi-jurisdictional hazard mitigation plan
 - A copy of Section 201.6 and Section 201.7 of 44 CFR, which defines the federal requirements for a local and tribal hazard mitigation plans.
- Linkage Tool-Kit
 - Copy of Volume 1 and 2 of the plan
 - A special purpose district or tribe template and instructions
 - A catalog of hazard mitigation alternatives
 - A sample resolution for plan adoption
- The new jurisdiction will be required to review both volumes of the 2021 Multijurisdictional Local Hazard Mitigation Plan, which include the following key components for the planning area:
 - Goals and objectives
 - The planning area risk assessment
 - Comprehensive review of alternatives
 - Countywide actions
 - Plan implementation and maintenance procedures.

Once this review is complete, the jurisdiction will complete its specific annex using the template and instructions provided by the POC.

- The development of the new jurisdiction's annex must not be completed by one individual in isolation. The jurisdiction must develop, implement and describe a public involvement strategy and a methodology to identify and vet jurisdiction-specific actions. The original partnership was covered under a uniform public involvement strategy and a process to identify actions that covered the planning area described in Volume 1 and Volume 2 of this plan. Since new partners were not addressed by these strategies, they will have to initiate new strategies and describe them in their annex. For consistency, new partners are encouraged to develop and implement strategies similar to those described in this plan.
- The public involvement strategy must ensure the public's ability to participate in the plan development process. At a minimum, the new jurisdiction must solicit public opinion on hazard mitigation at the onset of the linkage process and hold one or more public meetings to present the draft jurisdiction-specific annex for comment at least two weeks prior to adoption by the governing body. The POC will have resources available to aid in the public involvement strategy, including:
 - The questionnaire utilized in the plan development
 - Presentations from public meeting workshops and the public comment period
 - Press releases used throughout the planning process
 - The plan website.
- The methodology to identify actions should include a comprehensive range of specific mitigation actions and projects being considered to reduce the effects of each hazard and a description of the process by which chosen actions were identified. As part of this process, linking jurisdictions should coordinate the selection of actions amongst the jurisdiction's various departments.
- Once their public involvement strategy and template are completed, the new jurisdiction will submit the completed package to the POC for a pre-adoption review to ensure conformance with the multi-jurisdictional plan format and linkage procedure requirements.
- The POC will review for the following:

- Documentation of public involvement and action plan development strategies
 - Conformance of template entries with guidelines outlined in instructions
 - Chosen actions are consistent with goals, objectives, and mitigation catalog of the 2021 Multijurisdictional Local Hazard Mitigation Plan
 - A designated point of contact
 - A completed FEMA plan review crosswalk.
- Plans will be reviewed by the POC and submitted to California Governor’s Office of Emergency Services (Cal OES) for review and approval.
 - Cal OES will review plans for state compliance. Non-compliant plans are returned to the lead agency for correction. Compliant plans are forwarded to FEMA for review with annotation as to the adoption status.
 - FEMA reviews the linking jurisdiction’s plan in association with the approved plan to ensure DMA compliance. FEMA notifies the new jurisdiction of the results of review with copies to Cal OES and the approved plan lead agency.
 - Linking jurisdiction corrects plan shortfalls (if necessary) and resubmits to Cal OES through the approved plan lead agency.
 - For plans with no shortfalls from the FEMA review that have not been adopted, the new jurisdiction governing authority adopts the plan and forwards adoption resolution to FEMA with copies to lead agency and Cal OES.
 - FEMA regional director notifies the new jurisdiction’s governing authority of the plan’s approval.

The new jurisdiction plan is then included with the multi-jurisdiction hazard mitigation plan and the linking jurisdiction is committed to participate in the ongoing plan maintenance strategy identified in Chapter 21, Volume 1 of the hazard mitigation plan.

DECREASING THE PARTNERSHIP

The eligibility afforded under this process to the planning partnership can be rescinded in two ways. First, a participating planning partner can ask to be removed from the partnership. This may be done because the partner has decided to develop its own plan or has identified a different planning process for which it can gain eligibility. A partner that wishes to voluntarily leave the partnership shall inform the POC of this desire in writing. This notification can occur any time during the calendar year. A jurisdiction wishing to pursue this avenue is advised to make sure that it is eligible under the new planning effort, to avoid any period of being out of compliance with the Disaster Mitigation Act.

After receiving this notification, the POC shall immediately notify both Cal OES and FEMA in writing that the partner in question is no longer covered by the 2021 Multijurisdictional Local Hazard Mitigation Plan, and that the eligibility afforded that partner under this plan should be rescinded based on this notification.

The second way a partner can be removed from the partnership is by failure to meet the participation requirements specified in the “Planning Partner Expectations” package provided to each partner at the beginning of the process, or the plan maintenance and implementation procedures specified in Volume 1 of the plan. Each partner agreed to these terms by adopting the plan.

Eligibility status of the planning partnership will be monitored by the POC. The determination of whether a partner is meeting its participation requirements will be based on the following parameters:

- Are partners notifying the POC of changes in designated points of contact?
- Are the partners supporting the Steering Committee by attending designated meetings or responding to needs identified by the body?
- Are the partners continuing to be supportive as specified in the planning partners expectations package provided to them at the beginning of the process?

Participation in the plan does not end with plan approval. This partnership was formed on the premise that a group of planning partners would pool resources and work together to strive to reduce risk within the planning area. Failure to support this premise lessens the effectiveness of this effort. The following procedures will be followed to remove a partner due to the lack of participation:

- The POC will advise the Steering Committee of this pending action and provide evidence or justification for the action. Justification may include: failure to attend meetings determined to be mandatory by the Steering Committee, failure to act on the partner's action plan, or inability to reach designated point of contact after a minimum of five attempts.
- The Steering Committee will review information provided by POC, and determine action by a vote. The Steering Committee will invoke the voting process established in the ground rules established during the formation of this body.
- Once the Steering Committee has approved an action, the POC will notify the planning partner of the pending action in writing via certified mail. This notification will outline the grounds for the action, and ask the partner if it is their desire to remain as a partner. This notification shall also clearly identify the ramifications of removal from the partnership. The partner will be given 30 days to respond to the notification.
- Confirmation by the partner that they no longer wish to participate or failure to respond to the notification shall trigger the procedures for voluntary removal discussed above.
- Should the partner respond that they would like to continue participation in the partnership, they must clearly articulate an action plan to address the deficiencies identified by the POC. This action plan shall be reviewed by the Steering Committee to determine whether the actions are appropriate to rescind the action. Those partners that satisfy the Steering Committee's review will remain in the partnership, and no further action is required.
- Automatic removal from the partnership will be implemented for partners where these actions have to be initiated more than once in a 5-year planning cycle.

2021 Multijurisdictional Local Hazard Mitigation Plan

Appendix C. Annex Instructions and Templates

INSTRUCTIONS FOR COMPLETING CITY/COUNTY ANNEX TEMPLATE

Jurisdictional annex templates for the 2021 *San Mateo Multijurisdictional Local Hazard Mitigation Plan* update will be completed in three phases. **This document provides instructions for completing all phases of the template for cities and counties.**

The target timeline for completion is as follows:

- **Phase 1**—Team, Profile, Trends, and Previous Plan Status
 - **Deployed:** February 19, 2021
 - **Due:** March 19, 2021 by close of business
- **Phase 2**—Capability Assessment, Integration Review, and Information Sources
 - **Deployed:** April 2, 2021
 - **Due:** May 21, 2021 by close of business, Pacific Time
- **Phase 3**—Risk Assessment, Action Plan, Information Sources, Future Needs, and Additional Comments
 - **Deployed:** June 11, 2021
 - **Mandatory Phase 3 Workshops:** Targeted for the week of June 14. We will schedule multiple workshops during that week to provide options for attendance
 - **Due:** July 23, 2021 by close of business, Pacific Time

Direct any questions about your Phase 3 template to:

Bart Spencer
 Tetra Tech
 Phone: (650) 324-1810
 E-mail: bart.spencer@tetrattech.com

Submit your completed Phase 3 template in electronic format to:

Megan Brotherton
 Tetra Tech
 Phone: (808) 339-9119
 E-mail: megan.brotherton@tetrattech.com

A Note About Formatting

The template for the annex is a Microsoft Word document in a format that will be used in the final plan. Partners are asked to use this template so that a uniform product will be completed for each partner.

Content should be entered directly into the template rather than creating text in another document and pasting it into the template. Text from another source may alter the formatting of the document.

DO NOT convert this document to a PDF.

The section and table numbering in the document will be updated when completed annexes are combined into the final document. Please do not adjust any of the numbering.

For planning partners who participated in the 2016 planning effort, relevant information has been brought over to the 2021 template. Fields that require attention have been highlighted using the following color coding:

- **Green:** Text has been brought over from 2016 Plan and should be reviewed and updated as needed.
- **Blue:** This is a new field that will require information that was not included in 2016.

Un-highlight each field that you update so that reviewers will know an edit has been made.

New planning partners will need to complete the template in its entirety.

IMPORTANT! READ THIS FIRST

Phase 1 and Phase 2 templates were previously provided to your jurisdiction for completion.

If your jurisdiction returned the completed Phase 1 & 2 templates:

- The Phase 1 & 2 content you provided is already incorporated into your Phase 3 template.
- Review the template to see if we have inserted any comments requesting further work to be done on Phase 1 or 2
 - ***If any comments are included, address them.*** Then, begin your work on Phase 3 following the Phase 3 instructions beginning on page 12.
 - If no comments are included, then you **DO NOT** need to do any further work on the Phase 1 or Phase 2 content. ***Go directly to the instructions for Phase 3, beginning on page 12.***

If your jurisdiction has **NOT** yet done any work on the Phase 1 or Phase 2 template:

- Follow the instructions beginning on page 3 for providing the Phase 1 and Phase 2 information.
- Then proceed with the Phase 3 instructions beginning on page 12.

If your jurisdiction started work on the Phase 1 or 2 template but never completed and submitted it, copy the work you had completed so far into the new template. Then complete Phases 1, 2, and 3 following the instructions provided here.

PHASE 1 INSTRUCTIONS

CHAPTER TITLE

In the chapter title at the top of Page 1, type in the complete official name of your municipality (e.g., City of Pleasantville, West County). Do not change the chapter number. Revise only the jurisdiction name. If your jurisdiction's name has already been entered, verify that wording and spelling are correct; revise as needed.

LOCAL HAZARD MITIGATION PLANNING TEAM

Points of Contact

Provide the name, title, mailing address, telephone number, and e-mail address for the primary point of contact for your jurisdiction. This should be the person responsible for monitoring, evaluating and updating the annex for your jurisdiction. This person should also be the principle liaison between your jurisdiction and the Steering Committee overseeing development of this plan.

In addition, designate an alternate point of contact. This would be a person to contact should the primary point of contact be unavailable or no longer employed by the jurisdiction.

Note: Both of these contacts should match the contacts that were designated in your jurisdiction's letter of intent to participate in this planning process. If you have changed the primary or secondary contact, let the planning team know by inserting a comment into the document.

Who Should Be on the Local Mitigation Planning Team

The Local Hazard Mitigation Planning Team is responsible for developing your jurisdiction's annex to the hazard mitigation plan. Team membership should represent agencies with authority to regulate development and enforce local ordinances or regulatory standards, such as building/fire code enforcement, emergency management, emergency services, floodplain management, parks and recreation, planning/ community development, public information, public works/ engineering, stormwater management, transportation, or infrastructure.

Participating Planning Team

Populate Table 1-1 with the names of staff from your jurisdiction who participated in preparing this annex or otherwise contributed to the planning process for this hazard mitigation plan.

JURISDICTION PROFILE

Provide information specific to your jurisdiction as indicated, in a style similar to the examples provided below. This should be information that will not be provided in the overall mitigation plan document.

Location and Features

Describe the community's location, size and prominent features, in a statement similar to the example below:

EXAMPLE: The City of Jones is in the northwest portion of Smith County, along the Pacific Coast in northern California. It is almost 150 miles northeast of San Francisco. The city's total area is 4.2 square miles, with boundaries generally extending north-south from State Highway 111 to the

Johnson River and east-west from Coast Road to East Frank Avenue. The City of Allen is to the north, unincorporated county is to the west, the City of Bethany is to the south, and the Pacific Ocean is to the west.

Jones is home to the University of Arbor, Bickerson Manufacturing, and the western portion of Soosoo National Park. Significant geographic features include the Watery River, which flows southwest across the city, Lake Splash in the city's northwest corner, and the foothills of the Craggy Mountains on the east side.

History

Describe the community's history, focusing on economy and development, and note its year of incorporation, in a statement similar to the example below:

EXAMPLE: The City of Jones was incorporated in 1858. The area was settled during the gold rush in the 1850s as a supply center for miners. As the gold rush died down, timber and fishing became the area's major economic resources. By 1913, the Jones Teachers College, a predecessor to today's University of Arbor, was founded. Recently, the presence of the college has come to shape Jones' population into a young and educated demographic. In 1981 the City developed the Jones Marsh and Wildlife Sanctuary, an environmentally friendly sewage treatment enhancement system.

With numerous annexations since its original incorporation, the city's area has almost doubled. Today it features a commercial core in the center of the city, with mostly residential areas to the north and south, the university to the west and the national park on the east.

Governing Body Format

Describe the community's key governance elements and staffing, in a statement similar to the example below:

EXAMPLE: The City of Jones is governed by a five-member city council. The City consists of six departments: Finance, Environmental Services, Community Development, Public Works, Police, and the City Manager's Office. The City has 13 commissions and task forces, which report to the City Council. The City currently employs a total of 155 employees (full-time equivalent).

The City Council assumes responsibility for the adoption of this plan; the City Manager will oversee its implementation.

CURRENT TRENDS

Population

Provide the most current population estimate for your jurisdiction based on an official means of tracking (e.g., the U.S. Census or state agency that develops population estimates). Describe the current estimate and recent population trends in a statement similar to the example below.

EXAMPLE: According to California Department of Finance, the population of Jones as of July 2020 was 17,280. Since 2010, the population has grown at an average annual rate of 1.2 percent, though that rate is declining, with an annual average of only 0.8 percent since 2016.

Development

In the highlighted text that says “Describe trends in general,” provide a brief description of your jurisdiction’s recent development trends in a statement similar to the example below:

EXAMPLE: Anticipated future development for Jones is low to moderate, consisting primarily of residential growth. Recent development has been mostly infill. There has been a focus on affordable housing and a push for more secondary mother-in-law units. Future growth in the City will be managed as identified in the City’s 2018 general plan. City actions, such as those relating to land use, annexations, zoning, subdivision and design review, redevelopment, and capital improvements, must be consistent with the plan.

Complete the table titled “Recent and Expected Future Development Trends.” Note:

- The portion of the table requesting the number of permits by year is specifically looking for development permits for **new** construction. If your jurisdiction does not have the ability to differentiate between permit types, list the total number of permits and indicate “N/A” (not applicable) for the permit sub-types.
- If your jurisdiction does not have the ability to track permits by hazard area, delete the bullet list of hazard areas and insert a qualitative description of where development has occurred.

STATUS OF PREVIOUS PLAN ACTIONS

Note that this section only applies to jurisdictions that are conducting updates to previously approved hazard mitigation plans. If your jurisdiction has not previously participated in an approved plan, enter an “X” in the box at the beginning of this section and do not complete the section. We will remove this section from your final annex.

Also note that this section is further back in the annex than the rest of the Phase 1 content. Some Phase 2 sections are included before it.

All action items identified in prior mitigation plans must be reconciled in this update. Action items must all be marked as **ONE** of the following; check the appropriate box (place an X) and provide information as follows:

- **Completed**—If an action has been completed since the prior plan was prepared, check the “Completed” box and **provide a date of completion in the comment section**. If an action has been initiated and is an ongoing program (e.g. annual outreach event), you may mark it as completed and **note that it is ongoing in the comments**. If an action addresses an ongoing program you would like to continue to include in your action plan, see the “Carried Over to Plan Update” bullet below.
- **Removed**—If action items are to be removed because they are no longer feasible, a reason must be given. Lack of funding does not mean that it is no longer feasible, unless the sole source of funding for an action is no longer available. **Place a comment in the comment section explaining why the action is no longer feasible or barriers that prevented the action from being implemented (e.g., “Action no longer considered feasible due to lack of political support.”)**. If the wording and/or intent of a previously identified action is unclear, this can be a reason for removal. A change in community priorities may also be a reason for removal and should be discussed in the comments.
- **Carried Over to Plan Update**—If an action is in progress, is ongoing, or has not been initiated and you would like to carry it over to the plan update, check the “Check if Yes” column under “Carried Over to Plan Update.” Selecting this option indicates that the action will be included in the mitigation action

plan for this update. If you are carrying over an action to the update, **include a comment describing any action that has been taken or why the action was not taken** (specifically, any barriers or obstacles that prevented the action from moving forward or slowed progress). Leave the last column, “Action # in Update,” blank at this point. This will be filled in after completing the updated action plan in Phase 3.

Ensure that you have provided **a status and a comment for each action.**

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, all action items from your jurisdiction’s previous hazard mitigation plan that are marked as “Carried Over to Plan Update” will need to be included in the action plan.

THIS COMPLETES PHASE 1

PHASE 2 INSTRUCTIONS

CAPABILITY ASSESSMENT

Note that it is unlikely that one person will be able to complete all sections of the capability assessment alone. The primary preparer will likely need to reach out to other departments within the local government for information. It may be beneficial to provide these individuals with background information about this planning process, as input from them will be needed again during Phase 3 of the annex development.

Planning and Regulatory Capability

In the table titled “Planning and Regulatory Capability,” indicate “Yes” or “No” for each listed code, ordinance, requirement or planning document in each of the following columns:

- **Local Authority**—Enter “Yes” if your jurisdiction has prepared or adopted the identified item; otherwise, enter “No.” If yes, then enter the code, ordinance number, or plan name and its date of adoption in the comments column. ***Note: If you enter yes, be sure to provide a comment with the appropriate code, ordinance or plan and date of adoption.***
- **Other Jurisdiction Authority**—Enter “Yes” if another agency (e.g., a state agency or special purpose district) enforces or administers the identified item in a way that may impact your jurisdiction or if any state or federal regulations or laws would prohibit local implementation of the identified item; otherwise, enter “No.” ***Note: If you enter yes, be sure to provide a comment indicating the other agency and its relevant authority.***
- **State Mandated**—Enter “Yes” if state laws or other requirements enable or require the listed item to be implemented at the local level; otherwise, enter “No.” ***Note: If you enter yes, be sure to provide a comment describing the relevant state mandate.***
- **Integration Opportunity**—Enter “Yes” if there are obvious ways that the code, ordinance or plan can be coordinated with the hazard mitigation plan. Consider the following:
 - If you answered “Yes” in the Local Authority column for this item, then enter “Yes” for integration opportunity if any of the following are true:
 - The item already addresses hazards and their impacts and should be updated to reflect new information about risk from this hazard mitigation plan
 - The item does not address hazards and their impacts but is due for an update in the next 5 years and could be updated in a way that does address hazards and impacts
 - The item identifies projects for implementation and these could be reviewed to determine if they can be modified to help address hazard mitigation goals
 - The item identifies projects for implementation and some of these should be considered for inclusion in the hazard mitigation action plan for your jurisdiction
 - If you answered “No” in the Local Authority column for this item, then enter “Yes” for integration opportunity if your jurisdiction will develop the item over the next 5 years

Note: Each capability with a “Yes” answer to Integration Opportunity will be discussed in more detail later in the annex. You may wish to keep notes when assessing the Integration Opportunity or review the “Integration with Other Planning Initiatives” section below.
- **Comments**—Enter the code number and adoption date for any local code indicated as being in place; provide other comments as appropriate to describe capabilities for each entry. **DO NOT OVERLOOK THIS STEP**

For the categories “General Plan” and “Capital Improvement Plan,” answer the specific questions shown, in addition to completing the four columns indicating level of capability.

Development and Permit Capability

Complete the table titled “Development and Permitting Capabilities.”

Fiscal Capability

Complete the table titled “Fiscal Capability” by indicating whether each of the listed financial resources is accessible to your jurisdiction. Enter “Yes” if the resource is fully accessible to your jurisdiction. Enter “No” if there are limitations or prerequisites that may hinder your use of this resource.

Administrative and Technical Capability

Complete the table titled “Administrative and Technical Capability” by indicating whether your jurisdiction has access to each of the listed personnel resources. Enter “Yes” or “No” in the column labeled “Available?”. If yes, then enter the department and position title. If you have contract support with these capabilities, you can still answer “Yes.” Indicate in the department row that this resource is provided through contract.

Education and Outreach Capability

Complete the table titled “Education and Outreach.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the above capability assessment tables and consider including actions to provide a capability that your jurisdiction does not currently have, update a capability that your jurisdiction does have, or implement an action that is recommended in an existing plan or program.

National Flood Insurance Program Compliance

Complete the table titled “National Flood Insurance Program Compliance.”

Community Classifications

Complete the table titled “Community Classifications” to indicate your jurisdiction’s participation in various national programs related to natural hazard mitigation. For each program enter “Yes” or “No” in the second column to indicate whether your jurisdiction participates. If yes, then enter the classification that your jurisdiction has earned under the program in the third column and the date on which that classification was issued in the fourth column; enter “N/A” in the third and fourth columns if your jurisdiction is not participating. If you do not know your current classification, information is available at the following websites:

- **Community Rating System**— <https://www.fema.gov/floodplain-management/community-rating-system>

- **Building Code Effectiveness Grading Schedule**— <https://www.isomitigation.com/bcegs/iso-s-building-code-effectiveness-grading-schedule-bcegs.html>
- **Public Protection Classification**— <https://www.isomitigation.com/ppc/>
- **Storm Ready**— <https://www.weather.gov/stormready/communities>
- **Firewise**— <http://www.firewise.org/usa-recognition-program/map-of-active-participants.aspx>

Adaptive Capacity for Climate Change

Consider climate change impact concerns such as the following:

- Reduced snowpack
- Increased wildfires
- Sea level rise
- Inland flooding
- Threats to sensitive species
- Loss in agricultural productivity
- Public health and safety.

With those impacts in mind, complete the table titled “Adaptive Capacity for Climate Change” by indicating your jurisdiction’s capacity for each listed criterion as follows:

- **High**—The capacity exists and is in use.
- **Medium**—The capacity may exist, but is not used or could use some improvement.
- **Low**—The capacity does not exist or could use substantial improvement.
- **Unsure**—Not enough information is known to assign a rating.

This is a subjective assessment, but providing a few words of explanation is useful. It is highly recommended that you complete this table with an internal planning team after reviewing the results of the other capability assessment tables.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the adaptive capacity criteria and consider including actions to improve the rating for those rated medium or low, to make use of the capacity for those rated high, or to acquire additional information for those rated unsure.

INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as general planning and capital facilities planning, and that relevant information from those sources is used in hazard mitigation. FEMA recommends integration as follows:

- Integrate hazard mitigation plan goals with community objectives (e.g. incorporate the goals for risk reduction and safety into the policies of other plans).
- Use the risk assessment to inform plans and policies (e.g. incorporate risk assessment findings into land use plans, site plan review, emergency operations plans).
- Implement mitigation actions through existing mechanisms (e.g. include mitigation projects in the capital improvement plan).
- Think about mitigation before and after a disaster (e.g. build recovery planning on existing mitigation plans and goals).

After reviewing the plans, programs and ordinances identified in the capability assessment tables, identify all plans and programs that have already been integrated with the hazard mitigation plan, and those that offer opportunities for future integration. The simplest way to do this is to review the Planning and Regulatory Capabilities table to see which items were marked as “Yes” under the Integration Opportunity column.

Existing Integration

In the highlighted bullet list, list items for which you entered “Yes” under the Integration Opportunity column of the “Planning and Regulatory Capability” table because the plan or ordinance already addresses potential impacts or includes specific projects that should be included as action items in the mitigation action plan. Consider listing items marked as Completed in the “Status of Previous Plan Actions” table if they were indicated as being ongoing actions. Provide a brief description of how the plan or ordinance is integrated. Examples are as follows:

- **Capital Improvement Plan**—The capital improvement plan includes projects that can help mitigate potential hazards. The City will act to ensure consistency between the hazard mitigation plan and the current and future capital improvement plans. The hazard mitigation plan may identify new possible funding sources for capital improvement projects and may result in modifications to proposed projects based on results of the risk assessment.
- **Building Code and Fire Code**—The City’s adoption of the 2016 California building and fire codes incorporated local modifications to account for the climatic, topographic and geographic conditions that exist in the City.
- **General Plan**—The general plan includes a Safety Element to protect the community from unreasonable risk by establishing policies and actions to avoid or minimize the following hazards:
 - Geologic and seismic hazards
 - Fire hazards
 - Hazardous materials
 - Flood control
 - Impacts from climate change.
- **Climate Action Plan**—The City’s Climate Action Plan includes projects for reducing greenhouse gas emissions and adapting to likely impacts of climate change. These projects were reviewed to identify cross-planning initiatives that serve both adaptation and mitigation objectives.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, any plans that fall into the “Existing Integration” category should be reviewed and elements from them should be included in the action plan as appropriate.

Opportunities for Future Integration

List any remaining items that say “Yes” in the Integration Opportunity column in the Planning and Regulatory Capabilities table and explain the process by which integration could occur. Examples follow:

- **Zoning Code**—The City is conducting a comprehensive update to its zoning code. Additional mitigation and abatement measures will be considered for incorporation into the code.
- **Capital Improvement Projects**—Capital improvement project proposals may take into consideration hazard mitigation potential as a means of evaluating project prioritization.
- **Post-Disaster Recovery Plan**—The City does not have a recovery plan and intends to develop one as a mitigation planning action during the next five years. The plan will build on the goals and objectives identified in the hazard mitigation plan.

After you have accounted for all items marked as “Yes” under the Integration Opportunity column, consider other programs you may have in place in your jurisdiction that include routine consideration and management of hazard risk. Examples of such programs may include: tree pruning programs, right-of-way mowing programs, erosion control or stream maintenance programs, etc. Add any such programs to the integration discussion and provide a brief description of how these programs manage (or could be adapted to manage) risk from hazards.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, an action to integrate any identified “Opportunities for Future Integration” should be considered for inclusion in the action plan.

INFORMATION SOURCES USED FOR THIS ANNEX

Note that this section will ultimately describe all information sources used to develop this annex, but that only the sources used for Phases 1 and 2 will be listed at this point. Additional sources will be added with the preparation of the Phase 3 annex.

This section should describe what resources you used to complete the annex and how you used them. Several items are started for you, but be sure to update and enhance any descriptions. Providing this information is a requirement to pass the state and FEMA review process.

THIS COMPLETES PHASE 2

PHASE 3 INSTRUCTIONS

RISK ASSESSMENT

Jurisdiction-Specific Natural Hazard Event History

In the table titled “Past Natural Hazard Events,” list in chronological order (most recent first) any natural hazard event that has caused damage to your jurisdiction. Include the date of the event and the estimated dollar amount of damage it caused. You are welcome to include any events, but special attention should be made to include major storms and federally declared disasters. Refer to the table below that lists hazard events in the planning area as recognized by the County, the state, and the federal government.

Table 1. Presidential Disaster Declarations for the Planning Area

[illegible]

We recommend including most large-scale disasters, unless you know that there were no impacts on your jurisdiction. Specifically, we recommend that you include these events if you have damage estimate information or can provide a brief description of impacts that occurred within your community. In addition to these events, refer to the NOAA storm events database included in the toolkit. We recommend conducting a search for the name of your jurisdiction in order to identify events with known impacts. Other potential sources of damage information include the following

- Preliminary damage estimates your jurisdiction filed with the county or state
- Insurance claims data
- Newspaper archives
- Emergency management documents (general plan safety element, emergency response plan, etc.)
- Resident input.

If you do not have estimates for costs of damage caused, list “Not Available” in the “Damage Assessment” column or list a brief description of the damage rather than a dollar value (e.g., Main Street closed as a result of flooding, downed trees and residential damage). Note that tracking such damage is a valid and useful mitigation action if your jurisdiction does not currently track such information.

Hazard Risk Ranking

Risk ranking identifies which hazards pose the greatest risk to the community, based on how likely it is for each hazard to occur (this is called the community’s exposure) and how great an impact each hazard will have if it does occur (this is called the community’s vulnerability). Every jurisdiction has differing degrees of risk exposure and vulnerability and therefore needs to rank risk for its own area. The risk ranking for each jurisdiction has been calculated in the “Loss Matrix” spreadsheet included in the annex preparation toolkit. The ranking is on the basis of risk ranking scores for each hazard that were calculated based on the hazard’s probability of occurrence and its potential impact on people, property and the economy.

The results for your jurisdiction have already been entered into the “Hazard Risk Ranking” table in your Phase 3 annex template. The hazard with the highest risk rating is listed at the top of table and was given a rank of 1; the hazard with the second highest rating is listed second with a rank of 2; and so on. Two hazards with equal risk ranking scores were given the same rank. Hazards were assigned to “High,” Medium,” or “Low” risk categories based on the risk ranking score. If you wish to review the calculations in detail, the appendix at the end of these instructions describes the calculation methodology that the spreadsheet uses.

Review the hazard risk ranking information that is included in your annex. If these results differ from what you know based on substantiated data and documentation, you may alter the ranking and risk categories based on this knowledge. If you do so, indicate the reason for the change in your template. For example:

“Drought was ranked as low; however, the jurisdiction’s economy is heavily reliant on water-using industries, such as agriculture or manufacturing, so this hazard should be ranked as medium.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, you will need to have at least one mitigation action for each hazard ranked as “high” or “medium.”

Jurisdiction-Specific Vulnerabilities

Repetitive Loss Properties

A repetitive loss property is any property for which FEMA has paid two or more flood insurance claims in excess of \$1,000 in any rolling 10-year period since 1978. In the space provided, the following information has been included in your annex based on data provided by FEMA:

- The number of any FEMA-identified repetitive-loss properties in your jurisdiction.
- The number of any FEMA-identified severe-repetitive-loss properties in your jurisdiction.
- The number (if any) of repetitive-loss or severe-repetitive-loss properties in your jurisdiction that have been mitigated. Mitigated for this exercise means that flood protection has been provided to the structure.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, if your jurisdiction has any repetitive loss properties, you should strongly consider including a mitigation action that addresses mitigating these properties.

Other Noted Vulnerabilities

Review the results of the risk assessment included in the toolkit, your jurisdiction's natural events history, and any relevant public comments/input, then develop a few sentences that discuss specific hazard vulnerabilities. You do not need to develop a sentence for every hazard, but identify a few issues you would like to highlight. Also list any known hazard vulnerabilities in your jurisdiction that may not be apparent from the risk assessment and other information provided.

Spending some time thinking about the results of the risk assessment and other noted vulnerabilities will be a big help in the development of your hazard mitigation action plan. The following are examples of vulnerabilities you could identify through this exercise:

- About 45 percent of the population lives in the 0.2 percent annual chance flood hazard area, where flood insurance is generally not required.
- A magnitude 7.5 earthquake on the Smithburg Fault is estimated to produce nearly 1 million tons of structure debris.
- Over the past 10 years, the jurisdiction has experienced more than \$6 million in damage from severe storm events.
- More than 50 buildings are located in areas that would be permanently inundated with 12 inches of sea level rise.
- The results of the public survey indicated that 40 percent of Smithburg residents would not be able to be self-sufficient for 5 days following a major event.
- An urban drainage issue at a specific location results in localized flooding every time it rains.
- One area of the community frequently loses power due to a lack of tree maintenance.

- A critical facility, such as a police station, is not equipped with a generator.
- A neighborhood has the potential to have ingress and egress cut off as the result of a flood or earthquake (e.g. a bridge is the only access).
- Substantial number of buildings in one area of the community are unreinforced masonry or soft-story construction.
- An area along the river is eroding and threatening public and/or private property.
- A large visitor population that may not be aware of tsunami risk.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, consider including actions to address the jurisdiction-specific vulnerabilities listed in this section.

HAZARD MITIGATION ACTION PLAN

Hazard Mitigation Action Plan Matrix

The hazard mitigation action plan is the heart of your jurisdictional annex. This is where you will identify the actions your jurisdiction would like to pursue with this plan.

Select Recommended Actions

All of the work that you have done thus far should provide you with ideas for actions. Throughout these instructions, green boxes labeled “Hazard Mitigation Action Plan Input” have indicated information that needs to be considered in the selection of mitigation actions. The following sections describe how to consider these and other information sources to develop a list of potential actions.

Be sure to consider the following factors in your selection of actions:

- Select actions that are consistent with the overall purpose, goals, and objectives of the hazard mitigation plan.
- Identify actions where benefits exceed costs.
- Include any action that your jurisdiction has committed to pursuing, regardless of eligibility from outside funding sources (grants, non-profit funding, donations, etc.).
- Know what is and is not eligible for funding under various federal programs (see the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table below).

Table 2. Federal Hazard Mitigation Grant Program Eligibility by Action Type

Eligible Activities	Hazard Mitigation Grant Program (HMGP)	Pre-Disaster Mitigation (PDM)	Flood Mitigation Assistance (FMA)
Mitigation Projects			
Property Acquisition and Structure Demolition	√	√	√
Property Acquisition and Structure Relocation	√	√	√
Structure Elevation	√	√	√
Mitigation Reconstruction	√	√	√
Dry Floodproofing of Historic Residential Structures	√	√	√
Dry Floodproofing of Non-residential Structures	√	√	√
Generators	√	√	
Localized Flood Risk Reduction Projects	√	√	√
Non-Localized Flood Risk Reduction Projects	√	√	
Structural Retrofitting of Existing Buildings	√	√	√
Non-structural Retrofitting of Existing Buildings and Facilities	√	√	√
Safe Room Construction	√	√	
Wind Retrofit for One- and Two-Family Residences	√	√	
Infrastructure Retrofit	√	√	√
Soil Stabilization	√	√	√
Wildland fire Mitigation	√	√	
Post-Disaster Code Enforcement	√		
Advance Assistance	√		
5 Percent Initiative Projects*	√		
Aquifer and Storage Recovery**	√	√	√
Flood Diversion and Storage**	√	√	√
Floodplain and Stream Restoration**	√	√	√
Green Infrastructure**	√	√	√
Miscellaneous/Other**	√	√	√
Hazard Mitigation Planning	√	√	√
Technical Assistance			√
Management Costs	√	√	√

* FEMA allows increasing the 5% initiative amount under the Hazard Mitigation Grant Program up to 10% for a presidential major disaster declaration. The additional 5% initiative funding can be used for activities that promote disaster-resistant codes for all hazards. As a condition of the award, either a disaster-resistant building code must be adopted or an improved Building Code Effectiveness Grading Schedule is required.

** Indicates that any proposed action will be evaluated on its own merit against program requirements. Eligible projects will be approved provided funding is available.

Material Previously Developed for This Annex

Capability Assessment Section—Planning and Regulatory Capability Table, Fiscal Capability Table, Administrative and Technical Capability Table, Education and Outreach Table, and Community Classification Table

Review these tables and consider the following:

- For any capability that you do not currently have, consider whether your jurisdiction should have this capability. If so, consider including an action to develop/acquire the capability.
- For any capability that you do currently have, consider whether this capability can be leveraged to increase or improve hazard mitigation in the jurisdiction.
- If any capabilities listed in the Planning and Regulatory Capabilities table have not been updated in more than 10 years, consider an action to review and update the capability and, as appropriate, incorporate hazard mitigation principles or information obtained in the risk assessment.
- Consider including actions that are identified in other plans and programs (capital improvement plans, strategic plans, etc.) as actions in this plan.

Capability Assessment Section—National Flood Insurance Program Compliance table

Review the table and consider the following:

- If you have no certified floodplain managers and you have flood risk, consider adding an action to provide key staff members with training to obtain certification.
- If your flood damage prevention was last updated in or before 2004, you should identify an action to update your ordinance to ensure it is compliant with current NFIP requirements.
- If you have any outstanding NFIP compliance issues, be sure to add an action to address them.
- If flood hazard maps do not adequately address the flood risk within your jurisdiction, consider actions to request new mapping or conduct studies.
- If you wish to begin to participate in CRS or you already to participate and would like to improve your classification, consider this as an action.
- If the number of flood insurance policies in your jurisdiction is low relative to the number of structures in the floodplain, consider an action that will promote flood insurance in your jurisdiction.

Capability Assessment Section— Adaptive Capacity for Climate Change Table

Consider your responses to this section:

- For criteria that you listed as medium or low, think of ways you could improve this rating (see adaptive capacity portion of the mitigation best practices catalog).
- For criteria you listed as high, think about how you can leverage this capacity to improve or enhance mitigation or continue to improve this capacity.
- For criteria that you were unable to provide responses for, consider ways you could improve your understanding of this capacity (see mitigation best practices and adaptive capacity catalog).

Integration Review Section

Review the items you identified in this section and consider an action that specifically says what the plan, code, ordinance etc. is and how it will be integrated. For items that address land use, include them in the prepopulated action in your template that reads as follows:

“Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions in the community, including _____.”

Risk Ranking Section

You must identify at least one mitigation action that is clearly defined and actionable (i.e. not a preparedness or response action) for every hazard that is categorized in the risk ranking as “high” or “medium” risk.

Jurisdiction-Specific Vulnerabilities Section

Review the vulnerability issues that you identified in this section and consider actions to address them (see mitigation best practices catalog). Two examples are shown in the table below.

Table 3. Example Actions to Address Jurisdiction-Specific Vulnerabilities

Noted Vulnerability	Example Mitigation Action
About 45 percent of the population lives in the 0.2 percent annual chance flood hazard area where flood insurance is generally not required.	Implement an annual public information initiative that targets residents in the 0.2 percent annual chance flood hazard area. Provide information on the availability of relatively low cost flood insurance policies.
An urban drainage issue results in localized flooding every time it rains.	Replace undersized culverts that are contributing to localized flooding. Priority areas include: <ul style="list-style-type: none"> • The corner of Main Street and 1st Street • Old Oak subdivision.

Status of Previous Plan Actions Section

If your jurisdiction participated in a previous hazard mitigation plan, be sure to include any actions that were identified as “carry over” actions.

Other Sources

Mitigation Best Practices Catalog

A catalog that includes best practices identified by FEMA and other agencies, as well as recommendations from the steering committee and other stakeholders, is included in your toolkit. Review the catalog and identify actions your jurisdiction should consider for its action plan.

Public Input

Review input received during the process, specifically the public survey results included in your toolkit.

Common Actions for All Partners

The following six actions have been prepopulated in your annex template; **these six actions should be included in every annex and should not be removed**:

- Where appropriate, support retro-fitting, purchase or relocation of structures located in high hazard areas, prioritizing those structures that have experienced repetitive losses and/or are located in high or medium ranked hazard.
- Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions within the community.
- Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan.
- Continue to maintain good standing and compliance under the NFIP through implementation of floodplain management programs that, at a minimum, meet the NFIP requirements:
 - Enforce the flood damage prevention ordinance.
 - Participate in floodplain identification and mapping updates.
 - Provide public assistance/information on floodplain requirements and impacts.
- Identify and pursue strategies to increase adaptive capacity to climate change.
- Purchase generators for critical facilities and infrastructure that lack adequate back-up power.

In addition, the core planning team recommends that every planning partner strongly consider the following actions:

- Develop and implement a program to capture perishable data after significant events (e.g. high water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan.
- Support the County-wide initiatives identified in Volume I of the hazard mitigation plan.
- Develop a post-disaster recovery plan and a debris management plan.
- Develop and/or update plans that support or enhance continuity of operations following disasters.

The specifics of all these common actions should be adjusted as needed for the particulars of each community.

Complete the Table

Complete the table titled “Hazard Mitigation Action Plan Matrix” for all the actions you have identified and would like to include in the plan:

- Enter the action number (see box on next page) and description. **If the action is carried over from your previous hazard mitigation plan, return to the “Status of Previous Plan Actions” table you completed in Phase 1 and enter the new action number in the column labeled “Action # in Update.”**
- Indicate whether the action mitigates hazards for new and/or existing assets.
- Identify the specific hazards the action will mitigate (note: you must list each hazard by name; simply indicating “all hazards” is not deemed acceptable).
- Identify by number the mitigation plan objectives that the action addresses (see toolkit).
- Indicate who will be the lead in administering the action. This will most likely be a department within your jurisdiction (e.g. planning or public works). If you wish to indicate more than one department as responsible for the action, clearly identify one as the lead agency and list the others in the “supporting agency” column.

- Enter an estimated cost in dollars if known; otherwise, enter “High,” “Medium,” or “Low,” as determined for the prioritization process described in the following section.
- Identify funding sources for the action. If it is a grant, include the grant-providing agency as well as funding sources for any required cost share. If it is another outside funding source such as a non-profit funding source or a donation, include the source and any requirements for receiving the funding. Refer to your fiscal capability assessment to identify possible sources of funding and refer to the table on page 16 of these instructions for project eligibility for FEMA’s hazard mitigation assistance grant programs.
- Indicate the time line as “short-term” (1 to 5 years) or “long-term” (5 years or greater) or “ongoing” (a continual program)

Mitigation Action Priority

Complete the information in the table titled “Mitigation Action Priority” as follows:

- **Action #**—Indicate the action number from the Hazard Mitigation Action Plan Matrix table.
- **# of Objectives Met**—Enter the number of objectives the action will meet.
- **Benefits**—Enter “High,” “Medium” or “Low” as follows:
 - High—Action will provide an immediate reduction of risk exposure for life and property.
 - Medium—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - Low—Long-term benefits of the action are difficult to quantify in the short term.
- **Cost**—Enter “High,” “Medium” or “Low” as follows:
 - High—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, outside funding sources, bonds, grants, and fee increases).

Action Numbering

Actions are to be numbered using the three-letter code for your jurisdiction shown below, followed by a hyphen and the action’s sequential number:

- San Mateo County—SMC-1, SMC-2...
- Atherton City—ATH-1, ATH-2...
- Belmont City—BEL-1, BEL-2...
- Brisbane City—BRS-1, BRS-2...
- Burlingame City—BRL-1, BRL-2...
- Colma City—CLM-1, CLM-2...
- Daly City—DLY-1, DLY-2...
- East Palo Alto City—EPA-1, EPA-2...
- Foster City—FOS-1, FOS-2...
- Half Moon Bay City—HMB-1, HMB-2...
- Hillsborough City—HLS-1, HLS-2...
- Menlo Park City—MPK-1, MPK-2...
- Millbrae City—MLB-1, MLB-2...
- Pacifica City—PAC-1, PAC-2...
- Portola Valley City—PTV-1, PTV-2...
- Redwood City—RDW-1, RDW-2...
- San Bruno City—SBR-1, SBR-2...
- San Carlos City—SCR-1, SCR-2...
- San Mateo City—SMT-1, SMT-2...
- South San Francisco City—SSF-1, SSF-2...
- Woodside City—WDS-1, WDS-2...
- Coastside Water —CSW-1, CSW-2...
- Colma Fire —CFD-1, CFD-2...
- Flood & Sea Level —FSL-1, FSL-2...
- Harbor District —HRB-1, HBR-2
- Highland Recreational —HLD-1, HLD-2...
- Jefferson Union HS —JEF-1, JEF-2...
- Menlo Park Fire —MPF-1, MPF-2...
- Mid-Pen Reg Open Space District —MPR-1, MPR-2...
- Mid-Peninsula Water —MPW-1, MPW-2...
- Montara Water & Sewer —MWS-1, MWS-2...
- North Coast Water —NCW-1, NCW-2...
- Office of Education —OED-1, OED-2...
- San Mateo Community College —SCC-1, SCC-2...
- San Mateo RCD —SRC-1, SRC-2...
- Westborough Water —WBW-1, WBW-2...
- Woodside Fire —WFD-1, WFD-2...

- Medium—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.
- Low—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- **Do Benefits Exceed the Cost?**—Enter “Yes” or “No.” This is a qualitative assessment. Enter “Yes” if the benefit rating (high, medium or low) is the same as or higher than the cost rating (high benefit/high cost; high benefit/medium cost; medium benefit/low cost; etc.). Enter “No” if the benefit rating is lower than the cost rating (medium benefit/high cost, low benefit/medium cost; etc.)
- **Is the Action Eligible for Outside Funding Sources?**—Enter “Yes” or “No.” For grant funding, refer to the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table on page 16 of these instructions.
- **Can Action Be Funded Under Existing Program Budgets?**—Enter “Yes” or “No.” In other words, is this action currently budgeted for, or would it require a new budget authorization or funding from another outside source such as grants, non-profit funding, or donations?
- **Implementation Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
 - Medium Priority—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years), once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
 - Low Priority—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known outside funding sources. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for outside funding from programs that have not yet been identified.
- **Outside Funding Source Pursuit Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets identified outside funding source eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible to be funded by outside sources.
 - Medium Priority—An action that meets identified outside funding source eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
 - Low Priority—An action that has not been identified as meeting any outside funding source eligibility requirements.

Actions identified as high-outside-funding-pursuit priority actions should be closely reviewed for consideration when outside funding source opportunities arise.

Note: If a jurisdiction wishes to identify an action as high priority that is outside of the prioritization scheme for high priorities, a note indicating so should be inserted and a rationale should be provided.

Analysis of Mitigation Actions

In the table titled “Analysis of Mitigation Actions,” for each combination of hazard type and mitigation type, enter the numbers of all recommended actions that address that hazard type and can be categorized as that mitigation type. The mitigation types are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education & Awareness**—Actions to inform residents and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.
- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.
- **Climate Resilience**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea-level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff training, memorandums of understanding, development of plans and studies, and monitoring programs.

This exercise demonstrates that the jurisdiction has selected a comprehensive range of actions. This table must show at least one action to address each “high” and “medium” ranked hazard. Planning partners should aim to identify at least one action for each mitigation type, but this is not required.

An example of a completed “Analysis of Mitigation Actions” table is provided below. Note that an action can be more than one mitigation type.

Sample Completed Table – Analysis of Mitigation Actions

Hazard Type	Action Addressing Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education & Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resilience	Community Capacity Building
High-Risk Hazards								
Dam Failure	EX-2, 3, 4, 5, 6	EX-1, 6	EX-4, 6		EX-8, 11			EX-3, 4, 8, 9, 10

Hazard Type	Action Addressing Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education & Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resilience	Community Capacity Building
Drought	EX-2	EX-1	EX-4					EX-3, 4, 8, 9, 10
Medium-Risk Hazards								
Earthquake	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9
Flooding	EX-2, 3, 4, 5, 6, 7	EX-1, 6, 7	EX-4, 6	EX-9	EX-8, 11	EX-6		EX-3, 4, 8, 9, 10
Landslide	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9, 10
Low-Risk Hazards								
Severe Weather	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4		EX-8, 9, 11		EX-8, 7	EX-3, 4, 8, 9, 10
Wildfire	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4, 9	EX-9	EX-8, 11			EX-3, 4, 8, 9, 10

PUBLIC OUTREACH

FEMA requirements for public outreach will be met by the County's engagement efforts and are included in the main part of the plan. These may include public meetings, a StoryMap, surveys, etc. If individual jurisdictions want to have a more robust outreach for their local community, the public outreach table in each annex may be used to memorialize those local efforts.

This table should record local public outreach efforts made by your jurisdiction to inform the community of the plan update process. Examples may include local surveys on hazard awareness/preparedness, social media blasts, press releases, and outreach to local groups (CERT, senior citizen organizations, etc.) **This section is optional.**

INFORMATION SOURCES USED FOR THIS ANNEX

This section should describe what resources you used to complete the annex and how you used them. The sources used for Phases 1 and 2 should have been entered previously. List any additional sources used for the preparation of the Phase 3 annex. Review to ensure that all materials used in all three phases are identified. Providing this information is a requirement to pass the state and FEMA review process.

FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

In this section, identify any future studies, analyses, reports, or surveys your jurisdiction needs to better understand its vulnerability to identified or currently unidentified risks. These could be needs based on federal or state agency mandates. **This section is optional.**

ADDITIONAL COMMENTS

Use this section to add any additional information pertinent to hazard mitigation and your jurisdiction not covered in this template. **This section is optional.**

THIS COMPLETES PHASE 3

APPENDIX— Risk Ranking Calculation Methodology

The instructions below describe the methodology for how risk rankings were derived in the “Loss Matrix” spreadsheet provided with the annex preparation toolkit. The risk-ranking for each hazard assessed its probability of occurrence and its potential impact on people, property, and the economy. Refer to the Loss Matrix spreadsheet in order to follow along.

Probability of Occurrence

A probability factor is assigned based on how often a hazard is likely to occur. The probability of occurrence of a hazard event is generally based on past hazard events in an area, although weight can be given to expected future probability of occurrence based on established return intervals and changing climate conditions. For example, if your jurisdiction has experienced two damaging floods in the last 25 years, the probability of occurrence is high for flooding and scores a 3 under this category. If your jurisdiction has experienced no damage from landslides in the last 100 years, your probability of occurrence for landslide is low, and scores a 1 under this category. Each hazard was assigned a probability factor as follows:

- High—Hazard event is likely to occur within 25 years (Probability Factor = 3)
- Medium—Hazard event is likely to occur within 100 years (Probability Factor = 2)
- Low—Hazard event is not likely to occur within 100 years (Probability Factor = 1)
- None—There is no exposure to the hazard and no probability of occurrence (Probability Factor = 0)

Potential Impacts of Each Hazard

The impact of each hazard is divided into three categories: impacts on people, impacts on property, and impacts on the economy. These categories are also assigned weighted values. Impact on people was assigned a weighting factor of 3, impact on property was assigned a weighting factor of 2 and impact on the economy was assigned a weighting factor of 1.

Impact factors for each category (people, property, economy) are described below:

- **People**—Values are assigned based on the percentage of the total *population exposed* to the hazard event. The degree of impact on individuals will vary and is not measurable, so the calculation assumes for simplicity and consistency that all people exposed to a hazard because they live in a hazard zone will be equally impacted when a hazard event occurs. Impact factors were assigned as follows:
 - High—25 percent or more of the population is exposed to a hazard (Impact Factor = 3)
 - Medium—10 percent to 24 percent of the population is exposed to a hazard (Impact Factor = 2)
 - Low—9 percent or less of the population is exposed to the hazard (Impact Factor = 1)
 - No impact—None of the population is exposed to a hazard (Impact Factor = 0)
- **Property**—Values are assigned based on the percentage of the total *property value exposed* to the hazard event:
 - High—25 percent or more of the total replacement value is exposed to a hazard (Impact Factor = 3)
 - Medium—10 percent to 24 percent of the total replacement value is exposed to a hazard (Impact Factor = 2)
 - Low—9 percent or less of the total replacement value is exposed to the hazard (Impact Factor = 1)

- No impact—None of the total replacement value is exposed to a hazard (Impact Factor = 0)
- **Economy**—Values were assigned based on the percentage of the total *property value vulnerable* to the hazard event. Values represent estimates of the loss from a major event of each hazard in comparison to the total replacement value of the property exposed to the hazard. For some hazards, such as wildland fire and landslide, vulnerability may be considered to be the same or a portion of exposure due to the lack of loss estimation tools specific to those hazards.
 - High—Estimated loss from the hazard is 10 percent or more of the total replacement value (Impact Factor = 3)
 - Medium—Estimated loss from the hazard is 5 percent to 9 percent of the total replacement value (Impact Factor = 2)
 - Low—Estimated loss from the hazard is 4 percent or less of the total replacement value (Impact Factor = 1)
 - No impact—No loss is estimated from the hazard (Impact Factor = 0).

Impacts on People

The percent of the total population exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **green highlighted column**. For those hazards that do not have a defined extent and location the entire population or a portion of the population is considered to be exposed, depending on the hazard. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all people in the planning area would be exposed to drought, but impacts to the health and safety of individuals are expected to be minimal.

Impacts on Property

The percent of the total value exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **blue highlighted column**. For those hazards that do not have a defined extent and location (e.g. severe weather) the entire building stock is generally considered to be exposed. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all structures in the planning area would be exposed to drought, but impacts to structures are expected to be minimal.

Impacts on the Economy

The loss estimates for each hazard of concern that was modeled (i.e. dam failure, flood, earthquake) can be found in the loss estimate matrix in the **purple highlighted column**. For those hazards that have a defined extent and location, but do not have modelled loss results, loss estimates can be the same as exposure or a portion thereof. For example, a large percentage of the building stock may be exposed to landslide or wildland fire risk, but it would not be expected that one event that resulted in loss to all exposed structures would occur. For those hazards that do not have a defined extent and location, exposure is based on the hazard type.

Risk Rating for Each Hazard

A risk rating for each hazard was determined by multiplying the assigned probability factor by the sum of the weighted impact factors for people, property and the economy:

$$\text{Risk Rating} = \text{Probability Factor} \times \text{Weighted Impact Factor \{people + property + economy\}}$$

This is the number that is shown in the risk ranking table in your template. Generally, score of 30 or greater receive a “high” rating, score between 15 and 30 receive a “medium” rating, and score of less than 15 receives a “low” rating.

**INSTRUCTIONS FOR COMPLETING
ANNEXES WITH EQUITY LENS FOR
CITIES AND COUNTY**

INSTRUCTIONS FOR COMPLETING CITY/COUNTY ANNEX TEMPLATE/ WITH AN EQUITY LENS

Note Regarding Equity Lensing. The Core Planning Team and Steering Committee for the 2021 San Mateo County Multijurisdictional Local Hazard Mitigation Plan update have decided to add another layer of resolution to the risk assessment and action planning portions of this plan update, applying an “equity lens”. An equity lens is defined as a critical thinking approach to undoing institutional and structural biases, which evaluates burdens, benefits, and outcomes to underserved communities. Application of the equity lens to risk ranking and action plan prioritization was determined to be “optional” for all planning partners. These instructions have been enhanced to include the equity lens options for Risk Ranking and Action Plan prioritization.

Jurisdictional annex templates for the 2021 San Mateo Multijurisdictional Local Hazard Mitigation Plan update will be completed in three phases. **This document provides instructions for completing all phases of the template for cities and counties.**

The target timeline for completion is as follows:

- **Phase 1**—Team, Profile, Trends, and Previous Plan Status
 - **Deployed:** February 19, 2021
 - **Due:** March 19, 2021 by close of business
- **Phase 2**—Capability Assessment, Integration Review, and Information Sources
 - **Deployed:** April 2, 2021
 - **Due:** May 21, 2021 by close of business, Pacific Time
- **Phase 3**—Risk Assessment, Action Plan, Information Sources, Future Needs, and Additional Comments
 - **Deployed:** June 11, 2021

A Note About Formatting

The template for the annex is a Microsoft Word document in a format that will be used in the final plan. Partners are asked to use this template so that a uniform product will be completed for each partner.

Content should be entered directly into the template rather than creating text in another document and pasting it into the template. Text from another source may alter the formatting of the document.

DO NOT convert this document to a PDF.

The section and table numbering in the document will be updated when completed annexes are combined into the final document. Please do not adjust any of the numbering.

For planning partners who participated in the 2016 planning effort, relevant information has been brought over to the 2021 template. Fields that require attention have been highlighted using the following color coding:

- **Green:** Text has been brought over from 2016 Plan and should be reviewed and updated as needed.
- **Blue:** This is a new field that will require information that was not included in 2016.

Un-highlight each field that you update so that reviewers will know an edit has been made.

New planning partners will need to complete the template in its entirety.

-
- **Mandatory Phase 3 Workshops:** Targeted for the week of June 14. We will schedule multiple workshops during that week to provide options for attendance
 - **Due: July 23, 2021 by close of business, Pacific Time**

Direct any questions about your Phase 3 template to:

Bart Spencer

Tetra Tech

Phone: (650) 324-1810

E-mail: bart.spencer@tetrattech.com

Submit your completed Phase 3 template in electronic format to:

Megan Brotherton

Tetra Tech

Phone: (808) 339-9119

E-mail: megan.brotherton@tetrattech.com

IMPORTANT! READ THIS FIRST

Phase 1 and Phase 2 templates were previously provided to your jurisdiction for completion.

If your jurisdiction returned the completed Phase 1 & 2 templates:

- The Phase 1 & 2 content you provided is already incorporated into your Phase 3 template.
- Review the template to see if we have inserted any comments requesting further work to be done on Phase 1 or 2
 - ***If any comments are included, address them.*** Then, begin your work on Phase 3 following the Phase 3 instructions beginning on page 13.
 - If no comments are included, then you **DO NOT** need to do any further work on the Phase 1 or Phase 2 content. ***Go directly to the instructions for Phase 3, beginning on page 13.***

If your jurisdiction has **NOT** yet done any work on the Phase 1 or Phase 2 template:

- Follow the instructions beginning on page 3 for providing the Phase 1 and Phase 2 information.
- Then proceed with the Phase 3 instructions beginning on page 13.

If your jurisdiction started work on the Phase 1 or 2 template but never completed and submitted it, copy the work you had completed so far into the new template. Then complete Phases 1, 2, and 3 following the instructions provided here.

PHASE 1 INSTRUCTIONS**CHAPTER TITLE**

In the chapter title at the top of Page 1, type in the complete official name of your municipality (e.g., City of Pleasantville, West County). Do not change the chapter number. Revise only the jurisdiction name. If your jurisdiction's name has already been entered, verify that wording and spelling are correct; revise as needed.

LOCAL HAZARD MITIGATION PLANNING TEAM**Points of Contact**

Provide the name, title, mailing address, telephone number, and e-mail address for the primary point of contact for your jurisdiction. This should be the person responsible for monitoring, evaluating, and updating the annex for your jurisdiction. This person should also be the principle liaison between your jurisdiction and the Steering Committee overseeing development of this plan.

In addition, designate an alternate point of contact. This would be a person to contact should the primary point of contact be unavailable or no longer employed by the jurisdiction.

Note: Both of these contacts should match the contacts that were designated in your jurisdiction's letter of intent to participate in this planning process. If you have changed the primary or secondary contact, let the planning team know by inserting a comment into the document.

Who Should Be on the Local Mitigation Planning Team

The Local Hazard Mitigation Planning Team is responsible for developing your jurisdiction's annex to the hazard mitigation plan. Team membership should represent agencies with authority to regulate development and enforce local ordinances or regulatory standards, such as building/fire code enforcement, emergency management, emergency services, floodplain management, parks and recreation, planning/ community development, public information, public works/ engineering, stormwater management, transportation, or infrastructure.

Participating Planning Team

Populate Table 1-1 with the names of staff from your jurisdiction who participated in preparing this annex or otherwise contributed to the planning process for this hazard mitigation plan.

JURISDICTION PROFILE

Provide information specific to your jurisdiction as indicated, in a style similar to the examples provided below. This should be information that will not be provided in the overall mitigation plan document.

Location and Features

Describe the community's location, size, and prominent features, in a statement similar to the example below:

EXAMPLE: The City of Jones is in the northwest portion of Smith County, along the Pacific Coast in northern California. It is almost 150 miles northeast of San Francisco. The city's total area is 4.2 square miles, with boundaries generally extending north-south from State Highway 111 to the

Johnson River and east-west from Coast Road to East Frank Avenue. The City of Allen is to the north, unincorporated county is to the west, the City of Bethany is to the south, and the Pacific Ocean is to the west.

Jones is home to the University of Arbor, Bickerson Manufacturing, and the western portion of Soosoo National Park. Significant geographic features include the Watery River, which flows southwest across the city, Lake Splash in the city's northwest corner, and the foothills of the Craggy Mountains on the east side.

History

Describe the community's history, focusing on economy and development, and note its year of incorporation, in a statement similar to the example below:

EXAMPLE: The City of Jones was incorporated in 1858. The area was settled during the gold rush in the 1850s as a supply center for miners. As the gold rush died down, timber and fishing became the area's major economic resources. By 1913, the Jones Teachers College, a predecessor to today's University of Arbor, was founded. Recently, the presence of the college has come to shape Jones' population into a young and educated demographic. In 1981 the City developed the Jones Marsh and Wildlife Sanctuary, an environmentally friendly sewage treatment enhancement system.

With numerous annexations since its original incorporation, the city's area has almost doubled. Today it features a commercial core in the center of the city, with mostly residential areas to the north and south, the university to the west and the national park on the east.

Governing Body Format

Describe the community's key governance elements and staffing, in a statement similar to the example below:

EXAMPLE: The City of Jones is governed by a five-member city council. The City consists of six departments: Finance, Environmental Services, Community Development, Public Works, Police, and the City Manager's Office. The City has 13 commissions and task forces, which report to the City Council. The City currently employs a total of 155 employees (full-time equivalent).

The City Council assumes responsibility for the adoption of this plan; the City Manager will oversee its implementation.

CURRENT TRENDS

Population

Provide the most current population estimate for your jurisdiction based on an official means of tracking (e.g., the U.S. Census or state agency that develops population estimates). Describe the current estimate and recent population trends in a statement similar to the example below.

EXAMPLE: According to California Department of Finance, the population of Jones as of July 2020 was 17,280. Since 2010, the population has grown at an average annual rate of 1.2 percent, though that rate is declining, with an annual average of only 0.8 percent since 2016.

Development

In the highlighted text that says, “Describe trends in general,” provide a brief description of your jurisdiction’s recent development trends in a statement similar to the example below:

EXAMPLE: Anticipated future development for Jones is low to moderate, consisting primarily of residential growth. Recent development has been mostly infill. There has been a focus on affordable housing and a push for more secondary mother-in-law units. Future growth in the City will be managed as identified in the City’s 2018 general plan. City actions, such as those relating to land use, annexations, zoning, subdivision and design review, redevelopment, and capital improvements, must be consistent with the plan.

Complete the table titled “Recent and Expected Future Development Trends.” Note:

- The portion of the table requesting the number of permits by year is specifically looking for development permits for **new** construction. If your jurisdiction does not have the ability to differentiate between permit types, list the total number of permits and indicate “N/A” (not applicable) for the permit sub-types.
- If your jurisdiction does not have the ability to track permits by hazard area, delete the bullet list of hazard areas and insert a qualitative description of where development has occurred.

STATUS OF PREVIOUS PLAN ACTIONS

Note that this section only applies to jurisdictions that are conducting updates to previously approved hazard mitigation plans. If your jurisdiction has not previously participated in an approved plan, enter an “X” in the box at the beginning of this section and do not complete the section. We will remove this section from your final annex.

Also note that this section is further back in the annex than the rest of the Phase 1 content. Some Phase 2 sections are included before it.

All action items identified in prior mitigation plans must be reconciled in this update. Action items must all be marked as **ONE** of the following: check the appropriate box (place an X) and provide information as follows:

- **Completed**—If an action has been completed since the prior plan was prepared, check the “Completed” box and **provide a date of completion in the comment section**. If an action has been initiated and is an ongoing program (e.g. annual outreach event), you may mark it as completed and **note that it is ongoing in the comments**. If an action addresses an ongoing program you would like to continue to include in your action plan, see the “Carried Over to Plan Update” bullet below.
- **Removed**—If action items are to be removed because they are no longer feasible, a reason must be given. Lack of funding does not mean that it is no longer feasible, unless the sole source of funding for an action is no longer available. **Place a comment in the comment section explaining why the action is no longer feasible or barriers that prevented the action from being implemented (e.g., “Action no longer considered feasible due to lack of political support.”)**. If the wording and/or intent of a previously identified action is unclear, this can be a reason for removal. A change in community priorities may also be a reason for removal and should be discussed in the comments.
- **Carried Over to Plan Update**—If an action is in progress, is ongoing, or has not been initiated and you would like to carry it over to the plan update, check the “Check if Yes” column under “Carried Over to Plan Update.” Selecting this option indicates that the action will be included in the mitigation action

plan for this update. If you are carrying over an action to the update, **include a comment describing any action that has been taken or why the action was not taken** (specifically, any barriers or obstacles that prevented the action from moving forward or slowed progress). Leave the last column, “Action # in Update,” blank at this point. This will be filled in after completing the updated action plan in Phase 3.

Ensure that you have provided **a status and a comment for each action.**

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, all action items from your jurisdiction’s previous hazard mitigation plan that are marked as “Carried Over to Plan Update” will need to be included in the action plan.

THIS COMPLETES PHASE 1

PHASE 2 INSTRUCTIONS

CAPABILITY ASSESSMENT

Note that it is unlikely that one person will be able to complete all sections of the capability assessment alone. The primary preparer will likely need to reach out to other departments within the local government for information. It may be beneficial to provide these individuals with background information about this planning process, as input from them will be needed again during Phase 3 of the annex development.

Planning and Regulatory Capability

In the table titled “Planning and Regulatory Capability,” indicate “Yes” or “No” for each listed code, ordinance, requirement, or planning document in each of the following columns:

- **Local Authority**—Enter “Yes” if your jurisdiction has prepared or adopted the identified item; otherwise, enter “No.” If yes, then enter the code, ordinance number, or plan name and its date of adoption in the comment’s column. ***Note: If you enter yes, be sure to provide a comment with the appropriate code, ordinance or plan and date of adoption.***
- **Other Jurisdiction Authority**—Enter “Yes” if another agency (e.g., a state agency or special purpose district) enforces or administers the identified item in a way that may impact your jurisdiction or if any state or federal regulations or laws would prohibit local implementation of the identified item; otherwise, enter “No.” ***Note: If you enter yes, be sure to provide a comment indicating the other agency and its relevant authority.***
- **State Mandated**—Enter “Yes” if state laws or other requirements enable or require the listed item to be implemented at the local level; otherwise, enter “No.” ***Note: If you enter yes, be sure to provide a comment describing the relevant state mandate.***
- **Integration Opportunity**—Enter “Yes” if there are obvious ways that the code, ordinance, or plan can be coordinated with the hazard mitigation plan. Consider the following:
 - If you answered “Yes” in the Local Authority column for this item, then enter “Yes” for integration opportunity if any of the following are true:
 - The item already addresses hazards and their impacts and should be updated to reflect new information about risk from this hazard mitigation plan
 - The item does not address hazards and their impacts but is due for an update in the next 5 years and could be updated in a way that does address hazards and impacts
 - The item identifies projects for implementation, and these could be reviewed to determine if they can be modified to help address hazard mitigation goals
 - The item identifies projects for implementation and some of these should be considered for inclusion in the hazard mitigation action plan for your jurisdiction
 - If you answered “No” in the Local Authority column for this item, then enter “Yes” for integration opportunity if your jurisdiction will develop the item over the next 5 years

Note: Each capability with a “Yes” answer to Integration Opportunity will be discussed in more detail later in the annex. You may wish to keep notes when assessing the Integration Opportunity or review the “Integration with Other Planning Initiatives” section below.
- **Comments**—Enter the code number and adoption date for any local code indicated as being in place; provide other comments as appropriate to describe capabilities for each entry. **DO NOT OVERLOOK THIS STEP**

For the categories “General Plan” and “Capital Improvement Plan,” answer the specific questions shown, in addition to completing the four columns indicating level of capability.

Development and Permit Capability

Complete the table titled “Development and Permitting Capabilities.”

Fiscal Capability

Complete the table titled “Fiscal Capability” by indicating whether each of the listed financial resources is accessible to your jurisdiction. Enter “Yes” if the resource is fully accessible to your jurisdiction. Enter “No” if there are limitations or prerequisites that may hinder your use of this resource.

Administrative and Technical Capability

Complete the table titled “Administrative and Technical Capability” by indicating whether your jurisdiction has access to each of the listed personnel resources. Enter “Yes” or “No” in the column labeled “Available?”. If yes, then enter the department and position title. If you have contract support with these capabilities, you can still answer “Yes.” Indicate in the department row that this resource is provided through contract.

Education and Outreach Capability

Complete the table titled “Education and Outreach.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the above capability assessment tables and consider including actions to provide a capability that your jurisdiction does not currently have, update a capability that your jurisdiction does have, or implement an action that is recommended in an existing plan or program.

National Flood Insurance Program Compliance

Complete the table titled “National Flood Insurance Program Compliance.”

Community Classifications

Complete the table titled “Community Classifications” to indicate your jurisdiction’s participation in various national programs related to natural hazard mitigation. For each program enter “Yes” or “No” in the second column to indicate whether your jurisdiction participates. If yes, then enter the classification that your jurisdiction has earned under the program in the third column and the date on which that classification was issued in the fourth column; enter “N/A” in the third and fourth columns if your jurisdiction is not participating. If you do not know your current classification, information is available at the following websites:

- **Community Rating System**— <https://www.fema.gov/floodplain-management/community-rating-system>

- **Building Code Effectiveness Grading Schedule**— <https://www.isomitigation.com/bcegs/iso-s-building-code-effectiveness-grading-schedule-bcegs.html>
- **Public Protection Classification**— <https://www.isomitigation.com/ppc/>
- **Storm Ready**— <https://www.weather.gov/stormready/communities>
- **Firewise**— <http://www.firewise.org/usa-recognition-program/map-of-active-participants.aspx>

Adaptive Capacity for Climate Change

Consider climate change impact concerns such as the following:

- Reduced snowpack
- Increased wildfires
- Sea level rise
- Inland flooding
- Threats to sensitive species
- Loss in agricultural productivity
- Public health and safety.

With those impacts in mind, complete the table titled “Adaptive Capacity for Climate Change” by indicating your jurisdiction’s capacity for each listed criterion as follows:

- **High**—The capacity exists and is in use.
- **Medium**—The capacity may exist but is not used or could use some improvement.
- **Low**—The capacity does not exist or could use substantial improvement.
- **Unsure**—Not enough information is known to assign a rating.

This is a subjective assessment but providing a few words of explanation is useful. It is highly recommended that you complete this table with an internal planning team after reviewing the results of the other capability assessment tables.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the adaptive capacity criteria and consider including actions to improve the rating for those rated medium or low, to make use of the capacity for those rated high, or to acquire additional information for those rated unsure.

INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as general planning and capital facilities planning, and that relevant information from those sources is used in hazard mitigation. FEMA recommends integration as follows:

- Integrate hazard mitigation plan goals with community objectives (e.g. incorporate the goals for risk reduction and safety into the policies of other plans).
- Use the risk assessment to inform plans and policies (e.g. incorporate risk assessment findings into land use plans, site plan review, emergency operations plan).
- Implement mitigation actions through existing mechanisms (e.g. include mitigation projects in the capital improvement plan).
- Think about mitigation before and after a disaster (e.g. build recovery planning on existing mitigation plans and goals).

After reviewing the plans, programs and ordinances identified in the capability assessment tables, identify all plans and programs that have already been integrated with the hazard mitigation plan, and those that offer opportunities for future integration. The simplest way to do this is to review the Planning and Regulatory Capabilities table to see which items were marked as “Yes” under the Integration Opportunity column.

Existing Integration

In the highlighted bullet list, list items for which you entered “Yes” under the Integration Opportunity column of the “Planning and Regulatory Capability” table because the plan or ordinance already addresses potential impacts or includes specific projects that should be included as action items in the mitigation action plan. Consider listing items marked as Completed in the “Status of Previous Plan Actions” table if they were indicated as being ongoing actions. Provide a brief description of how the plan or ordinance is integrated. Examples are as follows:

- **Capital Improvement Plan**—The capital improvement plan includes projects that can help mitigate potential hazards. The City will act to ensure consistency between the hazard mitigation plan and the current and future capital improvement plans. The hazard mitigation plan may identify new possible funding sources for capital improvement projects and may result in modifications to proposed projects based on results of the risk assessment.
- **Building Code and Fire Code**—The City’s adoption of the 2016 California building, and fire codes incorporated local modifications to account for the climatic, topographic, and geographic conditions that exist in the City.
- **General Plan**—The general plan includes a Safety Element to protect the community from unreasonable risk by establishing policies and actions to avoid or minimize the following hazards:
 - Geologic and seismic hazards
 - Fire hazards
 - Hazardous materials
 - Flood control
 - Impacts from climate change.
- **Climate Action Plan**—The City’s Climate Action Plan includes projects for reducing greenhouse gas emissions and adapting to likely impacts of climate change. These projects were reviewed to identify cross-planning initiatives that serve both adaptation and mitigation objectives.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, any plans that fall into the “Existing Integration” category should be reviewed and elements from them should be included in the action plan as appropriate.

Opportunities for Future Integration

List any remaining items that say “Yes” in the Integration Opportunity column in the Planning and Regulatory Capabilities table and explain the process by which integration could occur. Examples follow:

- **Zoning Code**—The City is conducting a comprehensive update to its zoning code. Additional mitigation and abatement measures will be considered for incorporation into the code.
- **Capital Improvement Projects**—Capital improvement project proposals may take into consideration hazard mitigation potential as a means of evaluating project prioritization.
- **Post-Disaster Recovery Plan**—The City does not have a recovery plan and intends to develop one as a mitigation planning action during the next five years. The plan will build on the goals and objectives identified in the hazard mitigation plan.

After you have accounted for all items marked as “Yes” under the Integration Opportunity column, consider other programs you may have in place in your jurisdiction that include routine consideration and management of hazard risk. Examples of such programs may include tree pruning programs, right-of-way mowing programs, erosion control or stream maintenance programs, etc. Add any such programs to the integration discussion and provide a brief description of how these programs manage (or could be adapted to manage) risk from hazards.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, an action to integrate any identified “Opportunities for Future Integration” should be considered for inclusion in the action plan.

INFORMATION SOURCES USED FOR THIS ANNEX

Note that this section will ultimately describe all information sources used to develop this annex, but that only the sources used for Phases 1 and 2 will be listed at this point. Additional sources will be added with the preparation of the Phase 3 annex.

This section should describe what resources you used to complete the annex and how you used them. Several items are started for you but be sure to update and enhance any descriptions. Providing this information is a requirement to pass the state and FEMA review process.

THIS COMPLETES PHASE 2

PHASE 3 INSTRUCTIONS

RISK ASSESSMENT

Jurisdiction-Specific Natural Hazard Event History

In the table titled “Past Natural Hazard Events,” list in chronological order (most recent first) any natural hazard event that has caused damage to your jurisdiction. Include the date of the event and the estimated dollar amount of damage it caused. You are welcome to include any events, but special attention should be made to include major storms and federally declared disasters. Refer to the table below that lists hazard events in the planning area as recognized by the County, the state, and the federal government.

Table 1. Presidential Disaster Declarations for the Planning Area

[illegible]

We recommend including most large-scale disasters, unless you know that there were no impacts on your jurisdiction. Specifically, we recommend that you include these events if you have damage estimate information or can provide a brief description of impacts that occurred within your community. In addition to these events, refer to the NOAA storm events database included in the toolkit. We recommend conducting a search for the name of your jurisdiction in order to identify events with known impacts. Other potential sources of damage information include the following

- Preliminary damage estimates your jurisdiction filed with the county or state
- Insurance claims data
- Newspaper archives
- Emergency management documents (general plan safety element, emergency response plan, etc.)
- Resident input.

If you do not have estimates for costs of damage caused, list “Not Available” in the “Damage Assessment” column or list a brief description of the damage rather than a dollar value (e.g., Main Street closed as a result of flooding, downed trees and residential damage). Note that tracking such damage is a valid and useful mitigation action if your jurisdiction does not currently track such information.

Hazard Risk Ranking

Risk ranking identifies which hazards pose the greatest risk to the community, based on how likely it is for each hazard to occur (this is called the community’s exposure) and how great an impact each hazard will have if it does occur (this is called the community’s vulnerability). Every jurisdiction has differing degrees of risk exposure and vulnerability and therefore needs to rank risk for its own area. The risk ranking for each jurisdiction has been calculated in the “Loss Matrix” spreadsheet included in the annex preparation toolkit. Two sets of ranking are provided. One ranking is the base ranking that utilizes the raw percentage of population exposed to each hazard to rank the impacts to population. The second ranking uses the social vulnerability metrics established by FEMA’s National Risk Index (NRI) to add an equity lens to the impact on population factor for the risk ranking application. Those planning partners applying the equity lens option should utilize the “Social Equity Version” for risk ranking provided in the loss matrix. The ranking is on the basis of risk ranking scores for each hazard that were calculated based on the hazard’s probability of occurrence and its potential impact on people, property and the economy.

The results for your jurisdiction have already been entered into the “Hazard Risk Ranking” table in your Phase 3 annex template. The hazard with the highest risk rating is listed at the top of table and was given a rank of 1; the hazard with the second highest rating is listed second with a rank of 2; and so on. Two hazards with equal risk ranking scores were given the same rank. Hazards were assigned to “High,” Medium,” or “Low” risk categories based on the risk ranking score. If you wish to review the calculations in detail, the appendix at the end of these instructions describes the calculation methodology that the spreadsheet uses.

Review the hazard risk ranking information that is included in your annex. If these results differ from what you know based on substantiated data and documentation, you may alter the ranking and risk categories based on this knowledge. If you do so, indicate the reason for the change in your template. For example:

“Drought was ranked as low; however, the jurisdiction’s economy is heavily reliant on water-using industries, such as agriculture or manufacturing, so this hazard should be ranked as medium.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, you will need to have at least one mitigation action for each hazard ranked as “high” or “medium.”

Jurisdiction-Specific Vulnerabilities**Repetitive Loss Properties**

A repetitive loss property is any property for which FEMA has paid two or more flood insurance claims in excess of \$1,000 in any rolling 10-year period since 1978. In the space provided, the following information has been included in your annex based on data provided by FEMA:

- The number of any FEMA-identified repetitive-loss properties in your jurisdiction.
- The number of any FEMA-identified severe-repetitive-loss properties in your jurisdiction.
- The number (if any) of repetitive-loss or severe-repetitive-loss properties in your jurisdiction that have been mitigated. Mitigated for this exercise means that flood protection has been provided to the structure.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, if your jurisdiction has any repetitive loss properties, you should strongly consider including a mitigation action that addresses mitigating these properties.

Other Noted Vulnerabilities

Review the results of the risk assessment included in the toolkit, your jurisdiction’s natural events history, and any relevant public comments/input, then develop a few sentences that discuss specific hazard vulnerabilities. You do not need to develop a sentence for every hazard but identify a few issues you would like to highlight. Also list any known hazard vulnerabilities in your jurisdiction that may not be apparent from the risk assessment and other information provided.

Spending some time thinking about the results of the risk assessment and other noted vulnerabilities will be a big help in the development of your hazard mitigation action plan. The following are examples of vulnerabilities you could identify through this exercise:

- About 45 percent of the population lives in the 0.2 percent annual chance flood hazard area, where flood insurance is generally not required.
- A magnitude 7.5 earthquake on the Smithburg Fault is estimated to produce nearly 1 million tons of structure debris.
- Over the past 10 years, the jurisdiction has experienced more than \$6 million in damage from severe storm events.

- More than 50 buildings are located in areas that would be permanently inundated with 12 inches of sea level rise.
- The results of the public survey indicated that 40 percent of Smithburg residents would not be able to be self-sufficient for 5 days following a major event.
- An urban drainage issue at a specific location results in localized flooding every time it rains.
- One area of the community frequently loses power due to a lack of tree maintenance.
- A critical facility, such as a police station, is not equipped with a generator.
- A neighborhood has the potential to have ingress and egress cut off as the result of a flood or earthquake (e.g. a bridge is the only access).
- Substantial number of buildings in one area of the community are unreinforced masonry or soft-story construction.
- An area along the river is eroding and threatening public and/or private property.
- A large visitor population that may not be aware of tsunami risk.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, consider including actions to address the jurisdiction-specific vulnerabilities listed in this section.

HAZARD MITIGATION ACTION PLAN

Hazard Mitigation Action Plan Matrix

The hazard mitigation action plan is the heart of your jurisdictional annex. This is where you will identify the actions your jurisdiction would like to pursue with this plan.

Select Recommended Actions

All of the work that you have done thus far should provide you with ideas for actions. Throughout these instructions, green boxes labeled “Hazard Mitigation Action Plan Input” have indicated information that needs to be considered in the selection of mitigation actions. The following sections describe how to consider these and other information sources to develop a list of potential actions.

Be sure to consider the following factors in your selection of actions:

- Select actions that are consistent with the overall purpose, goals, and objectives of the hazard mitigation plan.
- Identify actions where benefits exceed costs.
- Include any action that your jurisdiction has committed to pursuing, regardless of eligibility from outside funding sources (grants, non-profit funding, donations, etc.).
- Know what is and is not eligible for funding under various federal programs (see the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table below).

Table 2. Federal Hazard Mitigation Grant Program Eligibility by Action Type

Eligible Activities	Hazard Mitigation Grant Program (HMGP)	Pre-Disaster Mitigation (PDM)	Flood Mitigation Assistance (FMA)
Mitigation Projects			
Property Acquisition and Structure Demolition	√	√	√
Property Acquisition and Structure Relocation	√	√	√
Structure Elevation	√	√	√
Mitigation Reconstruction	√	√	√
Dry Floodproofing of Historic Residential Structures	√	√	√
Dry Floodproofing of Non-residential Structures	√	√	√
Generators	√	√	
Localized Flood Risk Reduction Projects	√	√	√
Non-Localized Flood Risk Reduction Projects	√	√	
Structural Retrofitting of Existing Buildings	√	√	√
Non-structural Retrofitting of Existing Buildings and Facilities	√	√	√
Safe Room Construction	√	√	
Wind Retrofit for One- and Two-Family Residences	√	√	
Infrastructure Retrofit	√	√	√
Soil Stabilization	√	√	√
Wildland fire Mitigation	√	√	
Post-Disaster Code Enforcement	√		
Advance Assistance	√		
5 Percent Initiative Projects*	√		
Aquifer and Storage Recovery**	√	√	√
Flood Diversion and Storage**	√	√	√
Floodplain and Stream Restoration**	√	√	√
Green Infrastructure**	√	√	√
Miscellaneous/Other**	√	√	√
Hazard Mitigation Planning	√	√	√
Technical Assistance			√
Management Costs	√	√	√

* FEMA allows increasing the 5% initiative amount under the Hazard Mitigation Grant Program up to 10% for a presidential major disaster declaration. The additional 5% initiative funding can be used for activities that promote disaster-resistant codes for all hazards. As a condition of the award, either a disaster-resistant building code must be adopted, or an improved Building Code Effectiveness Grading Schedule is required.

** Indicates that any proposed action will be evaluated on its own merit against program requirements. Eligible projects will be approved provided funding is available.

Material Previously Developed for This Annex**Capability Assessment Section—Planning and Regulatory Capability Table, Fiscal Capability Table, Administrative and Technical Capability Table, Education and Outreach Table, and Community Classification Table**

Review these tables and consider the following:

- For any capability that you do not currently have, consider whether your jurisdiction should have this capability. If so, consider including an action to develop/acquire the capability.
- For any capability that you do currently have, consider whether this capability can be leveraged to increase or improve hazard mitigation in the jurisdiction.
- If any capabilities listed in the Planning and Regulatory Capabilities table have not been updated in more than 10 years, consider an action to review and update the capability and, as appropriate, incorporate hazard mitigation principles or information obtained in the risk assessment.
- Consider including actions that are identified in other plans and programs (capital improvement plans, strategic plans, etc.) as actions in this plan.

Capability Assessment Section—National Flood Insurance Program Compliance table

Review the table and consider the following:

- If you have no certified floodplain managers and you have flood risk, consider adding an action to provide key staff members with training to obtain certification.
- If your flood damage prevention was last updated in or before 2004, you should identify an action to update your ordinance to ensure it is compliant with current NFIP requirements.
- If you have any outstanding NFIP compliance issues, be sure to add an action to address them.
- If flood hazard maps do not adequately address the flood risk within your jurisdiction, consider actions to request new mapping or conduct studies.
- If you wish to begin to participate in CRS or you already to participate and would like to improve your classification, consider this as an action.
- If the number of flood insurance policies in your jurisdiction is low relative to the number of structures in the floodplain, consider an action that will promote flood insurance in your jurisdiction.

Capability Assessment Section— Adaptive Capacity for Climate Change Table

Consider your responses to this section:

- For criteria that you listed as medium or low, think of ways you could improve this rating (see adaptive capacity portion of the mitigation best practices catalog).
- For criteria you listed as high, think about how you can leverage this capacity to improve or enhance mitigation or continue to improve this capacity.
- For criteria that you were unable to provide responses for, consider ways you could improve your understanding of this capacity (see mitigation best practices and adaptive capacity catalog).

Integration Review Section

Review the items you identified in this section and consider an action that specifically says what the plan, code, ordinance etc. is and how it will be integrated. For items that address land use, include them in the prepopulated action in your template that reads as follows:

“Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions in the community, including _____.”

Risk Ranking Section

You must identify at least one mitigation action that is clearly defined and actionable (i.e. not a preparedness or response action) for every hazard that is categorized in the risk ranking as “high” or “medium” risk.

Jurisdiction-Specific Vulnerabilities Section

Review the vulnerability issues that you identified in this section and consider actions to address them (see mitigation best practices catalog). Two examples are shown in the table below.

Table 3. Example Actions to Address Jurisdiction-Specific Vulnerabilities

Noted Vulnerability	Example Mitigation Action
About 45 percent of the population lives in the 0.2 percent annual chance flood hazard area where flood insurance is generally not required.	Implement an annual public information initiative that targets residents in the 0.2 percent annual chance flood hazard area. Provide information on the availability of relatively low-cost flood insurance policies.
An urban drainage issue results in localized flooding every time it rains.	Replace undersized culverts that are contributing to localized flooding. Priority areas include: <ul style="list-style-type: none"> • The corner of Main Street and 1st Street • Old Oak subdivision.

Status of Previous Plan Actions Section

If your jurisdiction participated in a previous hazard mitigation plan, be sure to include any actions that were identified as “carry over” actions.

Other Sources

Mitigation Best Practices Catalog

A catalog that includes best practices identified by FEMA and other agencies, as well as recommendations from the steering committee and other stakeholders, is included in your toolkit. Review the catalog and identify actions your jurisdiction should consider for its action plan.

Public Input

Review input received during the process, specifically the public survey results included in your toolkit.

Common Actions for All Partners

The following six actions have been prepopulated in your annex template; **these six actions should be included in every annex and should not be removed**:

- Where appropriate, support retrofitting, purchase or relocation of structures located in high hazard areas, prioritizing those structures that have experienced repetitive losses and/or are located in high or medium ranked hazard.
- Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions within the community.
- Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan.
- Continue to maintain good standing and compliance under the NFIP through implementation of floodplain management programs that, at a minimum, meet the NFIP requirements:
 - Enforce the flood damage prevention ordinance.
 - Participate in floodplain identification and mapping updates.
 - Provide public assistance/information on floodplain requirements and impacts.
- Identify and pursue strategies to increase adaptive capacity to climate change.
- Purchase generators for critical facilities and infrastructure that lack adequate back-up power.

In addition, the core planning team recommends that every planning partner strongly consider the following actions:

- Develop and implement a program to capture perishable data after significant events (e.g. high-water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan.
- Support the County-wide initiatives identified in Volume I of the hazard mitigation plan.
- Develop a post-disaster recovery plan and a debris management plan.
- Develop and/or update plans that support or enhance continuity of operations following disasters.

The specifics of all these common actions should be adjusted as needed for the particulars of each community.

Complete the Table

Complete the table titled “Hazard Mitigation Action Plan Matrix” for all the actions you have identified and would like to include in the plan:

- Enter the action number (see box on next page) and description. **If the action is carried over from your previous hazard mitigation plan, return to the “Status of Previous Plan Actions” table you completed in Phase 1 and enter the new action number in the column labeled “Action # in Update.”**
- Indicate whether the action mitigates hazards for new and/or existing assets.
- Identify the specific hazards the action will mitigate (note: you must list each hazard by name; simply indicating “all hazards” is not deemed acceptable).
- Identify by number the mitigation plan objectives that the action addresses (see toolkit).
- Indicate who will be the lead in administering the action. This will most likely be a department within your jurisdiction (e.g. planning or public works). If you wish to indicate more than one department as responsible for the action, clearly identify one as the lead agency and list the others in the “supporting agency” column.

- Enter an estimated cost in dollars if known; otherwise, enter “High,” “Medium,” or “Low,” as determined for the prioritization process described in the following section.
- Identify funding sources for the action. If it is a grant, include the grant-providing agency as well as funding sources for any required cost share. If it is another outside funding source such as a non-profit funding source or a donation, include the source and any requirements for receiving the funding. Refer to your fiscal capability assessment to identify possible sources of funding and refer to the table on page 17 of these instructions for project eligibility for FEMA’s hazard mitigation assistance grant programs.
- Indicate the timeline as “short-term” (1 to 5 years) or “long-term” (5 years or greater) or “ongoing” (a continual program)

Mitigation Action Priority

Complete the information in the table titled “Mitigation Action Priority” as follows:

- **Action #**—Indicate the action number from the Hazard Mitigation Action Plan Matrix table.
- **# of Objectives Met**—Enter the number of objectives the action will meet.
- **Benefits**—Enter “High,” “Medium” or “Low” as follows:
 - High—Action will provide an immediate reduction of risk exposure for life and property.
 - Medium—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - Low—Long-term benefits of the action are difficult to quantify in the short term.
- **Cost**—Enter “High,” “Medium” or “Low” as follows:
 - High—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, outside funding sources, bonds, grants, and fee increases).

Action Numbering

Actions are to be numbered using the three-letter code for your jurisdiction shown below, followed by a hyphen and the action’s sequential number:

- San Mateo County—SMC-1, SMC-2...
- Atherton City—ATH-1, ATH-2...
- Belmont City—BEL-1, BEL-2...
- Brisbane City—BRS-1, BRS-2...
- Burlingame City—BRL-1, BRL-2...
- Colma City—CLM-1, CLM-2...
- Daly City—DLY-1, DLY-2...
- East Palo Alto City—EPA-1, EPA-2...
- Foster City—FOS-1, FOS-2...
- Half Moon Bay City—HMB-1, HMB-2...
- Hillsborough City—HLS-1, HLS-2...
- Menlo Park City—MPK-1, MPK-2...
- Millbrae City—MLB-1, MLB-2...
- Pacifica City—PAC-1, PAC-2...
- Portola Valley City—PTV-1, PTV-2...
- Redwood City—RDW-1, RDW-2...
- San Bruno City—SBR-1, SBR-2...
- San Carlos City—SCR-1, SCR-2...
- San Mateo City—SMT-1, SMT-2...
- South San Francisco City—SSF-1, SSF-2...
- Woodside City—WDS-1, WDS-2...
- Coastside Water —CSW-1, CSW-2...
- Colma Fire —CFD-1, CFD-2...
- Flood & Sea Level —FSL-1, FSL-2...
- Harbor District —HRB-1, HBR-2
- Highland Recreational —HLD-1, HLD-2...
- Jefferson Union HS —JEF-1, JEF-2...
- Menlo Park Fire —MPF-1, MPF-2...
- Mid-Pen Reg Open Space District —MPR-1, MPR-2...
- Mid-Peninsula Water —MPW-1, MPW-2...
- Montara Water & Sewer —MWS-1, MWS-2...
- North Coast Water —NCW-1, NCW-2...
- Office of Education —OED-1, OED-2...
- San Mateo Community College —SCC-1, SCC-2...
- San Mateo RCD —SRC-1, SRC-2...
- Westborough Water —WBW-1, WBW-2...
- Woodside Fire —WFD-1, WFD-2...

- Medium—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.
 - Low—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- **Do Benefits Exceed the Cost?**—Enter “Yes” or “No.” This is a qualitative assessment. Enter “Yes” if the benefit rating (high, medium, or low) is the same as or higher than the cost rating (high benefit/high cost; high benefit/medium cost; medium benefit/low cost; etc.). Enter “No” if the benefit rating is lower than the cost rating (medium benefit/high cost, low benefit/medium cost; etc.)
 - **Is the Action Eligible for Outside Funding Sources?**—Enter “Yes” or “No.” For grant funding, refer to the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table on page 17 of these instructions.
 - **Can Action Be Funded Under Existing Program Budgets?**—Enter “Yes” or “No.” In other words, is this action currently budgeted for, or would it require a new budget authorization or funding from another outside source such as grants, non-profit funding, or donations?
 - **Implementation Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
 - Medium Priority—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years) once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
 - Low Priority—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known outside funding sources. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for outside funding from programs that have not yet been identified.
 - **Outside Funding Source Pursuit Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets identified outside funding source eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible to be funded by outside sources.
 - Medium Priority—An action that meets identified outside funding source eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
 - Low Priority—An action that has not been identified as meeting any outside funding source eligibility requirements.

Actions identified as high-outside-funding-pursuit priority actions should be closely reviewed for consideration when outside funding source opportunities arise.

- **Equity Lens Priority**- Enter “High,” “Medium” or “Low” as follows:
 - High Priority—The mitigation action is designed to reduce harm to multiple socially vulnerable groups in the County from one or more of the hazards identified in the LHMP.
 - Medium Priority— The mitigation action is designed to reduce harm to a single socially vulnerable population in the County from at least one hazard identified in the LHMP.

- **Low Priority**—The mitigation action fails to advance social equity in any measurable way in the County

An equity screening tool has been provided in **Appendix B** to these instructions that can be utilized to screen each action to help prioritize each action to the above criteria. The screening of each action using this tool is considered to be optional and not required for jurisdictions applying the equity lens to their action plan prioritization scheme.

Note: If a jurisdiction wishes to identify an action as high priority that is outside of the prioritization scheme for high priorities, a note indicating so should be inserted and a rationale should be provided.

Analysis of Mitigation Actions

In the table titled “Analysis of Mitigation Actions,” for each combination of hazard type and mitigation type, enter the numbers of all recommended actions that address that hazard type and can be categorized as that mitigation type. The mitigation types are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education & Awareness**—Actions to inform residents and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.
- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.
- **Climate Resilience**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea-level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff training, memorandums of understanding, development of plans and studies, and monitoring programs.

This exercise demonstrates that the jurisdiction has selected a comprehensive range of actions. This table must show at least one action to address each “high” and “medium” ranked hazard. Planning partners should aim to identify at least one action for each mitigation type, but this is not required.

An example of a completed “Analysis of Mitigation Actions” table is provided below. Note that an action can be more than one mitigation type.

Sample Completed Table – Analysis of Mitigation Actions

Hazard Type	Action Addressing Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education & Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resilience	Community Capacity Building
High-Risk Hazards								
Dam Failure	EX-2, 3, 4, 5, 6	EX-1, 6	EX-4, 6		EX-8, 11			EX-3, 4, 8, 9, 10
Drought	EX-2	EX-1	EX-4					EX-3, 4, 8, 9, 10
Medium-Risk Hazards								
Earthquake	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9
Flooding	EX-2, 3, 4, 5, 6, 7	EX-1, 6, 7	EX-4, 6	EX-9	EX-8, 11	EX-6		EX-3, 4, 8, 9, 10
Landslide	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9, 10
Low-Risk Hazards								
Severe Weather	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4		EX-8, 9, 11		EX-8, 7	EX-3, 4, 8, 9, 10
Wildfire	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4, 9	EX-9	EX-8, 11			EX-3, 4, 8, 9, 10

PUBLIC OUTREACH

FEMA requirements for public outreach will be met by the County’s engagement efforts and are included in the main part of the plan. These may include public meetings, a StoryMap, surveys, etc. If individual jurisdictions want to have a more robust outreach for their local community, the public outreach table in each annex may be used to memorialize those local efforts.

This table should record local public outreach efforts made by your jurisdiction to inform the community of the plan update process. Examples may include local surveys on hazard awareness/preparedness, social media blasts, press releases, and outreach to local groups (CERT, senior citizen organizations, etc.) **This section is optional.**

INFORMATION SOURCES USED FOR THIS ANNEX

This section should describe what resources you used to complete the annex and how you used them. The sources used for Phases 1 and 2 should have been entered previously. List any additional sources used for the preparation of the Phase 3 annex. Review to ensure that all materials used in all three phases are identified. Providing this information is a requirement to pass the state and FEMA review process.

FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

In this section, identify any future studies, analyses, reports, or surveys your jurisdiction needs to better understand its vulnerability to identified or currently unidentified risks. These could be needs based on federal or state agency mandates. **This section is optional.**

ADDITIONAL COMMENTS

Use this section to add any additional information pertinent to hazard mitigation and your jurisdiction not covered in this template. **This section is optional.**

THIS COMPLETES PHASE 3

APPENDIX A— Risk Ranking Calculation Methodology

The instructions below describe the methodology for how risk rankings were derived in the “Loss Matrix” spreadsheet provided with the annex preparation toolkit. The risk-ranking for each hazard assessed its probability of occurrence and its potential impact on people, property, and the economy. Refer to the Loss Matrix spreadsheet in order to follow along.

Probability of Occurrence

A probability factor is assigned based on how often a hazard is likely to occur. The probability of occurrence of a hazard event is generally based on past hazard events in an area, although weight can be given to expected future probability of occurrence based on established return intervals and changing climate conditions. For example, if your jurisdiction has experienced two damaging floods in the last 25 years, the probability of occurrence is high for flooding and scores a 3 under this category. If your jurisdiction has experienced no damage from landslides in the last 100 years, your probability of occurrence for landslide is low, and scores a 1 under this category. Each hazard was assigned a probability factor as follows:

- High—Hazard event is likely to occur within 25 years (Probability Factor = 3)
- Medium—Hazard event is likely to occur within 100 years (Probability Factor = 2)
- Low—Hazard event is not likely to occur within 100 years (Probability Factor = 1)
- None—There is no exposure to the hazard and no probability of occurrence (Probability Factor = 0)

Potential Impacts of Each Hazard

The impact of each hazard is divided into three categories: impacts on people, impacts on property, and impacts on the economy. These categories are also assigned weighted values. Impact on people was assigned a weighting factor of 3, impact on property was assigned a weighting factor of 2 and impact on the economy was assigned a weighting factor of 1.

Impact factors for each category (people, property, economy) are described below:

- **People**—Values for the impact on people is based on the percentage of the population in each of the five (5) classifications for social vulnerability from the National Risk Index (NRI). Values are assigned based on the percentage of the total *population exposed* to the hazard event. The degree of impact on individuals will vary and is not measurable, so the calculation assumes for simplicity and consistency that all people exposed to a hazard because they live in a hazard zone will be equally impacted when a hazard event occurs. Impact factors were assigned as follows:
 - Very High—15 percent or more of the population is exposed to a hazard (Impact Factor = 5), less than 15% of the population exposed to a hazard (impact factor =4)
 - Relatively High—25 percent or more of the population is exposed to a hazard (Impact Factor = 4), less than 25 percent of the population exposed to a hazard (Impact Factor = 3).
 - Relatively Moderate—35 percent or more of the population is exposed to the hazard (Impact Factor = 3), less than 35 percent of the population exposed (Impact Factor =2).
 - Relatively Low—50 percent or more of the population is exposed to a hazard (Impact Factor = 2), less than 50 percent of the population exposed to a hazard (Impact Factor =1)
 - Very Low—75 percent or more of the population exposed to a hazard (Impact Factor =1), less than 75 percent of the population exposed (Impact Factor = 0).
 - No impact— No population exposed to the hazard.

The impact factors are additive. There could be multiple levels of exposure for each hazard under the five NRI social vulnerability indices. Please note that if 0 to 74 percent of the population is exposed to the “very low” classification, the risk ranking score will default to the base-line risk ranking score (Ranking result for the without equity lens option in the loss matrix).

- **Property**—Values are assigned based on the percentage of the total *property value exposed* to the hazard event:
 - High—25 percent or more of the total replacement value is exposed to a hazard (Impact Factor = 3)
 - Medium—10 percent to 24 percent of the total replacement value is exposed to a hazard (Impact Factor = 2)
 - Low—9 percent or less of the total replacement value is exposed to the hazard (Impact Factor = 1)
 - No impact—None of the total replacement value is exposed to a hazard (Impact Factor = 0)
- **Economy**—Values were assigned based on the percentage of the total *property value vulnerable* to the hazard event. Values represent estimates of the loss from a major event of each hazard in comparison to the total replacement value of the property exposed to the hazard. For some hazards, such as wildland fire and landslide, vulnerability may be considered to be the same or a portion of exposure due to the lack of loss estimation tools specific to those hazards.
 - High—Estimated loss from the hazard is 10 percent or more of the total replacement value (Impact Factor = 3)
 - Medium—Estimated loss from the hazard is 5 percent to 9 percent of the total replacement value (Impact Factor = 2)
 - Low—Estimated loss from the hazard is 4 percent or less of the total replacement value (Impact Factor = 1)
 - No impact—No loss is estimated from the hazard (Impact Factor = 0).

Impacts on People

The percent of the total population exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **green highlighted column**. For those hazards that do not have a defined extent and location the entire population or a portion of the population is considered to be exposed, depending on the hazard. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all people in the planning area would be exposed to drought, but impacts to the health and safety of individuals are expected to be minimal.

Impacts on Property

The percent of the total value exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **blue highlighted column**. For those hazards that do not have a defined extent and location (e.g. severe weather) the entire building stock is generally considered to be exposed. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all structures in the planning area would be exposed to drought but impacts to structures are expected to be minimal.

Impacts on the Economy

The loss estimates for each hazard of concern that was modeled (i.e. dam failure, flood, earthquake) can be found in the loss estimate matrix in the **orange highlighted column**. For those hazards that have a defined extent and location, but do not have modelled loss results, loss estimates can be the same as exposure or a portion thereof. For example, a large percentage of the building stock may be exposed to landslide or wildland fire risk, but it would not be expected that one event that resulted in loss to all exposed structures would occur. For those hazards that do not have a defined extent and location, exposure is based on the hazard type.

Risk Rating for Each Hazard

A risk rating for each hazard was determined by multiplying the assigned probability factor by the sum of the weighted impact factors for people, property, and the economy:

$$\text{Risk Rating} = \text{Probability Factor} \times \text{Weighted Impact Factor \{people + property + economy\}}$$

This is the number that is shown in the risk ranking table in your template. Generally, score of 30 or greater receive a “high” rating, score between 15 and 30 receive a “medium” rating, and score of less than 15 receives a “low” rating.

APPENDIX B— Equity Lens Screening Tool

	Procedural	Distributive	Structural
Programs/ Services	How was the target audience included in the design of the program? What actions will be taken to ensure that services and programs are physically and programmatically accessible and inclusive? What are the criteria for participation or receipt of benefits?	Is the program or service designed to meet the needs of underserved and underrepresented communities? If not, what would need to be changed to ensure their equitable participation? How will program dollars be allocated to ensure inclusive and accessible service delivery? Does the cost structure of the program result in disparate use? /Does the fee structure of the service result in increased burdens for low-income communities?	Does this program/service create unintended consequences for communities that are underserved and underrepresented? How will they be mitigated? Is there an opportunity to extend additional benefits through this program/service that can help support the healing of past harms to communities? Does the program empower and build capacity of a community?
Capital Investments	What are the criteria for prioritizing projects and investments? Does the data and information used consider the demographic, geographic and real-world experience of residents and businesses in the area? If data gaps exist, what are you using to guide decisions? What process will be used to get input from the community? How will you reach underserved populations?	Will the investment provide improved safety, health, access, or opportunity for the communities who need it most? How will the underserved people who currently live and work in the area benefit from the investment?	What measures will be taken to mitigate the potential impacts of involuntary displacement in the project? How will business or employment opportunity created through the project be extended to communities of color, people with disabilities, and low-income people? How will community benefits be negotiated?
Regulation	Has analysis been done on the impacts to communities of color, people with disabilities, low-income populations, seniors, children, renters, and other historically underserved or excluded groups? How will impacted communities be able to learn about and understand changes with the regulation? How will the regulation be enforced?	Will the regulation provide improved safety, health, access, or opportunity for the communities who need it most? How will the regulation alleviate any cost-burden for those who are already in a position where it is difficult to pay?	Does the regulation create or inhibit opportunity for communities of color, people with disabilities, and low-income populations? Will enforcement disproportionately negatively affect low-income communities or communities of color? How will this be mitigated?
Planning	How will impacted communities be involved in the planning process? What measures will be taken to ensure the process is fair and inclusive?	How does the plan prioritize and address the needs of the most impacted or vulnerable in the community? Does the plan improve safety, health, access, or opportunity for the communities who need it most? How will resources shift to ensure equitable implementation of the plan?	What measures will be taken to mitigate the potential impacts of involuntary displacement? How will policies support community development? What support is needed to build the community's ownership and self-determination with the plan?

- Procedural equity—ensuring that processes are fair and inclusive in the development and implementation of any program or policy
- Distributive equity—ensuring that resources or benefits and burdens of a policy or program are distributed fairly, prioritizing those with highest need first.
- Structural equity—a commitment and action to correct past harms and prevent future negative consequences by institutionalizing accountability and decision-making structures that aim to sustain positive outcomes

Table 2.0. Equity Screening Question Matrix

Evaluation Question	Response
1. What issue/problem/risk is the action designed to address? And what are the expected benefits?	Issue: Benefits:
2. Who is the target audience/beneficiary for this action? Who is affected if no action is taken?	
3. How would you classify the mitigation action? (Programs/Service; Capital Investment; Regulation; Planning). <i>Refer to questions in table above based on your answer to this question.</i>	
4. Will any community groups be involved in the design/implementation of this action? (i.e. potential partners)	
5. Will this action reduce risk from natural hazards for the following groups? How?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
6. How could this action benefit the following groups? Or How could this action be modified so that there are benefits?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
7. How could this action burden/negatively impact/leave out the following groups, for example through communication, transportation, physical or programmatic barriers?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
8. If you have identified burdens, barriers, or negative impacts, or opportunities for benefits please <u>revisit the action</u> to identify strategies to reduce or eliminate burdens or negative impacts; remove communication, transportation, physical or programmatic barriers; or enhance potential benefits.	
9. Have you identified a performance metric for evaluating progress on this action? How will you know when this action is complete? (please provide) Have you considered outcomes for communities of color, people with disabilities, low-income families, people with limited English proficiency, renters, seniors, and children?	

**ANNEX TEMPLATE FOR CITIES
AND COUNTY**

1. JURISDICTION NAME

1.1 LOCAL HAZARD MITIGATION PLANNING TEAM

Primary Point of Contact

Name, Title

Street Address

City, State ZIP

Telephone: xxx-xxx-xxxx

e-mail Address: xxx@xxx.xxx

Alternate Point of Contact

Name, Title

Street Address

City, State ZIP

Telephone: xxx-xxx-xxxx

e-mail Address: xxx@xxx.xxx

This annex was developed by the local hazard mitigation planning team, whose members are listed in Table 1-1.

Table 1-1. Local Hazard Mitigation Planning Team Members

Name	Title

1.2 JURISDICTION PROFILE

1.2.1 Location and Features

[jurisdiction name] is in [general location description]

The current boundaries generally extend from [describe], encompassing an area of [area in square miles].

[general description of key features]

1.2.2 History

[jurisdiction name] was incorporated in [date]. [brief historical summary]

1.2.3 Governing Body Format

[general description].

The [name of adopting body] assumes responsibility for the adoption of this plan; [name of oversight agency] will oversee its implementation.

1.3 CURRENT TRENDS

1.3.1 Population

According to [identify data source], the population of [jurisdiction name] as of [month year] was [population]. Since [year], the population has grown at an average annual rate of [number] percent.

1.3.2 Development

DESCRIBE TRENDS IN GENERAL.

Identifying previous and future development trends is achieved through a comprehensive review of permitting since completion of the previous plan and in anticipation of future development. Tracking previous and future growth in potential hazard areas provides an overview of increased exposure to a hazard within a community. Table 1-2 summarizes development trends in the performance period since the preparation of the previous hazard mitigation plan, as well as expected future development trends.

Table 1-2. Recent and Expected Future Development Trends

Criterion	Response																														
Has your jurisdiction annexed any land since the preparation of the previous hazard mitigation plan? <i>If yes, give the estimated area annexed and estimated number of parcels or structures.</i>	Yes/No																														
Is your jurisdiction expected to annex any areas during the performance period of this plan? <i>If yes, describe land areas and dominant uses.</i> <i>If yes, who currently has permitting authority over these areas?</i>	Yes/No																														
Are any areas targeted for development or major redevelopment in the next five years? <i>If yes, briefly describe, including whether any of the areas are in known hazard risk areas</i>	Yes/No																														
How many permits for new construction were issued in your jurisdiction since the preparation of the previous hazard mitigation plan?	<table><tr><th></th><th>2016</th><th>2017</th><th>2018</th><th>2019</th><th>2020</th></tr><tr><td>Single Family</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Multi-Family</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Other</td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Total</td><td></td><td></td><td></td><td></td><td></td></tr></table>		2016	2017	2018	2019	2020	Single Family						Multi-Family						Other						Total					
	2016	2017	2018	2019	2020																										
Single Family																															
Multi-Family																															
Other																															
Total																															
Provide the number of new-construction permits for each hazard area or provide a qualitative description of where development has occurred.	<ul style="list-style-type: none">• Special Flood Hazard Areas: #• Landslide: #• High Liquefaction Areas: #• Tsunami Inundation Area: #• Wildfire Risk Areas: #																														

Criterion	Response
Describe the level of buildout in the jurisdiction, based on your jurisdiction's buildable lands inventory. If no such inventory exists, provide a qualitative description.	

1.4 CAPABILITY ASSESSMENT

This section describes an assessment of existing capabilities for implementing hazard mitigation strategies. The introduction at the beginning of this volume of the hazard mitigation plan describes the components included in the capability assessment and their significance for hazard mitigation planning.

Findings of the capability assessment were reviewed to identify opportunities to expand, initiate or integrate capabilities to further hazard mitigation goals and objectives. Where such opportunities were identified and determined to be feasible, they are included in the action plan. The “Analysis of Mitigation Actions” table in this annex identifies these as community capacity building mitigation actions. The findings of the assessment are presented as follows:

- An assessment of planning and regulatory capabilities is presented in Table 1-3.
- Development and permitting capabilities are presented in Table 1-4.
- An assessment of fiscal capabilities is presented in Table 1-5.
- An assessment of administrative and technical capabilities is presented in Table 1-6.
- An assessment of education and outreach capabilities is presented in Table 1-7.
- Information on National Flood Insurance Program (NFIP) compliance is presented in Table 1-8.
- Classifications under various community mitigation programs are presented in Table 1-9.
- The community's adaptive capacity for the impacts of climate change is presented in Table 1-10.

If Yes, Department /Position: Enter Response	
Grant writers	Yes/No
If Yes, Department /Position: Enter Response	
Other	Yes/No
If Yes, Department /Position: Enter Response	

Table 1-7. Education and Outreach Capability

Criterion	Response
Do you have a public information officer or communications office?	Yes/No
Do you have personnel skilled or trained in website development?	Yes/No
Do you have hazard mitigation information available on your website? <i>If yes, briefly describe:</i> Enter Response	Yes/No
Do you use social media for hazard mitigation education and outreach? <i>If yes, briefly describe:</i> Enter Response	Yes/No
Do you have any citizen boards or commissions that address issues related to hazard mitigation? <i>If yes, briefly describe:</i> Enter Response	Yes/No
Do you have any other programs in place that could be used to communicate hazard-related information? <i>If yes, briefly describe:</i> Enter Response	Yes/No
Do you have any established warning systems for hazard events? <i>If yes, briefly describe:</i> Enter Response	Yes/No

Table 1-8. National Flood Insurance Program Compliance

Criterion	Response
What local department is responsible for floodplain management?	Enter Response
Who is your floodplain administrator? (department/position)	Enter Response
Are any certified floodplain managers on staff in your jurisdiction?	Yes/No
What is the date that your flood damage prevention ordinance was last amended?	Enter Response
Does your floodplain management program meet or exceed minimum requirements? <i>If exceeds, in what ways?</i> Enter Response	Meets/Exceeds
When was the most recent Community Assistance Visit or Community Assistance Contact?	Enter Response
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? <i>If so, state what they are.</i> Enter Response	Yes/No
Are any RiskMAP projects currently underway in your jurisdiction? <i>If so, state what they are.</i> Enter Response	Yes/No
Do your flood hazard maps adequately address the flood risk within your jurisdiction? <i>If no, state why.</i> Enter Response	Yes/No
Does your floodplain management staff need any assistance or training to support its floodplain management program? <i>If so, what type of assistance/training is needed?</i> Enter Response	Yes/No
Does your jurisdiction participate in the Community Rating System (CRS)? <i>If yes, is your jurisdiction interested in improving its CRS Classification?</i> Yes/No <i>If no, is your jurisdiction interested in joining the CRS program?</i> Yes/No	Yes/No
How many flood insurance policies are in force in your jurisdiction? ^a <i>What is the insurance in force?</i> \$ <input type="text"/> <i>What is the premium in force?</i> \$ <input type="text"/>	Enter Response

Criterion	Response
How many total loss claims have been filed in your jurisdiction? ^a	Enter Response
How many claims are still open or were closed without payment?	Enter Response
What were the total payments for losses? \$	
a. According to FEMA statistics as of MONTH XX, 20XX	

Table 1-9. Community Classifications

	Participating?	Classification	Date Classified
FIPS Code	Yes/No		Date
DUNS #	Yes/No		Date

Tsunami Ready	Yes/No		Date

Table 1-10. Adaptive Capacity for Climate Change

Criterion	Jurisdiction Rating ^a
Technical Capacity	
Jurisdiction-level understanding of potential climate change impacts	High/Medium/Low
Comment: Enter Comment	
Jurisdiction-level monitoring of climate change impacts	High/Medium/Low
Comment: Enter Comment	
Technical resources to assess proposed strategies for feasibility and externalities	High/Medium/Low
Comment: Enter Comment	
Jurisdiction-level capacity for development of greenhouse gas emissions inventory	High/Medium/Low
Comment: Enter Comment	
Capital planning and land use decisions informed by potential climate impacts	High/Medium/Low
Comment: Enter Comment	
Participation in regional groups addressing climate risks	High/Medium/Low
Comment: Enter Comment	
Implementation Capacity	
Clear authority/mandate to consider climate change impacts during public decision-making processes	High/Medium/Low
Comment: Enter Comment	
Identified strategies for greenhouse gas mitigation efforts	High/Medium/Low
Comment: Enter Comment	
Identified strategies for adaptation to impacts	High/Medium/Low
Comment: Enter Comment	
Champions for climate action in local government departments	High/Medium/Low
Comment: Enter Comment	

Criterion	Jurisdiction Rating ^a
Political support for implementing climate change adaptation strategies <i>Comment:</i> Enter Comment	High/Medium/Low
Financial resources devoted to climate change adaptation <i>Comment:</i> Enter Comment	High/Medium/Low
Local authority over sectors likely to be negative impacted <i>Comment:</i> Enter Comment	High/Medium/Low
Public Capacity	
Local residents knowledge of and understanding of climate risk <i>Comment:</i> Enter Comment	High/Medium/Low
Local residents support of adaptation efforts <i>Comment:</i> Enter Comment	High/Medium/Low
Local residents' capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Local economy current capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Local ecosystems capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low

- a. High = Capacity exists and is in use; Medium = Capacity may exist, but is not used or could use some improvement; Low = Capacity does not exist or could use substantial improvement; Unsure= Not enough information is known to assign a rating.

1.5 INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as general planning and capital facilities planning, and that relevant information from those sources is used in hazard mitigation. This section identifies where such integration is already in place, and where there are opportunities for further integration in the future. Resources listed at the end of this annex were used to provide information on integration. The progress reporting process described in Volume 1 of the hazard mitigation plan will document the progress of hazard mitigation actions related to integration and identify new opportunities for integration.

1.5.1 Existing Integration

Some level of integration has already been established between local hazard mitigation planning and the following other local plans and programs:

- **Plan or Program Name**—Description
- **Plan or Program Name**—Description
- **Plan or Program Name**—Description
- **Plan or Program Name**—Description
- **Plan or Program Name**—Description

1.5.2 Opportunities for Future Integration

The capability assessment presented in this annex indicates opportunities to integrate this mitigation plan with other jurisdictional planning/regulatory capabilities. Capabilities were identified as integration opportunities if they can support or enhance the actions identified in this plan or be supported or enhanced by components of this plan. The capability assessment identified the following plans and programs that do not currently integrate hazard mitigation information but provide opportunities to do so in the future:

- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description

Taking action to integrate each of these programs with the hazard mitigation plan was considered as a mitigation action to include in the action plan presented in this annex.

1.6 RISK ASSESSMENT

1.6.1 Jurisdiction-Specific Natural Hazard Event History

Table 1-11 lists past occurrences of natural hazards for which specific damage was recorded in this jurisdiction. Other hazard events that broadly affected the entire planning area, including this jurisdiction, are listed in the risk assessments in Volume 1 of this hazard mitigation plan.

Table 1-11. Past Natural Hazard Events

Insert event type		Date	\$
Insert event type		Date	\$
Insert event type		Date	\$

1.6.2 Hazard Risk Ranking

Table 1-12 presents a local ranking of all hazards of concern for which this hazard mitigation plan provides complete risk assessments. As described in detail in Volume 1, the ranking process involves an assessment of the likelihood of occurrence for each hazard, along with its potential impacts on people, property and the economy. Mitigation actions target hazards with high and medium rankings.

Table 1-12. Hazard Risk Ranking

Rank	Hazard	Risk Ranking Score	Risk Category
1			High/Medium/Low
2			High/Medium/Low
3			High/Medium/Low
4			High/Medium/Low
5			High/Medium/Low
6			High/Medium/Low
7			High/Medium/Low
8			High/Medium/Low
9			High/Medium/Low

1.6.3 Jurisdiction-Specific Vulnerabilities

Volume 1 of this hazard mitigation plan provides complete risk assessments for each identified hazard of concern. This section provides information on a few key vulnerabilities for this jurisdiction. Available jurisdiction-specific risk maps of the hazards are provided at the end of this annex.

Repetitive Loss Properties

Repetitive loss records are as follows:

- Number of FEMA-identified Repetitive-Loss Properties: XX
- Number of FEMA-identified Severe-Repetitive-Loss Properties: XX
- Number of Repetitive-Loss Properties or Severe-Repetitive-Loss Properties that have been mitigated: XX

Other Noted Vulnerabilities

The following jurisdiction-specific issues have been identified based on a review of the results of the risk assessment, public involvement strategy, and other available resources:

- Insert as appropriate.
- Insert as appropriate.
- Insert as appropriate.

Mitigation actions addressing these issues were prioritized for consideration in the action plan presented in this annex.

1.7 STATUS OF PREVIOUS PLAN ACTIONS

If your jurisdiction has no previous hazard mitigation plan, please enter an “X” in the box at right and do not complete this section.

Table 1-13 summarizes the actions that were recommended in the previous version of the hazard mitigation plan and their implementation status at the time this update was prepared.

1.8 HAZARD MITIGATION ACTION PLAN

Table 1-14 lists the identified actions, which make up the hazard mitigation action plan for this jurisdiction. Table 1-15 identifies the priority for each action. Table 1-16 summarizes the mitigation actions by hazard of concern and mitigation type.

Table 1-14. Hazard Mitigation Action Plan Matrix

Benefits New or Existing Assets	Objectives Met	Lead Agency	Support Agency	Estimated Cost	Sources of Funding	Timeline ^a
Action xxx-1 —Where appropriate, support retrofitting, purchase or relocation of structures located in hazard areas, prioritizing those that have experienced repetitive losses and/or are located in high- or medium-risk hazard areas. <i>Hazards Mitigated:</i> Enter Response						
Existing	Enter Response	Enter Response	Enter Response	High	HMGP, PDM, FMA	Short-term
Action xxx-2 —Integrate the hazard mitigation plan into other plans, ordinances and programs that dictate land use decisions in the community, including [REDACTED] <i>Hazards Mitigated:</i> Enter Response						
New & Existing	Enter Response	Enter Response	Enter Response	Low	Staff Time, General Funds	Ongoing
Action xxx-3 —Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan. <i>Hazards Mitigated:</i> Enter Response						
New & Existing	Enter Response	Enter Response	Enter Response	Low	Staff Time, General Funds	Short-term
Action xxx-4 —Continue to maintain good standing and compliance under the NFIP through implementation of floodplain management programs that, at a minimum, meet the NFIP requirements: <ul style="list-style-type: none"> Enforce the flood damage prevention ordinance. Participate in floodplain identification and mapping updates. Provide public assistance/information on floodplain requirements and impacts. <i>Hazards Mitigated:</i> Enter Response						
New & Existing	Enter Response	Enter Response	Enter Response	Low	Staff Time, General Funds	Ongoing

Table 1-17. Local Public Outreach		
Local Outreach Activity	Date	Number of People Involved

1.10 INFORMATION SOURCES USED FOR THIS ANNEX

The following technical reports, plans, and regulatory mechanisms were reviewed to provide information for this annex.

- **[jurisdiction name] Municipal Code**—The municipal code was reviewed for the full capability assessment and for identifying opportunities for action plan integration.
- **[jurisdiction name] Flood Damage Prevention Ordinance**—The flood damage prevention ordinance was reviewed for compliance with the National Flood Insurance Program.
- <INSERT PLAN/PROGRAM AND DESCRIPTION OF HOW IT WAS USED>
- <INSERT PLAN/PROGRAM AND DESCRIPTION OF HOW IT WAS USED>
- <INSERT PLAN/PROGRAM AND DESCRIPTION OF HOW IT WAS USED>
- <INSERT PLAN/PROGRAM AND DESCRIPTION OF HOW IT WAS USED>

The following outside resources and references were reviewed:

- **Hazard Mitigation Plan Annex Development Toolkit**—The toolkit was used to support the identification of past hazard events and noted vulnerabilities, the risk ranking, and the development of the mitigation action plan.
- <INSERT DOCUMENT AND DESCRIPTION OF HOW IT WAS USED>

1.11 FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

Insert text, if any; otherwise, delete section

1.12 ADDITIONAL COMMENTS

Insert text, if any; otherwise, delete section

**INSTRUCTIONS FOR COMPLETING
ANNEXES FOR SPECIAL-PURPOSE
DISTRICTS**

INSTRUCTIONS FOR COMPLETING SPECIAL-PURPOSE DISTRICT ANNEX TEMPLATE

Jurisdictional annex templates for the 2021 *San Mateo Multijurisdictional Local Hazard Mitigation Plan* update will be completed in three phases. **This document provides instructions for completing all phases of the template for special-purpose districts.**

The target timeline for completion is as follows:

- **Phase 1—Team, Profile, Trends, and Previous Plan Status**
 - **Deployed:** February 19, 2021
 - **Due:** March 19, 2021 by close of business
- **Phase 2—Capability Assessment, Integration Review, and Information Sources**
 - **Deployed:** April 2, 2021
 - **Due:** May 21, 2021 by close of business
- **Phase 3—Risk Assessment, Action Plan, Information Sources, Future Needs, and Additional Comments**
 - **Deployed:** June 11, 2021
 - **Mandatory Phase 3 Workshops:** Targeted for the week of June 14. We will schedule multiple workshops during that week to provide options for attendance
 - **Due:** July 23, 2021 by close of business, Pacific Time

Direct any questions about your Phase 3 template to:

Bart Spencer
Tetra Tech
Phone: (650) 324-1810
E-mail: bart.spencer@tetratech.com

Submit your completed Phase 3 template in electronic format to:

Megan Brotherton
Tetra Tech
Phone: (808) 339-9119
E-mail: megan.brotherton@tetratech.com

A Note About Formatting

The template for the annex is a Microsoft Word document in a format that will be used in the final plan. Partners are asked to use this template so that a uniform product will be completed for each partner.

Content should be entered directly into the template rather than creating text in another document and pasting it into the template. Text from another source may alter the formatting of the document.

DO NOT covert this document to a PDF.

The section and table numbering in the document will be updated when completed annexes are combined into the final document. Please do not adjust any of the numbering.

For planning partners who participated in the 2016 planning effort, relevant information has been brought over to the 2021 template. Fields that require attention have been highlighted using the following color coding:

- **Green:** Text has been brought over from 2016 Plan and should be reviewed and updated as needed.
- **Blue:** This is a new field that will require information that was not included in 2016.

Please un-highlight each field that you update so that reviewers will know an edit has been made.

New planning partners will need to complete the template in its entirety.

IMPORTANT! READ THIS FIRST

Phase 1 and Phase 2 templates were previously provided to your jurisdiction for completion.

If your jurisdiction returned the completed Phase 1 & 2 templates:

- The Phase 1 & 2 content you provided is already incorporated into your Phase 3 template.
- Review the template to see if we have inserted any comments requesting further work to be done on Phase 1 or 2
 - ***If any comments are included, address them.*** Then, begin your work on Phase 3 following the Phase 3 instructions beginning on page 12.
 - If no comments are included, then you **DO NOT** need to do any further work on the Phase 1 or Phase 2 content. ***Go directly to the instructions for Phase 3, beginning on page 12.***

If your jurisdiction has **NOT** yet done any work on the Phase 1 or Phase 2 template:

- Follow the instructions beginning on page 3 for providing the Phase 1 and Phase 2 information.
- Then proceed with the Phase 3 instructions beginning on page 12.

If your jurisdiction started work on the Phase 1 or 2 template but never completed and submitted it, copy the work you had completed so far into the new template. Then complete Phases 1, 2, and 3 following the instructions provided here.

PHASE 1 INSTRUCTIONS

CHAPTER TITLE

In the chapter title at the top of Page 1, type in the complete official name of your district (e.g. West County Fire Protection District #1, Johnsonville Flood Protection District). Do not change the chapter number. Revise only the jurisdiction name. If your jurisdiction's name has already been entered, verify that wording and spelling are correct; revise as needed.

LOCAL HAZARD MITIGATION PLANNING TEAM

Points of Contact

Provide the name, title, mailing address, telephone number, and e-mail address for the primary point of contact for your jurisdiction. This should be the person responsible for monitoring, evaluating, and updating the annex for your jurisdiction. This person should also be the principle liaison between your jurisdiction and the Steering Committee overseeing development of this plan.

In addition, designate an alternate point of contact. This would be a person to contact should the primary point of contact be unavailable or no longer employed by the jurisdiction.

Note: Both of these contacts should match the contacts that were designated in your jurisdiction's letter of intent to participate in this planning process. If you have changed the primary or secondary contact, let the planning team know by inserting a comment into the document.

Participating Planning Team

Populate Table 1-1 with the names of staff from your jurisdiction who participated in preparing this annex or otherwise contributed to the planning process for this hazard mitigation plan.

JURISDICTION PROFILE

Overview

Provide a brief summary description of the following:

- The purpose of the jurisdiction
- The date of inception
- The type of organization
- The number of employees
- Funding sources
- The type of governing body, and who has adoptive authority.

This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District is a special district created in 1952 to provide water and sewer service. A five-member elected Board of Directors governs the District. The Board assumes responsibility for the adoption of this plan; the General Manager will oversee its implementation. The District currently employs a staff of 21. Funding comes primarily through rates and revenue bonds.*

Service Area

Provide a brief description of the following:

- Who the District's customers are and an approximation of how many are currently served
- The area served, in square miles
- The geographic extent of the service area

This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District serves unincorporated areas of Jones County east of the City of Smithburg, including the communities of Johnsonville, Creeks Corner, Jones Hill, Fields Landing, King Salmon, and Freshwater. The current total service area is 3.3 square miles. As of April 30, 2020, the District serves 7,305 water connections and 6,108 sewer connections.*

Assets

List District-owned assets in the categories shown on the table (and described in the sections below). Include an approximate value for each asset and a subtotal value for identified assets in each category.

Property

Provide an approximate value for any land owned by the District.

Equipment

List equipment owned by the District that is used in times of emergency or that, if incapacitated, could severely impact the service area (vehicles, generators, pumps, etc.). Provide an approximate replacement value for each item. Equipment of similar type may be listed as a single category (e.g., "3 diesel-powered generators"). For water and sewer districts, include mileage of pipeline under this category.

Critical Facilities

List District-owned facilities that are vital to maintain services to the service area. Include the address of each facility. Provide an approximate replacement value for each line. Critical facilities are generally defined as facilities owned by the District that are critical to District operations and to public health or safety and that are especially important following hazard events, including but not limited to the following:

- Structures or facilities that produce, use, or store hazardous materials (highly volatile, flammable, explosive, toxic and/or water-reactive materials)

- Hospitals, nursing homes, and housing facilities likely to contain occupants who may not be sufficiently mobile to avoid death or injury during a natural hazard event
- Mass gathering facilities that may be used as evacuation shelters (such as schools or community centers)
- Transportation infrastructure such as roads, bridges and airports that provide sources for evacuation before, during and after natural hazard events
- Police stations, fire stations, government facilities, vehicle equipment and storage facilities, and emergency operation centers that are needed for response activities before, during and after a natural hazard event
- Public utility facilities such as drinking water, stormwater, and wastewater systems that are vital to providing normal services to damaged areas before, during and after natural hazard events.

The table below shows an example of assets to be listed in this section.

Sample Completed Table – Special District Assets	
Asset	Value
Property	
11.5 Acres	\$5,750,000
Equipment	
Total length of pipe 40 miles (\$1.32 million per mile X 40 miles)	\$52,800,000
4 Emergency Generators	\$250,000
Total:	\$53,050,000
Critical Facilities	
Administrative Buildings – 357 S. Jones Street	\$2,750,000
Philips Pump Station – 111 Fifth Avenue N.	\$377,000
Total:	\$3,127,000

NOTE: Placeholders in the table of assets request **ADDRESSES** for critical facilities. These addresses will not be included in the final published annex, but are needed in order to perform risk mapping and risk analysis for the hazard mitigation plan. Include the addresses in the table if convenient. If not, then provide a separate document listing all critical facilities and addresses for use in development of the hazard mitigation plan.

CURRENT TRENDS

Provide a brief description of previous growth trends in the service area and anticipated future increase or decrease in services (if applicable). This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District originally was formed to serve only the Johnsonville area. The District's service area expanded throughout the years to include the full area served today. Total customers have increased by 3 percent since 2010. Population in the service area is not projected to change significantly over the next 10 years, and the District has no plans to expand its service area.*

STATUS OF PREVIOUS PLAN ACTIONS

Note that this section applies only to jurisdictions that are conducting updates to previously approved hazard mitigation plans. If your jurisdiction has not previously participated in an approved plan, enter an “X” in the box at the beginning of this section and do not complete the section. We will remove this section from your final annex.

Also note that this section is further back in the annex than the rest of the Phase 1 content. Some Phase 2 sections are included before it.

The hazard mitigation plan update must describe the status of all action items from each jurisdiction’s previous hazard mitigation plan. Each action item must be marked as ONE of the options below by checking the appropriate box (place an X) and providing the following information:

- **Completed**—If an action has been completed since the prior plan was prepared, check the “Completed” box and provide a date of completion in the comment section. If an action has been initiated and is an ongoing program (e.g. annual outreach event), you may mark it as completed and note that it is ongoing in the comments. If an action addresses an ongoing program you would like to continue to include in your action plan, see the “Carried Over to Plan Update” bullet below.
- **Removed**—If action items are to be removed because they are no longer feasible, a reason must be given. Lack of funding does not mean that it is no longer feasible, unless the sole source of funding for an action is no longer available. Place a comment in the comment section explaining why the action is no longer feasible or barriers that prevented the action from being implemented (e.g., “Action no longer considered feasible due to lack of political support.”). If the wording and/or intent of a previously identified action is unclear, this can be a reason for removal. A change in community priorities may also be a reason for removal and should be discussed in the comments.
- **Carried Over to Plan Update**—If an action is in progress, is ongoing, or has not been initiated and you would like to carry it over to the plan update, check the “Check if Yes” column under “Carried Over to Plan Update.” Selecting this option indicates that the action will be included in the mitigation action plan for this update. If you are carrying over an action to the update, include a comment describing any action that has been taken or why the action was not taken (specifically, any barriers or obstacles that prevented the action from moving forward or slowed progress). Leave the last column, “Action # in Update,” blank at this point. This will be filled in after completing the updated action plan in Phase 3.

Ensure that you have provided a status and a comment for each action.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, all action items from your jurisdiction’s previous hazard mitigation plan that are marked as “Carried Over to Plan Update” will need to be included in the action plan.

THIS COMPLETES PHASE 1

PHASE 2 INSTRUCTIONS

CAPABILITY ASSESSMENT

Note that it is unlikely that one person will be able to complete all sections of the capability assessment alone. The primary preparer will likely need to reach out to other departments within the local government for information. It may be beneficial to provide these individuals with background information about this planning process, as input from them will be needed again during Phase 3 of the annex development.

Planning and Regulatory Capability

List any federal, state, local or district ordinances, plans, or policies that apply to your jurisdiction and relate to hazard mitigation. Provide the date of last update and any comments as appropriate. The table below shows an example of items to be listed in this section.

Sample Completed Table – Planning and Regulatory Capability

Plan, Study or Program	Date of Most Recent Update	Comment
District Design Standards	2010	
Capital Improvement Program	Updated annually	covers 5 year timeframe
Emergency Operations Plan	2000	
Facility Maintenance Manual	1990	
State Building Code	2016	
Division of State Architects		Review of all building and site design features is required prior to construction

Fiscal Capability

Complete the table titled “Fiscal Capability” by indicating whether each of the listed financial resources is accessible to your jurisdiction. Enter “Yes” if the resource is fully accessible to your jurisdiction. Enter “No” if there are limitations or prerequisites that may hinder your use of this resource.

Administrative and Technical Capability

Complete the table titled “Administrative and Technical Capability” by indicating whether your jurisdiction has access to each of the listed personnel resources. Enter “Yes” or “No” in the column labeled “Available?”. If yes, then enter the department and position title. If you have contract support with these capabilities, you can still answer “Yes.” Indicate in the department row that this resource is provided through contract.

Education and Outreach Capability

Complete the table titled “Education and Outreach.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the above capability assessment tables and consider including actions to provide a capability that your jurisdiction does not currently have, update a capability that your jurisdiction does have, or implement an action that is recommended in an existing plan or program.

Community Classifications

Complete the table titled “Community Classifications” to indicate your jurisdiction’s participation in various national programs related to natural hazard mitigation. For each program enter “Yes” or “No” in the second column to indicate whether your jurisdiction participates. If yes, then enter the classification that your jurisdiction has earned under the program in the third column and the date on which that classification was issued in the fourth column; enter “N/A” in the third and fourth columns if your jurisdiction is not participating. If you do not know your current classification, information is available at the following websites:

- **FIPS Code**— <https://www.census.gov/geographies/reference-files/2018/demo/popest/2018-fips.html>
- **DUNS #**— <https://www.dnb.com/duns-number.html>
- **Community Rating System**— <https://www.fema.gov/floodplain-management/community-rating-system>
- **Building Code Effectiveness Grading Schedule**— <https://www.isomitigation.com/bcegs/iso-s-building-code-effectiveness-grading-schedule-bcegs.html>
- **Public Protection Classification**— <https://www.isomitigation.com/ppc/>
- **Storm Ready**— <https://www.weather.gov/stormready/communities>
- **Firewise**— <http://www.firewise.org/usa-recognition-program/map-of-active-participants.aspx>
- **Tsunami Ready**— <https://www.weather.gov/tsunamiready/communities>

Adaptive Capacity for Climate Change

Consider climate change impact concerns such as the following:

- Reduced snowpack
- Increased wildfires
- Sea level rise
- Inland flooding
- Threats to sensitive species
- Loss in agricultural productivity
- Public health and safety.

With those impacts in mind, complete the table titled “Adaptive Capacity for Climate Change” by indicating your jurisdiction’s capacity for each listed criterion as follows:

- **High**—The capacity exists and is in use.
- **Medium**—The capacity may exist, but is not used or could use some improvement.
- **Low**—The capacity does not exist or could use substantial improvement.
- **Unsure**—Not enough information is known to assign a rating.

This is a subjective assessment, but providing a few words of explanation is useful. It is highly recommended that you complete this table with an internal planning team after reviewing the results of the other capability assessment tables.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the adaptive capacity criteria and consider including actions to improve the rating for those rated medium or low, to make use of the capacity for those rated high, or to acquire additional information for those rated unsure.

INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as capital facilities planning, and that relevant information from those sources is used in hazard mitigation. FEMA recommends integration as follows:

- Integrate hazard mitigation plan goals with community objectives (e.g. incorporate the goals for risk reduction and safety into the policies of other plans).
- Use the risk assessment to inform plans and policies (e.g. incorporate risk assessment findings into emergency operations plans).
- Implement mitigation actions through existing mechanisms (e.g. include mitigation projects in the capital improvement plan).
- Think about mitigation before and after a disaster (e.g. build recovery planning on existing mitigation plans and goals).

After reviewing the plans, programs and ordinances identified in the capability assessment tables, identify all plans and programs that have already been integrated with the hazard mitigation plan, and those that offer opportunities for future integration.

Existing Integration

In the highlighted bullet list, provide a brief description of integrated plans or ordinances and how each is integrated. Consider listing items marked as Completed in the “Status of Previous Plan Actions” table if they were indicated as being ongoing actions. Examples are as follows:

- **Capital Improvement Plan**—The capital improvement plan includes projects that can help mitigate potential hazards. The District will act to ensure consistency between the hazard mitigation plan and the current and future capital improvement plans. The hazard mitigation plan may identify new possible funding sources for capital improvement projects and may result in modifications to proposed projects based on results of the risk assessment.
- **Emergency Operations Plan**—The results of the risk assessment were used in the development of the emergency operations plan.

- **Facilities Plan**—The results of the risk assessment and mapped hazard areas are used in facility planning for the District. Potential sites are reviewed for hazard risks, and appropriate mitigation measures are considered in building and site design.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, any plans that fall into the “Existing Integration” category should be reviewed and elements from them should be included in the action plan as appropriate.

Opportunities for Future Integration

List any plans or programs that offer the potential for future integration and describe the process by which integration will occur. Examples follow:

- **Capital Improvement Projects**—Capital improvement project proposals may take into consideration hazard mitigation potential as a means of evaluating project prioritization.
- **Post-Disaster Recovery Plan**—The District does not have a recovery plan and intends to develop one as a mitigation planning action during the next five years. The plan will build on the mitigation goals and objectives identified in the mitigation plan.

Consider other programs you may have in place in your jurisdiction that include routine consideration and management of hazard risk. Examples of such programs may include: tree pruning programs, right-of-way mowing programs, erosion control or stream maintenance programs, etc. Add any such programs to the integration discussion and provide a brief description of how these program manage (or could be adapted to manage) risk from hazards.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, an action to integrate any identified “Opportunities for Future Integration” should be considered for inclusion in the action plan.

INFORMATION SOURCES USED FOR THIS ANNEX

Note that this section will ultimately describe all information sources used to develop this annex, but that only the sources used for Phases 1 and 2 will be listed at this point. Additional sources will be added with the preparation of the Phase 3 annex.

This section should describe what resources you used to complete the annex and how you used them. Several items are started for you, but be sure to update and enhance any descriptions. Providing this information is a requirement to pass the state and FEMA review process.

THIS COMPLETES PHASE 2

PHASE 3 INSTRUCTIONS

RISK ASSESSMENT

Jurisdiction-Specific Natural Hazard Event History

In the table titled “Past Natural Hazard Events,” list in chronological order (most recent first) any natural hazard event that has caused damage to your jurisdiction. Include the date of the event and the estimated dollar amount of damage it caused. You are welcome to include any events, but special attention should be made to include major storms and federally declared disasters. Refer to the table below that lists hazard events in the planning area as recognized by the County, the state, and the federal government.

Table 1. Presidential Disaster Declarations for the Planning Area

[illegible]

We recommend including most large-scale disasters, unless you know that there were no impacts on your jurisdiction. Specifically, we recommend that you include these events if you have damage estimate information or can provide a brief description of impacts that occurred within your community. In addition to these events, refer to the NOAA storm events database included in the toolkit. We recommend conducting a search for the name of your jurisdiction in order to identify events with known impacts. Other potential sources of damage information include the following

- Preliminary damage estimates your jurisdiction filed with the county or state
- Insurance claims data
- Newspaper archives
- Emergency management documents (general plan safety element, emergency response plan, etc.)
- Resident input.

If you do not have estimates for costs of damage caused, list “Not Available” in the “Damage Assessment” column or list a brief description of the damage rather than a dollar value (e.g., Main Street closed as a result of flooding, downed trees and residential damage). Note that tracking such damage is a valid and useful mitigation action if your jurisdiction does not currently track such information.

Hazard Risk Ranking

Risk ranking identifies which hazards pose the greatest risk to the community, based on how likely it is for each hazard to occur (this is called the community’s exposure) and how great an impact each hazard will have if it does occur (this is called the community’s vulnerability). Every jurisdiction has differing degrees of risk exposure and vulnerability and therefore needs to rank risk for its own area. Risk rankings for cities and the county have been calculated in the “Loss Matrix” spreadsheet included in the annex preparation toolkit. These rankings are on the basis of risk ranking scores for each hazard that were calculated based on the hazard’s probability of occurrence and its potential impact on people, property and the economy.

The risk ranking methodology used for cities and counties is not usable for special-purpose districts because the risk-related mapping generally does not align with the boundaries of districts. To rank risk for your District, use the following procedure:

- Find the risk ranking scores in the Loss Matrix spreadsheet (on the “Risk Ranking Summary” tab) for the county overall and for any cities whose area overlaps that of your District.
- For each hazard, generate a risk ranking score for your District by calculating the average of the scores for those other jurisdictions.
- Rank the hazards based on those average scores:
 - Assign the rank of 1 to the hazard with the highest risk ranking score, the rank of 2 to the hazard with the second highest ranking score; and so on.
 - Assign the same rank to any two hazards with equal risk ranking scores
- If the resulting ranking differs from what you know based on substantiated data and documentation, alter the scores and ranking as needed based on this knowledge.

- Assign each hazard to the risk category of “High,” Medium,” or “Low” based on the risk rating score:
 - Low for scores of 0 to 15
 - Medium for scores of 16 to 30
 - High for scores greater than 30

Enter the results of this analysis in the “Hazard Risk Ranking” table in the template; enter the hazards in order of ranking, with 1 at the top of the table.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, you will need to have at least one mitigation action for each hazard ranked as “high” or “medium.”

Jurisdiction-Specific Vulnerabilities

Review the results of the risk assessment included in the toolkit, your jurisdiction’s natural events history, and any relevant public comments/input, then develop a few sentences that discuss specific hazard vulnerabilities. You do not need to develop a sentence for every hazard, but identify a few issues you would like to highlight. Also list any known hazard vulnerabilities in your jurisdiction that may not be apparent from the risk assessment and other information provided.

Spending some time thinking about the results of the risk assessment and other noted vulnerabilities will be a big help in the development of your hazard mitigation action plan. The following are examples of vulnerabilities you could identify through this exercise:

- Over the past 10 years, the jurisdiction has experienced more than \$1 million in damage to critical assets from severe storm events.
- 17 critical assets are in areas that would be permanently inundated with 12 inches of sea level rise.
- One significant District asset is not equipped with a generator and four District buildings are unreinforced masonry or soft-story construction.
- An area along the river is eroding and threatening a District-owned treatment facility.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, consider including actions to address the jurisdiction-specific vulnerabilities listed in this section.

HAZARD MITIGATION ACTION PLAN

Hazard Mitigation Action Plan Matrix

The hazard mitigation action plan is the heart of your jurisdictional annex. This is where you will identify the actions your jurisdiction would like to pursue with this plan.

Select Recommended Actions

All of the work that you have done thus far should provide you with ideas for actions. Throughout these instructions, green boxes labeled “Hazard Mitigation Action Plan Input” have indicated information that needs to be considered in the selection of mitigation actions. The following sections describe how to consider these and other information sources to develop a list of potential actions.

Be sure to consider the following factors in your selection of actions:

- Select actions that are consistent with the overall purpose, goals, and objectives of the hazard mitigation plan.
- Identify actions where benefits exceed costs.
- Include any action that your jurisdiction has committed to pursuing, regardless of eligibility from outside funding sources (grants, non-profit funding, donations, etc.).
- Know what is and is not eligible for funding under various federal programs (see the fact sheet on FEMA hazard mitigation grant programs in the toolkit and the table on the next page).

Material Previously Developed for This Annex

Capability Assessment Section—Planning and Regulatory Capability Table, Fiscal Capability Table, Administrative and Technical Capability Table, and Education and Outreach Table

Review these tables and consider the following:

- For any capability that you do not currently have, consider whether your jurisdiction should have this capability. If so, consider including an action to develop/acquire the capability.
- For any capability that you do currently have, consider whether this capability can be leveraged to increase or improve hazard mitigation in the jurisdiction.
- If any items listed in the Planning and Regulatory Capabilities table have not been updated in more than 10 years, consider an action to review and update the capability and, as appropriate, incorporate hazard mitigation principles or information obtained in the risk assessment.
- Consider including actions that are identified in other plans and programs (capital improvement plans, strategic plans, etc.) as actions in this plan.

Capability Assessment Section—Adaptive Capacity for Climate Change Table

Consider your responses to this section:

- For criteria that you listed as medium or low, think of ways you could improve this rating (see adaptive capacity portion of the mitigation best practices catalog).
- For criteria you listed as high, think about how you can leverage this capacity to improve or enhance mitigation or continue to improve this capacity.
- For criteria that you were unable to provide responses for, consider ways you could improve your understanding of this capacity (see mitigation best practices and adaptive capacity catalog).

Table 2. Federal Hazard Mitigation Grant Program Eligibility by Action Type

Eligible Activities	Hazard Mitigation Grant Program	Pre-Disaster Mitigation	Flood Mitigation Assistance
Mitigation Projects			
Property Acquisition and Structure Demolition	√	√	√
Property Acquisition and Structure Relocation	√	√	√
Structure Elevation	√	√	√
Mitigation Reconstruction	√	√	√
Dry Floodproofing of Non-residential Structures	√	√	√
Generators	√	√	
Localized Flood Risk Reduction Projects	√	√	√
Non-Localized Flood Risk Reduction Projects	√	√	
Structural Retrofitting of Existing Buildings	√	√	√
Non-structural Retrofitting of Existing Buildings and Facilities	√	√	√
Safe Room Construction	√	√	
Infrastructure Retrofit	√	√	√
Soil Stabilization	√	√	√
Wildfire Mitigation	√	√	
Post-Disaster Code Enforcement	√		
Advance Assistance	√		
5 Percent Initiative Projects*	√		
Aquifer and Storage Recovery**	√	√	√
Flood Diversion and Storage**	√	√	√
Floodplain and Stream Restoration**	√	√	√
Green Infrastructure**	√	√	√
Miscellaneous/Other**	√	√	√
Hazard Mitigation Planning	√	√	√
Technical Assistance			√
Management Costs	√	√	√

* FEMA allows increasing the 5% initiative amount under the Hazard Mitigation Grant Program up to 10% for a presidential major disaster declaration. The additional 5% initiative funding can be used for activities that promote disaster-resistant codes for all hazards. As a condition of the award, either a disaster-resistant building code must be adopted or an improved Building Code Effectiveness Grading Schedule is required.

** Indicates that any proposed action will be evaluated on its own merit against program requirements. Eligible projects will be approved provided funding is available.

Integration Review Section

Review the items you identified in this section and consider an action that specifically says what the plan, code, ordinance etc. is and how it will be integrated.

Risk Ranking Section

You must identify at least one mitigation action that is clearly defined and actionable (i.e. not a preparedness or response action) for every hazard that is categorized in the risk ranking as “high” or “medium” risk.

Jurisdiction-Specific Vulnerabilities Section

Review the vulnerability issues that you identified in this section and consider actions to address them (see mitigation best practices catalog).

Status of Previous Plan Actions Section

If your jurisdiction participated in a previous hazard mitigation plan, be sure to include any actions that were identified as “carry over” actions.

Other Sources

Mitigation Best Practices Catalog

A catalog that includes best practices identified by FEMA and other agencies, as well as recommendations from the steering committee and other stakeholders, is included in your toolkit. Review the catalog and identify actions your jurisdiction should consider for its action plan.

Public Input

Review input received during the process, specifically the public survey results included in your toolkit.

Common Actions for All Partners

The following three actions have been prepopulated in your annex template; **these three actions should be included in every annex and should not be removed:**

- Where appropriate, support retro-fitting, purchase or relocation of structures located in high hazard areas, prioritizing those structures that have experienced repetitive losses and/or are located in high or medium ranked hazard.
- Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan.
- Purchase generators for critical facilities and infrastructure that lack adequate back-up power.

In addition, the core planning team recommends that every planning partner strongly consider the following actions:

- Identify and pursue strategies to increase adaptive capacity to climate change.
- Develop and implement a program to capture perishable data after significant events (e.g. high water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan.
- Support the County-wide initiatives identified in Volume I of the hazard mitigation plan.
- Develop a post-disaster recovery plan and a debris management plan.
- Develop and/or update plans that support or enhance continuity of operations following disasters.

The specifics of all these common actions should be adjusted as needed for the particulars of each community.

Complete the Table

Complete the table titled “Hazard Mitigation Action Plan Matrix” for all the actions you have identified and would like to include in the plan:

- Enter the action number (see box at right) and description. **If the action is carried over from your previous hazard mitigation plan, return to the “Status of Previous Plan Actions” table you completed in Phase 1 and enter the new action number in the column labeled “Action # in Update.”**
- Indicate whether the action mitigates hazards for new and/or existing assets.
- Identify the specific hazards the action will mitigate (note: you must list each hazard by name; simply indicating “all hazards” is not deemed acceptable).
- Identify by number the mitigation plan objectives that the action addresses (see toolkit).
- Indicate who will be the lead in administering the action. This will most likely be a department within your jurisdiction (e.g. planning or public works). If you wish to indicate more than one department as responsible for the action, clearly identify one as the lead agency and list the others in the “supporting agency” column.
- Enter an estimated cost in dollars if known; otherwise, enter “High,” “Medium,” or “Low,” as determined for the prioritization process described in the following section.
- Identify funding sources for the action. If it is a grant, include the grant-providing agency as well as funding sources for any required cost share. If it is another outside funding source such as a non-profit funding source or a donation, include the source and any requirements for receiving the funding. Refer to your fiscal capability assessment to identify possible sources of funding and refer to the table on page 15 of these instructions for project eligibility for FEMA’s hazard mitigation assistance grant programs.
- Indicate the time line as “short-term” (1 to 5 years) or “long-term” (5 years or greater) or “ongoing” (a continual program)

Action Numbering

Actions are to be numbered using the three-letter code for your jurisdiction shown below, followed by a hyphen and the action’s sequential number:

- San Mateo County—SMC-1, SMC-2...
- Atherton City—ATH-1, ATH-2...
- Belmont City—BEL-1, BEL-2...
- Brisbane City—BRS-1, BRS-2...
- Burlingame City—BRL-1, BRL-2...
- Colma City—CLM-1, CLM-2...
- Daly City—DLY-1, DLY-2...
- East Palo Alto City—EPA-1, EPA-2...
- Foster City—FOS-1, FOS-2...
- Half Moon Bay City—HMB-1, HMB-2...
- Hillsborough City—HLS-1, HLS-2...
- Menlo Park City—MPK-1, MPK-2...
- Millbrae City—MLB-1, MLB-2...
- Pacifica City—PAC-1, PAC-2...
- Portola Valley City—PTV-1, PTV-2...
- Redwood City—RDW-1, RDW-2...
- San Bruno City—SBR-1, SBR-2...
- San Carlos City—SCR-1, SCR-2...
- San Mateo City—SMT-1, SMT-2...
- South San Francisco City—SSF-1, SSF-2...
- Woodside City—WDS-1, WDS-2...
- Coastside Water —CSW-1, CSW-2...
- Colma Fire —CFD-1, CFD-2...
- Flood & Sea Level —FSL-1, FSL-2...
- Harbor District —HRB-1, HBR-2
- Highland Recreational —HLD-1, HLD-2...
- Jefferson Union HS —JEF-1, JEF-2...
- Menlo Park Fire —MPF-1, MPF-2...
- Mid-Pen Reg Open Space District —MPR-1, MPR-2...
- Mid-Peninsula Water —MPW-1, MPW-2...
- Montara Water & Sewer —MWS-1, MWS-2...
- North Coast Water —NCW-1, NCW-2...
- Office of Education —OED-1, OED-2...
- San Mateo Community College —SCC-1, SCC-2...
- San Mateo RCD —SRC-1, SRC-2...
- Westborough Water —WBW-1, WBW-2...
- Woodside Fire —WFD-1, WFD-2...

Mitigation Action Priority

Complete the information in the table titled “Mitigation Action Priority” as follows:

- **Action #**—Indicate the action number from the Hazard Mitigation Action Plan Matrix table.
- **# of Objectives Met**—Enter the number of objectives the action will meet.
- **Benefits**—Enter “High,” “Medium” or “Low” as follows:
 - High—Action will provide an immediate reduction of risk exposure for life and property.
 - Medium—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - Low—Long-term benefits of the action are difficult to quantify in the short term.
- **Cost**—Enter “High,” “Medium” or “Low” as follows:
 - High—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, outside funding sources, bonds, grants, and fee increases).
 - Medium—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.
 - Low—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- **Do Benefits Exceed the Cost?**—Enter “Yes” or “No.” This is a qualitative assessment. Enter “Yes” if the benefit rating (high, medium or low) is the same as or higher than the cost rating (high benefit/high cost; high benefit/medium cost; medium benefit/low cost; etc.). Enter “No” if the benefit rating is lower than the cost rating (medium benefit/high cost, low benefit/medium cost; etc.)
- **Is the Action Eligible for Outside Funding Sources?**—Enter “Yes” or “No.” For grant funding, refer to the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table on page 15 of these instructions.
- **Can Action Be Funded Under Existing Program Budgets?**—Enter “Yes” or “No.” In other words, is this action currently budgeted for, or would it require a new budget authorization or funding from another source such as grants, non-profit funding, or donations?
- **Implementation Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
 - Medium Priority—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years), once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
 - Low Priority—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known outside funding sources. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for outside funding from programs that have not yet been identified.
- **Outside Funding Source Pursuit Priority**— Enter “High,” “Medium” or “Low” as follows:

- **High Priority**—An action that meets identified outside funding source eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible to be funded by outside sources.
- **Medium Priority**—An action that meets identified outside funding source eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
- **Low Priority**—An action that has not been identified as meeting any outside funding source eligibility requirements.

Actions identified as high-outside-funding-pursuit priority actions should be closely reviewed for consideration when outside funding source opportunities arise.

Note: If a jurisdiction wishes to identify an action as high priority that is outside of the prioritization scheme for high priorities, a note indicating so should be inserted and a rationale should be provided.

Analysis of Mitigation Actions

In the table titled “Analysis of Mitigation Actions,” for each combination of hazard type and mitigation type, enter the numbers of all recommended actions that address that hazard type and can be categorized as that mitigation type. The mitigation types are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education & Awareness**—Actions to inform residents and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.
- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.
- **Climate Resilience**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea-level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff

training, memorandums of understanding, development of plans and studies, and monitoring programs.

This exercise demonstrates that the jurisdiction has selected a comprehensive range of actions. This table must show at least one action to address each “high” and “medium” ranked hazard. Planning partners should aim to identify at least one action for each mitigation type, but this is not required.

An example of a completed “Analysis of Mitigation Actions” table is provided below. Note that an action can be more than one mitigation type.

Sample Completed Table – Analysis of Mitigation Actions

Hazard Type	Action Addressing Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education & Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resilience	Community Capacity Building
High-Risk Hazards								
Dam Failure	EX-2, 3, 4, 5, 6	EX-1, 6	EX-4, 6		EX-8, 11			EX-3, 4, 8, 9, 10
Drought	EX-2	EX-1	EX-4					EX-3, 4, 8, 9, 10
Medium-Risk Hazards								
Earthquake	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9
Flooding	EX-2, 3, 4, 5, 6, 7	EX-1, 6, 7	EX-4, 6	EX-9	EX-8, 11	EX-6		EX-3, 4, 8, 9, 10
Landslide	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9, 10
Low-Risk Hazards								
Severe Weather	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4		EX-8, 9, 11		EX-8, 7	EX-3, 4, 8, 9, 10
Wildfire	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4, 9	EX-9	EX-8, 11			EX-3, 4, 8, 9, 10

PUBLIC OUTREACH

FEMA requirements for public outreach will be met by the County’s engagement efforts and are included in the main part of the plan. These may include public meetings, a StoryMap, surveys, etc. If individual jurisdictions want to have a more robust outreach for their local community, the public outreach table in each annex may be used to memorialize those local efforts.

This table should record local public outreach efforts made by your jurisdiction to inform the community of the plan update process. Examples may include local surveys on hazard awareness/preparedness, social media blasts, press releases, and outreach to local groups (CERT, senior citizen organizations, etc.) **This section is optional.**

INFORMATION SOURCES USED FOR THIS ANNEX

This section should describe what resources you used to complete the annex and how you used them. The sources used for Phases 1 and 2 should have been entered previously. List any additional sources used for the preparation of the Phase 3 annex. Review to ensure that all materials used in all three phases are identified. Providing this information is a requirement to pass the state and FEMA review process.

FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

In this section, identify any future studies, analyses, reports, or surveys your jurisdiction needs to better understand its vulnerability to identified or currently unidentified risks. These could be needs based on federal or state agency mandates. **This section is optional.**

ADDITIONAL COMMENTS

Use this section to add any additional information pertinent to hazard mitigation and your jurisdiction not covered in this template. **This section is optional.**

THIS COMPLETES PHASE 3

**INSTRUCTIONS FOR COMPLETING
ANNEXES WITH EQUITY LENS
FOR SPECIAL-PURPOSE
DISTRICTS**

INSTRUCTIONS FOR COMPLETING SPECIAL-PURPOSE DISTRICT ANNEX TEMPLATE WITH EQUITY LENS

Note Regarding Equity Lensing. The Core Planning Team and Steering Committee for the 2021 San Mateo County Multijurisdictional Local Hazard Mitigation Plan update have decided to add another layer of resolution to the risk assessment and action planning portions of this plan update, applying an “equity lens”. An equity lens is defined as a critical thinking approach to undoing institutional and structural biases, which evaluates burdens, benefits, and outcomes to underserved communities. Application of the equity lens to risk ranking and action plan prioritization was determined to be “optional” for all planning partners. These instructions have been enhanced to include the equity lens options for Risk Ranking and Action Plan prioritization.

Jurisdictional annex templates for the 2021 San Mateo Multijurisdictional Local Hazard Mitigation Plan update will be completed in three phases. **This document provides instructions for completing all phases of the template for special-purpose districts.**

The target timeline for completion is as follows:

- **Phase 1**—Team, Profile, Trends, and Previous Plan Status
 - **Deployed:** February 19, 2021
 - **Due:** March 19, 2021 by close of business
- **Phase 2**—Capability Assessment, Integration Review, and Information Sources
 - **Deployed:** April 2, 2021
 - **Due:** May 21, 2021 by close of business
- **Phase 3**—Risk Assessment, Action Plan, Information Sources, Future Needs, and Additional Comments
 - **Deployed:** June 11, 2021

A Note About Formatting

The template for the annex is a Microsoft Word document in a format that will be used in the final plan. Partners are asked to use this template so that a uniform product will be completed for each partner.

Content should be entered directly into the template rather than creating text in another document and pasting it into the template. Text from another source may alter the formatting of the document.

DO NOT convert this document to a PDF.

The section and table numbering in the document will be updated when completed annexes are combined into the final document. Please do not adjust any of the numbering.

For planning partners who participated in the 2016 planning effort, relevant information has been brought over to the 2021 template. Fields that require attention have been highlighted using the following color coding:

- **Green:** Text has been brought over from 2016 Plan and should be reviewed and updated as needed.
- **Blue:** This is a new field that will require information that was not included in 2016.

Please un-highlight each field that you update so that reviewers will know an edit has been made.

New planning partners will need to complete the template in its entirety.

- **Mandatory Phase 3 Workshops:** Targeted for the week of June 14. We will schedule multiple workshops during that week to provide options for attendance
- **Due: July 23, 2021 by close of business, Pacific Time**

Direct any questions about your Phase 3 template to:

Bart Spencer

Tetra Tech

Phone: (650) 324-1810

E-mail: bart.spencer@tetrattech.com

Submit your completed Phase 3 template in electronic format to:

Megan Brotherton

Tetra Tech

Phone: (808) 339-9119

E-mail: megan.brotherton@tetrattech.com

IMPORTANT! READ THIS FIRST

Phase 1 and Phase 2 templates were previously provided to your jurisdiction for completion.

If your jurisdiction returned the completed Phase 1 & 2 templates:

- The Phase 1 & 2 content you provided is already incorporated into your Phase 3 template.
- Review the template to see if we have inserted any comments requesting further work to be done on Phase 1 or 2
 - ***If any comments are included, address them.*** Then, begin your work on Phase 3 following the Phase 3 instructions beginning on page 12.
 - If no comments are included, then you **DO NOT** need to do any further work on the Phase 1 or Phase 2 content. ***Go directly to the instructions for Phase 3, beginning on page 12.***

If your jurisdiction has **NOT** yet done any work on the Phase 1 or Phase 2 template:

- Follow the instructions beginning on page 3 for providing the Phase 1 and Phase 2 information.
- Then proceed with the Phase 3 instructions beginning on page 12.

If your jurisdiction started work on the Phase 1 or 2 template but never completed and submitted it, copy the work you had completed so far into the new template. Then complete Phases 1, 2, and 3 following the instructions provided here.

PHASE 1 INSTRUCTIONS**CHAPTER TITLE**

In the chapter title at the top of Page 1, type in the complete official name of your district (e.g. West County Fire Protection District #1, Johnsonville Flood Protection District). Do not change the chapter number. Revise only the jurisdiction name. If your jurisdiction's name has already been entered, verify that wording and spelling are correct; revise as needed.

LOCAL HAZARD MITIGATION PLANNING TEAM**Points of Contact**

Provide the name, title, mailing address, telephone number, and e-mail address for the primary point of contact for your jurisdiction. This should be the person responsible for monitoring, evaluating, and updating the annex for your jurisdiction. This person should also be the principle liaison between your jurisdiction and the Steering Committee overseeing development of this plan.

In addition, designate an alternate point of contact. This would be a person to contact should the primary point of contact be unavailable or no longer employed by the jurisdiction.

Note: Both of these contacts should match the contacts that were designated in your jurisdiction's letter of intent to participate in this planning process. If you have changed the primary or secondary contact, let the planning team know by inserting a comment into the document.

Participating Planning Team

Populate Table 1-1 with the names of staff from your jurisdiction who participated in preparing this annex or otherwise contributed to the planning process for this hazard mitigation plan.

JURISDICTION PROFILE**Overview**

Provide a brief summary description of the following:

- The purpose of the jurisdiction
- The date of inception
- The type of organization
- The number of employees
- Funding sources
- The type of governing body, and who has adoptive authority.

This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District is a special district created in 1952 to provide water and sewer service. A five-member elected Board of Directors governs the District. The Board assumes responsibility for the adoption of this plan; the General Manager will oversee its implementation. The District currently employs a staff of 21. Funding comes primarily through rates and revenue bonds.*

Service Area

Provide a brief description of the following:

- Who the District's customers are and an approximation of how many are currently served
- The area served, in square miles
- The geographic extent of the service area

This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District serves unincorporated areas of Jones County east of the City of Smithburg, including the communities of Johnsonville, Creeks Corner, Jones Hill, Fields Landing, King Salmon, and Freshwater. The current total service area is 3.3 square miles. As of April 30, 2020, the District serves 7,305 water connections and 6,108 sewer connections.*

Assets

List District-owned assets in the categories shown on the table (and described in the sections below). Include an approximate value for each asset and a subtotal value for identified assets in each category.

Property

Provide an approximate value for any land owned by the District.

Equipment

List equipment owned by the District that is used in times of emergency or that, if incapacitated, could severely impact the service area (vehicles, generators, pumps, etc.). Provide an approximate replacement value for each item. Equipment of similar type may be listed as a single category (e.g., "3 diesel-powered generators"). For water and sewer districts, include mileage of pipeline under this category.

Critical Facilities

List District-owned facilities that are vital to maintain services to the service area. Include the address of each facility. Provide an approximate replacement value for each line. Critical facilities are generally defined as facilities owned by the District that are critical to District operations and to public health or safety and that are especially important following hazard events, including but not limited to the following:

- Structures or facilities that produce, use, or store hazardous materials (highly volatile, flammable, explosive, toxic and/or water-reactive materials)

- Hospitals, nursing homes, and housing facilities likely to contain occupants who may not be sufficiently mobile to avoid death or injury during a natural hazard event
- Mass gathering facilities that may be used as evacuation shelters (such as schools or community centers)
- Transportation infrastructure such as roads, bridges and airports that provide sources for evacuation before, during and after natural hazard events
- Police stations, fire stations, government facilities, vehicle equipment and storage facilities, and emergency operation centers that are needed for response activities before, during and after a natural hazard event
- Public utility facilities such as drinking water, stormwater, and wastewater systems that are vital to providing normal services to damaged areas before, during and after natural hazard events.

The table below shows an example of assets to be listed in this section.

Sample Completed Table – Special District Assets	
Asset	Value
Property	
11.5 Acres	\$5,750,000
Equipment	
Total length of pipe 40 miles (\$1.32 million per mile X 40 miles)	\$52,800,000
4 Emergency Generators	\$250,000
Total:	\$53,050,000
Critical Facilities	
Administrative Buildings – 357 S. Jones Street	\$2,750,000
Philips Pump Station – 111 Fifth Avenue N.	\$377,000
Total:	\$3,127,000

NOTE: Placeholders in the table of assets request **ADDRESSES** for critical facilities. These addresses will not be included in the final published annex, but are needed in order to perform risk mapping and risk analysis for the hazard mitigation plan. Include the addresses in the table if convenient. If not, then provide a separate document listing all critical facilities and addresses for use in development of the hazard mitigation plan.

CURRENT TRENDS

Provide a brief description of previous growth trends in the service area and anticipated future increase or decrease in services (if applicable). This should be information that is specific to your jurisdiction and will not be provided in the overall, planning area-wide mitigation plan document. Provide a statement similar to the example below:

EXAMPLE: *The Johnsonville Community Services District originally was formed to serve only the Johnsonville area. The District's service area expanded throughout the years to include the full area served today. Total customers have increased by 3 percent since 2010. Population in the service area is not projected to change significantly over the next 10 years, and the District has no plans to expand its service area.*

STATUS OF PREVIOUS PLAN ACTIONS

Note that this section applies only to jurisdictions that are conducting updates to previously approved hazard mitigation plans. If your jurisdiction has not previously participated in an approved plan, enter an “X” in the box at the beginning of this section and do not complete the section. We will remove this section from your final annex.

Also note that this section is further back in the annex than the rest of the Phase 1 content. Some Phase 2 sections are included before it.

The hazard mitigation plan update must describe the status of all action items from each jurisdiction’s previous hazard mitigation plan. Each action item must be marked as ONE of the options below by checking the appropriate box (place an X) and providing the following information:

- **Completed**—If an action has been completed since the prior plan was prepared, check the “Completed” box and provide a date of completion in the comment section. If an action has been initiated and is an ongoing program (e.g. annual outreach event), you may mark it as completed and note that it is ongoing in the comments. If an action addresses an ongoing program you would like to continue to include in your action plan, see the “Carried Over to Plan Update” bullet below.
- **Removed**—If action items are to be removed because they are no longer feasible, a reason must be given. Lack of funding does not mean that it is no longer feasible, unless the sole source of funding for an action is no longer available. Place a comment in the comment section explaining why the action is no longer feasible or barriers that prevented the action from being implemented (e.g., “Action no longer considered feasible due to lack of political support.”). If the wording and/or intent of a previously identified action is unclear, this can be a reason for removal. A change in community priorities may also be a reason for removal and should be discussed in the comments.
- **Carried Over to Plan Update**—If an action is in progress, is ongoing, or has not been initiated and you would like to carry it over to the plan update, check the “Check if Yes” column under “Carried Over to Plan Update.” Selecting this option indicates that the action will be included in the mitigation action plan for this update. If you are carrying over an action to the update, include a comment describing any action that has been taken or why the action was not taken (specifically, any barriers or obstacles that prevented the action from moving forward or slowed progress). Leave the last column, “Action # in Update,” blank at this point. This will be filled in after completing the updated action plan in Phase 3.

Ensure that you have provided a status and a comment for each action.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, all action items from your jurisdiction’s previous hazard mitigation plan that are marked as “Carried Over to Plan Update” will need to be included in the action plan.

THIS COMPLETES PHASE 1

PHASE 2 INSTRUCTIONS

CAPABILITY ASSESSMENT

Note that it is unlikely that one person will be able to complete all sections of the capability assessment alone. The primary preparer will likely need to reach out to other departments within the local government for information. It may be beneficial to provide these individuals with background information about this planning process, as input from them will be needed again during Phase 3 of the annex development.

Planning and Regulatory Capability

List any federal, state, local or district ordinances, plans, or policies that apply to your jurisdiction and relate to hazard mitigation. Provide the date of last update and any comments as appropriate. The table below shows an example of items to be listed in this section.

Sample Completed Table – Planning and Regulatory Capability

Plan, Study or Program	Date of Most Recent Update	Comment
District Design Standards	2010	
Capital Improvement Program	Updated annually	covers 5 year timeframe
Emergency Operations Plan	2000	
Facility Maintenance Manual	1990	
State Building Code	2016	
Division of State Architects		Review of all building and site design features is required prior to construction

Fiscal Capability

Complete the table titled “Fiscal Capability” by indicating whether each of the listed financial resources is accessible to your jurisdiction. Enter “Yes” if the resource is fully accessible to your jurisdiction. Enter “No” if there are limitations or prerequisites that may hinder your use of this resource.

Administrative and Technical Capability

Complete the table titled “Administrative and Technical Capability” by indicating whether your jurisdiction has access to each of the listed personnel resources. Enter “Yes” or “No” in the column labeled “Available?”. If yes, then enter the department and position title. If you have contract support with these capabilities, you can still answer “Yes.” Indicate in the department row that this resource is provided through contract.

Education and Outreach Capability

Complete the table titled “Education and Outreach.”

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the above capability assessment tables and consider including actions to provide a capability that your jurisdiction does not currently have, update a capability that your jurisdiction does have, or implement an action that is recommended in an existing plan or program.

Community Classifications

Complete the table titled “Community Classifications” to indicate your jurisdiction’s participation in various national programs related to natural hazard mitigation. For each program enter “Yes” or “No” in the second column to indicate whether your jurisdiction participates. If yes, then enter the classification that your jurisdiction has earned under the program in the third column and the date on which that classification was issued in the fourth column; enter “N/A” in the third and fourth columns if your jurisdiction is not participating. If you do not know your current classification, information is available at the following websites:

- **FIPS Code**— <https://www.census.gov/geographies/reference-files/2018/demo/popest/2018-fips.html>
- **DUNS #**— <https://www.dnb.com/duns-number.html>
- **Community Rating System**— <https://www.fema.gov/floodplain-management/community-rating-system>
- **Building Code Effectiveness Grading Schedule**— <https://www.isomitigation.com/bcegs/iso-s-building-code-effectiveness-grading-schedule-bcegs.html>
- **Public Protection Classification**— <https://www.isomitigation.com/ppc/>
- **Storm Ready**— <https://www.weather.gov/stormready/communities>
- **Firewise**— <http://www.firewise.org/usa-recognition-program/map-of-active-participants.aspx>
- **Tsunami Ready**— <https://www.weather.gov/tsunamiready/communities>

Adaptive Capacity for Climate Change

Consider climate change impact concerns such as the following:

- Reduced snowpack
- Increased wildfires
- Sea level rise
- Inland flooding
- Threats to sensitive species
- Loss in agricultural productivity
- Public health and safety.

With those impacts in mind, complete the table titled “Adaptive Capacity for Climate Change” by indicating your jurisdiction’s capacity for each listed criterion as follows:

- **High**—The capacity exists and is in use.
- **Medium**—The capacity may exist, but is not used or could use some improvement.
- **Low**—The capacity does not exist or could use substantial improvement.
- **Unsure**—Not enough information is known to assign a rating.

This is a subjective assessment, but providing a few words of explanation is useful. It is highly recommended that you complete this table with an internal planning team after reviewing the results of the other capability assessment tables.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, review all the adaptive capacity criteria and consider including actions to improve the rating for those rated medium or low, to make use of the capacity for those rated high, or to acquire additional information for those rated unsure.

INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as capital facilities planning, and that relevant information from those sources is used in hazard mitigation. FEMA recommends integration as follows:

- Integrate hazard mitigation plan goals with community objectives (e.g. incorporate the goals for risk reduction and safety into the policies of other plans).
- Use the risk assessment to inform plans and policies (e.g. incorporate risk assessment findings into emergency operations plans).
- Implement mitigation actions through existing mechanisms (e.g. include mitigation projects in the capital improvement plan).
- Think about mitigation before and after a disaster (e.g. build recovery planning on existing mitigation plans and goals).

After reviewing the plans, programs and ordinances identified in the capability assessment tables, identify all plans and programs that have already been integrated with the hazard mitigation plan, and those that offer opportunities for future integration.

Existing Integration

In the highlighted bullet list, provide a brief description of integrated plans or ordinances and how each is integrated. Consider listing items marked as Completed in the “Status of Previous Plan Actions” table if they were indicated as being ongoing actions. Examples are as follows:

- **Capital Improvement Plan**—The capital improvement plan includes projects that can help mitigate potential hazards. The District will act to ensure consistency between the hazard mitigation plan and the current and future capital improvement plans. The hazard mitigation plan may identify new possible funding sources for capital improvement projects and may result in modifications to proposed projects based on results of the risk assessment.
- **Emergency Operations Plan**—The results of the risk assessment were used in the development of the emergency operations plan.

- **Facilities Plan**—The results of the risk assessment and mapped hazard areas are used in facility planning for the District. Potential sites are reviewed for hazard risks, and appropriate mitigation measures are considered in building and site design.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, any plans that fall into the “Existing Integration” category should be reviewed and elements from them should be included in the action plan as appropriate.

Opportunities for Future Integration

List any plans or programs that offer the potential for future integration and describe the process by which integration will occur. Examples follow:

- **Capital Improvement Projects**—Capital improvement project proposals may take into consideration hazard mitigation potential as a means of evaluating project prioritization.
- **Post-Disaster Recovery Plan**—The District does not have a recovery plan and intends to develop one as a mitigation planning action during the next five years. The plan will build on the mitigation goals and objectives identified in the mitigation plan.

Consider other programs you may have in place in your jurisdiction that include routine consideration and management of hazard risk. Examples of such programs may include: tree pruning programs, right-of-way mowing programs, erosion control or stream maintenance programs, etc. Add any such programs to the integration discussion and provide a brief description of how these program manage (or could be adapted to manage) risk from hazards.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, an action to integrate any identified “Opportunities for Future Integration” should be considered for inclusion in the action plan.

INFORMATION SOURCES USED FOR THIS ANNEX

Note that this section will ultimately describe all information sources used to develop this annex, but that only the sources used for Phases 1 and 2 will be listed at this point. Additional sources will be added with the preparation of the Phase 3 annex.

This section should describe what resources you used to complete the annex and how you used them. Several items are started for you, but be sure to update and enhance any descriptions. Providing this information is a requirement to pass the state and FEMA review process.

THIS COMPLETES PHASE 2

Table 1. Presidential Disaster Declarations for the Planning Area

[illegible]

We recommend including most large-scale disasters, unless you know that there were no impacts on your jurisdiction. Specifically, we recommend that you include these events if you have damage estimate information or can provide a brief description of impacts that occurred within your community. In addition to these events, refer to the NOAA storm events database included in the toolkit. We recommend conducting a search for the name of your jurisdiction in order to identify events with known impacts. Other potential sources of damage information include the following

- Preliminary damage estimates your jurisdiction filed with the county or state
- Insurance claims data
- Newspaper archives
- Emergency management documents (general plan safety element, emergency response plan, etc.)
- Resident input.

If you do not have estimates for costs of damage caused, list “Not Available” in the “Damage Assessment” column or list a brief description of the damage rather than a dollar value (e.g., Main Street closed as a result of flooding, downed trees and residential damage). Note that tracking such damage is a valid and useful mitigation action if your jurisdiction does not currently track such information.

Hazard Risk Ranking

Risk ranking identifies which hazards pose the greatest risk to the community, based on how likely it is for each hazard to occur (this is called the community’s exposure) and how great an impact each hazard will have if it does occur (this is called the community’s vulnerability). Every jurisdiction has differing degrees of risk exposure and vulnerability and therefore needs to rank risk for its own area. The risk ranking for each jurisdiction has been calculated in the “Loss Matrix” spreadsheet included in the annex preparation toolkit. Two sets of ranking are provided. One ranking is the base ranking that utilizes the raw percentage of population exposed to each hazard to rank the impacts to population. The second ranking uses the social vulnerability metrics established by FEMA’s National Risk Index (NRI) to add an equity lens to the impact on population factor for the risk ranking application. Those planning partners applying the equity lens option should utilize the “Social Equity Version” for risk ranking provided in the loss matrix. The ranking is on the basis of risk ranking scores for each hazard that were calculated based on the hazard’s probability of occurrence and its potential impact on people, property and the economy.

The risk ranking methodology used for cities and counties is not usable for special-purpose districts because the risk-related mapping generally does not align with the boundaries of districts. To rank risk for your District, use the following procedure:

- Find the risk ranking scores in the Loss Matrix spreadsheet (on the “Risk Ranking Summary” tab) for the county overall and for any cities whose area overlaps that of your District.
- For each hazard, generate a risk ranking score for your District by calculating the average of the scores for those other jurisdictions.
- Rank the hazards based on those average scores:
 - Assign the rank of 1 to the hazard with the highest risk ranking score, the rank of 2 to the hazard with the second highest ranking score; and so on.
 - Assign the same rank to any two hazards with equal risk ranking scores

- If the resulting ranking differs from what you know based on substantiated data and documentation, alter the scores and ranking as needed based on this knowledge.
- Assign each hazard to the risk category of “High,” Medium,” or “Low” based on the risk rating score:
 - Low for scores of 0 to 15
 - Medium for scores of 16 to 32
 - High for scores greater than 33

Enter the results of this analysis in the “Hazard Risk Ranking” table in the template; enter the hazards in order of ranking, with 1 at the top of the table.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, you will need to have at least one mitigation action for each hazard ranked as “high” or “medium.”

Jurisdiction-Specific Vulnerabilities

Review the results of the risk assessment included in the toolkit, your jurisdiction’s natural events history, and any relevant public comments/input, then develop a few sentences that discuss specific hazard vulnerabilities. You do not need to develop a sentence for every hazard, but identify a few issues you would like to highlight. Also list any known hazard vulnerabilities in your jurisdiction that may not be apparent from the risk assessment and other information provided.

Spending some time thinking about the results of the risk assessment and other noted vulnerabilities will be a big help in the development of your hazard mitigation action plan. The following are examples of vulnerabilities you could identify through this exercise:

- Over the past 10 years, the jurisdiction has experienced more than \$1 million in damage to critical assets from severe storm events.
- 17 critical assets are in areas that would be permanently inundated with 12 inches of sea level rise.
- One significant District asset is not equipped with a generator and four District buildings are unreinforced masonry or soft-story construction.
- An area along the river is eroding and threatening a District-owned treatment facility.

HAZARD MITIGATION ACTION PLAN INPUT

When preparing the hazard mitigation action plan in Phase 3, consider including actions to address the jurisdiction-specific vulnerabilities listed in this section.

HAZARD MITIGATION ACTION PLAN

Hazard Mitigation Action Plan Matrix

The hazard mitigation action plan is the heart of your jurisdictional annex. This is where you will identify the actions your jurisdiction would like to pursue with this plan.

Select Recommended Actions

All of the work that you have done thus far should provide you with ideas for actions. Throughout these instructions, green boxes labeled “Hazard Mitigation Action Plan Input” have indicated information that needs to be considered in the selection of mitigation actions. The following sections describe how to consider these and other information sources to develop a list of potential actions.

Be sure to consider the following factors in your selection of actions:

- Select actions that are consistent with the overall purpose, goals, and objectives of the hazard mitigation plan.
- Identify actions where benefits exceed costs.
- Include any action that your jurisdiction has committed to pursuing, regardless of eligibility from outside funding sources (grants, non-profit funding, donations, etc.).
- Know what is and is not eligible for funding under various federal programs (see the fact sheet on FEMA hazard mitigation grant programs in the toolkit and the table on the next page).

Material Previously Developed for This Annex

Capability Assessment Section—Planning and Regulatory Capability Table, Fiscal Capability Table, Administrative and Technical Capability Table, and Education and Outreach Table

Review these tables and consider the following:

- For any capability that you do not currently have, consider whether your jurisdiction should have this capability. If so, consider including an action to develop/acquire the capability.
- For any capability that you do currently have, consider whether this capability can be leveraged to increase or improve hazard mitigation in the jurisdiction.
- If any items listed in the Planning and Regulatory Capabilities table have not been updated in more than 10 years, consider an action to review and update the capability and, as appropriate, incorporate hazard mitigation principles or information obtained in the risk assessment.
- Consider including actions that are identified in other plans and programs (capital improvement plans, strategic plans, etc.) as actions in this plan.

Capability Assessment Section—Adaptive Capacity for Climate Change Table

Consider your responses to this section:

- For criteria that you listed as medium or low, think of ways you could improve this rating (see adaptive capacity portion of the mitigation best practices catalog).
- For criteria you listed as high, think about how you can leverage this capacity to improve or enhance mitigation or continue to improve this capacity.
- For criteria that you were unable to provide responses for, consider ways you could improve your understanding of this capacity (see mitigation best practices and adaptive capacity catalog).

Table 2. Federal Hazard Mitigation Grant Program Eligibility by Action Type

Eligible Activities	Hazard Mitigation Grant Program	Pre-Disaster Mitigation	Flood Mitigation Assistance
Mitigation Projects			
Property Acquisition and Structure Demolition	√	√	√
Property Acquisition and Structure Relocation	√	√	√
Structure Elevation	√	√	√
Mitigation Reconstruction	√	√	√
Dry Floodproofing of Non-residential Structures	√	√	√
Generators	√	√	
Localized Flood Risk Reduction Projects	√	√	√
Non-Localized Flood Risk Reduction Projects	√	√	
Structural Retrofitting of Existing Buildings	√	√	√
Non-structural Retrofitting of Existing Buildings and Facilities	√	√	√
Safe Room Construction	√	√	
Infrastructure Retrofit	√	√	√
Soil Stabilization	√	√	√
Wildfire Mitigation	√	√	
Post-Disaster Code Enforcement	√		
Advance Assistance	√		
5 Percent Initiative Projects*	√		
Aquifer and Storage Recovery**	√	√	√
Flood Diversion and Storage**	√	√	√
Floodplain and Stream Restoration**	√	√	√
Green Infrastructure**	√	√	√
Miscellaneous/Other**	√	√	√
Hazard Mitigation Planning	√	√	√
Technical Assistance			√
Management Costs	√	√	√

* FEMA allows increasing the 5% initiative amount under the Hazard Mitigation Grant Program up to 10% for a presidential major disaster declaration. The additional 5% initiative funding can be used for activities that promote disaster-resistant codes for all hazards. As a condition of the award, either a disaster-resistant building code must be adopted or an improved Building Code Effectiveness Grading Schedule is required.

** Indicates that any proposed action will be evaluated on its own merit against program requirements. Eligible projects will be approved provided funding is available.

Integration Review Section

Review the items you identified in this section and consider an action that specifically says what the plan, code, ordinance etc. is and how it will be integrated.

Risk Ranking Section

You must identify at least one mitigation action that is clearly defined and actionable (i.e. not a preparedness or response action) for every hazard that is categorized in the risk ranking as “high” or “medium” risk.

Jurisdiction-Specific Vulnerabilities Section

Review the vulnerability issues that you identified in this section and consider actions to address them (see mitigation best practices catalog).

Status of Previous Plan Actions Section

If your jurisdiction participated in a previous hazard mitigation plan, be sure to include any actions that were identified as “carry over” actions.

Other Sources

Mitigation Best Practices Catalog

A catalog that includes best practices identified by FEMA and other agencies, as well as recommendations from the steering committee and other stakeholders, is included in your toolkit. Review the catalog and identify actions your jurisdiction should consider for its action plan.

Public Input

Review input received during the process, specifically the public survey results included in your toolkit.

Common Actions for All Partners

The following three actions have been prepopulated in your annex template; **these three actions should be included in every annex and should not be removed:**

- Where appropriate, support retro-fitting, purchase or relocation of structures located in high hazard areas, prioritizing those structures that have experienced repetitive losses and/or are located in high or medium ranked hazard.
- Actively participate in the plan maintenance protocols outlined in Volume 1 of this hazard mitigation plan.
- Purchase generators for critical facilities and infrastructure that lack adequate back-up power.

In addition, the core planning team recommends that every planning partner strongly consider the following actions:

- Identify and pursue strategies to increase adaptive capacity to climate change.
- Develop and implement a program to capture perishable data after significant events (e.g. high water marks, preliminary damage estimates, damage photos) to support future mitigation efforts including the implementation and maintenance of the hazard mitigation plan.
- Support the County-wide initiatives identified in Volume I of the hazard mitigation plan.
- Develop a post-disaster recovery plan and a debris management plan.
- Develop and/or update plans that support or enhance continuity of operations following disasters.

The specifics of all these common actions should be adjusted as needed for the particulars of each community.

Complete the Table

Complete the table titled “Hazard Mitigation Action Plan Matrix” for all the actions you have identified and would like to include in the plan:

- Enter the action number (see box at right) and description. **If the action is carried over from your previous hazard mitigation plan, return to the “Status of Previous Plan Actions” table you completed in Phase 1 and enter the new action number in the column labeled “Action # in Update.”**
- Indicate whether the action mitigates hazards for new and/or existing assets.
- Identify the specific hazards the action will mitigate (note: you must list each hazard by name; simply indicating “all hazards” is not deemed acceptable).
- Identify by number the mitigation plan objectives that the action addresses (see toolkit).
- Indicate who will be the lead in administering the action. This will most likely be a department within your jurisdiction (e.g. planning or public works). If you wish to indicate more than one department as responsible for the action, clearly identify one as the lead agency and list the others in the “supporting agency” column.
- Enter an estimated cost in dollars if known; otherwise, enter “High,” “Medium,” or “Low,” as determined for the prioritization process described in the following section.
- Identify funding sources for the action. If it is a grant, include the grant-providing agency as well as funding sources for any required cost share. If it is another outside funding source such as a non-profit funding source or a donation, include the source and any requirements for receiving the funding. Refer to your fiscal capability assessment to identify possible sources of funding and refer to the table on page 16 of these instructions for project eligibility for FEMA’s hazard mitigation assistance grant programs.
- Indicate the time line as “short-term” (1 to 5 years) or “long-term” (5 years or greater) or “ongoing” (a continual program)

Action Numbering

Actions are to be numbered using the three-letter code for your jurisdiction shown below, followed by a hyphen and the action’s sequential number:

- San Mateo County—SMC-1, SMC-2...
- Atherton City—ATH-1, ATH-2...
- Belmont City—BEL-1, BEL-2...
- Brisbane City—BRS-1, BRS-2...
- Burlingame City—BRL-1, BRL-2...
- Colma City—CLM-1, CLM-2...
- Daly City—DLY-1, DLY-2...
- East Palo Alto City—EPA-1, EPA-2...
- Foster City—FOS-1, FOS-2...
- Half Moon Bay City—HMB-1, HMB-2...
- Hillsborough City—HLS-1, HLS-2...
- Menlo Park City—MPK-1, MPK-2...
- Millbrae City—MLB-1, MLB-2...
- Pacifica City—PAC-1, PAC-2...
- Portola Valley City—PTV-1, PTV-2...
- Redwood City—RDW-1, RDW-2...
- San Bruno City—SBR-1, SBR-2...
- San Carlos City—SCR-1, SCR-2...
- San Mateo City—SMT-1, SMT-2...
- South San Francisco City—SSF-1, SSF-2...
- Woodside City—WDS-1, WDS-2...
- Coastside Water —CSW-1, CSW-2...
- Colma Fire —CFD-1, CFD-2...
- Flood & Sea Level —FSL-1, FSL-2...
- Harbor District —HRB-1, HBR-2
- Highland Recreational —HLD-1, HLD-2...
- Jefferson Union HS —JEF-1, JEF-2...
- Menlo Park Fire —MPF-1, MPF-2...
- Mid-Pen Reg Open Space District —MPR-1, MPR-2...
- Mid-Peninsula Water —MPW-1, MPW-2...
- Montara Water & Sewer —MWS-1, MWS-2...
- North Coast Water —NCW-1, NCW-2...
- Office of Education —OED-1, OED-2...
- San Mateo Community College —SCC-1, SCC-2...
- San Mateo RCD —SRC-1, SRC-2...
- Westborough Water —WBW-1, WBW-2...
- Woodside Fire —WFD-1, WFD-2...

Mitigation Action Priority

Complete the information in the table titled “Mitigation Action Priority” as follows:

- **Action #**—Indicate the action number from the Hazard Mitigation Action Plan Matrix table.
- **# of Objectives Met**—Enter the number of objectives the action will meet.
- **Benefits**—Enter “High,” “Medium” or “Low” as follows:
 - High—Action will provide an immediate reduction of risk exposure for life and property.
 - Medium—Action will have a long-term impact on the reduction of risk exposure for life and property, or action will provide an immediate reduction in the risk exposure for property.
 - Low—Long-term benefits of the action are difficult to quantify in the short term.
- **Cost**—Enter “High,” “Medium” or “Low” as follows:
 - High—Existing funding will not cover the cost of the action; implementation would require new revenue through an alternative source (for example, outside funding sources, bonds, grants, and fee increases).
 - Medium—The action could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the action would have to be spread over multiple years.
 - Low—The action could be funded under the existing budget. The action is part of or can be part of an ongoing existing program.
- **Do Benefits Exceed the Cost?**—Enter “Yes” or “No.” This is a qualitative assessment. Enter “Yes” if the benefit rating (high, medium or low) is the same as or higher than the cost rating (high benefit/high cost; high benefit/medium cost; medium benefit/low cost; etc.). Enter “No” if the benefit rating is lower than the cost rating (medium benefit/high cost, low benefit/medium cost; etc.)
- **Is the Action Eligible for Outside Funding Sources?**—Enter “Yes” or “No.” For grant funding, refer to the fact sheet on FEMA hazard mitigation grant programs in the annex preparation toolkit and the table on page 16 of these instructions.
- **Can Action Be Funded Under Existing Program Budgets?**—Enter “Yes” or “No.” In other words, is this action currently budgeted for, or would it require a new budget authorization or funding from another source such as grants, non-profit funding, or donations?
- **Implementation Priority**— Enter “High,” “Medium” or “Low” as follows:
 - High Priority—An action that meets multiple objectives, has benefits that exceed costs, and has a secured source of funding. Action can be completed in the short term (1 to 5 years).
 - Medium Priority—An action that meets multiple objectives, has benefits that exceed costs, and is eligible for funding though no funding has yet been secured for it. Action can be completed in the short term (1 to 5 years), once funding is secured. Medium-priority actions become high-priority actions once funding is secured.
 - Low Priority—An action that will mitigate the risk of a hazard, has benefits that do not exceed the costs or are difficult to quantify, has no secured source of funding, and is not eligible for any known outside funding sources. Action can be completed in the long term (1 to 10 years). Low-priority actions may be eligible for outside funding from programs that have not yet been identified.
- **Outside Funding Source Pursuit Priority**— Enter “High,” “Medium” or “Low” as follows:

- **High Priority**—An action that meets identified outside funding source eligibility requirements, has high benefits, and is listed as high or medium implementation priority; local funding options are unavailable or available local funds could be used instead for actions that are not eligible to be funded by outside sources.
- **Medium Priority**—An action that meets identified outside funding source eligibility requirements, has medium or low benefits, and is listed as medium or low implementation priority; local funding options are unavailable.
- **Low Priority**—An action that has not been identified as meeting any outside funding source eligibility requirements.

Actions identified as high-outside-funding-pursuit priority actions should be closely reviewed for consideration when outside funding source opportunities arise.

- **Equity Lens Priority**- Enter “High,” “Medium” or “Low” as follows:
 - **High Priority**—The mitigation action is designed to reduce harm to multiple socially vulnerable groups in the County from one or more of the hazards identified in the LHMP.
 - **Medium Priority**— The mitigation action is designed to reduce harm to a single socially vulnerable population in the County from at least one hazard identified in the LHMP.
 - **Low Priority**—The mitigation action fails to advance social equity in any measurable way in the County

An equity screening tool has been provided in **Appendix B** to these instructions that can be utilized to screen each action to help prioritize each action to the above criteria. The screening of each action using this tool is considered to be optional and not required for jurisdictions applying the equity lens to their action plan prioritization scheme.

Note: If a jurisdiction wishes to identify an action as high priority that is outside of the prioritization scheme for high priorities, a note indicating so should be inserted and a rationale should be provided.

Analysis of Mitigation Actions

In the table titled “Analysis of Mitigation Actions,” for each combination of hazard type and mitigation type, enter the numbers of all recommended actions that address that hazard type and can be categorized as that mitigation type. The mitigation types are as follows:

- **Prevention**—Government, administrative or regulatory actions that influence the way land and buildings are developed to reduce hazard losses. Includes planning and zoning, floodplain laws, capital improvement programs, open space preservation, and stormwater management regulations.
- **Property Protection**—Modification of buildings or structures to protect them from a hazard or removal of structures from a hazard area. Includes acquisition, elevation, relocation, structural retrofit, storm shutters, and shatter-resistant glass.
- **Public Education & Awareness**—Actions to inform residents and elected officials about hazards and ways to mitigate them. Includes outreach projects, real estate disclosure, hazard information centers, and school-age and adult education.
- **Natural Resource Protection**—Actions that minimize hazard loss and preserve or restore the functions of natural systems. Includes sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, wetland restoration and preservation, and green infrastructure.

- **Emergency Services**—Actions that protect people and property during and immediately after a hazard event. Includes warning systems, emergency response services, and the protection of essential facilities.
- **Structural Projects**—Actions that involve the construction of structures to reduce the impact of a hazard. Includes dams, setback levees, floodwalls, retaining walls, and safe rooms.
- **Climate Resilience**—Actions that incorporate methods to mitigate and/or adapt to the impacts of climate change. Includes aquifer storage and recovery activities, incorporating future conditions projections in project design or planning, or actions that specifically address jurisdiction-specific climate change risks, such as sea-level rise or urban heat island effect.
- **Community Capacity Building**—Actions that increase or enhance local capabilities to adjust to potential damage, to take advantage of opportunities, or to respond to consequences. Includes staff training, memorandums of understanding, development of plans and studies, and monitoring programs.

This exercise demonstrates that the jurisdiction has selected a comprehensive range of actions. This table must show at least one action to address each “high” and “medium” ranked hazard. Planning partners should aim to identify at least one action for each mitigation type, but this is not required.

An example of a completed “Analysis of Mitigation Actions” table is provided below. Note that an action can be more than one mitigation type.

Sample Completed Table – Analysis of Mitigation Actions

Hazard Type	Action Addressing Hazard, by Mitigation Type							
	Prevention	Property Protection	Public Education & Awareness	Natural Resource Protection	Emergency Services	Structural Projects	Climate Resilience	Community Capacity Building
High-Risk Hazards								
Dam Failure	EX-2, 3, 4, 5, 6	EX-1, 6	EX-4, 6		EX-8, 11			EX-3, 4, 8, 9, 10
Drought	EX-2	EX-1	EX-4					EX-3, 4, 8, 9, 10
Medium-Risk Hazards								
Earthquake	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9
Flooding	EX-2, 3, 4, 5, 6, 7	EX-1, 6, 7	EX-4, 6	EX-9	EX-8, 11	EX-6		EX-3, 4, 8, 9, 10
Landslide	EX-2, 3, 4, 5, 7	EX-1, 7	EX-4		EX-8, 11			EX-3, 4, 8, 9, 10
Low-Risk Hazards								
Severe Weather	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4		EX-8, 9, 11		EX-8, 7	EX-3, 4, 8, 9, 10
Wildfire	EX-2, 3, 4, 5, 7	EX-1, 7, 9	EX-4, 9	EX-9	EX-8, 11			EX-3, 4, 8, 9, 10

PUBLIC OUTREACH

FEMA requirements for public outreach will be met by the County’s engagement efforts and are included in the main part of the plan. These may include public meetings, a StoryMap, surveys, etc. If individual jurisdictions want to have a more robust outreach for their local community, the public outreach table in each annex may be used to memorialize those local efforts.

This table should record local public outreach efforts made by your jurisdiction to inform the community of the plan update process. Examples may include local surveys on hazard awareness/preparedness, social media blasts, press releases, and outreach to local groups (CERT, senior citizen organizations, etc.) **This section is optional.**

INFORMATION SOURCES USED FOR THIS ANNEX

This section should describe what resources you used to complete the annex and how you used them. The sources used for Phases 1 and 2 should have been entered previously. List any additional sources used for the preparation of the Phase 3 annex. Review to ensure that all materials used in all three phases are identified. Providing this information is a requirement to pass the state and FEMA review process.

FUTURE NEEDS TO BETTER UNDERSTAND RISK/VULNERABILITY

In this section, identify any future studies, analyses, reports, or surveys your jurisdiction needs to better understand its vulnerability to identified or currently unidentified risks. These could be needs based on federal or state agency mandates. **This section is optional.**

ADDITIONAL COMMENTS

Use this section to add any additional information pertinent to hazard mitigation and your jurisdiction not covered in this template. **This section is optional.**

THIS COMPLETES PHASE 3

APPENDIX A— Risk Ranking Calculation Methodology

The instructions below describe the methodology for how risk rankings were derived in the “Loss Matrix” spreadsheet provided with the annex preparation toolkit. The risk-ranking for each hazard assessed its probability of occurrence and its potential impact on people, property, and the economy. Refer to the Loss Matrix spreadsheet in order to follow along.

Probability of Occurrence

A probability factor is assigned based on how often a hazard is likely to occur. The probability of occurrence of a hazard event is generally based on past hazard events in an area, although weight can be given to expected future probability of occurrence based on established return intervals and changing climate conditions. For example, if your jurisdiction has experienced two damaging floods in the last 25 years, the probability of occurrence is high for flooding and scores a 3 under this category. If your jurisdiction has experienced no damage from landslides in the last 100 years, your probability of occurrence for landslide is low, and scores a 1 under this category. Each hazard was assigned a probability factor as follows:

- High—Hazard event is likely to occur within 25 years (Probability Factor = 3)
- Medium—Hazard event is likely to occur within 100 years (Probability Factor = 2)
- Low—Hazard event is not likely to occur within 100 years (Probability Factor = 1)
- None—There is no exposure to the hazard and no probability of occurrence (Probability Factor = 0)

Potential Impacts of Each Hazard

The impact of each hazard is divided into three categories: impacts on people, impacts on property, and impacts on the economy. These categories are also assigned weighted values. Impact on people was assigned a weighting factor of 3, impact on property was assigned a weighting factor of 2 and impact on the economy was assigned a weighting factor of 1.

Impact factors for each category (people, property, economy) are described below:

- **People**—Values for the impact on people is based on the percentage of the population in each of the five (5) classifications for social vulnerability from the National Risk Index (NRI). Values are assigned based on the percentage of the total *population exposed* to the hazard event. The degree of impact on individuals will vary and is not measurable, so the calculation assumes for simplicity and consistency that all people exposed to a hazard because they live in a hazard zone will be equally impacted when a hazard event occurs. Impact factors were assigned as follows:
 - Very High—15 percent or more of the population is exposed to a hazard (Impact Factor = 5), less than 15% of the population exposed to a hazard (impact factor =4)
 - Relatively High—25 percent or more of the population is exposed to a hazard (Impact Factor = 4), less than 25 percent of the population exposed to a hazard (Impact Factor = 3).
 - Relatively Moderate—35 percent or more of the population is exposed to the hazard (Impact Factor = 3), less than 35 percent of the population exposed (Impact Factor =2).
 - a) Relatively Low—50 percent or more of the population is exposed to a hazard (Impact Factor = 2), less than 50 percent of the population exposed to a hazard (Impact Factor =1)
 - Very Low—75 percent or more of the population exposed to a hazard (Impact Factor =1), less than 75 percent of the population exposed (Impact Factor = 0).
 - No impact— No population exposed to the hazard.

The impact factors are additive. There could be multiple levels of exposure for each hazard under the five NRI social vulnerability indices. Please note that if 0 to 74 percent of the population is exposed to

the “very low” classification, the risk ranking score will default to the base-line risk ranking score (Ranking result for the without equity lens option in the loss matrix).

- **Property**—Values are assigned based on the percentage of the total *District Assets exposed* to the hazard event:
 - High—25 percent or more of the total replacement value of the District’s assets are exposed to a hazard (Impact Factor = 3)
 - Medium—10 percent to 24 percent of the total replacement value of the District’s assets are exposed to a hazard (Impact Factor = 2)
 - Low—9 percent or less of the total replacement value of the District’s assets are exposed to the hazard (Impact Factor = 1)
 - No impact—None of the total replacement value of the Districts are exposed to a hazard (Impact Factor = 0)
- **Economy**— How long it will take your District to become 100-percent operable after a hazard event? This is a subjective assessment based on the loss estimation you observe for your service area in the Los Matric.
 - High—Functional downtime of 365 days or more (Impact Factor = 3)
 - Medium—Functional downtime of 180 to 364 days (Impact Factor = 2)
 - Low—Functional downtime of 180 days or less (Impact Factor = 1)
 - No impact—No functional downtime is estimated from the hazard (Impact Factor = 0).

Impacts on People

The percent of the total population exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **green highlighted column**. For those hazards that do not have a defined extent and location the entire population or a portion of the population is considered to be exposed, depending on the hazard. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all people in the planning area would be exposed to drought, but impacts to the health and safety of individuals are expected to be minimal.

Impacts on Property

The percent of the total value exposed to each hazard of concern with a defined extent and location (e.g. floodplain) can be found in the loss estimate matrix in the **blue highlighted column**. For those hazards that do not have a defined extent and location (e.g. severe weather) the entire building stock is generally considered to be exposed. For the drought hazard, it is common for jurisdictions to list “low” or “none,” because all structures in the planning area would be exposed to drought but impacts to structures are expected to be minimal.

Impacts on the Economy

The loss estimates for each hazard of concern that was modeled (i.e. dam failure, flood, earthquake) can be found in the loss estimate matrix in the **orange highlighted column**. For those hazards that have a defined extent and location, but do not have modelled loss results, loss estimates can be the same as exposure or a portion thereof. For example, a large percentage of the building stock may be exposed to landslide or wildland fire risk, but it would not be expected that one event that resulted in loss to all exposed structures would occur. For those hazards that do not have a defined extent and location, exposure is based on the hazard type.

Risk Rating for Each Hazard

A risk rating for each hazard was determined by multiplying the assigned probability factor by the sum of the weighted impact factors for people, property, and the economy:

$$\text{Risk Rating} = \text{Probability Factor} \times \text{Weighted Impact Factor \{people + property + economy\}}$$

This is the number that is shown in the risk ranking table in your template. Generally, score of 30 or greater receive a “high” rating, score between 15 and 30 receive a “medium” rating, and score of less than 15 receives a “low” rating.

APPENDIX B— Equity Lens Screening Tool			
	Procedural	Distributive	Structural
Programs/ Services	How was the target audience included in the design of the program? What actions will be taken to ensure that services and programs are physically and programmatically accessible and inclusive? What are the criteria for participation or receipt of benefits?	Is the program or service designed to meet the needs of underserved and underrepresented communities? If not, what would need to be changed to ensure their equitable participation? How will program dollars be allocated to ensure inclusive and accessible service delivery? Does the cost structure of the program result in disparate use? /Does the fee structure of the service result in increased burdens for low-income communities?	Does this program/service create unintended consequences for communities that are underserved and underrepresented? How will they be mitigated? Is there an opportunity to extend additional benefits through this program/service that can help support the healing of past harms to communities? Does the program empower and build capacity of a community?
Capital Investments	What are the criteria for prioritizing projects and investments? Does the data and information used consider the demographic, geographic and real-world experience of residents and businesses in the area? If data gaps exist, what are you using to guide decisions? What process will be used to get input from the community? How will you reach underserved populations?	Will the investment provide improved safety, health, access, or opportunity for the communities who need it most? How will the underserved people who currently live and work in the area benefit from the investment?	What measures will be taken to mitigate the potential impacts of involuntary displacement in the project? How will business or employment opportunity created through the project be extended to communities of color, people with disabilities, and low-income people? How will community benefits be negotiated?
Regulation	Has analysis been done on the impacts to communities of color, people with disabilities, low-income populations, seniors, children, renters, and other historically underserved or excluded groups? How will impacted communities be able to learn about and understand changes with the regulation? How will the regulation be enforced?	Will the regulation provide improved safety, health, access, or opportunity for the communities who need it most? How will the regulation alleviate any cost-burden for those who are already in a position where it is difficult to pay?	Does the regulation create or inhibit opportunity for communities of color, people with disabilities, and low-income populations? Will enforcement disproportionately negatively affect low-income communities or communities of color? How will this be mitigated?
Planning	How will impacted communities be involved in the planning process? What measures will be taken to ensure the process is fair and inclusive?	How does the plan prioritize and address the needs of the most impacted or vulnerable in the community? Does the plan improve safety, health, access, or opportunity for the communities who need it most? How will resources shift to ensure equitable implementation of the plan?	What measures will be taken to mitigate the potential impacts of involuntary displacement? How will policies support community development? What support is needed to build the community's ownership and self-determination with the plan?

- Procedural equity—ensuring that processes are fair and inclusive in the development and implementation of any program or policy
- Distributive equity—ensuring that resources or benefits and burdens of a policy or program are distributed fairly, prioritizing those with highest need first.
- Structural equity—a commitment and action to correct past harms and prevent future negative consequences by institutionalizing accountability and decision-making structures that aim to sustain positive outcomes

Table 2.0. Equity Screening Question Matrix

Evaluation Question	Response
1. What issue/problem/risk is the action designed to address? And what are the expected benefits?	Issue: Benefits:
2. Who is the target audience/beneficiary for this action? Who is affected if no action is taken?	
3. How would you classify the mitigation action? (Programs/Service; Capital Investment; Regulation; Planning). <i>Refer to questions in table above based on your answer to this question.</i>	
4. Will any community groups be involved in the design/implementation of this action? (i.e. potential partners)	
5. Will this action reduce risk from natural hazards for the following groups? How?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
6. How could this action benefit the following groups? Or How could this action be modified so that there are benefits?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
7. How could this action burden/negatively impact/leave out the following groups, for example through communication, transportation, physical or programmatic barriers?	
Communities of color	
Persons with disabilities and/or access and functional needs	
Households with limited English Proficiency	
Renters	
Economically disadvantaged families	
Seniors (age 65 or older)	
Children (under 15 years of age)	
8. If you have identified burdens, barriers, or negative impacts, or opportunities for benefits please <u>revisit the action</u> to identify strategies to reduce or eliminate burdens or negative impacts; remove communication, transportation, physical or programmatic barriers; or enhance potential benefits.	
9. Have you identified a performance metric for evaluating progress on this action? How will you know when this action is complete? (please provide) Have you considered outcomes for communities of color, people with disabilities, low-income families, people with limited English proficiency, renters, seniors, and children?	

**ANNEX TEMPLATE FOR
SPECIAL-PURPOSE DISTRICTS**

1. DISTRICT NAME

1.1 LOCAL HAZARD MITIGATION PLANNING TEAM

Primary Point of Contact

1.3 CURRENT TRENDS

Insert summary description of service trends.

1.4 CAPABILITY ASSESSMENT

This section describes an assessment of existing capabilities for implementing hazard mitigation strategies. The introduction at the beginning of this volume of the hazard mitigation plan describes the components included in the capability assessment and their significance for hazard mitigation planning.

Findings of the capability assessment were reviewed to identify opportunities to expand, initiate or integrate capabilities to further hazard mitigation goals and objectives. Where such opportunities were identified and determined to be feasible, they are included in the action plan. The “Analysis of Mitigation Actions” table in this annex identifies these as community capacity building mitigation actions. The findings of the assessment are presented as follows:

- An assessment of planning and regulatory capabilities is presented in Table 1-3.
- An assessment of fiscal capabilities is presented in Table 1-4.
- An assessment of administrative and technical capabilities is presented in Table 1-5.
- An assessment of education and outreach capabilities is presented in Table 1-6.

- Classifications under various community mitigation programs are presented in Table 1-7.
- The community's adaptive capacity for the impacts of climate change is presented in Table 1-8.

Table 1-3. Planning and Regulatory Capability

Jurisdiction-level monitoring of climate change impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Technical resources to assess proposed strategies for feasibility and externalities <i>Comment:</i> Enter Comment	High/Medium/Low
Jurisdiction-level capacity for development of greenhouse gas emissions inventory <i>Comment:</i> Enter Comment	High/Medium/Low
Capital planning and land use decisions informed by potential climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Participation in regional groups addressing climate risks <i>Comment:</i> Enter Comment	High/Medium/Low
Implementation Capacity	
Clear authority/mandate to consider climate change impacts during public decision-making processes <i>Comment:</i> Enter Comment	High/Medium/Low
Identified strategies for greenhouse gas mitigation efforts <i>Comment:</i> Enter Comment	High/Medium/Low
Identified strategies for adaptation to impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Champions for climate action in local government departments <i>Comment:</i> Enter Comment	High/Medium/Low
Political support for implementing climate change adaptation strategies <i>Comment:</i> Enter Comment	High/Medium/Low
Financial resources devoted to climate change adaptation <i>Comment:</i> Enter Comment	High/Medium/Low
Local authority over sectors likely to be negative impacted <i>Comment:</i> Enter Comment	High/Medium/Low

Criterion	Jurisdiction Rating ^a
Public Capacity	
Local residents knowledge of and understanding of climate risk <i>Comment:</i> Enter Comment	High/Medium/Low
Local residents support of adaptation efforts <i>Comment:</i> Enter Comment	High/Medium/Low
Local residents' capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Local economy current capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low
Local ecosystems capacity to adapt to climate impacts <i>Comment:</i> Enter Comment	High/Medium/Low

- a. High = Capacity exists and is in use; Medium = Capacity may exist, but is not used or could use some improvement; Low = Capacity does not exist or could use substantial improvement; Unsure= Not enough information is known to assign a rating.

1.5 INTEGRATION REVIEW

For hazard mitigation planning, “integration” means that hazard mitigation information is used in other relevant planning mechanisms, such as capital facilities planning, and that relevant information from those sources is used in hazard mitigation. This section identifies where such integration is already in place, and where there are opportunities for further integration in the future. Resources listed at the end of this annex were used to provide information on integration. The progress reporting process described in Volume 1 of the hazard mitigation plan will document the progress of hazard mitigation actions related to integration and identify new opportunities for integration.

1.5.1 Existing Integration

Some level of integration has already been established between local hazard mitigation planning and the following other local plans and programs:

- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description

1.5.2 Opportunities for Future Integration

The capability assessment presented in this annex indicates opportunities to integrate this mitigation plan with other jurisdictional planning/regulatory capabilities. Capabilities were identified as integration opportunities if they can support or enhance the actions identified in this plan or be supported or enhanced by components of this plan. The capability assessment identified the following plans and programs that do not currently integrate hazard mitigation information but provide opportunities to do so in the future:

- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description
- Plan or Program Name—Description

Taking action to integrate each of these programs with the hazard mitigation plan was considered as a mitigation action to include in the action plan presented in this annex.

1.6 RISK ASSESSMENT

1.6.1 Jurisdiction-Specific Natural Hazard Event History

Table 1-8 lists past occurrences of natural hazards for which specific damage was recorded in this jurisdiction. Other hazard events that broadly affected the entire planning area, including this jurisdiction, are listed in the risk assessments in Volume 1 of this hazard mitigation plan.

Table 1-8. Past Natural Hazard Events

1.6.2 Hazard Risk Ranking

Table 1-9 presents a local ranking of all hazards of concern for which this hazard mitigation plan provides complete risk assessments. As described in detail in Volume 1, the ranking process involves an assessment of the likelihood of occurrence for each hazard, along with its potential impacts on people, property and district operations. Mitigation actions target hazards with high and medium rankings.

Table 1-9. Hazard Risk Ranking

Rank	Hazard	Risk Ranking Score	Risk Category
1			High/Medium/Low
2			High/Medium/Low
3			High/Medium/Low
4			High/Medium/Low
5			High/Medium/Low
6			High/Medium/Low

1.6.3 Jurisdiction-Specific Vulnerabilities

Volume 1 of this hazard mitigation plan provides complete risk assessments for each identified hazard of concern. The following jurisdiction-specific issues have been identified based on a review of the results of the risk assessment, public involvement strategy, and other available resources:

- Insert as appropriate.
- Insert as appropriate.
- Insert as appropriate.

Mitigation actions addressing these issues were prioritized for consideration in the action plan presented in this annex.

1.7 STATUS OF PREVIOUS PLAN ACTIONS

If your jurisdiction has no previous hazard mitigation plan, please enter an “X” in the box at right and do not complete this section.

Table 1-10 summarizes the actions that were recommended in the previous version of the hazard mitigation plan and their implementation status at the time this update was prepared.

H. Adopt Resolution No. 2021-71 to Continue Conducting City Council and Commission Meetings Remotely Due to Health and Safety Concerns for the Public

CITY COUNCIL AGENDA REPORT

Meeting Date: 11/18/2021

From: Clay Holstine, City Manager

Subject: Adoption of a Resolution No. 2021-71 to Continue Conducting City Council and Commission Meetings Remotely Due to Health and Safety Concerns for the Public

COMMUNITY GOAL RESULTS

Safe Community

Ensuring Public Meetings Remain Open to the Public

RECOMMENDATION

Staff recommends that the City Council adopt a resolution to continue conducting the City Council's meetings and Committee and Commission meetings remotely due to health and safety concerns for the public.

BACKGROUND

COVID-19 (Coronavirus) was declared a global pandemic in March 2020 by the World Health Organization. Then President Donald Trump declared a national emergency in response. President Trump also called on states and localities to take action to help protect their residents from the spread of the Coronavirus. On March 4, 2020, Governor Gavin Newsom proclaimed a state of emergency in response to the Coronavirus pandemic, and on March 5, 2020, San Mateo County's Health Officer, Dr. Scott Morrow, declared a local health emergency in response to the Coronavirus. The San Mateo County Board of Supervisors ratified Dr. Morrow's declaration on March 10, 2020. On March 19, 2020, the City Council ratified the City's Director of Emergency Service's proclamation of a local emergency, which allowed staff to expeditiously respond to the emergency circumstances caused by the pandemic.

On March 17, 2020, as part of the state's response to the COVID-19 pandemic, Governor Newsom issued Executive Order N-29-20. The order suspended certain provisions of the Ralph M. Brown Act to allow local legislative bodies to conduct meetings remotely, by telephone, interactive video or similar means. Additionally, Governor Newsom issued a shelter-in-place order, requiring all non-essential personnel to work from home.

Staff worked to set up Zoom meetings for all public City Council, Committee and Commission meetings. The use of Zoom for public meetings allows the City to ensure the public's continued access to government meetings while also ensuring the public's safety. The City has been utilizing Zoom to conduct public meetings since March 2020 and no meeting has had to be cancelled due to technical or related difficulties.

On June 11, 2021, Governor Newsom issued Executive Order N-08-21 rescinding Executive Order N-29-20 and requiring that as of October 1, 2021, localities must hold public meetings in full compliance with the Brown Act. In preparation for the return to in-person meetings, and in order to keep people safe, staff acquired audio and visual upgrades for the Council Chambers to conduct hybrid meetings. Hybrid meetings allow the public to continue participating in public meetings remotely, while councilmembers, committee members, commissioners, and staff meet in person.

Subsequent to the Governor's issuance of Executive Order N-08-21, the Delta variant emerged and caused a spike in Coronavirus cases throughout the state and county. In response, on August 2, 2021, the County Health Officer issued a Health Order requiring masks indoors in public places, regardless of vaccination status. Despite the Order, the Delta variant continued to spread in the county, leading to questions about whether even hybrid meetings should be held. Staff advised that the state legislature was considering legislation, Assembly Bill 361, that would permit meetings subject to the Brown Act to continue to be held via video and telecommunications. AB 361 was signed into law on September 16, 2021.

AB 361 amends the Brown Act to permit local legislative bodies to continue to meet remotely until January 1, 2024 provided:

- The local legislative body is meeting during a declared state of emergency.
- State or local health officials have imposed or recommended measures to promote social distancing.
- The local legislative body has determined that there is a need to hold public meetings remotely due to imminent risks to the health or safety of attendees.

On September 23, 2021 and on October 21, 2021, the City Council found that the City meets the requirements of AB 361 – the declared state of emergency proclaimed by the state (as well as one by the City) remain in place, state and local health officials continue to recommend that residents observe social distancing and other protective measures, and the City has determined that there is a need to hold public meetings remotely due to imminent risks to the health and safety of attendees – and adopted Resolution No. 2021-66 and No. 2021-69 directing that the City shall continue to conduct public meetings normally scheduled for City Hall via Zoom to protect the health and safety of the public.

DISCUSSION

The Brown Act as amended by AB 361 requires that every 30 days the City Council review its decision not to hold in-person public meetings at City Hall and to specifically determine whether holding remote and/or hybrid public meetings continues to meet the requirements of the Brown Act as amended.

ACTION

Staff recommends that the City Council declare that the findings required under AB 361, as reflected in proposed Resolution No. 2021-71, remain in effect and that the Council's, committees' and commissions' public meetings normally scheduled for City Hall through December 18, 2021, must be held remotely or in hybrid fashion to protect the health and safety of the public.

FISCAL IMPACT

There is no fiscal impact.

RESOLUTION NO. 2021-71

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BRISBANE DECLARING THE NEED FOR THE CITY COUNCIL, COMMITTEES AND COMMISSIONS TO CONTINUE TO MEET REMOTELY IN ORDER TO ENSURE THE HEALTH AND SAFETY OF THE PUBLIC

WHEREAS, on March 4, 2020, Governor Newsom declared a State of Emergency to make additional resources available, formalize emergency actions already underway across multiple state agencies and departments, and help the State prepare for a broader spread of COVID-19; and

WHEREAS, on March 19, 2020, the City Council ratified and confirmed the Director of Emergency Service's proclamation of a local emergency which allowed staff to expeditiously respond to the emergency circumstances caused by the pandemic; and

WHEREAS, on March 17, 2020, in response to the COVID-19 pandemic, Governor Newsom issued Executive Order N-29-20 suspending certain provisions of the Ralph M. Brown Act in order to allow local legislative bodies to conduct meetings telephonically or by other means; and

WHEREAS, as a result of Executive Order N-29-20, staff set up Zoom meetings for all City Council, Committee and Commission meetings; and

WHEREAS, on June 11, 2021, Governor Newsom issued Executive Order N-08-21, which placed an end date of September 30, 2021, for agencies to meet remotely; and

WHEREAS, since issuing Executive Order N-08-21, the Delta variant has emerged, causing a spike in COVID-19 cases throughout the state; and

WHEREAS, on August 3, 2021, in response to the Delta variant, the San Mateo County Health Department ordered all individuals to wear masks when inside public spaces and maintain social distancing; and

WHEREAS, on September 16, 2021, Governor Newsom signed Assembly Bill 361 into law, amending the Brown Act to permit local legislative bodies, including the City Council, to meet remotely provided it is meeting during a declared state of emergency, state or local officials have imposed or recommended measures to promote social distancing, and the Council believes there is a need to meet remotely to protect against imminent risks to the health and safety of potential public attendees; and

WHEREAS, because of the rise in cases due to the Delta variant, the state, San Mateo County and the City Council are concerned about and desire to protect the health and safety of individuals who might otherwise attend Council, Committee and Commission

meetings;

WHEREAS, the City Council of the City of Brisbane approved Resolution No. 2021-66 on September 23, 2021 and Resolution No. 2021-69 on October 21, 2021 declaring the need for the City Council, Committees, and Commissions to continue to meet remotely in order to ensure the health and safety of the public through November 19, 2021; and

WHEREAS, the City Council does hereby find that the above described conditions of serious threat to the public health, safety, and welfare continue at this time; and

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF BRISBANE
RESOLVES AS FOLLOWS:**

1. In compliance with AB 361, the City Council has reviewed and makes the following findings:
 - a. The state, San Mateo County and the City have each proclaimed a state of emergency due to the Coronavirus pandemic;
 - b. San Mateo County has issued a public health order requiring that individuals in public spaces wear masks and socially distance, but the City cannot maintain social distancing for the public, staff, councilmembers, commissioners, and committee members in its meeting spaces; and
 - c. The City Council has considered these circumstances and concludes that it, City Committees and City Commissions must meet remotely due to imminent risks to the health and safety of attendees if the Council, Committees or Commissions meet in City facilities.
2. Based on the foregoing, the City Council declares that to protect the safety and health of the public, City Council, Committee and Commission meetings will continue to be conducted remotely for the next 30 days in compliance with AB 361.
3. The City Council will revisit the need to conduct public meetings remotely within 30 days of the adoption of this resolution.

Karen Cunningham, Mayor

PASSED, APPROVED AND ADOPTED by the Brisbane City Council at a regular meeting on November 18, 2021.

I hereby certify that the foregoing resolution was adopted by the City Council at a regular meeting held on November 18, 2021 by the following vote:

AYES:
NOES:
ABSENT:
ABSTAIN:

Ingrid Padilla, City Clerk

CALIFORNIA LEGISLATURE— 2021–2022 REGULAR SESSION

ASSEMBLY BILL

NO. 361

Introduced by Assembly Member Robert Rivas

February 01, 2021

An act to add and repeal Section 89305.6 of the Education Code, and to amend, repeal, and add Section 54953 of, and to add and repeal Section 11133 of, the Government Code, relating to open meetings, and declaring the urgency thereof, to take effect immediately.

LEGISLATIVE COUNSEL'S DIGEST

AB 361, Robert Rivas. Open meetings: state and local agencies: teleconferences.

(1) Existing law, the Ralph M. Brown Act requires, with specified exceptions, that all meetings of a legislative body of a local agency, as those terms are defined, be open and public and that all persons be permitted to attend and participate. The act contains specified provisions regarding the timelines for posting an agenda and providing for the ability of the public to directly address the legislative body on any item of interest to the public. The act generally requires all regular and special meetings of the legislative body be held within the boundaries of the territory over which the local agency exercises jurisdiction, subject to certain exceptions. The act allows for meetings to occur via teleconferencing subject to certain requirements, particularly that the legislative body notice each teleconference location of each member that will be participating in the public meeting, that each teleconference location be accessible to the public, that members of the public be allowed to address the legislative body at each teleconference location, that the legislative body post an agenda at each teleconference location, and that at least a quorum of the legislative body participate from locations within the boundaries of the local agency's jurisdiction. The act provides an exemption to the jurisdictional requirement for health authorities, as defined. The act authorizes the district attorney or any interested person, subject to certain provisions, to commence an action by mandamus or injunction for the purpose of obtaining a judicial determination that specified actions taken by a legislative body are null and void.

Existing law, the California Emergency Services Act, authorizes the Governor, or the Director of Emergency Services when the governor is inaccessible, to proclaim a state of emergency under specified circumstances.

Executive Order No. N-29-20 suspends the Ralph M. Brown Act's requirements for teleconferencing during the COVID-19 pandemic provided that notice and accessibility requirements are met, the public members are allowed to observe and address the legislative body at the meeting, and that a legislative body of a local agency has a procedure for receiving and swiftly resolving requests for reasonable accommodation for individuals with disabilities, as specified.

This bill, until January 1, 2024, would authorize a local agency to use teleconferencing without complying with the teleconferencing requirements imposed by the Ralph M. Brown Act when a legislative body of a local agency holds a meeting during a declared state of emergency, as that term is defined, when state or local health officials have imposed or recommended measures to promote social distancing, during a proclaimed state of emergency held for the purpose of determining, by majority vote, whether meeting in person would present imminent risks to the health or safety of attendees, and during a proclaimed state of emergency when the legislative body has determined that meeting in person would present imminent risks to the health or safety of attendees, as provided.

This bill would require legislative bodies that hold teleconferenced meetings under these abbreviated teleconferencing procedures to give notice of the meeting and post agendas, as described, to allow members of the public to access the meeting and address the legislative body, to give notice of the means by which members of the public may access the meeting and offer public comment, including an opportunity for all persons to attend via a call-in option or an internet-based service option, and to conduct the meeting in a manner that protects the statutory and constitutional rights of the parties and the public appearing before the legislative body. The bill would require the legislative body to take no further action on agenda items when there is a disruption which prevents the public agency from broadcasting the meeting, or in the event of a disruption within the local agency's control which prevents members of the public from offering public comments, until public access is restored. The bill would specify that actions taken during the disruption are subject to challenge proceedings, as specified.

This bill would prohibit the legislative body from requiring public comments to be submitted in advance of the meeting and would specify that the legislative body must provide an opportunity for the public to address the legislative body and offer comment in real time. The bill would prohibit the legislative body from closing the public comment period and the opportunity to register to provide public comment, until the public comment period has elapsed or until a reasonable amount of time has elapsed, as specified. When there is a continuing state of emergency, or when state or local officials have imposed or recommended measures to promote social distancing, the bill would require a legislative body to make specified findings not later than 30 days after the first teleconferenced meeting pursuant to these provisions, and to make those findings every 30 days thereafter, in order to continue to meet under these abbreviated teleconferencing procedures.

Existing law prohibits a legislative body from requiring, as a condition to attend a meeting, a person to register the person's name, or to provide other information, or to fulfill any condition precedent to the person's attendance.

This bill would exclude from that prohibition, a registration requirement imposed by a third-party internet website or other online platform not under the control of the legislative body.

(2) Existing law, the Bagley-Keene Open Meeting Act, requires, with specified exceptions, that all meetings of a state body be open and public and all persons be permitted to attend any meeting of a state body. The act requires at least one member of the state body to be physically present at the location specified in the notice of the meeting.

The Governor's Executive Order No. N-29-20 suspends the requirements of the Bagley-Keene Open Meeting Act for teleconferencing during the COVID-19 pandemic, provided that notice and accessibility requirements are met, the public members are allowed to observe and address the state body at the meeting, and that a state body has a procedure for receiving and swiftly resolving requests for reasonable accommodation for individuals with disabilities, as specified.

This bill, until January 31, 2022, would authorize, subject to specified notice and accessibility requirements, a state body to hold public meetings through teleconferencing and to make public meetings accessible telephonically, or otherwise electronically, to all members of the public

seeking to observe and to address the state body. With respect to a state body holding a public meeting pursuant to these provisions, the bill would suspend certain requirements of existing law, including the requirements that each teleconference location be accessible to the public and that members of the public be able to address the state body at each teleconference location. Under the bill, a state body that holds a meeting through teleconferencing and allows members of the public to observe and address the meeting telephonically or otherwise electronically would satisfy any requirement that the state body allow members of the public to attend the meeting and offer public comment. The bill would require that each state body that holds a meeting through teleconferencing provide notice of the meeting, and post the agenda, as provided. The bill would urge state bodies utilizing these teleconferencing procedures in the bill to use sound discretion and to make reasonable efforts to adhere as closely as reasonably possible to existing law, as provided.

(3) Existing law establishes the various campuses of the California State University under the administration of the Trustees of the California State University, and authorizes the establishment of student body organizations in connection with the operations of California State University campuses.

The Gloria Romero Open Meetings Act of 2000 generally requires a legislative body, as defined, of a student body organization to conduct its business in a meeting that is open and public. The act authorizes the legislative body to use teleconferencing, as defined, for the benefit of the public and the legislative body in connection with any meeting or proceeding authorized by law.

This bill, until January 31, 2022, would authorize, subject to specified notice and accessibility requirements, a legislative body, as defined for purposes of the act, to hold public meetings through teleconferencing and to make public meetings accessible telephonically, or otherwise electronically, to all members of the public seeking to observe and to address the legislative body. With respect to a legislative body holding a public meeting pursuant to these provisions, the bill would suspend certain requirements of existing law, including the requirements that each teleconference location be accessible to the public and that members of the public be able to address the legislative body at each teleconference location. Under the bill, a legislative body that holds a meeting through teleconferencing and allows members of the public to observe and address the meeting telephonically or otherwise electronically would satisfy any requirement that the legislative body allow members of the public to attend the meeting and offer public comment. The bill would require that each legislative body that holds a meeting through teleconferencing provide notice of the meeting, and post the agenda, as provided. The bill would urge legislative bodies utilizing these teleconferencing procedures in the bill to use sound discretion and to make reasonable efforts to adhere as closely as reasonably possible to existing law, as provided.

(4) This bill would declare the Legislature's intent, consistent with the Governor's Executive Order No. N-29-20, to improve and enhance public access to state and local agency meetings during the COVID-19 pandemic and future emergencies by allowing broader access through teleconferencing options.

(5) This bill would incorporate additional changes to Section 54953 of the Government Code proposed by AB 339 to be operative only if this bill and AB 339 are enacted and this bill is enacted last.

(6) The California Constitution requires local agencies, for the purpose of ensuring public access to the meetings of public bodies and the writings of public officials and agencies, to comply with a statutory enactment that amends or enacts laws relating to public records or open meetings and contains findings demonstrating that the enactment furthers the constitutional requirements relating to this purpose.

This bill would make legislative findings to that effect.

(7) Existing constitutional provisions require that a statute that limits the right of access to the meetings of public bodies or the writings of public officials and agencies be adopted with findings demonstrating the interest protected by the limitation and the need for protecting that interest.

This bill would make legislative findings to that effect.

(8) This bill would declare that it is to take effect immediately as an urgency statute.

DIGEST KEY

Vote: 2/3 Appropriation: no Fiscal Committee: yes Local Program: no

BILL TEXT

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1.

Section 89305.6 is added to the Education Code, to read:

89305.6.

(a) Notwithstanding any other provision of this article, and subject to the notice and accessibility requirements in subdivisions (d) and (e), a legislative body may hold public meetings through teleconferencing and make public meetings accessible telephonically, or otherwise electronically, to all members of the public seeking to observe and to address the legislative body.

(b) (1) For a legislative body holding a public meeting through teleconferencing pursuant to this section, all requirements in this article requiring the physical presence of members, the clerk or other personnel of the legislative body, or the public, as a condition of participation in or quorum for a public meeting, are hereby suspended.

(2) For a legislative body holding a public meeting through teleconferencing pursuant to this section, all of the following requirements in this article are suspended:

(A) Each teleconference location from which a member will be participating in a public meeting or proceeding be identified in the notice and agenda of the public meeting or proceeding.

(B) Each teleconference location be accessible to the public.

(C) Members of the public may address the legislative body at each teleconference conference location.

(D) Post agendas at all teleconference locations.

(E) At least one member of the legislative body be physically present at the location specified in the notice of the meeting.

(c) A legislative body that holds a meeting through teleconferencing and allows members of the public to observe and address the meeting telephonically or otherwise electronically, consistent with the notice and accessibility requirements in subdivisions (d) and (e), shall have satisfied any requirement that the legislative body allow members of the public to attend the meeting and offer public comment. A legislative body need not make available any physical location from which members of the public may observe the meeting and offer public comment.

(d) If a legislative body holds a meeting through teleconferencing pursuant to this section and allows members of the public to observe and address the meeting telephonically or otherwise electronically, the legislative body shall also do both of the following:

(1) Implement a procedure for receiving and swiftly resolving requests for reasonable modification or accommodation from individuals with disabilities, consistent with the federal Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12101 et seq.), and resolving any doubt whatsoever in favor of accessibility.

(2) Advertise that procedure each time notice is given of the means by which members of the public may observe the meeting and offer public comment, pursuant to paragraph (2) of subdivision (e).

(e) Except to the extent this section provides otherwise, each legislative body that holds a meeting through teleconferencing pursuant to this section shall do both of the following:

(1) Give advance notice of the time of, and post the agenda for, each public meeting according to the timeframes otherwise prescribed by this article, and using the means otherwise prescribed by this article, as applicable.

(2) In each instance in which notice of the time of the meeting is otherwise given or the agenda for the meeting is otherwise posted, also give notice of the means by which members of the public may observe the meeting and offer public comment. As to any instance in which there is a change in the means of public observation and comment, or any instance prior to the effective date of this section in which the time of the meeting has been noticed or the agenda for the meeting has been posted without also including notice of the means of public observation and comment, a legislative body may satisfy this requirement by advertising the means of public observation and comment using the most rapid means of communication available at the time. Advertising the means of public observation and comment using the most rapid means of communication available at the time shall include, but need not be limited to, posting such means on the legislative body's internet website.

(f) All legislative bodies utilizing the teleconferencing procedures in this section are urged to use sound discretion and to make reasonable efforts to adhere as closely as reasonably possible to the otherwise applicable provisions of this article, in order to maximize transparency and provide the public access to legislative body meetings.

(g) This section shall remain in effect only until January 31, 2022, and as of that date is repealed.

SEC. 2.

Section 11133 is added to the Government Code, to read:

11133.

(a) Notwithstanding any other provision of this article, and subject to the notice and accessibility requirements in subdivisions (d) and (e), a state body may hold public meetings through teleconferencing and make public meetings accessible telephonically, or otherwise electronically, to all members of the public seeking to observe and to address the state body.

(b) (1) For a state body holding a public meeting through teleconferencing pursuant to this section, all requirements in this article requiring the physical presence of members, the clerk or other personnel of the state body, or the public, as a condition of participation in or quorum for a public meeting, are hereby suspended.

(2) For a state body holding a public meeting through teleconferencing pursuant to this section, all of the following requirements in this article are suspended:

(A) Each teleconference location from which a member will be participating in a public meeting or proceeding be identified in the notice and agenda of the public meeting or proceeding.

(B) Each teleconference location be accessible to the public.

(C) Members of the public may address the state body at each teleconference conference location.

(D) Post agendas at all teleconference locations.

(E) At least one member of the state body be physically present at the location specified in the notice of the meeting.

(c) A state body that holds a meeting through teleconferencing and allows members of the public to observe and address the meeting telephonically or otherwise electronically, consistent with the notice and accessibility requirements in subdivisions (d) and (e), shall have satisfied any requirement that the state body allow members of the public to attend the meeting and offer public comment. A state body need not make available any physical location from which members of the public may observe the meeting and offer public comment.

(d) If a state body holds a meeting through teleconferencing pursuant to this section and allows members of the public to observe and address the meeting telephonically or otherwise electronically, the state body shall also do both of the following:

(1) Implement a procedure for receiving and swiftly resolving requests for reasonable modification or accommodation from individuals with disabilities, consistent with the federal

Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12101 et seq.), and resolving any doubt whatsoever in favor of accessibility.

(2) Advertise that procedure each time notice is given of the means by which members of the public may observe the meeting and offer public comment, pursuant to paragraph (2) of subdivision (e).

(e) Except to the extent this section provides otherwise, each state body that holds a meeting through teleconferencing pursuant to this section shall do both of the following:

(1) Give advance notice of the time of, and post the agenda for, each public meeting according to the timeframes otherwise prescribed by this article, and using the means otherwise prescribed by this article, as applicable.

(2) In each instance in which notice of the time of the meeting is otherwise given or the agenda for the meeting is otherwise posted, also give notice of the means by which members of the public may observe the meeting and offer public comment. As to any instance in which there is a change in the means of public observation and comment, or any instance prior to the effective date of this section in which the time of the meeting has been noticed or the agenda for the meeting has been posted without also including notice of the means of public observation and comment, a state body may satisfy this requirement by advertising the means of public observation and comment using the most rapid means of communication available at the time. Advertising the means of public observation and comment using the most rapid means of communication available at the time shall include, but need not be limited to, posting such means on the state body's internet website.

(f) All state bodies utilizing the teleconferencing procedures in this section are urged to use sound discretion and to make reasonable efforts to adhere as closely as reasonably possible to the otherwise applicable provisions of this article, in order to maximize transparency and provide the public access to state body meetings.

(g) This section shall remain in effect only until January 31, 2022, and as of that date is repealed.

SEC. 3.

Section 54953 of the Government Code is amended to read:

54953.

(a) All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, except as otherwise provided in this chapter.

(b) (1) Notwithstanding any other provision of law, the legislative body of a local agency may use teleconferencing for the benefit of the public and the legislative body of a local agency in connection with any meeting or proceeding authorized by law. The teleconferenced meeting or proceeding shall comply with all otherwise applicable requirements of this chapter and all otherwise applicable provisions of law relating to a specific type of meeting or proceeding.

(2) Teleconferencing, as authorized by this section, may be used for all purposes in connection with any meeting within the subject matter jurisdiction of the legislative body. All votes taken during a teleconferenced meeting shall be by rollcall.

(3) If the legislative body of a local agency elects to use teleconferencing, it shall post agendas at all teleconference locations and conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties or the public appearing before the legislative body of a local agency. Each teleconference location shall be identified in the notice and agenda of the meeting or proceeding, and each teleconference location shall be accessible to the public. During the teleconference, at least a quorum of the members of the legislative body shall participate from locations within the boundaries of the territory over which the local agency exercises jurisdiction, except as provided in subdivisions (d) and (e). The agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3 at each teleconference location.

(4) For the purposes of this section, "teleconference" means a meeting of a legislative body, the members of which are in different locations, connected by electronic means, through either audio or video, or both. Nothing in this section shall prohibit a local agency from providing the public with additional teleconference locations.

(c) (1) No legislative body shall take action by secret ballot, whether preliminary or final.

(2) The legislative body of a local agency shall publicly report any action taken and the vote or abstention on that action of each member present for the action.

(3) Prior to taking final action, the legislative body shall orally report a summary of a recommendation for a final action on the salaries, salary schedules, or compensation paid in the form of fringe benefits of a local agency executive, as defined in subdivision (d) of Section 3511.1, during the open meeting in which the final action is to be taken. This paragraph shall not affect the public's right under the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1) to inspect or copy records created or received in the process of developing the recommendation.

(d) (1) Notwithstanding the provisions relating to a quorum in paragraph (3) of subdivision (b), if a health authority conducts a teleconference meeting, members who are outside the jurisdiction of the authority may be counted toward the establishment of a quorum when participating in the teleconference if at least 50 percent of the number of members that would establish a quorum are present within the boundaries of the territory over which the authority exercises jurisdiction, and the health authority provides a teleconference number, and associated access codes, if any, that allows any person to call in to participate in the meeting and the number and access codes are identified in the notice and agenda of the meeting.

(2) Nothing in this subdivision shall be construed as discouraging health authority members from regularly meeting at a common physical site within the jurisdiction of the authority or from using teleconference locations within or near the jurisdiction of the authority. A teleconference meeting for which a quorum is established pursuant to this subdivision shall be subject to all other requirements of this section.

(3) For purposes of this subdivision, a health authority means any entity created pursuant to Sections 14018.7, 14087.31, 14087.35, 14087.36, 14087.38, and 14087.9605 of the Welfare and Institutions Code, any joint powers authority created pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 for the purpose of contracting pursuant to Section 14087.3 of the Welfare and Institutions Code, and any advisory committee to a county-sponsored health plan licensed pursuant to Chapter 2.2 (commencing with Section 1340) of Division 2 of the Health and Safety Code if the advisory committee has 12 or more members.

(e) (1) A local agency may use teleconferencing without complying with the requirements of paragraph (3) of subdivision (b) if the legislative body complies with the requirements of paragraph (2) of this subdivision in any of the following circumstances:

(A) The legislative body holds a meeting during a proclaimed state of emergency, and state or local officials have imposed or recommended measures to promote social distancing.

(B) The legislative body holds a meeting during a proclaimed state of emergency for the purpose of determining, by majority vote, whether as a result of the emergency, meeting in person would present imminent risks to the health or safety of attendees.

(C) The legislative body holds a meeting during a proclaimed state of emergency and has determined, by majority vote, pursuant to subparagraph (B), that, as a result of the emergency, meeting in person would present imminent risks to the health or safety of attendees.

(2) A legislative body that holds a meeting pursuant to this subdivision shall do all of the following:

(A) The legislative body shall give notice of the meeting and post agendas as otherwise required by this chapter.

(B) The legislative body shall allow members of the public to access the meeting and the agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3. In each instance in which notice of the time of the teleconferenced meeting is otherwise given or the agenda for the meeting is otherwise posted, the legislative body shall also give notice of the means by which members of the public may access the meeting and offer public comment. The agenda shall identify and include an opportunity for all persons to attend via a call-in option or an internet-based service option. This subparagraph shall not be construed to require the legislative body to provide a physical location from which the public may attend or comment.

(C) The legislative body shall conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties and the public appearing before the legislative body of a local agency.

(D) In the event of a disruption which prevents the public agency from broadcasting the meeting to members of the public using the call-in option or internet-based service option, or in the event of a disruption within the local agency's control which prevents members of the public from offering public comments using the call-in option or internet-based service option, the body shall take no further action on items appearing on the meeting agenda until public access to the

meeting via the call-in option or internet-based service option is restored. Actions taken on agenda items during a disruption which prevents the public agency from broadcasting the meeting may be challenged pursuant to Section 54960.1.

(E) The legislative body shall not require public comments to be submitted in advance of the meeting and must provide an opportunity for the public to address the legislative body and offer comment in real time. This subparagraph shall not be construed to require the legislative body to provide a physical location from which the public may attend or comment.

(F) Notwithstanding Section 54953.3, an individual desiring to provide public comment through the use of an internet website, or other online platform, not under the control of the local legislative body, that requires registration to log in to a teleconference may be required to register as required by the third-party internet website or online platform to participate.

(G) (i) A legislative body that provides a timed public comment period for each agenda item shall not close the public comment period for the agenda item, or the opportunity to register, pursuant to subparagraph (F), to provide public comment until that timed public comment period has elapsed.

(ii) A legislative body that does not provide a timed public comment period, but takes public comment separately on each agenda item, shall allow a reasonable amount of time per agenda item to allow public members the opportunity to provide public comment, including time for members of the public to register pursuant to subparagraph (F), or otherwise be recognized for the purpose of providing public comment.

(iii) A legislative body that provides a timed general public comment period that does not correspond to a specific agenda item shall not close the public comment period or the opportunity to register, pursuant to subparagraph (F), until the timed general public comment period has elapsed.

(3) If a state of emergency remains active, or state or local officials have imposed or recommended measures to promote social distancing, in order to continue to teleconference without compliance with paragraph (3) of subdivision (b), the legislative body shall, not later than 30 days after teleconferencing for the first time pursuant to subparagraph (A), (B), or (C) of paragraph (1), and every 30 days thereafter, make the following findings by majority vote:

(A) The legislative body has reconsidered the circumstances of the state of emergency.

(B) Any of the following circumstances exist:

(i) The state of emergency continues to directly impact the ability of the members to meet safely in person.

(ii) State or local officials continue to impose or recommend measures to promote social distancing.

(4) For the purposes of this subdivision, "state of emergency" means a state of emergency proclaimed pursuant to Section 8625 of the California Emergency Services Act (Article 1 (commencing with Section 8550) of Chapter 7 of Division 1 of Title 2).

(f) This section shall remain in effect only until January 1, 2024, and as of that date is repealed.

SEC. 3.1.

Section 54953 of the Government Code is amended to read:

54953.

(a) All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency in person, except as otherwise provided in this chapter. Local agencies shall conduct meetings subject to this chapter consistent with applicable state and federal civil rights laws, including, but not limited to, any applicable language access and other nondiscrimination obligations.

(b) (1) Notwithstanding any other provision of law, the legislative body of a local agency may use teleconferencing for the benefit of the public and the legislative body of a local agency in connection with any meeting or proceeding authorized by law. The teleconferenced meeting or proceeding shall comply with all otherwise applicable requirements of this chapter and all otherwise applicable provisions of law relating to a specific type of meeting or proceeding.

(2) Teleconferencing, as authorized by this section, may be used for all purposes in connection with any meeting within the subject matter jurisdiction of the legislative body. All votes taken during a teleconferenced meeting shall be by rollcall.

(3) If the legislative body of a local agency elects to use teleconferencing, it shall post agendas at all teleconference locations and conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties or the public appearing before the legislative body of a local agency. Each teleconference location shall be identified in the notice and agenda of the meeting or proceeding, and each teleconference location shall be accessible to the public. During the teleconference, at least a quorum of the members of the legislative body shall participate from locations within the boundaries of the territory over which the local agency exercises jurisdiction, except as provided in subdivisions (d) and (e). The agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3 at each teleconference location.

(4) For the purposes of this section, "teleconference" means a meeting of a legislative body, the members of which are in different locations, connected by electronic means, through either audio or video, or both. Nothing in this section shall prohibit a local agency from providing the public with additional teleconference locations.

(c) (1) No legislative body shall take action by secret ballot, whether preliminary or final.

(2) The legislative body of a local agency shall publicly report any action taken and the vote or abstention on that action of each member present for the action.

(3) Prior to taking final action, the legislative body shall orally report a summary of a recommendation for a final action on the salaries, salary schedules, or compensation paid in the form of fringe benefits of a local agency executive, as defined in subdivision (d) of Section 3511.1, during the open meeting in which the final action is to be taken. This paragraph shall not affect the public's right under the California Public Records Act (Chapter 3.5 (commencing with Section

6250) of Division 7 of Title 1) to inspect or copy records created or received in the process of developing the recommendation.

(d) (1) Notwithstanding the provisions relating to a quorum in paragraph (3) of subdivision (b), if a health authority conducts a teleconference meeting, members who are outside the jurisdiction of the authority may be counted toward the establishment of a quorum when participating in the teleconference if at least 50 percent of the number of members that would establish a quorum are present within the boundaries of the territory over which the authority exercises jurisdiction, and the health authority provides a teleconference number, and associated access codes, if any, that allows any person to call in to participate in the meeting and the number and access codes are identified in the notice and agenda of the meeting.

(2) Nothing in this subdivision shall be construed as discouraging health authority members from regularly meeting at a common physical site within the jurisdiction of the authority or from using teleconference locations within or near the jurisdiction of the authority. A teleconference meeting for which a quorum is established pursuant to this subdivision shall be subject to all other requirements of this section.

(3) For purposes of this subdivision, a health authority means any entity created pursuant to Sections 14018.7, 14087.31, 14087.35, 14087.36, 14087.38, and 14087.9605 of the Welfare and Institutions Code, any joint powers authority created pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 for the purpose of contracting pursuant to Section 14087.3 of the Welfare and Institutions Code, and any advisory committee to a county-sponsored health plan licensed pursuant to Chapter 2.2 (commencing with Section 1340) of Division 2 of the Health and Safety Code if the advisory committee has 12 or more members.

(e) (1) A local agency may use teleconferencing without complying with the requirements of paragraph (3) of subdivision (b) if the legislative body complies with the requirements of paragraph (2) of this subdivision in any of the following circumstances:

(A) The legislative body holds a meeting during a proclaimed state of emergency, and state or local officials have imposed or recommended measures to promote social distancing.

(B) The legislative body holds a meeting during a proclaimed state of emergency for the purpose of determining, by majority vote, whether as a result of the emergency, meeting in person would present imminent risks to the health or safety of attendees.

(C) The legislative body holds a meeting during a proclaimed state of emergency and has determined, by majority vote, pursuant to subparagraph (B), that, as a result of the emergency, meeting in person would present imminent risks to the health or safety of attendees.

(2) A legislative body that holds a meeting pursuant to this subdivision shall do all of the following:

(A) The legislative body shall give notice of the meeting and post agendas as otherwise required by this chapter.

(B) The legislative body shall allow members of the public to access the meeting and the agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3. In each instance in which notice of the time of the teleconferenced meeting is otherwise given or the agenda for the meeting is otherwise posted, the legislative body shall also give notice of the means by which members of the public may access the meeting and offer public comment. The agenda shall identify and include an opportunity for all persons to attend via a call-in option or an internet-based service option. This subparagraph shall not be construed to require the legislative body to provide a physical location from which the public may attend or comment.

(C) The legislative body shall conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties and the public appearing before the legislative body of a local agency.

(D) In the event of a disruption which prevents the public agency from broadcasting the meeting to members of the public using the call-in option or internet-based service option, or in the event of a disruption within the local agency's control which prevents members of the public from offering public comments using the call-in option or internet-based service option, the body shall take no further action on items appearing on the meeting agenda until public access to the meeting via the call-in option or internet-based service option is restored. Actions taken on agenda items during a disruption which prevents the public agency from broadcasting the meeting may be challenged pursuant to Section 54960.1.

(E) The legislative body shall not require public comments to be submitted in advance of the meeting and must provide an opportunity for the public to address the legislative body and offer comment in real time. This subparagraph shall not be construed to require the legislative body to provide a physical location from which the public may attend or comment.

(F) Notwithstanding Section 54953.3, an individual desiring to provide public comment through the use of an internet website, or other online platform, not under the control of the local legislative body, that requires registration to log in to a teleconference may be required to register as required by the third-party internet website or online platform to participate.

(G) (i) A legislative body that provides a timed public comment period for each agenda item shall not close the public comment period for the agenda item, or the opportunity to register, pursuant to subparagraph (F), to provide public comment until that timed public comment period has elapsed.

(ii) A legislative body that does not provide a timed public comment period, but takes public comment separately on each agenda item, shall allow a reasonable amount of time per agenda item to allow public members the opportunity to provide public comment, including time for members of the public to register pursuant to subparagraph (F), or otherwise be recognized for the purpose of providing public comment.

(iii) A legislative body that provides a timed general public comment period that does not correspond to a specific agenda item shall not close the public comment period or the

opportunity to register, pursuant to subparagraph (F), until the timed general public comment period has elapsed.

(3) If a state of emergency remains active, or state or local officials have imposed or recommended measures to promote social distancing, in order to continue to teleconference without compliance with paragraph (3) of subdivision (b), the legislative body shall, not later than 30 days after teleconferencing for the first time pursuant to subparagraph (A), (B), or (C) of paragraph (1), and every 30 days thereafter, make the following findings by majority vote:

(A) The legislative body has reconsidered the circumstances of the state of emergency.

(B) Any of the following circumstances exist:

(i) The state of emergency continues to directly impact the ability of the members to meet safely in person.

(ii) State or local officials continue to impose or recommend measures to promote social distancing.

(4) For the purposes of this subdivision, "state of emergency" means a state of emergency proclaimed pursuant to Section 8625 of the California Emergency Services Act (Article 1 commencing with Section 8550) of Chapter 7 of Division 1 of Title 2).

(f) This section shall remain in effect only until January 1, 2024, and as of that date is repealed.

SEC. 4.

Section 54953 is added to the Government Code, to read:

54953.

(a) All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, except as otherwise provided in this chapter.

(b) (1) Notwithstanding any other provision of law, the legislative body of a local agency may use teleconferencing for the benefit of the public and the legislative body of a local agency in connection with any meeting or proceeding authorized by law. The teleconferenced meeting or proceeding shall comply with all requirements of this chapter and all otherwise applicable provisions of law relating to a specific type of meeting or proceeding.

(2) Teleconferencing, as authorized by this section, may be used for all purposes in connection with any meeting within the subject matter jurisdiction of the legislative body. All votes taken during a teleconferenced meeting shall be by rollcall.

(3) If the legislative body of a local agency elects to use teleconferencing, it shall post agendas at all teleconference locations and conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties or the public appearing before the legislative body of a local agency. Each teleconference location shall be identified in the notice and agenda of the meeting or proceeding, and each teleconference location shall be accessible to the public. During the teleconference, at least a quorum of the members of the legislative body shall

participate from locations within the boundaries of the territory over which the local agency exercises jurisdiction, except as provided in subdivision (d). The agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3 at each teleconference location.

(4) For the purposes of this section, “teleconference” means a meeting of a legislative body, the members of which are in different locations, connected by electronic means, through either audio or video, or both. Nothing in this section shall prohibit a local agency from providing the public with additional teleconference locations

(c) (1) No legislative body shall take action by secret ballot, whether preliminary or final.

(2) The legislative body of a local agency shall publicly report any action taken and the vote or abstention on that action of each member present for the action.

(3) Prior to taking final action, the legislative body shall orally report a summary of a recommendation for a final action on the salaries, salary schedules, or compensation paid in the form of fringe benefits of a local agency executive, as defined in subdivision (d) of Section 3511.1, during the open meeting in which the final action is to be taken. This paragraph shall not affect the public’s right under the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1) to inspect or copy records created or received in the process of developing the recommendation.

(d) (1) Notwithstanding the provisions relating to a quorum in paragraph (3) of subdivision (b), if a health authority conducts a teleconference meeting, members who are outside the jurisdiction of the authority may be counted toward the establishment of a quorum when participating in the teleconference if at least 50 percent of the number of members that would establish a quorum are present within the boundaries of the territory over which the authority exercises jurisdiction, and the health authority provides a teleconference number, and associated access codes, if any, that allows any person to call in to participate in the meeting and the number and access codes are identified in the notice and agenda of the meeting.

(2) Nothing in this subdivision shall be construed as discouraging health authority members from regularly meeting at a common physical site within the jurisdiction of the authority or from using teleconference locations within or near the jurisdiction of the authority. A teleconference meeting for which a quorum is established pursuant to this subdivision shall be subject to all other requirements of this section.

(3) For purposes of this subdivision, a health authority means any entity created pursuant to Sections 14018.7, 14087.31, 14087.35, 14087.36, 14087.38, and 14087.9605 of the Welfare and Institutions Code, any joint powers authority created pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 for the purpose of contracting pursuant to Section 14087.3 of the Welfare and Institutions Code, and any advisory committee to a county-sponsored health plan licensed pursuant to Chapter 2.2 (commencing with Section 1340) of Division 2 of the Health and Safety Code if the advisory committee has 12 or more members.

(e) This section shall become operative January 1, 2024.

SEC. 4.1.

Section 54953 is added to the Government Code, to read:

54953.

(a) All meetings of the legislative body of a local agency shall be open and public, and all persons shall be permitted to attend any meeting of the legislative body of a local agency, in person except as otherwise provided in this chapter. Local agencies shall conduct meetings subject to this chapter consistent with applicable state and federal civil rights laws, including, but not limited to, any applicable language access and other nondiscrimination obligations.

(b) (1) Notwithstanding any other provision of law, the legislative body of a local agency may use teleconferencing for the benefit of the public and the legislative body of a local agency in connection with any meeting or proceeding authorized by law. The teleconferenced meeting or proceeding shall comply with all requirements of this chapter and all otherwise applicable provisions of law relating to a specific type of meeting or proceeding.

(2) Teleconferencing, as authorized by this section, may be used for all purposes in connection with any meeting within the subject matter jurisdiction of the legislative body. All votes taken during a teleconferenced meeting shall be by rollcall.

(3) If the legislative body of a local agency elects to use teleconferencing, it shall post agendas at all teleconference locations and conduct teleconference meetings in a manner that protects the statutory and constitutional rights of the parties or the public appearing before the legislative body of a local agency. Each teleconference location shall be identified in the notice and agenda of the meeting or proceeding, and each teleconference location shall be accessible to the public. During the teleconference, at least a quorum of the members of the legislative body shall participate from locations within the boundaries of the territory over which the local agency exercises jurisdiction, except as provided in subdivision (d). The agenda shall provide an opportunity for members of the public to address the legislative body directly pursuant to Section 54954.3 at each teleconference location.

(4) For the purposes of this section, "teleconference" means a meeting of a legislative body, the members of which are in different locations, connected by electronic means, through either audio or video, or both. Nothing in this section shall prohibit a local agency from providing the public with additional teleconference locations.

(c) (1) No legislative body shall take action by secret ballot, whether preliminary or final.

(2) The legislative body of a local agency shall publicly report any action taken and the vote or abstention on that action of each member present for the action.

(3) Prior to taking final action, the legislative body shall orally report a summary of a recommendation for a final action on the salaries, salary schedules, or compensation paid in the form of fringe benefits of a local agency executive, as defined in subdivision (d) of Section 3511.1, during the open meeting in which the final action is to be taken. This paragraph shall not affect the public's right under the California Public Records Act (Chapter 3.5 (commencing with Section

6250) of Division 7 of Title 1) to inspect or copy records created or received in the process of developing the recommendation.

(d) (1) Notwithstanding the provisions relating to a quorum in paragraph (3) of subdivision (b), if a health authority conducts a teleconference meeting, members who are outside the jurisdiction of the authority may be counted toward the establishment of a quorum when participating in the teleconference if at least 50 percent of the number of members that would establish a quorum are present within the boundaries of the territory over which the authority exercises jurisdiction, and the health authority provides a teleconference number, and associated access codes, if any, that allows any person to call in to participate in the meeting and the number and access codes are identified in the notice and agenda of the meeting.

(2) Nothing in this subdivision shall be construed as discouraging health authority members from regularly meeting at a common physical site within the jurisdiction of the authority or from using teleconference locations within or near the jurisdiction of the authority. A teleconference meeting for which a quorum is established pursuant to this subdivision shall be subject to all other requirements of this section.

(3) For purposes of this subdivision, a health authority means any entity created pursuant to Sections 14018.7, 14087.31, 14087.35, 14087.36, 14087.38, and 14087.9605 of the Welfare and Institutions Code, any joint powers authority created pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 for the purpose of contracting pursuant to Section 14087.3 of the Welfare and Institutions Code, and any advisory committee to a county-sponsored health plan licensed pursuant to Chapter 2.2 (commencing with Section 1340) of Division 2 of the Health and Safety Code if the advisory committee has 12 or more members.

(e) This section shall become operative January 1, 2024.

SEC. 5.

Sections 3.1 and 4.1 of this bill incorporate amendments to Section 54953 of the Government Code proposed by both this bill and Assembly Bill 339. Those sections of this bill shall only become operative if (1) both bills are enacted and become effective on or before January 1, 2022, but this bill becomes operative first, (2) each bill amends Section 54953 of the Government Code, and (3) this bill is enacted after Assembly Bill 339, in which case Section 54953 of the Government Code, as amended by Sections 3 and 4 of this bill, shall remain operative only until the operative date of Assembly Bill 339, at which time Sections 3.1 and 4.1 of this bill shall become operative.

SEC. 6.

It is the intent of the Legislature in enacting this act to improve and enhance public access to state and local agency meetings during the COVID-19 pandemic and future applicable emergencies, by allowing broader access through teleconferencing options consistent with the Governor's Executive Order No. N-29-20 dated March 17, 2020, permitting expanded use of teleconferencing during the COVID-19 pandemic.

SEC. 7.

The Legislature finds and declares that Sections 3 and 4 of this act, which amend, repeal, and add Section 54953 of the Government Code, further, within the meaning of paragraph (7) of

subdivision (b) of Section 3 of Article I of the California Constitution, the purposes of that constitutional section as it relates to the right of public access to the meetings of local public bodies or the writings of local public officials and local agencies. Pursuant to paragraph (7) of subdivision (b) of Section 3 of Article I of the California Constitution, the Legislature makes the following findings:

This act is necessary to ensure minimum standards for public participation and notice requirements allowing for greater public participation in teleconference meetings during applicable emergencies.

SEC. 8.

(a) The Legislature finds and declares that during the COVID-19 public health emergency, certain requirements of the Bagley-Keene Open Meeting Act (Article 9 (commencing with Section 11120) of Chapter 1 of Part 1 of Division 3 of Title 2 of the Government Code) were suspended by Executive Order N-29-20. Audio and video teleconference were widely used to conduct public meetings in lieu of physical location meetings, and public meetings conducted by teleconference during the COVID-19 public health emergency have been productive, have increased public participation by all members of the public regardless of their location in the state and ability to travel to physical meeting locations, have protected the health and safety of civil servants and the public, and have reduced travel costs incurred by members of state bodies and reduced work hours spent traveling to and from meetings.

(b) The Legislature finds and declares that Section 1 of this act, which adds and repeals Section 89305.6 of the Education Code, Section 2 of this act, which adds and repeals Section 11133 of the Government Code, and Sections 3 and 4 of this act, which amend, repeal, and add Section 54953 of the Government Code, all increase and potentially limit the public's right of access to the meetings of public bodies or the writings of public officials and agencies within the meaning of Section 3 of Article I of the California Constitution. Pursuant to that constitutional provision, the Legislature makes the following findings to demonstrate the interest protected by this limitation and the need for protecting that interest:

(1) By removing the requirement that public meetings be conducted at a primary physical location with a quorum of members present, this act protects the health and safety of civil servants and the public and does not preference the experience of members of the public who might be able to attend a meeting in a physical location over members of the public who cannot travel or attend that meeting in a physical location.

(2) By removing the requirement for agendas to be placed at the location of each public official participating in a public meeting remotely, including from the member's private home or hotel room, this act protects the personal, private information of public officials and their families while preserving the public's right to access information concerning the conduct of the people's business.

SEC. 9.

This act is an urgency statute necessary for the immediate preservation of the public peace, health, or safety within the meaning of Article IV of the California Constitution and shall go into immediate effect. The facts constituting the necessity are:

In order to ensure that state and local agencies can continue holding public meetings while providing essential services like water, power, and fire protection to their constituents during public health, wildfire, or other states of emergencies, it is necessary that this act take effect immediately.

I. Adopt Resolution No. 2021-72 Declaring the Continued Existence of a Local Emergency in the City of Brisbane in Response to the COVID-19 Pandemic

**CITY COUNCIL****Meeting Date: November 18, 2021****From: Clayton Holstine, City Manager****Subject: Resolution Declaring the Continued Existence of a Local Emergency in the City of Brisbane in Response to the COVID-19 Pandemic****Recommendation**

Adopt the attached resolution

Background

The COVID-19 Coronavirus has been declared a pandemic by the World Health Organization and has prompted various government agencies to take action in response. In March 2020, the Governor declared a Statewide Emergency, the County Board of Supervisors declared a County wide State of Emergency and the City Manager, as Emergency Services Director, proclaimed a local emergency on March 16, 2020. On March 19, 2020, the City Council ratified and confirmed the Director of Emergency Service's proclamation of a local emergency which allowed staff to expeditiously respond to the emergency circumstances caused by the pandemic.

Since that time, the City Council has extended the local emergency numerous times as State law requires that such local emergencies be reviewed every 60 days. The last extension was September 23, 2021. Notwithstanding that many of the restrictions that were imposed since March 2020 have been lifted, some, such as mask wearing in places like City Hall, remain in place. Also, issues concerning mandating vaccines for employees remain in flux. In addition, the Governor has not rescinded the Statewide Emergency. In light of those uncertainties, staff continues to recommend that the local emergency, for now, remain in place.

Discussion

Government Code Section 8630(c) requires that, "the governing body shall review the need for continuing the local emergency at least once every 60 days until the governing body terminates the local emergency." The current declaration of local emergency (approved on September 23, 2021, will expire on November 21, 2021 unless Council extends the declaration of local emergency

At this time, staff is recommending that the City Council adopt a resolution continuing the existence of a local emergency in response to the COVID-19 pandemic, and directing staff to continue to respond appropriately to the local emergency.

Financial Impact

There is no direct financial impact from City Council taking this action.

1. Resolution Declaring the Continued Existence of a Local Emergency in the City of Brisbane in Response to the COVID-19 Pandemic

Clayton L. Holstine

Clayton Holstine
City Manager

RESOLUTION NO. 2021-72

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BRISBANE DECLARING THE CONTINUATION OF THE EXISTENCE OF A LOCAL EMERGENCY

WHEREAS, Section 2.28.060 of the Brisbane Municipal Code empowers the City Manager/Director of Emergency Services to proclaim a local emergency if the City Council is not in session and requires the City Council to take action to ratify the proclamation thereafter; and

WHEREAS, conditions of extreme peril to the health, safety and welfare of persons have arisen in the world, the nation, the State, the County of San Mateo and the City of Brisbane due to the following:

A novel coronavirus (named COVID-19 by the World Health Organization) was first detected in December 2019. The Center for Disease Control and Prevention (CDC) has stated that COVID-19 is a serious public health threat, based on current information. Cases of COVID-19 have been diagnosed throughout the world, the United States, the State of California, the County of San Mateo and the City of Brisbane.

The exact modes of transmission of COVID-19, the factors facilitating human to human transmission, the extent of asymptomatic viral shedding, the groups most at risk of serious illness, the attack rate, and the case fatality rate all remain active areas of investigation. There are now approved vaccine or specific anti-viral treatment for COVID-19 but not all persons have chosen to be vaccinated and there is no approved vaccine for children four years old or younger.

Due to COVID-19 pandemic, in March 2020 the Governor of the State of California declared a State of Emergency for the State and the City of Brisbane's Director of Emergency Services declared a Local Emergency on March 16, 2020 and the City Council of the City of Brisbane ratified the Proclamation of a Local Emergency on March 19, 2020; and

WHEREAS, the City Council of the City of Brisbane has extended the Local Emergency on several occasions, most recently on September 23, 2021, extending the Local Emergency for an additional 60 days; and

WHEREAS, for the reasons expressed above, conditions of extreme peril and a serious threat to the public health, safety and welfare have arisen, and continue to exist in the City of Brisbane; and

WHEREAS, the City Council does hereby find that the above described conditions of extreme peril and serious threat to the public health, safety, and welfare did warrant and necessitate the existence of a Local Emergency in the City of Brisbane and those conditions continue at this time.

NOW, THEREFORE, BE IT RESOLVED THAT THE CITY COUNCIL OF THE CITY OF BRISBANE DOES RESOLVE, DECLARE, DETERMINE, AND ORDER THE FOLLOWING:

Section 1. During the existence of the Local Emergency, the powers, functions, and duties of the Director of Emergency Services and the Emergency Organization of the City shall be those prescribed by State law, ordinances and resolutions of the City of Brisbane, and by the City of Brisbane Emergency Operation Plan.

Section 2. The Local Emergency shall continue to exist until the City Council proclaims its termination or the Local Emergency is not extended as provided by law.

Section 3. This resolution is effective immediately upon its passage and adoption.

Karen Cunningham, Mayor

PASSED, APPROVED AND ADOPTED by the Brisbane City Council at a regular meeting on November 18, 2021.

I hereby certify that the foregoing resolution was adopted by the City Council at a regular meeting held on November 18, 2021 by the following vote:

J. Adopt Resolution No. 2021-73 to Approve the Second Amendment to and Restatement of the Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance

CITY COUNCIL AGENDA REPORT

Meeting Date: November 18, 2021

From: Clayton Holstine, City Manager

Subject: Adopt Resolution No. 2021-73 to Approve the Second Amendment to and Restatement of the Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance

RECOMMENDATION

It is recommended that the City of Brisbane continue its membership in the Peninsula Traffic Congestion Relief Alliance ("Alliance") with the approval and execution of the Second Amendment to and the Restatement of the Joint Powers Agreement establishing the Alliance.

BACKGROUND

The Alliance was established in 2000 to assist the public and private sectors in the County of San Mateo with reducing traffic congestion and air pollution. The Alliance was originally created through a Joint Powers Agreement ("JPA") among fifteen cities in the County.

In 2005, the County of San Mateo along with the Towns of Atherton and Hillsborough became members of the Alliance. To accomplish this, all 15 then current members together with the 3 new members approved and executed a First Amendment to and Restatement of the Joint Powers Agreement establishing the Alliance. The amended JPA provided for the addition of the new members and revised and made more flexible the committee structure of the Alliance.

Now, 16 years later, the City of Menlo Park and the Town of Portola Valley desire to join the Alliance and we understand that the Town of Woodside may consider membership too. To facilitate adding these new members, the Alliance Board of Directors at its meeting on September 16, 2021, reviewed the proposed Second Amendment to and Restatement of the Joint Powers Agreement establishing the Alliance and approved it for presentation to both current and new members for approval and execution. In addition to increasing the membership of the Alliance, this Second Amendment (a) updates and refreshes the first section of the original JPA on "Purpose" to reflect the Alliance's recently adopted Mission and Vision Statements as set forth in its Strategic Plan and (b) clarifies that the Alliance has developed a new brand and has become known to the public as "Commute.org."

FISCAL IMPACT OF THE ACTION REQUESTED

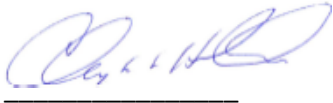

None. There is no required financial commitment to join or to continue as a member agency of the Alliance.

ACTIONS REQUESTED

1. Approve the enclosed "A Resolution of the City of Brisbane Approving the Second Amendment to and Restatement of the Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance."
2. Authorize the Mayor to Execute the Second Amendment to and Restatement of Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance and the City Clerk to attest to this document.

ATTACHMENTS:

- (1) Second Amendment to and Restatement of Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance
- (2) Resolution to Approve the Second Amendment to and Restatement of Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance

Clayton Holstine
City Manager

**SECOND AMENDMENT TO AND RESTATEMENT OF
JOINT POWERS AGREEMENT ESTABLISHING THE
PENINSULA TRAFFIC CONGESTION RELIEF ALLIANCE**

THIS AGREEMENT by and among the cities and the County of San Mateo who become signatories to this agreement (hereinafter referred to as “Party” in the singular and “Parties” collectively, as the content requires) is made and entered into as of the _____ day of _____, 2021 and in light of the following recitals:

- A. The Parties have authority to undertake transportation demand management activities in their respective communities and desire to establish and continue the Peninsula Traffic Congestion Relief Alliance under which the parties will work together essentially to reduce the number of single occupant vehicles traveling on streets and highways in San Mateo County.
- B. The Parties are authorized to contract with each other for the joint exercise of any common power pursuant to Government Code Sections 6500 *et seq.*
- C. The Parties desire to establish and continue the Peninsula Traffic Congestion Relief Alliance as a joint powers authority in accordance with the terms and conditions outlined in this Agreement and to brand and make this entity known to the public as "Commute.org."

NOW, THEREFORE, the Parties, in consideration of the mutual promises and agreements contained herein, agree as follows:

1. **Purpose:**

The Parties enter into this Agreement for the purpose of establishing and operating the Peninsula Traffic Congestion Relief Alliance (“Alliance”) to reduce traffic congestion and greenhouse gas emissions while enhancing the quality of life in San Mateo County by promoting the use of sustainable transportation and commute alternatives. The Parties envision a region where all residents and employees have access to equitable, sustainable, affordable, and safe transportation options and use them as their primary modes when commuting.

2. **Definitions:**

- (a) “Employer” shall mean any public or private employer or group thereof, including a city or the County, who has a permanent place of business in the County of San Mateo.

- (b) “Party” or “Parties” shall mean a member of the Peninsula Traffic Congestion Relief Alliance and a party signator to this Agreement establishing the Alliance.
 - (c) “TDM or Transportation Demand Management” shall mean a program or activity to improve the efficiency of the existing transportation system by increasing the use of alternative modes of transportation such as carpools, vanpools, public transit, bicycles, walking and telecommuting.
- 3. **Establishment of Alliance:** The Parties hereby create an entity originally called the Peninsula Traffic Congestion Relief Alliance to exercise in the manner set forth in this Agreement the specified powers common to each of the Parties. For purposes of name identification and branding, the Alliance shall be known to the public as "Commute.org." The Alliance shall be a public entity that is separate from the Parties and shall be responsible for the administration of this Agreement. Except as provided herein, the debts, liabilities, and/or obligations of the Alliance shall be the debts, liabilities, and/or obligations solely of the Alliance and shall not be the debts, liabilities, and/or obligations of any Party to this Agreement.
- 4. **Term:** This Agreement shall be effective on the date by which any nine Parties have executed it and shall continue in effect until terminated as provided herein.
- 5. **Powers of the Alliance:** The Alliance shall have the powers and duties:
 - (a) To make and enter into contracts;
 - (b) To incur debts, liabilities or obligations;
 - (c) To solicit, receive, and use grants, advances and contributions from all available sources, public or private, including federal, state and local subventions;
 - (d) To adopt bylaws;
 - (e) To employ employees or agents or contract for the services of agents, employees, consultants and such other persons or firms as it deems necessary;
 - (f) To sue and be sued in its own name;
 - (g) To invest any surplus funds not required for the immediate necessities of the Alliance as the Governing Board determines is advisable, in the same manner and upon the same conditions as local agencies pursuant to Government Code Section 53601;

- (h) To enforce all provisions of this Agreement;
- (i) To negotiate for, acquire, hold, manage, maintain, control or dispose of real and personal property;
- (j) To levy and collect fees and charges, including administrative and operating costs, to third parties who receive the benefit of services from the Alliance; and
- (k) To do all other acts deemed necessary or convenient to achieve the purposes and objectives of the Alliance.

6. **Governing Board:** There is hereby created a Governing Board (also referred to as “Board”) to govern the Alliance. Each Party shall appoint one Councilmember or, in the case of the County, one member of the Board of Supervisors, to serve on the Governing Board and another Councilmember, or Supervisor in the case of the County, to serve as an alternate, with each continuing in such capacity until replaced. The Governing Board shall elect one of its members to serve as Chairperson. The Board shall meet as needed, but at least one time a year. Meetings shall be held in San Mateo County at a place to be designated. Each member of the Board shall have one vote.

The Governing Board shall be responsible for establishing the policy direction of the Alliance. On an annual basis, the Board shall adopt a work plan and budget for programs, services and subsidies that support the Alliance’s purposes. The Governing Board may from time to time give public recognition to Employers and other participants for notable efforts and achievements with respect to TDM programs. The Board shall exercise all powers and authority on behalf of the parties and may do any and all things necessary to carry out this Agreement.

7. **Committees:** The Governing Board shall establish such committees, either standing or ad hoc, as it deems necessary and appropriate to assist the Alliance in carrying out the purposes of this Agreement. The establishment of standing committees, as well as their composition, method of appointment, role and purpose, shall be designated in the Bylaws of the Alliance as adopted by the Governing Board.
8. **Budget:** The Executive Director annually shall prepare a budget for the Alliance setting forth anticipated expenses, financing sources and proposed service levels and programs necessary to carry out the purposes of this Agreement. The Executive Director shall recommend the budget to the Governing Board for approval after reviewing same with any committee the Governing Board may establish and designate for this purpose. In the event the budget contemplates revenue in the form of

monetary contributions from the parties, the budget shall be submitted to each Party for approval.

9. **Staff of the Alliance:** The Governing Board shall appoint an Executive Director. The Executive Director may hire other staff people for the Alliance, as needed, provided that such hiring conforms to the approved budget. The Executive Director may contract for the provision of other staff services, provided that such contracts conform to the approved budget. In lieu of an Executive Director, the Governing Board may contract for such management services. Staff or contractors will be employee(s) or contractee(s) of the Alliance. The Executive Director and other staff shall serve at the pleasure of the hiring or appointing authority. At the direction of the Governing Board, the Executive Director shall work with such committees as may be established and designated for this purpose.

The Executive Director shall be employed by the Alliance and shall:

- (a) Be responsible for Alliance management, strategic planning, financial management, personnel, and implementation of the Board-adopted annual work program and budget; and
- (b) Be responsible for day to day personnel matters and for the hiring and firing of subordinate staff members; and
- (c) Prepare an annual report describing the results of program implementation, transportation surveys, TDM programs and other information including the successes in attaining the goals and objectives to advance the purpose of the Alliance.

The Governing Board may also appoint legal counsel to represent the Alliance.

10. **Fiscal Agent:** The member Party designated by resolution of the Governing Board and reflected in the Bylaws of the Alliance shall act as Fiscal Agent for the Alliance and shall be charged with the following responsibilities:
- (a) The custody of all money, property and assets of the Alliance;
 - (b) The maintenance of all financial books and records necessary to conduct the business of the Alliance; and
 - (c) The development of periodic reports to the Governing Board and the Executive Director regarding receipts, disbursements and the financial condition of the Alliance.

The Alliance, through the Fiscal Agent, shall retain an independent certified public accountant each year to conduct a fiscal year end audit and to prepare financial statements for the Alliance.

11. **Withdrawal:** Any participating Party may withdraw from this Agreement by filing written notice of intention to do so with the other parties. Termination will take effect on July 1 of any year, provided there is a least six months advance notice. The withdrawal of any Party from this Agreement shall in no way affect the rights and obligations of the remaining Parties. If a Party withdraws from this Agreement, it is not entitled to return of any funds contributed to the Agency nor to the return in cash or in kind of any materials or supplies contributed. Withdrawing Parties still are obligated for all payments due from them for the fiscal year of the withdrawal.
12. **Termination and Disposition of Property:** This Agreement shall be deemed terminated when only one Party continues to participate, or when all participating Parties choose to terminate it. Upon termination, all assets shall be distributed in equal shares to the Parties still active at the time of termination or to the one Party continuing to participate or to a successor agency designated by all of the remaining parties at the time of termination, with the exception that if any surplus money of the Alliance at the time of termination represents monetary contributions from still active member Parties, said money shall be refunded to such Parties in proportion to the contributions made.
13. **Amendment:** This Agreement may be amended from time to time with the written consent of a majority of the participating Parties.
14. **Insurance and Indemnification:** The Alliance shall acquire such insurance protection, including coverage for workers' compensation and commercial general liability, as is necessary to protect the interests of the Governing Board, the Parties, the Alliance staff, representatives, volunteers and other participants. The Alliance shall, at its sole expense, assume the defense of and indemnify and save harmless each Party to this Agreement and its respective councilmembers, officers, agents and employees, from all claims, losses, damages, costs, injury and liability of every kind, nature and description directly or indirectly arising from the performance of any of the activities, programs or services of the Alliance, its Governing Board, or staff.
15. **Execution in Counterparts:** This Agreement may be executed in counterparts, each of which shall be deemed an original but all of which shall constitute one and the same agreement.

IN WITNESS WHEREOF, the parties hereto by their duly authorized representatives, have executed this Agreement.

RESOLUTION NO. 2021-73**A RESOLUTION OF THE CITY OF BRISBANE APPROVING THE SECOND AMENDMENT TO AND RESTATEMENT OF THE JOINT POWERS AGREEMENT ESTABLISHING THE PENINSULA TRAFFIC CONGESTION RELIEF ALLIANCE AND AUTHORIZING EXECUTION OF SAME**

WHEREAS, the Peninsula Traffic Congestion Relief Alliance (“Alliance”) was established in 2000 through a Joint Powers Agreement (“JPA”) executed by fifteen cities in the County of San Mateo, to assist the public and private sectors in achieving traffic congestion relief; and

WHEREAS, in 2005, the JPA was amended to include the County of San Mateo, and the Towns of Atherton and Hillsborough as members of the Alliance, bringing the total membership to 18 agencies, all of which approved and executed the Amendment to and Restatement of the Joint Powers Agreement; and

WHEREAS, the City of Menlo Park and the Town of Portola Valley desire to join the Alliance and the Town of Woodside may consider membership as well; and

WHEREAS, adding members to the Alliance requires all of the current members as well as the new members to approve and execute a Second Amendment of the Joint Powers Agreement; and

WHEREAS, in addition to expanding the membership of the Alliance, the proposed Second Amendment to the Joint Powers Agreement takes the opportunity to update and refresh the JPA by (1) revising the first section on "Purpose" to reflect the Alliance's recently adopted Mission and Vision Statements as set forth in its Strategic Plan and (2) clarifying that

the Alliance has developed a new brand and has become known to the public as "Commute.org"; and

WHEREAS, at its meeting on September 16, 2021, the Alliance Board of Directors reviewed the proposed Second Amendment to and Restatement of the Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance that incorporates the changes recited above and approved this Second Amendment for presentation to the San Mateo County Board of Supervisors and the city councils of current and new members for approval and execution of same.

NOW, THEREFORE, BE IT RESOLVED that the City of Brisbane hereby approves the Second Amendment to and Restatement of the Joint Powers Agreement Establishing the Peninsula Traffic Congestion Relief Alliance and authorizes the Mayor to execute and the City Clerk to attest to this document.

PASSED AND ADOPTED this 18th day of November 2021.

Karen Cunningham, Mayor

K. Consider Contract Renewal with Granicus (Host Compliance)- Short Term Rental Monitoring and Permitting

CITY COUNCIL AGENDA REPORT

Meeting Date: November 18, 2021

From: John Swiecki, Community Development Director

Subject: Contract Renewal with Granicus (Host Compliance)- Short Term Rental Monitoring and Permitting

Community Goal/Result

Safe Community - Residents and visitors will experience a sense of safety

Economic Development - Brisbane will work with the businesses and residents to provide for economic vitality/diversity

Purpose

For the City Council to consider a one-year renewal of the City's current agreement with Granicus (Host Compliance) to provide short term rental (STR) monitoring and permitting services.

Recommendation

That the City Council authorize the City Manager to execute a one-year extension with Granicus to continue providing STR monitoring and permitting services.

Background

In 2020 the City adopted its STR ordinance which took effect in summer 2020 permitting short term rentals subject to a number of operational and performance standards. In early 2021 the City entered into a contract with a vendor (Host Compliance, now Granicus) to automate the STR permit process and monitor STR activity on multiple listing sites, allowing the City to initiate code enforcement as needed and pursue the collection of transient occupancy tax (TOT).

Discussion

The current agreement with Granicus ends in December 2021 and it is proposed the agreement be extended for an additional 12 months, through December 2022. Staff is supportive of extending the agreement an additional year. There was a substantial investment of staff time working with the vendor to develop the City's platform and training in using the system, which did not go live until June 2021. While the system has only been in place a short time, staff is generally satisfied with its performance based upon the limited usage to date. As expected there have been minor implementation issues and staff continues to work with the vendor to improve its ease of use. Extending the agreement another year will allow for staff to more fully familiarize itself with and utilize the system through the upcoming year. This will enable the

city to make a more informed decision at the end of 2022 regarding the continued use of the system. Choosing not to extend the agreement at this juncture would set back the City's STR permitting procedures, enforcement and TOT collection efforts. City staff does not have the resources or tools to effectively undertake a comprehensive proactive approach to STR enforcement, and would by necessity rely on complaints to initiate enforcement.

Fiscal Impact

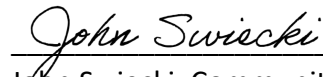

The cost of renewing the service agreement through December 2022 will be \$11,247.00. The agreement cost for 2021 was \$10,511.

Measure of Success

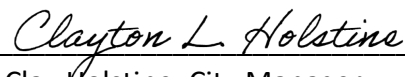

Successful implementation of the City's STR Ordinance by permitting STRs consistent with the City's ordinance, eliminating unpermitted STRs and generating and collecting TOT.

PRODUCT DESCRIPTIONS

Solution	Description
Address Identification	<p>Ongoing monitoring of 60+ Short Term Rental websites including major platforms Airbnb, VRBO, HomeAway, Booking.com, FlipKey, & Expedia. Our machine learning will deduplicate all known Listings into unique Rental Units, where our identification team will provide owner contact information for further enforcement. This product includes:- Ongoing monitoring of all listings in your jurisdiction</p> <ul style="list-style-type: none"> - Updating listing activity and details every 3-5 days - Screenshot activity of every listing - Deduplication of listings into unique Rental Units - Activity dashboard and map to monitor trends and breakdown of compliance
Mobile Permitting & Registration	<p>Mobile-enabled online forms and back-end systems for streamlining the registration/licensing/permitting of individual short-term rental hosts. These registration forms and workflows include:- Parcel Number lookup and validation</p> <ul style="list-style-type: none"> - E-Signatures - ACH, Debit, and Credit Payments exclusively powered by Stripe.com - Registration Number & Certificate creation - Document Upload - Renewals - Email confirmation - Admin approval & denial
24/7 Hotline	<p>24/7 web and phone hotline for your community to report short term rental complaints such as parking, trash, noise disturbances, and illegal short term rentals. This product include:- Mobile-enabled online web form for citizens to submit tips or complaints (text, videos, and photos)</p> <ul style="list-style-type: none"> - 24/7 call center for citizens to contact and report complaints verbally - Recordings for all call center complaints - Email notifications to your team when complaints are logged - Automatic outbound IVR calls and SMS messages to permit emergency contacts notifying them of the complaint - SMS support for emergency contacts to mark a complaint as acknowledged or resolved with the ability to send resolution notes - Hotline Dashboard for tracking complaint volumes, trends, and categories - Ability to upload Notes/Comments to each complaint

Solution	Description
Compliance Monitoring	<p>Compliance monitoring provides up-to-date information for each identified Rental Unit and its compliance status. We configure your compliance definition specific to your jurisdiction rules and ordinances in order to provide up-to-date compliance status of each identified Rental Unit. Additionally, this product will:- Allow your team to send letters to non-compliant properties 24/7</p> <ul style="list-style-type: none"> - Configure letter templates with your branding and letterhead - Add as many letter sequences as you need for escalation - Monitor properties that become compliant after letter enforcement
Rental Activity Monitoring	<p>Ongoing monitoring of Short Term Rental listings for signs of rental activity including historical revenue estimates & occupancy. Coupled with our Tax Collection product, users can also compare historical revenue estimates to actual reported revenue to identify those that may be underreporting and underpaying sales tax (i.e. TOT).</p>
Tax Collection	<p>Tax Collection can be built as a separate mobile-enabled form or coupled with Mobile Permitting & Registration in one single portal allowing your users to:- Report revenue monthly, quarterly, or annually and pay sales tax due (i.e TOT)</p> <ul style="list-style-type: none"> - Remind users when they are registering for a permit/license to also report any back taxes - Collect ACH, Debit, and Credit Payments exclusively powered by Stripe.com

TERMS & CONDITIONS

- The terms and conditions set forth in the Agreement effective 12-29-2020 are incorporated herein by reference.
- This quote is exclusive of applicable state, local, and federal taxes, which, if any, will be included in the invoice. It is the responsibility of Brisbane, CA to provide applicable exemption certificate(s).
- Granicus certifies that it will not sell, retain, use, or disclose any personal information provided by Client for any purpose other than the specific purpose of performing the services outlined within this Agreement.
- Any lapse in payment may result in suspension of service and will require the payment of a setup fee to reinstate the subscription.
- Notwithstanding anything to the contrary, Granicus reserves the right to adjust pricing at any renewal in which the volume has changed from the prior term without regard to the prior term's per-unit pricing.
- Renewal pricing for Address Identification, Compliance Monitoring, Rental Activity Monitoring, 24/7 Hotline, Tax Collection, and Mobile Permitting & Registration is based on the average volume of rental listings or units for the preceding 10-12 months and is subject to volume-based pricing adjustments as described herein.

L. Consider Introduction of Ordinance No. 668 Ordinance to Impose Higher Administrative Citation Fines for Violations of the City's Short Term Residential Rental Ordinance

CITY COUNCIL

Meeting Date: November 18, 2021

From: Michael Roush, Legal Counsel

Subject: Ordinance No. 668 Ordinance to Impose Higher Administrative Citation Fines for Violations of the City's Short Term Residential Rental Ordinance

Recommendation: Introduce the attached Ordinance.

Background

In lieu of issuing violators of local ordinances criminal citations, the California Government Code authorizes local agencies to issue administrative citations for such violations. Typically, these procedures are more streamlined than in the criminal court context. The City has adopted administrative citation procedures and they are set forth in Chapter 1.16 of the Brisbane Municipal Code.

The Government Code limits the amount of the administrative fines that may be imposed on violators: for the first offense, \$100; for the second offense with a 12-month period, \$200; and for the third and any subsequent offense within a 12 month period, \$500. Although the amount of these fines is not significant, they are sufficiently high that most violators will choose to comply rather than continue to face \$500 fines for violating an ordinance.

Cities throughout the State, however, that have adopted ordinance concerning short term residential rentals ("STR") have discovered that the amount of the fines pursuant to administrative citations have not been a sufficient deterrent to property owners violating a city's STR ordinance. In other words, property owners that are charging several hundred dollars a night in rent on a short term basis may well choose to pay a \$500 fine and continue to rent on a short term basis, notwithstanding their lack of compliance with the local STR ordinance.

In response, the State Legislature passed and the Governor signed into law, on an urgency basis, legislation (SB 60) that authorizes cities to set higher monetary penalties for violations of STR ordinances where the violation poses a threat to public health or safety. Under the new law, a city may impose a fine up to \$1500 for the first offense, a \$3000 fine for a second offense within a 12 month period, and fine up to \$5000 for a third and any subsequent offense within a 12 month period. Imposing these higher fines is discretionary; not mandatory.

Discussion

Although the number of property owners in Brisbane illegally engaging in short term rentals has dropped, there are still a limited number of property owners engaging in unauthorized STR activities. Council is aware of at least one owner who, notwithstanding receiving numerous citations for violating the City's STR ordinance, continued to rent the unit without a permit to do so. Neighbors affected by this unpermitted activity complained of late-night noise and cars parked illegally and haphazardly, both of which constituted threats to public health of safety.

Staff has drafted an ordinance for Council's consideration to adopt these higher penalties for violation of the City's STR ordinance. As permitted by statute, the draft ordinance imposes fines of \$1500 for the first offense, \$3000 for the second offense, and \$5000 for the third and any subsequent offense. In considering whether to introduce/adopt this Ordinance, Council has the discretion to reduce these amount of fines for the various offenses. For example, Council could impose a \$500 fine for the first offense, a \$1500 fine for the second offense, but leave the \$5000 fine for the third and subsequent offenses.

Because there have been issues with property owners' complying with the City's STR ordinance, staff recommends that Council adopt higher fines for these violations. Facing the prospect of higher fines will undoubtedly motivate most property owners to comply with the STR ordinance.

Fiscal Impact

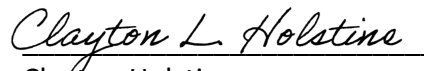

Adopting the ordinance will have no impact on the General Fund as enforcement activities, such as the City's contract with Host Compliance (to monitor and report STR activity in the City) are already funded.

Clayton Holstine
City Manager

ORDINANCE NO. 668

AN ORDINANCE OF THE CITY OF BRISBANE TO AMEND SECTION 1.16.060 OF THE BRISBANE MUNICIPAL CODE CONCERNING THE AMOUNT OF ADMINISTRATIVE FINES FOR VIOLATIONS OF THE CITY'S SHORT TERM RESIDENTIAL RENTAL ORDINANCE

THE CITY COUNCIL OF THE CITY OF BRISBANE HEREBY ORDAINS AS FOLLOWS:

SECTION 1. Section 1.16.060 of the Brisbane Municipal Code is amended to read as follows:

"1.16.060 Amount of administrative citation fines.

- A. Amount of Fine. Except as set forth in subsection C of this Section 1.16.060, any party to whom an administrative citation has been issued shall be responsible for payment of a fine for violating the applicable law specified in the citation, determined as follows:
 - 1. One hundred dollars (\$100) for a first citation;
 - 2. Two hundred dollars (\$200) for a second citation for the same violation within 12 consecutive months;
 - 3. Five hundred dollars (\$500) for each additional citation for the same violation within 12 consecutive months.

(Subsection B, no change).

- C. Amount of fine for violations of the City's Short Term Rental Ordinance. Any party to whom an administrative citation has been issued for a violation of the City's Short Term Residential Rental Ordinance (currently Ordinance No. 655, codified in Chapter 17.35 of the Brisbane Municipal Code), or any subsequently amended Short Term Residential Rental Ordinance, and where the violation posed a threat to public health or safety, shall be responsible for payment of a fine for violating the applicable law specified in the citation, determined as follows:
 - 1. Fifteen hundred dollars (\$1500) for the first citation;
 - 2. Three thousand dollars (\$3000) for the second citation for the same violation within 12 consecutive months;
 - 3. Five thousand dollars (\$5000) for each additional citation for the same violation within 12 consecutive months.

SECTION 2: This Ordinance shall be in full force and effect 30 days after its passage and adoption.

Karen Cunningham
Mayor of the City of Brisbane

The above Ordinance was regularly introduced and after waiting the time required by law was thereafter passed and adopted at a regular meeting of the City Council of the City of Brisbane held on _____, 2021, by the following vote:

M. Guadalupe Quarry Redevelopment Environmental Impact Report Consultant Selection

(It is being recommended that the City Council authorize the City Manager to execute a professional services agreement with Panorama Environmental, Inc. to prepare an EIR for the proposed redevelopment of the Guadalupe Quarry.)

CITY COUNCIL AGENDA REPORT

Meeting Date: November 18, 2021

From: John Swiecki, Community Development Director

Subject: Guadalupe Quarry Redevelopment Environmental Impact Report Consultant Selection

Community Goal/Result

Ecological Sustainability - Brisbane will be a leader in setting policies and practicing service delivery innovations that promote ecological sustainability

Economic Development - Brisbane will work with the businesses and residents to provide for economic vitality/diversity

Purpose

To retain the consultant services of Panorama Environmental, Inc. to prepare an Environmental Impact Report ("EIR") for the proposed redevelopment of the Guadalupe Quarry.

Recommendation

That the City Council authorize the City Manager to execute a professional services agreement with Panorama Environmental, Inc. to prepare an EIR for the proposed redevelopment of the Guadalupe Quarry.

Background

In July 2021, Orchard Partners, LLC (the "applicant") submitted a General Plan amendment and rezoning application to the City to facilitate annexation and redevelopment of approximately 50 acres of the 144-acre Guadalupe Quarry property ("project site") with trade commercial uses (logistics, warehousing, distribution) as an extension of Crocker Industrial Park (the "project"). The applicant proposes that the remaining approximately 94 acres of the quarry property would remain within the unincorporated limits of San Mateo County and be offered for dedication as permanent open space to San Mateo County Parks. In addition to the necessary applications to be processed by the City, the project will also require annexation approval by the San Mateo County LAFCo, mine closure/reclamation plan amendment approval by San Mateo County and the State Division of Mine Reclamation, and appropriate approvals under the San Bruno Mountain Habitat Conservation Plan and Section 10(a) Incidental Take Permit by the US Fish and Wildlife Service. Other approvals will likely be required by the California Department of Fish and Wildlife, the Regional Water Quality Control Board, and US Army Corps of Engineers. On June 3, 2021, the City Council approved a reimbursement agreement with Orchard Partners, LLC, to allow the City to recover the costs associated with processing

applications for redevelopment of the quarry property, and Orchard Partners also provided an informational presentation on the proposed project to the City Council on July 15, 2021.

The General Plan Amendment and Pre-Zoning applications, and any other subsequent discretionary applications that may be submitted by the applicant, are a project under the California Environmental Quality Act (CEQA), and the City has determined that an EIR is required.

Discussion

On July 30, 2021, the City issued a Request for Proposals (RFP) to five qualified consultant firms to prepare the EIR. Five proposals were received on September 17, 2021, and all firms were interviewed by an interview panel comprised of the City Manager, Community Development Director, key staff and outside counsel on October 12 and October 13, 2021. The interview panel unanimously recommended that the City retain Panorama Environmental, Inc. for preparation of the Quarry Redevelopment EIR due to the consultant team's strong project management approach, key experience in the project area, and technical expertise.

The draft professional services agreement including scope of work, budget, staffing, and schedule is attached for reference. This agreement is still in the process of being finalized, but no substantive changes are anticipated. It is recommended that the City Manager be authorized to execute the final professional services agreement.

Fiscal Impact

The cost of EIR preparation (not to exceed \$468,266.20, including an \$18,000 contingency fund) will be funded by the Applicant through a reimbursement agreement which was approved by the City Council and executed on June 8, 2021.

Measure of Success

The execution of a professional services agreement in a timely manner allowing EIR preparation to commence.

1. Draft Professional Services Agreement

 John Swiecki, Community Development Director

 Clay Holstine, City Manager

AGREEMENT FOR PROFESSIONAL SERVICES

THIS AGREEMENT, dated _____, is made by and between THE CITY OF BRISBANE, a municipal corporation ("City"), and PANORAMA ENVIRONMENTAL, INC., a S-Corporation ("Consultant").

RECITALS

A. City desires to retain Consultant for the performance of certain professional environmental impact report preparation services for the Guadalupe Quarry Redevelopment Project ("the Project").

B. Consultant represents that Consultant is specially trained, experienced, and qualified to provide such professional services and is willing to do so pursuant to the terms and conditions of this Agreement.

AGREEMENT

1. **Scope of Services.** Subject to the direction and approval of City through its staff that City may provide from time to time, Consultant shall perform the services described in Exhibit A attached hereto and incorporated herein by reference.

2. **Time of Performance.** The services of Consultant shall commence upon the execution of this Agreement and shall be satisfactorily completed in accordance with the time schedule set forth in Exhibit B attached hereto and incorporated herein by reference.

3. **Responsible Personnel.** The personnel acting on behalf of Consultant primarily responsible for performance of the services hereunder shall be as described in Exhibit C. Changes to staffing are allowed, but must be approved by the City in advance.

4. **Compensation.** As compensation for all services to be performed by Consultant under this Agreement, Consultant shall be paid the amounts set forth in Exhibit C attached hereto and incorporated herein by reference. In no event shall Consultant's total compensation exceed the sum of \$468,266.20 without additional authorization from City. Payment by City under this Agreement shall not be deemed a waiver of defects, even if such defects were known to City at the time of payment.

5. **Method of Payment.** Consultant shall submit billings to City describing in detail the work performed for which payment is requested, the date the services were performed, the number of hours spent and by whom, and a description of any reimbursable expenditures. Billings shall be submitted monthly, or at such other time as agreed upon between City and Consultant. City shall pay Consultant no later than 30 days after approval of the invoice by City staff.

6. **Maintenance and Inspection of Records.** Consultant shall maintain any and all ledgers, books of account, invoices, vouchers, canceled checks, time cards, and other

records or documents relating to charges for services or expenditures charged to City, for a minimum of three (3) years from the date of final payment to Consultant under this Agreement and shall make the same available to City or its authorized representatives for inspection and audit, at any time during regular business hours, upon written request by City. The right of inspection shall include the right to make extracts and copies.

7. **Assignment and Subcontracts.** Consultant acknowledges that Consultant's special skill and expertise is a material consideration for City entering into this Agreement. Consultant shall not assign, subcontract or delegate to any other party the performance of any services to be rendered by Consultant under this Agreement without the prior written approval of City. If City consents to any subcontracting of work, Consultant shall be fully responsible to City for all acts or omissions of the subcontractor.

8. **Ownership of Documents.** All plans, studies, documents and other writings prepared by and for Consultant in the course of performing its services under this Agreement, except working notes and internal documents, shall become the property of City upon payment to Consultant for such work, and City shall have the sole right to use such materials in its discretion without further compensation to Consultant or to any other party. Consultant shall, at Consultant's expense, provide such reports, plans, studies, documents and other writings to City upon written request.

9. **Independent Contractor.** Consultant is, and at all times shall remain, an independent contractor, and not an agent, officer or employee of City. As such independent contractor, neither Consultant nor any of its agents or employees shall be entitled to any salary, fringe benefits, worker's compensation, retirement contributions, sick leave, insurance or other benefit or right connected with employment by City, or any compensation other than as provided in this Agreement. Consultant shall have no power or authority to bind City to any contract or otherwise to incur any obligation or liability for, or on behalf, or in the name of City.

10. **Licenses.** Consultant represents and warrants to City that it has all licenses, permits, qualifications, insurance and approvals of whatsoever nature that are legally required of Consultant to practice its profession. Consultant shall, at its sole cost and expense, keep and maintain such licenses, permits, qualifications, insurance and approvals in full force and effect at all times during the term of this Agreement. Consultant shall maintain a City of Brisbane business license.

11. **Compliance with Laws.** Consultant shall use the standard of care in its profession to comply with all applicable federal, state and local laws, codes, ordinances and regulations in connection with the performance of its services under this Agreement.

12. **Indemnity.** Consultant shall indemnify, defend, and hold City, its officers, officials, agents, employees and volunteers, harmless from and against any and all claims, demands, causes of action, losses, damages, injuries, expenses and liabilities, direct or indirect, including attorney's fees, arising out of or in any manner relating to the performance by Consultant of its services under this Agreement or its failure to comply with any of the its obligations contained in this Agreement, and City shall not be liable for any acts or omissions of Consultant.

13. **Insurance.** Consultant, at its own expense, shall procure and maintain, for the duration of this Agreement, insurance policies which satisfy the following requirements:

(a) Type of policies and coverage:

- (1) *General Liability Coverage.* Consultant shall maintain commercial general liability insurance in an amount not less than \$1,000,000 per occurrence for bodily injury, personal injury and property damage, providing coverage at least as broad as Insurance Services Office Commercial General Liability form CG 0001 (Ed. 11/88). If the form of insurance with a general aggregate limit is used, either the general aggregate limit shall apply separately to the work to be performed under this Agreement or the general aggregate limit shall be at least twice the required occurrence limit.
- (2) *Automobile Liability Coverage.* Consultant shall maintain automobile liability insurance in an amount not less than \$1,000,000 combined single limit for each occurrence, for bodily injury and property damage, providing coverage at least as broad as Insurance Services Office form CA 0001 (Ed. 12/90) Code 1 (any auto).
- (3) *Workers' Compensation and Employer's Liability Coverage.* Consultant shall maintain workers' compensation insurance as required by the State of California and employer's liability insurance in an amount not less than \$1,000,000 per occurrence, for any and all persons employed by Consultant in connection with the performance of services under this Agreement. In the alternative, Consultant may rely on a self-insurance program to provide this coverage so long as the program of self-insurance complies fully with the provisions of the California Labor Code. The insurer, if insurance is provided, or Consultant, if a program of self-insurance is provided, shall waive all rights of subrogation against City for loss arising from work performed by Consultant for City.
- (4) *Professional Liability Coverage.* Consultant shall maintain professional errors and omissions liability insurance in an amount not less than \$1,000,000 per occurrence, covering negligent acts, errors or omissions which may be committed by Consultant in the performance of its services under this Agreement.

(b) Endorsements: Each general liability and automobile liability insurance policy shall contain, or be endorsed to contain, the following provisions:

- (1) The City, its officers, officials, employees, agents and volunteers are to be covered as insureds as respects: liability arising out of activities performed by or on behalf of Consultant; products and completed operations of Consultant; premises owned, occupied or used by Consultant; or automobiles owned, leased, hired or borrowed by Consultant. The coverage shall contain no special limitations on the scope of protection afforded to City, its officers, officials, employees, agents or volunteers.

- (2) For any claims related to the Project, Consultant's insurance coverage shall be primary insurance as respects the City, its officers, officials, employees, agents and volunteers. Any insurance or self-insurance maintained by City, its officers, officials, employees, agents or volunteers shall be excess of Consultant's insurance and shall not contribute with it.
- (3) Any failure to comply with reporting or other provisions of the policies including breaches of warranties shall not affect coverage provided to City, its officers, officials, employees, agents or volunteers.
- (4) Consultant's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.
- (5) Consultant's insurance coverage shall not be suspended, voided, canceled or reduced in coverage or in limits except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to City.
- (c) Deductibles and Self-Insured Retentions. Any deductibles or self-insured retentions must be declared to and approved by City. At City's option, Consultant shall demonstrate financial capability for payment of such deductibles or self-insured retentions.
- (d) Acceptability of Insurers. Insurance is to be placed with insurers having a current A.M. Best rating of no less than A:VII, unless otherwise approved by City in writing.
- (e) Verification of coverage. Consultant shall provide certificates of insurance with original endorsements to City as evidence of the insurance coverage required by this Agreement. Certificates of such insurance shall be filed with City before commencement of work by Consultant. At the request of City, Consultant shall provide complete, certified copies of all required insurance policies, including endorsements effecting the coverage required by this Agreement.

14. **Notices.** Any notices required or permitted to be given under this Agreement shall be in writing and shall be either personally delivered or sent by certified mail, return receipt requested, addressed to the other party as follows:

To City

City of Brisbane
Attn.: John Swiecki
50 Park Lane
Brisbane, CA 94005

To Consultant

Panorama Environmental, Inc.
Attn: Angie Alexander
717 Market Street, Suite 400
San Francisco, CA 94103

15. **Litigation Expenses and Attorneys' Fees.** If either party to this Agreement commences any legal action against the other party to enforce or interpret this Agreement, the prevailing party shall be entitled to recover all costs and expenses that may be incurred in connection therewith, including court costs, expert witness fees, discovery expenses, and attorneys' fees.

16. **Termination of Agreement.** This Agreement may be terminated by either party, effective upon written notice, should the other party commit any material default in the performance of its obligations hereunder. This Agreement may also be terminated by either party, for any reason, upon fifteen (15) day's prior written notice to the other party. In the event this Agreement is terminated by City through no fault of Consultant, Consultant shall be compensated for all services performed to the date of termination.

17. **Equal Opportunity Employment.** Consultant warrants that it is an Equal Opportunity Employer and shall comply with applicable regulations governing equal opportunity employment.

18. **Miscellaneous Provisions.**

- (a) Severability. Should any portion of this Agreement be declared void or unenforceable in a final decision by a court of competent jurisdiction, such decision shall not affect the validity of the remainder of this Agreement, which shall continue in full force and effect, provided that the remainder of this Agreement can be reasonably interpreted to implement the intention of the parties.
- (b) Entire Agreement. This Agreement constitutes the entire agreement between the parties and supersedes and cancels all prior agreements or understandings, whether written or verbal.
- (c) Amendments. This Agreement may be modified or amended only by a written document duly executed by both City and Consultant.
- (d) Waiver. The waiver of any breach or default under this Agreement shall not constitute a continuing waiver of a subsequent breach of the same provision or any other provision of this Agreement.
- (e) Execution. Each party warrants that the individuals signing this Agreement on its behalf have the legal power and authority to do so and to bind the party to this Agreement.
- (f) Successors and Assigns. Subject to the restriction against assignment and subcontracting, this Agreement shall be inure to the benefit of and shall be binding upon the heirs, personal representatives, successors and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties have executed this Agreement the day and year first above written.

THE CITY OF BRISBANE

APPROVED AS TO FORM:

City Attorney

CONSULTANT:

EXHIBIT A
Description of Services

Section 1. Project Team

Panorama Environmental, Inc. (Panorama) will serve as the prime contractor and will be responsible for the overall management of the project. In addition to project management tasks, Panorama will be lead development of the Project Description and perform the Environmental Impact Report (EIR) scoping tasks. Panorama will also complete the resource analyses and prepare related sections of the California Environmental Quality Act (CEQA) document for the following resource topics: Aesthetics and Visual Impacts, Land Use, Public Services, Utilities (with the exception of the Water Supply Assessment [WSA]), Recreation, Wildfire, Agriculture and Forestry, Population and Housing, Cumulative Impacts, and Alternatives Analysis.

For the remaining CEQA resource analyses, Panorama has teamed with the following subconsultant firms to conduct the following technical analyses:

- **Baseline Environmental Consulting (Baseline)**, who will provide Quality Assurance/Quality Control (QA/QC) and technical advisory support and will also complete the resource analyses and prepare related sections of the CEQA document for the following resource topics: Geology, Soils, and Seismicity; Hazards and Hazardous Materials; Hydrology and Water Quality; Air quality; Noise and Vibration; Greenhouse Gases; and Energy.
- **Coast Ridge Ecology (CRE)**, who will provide biological resource services for the project, including performing a peer review of existing biological resource studies and conduct a jurisdictional wetland delineation, if needed and requested under the contingency task described in Section 2.
- **PaleoWest**, who will conduct the historic, archaeological, and tribal cultural resources analysis, and may provide Assembly Bill (AB) 52 and Senate Bill (SB) 18 Native American consultation support to the City of Brisbane (the City), if needed and requested under the contingency task described in Section 2.
- **Fehr & Peers**, who is currently preparing the transportation study for the redevelopment at the existing Guadalupe Quarry and will lead preparation of the transportation and traffic impact analysis in the EIR.
- **EKI Environment & Water (EKI)**, who will conduct the WSA consistent with other WSAs prepared in coordination with City of Brisbane staff on other complex projects.

Panorama and its subconsultants will execute the scope of work described in Section 2.

Project Management Team

Panorama's proposed project leadership team includes:

- Panorama Project Manager, Angie Alexander, who has overseen the preparation of dozens of CEQA compliance documents over her 20-year career in environmental planning. As Project Manager, Angie will be the primary point of contact for the team and will oversee the execution, budget, and schedule for the scope of work provided herein.
- Panorama Deputy Project Manager, Whitney Broeking, who has 10 years of experience in environmental planning with an emphasis on infill redevelopment projects in the Bay Area. Whitney will direct the internal staff in accordance with direction from the Project
- Baseline Senior QA/QC Lead and Strategic Advisor, Judith Malamut, who managed the EIR for the One Quarry Road Project. In this capacity, Judith will assist with development and implementation of the project's CEQA strategy and provide QA/QC review of CEQA deliverables.

Section 2. Work Program

Project Understanding and Approach

Project Understanding

Panorama understands that Orchard Partners, LLC (the applicant) proposes to close Guadalupe Quarry, which is an approximately 144-acre active hardrock quarry, to redevelop 50 acres of the site as a logistics center (an extension of the Crocker Industrial Park located immediately northeast of the quarry) with the remaining 94 acres dedicated as open space. The project site, which is located in unincorporated San Mateo County within the City of Brisbane's Sphere of Influence, is currently designated as Heavy Industrial and Open Space land uses and has a zoning classification of Heavy Industrial (M-2). The project would annex the project site into the City of Brisbane's city limits and would change the existing Heavy Industrial land use designation to Trade Commercial and keep the Open Space land use designation unchanged. In accordance with the modifications to the land use designations, the proposed developed portion of the project site would be pre-zoned as Crocker Logistics Trade Commercial, with the remaining area pre-zoned as Open Space.

To annex the project site in accordance with General Plan policies, the applicant plans to submit applications to the San Mateo County Local Agency Formation Commission (LAFCo), as well as obtain approvals and permits from the County of San Mateo and State Division of Mine Reclamation for the mine closure. Given the sensitive resources present in and surrounding the project site, including the sensitive species and habitats in the adjacent San Bruno Mountain State and County Park, the project is also expected to require approvals or authorizations from various federal and state agencies, including the U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Wildlife, and San Francisco Regional Water Quality Control Board.

Although the quarry currently continues its operations under a surface mining permit and oversight by the County, an Interim Management Plan was approved by the County in 2020 because production decreased sufficiently to meet the definition of "idle" under the California Surface Mining and Reclamation Act (SMARA).

Site History

In 2001, SummerHill Homes proposed the One Quarry Road Residential Project (One Quarry Road Project), which would convert the project site to a residential subdivision with single-family and condominium lots, a community facility, public park, and open space. Residents largely opposed the project because of its size and potential for environmental impacts, particularly given the project's location adjacent to the sensitive species and habitats within San

Bruno Mountain State and County Park. Amid the controversy, SummerHill Homes suspended the project. The owner of the site, California Rock and Asphalt, Inc., later reinitiated review of the project by proceeding as the proponent for the certification of the project's Environmental Impact Report (EIR), though the One Quarry Road Project was never built. In 2013, the site owner submitted a reclamation plan amendment to the County, to allow for the development of commercial development pads; however, the application was suspended at the discretion of the owner.

Scope of Work

Task 1. Project Familiarization and Start-up

Work Plan Refinement

DELIVERABLES: Refined Work Plan, meeting agendas and notes

Under this task, the Panorama and Brisbane project management team, comprised of Project Manager, Angie Alexander, Deputy Project Manager, Whitney Broeking, and Senior QA/QC Lead and Strategic Advisor, Judith Malamut, will meet with City of Brisbane staff to review the preliminary scope of work and relevant regulatory requirements applicable to the project. The goal of the meeting will be to confirm whether the Work Plan is sufficiently comprehensive, as well as discuss any needed refinements, existing data, communication protocols, timelines, and key concerns and strategies to ensure an effective approach. Due to ongoing COVID-related restrictions, Panorama assumes that the meeting to review the Work Plan will be conducted via a teleconferencing platform and will be up to 1.5 hours in length.

Site Visit

Following the Work Plan review meeting, the Project Manager and Deputy Project Manager (at a minimum) will participate in a field visit to the project site to review and photo-document site conditions and gain a better understanding of project plans and environmental constraints and potential concerns.

Additional project staff from our technical team will also participate in the site visit, as needed. Panorama assumes the site visit will be up to 3 hours in length (not including travel time) with participants socially distanced and masked.

Project Management Start-Up Activities

Upon receiving the Notice to Proceed, Panorama's project management team will execute subcontracting agreements/task orders and communicate invoicing expectations with our teaming partners under this task. Panorama will also establish clear communication protocols and procedures with the City of Brisbane, the project applicant, and our internal and subconsultant team. All other project management tasks following project kickoff are included under Task 14.

Task 2. EIR Scoping

Defining the Project

Panorama's approach to the project definition phase is to work collaboratively with City staff and applicant to further refine the Project Description prior to completing the technical studies and EIR analysis. Panorama will work closely with Judith Malamut on an as-needed basis to suggest potential refinements to the project. Key considerations in refinement of the project include:

1. Addressing applicable comments provided by the public and agencies on the 2001 Draft EIR for the One Quarry Road Project
2. Ensuring the project does not conflict with regulatory requirements so that the City and applicant can obtain future regulatory permits and approvals for project implementation

Project Description

DELIVERABLES: Draft and Revised Draft Project Description (MS Word), Requests for Information (up to two), Notice of Preparation (MS Word), and mailing distribution list (MS Excel/Google Sheet), Scoping Meeting Summary (MS Word/PDF)

Panorama will review the preliminary Project Description, design details, and reports provided by the applicant to inform the Project Description for the EIR. Our team will then prepare a Project Description outline, in coordination with the City. The Project Description will meet CEQA requirements and include the standard information required by CEQA

Guidelines §15124 including: a brief history of the project; a description of the environmental setting (the baseline for the environmental analysis); a site location map; project goals and objectives; detailed text, maps, and graphics of each component of the project; construction methods and schedule; and long-term management and operation. The Project Description will also include a list of responsible and/or trustee agencies that have jurisdiction over the project under CEQA, including local, regional, state, and federal regulatory agencies.

To facilitate preparation of the Project Description, Panorama will develop Requests for Information (RFIs) to identify data needs. RFIs may include additional information on project construction and operation and maintenance. We will also collaborate with the City and applicant to ensure the concept engineering design is accurately and clearly portrayed in the detailed Project Description.

Panorama will prepare and submit a Draft Project Description to the City for review. Panorama will revise the Project Description based on the comments received and resubmit it to the City for a second round of review. Following the second round of review, the revised Project Description will form the basis of the technical studies and analyses used in the EIR. Any subsequent revisions to the Project Description will be submitted with the Administrative Draft EIR as part of Task 5.

Notice of Preparation and Scoping

Panorama recommends starting the scoping process after the detailed Project Description has

been prepared so that the graphics that have been developed through the process are available to the public at the time of scoping.

Notice of Preparation

Panorama will prepare the Notice of Preparation (NOP) in accordance with CEQA Guidelines §15082. The NOP will include a summary description of the project, a graphic of the project area, information on how to provide comments, and links to the City website where additional project information will be available. The NOP will be distributed to property owners within 300 feet of the project, Responsible Agencies, Trustee Agencies, the Office of Planning and Research, involved federal agencies, and the City's standard distribution list, if applicable. Panorama will assist the City with preparing the mailing list. Panorama assumes the City will produce and mail the NOP; however, production and mailing may be provided by Panorama under a budget modification.

Scoping Meeting

Under this task, Panorama and Baseline will collaborate with the City to plan and host one scoping meeting within 30 days of distribution of the NOP. This task includes the preparation of one (up to 30 minute) presentation to familiarize the public with the project and its goals and establish the open dialogue approach with the community. Up to two Panorama staff, including the Project Manager, will participate in the public scoping meeting. In addition to attending the scoping meeting, Panorama will compile and summarize the comments in a scoping report, including written comment letters, emails, and verbal comments received during the scoping meeting. The comments and summary will become an appendix to the EIR. Panorama will also coordinate with the City on the development of meeting materials. It is currently assumed that the meeting will be conducted via teleconferencing platform and hosted by the City; however, our team will be available to attend the scoping meeting in person, if appropriate.

Task 3. Consultation with Outside Agencies

Tribal Cultural Resources

Because the CEQA project is part of a General Plan Amendment, the project is required to conduct both Senate Bill (SB) 18 and Assembly Bill (AB) 52 noticing to Native American tribes. Panorama has teamed with PaleoWest to support the City's tribal consultation efforts. Under this task, PaleoWest will request a search of the Native American Heritage Commission (NAHC) Sacred Lands Files (SLF) and of their Native American Contacts List for SB 18 and AB 52. Following the results of the SLF search, PaleoWest will send outreach letters to Native American Contacts that may have information about tribal resources in the project area. These letters will notify tribe representatives regarding the project and inform them that the City of Brisbane consult with tribal representatives in accordance with SB 18 and AB 52.

PaleoWest assumes the City of Brisbane, as the lead agency under CEQA, will conduct AB 52 and SB 18 consultation should any tribe request consultation. If the City requests assistance with AB 52 and SB 18 Native American consultation efforts, PaleoWest can provide this support under the contingency task (Task 15) described below. PaleoWest assumes that non-confidential

details of AB 52 consultation regarding the project and any identified tribal cultural resources (TCRs) will be shared by the City of Brisbane for inclusion in the Cultural Resources/Tribal Cultural Resources Assessment Report and applicable EIR sections, described under Task 5.

Task 4 Potential Impact Topics to be Discussed in EIR

Our approach and scope of work for each resource topic to be discussed in the EIR is provided by topic below.

A. Geology, Soils, Seismicity, and Mineral Resources

Approach

The project site is not located in an Alquist-Priolo (AP) Fault Zone; however, the project site is located in a seismically-active area. A significant earthquake on one of the regional faults near the project site will likely produce strong ground shaking during the life of the project. The 2001 One Quarry Project EIR (2001 EIR) identified a variety of geotechnical constraints for redevelopment of the project site including seismic shaking, slope instability (including rockfalls and landslides) and unstable fill materials that could be subject to compression or settlement (including differential settlement).

We also understand that the quarry at the project site is fully operational and economically viable for at least another 25–30 years, and that aggregate resource areas at the project site are classified by the California Division of Mines and Geology as Mineral Resource Zone 2, indicating that the mineral deposits are considered significant. Therefore, redevelopment of the quarry could result in the loss of mineral resources.

To assess project-related impacts to geology, soils, seismicity, and mineral resources, Panorama has teamed with geologists and technical staff at Baseline. Their technical experts will conduct the peer review for this resource topic, as described in further detail below.

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s)

The Baseline team will conduct a peer review of the geology, soils, and seismicity technical study prepared by Cornerstone Earth Group. Baseline will prepare a memorandum with comments regarding the adequacy of the technical study for CEQA review purposes. Baseline's senior field geologist will conduct a site visit to confirm the existing geological conditions described in the technical study. If the technical study is found to be inadequate, Baseline's peer review memorandum will include recommendations for revisions to the technical study and/or additional technical study. If the technical study is revised based on the initial peer review memorandum, Baseline will perform a second round of peer review and prepare a revised peer review memorandums. Baseline will respond to one round of administrative comments on the initial peer review memo and the revised peer review memo. If the City requires additional technical studies to be performed by Baseline rather than the applicant team, our team may provide this service under the contingency task (Task 15) or a

contract modification. This task assumes the analyses related to geology, soils, seismicity, and mineral resources will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for these resource topics.

B. Hazardous Materials/Soil Contamination/Hazards

Approach

Fuel and oil have been stored in underground storage tanks (USTs) and aboveground storage tanks (ASTs) at the project site. Fuel USTs were removed from the project site in 1986 and 1992 and removal of contaminated soil was performed in the areas of the former USTs in 1993. Based on post remediation groundwater monitoring results, the San Mateo County Department of Environmental Health (SMCDEH) granted closure for the leaking USTs case in 1999. In 2007, four USTs containing asphalt or asphalt emulsion were removed and limited over-excavation of hardened asphalt material was conducted at the bottom and sidewalls of the excavation. SMCHED issued conditional closure of the asphalt oil USTs in 2007, which indicated residual petroleum impact exists proximate to the former USTs and notification to SMCHED is required under a future change in land use, such as residential. Previous investigations at the project site identified petroleum impacted soil in the areas of fuel and oil ASTs. Closure of the quarry would require the removal of ASTs under SMCDEH oversight, and remediation may be required if contamination is identified during the closure process. Demolition of existing structures at the project site could result in the release of hazardous building materials into the environment. The routine transportation and use of hazardous materials (e.g., fuel, oils, and paints) would occur during construction.

Baseline will characterize hazardous materials present at the site and determine the appropriate testing protocols and remediation requirements needed to reduce potential impacts to a less-than-significant level. This task assumes the analyses and mitigation related to hazardous materials, soil contamination, and hazards will be documented as part of the Hazards and Hazardous Materials section of the EIR to be submitted under Task 5 and does not include the submittal of a standalone deliverable, with the exception of the peer review memorandum(s) described below.

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s)

The Baseline team will conduct a peer review of the Phase I and Phase II Environmental Site Assessment studies prepared by Farallon Consulting. Baseline will prepare a memorandum with comments regarding the adequacy of the technical study for CEQA review purposes. Baseline's senior field geologist will conduct a site visit (under Task 1) to confirm the existing hazardous materials conditions described in the technical studies. If the technical studies are found to be inadequate, Baseline's peer review memorandum will include recommendations for revisions to the technical study and/or additional technical study. If the technical study is revised based on the initial peer review memorandum, Baseline will perform a second round of peer review and prepare a

revised peer review memorandum. Baseline will respond to one round of administrative comments on the initial peer review memo and the revised peer review memo. If the City requires additional technical studies to be performed by Baseline rather than the applicant team, our team may provide this service under the contingency task (Task 15) or a contract modification.

C. Biological Assessment and Wetlands Study

Approach

Recognizing the unique biological resources sensitivities of San Bruno Mountain, Panorama has teamed with CRE to provide the biological resources and wetland assessments. CRE biologists will conduct the peer review for biological resources, as described in further detail below. Due to the complex nature of the biological resources adjacent to the quarry, CRE will also conduct an independent review of applicant-submitted information for this resource topic, also described below.

Scope of Work

Peer and Independent Review

DELIVERABLES: Peer review memorandum (MS Word/PDF), Biological Resources Assessment (MS/Word/PDF)

CRE staff will peer review biological resource study prepared by Monk & Associates and will prepare a peer review memorandum with comments regarding the adequacy of the technical study for CEQA review purposes. CRE will also prepare a Biological Resources

Assessment (BRA) in accordance with the requirements of the San Bruno Mountain HCP and will identify existing plant species and communities, as well as wildlife on the project site and assess the potential for the project to impact special-status species and/or their habitats within a 5-mile radius.

Mapping of sensitive resources will be conducted with a Trimble GeoExplorer 6000 unit with submeter accuracy, and spatial data will be analyzed using ArcGIS 10.2. The assessment will identify any potentially significant impacts on these resources that could occur due to project implementation and will include recommended mitigation measures to prevent and/or mitigate any significant impacts. A standalone BRA will be submitted to the City for review and comment. Information from the BRA will be used to inform the CEQA analysis for the Biological Resources section of the EIR, prepared under Task 5. This task does not include preparation of a wetland delineation; however, this service may be provided under the contingency task (Task 15) upon request by the City.

D. Hydrology and Water Quality

Approach

Federal Emergency Management Agency (FEMA) mapping indicates that the project site is not located within a flood hazard zone. Stormwater runoff from the project site is currently conveyed as overland flow to three sedimentation ponds that function to remove sediment from quarry floor runoff. The runoff is conveyed to a roadside ditch and is discharged into a storm

drain system that eventually flows into Guadalupe Canal. FEMA mapping indicates that areas above and surrounding the Guadalupe Canal are located within a 100-year flood hazard zone. Construction activities at the project site could increase the discharge of sediment and pollutants to surface waters. Implementation of the proposed project would increase impervious surfaces and alter the existing drainage patterns at the project site, which could impact groundwater recharge. The increase in impervious surfaces could also increase the intensity and amount of stormwater runoff from the project site, which could impact the capacity of existing off-site stormwater drainage systems and impact off-site flooding conditions.

Panorama has teamed with technical staff at Baseline to lead the hydrology and water quality analysis, which will involve peer review and preparing the Hydrology and Water Quality section of the EIR.

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s)

The Baseline team will conduct a peer review of the hydrology, utilities, and stormwater study prepared by Kier & Wright. Baseline will prepare peer review

memorandum(s) as described above under Geology, Soils, Seismicity, and Mineral Resources. This task assumes the analyses and mitigation related to Hydrology and Water Quality will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

E. Air Quality

Approach

The project is located in an industrial area, with the nearest sensitive receptors located 1,700 feet away from the northern boundary of the project site, and approximately 650 feet away from the site's vehicle access route. Because the project would include reclamation and closure of the existing mining operations, and development of a logistics center, potential emission sources of air pollutants include, but are not limited to, off-road equipment such as construction equipment and warehouse equipment operating on fossil fuels, on-road vehicles such as light passenger vehicles and heavy-duty trucks, and emergency generators (if any). The major air quality concerns associated with these emissions sources are criteria pollutant emissions and health risk impacts caused by toxic air contaminants during both project construction and operation. Impacts related to emissions of criteria pollutant and toxic air contaminants could result in levels exceeding the applicable thresholds of significance.

Air quality specialists from Baseline will assess air quality impacts, including conducting a peer review for this resource topic, as described in further detail below, and prepare the Air Quality section of the EIR.

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s)

The Baseline team will conduct a peer review of the air quality study prepared by Ramboll. Baseline will prepare peer review memorandum(s) as described above under Geology, Soils, Seismicity, and Mineral Resources. This task assumes the analysis and mitigation related to Air Quality will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

F. Cultural Resources and Tribal Cultural Resources

Approach

The Guadalupe Quarry was established circa 1895 and is one the longest operating mining facilities in the state; therefore, the property will be evaluated as a potential built-environment historical resource against California Register of Historical Resources (CRHR) evaluation criteria. Because the project site is within unincorporated San Mateo County, the Guadalupe Quarry will also be evaluated as a potential historical resource against the San Mateo County Historic Landmark designation criteria per Chapter 7, Section 7732 of the Historic Preservation Ordinance. The historical resources evaluation under State and County criteria will be utilized to assess if the project may result in a substantial adverse change in the significance of a built environment historical resources, per Section 15064.5 of the CEQA Guidelines. Mitigation measures will be developed to lessen adverse effects to historical resources, as necessary.

Based on preliminary background research and PaleoWest's existing knowledge of the project area, PaleoWest assumes no archaeological resources or TCRs will be affected by the project and standard mitigation measures for unanticipated finds will be adequate.

Scope of Work

Cultural Resources/Tribal Cultural Resources Assessment Report

DELIVERABLES: Draft and Final Cultural Resources/Tribal Cultural Resources Assessment Report

Panorama has teamed with PaleoWest to lead the cultural resources and tribal cultural resources (TCR) analyses. Archaeologists at PaleoWest will conduct a records search at the Northwest Information Center (NWIC) at Sonoma State University with a search radius of ½-mile from the project area to identify known cultural resources and previously conducted cultural resource surveys. All previous cultural resource surveys and cultural resources within the area of the records search will be identified and copies of applicable site records and survey reports will be collected, as necessary. Other standards sources of information will be reviewed including historical maps, aerial photography, newspapers, journals, and other relevant sources of information.

After receipt of the NWIC records search results, PaleoWest cultural resources staff will conduct a pedestrian survey of the project area. Based on preliminary background research, knowledge of the region, the general slope of the area, and the fact the project area has been significantly modified from its natural and historical form, PaleoWest does not anticipate any archaeological

resources or TCRs are within the project area. Therefore, the pedestrian survey will focus on the built environment and record the historic-age Guadalupe Valley Quarry.

To document their findings, PaleoWest will prepare a Cultural Resources/Tribal Cultural Resources Assessment Report to support preparation of the Cultural Resources and Tribal Cultural Resources sections of the EIR. The report will summarize the results of background research including the search of the NWIC; SLF search and Native American outreach (described under Task 3 above); cultural resources surveys, prehistoric, ethnographic, and historical contexts; evaluation of built-environment resources; conclusion and management recommendations with any proposed mitigation measures to reduce impacts to cultural resources or TCRs. The report will include, at minimum: Summary of Findings; Background Research, Fieldwork and Methodology; Historical Overview; Description of Resources; Evaluation and Conclusion; References; and Preparers' Qualifications. For properties that are identified as historical resources, as defined by CEQA, the report will establish periods of significance and character-defining features that will be utilized for the assessment of effects in the EIR.

G. Aesthetics and Visual Impacts

Approach

The project includes multiple above-grade structural elements across approximately 50 acres associated with the proposed logistics center. The project is also expected to include the installation of permanent lighting along the new paved access roads and at new buildings/structures. The structures may also include metallic elements that could produce glare. The project site is particularly visible from residences along the Northeast Ridge of San Bruno Mountain and portions of the Crocker Industrial Park and San Bruno Mountain State and County Park. Therefore, the new project structures will be visible from nearby recreational trails and surrounding residential areas. Based on our experience on the Recology Project, we understand the sensitivity of new permanent lighting to hillside residents and the proposed visual changes may be a significant issue to the public. While private views from adjacent residences are not considered aesthetic impacts within CEQA, views from adjacent public streets such as Trinity Road can approximate residential views to provide the public with a representative understanding of the change in private views.

Scope of Work

Photo-realistic Renderings

DELIVERABLES: Photographs of recommended public viewpoints (electronic)

This task includes development of a three to five renderings from a varied range of public viewpoints. Recommended public viewpoints will be selected and presented to the City for consideration during a virtual

meeting (up to 2 hours in length). Upon approval of the viewpoints, Panorama's visual specialists will use the development and design standards presented in the applicant's Pre-Zoning application and conceptual development proposals to develop photo-realistic renderings to represent full buildout of the project.

Results of the visual impact analysis will be documented in the Aesthetics section of the EIR, prepared under Task 5. The analysis will include a description of the visual setting, project-related construction and operational impacts, and mitigation measures to reduce impacts, keeping in mind the visual impact analysis addresses whether the project could result in visual character degradation as compared with existing conditions. The analysis will also include a robust discussion of the Pre-Zoning application's lighting standards and potential changes in nighttime views of the site, focusing on light pollution and glare for residents of the Northeast Ridge.

This task assumes the analysis and mitigation related to visual impacts will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

H. Land Use

We understand that the project includes a City General Plan land use change for the approximate logistics center site to reflect that portion of the project site's annexation into the City. The General Plan amendment would change the City General Plan (preannexation) land use designation from Planned Development–Trade Commercial to Trade Commercial. The project also includes a pre-zoning of the logistics center site to Crocker Logistics Trade Commercial 3 (TC-3). The area not subject to development would remain designated as Open Space and have a pre-zone designation of Open Space (O-S).

Panorama planners will review the implications of these land use changes and assess conflicts or compatibility with the trade commercial property use and surrounding land uses. If required, we will develop appropriate mitigation to reduce potential land use conflicts, which could include General Plan Amendments and proposed zoning changes.

This task assumes the analysis and mitigation related to land use and planning will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

I. Traffic and Circulation

As the operating characteristics for different types of distribution/logistics facilities can vary widely, the transportation analysis will need to account for a range of potential future tenants. Fehr & Peers is currently under contract with the City to assess the range of potential tenants as a part of a transportation impact study (TIS). The traffic analysis will document the amount and impact of project-generated vehicle miles traveled (VMT) by both employee commutes and delivery trucks/vans, disclose (for informational purposes) the effect of project-added trips to intersection level of service (LOS) in the study area, and assess roadway hazards and the effect of the project on emergency access for fire, medical, and police services. Fehr & Peers will use the analyses and findings from the on-going transportation impact analysis to inform the traffic and circulation section of the EIR, prepared under Task 5, and additional analysis is not expected to be required.

We assume the TIS will be included as an appendix, or upon request by the City, we will extract the relevant information to create a stand-alone LOS memo based on the TIS for inclusion in the EIR appendix.

J. Noise and Vibration

Approach

The primary source of noise in the project vicinity is noise from the adjacent commercial uses. The nearest sensitive receptors are San Bruno Mountain State and County Park and the residential neighborhoods in the Northeast Ridge and Central Brisbane. Noise and vibration impacts could occur from project construction (e.g., off-road construction equipment and on-road hauling trucks). In addition, noise impacts could also occur during the operation of the proposed project because of the potential increase in traffic that may result from the development of the proposed project. It is anticipated that the proposed project would not generate substantial vibration during operation; therefore, potential new vibration impacts would not be evaluated.

Noise technical specialists from Baseline will assess noise impacts, including conducting a peer review and preparing the Noise section of the EIR (under Task 5).

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s)

The Baseline team will conduct a peer review of the noise study prepared by Ramboll. Baseline will prepare peer review memorandum(s) as described above under

Geology, Soils, Seismicity, and Mineral Resources. This task assumes the analysis and mitigation related to Noise will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

K. Public Services

Site annexation and construction of a logistics center would increase the number of people (employees) at the project site during operation. This increase could incrementally increase the provision for public services provided by the City or, by its nature, could increase hazards that require services such as police, ambulance, or fire. Panorama will contact public service providers, including the City's fire, police, and public works departments, to determine if the increase will change their response times or performance objectives. Panorama will use the information to evaluate the impact on public services from operation of the proposed project.

This task assumes the analysis and mitigation related to public services will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

L. Utilities

Approach

Panorama will evaluate potential impacts to water supply, wastewater collection, wastewater treatment, solid waste disposal, energy and communications during construction and operation of the project, as well as identify mitigation measures for potentially significant impacts. Panorama staff will assess impacts to utilities, including conducting a peer review for this resource topic, as described in further detail below, and prepare the Utilities section of the EIR (under Task 5). This task also includes preparation of a WSA by EKI, as a subcontractor to Panorama.

Scope of Work

Peer Review

DELIVERABLES: Peer review memorandum(s); Draft, Public Draft, and Final Adopted Water Supply Assessment Report (MS Word/PDF)

Panorama will conduct a peer review of the utilities study prepared by Kier and Wright and prepare peer review memorandum(s) as described above under Geology, Soils, Seismicity, and Mineral Resources. This task assumes the analysis and mitigation related to utilities

will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report.

Water Supply Assessment

The primary objective of this WSA is to evaluate whether sufficient water supplies are available to meet all future demands within the City of Brisbane's / Guadalupe Valley Municipal Improvement District's (GVMID) service area, including demands associated with the project, during normal, single dry, and multiple dry hydrologic years for a 20-year time horizon. In order to complete this assessment, the following must be included in a WSA pursuant to California Water Code (CWC) §10910:

- projected water demand associated with the project at completion;
- projected water demand within the water supplier's service area over the next 20 years;
- total projected water supplies available to the water supplier (and the project) over the next 20 years, including in normal and drought years; and
- evaluation of the sufficiency of available supplies to meet the total projected demands (inclusive of the project) over the 20-year horizon.

The City falls beneath the threshold definition of "urban water supplier" under CWC §10617 and is therefore not required to and has not prepared a recent Urban Water Management Plan (UWMP). Given this, EKI proposes to rely on the following sources for key service area demand and supply information:

- San Francisco Public Utilities Commission's (SFPUC's) 2020 UWMP
- Bay Area Water Supply & Conservation Agency's (BAWSCA's) Regional Water Demand and Conservation Projections, dated 26 June 2020

- BAWSCA Annual Survey FY 2019-20, dated March 2021
- “Common Language” provided by BAWSCA in support of its member agencies’ development of their 2020 UWMP (referred to herein as “BAWSCA Common Language”)

The WSA will be developed using the methodology proposed below. This task also include participation in up to four teleconferencing meetings by EKI staff.

Evaluate Project Water Demands

EKI will develop water demand estimates for the project based on: (1) land use and project information to be provided by the City and/or the project applicant (e.g., historical water uses at the project site, square footage for each land use type in the project, specifics on the proposed landscaping plan, etc.); and (2) the water demand factors identified in literature and other public sources for similar land uses. If water demand estimates have been prepared by others for the project, EKI will verify that these estimates are appropriate based on the information identified above and relative to the water demand factors currently used by the City for purposes of waste system master planning. Estimated demands for the project and for the City’s service area will be presented in five-year increments over the next 20 years.

Evaluate City Water Supplies

The City’s sole source of water supply is purchased water from the SFPUC Regional Water System (RWS). Supply reliability information is contained in SFPUC’s 2020 UWMP and BAWSCA Common Language, which anticipates very significant supply shortfalls in single dry year and multiple dry years (i.e., greater than 50 percent) as a direct result of implementation of the Bay-Delta Plan Amendment. However, as the SFPUC 2020 UWMP further discusses, numerous uncertainties remain in the implementation of the Bay-Delta Plan Amendment and the supply shortfalls presented in the SFPUC 2020 UWMP are likely a “worst-case” scenario. For the purposes of 2020 UWMP development, BAWSCA provided a revised Tier 2 drought allocation methodology to allocate RWS supplies during projected future single dry and multiple dry years in the instance where the supply shortfalls are greater than 20 percent. As part this task, EKI will evaluate the impact of potential Tier 2 drought allocations under the various drought scenarios.

Given these uncertainties in the SFPUC RWS supply reliability, EKI understands that SFPUC is planning to prepare updated guidance with respect to WSA preparation in late summer or fall 2021. To the extent that the SFPUC guidance is available in a timely fashion, EKI will work with the City to review and incorporate SFPUC’s approach into the WSA.

Given the projected dry year shortfalls, it is possible that the City may wish to develop additional water demand and supply management measures and/or policies associated with new development, such as a “water-neutral” growth policy or other measures (e.g., require development of local groundwater supplies) to reduce potable water demand associated with the project. If available, EKI will incorporate descriptions of the developed policy or requirements and any resulting additional supplies to be developed by the project into the

WSA. This task assumes that additional supply- and policy-related information can be readily obtained from the City. If desired, EKI may assist the City in developing such policies under the contingency task (Task 15) or a contract modification.

EKI will summarize information on available water supplies contained in SFPUC's 2020 UWMP, the BAWSCA Common Language, and other readily-available documents and information pertaining to the source and reliability of the City's water supply (e.g., supply reliability information and WSA guidance provided by the SFPUC). Similar to the method by which total projected water demands are addressed, total projected water supplies will be tabulated in five-year increments over the next 20 years during normal and dry years.

Compare Projected Supplies with Projected Demands

EKI will assess whether sufficient supplies are available for the project by performing a direct comparison of projected supplies and demands within the City's water service area, including demands associated with the project. As required by statute, EKI will perform this comparison at five-year intervals over the 20-year planning period for normal year conditions, single dry year conditions, and multiple dry year conditions. Given that the City does not have an UWMP, it is assumed that EKI will be able to rely on the projected wholesale purchase requests reported in SFPUC's 2020 UWMP as estimates of the projected demands for the City's current service area and customers. The supply shortfalls identified by this analysis will be presented in terms of total water volume and as a percentage of total demand.

As significant dry year shortfalls are anticipated to be projected based on currently available information, EKI will work with the City to discuss how to address the projected shortfalls and if it will be possible to make a determination as to whether the WSA can be approved, or if approval must be conditioned based on the development or application of a new policy or other requirements.

Prepare Draft and Final WSA

Pursuant to CWC §10910, and the assessments described above, EKI will prepare a draft WSA for the City review that will summarize the following:

- Projected water demand associated with the project at completion
- Projected water demand within the water supplier's service area over the next 20 years
- Total projected water supplies available to the water supplier (and the project) over the next 20 years, including in normal and drought years

The draft WSA will further provide a comparison of the projected water supplies and demands for the City over the next 20 years, inclusive of the project, to determine whether the City has sufficient water supplies during current and projected future normal and dry years. The draft WSA will incorporate information developed as part of Task 3 to address supply uncertainties of the SFPUC RWS with implementation of the Bay-Delta Plan Amendment.

A draft WSA will be sent to Panorama and the City for review and comment. EKI will then incorporate Panorama and the City's comments into a revised WSA document, which will then be provided to the project applicant. To the extent directed by the City, EKI will incorporate the project applicant's comments into a final WSA document, which will be provided to the City in electronic (PDF) format. This task assumes a minimal level of revision will be necessary to address comments and prepare a final WSA.

M. Greenhouse Gas Emissions

Approach

DELIVERABLES: Peer review memorandum(s)

The City of Brisbane's Climate Action Plan was adopted in 2015 and set a reduction target for 2020. The project's construction and operation would extend beyond 2020.

The project would generate direct and indirect greenhouse gas (GHG) emissions from the project's consumption of gasoline, diesel, electricity, and natural gas. Because the project would include a logistics center that would potentially generate significantly more vehicle trips compared to the existing conditions, the project's GHG emissions could exceed the applicable threshold of significance and require GHG-reducing mitigation measures.

Air quality specialists from Baseline will assess GHG impacts, including conducting a peer review for this resource topic, as described in further detail below, and prepare the Air Quality section of the EIR.

Scope of Work

Peer Review

The Baseline team will conduct a peer review of the GHG study prepared by Ramboll. Baseline will prepare peer review memorandum(s) as described above under Geology, Soils, Seismicity, and Mineral Resources. This task assumes the analysis and mitigation related to GHG will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report.

N. Recreation

The Guadalupe Quarry is located adjacent to San Bruno Mountain State and County Park and City of Brisbane Crocker Park Recreational Trail. Panorama staff will review trail maps and review park facilities surrounding the project site to evaluate the impact of the project on neighboring recreational facilities and will evaluate if the project would increase the use of existing recreation facilities, resulting in substantial physical deterioration of the facilities. This scope assumes that impacts would primarily be related to the addition of logistics center staff at the project site who may use nearby recreational facilities during operation of the proposed project. This task assumes the analysis related to recreation will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report.

O. Wildfire

The project site is located within an area currently mapped as moderate and high fire risk zones within a State Responsibility Area. We understand that subsequent to the quarry's annexation to the City of Brisbane, that the property will likely transition to a local responsibility area served by the North County Fire Authority. Panorama will identify the appropriate procedures applicable to wildfire responsibility and determine the need for mitigation

Mitigation or design recommendations may include creation of defensible space and vegetation treatments and/or fire hardening that would help protect project-related infrastructure from wildfire. This task assumes the analysis related to wildfire will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

P. Energy

Operation of the logistics center will permanently increase the electrical load and energy needs at the project site. Baseline will analyze the project's impacts related to energy consumption and identify any conflicts with applicable energy conservation plans in accordance with the State's Office of Planning and Research CEQA Guidelines. Baseline will peer review, independently verify, and appropriately summarize the project's consumption of fossil fuels and electricity during the construction and operational phases based on the results of the corresponding technical study provided by the project applicant. Baseline will also provide a qualitative discussion on how the project's location, functions, and features would avoid or reduce inefficient, wasteful, and unnecessary consumption of energy. Baseline assumes that written descriptions of any proposed energy-saving features that are proposed to be included in the project design will be provided. Baseline will prepare mitigation measures to reduce any significant impacts related to energy consumption to a less-than-significant level, if feasible. This task assumes the analysis related to energy will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

Q. Agriculture and Forestry

The proposed project is a redevelopment project and, therefore, impacts to agriculture and forestry are not anticipated. Panorama staff will verify these assumptions and eliminate this as an EIR topic through the scoping process, as appropriate.

R. Population and Housing

The project involves the development of additional commercial square footage and will create an increase in employment opportunities. This section will examine the proposed project's effect on population and housing in the City and whether the proposed project would result in population growth or cause displacement of people or housing. The proposed project does not propose the demolition or removal of any housing; therefore, the proposed project would not displace existing housing. This task assumes the analysis related to population and housing will be documented as part of the Administrative Draft EIR to be submitted under Task 5 and does not include the submittal of a standalone report for this resource topic.

S. Cumulative Impacts

Panorama understands that there are several other projects currently in development or planned for development in the vicinity of the quarry site. Panorama will coordinate with the City to develop a comprehensive cumulative projects list to assess the project's potential to result in cumulative impacts in combination with identified projects consistent with Section 15130 of the CEQA Guidelines. Panorama will also evaluate the project's potential to induce growth. The cumulative impacts analysis will be documented as part of the Administrative Draft EIR to be submitted under Task 5.

T. Alternatives Analysis

The Alternatives chapter of the EIR will identify and describe the alternatives selected for analysis as well as those considered but rejected, and the reason for the rejection; will include a brief analysis of the impacts of each alternative and a comparison of the alternatives' impacts with those of the project; will discuss the ability of each alternative to meet the project objectives; and will identify the environmentally superior alternative. These alternatives and alternatives suggested by the public during scoping and other design alternatives developed during the design process will need to be addressed in the EIR. We expect up to three alternatives will be considered and addressed in the EIR. The alternatives analysis will be documented as part of the Administrative Draft EIR to be submitted under Task 5.

Task 5. Prepare Administrative Draft EIR

DELIVERABLES: Administrative Draft EIR
(one consolidated MS Word file)

Panorama will prepare an Administrative Draft EIR. The content of the Administrative Draft EIR will be consistent with the requirements of CEQA subject to the approval of the City of Brisbane. The Administrative Draft EIR will include the following sections:

- **Executive Summary.** The Executive Summary will include a summary description of the project, the EIR process, identification of the alternatives analyzed in the EIR, and a summary of less than significant, significant, and significant and unavoidable impacts; outstanding issues and areas of controversy; and a table containing all impacts, mitigation measures, and the level of significance after mitigation.
- **Introduction.** The introduction will include a brief introduction to CEQA, the EIR process, and organization of the EIR.
- **Project Description.** The Project Description will include the revised Project Description prepared in response to City comments on the Revised Draft Project Description prepared under Task 2.
- **Environmental Impact Analysis.** The environmental impact analysis will be based on issues identified in the NOP, public scoping session, review of project documents, and additional research and study as described in our approach to addressing key environmental issues in Task 4. Where significant impacts are identified, the EIR will specify feasible mitigation measures, which may include avoidance, minimization, and compensatory measures. The EIR will provide a substantive discussion of the basis for

the determination of significance and the effectiveness of specified mitigation measures in reducing an impact to less than significant. For each mitigation measure, the EIR will also specify the mitigation monitoring and reporting requirements. All mitigation monitoring requirements will be compiled into a Mitigation Monitoring and Reporting Program, to be included as an appendix to the EIR. The environmental impact analysis will include all of the environmental topics contained in the State CEQA Guidelines, Appendix G, and will use the City's most recent version of the Appendix G checklist as a source for significance criteria for each topic. Panorama's understanding of the key environmental issues and approach to address each issue are described in Task 4.

- **Cumulative and Growth-Inducing Impacts.** The EIR will examine the potential for impacts of the project to combine with impacts of other nearby or related past, present, and foreseeable future projects. Where the potential for a cumulative impact is identified, Panorama will determine whether the project would make a considerable, and therefore significant, contribution to the cumulative impact. The EIR will also consider the project's potential to induce growth.
- **Alternatives.** The Alternatives chapter of the EIR will identify and describe the alternatives selected for analysis as well as those considered but rejected, and the reason for the rejection; will include a brief analysis of the impacts of each alternative and a comparison of the alternatives' impacts with those of the project; will discuss the ability of each alternative to meet the project objectives; and will identify the environmentally superior alternative.

- **Report Preparers**
- **Technical Appendices**
- **Draft Mitigation Monitoring and Reporting Program**

Task 6. Respond to Comments and Update Report

DELIVERABLES: Screencheck
Administrative Draft EIR (one
consolidated MS Word file)

Panorama will respond to all comments from the City on the first Administrative Draft EIR and will prepare a Screencheck Administrative Draft EIR. We utilize several techniques to facilitate the review of the document, including using shared documents to maintain version control when multiple contributors are involved. On a recent project for Stanford University, where we had over 15 reviewers, we utilized SharePoint to allow for a contemporaneous review among all parties. We provided brief instructions on how to review in SharePoint to minimize confusion. This technique resulted in one file with all contributor's comments and few conflicting or repetitive comments. When responding to comments, provides responses to every comment bubble and showing all changes in track changes/redline. We will diligently follow up on any comments we do not understand or need additional clarifications. Panorama will provide both a clean and track-change version of the Screencheck Administrative Draft EIR.

Task 7. Publish Notice of Availability and Draft EIR

DELIVERABLES: Draft EIR (MS Word, PDF, and hardcopy formats), Notice of Completion (MS Word File), Notice of Availability (MS Word File)

Panorama will address any final City comments on the Screencheck Draft EIR, using the same methods previously described under Task 6 and will publish the Draft EIR for public review. Panorama will also prepare the Notice of Completion, Notice of Availability, and

newspaper notice, including information on the Draft EIR public review process. The public notice will contain information on how to access to the Draft EIR, public meetings on the Draft EIR, and how to comment on the Draft EIR. This task assumes that Panorama will provide electronic copies of the Draft EIR in Word and PDF (searchable and hyperlinked from the table of contents for ease of digital review) formats for electronic distribution by the City. Panorama will coordinate with the City to identify the number of hardcopies of the Draft EIR are required for distribution. Costs associated with production are not included in this proposal; Panorama will produce hardcopies on a time-and-materials basis. This task assumes that the City will print and mail all public notices, including the notice to the County Clerk.

Task 8. State Clearinghouse and Public Review

DELIVERABLES: State Clearinghouse submittal documents, including Draft EIR (electronic submittal)

Panorama will prepare and send the required documents to the State Clearinghouse via electronic submittal for the required 45-day review. Attendance at up to two public hearings on the Draft EIR by Panorama

and subconsultant staff is included under this task. This task assumes Panorama will not present at the public hearing, but will be available to answer questions, as needed, and will take detailed notes to document comments.

Task 9. Respond to Review Period Comments

DELIVERABLES: Public comment tracking matrix (MS Excel or Google Sheets)

After the 45-day public review period has ended, Panorama will review comment letters, identify comments related to the adequacy of the environmental analysis, organize comments by topic, and develop a

comment tracking matrix (in Google Sheet or MS Excel format). Panorama and our team of technical subconsultants will develop draft responses to comments for review by the City in the tracking matrix and may also prepare a Master Response if several similar themes arise in the comments. This task includes two rounds of review and comment by the City prior to finalization of responses. Public comments and final responses will be documented in a chapter in the Final EIR (under Task 10).

Task 10. Prepare Final EIR

DELIVERABLES: Administrative, Screencheck, and Final EIR (MS Word, PDF, and hardcopy formats), Notice of Completion (MS Word File), Notice of Availability (MS Word File), State Clearinghouse submittal documents, including Final EIR (electronic submittal)

Panorama will address any comments that require clarifying changes in revisions to the Draft EIR text. The Draft EIR written comments received during the public review period will be responded to and incorporated into

a "freestanding" Administrative Final EIR, which will include the revised Draft EIR as Volume 1 and a response to comments document as Volume 2. Panorama will respond to City comments on the Administrative Final EIR and will produce a clean Screencheck Final EIR and a track-change Word version of the Screencheck Final EIR. Upon approval by the City, Panorama will prepare digital copies of the Final EIR in Word and PDF (searchable and hyperlinked from the table of contents for ease of digital review) formats, for electronic distribution by the City. Panorama will coordinate with the City to identify the number of hardcopies of the Final EIR are required for distribution. Costs associated with production are not included in this proposal; Panorama will produce hardcopies on a time-and-materials basis.

Panorama will also prepare the Notice of Completion and Notice of Availability of the Final EIR. The Notice of Availability will be sent to agencies and individuals who commented on the Draft EIR regarding the decision to certify the EIR. The Notice of Availability will include the date of public hearing to certify the Final EIR. It is assumed that the City will mail public notices. Panorama send the Notice of Completion and required attachments to the State Clearinghouse.

Task 11. Prepare Mitigation Monitoring and Reporting Plan

DELIVERABLES: MMRP (MS Excel or Google Sheet)

Panorama will develop a Mitigation Monitoring and Reporting Plan (MMRP) in tabular format identifying the mitigation measures included in the EIR. The MMRP

will identify the responsible parties for implementation of each mitigation measures, as well as those responsible for conducting the monitoring and/or reporting. The procedural and schedule requirements involved as part of the monitoring process will also be summarized for each measure, as applicable. The MMRP will be provided to the City as a separate digital document in an editable format (MS Excel or Google Sheet) in consultation with City staff.

Task 12. Prepare Draft CEQA Findings and Statement of Overriding Considerations (if needed)

DELIVERABLES: Draft CEQA Findings and Resolutions (MS Word/PDF)

Panorama will coordinate with the City to develop the Draft CEQA Findings and Resolutions that will be presented to the City Council for Certification. Panorama

understands that findings related to project approval and a Statement of Overriding Considerations may or may not be required.

Task 13: Certification Hearings

Panorama will present the Final EIR and MMRP to the Planning Commission and City Council for certification at two public hearings. This task also includes participation in hearings by technical staff if required. Participation in certification hearings may be remote or in person. This task also include participation in certification hearings by Baseline and Fehr & Peers staff to answer technical questions that may arise. Other technical team members from PaleoWest, CRE, and Tully & Young may also participate, if needed; however, their participation is not included in our proposed scope of work.

Task 14: Project Management and Coordination

DELIVERABLES: Meeting agendas and notes (MS Word), monthly invoices and progress reports (PDF), project schedule (MS Project and PDF)

Under this task, Panorama's project management team will execute subagreements, refine the project Work Plan in coordination with the City, develop a file-sharing procedure and platform dedicated to the project, and act as the primary point of contact for the City and subconsultants. Additional activities under this task are described below.

Biweekly Conference Calls

This task also includes facilitation of biweekly conference calls by the Panorama project management team for the duration of the project. During these calls, the City and consultant team will review the status of the project, discuss information requests, refine schedule, and strategize on the environmental review process. This scope includes preparation of bi-weekly meeting agendas in advance of calls and meeting notes for distribution to the team.

Open Communication

The Panorama team will be available to discuss and manage the project with the City via emails and phone calls, as needed. We maintain an open line of communication with our internal team, clients, and agencies, allowing the identification of issues requiring extra resource allocation early in the environmental review process.

Knowledge Sharing

The Panorama project management team will hold check in calls and take detailed notes, including action items, that are tracked from meeting to meeting. We will use a file-sharing system that integrates with our own server to seamlessly and securely share data and information across all team members. The Project Manager will act as the liaison among all team members to share cross-discipline knowledge and findings. The in-house team and subconsultants will work from defined scopes of work and, in the case of subconsultants, project-specific task orders. Each team member will follow written protocols for analysis and document preparation. We will use modern, cloud-based collaboration tools to integrate the team working environment by sharing data, documents, and other information among all team members, and we will have a dedicated staff member responsible for ensuring the central organization, cataloging, and distribution of data. Work will be reviewed and discussed on an ongoing basis to ensure issues are addressed in a timely fashion.

Budget Tracking, Invoicing, and Progress Reporting

Under this task, Panorama will maintain the project budget. Cost control is comprised of team communication and the use of cost tracking/timekeeping software programs. Panorama will use a cloud-based timekeeping and budgeting system called Harvest (www.getharvest.com) to track costs and will provide monthly status updates of budget and schedule in progress reports. Progress reports will also summarize activities completed during the previous month and activities anticipated to be conducted during the upcoming month.

Schedule

Schedule management will be achieved through the close coordination with the team, as well as the implementation of schedule tracking tools. Panorama will use Microsoft Project to manage the project schedule. We will provide the City with monthly status updates in progress reports and at meetings, including cost and schedule updates. We will also keep the City updated as to our progress as deadlines approach. The schedule will be updated on an ongoing basis throughout the duration of the project and submitted to the City and applicant as revisions are made.

Quality Control

Panorama's QA/QC policy will ensure that our documents and other deliverables are compliant with regulatory requirements and written so that the information is easily understood. By incorporating this QA/QC process, document authors and reviewers will identify errors and omissions or conflicts, ask questions, ensure consistency with policies and environmental regulations and raise issues that may present a problem. This process will apply to both Panorama's internal staff and subconsultants.

Focus QA/QC Procedures

- **Project Preparation by Project Manager** to develop technical outlines, document and terminology
- standards and conventions, and review tracking tools.
- **Technical Review** performed by senior staff and/or PM for content and analysis.
- **QA/QC Review by Panorama Principals** for quality, consistency, accuracy
- **Editorial Review** by technical editor including checking for document standards, grammar, and copy- editing
- **Production Review** by designated team member with "fresh eyes" using printed copy

Our deliverables will incorporate the following concepts:

- Utilizing language and analysis from previous documents, which were already vetted by the City
- Avoiding repetition in technical reports and documents
- Carefully ensuring that consistent terminology for all aspects of the project is carried throughout the reports
- Minimizing or avoiding the use of imprecise language

The implementation of our QA/QC process will be facilitated by using Panorama's style manuals.

Task 15. Contingency Tasks

Because the need for services and/or deliverables not explicitly included in Task 1 through 14 of this scope of work may arise, Panorama has included a contingency task at the request of the City. This contingency task includes up to \$18,000 of additional services and may include, but not be limited to, the following:

- AB 52 and SB 18 Native American Consultation Support.** The City, as the lead agency under CEQA, will conduct AB 52 and SB 18 consultation should any tribe request consultation. Task 3 does not include assistance with government-to-government SB 18 and AB 52 consultation beyond the initial outreach to Native American representatives. If the City requests assistance with AB 52 and SB 18 Native American consultation efforts, Panorama, in coordination with PaleoWest, will define an appropriate scope of work and cost estimate to provide this support under this contingency task.
- Wetland Delineation.** Upon request by the City, a wetland delineation may be prepared per the 1987 U.S. Army Corps Manual as an optional task. If requested, CRE will perform field visits to each potential wetland site to record data on three parameters: hydrology, vegetation and soils and mapping of data points in GIS. Mapping will determine the extent of potential wetlands and waters of the U.S. as well as determining waters of the state (one-parameter) jurisdiction. A Wetland Delineation and preliminary jurisdictional determination report describing the methods used and the existing site conditions will be prepared. The report will include a summary of all potential wetlands and waters of the U.S. subject to federal or state regulations, a discussion of permitting implications, and a map of all wetlands and their respective field data forms. The GIS-based maps will depict all potentially jurisdictional wetlands and waters. Preparation of the wetland delineation, as described herein, may be conducted under this contingency task and would be up to \$16,000 (including labor, expenses, and subcontractor markup).
- Water Demand and Supply Management Measures and Policies.** Task 4 includes the incorporation of descriptions of developed policy or requirements and any resulting additional supplies to be developed by the project into the WSA. Given the projected dry year shortfalls, it is possible that the City may wish to develop additional water demand and supply management measures and/or policies associated with new development, such as a “water-neutral” growth policy or other measures (e.g., require development of local groundwater supplies) to reduce potable water demand associated with the project. At the City’s request, EKI may assist the City in developing such policies under this contingency task. Panorama, in coordination with EKI, will define an appropriate scope of work and cost estimate to provide this support under this contingency task.

No work under this contingency task will be undertaken without advance discussion and approval by the City and the applicant.

Section 3. Project Budget

As summarized in Table 1 and detailed in Appendix B: Detailed Cost Proposal, proposed budget is **\$468,266.20**, including \$18,000 in Task 15 (Contingency Task). The cost proposal is based on our current understanding of the preliminary project description and the existing studies prepared for the project.

Table 1 Budget Summary

Task	Costs
Task 1: Project Familiarization and Start-up	\$6,455.00
Task 2: EIR Scoping	\$28,871.00
Task 3: Consultation with Outside Agencies	\$4,980.00
Task 4: Potential Impact Topics to be Discussed in the EIR	\$86,062.00
Task 5: Prepare Administrative Draft EIR	\$132,245.00
Task 6: Respond to Staff Comments and Revise Report	\$33,535.00
Task 7: Publish Notice of Availability and Draft EIR	\$21,922.00
Task 8: State Clearinghouse and Public Review	\$5,860.00
Task 9: Respond to Review Period Comments	\$23,850.00
Task 10: Prepare Final EIR	\$23,354.00
Task 11: Prepare Draft MMRP	\$8,452.00
Task 12: Prepare Draft CEQA Findings and Statement of Overriding Considerations (if needed)	\$5,000.00
Task 13: Certification Hearings	\$13,545.00
Task 14: Project Management and Coordination	\$32,265.00
Task 15: Contingency Task	\$18,000.00
Labor Subtotal	\$444,396.00
Other Direct Costs (NWIC search fees, mileage, field equipment, printing, etc.)	\$4,604.00
10% Subcontractor Markup (on labor costs only)	\$19,266.20
TOTAL (inclusive of Task 15: Contingency Task)	\$468,266.20

Cost Assumptions

The proposed budget above is based on the assumptions listed below. Deviations from these assumptions may increase the scope and budget.

1. Panorama assumes that comments on all deliverables will be non-conflicting and submitted as a consolidated set.
2. Biweekly conference calls will be up to 0.5 hour long. The cost proposal includes up to 18 months of biweekly conference calls and general project management activities.
3. The cost estimate includes up to 4 hours (including travel time) for the Panorama Project Manager and staff member to participate in a site visit.
4. There will be no changes to the Project Description after it has been approved.
5. This proposal assumes that two rounds of review and revision to the neighborhood notice will be sufficient.
6. The cost proposal assumes production and mailing of public notices will be conducted by the City.
7. This scope does not include preparation of any permit applications for the project; however, this service may be provided at additional cost.
8. This proposal assumes production of hardcopies of the Draft EIR and Final EIR will be conducted on a time-and-materials basis and is not included in this cost proposal.
9. This proposal assumes that recirculation of the EIR will not be required.
10. This proposal assumes that the EIR will not be appealed.
11. Request for NAHC SLF search and Native American Contacts List will be sent within one week of the Notice to Proceed.
12. Coordination for a NWIC records search will occur within one week of the Notice to Proceed.
13. Native American outreach letters to Native American Contacts will be sent after receipt from the NAHC. PaleoWest will send letters via email and postal service and conduct follow-up phone calls within 30 days of initial date of letters.
14. PaleoWest assumes the City of Brisbane will provide documentation of the SB 18 and AB 52 government-to-government consultation and non-confidential information resulting from consultation for inclusion in the Cultural Resources/Tribal Cultural Resources Assessment Report and EIR.
15. PaleoWest assumes no confidential tribal cultural resources information will be provided, so a confidential report under separate cover will not be required.
16. This scope of work does not include any consultation or coordination with federal, State, and local resource agencies beyond tribal consultation described in Task 3.
17. The City of Brisbane will provide and/or coordinate access onto the property for pedestrian survey and fieldwork.

18. The site visit and fieldwork will occur after the results NWIC records search have been received.
19. A single cultural resources report that includes archaeology, built environment, and tribal cultural resources will be prepared by PaleoWest for CEQA.
20. The project will not require any specific cultural resources documents aimed at obtaining federal agency permits, including Clean Water Act Section 404 Permits from U.S. Army Corps of Engineers or Endangered Species Section 10 (a) Incidental Take Permits from the U.S. Fish and Wildlife Service. If federally-compliant documents are needed, they can be prepared with minor effort under a separate cost amendment.
21. This scope of work includes a Contingency Task of up to \$18,000 to cover labor or direct costs associated with tasks or support requested by the City of Brisbane that are not included in the scope of work. Use of contingency funds will not occur without advanced discussion and approval from the City and applicant.
22. This budget includes routine project management tasks and client communications by EKI staff. Coordination efforts are expected to include telephone conference calls and participation in up to four web conference meetings. Because the time and effort required to complete this task is difficult to estimate, EKI assumes a level of effort equal to that of approximately 10 percent of the total WSA-related budget (under Task 4) will be sufficient.

EXHIBIT B

Time Schedule for Performance of Services

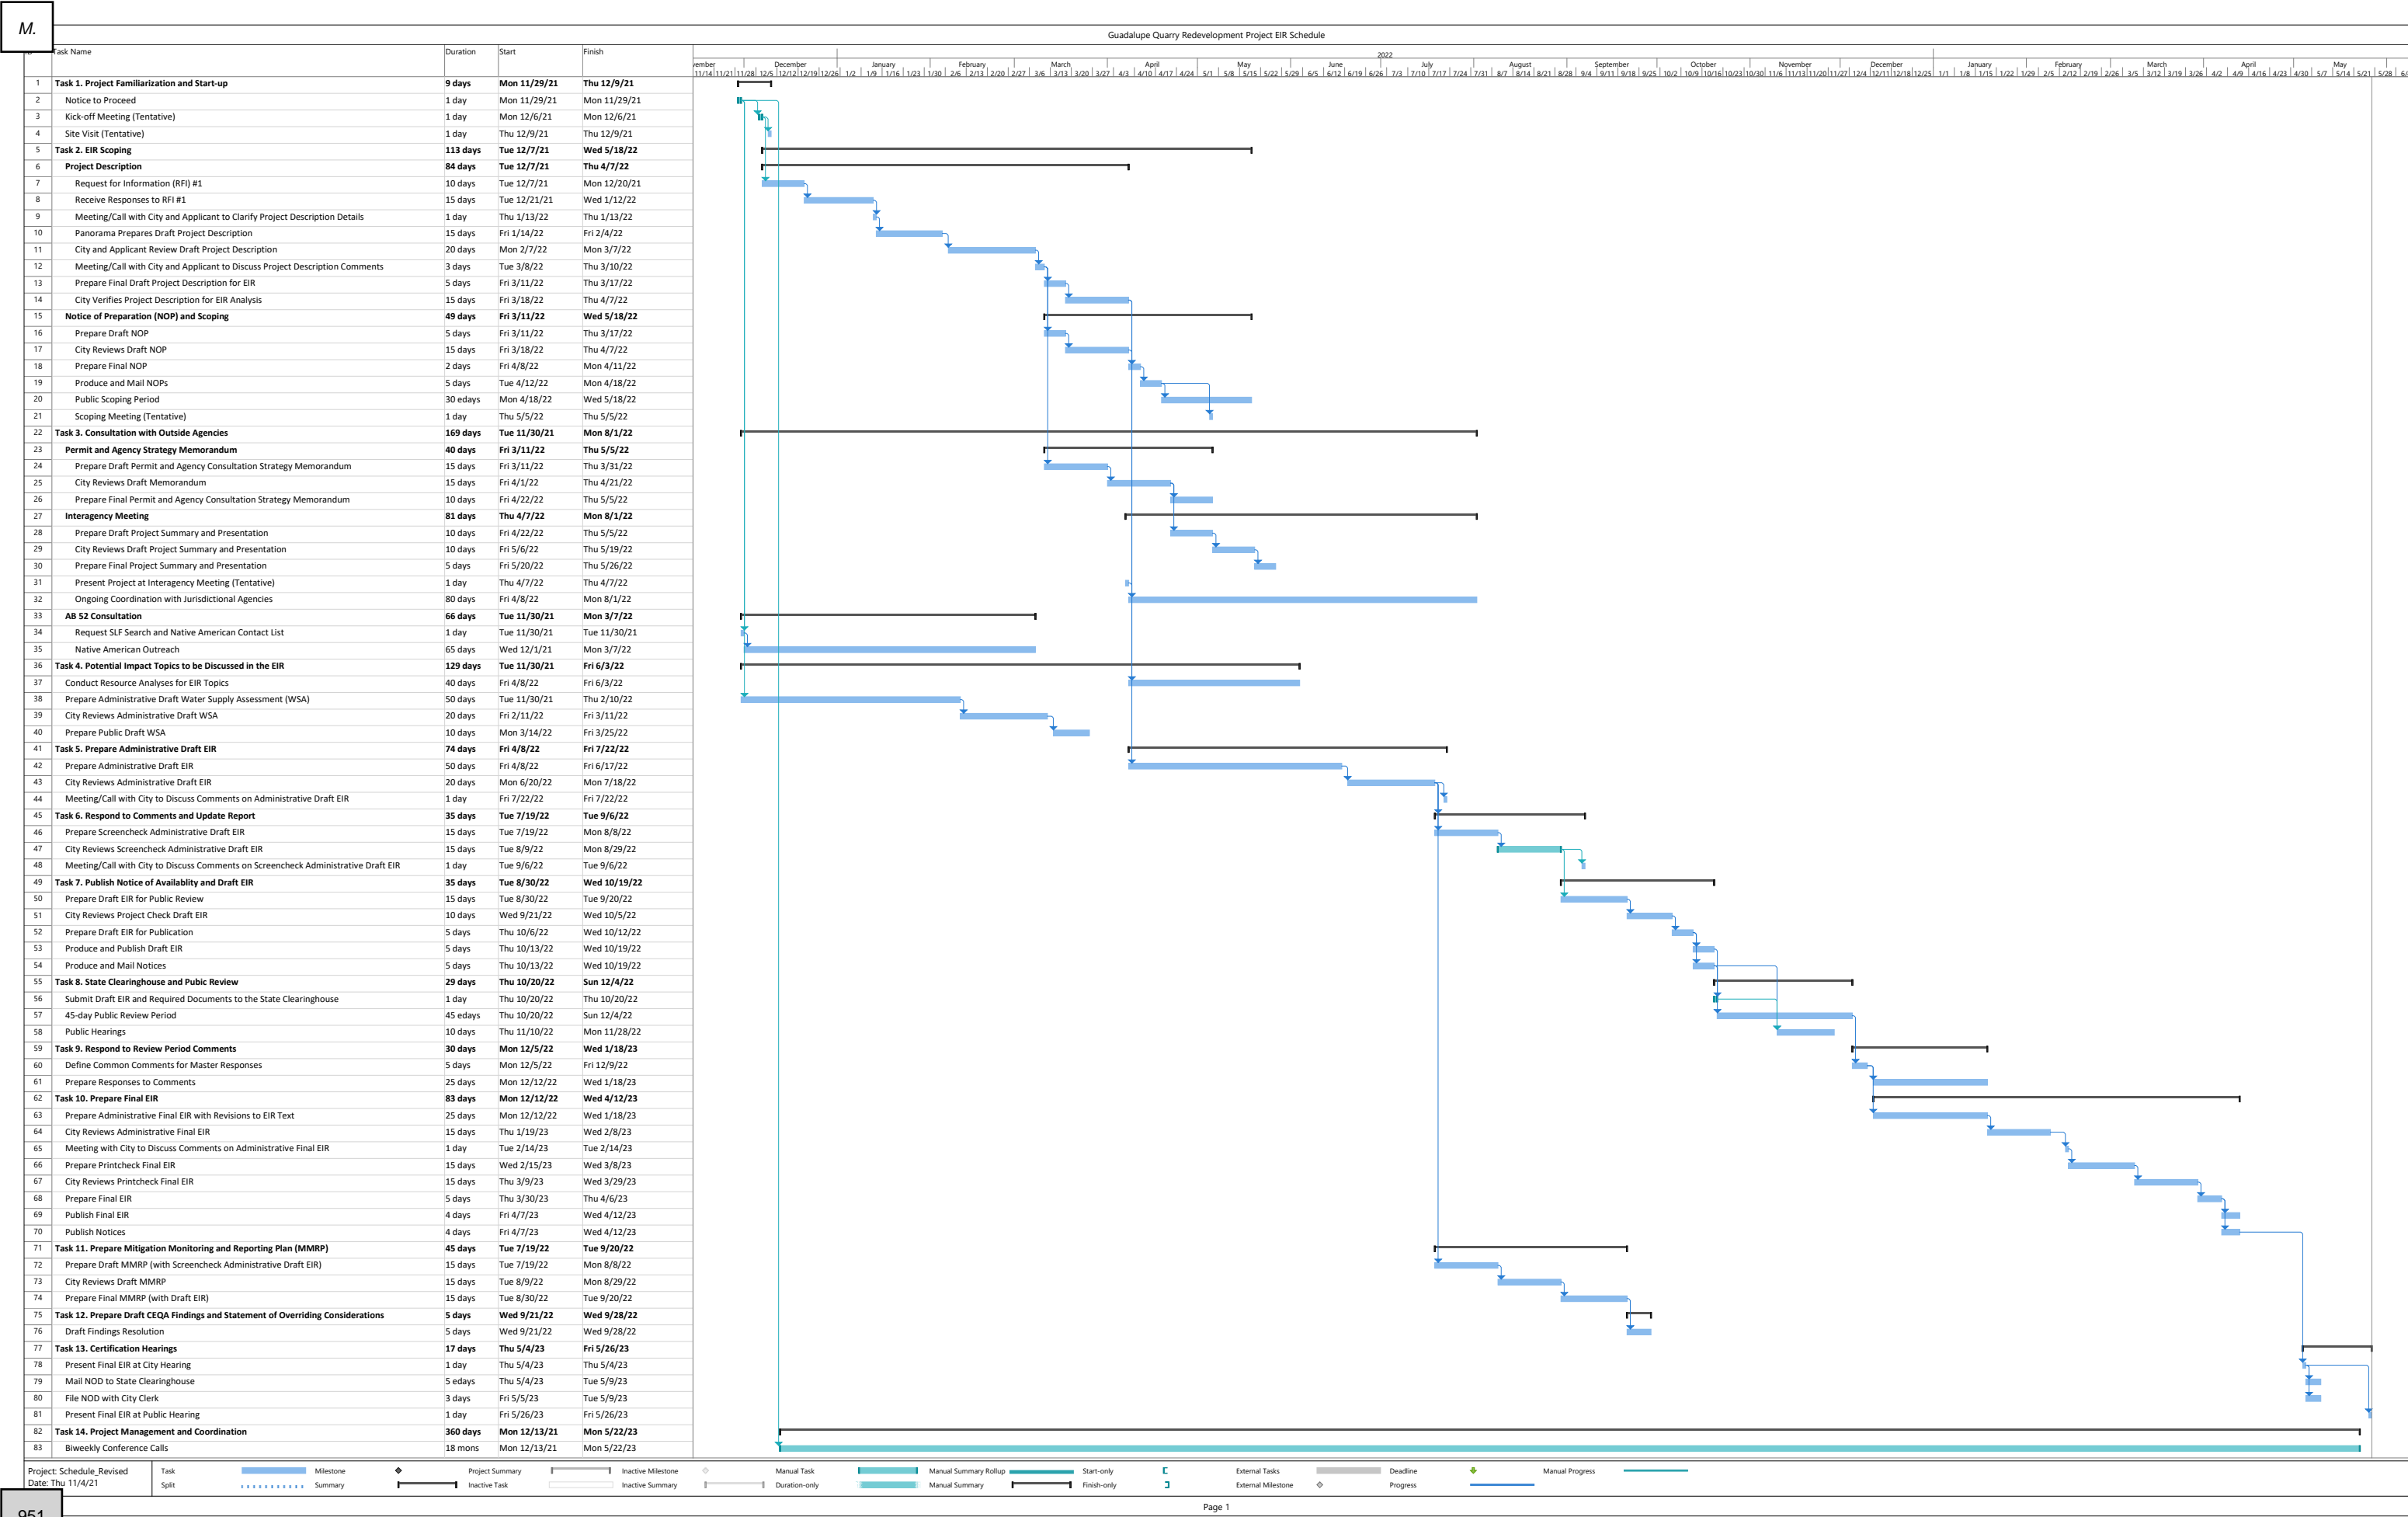

EXHIBIT C
Compensation

Task	Hourly Rate	Total Hours	Total Cost
Task 1: Project Familiarization and Start Up			
Panorama Project Manager	\$ 200.00	14.00	\$ 2,800.00
Panorama Deputy Project Manager	\$ 170.00	20.00	\$ 3,400.00
PaleoWest Project Manager	\$ 120.00	1.00	\$ 120.00
PaleoWest Senior Architectural Historian	\$ 135.00	1.00	\$ 135.00
Task 1 Total		36.00	\$ 6,455.00
Task 2: EIR Scoping			
Panorama Project Manager	\$ 200.00	38.00	\$ 7,600.00
Panorama Deputy Project Manager	\$ 170.00	45.00	\$ 7,650.00
Panorama Environmental Analyst	\$ 100.00	80.00	\$ 8,000.00
Panorama GIS Specialist	\$ 139.00	23.00	\$ 3,197.00
Panorama Technical Editor	\$ 101.00	24.00	\$ 2,424.00
Task 2 Total		210.00	\$ 28,871.00
Task 3: Consultation with Outside Agencies			
Panorama Project Manager	\$ 200.00	3.00	\$ 600.00
Panorama Deputy Project Manager	\$ 170.00	6.00	\$ 1,020.00
PaleoWest Project Manager	\$ 120.00	2.00	\$ 240.00
PaleoWest Administrative	\$ 70.00	1.00	\$ 70.00
PaleoWest Associate Architectural Historian	\$ 100.00	8.00	\$ 800.00
PaleoWest Associate Archaeologist	\$ 100.00	8.00	\$ 800.00
PaleoWest Staff Archaeologist	\$ 75.00	16.00	\$ 1,200.00
PaleoWest GIS Specialist	\$ 80.00	2.00	\$ 160.00
PaleoWest Principal	\$ 180.00	0.50	\$ 90.00
Task 3 Total		46.50	\$ 4,980.00
Task 4: Potential Impact Topics to be Discussed in EIR			
Panorama Project Manager	\$ 200.00	20.00	\$ 4,000.00
Panorama Deputy Project Manager	\$ 170.00	30.00	\$ 5,100.00
Panorama Senior Environmental Planner	\$ 150.00	40.00	\$ 6,000.00
Panorama Environmental Planner	\$ 145.00	20.00	\$ 2,900.00
Panorama Environmental Analyst	\$ 100.00	40.00	\$ 4,000.00
Baseline Principal/Technical Director	\$ 225.00	8.00	\$ 1,800.00
Baseline Environmental Engineer III	\$ 180.00	60.00	\$ 10,800.00
Baseline Environmental Engineer II	\$ 170.00	36.00	\$ 6,120.00
CRE Principal Biologist	\$ 135.00	16.00	\$ 2,160.00
CRE Staff Biologist	\$ 120.00	96.00	\$ 11,520.00
PaleoWest Project Manager	\$ 120.00	1.00	\$ 120.00
PaleoWest Administrative	\$ 70.00	1.00	\$ 70.00
PaleoWest Associate Architectural Historian	\$ 100.00	10.00	\$ 1,000.00
PaleoWest Staff Archaeologist	\$ 75.00	10.00	\$ 750.00
PaleoWest Principal	\$ 180.00	0.50	\$ 90.00
PaleoWest Principal Investigator	\$ 135.00	1.00	\$ 135.00
EKI Officer and Chief Engineer/Scientist	\$ 297.00	21.00	\$ 6,237.00
EKI Senior I Engineer/Scientist	\$ 265.00	50.00	\$ 13,250.00
EKI General Support	\$ 143.00	70.00	\$ 10,010.00
Task 4 Total		530.50	\$ 86,062.00
Task 5: Prepare Administrative Draft EIR			
Panorama Project Manager	\$ 200.00	40.00	\$ 8,000.00
Panorama Deputy Project Manager	\$ 170.00	50.00	\$ 8,500.00
Panorama Senior Environmental Planner	\$ 150.00	60.00	\$ 9,000.00
Panorama Environmental Planner	\$ 145.00	50.00	\$ 7,250.00
Panorama Environmental Analyst	\$ 100.00	90.00	\$ 9,000.00
Panorama GIS Specialist	\$ 139.00	40.00	\$ 5,560.00
Panorama Technical Editor	\$ 101.00	40.00	\$ 4,040.00
Baseline Principal/Technical Director	\$ 225.00	18.00	\$ 4,050.00
Baseline Planning Associate	\$ 210.00	8.00	\$ 1,680.00
Baseline Environmental Engineer III	\$ 180.00	142.00	\$ 25,560.00
Baseline Environmental Engineer II	\$ 170.00	94.00	\$ 15,980.00
CRE Principal Biologist	\$ 135.00	94.00	\$ 12,690.00
PaleoWest Project Manager	\$ 120.00	2.00	\$ 240.00
PaleoWest Administrative	\$ 70.00	1.00	\$ 70.00
PaleoWest Associate Architectural Historian	\$ 100.00	60.00	\$ 6,000.00
PaleoWest Associate Archaeologist	\$ 100.00	24.00	\$ 2,400.00
PaleoWest Senior Architectural Historian	\$ 135.00	4.00	\$ 540.00

PaleoWest Staff Archaeologist	\$	75.00	16.00	\$	1,200.00
PaleoWest GIS Specialist	\$	80.00	4.00	\$	320.00
PaleoWest Principal	\$	180.00	1.00	\$	180.00
PaleoWest Technical Editor	\$	75.00	4.00	\$	300.00
PaleoWest Principal Investigator	\$	135.00	4.00	\$	540.00
Fehr & Peers Associate-in-Charge	\$	250.00	4.00	\$	1,000.00
Fehr & Peers Project Manager	\$	155.00	12.00	\$	1,860.00
Fehr & Peers Transportation Planner	\$	145.00	24.00	\$	3,480.00
Fehr & Peers Project Coordinator	\$	135.00	7.00	\$	945.00
Fehr & Peers Graphics	\$	155.00	12.00	\$	1,860.00
Task 5 Total			905.00	\$	132,245.00

Task 6: Respond to Comments and Update Report

Panorama Project Manager	\$	200.00	20.00	\$	4,000.00
Panorama Deputy Project Manager	\$	170.00	30.00	\$	5,100.00
Panorama Senior Environmental Planner	\$	150.00	18.00	\$	2,700.00
Panorama Environmental Planner	\$	145.00	20.00	\$	2,900.00
Panorama Environmental Analyst	\$	100.00	30.00	\$	3,000.00
Panorama GIS Specialist	\$	139.00	10.00	\$	1,390.00
Panorama Technical Editor	\$	101.00	20.00	\$	2,020.00
Baseline Principal/Technical Director	\$	225.00	4.00	\$	900.00
Baseline Planning Associate	\$	210.00	4.00	\$	840.00
Baseline Environmental Engineer III	\$	180.00	18.00	\$	3,240.00
Baseline Environmental Engineer II	\$	170.00	22.00	\$	3,740.00
Fehr & Peers Associate-in-Charge	\$	250.00	2.00	\$	500.00
Fehr & Peers Project Manager	\$	155.00	6.00	\$	930.00
Fehr & Peers Transportation Planner	\$	145.00	8.00	\$	1,160.00
Fehr & Peers Technical Lead	\$	200.00	2.00	\$	400.00
Fehr & Peers Project Coordinator	\$	135.00	3.00	\$	405.00
Fehr & Peers Graphics	\$	155.00	2.00	\$	310.00
Task 6 Total			219.00	\$	33,535.00

Task 7: Publish Notice of Availability and Draft EIR

Panorama Project Manager	\$	200.00	30.00	\$	6,000.00
Panorama Deputy Project Manager	\$	170.00	30.00	\$	5,100.00
Panorama Senior Environmental Planner	\$	150.00	12.00	\$	1,800.00
Panorama Environmental Planner	\$	145.00	20.00	\$	2,900.00
Panorama Environmental Analyst	\$	100.00	40.00	\$	4,000.00
Panorama GIS Specialist	\$	139.00	8.00	\$	1,112.00

N. Consider Adoption of Resolution No. 2021-74 Accepting the Donation of 650 Harold Drive
APN 007-570-220 Located within the Brisbane Acres

CITY COUNCIL AGENDA REPORT

Meeting Date: 11/18/2021

From: Stuart Schillinger Assistant City Manager

Subject: Adopt Resolution 2021-74 Accepting the Donation of 650 Harold Drive APN 007-570-220 Located within the Brisbane Acres

Community Goal/Result Ecological Sustainability

Purpose

Preserve valuable habitat within Brisbane Acres.

Recommendation

Adopt Resolution 2021-74 Approving a Donation Agreement for Real Property, Accepting the Real Property as a donation to the City, Authorizing the Mayor and or City Manager to sign all Documents Necessary to Transfer the Property to the City and Accept the Property as a Donation, and Authoring the City Clerk to Record a Deed with the County Recorder to Transfer the Property

Background

The City has an adopted Open Space Plan. Part of the plan calls for the City to acquire property within what is called the Priority Preservation Area of the Brisbane Acres, also known as the Upper Acres, to preserve it for habitat for several rare and endangered butterflies and other fauna and flora. The City over the past 20 years has acquired a number of properties for this purpose through a combination of purchases and donations. The majority of our purchases have been done in combination with grants for the purpose of maintaining open space. The City has also accepted donation of land from individuals.

Staff periodically sends out letters to property owners to see if there is any interest in selling or donating land to the City. Staff mailed letters out at the beginning of September. The owner of parcel number 007-570-220 (650 Harold Drive) offered to donate the parcel to the City of Brisbane.

Discussion

Jeff Cooper has reached out to the City to donate his parcel to the City. His stipulation is that he would like the transaction closed by the end of December. If the Council would like to accept the donation, staff believes this will be a reasonable timeframe. The property owner would like the City to pay for 50% of the appraisal and 50% of the Title Report. It is anticipated that this will be \$5,750 for both to be completed. The owner would have it appraised at the current zoning which is housing. He would give it to us unencumbered. The appraised value of the parcel is anticipated to be \$70,000 based on the preliminary report from the appraiser.

Fiscal Impact

Adopt Resolution 2021-74 Accepting the Donation of 650 Harold Drive APN 007-570-220 Located within the Brisbane Acres Page 1 of 2

The City can use the South Hill Project Fund to purchase Open Space. When the City sold this property it directed staff to put it in a separate fund for the purposes of recreational activities or open space uses. The City used this fund to pay for the Crocker Trail Master Plan.

Measure of Success

Open space is available for the fauna and flora of San Bruno Mountain to thrive.

Resolution 2021-74

Donation Agreement

Stuart Schillinger

Stuart Schillinger, Assistant City Manager

Clay Holstine, City Manager

RESOLUTION NO. 2021-74

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BRISBANE APPROVING A DONATION AGREEMENT FOR REAL PROPERTY, ACCEPTING THE REAL PROPERTY AS A DONATION TO THE CITY, AUTHORIZING THE MAYOR AND/OR CITY MANAGER TO SIGN ALL DOCUMENTS NECESSARY TO TRANSFER THE PROPERTY TO THE CITY AND ACCEPT THE PROPERTY AS A DONATION, AND AUTHORIZING THE CITY CLERK TO RECORD A DEED WITH THE COUNTY RECORDER TO TRANSFER THE PROPERTY TO THE CITY

Whereas, Cooper Pudega Management, Inc., a California Corporation ("Donor") is the owner in fee simple of that certain real property located in the City of Brisbane, San Mateo County, California (the "Property"); and

Whereas, the Property is in an area known as "Brisbane Acres," which is within the boundaries of the San Bruno Mountain Habitat Conservation Plan (the "HCP") and the HCP provides for the protection of federally listed endangered species that live on San Bruno Mountain and for the maintenance of their critical habitat; and

Whereas, Donor desires to enter into this Agreement with the City to convey Donor's fee interest in the Property to City at no cost, subject to the terms and conditions of the Agreement; and

Whereas, City desires to accept the Property from Donor; and

Whereas, City is a governmental entity described in Section 170(b)(1)(A)(v) of the Internal Revenue Code and is authorized to accept charitable donations of real property.

NOW, THEREFORE, the City Council of the City of Brisbane resolves as follows:

Section 1. The City Council approves the Donation Agreement concerning the Property.

Section 2. The City Council accepts the Property as a donation to the City of Brisbane.

Section 3. The City Council authorizes the Mayor and/or City Manager/City staff to sign all documents necessary to transfer the Property to the City and to accept the Property as a donation to the City.

Section 4. The City Clerk is authorized and directed to record in the San Mateo County's Recorder's Office a deed from the Donor to the City, in a form approved by the City Attorney.

Section 5. This Resolution shall take effect immediately upon its adoption.

PASSED, APPROVED AND ADOPTED by the City Council of the City of Brisbane at a regular meeting on _____, 2021.

Mayor of the City of Brisbane

I hereby certify that the foregoing Resolution was adopted by the City Council of the City of Brisbane at a regular meeting held on _____, 2021 by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

Ingrid Padilla, City Clerk

Approved as to form:

Thomas R. McMorrow, City Attorney

DONATION AGREEMENT FOR REAL PROPERTY

This Donation Agreement for Real Property (this “**Agreement**”) is made and entered into as of the later of the dates set forth under the Parties’ signatures below (the “**Effective Date**”), by and between **Cooper Puggeda Management, Inc.**, a California corporation (“**Donor**”), and **City of Brisbane**, a California municipal corporation (the “**City**”). Donor and City are sometimes collectively referred to in this Agreement, individually, as a “**Party**” and, together, as the “**Parties.**”

R E C I T A L S:

A. Donor is the owner in fee simple of that certain real property located in the City of Brisbane, San Mateo County, California (the “**Property**”) as described in the attached Exhibit 1.

B. The Property is in an area known as “Brisbane Acres,” which is within the boundaries of the San Bruno Mountain Habitat Conservation Plan (the “HCP”). The HCP provides for the protection of federally listed endangered species that live on San Bruno Mountain and for the maintenance of their critical habitat.

C. Donor desires to enter into this Agreement to convey Donor’s fee interest in the Property to City at no cost, subject to the terms and conditions of this Agreement.

D. City desires to accept the Property from Donor.

E. City is a governmental entity described in Section 170(b)(1)(A)(v) of the Internal Revenue Code and is authorized to accept charitable donations of real property.

A G R E E M E N T:

NOW, THEREFORE, in consideration of the mutual covenants contained herein, the receipt and sufficiency as consideration which are hereby acknowledged, City and Donor agree as follows:

1. Donation of Land and Donative Intent. Donor shall grant to City the Property by donation, and City shall accept the Property from Donor in its as-is condition, upon the terms and conditions set forth in this Agreement. Donor and City hereby confirm that Donor’s transfer of the Property to City will be a gift to City, without consideration of any sort.

2. Escrow.

2.1 Opening of Escrow. Concurrently with or soon after execution of this Agreement, Donor will open escrow (“**Escrow**”) with Chicago Title Company, Attn: Tyson Mickelbost, email: tyson.mickelbost@ctt.com, phone: (415) 397-5738.

2.2 Close of Escrow. For purposes of this Agreement, the “**Close of Escrow**” or and the “**Closing Date**” will be defined as the date that the Deed (defined in Section 5.2(a) below) is recorded in the Official Records of San Mateo County, California. The Escrow will close on or before December 21, 2021, but by written notice to Escrow Holder and to the other Party, either Party may extend the Closing Date until December 28, 2021 (“**Outside Closing Date**”). The period commencing on the Effective Date and ending on the Closing Date, unless terminated or extended as otherwise provided in this Agreement, will be referred to as the “**Agreement Term**.” Possession of the Property will be delivered to City on the Closing Date.

2.3 Taxes: Closing Costs.

(a) General real estate taxes payable for the tax year before the Close of Escrow and all prior years will be paid by Donor at or before the Close of Escrow. General real estate taxes payable for the tax year of the Close of Escrow will be prorated through Escrow as of the Closing Date.

(b) City will pay the costs of the Owner’s Title Policy (defined in Section 6.1(a)), including the costs of any endorsements, other title costs, escrow fees, recording fees (if any), transfer taxes (if any), and all other closing costs.

2.4 Failure to Close. If Close of Escrow has not occurred on or before the Outside Closing Date, the provisions of Section 6.3(c) below will apply.

3. City’s Diligence Contingencies. City’s obligation to accept conveyance of the Property will be subject to the satisfaction (or waiver by City) of City’s approval of the condition of the Property, the condition of title to the Property, and the draft appraised value (collectively, the “**Diligence Contingencies**”) on or before the earlier of (a) the date for approval of the draft appraised value in Section 3.3 below and (b) December 1, 2021 (the “**Diligence Expiration Date**”). City will disapprove or waive the Diligence Contingencies by written notice to Donor on or before the Diligence Expiration Date. If City elects to waive the Diligence Contingencies, then the Parties will proceed to Close of Escrow. If City disapproves or fails to give Donor written notice that City elects to waive the Diligence Contingencies on or before the Diligence Expiration Date, then City will be deemed to have elected to terminate this Agreement and neither Party will have any further rights or obligations hereunder, subject to Section 6.3.

3.1 Property Investigation.

(a) Limited Non-Exclusive License. Donor grants to City a non-exclusive license to City and its representatives, agents, and contractors to enter on the Property at reasonable times and at City’s own cost, expense, and risk, to inspect, investigate, test, and study the Property (collectively, “**Inspections**”) to learn the physical condition of the Property, including but not limited to whether there are any hazardous materials (as defined under California and federal law) on the Property. The cost of any reports, inspections, tests, and studies will be borne by City. City may not conduct any invasive tests of soil, environmental, or groundwater conditions without Donor’s prior

written consent. This limited license will be automatically revoked on the earlier of the Diligence Expiration Date or termination of this Agreement.

(b) City Covenants and Indemnity. City agrees for itself and the other City Parties and each of their representatives, agents, contractors, and invitees (collectively with City, "**City Parties**") that, in connection with all work permitted under this section, they will: (1) perform all work in a diligent, expeditious, and safe manner; (2) not allow any hazardous materials to be released onto the Property nor allow any dangerous or hazardous condition to continue beyond the completion of the work permitted under this section; (3) comply with all applicable laws and governmental regulations; and (4) keep the Property free and clear of all mechanics' and materialmen's liens and other liens arising out of the entry or work performed under this section by City Parties. After any entry, City Parties will immediately restore the Property to substantially the same condition as it was in before City Parties entered the Property. City will indemnify, defend with counsel reasonably acceptable to Donor, and hold harmless Donor and its partners and their respective officers, directors, shareholders, partners, members, agents, contractors, successors and assigns (collectively with Donor, "**Donor Parties**") from and against all claims, liabilities, damages, losses, costs, or expenses (including reasonable attorneys' fees) (collectively, "**Claims**") arising from or relating to the entry on the Property by any City Parties. City will notify Donor before any City Parties enter the Property and will deliver, or cause to be delivered, to Donor evidence satisfactory to Donor that City and any other City Parties conducting any Inspections or entering onto the Property maintain liability insurance with a liability limit of at least \$2,000,000.

3.2 Title Review. City has received and reviewed a preliminary title report ("**Title Report**") issued by the Title Company for the Property. Within ten (10) days after the Effective Date of this Agreement, City will notify Donor in writing of any objections to the legal description and any exceptions listed in the Title Report ("**City's Title Notice**"). Within ten (10) days after Donor's receipt of City's Title Notice, Donor will have the right, but not the obligation, to notify City that Donor will elect to attempt to cure one or more of City's objections in City's Title Notice ("**Donor's Response**"). If Donor does not give any Donor's Response, or elects not to cure some but not all of City's objections, then Donor will be deemed to have elected not to cure any such matters. If, within ten (10) days after Donor's receipt of City's Title Notice, Donor has not elected to remove the disapproved matters or if provision has not been made for their removal as of the Diligence Expiration Date, then City will have the right to terminate this Agreement, and neither Party will have any further rights or obligations hereunder, subject to Section 6.3 below. From time to time until Close of Escrow, City may request updates to the initial Title Report. If there are any new exceptions to title on an update to the Title Report, City will have five (5) days to notify Donor of any objections, and Donor will have five (5) days to respond. If Donor does not elect to cure the objectionable new exception, then City will have the right to terminate this Agreement, and neither Party will have any further rights or obligations hereunder, subject to Section 6.3 below. The cost of the Title Report will be borne by City.

3.3 Appraised Value. Donor has engaged Kidder Matthews to prepare qualified appraisal (as that term is defined in Treasury Regulation Section 1.170A-16) (the

“Appraisal”) to establish the market value of the Property. Donor will have the right to approve or reject the valuation set forth in the draft appraisal report within five (5) business days after receiving the draft report. Donor’s failure to approve or reject the valuation in the draft report by 5 p.m. on the fifth (5th) business day after receiving the draft report will be deemed a rejection. If Donor rejects or is deemed to reject the valuation set forth in the draft appraisal report, then this Agreement will automatically terminate, and neither Party will have any further rights or obligations hereunder, subject to Section 6.3 below. The cost of the Appraisal will be borne by City.

4. **Title Policy.** At the Close of Escrow, City will cause the Title Company to issue an Owner’s title insurance policy, together with endorsements reasonably requested by City (the **“Title Policy”**), in the amount of the fair market value of the Property to be established by the Appraisal. The Title Policy will be subject only to the following permitted exceptions (**“Permitted Exceptions”**): (a) a lien to secure payment of non-delinquent real estate taxes; (b) matters created by or with the written consent of City; and (c) exceptions that are disclosed by the Title Report and that are approved or deemed approved by City in accordance with Section 3.2 of this Agreement. If City desires an ALTA extended owner’s policy or any endorsements, City will satisfy itself before the Diligence Expiration Date that the Title Company will be willing to issue such ALTA extended policy and/or endorsements in connection with the Title Policy at the Closing. However, the issuance of the ALTA extended policy or such endorsements will not be a condition to Closing, the additional cost of any extended ALTA Policy will be borne solely by City, and in no event will Donor be obligated to provide any indemnity, affidavit, or other document in order to issue the Title Policy.

5. **Deliveries to Escrow.**

5.1 **City’s Deliveries.** Before the anticipated Closing Date, City will deliver the following documents and Funds to Escrow:

(a) A certificate of acceptance of the Property in the form attached as Attachment 2.

(b) Closing statement in form and content satisfactory to City and Donor.

(c) Such other instruments as are reasonably required by Title Company as escrow holder or otherwise required to close the escrow and consummate the conveyance of the Property in accordance with the terms of this Agreement.

(d) Funds in the amount of \$5,750 to reimburse Donor for Donor’s payment of (i) \$750 for the Title Report and (ii) \$5,000 for the Appraisal.

(e) All funds necessary to pay any other amounts payable by City through Escrow as shown on the approved closing statement.

5.2 Donor's Deliveries. Before the anticipated Closing Date, Donor will deliver the following documents and funds into to Escrow:

(a) A fully executed and acknowledged grant deed (the "Deed") in the form attached as Attachment 2.

(b) Such resolutions or other corporate documents relating to Donor as the Title Company may reasonably require to demonstrate the authority of Donor to enter into this Agreement and consummate the transactions contemplated hereby, and such proof of the power and authority of the individuals executing any documents or other instruments on behalf of Donor to act for and bind Donor.

(c) Closing statement in form and content satisfactory to City and Donor.

(d) Such other instruments as are reasonably required by Title Company as escrow holder or otherwise required to close the escrow and consummate the conveyance of the Property in accordance with the terms of this Agreement.

(e) All funds necessary to pay for Donor's share of any pro-rated property taxes that are payable by Donor through Escrow pursuant to Section 2.3(a), as shown on the approved closing statement.

6. Conditions to the Close of Escrow.

6.1 City's Conditions. The Close of Escrow and City's obligation to accept the Property are subject to the satisfaction of the following conditions for City's benefit on or before the Closing Date, or such earlier date as is designated below for the satisfaction of such conditions:

(a) Title. The Title Company will be irrevocably committed to issue the Title Policy, subject only to the Permitted Exceptions.

(b) No Material Changes. There will have been no material adverse changes with respect to the physical or environmental condition of the Property, except any material adverse change to the physical or environmental condition of the Property caused by any act or omission to act of any of the City Parties in exercising City's rights under this Agreement (excluding mere discovery of an existing condition).

(c) Donor's Obligations. Donor has timely performed all of the obligations required by the terms of this Agreement to be performed by Donor on or before the Closing.

6.2 Donor's Conditions. The Close of Escrow and Donor's obligations to convey the Property are subject to the satisfaction of the following conditions for Donor's benefit on or prior to the Closing Date, or such earlier date as is designated below for the satisfaction of such conditions:

(a) Appraisal. Donor has approved the Appraisal.

(b) City's Obligations. City has timely performed all of the obligations required by the terms of this Agreement to be performed by City on or before the Closing.

6.3 Termination of the Agreement.

(a) Failure of City's Conditions. If any one or more of the conditions to City's obligations, as set forth in Section 6.1 or elsewhere in this Agreement, is not either fully performed, satisfied, or waived in writing on or before the Closing Date, then City may elect, by written notice to Donor, to terminate this Agreement and the Escrow, in which event this Agreement, the Escrow, and the rights and obligations of the Parties will terminate and the provisions of Section 6.3(c) will apply.

(b) Failure of Donor's Conditions. If any one or more of the conditions to Donor's obligations, as set forth in Section 6.2 or elsewhere in this Agreement, is not either fully performed, satisfied, or waived in writing on or before the Closing Date, then Donor may elect, by written notice to City, to terminate this Agreement and the Escrow, in which event this Agreement, the Escrow, and the rights and obligations of the Parties will terminate and the provisions of Section 6.3(c) will apply.

(c) Effect of Termination. If this Agreement is terminated pursuant to any provision of this Agreement, then Escrow Holder will return any and all documents and instruments to the Parties who deposited them, City will reimburse Donor for the cost of the title report (\$750) and the Appraisal (\$5,000) within 30 days following termination, and the rights and obligations of the Parties will terminate as of the date of the notice of termination, except for the surviving provisions set forth in Section 6.3(d) below.

(d) Surviving Provisions. For purposes of this Agreement, the following provisions will survive the Closing or the earlier termination of this Agreement: Section 3.1(b) (City Covenants and Indemnity); this Section 6.3 (Termination of the Agreement); Section 7 (Default); Section 8.3 (Post-Closing Covenant by City); Section 10 (As-Is; Release of Donor); Section 12 (Brokers); and Section 13 (General Provisions). The foregoing provisions will survive the Closing, or earlier termination of this Agreement, for a period of two (2) years.

7. Default.

7.1 City's Default. In the event that the conveyance of the Property is not consummated because of a default by City, Donor will have, at its option and as its sole remedy, to terminate this Agreement. Upon such termination, all title and escrow cancellation charges will be charged to and paid by City, if any, and Donor will be entitled to reimbursement from City of its actual, out-of-pocket costs and expenses incurred by Donor in connection with this Agreement up to a maximum amount of \$10,000 in the aggregate (the "**Recovery Cap**"). Nothing contained in this Section 7 will serve to waive or otherwise limit City's liability under Section 3.1.

7.2 Donor's Default. In the event that the conveyance of the Property is not consummated because of a default by Donor, City will have, at its option and as its sole remedy, to terminate this Agreement. Upon such termination, all title and escrow cancellation charges will be charged to and paid by Donor, if any, and City will be entitled to reimbursement from Donor of its actual, out-of-pocket costs and expenses incurred by City in connection with this Agreement up to the Recovery Cap. City's maximum aggregate recovery from Donor may not exceed the Recovery Cap.

7.3 Limitation on Donor's Liability. In no event will Donor be liable for any special, indirect, punitive, or consequential damages on account of any default by Donor. No member of Donor or any partner, member, officer, director, shareholder or employee of Donor or its constituent members (individually and collectively, a "**Donor Constituent**"), will have any personal liability, directly or indirectly, under or in connection with this Agreement or any agreement made or entered into under the provisions of this Agreement (or any amendments to any of the foregoing), and City will look solely to the Property (including any sales, insurance, or condemnation proceeds derived therefrom) for the payment of any Claims or for any performance, and City, on behalf of itself and its successors and assigns, hereby waives any and all such personal liability.

8. Covenants.

8.1 Operations Covenant by Donor. Throughout the Agreement Term, Donor will continue to maintain the Property (ordinary wear and tear, casualty, and condemnation excepted, in Donor's ordinary course of business). Notwithstanding the foregoing, nothing in this Agreement will require Donor to make any capital expenditures or repairs, or to improve or modify any portion of the Property and Donor.

8.2 Approvals by City. City will diligently pursue all necessary City Council and other approvals in order to close the donation contemplated by this Agreement not later than the Outside Closing Date.

8.3 Post-Closing Covenant by City. City will reasonably cooperate with Donor in Donor's efforts to have the donation of the Property treated as a tax deductible, charitable contribution to City. City will file and/or provide to Donor, as and when required, all documents and instruments necessary to enable Donor to claim a charitable contribution deduction as a "qualified conservation contribution," for purposes of the federal and state income tax laws. Such documents and instruments will include, but not be limited to, IRS Form 8283, provided however, that City is not obligated to sign a Form 8283 if City has significant concerns about the appraiser, appraisal, and/or claimed tax deduction. Further, within five (5) business days following the Close of Escrow, City will provide a contemporaneous written letter in the form required by Internal Revenue Code Sections 170(f)(8) and 170(f)(11) acknowledging receipt of Donor's donation of the Property and acknowledging that no goods or services were exchanged in consideration for such donation.

9. Risk of Loss/Condemnation. All risk of loss shall remain with Donor until Close of Escrow. In the event the Property is destroyed or damaged before Close of Escrow, City or Donor may elect to terminate this Agreement in which case the terms of Section 6.3 will apply. If any condemnation proceedings are threatened or commenced respecting the Property on or before the Closing Date, City or Donor may elect to terminate this Agreement in which case the terms of Section 6.3 will apply.

10. As-Is; Release of Donor.

10.1 As provided in this Agreement, it is the intent of Donor and City that, by the Closing Date, City will have had the opportunity to perform a diligent and thorough inspection and investigation of the Property, either independently or through its agents. CITY SPECIFICALLY ACKNOWLEDGES AND AGREES THAT DONOR IS CONVEYING AND CITY IS ACQUIRING OWNER'S INTEREST IN THE PROPERTY ON AN "AS IS WITH ALL FAULTS" BASIS. CITY IS RELYING SOLELY ON ITS INDEPENDENT INVESTIGATION, NOT ON ANY REPRESENTATIONS OR WARRANTIES OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, FROM DONOR OR ITS AGENTS, REPRESENTATIVES, OFFICERS, OR EMPLOYEES AS TO ANY MATTERS CONCERNING THE PROPERTY, THE SUITABILITY FOR CITY'S INTENDED USES OR ANY OF THE PROPERTY CONDITIONS THEREOF. DONOR DOES NOT GUARANTEE THE LEGAL, PHYSICAL, GEOLOGICAL, ENVIRONMENTAL, ZONING, OR OTHER CONDITIONS OF THE PROPERTY, OR THE SUITABILITY FOR ANY USE, NOR DOES IT ASSUME ANY RESPONSIBILITY FOR THE COMPLIANCE OF THE PROPERTY OR ITS USE WITH ANY APPLICABLE LAWS. IT IS CITY'S SOLE RESPONSIBILITY TO DETERMINE ALL BUILDING, PLANNING, ZONING, AND OTHER REGULATIONS AND APPLICABLE LAWS RELATING TO THE PROPERTY AND THE USES TO WHICH IT MAY BE PUT.

10.2 As part of its agreement to accept the Property and in its "as is and with all faults" condition, City as of the Closing Date, on behalf of itself and its successors and assigns, waives any right to recover from, and forever releases and discharges, Donor and its agents, representatives, employees, officers, and shareholders and their respective heirs, successors, legal representatives and assigns, from any and all Claims, whether direct or indirect, known or unknown, or foreseen or unforeseen, that may arise on account of or in any way be connected with (a) the use of the Property by City and its successors and assigns or (b) the physical, geological, or environmental condition of the Property. In connection with the foregoing release, City, as of the Closing Date, expressly waives the benefits of Section 1542 of the California Civil Code, which provides as follows:

A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE AND THAT, IF KNOWN BY HIM OR HER, WOULD HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.

NOTWITHSTANDING ANYTHING TO THE CONTRARY, THE FOREGOING PROVISIONS OF THIS SECTION 10 SHALL NOT SERVE TO RELEASE DONOR FROM, AND NO RELEASE IN

THIS SECTION 10 APPLIES TO, AND CITY EXPRESSLY DOES NOT WAIVE (A) OWNER'S FRAUD, OR (B) WITH RESPECT TO ANY CLAIM MADE BY ANY THIRD PARTY AGAINST CITY WITH RESPECT TO THE PROPERTY ARISING DURING DONOR'S OWNERSHIP OF THE PROPERTY, EXCEPT AS AND TO THE EXTENT SUCH CLAIM IS ATTRIBUTABLE TO BY CITY.

By placing its initials below, City specifically acknowledges and confirms the validity of the releases made above and the fact that City was represented by counsel who explained, at the time of this Agreement was made, the consequences of the above releases. The provisions of this Section 10 shall survive the Closing.

INITIALS: City: _____

11. Notices. All notices, demands, requests, exercises and other communications under this Option Agreement by either Party must be in writing and will be effective upon the earliest of the following to occur: (a) when delivered to the recipient; (b) one (1) day after deposit with a nationally recognized overnight-guaranteed delivery service; (c) three (3) days after deposit in a sealed envelope into the United States mail, postage prepaid by certified mail, return receipt requested, addressed to the recipient Party as set forth below; or (d) on the date of delivery by email (so long as the email is properly addressed and the sender does not receive a transmittal error message), unless the email transmission is completed on a non-business day or after 5:00 p.m. in the recipient Party's time zone, in either of which cases it will be deemed to have been given on the next following business day. Notices must be sent to the respective addressee at its address or email address set forth below:

To Donor:

Cooper Pugeda Management, Inc.
Attn: Jeff Cooper
65 McCoppin St
San Francisco, CA 94103

Phone: (323) 634-2400
Email: jeffc@cpmservices.com

Copies of any notice to Donor should also be emailed to:

Conservation Partners LLP
Attn: Misti M. Schmidt
Email: mschmidt@conservationpartners.com

To City:

City of Brisbane
 Attn: Stuart Schillinger
 50 Park Place
 Brisbane, CA 94005-1310
 Phone: (415) 508-2151
 Email: schillinger@ci.brisbane.ca.us

Copies of any notice to City should also be emailed to:

To Escrow Holder:

Chicago Title Company
 Attn: Tyson Mickelbost
 One Embarcadero Center, Suite 250
 San Francisco, CA 94111
 Phone: (415) 397-5738
 Email: tyson.mickelbost@ctt.com

The foregoing addresses may be changed only by written notice given in accordance with this Section 11.

12. Brokers. Each Party represents to the other that it has not used a real estate broker in connection with this Agreement or the transaction contemplated by this Agreement. If any person asserts a Claim relating to a broker's commission or finder's fee against one of the Parties, the Party on account of whose actions the Claim is asserted shall indemnify and hold the other Party harmless from and against the Claim.

13. Miscellaneous.

13.1 Time of the Essence. Time is of the essence in this Agreement.

13.2 Modifications, Amendments, and Waivers. The waiver or failure to enforce any provision of this Agreement will not operate as a waiver of any future breach of any such provision or any other provision hereof. At any time prior to the termination of this Agreement, the Parties may, but only by written agreement duly executed by each, in each Party's sole and absolute discretion: (a) extend the time for performance of any of the obligations or other acts of the Parties under this Agreement; (b) waive compliance with any of the covenants or agreements contained in this Agreement; or (c) amend or supplement any of the provisions of this Agreement.

13.3 Successors and Restrictions on Transfer. City may not assign or transfer this Agreement without Donor's prior written consent, which consent may be withheld in Donor's sole and absolute discretion. This Agreement will bind and inure to the benefit of

the respective heirs, personal heirs, personal representatives, successors, and assigns and assignees of the Parties, except as otherwise provided in this Section.

13.4 Applicable Law. This Agreement will be governed by and construed in accordance with California law. Further, the venue of any claim, action, proceeding, or counterclaim arising out of or in any way connected with this Agreement, including any Claim of injury or damage, will be in the County of San Mateo, State of California.

13.5 No Obligations to Third Parties; Except as otherwise expressly provided in this Agreement, the execution and delivery of this Agreement will not be deemed to confer any rights upon, nor obligate any of the Parties, to any person or entity other than the Parties.

13.6 Enforcement Rights of Others. Nothing in this Agreement is intended to create any rights to enforce this Agreement for any third party where no such right otherwise exists under this Agreement or applicable law. Nothing in this Agreement creates any right, title, or interest in favor of any person or entity except for Donor and City.

13.7 Attorneys' Fees. Should either Party institute any action or proceeding in court or other dispute resolution mechanism (collectively with court actions or proceedings, "**DRM**") to enforce any provision hereof or for damages by reason of a breach of any provision of this Agreement, the prevailing party will be entitled to receive from the losing party all DRM costs or expenses incurred by the prevailing party including expert witness fees, document copying expenses, exhibit preparation costs, carrier expenses and postage and communication expenses, and such amount as the DRM adjudicator may determine to be reasonable attorneys' fees for services rendered to the prevailing party in the DRM action or proceeding. Attorneys' fees under this Section include attorneys' fees on any appeal, and, in addition, a Party entitled to attorneys' fees will be entitled to such other reasonable costs and expenses incurred in connection with the DRM action or proceeding.

13.8 Construction. This Agreement will be construed according to the fair meaning of its language. The rule of construction to the effect that ambiguities are to be resolved against the drafting party will not be employed in interpreting this Agreement. Unless the context clearly requires otherwise: (a) the plural and singular will each be deemed to include the other; (b) the masculine, feminine, and neuter genders will each be deemed to include the others; (c) "shall," "will," or "agrees" are mandatory, and "may" is permissive; (d) "or" is not exclusive; (e) "include," "includes," and "including" are not intended to be restrictive, and lists following such words will not be interpreted to be exhaustive or limited to items of the same type as those enumerated; and (f) "days" means calendar days, except if the last day for performance occurs on a Saturday, Sunday, or any legal holiday, then the next succeeding business day will be the last day for performance.

13.9 Captions. Any captions to, or headings of, the paragraphs or subparagraphs of this Agreement are solely for the convenience of the Parties, are not a part of this Agreement, and will not be used for the interpretation or determination of the validity of this Agreement or any provision hereof.

13.10 Severability. If any provision of this Agreement will be held to be unenforceable or invalid for any reason, it will be adjusted rather than voided, if possible, in order to achieve the intent of the Parties. In any event, all other provisions of this Agreement will be deemed valid and enforceable to the fullest extent.

13.11 Counterparts. This Agreement may be executed in multiple counterparts, each of which will be deemed an original, but all of which, together, will constitute one and the same instrument. The Parties hereby acknowledge and agree that electronic signatures or scanned signatures transmitted by electronic mail shall be legal and binding and shall have the same full force and effect as if an original of this Agreement had been delivered. Donor and City (i) intend to be bound by the signatures on any document sent by electronic mail, (ii) are aware that the other Party will rely on such signatures, and (iii) hereby waive any defenses to the enforcement of the terms of this Agreement based on the foregoing forms of signatures.

13.12 Recitals; Exhibits. The Recitals to this Agreement are integral and operative provisions of this Agreement and are incorporated in and made a part of this Agreement. The following Exhibits are attached hereto and incorporated by reference into this Agreement:

Exhibit 1 — Property Description

Exhibit 2 — Form of Grant Deed and Certificate of Acceptance

13.13 Entire Agreement. This Agreement and the Exhibits attached hereto supersede any prior agreements, negotiations, and communications, oral or written, and contains the entire agreement between City and Donor as to the subject matter hereof. The terms of this Agreement may not be modified or amended, except by a writing executed by both City and Donor.

[Signatures follow on next page.]

IN WITNESS WHEREOF, the Parties have duly executed and delivered this Agreement on the dates set forth under their respective signatures below.

O. City Manager's Report on upcoming activities

i. Appointment of Council members to an ad-hoc committee to review Community Garden Rules

**CITY COUNCIL****Meeting Date: November 18, 2021****From: Clayton Holstine, City Manager****Subject: Appointment of Ad-hoc Subcommittee to review current Rules and procedures for Community Garden****Background**

The City has owned and operated a community garden since the 1990's. The City has rules and procedures for the garden but has not updated them in some time. While staff has not identified any specific problems it probably is a good idea for a Council subcommittee to review.

At this time I do not anticipate either a significant time commitment or a need for a standing subcommittee. If that were to change we would come back to City Council with an update.

Currently, day to day administration of the Community Garden is overseen by the Public Works Department who maintains a sign up- list, oversees application of rules and procedures and also addresses any maintenance issues, equipment supplies and garden materials, such as mulch.

Mayor Cunningham has discussed this with me and would like to be one of the two Councilmembers to serve on the Ad-hoc committee.

Financial Impact

De minimis at this time.

Recommendation

Approve Mayor Cunningham and appoint a second Councilmember.

Clayton Holstine
City Manager
