Planning Commission Special Meeting Agenda
Tuesday, September 29, 2026, 7:00 PM
Council Chambers, 616 NE 4th AVE

NOTE: The City welcomes public meeting citizen participation. TTY Relay Service: 711. In compliance with the ADA, if you need special assistance to participate in a meeting, contact the City Clerk's office at (360) 834-6864, 72 hours prior to the meeting so reasonable accommodations can be made (28 CFR 35.102-35.104 ADA Title 1)

To Participate Remotely:

OPTION 1 -

1. Go to www.zoom.us and download the app or click "Join A Meeting" and use Meeting ID – 873 7343 6455
2. Or, from any device click https://cityofcamas-us.zoom.us/j/87373436455

OPTION 2 - Join by phone (audio only):
Dial 877-853-5257 and enter meeting ID# 873 7343 6455

For Public Comment:
Click the raise hand icon in the app or by phone, hit *9 to "raise your hand", or email to communitydevelopment@cityofcamas.us

These will be entered into the meeting record. Emails received up until one hour before the start of the meeting will be emailed to the Meeting Body prior to the meeting start time.

CALL TO ORDER

ROLL CALL

PUBLIC COMMENT

This is the public's opportunity to comment about any item on the agenda, including items up for final action.

MINUTES

1. September 15, 2026 Planning Commission Meeting Minutes

MEETING ITEMS

2. Our Camas 2045 Comprehensive Plan Periodic Update, Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code
   Presenter: Alan Peters, Community Development Director
   Time Estimate: 45 minutes

MISCELLANEOUS UPDATES

NEXT MEETING DATE

CLOSE OF MEETING

Planning Commission Meeting Minutes
Tuesday, September 15, 2026, 7:00 PM
Council Chambers, 616 NE 4th AVE

CALL TO ORDER

Commissioner Hull called the meeting to order at 7:00 p.m.

ROLL CALL

Present: Troy Hull, Shawn High, Hannah Burak and Joe Walsh
Remote: Geoerl Niles
Excused: Joe Keller and Paul Anderson

Staff Present: Alan Peters, Robert Maul, Sophie Webster and Carey Certo

Council Members Present: Mahsa Eshghi
Remote: Jennifer Senescu

PUBLIC COMMENT

Tyler Sanders, Jan Patricio, Rick Marshall and Darcy Smith offered public testimony.

MINUTES

1. August 18, 2026 Planning Commission Meeting Minutes

   It was moved by Commissioner High and seconded by Commissioner Burak, to approve the minutes of the August 18, 2026, Planning Commission Meeting. The motion passed unanimously.

MEETING ITEMS

2. Public Hearing - Our Camas 2045 Comprehensive Plan Periodic Update, Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code

   Alan Peters reviewed the Our Camas 2045 Comprehensive Plan Periodic Update, Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code.

   Commissioners will have time to discuss and ask questions about the agenda item, as well as vote, at the planning commission special meeting on September 29, 2026.

PUBLIC HEARING

Commissioner Hull opened the public hearing. Robert Nevin, Randal Friedman, Darcy Smith, Paul Smith, Rick Marshall, Tyler Sanders, Keenan Ordon-Bakalian offered public testimony.

Commissioner Hull closed the public hearing and stated that written public comment would be accepted through the September 29, 2026 special meeting. Commissioners will have time to deliberate and vote on a recommendation at the Planning Commission special meeting on September 29, 2026.

UPDATES

Alan Peters informed the commissioners that city attorney David Schultz passed away.

NEXT MEETING DATE

A special meeting is scheduled for September 29, 2026.

CLOSE OF MEETING

The meeting closed at 9:10 p.m.

Staff Report

September 29, 2026 Planning Commission Special Meeting

Our Camas 2045 Comprehensive Plan Periodic Update, Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code
Presenter: Alan Peters, Community Development Director
Time Estimate: 45 minutes

Phone	Email
360.817.7254	apeters@cityofcamas.us

BACKGROUND: The City of Camas is completing a periodic update of its comprehensive plan and development regulations to guide growth through 2045. The Our Camas 2045 Comprehensive Plan is an update to the Camas 2035 plan adopted in 2016. The proposed plan responds to changes in community conditions and state requirements, and establishes a shared direction for housing, employment, transportation, public services, environmental protection, and community character. The City prepared the Our Downtown Camas 2045 Subarea Plan concurrently to address the distinct opportunities and needs of the historic downtown and surrounding downtown neighborhoods.

The planning process began with community visioning in December 2023. Through community conversations, surveys, interactive mapping, stakeholder discussions, and outreach at local events, residents and businesses identified what they value about Camas and what they would like to improve. Visioning reached more than 1,000 community members. Recurring themes included preserving Camas's small-town character and natural beauty, providing a broader range of housing choices, improving walking and bicycling connections, supporting local businesses, and strengthening downtown as a place to gather. Community summits were held in June 2024, October 2024, and from September through December 2025. Council adopted the Our Camas 2045 Vision Statement by resolution in July 2024. The draft Comprehensive Plan and Subarea Plan were both published in July 2025.

The Community Advisory Committee, Climate Policy Advisory Team, and Downtown Advisory Committee provided community and technical perspectives. Staff coordinated with Clark County on allocations, land capacity, and countywide planning. Throughout 2025 and 2026, the Planning Commission and Council reviewed the draft plans and code updates and provided feedback at workshop meetings.

This hearing brings the Our Camas 2045 Comprehensive Plan, the Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code together as a coordinated package.

Under the Camas Municipal Code and Growth Management Act, proposed amendments to comprehensive plans and development regulations must be reviewed by the Planning Commission at a public hearing. The Planning Commission serves in an advisory role in this process. Its recommendation will be forwarded to the City Council, which will conduct its own public hearing, consider the Planning Commission's recommendation and public comments, and make the final decision regarding adoption of the proposed plans and amendments.

The Planning Commission held a public hearing on September 15, 2026. This meeting is intended to provide time for the Planning Commission to consider the public record, deliberate, and determine its recommendation to City Council. The Planning Commission may recommend approval of the proposed package, recommend specific changes, or continue deliberations on some or all of the items to a future meeting if additional time is needed.

SUMMARY:

Growth Management Act

Washington's Growth Management Act (GMA) (RCW 36.70a) establishes a coordinated framework for managing growth through comprehensive plans and development regulations, directing development toward urban areas while reducing sprawl and ensuring adequate public facilities and services. Its goals include housing affordability and choice, economic opportunity, efficient transportation, environmental and natural resource protection, climate resilience, and preservation of community character, supported by public participation, regional coordination, and respect for property rights.

Under GMA, Camas is required to maintain a comprehensive plan and periodically review it to maintain compliance with state law and meet the needs of future anticipated growth. This periodic review considers changes in state law, growth assumptions, land capacity, and the community's own vision.

The periodic review has been closely coordinated with Clark County and neighboring jurisdictions. Clark County is responsible for establishing countywide planning policies, growth allocations, and urban growth areas. The County Planning Commission forwarded a recommendation to the County Council to adopt the County comprehensive plan on September 3, 2026. The County Council will hold a public hearing to consider the plan on October 6, 2026.

Our Camas 2045 Comprehensive Plan

The draft Comprehensive Plan includes eight elements: Community Character, Land Use, Housing, Natural Environment, Climate Change and Resiliency, Transportation, Public Facilities and Services, and Economic Development. Community Character and Climate are new elements, addressing preservation and enhancement of Camas's identity and quality of life, as well as greenhouse gas reduction and resilience to climate impacts. Together these elements establish the Our Camas 2045 vision and policy framework for growth and development over a 20-year planning horizon through 2045.

Community Character

The Community Character Element defines Camas's sense of place and provides a consistent context for the comprehensive plan. It addresses how the natural environment, development, community programming, and public engagement contribute to the City's physical and social character. The element envisions an inclusive community where residents feel connected, history and culture are celebrated, and the natural landscape is thoughtfully integrated into the urban environment.

Its three goals address art, culture, and heritage; sustainable growth and distinct identity; and community engagement. As a new element, Community Character translates the community's desire to preserve Camas's small-town feel into land use policy and establishes a stronger focus on identity, art, history, and public engagement.

Land Use

The Land Use Element guides the location, mix, and character of development as Camas accommodates future population, housing, and employment growth. It seeks to maintain the community's small-town feel while providing diverse housing, employment opportunities, and convenient access to daily services. Land use planning is coordinated with infrastructure investments and protection of the natural environment.

The element's goals address citywide development patterns, sufficient employment land, livable neighborhoods, interconnected parks and open spaces, mixed-use areas, and distinctive design overlay areas. Together, these goals support neighborhoods that accommodate different household needs and income levels, commercial areas accessible by multiple transportation modes, and development that respects surrounding uses and natural resources.

The Land Use Element proposes two expansions to urban growth areas (UGA). The Port of Camas-Washougal's Grove Field would add 80 acres to the Camas UGA adjacent to the North Shore Subarea. The Nevin property off SE 283rd Avenue near the Camas and Washougal border would add 160 acres to the UGA.

Housing

The Housing Element establishes policies to provide housing for residents of all ages, abilities, household circumstances, and income levels. It supports safe, welcoming neighborhoods where residents can access employment, schools, services, and recreational opportunities, with housing choices that allow people to remain in Camas as their needs change.

Its goals emphasize housing choice and affordability, accessibility and livability, preservation of existing housing, and efficient permitting. The element encourages a diversified housing supply through new construction, preservation, and partnerships, while addressing the needs of residents who face housing challenges related to age, health, or disability.

Key changes support middle housing and accessory dwelling units consistent with new state housing requirements, along with standards that address neighborhood compatibility. Other changes emphasize streamlined permitting, long-term affordability, nonprofit housing

partnerships, maintenance of existing homes, assistance for low-income homeowners, and public education about community housing needs.

Natural Environment
The Natural Environment Element guides the City's stewardship of its natural resources, including critical areas, shorelines, forests, water resources, and wildlife habitat. Its purpose is to preserve ecological functions and the natural qualities that contribute to Camas's quality of life while providing appropriate public access to natural areas.

The element's goals address environmental stewardship, protection and restoration of critical areas, shoreline management, and preservation and enhancement of natural landscapes and tree canopy. It supports a sustainable urban environment, improved ecological function along shorelines, and increased use of native and climate-resilient landscaping.

Key changes add more detailed policies addressing climate resilience, ecosystem services, and environmental justice. The element strengthens attention to soils, hydrology, and native species; encourages adaptive management as climate conditions change; and supports habitat restoration and invasive species removal. Expanded urban forestry and landscaping policies seek to increase tree canopy and reduce urban heat.

Climate Change and Resiliency
The new Climate Change and Resiliency Element serves two related purposes: reducing the community's contributions to climate change and preparing for its effects. It establishes a framework for lowering greenhouse gas emissions while protecting community health, infrastructure, water resources, and vulnerable residents from climate-related hazards. This element was developed with the help of the Climate Policy Advisory Team.

The element's six goals address energy, transportation, local agency sustainability and preparedness, community health, emergency preparedness, and water resources. These goals support renewable energy and energy efficiency, a more efficient and resilient transportation system, coordinated sustainability efforts, and improved emergency response and recovery. They also emphasize protecting residents who may experience disproportionate impacts and preserving water quality and availability.

Transportation
The Transportation Element guides development of a safe, connected, and efficient transportation system that serves people of all abilities and supports planned growth.

Its goals focus on Complete Streets, dependable local and regional transit, traffic safety, transportation demand management, concurrency and level of service, and transportation funding. The element seeks to use existing infrastructure efficiently, increase the number of people the system can accommodate, and coordinate transportation improvements with land use objectives and adopted service standards.

Key changes expand the emphasis on Complete Streets and multimodal networks. Policies encourage improvements to existing street networks to strengthen connections and address

dead ends, improve access to employment centers, schools, and natural areas, and incorporate equity into transportation planning and impact fee allocation. Improved signage and wayfinding are also identified as ways to enhance the pedestrian and visitor experience.

Public Facilities and Services
The Public Facilities and Services Element guides the provision of infrastructure, utilities, and community services needed to support existing residents and future growth. It addresses public safety, parks and recreation, City facilities, schools, and utilities, while emphasizing maintenance of existing assets and coordination of future investments.

The element's goals support adequate fire protection, emergency medical services, and police protection; connected parks, trails, and open spaces; and facilities that serve City government and the community. Additional goals address utility availability, implementation of the Capital Improvement Plan in coordination with the biennial budget, and partnerships that support access to quality public education.

Economic Development
The Economic Development Element guides efforts to maintain a diverse, resilient local economy that provides living-wage employment, supports businesses, and expands access to goods and services.

The element's goals address sufficient employment land, business creation and retention, economic diversification, mixed-use and commercial development, and opportunities within mixed employment and industrial areas. The element also seeks to strengthen the City's tax base and support development that reinforces Camas's identity.

Key changes more closely connect economic development with land use, housing, and transportation planning. The element supports innovation, start-ups, and high-tech employment; encourages employment opportunities throughout the community; and promotes investment in mixed-use centers and commercial corridors.

Our Downtown Camas 2045 Subarea Plan
The Downtown Subarea Plan provides a more detailed policy and investment framework for downtown within the citywide comprehensive plan. The plan considers the historic character of Downtown Camas and offers a strategy for balancing history with future transformations to make downtown a place that will continue to attract residents and visitors alike. The Subarea Plan is intended to serve as a shared commitment between the City and downtown stakeholders, welcoming the development and business communities to help implement the vision. It also provides discussion about future expansion to Camas Mill Property.

The plan is organized around existing conditions, an urban design framework, land use concepts, open space, transportation, infrastructure, and implementation. Six policy areas guide the work: architecture and design, downtown housing, urban amenities, economic development, civic life, and multimodal connectivity. Together, they provide a basis for both public investment and private development.

The land use concept differentiates the Historic Main Street Core from areas appropriate for additional mixed-use and residential development. The core retains a strong emphasis on pedestrian-oriented ground-floor businesses and the established character of NE 4th Avenue. Low-rise and mid-rise mixed-use areas provide room for additional activity at scales appropriate to their locations, while Downtown Residential areas provide housing opportunities and transitions to adjoining neighborhoods.

The plan supports a range of housing types, including rental and ownership options and housing for different income levels. More residents living near shops, services, and civic facilities can help sustain businesses and create activity beyond special events. Housing policies address incentives, affordability, compatibility, and permitting, while economic development policies support business retention, adaptable spaces, infrastructure improvements, and partnerships with the Downtown Camas Association and other organizations.

The plan reinforces downtown's role as the civic center and calls for City Hall and primary services to remain downtown. A proposed Civic Hub and plaza would strengthen the area around public facilities as a gathering place and support community events. Other concepts include outdoor seating, pocket spaces, public art, and improvements connecting downtown to Louis Bloch Park and the Mill Ditch Trail.

The downtown transportation framework identifies Main Streets, Connector Streets, Mobility Streets, Gateway Streets, and Neighborhood Streets. Each has a different role in access, circulation, and the pedestrian experience.

The plan recognizes the Camas Mill as a defining part of the city's history and a significant long-term opportunity. It supports an unrestricted environmental cleanup level to preserve the broadest range of future uses and calls for continued City participation in the cleanup process.

An implementation program identifies actions, potential timing, responsible parties, and priorities. The program provides a basis for future work plans and budgets, with priorities adjusted as funding and opportunities develop. The proposed Downtown Design Manual and code updates are immediate implementation actions.

Downtown Design Manual

The proposed updated Downtown Design Manual is the principal tool for achieving the subarea plan's vision with new development. In addition to architectural design requirements, it establishes a detailed framework for development standards at the district, street, and frontage levels. The manual ensures that NE 4th Avenue maintains its historic charm as downtown's "Main Street" while allowing for transition to more intensive development in the blocks surrounding the historic main street core. The document combines maps, zoning information, standards, diagrams, and examples so that applicants and reviewers can understand how a project should relate to its site, adjoining buildings, and the street.

The regulating plan connects each property to a base zoning district and street context. The four principal downtown districts are Historic Main Street Core, Downtown Mixed-Use Mid Rise,

Downtown Mixed-Use Low Rise, and Downtown Residential. The manual differentiates active and passive retail uses and identifies how uses may occupy ground and upper floors. This is particularly important in the Historic Main Street Core, where active ground floor activity supports a lively, walkable Main Street. Other districts allow different combinations of housing, offices, retail, and services.

Tile 17 and 18 Code Amendments

Staff proposes several zoning code updates to ensure that development regulations are aligned with the updated plan's goals, policies, growth objectives and changes to state law. Additional amendments will be necessary in future years to better align the code with the new plan.

Chapter 17.09 – Short Subdivisions

HB 1096, adopted by the Washington Legislature in 2025, requires cities to establish an administrative lot split process allowing an existing residential lot to be divided into two lots through an administrative decision. The proposed amendments establish a new Section 17.09.080, Administrative Lot Split. Pursuant to RCW 58.17.145, this section would allow an existing lot in a residential zone to be divided into two lots through a streamlined process.

Although lot splits do not require the immediate construction of subdivision improvements, applicants must demonstrate that access and utility easements will be provided to serve the newly created lot. The code allows the City to condition approval on right-of-way dedications and frontage improvements when the newly created lot is developed. The flexibility in the timing of improvements is a key distinction between lot splits and other subdivision processes.

Chapter 18.03 – Definitions

This chapter includes definitions for various terms used throughout Title 18. Currently, definitions are separated into three sections: 18.03.030, Definitions for Land Uses; 18.03.040, Definitions for Development Terms; and 18.03.050, Environmental Definitions. For ease of use, all of these terms will be listed alphabetically in one section. The chapter will also be updated to incorporate several new terms added to Title 18 through various proposed code amendments.

Chapter 18.05 – Zoning Map and Districts

Chapter 18.05 establishes the City's zoning districts and describes the purpose and intended character of each district. The Light Industrial, Business Park, and Light Industrial/Business Park zones would be consolidated into a new Mixed Employment zone. Four park-related zones will be consolidated into a new Parks and Open Space zone. New zones will include a Multifamily Residential – 24 zone and four new downtown zones – Downtown Residential, Downtown Mixed Use – Low Rise, Downtown Mixed Use – Mid Rise, and Downtown Historic Main Street Core.

Section 18.05.040 would be revised to clarify that the R-6, R-7.5, R-10, R-12, and R-15 zones accommodate both single-family and middle housing. The zone densities are also revised from "units" or "dwellings" per acre to "lots" per acre, consistent with recent middle housing changes. This section would also include descriptions for two new residential zones, MF-24 and Downtown Residential.

Section 18.05.050 would be renamed to expressly include mixed-use zoning. This section includes descriptions for four new zones: DT-HMSC, DT-MXM, DT-MXL, and Mixed Employment.

The Heavy Industrial zone description would be amended to allow residential uses west of Lacamas Creek and the Washougal River as a conditional use when included as part of a mixed-use redevelopment. The specific provision for residential development in this zone is addressed below with changes to Chapter 18.07. This change is made consistent with the draft *Our Downtown Camas 2045* plan's support for an unrestricted cleanup level for the Camas Mill property, as well as Resolution 25-002 adopted by Council. "Given the site's legacy and its importance to our community," the resolution states, "it is imperative to ensure the cleanup efforts are fully protective of human health and the environment and preserve future private and public redevelopment options, including the flexibility to support a broad range of future uses from residential and commercial development to natural and recreational spaces."

Chapter 18.07 — Use Authorization

Chapter 18.07 identifies the land uses that are permitted, conditionally permitted, temporarily permitted, or prohibited within all zoning districts. The chapter is organized into tables for commercial and industrial zones, residential zones, the parks zone, and a new table for downtown zones.

Table 1 - Commercial and industrial land uses would be reorganized to correspond with the revised zoning districts established in Chapter 18.05.

A new footnote #8 establishes a new conditional-use pathway for residential development in the Heavy Industrial district west of Lacamas Creek and the Washougal River, occupied by the Camas Mill. Residential development would be subject to conditional use requirements in CMC 18.43 and allowable only when part of a mixed-use development and when heavy industrial uses have ceased on the site proposed for residential development.

> *West of Lacamas Creek/Washougal River, residential uses may be allowed as a conditional use only when part of a mixed-use development project. Heavy industrial uses must have ceased on the portion of the site proposed for residential development and the applicant must demonstrate that the proposed residential development will not interfere with any continuing industrial operations on adjoining properties in a manner that cannot be reasonably mitigated through conditions of approval.*

The Camas Mill cleanup process is being conducted under an agreed order between the Washington State Department of Ecology and Georgia-Pacific. The current process involves investigating the nature and extent of contamination and evaluating cleanup options, after which Ecology will establish the cleanup standards and select a final cleanup approach. Under WAC 173-340-740, unrestricted land-use cleanup levels, based on a residential exposure scenario, are the presumed standard unless Ecology determines that the property qualifies for industrial cleanup levels under WAC 173-340-745.

The proposed amendment is relevant because current and reasonably anticipated future land uses are among the factors Ecology considers when determining the appropriate cleanup standard. Although most of the Mill property is zoned Heavy Industrial, the name of the zoning district alone does not determine whether the property qualifies as industrial land for cleanup purposes. Ecology will review the comprehensive plan and zoning provisions, the types of uses allowed and anticipated on the property, surrounding land uses, public access, and other site-specific conditions. The Heavy Industrial zone already allows a range of commercial, public, and recreational uses that extend beyond industrial activity. The proposed pathway for residential use as part of mixed-use development further demonstrates that the property is not intended to be permanently limited to industrial use. While Ecology will make the ultimate determination, the amendment is intended to strengthen the basis for evaluating the property under an unrestricted land-use cleanup scenario and to preserve the broadest range of future redevelopment opportunities.

Minor changes to Table 2 - Residential land uses would add fourplexes as a recognized middle-housing type and add limited neighborhood commercial uses in residential zones. Limited neighborhood commercial uses would be allowed on corner lots at intersections with collector or arterial streets within design overlay areas.

Table 3 – Park and open space land uses would consolidate the Neighborhood Park, Special Use Park, Open Space, and North Shore Parks/Open Space columns into a single POS zoning column. Uses traditionally associated with parks and open space including recreation facilities, community centers, community gardens, trails, concession stands, restrooms, utilities, and park-support buildings—would be administered under the consolidated district.

A new Section 18.07.060 and Table 4 would establish a separate use table for the DT-HMSC, DT-MXM, DT-MXL, and DT-R districts. The new table distinguishes between active and passive retail uses and regulates whether uses are allowed on the ground floor, upper floors, or both. The use table generally reserves ground-floor space in the Historic Main Street Core for active retail and pedestrian-oriented uses.

Chapter 18.09 – Density and Dimensions

The proposed amendments update the City's density and dimensional standards to align with the revised zoning framework and changes to state law.

Section 18.09.030, Table 1, has been updated to remove zoning districts that are being replaced or consolidated, add the new Mixed Employment (ME) district, and revise certain Mixed-Use standards.

Section 18.09.040, Table 1, has been updated to revise the density standards from a unit measurement of “dwelling units” per acre to “lots” per acre. This change is intended to harmonize the table with the new middle housing standards, which allow up to four units per residential lot.

Section 18.09.050, Table 1, establishes standards for the newly proposed MF-24 zone.

New Section 18.09.055 has been added for the four Downtown zoning districts—DT-HMSC, DT-MXM, DT-MXL, and DT-R. This section directs development to the applicable standards in the Downtown Design Manual.

Sections 18.09.110 and 18.09.130 add limited height and setback exceptions for additional building insulation and roof-mounted solar panels. These changes implement new requirements of HB 1183, which requires cities to allow the portion of a building envelope that includes exterior insulation to encroach up to eight inches into a setback and to allow solar panels to exceed maximum building heights by up to 48 inches.

Chapter 18.11 — Parking

Chapter 18.11 would be substantially reorganized and updated to provide more flexible parking standards, establish clearer procedures for parking reductions, and reflect changes in state law and development practices.

In 2025, Washington adopted SB 5184, which limits how much parking local governments can require for certain residential uses and commercial spaces. The bill applies to cities with a population of 30,000 or more. This bill does not yet apply to Camas, which has a population of 28,490 according to the latest April 1, 2026, estimate by the Washington Office of Financial Management.

SB 5184 sets the following limits on local government development regulations regarding parking:

- No more than 0.5 off-street stalls per multifamily unit.
- No more than 1 stall per single-family unit.
- No more than 2 stalls per 1,000 square feet of commercial space.
- No parking may be required for residences under 1,200 square feet, commercial spaces under 3,000 square feet, affordable housing, senior housing, childcare centers, ground level non-residential space in mixed-use buildings, or for buildings changing use.

Another 2025 law, HB 1183, eliminated parking requirements for certain types of residential projects. Cities and counties planning under the GMA may not require off-street parking as a condition for permitting affordable housing, new construction or the retrofit of existing buildings meeting passive house requirements, modular construction, or mass timber construction.

The proposed draft substantially retains the existing off-street parking standards in Table 18.11-2. Changes are proposed only to certain residential uses to comply with state law and to be consistent with the City's recent middle housing code updates. Pursuant to HB 1183, there would be no minimum parking requirements for affordable housing, new construction or the retrofit of existing buildings meeting passive house requirements, modular construction, or mass timber construction. The state's definitions for the terms would be adopted into Title 18.

A new Section 18.11.120 would establish an administrative process through which an applicant could request that the reduced parking requirements of SB 5184 be applied early to their project.

The applicant would be required to submit a parking assessment explaining the requested reduction, anticipated parking needs, available on-site and on-street parking, transportation options, and relevant site constraints. The alternative standards would allow parking requirements to be reduced as follows:

- One-half space per multifamily dwelling unit.
- One space per single-family dwelling.
- Two spaces per 1,000 square feet of commercial space.

No minimum parking would be required under the alternative standards for:

- Residences smaller than 1,200 square feet.
- Commercial spaces smaller than 3,000 square feet.
- Affordable housing.
- Senior housing.
- Childcare centers.
- Ground-floor nonresidential space in mixed-use buildings.
- Certain residential or commercial changes of use.

Title 18 currently contains conflicting parking language for downtown and mixed-use zones. Section 18.11.010 generally requires off-street parking in the Downtown Commercial (DC) and Mixed Use (MX) districts but allows the Community Development Director the discretion to waive the requirement for certain projects. In contrast, Section 18.19.050 categorically states that downtown commercial and mixed-use areas are not required to provide on-site parking. The proposal blends the two provisions into a single, more clearly defined standard. In Downtown and Mixed-Use zones only, commercial uses and ground-floor nonresidential space within mixed-use buildings would have no minimum parking requirement – consistent with the current language in 18.19.050. Other uses – including residential – would retain parking requirements. However, for projects one-half block or less in size, the Community Development Director could reduce those requirements when the City Engineer finds that anticipated parking demand can be adequately accommodated by existing on-site parking and adjacent on-street parking. In either scenario, the Director could also require the applicant to convert adjacent on-street parking to angle parking or another approved configuration when necessary to increase parking capacity.

A new Section 18.11.110 would establish when a parking study is required. A study would be required when:

- Parking is proposed below the alternative minimum standards.
- A multifamily project containing more than 20 dwelling units seeks to use the alternative standards.
- No reasonably comparable parking standard exists for a proposed use.
- The Community Development Director determines that the scale, mix, phasing, or operating characteristics of a project warrant additional analysis.

The study would evaluate anticipated parking demand, project phasing, shared and off-site parking, on-street parking, transit access, transportation demand management, accessible parking, and other relevant site and operational conditions. The Director could impose conditions such as parking agreements, monitoring, management measures, or additional review if the use changes materially. A parking study could allow for fewer parking spaces than the parking standards or alternative minimum standards.

Chapter 18.13 – Landscaping

Section 18.13.051 establishes the minimum tree density requirements for development. When first established, the required minimum tree density was set at 20 tree units per acre. In 2023, when adopting North Shore zoning, the City established a standard of 30 tree units per acre in the North Shore subarea. Additionally, the 2023 changes required that at least 50 percent of the tree density be achieved with existing trees in most cases and that replacement trees be native or coniferous.

The proposed amendments to this section increase the citywide tree standards by increasing the minimum tree density from 20 to 30 tree units per net acre and eliminating the separate North Shore tree density standard.

Chapter 18.15 – Signs

Limited amendments are proposed to this chapter at this time. Section 18.15.040(D)(3) has been updated to provide a separate height standard for signs affixed to awnings over pedestrian areas and to resolve a conflict between the sign code and building code requirements for awnings. Awnings must maintain a minimum vertical clearance of 7 feet 6 inches above sidewalks. The current sign code requires a 10-foot clearance over sidewalks for signs. This conflict would prohibit signs from being affixed to awnings anywhere below 10 feet.

A minor change to Section 18.15.100 would prohibit the placement of temporary signs within center roadway medians. A change to Section 18.15.070 would clarify that a Master Sign Permit does not authorize signs within the public right-of-way that exceed the size limits established by Chapter 18.15.

Chapter 18.18 – Site Plan Review

The amendments refine the chapter's applicability and exemptions, clarify that middle housing and ADUs located on a single residential lot are exempt from site plan review, and remove references to outdated zoning districts.

Chapter 18.19 – Design Review

Proposed amendments to CMC Chapter 18.19 align design review requirements with the Downtown Design Manual, North Shore Design Manual, and proposed Design Overlay regulations. The proposed amendments would update references and terminology, clarify applicability of design review requirements, expand applicability to development within Design Overlay corridors, and incorporate design review into the consolidated review process by City planning staff, removing the need for a design review committee.

Chapter 18.20 – Design Overlays

The proposed new Design Overlay chapter is intended to establish corridor-focused design standards throughout the city. These new design overlay corridors would replace the existing Gateway standards and complement the new Downtown Design Manual. The overlays would apply to properties fronting designated Tier 1 and Tier 2 corridors identified on the Design Overlay Corridors Map. Proposed standards address landscaping, lighting, signage, sidewalks, street trees, bicycle facilities, gateway features, and other corridor design elements intended to improve community appearance and pedestrian experience.

Chapter 18.22 – Mixed Employment

The proposed new Mixed Employment zone is intended to implement the Mixed Employment land use designation in the draft Comprehensive Plan and would include lands in the former Light Industrial, Business Park, and Light Industrial/Business Park zones. The purpose of the proposed Mixed Employment zone is to provide areas for a broad range of employment-focused activities that support the local and regional economy. The zone is intended to accommodate uses such as advanced manufacturing, research and development, service commercial, offices, limited retail, artisan or craft industrial uses, technology production, and other compatible employment uses. The intent is to support higher-wage jobs, business diversity, innovation, and local employment opportunities while ensuring compatibility with nearby residential and commercial areas. This supports draft plan Policy ED-4.3 to "Support a mix of light industrial, research and development, manufacturing, and office spaces through flexible zoning that allows for evolving business needs" and Policy ED-4.4 to "Support the development of business parks, incubators, and innovation hubs that integrate industrial and high-tech employment uses".

The proposed chapter includes flexible site development standards intended to accommodate a variety of employment sites, building types, and business needs, but also includes standards to ensure quality design in grading and drainage, parking and loading, refuse and storage areas, utilities, fencing, and lighting. These standards are intended to ensure that employment areas are functional while also presenting a high-quality appearance from public streets and neighboring properties. The draft encourages shared parking between adjacent uses, limits parking between the primary street and the front of the building to visitor and accessible spaces, encourages employee parking behind buildings, and requires loading areas and truck docks to be located and screened to minimize visibility from streets and adjacent properties.

The proposed language would allow warehousing, indoor storage, and distribution activity only as an accessory use when directly associated with and subordinate to a permitted principal use on the same site. The language would prohibit stand-alone warehouse, distribution center, fulfillment center, freight terminal, mini-storage, self-service storage, and outdoor storage yard uses.

Chapter 18.23 – Planned Residential Development

Policy LU-1.4 of the draft Our Camas 2045 Plan is to "Promote the use of flexible development options (e.g., planned residential developments and development agreements) to create a

variety of accessible housing types within new developments." This policy is implemented through Chapter 18.23 of the Zoning Code, Planned Residential Development (PRD). The proposed amendments would establish objective approval criteria for PRDs and make them subject to quasi-judicial review by the Hearing Examiner.

The proposed changes would require all PRDs to provide a minimum of 15% open space and would guarantee a 15% density bonus.

Chapter 18.24 — Mixed Use

The proposed revised Mixed Use zone establishes a requirement for a mix of uses that can be achieved through either vertical or horizontal mixed-use projects.

For vertical mixed-use development, residential uses may be located above ground-floor commercial or other nonresidential uses. A building with ground-floor commercial or nonresidential uses and residential uses above would be considered consistent with the mixed-use intent of the chapter.

For horizontal mixed-use development, where residential and nonresidential uses are provided in separate buildings or separate portions of a site, the draft requires the development to consist of a maximum of 50 percent residential uses and a minimum of 50 percent commercial or nonresidential uses. The required use mix may be measured by either site acreage or gross floor area. This provides flexibility for different development formats while still ensuring that the commercial or nonresidential component remains a meaningful part of the project.

The draft also provides for some flexibility to allow more residential in a mixed-use project. On lots smaller than 20,000 square feet, a development proposal may be allowed to be 100 percent residential. For larger sites, the approval authority may allow residential uses to exceed 50 percent of the site acreage, up to a maximum of 70 percent residential acreage, when the applicant demonstrates that the proposal will provide a superior mixed-use outcome by ensuring timely delivery of the commercial or nonresidential component. Properties that are currently zoned residential and proposed to be rezoned to Mixed Use could also be developed at 100 percent residential. The proposal also includes an incentive for affordable housing projects, allowing affordable housing to count towards the commercial component of a project when calculating the use mix.

Chapter 18.26 – Flexible Development

The Flexible Development code is similar to the PRD code because both provide flexibility intended to promote efficient land use, ensure compatibility between developments, and preserve community resources. However, the PRD code focuses on innovative residential development, while the Flexible Development code promotes sustainable and environmentally responsive design in any zoning district.

Minor amendments to this chapter expand the purpose of the flexible development program to more explicitly support climate and sustainability goals, including renewable energy, EV infrastructure, low-impact development, and tree retention.

Chapter 18.32 – Park and Open Space Zoning
There are currently four different parks/open spaces zones: Neighborhood Park, Special Use, Open Space, and North Shore – Parks/Open Space. Most properties within these zones are City-owned, although the zones also include several privately owned parcels. The proposed Parks and Open Space zone would consolidate the four existing zones, recognize the privately owned properties within the zone, and better accommodate public park projects.

Chapter 18.43 – Conditional Use Permits
The proposed amendment would increase the required performance bond amount to 150% of the cost of the proposed improvements and authorize the Hearing Examiner to require a bond when necessary. The current code assigns this authority to the City Council; however, Council does not review conditional use permits.

Chapter 18.45 – Variances
Variances are divided into minor and major categories, which differ based on the degree of variation requested and the applicable review process. Minor variances up to 10% of a numerical standard are Type I reviews, meaning they can be approved administratively by City staff. Any variance request over 10% is considered a major variance. Major variances are Type III reviews, requiring a public hearing for approval.

A proposed amendment to this chapter would allow for variances of 10% or 1 foot of setback to be approved as a minor variance. This change would allow a setback reduction of up to one foot to be reviewed administratively as a minor variance, even when the reduction exceeds 10 percent of the required setback.

Major variances would now be limited to a maximum variance of 40%. The amendments also clarify that the hearing examiner, not the defunct board of adjustment, is the approval authority for major variances. This is consistent with prior changes in the municipal code granting this authority to the hearing examiner.

Chapter 18.51 – Comprehensive Plan and Zoning Amendments
This chapter establishes procedures for amendments to the comprehensive plan, zoning map, and zoning code text, which may be requested by any party. The proposed amendments would establish application requirements for zoning text amendments and authorize concomitant rezones.

A concomitant rezone is a zoning map amendment approved with specific, binding conditions governing how the property may be developed. This tool would allow the City to impose site-specific conditions related to matters such as permitted uses, density, design, phasing, and public improvements.

EVALUATION CRITERIA: CMC Section 18.51.030 includes the following criteria for the Planning Commission to evaluate when considering amendments to the comprehensive plan and development regulations.

A. Impact upon the city of Camas comprehensive plan and zoning code;

The proposal updates the City's comprehensive planning and zoning framework as a coordinated package. Our Camas 2045 will replace the Camas 2035 Comprehensive Plan and establish policies to guide growth through 2045. The Our Downtown Camas 2045 Subarea Plan provides more detailed direction for downtown. The Downtown Design Manual and amendments to Titles 17 and 18 translate the proposed plans into development standards and review procedures.

Final adoption will maintain consistency among the plans, maps, design manual, and implementing regulations and with Clark County's adopted growth allocations, countywide planning policies, and urban growth area decisions.

B. Impact upon surrounding properties, if applicable:

Changes to zoning, permitted uses, density, building dimensions, parking, landscaping, and design standards may influence the scale and character of future development and its relationship to surrounding properties.

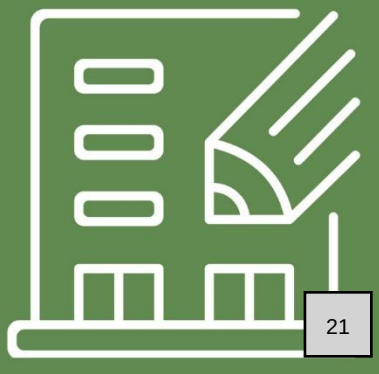
C. Alternatives to the proposed amendment; and

A no-action alternative would retain the Camas 2035 Comprehensive Plan and existing development regulations. This would leave the City without an updated policy framework for growth through 2045 and would not complete the required GMA periodic review or address applicable new state requirements.

The Planning Commission may recommend adoption of the package as proposed, recommend targeted revisions, or provide recommendations for further consideration. The Planning Commission may also recommend specific implementation items be prioritized.

D. Relevant code citations and other adopted documents that may be affected by the proposed change.

The proposal directly affects the comprehensive plan and land use map, the Downtown Subarea Plan, the Downtown Design Manual, the zoning map, and development regulations in CMC Titles 17 and 18. Updates to the City's capital facilities plans are in progress and will be consistent with the proposed plans.



RECOMMENDATION: Staff recommends that the Planning Commission deliberate on the Our Camas 2045 Comprehensive Plan Periodic Update, Our Downtown Camas 2045 Subarea Plan, Downtown Design Manual, and associated amendments to Titles 17 and 18 of the Camas Municipal Code and provide a formal recommendation to City Council.

The Planning Commission may recommend approval as proposed or recommend specific changes to individual plans, policies, standards, maps, or code provisions. Any clearly identified changes included in the Commission's motion may be incorporated into the materials before they are forwarded to City Council. The Planning Commission may also recommend future actions or identify topics for additional analysis, information, or consideration following this process.

ourCamas 2045

Vision

01

01. Vision

Our Camas Vision Statement

This vision is written in the present tense, as if describing the city as it exists in 2045. Some aspects of the vision can be found in Camas today, while others represent aspirations. The vision provides a framework for the goals and policies of every element of Our Camas 2045.

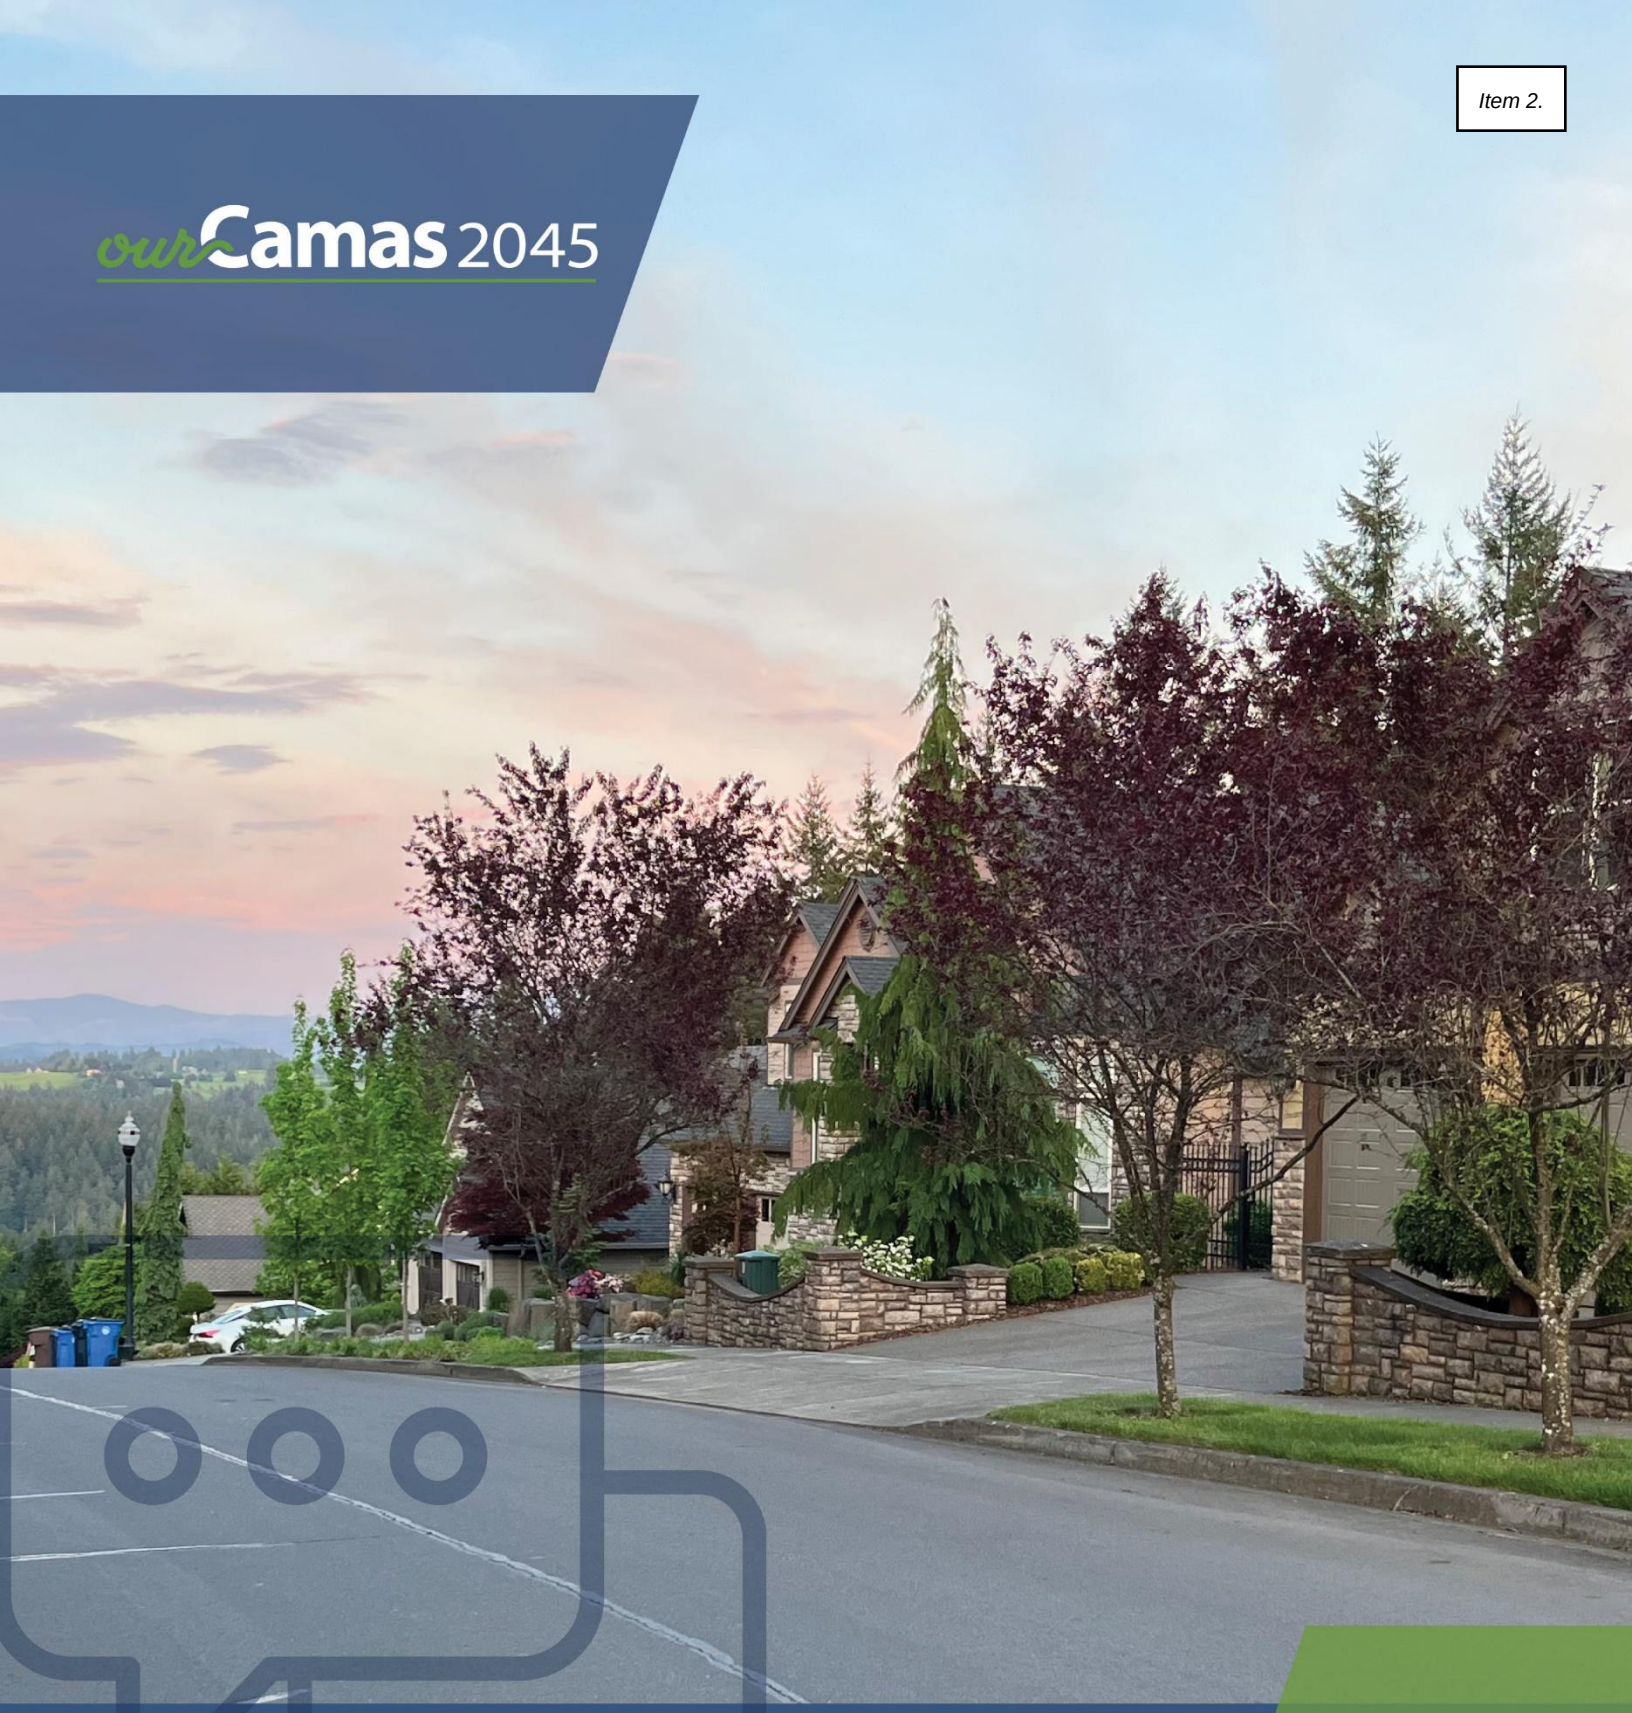
Our Community

Camas is an inclusive community where residents experience a sense of belonging and connection. Community-wide events foster civic pride, strong bonds among neighbors and a welcoming atmosphere for new residents. Community amenities and recreation facilities throughout Camas promote active lifestyles and social interaction. Camas is recognized for excellent schools and its commitment to lifelong learning. The City promotes a strong culture of public safety, transparent communication, and good governance, allowing residents to thrive in their neighborhoods and engage in decision-making that shapes their community.

Our Environment

Camas embraces its connection to nature and enjoys a wealth of outdoor recreational opportunities. Access to forests, clean water, parks, and trails is foundational to Camas' quality of life. The community shares a deep reverence for Camas' beauty, scenery, and tranquility, and is committed to preserving and enhancing its natural resources and tree canopy. Through proactive planning, the City mitigates the effects of changing climate conditions and natural hazards, ensuring a resilient community for generations to come.

Our Neighborhoods



Camas embraces its small-town feel while responsibly managing growth, ensuring a prosperous and livable future for all. Camas provides a variety of housing options that meet the needs of all residents, while ensuring the town's charm and livability are sustained. Camas is home to a thriving economy and diverse businesses, affording residents ample employment opportunities and access to high wage jobs. Neighborhood commercial hubs connect residents to daily services and amenities through a network of sidewalks and bike lanes, improving access and connectivity.

Our Downtown

Charming, vibrant, and walkable, Downtown Camas is the city's living room. Downtown's history is complemented by new businesses and inclusive housing options. Expansion, resiliency and a dynamic economic landscape are critical to its success. Downtown Camas anchors the community while fostering a culture of pride, support, and connection.

ourCamas 2045

Introduction

02

02. Introduction

Our Camas 2045

Our Camas 2045 is a roadmap for the future of the city and guides land use development and public facility investment decisions between now and 2045.

Camas has a long and rich history. More than 10,000 years ago, Native Americans occupied the Columbia River Valley. The Lewis and Clark Corps of Discovery camped by the river in 1806. In the late 1800s, the La Camas Colony Company of Portland purchased 2,600 acres and began planning the construction of a paper mill to supply newsprint for The Oregonian. The construction of the mill brought the platting of the town and the City of Camas was incorporated in 1906. Today, Camas is a vibrant and diverse community that occupies approximately 16 square miles and is home to over 28,000 people.

Our Camas 2045 is an update to the prior City of Camas comprehensive plan, Camas 2035. This update incorporates new state legislation to support additional housing and climate planning and establishes a new vision for the community's future.

The history of Camas comprehensive planning dates back to 1963 when the first plan was prepared. In 1990, the state adopted the Growth Management Act (GMA) with the goal of managing the growth of cities that had previously grown in an uncoordinated fashion. GMA requires municipalities to update their comprehensive plans every 10 years to ensure future growth can be accommodated with housing and jobs, and public services and facilities are available to serve new residential, commercial, and employment areas.

The last major update to the City's comprehensive plan was in 2016. Since that time, the city has grown by over 6,500 people, added new residential areas in Grass Valley and Green Mountain, and completed the North Shore Subarea Plan, which established a new vision and zoning for the North Shore of Lacamas Lake and sets the stage for future residential, mixed use, and employment development. In conjunction with Our Camas 2045, the city prepared a downtown subarea plan. Our Downtown Camas 2045 establishes a detailed vision and action plan to catalyze public and private investment in the historic downtown. Both plans work together to guide future development and ensure Camas' future remains as vibrant as its past.

What is a Comprehensive Plan?

Our Camas 2045 guides land use development and public facility investment decisions between now and 2045. Our Camas 2045 has eight elements that work together to achieve the community's vision and ensure long-term economic vitality:

Each element sets goals that will implement the vision and expresses policies that will guide land use and infrastructure decisions for the 20-year planning horizon. The elements are supported by the comprehensive plan map, which identifies land use designations throughout the City and within its urban growth area.1

Why Plan?

Planning is choosing what to do and how and when to do it. Planning is part of our everyday lives. We plan our vacations, our budgets, and even our trips to the grocery store. The detailed planning of our daily lives derives from a set of goals that we want to accomplish – in a day, in the next six months, or the next two years.

In the same way and for the same purpose, the City's plan is the basis of coordinated action – it enables public and private interests to undertake projects with a clear understanding of community goals and policies.

Our Camas 2045 helps the City identify deficiencies and take steps to remedy them. Planning can find desirable and reasonable solutions before the problem is beyond the community's economic capabilities. The plan is crucial to avoiding uncoordinated activities as the City adapts to changing conditions and experiences the population growth that is anticipated.

The plan is not intended as a rigid system of goals and development policies; rather, it is:

- **Long range** – looks ahead 20 years to anticipate growth and resulting community needs.
- **Comprehensive** – relates and integrates all types of uses and necessary public facilities.
- **General** – establishes general locations and areas for the elements and indicates their relationships to each other and the population they serve.
- **Responsive** – through regular updates, adjusts to changing conditions, unforeseen circumstances, and local and regional trends.

How is a Comprehensive Plan Related to Other Plans?

Our Camas 2045 is part of a family of state, regional, and local plans. Some, like statewide GMA and Clark County's Comprehensive Growth Management Plan, set the overall planning framework and guide the content of the Camas comprehensive plan.

Others, like plans that are specific to particular subareas, supply more detailed information about individual topics or smaller parts of the City.

Growth Management Act

The GMA establishes state goals, sets deadlines for compliance, and offers direction on how to prepare comprehensive plans and development regulations. GMA also establishes requirements for early and continuous public participation. GMA requires state and local governments to manage growth by identifying and protecting critical areas and natural resource lands, designating urban growth areas, and preparing comprehensive plans and implementing them through capital investments and development regulations.

The GMA legislation, which is Chapter 36.70A of the Revised Code of Washington (RCW), contains 15 goals.

For a community's plan to be valid, it must meet the requirements of the GMA through consistency with state statutory goals, countywide policies, and the plans of adjacent jurisdictions.

The fifteen statutory goals identified in the GMA (RCW 36.70A) are:

1. **Urban growth**. Encourage development in urban areas where adequate public facilities and services exist or can be provided in an efficient manner.
2. **Reduce sprawl.** Reduce the inappropriate conversion of undeveloped land into sprawling, low-density development.
3. **Transportation.** Encourage efficient multimodal transportation systems that will reduce greenhouse gas emissions and per capita vehicle miles traveled, and are based on regional priorities and coordinated with county and city comprehensive plans.
4. **Housing.** Plan for and accommodate housing affordable to all economic segments of the population of this state, promote a variety of residential densities and housing types, and encourage preservation of existing housing stock.
5. **Economic development.** Encourage economic development throughout the state that is consistent with adopted comprehensive plans, promote economic opportunity for all citizens of this state, especially for unemployed and for disadvantaged persons, promote

the retention and expansion of existing businesses and recruitment of new businesses, recognize regional differences impacting economic development opportunities, and encourage growth in areas experiencing insufficient economic growth, all within the capacities of the state's natural resources, public services, and public facilities.

6. **Property rights.** Private property shall not be taken for public use without just compensation having been made. The property rights of landowners shall be protected from arbitrary and discriminatory actions.
7. **Permits.** Applications for both state and local government permits should be processed in a timely and fair manner to ensure predictability.
8. **Natural resource industries.** Maintain and enhance natural resource-based industries, including productive timber, agricultural, and fisheries industries. Encourage the conservation of productive forestlands and productive agricultural lands, and discourage incompatible uses.
9. **Open space and recreation.** Retain open space and green space, enhance recreational opportunities, enhance fish and wildlife habitat, increase access to natural resource lands and water, and develop parks and recreation facilities.
10. **Environment.** Protect and enhance the environment and enhance the state's high quality of life, including air and water quality, and the availability of water.
11. **Citizen participation and coordination.** Encourage the involvement of citizens in the planning process, including the participation of vulnerable populations and overburdened communities, and ensure coordination between communities and jurisdictions to reconcile conflicts.
12. **Public facilities and services.** Ensure that those public facilities and services necessary to support development shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards.
13. **Historic preservation.** Identify and encourage the preservation of lands, sites, and structures, that have historical or archaeological significance.
14. **Climate change and resiliency.** Ensure that comprehensive plans, development regulations, and regional policies, plans, and strategies under RCW 36.70A.210 and chapter 47.80 RCW adapt to and mitigate the effects of a changing climate; support reductions in greenhouse gas emissions and per capita vehicle miles traveled; prepare for climate impact scenarios; foster resiliency to climate impacts and natural hazards; protect and enhance environmental, economic, and human health and safety; and advance environmental justice.
15. **Shorelines of the state.** For shorelines of the state, the goals and policies of the shoreline management act as set forth in RCW 90.58.020 shall be considered an element of the county's or city's comprehensive plan.

Urban Growth Areas

An urban growth area is a defined area of land adjacent to city limits within which urban growth is encouraged and beyond which growth can occur only if it is not urban in nature.

Each county that adopts a comprehensive plan under the GMA must designate urban growth areas. The City of Camas has 11,848 acres of land within the urban growth areas. This land, combined with the vacant land available within the City limits, must accommodate the City's population and employment projections as established by the state's Office of Financial Management. The population and employment projections for the City for the year 2045 are

37,080 people and 13,658 jobs. The City is proposing urban growth area expansion to accommodate increased job capacity (see the Land Use Element for additional details).

County Planning Goals and Policies

The Comprehensive Growth Management Plan, adopted by Clark County and its cities and last updated in 2016, guides local jurisdictions as they work to decide questions of regional land use and services.

Clark County is in the final stages of fully updating this plan for 2026 through 2045. As County and city plans were developed, representatives of the City of Camas met on a regular basis over the span of two years with officials of the County and its cities to coordinate efforts. This level of communication helps ensure that the plans and capital projects of these jurisdictions are consistent when adopted. Our Camas 2045 is consistent with the concepts put forward in the County's Comprehensive Growth Management Plan, and the initial drafts of its pending comprehensive plan, and the countywide planning policies as required by RCW 36.70A.100 and 210, WAC 365-196-305; 400(2)(c); 510 and 520.

Local Plans

The goals and policies included in Our Camas 2045 are implemented through development regulations established in the Camas Zoning Code (Title 18 of the Camas Municipal Codes) as well as the standards set forth in existing plans and policy documents.

Our Camas 2045 has been developed to ensure consistency with all other relevant local plans as listed below:

- Strategic Plan 2025-2030 (2025)
- Legacy Lands Master Plan (2026)
- Lake Management Plan (2024)
- North Shore Subarea Plan (October 2022)
- Camas Water System Plan (October 2019, to be updated with Our Camas 2045)
- Camas General Sewer Plan (June 2022, to be updated with Our Camas 2045)
- Camas General Sewer/Wastewater Facility Plan (November 2011)
- City of Camas Parks, Recreation, and Open Space Comprehensive Plan (March 2022)
- Camas Design Standards Manual–Engineering (adopted October 20, 2014, Res. 1308, updated annually)
- Camas Design Review Manual (May 2, 2016)
- Camas Shoreline Master Program (2021)
- Downtown Design Manual (revision in process, to be adopted with Our Downtown Camas 2045, the Downtown Subarea Plan)
- Camas Stormwater Design Standards Manual (June 2022)
- Six-Year Street Plan (Updated annually)
- 2025–2030 Capital Improvement Plan Project List (to be updated with Our Camas 2045)
- Transportation Impact Fee Update (May 2012)

Amending a Comprehensive Plan

The City is required to review its comprehensive plan at least every ten years. However, the City's comprehensive plan and development regulations are reviewed and evaluated regularly.

Our Camas 2045 is based on the best available information. As years go by, new information or changing circumstances – for instance, a revised sewer or water plan – may prompt changes to this plan. By state law, amending a comprehensive plan can occur only once a year and must follow the procedures that are set forth in RCW 36.70A.130.

Amendments to a comprehensive plan require legislative action, which entails the adoption of a resolution or ordinance following notice and public hearing indicating, at a minimum, a finding that a review and evaluation has occurred and identifying the revisions made, or that a revision was not needed and the reasons.

The review and evaluation must include the consideration of critical area ordinances, population projections, and other plans and policies in effect.

Under certain circumstances, amendments can occur more frequently:

- The initial adoption of a subarea plan. Subareas must clarify, supplement, or implement jurisdiction-wide comprehensive plan policies, and may only be adopted if the cumulative impacts of the proposed plan are addressed by appropriate environmental review under chapter 43.21C RCW.
- The development of an initial subarea plan for economic development located outside of the 100 year floodplain in a county that has completed a state-funded pilot project that is based on watershed characterization and local habitat assessment
- The adoption or amendment of a shoreline master program under the procedures set forth in Chapter 90.58 RCW.
- The amendment of the capital facilities element of a comprehensive plan that occurs concurrently with the adoption or amendment of a county or city budget.
- The adoption of comprehensive plan amendments necessary to enact a planned action under RCW 43.21C.440, provided that amendments are considered in accordance with the public participation program established by the county or city under this subsection (2)(a) and all persons who have requested notice of a comprehensive plan update are given notice of the amendments and an opportunity to comment.

Developing Our Camas 2045

Our Camas 2045 began with a citywide outreach process to better understand the community's vision and priorities related to Camas' future. The Our Camas Visioning process reached over 1,000 community members through community conversations, community events, an online survey, online mapping tools, and the project website.

The City hosted three Community Summits. The first, held in June 2024, was an open house event where members of the public could provide feedback on the draft vision statement and

goals, as well as provide ideas to achieve the vision and goals. The second Community Summit was held in October 2024 and provided a forum for community members to provide feedback on the draft land use alternatives, development scales, review development concepts for downtown, and learn about the County's climate planning efforts and greenhouse gas inventory. The third Community Summit was a three-month effort in fall 2025 to share the draft comprehensive plan and Downtown subarea plan. The summit was a mix of online engagement and in-person activities to provide community members with opportunities to review, ask questions and provide feedback on each chapter of the draft comprehensive plan and the Downtown subarea plan. Every two weeks, a new plan element was highlighted with background information, an online survey to gauge opinion on various plan policies and an opportunity to chat with a planner, where community members could speak directly with City staff.

There were several advisory committees that participated in the development of the plan.

- Project Advisory Committee (PAC) – technical stakeholders, agency partners, service providers
- Community Advisory Community (CAC) – broad cross-section of community interests
- Climate Policy Advisory Team (CPAT) – community members advising on climate goals and policies
- Downtown Advisory Committee (DAC) – representatives from the CAC and the Downtown Camas Association (DCA)
- The Planning Commission and City Council were also consulted during the development of the vision, goals, policies, and plan

COMMUNITY FEEDBACK HIGHLIGHTS

Feedback from the community is highlighted throughout the plan chapters, indicating where the community's input was incorporated into vision, goals, policies and plan.

Following preparation of the draft plan, the City hosted pop-up events throughout the summer and fall of 2025 to seek input on the preferred alternative map and draft goals and policies.

In addition to the outreach efforts described above, the City maintained a public engagement website throughout the visioning process and the development of Our Camas 2045. During spring 2024, a community survey and interactive map gathered feedback from the community on things they like about Camas, things they would change in the future, important topics to address in the plan, and areas of opportunity or concern both downtown and in the wider Camas community. A second online survey accompanied the second community summit to seek input on the draft land use alternatives and development concepts for downtown. The City prepared an online Story Map in Spring 2025 to present and obtain feedback on the preferred land use alternative and proposed zoning and comprehensive plan land use designation changes.

The City of Camas values residents' opinions and is committed to being responsive. The final comprehensive plan incorporates the contributions and comments from those who participated in the project engagement. Summaries of all engagement activities is included in Appendix A.

ourCamas 2045

Community Character

03

Community Character

This element integrates art, culture, growth and identity into the comprehensive plan, while ensuring community engagement is inclusive and open.

03. Community Character

Vision

In 2045, Camas is an inclusive community where residents experience a sense of belonging and connection. The city's unique identity is defined by its small-town feel and the incorporation of the natural landscape into walkable neighborhoods and high-quality development. Camas maintains its distinct sense of place through inclusive community engagement, sustainable development practices, and intentional placemaking that reinforces Camas' beauty, livability, and lasting connection to nature.

Introduction

The community character element establishes a framework for preserving and enhancing the physical, cultural, and social characteristics that make Camas feel like Camas. Community character is shaped not only by the built environment, but also by the natural landscape, cultural identity, historic context, and the ways in which people engage with their surroundings. As Camas plans for continued growth through the 2045 horizon, this element ensures that the qualities residents value—such as the City's small-town atmosphere, its connection to nature, and its strong civic identity—are maintained and reinforced through thoughtful development, design standards, public investment, and public engagement. Camas' natural and built environment is defined by its integration of the natural features of the land with the development of housing, commercial buildings and its connecting infrastructure. In 2026, the City of Camas is home to 16 parks, 12 miles of scenic trails, and over 1,060 acres of parks and open space. From the forested paths around Lacamas Lake to the many playgrounds throughout the city, the natural beauty of Camas is a defining part of community life.

Camas' diversifying community is comprised of approximately 28,500 people and expected to grow to over 37,000 by 2045. While most people who live in Camas commute to nearby cities for employment, in 2026, there are approximately 9,550 jobs within the city with the largest employment sectors being education and healthcare, followed by professional services. The Georgia Pacific Mill remains a significant part of the city's economic history and a symbol of Camas' working roots.

The majority of housing in Camas is low density detached homes. Most residents own their home, with renters making up 20% of residents. There are approximately 10,000 housing units in Camas in 2026. By 2045, the city needs to add 4,226 new units to support the growing population. Camas also needs a greater variety of housing types at a range of price points to meet residents' diverse needs. By 2045, new multifamily and mixed-use buildings near transit, in Downtown, North Shore, and along NW Parker Street and Pacific Rim Boulevard will expand options for existing and new residents. These future developments will complement the strong sense of place already present in Camas' established neighborhoods like Prune Hill, Crown Park, and Evergreen Terrace.

Access to public art and community events is an important priority to define and enhance the identity of Camas. Beloved local traditions like Camas Days, the Camas Farmers Market, sporting events, and seasonal festivals foster a deep sense of connection and pride. New development will include and support inclusive public gathering spaces to host events, ensuring that the community spirit thrives as the city grows.

Key community resources to preserve and enhance include the existing built infrastructure, high quality schools, access to living wage jobs, parks, open space and recreational amenities, and the distinctive Downtown area, where historic storefronts, local restaurants, and venues like the Liberty Theatre draw residents and visitors alike.

The community will connect with city government and processes through accessible engagement and neighborhood leadership. Ongoing collaboration will help ensure that Camas remains a place where people feel heard, welcomed, and at home.

COMMUNITY FEEDBACK

- **Provide amenities for children and teenagers**
- **Focus on reuniting the community and fostering diversity through inclusive initiatives**
- **Prioritize community engagement and accountability in city planning and policy implementation**
- **Preserve and expand upon Camas' cultural heritage through arts and community events**
- **Provide development incentives for projects to protect natural topographic, geologic, vegetative, and hydrologic features and provide features such as tree-lined streets, rain gardens and use of native landscaping.**
- **Develop a City education program to share information and educate the community on local government, city functions and ways to engage with staff**

Community Character Goals and Policies

Goal CC-1 Art, Culture, and Heritage

Camas is a city where history, art, and culture are celebrated and accessible to all. Camas events and activities will instill a sense of belonging among residents of all ages, making Camas an ideal place to live and work.

Policy CC-1.1 Encourage and promote a wide range of artistic and cultural activities by reducing barriers and increasing access to hosting and attending community events that define and enhance Camas' community identity.

Policy CC-1.2 Incentivize development sites to create spaces conducive to the provision of art and other cultural activities and amenities. Encourage murals, sculptures, interactive art installations, and interpretive displays that celebrate the history, culture, and creativity of Camas.

Policy CC-1.3 Develop a process to memorialize historic sites and create and maintain an official inventory of Camas' historic and cultural resources.

Policy CC-1.4 Support the formation of a local arts commission that provides funding and support for local artists and artistic events in Camas.

Policy CC-1.5 Require a percentage of capital project budgets to be allocated for public art and design enhancements.

Policy CC-1.6 Prioritize naming streets, parks, and public facilities after historically significant people, events, geographic features, or native flora and fauna. Consider allowing naming rights in recognition of significant donations.

Goal CC-2 Sustainable Growth and Distinct Identity

Camas' unique identity is enhanced by high-quality urban design that respects the natural landscape, fosters a connection to nature, and integrates sustainable development.

Policy CC-2.1 Establish and enforce clear and objective design standards to ensure that new development respects and enhances Camas' architectural, historical, and natural character.

Policy CC-2.2 Regulate land use and development to protect natural topographic, geologic, vegetative, and hydrologic features, and natural contours of undeveloped properties.

Policy CC-2.3 Promote and provide educational resources for tree-lined streets, rain gardens, and preservation and use of native landscaping to reinforce Camas' connection to nature.

Policy CC-2.4 Align development regulations and design guidelines with dark sky standards to encourage the preservation of the night sky.

Policy CC-2.5 Establish distinctive gateway features at major points of entry into Camas, including attractive signage, landscaping, and public art that reflect Camas' distinct identity.

Policy CC-2.6 Ensure that street signage, lighting, landscaping, and street furniture are designed and maintained with a cohesive aesthetic that enhances community identity.

Policy CC-2.7 Revise the City's sign standards to ensure that all permanent and temporary signage is attractive and well-maintained, with clear regulations and enforcement mechanisms.

Policy CC-2.8 Provide educational and volunteer programs related to climate science, the connections between habitat conditions and native species, and effective ways to mitigate the impacts of climate change.

Goal CC-3 Community Engagement

Camas will have a strong sense of community through open communication, inclusive and meaningful outreach efforts, and enduring partnerships throughout the community.

Policy CC-3.1 Increase access to public engagement by ensuring materials and procedures are accessible for all community members, especially vulnerable groups such

as low-income, Limited English Proficiency (LEP) individuals, youth, elderly, and differently abled.

Policy CC-3.2 Utilize outreach strategies such as focus groups and listening posts that accommodate the needs of everyone and account for the broad spectrum of community members.

Policy CC-3.3 Develop and implement strategies to support neighborhood leadership and associations to increase community involvement and provide opportunities to participate in the development processes.

Policy CC-3.4 Regularly inform the community of activities and events through a range of outreach methods including traditional and social media, partnerships with schools, and information at fairs and events.

Policy CC-3.5 Develop a City education program to inform the community on the inner workings of their local government, city functions, and an opportunity to engage with staff.

ourCamas 2045

Land Use

04

Land Use Element

The land use element is designed to support development that adheres to the City's vision to ensure Camas' future is as bright as its past.

04. Land Use

Vision

Camas embraces its small-town feel while responsibly managing growth, ensuring a prosperous and livable future for all. Camas provides a variety of housing options that meet the needs of all residents, while ensuring the town's charm and livability are sustained. Camas is home to a thriving economy and diverse businesses, affording residents ample employment opportunities and access to high wage jobs. Neighborhood commercial hubs connect residents to daily services and amenities through a network of sidewalks and bike lanes, improving access and connectivity.

Land Use Overview

The City of Camas is home to great schools, family-wage jobs, high quality neighborhoods, and an abundance of open space and recreational amenities. Camas has grown into a dynamic, vibrant city with diversified employment opportunities and services that cater to its residents' various needs. In 2026, Camas maintains its small town charm and character, and downtown remains the heart of the City with a mix of restaurants, shops, professional offices, and residential development. The Grass Valley area is home to several national and international technology and manufacturing firms. Newer residential development has occurred recently in the Green Mountain area, and planned transportation improvements in the North Shore area will improve connectivity and provide better transportation options throughout the City.

The land use element is designed to support development that adheres to the City's vision to ensure Camas' future is as bright as its past. The GMA identifies the land use element as the foundation of the comprehensive plan. GMA outlines the framework by which the plan will be implemented and establishes land use designations to accommodate the City's population and employment projections. The development of land in accordance with the goals and policies included in the land use element will ensure the achievement of an appropriate balance of public facilities, housing, employment, services, and recreational uses throughout the City.

Population Projections

GMA requires that each jurisdiction accommodate its share of the region's growth. The City of Camas is expected to have a population of 37,080 by 2045 (based on the County adopted growth rate of 1.2 percent per year), a 8,590-person increase from the 2026 population of 28,490. During the same period, Camas is expected to have 13,658 jobs in the city by 2045.

Land Use Designations

In order to ensure the City's vision and land use goals are achieved, land use designations are used to assign a variety of development uses and building densities to land throughout the City. The plan identifies areas for residential, commercial, mixed use, mixed employment and industrial development. The plan also identifies areas for parks and open space to support recreation and enhance natural areas, including habitat and wildlife corridors.

Table 1 Land Use Designations

Comprehensive Plan Designation	Corresponding Zones	Total (Acres)[1]	Net residential capacity (units)	Jobs Capacity
Residential Low	Residential 15 (R-15)	443	39	0
	Residential 12 (R-12)	27	30	0
	Residential 10 (R-10)	349	363	0
	Residential 7.5 (R-7.5)	216	310	0
	Residential 6 (R-6)	113	269	0
	North Shore Lower Density (LD-NS)	168	203	0
	Downtown Residential (DT-R)	2	39	11
Residential Medium	Multi-Family 10 (MF-10)	37	503	0
Residential High	Multi-Family 18 (MF-18)	185	1,015	0
	Multi-Family 24 (MF-24)	33	282	0
	North Shore Higher Density (HD-NS)	139	848	0
Mixed Use	Mixed Use (MX)	141	1,179	1,001
	North Shore Mixed-Use (MX-NS)	89	790	598
	Downtown Mixed-Use Low Rise (DT-MXL)	1	23	9

Comprehensive Plan Designation	Corresponding Zones	Total (Acres)[1]	Net residential capacity (units)	Jobs Capacity
Mixed Employment	Downtown Mixed-Use Mid Rise (DT-MXM)	16	566	127
	Mixed Employment (ME)	361	0	2,201
	North Shore Mixed Employment (ME-NS)	99	0	590
Commercial	Neighborhood Commercial (NC)	2	0	20
	Community Commercial (CC)	91	0	1,197
	North Shore Commercial (C-NS)	66	0	894
	Regional Commercial (RC)	298	0	3,826
	Historic Main Street Core (DT-HMSC)	1	24	1
Industrial	Heavy Industrial (HI)	545	0	1,948
Parks and Open Space	Parks and Open Space (POS)	1,343	0	0

[1]Total acres within each zoning designation are gross acres and inclusive of rights-of-way and infrastructure.

COMMUNITY FEEDBACK

- **Manage growth to allow for infrastructure adjustments and maintain the small-town feel**
- **Support neighborhood hubs, residential scale businesses, and encourage community building**
- **Encourage multifamily units to support walking or taking transit to employment areas**
- **Need clear transitions between low density and higher density developments**
- **Support for design standards that are sustainable and low climate impact (native landscaping, energy and water efficiency standards, site optimization to preserve green space)**
- **Align land use plans with transportation improvements**

Overlays

In addition to the land use designations listed in Table 1, land use overlays further define appropriate uses and development standards for particular areas within the City. Overlays in Camas include an Airport Overlay, Cottage Overlay, and a Design Overlay. Development within all overlay areas must comply with the goals and policies of the underlying land use designation and the specific standards included in the overlay.

The Airport Overlay area applies to land adjacent to Grove Field, an airport owned and operated by the Port of Camas-Washougal and located northeast of Lacamas Lake. Grove Field is included in the UGA with this update. The Airport Overlay is designated to ensure land uses adjacent to the airport are compatible with air traffic and do not interfere with safe air navigation. For example, the comprehensive plan designation of lands adjacent to the airport is generally Mixed Employment, rather than residential, and the Airport Overlay area restricts uses tending to have higher concentrations of people, such as schools or hospitals.

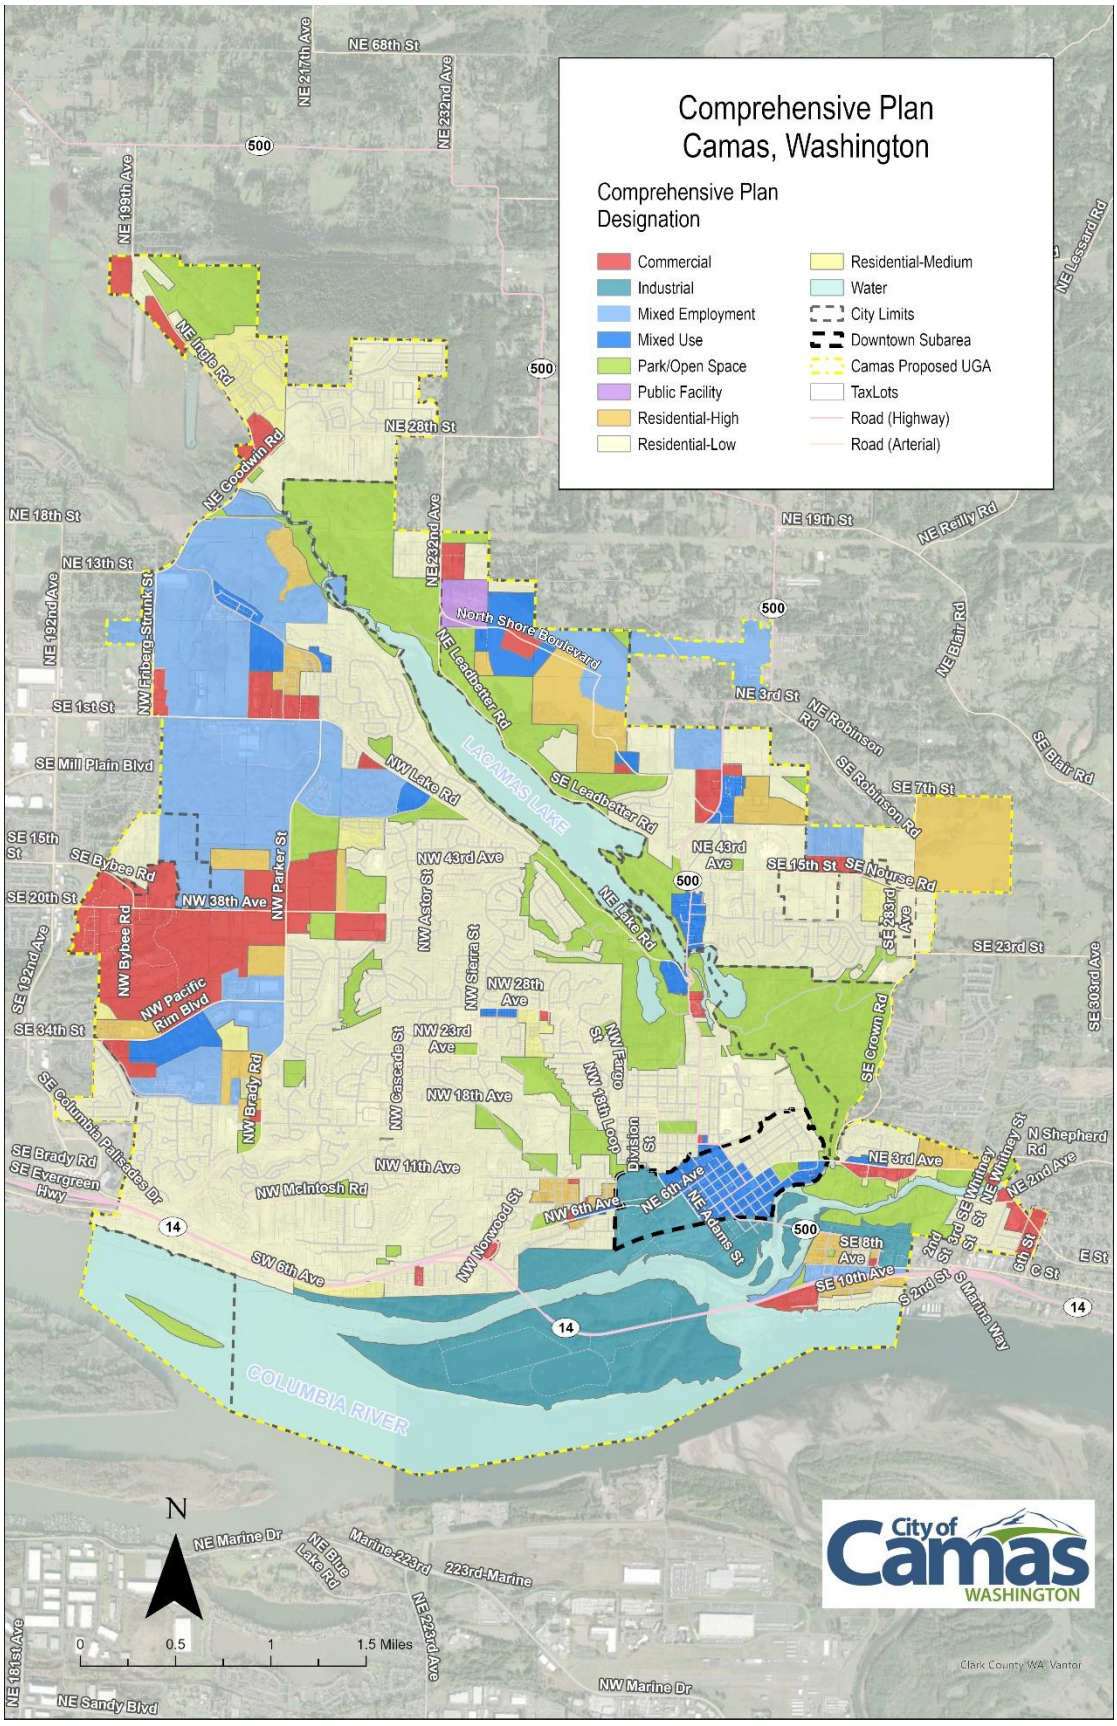
The Cottage Overlay may be utilized within multi-family zones only and is intended to increase housing choice and supply by allowing flexibility in the development of smaller detached cottage-style dwellings.

The Design Overlay is a new overlay with the 2026 update and replaces the Gateways and Corridors Overlay included in the prior plan. The Design Overlay generally applies to the following locations. The specific extents of the overlay are included on the Camas Zoning Map.

- NW 6th Avenue
- NE 3rd Avenue
- NE Everett Street
- NW 38th Avenue
- NW Lake Road
- Green Mountain – NW Goodwin Road
- NW Brady Road
- SE Union Street
- NW Parker Street

The Design Overlay is intended to enhance the walkability, pedestrian experience, and design of the corridors it covers. Development/redevelopment within a designated Design Overlay must adhere to the Design Overlay goals and policies included in this element. See Goal LU-6 and Policies LU-6.1 – 6.7.

Figure 1 Comprehensive Plan Map



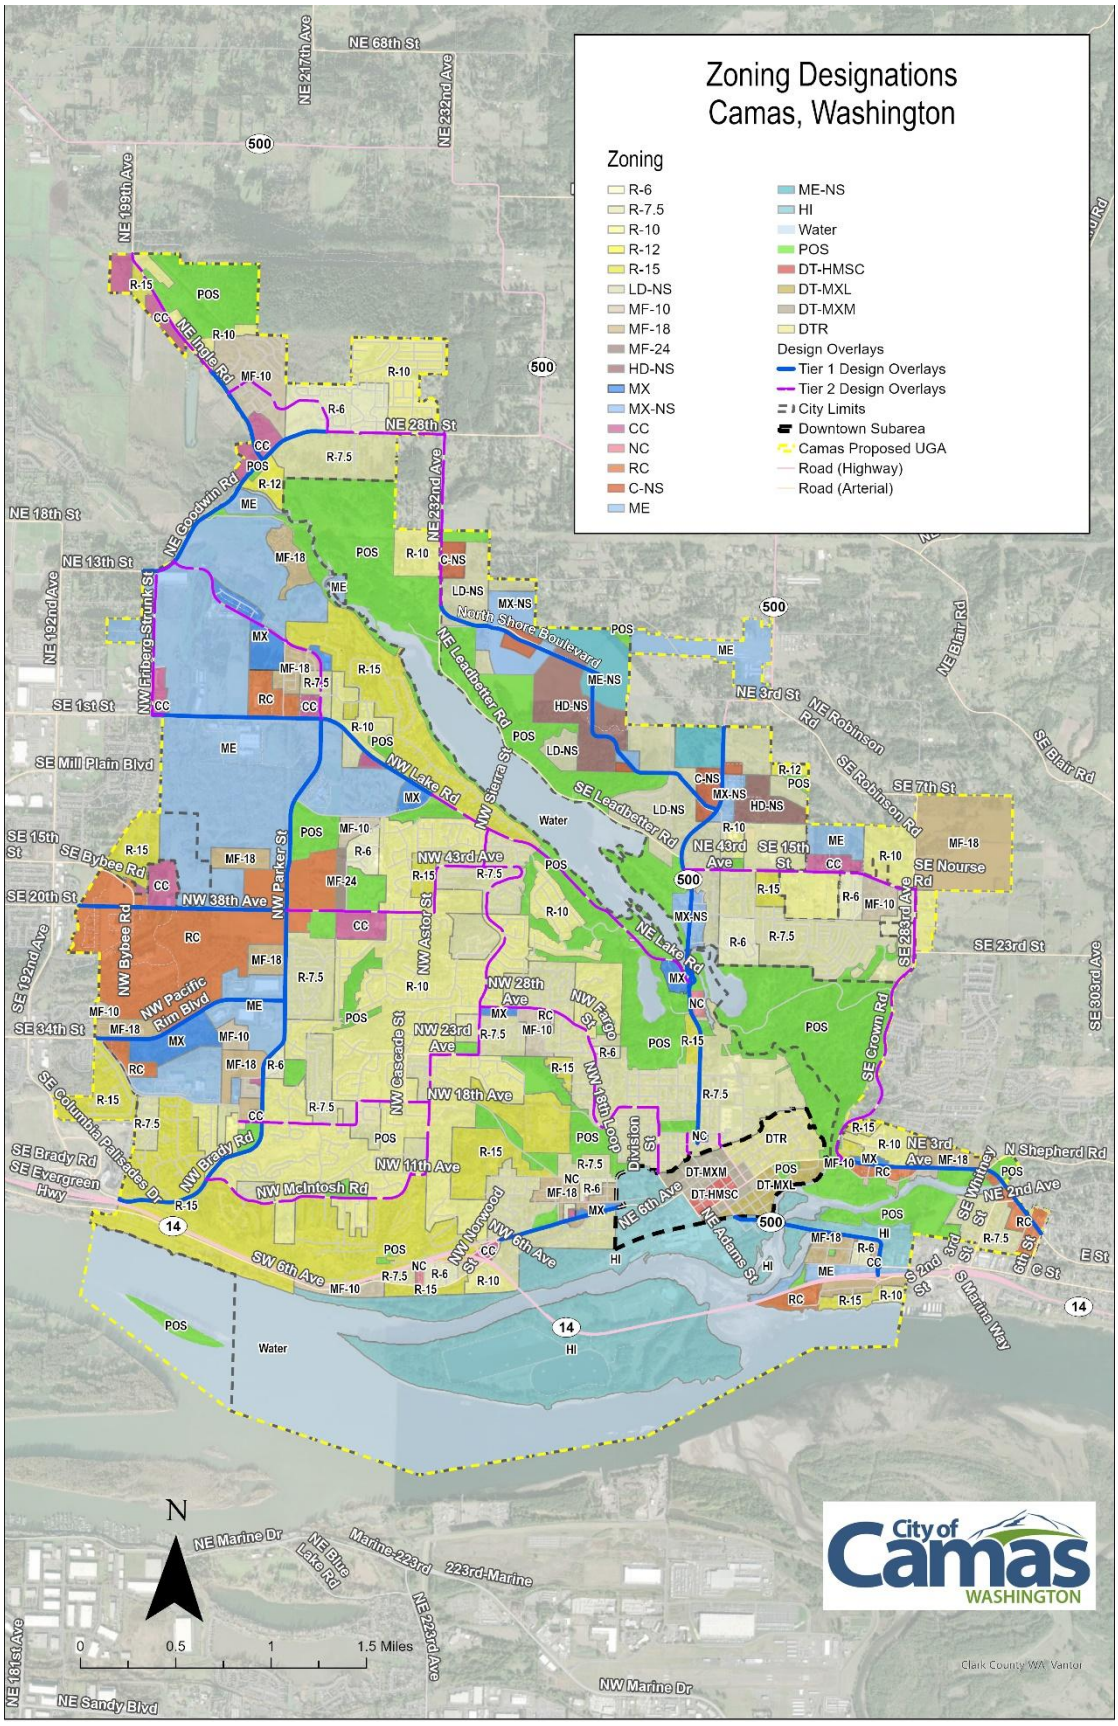


Figure 2 Zoning Map

Land Use Goals and Policies

Goal LU-1 Citywide Land Use

Maintain a land use pattern that respects the natural environment and existing uses while accommodating a mix of housing and employment opportunities to meet the City's growth projections in coordination with the capital improvement plan.

Policy LU-1.1 Ensure the appropriate mix of commercial, residential, and industrial zoned land accommodates the City's share of the regional population and employment projections for the 20-year planning horizon.

Policy LU-1.2 Coordinate with Clark County, the state, and special districts to identify future needs and site planning for essential public facilities such as airports, state education facilities, state and regional transportation facilities, state and local correctional facilities, solid waste handling facilities, regional parks and others as identified in RCW 36.70A.200. (See policies ED-3.1, 3.2, and 3.3 regarding Grove Field airport, policy TR-2.1 regarding transportation, and policy PFS-4.27 regarding solid waste.)

Policy LU-1.3 Implement design standards for new development, redevelopment, and infill that consider the surrounding built and natural environments and support a natural transition between uses.

Policy LU-1.4 Ensure that park and recreation land is distributed equitably throughout the City and work to achieve park and continuous trail corridors from Green Mountain to the Columbia River. (See policies PFS-2.1 and 2.4 regarding increasing connectivity to natural areas and continuous trail around Lacamas Lake.)

Policy LU-1.5 Ensure adequate public facilities, including roads, emergency services, utilities, and schools, exist to serve new development, and mitigate potential impacts to current residents. Establish and maintain policies for impact fees for new development.

Policy LU-1.6 Ensure consistency with County-wide planning policies.

Policy LU-1.7 Evaluate and improve design and building standards for new and redeveloped sites in high-risk natural hazard areas.

Policy LU-1.8 Incorporate sustainable and low climate impact design into development codes and standards.

Policy LU-1.9 Encourage high density concentrations of housing, commercial, and other uses needed in daily life along major transportation corridors to support the reduction in vehicle miles traveled and opportunities to increase physical activity.

Policy LU-1.10 Protect the viability of the airport as a significant economic resource to the community by encouraging compatible land uses and densities, and reducing hazards that may endanger the lives and property of the public and aviation users consistent with state laws RCW 36.701A.510 and RCW 36.70547.

Goal LU-2 Employment Land

Create a diversified economy and serve Camas residents, businesses, and tourists by providing sufficient land throughout the City to support a variety of business types and employment opportunities.

Policy LU-2.1 Protect employment land to ensure an adequate supply of commercial and industrial land to meet 20-year employment projections. Encourage a balance of new and existing commercial, light industrial, knowledge-based business, medical, and high-tech uses.

Policy LU-2.2 Encourage mixed-use developments (residential and commercial) that support adjacent uses, reduce vehicle miles traveled, and balance job creation.

Policy LU-2.3 Implement development and landscaping standards to ensure industrial development and other employment lands integrate with the surrounding neighborhoods.

Policy LU-2.4 Support the transition of industrial brownfield sites to mixed-use development. Ensure that residential components are designed and located to not interfere with continuing industrial operations.

Goal LU-3 Neighborhoods

Create vibrant, stable, and livable neighborhoods with a variety of housing choices that meet all stages in the life cycle and the range of affordability.

Policy LU-3.1 Encourage connectivity between neighborhoods and adjoining natural areas and trails to increase access to recreation amenities. (See policies PFS-2.1 and 2.2)

Policy LU-3.2 Discourage exclusive neighborhoods, privacy walls, and gated communities.

Policy LU-3.3 Provide commercial zoning within a half mile of residential areas for the development of food retailers (grocery stores and farmers' markets) to improve food access.

Goal LU-4 Natural Environment

Develop an interconnected network of parks, trails, and open space to enhance the quality of life for Camas residents and visitors and support and preserve wildlife corridors and natural resources.

Policy LU-4.1 Maintain development regulations that encourage the preservation of trees and natural areas, including the use of density bonuses and other tools to protect sensitive areas and encourage tree replacement. (See policy NE-4.1)

Policy LU-4.2 Support the purchase and preservation of open space by the City and private owners. Encourage careful consideration and integration of the natural environment in planning activities to maintain the park-like setting of Camas.

Policy LU-4.3 Encourage connectivity and increase access to regional trails throughout the City to support multi-modal transportation and physical activity. (See policies PFS-2.1)

Policy LU-4.4 Protect the quality and quantity of groundwater used for public water supplies through conservation of water usage and treatment of runoff.

Goal LU-5 Mixed-Use Areas

Foster economically and socially diverse mixed-use neighborhoods that meet the multi-modal transportation, housing, employment, education, recreation, and health needs of the community.

Policy LU-5.1 Mixed-use developments should be unique to the area in which they are located, encourage small business development, provide a mix of housing types to ensure affordability, increase pedestrian and transit connections, and include design that is sensitive to the natural environment.

Policy LU-5.2 Develop mixed-use areas that are oriented to the public street and scaled and designed to integrate with surrounding land uses.

Policy LU-5.3 Create a mixed-use zone that requires developments to include a minimum percentage of commercial space in both vertical and horizontal mixed-use settings.

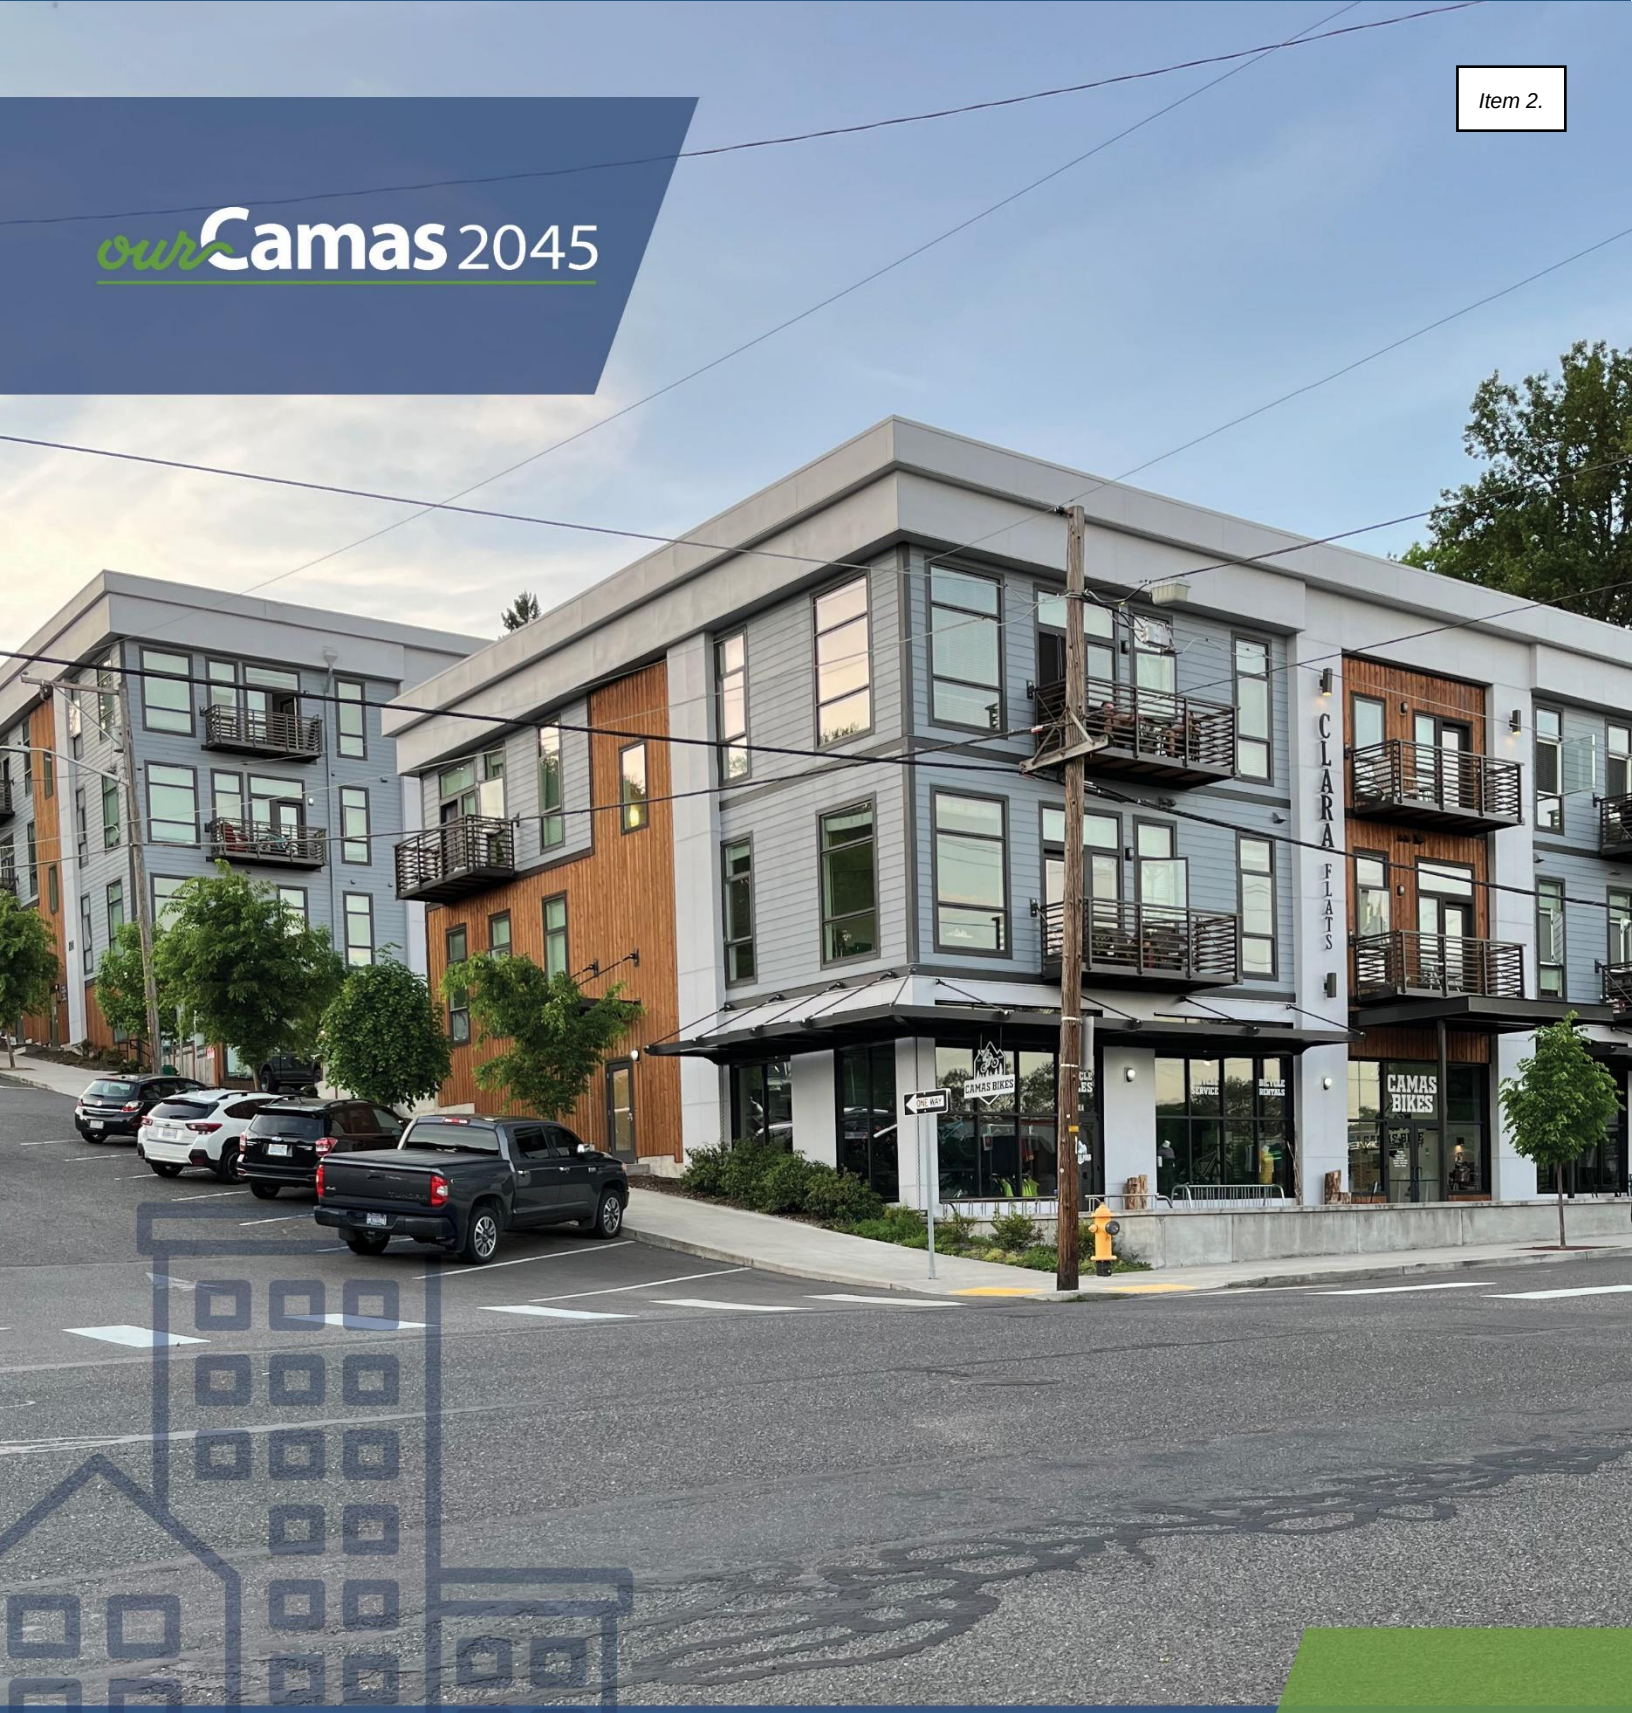
Goal LU-6 Design Overlay Areas

Create attractive and welcoming areas in the City and distinguish Camas from adjacent jurisdictions through the development of design overlays.

Policy LU-6.1 Encourage development and redevelopment along the design overlay corridors that respects the historic character of the areas, improves pedestrian mobility/safety, and supports small-scale retail and commercial services.

Policy LU-6.2 Encourage development of commercial uses and multi-family residential within the NE 6th Avenue and NE 3rd Avenue design overlay corridors to support downtown businesses (such as through the Downtown subarea plan). Consider rezoning low-density residential land to support the downtown area. Consider rezoning low-density residential land to support the downtown area.

Policy LU-6.3 Orient building entrances toward the street and provide pedestrian connections from building entrances to the sidewalk. Encourage landscaping, rather than parking, between the building and the street to create a welcoming streetscape.



Policy LU-6.4 Collaborate with partners to support community events, public art, and infrastructure investments that celebrate cultural heritage, provide community amenities, and strengthen community branding. Develop area identities through events, festivals, signage, and other improvements that help establish or enhance existing character within the overlay areas.

Policy LU-6.5 Encourage the designation and development of design overlay features in strategic areas to create a distinct pedestrian scale identity and attract visitors.

Policy LU-6.6 Identify streets in the design overlay areas as public places to encourage pedestrian and bicycle mobility and to reinforce the connection between the corridors and the surrounding neighborhoods.

Policy LU-6.7 Improve and increase wayfinding signage in design overlay areas to nearby recreational and other amenities.

ourCamas 2045

Housing

05

05. Housing

Vision

In the year 2045, residents of Camas continue to appreciate their safe, diverse, and welcoming community. Those raised in Camas will return for living-wage jobs and to ultimately retire here. Camas is a well-planned and connected city where residents enjoy pedestrian and bicycle paths between neighborhoods and to downtown. Camas provides a wide variety of housing options that meets the needs of all residents and provides a range of housing for all ages, abilities, needs, preferences, and income levels.

Background

This element of the comprehensive plan sets out the vision, goals, and policies to address current and projected housing needs for the next 20 years (to 2045), inclusive of the diverse needs of the whole community across the income spectrum. Camas is facing housing challenges that could benefit from improved access to more housing options including more housing for seniors and young adults, smaller housing, more rental units, and affordable homeownership opportunities, all of which the City can have a role in supporting.

The housing element is supported by a housing needs assessment (provided below) that quantifies existing housing stock and projected housing needed to accommodate projected growth. Housing analysis is an important exercise as the housing needs in Camas tend to continually evolve based on changes in the broader economy, local demographics, and the regulatory environment. In addition to an assessment of housing needs based on the best available existing data, the housing element goals and policies reflect community input, state legislative requirements, and City of Camas' priorities.

The following section provides background on the planning framework and highlights the analytical findings associated with current and projected housing including details on Camas' community demographics, housing stock, housing market dynamics, expected housing demand, and special housing needs. The insights from this analysis help to build a factual basis for the housing policy updates.

Housing Challenges

Camas is facing housing challenges that could benefit from improved access to more housing options including more housing for seniors and young adults, smaller housing, more rental units, and affordable homeownership opportunities, all of which the City can have a role in supporting.

Planning Framework

In Clark County, RCW 36.70A.040 requires all cities to "fully plan" for the Elements of a Comprehensive Plan, including land use, housing, capital facilities, utilities, transportation, and climate change.[1] The current update process is part of a periodic update also required by the Growth Management Act (GMA), as part of an established schedule by the County.

At the state level, the GMA requires local jurisdictions to adopt Housing Elements that are consistent with statewide goals and objectives. The Housing Element must include an inventory and analysis of existing and projected housing needs that identifies the number of housing units by income level necessary to manage projected growth including permanent supportive and emergency housing.

Recent state legislation calls for cities to expand middle housing allowances in single family residential zones (HB 1110) and support Accessory Dwelling Unit development (HB 1337). These changes require cities to allow up to two Accessory Dwelling Units (ADUs) on all lots zoned to allow single-family homes. In addition, via HB 1220, the Washington State Department of Commerce instructed local governments to "plan for and accommodate" housing affordable to all income levels. Additionally, HB 1220 requires cities to examine racially disparate impacts, displacement, exclusion and displacement risk in housing policies and regulations as well as adopt policies that will begin to undo those impacts.

Middle housing policy in WA

'Middle housing' refers to moderate-density housing types between single-family detached homes and larger multifamily housing. HB 1110 became effective in July 2023 and requires that designated Growth Management Act (GMA) planning cities in Washington must allow certain minimum densities for middle housing within 6 months after their periodic update due date.

Camas is counted as a Tier 2 city under this policy, which must allow for 2 dwelling units per lot or higher in predominantly residential zones, as well as 4 dwelling units per lot within a quarter mile of major transit stops and for affordable housing (ESHB 1110, Sec. 3(1)(c)).

The Clark County Countywide Planning Policies provide helpful guidance on the Comprehensive Plan update. Clark County updated its Comprehensive Plan and Countywide Planning Policies in 2026. See Clark County's Comprehensive Growth Management Plan website for the draft Clark County Countywide Planning Policies.

Lastly, the City of Camas completed its Housing Action Plan (HAP) in 2021 (Appendix B), including a housing needs assessment and a thorough community engagement process focused on learning about housing experiences and identifying ways to meet housing needs and

[1] The GMA includes other optional Elements for economic development, parks and recreation, conservation, energy, sub areas, and ports.

overcome core challenges. The engagement included two virtual public meetings, seven focus groups and interviews, a housing survey with over 300 responses, a project website, and written public comments. Key findings helped to shape the updates to the Camas Housing Element.

Community Engagement

The project team held interactive open houses and interviewed stakeholders to learn about housing challenges, opportunities, and actions. Engagement activities identified the following themes that could contribute to future decision-making related to housing in Camas.

COMMUNITY FEEDBACK

- **Need diverse residential options that cater to different life stages.**
- **Maintain Camas' character by integrating small-town charm in mixed use developments.**
- **Ensure workforce housing is available for current and future workers.**
- **Incentivize housing development through zoning, taxes and fees, and partnerships.**
- **Partner with affordable housing developers to build affordable housing.**
- **Desire for more dense housing options, especially Downtown.**
- **Require large developments to dedicate a portion of lots or units for middle housing or ADUs as part of subdivision approval.**
- **Offer financial assistance or programs to rehabilitate and repair existing housing stock.**
- **Invest in existing neighborhoods to improve safety, accessibility, and livability while preserving neighborhood character.**

Housing Action Plan

The City of Camas completed its Housing Action Plan (HAP) in 2021 (Appendix B), including a housing needs assessment and a thorough community engagement process focused on learning about housing experiences and identifying ways to meet housing needs and overcome core challenges. The engagement included two virtual public meetings, seven focus groups and interviews, a housing survey with over 300 responses, a project website, and written public comments. Key findings about community priorities and HAP goals and strategies are summarized below.

HAP Goals

- **Develop Housing to Accommodate Growth.** Thoughtful changes to Camas' zoning and development regulations can allow the City to better accommodate projected growth.
- **Diversify the Mix.** A greater variety of housing types can better serve young families, small households, seniors, people with disabilities, and people with diverse incomes.
- **Increase Housing Affordability.** Young families, seniors, and people who work in Camas may have difficulty finding affordable housing in Camas.
- **Preserve Existing Affordable Housing.** Camas should adopt strategies to preserve its existing affordable housing and prevent the displacement of residents. Community members noted concern for preserving existing affordable housing, particularly smaller single-family properties, in older neighborhoods near Downtown.

Table 2 Housing Action Plan Goals and Strategies

	Develop Housing	Diversify Housing Mix	Increase Housing Affordability	Preserve Affordable Housing
Strategy 1: Expand housing opportunities in mixed use and downtown commercial districts.	X	X		
Strategy 2: Consider making targeted rezones during Comprehensive Plan updates.	X			
Strategy 3: Diversity allowed housing types and update related lot and dimensional standards.	X	X	X	
Strategy 4: Focus on key areas with residential development or redevelopment potential. Expand more mixed-use areas throughout the city.	X	X		
Strategy 5: Continue community conversations around housing and housing for all.	X	X	X	X

Strategy 6: Communicate available affordable housing resources.			X	
Strategy 7: Build partnership to develop and preserve affordable housing for individuals, families and seniors. Explore expansion of the MFTE program.			X	X
Strategy 8: Explore funding source and cost reduction options for affordable housing.	X	X	X	X

Housing Targets

Planning for future housing demand is critical to ensure that the City can meet demand driven by population growth. This section summarizes projected future housing demand for Camas to provide context for the City's housing policies.

Population and Housing Allocations

Table 3 below demonstrates the City of Camas and Clark County's anticipated population forecast between 2023 and 2045. Since 2000, Camas has grown at a faster rate than the County overall with an Average Annual Growth Rate (AAGR) of 5.2% in the City (including annexations), compared to the County's AAGR of 2.4% (Appendix C, Housing Analysis). However, the County's estimates assume a slower growth scenario for the City in the next 22 years. With this assumption, new population growth in Camas is estimated to comprise 4.05% of growth in Clark County overall.

The population growth forecast indicates that the City of Camas will make up 4.05 percent of new growth population in Clark County between 2023 and 2045 with an AAGR of 1.2% in the City. The County's methodology also acknowledges Washington State Department of Commerce's HAPT estimates for current housing supply in Camas and allocates a number of net new units for the Urban Growth Area(s).

Table 3 Population Growth Forecast, Camas and Clark County, 2023 to 2045

Source: Clark County Interim Population Allocations and Clark County Comprehensive Plan 2025 Update, 2025 Population, Housing, and Employment Allocation – Issue Paper 5.

Jurisdiction	2023 Est. Population	Vacant Buildable Land Model Percent Capacity	2023-2045 Growth	2045 Estimate	Change (percent)	AAGR
City of Camas	**29,352**	**4.26%**	**7,729** ***(4.05% of total growth)***	**37,080**	**26%**	**1.2%**
Clark County	527,400	100%	190,754 *(100% of total growth)*	718,154	36%	1.6%

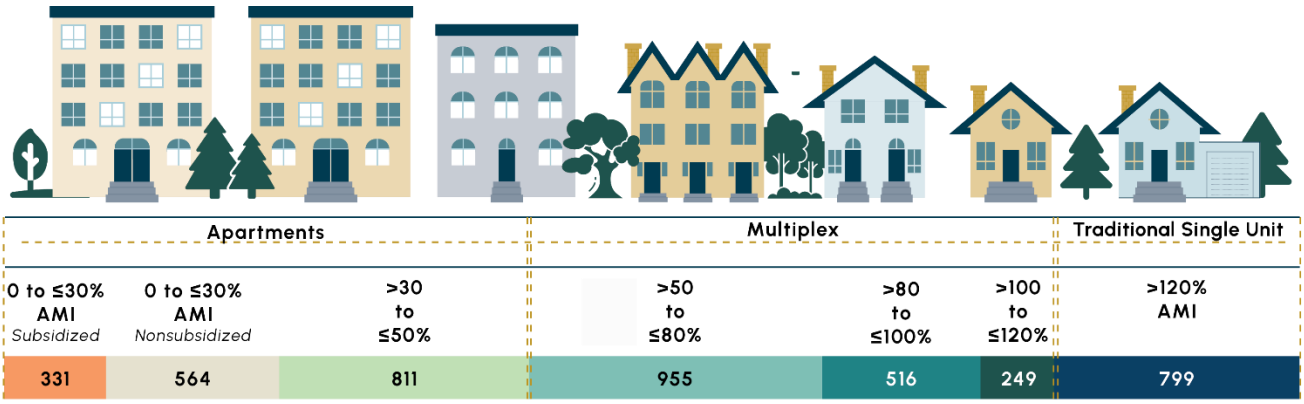
In May 2024, Clark County adopted housing allocations for jurisdictions located within county boundaries. In total, this shows an estimated 4,226 housing units needed by 2045 in the City of Camas and UGA(s).[2] The City would add about 311 new units to meet the new permanent supportive housing target and 1,766 units affordable to low-income households below 80% of AMI by 2045. Camas currently has 143 units of housing affordable for households at or below 30% of AMI that are not Permanently Supportive Housing (PSH)[3] and 14 emergency units[4] according to the HAPT estimate. With this allocation, the City will need to accommodate 172 new units of temporary emergency housing by 2045.[5]

Housing Allocations

In 2021, HB 1220 created a new way that communities in the state are required to plan for housing needs. This legislation requires that jurisdictions plan for sufficient land capacity for housing needs, including all economic segments of the population (moderate, low, very low and extremely low income, as well as emergency housing and permanent supportive housing).

- Since 2000, the City of Camas had an average annual growth rate of 221 new housing units per year.
- Comparatively, the City will need to add an average of 195 new housing units per year between 2024 and 2045 to reach its allocation of net new units.

[2] The Washington State Department of Commerce Housing for All Planning Tool (HAPT) provides two allocation methods for determining the share of a County's housing supply to be met by jurisdictions. Method A assumes all housing needs will be accommodated through new housing production. Method B assumes all jurisdictions will accommodate equivalent shares of the total countywide housing need at each income level, proportional to their size, in the projection year. Clark County elected to use a hybrid method of 75/25 for Camas.



[3] Permanent Supportive Housing is defined as: "subsidized, leased housing with no limit on length of stay that prioritizes people who need comprehensive support services to retain tenancy and utilizes admissions practices designed to use lower barriers to entry than would be typical for other subsidized or unsubsidized rental housing, especially related to rental history, criminal history, and personal behaviors" Washington RCW 36.70A.030(31).

[4] Temporary emergency housing is defined as: "temporary indoor accommodations for individuals or families who are homeless or at imminent risk of becoming homeless that is intended to address the basic health, food, clothing, and personal hygiene needs of individuals or families. Emergency housing may or may not require occupants to enter into a lease or an occupancy agreement." – Washington RCW 36.70A.030(14).

[5] Clark County's interim allocations do not include designated temporary emergency housing units at the City level. Estimates in this section for the City of Camas are derived directly from the Department of Commerce HAPT tool.

Figure 3 Housing Unit Allocations by Income, Camas and its UGA, 2024-2045

Source: Washington State Department of Commerce HAPT, Clark County Interim Housing Allocations, City of Camas
Note: Current supply includes both the estimate from the HAPT with the addition of 599 additional units since its calibration in 2020.

4,226 new homes will be needed over the next 20 years in the City of Camas

In addition, there will also need to be:
172 Emergency housing beds (temporary housing)

Table 4 Housing Units Needed

	0-30% AMI		>30-50% AMI	>50-80% AMI	>80-100% AMI	>100-120% AMI	>120% AMI	Total	Emergency housing beds

Housing Choice and Affordability

Housing affordability and a diversity of housing options were a consistent theme in community engagement. In order to develop housing that is affordable to a wider range of incomes, the City will pursue several pathways to meet this goal. One way to develop more housing that is affordable to households earning 50-100% AMI is to increase the density of housing in

neighborhoods with access to schools, jobs and other amenities. Single-family zoning, which dominates most residential areas throughout the City, can contribute to housing unaffordability by limiting most residential land to detached homes on individual lots and prohibiting more space-efficient housing types such as duplexes, triplexes, townhomes, and apartment buildings. By restricting the number of homes that can be built in desirable neighborhoods, these regulations constrain housing supply even as population and demand grow. The limited supply of homes increases competition for available housing, driving up land values, home prices, and rents. Single-family zoning can also encourage larger lot sizes and lower-density development, which increases infrastructure and land costs per household. As a result, many households, including first-time homebuyers, renters, and lower- and middle-income residents face fewer affordable housing options and may be priced out of neighborhoods with access to jobs, schools, and services. By allowing medium and higher density residential development in Camas, more lower cost housing options may be available. Past housing policies were analyzed to consider potential disproportionate impacts that limited the development of housing affordable to lower- and middle-income families. The policies of this plan aim to provide a greater diversity of housing choices throughout Camas.

Approximately 40% of new housing units needed will need to be affordable to households at or below 50% AMI. This type of housing typically requires public subsidy in order to make development feasible. The State has not allocated funding to cities to support development of units affordable at this level. This plan includes policies to facilitate the permitting process for developing housing that is affordable to a wider range of incomes as well as to pursue funding that directly supports development of affordable housing. Potential sources of funding include Federal grants from the Department of Housing and Urban Development, state funding opportunities through tax exemption programs like the Multifamily Tax Exemption incentive, and local options such as waiving impact fees and deferral of construction sales tax.

Analysis of housing price data and land capacity below demonstrates the availability of land to meet housing needs. Table 5 lists the level of affordability anticipated to be achieved within each zone based on an analysis of housing prices.

Table 5 Affordability Level and Housing Type by Zoning Designation

Zoning Designation	Typical Housing Types Allowed	Assumed Affordability Level of Capacity Analysis
North Shore Higher Density (HD-NS)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts, small-scale apartments (wood frame), garden-style apartments, and apartments (podium)	High income (100% AMI - >120% AMI)

Zoning Designation	Typical Housing Types Allowed	Assumed Affordability Level of Capacity Analysis
North Shore Lower Density (LD-NS)	Single-family (attached/detached), duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts	High income (100% AMI - >120% AMI)
Residential 6 (R-6)	Single-family (attached/detached), duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts	High income (100% AMI - >120% AMI)
Residential 7.5 (R-7.5)	Single-family (attached/detached), duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts	High income (100% AMI - >120% AMI)
Residential 10 (R-10)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts	High income (100% AMI - >120% AMI)
Residential 12 (R-12)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts and small-scale apartments (wood frame)	High income (100% AMI - >120% AMI)
Residential 15 (R-15)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts and small-scale apartments (wood frame)	High income (100% AMI - >120% AMI)
Downtown Residential (R-DT)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts and small-scale apartments (wood frame)	Moderate income (>80% AMI - >120% AMI)
Multi-Family 18 (MF-18)	Duplexes, triplexes, quadplexes, 5-6 unit buildings, townhouses and cottage courts and small-scale apartments (wood frame), garden-style apartments	Low to moderate income (<50% AMI – 80% AMI)
Multi-Family 26 (MF-26)	Garden-style apartments and apartments (podium)	Low to moderate income (<50% AMI – 80% AMI)
ADUs (All zone categories)	Accessory dwelling units (ADUs) on developed residential lots	Low to moderate income (<50% AMI – 80% AMI)
Downtown Mixed-Use Low Rise (MX-LR)	Mixed-use (wood frame)	Moderate income (>80% AMI - >120% AMI)

Zoning Designation	Typical Housing Types Allowed	Assumed Affordability Level of Capacity Analysis
Downtown Mixed-Use Mid Rise (MX-MR)	Mixed-use (podium)	Moderate income (>80% AMI - >120% AMI)
Downtown Historic Main Street Core (HMSC)	Mixed-use (podium)	Moderate income (>80% AMI - >120% AMI)
Mixed Use (MX)	Mixed-use (wood frame), mixed-use (podium)	Moderate income (>80% AMI - >120% AMI)
North Shore Mixed-Use (MX-NS)	Mixed-use (podium)	High income (100% AMI - >120% AMI)

While the land use and zoning updates meet the City's need for housing, financial subsidies will be necessary to meet housing needs for 0-80% AMI levels. In order to build below market rate housing, annual subsidies from various sources are necessary. The goals and policies in this chapter look to pursue partnerships and funding to support development of more affordable housing in Camas.

Emergency housing, emergency shelters, and transitional housing are allowed uses by right in all zones across the city that allow residential and lodging uses. There is a need for an additional 172 emergency shelter beds by 2045. Table 6 summarizes the total unit capacity by zoning designation where emergency housing, emergency shelters, and transitional housing are allowed.

Table 6 Zoned Capacity for Emergency Housing and Shelters by Zoning Designation

Zoning Designation	Unit Capacity
North Shore Higher Density (HD-NS)	848
North Shore Lower Density (LD-NS)	203
Residential 6 (R-6)	269
Residential 7.5 (R-7.5)	310
Residential 10 (R-10)	363
Residential 12 (R-12)	30

Zoning Designation	Unit Capacity
Residential 15 (R-15)	39
Downtown Residential (R-DT)	39
Multi-Family 10 (MF-10)	503
Multi-Family 18 (MF-18)	1,015
Multi-Family 26 (MF-26)	282
Downtown Mixed-Use Low Rise (MX-LR)	23
Downtown Mixed-Use Mid Rise (MX-MR)	566
Historic Main Street Core (HMSC)	24
Mixed Use (MX)	1,179
North Shore Mixed-Use (MX-NS)	790
Total Housing Unit Capacity	**6,480**

Camas has an overall relatively low risk for residential displacement, as demonstrated in the Displacement Risk Map developed by the Department of Commerce. One area at high risk for displacement is downtown and the neighborhoods directly south and east of downtown. Additionally, a section on the west side of the City is at moderate risk for displacement. Goals and policies within this plan aim to reduce the risk of displacement citywide.

Residential Capacity

Residential capacity is generally defined as the amount of existing housing units plus new housing a city can accommodate based on city zoning regulations (e.g., residential density requirements in the zoning code) and land available for new development. Residential capacity relates to residential growth allocations in a number of ways. Evaluating residential growth capacity is necessary to determine whether the housing growth allocation (determined by the county) can be accommodated within the City of Camas and its UGA. Sufficient capacity is available if residential growth capacity is equal to or greater than the City's allocation. If sufficient capacity is not available, the shortfall must be addressed by rezoning, or revising allowable density, or by modifying or creating a new UGA or annexed area to provide additional area for residential growth capacity. The Vacant Buildable Lands Model (VBLM) for Clark County provided a basis for the available housing capacity in the City of Camas based on available buildable land (including both vacant and underutilized land) and current zoning. The existing zoning and UGA showed insufficient housing capacity.

The City of Camas is proposing zoning modifications that would allow for more residential capacity. According to the housing capacity estimates as detailed in Appendix D, Housing Needs and Land Capacity Analysis, Camas would have capacity for 6,480 housing units. This would result in a surplus over the 2045 housing target of 4,226 housing units (2,254 capacity surplus). Results (summarized below and in Table 7) from the updated capacity analysis show sufficient residential growth capacity to meet the 2045 housing target.

Table 7 Housing Capacity by Income Level

Income Level (% AMI)	Allocated Housing Need	Comp Plan Designation Serving These Needs	Aggregated Housing Need	Total Capacity	Capacity Surplus
0-30% AMI (PSH)	331	MF-10, MF-18 and MF-24	2,661	3,402	741
0-30% AMI (Other)	564				
>30-50% AMI	811				
>50-80% AMI	955				
>80-100% AMI	516	HD-NS, R-6, R-DT, DTMU-L, DTMU- Mid, HMSC, and MX	765	2,134	1,369
>100-120% AMI	249				
>120% AMI	799	HD-NS, LD-NS, R-6, R-7.5, R-10, R-12, R-15, and MX-NS	799	944	145
Total	**4,226**		**4,226**	**6,480**	**2,254**

Summary of Housing Analysis Findings

A summary of key findings from the housing data analysis is provided below to help describe key insights to inform Comprehensive Plan policy updates (Appendix C provides the full findings).

Community Demographic Trends

- **Since 2000, Camas has grown at a faster rate than Clark County or Washington State overall, more than doubling in size by 2023 from 12,462 to 27,420 persons.** As population increases, the demand for housing also rises and affects planning.
- **In terms of land, Camas has expanded incrementally over time through annexations.** In the 2000's and early 2010's, the City added large new areas on the north side of Lacamas Lake, with a large portion of this area zoned for multifamily housing alongside employment and commercial areas.
- **Camas is becoming a more diverse community.** The share of people of color increased from 13% in 2012 to 24% in 2022 and is slightly more diverse than the county (21% were people of color in 2022). This may indicate that displacement in Camas is at a lower risk.

- **Camas is seeing a larger share of couples and families with children (39%) and has a higher share of both groups than the County or State (24%, 22%, respectively).** The City also had a larger median household size (almost 3 persons) compared to the county (2.65 persons).
- **Median household income in Camas is higher than both Clark County and the state at $133,000 in 2022.** Adjusting for inflation, median income in the City still increased by 31 percentage points since 2012 which is primarily due to growth in high-income households earning over $100,000 per year.[6]
- **Four out of five households in Camas owned their homes in 2018-2022, at a higher rate than either Clark County or Washington.** The share of renter households stayed the same in Camas since 2012, showing less than a 1% increase over this time period.
- **County-level trends indicate that homeownership disparities exist for some groups by race and ethnicity in Clark County,** with households who are Black or African American, American Indian or Alaska Native, Native Hawaiian or Pacific Islander, Hispanic or Latino, or mixed/other races having lower rates of homeownership. This may be indicative of past policies that had a racially disparate impact on homeownership.
- **At the County level, income levels also vary by race and ethnicity.** Households who were Black or African American, Native Hawaiian or Pacific Islander, Hispanic or Latino, two or more races, or another race had lower median household incomes than the overall average.
- **Overall levels of housing cost burden are decreasing, but more renters and low-income households experience higher rates.** Around 24% of all Camas households experienced cost burden (2022) with a higher share of renter households experienced cost burden compared to homeowners and with 100% of households earning less than $20,000 experienced severe cost burden (paying at least half of their monthly income towards housing). Although cost burden is generally lower for homeowners, more people of color in Camas who own their homes experience cost burden compared to white, non-Hispanic homeowners, another indicator or potential racially disparate impacts from prior policies.

Existing Housing Inventory

- **Camas has seen growth in their number of housing units in the past two decades,** with a 108% change between 2000 and 2023 (annually this equates with an average of 221 new homes). The City of Camas' growth in housing units was lower than its population change (120%), indicating that the City has not been keeping pace by adding to its supply to meet the rising demand.
- **Camas has steadily low vacancy rates for all housing units in total** (4% in 2022 with little change over the last decade). This level of vacancy is indicative of a healthy housing market with

[6] The median income in Camas is above the area median income (AMI) for 2023. HUD determined the AMI to be $114,400 for a family of four in the Portland-Vancouver-Hillsboro, OR-WA MSA (including Camas). This is lower than median income in Camas itself which was $133,000 in 2022 (Exhibit 14) and has been consistently lower than the City over time.

natural rates of turnover; however, the slight decrease could begin to indicate constrained supply of housing.

- **For two-bedroom multifamily units, Camas has seen spikes in vacancy, but these align with new construction trends** which can temporarily raise vacancy rates for newly delivered units but do not indicate long-term vacancy. In 2023, the City saw over 200 new housing units delivered, likely accounting for the fluctuation in vacancies, as well as deliveries in 2017 and 2020.
- **Since 2015, the City has permitted 2,763 new housing units.** Single detached homes have accounted for the largest share (70%) of new permits in the City of Camas, and another 8 percent were made up of attached townhomes. While apartments, condos, and units in mixed-use buildings made up 20 percent of new permits between 2015-2024, middle housing types like duplexes, triplexes, quadplexes, and accessory dwelling units (ADUs) were only 2 percent of all permits.
- **Median home sale prices in Camas has increased over the last ten years,** with Camas' average prices generally remaining higher than the County. In 2023, the average home sale price in the City was **$704,000,** increasing by 119% since 2013 which is more expensive than the average home in the City of Portland (by $196,000) or Clark County (by $173,000).
- **Prices are also increasing quickly in Camas and Clark County for the average 2-bedroom multifamily rental.** The average 2-bedroom apartment rent was over $1,800 in the City and over $1,700 in Clark County (2024 year-to-date), indicating a 35% increase since 2010. Average 2-bedroom multifamily rents in Portland tracked closely with Camas in the 2010's, while rents in Vancouver remained lower (generally following countywide trends).
- **Compared with home sale price and rent increases in Camas, only households earning over 150% or more of AMI would be able to afford the average home in the City as of 2023.** However, the average 2-bedroom apartment is still affordable to households between 50 and 80% AMI in Camas.
- **The City of Camas had 98 units of regulated affordable housing in 6 buildings** according to data from Oregon Metro and the City. Approximately half of these units are affordable respectively for residents between 30-50% of AMI and 50-80% of AMI. The City also has several long-term care residential facilities for older adults providing 135 units.

Future Housing Demand

- **Since 2000, Camas has grown at a faster rate than Clark County overall but is expected to slow based on County estimates for 2045.** The County's projections assume that new population growth in Camas is estimated to grow at an annual rate of 1.2% to account for 4.05% of county growth.
- **County allocations show the need for 4,226 new housing units in Camas by 2045, adding around 211 new housing units per year.**
- **The City would add about 331 new units to meet the new permanent supportive housing target and 1,766 units affordable to low-income households below 80% of AMI by 2045.**

- **Camas residents with disabilities may require additional housing features for accessibility.** Around 8% of residents in Camas had at least one disability (2022), with the most common being cognitive difficulties, followed by ambulatory and vision difficulties. These disabilities can require housing accommodations such as zero-step entryways, ramps, lifts, or other accessibility features.

Housing Goals and Policies

Goal H-1 Citywide Housing

Promote safe, attractive, and vibrant neighborhoods with access to housing, jobs, services, schools, amenities, and healthy active living that meet the needs of all members of the community.

Policy H-1.1 Provide a range of housing choices and options to support all ages and income levels. Provide an adequate supply of land to accommodate the City's housing growth target.

Policy H-1.2 Support low impact development (LID) in residential development that minimizes both impervious areas and site grading to retain the natural contours of the land. LID strategies include conserving native vegetation, narrower streets, stormwater gardens, and other landscape practices that store and filter runoff.

Policy H-1.3 Promote the use of flexible development options (e.g., planned residential developments and development agreements) to create a variety of accessible housing types within new developments.

Policy H-1.4 Require new residential developments to demonstrate how proposed lot, street, and utility layouts can accommodate development of single-story dwellings, duplexes, and attached or detached accessory dwelling units.

Policy H-1.5 Ensure housing in mixed-use buildings (or developments) will complement the commercial and retail portion of the development and increase local living-wage jobs. Amend the municipal code to support mixed-use and middle housing development in the Downtown Subarea and nearby Heavy Industrial areas and near other community hubs.

Policy H-1.6 Support in-fill housing development on vacant or underutilized sites, subject to design review guidelines, that have adequate urban services. Ensure development compatibility with the surrounding neighborhood.

Policy H-1.7 Require all new housing developments to provide a range of housing types and sizes that are evaluated through the land use approval process and stipulated on the final plat.

Policy H-1.8 Support the maintenance, repair, and rehabilitation of Camas' existing housing stock by promoting resources that provide financial and other assistance to community members to maintain or repair health and safety features of their home and avoid displacement.

Policy H-1.9 Support investment in existing neighborhoods to enhance livability, safety, and accessibility in a way that preserves unique physical character while mitigating displacement.

Policy H-1.10 Develop objective design standards to ensure new development is compatible in scale, architectural style, and landscape composition with existing and planned neighborhoods.

Policy H-1.11 Provide ongoing education and community engagement regarding Camas' housing needs, including available programs and incentives. Provide permit process support to affordable housing developers.

Policy H-1.12 Achieve and sustain the housing targets by income group allocation for Camas as adopted by the Clark County Council. Monitor and assess the City's progress in meeting housing needs at least every five years.

Policy H-1.13 Support and encourage housing legislation at the county, state, and federal levels that promotes and supports the City's housing goals and policies.

Goal H-2 Housing Choice and Affordability

Create a diversified housing stock that meets the needs of all lifestyles and economic segments of the community through new developments, preservation, and collaborative partnerships.

Policy H-2.1 Support and encourage a wide variety of housing types throughout the City to provide choice, diversity, affordability, promote homeownership and mitigate displacement.

Policy H-2.2 Promote the preservation and rehabilitation of the City's existing affordable housing stock of all types, including low-cost rentals and affordable owner-occupied single-family homes, and protection of existing households. Support measures that preserve affordable housing, such as home repair programs with partners to rehabilitate existing housing that serve low to moderate-income households.

Policy H-2.3 Create opportunities for ownership housing in a variety of settings, styles, sizes, and affordability levels throughout Camas.

Policy H-2.4 Provide incentives and bonuses for the development of affordable housing, middle housing, and accessory dwelling units. Ensure that any affordable housing built with the support of city incentives or bonuses (including, but not

limited to, public funds, through development agreements, incentives, or by regulation) remains affordable for the longest possible term.

Policy H-2.5 Participate in collaborative partnerships with local and regional public and non-profit housing groups to ensure that affordable housing and supportive services are provided throughout the City.

Policy H-2.6 Encourage and support collaborations between for-profit and non-profit developers to expand affordable housing options.

Policy H-2.7 Evaluate the existing Multifamily Tax Exemption (MFTE) program provisions and participation. Consider changes and expansions to program options and associated costs and benefits that support housing production and affordable housing targets.

Policy H-2.8 Review and update the Camas Municipal Code to be consistent with State guidelines for housing and residential use.

Policy H-2.9 Plan for and accommodate Camas' allocated share of countywide future housing needs for moderate-, low-, very low-, and extremely low-income households as well as manufactured housing, multifamily housing, group homes, foster care facilities, emergency housing, emergency shelters, and permanent supportive housing.

Goal H-3 Housing Accessibility and Livability

Encourage and support a variety of housing opportunities for those with special needs, particularly those with challenges relating to age, health, or disability.

Policy H-3.1 Encourage and incentivize special needs and senior housing to be dispersed throughout the community and close to public transportation, shopping, medical clinics, and other essential services.

Policy H-3.2 Encourage, support, and work with partners, such as the Clark County Health District, that support social and health service organizations and offer programs and facilities to help persons with special needs remain in the community.

Policy H-3.3 Treat residential structures occupied by persons with disabilities the same as residential structures occupied by a family or by non-disabled unrelated individuals.

Policy H-3.4 Encourage the creation and retrofitting of senior housing and accessible housing types that allow residents to "age in place" to support aging populations and allow residents to continue living in Camas.

Policy H-3.5 Develop and implement a strategy or action plan to work with partners to secure grants and loans by agencies, private developers, and nonprofit

organizations that are tied to the provision of permanent supportive housing, emergency shelter beds, transitional housing, and other housing serving at-risk populations.

Policy H-3.6 Work with other jurisdictions and health and social service organizations to develop a coordinated, regional approach to address the impacts of displacement and people at risk of becoming homeless.

Policy H-3.7 Promote the use of universal design principles for new development or redevelopment housing projects to ensure housing is designed for all people and abilities.

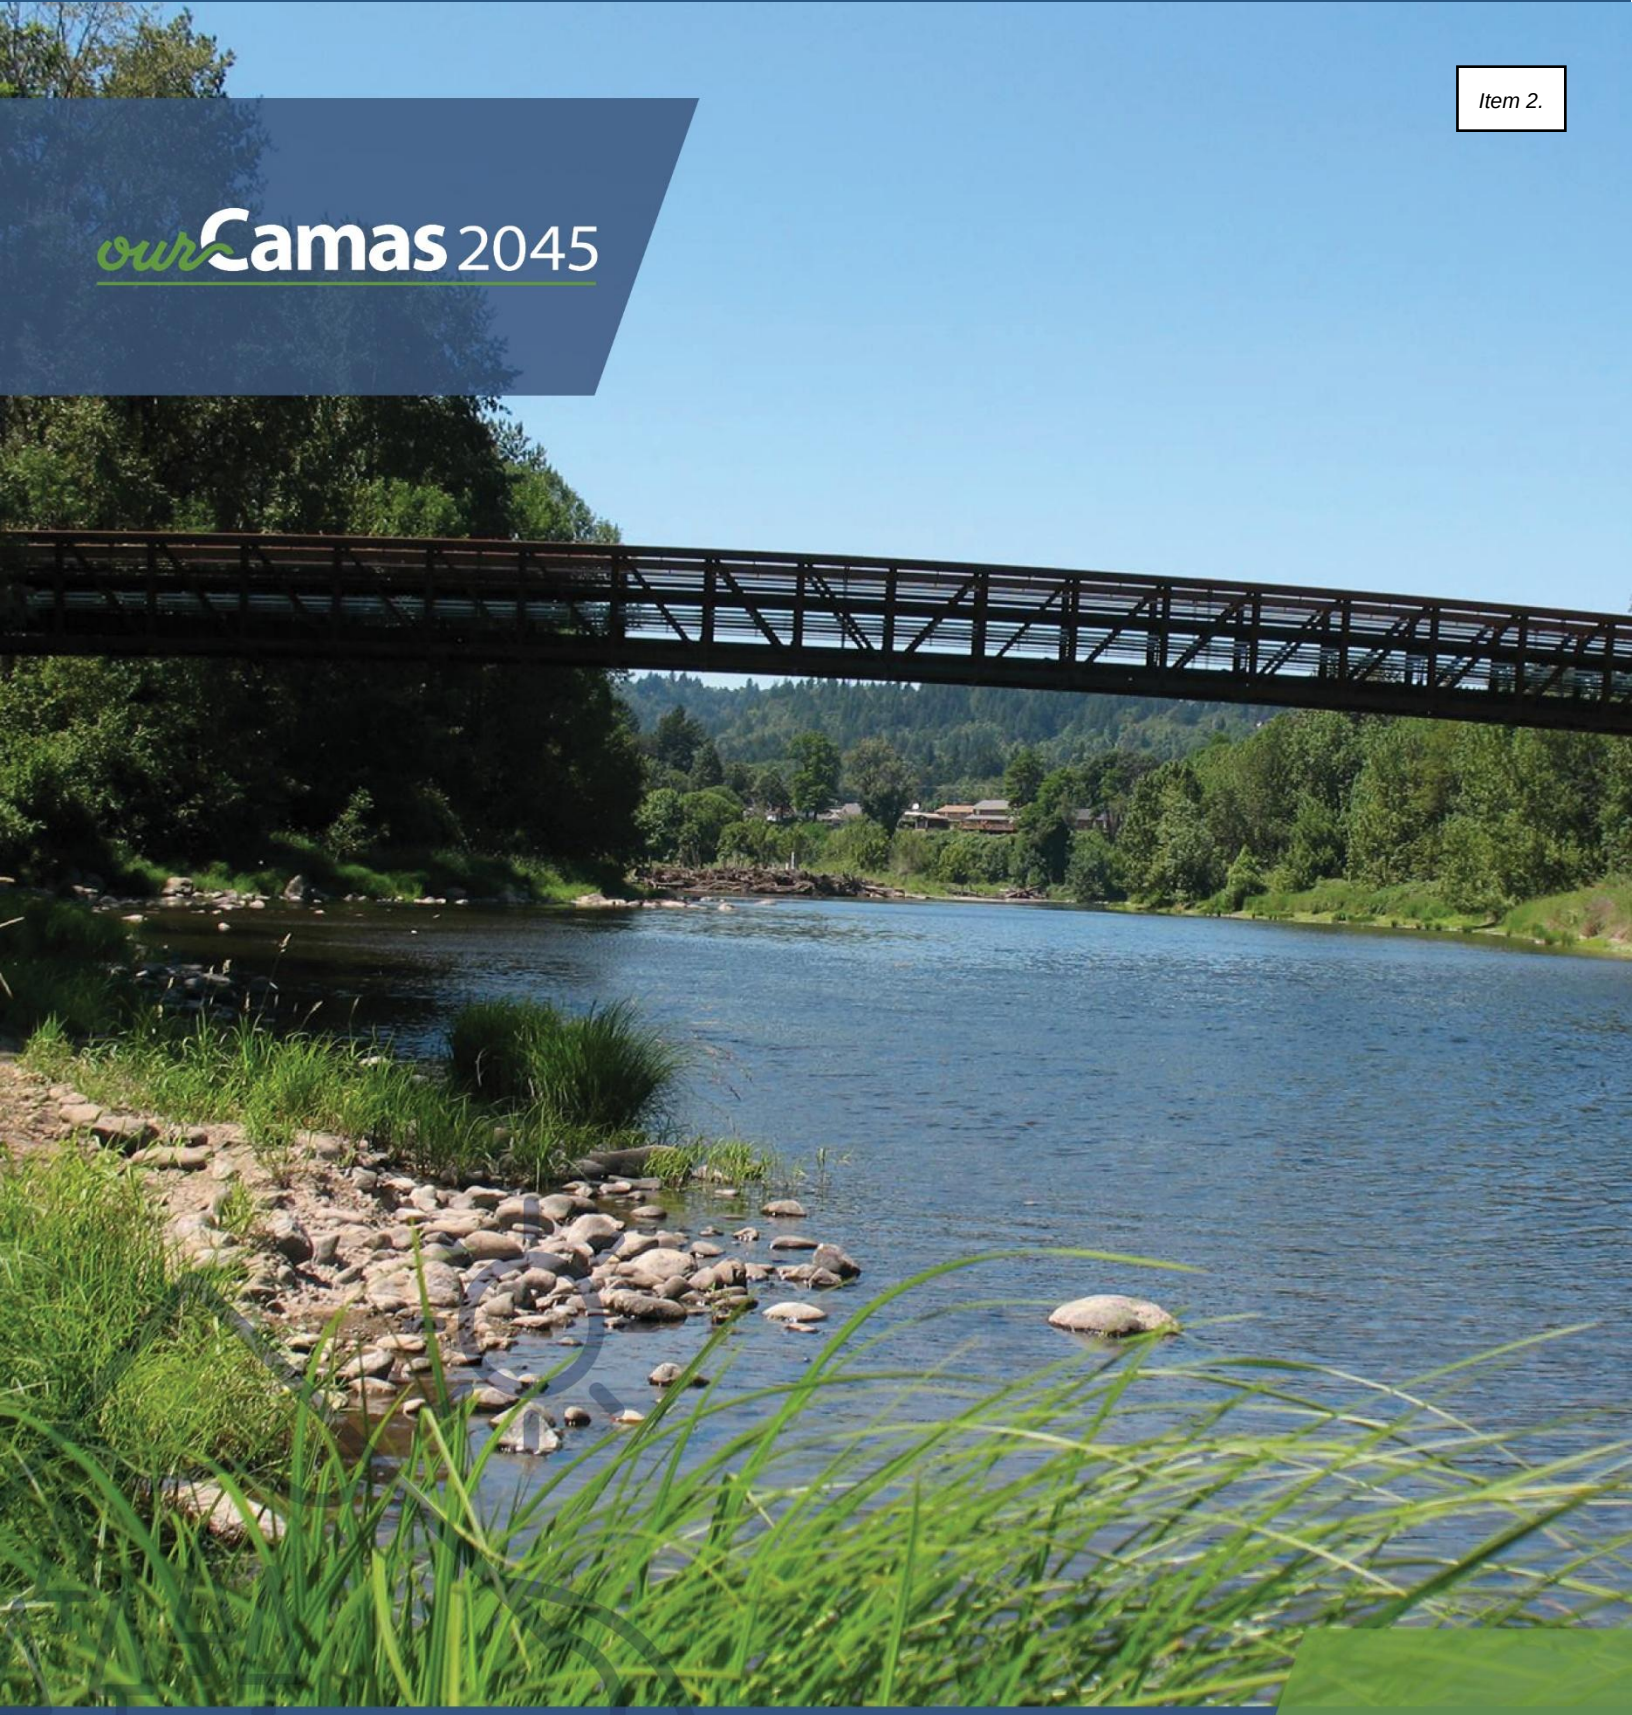
Goal H-4 Streamlining Permitting for Housing

Support the development of quality and sustainable housing in Camas with streamlined regulations and permitting processes.

Policy H-4.1 Periodically review and update the City's residential zoning regulations, design standards, and permitting procedures to promote quality development with timely and predictable outcomes.

Policy H-4.2 Create regulations and procedures that balance clarity and objectivity with flexibility for design innovation.

Policy H-4.3 Study the impacts of land use policy decisions and zoning code amendments and minimize the negative impacts to housing supply and affordability.



Policy H-4.4 Classify the development of middle housing and accessory dwelling units as permitted uses in lower density residential zones, consistent with the Growth Management Act.

Policy H-4.5 Review and update policies, codes, and ordinances to allow for a mix of housing types and variable lot and unit sizes in new subdivisions and development projects to promote housing choice diversity and affordability.

Policy H-4.6 Annually review the number and type of housing units built in Camas and permit timelines associated with new housing developments to inform additional changes to permitting, incentives, and housing programs.

ourCamas 2045

Natural Environment

06

06. Natural Environment

Nature in Camas

Camas has an abundance of natural areas that make it an ideal place to live. This element balances Camas' natural environment with the demands of a growing city.

Vision

Camas embraces its connection to nature and enjoys a wealth of outdoor recreational opportunities. Access to forests, clean water, parks, and trails is foundational to Camas' quality of life. The community shares a deep reverence for Camas' beauty, scenery, and tranquility, and is committed to preserving and enhancing its natural resources and tree canopy. Through proactive planning, the City mitigates the effects of changing climate conditions and natural hazards, ensuring a resilient community for generations to come.

Natural Setting

Camas is blessed with an abundance of natural areas and physical features, making it a highly attractive place for people to call home. Residents and businesses who seek an exceptional quality of life are buoyed by the natural surroundings of Camas and enjoy such amenities as Lacamas, Round and Fallen Leaf Lakes, Lacamas Creek, and the Washougal River greenway. Residents also enjoy the beauty and quiet of the open space and greenbelt network throughout the community, stitched together by the City through many decades of planning and implementation.

As envisioned decades ago and to be held in perpetuity as natural, legacy lands along Lacamas Lake, Fallen Leaf Lake, and near Green Mountain are treasured for their mature stands of evergreen and deciduous trees and offer a respite for many in the community. When people think of Camas, they think of a place that values the natural environment on par with other facets of the community. Camas is a place where stewardship of greenbelts, natural areas, and open space is an essential fiber in the fabric of the community.

Overview

The natural environment element of the comprehensive plan provides a policy framework for the identification, protection, and improvement of Camas' natural environment. Goals and policies include those for environmental stewardship, the protection of environmentally sensitive lands (critical areas), natural areas and open space, shorelines, and landscaping and tree enhancement.

Stewardship has three prongs for the benefit of all community members. The first prong relates to compliance with the Growth Management Act (GMA) and the identification, designation, and protection of certain environmentally sensitive lands, which, in GMA, are known as critical areas. The second prong relates to the community and its steadfast approach to keeping Camas a place that balances growth with preservation of a natural areas and open space network. Camas has longed placed a premium on its open space network of environmentally sensitive lands, with or without GMA requirements. The third prong is an ethic of volunteerism and stewardship from the community's citizenry, which manifests in many ways including active volunteer groups, active boards and committees, and public involvement on issues related to the environment.

Environmental stewardship refers to the City's role as chief steward of the environment for the Camas community. A chief steward in this context means how the City, on behalf of the residents, establishes a responsible relationship between the people and the land they inhabit.

The City of Camas has preserved over 700 acres of open space across 31 sites, including forests, wetlands, riparian corridors, and steep slopes, with nearly half of this land concentrated around Lacamas Lake. These natural areas, distinct from developed parks, are managed to protect ecosystem functions, water quality, native vegetation, and wildlife habitats, while allowing for limited public access through trails and modest amenities. The City prioritizes conservation and restoration of high-value landscapes such as waterfronts, forested hillsides, and sensitive wetlands, balancing environmental stewardship with recreational use. Key efforts include protecting watercourses within three major watersheds, regulating development on steep slopes and wetlands, and maintaining resilient forest lands to support biodiversity and ecological health.

COMMUNITY FEEDBACK

- **Preserve land for wildlife and promote denser development in already developed areas to conserve green spaces**
- **Preserve mature landscaping and save parks and green space**
- **Support cleanup efforts at the Camas Mill and other contaminated sites to protect natural resources and local water supply**
- **Implement targeted lake management actions to protect water quality and reduce harmful algae blooms in local waterways**

Environmental Stewardship

One of the most demanding roles the City of Camas must fulfill is that of chief steward of the community's environment while also accommodating growth. The City has the duty to implement land use policies via development regulations and the responsibility to comply with federal and state statutes related to the environment.

Facing federal and state mandates, the City strives to ensure that its environment is managed in compliance with applicable laws and does so in a wise manner. While simultaneously accommodating growth, the City encourages the preservation, restoration, and improvement of the natural environment in all development.

Goal NE-1 Environmental Stewardship

Preserve Camas' natural environment citywide by developing a sustainable urban environment and protecting natural areas and open space, including critical areas.

Policy NE-1.1 Support a cleanup of the Camas Mill and other contaminated sites to protect natural resources and the city's water supply.

Policy NE-1.2 Support programs and regulations that monitor, maintain, conserve and protect water quality in Camas, including watersheds, Lacamas Lake Basin, Columbia River Basin, and Washougal River Basin.

Policy NE-1.3 Encourage restoration and protection of natural areas through the removal of invasive species.

Policy NE-1.4 Support and implement actions identified in adopted plans, including adaptive management of natural resources that is consistent with best available science and climate guidance to improve climate resiliency.

Policy NE-1.5 Protect and restore natural resources, valuable historic and cultural areas, climate refugia, habitat areas and corridors to provide biological and hydrological connectivity that fosters resilience to climate impacts.

Policy NE-1.6 Create and support natural resource management plans that consider climate change impacts and guide adaptive management.

Policy NE-1.7 Include immediate and long-term environmental impacts in the policy and regulatory decision-making process. Identify and quantify the ecosystem services benefits of natural systems and include these natural capital assets in cost-benefit assessments for community and development planning.

Policy NE-1.8 Promote and incentivize public and private landowners to restore and create local habitats and corridors to increase the availability throughout the city.

Policy NE-1.9 Regulate land use and development to protect natural topographic, geologic, vegetative, and hydrologic features of undeveloped properties.

Policy NE-1.10 Promote soil stability and minimize and control soil erosion using best management practices, best available science, ecologically sustainable site design, natural drainage systems and protection of existing native vegetation.

Critical Areas

The natural environment includes specific environmentally sensitive areas that the GMA requires the City to identify, designate, and protect. Referred to in statute (RCW 36.70A) as *critical areas.* Under GMA, critical areas include wetlands, critical aquifer recharge areas, frequently flooded areas, geologically hazardous areas, and fish and wildlife habitat conservation areas. Each of these critical areas is present in the City. The law further requires that the City use best available science (BAS) when developing policies and regulations to designate and protect critical areas. GMA also recognizes that salmonids (salmon and trout) play an important role in the ecosystem and are vital cultural and economic resources, which require jurisdictions to give 'special consideration to conservation and protection measures necessary to preserve or enhance anadromous fisheries'.

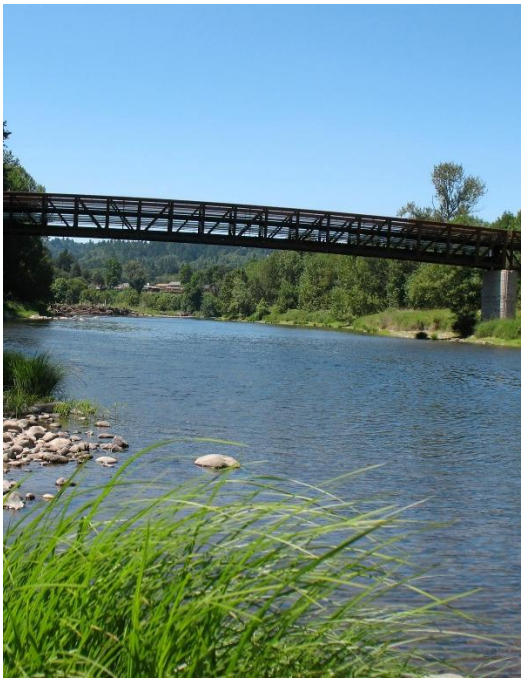
Functions of Critical Areas

Critical areas perform key functions that enhance the environment and protect us from natural hazards. The beneficial functions and values that critical areas provide include, but are not limited to, water quality protection and enhancement; fish and wildlife habitat; food chain support; flood storage, conveyance, and attenuation of flood waters; groundwater recharge and discharge; drinking water quality and quantity; erosion control; protection from natural hazards; historical, cultural, archaeological, and aesthetic value; and recreation. Identifying the functions and values of local critical areas is essential to defining the purpose of a critical areas protection program.

Each type of critical area performs different functions and each community assesses the values of the critical areas in its environment differently. Therefore, the purpose of protecting critical areas is unique for each community. Critical areas protection is necessary to protect the public's health and safety and is essential to comply with state laws in Washington. It may also provide compliance with federal laws for such things as water quality and endangered species.

There are also economic reasons to protect critical areas. For example, protection of drinking water quality and quantity supports sustainable growth, and critical areas support resource industries, such as salmon and other fisheries.

Critical areas are environmentally sensitive and hazardous areas that the State and City have identified for certain development considerations or restrictions to protect their functions and values, while allowing for reasonable use of property. Critical areas protection is regulated through the Camas Municipal Code (CMC) Title 16, which identifies five types of critical areas: wetlands, fish and wildlife habitat conservation areas, geologically hazardous areas (steep slopes, erosion hazard areas, and seismic hazard areas), critical aquifer recharge areas (CARAs), and frequently flooded areas.



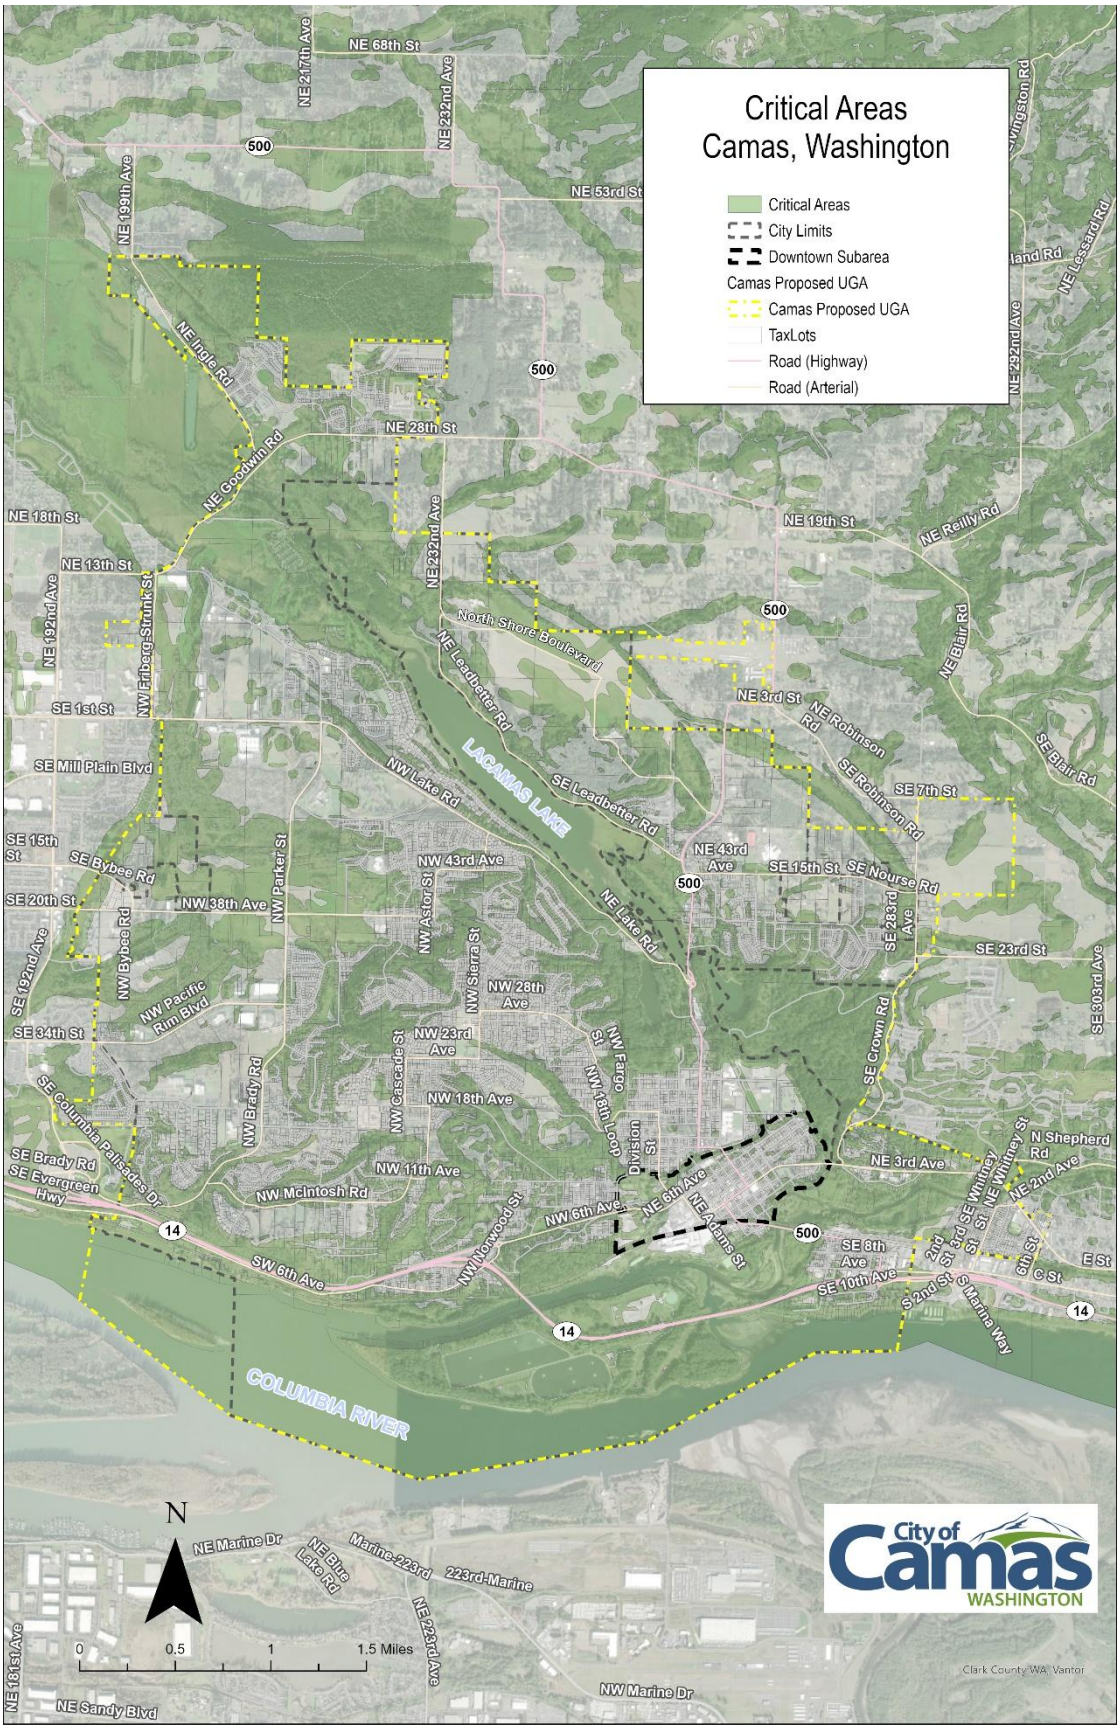


Figure 4 Critical Areas

Wetlands

Wetlands are defined as those areas, designated in accordance with the approved federal wetland delineation manual and applicable regional supplements, which are inundated or saturated by surface or ground water at a frequency and duration, and under normal circumstances do support, a prevalence of vegetation adapted for life in saturated soil conditions. Wetlands in the community are generally located in and around the Grass Valley area in west Camas, Lacamas Lake, Lacamas Creek, and the Washougal River greenway. The largest mapped wetland is located around the south end of Lacamas Lake, identified as lake habitat. The National Wetlands Inventory (NWI) does not identify mapped wetlands in downtown Camas.

Critical Aquifer Recharge Areas

Critical aquifer recharge areas (CARAs) are those areas with a critical recharging effect on aquifers used for potable water, including areas where an aquifer that is a source of drinking water is vulnerable to contamination that would affect the potability of the water, or is susceptible to reduced recharge. The quality and quantity of groundwater in an aquifer is inextricably linked to its recharge area. To determine the threat to groundwater quality, existing land use activities and their potential to lead to contamination should be evaluated.

The goal of establishing CARAs is to protect the functions and values of the community's drinking water supply by preventing pollution and/or contamination of the supply directly or recharge areas indirectly.

Frequently Flooded Areas

Floodplains and other areas subject to flooding perform important hydrologic functions and may present a risk to persons and property. Classifications of frequently flooded areas should include, at a minimum, the 100-year floodplain designations of the Federal Emergency Management Agency (FEMA) and the National Flood Insurance Program (NFIP), known as the 'special flood hazard area', which is defined further as having a special flood, mudflow, or flood-related erosion hazards and shown on Flood Insurance Rate Maps (FIRM), which also includes the regulatory floodway.

Geologically Hazardous Areas

In the physical context of Camas, geologically hazardous areas include areas susceptible to erosion hazard, seismic hazard, mine hazard, and other geological events. Geologically hazardous areas in Camas include severe erosion hazard areas adjacent to Lacamas Lake, north of the Columbia River, and to the east along the Washougal River.

Fish and Wildlife Habitat Conservation Areas

Fish and Wildlife Habitat Conservation Areas (FWHCAs) are critical ecological zones that support essential habitats and species necessary for maintaining ecosystem integrity and biodiversity. These areas may include rare ecosystems, high-density wildlife zones, breeding and migration

corridors, and habitats for endangered or sensitive species. Their designation plays a key role in guiding land use planning, urban growth boundaries, and conservation strategies. FWHCAs must be identified using the best available science, considering factors such as habitat connectivity, human activity levels, riparian and salmonid protection, and the impact of surrounding land uses. Buffer zones are also recommended to minimize conflicts between development and habitat preservation.

Aquatic and Riparian Habitat

Fish and wildlife habitat conservation areas in Camas include habitats for state or federally listed endangered, threatened, or sensitive species, as well as areas associated with state priority species identified by the Washington Department of Fish and Wildlife. These areas encompass naturally occurring ponds under twenty acres, classified state waters, and water bodies stocked with game fish by governmental or tribal entities. Key aquatic habitats in Camas include the Columbia and Washougal Rivers, Lacamas Creek, Camas Slough, Lacamas Lake, and various streams, ponds, and wetlands, all often bordered by riparian zones. Lacamas Lake is the largest aquatic habitat in the city aside from the Columbia River system.

Terrestrial Habitat

Terrestrial habitats in Camas, like aquatic ones, include areas supporting state or federally listed endangered, threatened, or sensitive species, as well as state priority species identified by the Washington Department of Fish and Wildlife (WDFW), State Natural Area Preserves, and locally important habitats. Locally designated habitats include Oregon white oak trees and stands, and Camas lily fields of specific sizes. While much of the city is mapped as “cave rich” by WDFW, actual cave presence is limited, though caves are considered a priority habitat feature. The Camas biodiversity corridor, which includes mature timber and sightings of Vaux swifts, runs through parts of the city. Oak woodland habitat is primarily found near Lacamas Lake, and the northern part of Camas including the Lacamas Prairie Natural Area Preserve, which protects rare Willamette Valley wet prairie habitat and several endangered plant species, including Bradshaw’s lomatium.

Critical Areas Goals & Policies

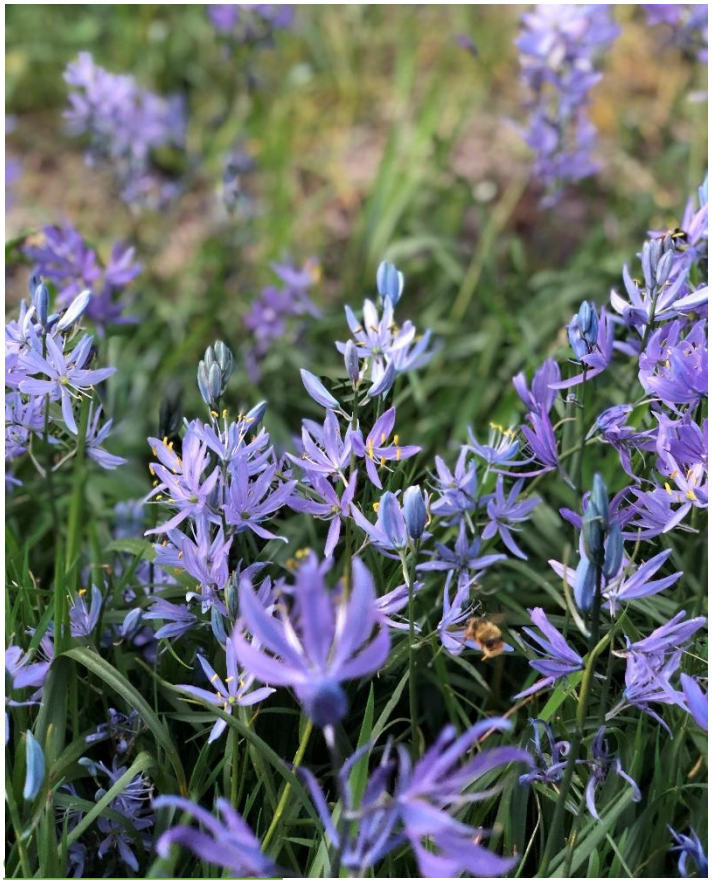
Preserve, maintain, and restore the City’s critical areas to protect their function and value.

Policy NE-2.1 Use best management practices and best available science to preserve, protect, and restore the biological health and diversity of Camas’ critical areas.

Policy NE-2.2 Preserve and restore aquatic and riparian habitats consistent with applicable regulations.

Policy NE-2.3 Preserve and avoid development of areas with endangered, threatened, and sensitive species and species of local importance as required by local, state, and federal laws.

Policy NE-2.4 Ensure that development throughout the City meets or exceeds standards and practices for long-term wetland protection and mitigation.



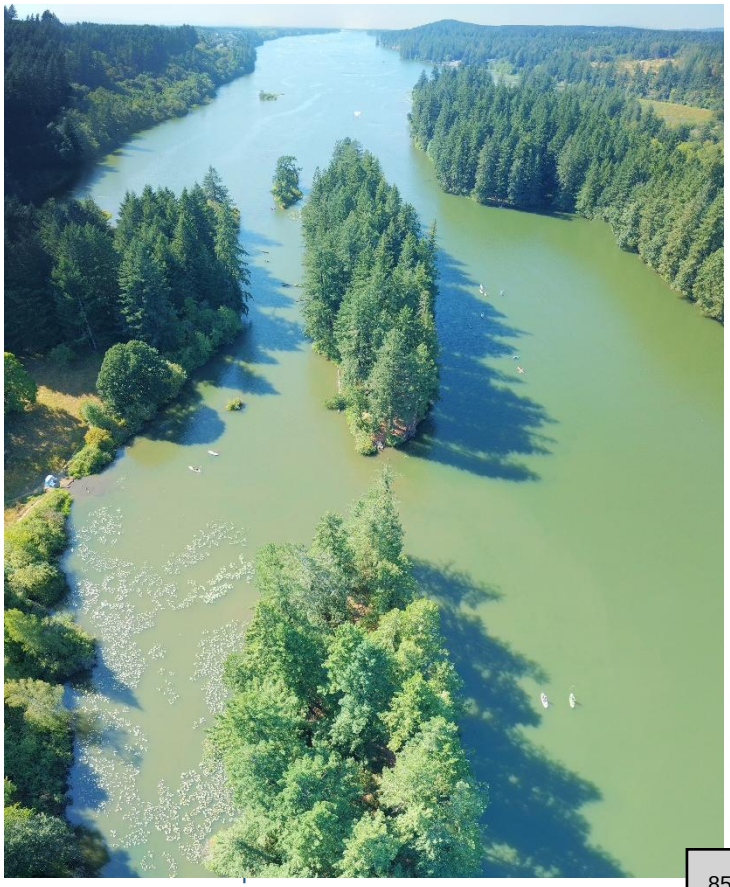
Shorelines

Overview

The Shoreline Management Act, enacted in 1972, created a collaborative framework between Washington State and local governments to manage and protect shorelines. Under this law, local jurisdictions are required to develop Shoreline Master Programs (SMPs) tailored to their specific needs.

Camas encompasses 946 acres of shoreline across 26 miles, including areas along Lacamas Creek, several lakes, and the Columbia and Washougal Rivers. The SMP outlines strategies to minimize flood risks, enhance recreational opportunities, and ensure sustainable shoreline use through voluntary programs and regulatory measures.

To guide development and conservation, Camas assigns specific shoreline designations based on land use, ecological characteristics, and community vision. These designations—Aquatic, Natural, Urban Conservancy, Medium Intensity, and High Intensity—are aligned with state guidelines and the city's comprehensive plan. Each designation comes with tailored policies and development regulations, such as height and setback limits. For example, High Intensity areas support industrial use, while Natural areas prioritize ecological preservation. These designations help ensure that shoreline development aligns with environmental protection and long-term community goals.



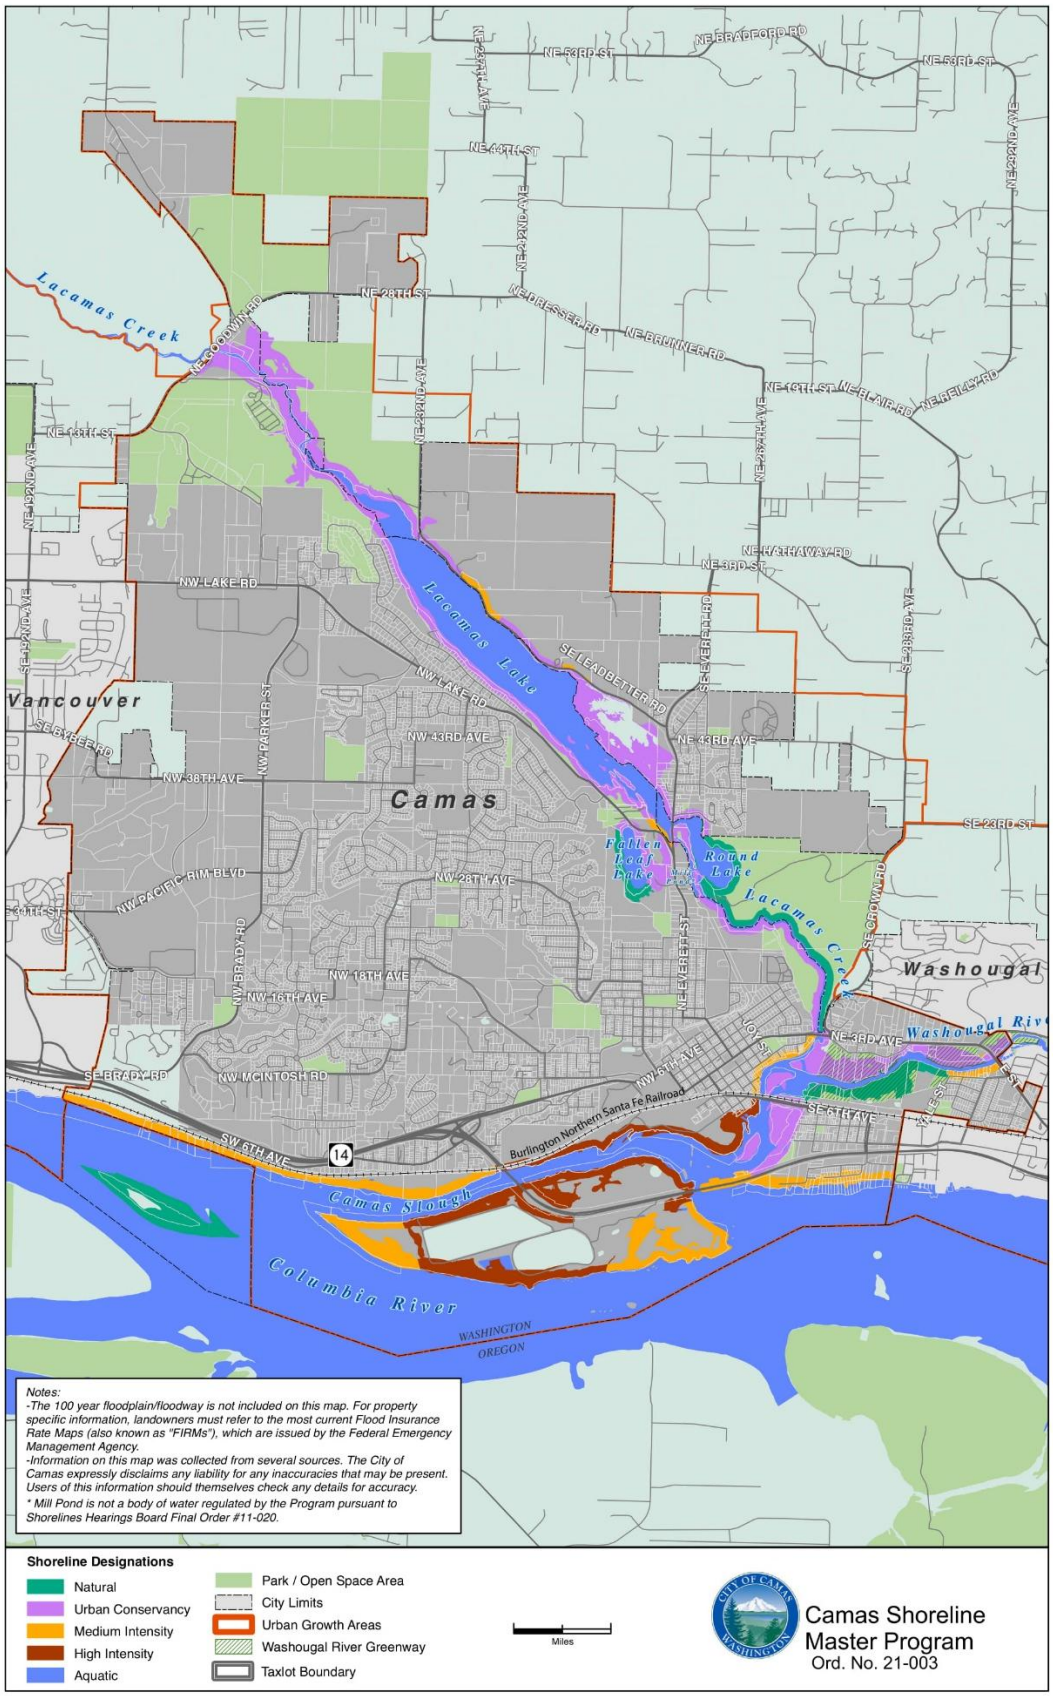


Figure 5 Shoreline Map

Shoreline Goals and Policies

Goal NE-3 Shorelines

Use the full potential of shoreline in accordance with the opportunities presented by their relationship to the surrounding area, their natural resource values, and their unique aesthetic qualities offered by water, topography, and views. Develop a physical environment that is both ordered and diversified, and which integrates water and shoreline uses while achieving a net gain of ecological function.

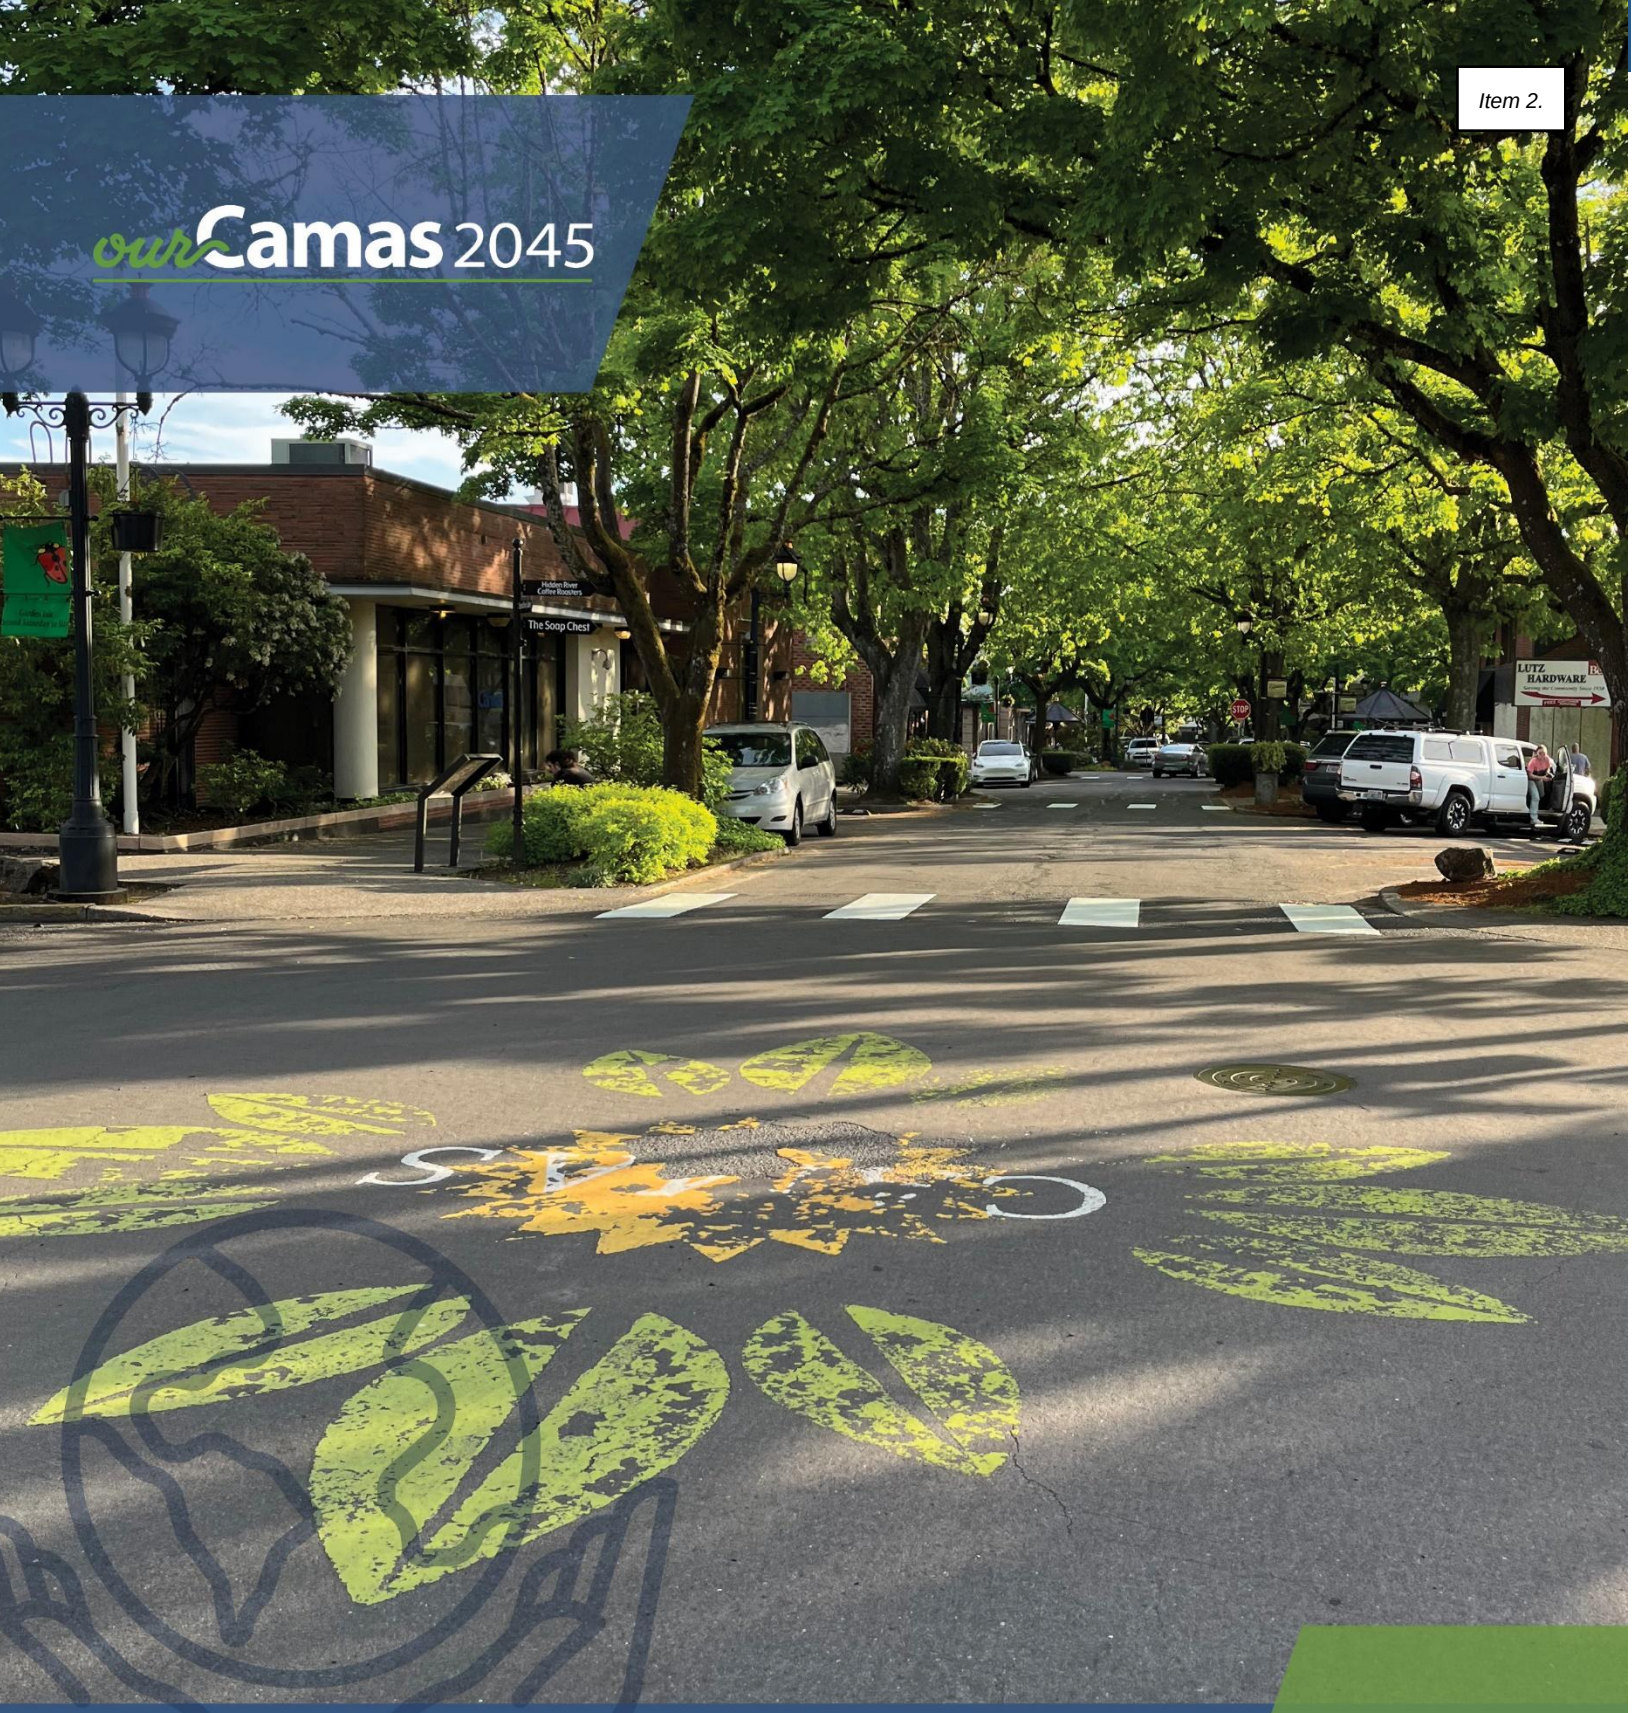
Policy NE-3.1 Adopt the goals and policies as outlined in the current Camas Shoreline Master Program.

Landscape Enhancement and Tree Preservation

The natural landscape and existing tree cover are important aspects of Camas' natural environment. Native, mature landscaping and trees contribute to the City's ecological health, supply valuable animal habitat, and enhance the community's natural beauty.

Goal NE-4 Landscape Enhancement and Tree Preservation

Preserve existing natural landscapes and tree canopy. Support opportunities for increasing native and climate resilient landscaping and tree canopy.



Policy NE-4.1 Develop and implement a program to prioritize retention of existing trees and planting of new trees within development sites to maximize cooling and energy savings. Encourage planting of hardy and climate resilient native trees.

Policy NE-4.2 Develop an urban forestry program that articulates a long-term strategy for future-proofing the City's tree canopy, including actions for tree protection, management, education, and collecting and maintaining data on citywide tree canopy.

Policy NE-4.3 Require the use of native and climate resilient plants in residential, commercial, and industrial landscapes to support the implementation of low impact development.

Policy NE-4.4 Develop and implement a program to mitigate and compensate for tree canopy loss when retention of mature trees within development sites is impractical.

ourCamas 2045

Climate Change & Resliency

07

07. Climate Change & Resiliency

Community Impacts from Climate Change

Climate hazards (i.e., natural hazards exacerbated by climate change) of the highest concern and priority are extreme heat and precipitation. Camas can address anticipated impacts by reducing GHG emissions and building community resiliency.

Vision

In 2045, Camas has proactive plans to reduce greenhouse gas (GHG) emissions and mitigate the effects of changing climate conditions and natural hazards, ensuring a resilient community for generations to come. The most vulnerable communities are protected, and climate planning contributes to improvements in community health and well-being.

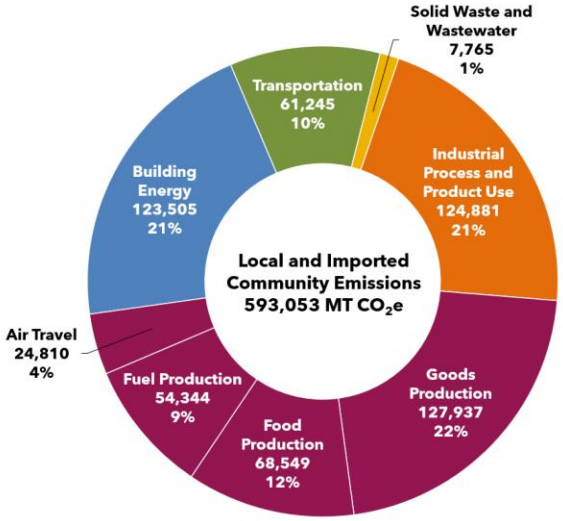
Introduction

The City developed this climate change and resiliency element consistent with House Bill 1181, signed into law in 2023. This new state law integrates climate planning into Washington's GMA and requires cities and counties to include a climate element in their comprehensive plans.

Climate change refers to long-term shifts in temperatures and weather patterns. The burning of fossil fuels and other human activities are increasing emissions of greenhouse gases (GHGs) that trap heat in the atmosphere and contribute to global and local climate change. Negative effects include impacts on the community caused by natural hazards that are exacerbated by climate change (e.g., the increased frequency and severity of drought conditions). Natural hazards are also referred to as "climate hazards" in this element as climate change is anticipated to affect the frequency and intensity of natural hazards.

The purpose of this climate element is twofold: to reduce contributions to climate change (i.e., GHG emissions) and to build community resilience to climate change.

To support these two overarching goals, the City formed a Climate Policy Advisory Team (CPAT) to advise on the creation of this new element. The 17 CPAT members included community members, City staff, City Council and Planning Commission liaisons, and representatives from the Port of Camas-Washougal, Clark Public Utilities, NW Natural, and the Camas School District. CPAT members held five meetings between early 2024 and early 2025.



The CPAT was instrumental in the identification and development of climate goals and policies.

Climate Overview

Greenhouse Gas Emissions

The GHG reduction subelement identifies actions to reduce GHG emissions and decrease per capita vehicle miles traveled (VMT). One of the requirements of the GHG reduction subelement is to meet the GHG reduction requirements in RCW 36.70a.070(9)(d), including reducing per capita VMT within Camas but without increasing GHG emissions elsewhere in the state. To identify actions for VMT reduction, Clark County worked with local cities to prepare a VMT study and travel market assessment to understand baseline travel patterns and strategies for VMT reduction. According to the VMT study, data from the Highway Performance Monitoring System shows that the city's estimated per capita VMT, which represents the average weekday VMT within Camas divided by the city's population, is 11.1. The travel market assessment identified key travel destinations in the city for short trips (i.e., trips 3 miles or less), showing that areas near Lacamas Lake, Camas high school, and Downtown Camas are popular destinations. Both assessments will help inform a regional target for VMT, which will be established outside the climate element/comprehensive plan framework. In addition to VMT reduction, Clark County's Countywide Planning Policies establish requirements for cities to reach net-zero emissions by 2050 (14.1.2) in alignment with statewide GHG emission reductions (RCW 70A.45.020(1)) and set interim (5-year) objectives or targets (14.1.4). A GHG inventory for Camas was also prepared to inform GHG reduction strategies. The inventory provides an estimate of the city's carbon footprint from local emissions (building energy, transportation, solid waste and wastewater, and industrial process and product use) and imported emissions (consumption of goods). Figure 6 Camas Emissions, 2022 shows the combined and per capita emissions for the city.

Figure 6 Camas Emissions, 2022

With a population of 27,250, all 2022 GHG emissions combined (local and imported) for City of Camas totaled

593,035 MT CO_2e

21.8
MT CO_2e
Per Capita

Local emissions include sector-based emissions that are generated within Camas. Imported emissions are generated outside of Camas to produce and provide the goods, food, services, air travel, and production of transport of fuels consumed by households. Additionally, wildfires have become one of the largest sources of carbon emissions in Washington state. From 2014 to 2018, wildfires in the state generated 39,200,000 MT CO_2e.

Figure 7 Local and Imported Emissions in Camas

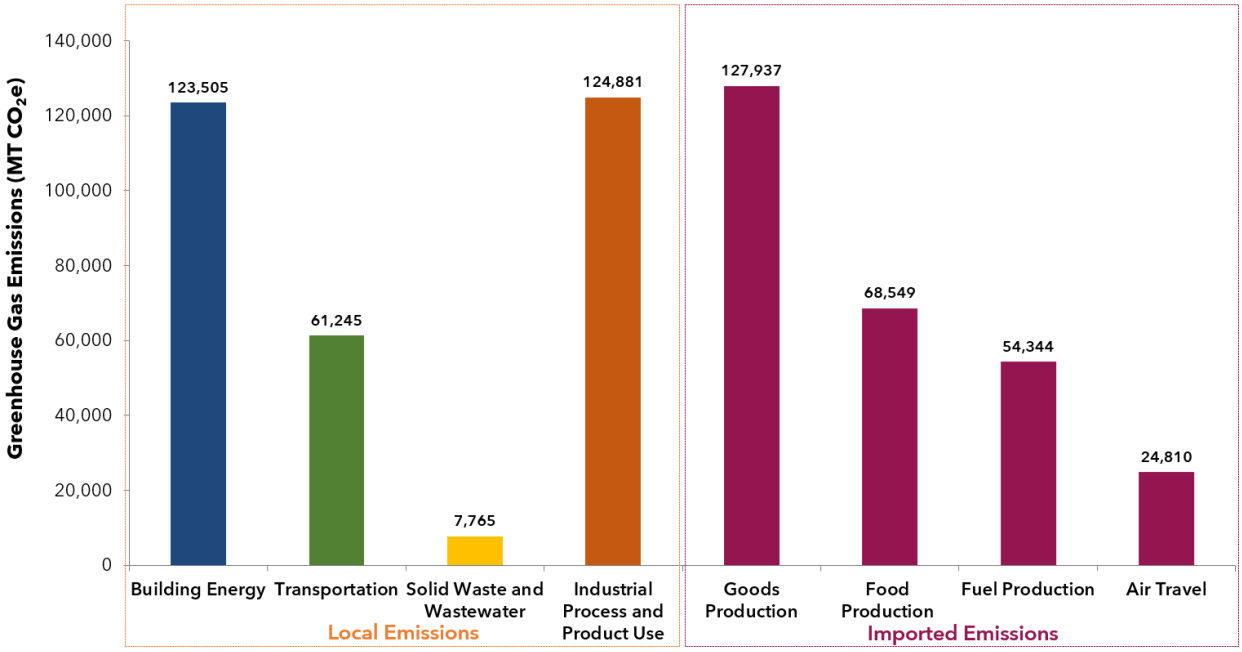


Figure 7 shows a breakdown of the sources of local and imported emissions in Camas. Most sources of local emissions include **industrial process and product use** and **building energy**, which accounts for **78%** of local emissions. Emissions from the industrial process and product use sector generally involve facilities with silicon semiconductor manufacturing. While emissions from these facilities contribute to a large share of local emissions, demand for these goods is global and not specific to Camas. Therefore, goals and policies target reducing local emissions and support existing GHG reduction strategies or targets that are being implemented by businesses and industries in Camas.

Climate Resiliency

Community resiliency is the ongoing process of preparing for, anticipating, and responding to natural hazards created or aggravated by climate change.

Natural hazards relevant to Camas are identified in the 2023 Clark County Natural Hazard Mitigation Plan (NHMP) (CRESA 2023). Table 8 Natural Hazards in Camas lists hazards of concern in order of ranking and their priority, which were evaluated as part of the risk assessment in the NHMP. The risk rating reflects the probability of a hazard weighted against its potential impact on people, property, and the economy. The table also shows the projected climate impacts for each hazard and how hazards have affected the community in the past.

Table 8 Natural Hazards in Camas

Natural Hazard (NHMP Rating[7])	Projected Changes by 2050[8]	Effects on the Community[9]
Extreme Heat (High)	40+ days per year that feel hotter than 90 degrees.	Increased demand for air conditioning, higher utility bills, heat-related illness for sensitive populations and youth at school playgrounds and sports fields, disruption of outdoor activities.
Extreme Precipitation (High)	12% increase in total annual precipitation	Overflowing of streams or rivers, unsafe driving and walking conditions.
Landslide (Medium)	13% increase in heavy rain events	Physical damage to residential and commercial property, energy infrastructure, communication infrastructure, and transportation infrastructure.
Flood (Medium)	17% increase in peak streamflow in Washougal River	Property damage, particularly for older buildings and low-income housing near the floodplain, and temporary or permanent displacement. Temporary closures of businesses and other services.
Wildfire (Medium)	9+ days per year that have high fire danger	Wildfire smoke can impact human health, particularly people with respiratory illnesses or diseases. Increased health risks and property damage for communities near the wildland-urban interface[10].
Drought (Low)	14% decrease in summer rains	Impacts to water quality and quantity, decrease in habitat quality and quantity for salmon and other aquatic species.

[7] 2023 CRESA Regional Natural Hazard Mitigation Plan Volume 2 – Planning Partner Annexes
[8] University of Washington's Climate Mapping for a Resilient Washington webtool. Projections are based on a "business as usual" emissions scenario.
[9] Includes effects identified by the Camas community in a 2025 survey.
[10] Clark County Code (15.13.030) defines the wildland-urban interface as areas with elevation in excess of 500 feet and one or more of the following conditions: (a) slope equal to or greater than 25%, (b) forest type vegetation, and (c) outside of an organized fire protection district.

Vulnerability

Vulnerable Communities

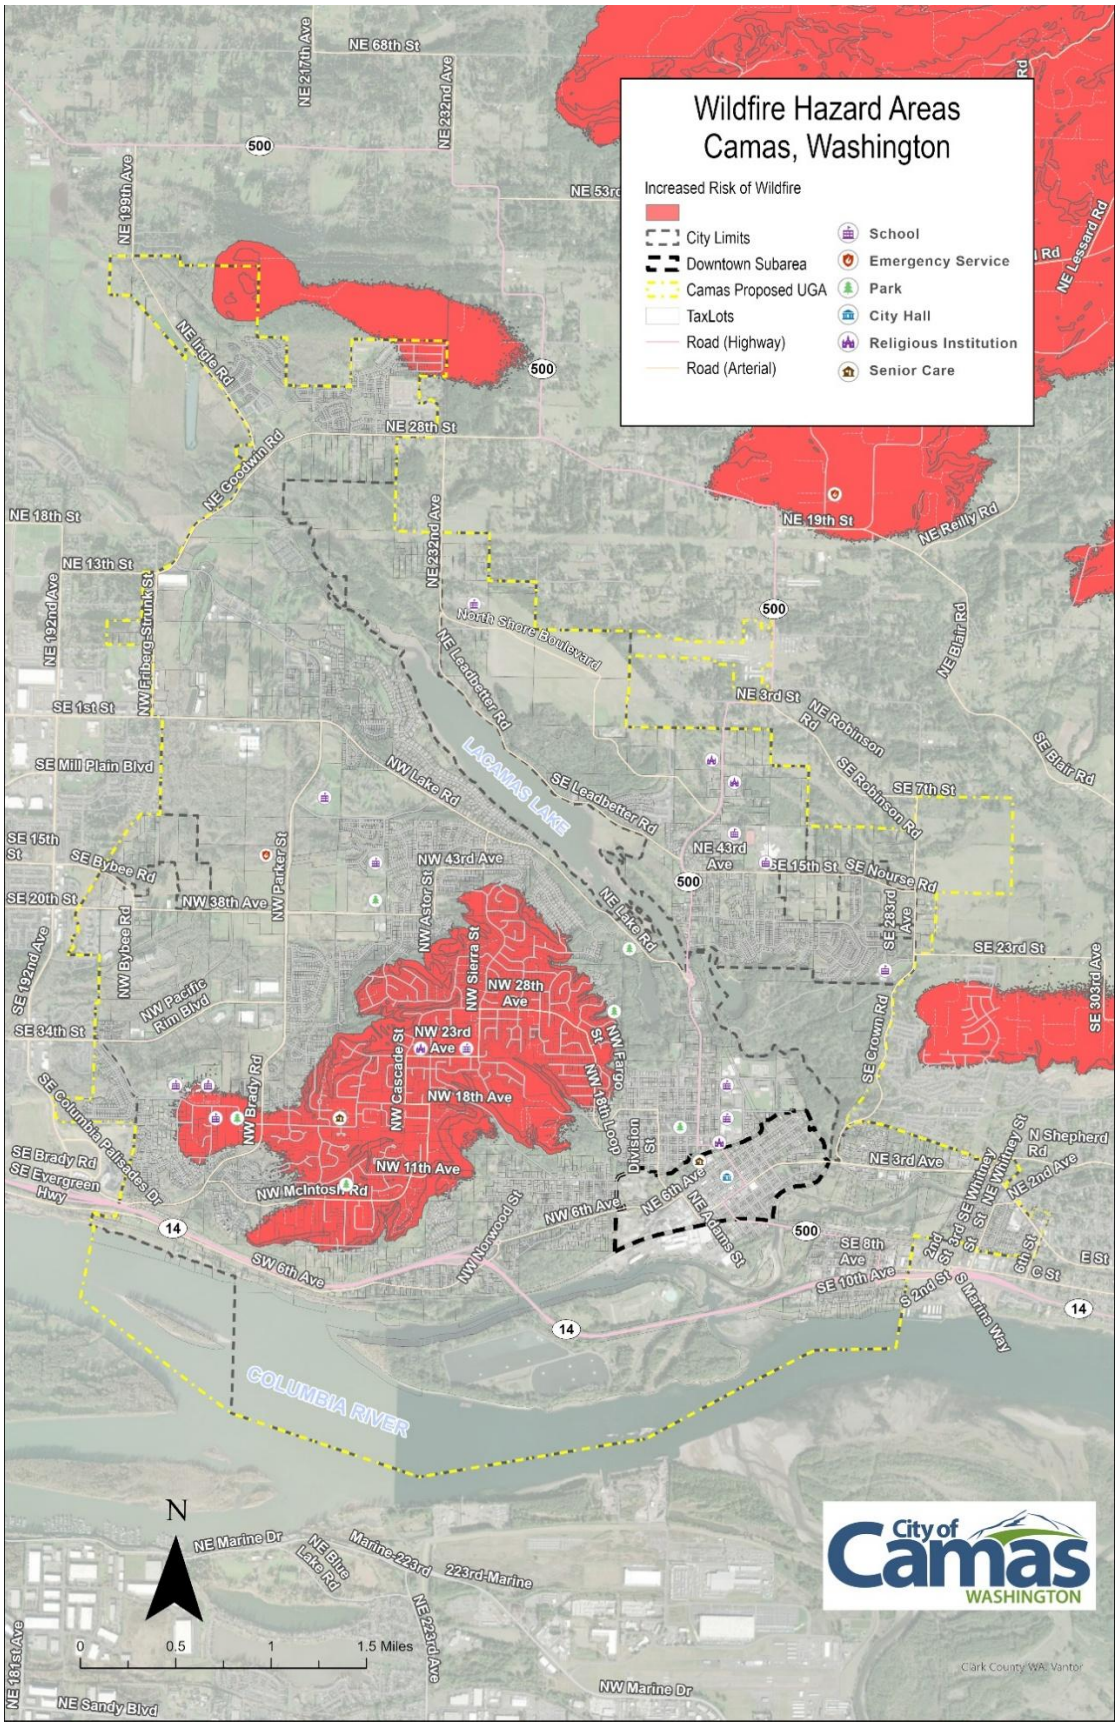
Climate change can impact certain groups of people (vulnerable populations) and areas of the city (overburdened communities) differently. Vulnerable populations are groups of people who are more vulnerable to environmental harms due to socioeconomic factors and other health risk factors (RCW 70A.02.010(14)). Overburdened communities are areas where vulnerable populations experience environmental harms and health impacts (RCW 70A.02.010(11)). Together, vulnerable and overburdened communities are disproportionately impacted by climate change due to the concentration of environmental harms (e.g., air pollution near major roadways) and socioeconomic characteristics (e.g., low income, youth and children). People and communities in Camas who are vulnerable to climate hazards are generally described in the *Our Camas 2045* Equity Framework (see introduction for a description of Equity Communities in Camas).

In addition to communities described in the Equity Framework, CPAT members identified additional communities that could be more vulnerable to climate hazards. These communities include areas that are located near floodplains (such as Lacamas Lake and the Columbia River), near mobile sources of air pollution (such as major roadways), near steep slopes and steep road grades, and/or near the wildland urban interface (e.g., homes adjacent to forested areas).

Vulnerable Assets

In Camas, the impact of climate hazards can depend on the proximity of people and buildings to each hazard. The approximate location of these hazards is shown in Figure 8 Wildfire Hazard Areas and Figure 9 Flood and Landslide Hazard Areas. Climate hazard locations are based on data from publicly available sources such as Clark County's Open Data Hub and include approximate areas of increased risk. While this information provides a visualization of higher risk areas, data may not include all potential risks and data gaps may exist depending on when data was published. Therefore, these figures provide a conceptual understanding of the location of climate hazards and potential effects on the community.

Figure 8 Wildfire Hazard Areas



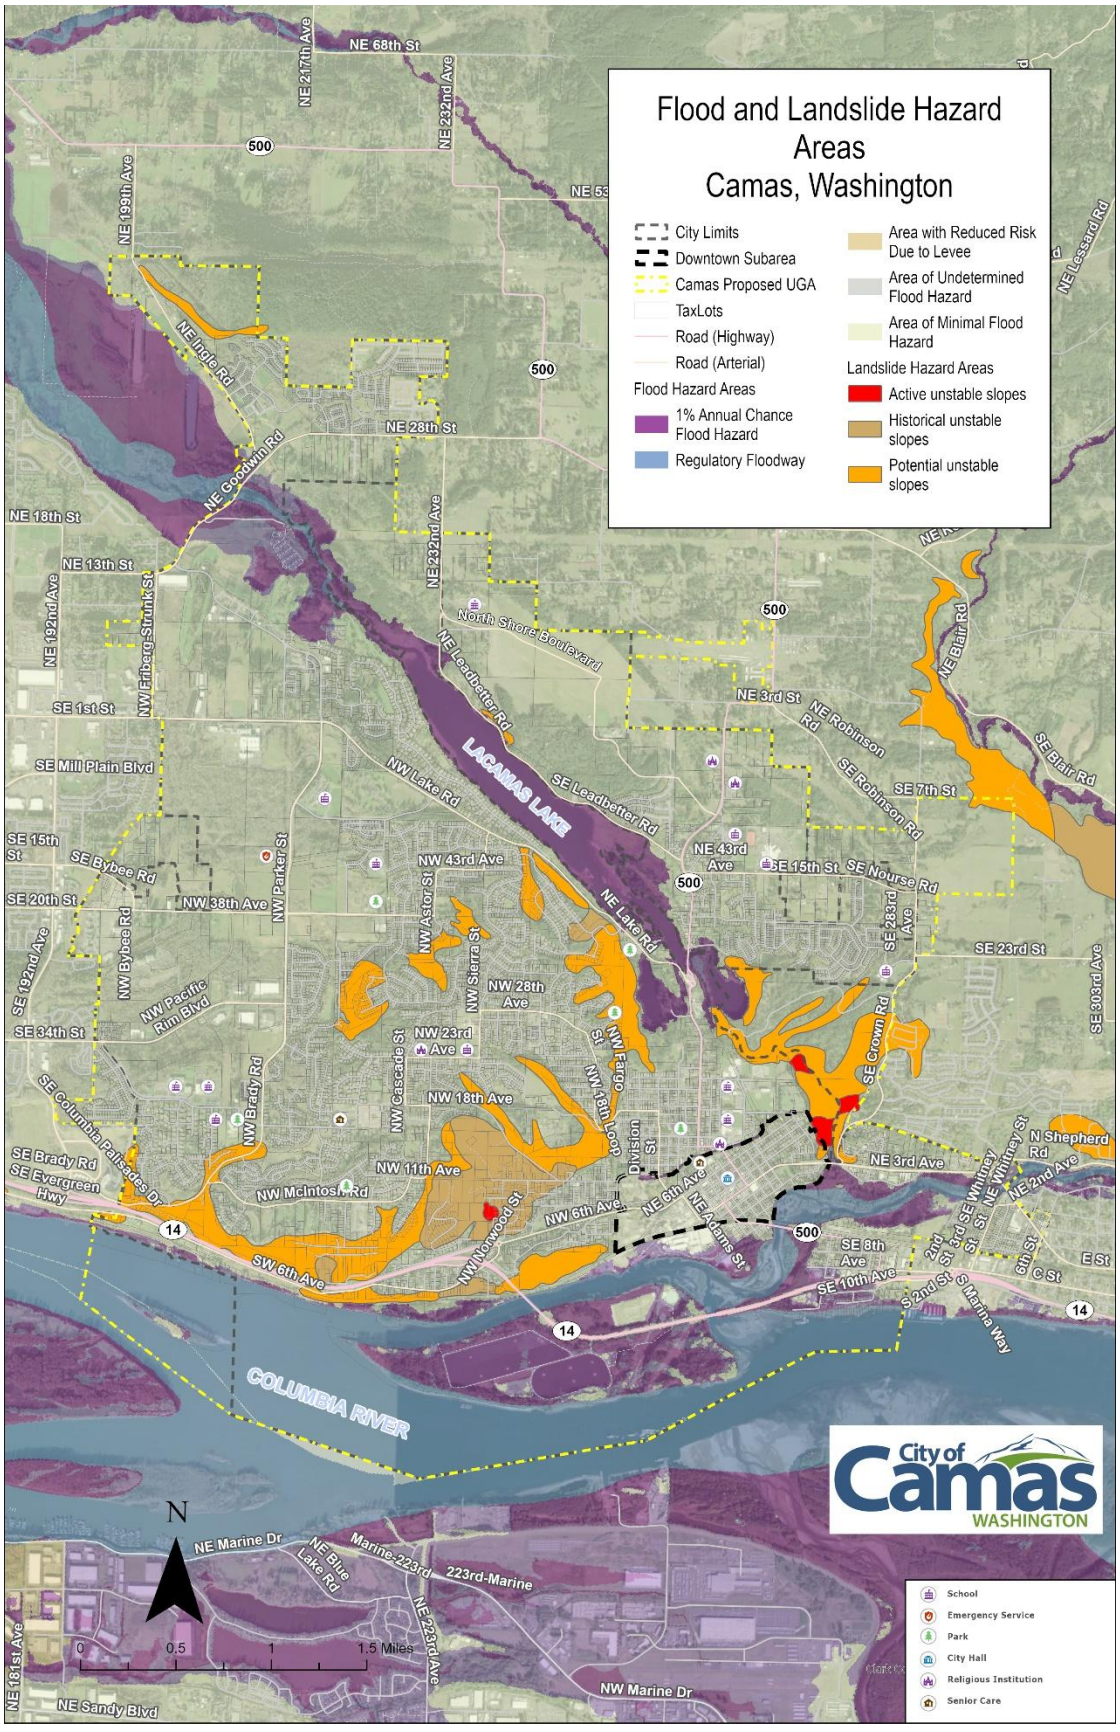


Figure 9 Flood and Landslide Hazard Areas

In Camas, buildings and infrastructure that could be vulnerable to climate hazards include aging water and sewer lines, buildings constructed before adopted seismic codes (e.g., city hall, public works operations center), and high-pressure natural gas lines. High tension power lines may also be vulnerable to severe storms (i.e., wind and ice), homes along the Washougal and Columbia Rivers, including the Georgia Pacific paper mill, may be susceptible to flooding, and the dam at Lacamas Lake could be impacted by an earthquake or flooding.

Extreme heat is one of the highest rated hazards for Camas. Buildings and impervious surfaces such as streets are factors in the urban heat island effect, where urban areas are warmer than surrounding rural or less developed areas. The County's department of public health collected heat data on one day in July 2024 and prepared a heat watch summary report describing how urban heat varies across neighborhoods in the county and how landscape features affect temperature and humidity. Across the county, areas with more buildings and paved surfaces tend to be hotter during the afternoon and evening. In Camas, the hottest areas of the city during the afternoon and evening are near Downtown Camas while cooler areas with more vegetation and shade are in west Camas, northeast of downtown, and near Lacamas Lake.

Vulnerability Assessment

A vulnerability and risk assessment prepared for Camas evaluated the risk of extreme heat on outdoor recreation sites, including (1) Lakes, (2) Parks & Trails, (3) School Playgrounds & Sport Fields, and (4) Downtown Camas. Both vulnerability (sensitivity and adaptive capacity) and risk (probability and magnitude) were evaluated.

The assessment produced composite scores for vulnerability and risk. For the lakes, Lacamas Lake and Round Lake scored high and Fallen Leaf Lake scored low. Under parks and trails, seven scored low, two scored medium, and 11 scored high. School playgrounds and sports fields scored medium (6) and high (6). Lastly, Downtown Camas scored high as it features the hottest area of the city. To reduce vulnerability and risk, this element includes policies to mitigate the impacts of extreme heat.

COMMUNITY FEEDBACK

- **Prepare a community wildfire protection plan that addresses wildfire prevention and requirements for fire resilient landscaping**
- **Hold community listening sessions on evacuation routes and develop policies based on community input**
- **Reform storm water modeling under climate scenarios to assess infrastructure capacity and service levels**
- **Retrofit older buildings to meet current codes**
- **Install electric vehicle charging stations**
- **Improve active transportation options to reduce dependence on vehicle travel, particularly for shorter trips around Camas and into Vancouver**
- **Incorporate solar power into local energy strategies**

Climate Change and Resiliency Goals and Policies

Climate goals and policies are established to meet the State's vision to reduce greenhouse gas emissions, plan for resilience, and support environmental justice. While these goals and policies directly focus on emissions and resiliency, additional policies in other elements of the plan tangentially support these goals. Those policies are noted with a leaf symbol.

Goal CL-1 Energy

Ensure that development and redevelopment projects, including buildings and energy infrastructure (generation, storage, and transmission) are designed to accommodate and use renewable energy, conservation, and efficiency technologies and practices to reduce GHG emissions and increase resiliency to natural hazards.

Policy CL-1.1 Support residents' efforts to improve energy efficiency and resiliency in existing and new residences.

Policy CL-1.2 Encourage renewable energy sources for new and existing buildings.

Policy CL-1.3 Provide commercial buildings, particularly restaurants and food services, with incentives to retrofit buildings for energy efficiency (e.g., grant programs, reduce permit fees, etc.).

Policy CL-1.4 Incentivize and streamline the review process for renewable resource projects.

Goal CL-2 Transportation

Improve the efficiency and resiliency of the transportation system to achieve GHG reduction goals and better withstand natural hazards.

Policy CL-2.1 Promote and complement state and utility incentives to provide electric vehicle charging infrastructure throughout the city, particularly at existing and new multi-family buildings and large employers.

Policy CL-2.2 Provide homeowners and renters information on state and federal tax credits/rebates for electric vehicles, renewable resources and energy efficiency.

Policy CL-2.3 Incorporate projected hydrologic climate impacts into the design and maintenance of water-crossing structures (e.g., climate-smart culverts and bridges).

Policy CL-2.4 Promote land use patterns and multimodal transportation systems that reduce vehicle miles traveled, traffic congestion, and associated greenhouse gas emissions per capita to support sustainability and climate resiliency.

Goal CL-3 Local Agency Sustainability and Preparedness

Support agencies, districts, and businesses in establishing and achieving their own sustainability goals, initiatives, and programs.

Policy CL-3.1 Support the sustainability initiatives of local agencies, districts, and businesses.

Policy CL-3.2 Support local businesses efforts to bolster climate preparedness and continuity of operations (e.g., develop on-site electricity storage to reduce energy demand during peak hours, incentives to install backup power, building retrofits).

Policy CL-3.3 Support the local economy's resilience to climate disruptions by providing information and resources on how to prepare for extreme heat, flooding, and wildfire.

Policy CL-3.4 Support economic opportunities for green jobs in Camas, including businesses that produce goods or services that benefit the environment and jobs that support business production processes to be more environmentally friendly or use fewer natural resources.

Policy CL-3.5 Develop a sustainable purchasing policy and sustainable construction standards for the City of Camas.

Goal CL-4 Community Health

Protect community health and well-being from the impacts of climate-exacerbated hazards and ensure that the most vulnerable residents do not bear disproportionate health impacts.

Policy CL-4.1 Promote the use of health impact assessments and other tools to identify and address the impacts on health and equity from climate change.

Policy CL-4.2 Develop and implement an urban heat resilience strategy that addresses land use, urban design, urban greening, and waste heat reduction actions.

Policy CL-4.3 Establish development regulations that include best practices for reducing risk of climate-exacerbated hazards such as wildfire, extreme heat, extreme precipitation and flooding.

Goal CL-5 Emergency Preparedness

Enhance emergency preparedness, response, and recovery efforts to mitigate risks and impacts associated with natural hazards.

Policy CL-5.1 Create accessible evacuation plans and outreach materials to help residents plan and practice actions that make evacuation and reunification quicker and safer during a natural hazard event (e.g., notification alerts).

Policy CL-5.2 Develop a comprehensive, communitywide wildfire resilience strategy to improve emergency response capabilities, create fire-resilient landscapes, promote fire-adapted communities, and support the development of community wildfire protection plans.

Policy CL-5.3 Support enhanced data collection for hazard events of all magnitudes to provide a fuller understanding of the community's hazard characteristics.

Policy CL-5.4 Develop resiliency hubs, such as community-serving facilities that support residents, coordinate communication, distribute resources, and enhance quality of life.

Policy CL-5.5 Prepare, plan, and provide ongoing training for those responding to adverse environmental events.

Goal CL-6 Water Resources

Protect and preserve the long-term quality and quantity of Camas' water, and natural and cultural resources from climate change hazards such as drought and extreme participation.

Policy CL-6.1 Develop and implement a comprehensive drought resilience strategy that factors in projected climate impacts and sets action levels for different drought stages.

Policy CL-6.2 Evaluate the long-term adequacy of water delivery and storage infrastructure to ensure projected changes in hydrological conditions can be anticipated and managed effectively.

Policy CL-6.3 Implement actions recommended by the Lacamas, Round, and Fallen Leaf Lakes Management Plan to reduce the frequency of harmful algae blooms in lakes due to water pollution and projected changes in climate conditions, including higher temperatures.

Policy CL-6.4 Identify funding mechanisms for mitigation measures recommended by the Lake Management Plan to address the impacts of climate hazards on Lacamas, Round, and Fallen Leaf Lakes.

Policy CL-6.5 Introduce adaptive cooling features at local parks and school playgrounds and sports fields to help mitigate the effects of extreme heat on vulnerable park users and young children.

ourCamas 2045

Transportation

08

08. Transportation

GMA Planning Goal

Encourage efficient multimodal transportation systems that will reduce greenhouse gas emissions and per capita vehicle miles traveled, and are based on regional priorities and coordinated with county and city comprehensive plans.

Vision

In 2045, residents of Camas continue to appreciate their safe transportation infrastructure that equitably serves all users.

Introduction

As part of the comprehensive plan periodic update, the City of Camas reviewed and updated its Transportation System Plan (TSP). The TSP is adopted by reference and included as Appendix E. The TSP is a long-range plan to guide transportation investments for Camas and its UGA for the planning horizon to 2045. The TSP provides the following:

- Inventory of the current transportation system for all modes of travel
- Summary of land use assumptions used for estimating travel demands
- Summary of level of service (LOS) standards
- List of actions to address deficiencies
- Forecast of traffic demand for twenty years
- System needs to meet the current and forecasted demand
- Six-year Transportation Improvement Plan (TIP)

These items are foundational to a comprehensive plan and integral to implementing the Land Use plan.

The transportation element is one of the main parts of the comprehensive plan and is an effective tool for shaping the city's future development patterns. Growth and development patterns have a major influence on the fiscal health of local governments and on the economic performance of the community. The nature of public streets can shape the level of traffic congestion, the use of multiple modes, and the character of neighborhoods. Related requirements, such as parking and loading, will influence the cost to develop in a community and can present both opportunities and barriers to how people can access homes, schools, recreational opportunities, and businesses within the community and in the region.

Ownership, control, development, and the operation and maintenance of streets and public rights-of-way are primary functions of local governments. A transportation system is one of the most expensive facilities a community will construct, operate and maintain. Each new facility adds an asset to the city's portfolio, but it also must be managed, resulting in an incremental increase in operating costs and a new set of maintenance, preservation, and rehabilitation obligations.

Decisions about transportation facilities greatly influence the safety and security of the community. How the streets, roads and other transportation facilities are designed, built and maintained will influence safety in multiple ways for all users.

Federal, state, county and city transportation systems are interrelated, so coordination with other units of government is essential. Responsibility for transportation systems spans all levels of government. The Camas transportation network connects to state highways, neighboring city streets and adjacent county roads and indirectly to federal and interstate highways. It also interacts with transportation facilities operated by other special purpose districts like C-TRAN and for-profit businesses. Moreover, the public does not experience the transportation system as a series of separate systems, but as a single, unified system, and it expects all the parts to function in an integrated fashion.

The GMA requires the transportation element to implement and be consistent with the land use element. Counties and cities should use consistent land use assumptions, population forecasts, and planning periods for both elements. Coordination of the land use and transportation elements must be dynamic and iterative with an ongoing feedback loop coordinating land use and transportation in the plan development and in local implementation. The transportation element is also required to be consistent with state and regional plans. The transportation element is certified by the regional transportation organization, which is the Southwest Washington Regional Transportation Council (RTC), to ensure consistency with the regional transportation plan (RTP).

Performance Standards

Level of Service (LOS)

The TSP includes level of service as a measure of performance standards for motor vehicles. A LOS "D" and a vehicle to capacity (v/c) ratio not higher than 0.85 is the minimum performance standard during the highest one-hour period of the day for signalized, all-way stop and roundabout controlled intersections under City jurisdiction. These standards shall be applied to the intersection as a whole.

A LOS "E" and a v/c ratio not higher than 0.90 is the minimum performance standard during the highest one-hour period of the day for two-way stop and yield controlled intersections under City jurisdiction. These standards shall be applied to all intersection approaches serving more than 20 vehicles. Mobility standards do not apply to approaches at intersections serving 20 vehicles or fewer during the highest one-hour period of the day. This mobility standard allows

more flexibility in the tension between larger intersection and street designs that are sometimes needed to accommodate peak vehicle demands, and the desire to maintain smaller designs that encourage slower vehicle speeds and tend to be more accommodating to pedestrian and bicycle users.

Level of Service for Highways of Statewide Significance is set by the State. In Clark County, the standard is set as LOS "D" for urban areas, including SR 14. Level of Service for regional state highway facilities (not part of the HSS), including SR 500 in Camas, is set through the Southwest Washington RTC. The Southwest Washington RTC Board adopted LOS 'E' or better for non-HSS urban state highway facilities.

As part of the City's TSP update, forecasted 2045 motor vehicle volumes for peak hour conditions were utilized to determine areas on the baseline roadway network that will be congested and may require future investments to accommodate forecasted growth. The corridors recommended to prioritize for improvements include:

- SR 500-NE Everett Street between NE 23rd Avenue and SE Leadbetter Road
- NW 6th Avenue between Norwood Street and Adams Street
- NE 3rd Avenue between NE Dallas Street and SE Lechner Street

Level of Traffic Stress (LTS)

The City is adopting Level of Traffic Stress (LTS) as the multimodal level of service (MMLOS) standard. LTS is used to measure the comfort of those who are walking, biking or rolling on streets shared with vehicles. The best way to make these facilities comfortable to use while walking, biking and rolling is with space, separation, and visibility. The specific application depends on the conditions of each street. LTS is measured on a scale of one to four. A road with an LTS of 1 is best and is suitable for all users. A road with an LTS of 4 has the highest level of stress for a user and is typically used by those with a high level of confidence or those who don't have an alternative option. LTS 2 is the standard, meaning streets should be comfortable for most adults, including most adults experiencing disabilities. There may be some separation between pedestrians and vehicles, though no physical barrier.

Travel Demands and Characteristics

The number of people who choose to walk, bike, ride transit, or drive alone with the distances they travel is important for assessing how well existing transportation facilities serve the needs of users. Available data on travel demand, travel mode choice, and trip length are used to

better understand travel behavior in the community and inform the needs analysis for the transportation system. This data is largely derived from the US Census Bureau on employment-based trips; however, no other travel data is available from this source. The following sections provide a summary of travel demands and characteristics in the City's planning area.

Commuter Trips

Much of the traffic in the Camas planning area, especially during the more congested weekday peak periods, is related to employment. In other words, how do people get to and from work from their place of residence. People who live in Camas and who are employed overwhelmingly commute to work outside of the planning area (87 percent), while jobs in the planning area are overwhelmingly filled by people who live outside of the planning area (83 percent).[11]

In terms of the predominant travel mode, on average, almost 75 percent of employed residents in the Camas planning area commute to work using single-occupant motor vehicles. About 8 percent of residents carpool to work and the remaining 17 percent work from home, walk, bike, take transit, or use some other means of travel[12].

About 11 percent of employed residents in the Camas planning area worked from home pre-COVID, and that figure likely increased due to COVID-19. It seems likely that a higher percentage of workers will continue a hybrid work schedule that includes teleworking, at least part time. Any increase in the hybrid work week (e.g. 2-3 days in an office with the balance at home or some other remote location) will change the demand on the transportation network, including when and how people travel.

Transportation Demand by Mode

Pedestrian, bicycle, and motor vehicle traffic counts were conducted at key intersections throughout Camas on typical weekdays[13]. This information indicates where and when travel demand is highest for each mode of travel. It also provides a basis for assessing how well existing transportation facilities are able to meet the needs of users during peak demand periods.

- Pedestrian volumes during the PM peak hour are generally highest near downtown Camas, including along NE 3rd Avenue and NE Adams Street (the traffic count summary is included in Appendix E). The highest hourly pedestrian activity during the evening peak occurred at the NW Sierra Drive intersection with NW 28th Avenue, near Dorothy Fox Elementary school, with 30 pedestrian crossings in the one-hour period. Other study intersections with more than 15 pedestrian crossings during the one-hour period included many downtown locations such as NE 6th Avenue at NE Adams Street, NE 3rd Avenue at NE Dallas Street, NE 3rd Avenue at NE 4th Street, and Weir Road at NE 3rd Avenue, near the border of Camas and Washougal.

[11] US Census Bureau, OnTheMap. Home/Work Distance/Direction Analysis, 2015.
[12] US Census Bureau, 2012-2016 American Community Survey
[13] Based on counts conducted in April of 2018.

- Bicycle volumes indicate limited biking, with the highest volumes along NW Lake Road, and NW Sierra Street (the traffic count summary is included in Appendix E, volume 2). During the evening peak hour, 20 of the 50 study intersections had no observed bicyclists during the one-hour period. The NE Lake Road at SR 500, NW Lake Road at NW Sierra Street, NW Lake Road at NW Leadbetter Drive, NW Sierra Street at NW 45th Avenue, and NE 6th Avenue at NE Garfield Street intersections had the highest observed bicycle volumes, with 4 or more bicyclists counted during the single hour at each of the intersections.
- Motor vehicle volumes on the roadways in Camas (the traffic count summary is included in Appendix E) most commonly peak during weekday evenings between 4:50 and 5:50 p.m. The highest hourly motor vehicle volumes during the evening peak occurred along the NW 6th Avenue corridor between the SR 14 ramps and NE Adams Street, with more than 1,300 trips during the one-hour period. This corridor is the primary entrance into Camas from eastbound travel. The NE Lake Road at NE Everett Street, and NW 6th Avenue at SR 14 Ramps intersections had the highest observed volumes, with more than 1,800 entering vehicle trips during the single hour at each of the intersections.

Active Transportation Networks

Camas is a community with an active population and, therefore, requires a fairly robust active transportation system that includes pedestrian and biking facilities. The TSP inventoried the pedestrian and biking facilities, listed gaps in the systems, and assessed the facilities for how a pedestrian and bicyclist experiences them.

Multimodal Network Design

The design of the streets in the City's planning area is based on the network classifications and area designation. All streets in the planning area are multimodal and include travel lanes and on-street parking for vehicles, sidewalks for pedestrians, and on-street or separated facilities for bicyclists. Accommodating these modes varies by the functional classification and area designations. For a typical street cross-section, the functional classification determines the minimum design requirements for the number of vehicle travel way lanes and on-street parking, and the minimum acceptable bike facility, and the area designation is used to determine the minimum acceptable design for pedestrian facilities, and the minimum travel lane and median/turn lane width. Together, these cross-section standards identify the design characteristics needed to meet the function and demand for each facility type for streets in the City's planning area. Since the actual design of a roadway can vary from segment to segment due to adjacent land uses and demands, this system allows standardization of key characteristics to provide consistency. An example of a collector street cross section is shown below.

The typical designs are intended to be implemented in newly developing or redeveloping areas of the City's planning area, where constrained conditions do not limit the ability to construct the typical cross-section. A variety of physical and natural constraints may prevent adherence to the multimodal network design requirements. A deviation to the street standards may be requested from the City Engineer or City Engineer's designee with justification of constraints to consider a constrained cross-section or other adjustments.

Pedestrian Network

Walking supports healthy lifestyles, is an easy and economical way to travel, and is well-suited for people of all ages and abilities. In this plan, "walking" and "pedestrian" are terms that include people who walk independently or use canes, wheelchairs, or other walking aids, or strollers. Approximately two percent of commuters in the city walk to work, with three percent utilizing public transportation, which often includes walking at the beginning or end of the trip.[14] In addition to the work commute trips, walking trips are made to and from recreational areas, shopping areas, schools, and other key destinations in the community. Continuous and direct sidewalk connections to all key destinations and along all streets, in addition to safe crossing opportunities along major roadways, are essential to encourage walking and transit use.

A pedestrian network assessment of streets, showing the extent to which the walking network on collector and arterial streets provides a level of comfort and safety for users, was completed throughout the city. About 30 percent of the collector and arterial street miles in Camas were rated "good (i.e., level of traffic stress (LTS) 2)" or "excellent (i.e., LTS 1)" for pedestrians. However, over 35 percent of the collector and arterial street miles rate poorly (i.e., LTS 4). Most

[14] US Census Bureau, 2012-2016 American Community Survey

of the street miles rated "poor" are located in high growth areas, be that housing or business growth. The pedestrian network in these areas is largely unimproved due to the once rural nature of the surrounding land use. As future urban development occurs, pedestrian facilities will improve in those areas. Overall, the pedestrian network rates relatively high near downtown, and generally poorer towards the edges of the city. See Figure 11 for an inventory of the pedestrian network.

Bicycle Network

Cycling is important for both transportation and recreation in the Camas planning area. This includes people who bike to work and school, bike for recreation or running errands. Approximately one percent of commuters in the city bicycle to work[15]. Riding bicycles also plays a key role in the transportation system's ability to support healthy and active lifestyles and provide a viable alternative to the automobile. Continuous bicycle connections between all activity generators and arterial/collector roadways are desirable to allow for safe and attractive non-motorized travel options.

The bicycle network in the City's planning area, shown in

Figure 10, is composed of bike lanes, roadway shoulders, shared roadways, and shared-use paths.

- Bike lanes are portions of the roadway designated specifically for bicycle travel via a striped lane and pavement stencils. Bike lanes are most appropriate for arterials and collectors, where high traffic volumes and speeds warrant greater separation of the travel modes. Significant segments of continuous bicycle lanes exist along portions of NW Lake Road, NW 38th Avenue, NW Parker Street, NW Friberg-Strunk Street, and SR 500.
- Shoulder bikeways are paved with striped shoulders wide enough for bicycle travel. A six-foot paved shoulder is desired to adequately provide for bicyclists, with a four-foot minimum width in constrained areas. Roadways with shoulders less than four feet are considered shared roadways. Some shoulder bikeways are signed to alert motorists to expect bicycle travel along the roadway
- Shared roadways include those on which bicyclists and motorists share the same travel lane. The most suitable roadways for shared bicycle use are those with low speeds (25 mph or less) and low traffic volumes (3,000 vehicles or fewer per day). Shared roadways, often signed as bicycle routes, serve to provide continuity to other bicycle facilities (e.g., bicycle lanes) or can be designated as a preferred route through the community. Shared roadways can have signs that highlight a special route or provide directional information in bicycling minutes or distance. Most local roadways in the city are considered shared roadways, but do not have signs or pavement markings, although some are planned to be improved in the TSP.

[15] US Census Bureau, 2012-2016 American Community Survey

- Shared-use paths provide off-street travel for bicyclists and pedestrians, and are wider than an average sidewalk (e.g., 10 – 14 feet). Shared-use paths are typically paved (asphalt or concrete) but may also consist of an unpaved smooth surface, such as compacted gravel, as long as it meets Americans with Disabilities Act (ADA) standards. Paved shared-use paths exist along portions of NW Parker Street, NW 18th Avenue, Lacamas Lake, Washougal River, and scattered throughout the residential neighborhoods.

A bicycle network assessment of streets in Camas shows the extent to which the bicycle network on collector and arterial streets provides a level of comfort and safety for users. About 20 percent of the collector and arterial street miles' in Camas rate "good (i.e., LTS 2)" or "excellent (i.e., LTS1)" for bicyclists. However, about 65 percent of the collector and arterial street miles' rate poorly (i.e., LTS 4) for bicyclists.

Overall, the bicycle network rates relatively high on the northwest side of the city and poor on the south and east side. The streets with the lowest ratings are the streets important for local and regional through travel (e.g. portions of NW 6th Avenue, NE 3rd Avenue, and SR 500), where many businesses and services are located. These streets rate low due to the relatively high motor vehicle traffic volumes and speeds and lack of separated bicycle facilities.

COMMUNITY FEEDBACK

- **Improve walking and biking infrastructure for better accessibility**
- **Connect neighborhoods and parks to Downtown Camas with sidewalks and trails**
- **Prioritize protected bike lanes**
- **Prioritize pedestrian-focused, multimodal streets with bike lanes, protected sidewalks, and transit stops that connect neighborhoods**
- **Develop a Safe Routes to School program with the Camas School District**

Transition Plan for Transportation

Title II of the Americans with Disabilities Act requires cities to establish a transition plan for transportation. The plan shall, at a minimum:

1. Identify physical obstacles in Camas' facilities that limit the accessibility of its programs or activities to individuals with disabilities;
2. Describe in detail the methods that will be used to make the facilities accessible;
3. Specify the schedule for taking the steps necessary to achieve compliance and, if the time period of the transition plan is longer than one year, identify steps that will be taken during each year of the transition period; and
4. Indicate the official responsible for implementation of the plan.

Camas has a relatively well-developed pedestrian network that is also potentially suitable for those who use mobility devices. The network is composed of sidewalks, shared-use paths and pedestrian trails, and other accessways. A large part of downtown Camas was developed prior to 1950, a time in which sidewalks were incorporated into the design of neighborhoods and streets. Although most areas incorporated into Camas over the following decades have sidewalk coverage, a few areas have noticeable gaps that do not make for a complete sidewalk network. These gaps are most significant in southwest, southeast, and northeast Camas, and on roadway segments outside city limits. Paved shared-use paths exist along portions of NW Parker Street, NW 18th Avenue, Lacamas Lake, Washougal River, and scattered throughout residential neighborhoods. Unpaved pedestrian only trails are scattered throughout the city.

Many intersections in older parts of the city lack ADA-compliant ramps, which provide important connections between sidewalks, making it easier to cross streets and handle the vertical drop at curbs. Knowing these conditions, the city has been recently installing new curb ramps in many of these locations. The presence of curb ramps is fairly consistent along streets in downtown Camas, and in the newer neighborhoods in the city. Additional work is required by the City to ensure all existing and future sidewalks have curb ramps.

About 38 percent of street miles (including City arterial, collector and local streets) lack sidewalk coverage along one or both sides (see Figure 11). These gaps are more common along arterial streets than collector streets, at 40 and 23 percent, respectively, of the street miles with no sidewalk on either side. These numbers do not incorporate off-street shared-use paths that may run alongside some roadways. Any future streets constructed in association with development projects will be required to construct sidewalks with curb ramps, increasing the overall sidewalk supply.

Transportation Projects and Priorities

This section describes the transportation system improvement projects- multimodal street improvement, intersection improvement, pedestrian/bike improvement, transit enhancement, and demand/system management – to address the system needs identified in earlier text.

The list of projects was developed through three main sources including stakeholders, relying on previous plans (such as the North Shore Subarea Plan), and independent project team evaluation.

The full list of projects is identified to improve the transportation network along major streets in the City's planning area, regardless of their priority or their likelihood of being funded. The TSP focuses on streets in the planning area with a functional classification of Collector or higher. Additional improvements will occur with private development in the planning area, including the build-out of the local street network consistent with the applicable standards.

The planning process from the TSP screens candidate projects to set aside those that may not be feasible due to environmental or existing development limitations. The remaining projects

are a combination of new and previous ideas for the transportation system that seek to address the gaps and deficiencies in the city.

The full project list, included in Appendix E, includes 99 projects totaling over $180 million in total investments. For the purposes of cost estimates, project design elements are identified, however, the actual design elements for any project are subject to change and will ultimately be determined through a preliminary and final design process and are subject to City, WSDOT, Clark County, and/or other partner agency approval. The projects were assigned to one of several categories:

- Multimodal Street Improvement - these projects will improve or construct new multimodal streets throughout the planning area, each with facilities for motorists, pedestrians, and bicyclists. A total of 29 projects have been identified that, as of 2024, will cost an estimated $72 million to complete.
- Intersection Improvement – these projects will improve safety and mobility at intersections throughout the planning area. A total of 19 projects were identified to construct new or improve existing intersections that, as of 2024, will cost an estimated $64 million to complete.
- Pedestrian/Bike Improvement – these projects include stand-alone sidewalk, path and roadway crossing improvements, and an integrated network of bicycle lanes, marked on-street routes and shared-use paths to facilitate safe and convenient travel citywide. A total of 39 pedestrian and bicycle projects were identified that, as of 2024, will cost an estimated $38 million to complete.
- Transit Enhancement – these projects will enhance the quality and convenience for transit passengers. One transit project was identified that, as of 2024, will cost an estimated $1 million.
- Demand/System Management – this will encourage more efficient usage of the transportation system. Two projects were identified that, as of 2024, will cost an estimated $450,000.

Transportation Facility Maps

Figure 10 Bicycle Facilities

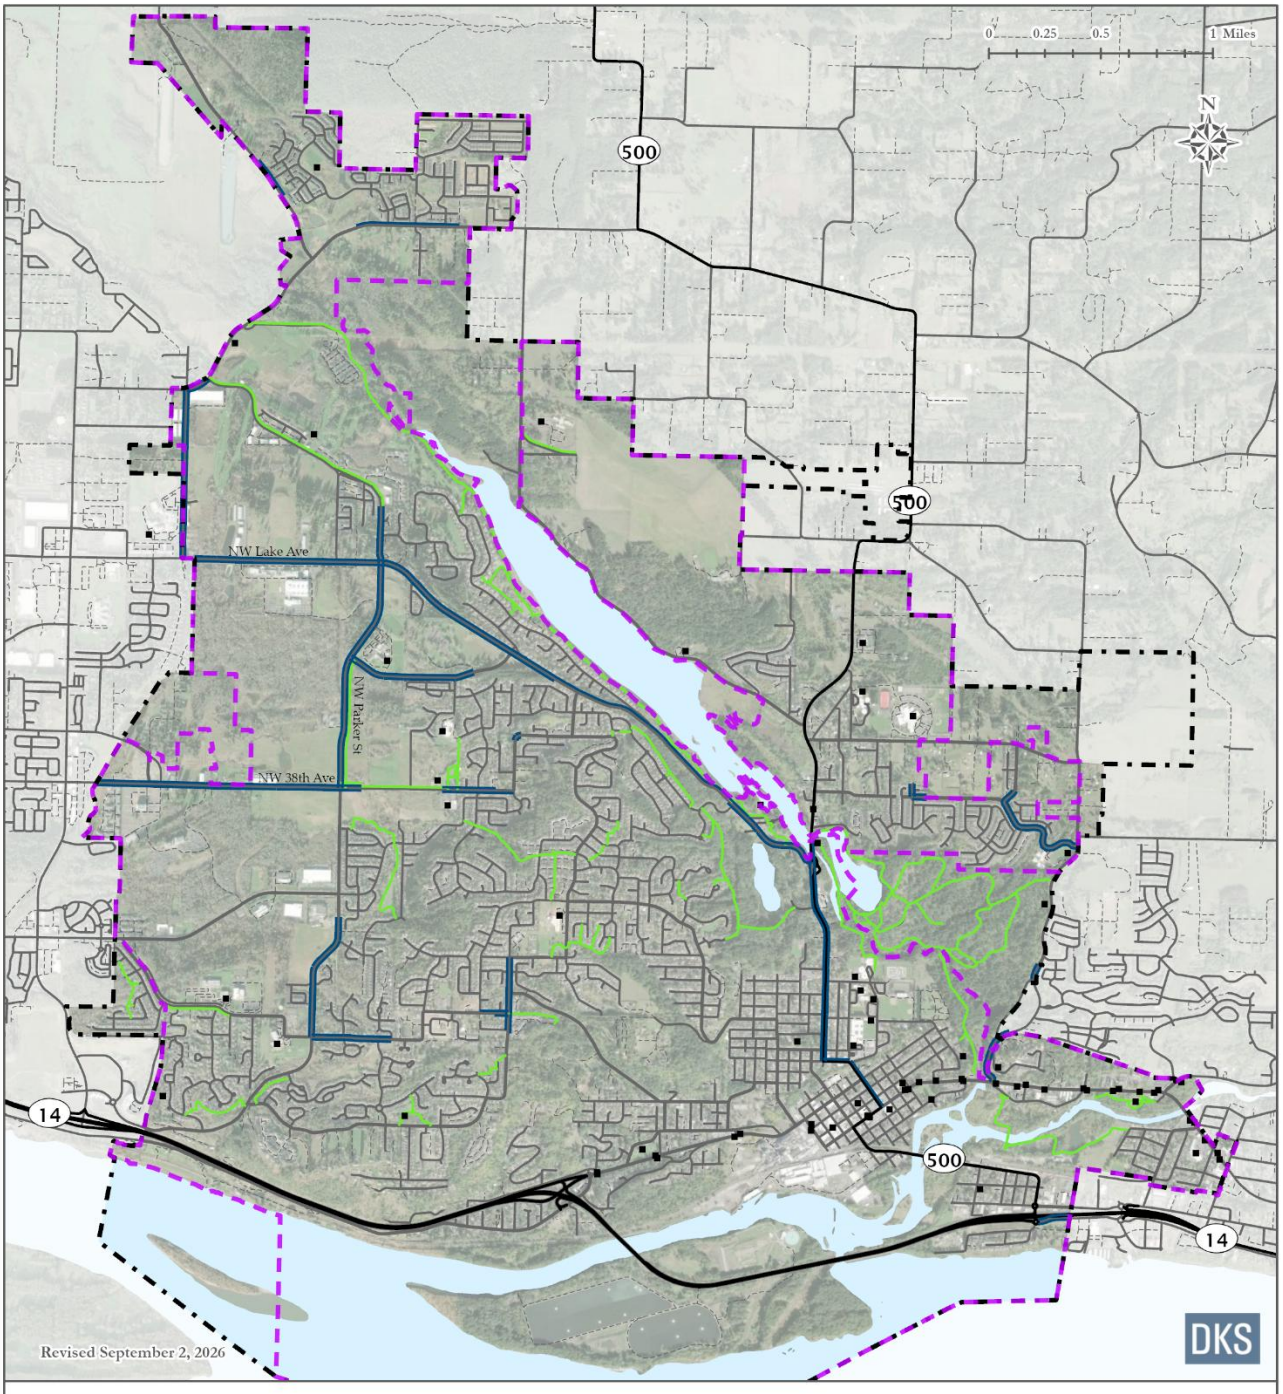

Figure 11 Pedestrian Facilities

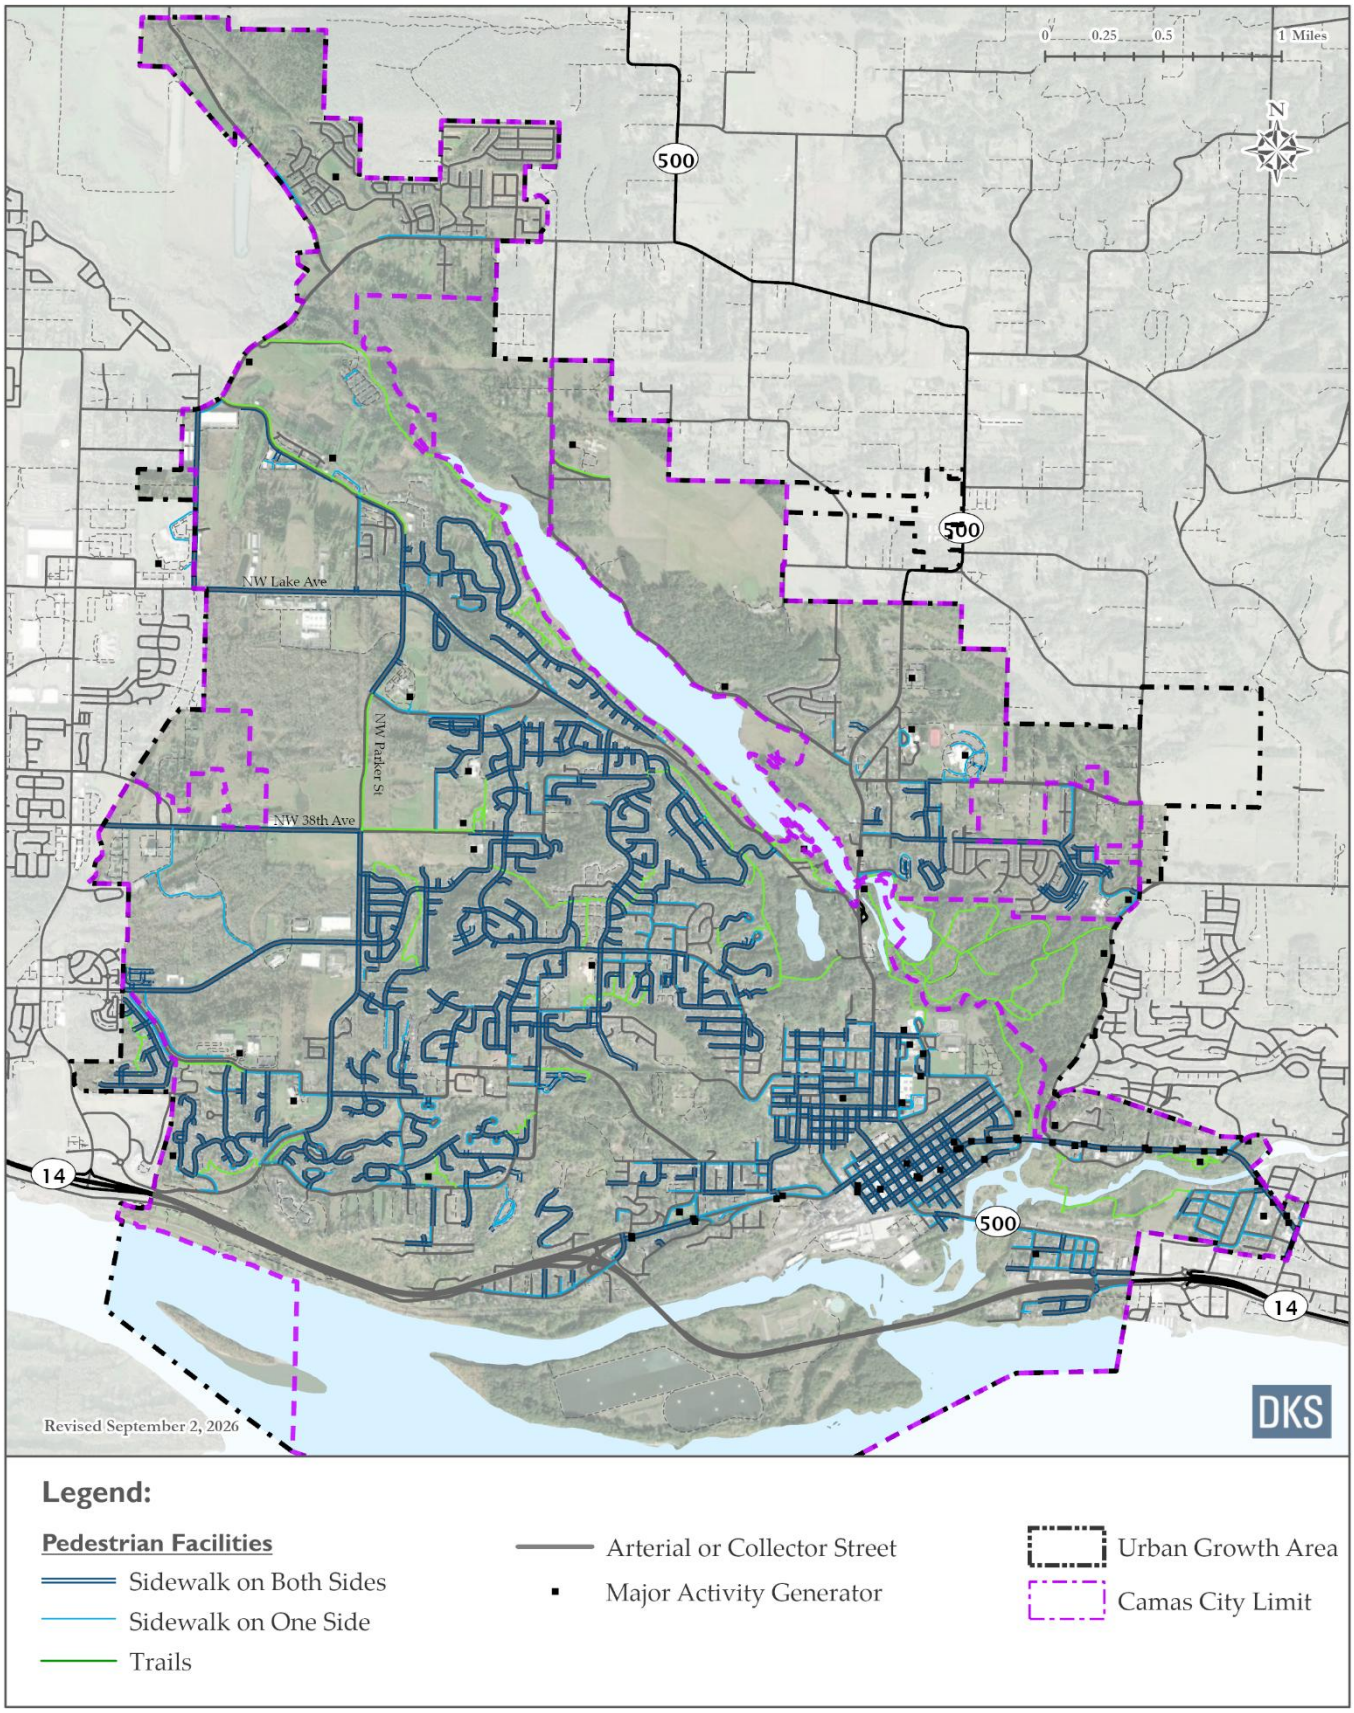

Figure 12 Street Network

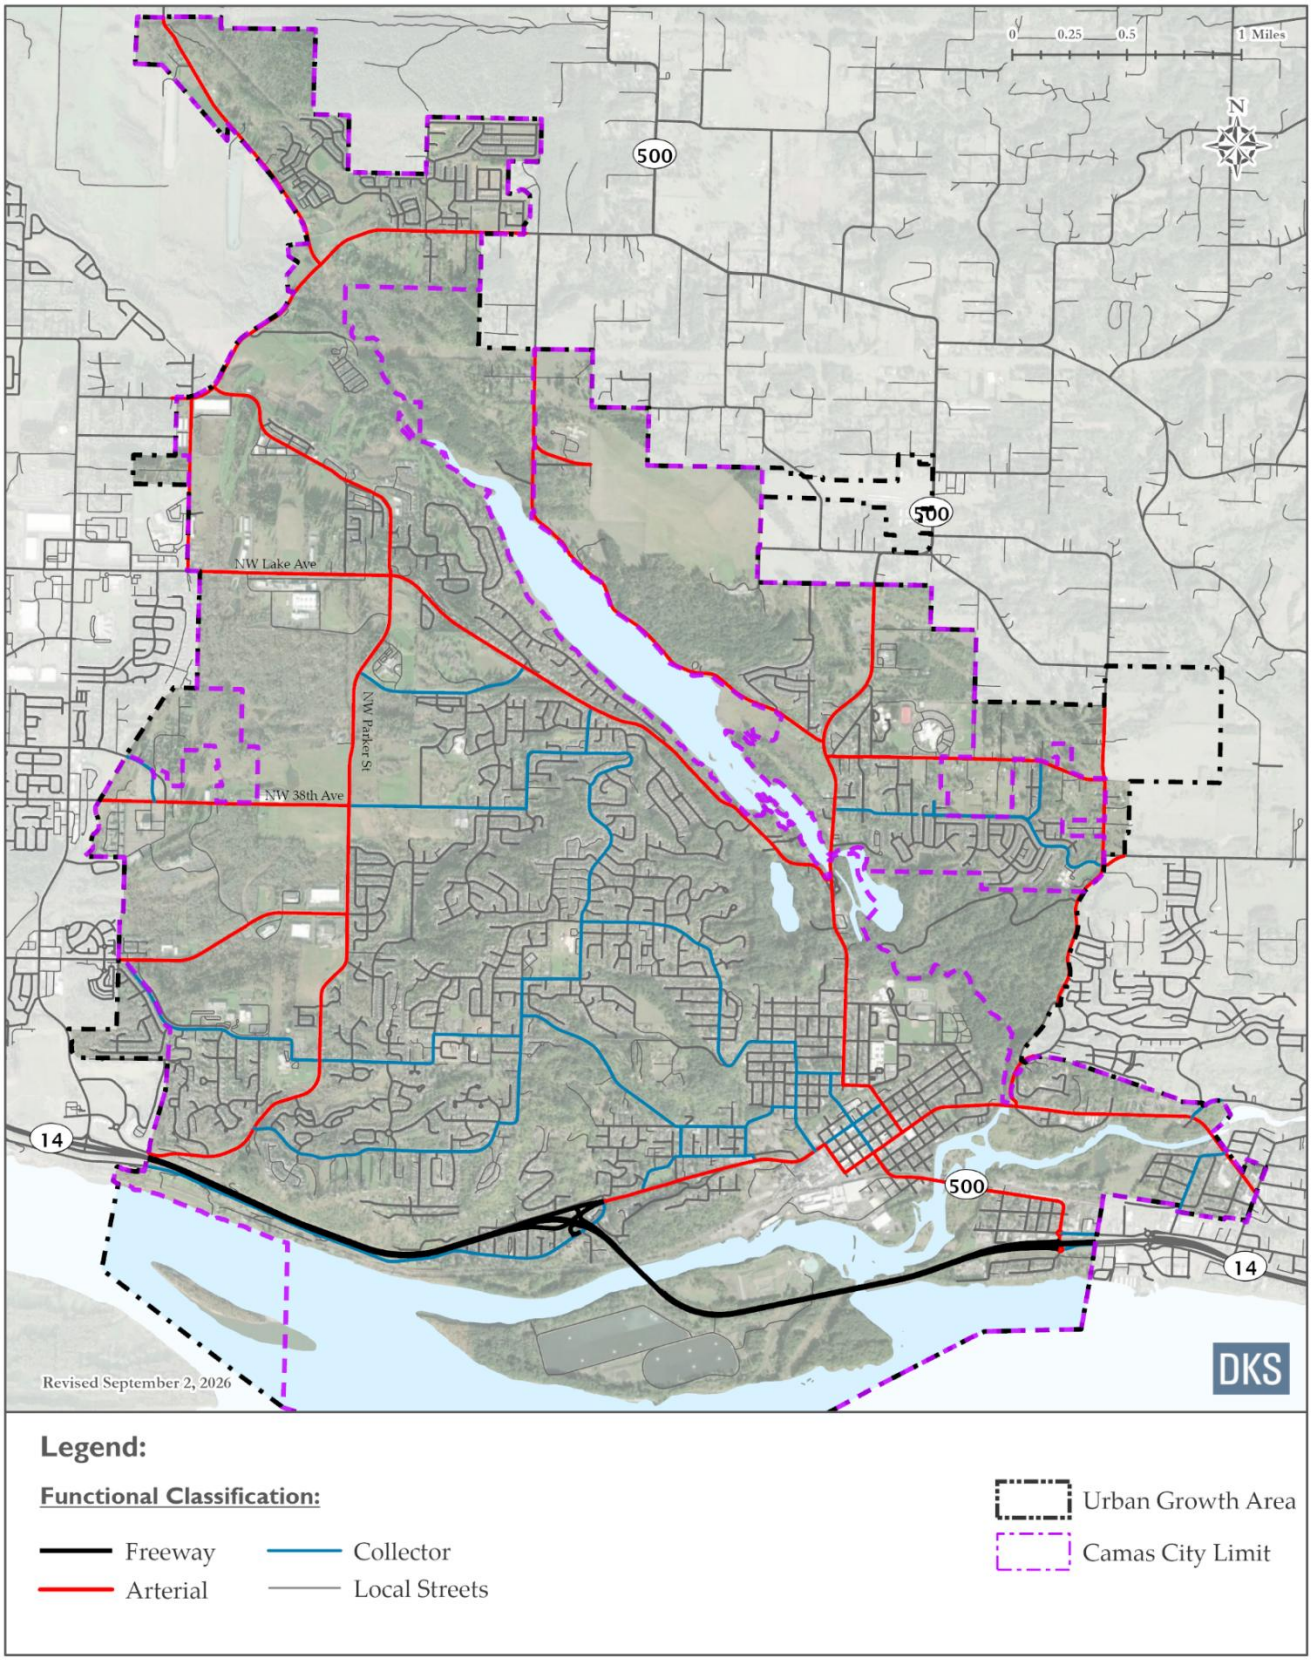

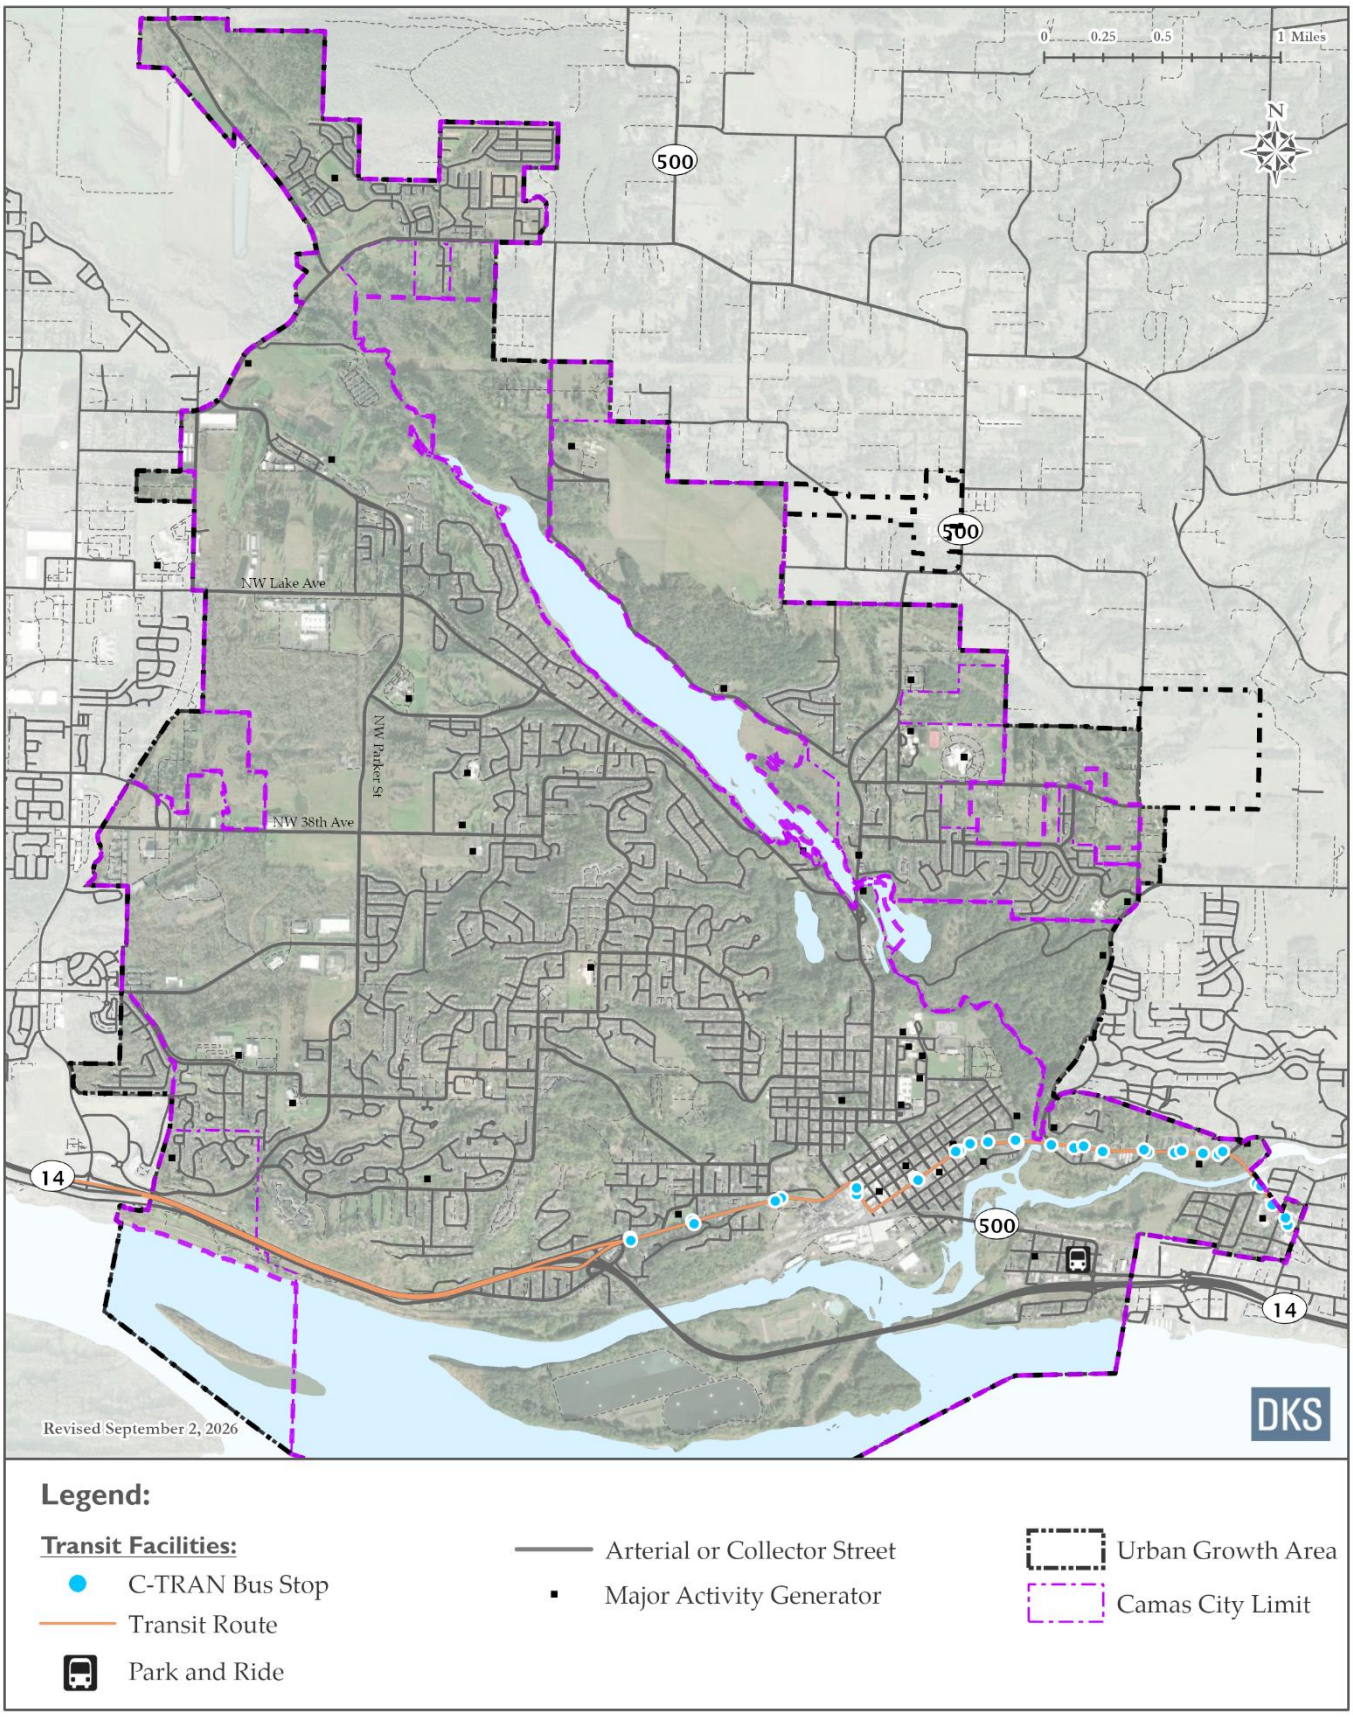

Figure 13 Transit Facilities

Transportation Goals and Policies

Goal TR-1 Complete Streets

Streets will function for all users of all abilities including bicyclists, pedestrians, transit users, and motorists.

Policy TR-1.1 Implement the Transportation System Plan (TSP) to maintain the livability of Camas and guide decision-making for transportation-related projects, policies, and design. Ensure consistency between the TSP, the Parks, Recreation and Open Space Plan and the 6-year street plan.

Policy TR-1.2 Maintain the transportation system to enhance safety and efficiency for all users, facility aesthetics, access management measures and the overall integrity of the system.

Policy TR-1.3 Construct streets that are interconnected and avoid long cul-de-sacs or dead ends. Block lengths should be less than 1,000 feet. Include pedestrian and bicycle linkages in the construction of cul-de-sacs and other forms of dead-end streets. Existing dead-end streets should be retrofitted to provide bicycle and pedestrian linkages as practicable.

Policy TR-1.4 Develop and implement design standards that provide attractive streetscapes, encourage appropriate traffic volumes and speeds, and support multi-modal safety. Include enhanced roadway features such as roundabouts, decorative lighting, and landscaping in gateways and design overlay areas.

Policy TR-1.5 Minimize access to new development and redevelopment along City arterials and consolidate access points when spacing is insufficient.

Policy TR-1.6 Provide routes designed for active transportation to encourage mode shift for short trips. Route planning should seek shortcuts and other opportunities that provide advantages to active transportation users. Public investments should support active transportation routes such as street lighting, safe crosswalks, and protected bike lanes.

Policy TR-1.7 Coordinate with Camas School District to implement a safe routes to school program to encourage the use of alternative and active transportation.

Policy TR-1.8 Develop and implement Complete Streets design in all new and retrofit street projects to support the use of alternative travel modes. Adopt engineering design standards consistent with Complete Streets goals.

Policy TR-1.9 Increase wayfinding signage for outdoor destinations throughout the City.

Policy TR-1.10 Inventory current bicycle and pedestrian networks to identify gaps in route coverage. Support filling in network gaps as new development and redevelopment occurs to create a bicycle and pedestrian network that is safe, comfortable, and accessible to people of all ages and abilities.

Policy TR-1.11 Minimize cut and fill roadway design and, where feasible, minimize restructuring the natural contours of the land.

Policy TR-1.12 Encourage the inclusion of low impact development (LID) design features (e.g. rain gardens, grass pavers, pervious pavement) in the design of road surfaces.

Policy TR-1.13 Require LED lights in new development and replace existing inventory that lack LED features.

Goal TR-2 Local and Regional Transit

Regional transit will provide safe, efficient, and dependable service to the Camas community for a variety of trips within and outside of the city.

Policy TR-2.1 Coordinate with local municipalities, Washington Department of Transportation, adjacent counties, and C-TRAN to ensure that minimum roadway and multi-modal design standards are consistent.

Policy TR-2.2 Partner with C-Tran to advocate for and develop transit options that are safe, convenient, frequent, and accessible for Camas residents.

Goal TR-3 Traffic Safety

Design and construct safe transportation facilities that meet applicable requirements.

Policy TR-3.1 Encourage traffic safety through education, enforcement, and engineering. Use traffic calming, traffic diversion, and other available tools such as landscaping, trees, and art to ensure a comfortable and safe environment for all users.

Policy TR-3.2 Provide adequate access for emergency vehicles throughout the city.

Policy TR-3.3 Develop safe pedestrian and bicycle routes between residential areas, schools, and public facilities.

Policy TR-3.4 Require new development to implement designs standards using the Neighborhood Traffic Management Plan.

Policy TR-3.5 Identify high accident areas and implement specific measures to reduce accident occurrences.

Goal TR-4 Transportation Demand Management

Transportation planning will achieve the efficient use of transportation infrastructure, increase its person carrying capacity, and accommodate and facilitate future growth consistent with land use objectives.

Policy TR-4.1 Require large employers to implement a commute trip reduction program for employees, as mandated by state law.

Policy TR-4.2 Support intergovernmental development review.

Policy TR-4.3 Support the Regional Transportation Council (RTC) with funding and staff participation to the extent possible.

Goal TR-5 Concurrency and Level of Service

The City will maintain the adopted LOS standards for all arterial streets and transit routes.

Policy TR-5.1 Encourage growth in areas with existing or planned infrastructure capacity.

Policy TR-5.2 Require new development to demonstrate that adequate person trips are available, or that multi-modal improvements to the transportation system will be made to accommodate the impacts concurrent with the development.

Policy TR-5.3 Utilize traffic impact fee studies, development traffic impact analyses, and corridor studies to identify deficiencies and plan improvements to maintain or improve LOS standards.

Policy TR-5.4 Take the following actions (in no priority order) if the probable funding falls short of meeting identified needs: 1) delay development until programs, facilities, or services can be funded; 2) obtain the revenue needed or revise the transportation plan to reflect known financial resources; or 3) change the transportation LOS standard, which is a last resort measure.

Goal TR-6 Transportation Revenue

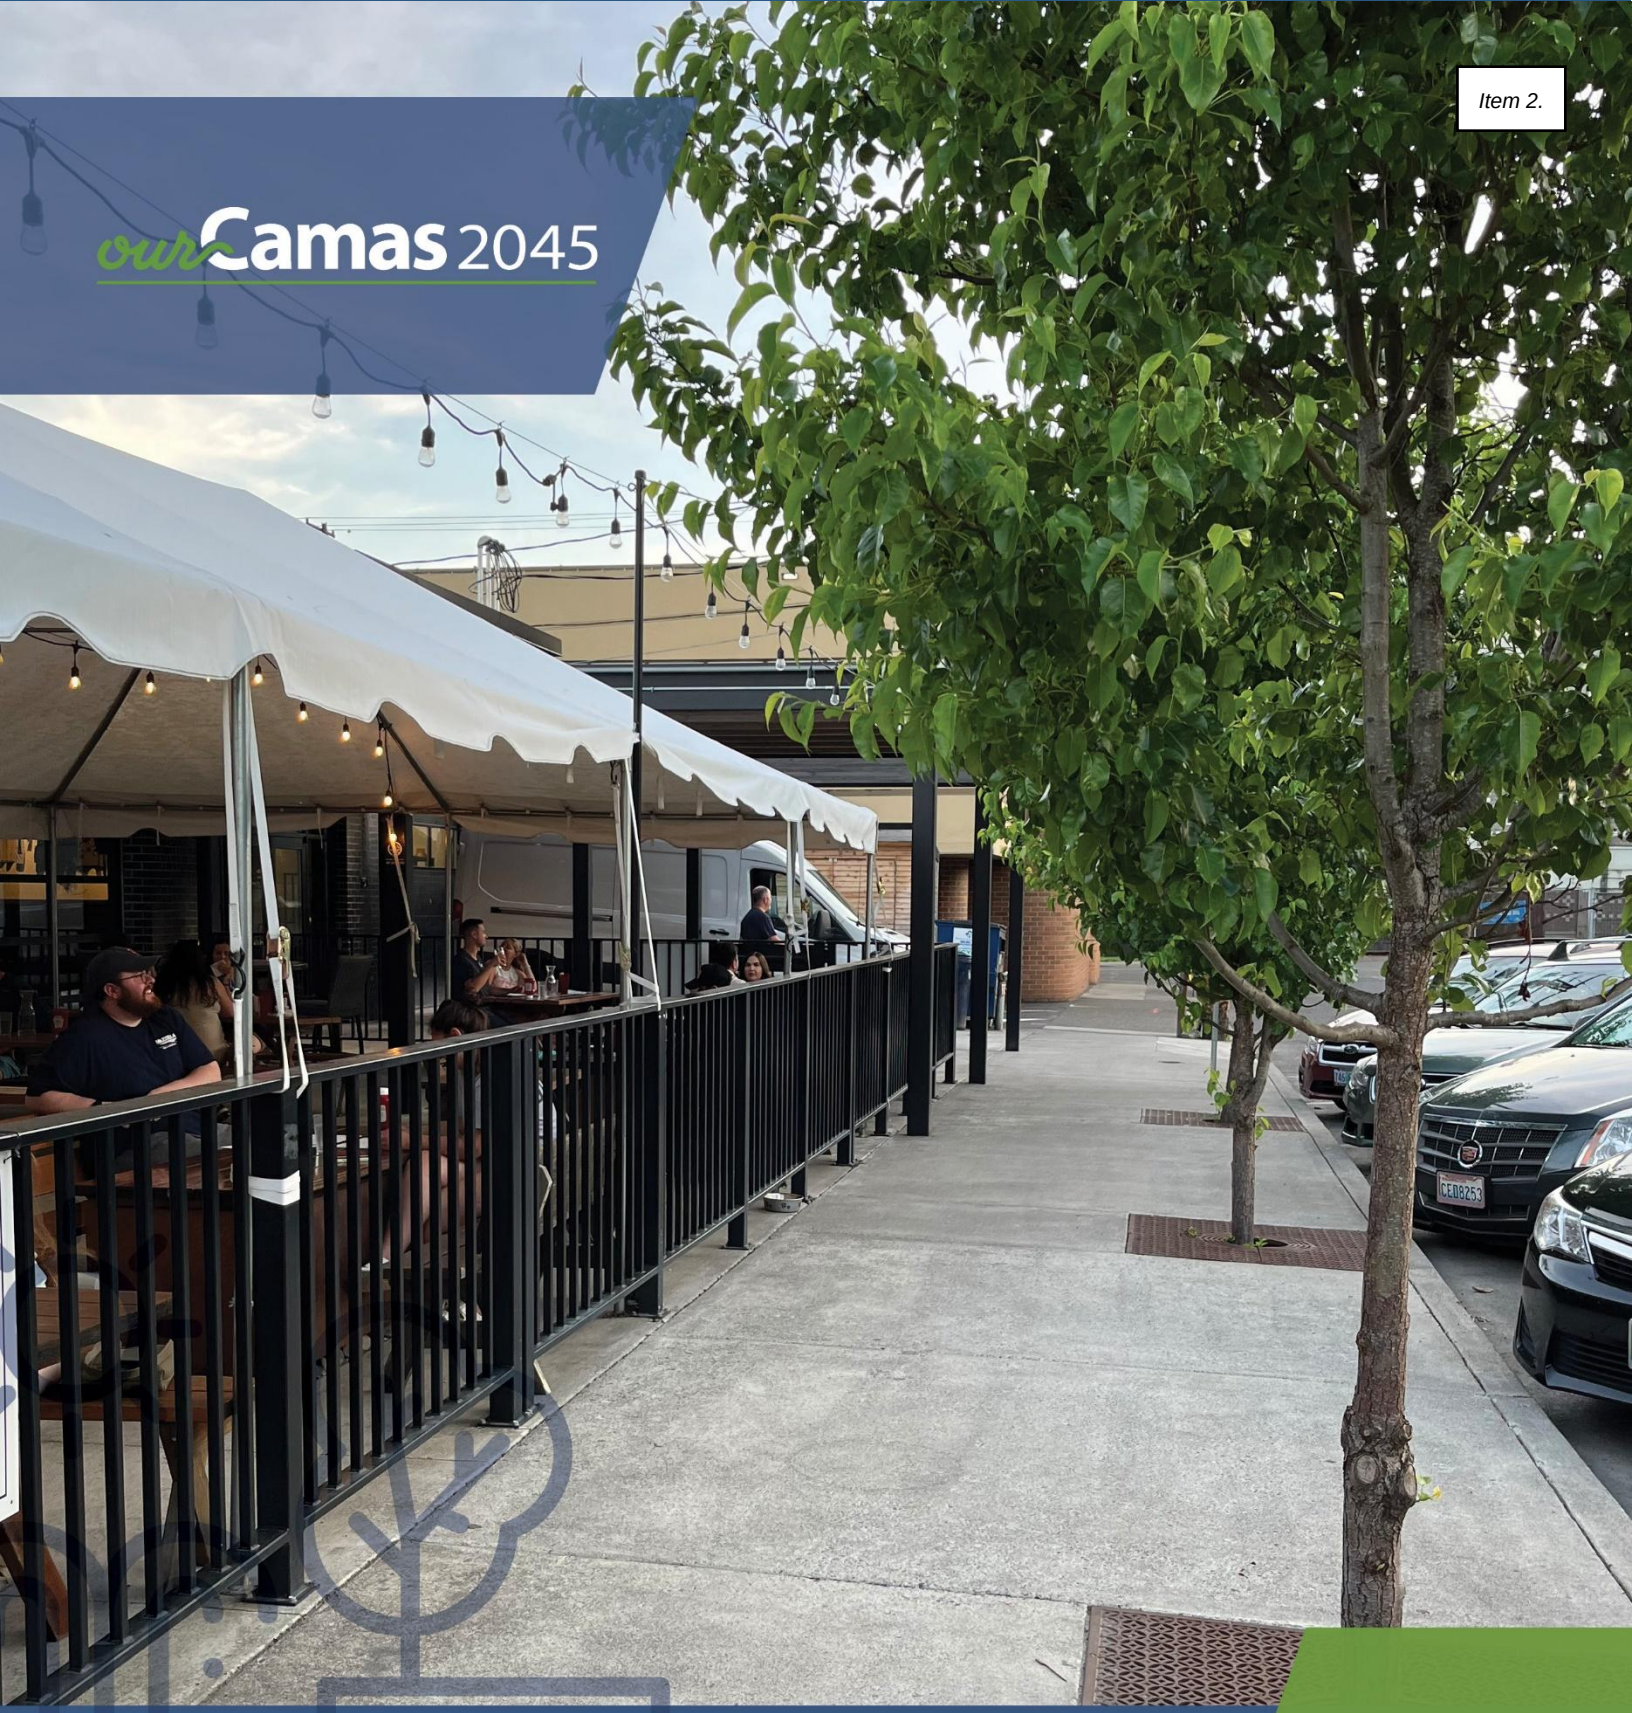
Maximize the use of state and federal funds for transportation capital, operating, service, and demand improvements.

Policy TR-6.1 Maintain a capital improvement plan (CIP) that identifies construction and improvement priorities and funding.

Policy TR-6.2 Ensure that the transportation impact fee program responds to land use changes, supports connectivity, and requires new development to pay its proportionate share of needed capacity.

Policy TR-6.3 Support the Pavement Asset Management System and other maintenance programs to ensure cost-effective maintenance of transportation facilities and efficient use of public funds.

Policy TR-6.4 Develop equitable transportation impact fees to assess developers a fair-share contributions for any transportation improvements.



Policy TR-6.5 Prioritize transportation funding for multi-modal improvements that will enhance safety and access between infill areas, schools, and employment centers.

Policy TR-6.6 Focus transportation projects in economic development areas to act as catalysts for job growth.

ourCamas 2045

Public Facilities & Services

09

09. Public Facilities & Services

Purpose

Plan for adequate facilities that are consistent with the other elements, goals and policies of Our Camas 2045, can accommodate the projected population and employment growth and land use plan, and based on sound fiscal policies for the City.

Vision

In 2045, Camas residents enjoy the city's parks, trails, community centers, and other recreational opportunities. The school district draws families to the community and the library continues its vital role as a place of learning. Residents value accessible police, fire, and emergency response services. Proficient government agencies maintain existing City assets and coordinate future development.

Introduction

The City of Camas is a full-service community that offers a breadth of public facilities, services, and utilities. Public facilities include such things as City Hall, the Camas Public Library, the Public Works Operation Center, Lacamas Lodge, the Community Center, the Camas Police Department headquarters, and Fire Stations 41 and 42. The majority of the City's functions and services are carried out from these facilities.

General government services include such departments as Administration and Human Resources, Community Development, Finance, Information Technology, and the Camas Public Library. General services include but are not limited to utility billing, human resources, city clerk functions, building and engineering permits and inspection, and activities of the City Council and city boards and commissions.

Other city services include Fire and Emergency Medical Services (EMS), Police, and Parks and Recreation. Fire and EMS services are provided in Camas and, via intergovernmental agreements, beyond Camas city limits. The Camas Police Station dispatches law enforcement services throughout the community. Parks and Recreation services are housed in several facilities including Lacamas Lodge, the Community Center, and through a myriad of parks, trails, open spaces, and special use buildings.

Public utilities, administered by the Public Works Department, includes the city's sewer system, water system, and municipal stormwater system. These systems have a variety of assets that support them and are scattered throughout the city.

Public Works also operates solid waste service. Garbage trucks are dispatched from the Operations Center, the hub of Public Works' activities, and the solid waste is transported to an off-site transfer station and then to a landfill in eastern Washington. The City budgets money for capital equipment, however, the solid waste system does not require the same kinds of investments that the sewer, water, and stormwater systems require.

The public facilities and services element is divided into four sections:

- Public Facilities and Services including fire, emergency medical and police services, parks and open space, and City owned facilities
- Public and Franchise Utilities including water, sewer, stormwater, solid waste, electricity, natural gas, and telecommunications
- Capital Improvement Plan
- School Districts

Related to this element is the City's Water System Plan (Appendix J), General Sewer Plan (Appendix K), Stormwater Management Program (Appendix L), and Capital Improvement Plan (CIP) (Appendix M), which provide comprehensive project lists and schedules guiding the investment of city resources in facilities and infrastructure. These resources are made up of local revenues as well as State, Federal and other sources. The plans listed above identify projects which have secured funding as well as a list of projects which have not yet been funded.

Level of Service (LOS) Standards

Under the GMA, adequate provisions for urban governmental services must be provided in the UGA. The goals and policies in this element are provided to address anticipated growth and maintain adopted LOS standards.

COMMUNITY FEEDBACK

- **Enhance community facilities including parks and libraries**
- **Develop multipurpose green spaces for sports and other recreation that support active lifestyles**
- **Improve the Mill Ditch trail with lighting, well-maintained pathway to connect community spaces**
- **Incorporate sustainable design features (such as daylighting, solar, and green roofs) in existing and new public buildings**
- **Update the City's Stormwater Design Standards Manual to include requirements for low-impact development or green infrastructure to reduce the amount of impervious areas in new development or redevelopment projects**
- **Protect groundwater recharge areas**

Public Facilities and Services

Many of the public facilities and services listed in this element have strategic plans and actions that guide maintenance and service improvements. The identified goals and policies were given consideration based on a framework of budgetary and operational guidelines as well as these strategic plans.

Fire Protection, Emergency Medical Services, and Police Protection

The city is served by the Camas-Washougal Fire Department (CWFD), which covers 20 square miles and 33,000 residents for fire protection and 80 square miles and 65,000 residents for emergency medical services. The Camas and Washougal fire departments consolidated in 2011 through a joint contract for service to improve efficiency and lower costs. CWFD averages approximately 5,000 fire and medical calls annually. The CWFD is the only fire department in Clark County to provide ambulance transport services, which requires additional training for the firefighters in addition to fire suppression techniques.

Camas Fire and EMS operates out of two stations – Station 41 located in City Hall on NE 4th Avenue and Station 42 located off NW Parker Street. Station 42 opened in 2001, while Station 41 was constructed in 1967 as part of City Hall.

Voters approved a capital construction bond in August of 2024 for a new downtown station and headquarters to replace Station 41. It will be located on the property occupied by the City Hall Annex building just west of City Hall on NE Fourth Avenue. When construction of the new Station 41 is completed in 2027, there will be vacated space in the City Hall building. Future uses for the vacated space have not been determined.

A Facility Conditions Assessment (FCA) (Appendices F and G) was completed in 2021 and lists some deficiencies in Station 42 in the form of HVAC, plumbing, electrical, and interior finishes that will be addressed with funding from a general obligation bond.

Beginning January 1, 2027, the Camas-Washougal Fire Department will become a regional fire authority operating independent of the City of Camas. The boundaries of this new agency will cover the municipal boundaries of the cities of Camas and Washougal.

The Camas Police Department operates a full-service police department from one location near the downtown core on NE 3rd Avenue. This 15,000 square-foot facility was built in 1998 and includes a 1,500 square-foot community/training room. Services include police response, community engagement, school resource officers, investigative follow-up, parking enforcement, code enforcement, and records services.

The City is currently investing over $400,000 in upgrades to the Camas Police Station by replacing end-of-life mechanical equipment. This investment will make it more cost-effective and environmentally resilient.

Parks, Trails, and Open Space

Camas' Comprehensive Parks, Recreation, and Open Space (PROS) plan, updated in March 2022, outlines a community vision for Camas that includes a high-quality park and recreation system, with a comprehensive open space and trail system linking all recreational sites to the regional trail network. The PROS plan is adopted by reference and included as Appendix H.

Parks and recreational opportunities in Camas include neighborhood parks that serve individual neighborhoods, natural open space areas that preserve resources throughout the community, and special use areas for specific recreation needs. Supplementing these are public and private sites and facilities, such as school sites, regional parks, and privately-owned recreation facilities.

In response to the community's feedback on the PROS plan, the City completed a Parks and Open Space Management Plan (POSMP), included as Appendix I. The purpose of the POSMP is to maintain the existing facilities, fill gaps and improve trail connections, and develop and improve existing parks. The POSMP outlines a strategic vision for the thoughtful management of parks and open spaces within the city, ensuring that they continue to serve as resources for all users. The City will need to coordinate the POSMP with the comprehensive plan to ensure consistency.

During the City's review of land use designations, the PROS plan was reviewed to ensure that sufficient land is designated as Parks and Open Space.

Camas receives impact fees paid by new development for park, trail, and open space improvements that increase the capacity of the system. The expenditure of the collected fees will be applied to the total costs of implementing projects that are identified in the PROS Plan project list, and as further refined by the City's Capital Improvements Plan.

City Facilities

The comprehensive FCA reviewed 17 publicly owned buildings located at 11 different sites. The total square footage of the surveyed buildings is just under 276,000 square feet.

The FCA report notes the total replacement value of all facilities at $61 million in 2022 dollars. The reported deficiencies for the years 2022-2027 total $17 million with the priority needs (life safety and code issue deficiencies) at $6.3 million. Long-term needs would require $18 million for major maintenance projects.

Recently, the City appropriated funding, through limited general obligation bonds, to pay for many of the items listed as priority needs in the FCA. This approximately $7 million has allowed the City to attend to some of the high priority deficiencies.

Noteworthy on the list is Station 41 and the City Hall Annex. With passage of a voter approved bond in 2024 specifically to replace Station 41, the City Hall Annex building will be demolished, and the site will house the new Station 41, which will also serve as the headquarters of the new regional fire authority.

The Camas Public Library, located across the street from City Hall on NE 4th Avenue, provides library services to the community at-large. According to the FCA, the library is in need of priority improvements to address immediate deficiencies. Since the date of the report, the City is funding a number of deficiencies through a general obligation bond.

City and Franchise Utilities

Water

The City owns and operates a multi-source municipal water system which includes supply, treatment, storage, and distribution of potable water to residential and commercial customers. The City currently obtains its water from ten groundwater wells and two surface water sources that are treated to provide high quality water to customers. The City owns over 143 miles of pipelines in its water transmission and distribution system. Service is provided to customers across five major pressure zones and 18 subzones. Eight booster pumping stations are used to move water between pressure zones. Seven storage facilities, with a combined total of 8.45 million gallons (MG), provide storage for normal and emergency conditions, such as fire suppression. Additionally, distribution system includes numerous meters, isolation valves, and hydrants. Additional information regarding Camas Water Service, including capacity analysis, is available in Appendix J, Water System Plan (2019).

Sewer

The majority of the 7,700-acre UGA and the sewage collecting infrastructure inside the city limits is owned and operated by the City of Camas. The collecting system consists of traditional gravity sewers, pump stations, force mains, and septic tank effluent systems. The system includes 38,260 linear feet of force main, 29 lift stations, and 236,200 linear feet of gravity mains. Approximately half of the city is served by septic tank effluent systems and the other half by a traditional collection system. The City gathers, treats, and discharges wastewater into the Columbia River at the Camas Wastewater Treatment Plant (WWTP).

The City of Camas Sewer Division serves residences and commercial buildings, with approximately 8,500 customers, comprised of industrial, commercial, and residential users.

A collection system flow metering and projection was conducted in 2018/2019 to evaluate the collection system using the City's hydraulic model. The results of this analysis are available in Appendix K, General Sewer Plan (2022), which develops a management plan for the system over the next 20 years.

Stormwater

The stormwater runoff generated from approximately 7,500 acres across the city of Camas is managed through 75 miles of stormwater conveyance pipe and 1,800 stormwater inlets and catch basins. The stormwater conveyance system is owned and maintained by the City. The City also owns and maintains stormwater facilities, including underground treatment vaults, detention ponds, biofiltration swales, wet ponds, drainage ditches, and culverts. These have

been geolocated on the City's Stormwater Management Action Plan (SMAP) Public Input Map. The SMAP identifies actions to protect and improve receiving waters' water quality. Commercial and residential stormwater facilities are privately owned and maintained per stormwater code CMC 14.02.200 Ownership and Maintenance. These privately owned facilities within the city are geolocated on the SMAP Public Input Map. Additional details on stormwater management in Camas can be found in Appendix L, Stormwater Management Program (2026).

Solid Waste

The City owns and operates its own solid waste utility which provides for the collection and transfer of solid waste refuse to the Clark County-owned Washougal Transfer Station. The City is responsible for managing garbage collection within the Camas boundaries. The City has established universal compulsory solid waste collection, requiring all residents and businesses to maintain solid waste service. The City contracts with Waste Connections of Washington to provide recycling and yard debris management, collection, and disposal. The City also contracts with Waste Connections to provide large container service (larger than 2 cubic yards) to those with greater solid waste handling needs.

All cities and towns in Clark County have delegated responsibility for solid waste transfer and disposal planning to the County, including Camas. The currently adopted Clark County Comprehensive Solid Waste Management Plan (CSWMP) was adopted in October 2025. Agreements between Clark County and its cities commit each to the plan and to the plan's waste disposal system.

Franchise Utilities

There are several other utilities, some of which are provided by public entities and others by private entities, that contribute to the functionality and prosperity of the community. The main utilities include electricity, natural gas, and telecommunications. Electricity is provided by Clark Public Utilities (CPU), a customer-owned public utility; natural gas is provided by Northwest Natural; and telecommunications, including high-speed internet, are provided by a variety of companies (e.g. Comcast, Verizon, Frontier, etc.). No detailed inventory regarding the capacity of these utilities is available.

Electrical

Clark Public Utilities (CPU) (https://www.clarkpublicutilities.com/) provides electricity to Camas and throughout Clark County. CPU balances strategic planning for the future with present rate and service stability in compliance with changing requirements at the local, state, and federal levels. CPU is led by an elected board to plan for integration of new technologies and has indicated there is ample capacity to meet existing demand for areas within both the incorporated City limits and the UGA. Power supplies are provided through a combination of power supply contracts and purchases from the generating system.

Natural Gas

Delivery of natural gas to Camas and its UGA is provided by Northwest Natural (https://www.nwnatural.com/). The delivery of natural gas is governed by the Federal Energy Regulatory Commission, the National Office of Pipeline Safety, and the Washington Utilities and Transportation Commission (WUTC). The City's regulations include safety and emergency provisions, LOS standards, and rate limitations. Northwest Natural provides natural gas service to all of Clark County. The alignment of the main pipeline crosses the Columbia River at the area of the Port of Camas-Washougal. Additionally, Northwest Natural is improving its backbone through the City with the installation of a large-diameter high-pressure gas main connecting Lake Road and Pacific Rim Boulevard.

Telecommunications

Verizon provides local telephone service to the City and its UGA. Many of the telecommunication facilities, including aerial and underground, are co-located with those of the electrical power provider. Frontier Communications also provides telecommunications to a large number of customers in the Camas area. Contact information for telecommunication utility providers is available on the City of Camas website (https://www.cityofcamas.us/utilities/page/new-resident-information).

Capital Improvement Plan

The 6-year Capital Improvement Plan (CIP) is a significant component of the financing plan and is adopted as part of the biennial budget. It includes a list of projects, project start dates, estimated cost, and funding. The CIP is a shorter term funding plan that directs available resources to specific projects including street preservation and improvements, fire and EMS, parks and recreation, stormwater, water, and sewer projects. The 2025-2026 CIP is included as Appendix M.

The first two years of the CIP are typically consistent with the adopted City budget. However, since capital expenditures often impact multiple years after funding has been committed, it is prudent to plan ahead for the expenditure of funds for at least four years or longer. Additionally, some of the City's adopted plans include longer term expenditure plans in which resources are actively being pursued when opportunities arise.

School Districts

Public schools are recognized as one of the largest public services within the community. Education serves one of the most important roles in community health as the quality of education today impacts the skill levels, employment rates, labor supply, and wages of tomorrow.

The Camas School District has the most, and some of largest, public facilities in the Camas Urban Growth Area. The UGA spans two school districts. Camas and Evergreen School Districts are responsible for facility planning and service levels of the districts and coordination with the

city's overall development. Both school districts are currently evaluating school facilities and overall needs to serve the community.

The Camas School District has prepared a 2022 Capital Facilities Plan (CFP) (Appendix P) to provide the County and the Cities with a schedule and financing program for capital improvement needs over a six year period (2022-2028) to ensure that adequate facilities are available to serve new growth and development.

The collection of school impact fees generates partial funding for construction of public facilities needed to accommodate new development. School impact fees are collected by the cities and County on behalf of the District at the time plats are approved or building permits are issued. Impact fees are calculated based on a formula, which includes the portion of District construction resulting in increased capacity in schools. The districts submit their capital facilities plans every other year, accompanied by impact fee calculations. The plans describe the existing and planned school facilities and services.

Anticipated property acquisition and new construction is based on the enrollment forecast, capacity, the District's educational standards and the community's support of finance tools to fund improvements.

Public Facilities and Services Goals and Policies

Goal PFS-1 Fire Protection, Emergency Medical Services, Police Protection

Provide fire protection, emergency medical services, and police protection to Camas and accommodate growth in the community.

Policy PFS-1.1 Plan for fire and emergency medical services to include adequate land, building, and equipment to effectively serve the geographic area of the city north of Lacamas Lake (North Shore).

Policy PFS-1.2 Assess the level of service needs and provide fire, advanced life support emergency medical, and police services that meet the community demand. Maintain service levels as growth occurs.

Policy PFS-1.3 Ensure the installation of commercial fire sprinklers where required by code and strongly encourage their use when installation is optional.

Policy PFS-1.4 Pursue funding to maintain fire facilities, including all fire apparatus at levels that best serve the community. Fire apparatus includes fire suppression equipment such as engine, water tenders, brush trucks and command officer vehicles.

Policy PFS-1.5 Require all new residences to install fire sprinkler systems.

Policy PFS-1.6 Plan police annex facilities at strategic locations throughout the City.

Goal PFS-2 Parks, Trails and Open Space

A network of parks, trails, and open space will connect neighborhoods, wildlife corridors, and natural resources and enhance the quality of life for residents and visitors. Refer to the Camas PROS plan for additional goals and policies.

Policy PFS-2.1 Provide and maintain an active transportation network to increase connectivity to natural areas, wildlife corridors, and other natural resources in Camas.

Policy PFS-2.2 Ensure every neighborhood has access to a park within a 15-minute walk or roll.

Policy PFS-2.3 Provide safe and maintained parks, natural areas, and other recreational spaces that are accessible for all ages and abilities.

Policy PFS-2.4 Provide a continuous trail network around Lacamas Lake with ample access points, prioritizing active transportation users. Consider new public access points through dedications, easements, and acquisitions. Partner with transit agencies to plan and implement transit service to Lacamas and Round Lake.

Policy PFS-2.5 Explore the development of dog parks within special use park areas to balance the needs of pet owners and other park users.

Policy PFS-2.6 Encourage the development of parks and playgrounds that have ample facilities for all users.

Policy PFS-2.7 Work with the Camas Parks & Recreation Department to acquire land for parks, trails, recreational uses, and habitat conservation.

Policy PFS-2.8 Enhance water conservation methods and technologies in development of irrigation infrastructure within parks and recreation areas.

Goal PFS-3 City Facilities and Services

Provide facilities and services to support the functions of City government and the community, including cemetery, animal control, and the public library.

Policy PFS-3.1 Develop an expansion plan (e.g., new municipal facility, meeting space) to accommodate additional personnel.

Policy PFS-3.2 Ensure that the municipal building and primary services remain downtown.

Policy PFS-3.3 Incorporate sustainable and low climate impact design into city buildings. Promote LEED certification (or similar) for all publicly owned facilities.

Policy PFS-3.4 Utilize the City's capital improvement program to develop alternative transportation facilities and electric vehicle charging infrastructure for public facilities.

Policy PFS-3.5 Maximize the developed and undeveloped property for cemetery use to meet future burial needs and trends and meet residents' service expectations.

Policy PFS-3.6 Provide economic stability to the cemetery fund by reducing dependency on the general fund.

Policy PFS-3.7 Develop a strong volunteer and donation program for the cemetery.

Policy PFS-3.8 Continue animal control partnership with the City of Washougal.

Policy PFS-3.9 Maintain funding and support for library services that meet the demands of current and future residents.

Policy PFS-3.10 Assess need and solutions for additional library services throughout the growing City.

Goal PFS-4 City and Franchise Utilities

Provide utility services, including energy and communication facilities and their services, to all businesses, residents, and properties in the City limits.

General Utilities Policy

Policy PFS-4.1 Maintain and improve City utility systems through preventative maintenance and regular assessments and improvements to meet regulatory standards.

Policy PFS-4.2 Where service is available, require connection to public water for domestic and irrigation needs and connection to sewer systems. Promote connection to sewer and water before system failure of private well or septic.

Policy PFS-4.3 The City should be the sole provider of urban services, including water and sewer, within the UGA for sewer service and the Water Service Area for water. Require all new construction connect to city systems. Prohibit construction of new private wells and subsurface sewage disposal systems in new developments.

Policy PFS-4.4 Do not extend utilities without annexation or commitments for annexation. Exceptions may be made in cases where human health is threatened. In areas where utilities presently extend beyond City limits, but are within UGAs, plan development jointly with the County. A joint development must be consistent with City standards.

Policy PFS-4.5 Coordinate plans for providing public utility services in UGAs and rural areas with plans for transitioning undeveloped land to urban uses.

Policy PFS-4.6 Plan public utility services so that service provision maximizes efficiency, cost effectiveness, is equitably distributed and ensures concurrency. Coordinate with other entities to provide services within the urban area.

Water Service Policy

Policy PFS-4.7 Extend adequate public water service throughout the City's urban areas that meets state requirements and provides minimum fire flow as required by the Fire Marshal.

Policy PFS-4.8 Conserve and protect groundwater resources to provide safe, clean, high quality drinking water to residents.

Policy PFS-4.9 Ensure water infrastructure is designed to City standards and is in place prior to land development.

Policy PFS-4.10 Coordinate with Clark County and other purveyors to eliminate private systems in accordance with the Clark County Coordinated Water System Plan.

Policy PFS-4.11 Coordinate with the County and the cities of Vancouver and Washougal to protect groundwater from contamination.

Policy PFS-4.12 Expand municipal reclaimed water systems and allow onsite non-potable water systems to reduce water demand in private-sector commercial and residential buildings.

Policy PFS-4.13 Eliminate the introduction of groundwater and surface water into the sewer system.

Sewer Services Policy

Policy PFS-4.14 Extend public sanitary sewer service, as required, throughout urban areas. Service may be provided outside urban areas to serve areas where imminent health hazards exist.

Policy PFS-4.15 Use traditional gravity sewer systems (in lieu of STEP systems) to serve future customers and reduce maintenance and power costs.

Policy PFS-4.16 Coordinate with Clark County to eliminate septic systems.

Stormwater Policy

Policy PFS-4.17 Provide a stable funding source to meet National Pollutant Discharge Elimination Systems (NPDES) Phase II requirements to manage and control stormwater runoff.

Policy PFS-4.18 Inspect homeowner association and other private facilities and provide directions and standards for repair.

Policy PFS-4.19 Meet water quality standards by providing best management practices for development activities.

Policy PFS-4.20 Establish baseline flows on each drainage basin or sub-basin for the analysis of deficiencies.

Policy PFS-4.21 Consider stormwater impacts during land use review processes and develop standards that would reduce the amount of impervious surface on existing and new development, including the creation and adoption of low-impact development standards and the use of green infrastructure, to address increased storm intensities and stormwater runoff.

Policy PFS-4.22 Require new development or redevelopment to comply with the Camas Stormwater Design Standards Manual and design criteria.

Policy PFS-4.23 Protect natural stream courses for water quality.

Policy PFS-4.24 Manage stormwater to safely pass surface water and maintain water quality of lakes, streams, and rivers.

Solid Waste Policy

Policy PFS-4.25 Provide for solid waste service throughout the City through continuance of self-collection of solid waste and contracting with private waste management companies to provide recycling and yard debris collection options.

Policy PFS-4.26 Continue a system of universal compulsory solid waste collection.

Policy PFS-4.27 Coordinate with the County to implement the Clark County Solid Waste Management Plan (CSWMP). Reduce the total production of waste, increase the recycling rate of waste that is produced, and properly manage and dispose of waste that is not recycled. Provide education and outreach to businesses and the public on benefits and opportunities for waste reduction and recycling. Focus on residential recycling rates to improve participation rates similar to the rest of the County.

Policy PFS-4.28 Work with solid waste utility companies to determine if household food waste/compost can be accommodated in yard waste bins.

Franchise Utility Policy

Policy PFS-4.29 Minimize the effects on adjacent properties, the environment, and the visual quality of the community of siting, developing, operating, and maintaining facilities.

Policy PFS-4.30 Coordinate to provide reliable service through partnerships and agreements with utility companies.

Policy PFS-4.31 Promote the conservation of energy resources through the adoption of appropriate energy codes and efficient land use and transportation systems.

Policy PFS-4.32 Work with energy utilities to improve the safety and reliability of infrastructure vulnerable to climate change (e.g., undergrounding transmission lines).

Goal PFS-5 Capital Improvement Plan

Maintain and implement the Capital Improvement Plan in coordination with the biennial budget.

Policy PFS-5.1 Update the capital improvement plan biannually and include a statement of projected costs and sources of revenue.

Policy PFS-5.2 Ensure capital improvements enhance the community and add physical value to the City.

Policy PFS-5.3 Apply earnings from bond proceeds toward the debt service fund reserved for the future repayment of debt directly for enhancement of the project.

Policy PFS-5.4 Dedicate all or a portion of the first year of property taxes generated from newly incorporated areas to the Capital Fund.

Policy PFS-5.5 Dedicated funds and bonds may be used to fund essential capital improvement projects such as police, fire, and general municipal structures.

Policy PFS-5.6 Use voted, general obligation debt for discretionary projects such as recreation and library facilities.

Policy PFS-5.7 Prioritize projects that support the core services provided by the City.

Policy PFS-5.8 Ensure consistency of capital improvement plans with the adopted comprehensive plan map and evaluate if funding is adequate to provide necessary public facilities and services to implement the plan.

Goal PFS-6 School Districts

Support access to quality education and public schools through partnerships and investments.

Policy PFS-6.1 Encourage the Camas School District, Clark County, and the City of Camas to invest in mutual use facilities that support intergenerational and intercultural use.

Policy PFS-6.2 Coordinate planning between the Camas School District and the City of Camas to reflect school facility needs in response to growth forecasts.

Policy PFS-6.3 Ensure equitable access to schools and educational programs, specifically considering those in underserved areas, where needs and abilities may differ.

ourCamas 2045

Economic Development

10

10. Economic Development

Boosting the Local Economy

The economic health and well-being of the City of Camas is supported by providing a wide range of employment opportunities throughout the community and a setting and quality of life that is attractive to businesses and residents.

Vision

In 2045, Camas has cultivated a diverse and thriving economy with stable employment opportunities and living-wage jobs across various sectors, including technology, healthcare, manufacturing, retail, recreation, and professional services. Camas residents have access to a wide range of services and amenities in their community, while benefiting from excellent regional connectivity and the city's proximity to Portland International Airport. Camas is a gateway to nature and recreational opportunities, supporting regional tourism in the area. Camas is home to a thriving economy and diverse businesses, affording residents ample employment opportunities. Neighborhood commercial hubs connect residents to daily services and amenities through a network of sidewalks and bike lanes, improving access and connectivity. Professional office, medical, and industrial uses typify western Camas, with retail businesses supporting these firms and nearby residents. The North Shore area will fulfill the employment and retail needs of the growing population on the northeast side, and reduce trips outside the city. Downtown Camas anchors the community with a dynamic economic landscape and retains its historic atmosphere as a walkable, attractive place to shop, dine, and gather. Inclusive housing options within the city's core contributes to a town center that supports local businesses.

Approach for Updating this Element

The approach for updating the economic development element for the 2026 to 2045 planning horizon was informed by community input (outlined below), state legislation requirements, priorities, and a comprehensive economic profile. This profile integrated the best available information from public and private data sources to assess the city's economic trajectory, opportunities, challenges, and economic conditions and competitiveness. These insights help build a factual basis for the updates.

Community Engagement Insights

Interactive open houses and interviews with stakeholders provided information about economic development strengths,

challenges, opportunities, and actions in Downtown Camas and other areas in the City. Engagement activities identified the following themes that could contribute to future decision-making related to economic development in Camas.

COMMUNITY FEEDBACK

- **Support for infill development in North Shore**
- **Maintain land for commercial and manufacturing jobs**
- **Maintain Downtown's quaint, small-town character and support the mix of older and newer businesses**
- **Increasing housing density near Downtown will support more amenities in the area**
- **Need for more indoor and outdoor gathering spaces**
- **Explore opportunities for ground floor activation**
- **Partner with groups such as the Chamber of Commerce, Port of Camas-Washougal and CREDC to proactively recruit new businesses and industries and ensure that tools and incentives are in place to attract and retain living-wage employment**
- **Support local businesses and provide incentives for new businesses and industries with a grant program**

City of Camas Competitive Position

The city's competitive position can be summarized in terms of strengths, weaknesses, opportunities, and threats. These represent internal and external factors that can have positive or negative impacts on economic outcomes in Camas. Several ideas added to the summary below are based on feedback received through community engagement activities. Table 9 below outlines key findings associated with economic growth and development.

Table 9 Strengths, Weaknesses, Opportunities, and Threats Summary Analysis

STRENGTHS

High quality of life amenities like parks and recreation opportunities including new City investments in capital projects.

- Downtown experiencing high visitation and high demand for retail spaces (increasing rents, low vacancy).
- Responsive permitting, ongoing maintenance of the public realm.
- No Washington State income tax.
- Proximity to Portland International Airport.
- Well regarded public schools.
- The Downtown Camas Association is completing a comprehensive Downtown lighting plan with a state grant to support safety.

WEAKNESSES

Rising housing costs, purchasing a home is unaffordable for those under 120% AMI.

- High industrial rents and very low industrial real estate vacancies.
- Development standards related to height was cited as a barrier by stakeholders.
- Need Downtown development to be feasible to build (pencil).
- Highly constrained lands may be difficult to develop for commercial or industrial land uses (such as in Washougal).

OPPORTUNITIES

Attract highly skilled workers with locational flexibility.

- Develop pathways for youth to gain skills and seek jobs in Camas.
- Identify target industries for managing land capacity and expected growth.
- Incentives for existing business owners, wishing to expand their operations.
- Opportunities for Downtown redevelopment and partnerships with Downtown businesses and nonprofits (such as Downtown Camas Association, the Port, Chamber, Farmers Market, and more).
- Develop mill ditch into a compelling, easy, and beautiful trail system that is clear to connect with from Downtown and improve the trails to encourage local resident activity and to attract visitors.
- Need more hotels and conference space.
- City should partner more with the Downtown Camas Association on incentive programs.
- Improve pedestrian safety throughout downtown.

THREATS

Unequal rates of homeownership by race and ethnicity indicating unequal economic opportunities.

- Disparities between remote and non-remote workers.
- Anchor employer changes.
- Safety threats that could be supported by better lighting, street tree improvements, safer crossings for pedestrians in the Downtown.
- Need to balance preserving historic features with new development in Downtown.

Broad Planning Context

Comprehensive planning in Washington is guided by the Growth Management Act (GMA), a series of statutes first adopted in 1990 which requires cities and towns within the state's most populous counties to fully plan for future growth (RCW 36.70A) and develop mandatory comprehensive plan elements. State provisions set limits on what actions cities and counties can take to support economic development. Article 8, Section 7 of the state constitution specifies that "No county, city, town or other municipal corporation shall hereafter give any money, property, or loan its money, or credit to or in aid of any individual, association, company or corporation, except for the necessary support of the poor and infirm."[16] Given this limitation, cities generally cannot directly use public funds to attract private development and instead target policies that facilitate economic growth through land use, infrastructure, tourism, marketing, and partnerships with nonprofit community-based organizations.

Cities in Washington also coordinate with county-level Associate Development Organizations (ADOs) that represent each of Washington's counties, funded in part by the state Department of Commerce. The Columbia River Economic Development Council (CREDC) represents Clark County and presents a baseline of goals and objectives for the region. Their former 2018-2023 Comprehensive Economic Development Plan outlined goals and actions based on a vision and set of values and guiding principles identified through extensive engagement with local partners, which have carried through and expanded with the more recent 2024 Comprehensive Economic Development Plan with new supplemental actions to encourage economic development for communities within Clark County.

New objectives in CREDC's regional economic development plan expand on support for entrepreneurship, placemaking investments, fostering development and redevelopment projects, and expanding equitable employment opportunities. The Plan also recognizes the growing role of smaller cities like Camas outside of Vancouver which are seeing fast population growth and opportunities to develop their own employment bases.

[16] RCW 35.21.703 does allow cities to contract with nonprofit corporations to advance economic development.

Table 10 Goals and Objectives from 2018-2023 CREDC Comprehensive Economic Development Plan

Source: CREDC

	2018 Plan Objectives	2024 Update Objectives
Expand the Existing Base	• Become Industry Experts • Strategically Market Industry Clusters • Build a Start-Up Ecosystem	• Reduce Site Infrastructure Hurdles • Grow Start-Up Ecosystem • Support Permitting Consistency • Explore Commercial Code Flexibility • Foster Small Business Networking
Support People	• Foster Skills Development • Prepare Youth for Economic Opportunity • Launch a Brain Gain Initiative	• Align Workforce with Employer Needs • Enhance Access to Career Pathways • Support Talent Retention
Create Place	• Each Community Creates a Placemaking Strategy • Embrace Economic Opportunity in Urban Center • CREDC Tells the Story of Place • Make Areas Desired by Industry Clusters Shovel-Ready • Determine All Transportation Needs on a Regional Level	• Leverage Placemaking Investments • Encourage Infrastructure Investments That Cross Municipal Boundaries

The Clark Countywide Planning Policies provide guidance on economic development across incorporated and unincorporated areas of the County (the County also distinguishes policies specifically for unincorporated areas, but not for jurisdictions and their UGAs). These policies were updated in 2026.

Buildable Land Capacity and Employment Capacity

Cities fully planning for adequate land capacity to meet the needs of the community must understand their current employment base, development trends, workforce housing availability, income segments of the population, and future projections. To fully plan for growth and meet community needs in compliance with state provisions, more suburban cities like Camas that are growing in terms of employment must understand the dynamics of the local and regional

economy, consider where employment is concentrated and how residents and workers access employment opportunities, what industries are growing or declining, and whether there is sufficient space to fulfill anticipated employment land needs alongside other uses.

Washington's Review and Evaluation Program (the Buildable Lands Program, RCW 36.70A.215) requires certain counties, including Clark County, to establish their own buildable lands programs and review past development and density patterns to see if local policies are effective and prepare to plan for the next 20 years of growth, through a "Buildable Lands Report" released before a Comprehensive Plan update.

Clark County has updated its Vacant Buildable Lands Model (VBLM) as a part of their 2026 periodic update of their Comprehensive Plan. This VBLM provides a basis for the available employment capacity in the City of Camas based on available buildable land (including both vacant and underutilized land), current zoning, and market and employment density assumptions. Table 11 below shows the County's current allocation of jobs for the City of Camas and the Camas Urban Growth Area (UGA) and the 2023 Vacant Buildable Lands Model (VBLM) capacity and yield calculations.[17]

This analysis shows that the City of Camas has an overall job target of 13,658 jobs; however, not all of those jobs create demand for commercial or industrial land. The County estimates that 2,043 of the allocated jobs will consist of work-from-home employment, field-based construction employment, or government employment accommodated on public land or existing facilities. Accordingly, the employment land capacity target for Camas is 11,615 jobs as documented in Clark County's 2025 Population, Housing and Employment Allocation memorandum.[18]

Evaluating employment capacity is necessary to determine whether the job growth allocation (determined by the county) can be accommodated within the City of Camas and Camas UGA(s). Sufficient capacity is available if employment growth capacity is equal to or greater than the City's allocation. If sufficient capacity is not available, the shortfall must be addressed by rezoning, or revising allowable density, or by modifying or creating a new UGA or annexed area to provide additional area for employment growth capacity. To help provide geographic context for this analysis, see Figure 1, a map of the City of Camas and its existing and proposed Urban Growth Areas.

[17] This has been modified since the County's 2020 Buildable Lands Report, which identified 963 net buildable acres (296 on commercial land, 667 on industrial land) in the Camas UGA (Clark County Buildable Lands Report, 2023).
[18] Clark County Community Planning, 'Clark County Comprehensive Plan 2025 Update 2025 Population, Housing and Employment Allocation – Issue Paper 5,' April 2024, https://clark.wa.gov/sites/default/files/media/document/2024-04/issue_paper_5_pop-emp_alloc_4_17_24.pdf.

Table 11 Employment Capacity and Allocation by UGA, Clark County

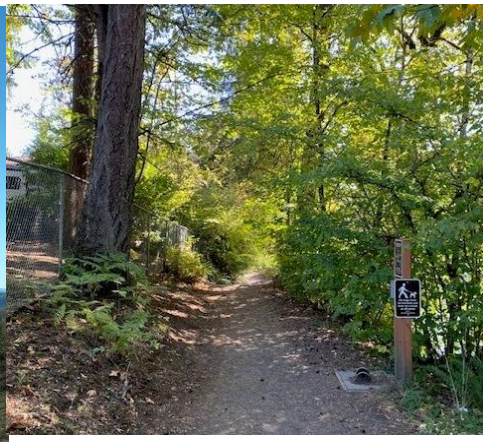
Source: VBLM 2023, Capacity and Yield by Jurisdiction. Note: The County total estimate is 88,100 jobs accounting for government, construction, rural, and work from home jobs.

Jurisdiction	2023-2045 Employment Allocation	2023 VBLM Capacity	Assumptions		
			Work from Home	Construction	Government
City of Camas and Camas UGA	**13,658 jobs**	**12,423 jobs**	615 jobs	879 jobs	549 jobs
Total Clark County UGAs and Cities	**83,695 jobs**	68,406 jobs	3,524 jobs	5,038 jobs	8,600 jobs

Additional analysis refining the employment capacity is underway that is based on key City of Camas zoning and UGA modifications. The City of Camas is adopting zoning modifications and expanded the UGA to allow for additional employment capacity. According to these refined employment capacity estimates, Camas has capacity for 12,423 jobs which exceeds the 2045 employment target of 11,615 jobs.

Clark County's Buildable Lands Report, 2023, Key Findings

Clark County's Buildable Lands Report was adopted in June 2022 to update the methodology and Vacant Buildable Lands Model (VBLM) and updated with 2023 data.

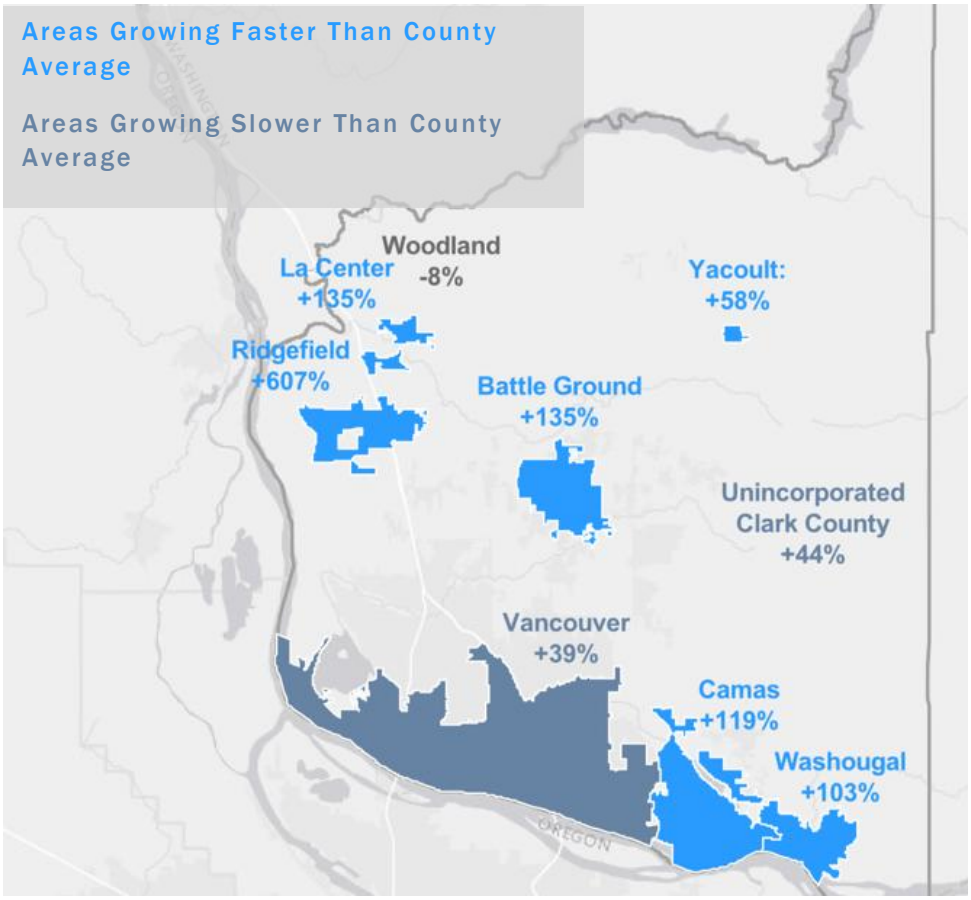


- The Clark County Buildable Lands Report and employment allocations and City of Camas estimates indicate that there is sufficient employment capacity for employment growth in the county through 2045.
- Camas has the second largest share of total projected jobs in Clark County (17.5%) after the City of Vancouver and the Vancouver Unincorporated Urban Area (U). The City of Camas is expected to have capacity to accommodate 11,363 jobs, with about half (55%) of new employment on commercial land and half on industrial (45%).

City of Camas Profile

The early economy in Camas was at first dominated by manufacturing but has shifted and diversified over time. In 2018, the mill now owned by Georgia-Pacific, shut down several facilities and all but one of its paper machines and downsized its workforce to roughly 150 workers. In 2026, the mill began a multi-year revitalization project which includes removing buildings and equipment no longer needed for papermaking as well as new investments to upgrade equipment and infrastructure. The City's past economic health was closely tied to the paper mill but has shifted to become more diversified supporting many technology and manufacturing firms, as well as a growing school system and professional offices. In the last four decades, the family-friendly city with close ties to the Portland Metropolitan Region has continued to attract more residents, especially from 1990 to 2000 by almost doubling in size to almost 13,000 people, increasing to a little over 19,000 people in 2010, and then reaching 27,420 people by 2023. Similar to the City of Vancouver, Camas has experienced high population growth over the last two decades, with an average annual growth rate of 5.2% which is double the rate in Clark County and Washington State.

Today, the City of Camas is a highly desirable place to live, offering a prime location nearby the growing cities and employment centers of Vancouver and Portland, and the smaller cities of Washougal and Battle Ground in south Clark County. The City of Camas is sandwiched between the City of Vancouver (sharing a border on the west side of Camas) to the west and the City of Washougal to the east. At a regional level, the City is interconnected to the Portland Metropolitan region, located northeast of Portland (see map below).



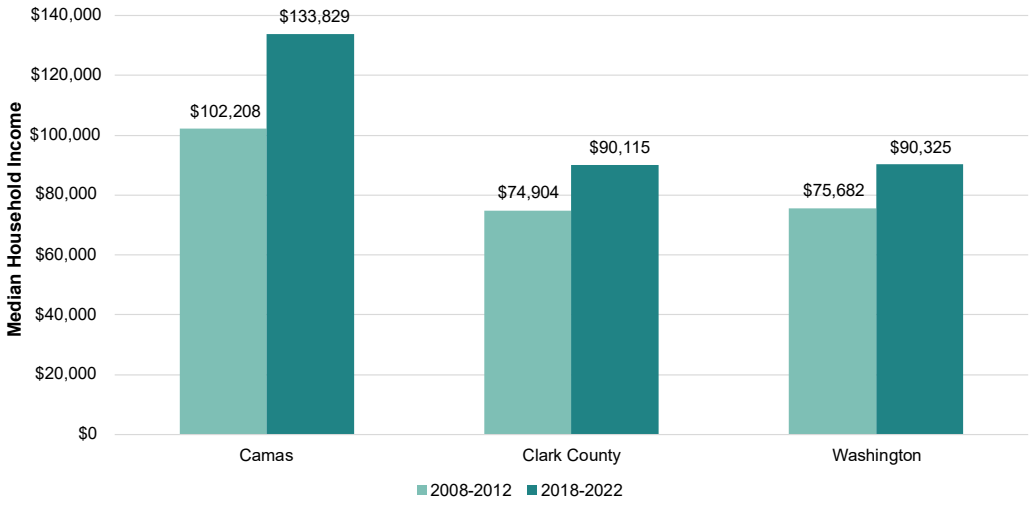
Camas has been working to advance its economic development goals in recent years while investing in quality-of-life amenities that make it a competitive location for attracting workers and residents. Recently, the City adopted a North Shore subarea plan (2022) to support community vibrancy and economic development strategies and the City is working to adopt a new Downtown subarea plan as part of the 2026 Comprehensive Plan periodic update. The City has also been expanding its inventory of parks space by leveraging the County's Legacy Lands

program to expand its offerings of natural areas and recreation facilities. As larger economic trends increase locational flexibility (especially for professional services and traditionally office-based jobs), these types of investments will be critical for cities in the region to continue drawing in and retaining a residential base and workforce. The Port of Camas-Washougal manages an airport that is outside City limits, but most of the developable land in the North Shore area is within the airport influence area.

Figure 14 Camas Compared to Clark County Cities

Source: Office of Financial Management Population Estimates

Economic Development Overview



Economic development for the City of Camas is the creation and sustenance of a diverse array of employment opportunities, ensuring the tax base currently enjoyed by the City endures and is strengthened. The economic health and well-being of the City are tied to commitments to promote a wide range of employment opportunities for the community and to provide a setting and quality of life that attract businesses and residents.

Planning a diverse and vibrant economy must start by understanding current economic conditions in the City and Clark County. While the City's past economic health was closely tied to the paper mill, in more recent years, the City's economy has diversified and now supports many technology and manufacturing firms, as well as a growing school system and professional

offices. The figures below compare the median household income for Camas, Clark County, and Washington as well as employment and related trends over time.

As illustrated in Figure 15 when compared with Clark County, wages in Camas are higher and have grown over the last decade. Higher wages can have positive impacts on other aspects of the economy, and community members have expressed their desire to support living-wage jobs, particularly in healthcare and high technology.

Figure 15 Median Household Income, Camas, Clark County, and Washington

Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates
Note: 2008-2012 values are adjusted for inflation. Median household incomes are shown in 2022 $.

Growth in employment, population, and housing are interconnected. In general, communities with a high ratio of population to jobs can be characterized as "bedroom" or commuter communities, where there are fewer jobs than residents in the city. In Camas, there are roughly three residents for every one employee, indicating a continued trend from the past decade.

The ratio of jobs to housing has slightly increased from 0.9 to 1.0, indicating a healthy balance of housing units in comparison with employment and meeting the jobs-to-housing ratio of 1:1 adopted by Clark County (Resolution 2016-03-01). As the City grows, maintaining this trend can help to ensure there is adequate housing for those who work in Camas.

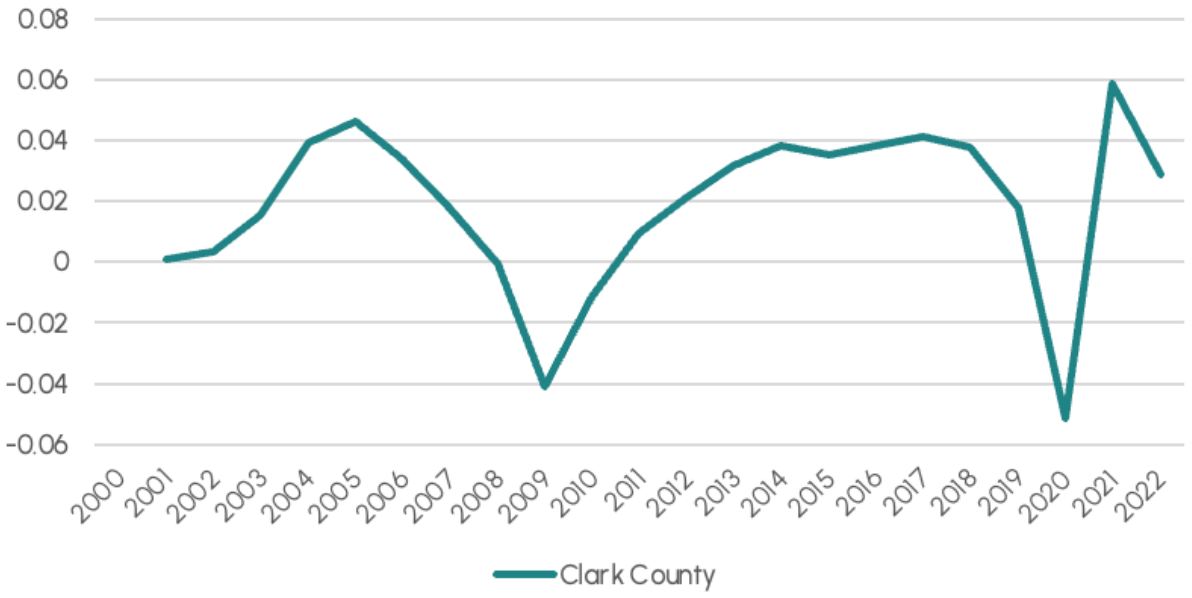


Table 12 Population, Employment, and Jobs Comparison Ratios, Camas, 2010-2021

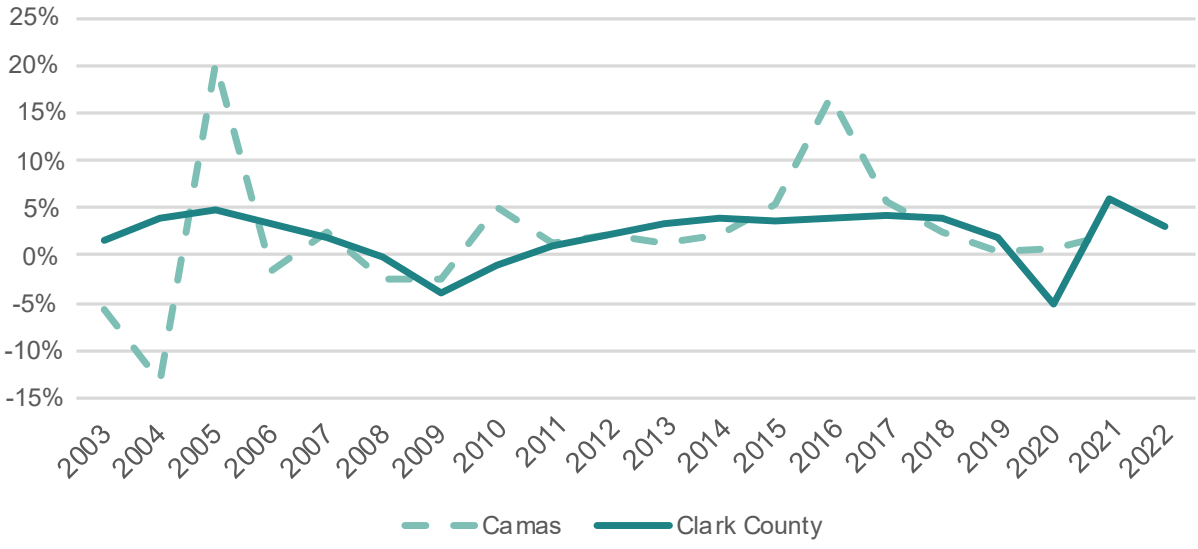
	Trends			Ratios	
	Population	Employment	Housing Units	Population : Jobs	Jobs : Housing
2010	19,355	6,508	7,072	3.0	0.9
2021	26,870	9,558	9,586	2.8	**1.0**

Source: OFM, LEHD-LODES. Note: Employment data is currently only available at the City level through 2021.



Overall, Clark County has seen fluctuations in employment since 2000, with the most notable decline in employment in the wake of the 2008 recession and at the onset of the COVID-19 in 2020. However, the County has also seen a rapid rebound from pandemic trends, with sharp employment growth after 2020. The City has generally seen positive growth in employment over the last two decades. The City saw less of a decrease during 2020 compared to Clark County overall, which may reflect Camas' growth in remote workers during this period (Figure 16).

The Economic Development Element establishes goals and policies that seek to maintain the diversification of employment opportunities and support the continued growth of the Camas economy and attainment of the jobs target by 2045.

The City is targeting businesses that provide a greater proportion of living-wage jobs. Increasing retail services in support of residential, industrial, and professional business growth is highly desirable. Camas is also seeing an increasing share of remote workers at a higher rate than the County or State, with nearly a quarter of workers falling into this category in 2022.

Figure 18 Share of Remote Workers, Camas, Clark County, and Washington, 2012-2022

Source: ACS, 2008-2012, 2018-2022

Summary of Demographic and Economic Trends

A summary of key findings from this Economic Development Element analysis is provided below to help describe key insights regarding the economic context, economic opportunities and challenges informing plan updates (Appendix N, Economic Conditions and Opportunities Analysis provides the full findings).

- **Camas has an aging population with a median age of 40 years in 2022 and a growing share of residents aged 60 years and over.** This group typically represents late-career workers or retirees. Median age in Camas is higher than Clark County overall and quickly growing since 2012, likely indicating a combination of natural growth and in-migration of older adults.
- **Camas has a higher share of residents 25 or older with at least a college level bachelor degree compared to Clark County or Washington State**, with 79% of residents holding these degrees in 2022. This share of residents rose quickly from only 37% in 2012.
- **Median household income for all households in Camas was nearly $134,000 in 2022, higher than Clark County or Washington State.** Since 2012, median income for

residents of Camas increased by about 30% (in nominal dollars, not adjusted for inflation), more than either the County or State.

- **The City of Camas has seen generally positive trends in employment growth over the last two decades,** with notable increases in the number of workers in 2005, 2010, and 2016. The City of Camas employment grew from approximately 6,584 to 9,558 between 2011 and 2021.
- **The current employment to housing ratio in Camas was 1.0 in 2021, meaning that there is about one employee working in the City for every housing unit.** This ratio indicates that Camas has a well-balanced housing stock to accommodate workers in the City.
- **In 2021, the top five industries by employment in Camas were Finance and Insurance; Manufacturing; Educational Services; Professional, Scientific, and Technical Services; and Wholesale Trade.** Four of these five top industries paid above average wages (all except Educational Services paid below average wages). Finance and Insurance was the City's fastest growing industry (with an average annual growth rate of about 33%).
- **Top employers also reflect many of the County's largest industries, including professional services like finance and insurance, technology, manufacturing, and health care. Four of the City's top ten employers were in the manufacturing industry as of 2020.** Within Camas, employment has concentrated at two nodes, including the Downtown area to the southeast and corporate campuses in the Grass Valley near the border with the City of Vancouver.
- **Camas is part of an interconnected region, with more residents commuting out of Camas for work (8,159) than employees commuting in (6,982) as of 2021. Approximately 9,102 people are employed in Camas and among this total nearly 90% live in Camas (8,159) but work outside of the city and the remaining 10% live and work in Camas (943 people).** Top commuting destinations for Camas residents are primarily nearby, larger cities with employment hubs like Vancouver and Portland, while only 10% remained in the City. Nearly 59% commute less than 10 miles. The fourth most common destination for residents was Seattle, likely indicating remote workers at companies based in the Puget Sound area. Workers commuting to Camas originated from similar destinations, with one quarter coming from Vancouver.
- **Washington State Employment Security Department projections for future employment growth estimated that the Southwest Washington region will grow by about 19% overall by 2031.** The sectors expected to see the greatest increase in their share of employment are Professional/ Business Services, Leisure/ Hospitality, Education/ Health Services, Information, and Other Services.
- **Camas has a larger share of remote workers compared with Clark County and Washington State.** In 2022 one in four workers in Camas was a remote employee, compared to 15% in both the County and State overall. The share of remote workers in Camas has grown since 2012.

- **Since 2020, the City has issued 8,652 new business permits, with the largest volume of new permits in 2020 and a decreasing amount annually after 2020.** General business establishments accounted for the largest portion of these permits (74%), followed by home occupations (25%), and nonprofits (1%).
- **Camas' taxable retail sales were higher than those in most comparable jurisdictions in Clark County over the past decade**, competing primarily with the City of Battle Ground for the highest annual sales. In 2022, total taxable retail sales reached an all-time high of over $600 million.
- **Retail rents in Camas had slight upward growth since 2014 while vacancies trended downward, indicating increasing demand for retail. Industrial real estate in the City of Camas is also performing well compared to Clark County in 2024.** The City is home to only about 3.9% of Clark County's industrial real estate in square footage but saw a sharp increase of industrial rents PSF in 2022, growing by over 200% year-over-year (YOY) to $23. Vacancy rates for industrial real estate were also extremely low in Camas in 2024 YTD at 1.7%, indicating high demand in the industrial market.

Implementation Tools and Strategies

Realizing the City of Camas economic development goals requires building on the City's potential while overcoming existing constraints. The following implementation strategies will generate positive momentum toward creating a more balanced and healthy economy.

Programmatic Strategies

- **Economic Development Committee:** Establish a mayor-appointed committee to help refine and implement Camas' economic development goals and strategies. The committee will:
  - Convene government, private sector, and nonprofit partners to leverage resources or secure financial support for economic development initiatives that benefit Camas and the broader region. In addition, this committee would help provide input on the Economic Development Strategy.
- **Economic Development Strategy**: Create an Economic Development Strategic Plan involving the Economic Development Committee, local businesses, community groups, school districts, and city leadership that further identifies priorities for job creation in targeted industries, infrastructure needs, reducing regulatory barriers, and incentives to attract needed and desired businesses.
  - Promote the development of an economic development strategy that will capitalize on the creation and retention of industries that provide living-wage jobs.
  - Future economic development strategy planning should capitalize on existing facilities and infrastructure and include a mix of uses that are trail- and transit-oriented and designed with high-quality streetscape appeal.
  - Lead an economic development strategy update every 1 to 3 years.

Financial Strategies

- **Leverage Grant Dollars**: Utilize federal, state, and county grants to support the establishment and expansion of small local businesses and infrastructure improvements benefiting economic development areas.
- **Incentives**: Explore incentives to encourage mixed-use development and provide affordable housing options (such as TIF, LID, MFTE changes).
- **Partnership**: Coordinate with the Columbia River Economic Development Council (CREDC) or other relevant organizations, to explore collaborative opportunities in promoting regional workforce development.
- **Opportunity Site Inventory**: Identify sites where the city can participate in cost-sharing mechanisms for infrastructure development.
    - Establish a policy that prioritizes capital investments to or on opportunities sites or other capital projects that better connect commercial nodes. This could include sidewalks, trails, bike paths, etc.

Regulatory Strategies

- **Code Audit**: Ensure the zoning code supports/incentivizes a broad range of needed and desired businesses in various zones.
    - **Study Allowed Uses:** Ensure needed and desired businesses are allowed in certain zones, including accessory uses which can support home-based businesses.
    - **Design standards**: Consider revisiting existing design standards to ensure they adequately support efforts to maintain and enhance existing character without compromising development feasibility.
    - **Flexible parking standards:** Develop flexible parking standards that can respond to site conditions.
    - **Revised Gateway Corridor Design Standards:** Update the design standards and allowed uses for gateway corridors to enhance its natural beauty but deemphasize its auto-oriented environment.

Procedural Strategies

- **Capacity Building**: Leverage increased tax revenue from population growth to support Camas' economic development strategy.
- **Clear and Objective Development Standards**: Establish clear and objective development standards for all development types, reducing the need for conditional use processes or other discretionary review processes.
- **Monitoring**: Monitor the performance of economic development such as with business retention and attrition, changes in tax revenues, and permitting of employment facilities. Monitor the financial impact of new programs, policies, and regulatory requirements on development feasibility by providing a report update every 1-3 years describing key metrics such as development changes and infrastructure projects.

Economic Development Goals and Policies

Goal ED-1 Citywide Economic Development

Maintain a diverse range of employment opportunities to support all residents, provide sufficient land supporting employment needs, and provide a setting and quality of life that attract and retain living-wage jobs[19] throughout the community.

Policy ED-1.1 Work with partners to identify strategies to proactively recruit businesses and ensure that tools and incentives are in place to attract sustainable and innovative industries to expand and provide stable living-wage employment.

Policy ED-1.2 Work with partners (such as the Chamber of Commerce, education programs, Workforce SW WA, CREDC) to provide apprenticeships, internships, vocational training schools, entrepreneurship programs, equitable opportunities, and on-the-job training in targeted industry sectors.

Policy ED-1.3 Encourage appropriate reuse, environmental cleanup, and redevelopment of older and deteriorating commercial areas and industrial brownfield sites. Identify opportunities to support place-based economic development, provide connections to the waterfront, diversify the economy, and support mixed-use development.

Policy ED-1.4 Foster and expand year-round recreational services, lodging, conference spaces, dining, and retail options to support tourism, benefit residents and employers, leverage Camas' strong parks and open space assets, and connect to the waterfront.

Policy ED-1.5 Participate in regional recruitment organizations to ensure the availability of an adequate supply of commercial and industrial employment land to support the City's economic development goals. Evaluate city resources to support economic development planning and implementation by designating a point-of-contact for economic development programs and serving as a liaison to the business community.

Policy ED-1.6 Support and encourage employees to use the Commute Trip Reduction Program. Encourage businesses to support remote work to reduce trips and implement a trip reduction program with incentives for carpooling, transit ridership, and other options beyond single-occupancy vehicles.

[19] A living-wage job is one that pays an income sufficient to cover basic living expenses without financial hardship, allowing an individual or family to afford essential needs such as housing, food, healthcare, transportation, childcare, and other necessities without relying on public assistance. MIT Living wage calculation (2024): https://livingwage.mit.edu/counties/53053.

Policy ED-1.7 Encourage mixed-use development and complementary businesses throughout the City to support industry clusters and leverage resources.

Policy ED-1.8 Review regulatory design standards and planning procedures for industrial and commercial facilities and provide economic incentives to promote private investment in start-ups, incubator businesses, and businesses relocating to Camas.

Policy ED-1.9 Explore ways to support remote workers such as community hubs and third places and code revisions for co-working spaces.

Policy ED-1.10 Implement the Downtown Camas subarea plan and the associated goals and actions (see downtown subarea element).

Policy ED-1.11 Promote the growth of residential development in the North Shore as described in the Camas North Shore Subarea Plan.

Goal ED-2 Local Business Development

Promote business creation, expansion, retention, and diversification throughout the community to create a consistent and reliable tax base and a healthy, diversified local economy.

Policy ED-2.1 Identify and plan for infrastructure to nurture and incubate new businesses. Explore financing tools such as tax increment financing to fund infrastructure to support development and investment in targeted areas.

Policy ED-2.2 Support retention, expansion, and recruitment of local businesses in Camas.

Policy ED-2.3 Support development standards that promote high-quality building and site design, encourage businesses to operate in a sustainable and environmentally responsible manner and integrate energy efficient design features.

Policy ED-2.4 Collaborate with partners and agencies (such as CREDC and the Port of Camas Washougal) to develop economic strategies that promote diversification of business and industry in the city and facilitate opportunities for entrepreneurship.

Policy ED-2.5 Work with partners to proactively recruit and promote the growth of businesses and industries that provide, at a minimum, cost-of-living wages and economic diversity in alignment with the CREDC regional economic development plan.

Policy ED-2.6 Explore the creation of an economic development grant program for local businesses in connection with local partners.

Policy ED-2.7 Facilitate an environment for the success and growth of small businesses to maintain a strong, diverse, and resilient local economy.

Policy ED-2.8 Encourage investments and programs that provide resources and support to minority-owned and woman-owned businesses.

Policy ED-2.9 Increase the number of neighborhood business districts to expand local access to goods and services. Consider expanding mixed-use zoning options with ground floor commercial uses that allow residents to walk or roll from home.

Policy ED-2.10 Encourage shopping local to support Camas businesses.

Goal ED-3 Mixed Use and Commercial Areas

Encourage efficient and innovative development that thoughtfully mixes commercial and residential land uses that are pedestrian-friendly and consider the context of the surrounding area.

Policy ED-3.1 Develop commercial and mixed-use areas that are safe, comfortable, and attractive to pedestrians.

Policy ED-3.2 Encourage efficient land use in the mixed-use land use designation by facilitating compact, high-density development and minimizing the amount of land that is needed for surface parking.

Policy ED-3.3 Promote the growth of businesses such as grocery stores, medical offices, and restaurants that meet the retail and service needs of the community.

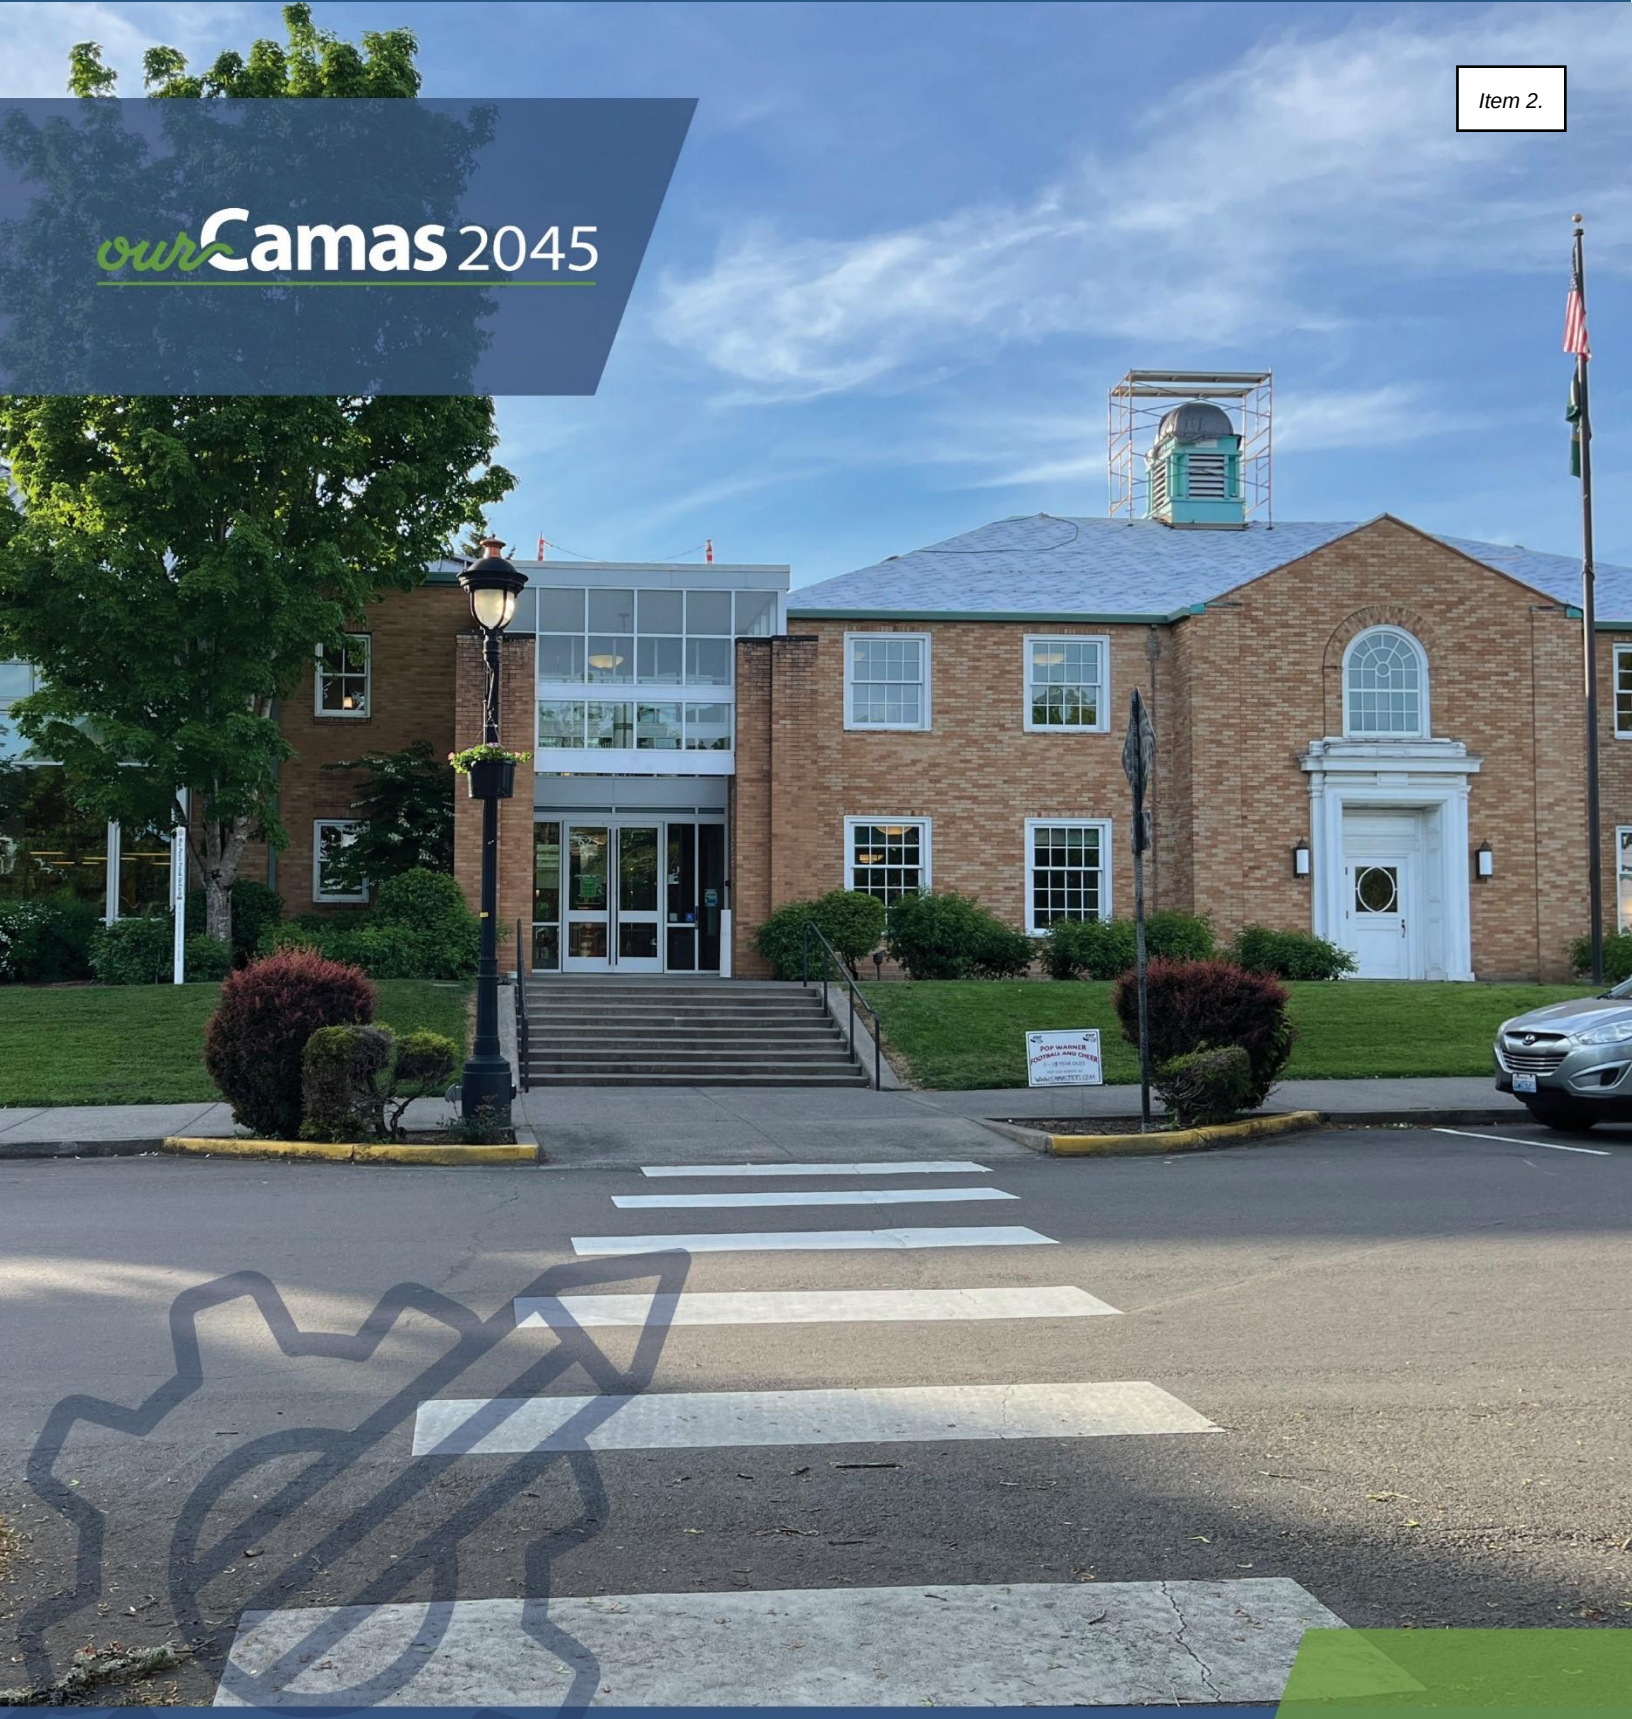
Policy ED-3.4 Encourage new developments to provide neighborhood parks and shared use paths to encourage greater physical activity and connect residential areas to commercial centers, public transit, and community facilities.

Goal ED-4 Mixed Employment and Industrial Areas

Providing a mix of traditional industrial and non-industrial land uses to maximize opportunities and partnerships and facilitate employers to remain, expand, or locate in Camas.

Policy ED-4.1 Evaluate the costs and benefits associated with adding the Grove Field Urban Growth Area to the North Shore Subarea Plan.

Policy ED-4.2 Preserve large tracts of land for large industry and master-planned commercial development within mixed employment land use areas.



Policy ED-4.3 Support a mix of light industrial, research and development, manufacturing, and office spaces through flexible zoning that allows for evolving business needs.

Policy ED-4.4 Support the development of business parks, incubators, and innovation hubs that integrate industrial and high-tech employment uses.

Policy ED-4.5 Ensure zoning and development regulations support both large-scale employers and small businesses, including start-ups and maker spaces.

Policy ED-4.6 Support continued operation of the Camas Mill while recognizing the long-term potential for mixed-use redevelopment, including residential. Support environmental cleanup to standards protective of unrestricted land uses.

Camas Comprehensive Plan Update and Downtown Subarea Plan

Public Participation Plan

February 9, 2024

Project Overview

The City of Camas seeks to update its Comprehensive Plan and to account for 20 years of growth and remain consistent with the requirements of the Growth Management Act (GMA). Per the GMA, comprehensive plans are required to contain certain elements including land use, housing, capital facilities, utilities, transportation, economic development, and parks. New considerations stemming from recent state mandates in the GMA include housing, critical areas, and the recently released guidance on climate change. The City of Camas also seeks to create a Downtown Subarea Plan that will coincide with the Comprehensive Plan update. This plan will consider the direction for sub-districts, land use and density, connectivity and mobility systems, potential redevelopment sites, gateways, and activity centers.

To ensure the Comprehensive Plan and Downtown Subarea Plan reflect the needs of community members, a robust public involvement process that reaches a large segment of Camas's population is essential. The purpose of this document is to outline an array of tools that will be employed to reach a diverse set of Camas stakeholders who will help guide the development of the Comprehensive Plan Update and Downtown Subarea Plan.

Community Engagement Objectives

The public involvement process aims to meet the following objectives:

- Inform the community with timely, transparent, and accurate information.
- Educate community members about planning, the Growth Management Act, and decision-making processes.
- Consult and involve the community in the identification, refinement and prioritization of policy updates needed to guide growth and development in Camas over the next 20 years as well as for the Downtown Subarea Plan. Ensure community members understand how decisions are made, their concerns are heard, and they know how their feedback influenced decisions.
- Partner with city and agency representatives to ensure officials are engaged in the planning process and key decisions.
- Reach a diversity of stakeholders who reflect Camas's greater community.

Key Messages

- The City of Camas is launching *Our Camas 2045*, a citywide effort to develop a new, community-wide vision for the future and update the Camas Comprehensive Plan to reflect that vision.
- Washington requires that all cities and counties plan for managing growth over a 20-year horizon, including changes in population, demographics, housing and employment trends.
- The Comprehensive Plan is Camas's primary planning document. It articulates the city's vision for future land use, housing, capital facilities, utilities, transportation, economic development, and parks.
- The City of Camas is also launching *Our Downtown Camas 2045*, a concurrent planning process to establish a more detailed vision and action plan to preserve and enhance our historic downtown's unique sense of place.
- The City of Camas is committed to an inclusive and transparent planning process. Community engagement is crucial to understanding the community's core values and developing an equitable, representative plan.
- There will be many opportunities for community members to engage throughout the planning process, with a focus on accessible opportunities to provide feedback.
- Community members can stay engaged by visiting the project website: https://engagecamas.com/

Community Demographics

The following demographic profile helps identify priority populations and tailor outreach methods to reach the full spectrum of Camas residents and property owners. Demographic data is derived primarily from the U.S. Census American Community Survey 5-Year Data 2017-2021 Data Profile. According to Census Bureau Population Estimates, Camas's population reached 27,371 as of July 1, 2022.

Race and Ethnicity

According to 2017-2021 American Community Survey data, 78 percent of Camas residents identify as White. The remainder of residents identify as African American (1.6%), American Indian/Alaska Native (1.0%), and Asian (10.6%). 8.0 percent identify with two or more races. 3.8 percent of Camas residents identify as Hispanic or Latino.

Race/Ethnicity	City of Camas	Washington
White	78.0%	71.7%
African American	1.6%	3.9%
Asian	10.6%	9.0%
Native Hawaiian and other Pacific Islander	0.1%	0.7%
American Indian or Alaskan Native	1.0%	1.2%
Two or more races	8.0%	8.6%
Hispanic or Latino (any race)	3.8%	13.2%

Languages Spoken at Home

86.7 percent of Camas residents are English speakers. The language spoken most commonly other than English are Indo European languages (5.9%) as well as Asian and Pacific Islander languages (5.5%). Smaller portions of the population speak Spanish (1.4%).

Age

The City of Camas has a larger share of residents 19 and under (29.0%) than the State of Washington (24.4%). There is also a significant portion of those who are between 35 and 54 years old (32.0%). Consequently, there are smaller shares of residents who are between the ages of 20-34 (12.7%) and those who are 75 years and older (4.0%) than Washington (21.4% and 5.8%). Camas's other age group sizes are roughly on par with State averages.

Age	City of Camas	Washington
19 years and under	29.0%	24.4%
20 – 34 years	12.7%	21.4%
35 – 54 years	32.0%	26.0%
55 – 64 years	12.9%	12.7%
65 – 74 years	9.3%	9.6%
75 years +	4.0%	5.8%

Income

From 2017-2021, the median household income in Camas was $121,094, which is higher than the state median ($82,400). More than half of Camas households earn more than $100,000 annually, compared to the State average of 40.9%.

Income	City of Camas	Washington
<$15,000	4.9%	7.1%
$15,000-$25,000	3.8%	5.9%
$25,000-$50,000	9.3%	16.5%
$50,000-$75,000	15.0%	16.3%
$75,000-$100,000	8.9%	13.4%
$100,000+	58.1%	40.9%

People with Disabilities

Census data indicates that 17.3 percent of Camas residents live with a disability. This is lower than the Washington state average of 25.4 percent. The highest percentages of those with disabilities have a hearing (3.9%) or cognitive (3.8%) disability.

Housing

Census data indicates that more than 83 percent of Camas residents live in a single-family detached home, which is greater than the State of Washington (63.0%). Around 9.7 percent of Camas residents live in middle housing (1 to 4 attached units), 5.3 percent occupy multi-family homes (5 or more attached units), and about 1.2 percent live in a mobile home. 79.9 percent of Camas residents are

homeowners and 20.1 percent are renters. ACS 2017-2021 shows that median gross rent in Camas was $1,504.

Housing Type	City of Camas	Washington
Single-family home	83.8%	63.0%
Middle housing	9.7%	10.0%
Multi-family home	5.3%	20.9%
Mobile home	1.2%	5.9%
Homeowners	79.9%	63.6%
Renters	20.1%	36.4%

Underserved Populations

The City of Camas is committed to facilitating extensive and equitable community engagement for the Comprehensive Plan Update and Downtown Subarea Plan. To ensure full and fair participation by all potentially affected community members in the decision-making process, engagement activities and tools will focus on meeting underserved groups where they are. The following describes priority populations for this process.

Census demographic information indicates that second most spoken language besides English are Indo-European Languages (5.9) and Asian and Pacific Islander Languages (5.5%) in Camas. About 10.6 percent of the community also identified as Asian. The City may consider translation of materials in relevant languages, and hosting public activities in non-governmental, community spaces that are comfortable and welcoming to those who speak limited English.

The City of Camas is also shown to have significantly higher proportions of youth (19 and under). To reach the youth of Camas, engagement activities should be centered around youth-oriented events and activities. Local schools, after school programs, and youth groups may be considered for community conversations and surveys or notified of engagement opportunities.

While the City of Camas does have a lower proportion (17.3%) of those with disabilities than Washington (25.4%), engagement activities should be made accessible and include accommodations for people of all abilities. Among identified groups in the census, those with hearing impairments are the higher than others (3.9%). Engagement events should consider the accessibility of community spaces and venues, including provision of hearing impairment accommodations, as well as access to transportation options.

Although Camas's median household income is higher than Washington, approximately 18 percent of Camas households still earn less than $50,000 a year. Access to technology to participate in engagement activities, as well as access to transportation and childcare during engagement activities should be considered when taking an equitable approach. While the City of Camas has a lower percentage of renters and people living in multifamily housing, citywide mailings could ensure all residents regardless of housing type and tenure are informed and engaged.

Stakeholders and Partners

Community members and stakeholders will have multiple opportunities to participate in the Comprehensive Plan Update and Downtown Subarea Plan processes. This section identifies the spectrum of stakeholders and the variety of ways in which the City will engage community members in the process.

Engagement Activities

The following table summarizes primary community engagement activities, their intended audience, and partners needed to carry out the activities while using the IAP2 engagement spectrum.

The IAP2 Spectrum is an internationally recognized model developed to help clarify the role of the public in planning and decision making, and how much influence the community has over planning or decision-making processes. The model identifies 5 levels of community engagement, ordered as follows by increasing impact on decision-making: (1) inform; (2) consult; (3) involve; (4) collaborate; and (5) empower.

Engagement Tool/Activity	IAP2 Spectrum	Description	Audience
Project Advisory Committee (PAC)	Inform Consult Involve	The PAC will meet up to eight (8) times to advise on the Comprehensive Plan Update and Downtown Subarea Plan process. The PAC will consist of technical stakeholders, agency partners and service providers to work alongside the CAC. They will review project materials and advise on technical issues.	Interest Groups Technical Groups
Community Advisory Community (CAC)	Inform Consult Involve	The Community Advisory Committee (CAC) will meet up to eight (8) times. The committee will represent a broad cross-section of community interests. The CAC will review and comment on work products, guide public outreach and engagement efforts, act as liaisons to specific constituencies or interest groups, help host public events, encourage community members to participate in the	Public Interest Groups

Engagement Tool/Activity	IAP2 Spectrum	Description	Audience
		process, and act as champions of the ultimate Camas Vision, Comprehensive Plan, and Downtown Plan that emerge from this process.	
Downtown Camas Association (DCA) Meetings	Inform Consult Involve	The Consultant Team will attend up to eight (8) meetings with the Downtown Camas Association (DCA) at key project milestones. Meetings will be held with the DCA board or subcommittees.	Public Interest Groups
Interested Party Interviews	Inform Consult Involve	Up to (6) interviews with interested parties will be conducted. Interviews will help build relationships with trusted community leaders and identify important issues, challenges, and assets at the outset of the project.	Stakeholders Public
Community Conversations & Events	Inform Consult	Up to ten (10) Community Conversations will be conducted by the project team, City staff and CAC members. Community Conversations will provide community members with information about the project and engage them in discussion about what they value about Camas today and what could make it a better place to live in the future. Up to five (5) community events will involve visioning activities through an informational table/booth or intercept surveys. Visioning activities will be designed to create awareness of the project and engage youth and adults in identifying what they love about Camas today and what they would change to make Camas an even better place to live, work and play in the future. Events could include: • Little Art Camas • Camas Farmer's Market • Camas Days • First Fridays • Plant and Garden Fair	Public
Surveys & Online Engagement	Inform Consult	Four (4) online community forums or surveys to gather the general interests and positions of the public will be created. Digital surveys will be provided through Engage Camas, and paper surveys will be distributed or conducted as intercept surveys at strategic locations around the city. Surveys will coincide with each of the (4) rounds of public involvement and provide an alternative opportunity to comment for those who may not come to a meeting or	Public

Engagement Tool/Activity	IAP2 Spectrum	Description	Audience
		event or feel comfortable voicing their opinions among others.	
Community Summits	Inform Consult Involve	Four (4) Community Summits throughout the course of the project will be held. These fun and engaging community events are the main opportunities for Camas community members to engage and share ideas with their neighbors face-to-face regarding the Vision, Comprehensive Plan, and Downtown Plan. To encourage participation, snacks/beverages and activities for children will be provided.	Public

Communication Tools

In addition to the above activities, the following communication tools will provide information about events, activities, and opportunities to be involved in developing the Comprehensive Plan Update and Downtown Subarea Plan.

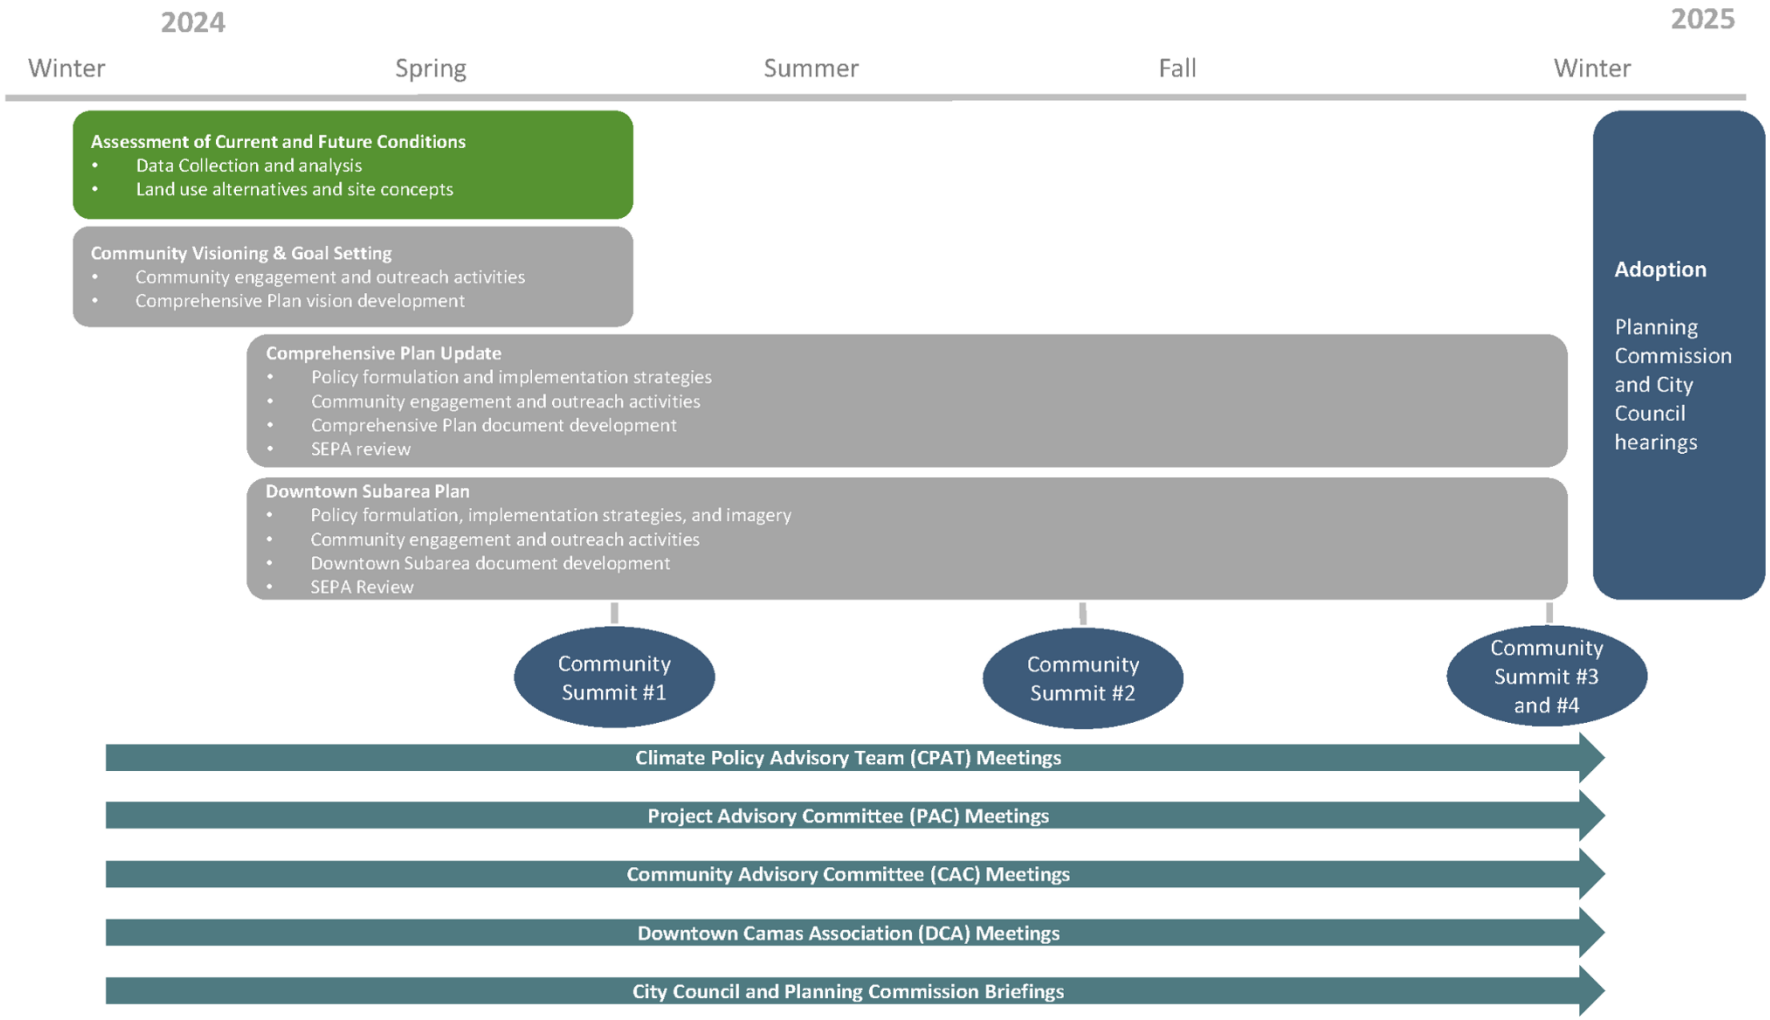
Communication Tools	Description
Project Website	The website page will utilize the Engage Camas platform and will function as an information and engagement hub for the project. It will be used for outreach activities such as online surveys and virtual meetings as well. A project overview, timeline, important contacts, schedules for public events, surveys, and other engagement activities, updates on the project's status, and the ability to view or download documents will be available on this webpage.
Social Media	Content will be prepared for social media platforms, such as Facebook and Instagram accounts to increase project awareness and provide multiple avenues for community input.
Media Contacts	Media releases to the Camas-Washougal Post Record and other local media outlets will be prepared for the City to distribute.
Public Information Materials	Flyers, newsletters, facts sheets and other materials to educate and inform the public will be prepared.
Electronic Mailing List	The City will maintain a database of e-mail addresses of people who express interest in the planning process. E-blasts for the City to distribute to help notify people about events and activities will be prepared. Interested parties will have several opportunities to join the mailing list, such as on the project website and at public meetings and events.

Risks and Mitigation Engagement Activities

The following table summarizes potential risks and suggested mitigations.

Risks	Mitigation	Stakeholder(s) Affected
Low attendance at public forums	Community event notices are shared through e-blasts, social media, website, at public events and in print materials, and distributed by CAC members.	General public
Low response rate for surveys	Surveys are shared through e-blasts, social media, website, at public evets and in print materials, and distributed by CAC members.	General public
Limited communication and buy-in from agency and city partners	Advisory Committee meeting summaries are shared in a timely manner with city and agency partners. Planning Commission and City Council updates occur throughout the project.	Agency partners, City, general public
Inadequate or poor media coverage	Press release published prior to each community event; Press invited to attend committee meetings and public events; Detailed and up to date information on the website.	Agency partners, City, general public
Lack of variety in stakeholders engaged	Committee meetings and public events held at a variety of venues that meet stakeholder needs. Direct outreach to stakeholder and community organizations that represent a broad cross section of the Camas community.	General public

Evaluation



The following table describes the key metrics and processes for evaluating progress on meeting the goals set out in this public engagement plan. The project team will evaluate progress made toward meeting these goals throughout the duration of the project.

Goal	Objective	Metric	Tool
Inform: inform the community with timely, transparent and accurate information.	• Community event attendees report high satisfaction with information shared at forums • Web traffic increases throughout the process • Social media engagements increase throughout the process	• >75% attendees are satisfied with information shared • >75% attendees are satisfied with transparency of process • Increase in web traffic throughout process • Increase in social media engagement throughout process	• Online survey • Web analytics • Social media analytics • Event questionnaires and comment forms
Consult: consult and involve the community in the identification, refinement and prioritization of plan updates. Ensure community members understand how decisions are made, have their concerns heard and learn how their feedback influenced project decisions.	• Community event attendees report high satisfaction with opportunities to engage in sharing feedback • Stakeholder feedback is plentiful • Stakeholder feedback and decisions are published within a timely manner • Information is shared back with stakeholders about how their feedback influenced the plan	• >75% attendees are satisfied with opportunities to share feedback • 200+ residents respond to surveys • 50+ residents attend public events • Website includes information on feedback and how it influenced policy • CAC meeting summaries are uploaded to website within 20 days	• Online survey • Online survey analytics • Community event sign-in sheet • Web content (Project library) • Event questionnaires and comment forms

Partner: partner with city and agency representatives to ensure officials are engaged in the planning process and key decisions.	• City Council and Planning Commission are satisfied with frequency and quantity of information shared	• City Council and Planning Commission receive a planning update either in writing or through regular briefings	• City Council and Planning Commission engagement at briefings and attendance at key community events
Reach: reach a diversity of stakeholders that reflect Camas' community.	• Each stakeholder interest is represented • Community events are hosted at accessible and representative venues • Specific outreach methods are used to reach minority populations including people of color people experiencing low income, renters, and seniors.	• Community members from all interests identified in the stakeholder interest matrix are engaged at some point throughout the process • 100% of venues are ADA accessible • Venue reflects diverse interests	• Community events sign in sheets • Venue list • Mailers • Print materials

Project Schedule

This schedule outlines engagement activities and key milestones throughout the project.

OurCamas2045 Visioning Outreach
Summary of Engagement Results
October 2024

Project Overview

The City of Camas is undertaking a multi-year initiative to update the City's Comprehensive Plan. The Our Camas 2045 Comprehensive Plan will establish a vision for growth and development and will articulate goals, objectives, policies, and actions to guide our future through 2045. The plan will also address recent changes to Washington's Growth Management Act related to housing and climate change. In conjunction with Our Camas 2045, the City of Camas is developing a downtown subarea plan to establish a more detailed vision and action plan to catalyze public and private investment in our historic downtown that preserves and enhances its unique sense of place. Our Downtown Camas 2045 will be a visionary roadmap that honors our rich heritage and maintains our hometown feel while setting the stage for a thriving future.

Beginning in December 2023, City staff and the consultant teams led outreach efforts to better understand the community's vision and priorities related to Camas' future. As of October 2024, the *Our Camas Visioning* process has reached over 1,000 community members through Community Conversations, Community Events, online surveys, online mapping tools, and the project website. The main purpose of the initial outreach effort was to ask the following questions:

- *What makes Camas, including our historic downtown, special today? What should we strive to preserve or enhance?*
- *What about Camas, including our historic downtown, would you like to change in the future? What can improve?*

While there was variation in how these broad questions were posed across different activities, they were designed to identify common themes around the aspirations and concerns of Camas residents and business owners, which is a key piece to the development of the vision statement for both downtown and the broader community. After each engagement activity, all information received was reviewed and stored within the online survey database, either through individual survey responses or manual input (which is noted within the survey system) of notes from events and activities.

This summary provides a review of the various outreach efforts and summarizes the key themes that emerged from these activities through tagging of community

conversations, event notes, and survey responses. The raw survey data, which includes the notes and feedback from community conversations and events, is included in the Appendix to this document. Note that this is not a statistically valid survey and is only meant to qualitatively explore the future of Camas.

Engagement Activities

Community Conversations

To reach a wide spectrum of Camas community members, project staff and members of the Community Advisory Committee (CAC) facilitated community conversations with local groups, clubs, committees, and organizations in Camas.

While most community conversations were facilitated by City staff, project staff and CAC members, a "Community Conversation Kit" was available on the project website for anyone to download and conduct among their own networks.

Fourteen community conversations were conducted with the following groups, engaging approximately 558 community members in Camas:

- City Council
- Camas Library Board of Directors
- Columbia Ridge Assisted Living
- Chamber of Commerce
- Downtown Camas Association
- Skyridge Middle School
- Prune Hill Residents
- Camas Planning Commission
- Holly Hills Residents
- Camas City Directors
- Downtown Merchants
- Camas Parks and Recreation Commission
- Camas Lions Club
- Camas High School

Camas High School Community Conversation

Community conversations were held in-person, and the discussion questions followed the same questions posed through the online questionnaire. These discussions helped extend the reach of the online questionnaire. Notes from discussion leaders were manually inputted to the questionnaire and marked as a community conversation.

<u>Community Events</u>

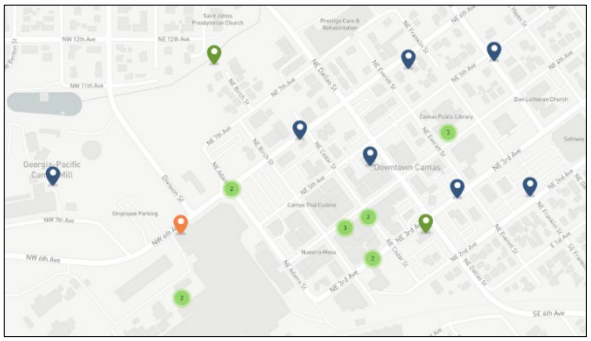
Starting in April, the project team kicked off the beginning of presence at community events. Tabling at community events provides a unique opportunity to reach many people in one place. Materials for tabling were designed to receive community feedback, build project awareness, drive people to the project website, and promote opportunities to get involved.

Downtown Camas First Friday Event

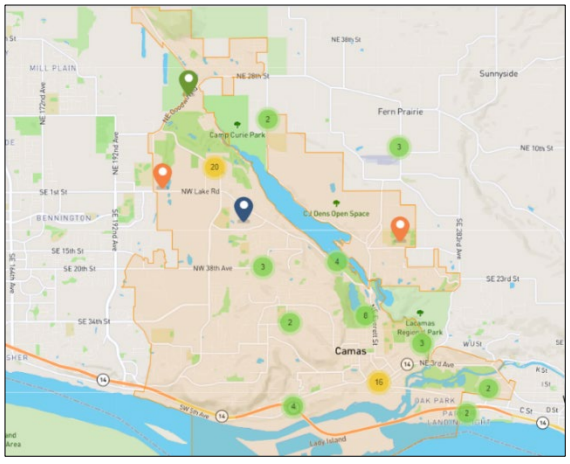
- Downtown Camas First Fridays
- Camas Days

On June 12th, the City of Camas hosted Our Camas 2045 Community Summit #1. The purpose of this event was to report back on the outreach and engagement activities that took place over Spring 2024, reveal the draft and ask for feedback on the Our Camas 2045 Vision Statement and Goals, and to identify the community's big ideas for achieving the vision and goals. More than 40 community members participated in the event at the Lacamas Lake Lodge, where kids activities and refreshments were provided.

A wide range of participants included residents, business owners, families with children, and elected officials. A compilation of the raw notes from the comment forms and poster boards are included in Appendix.



Our Camas 2045 Community Summit #1



Online Engagement

Running concurrently with outreach through Community Conversations and community events, an initial online questionnaire and interactive map were launched in early February 2024. A citywide mailer was sent to all Camas residents to announce the launch of the project and promote the project website and online engagement activities.

The initial questionnaire received 367 responses, accessed through the City's *Engage Camas* online platform, which has received over 2,000 visitors to the site.

In addition to the first questionnaire, an interactive online map provided the opportunity for participants to identify and describe areas of opportunity or concern both in the downtown and in the wider Camas community. Overall, the interactive map received 146 pins.

Following Summit #1, an online survey complimentary to the summit was launched as an opportunity for community members to participate who were unable to attend the event.

Topics and Key Themes

The following is a list of topics that emerged from the outreach conducted through the initial visioning process. These topics are a synthesis of the comments shared by Camas residents and business owners when they describe what they love about their community today, and what they want to see in the future. The word clouds provide a visual representation of the most repeated phrases.

What makes Camas, including our historic downtown, special today? What should we strive to preserve or enhance?

City-wide

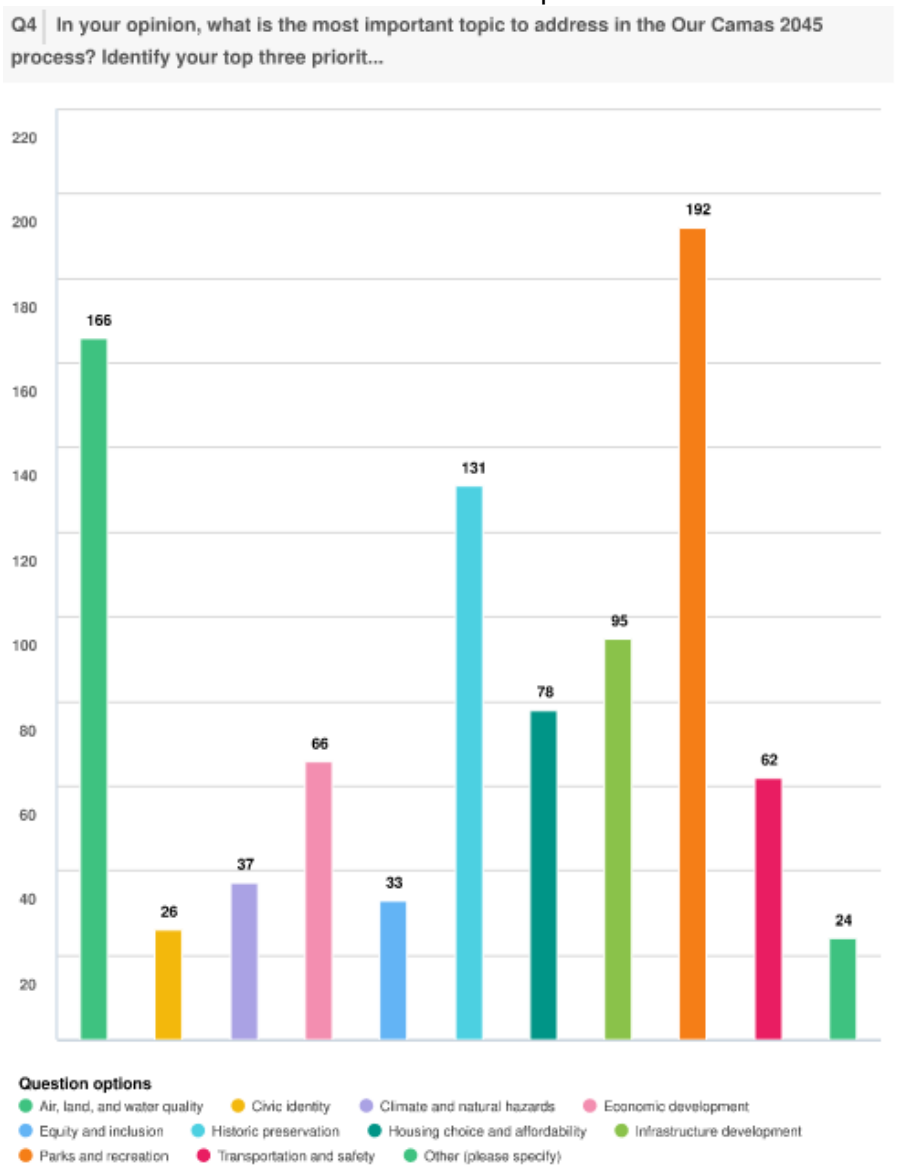
- Family-friendly
- Outdoor Access
- Trails
- Small-town feel
- Safety
- Community
- Cleanliness
- Art
- Parks
- Beauty
- Community Events
- Natural Resources

Downtown

- Walkability
- Charm
- Trees
- Historic

What about Camas, including our historic downtown, would you like to change in the future? What can improve?

City-wide



- Equity
- Support diversity
- Celebrate history
- Community pool
- Prioritize infrastructure
- Gathering space
- Lake quality
- Improve walkability
- Enhance parks
- Increase green space

Downtown

- Better parking
- More restaurants
- Less Church property
- More businesses
- Redevelop Paper Mill
- Expand downtown
- More hotels
- Maintain landscaping
- More entertainment
- Develop waterfront

- Dog park
- Smart growth
- Encourage employment
- Youth activities
- Better communication
- Building facade
- Trees
- Improve bike facilities
- Traffic
- More housing
- Affordability
- Support Emergency Services
- Maintain/increase safety
- Maintain cleanliness
- Add High School
- Increase trail connectivity
- Preserve open space
- Plan for Natural Hazards
- Support education
- Improve environment
- Reduce temporary camping
- More community events
- Public transit
- Neighborhood centers
- Recreational opportunities
- Reduce speeding
- Facility maintenance
- Accessibility
- More parks

In addition to these two broad visioning questions, the online questionnaire also asked respondents to identify the most important topics to address through the *Our Camas 2045* Comprehensive Plan and Downtown Subarea Plan process. Parks and Recreation, Air, Land, and Water Quality, and Historic Preservation were the top three topics that respondents chose as seen below in a snapshot of the results.

Based on the topics that were uncovered through the visioning process, four key themes emerged that captured the sentiment and aspirations of Camas residents and businesses owners about the future of their community. An assessment of the outreach feedback is organized around these four key themes, which serve as the foundation of the *Our Camas 2045 Vision Statement*.

Our Community:
The questionnaire's results show support for more community events and activities to add to existing programming. There were requests for better communication with residents, more involvement in decision-making processes and the welcoming of new families moving into the area through informational welcome packets. Respondents share concerns about taxation, zoning, and development decisions. Many respondents also call for more community facilities like a swimming pool, youth center, and more recreational activities such as parks, trails, and sports facilities. Lastly, some suggestions call for improving access to education, including the need for more schools and support for innovative education models.

Positive feedback was offered on the community feel and connection, shown in in sentiments like "it's a great mix of people, a safe place for families, and has a small-town community feel" and "I think the city still offers a feel of community that is lost in some places." Many point to the downtown as the center of the Camas community, noted in responses like "the downtown corridor is the foundation of Camas" and "the DCA (Downtown Camas Association) is critical in creating a welcoming atmosphere." There is strong support for locally owned businesses, seen through responses like "small family-owned businesses" and "local businesses, walkability." Emphasis was seen on preserving the small-town feel through responses like "preserve the small-town feel" and "don't turn it into a crowded, noisy place!"

Our Environment:
The questionnaire's results highlight care and passion for the many opportunities for access to nature and the outdoor recreation opportunities offered by the regional outdoor access, lakes, the waterfront, and hiking trails. Concerns were voiced about water quality in lakes seen through responses like "water quality in lakes" and "clean up the lake." Respondents noted the need for clean-up and maintenance to preserve the natural beauty and green spaces.

Many respondents spoke positively about the City's access to nature through statements like "access to nature on a daily basis is very important to me" and "nature, calmness/peace are what I think of with Camas." Emphasis was placed on the beauty, greenery, and trails, seen through responses like "I love our beautiful eclectic town" and "trails, green space and parks."

Our Neighborhoods:
The questionnaire's results ask for better management of growth, specifying the need for infrastructure considerations prior to additional housing development, shown in

responses like "developers are building housing developments faster than our infrastructure and the schools can handle them" and "growth needs to be better managed." Concerns were voiced about parking availability and infrastructure improvements such as improved streets, sidewalks, and central gathering places like parks or a town square. Emphasis was placed on improving walkability with better sidewalks, bike lanes, pedestrian-only areas, and safer pedestrian crossings, as well as reducing car traffic in downtown areas. Specific responses seen were "Strive for more large sidewalks" and "Walkability and food; shopping options downtown."

Positive feedback was given on the current state of the City's safety, cleanliness, quietness, and quality of schools. Responses indicated "it's a safe and clean community" and Camas is a "small, quiet, clean town." Emphasis was placed on slowing down development and preserving existing buildings, with comments that expressed " many things have changed over the past 15 years" and "it's sad to see buildings destroyed for what some feel is 'improvement'."

Our Downtown:
Respondents call for maintaining and preserving the historical significance of Camas, including educating youth about the town's founding and heritage. There is considerable appreciation for the quaint, historic downtown area, noted in responses like "it is a tight knit community," "the small-town feel" and "I love the older buildings downtown with the lighted trees."

There is a strong desire to preserve downtown's charm and ambiance, expressed in comments such as "preserve the small-town vibe" and "preserve the heritage and hardworking culture of the past." Emphasis was placed on the feel and the draw offered by downtown and its local businesses, noted in responses like "our quaint historic downtown area, wonderful shops and restaurants" and "love the 'community' feel, the downtown area is quaint and enjoyable."

Every key theme has ties to the downtown core, with specific suggestions for downtown development including building a parking garage, revitalizing existing parks through the addition of new play structures, restrooms, and water fountains, preserving the historic look and feel of the area, and attracting more diverse businesses, shown in responses like "continue to encourage businesses to develop in the downtown area" and "continue investment in the downtown core."

Respondents express a strong desire for downtown to be more pedestrian-friendly, with respondents saying, "make the downtown core walkable (vehicle free), with ample parking around it" and "make the entire downtown core a pedestrian zone." There is a

strong interest in more dining and restaurant options, with nearly 40 mentions of the word "restaurant" in the survey analysis. This is supported by sentiments like "add more restaurants, cafes, wine bars" and "[I] would like to see more shops/restaurants and other business that make it fun to spend an afternoon shopping and eating."

Lastly, there are some differing opinions on increasing housing downtown, but more often, respondents note the need for more downtown housing options in addition to hotels and places for visitors to stay. Specifically, people mentioned supporting "downtown businesses by including more housing" and "more housing downtown and throughout town for all income levels."

Conclusion

The raw survey data, which includes the notes and feedback from community conversations and events, is included in the Appendix. All comments received through community conversations and community events were inputted into the questionnaire to build an online database of feedback. Information from this summary was used to craft the *Our Camas 2045 Vision Statement for* the Comprehensive Plan update and Downtown Subarea Plan process.

Our Camas 2045: Vision Survey

SURVEY RESPONSE REPORT
01 December 2023 - 15 May 2024

PROJECT NAME:
Our Camas 2045

SURVEY QUESTIONS

Q1 Why do you choose to live and/or work in Camas?

Screen Name Redacted 2/09/2024 07:21 PM	When I originally purchased property here in Camas it presented as a small town that valued exactly that- a small town culture of safe protection. Boy was I wrong!
Screen Name Redacted 2/09/2024 09:12 PM	I moved to Camas specifically because of the downtown area. I have lived by Crown Park and now live by Doc Harris, and specifically live close to the center of downtown because it is what makes our city special.
Screen Name Redacted 2/10/2024 07:55 AM	I was born and raised in Washougal and I love our beautiful eclectic town.
Screen Name Redacted 2/10/2024 09:40 AM	Schools, nature, small town feel
Screen Name Redacted 2/10/2024 11:47 AM	I moved to Camas because I liked the simple small town feel. I loved how kind and inviting people were and how safe it was.
Screen Name Redacted 2/10/2024 11:14 PM	Community and culture
Screen Name Redacted 2/11/2024 10:27 AM	It is safe for raising a family. It is close to parks and nature with a strong community feel rather than an unplanned urban sprawl.
Screen Name Redacted 2/12/2024 10:02 AM	nature, calmness/peace are what I think of with Camas. Camas is ideal in its environmental setting--- with the lakes & rivers providing so many areas to walk and hike. I love how green it is here, and keeping access to recreation in nature is very important to me.
Screen Name Redacted 2/12/2024 02:44 PM	Small town feel, family environment, unique shops, lots of open spaces, amazing schools.
Screen Name Redacted 2/12/2024 02:59 PM	Safety, good schools, small town feel, cleanliness.
Screen Name Redacted	Great schools. Proximity to job.

2/12/2024 04:48 PM	
Screen Name Redacted 2/13/2024 08:43 AM	I live in the Green Mountain neighborhood off of Ingle. I live here because of safety, access to the lakes and hiking trails and the good schools.
Screen Name Redacted 2/13/2024 08:52 AM	The excellent school district, green spaces, rivers & "small town" feel.
Screen Name Redacted 2/13/2024 09:11 AM	Community focus on families, quality schools, and a safe, welcoming environment.
Screen Name Redacted 2/13/2024 09:37 AM	Great schools and wonderful community
Screen Name Redacted 2/13/2024 09:42 AM	Because my wife lives here.
Screen Name Redacted 2/13/2024 09:42 AM	Schools and community feeling.
Screen Name Redacted 2/13/2024 10:00 AM	The safety and small town feel! If it changes to much more I may have to choose elsewhere.
Screen Name Redacted 2/13/2024 10:42 AM	Parks and trails. Quiet and not overdeveloped.
Screen Name Redacted 2/13/2024 10:52 AM	I am a lifelong Camas resident. I stay because of the beautiful area and because the town has been developed thoughtfully and in a way that has retained and enhanced its unique small town feeling.
Screen Name Redacted 2/13/2024 10:55 AM	Schools and public outdoor recreation/beauty (lake, park, gorge)
Screen Name Redacted 2/13/2024 12:18 PM	Small and historic town is why we moved here 20 years ago.
Screen Name Redacted 2/13/2024 12:47 PM	School, Community, Parks and Trails

Screen Name Redacted 2/13/2024 12:49 PM	It's a great small-town feel with modern amenities. Convenient location and spectacular views.
Screen Name Redacted 2/13/2024 01:27 PM	Parks/Trails, Schools, Location to PDX, Taxes, and the hope of a more diverse downtown.
Screen Name Redacted 2/13/2024 02:09 PM	The natural beauty and small town charm.
Screen Name Redacted 2/13/2024 02:59 PM	From Washougal. I love what used to be the small feel like Washougal. I work in Camas. I enjoy supporting the local businesses in town and the trails and parks.
Screen Name Redacted 2/13/2024 06:00 PM	Schools and location
Screen Name Redacted 2/13/2024 07:02 PM	Small feel
Screen Name Redacted 2/13/2024 07:34 PM	Great small community vibe, lots of green space and dedicated parks and trails.
Screen Name Redacted 2/13/2024 07:53 PM	safety and schools
Screen Name Redacted 2/13/2024 09:21 PM	Lots of open green spaces, and a useful, vibrant downtown.
Screen Name Redacted 2/13/2024 09:29 PM	I enjoy the small town feel, plentiful outdoor activities and trail system
Screen Name Redacted 2/13/2024 11:33 PM	Small town feel. Time moves slower. Know people I went to school with.
Screen Name Redacted 2/14/2024 05:29 AM	I live by downtown and like being able to walk to get many basic everyday needs met, while also being able to walk to a trail system from my house. Access to nature on a daily basis is very important to me. And also the great schools for my kids!

Screen Name Redacted 2/14/2024 08:06 AM	Good schools. Small town feel. Both of these aspects are dwindling FAST. Developers are building housing developments faster than our infrastructure and the schools can handle them. Camas high school is over crowded and serves only the top echelon of students. A second high school is needed. New road projects are literally pushing small businesses out - people that have spent time and money and invested in our community. What the EverettStreet corridor project is doing to these businesses is outrageous- all because the city didn't have a plan for infrastructure after allowing developers to build hundreds (maybe thousands?) of homes east of the lakes.
Screen Name Redacted 2/14/2024 09:39 AM	Safety and quality schools
Screen Name Redacted 2/14/2024 12:05 PM	Raised our children in Camas Schools while working in the metro Portland-Vancouver job market. Have remained here now that we are empty-nesters and retired because of the availability of services, health-care, relatively low taxes, and excellent parks & trails
Screen Name Redacted 2/14/2024 05:16 PM	Safety, small town community, conservative values
Screen Name Redacted 2/15/2024 08:30 AM	We've built a family, home and community here.
Screen Name Redacted 2/15/2024 09:16 AM	We live in Camas because we have lived here for 50 years now and don't want to sell our home and start over even though we don't like the direction that our town is going.
Screen Name Redacted 2/15/2024 09:16 AM	Safe, good schools, beautiful scenery, modern suburbs and development
Screen Name Redacted 2/15/2024 09:26 AM	Our quaint historic downtown area, wonderful shops and restaurants.
Screen Name Redacted 2/15/2024 09:33 AM	We picked Camas first for the schools. Second we picked it based on it's proximity to PDX and Portland. Third we picked it based on it's charming downtown and walking trails.
Screen Name Redacted 2/15/2024 09:39 AM	Now that the city doesn't give a crap about the beauty of trees, all access to the lake or anything nature/wildlife related, not sure why. I

	will be moving out of here in the next 2 to 3 years. Camas used to be a gem - now it's just as ugly as strip-mall Vancouver. Well done Camas, you've ruined the beauty that brought me here. Shame on you.
Screen Name Redacted 2/15/2024 09:46 AM	Safety. No homeless camps and drugs on streets. There's no gang activity and violence.
Screen Name Redacted 2/15/2024 09:44 AM	The schools, small town community but close to airport and PDX. Parks and neighborhoods with trees
Screen Name Redacted 2/15/2024 09:44 AM	Nice, friendly small town with great schools.
Screen Name Redacted 2/15/2024 09:52 AM	Small Community values, school excellence, safety, quiet neighborhoods.
Screen Name Redacted 2/15/2024 09:58 AM	I live in Washougal, but worked at the paper mill for 40 years. I moved here for works but enjoy the small town feel of Camas and Washougal.
Screen Name Redacted 2/15/2024 10:02 AM	I like the small town feel and abundance of trees and trails.
Screen Name Redacted 2/15/2024 10:06 AM	Small community support, outdoor access to hikes, lakes, feeling of safety
Screen Name Redacted 2/15/2024 10:08 AM	New Housing.
Screen Name Redacted 2/15/2024 10:18 AM	We chose to live here because of the small town feel, specifically downtown's charm. We live a few blocks from downtown and the walkability is a huge positive for my partner and me. We also love how close we are to the hiking trail and river walk. It feels like we have everything we need here and it is lovely not having to leave town unless there is a special need.
Screen Name Redacted 2/15/2024 10:18 AM	I moved here to live with my daughters family. I enjoy the area and 'home' town feel.

Screen Name Redacted 2/15/2024 10:29 AM	I live it Camas because it is a friendly, safe community. We love the large lots of land that houses are on. We love how adorable yet functional downtown Camas. We love that getting into Portland and PDX isn't a hassle, traffic is good.
Screen Name Redacted 2/15/2024 10:28 AM	Large lot homes, small town feel.
Screen Name Redacted 2/15/2024 10:36 AM	away from the bigger cities, yet near enough to PDX and Downtown Vancouver if need some city life. Feel fairly safe - but this is starting to change....
Screen Name Redacted 2/15/2024 10:41 AM	The low crime rates, people it draws to the community and abundance of outdoor recreational access/opportunity (primarily biking lanes, trails and open space).
Screen Name Redacted 2/15/2024 10:43 AM	It's where the business I work at is located.
Screen Name Redacted 2/15/2024 10:48 AM	The charming downtown and friendly people drew us to Camas. Our home is within walking distance to downtown. We also like its proximity in the Portland metro area.
Screen Name Redacted 2/15/2024 10:50 AM	I work and hangout in camas because it is a great town with awesome small town feel. Being able to hangout downtown and walk to round lake park and feel like you are in the middle of nowhere is so cool. So many great places to eat and drink
Screen Name Redacted 2/15/2024 10:52 AM	It is a cute, vibrant and at the same time quiet town that is really enjoyable to stroll around regularly. There are also lots of events and opportunities available.
Screen Name Redacted 2/15/2024 10:59 AM	I love the small town feel, it's very beautiful.
Screen Name Redacted 2/15/2024 10:58 AM	Beautiful area, love down town, and friends already here
Screen Name Redacted	It is beautiful and safe

2/15/2024 10:56 AM

Screen Name Redacted
2/15/2024 10:59 AM

Community culture, downtown

Screen Name Redacted
2/15/2024 11:17 AM

Public green spaces with water access for hiking, biking and dog walking, proximity to airport and Portland, quality schools,

Screen Name Redacted
2/15/2024 11:30 AM

Our jobs were here (in the late 70's). Now we could work anywhere but we love the downtown core and the fact that we live within walking distance, n "old Camas."

Screen Name Redacted
2/15/2024 11:45 AM

Nice surroundings

Screen Name Redacted
2/15/2024 11:49 AM

Amazing small town and community feel. Lots of access to great parks and recreation.

Screen Name Redacted
2/15/2024 12:41 PM

It’s beautiful

Screen Name Redacted
2/15/2024 12:44 PM

Well, technically I'm in Washougal, but only just -- however our family did live in Camas for about 10 years. The biggest draw -- besides good schools -- was and is the downtown core, with shops, restaurants, galleries and regular community activities. The places I visit most often are Caffe Piccolo, Camas Antiques and the library.

Screen Name Redacted
2/15/2024 12:53 PM

Small town feel but close to bigger cities. Originally the school district but feeling lied to regarding it being top notch.

Screen Name Redacted
2/15/2024 12:56 PM

Great school districts, small town feel with proximity to Portland/Vancouver.

Screen Name Redacted
2/15/2024 01:07 PM

Love the small town feel the town

Screen Name Redacted
2/15/2024 01:10 PM

Its reputation for being a clean and safe place to live. A place that cares about the families that live there

Screen Name Redacted 2/15/2024 02:08 PM	We live in an older neighborhood walking distance to downtown. Love the downtown but disturbing to see all the development swallowing up the outskirts of camas.
Screen Name Redacted 2/15/2024 02:16 PM	Small town and great schools
Screen Name Redacted 2/15/2024 02:16 PM	I love the community! The shops and nice restaurants. I also love the trails for biking and walking. I really really love camas.
Screen Name Redacted 2/15/2024 03:14 PM	Love the small town feel(I live close to Downtown, I'm in Washougal, but camas school district.
Screen Name Redacted 2/15/2024 03:56 PM	Great schools
Screen Name Redacted 2/15/2024 04:23 PM	Location, schools, amenities, and recreational opportunities.
Screen Name Redacted 2/15/2024 04:40 PM	I both work and live in Camas. I wanted a small town feel, but close to the city of Portland. I like the parks, especially Round Lake, Fallen Leafe Lake and Lacamas Lake parks.
Screen Name Redacted 2/15/2024 05:20 PM	Schools, trails, beautiful and quaint downtown.
Screen Name Redacted 2/15/2024 05:39 PM	It is a nice little city
Screen Name Redacted 2/15/2024 06:46 PM	Because it's home for over 29 years.
Screen Name Redacted 2/15/2024 07:46 PM	Fairly small town setting.
Screen Name Redacted 2/15/2024 11:23 PM	I love the strong sense of community reflected in the pride shining in our downtown and parks, the strong support of our schools and public services, and the joyous neighborhood feeling of First Fridays, Camas Days and Farmers Market.

Screen Name Redacted 2/16/2024 12:20 AM	You are close to nature and the beauty of the trees and lakes, yet not too far from civilization either.
Screen Name Redacted 2/16/2024 05:07 AM	I like the community and small town atmosphere.
Screen Name Redacted 2/16/2024 08:08 AM	I have lived in Camas for 62 of my 64 years. I love our town, but our growth needs to be better managed.
Screen Name Redacted 2/16/2024 08:40 AM	I chose to live in Camas because of the quality of schools and because of the mix of rural and small-town urban community. I value open space and trails and I love that Camas has so much open space and rural community in combination with a lively small-town feel downtown.
Screen Name Redacted 2/16/2024 09:47 AM	Small town feel, love the beauty of the downtown as well as the nature around us.
Screen Name Redacted 2/16/2024 11:53 AM	nice people, pleasant, clean, safe, pretty.
Screen Name Redacted 2/16/2024 12:34 PM	We moved for the schools and will stay because of the natural beauty, dedication to preserving quality public spaces and the small town ethos that drives development.
Screen Name Redacted 2/16/2024 01:44 PM	Love the 'community' feel, the downtown area is quaint and enjoyable, the work of the Small Business Association is vibrant, there are art galleries, and the vintage Liberty Theater is great!
Screen Name Redacted 2/16/2024 04:54 PM	Live near Camas, Vancouver!!😊
Screen Name Redacted 2/16/2024 05:18 PM	Safety, clean, parks/trails, small town feel.
Screen Name Redacted 2/16/2024 06:17 PM	Camas has done a great job balancing community, businesses, jobs, and schools. The historic downtown. We are far enough away from the big cities, but close enough to go there if we chose.

Screen Name Redacted 2/17/2024 08:19 AM	Found an affordable view property in an established neighborhood 34 years ago.
Screen Name Redacted 2/17/2024 09:23 PM	It is a safe, family friendly small town where one can actually know others who also work and live here.
Screen Name Redacted 2/18/2024 09:07 AM	Natural elements: the forest, trails, lake, river
Screen Name Redacted 2/18/2024 09:38 AM	I relish living close enough to Lacamas Park, and ready access to all the trails, while also within easy walking distance to downtown Camas.
Screen Name Redacted 2/18/2024 04:15 PM	Schools and neighborhoods
Screen Name Redacted 2/19/2024 08:42 AM	I love the small-town vibe, interesting houses, walkable streets, and community events (even if I don't partake in very many).
Screen Name Redacted 2/19/2024 11:53 AM	Outdoor recreation (hiking, mountain biking, lakes, etc.), good schools, safe.
Screen Name Redacted 2/19/2024 02:23 PM	Family (I'm a 3rd generation Camasonian), friends, community.
Screen Name Redacted 2/20/2024 09:33 PM	Highly rated schools. Safety. Quiet, small town life-style.
Screen Name Redacted 2/21/2024 10:35 AM	Small town, small school district, nice people, cute downtown area, beautiful nature
Screen Name Redacted 2/21/2024 05:11 PM	I live in Camas because I enjoy quick access to trails and LaCamas Lake. I also enjoy. Downtown Camas.
Screen Name Redacted 2/22/2024 01:22 PM	Beautiful suburb and location next to Columbia River is gorgeous. Great schools and safe for kids
Screen Name Redacted	Moved here for schools in 2001. Staying because we like the

2/23/2024 09:58 AM	downtown & parks.
Screen Name Redacted 2/24/2024 08:28 PM	We moved here from out of state, we heard from a lot of people this is the best town to live in for kids, and low crime.
Screen Name Redacted 2/26/2024 08:36 AM	We wanted to move to camas for the quiet, unique, far-away feel from the big city; for the schools; for the serene beauty of the trees, the quiet neighborhoods, the less populated roads. Sadly, many of those things have changed over the past 15 years. The streets are failing - our road is crumbling apart and looks like it could be a sinkhole one day soon. Our street is like a main highway, our house is being targeted nearly every weekend by kids trying to beat down our door - causing health issues for my husband. We can't sit in our backyard without hearing industrial decibel leaf blowers all day and street racers at night. The front of our house has become a parking spot for folks that are up to no good - no plates or temp tags, smoking, yelling, trash, etc. Yet the city keeps asking for more of our money while our quality of living in this city is taking a nosedive.
Screen Name Redacted 2/27/2024 09:54 AM	I love the small town feel. Not a lot of Portland and Vancouvers messy homeless politics.
Screen Name Redacted 2/27/2024 10:39 AM	We moved here for work. We chose Camas for the Lakes, trails, small community, and we heard so much about the great schools. We LOVE the Library!
Screen Name Redacted 2/27/2024 11:58 AM	For the neighborhoods, open spaces/farms, and schools.
Screen Name Redacted 2/27/2024 02:25 PM	Access to nature and schools
Screen Name Redacted 2/27/2024 04:18 PM	Good schools Beautiful community The lake (which I didn't know was filthy until I moved here)
Screen Name Redacted 2/27/2024 04:31 PM	It's got small town charm without the right wing politics
Screen Name Redacted 2/27/2024 04:57 PM	Schools, safety

Screen Name Redacted 2/27/2024 06:28 PM	School district
Screen Name Redacted 2/27/2024 07:09 PM	We moved to Camas for the high performing schools and fantastic outdoor hiking. Protect the parks!
Screen Name Redacted 2/28/2024 08:59 AM	Two biggest factors that brought my family to Camas from San Diego. 1) My family is nearby in Washougal 2) The schools have a reputation for being top notch.
Screen Name Redacted 2/28/2024 06:52 PM	Outdoors
Screen Name Redacted 2/28/2024 09:06 PM	I have lived in Camas for almost 30 Years because it was a great small town.
Screen Name Redacted 2/29/2024 08:38 PM	Proximity to Lacamas Park, Columbia River, and Portland.
Screen Name Redacted 2/29/2024 09:00 PM	Proximity to Lacamas park - our family hikes, mountain bikes and trail runs through the park multiple times a week. We love access to the lakes in the summer (we wish they were safe to swim in). We love that there's almost no traffic in camas and there's a vibrant downtown thats fun to walk in and attend community events.
Screen Name Redacted 2/29/2024 09:46 PM	My kids and grandkids live here and I really love the small town life. Hope it’s not over built.
Screen Name Redacted 3/01/2024 07:51 PM	great environment, green space, parks, hiking trails, library
Screen Name Redacted 3/01/2024 09:44 PM	It’s a safe and clean community
Screen Name Redacted 3/02/2024 07:37 PM	Schools; Lacamas Lake Park and Heritage Park; quality and consistency of neighborhoods; small-town feel; moved for work then fell in love with it and stayed; better than the other nearby choice, Washougal; clients recommended it, so we moved to Camas from the Bay Area; outdoors and access to nature; moved from another mill town, Aberdeen, WA; reduced the commute to my job at PDX Airport; all of the choices, Camas was the best; my husband's work colleague

	lived in Camas and told us to check it out.
Screen Name Redacted 3/04/2024 02:05 AM	It was a small community with a sense of pride.
Screen Name Redacted 3/06/2024 05:58 PM	Small town, recreation, schools
Screen Name Redacted 3/06/2024 06:24 PM	Access to outdoor activities and Lacamas lake. Beautiful downtown area.
Screen Name Redacted 3/06/2024 06:36 PM	1:Love the trail network and views. 2: Higher-end homes. 3: Favorable WA state tax structures 4: Charming downtown.
Screen Name Redacted 3/06/2024 07:49 PM	Beautiful scenery, parks and recreation, safety, sense of community, high quality of life
Screen Name Redacted 3/06/2024 08:09 PM	Schools, outdoor parks and recreation, the ability to participate in local government and make a difference, the community we've built, schools, schools, schools, community, being connected and feeling involved.
Screen Name Redacted 3/06/2024 08:05 PM	great schools, opportunity to participate in government and the environment, parks and outdoor space
Screen Name Redacted 3/07/2024 01:11 AM	Quiet and slower paced, feels safe, doesn’t have a lot of the issues facing Vancouver, emphasis on nature
Screen Name Redacted 3/07/2024 09:17 AM	Great schools, friendly community, safe and beautiful environment.
Screen Name Redacted 3/07/2024 09:33 AM	The school system (we moved from California)
Screen Name Redacted 3/07/2024 09:38 AM	Good schools, grew up here, safe.
Screen Name Redacted 3/07/2024 10:04 AM	Mostly because of the downtown -- the shops, galleries and small businesses feel like a community. When you walk into a store, as

	often as not they greet you by name. It's also just beautiful in every season, with all those mature trees.
Screen Name Redacted 3/07/2024 10:11 AM	It is so nice to not have to get on the freeway to get involved in community. I appreciate the family events in the Hometown field. The tree line streets and the lit up nights are enchanting.
Screen Name Redacted 3/07/2024 10:29 AM	Odyssey middle school is the singular reason we chose camas. It's an extraordinary program
Screen Name Redacted 3/07/2024 11:41 AM	It’s a family oriented town and it’s pretty. We also fell in love with a church here before we moved to Camas.
Screen Name Redacted 3/07/2024 12:51 PM	Safe, good schools, beautiful area
Screen Name Redacted 3/07/2024 01:27 PM	Love downtown
Screen Name Redacted 3/07/2024 01:44 PM	The quality of life- we have an incredible balance of “small town”, natural amenities, proximity to larger city options and great small businesses.
Screen Name Redacted 3/07/2024 04:01 PM	School district & safe feeling community
Screen Name Redacted 3/07/2024 07:09 PM	Schools and cleanliness
Screen Name Redacted 3/07/2024 07:16 PM	Small town community feel, great schools and trails, safety
Screen Name Redacted 3/07/2024 09:16 PM	I chose to live in Camas for the beautiful natural areas and quality public schools.
Screen Name Redacted 3/08/2024 09:15 AM	school district, community feel like DCA events, beautiful nature like Lacamas and Round lake trails

Screen Name Redacted 3/08/2024 12:32 PM	Good schools, Lacamas Park, beautiful views, Lacamas Lake
Screen Name Redacted 3/08/2024 12:49 PM	The schools, the location close to pdx airport and portland.
Screen Name Redacted 3/10/2024 08:13 PM	I moved here for the small-town feel, abundance of trees and trails, and low amount of traffic.
Screen Name Redacted 3/11/2024 03:15 PM	Family nearby, PDX metro is convenient for working remotely but traveling when needed, love PNW
Screen Name Redacted 3/11/2024 08:30 PM	To raise kids in a safe community, with good schools
Screen Name Redacted 3/11/2024 10:21 PM	I grew up in Camas, my family is here and I love living and working in the downtown.
Screen Name Redacted 3/12/2024 12:45 PM	I've lived in the community for approximatly 52 of my 56 years. The proximity to PDX while not being in the big city is perfect.
Screen Name Redacted 3/12/2024 02:43 PM	Good schools, great community feel, love our downtown shops and restaurants
Screen Name Redacted 3/14/2024 09:17 AM	Safe community, lots of community events, hiking trails and parks, great schools, lake activities
Screen Name Redacted 3/14/2024 10:58 AM	School district and overall safety
Screen Name Redacted 3/15/2024 08:13 PM	Originally, because it was close to work, and we liked the location. Now its because we still like the location, and our backyard permaculture "food forest" produces tons of food for us.
Screen Name Redacted 3/16/2024 06:19 PM	We moved to the area due to work, but chose Camas because it was a small, safe town with an old-style downtown.
Screen Name Redacted	Family here and the good public schools

3/16/2024 06:30 PM	
Screen Name Redacted 3/16/2024 06:51 PM	I love both the small town feel as well as the proximity to a big city. I love the parks, the ease of being in nature. It feels like a mostly safe, close community.
Screen Name Redacted 3/16/2024 08:19 PM	Close to ocean,mountains and airport
Screen Name Redacted 3/16/2024 08:36 PM	It is a great town. I live and work in Camas.
Screen Name Redacted 3/16/2024 09:32 PM	School district
Screen Name Redacted 3/16/2024 11:41 PM	Moved here for the SCHOOLS - staying for the beautiful trails, amazing downtown community, and deepening social connections.
Screen Name Redacted 3/17/2024 01:24 AM	Love the location and small town feeling.
Screen Name Redacted 3/17/2024 07:22 AM	Small town feel
Screen Name Redacted 3/17/2024 08:14 AM	Safety, cleanliness, nature access
Screen Name Redacted 3/17/2024 08:39 AM	We chose to live her for the schools, proximity to a larger city with a small town feel.
Screen Name Redacted 3/17/2024 08:49 AM	When we moved here, it was a small, pretty town with a few restaurants and shops, close to major cities. The schools also had a good review for our growing family. That's what brought us here.
Screen Name Redacted 3/17/2024 09:01 AM	Schools, excellent police, location.
Screen Name Redacted 3/17/2024 10:29 AM	We love the small town feel, the great school system, and the support of small businesses.

Screen Name Redacted 3/17/2024 10:29 AM	I like how it's a small town with beautiful nature and events like Wheels and Wings and First Friday, but it's next to the medium town of Vancouver and the large town of Portland.
Screen Name Redacted 3/17/2024 10:40 AM	School system and the darling downtown area
Screen Name Redacted 3/17/2024 01:45 PM	Small town with character.
Screen Name Redacted 3/17/2024 05:10 PM	Good schools. Close to parks and trails.
Screen Name Redacted 3/17/2024 05:27 PM	It's a small town, great place to raise a family, feels safe but also close to metropolitan area.
Screen Name Redacted 3/17/2024 05:43 PM	Since of community. Businesses in town owned by fellow Camas citizens. Quality of life, small town feel.
Screen Name Redacted 3/17/2024 08:22 PM	Trails... and the shrinking historical downtown core and shrinking landscape.
Screen Name Redacted 3/18/2024 02:54 AM	I've lived here off and on for 30 years. I love it
Screen Name Redacted 3/18/2024 09:51 AM	Small safe community with great schools
Screen Name Redacted 3/18/2024 11:49 AM	It was for the schools
Screen Name Redacted 3/18/2024 11:54 AM	Quieter than the surrounding areas. I feel safer here. I found the best house (privacy)
Screen Name Redacted 3/18/2024 01:45 PM	Camas has the best schools in PDX metro area. Camas is safe and we love the small-town community feeling.
Screen Name Redacted 3/19/2024 10:13 AM	Great school, lots of green spaces, cute downtown

Screen Name Redacted 3/20/2024 05:25 AM	Nature, affordability, school districts, parks, community.
Screen Name Redacted 3/20/2024 03:19 PM	Love to mountain bike at Lacamas Park
Screen Name Redacted 3/20/2024 03:29 PM	Charm sense of community Wanting to work where you live
Screen Name Redacted 3/20/2024 07:26 PM	Family friendly community, good schools, close to Portland, airport and extended family.
Screen Name Redacted 3/22/2024 07:12 AM	I moved to Camas in the 90s.Within that time,Camas has turned into a city,that is now nothing that it was.Honestly if we did not have our home specifically where it is,as well as what it is, we would not own a home in this town.
Screen Name Redacted 3/22/2024 09:01 AM	nice, clean, town, close to shops (costco walmart) but also lots nature
Screen Name Redacted 3/25/2024 10:09 PM	We moved to Camas to raise our kids in a smaller city.
Screen Name Redacted 3/26/2024 09:46 AM	10 - 15 minute commute to work Quality schools Trails, green space and parks Real downtown, not just strip malls
Screen Name Redacted 3/26/2024 11:07 AM	Safety, schools, cleanliness
Screen Name Redacted 3/26/2024 04:18 PM	Good schools, affordable housing, close to Portland, natural beauty.
Screen Name Redacted 3/27/2024 03:45 PM	§ People knowing/supporting each other § Close-knit downtown business community § Great schools § Family Friendly § Close to nature (paths, lake, parks) § Clean and Safe § Don't see a homeless problem (new residents) § Downtown acts as living room – expands social fabric § Events bring people downtown, and they come back for the businesses § Compact, walkable, accessible (balanced with proximity to nature, but access to 205/14/PDX airport) § Authentic historic charm (architecture, mill town history, "Hallmark movie") §

	Library programing, Youth Sports programming § "We pass all our bonds"
Screen Name Redacted 4/03/2024 08:44 AM	Because it’s a nice small town
Screen Name Redacted 4/03/2024 09:08 AM	Camas has been special to me. I grew up in Camas 1947 to 1969, lived on Prune Hill 1976 to 1991; in Fern Prairie 1991 to 2002. My Grandpa had a Business College in Camas from 1939 to 1964; my parents had a clothing store from 1947 to 1972; Dad was involved in the business community, and held advisory positions for the school and city. Great activities growing up in Camas, first Little league teams; Babe Ruth teams; fun at Crown Park; swimming at the Camas Pool, saldy now gone!! It’s sad to see buildings destroyed, for what some feel is “improvement"?? The old Church that was recently destroyed was a historic building that should never have been destroyed. Camas is unique for it’s visual atmosphere includes old buildings to be treasured and maintained!! The downtown Post Office is one of those treasures!! My vision of Camas, is the Camas I grew up in, and I shudder at the thought of the growth of Camas that seems to be happening. S Slow the growth, before Camas totally loses it’s identity!!
Screen Name Redacted 4/03/2024 10:07 AM	I grew up in Camas & Washougal. It was a beautiful and peaceful area with an abundance of open, green space providing a healthy habitat for people and wildlife. Then the money-hungry developers arrived.
Screen Name Redacted 4/03/2024 10:24 AM	I love the little city feel. I love the tails, parks, and the school district.
Screen Name Redacted 4/03/2024 10:43 AM	Schools
Screen Name Redacted 4/03/2024 11:02 AM	I grew up here and liked the small town and associated close knit community.
Screen Name Redacted 4/03/2024 12:34 PM	I grew up here. My parents grew up here. My grand parents moved here when they were very young. For me it's just home! I lived for a while in the Seattle area, and in the mountains of Montana, and on Oahu. But this is home.

Screen Name Redacted 4/03/2024 04:45 PM	I chose to live here because I was looking for property in the camas washougal property. I grew up in washougal in the gorge. I loved our smaller towns back then and it feels safer here.
Screen Name Redacted 4/03/2024 05:13 PM	Born here
Screen Name Redacted 4/03/2024 06:10 PM	I don't live in Camas, but in western North Carolina. However, I lived in Camas for the first 23 years of my life and off and on after that until 1981 when I moved away permanently, only visiting now and then.
Screen Name Redacted 4/03/2024 10:03 PM	Great small town feel. Caring community.
Screen Name Redacted 4/03/2024 11:32 PM	I'm 4th generation Camas!!! My roots are here!
Screen Name Redacted 4/04/2024 02:26 AM	I have lived in Camas for over 55 years. The small town was calm, safe, and friendly. Housing was affordable, schools were great, and the land was beautiful.
Screen Name Redacted 4/04/2024 07:30 AM	It is my hometown. My family has been here for years! However...you all seem to be in favor of pushing locals out
Screen Name Redacted 4/04/2024 08:05 AM	Camas schools, being near family, lots of parks and outdoor spaces.
Screen Name Redacted 4/04/2024 08:11 AM	Schools
Screen Name Redacted 4/04/2024 08:23 AM	Small community that is great for families
Screen Name Redacted 4/04/2024 08:34 AM	I grew up in Camas and it's where I raised my family. I know maintaining a small town mindset is difficult as the city grows but the feeling of close community is why we stay.
Screen Name Redacted 4/04/2024 08:58 AM	Cuz it's a beautiful old town feel, LOVE the older CLASSIC buildings with our towns history so vibrant.

Screen Name Redacted 4/04/2024 09:54 AM	Originally, because of the schools for our children and because there was a separation from Vancouver. Now, because it feels like home and has maintained it's "small town" appeal.
Screen Name Redacted 4/04/2024 11:51 AM	Camas is a fantastic place to live ! Small town appeal but still has plenty of things to see and do ! We found an affordable house in a beautiful country atmosphere, and have been here for over 20 years. Hate to see things changing but it's inevitable. That's what progress is. Does Camas need progress ? My opinion.....to a certain degree. But not if it's going to destroy everything of historic value in this wonderful community. That's a big part of the charm and appeal of Camas....it's not BIG CITY !!!
Screen Name Redacted 4/04/2024 01:01 PM	We chose to live in Camas because it was near my husband's work and it was supposed to have the best schools (2006). I would not choose Camas for the schools today.
Screen Name Redacted 4/04/2024 01:15 PM	I live and work in Camas because of the kind community filled with people who appreciated common sense approach to problems. Moved here in 2008 and it has changed and NOT for the better.
Screen Name Redacted 4/04/2024 01:39 PM	It’s always been a unique town with outstanding charm and appeal.
Screen Name Redacted 4/04/2024 01:44 PM	The small town feel
Screen Name Redacted 4/04/2024 03:32 PM	Rural small town feel
Screen Name Redacted 4/04/2024 06:13 PM	Small, quaint town.
Screen Name Redacted 4/04/2024 06:58 PM	3rd generation resident. We built this town, but now our presence and opinions are neither desired nor required.
Screen Name Redacted 4/04/2024 07:26 PM	I liked the small-town feel and the tree canopy downtown. I loved the lakes and rivers. I like the quaint old Mill houses. I liked that I could do shopping, medical visits, yoga, groceries all right downtown.

Screen Name Redacted 4/04/2024 07:36 PM	Walkability, schools, beautiful downtown, library, lgbtqia+ safe
Screen Name Redacted 4/04/2024 11:03 PM	Because it is safe, I want my children to grow up in a lovely community, and the school district is of the highest quality.
Screen Name Redacted 4/05/2024 10:37 AM	The schools and safe neighborhoods
Screen Name Redacted 4/05/2024 11:41 AM	Small town with no over development.
Screen Name Redacted 4/06/2024 07:48 AM	The small town atmosphere, with so many small businesses. We are a community deliberately striving to avoid being incorporated into a huge, faceless metro.
Screen Name Redacted 4/06/2024 02:58 PM	My husband grew up hear.
Screen Name Redacted 4/06/2024 11:45 PM	Small town, friendly community that is not far from a Metropolitan city
Screen Name Redacted 4/08/2024 09:20 AM	A wonderful, thriving small town with access to some of the best nature in the world. And fairly low density living, which needs to be preserved in future planning.
Screen Name Redacted 4/12/2024 10:29 AM	I grew up here, my family and friends live here. I love the area and my job here.
Screen Name Redacted 4/12/2024 01:45 PM	The charm of the community, great schools, small town and community centric events.
Screen Name Redacted 4/12/2024 03:40 PM	We've retired here which allows us to live comfortably in Washington State (our home state for 30+ years) while also being close to our daughter, son-in-law, and granddaughter who live in Portland. This is a beautiful town that is so nicely walkable. We regularly (daily almost) use the walking trails of the large Lacamas Creek Park; so great! Downtown is also walkable for us (a short 4 blocks or so) from our wonderful neighborhood in our remodeled 1937 house. Finally, so close to the airport!!

Screen Name Redacted 4/12/2024 05:02 PM	good schools, access to outdoors, safe, relatively affordable
Screen Name Redacted 4/12/2024 05:38 PM	Close to Portland and the airport but far enough away it feels safe, clean, and family friendly.
Screen Name Redacted 4/12/2024 08:46 PM	Love the small-town feel and approachability of the downtown core and nature trails.
Screen Name Redacted 4/12/2024 09:08 PM	Nice and homey without too much suburban sprawl
Screen Name Redacted 4/13/2024 04:49 AM	Small town feel, quaint shops in town, the lakes and surrounding beautiful parks and trails, crown park. Close to airport. Nice genuine people.
Screen Name Redacted 4/13/2024 06:19 AM	Small town community pride, availability of easy access parks and trails, school system quality, safe neighborhoods.
Screen Name Redacted 4/13/2024 07:03 AM	Parks, lots of family centered events, schools, convenient to everything.
Screen Name Redacted 4/13/2024 03:33 PM	Small town feel, but has so much and close to bigger cities and airports. I like the downtown area, very friendly, every thing close and lots of small businesses.
Screen Name Redacted 4/13/2024 04:36 PM	I bought a home here when prices were cheap and nobody wanted to live here.
Screen Name Redacted 4/13/2024 05:05 PM	We have young kids; appreciate the commitment to quality education from the city and community. We enjoy the quiet clean local feel that Camas provides.
Screen Name Redacted 4/13/2024 08:05 PM	Small town close to river and large city
Screen Name Redacted 4/14/2024 11:03 AM	Camas is a quiet, clean community with an abundance of open space parks for outdoor activities.

Screen Name Redacted 4/14/2024 11:11 AM	Walkability! Camas is one of the few places in Clark County that a person can navigate almost entirely on foot. We have great trails and need more! Walking and biking contribute to public safety (basically citizen patrols) and keeps our residents healthier and more connected.
Screen Name Redacted 4/14/2024 05:39 PM	Grew up here and came back after working in Oregon. Sad to see what has happened to this historic city and the changes leadership is making without thought to the citizens or qualities in this town we love. Unfortunately I realize filling out a survey will not have an impact on leaders who have heard concerns with deaf ears. As long as money and progress is dangled in front of their faces, they will continue to ruin the aspects of this city we appreciate and come back home to.
Screen Name Redacted 4/14/2024 07:17 PM	The schools.
Screen Name Redacted 4/15/2024 06:40 AM	Born and raised here since 1961. Many Many friends and family friends. small town community. Love the closeness of Hiking, the mountains. Lose to city and medical and high speed internet.
Screen Name Redacted 4/15/2024 10:39 AM	Love the small town! This feels so much safer than a larger city (Portland).
Screen Name Redacted 4/15/2024 10:53 AM	WA state personal income tax structure. The charm of downtown. Safety of community. Proximity to Portland. Green space.
Screen Name Redacted 4/15/2024 02:26 PM	quaint small downtown; schools/parks/etc increase the resale value of my home
Screen Name Redacted 4/15/2024 02:56 PM	Small and nice downtown
Screen Name Redacted 4/15/2024 04:36 PM	I choose to live in Camas because it has a small town feel and largely lacks the urbanized strip mall business sections. It is quiet at night and low traffic. I love hiking the trails and visiting the parks. People are friendly and do not seem to be in a hurry. The schools are great and I love the library. Downtown by the mill is a perfect place to stroll

	and not feel overwhelmed by a big city feel. We moved here last year from eastern Washington and I wanted to be in Camas because it is outside the city and I hope it stays that way.
Screen Name Redacted 4/15/2024 05:23 PM	Schools and green space
Screen Name Redacted 4/15/2024 06:59 PM	Grew up here and love the town. Because of the great schools, moved back so my kids could get a great education and everyone is friendly.
Screen Name Redacted 4/16/2024 09:10 AM	Quality of life! A family-friendly environment with good schools, safe neighborhoods, parks and trails, quiet (little air traffic and limited vehicle thoroughfare). Proximity to the river, access to freeways for commuting, as well as getting to the airport, or into Portland. We don't want to live in Portland, so we do not want Camas to become anything like Portland!
Screen Name Redacted 4/16/2024 09:34 AM	Parks and trails, lake, close to undeveloped land-we like being close to rural areas.
Screen Name Redacted 4/16/2024 03:59 PM	It used to be a small town, safe community. Now the city allows homeless people to live downtown, i.e. Carmen, and they don't do anything about it!
Screen Name Redacted 4/16/2024 06:51 PM	I enjoy the access to nature, the community feel, and the events that our put forward for families.
Screen Name Redacted 4/16/2024 08:21 PM	Initially I moved to the area because of my job, which was in Vancouver. Because of tax reasons, I wanted to live on the WA side. I chose Camas because of the short commute, schools had a good reputation, and I liked the livability of the area.
Screen Name Redacted 4/17/2024 08:06 AM	Small community, nature, less traffic
Screen Name Redacted 4/17/2024 12:10 PM	We have chosen Camas for the quality of life it provides (Close to a large city - Portland - , close to the airport, quaint downtown, close to the Columbia Gorge)

Screen Name Redacted 4/17/2024 02:49 PM	A walkable vibrant downtown with a lot going on, and easy access to the countryside.
Screen Name Redacted 4/17/2024 05:10 PM	Love the access to recreation. The probability that you may run into someone you know at the store. The pride in the town activities and name.
Screen Name Redacted 4/17/2024 05:48 PM	It’s safe and beautiful!
Screen Name Redacted 4/17/2024 05:58 PM	Great schools! All of the green areas, with beautiful trees and plenty of walking/hiking/bike riding paths, interspersed throughout our growing city.
Screen Name Redacted 4/17/2024 09:07 PM	Quiet, small town feel, good schools
Screen Name Redacted 4/18/2024 07:28 AM	Community. The hiking trails. Nature at our back door is amazing.
Screen Name Redacted 4/18/2024 09:31 AM	Good schools and easy access to nature
Screen Name Redacted 4/18/2024 09:52 AM	We wanted a safe, family friendly, town.
Screen Name Redacted 4/18/2024 02:06 PM	Beautiful history, beautiful preserved natural areas, beautiful people
Screen Name Redacted 4/18/2024 03:33 PM	Views, privacy, quiet community
Screen Name Redacted 4/19/2024 05:56 PM	Smaller town with services, trails are wonderful, nice downtown, nice library.
Screen Name Redacted 4/19/2024 07:24 PM	Quiet area.
Screen Name Redacted 4/20/2024 10:55 AM	I grew up here, and decided to move back here to raise my kids because of the excellent schools, safe community, beauty, and

	hometown pride. I love that it's close to bigger cities but retains its small town feel.
Screen Name Redacted 4/20/2024 06:40 PM	Central location, close to highways, good views of Columbia river, good weather, good people, safe
Screen Name Redacted 4/20/2024 07:25 PM	my sister lives in Portland. I never thought I could afford to live here, but had some good luck - then did a crazy thing - bought a house I saw on the net for nearly 900 grand. Had never been to Camas. I love it.
Screen Name Redacted 4/20/2024 08:25 PM	Nice community. Not crowded outdoors. Downtown
Screen Name Redacted 4/22/2024 09:05 AM	The Camas area is a great location. Close to all the amenities you could ever need if you go West. Close to all the outdoor activities you could ever want if you go East.
Screen Name Redacted 4/22/2024 12:10 PM	Walkability, good schools, quiet town, good weather, trail system, lakes, awesome library, shopping district downtown, community events.
Screen Name Redacted 4/23/2024 05:00 PM	Character -- the surroundings, the people, the history. It is reminiscent of some of the smaller coastal towns where I grew up (as they existed then).
Screen Name Redacted 4/23/2024 09:08 PM	Small town vibe, open spaces, proximity to nature and hiking.
Screen Name Redacted 4/23/2024 09:20 PM	I live here because of how walkable and bikeable camas is. Camas is a rare example of a city that relatively held on to its urban fabric.
Screen Name Redacted 4/26/2024 07:36 AM	library, access to natural and less populated hiking and walking areas, rivers & lakes, green!
Screen Name Redacted 4/27/2024 12:34 PM	Good schools and access to hiking
Screen Name Redacted	Family has been here since the 1800s

4/27/2024 05:02 PM

Screen Name Redacted 4/29/2024 10:59 AM	I can own a nice home here, the nature is beautiful, the schools are great.
Screen Name Redacted 4/29/2024 12:38 PM	Beautiful location. Wonderful people. Hiking trails. A concern for the public's input.
Screen Name Redacted 5/02/2024 03:06 PM	good schools, good community, lakes, close to PDX airport, not too crowded
Screen Name Redacted 5/02/2024 03:30 PM	It's quiet, safe and schools are great
Screen Name Redacted 5/02/2024 09:31 PM	There is a nice balance of green space, well paying jobs, and lots of potential to grow into a model, well-connected community.
Screen Name Redacted 5/02/2024 10:20 PM	Schools
Screen Name Redacted 5/03/2024 08:07 AM	Parks and trails, library
Screen Name Redacted 5/03/2024 08:23 AM	Schools and public safety
Screen Name Redacted 5/03/2024 08:42 AM	Proximity to the Gorge, mountains, and outdoor recreation; access to the trails on the Columbia and Washougal rivers, and Lacamas/Round/Fallen Leaf Lake; affordability of housing; proximity to PDX and Portland; good schools
Screen Name Redacted 5/03/2024 03:27 PM	Community, parks and trails
Screen Name Redacted 5/03/2024 03:28 PM	Quality of life, small community
Screen Name Redacted 5/03/2024 04:05 PM	retiree, gladly left congestion of Portland, OR 5 yr. ago for contented living in the Camas/Washougal corridor. Grew weary of paying 10% income tax to Oregon! Camas is nicely sized and Very Clean.

Screen Name Redacted 5/03/2024 04:05 PM	I bought a house in 2015 when it was more affordable than Vancouver. Now it’s not affordable to live here.
Screen Name Redacted 5/03/2024 04:05 PM	It is where our daughter lives. We love the downtown area.
Screen Name Redacted 5/03/2024 04:07 PM	Because it’s a wonderful place
Screen Name Redacted 5/03/2024 04:37 PM	Cost of living, quality of schools, natural beauty, a lake (bummed to learn it was contaminated after moving)
Screen Name Redacted 5/03/2024 05:41 PM	Schools Parks Small town feel Great food and stores
Screen Name Redacted 5/03/2024 06:03 PM	1. I was able to buy a solidly built home, old and in need of repair, but so solidly built I can play my piano in the middle of the night yet the neighbors don't hear me! 2. Walkability. Nature trails are within 3 blocks of my house, and go on for over 12 miles; sidewalks (and many bike lanes) make exercise safe and enjoyable. 3. Great community spirit: meaningful volunteer activities, shared pride in our hometown, the Farmer's Market, a vibrant independent library, friendly small businesses.
Screen Name Redacted 5/03/2024 06:01 PM	The school district at the time (2019) and the small town atmosphere with the natural beauty surroundings.
Screen Name Redacted 5/03/2024 09:16 PM	Small town vibe, beautiful surroundings, convenient to Portland and downtown Vancouver, great schools, recreational opportunities
Screen Name Redacted 5/03/2024 09:55 PM	Beautiful downtown, proximity to Portland and the Columbia Gorge, safety
Screen Name Redacted 5/04/2024 09:19 AM	We moved here in 1992 when we found an affordable home. We love the area and also can’t afford to move anywhere else if we want to downsize in our retirement.
Screen Name Redacted	Schools, Fisher Investments job, hiking trails, downtown restraints

5/04/2024 09:47 AM	and shops
Screen Name Redacted 5/04/2024 04:41 PM	Quality of Life -- walkability, trails, schools, downtown and other local services & amenities, proximity to major metro areas (Vancouver and Portland), green spaces and tree canopy, PNW climate, access to lakes & rivers, mountain views....
Screen Name Redacted 5/04/2024 05:28 PM	Access to parks and trails, access to downtown
Screen Name Redacted 5/04/2024 05:30 PM	The trail networks is number one Schools
Screen Name Redacted 5/05/2024 08:40 AM	Location close to Gorge/Mt Hood, good schools
Screen Name Redacted 5/05/2024 09:13 AM	The school district and access to outdoor recreation.
Screen Name Redacted 5/05/2024 12:39 PM	Family. I use to love the small town feel and the endless view of untouched land.
Screen Name Redacted 5/05/2024 03:21 PM	I love the green areas, the wildlife and fields close to downtown, the small town atmosphere
Screen Name Redacted 5/05/2024 04:34 PM	Safe and quaint town!
Screen Name Redacted 5/05/2024 06:11 PM	Raised kids here… love the area
Screen Name Redacted 5/05/2024 09:37 PM	My partner is a 5 generation Camas resident. We choose to live here because his family is close.
Screen Name Redacted 5/06/2024 02:01 PM	I Love the small town feel and sense of safety we enjoy.
Screen Name Redacted 5/06/2024 03:27 PM	I’ve lived here all my life.

Screen Name Redacted
5/07/2024 08:24 PM
It's a safe community with good schools.

Screen Name Redacted
5/10/2024 01:55 PM
It has been our home for 25 years and we love the dedicated space to nature and trails. Please continue to protect and expand our green spaces as we move forward.

Screen Name Redacted
5/11/2024 02:20 PM
Camas and the surrounding areas provide a place to live that is both beautiful and ideally situated (ie close to the airport, Portland, the Gorge, Mt. Hood, etc).

Screen Name Redacted
5/12/2024 07:25 AM
Schools, close to nature , close to PDX

Screen Name Redacted
5/12/2024 06:47 PM
We have been here a pretty long time and watched Camas grow. It's a really good place to be for so many reasons including the outdoors, the accessibility and the overall quality of life.

Screen Name Redacted
5/13/2024 04:33 PM
My wife's best from from grade school lived here and we visited. We decided this would be a great place to retire.

Screen Name Redacted
5/13/2024 09:22 PM
Safe attractive residential neighborhoods.

Optional question (341 response(s), 26 skipped)
Question type: Essay Question

Q2 What makes Camas, including our historic downtown, special today? What should we strive to preserve or enhance?

Screen Name Redacted
2/20/2024 02:02 PM
Small town feel; the architecture, small businesses, and green space paths. High amount of tech employment base. Access to airport. Access to nature. School system excellence.

Screen Name Redacted
2/09/2024 07:21 PM
City council absolutely needs to govern better with consideration of ALL residents and peoples who pay property tax to the city of Camas. This is not currently represented.

Screen Name Redacted 2/09/2024 09:12 PM	Downtown Camas is a jewel among gems. Every time I have friends or family come from out of town we routinely visit the shops and restaurants in downtown Camas and don't really go to Vancouver or Portland. We need to continue to build on downtown and it's infrastructure, so that this type of hospitality attraction can continue for years to come.
Screen Name Redacted 2/10/2024 07:55 AM	The wide variety of shops and dining, the trees and lights and all the fun activities.
Screen Name Redacted 2/10/2024 09:40 AM	Downtown with it's small businesses, lakes with hiking trails
Screen Name Redacted 2/10/2024 11:47 AM	I love the older buildings in downtown with the lighted trees. It is a great area to come and walk and shop.
Screen Name Redacted 2/10/2024 11:14 PM	The Antique Shop, old theater, and Lacamas Lake.
Screen Name Redacted 2/11/2024 10:27 AM	We should strive to preserve the safe and walkability of the community along with a high density of a community lifestyle enhancing businesses. Also the access to nature and trails and lakes.
Screen Name Redacted 2/12/2024 10:02 AM	The downtown corridor is the foundation of Camas, rooted in the history of the mill. Honoring the history of Camas as a mill town and all the business that started from that is important. I think DCA did a great job with the walking tour/signs which tell key historical businesses/people. I think the key in the long term future is in the clean up and eventual transition of the existing mill. Someday this mill will go and with it is an opportunity to still tell the historic Camas legacy, while bringing modern development and opportunity in a prime location of downtown
Screen Name Redacted 2/12/2024 02:44 PM	Character. Old but well maintained buildings, nice landscaping, unique shops, good food.
Screen Name Redacted 2/12/2024 02:59 PM	Downtown is well maintained from a beauty/cleanliness stand point and I enjoy the retail options. Parks are safe and clean, but could use a refresh. Roads are pretty well maintained and fixed when there are issues. The Brady corridor road improvements turned out great. I would like to see more maintenance to clear roads quicker during

	winter weather and more road enhancements to improve walkability on older country roads (i.e. McIntosh and the southern end of Brady).
Screen Name Redacted 2/13/2024 08:43 AM	It's special because of the focus on keeping the original facades of the buildings.
Screen Name Redacted 2/13/2024 08:52 AM	All of the things listed in #1 above. But I'll ad ... keep giant apartment buildings & big box, national chain stores, out of the downtown core. Don't let the urban/suburban sprawl, industrial development & traffic nightmare become Camas/Washougal, as it has in the once iconic small towns of Gresham & Troutdale, directly across the river.
Screen Name Redacted 2/13/2024 09:11 AM	Local businesses, walkability, the many community events (first Friday, farmer's market, etc).
Screen Name Redacted 2/13/2024 09:37 AM	The 1st Fridays and the liberty theater.
Screen Name Redacted 2/13/2024 09:42 AM	Proximity to the river and the mountains. Open (undeveloped) land.
Screen Name Redacted 2/13/2024 09:42 AM	Preserving small businesses.
Screen Name Redacted 2/13/2024 10:00 AM	Everything that is already there!! The design of the buildings to the beautiful feel it gives. There is not allot to enhance other then making sure the maintenance is kept up.
Screen Name Redacted 2/13/2024 10:42 AM	Small town feel, traffic is not bad, downtown is fun, all the forested areas within the city limits. These should all be preserved .
Screen Name Redacted 2/13/2024 10:52 AM	My favorite things about Camas are the trails and parks around the lake and the thriving downtown. The Northshore plans to create a larger trail system and connect all the trails will make the lake area even better. Maintaining the charm of downtown while expending the core out onto adjacent streets will make the downtown better too.
Screen Name Redacted 2/13/2024 10:55 AM	small, walkable downtown

Screen Name Redacted 2/13/2024 12:18 PM	It’s less special since the “elected” officials ignore our wants.
Screen Name Redacted 2/13/2024 12:47 PM	Small Town Feel, Great Library, Unique Small businesses
Screen Name Redacted 2/13/2024 12:49 PM	Preserve the heritage and hardworking culture of the past. It's a small town that doesn't give up!! Let's strive for a cleaner and more appealing town for visitors and locals. Clean up the streets and continue to make it a desirable place to be in.
Screen Name Redacted 2/13/2024 01:27 PM	The potential. It has everything to be something truly special.
Screen Name Redacted 2/13/2024 02:09 PM	I would strive to preserve the natural beauty of the town in addition to downtown.
Screen Name Redacted 2/13/2024 02:59 PM	Old growth forests. Trails and parks. Small family owned businesses. Areas for youth to gather and be active. Create a local music venue for youth and adults.
Screen Name Redacted 2/13/2024 06:00 PM	Small businesses
Screen Name Redacted 2/13/2024 07:02 PM	Diversity celebrations
Screen Name Redacted 2/13/2024 07:34 PM	Don’t over develop. Don’t allow commercial companies in, stay local and preserve the history and natural beauty.
Screen Name Redacted 2/13/2024 07:53 PM	Beautiful tree-lined streets and historic buildings with unique local businesses.
Screen Name Redacted 2/13/2024 09:21 PM	Useful stores (Lutz, Bookish, Periwinkle) that help me get my tasks accomplished (housework, gifts) without having to drive to Vancouver.
Screen Name Redacted 2/13/2024 09:29 PM	The small town feel

Screen Name Redacted 2/13/2024 11:33 PM	Community events Mill Mixed income residential Youth sports
Screen Name Redacted 2/14/2024 05:29 AM	I do think having so many trails basically right in town is very unique, please continue to preserve / expand the trail system and connect different trail areas. The downtown is adorable, it just needs to keep doing what it's doing.
Screen Name Redacted 2/14/2024 08:06 AM	The community still feels quaint and approachable, but it is quickly growing to a size where community involvement and hometown pride will feel meaningless. Vancouver has already turned into this.
Screen Name Redacted 2/14/2024 09:39 AM	Old fashion values.
Screen Name Redacted 2/14/2024 12:05 PM	Parks, trails, and open spaces, with a dynamic library as a part of fabric of the community.
Screen Name Redacted 2/14/2024 05:16 PM	The buildings are historic and quaint. There are no homeless people. A variety of businesses. However you need 2 more coffee shops and some more cafes. To enhance it, I'd recommend requiring businesses to be open for a portion of Sunday.
Screen Name Redacted 2/15/2024 08:30 AM	Preserve the small town vibe. All the restaurants, shops and avenue of old trees add a unique charm to Camas. Preserve small town vibe- limit excessive growth, that our infrastructure can’t maintain. Our roads are overloaded and downtown Camas events, like Boo Bash, Christmas tree lighting are almost impossible to access. There’s not enough parking, so we need to arrive hours early to attend. Preserve our trees. They add such value to the city. Preserve the look of the old buildings. Revamp the mill into a shopping / lifestyle center like the Bend Mill District. Preserve our trails. Clean up the lakes, and stop motorized boats/ jet skis, that make so much noise and prevent non-motorized boats and swimmers from being safe.
Screen Name Redacted 2/15/2024 09:16 AM	We enjoy the history of the buildings from the Antique store to the old post office.
Screen Name Redacted 2/15/2024 09:16 AM	We need to enhance the downtown with more modern developments such as take down the paper mill and build a new Camas waterfront

	with contemporary shops and dining. We can still preserve the old downtown just have the new downtown Camas at the waterfront connect to the old historic downtown Camas. Many cities do this such as Dublin, Ohio with their new downtown Dublin connected to the old history downtown Dublin.
Screen Name Redacted 2/15/2024 09:26 AM	The people and shops. You need to somehow get control of the 'church' property back. It's a shame that so much of that amazing street is now empty or a church. I am a Christian but this isn't the best use for historic buildings and losing prime real estate and good restaurants is so disappointing.
Screen Name Redacted 2/15/2024 09:33 AM	The downtown is very charming and a highlight of the area. The tree lined streets and hanging baskets in the spring make the downtown beautiful. The retail stores are varied and offer a lot of options for residents and visitors. However, when you peel back the layers, there aren't a whole lot of places to keep you downtown. For instance, we only have a handful of restaurants families and friends can gather. The church has bought up valuable storefront space and took a pizza restaurant with it. If we can't get more restaurants, what about a food truck park? Restaurants can make Camas more of a destination.
Screen Name Redacted 2/15/2024 09:39 AM	Quitting being greedy SOBs and preserve! Ridiculous that this is even a question.
Screen Name Redacted 2/15/2024 09:46 AM	The small local businesses are special and add character. Preserve the Family oriented community.
Screen Name Redacted 2/15/2024 09:44 AM	The small town feel. You can go anywhere and run into someone you know. The members of the town really care about each other. This has been truly shown in how the town has thrived even through COVID. The parks and trails are amazing. Continuing to work to preserve and improve these is very important. All of the activities throughout town through out the year.
Screen Name Redacted 2/15/2024 09:44 AM	Locally owned businesses. Downtown Camas Association events.
Screen Name Redacted 2/15/2024 09:52 AM	Walk-ability, diversity of shops, restaurants, and entertainment. I hope that more spaces are available/affordable for small shops, restaurants and entertainment venues. I love the community events hosted/supported by the DCA. I would like more parking options, or

	more communication regarding transportation/shuttle options for community events, i.e. First Friday, October-fest, Car Show, Christmas tree lighting, etc.
Screen Name Redacted 2/15/2024 09:58 AM	The downtown development has made shopping downtown very inviting. I would like to preserve the small town atmosphere
Screen Name Redacted 2/15/2024 10:02 AM	Please preserve the historic buildings, small town charm, trees, and nature trails.
Screen Name Redacted 2/15/2024 10:06 AM	Not many small towns left and it feels good ti be part of the community. preserving historical buildings and culture is important for the future generations
Screen Name Redacted 2/15/2024 10:08 AM	Keep the great downtown association that is driving business.
Screen Name Redacted 2/15/2024 10:18 AM	I love that downtown has local companies. I think this is the future of malls and strip malls across the country. People want to support local and it's such a good thing. I also love how walkable downtown is, and that it is pedestrian centric, not car centric. America's roads (stroads) are designed for cars, not people, and it is so unfortunate and dangerous. Having a pedestrian centric downtown is so much safer and provides a much better experience.
Screen Name Redacted 2/15/2024 10:18 AM	the small shops are part of the feel. I like the events and parade in the summer. the general area is nice with parks and walking trails. Parking is always the big problem downtown.
Screen Name Redacted 2/15/2024 10:29 AM	Preservation on the friendly and safe community is so important. The look and feel of our historic downtown is essential.
Screen Name Redacted 2/15/2024 10:36 AM	Its fun to have a local theater, and small locally owned shops. Parking spaces are too small for modern day large vehicles. More places to eat, less salons..
Screen Name Redacted 2/15/2024 10:41 AM	What makes it special is its juxtaposition to water - to Lacamas Lake and the Columbia/Washougal rivers. We should strive to enhance the downtown, especially by reclaiming the land destroyed by the Mill over the years and hold GP accountable for remediating ALL

	properties and the underlaying soil/sediment/groundwater owned by GP to the highest land use classification, residential.
Screen Name Redacted 2/15/2024 10:43 AM	The brickwork and tree-lined lane - main street is gorgeous anytime of year and I'd love to see that continue. The art throughout the downtown area is also lovely and greatly enhances the feel of it. The theater is especially wonderful to have, and I frequent many of the local businesses including the hardware store, truly scrumptuous, mesa, kop chai and others.
Screen Name Redacted 2/15/2024 10:48 AM	We enjoy the trails and access to nature on walks or on bicycles.
Screen Name Redacted 2/15/2024 10:50 AM	Its ease to get to, great places to eat and drink and proximity of one place to the next is very nice Should strive to keep the small town feel. No big buildings, no big corporate block take overs (ex, the new church taking up a whole block)
Screen Name Redacted 2/15/2024 10:52 AM	The history is still seen throughout our town while we continue to grow and have more modern amenities. I would love to continue preserving the history while growing to meet our community's needs.
Screen Name Redacted 2/15/2024 10:59 AM	I like the shops and restaurants, the farmers markets. I like the trees, flower baskets, and statues.
Screen Name Redacted 2/15/2024 10:58 AM	Downtown. A vision for the mill is critical, and should be mixed use with housing
Screen Name Redacted 2/15/2024 10:56 AM	It is cute and charming
Screen Name Redacted 2/15/2024 10:59 AM	continuing preservation of historic downtown preserving walkability safety, parking ease.
Screen Name Redacted 2/15/2024 11:17 AM	small town feel with great shops, movie theater, live music and restaurants, community events and unique themed gatherings
Screen Name Redacted 2/15/2024 11:30 AM	The vintage buildings with their upgraded, locally owned shops and restaurants. The trees and plantings help immensely but the narrow

	street makes it particularly inviting to walk along 4th. Please try to add landscaping to the side streets, 3rd, 5th and 6th.
Screen Name Redacted 2/15/2024 11:45 AM	Don’t change to much
Screen Name Redacted 2/15/2024 11:49 AM	The small town feel. Shops are owned and operated by locals. It has a unique vibe. Doesn't feel like every other place.
Screen Name Redacted 2/15/2024 12:41 PM	It’s unique history and charm and beautiful natural beauty of the area.
Screen Name Redacted 2/15/2024 12:44 PM	What's special are all those independently owned businesses along Fourth Ave. The downtown core is so very pleasant because of all those tall, leafy trees and the well-maintained plantings and flower baskets. There's also just a good mix of different things, which means you can easily spend half a day or even a day shopping interspersed with restaurant-hopping. It's wonderfully walkable.
Screen Name Redacted 2/15/2024 12:53 PM	Embrace the new cultures moving into the community.
Screen Name Redacted 2/15/2024 12:56 PM	Small town feeling and locally-owned businesses.
Screen Name Redacted 2/15/2024 01:07 PM	Preserve the small town feel
Screen Name Redacted 2/15/2024 01:10 PM	A balance of cute small businesses, nice places to eat and clean and safe parks and recreation area. Strive to preserve the cleanliness and safety.
Screen Name Redacted 2/15/2024 02:08 PM	Beautiful Crown Park is so underutilized and lacking updates. A bathroom would be nice. The parks here are lovely. They need to be upkept better. We were promised a splash pool when they arbitrarily tore out the pool. That’s been several years ago and nothing.
Screen Name Redacted 2/15/2024 02:16 PM	All downtown activities , Small town feel, great shops, great schools, lots of hiking and park land.

Screen Name Redacted 2/15/2024 02:16 PM	Community things! Like first friday, farmers markets, etc. So fun!
Screen Name Redacted 2/15/2024 03:14 PM	Charming
Screen Name Redacted 2/15/2024 03:56 PM	I like the downtown feel with the shops
Screen Name Redacted 2/15/2024 04:23 PM	The warm welcoming family feel. People still say hello and our downtown business are friendly and inviting.
Screen Name Redacted 2/15/2024 04:40 PM	Small family owned businesses, historic buildings, and honoring the history of how camas came to be. Lets preserve the nature we have here. Round Lake, Fallen Leafe Lake and Lacamas Lake parks, Washougal River. Please prevent any further development on these natural sites. Preserving nature is key to making it livable here.
Screen Name Redacted 2/15/2024 05:20 PM	Special because it's a great mix of people, a safe place for families, and has a small town community feel.
Screen Name Redacted 2/15/2024 05:39 PM	It is a tight knit community Let’s keep it that way
Screen Name Redacted 2/15/2024 06:46 PM	The originality of Camas art, businesses and streets. Please preserve some of the original charm. Not just brew pubs and burger joints. Keep flowering baskets, first Friday’s, Girls night out, add 5k, events, art walks. Add Sassy Saturdays and other fun activities.
Screen Name Redacted 2/15/2024 07:46 PM	Balanced city with parks, library, retail, theater, restaurants, and residential. Preserve the downtown area but improve the entrance on 6th into downtown.
Screen Name Redacted 2/15/2024 11:23 PM	There seems to be a shared feeling of enjoyment and belonging when I'm downtown and cross paths with others, even if we don't know one another. I invite friends and family from out of the area to join in one of the special downtown events, and they feel like they've been welcomed to our block party
Screen Name Redacted	It's quaint...lets keep it clean and the crime low.

2/16/2024 12:20 AM

Screen Name Redacted
2/16/2024 05:07 AM

Small town, preserve the restaurants and shops.

Screen Name Redacted
2/16/2024 08:08 AM

The people whe have been here the longest seem to want to keep our Camas hometown feel. I am not a fan of out of towners moving in and wanting to change everything. Our school district is awesome, 4th Avenue should be walkable with stations that are permane from early spring through the end of Farmer's market or Boo Bash. Then all events could take place there with not do many spardic Street closures.

Screen Name Redacted
2/16/2024 08:40 AM

The small-town feel of Camas and the mix of small neighborhoods and rural community is one of my favorite parts of Camas. I think the town needs to preserve some of the rural areas and not just convert it all to subdivisions. Camas also needs to preserve and invest more in expanding open space and green areas, primarily natural areas and natural walking paths. With the growth we expect in the coming decades, we need to expand access to open space and natural areas.

Screen Name Redacted
2/16/2024 09:47 AM

Something for everyone. Preserve the history of the town.

Screen Name Redacted
2/16/2024 11:53 AM

nice people, pleasant, clean, safe, pretty. downtown is charming. Lacamas Lake is a treasure. Christmas festival is enjoyable.

Screen Name Redacted
2/16/2024 12:34 PM

Downtown should be enhanced by encouraging tax paying enterprises to set up in an environment that encourages community, growth and diversity of commerce. Real access to the entire community via trails, roads and public transit should be encouraged.

Screen Name Redacted
2/16/2024 01:44 PM

(see above for 1st question) Communities need to grow of course but Camas needs to do this while keeping the small town feeling. The cohesion in downtown is a real draw for not only locals but people outside the area as well.

Screen Name Redacted
2/16/2024 04:54 PM

The buildings, shops and restaurants

Screen Name Redacted

Nice walkable downtown, trails, usually pass school levies, festivities

2/16/2024 05:18 PM	downtown. Preserve downtown especially the movie theater, preserve park and open space.
Screen Name Redacted 2/16/2024 06:17 PM	Thanks to the city leaders, the downtown has been maintained as its historic self, camas should preserve that and not let it turn into a bunch of multilevel high rise apartment buildings to pack population into that area.
Screen Name Redacted 2/17/2024 08:19 AM	Great ambiance and flowers. Keep flowers and greenery.
Screen Name Redacted 2/17/2024 09:23 PM	Preserving the liberty theatre, library, the look of downtown Camas: lights, landscaping, sidewalks, monthly first Friday’s and other events throughout the year. The parks and trails are phenomenal. Great school support.
Screen Name Redacted 2/18/2024 09:07 AM	My favorite parts of downtown are the library and the theater. They signify the history of the town and community. Lutz’s is fantastic too—very hometown.
Screen Name Redacted 2/18/2024 09:38 AM	Signage that shares the history of our city with newcomers. I also enjoy places to mingle with a cup of tea, coffee, wine, and not just door to door spas.
Screen Name Redacted 2/18/2024 04:15 PM	Downtown
Screen Name Redacted 2/19/2024 08:42 AM	The mill history, murals/plaques, and a very dedicated and active library (with bees!) are special. I would love to enhance our knowledge about the history of the downtown-adjacent neighborhoods.
Screen Name Redacted 2/19/2024 11:53 AM	Outdoor recreation (parks, lakes, etc)
Screen Name Redacted 2/19/2024 02:23 PM	Preserve and protect our small businesses! Ensure development and growth doesn't adversely impact this vital part of what makes our community "us".

Screen Name Redacted 2/20/2024 02:25 PM	• Strong sense of community • Camas Farmer's Market • Many family friendly events, unique and inclusive • Iconic Main Street charm and beauty • Tree canopy, downtown and throughout town • Award winning library and programming • Downtown is cozy and inviting • Downtown is walkable—so much contained within a few blocks • Safety downtown and throughout Camas • Liberty Theatre—quality of programming and experience • Live music in multiple locations in downtown on the weekends; other events throughout the week in the bars/restaurants (tastings, bunco, karaoke, trivia, murder mysteries, etc) • Undertone of friendliness in downtown and throughout town • All of Camas is cleaner than average city • Quality stores, restaurants and services downtown—great mix for our size • Merchants collaborate with each other • Our community supports our downtown and wants to engage with our businesses • Surprising art scene: organic, authentic, variety of media styles, engaged artists • Many art focused events • Public art in downtown—engaging and fits within our aesthetic and scale • Downtown amenities—benches and seating areas, art, bike racks, signage • Our public schools • Our trail systems/parks; recreation areas • There is a Main Street Program that has and continues to intentionally revitalize downtown
Screen Name Redacted 2/20/2024 09:33 PM	Community events. Well maintained landscaping and store fronts. Locally owned businesses that service all age groups.
Screen Name Redacted 2/21/2024 10:35 AM	Our historic downtown is so cute! Fun activitites, small businesses, nice people. The library is amazing! Please keep it small and local.
Screen Name Redacted 2/21/2024 05:11 PM	I love the small town feel of Camas. I hope we can improve what we have without becoming too big or commercial.
Screen Name Redacted 2/22/2024 01:22 PM	Business friendly and very walkable historic downtown. I wish it was just more pedestrian friendly from downtown camas to Crown Rd. Many people walking on Crown Rd to Lacamas Creek Trail to downtown camas and that area does not feel very safe for all the pedestrians. I would like to see more large sidewalks and walking paths as a pedestrian who walks on crown rd to downtown camas often.
Screen Name Redacted 2/23/2024 09:58 AM	Walkability and food & shopping options downtown
Screen Name Redacted 2/24/2024 08:28 PM	Downtown camas is straight out of a hallmark movie! All the stores and walking the streets makes you feel like you're the main character

	in a small town movie. I'd love for there to be more restaurants and other unique stores added in the downtown strip, and possibly adding on to make it longer! Definitely preserve the library and post office, and keep all the older buildings as long as possible! It adds to the charm. I think the city could enhance the landscaping around the town, and adding lighting around camas.
Screen Name Redacted 2/26/2024 08:36 AM	Please stop adding more housing development before building the appropriate infrastructure. Fix the roads first. Putting the cart before the horse will never end well. And for some reason this trend continues to happen. Maybe revamp the planning commission .
Screen Name Redacted 2/27/2024 09:54 AM	Keep it small. Keep it walking friendly, but put it back to two lanes by safeway. Have the police actually give speeding tickets on 6th by the ball fields. Alot of people do 50 to 60 so they can be first to the stupid roundabout. Keep the homeless away. The mess they bring is disgusting.
Screen Name Redacted 2/27/2024 10:39 AM	We moved from Bend and feel that even though Bend is much larger it has really figured out how to have a small town community vibe. It puts a large portion of its' budget into parks and rec and and the schools (teachers, admin & especially the counselors) really show they care and put the kids and community first. Everyone lives in and contributes to the community. We haven't really felt that here. We feel Camas has such a unique opportunity with Lakes, Trails and historic downtown , however it's really not maintaining or utilizing them well. Clean lakes should be top priority. If we eliminate motorized vehicles on the lake it would make it less stressful on the ecosystem and more enjoyable for people to enjoy. We love paddling and kayaking on the lake with the kids and their friends but many times my kids have been knocked off by wave runners and speed boats circling us like sharks. Needless to say it makes it much less enjoyable and more difficult for kids, beginners and older adults to enjoy. We are fortunate to border the Columbia which is perfect for those vehicles so it wouldn't really be a loss for people who would like to participate in motorized activities .Also seems that since some people were interested in a community pool we could work on cleaning the lakes and maybe even have swimming areas & install inflatable features like slides, etc in the summer. We are so happy to see that work is being done to improve the trailhead on 3rd street. Thank you.
Screen Name Redacted 2/27/2024 11:58 AM	The character of the neighborhoods and the fact that there are still farms and open spaces. It's old AND new; not cookie cutter.

Screen Name Redacted 2/27/2024 02:25 PM	Quaint family friendly outdoor shopping and eating and events.
Screen Name Redacted 2/27/2024 04:18 PM	Local businesses and events
Screen Name Redacted 2/27/2024 04:31 PM	Don’t turn it into a crowded, noisy place! Keep the old charm
Screen Name Redacted 2/27/2024 04:57 PM	Cute old buildings. Stop taking down cute older ones and instead focus on getting rid of the 80s ones like the old Rivermark bank building if something needs to be taken down.
Screen Name Redacted 2/27/2024 06:28 PM	Preserve the small town feel
Screen Name Redacted 2/27/2024 07:09 PM	Unique shops & good food! Camas city pride.
Screen Name Redacted 2/28/2024 08:59 AM	I enjoy the cute downtown feel.
Screen Name Redacted 2/28/2024 06:52 PM	Open space
Screen Name Redacted 2/28/2024 09:06 PM	Actual homes, used to have little traffic.Strive to stop turning us into Vancouver
Screen Name Redacted 2/29/2024 08:38 PM	Lacamas Park. Historic downtown. Building/maintaining more trails to get citizens healthy and happy in nature.
Screen Name Redacted 2/29/2024 09:00 PM	Lacamas park is a pure gem and we love the lakes. Please preserve these wonderful areas and continue to work on the algae bloom issues in the lakes. Historic downtown is special because of it's focus on pedestrians over cars which facilitates enriching community events.
Screen Name Redacted 2/29/2024 09:46 PM	The cute town town area. Crown park is beautiful and should have attention.

Screen Name Redacted 3/01/2024 07:51 PM	charming downtown, We like the events in the summertime, Camas days, antique shows etc.
Screen Name Redacted 3/01/2024 09:44 PM	To have more options for cultural event. Theater, live music, musical, festival.
Screen Name Redacted 3/02/2024 07:37 PM	People talk to one another, unlike Salmon Creek where we used to live; connectedness; play park (run out of a local church, where a lot of moms and kids got to know one another; sociableness of our neighborhood, Lake Pointe; mom connections; convenience of downtown Camas; Heritage Trail and Round Lake trail network; green spaces; you recognize a lot of people when you're out; Downtown Camas merchants and staff; beauty; it's the total package: schools, downtown--you don't have to sacrifice anything; safety; community steps up to help each others; connections; cute, quaint, has trees; driving down Lake Road; most people own their homes; neighborliness; people have your back
Screen Name Redacted 3/04/2024 02:05 AM	We have a quaint historic downtown. The shortage of parking for events keeps us away from enjoying it. Parking is needed!
Screen Name Redacted 3/06/2024 05:58 PM	Natural spaces, good well-staffed schools, charming downtown
Screen Name Redacted 3/06/2024 06:24 PM	Great schools, good parks near Lacamas lake, nice downtown area. Please don't let Journey church take over the whole downtown area. Downtown is quaint but it's in need of more restaurants and specialty stores. We need to draw more foot traffic.
Screen Name Redacted 3/06/2024 06:36 PM	1:Privately owned business vs big chains and franchises everywhere, especially downtown. 2:Love the beautiful trees downtown and some buildings have character.
Screen Name Redacted 3/06/2024 07:49 PM	Charming atmosphere, independently owned businesses, convenient location. Strive for more diverse, higher caliber restaurants and bars/lounges.
Screen Name Redacted 3/06/2024 08:09 PM	Downtown: Strong community pride, shops, well-cared for. Bringing visitors downtown--it has a great feel; the big, mature trees make it

	feel really nice. Variety of businesses, including restaurants, movie theater; feels very family-friendly; feels safe.
Screen Name Redacted 3/06/2024 08:05 PM	park space, city adding green space, tree canopy
Screen Name Redacted 3/07/2024 01:11 AM	Love the old buildings and that everything doesn't look “cookie cutter” downtown. Please preserve and enhance nature and wildlife.
Screen Name Redacted 3/07/2024 09:17 AM	Small town feel with unique small businesses
Screen Name Redacted 3/07/2024 09:33 AM	We really do like the downtown area and the lakes/walking trails
Screen Name Redacted 3/07/2024 09:38 AM	downtown is charming Camas is hanging on to the small town feel that I loved growing up.
Screen Name Redacted 3/07/2024 10:04 AM	The library is incredibly special. Small businesses like Lutz Hardware are hard to find -- they're always friendly, and they always go the extra mile to find what you need. I LOVE Camas Antiques. It is definitely my happy place. Most times I visit, I buy things, but even when I don't, I leave feeling uplifted. Camas street fairs are unbeatable.
Screen Name Redacted 3/07/2024 10:11 AM	The Historical placards, and old buildings really add to the flavor of the town. The little statues of animals are a bit of whimsy and greatly appreciated.
Screen Name Redacted 3/07/2024 11:41 AM	Downtown Camas has unique old buildings and several nice shops/ restaurants. It has a quaint and charming feel, should be maintained.
Screen Name Redacted 3/07/2024 12:51 PM	Tear down the papermill and build a waterfront. It’ll bring in more businesses to the area and help our local economy. Build more modern buildings like a new library, contemporary downtown shopping.
Screen Name Redacted 3/07/2024 01:27 PM	all the people

Screen Name Redacted 3/07/2024 01:44 PM	The charm of downtown to me lies in the historic appearance, the trees, and our amazing small businesses.
Screen Name Redacted 3/07/2024 04:01 PM	the DCA is critical in creating a welcoming atmosphere which invites participation, but does not create artificial pressure. The regular newsletters, First Friday activities, and community events show how passionate and engaged the DCA members are, and encourage others to get involved as well. I value connection with my neighbors and knowing that all parents are aware of activity and will communicate in order to keep our kids safe so they can feel like they are playing on their own and gaining independence. I would love to see proactive planning to address the drug and houseless crisis that are stretching toward our town and could impact that sense of safety.
Screen Name Redacted 3/07/2024 07:09 PM	More promotion of small business. Additional community centered spaces and parks.
Screen Name Redacted 3/07/2024 07:16 PM	Small town feel, good community/schools, clean parks and trails, local businesses
Screen Name Redacted 3/07/2024 09:16 PM	I enjoy the events downtown, but they do get sort of redundant. I love the seasonal decor.
Screen Name Redacted 3/08/2024 09:15 AM	school district, community feel like DCA events, beautiful nature like Lacamas and Round lake trails, small independent businesses, lots of little eateries, local theater, library, etc. small town feel.
Screen Name Redacted 3/08/2024 12:32 PM	The downtown is charming. The trees and other plantings must be preserved to retain this charm.
Screen Name Redacted 3/08/2024 12:49 PM	Its a great city with small town charm and pride, don’t take all the open space and build on it. Takes away from the charm
Screen Name Redacted 3/10/2024 08:13 PM	Please preserve the old buildings that give our town the character that keeps it from looking like “any other town.” Please maintain our trees, trails, and pedestrian-friendly traffic levels
Screen Name Redacted 3/11/2024 03:15 PM	walkability, small town vibe, green trees, the sense of community, Natalia's cafe, bookstore, library, kid's stores and the movie theater all

	create an awesome homey vibe
Screen Name Redacted 3/11/2024 08:30 PM	For downtown specifically, I love the events for families and it's great to see small businesses downtown. We could use more options for food/drinks. Downtown is cute, clean, walkable, safe.
Screen Name Redacted 3/11/2024 10:21 PM	Our stores and merchants are so friendly and there is always something fun going on.
Screen Name Redacted 3/12/2024 12:45 PM	Keep from making it like California 2.0.
Screen Name Redacted 3/12/2024 02:43 PM	The lovely parks, downtown shops and restaurants, library and schools
Screen Name Redacted 3/14/2024 09:17 AM	Local stores and community activities. Less church owned buildings would be great...
Screen Name Redacted 3/14/2024 10:58 AM	Safety, great school and absence of homeless people
Screen Name Redacted 3/15/2024 11:29 AM	Small Town feel, *Small businesses, *Green space paths, *Access to nature,*School system excellence
Screen Name Redacted 3/15/2024 08:13 PM	Events downtown, and downtown itself. Decent (though incomplete) trail network. Camas lily fields, though they are getting degraded from invasives, development, and "bad instagrammers" who trample the plants. Pretty good community feel.
Screen Name Redacted 3/16/2024 06:19 PM	The movie theater, the antique store, the trees, the library, and the farmer's market. We also like the variety of restaurants downtown, places to get a hair cut. We don't go to the most expensive restaurants or the wineries. Places for people to sit and visit (benches, and I think there used to be a gazebo? in the downtown area are nice. We also liked the outdoor seating for restaurants allowed on the sidewalks or parking spaces during covid. Camas Days with the parade and the annual car show are also our favorite annual events.

Screen Name Redacted 3/16/2024 06:30 PM	Nice downtown, small town feel, easy and free parking. Save the downtown post office and other older buildings and trees. Sorry to see that church go and too much development
Screen Name Redacted 3/16/2024 06:51 PM	I like that there are t really any corporate entities. It’s walkable, easy to park. I love unique stores like Poppy & Hawk. I wish there were more like it.
Screen Name Redacted 3/16/2024 08:19 PM	Green trees,local business, quality food and drinks. No big shopping plazas please,not too many tourists too.
Screen Name Redacted 3/16/2024 08:36 PM	There are great restaurants and nice stores. Preserve a safe water system. Don't turn a contaminated pump on.
Screen Name Redacted 3/16/2024 09:32 PM	Schools
Screen Name Redacted 3/16/2024 11:41 PM	First Fridays are amazing, don't change a thing. Would love to see consistent source of information for everything going on around town - seems like I'm always the last to know when there's a special event coming to town.
Screen Name Redacted 3/17/2024 01:24 AM	The little few blocks of our old town and the business located there.
Screen Name Redacted 3/17/2024 07:22 AM	The commitment to building a vibrant business community that draws citizens of Camas as well as tourists to our downtown.
Screen Name Redacted 3/17/2024 08:14 AM	The trees and design of historic downtown are so charming and having shops and restaurants down there continue is crucial. We should preserve the downtown and continue to expand the specialty shops and restaurants. We also need to preserve the walking trails near the lakes as it makes camas so special!
Screen Name Redacted 3/17/2024 08:39 AM	We are proud to bring visitors. Feels safe, charming.
Screen Name Redacted 3/17/2024 08:49 AM	The downtown area is beautifully landscaped and maintained, it has a good variety of restaurants and shops and an affordable theater, a lovely library. Preserve the diversity of stores, the theater, the small

	town feel. It's sad that we have not preserved the small town. There are far too many people and the roads are crowded.
Screen Name Redacted 3/17/2024 09:01 AM	A small town environment is important for our youth.
Screen Name Redacted 3/17/2024 10:29 AM	The small and family-owned businesses, good restaraunts and shops. We were drawn to the town not being over-developed, which has been changing unfortunately.
Screen Name Redacted 3/17/2024 10:29 AM	The Main Street including its trees and foliage. The shops owned by local, small-town owners rather than a bunch of chains.
Screen Name Redacted 3/17/2024 10:40 AM	I love the community events. There's always something going on. The DCA has done a fabulous job making the town welcoming and beautiful.
Screen Name Redacted 3/17/2024 01:45 PM	The mix of businesses including a theater.
Screen Name Redacted 3/17/2024 05:10 PM	Love all the restaurants and beer places.
Screen Name Redacted 3/17/2024 05:27 PM	Downtown Camas needs to remain historic. It does not need more housing, it needs parking, walkable paths, places to sit and enjoy.
Screen Name Redacted 3/17/2024 05:43 PM	Our downtown expand streets beyond 4th with trees love the feel of 4th
Screen Name Redacted 3/17/2024 08:22 PM	Taking the charm out of Camas isn't good for anyone. There's literally no point having a DCA if the purpose is to strip away the things that make Camas unique. This includes historical buildings, like the octagon church. Putting up a high rise apartment with little character and no parking spaces will make it more difficult for people to want to stay downtown.
Screen Name Redacted 3/18/2024 02:54 AM	Preserve

Screen Name Redacted 3/18/2024 09:51 AM	Safe walkable downtown
Screen Name Redacted 3/18/2024 11:49 AM	Love the mill. Don't lose the feel of a mill town!
Screen Name Redacted 3/18/2024 11:54 AM	Like everyone I've met - the "small town feel" and TREES! Camas needs to hang on to open spaces, views, RESIST ALL DEVELOPMENT - the roads are becoming too busy, and most of all protect the TREES! People love to visit Camas because it "feels" like a hip, 1950's town - if you put sky scrapers around the main street it will not attract visitors or inhabitants. Right now Lacamas lakes are at risk and the rest of the hiking areas - which are being overused.
Screen Name Redacted 3/18/2024 01:45 PM	Camas is very walkable with wonderful trails and safe streets and sidewalks. Downtown Camas and Crown Park neighborhoods are very walkable and community oriented. We love First Fridays, farmer's market, Crown Park movies/concerts, egg hunt and summer kid's activities. We miss the Crown Park pool and look forward to the water feature/splash pad being installed soon.
Screen Name Redacted 3/19/2024 10:13 AM	Great school, the walkable downtown area, the hiking trails
Screen Name Redacted 3/20/2024 05:25 AM	Stop allowing churches on Main St., we fell in love with down town, but Journey is destroying it by trying to take up more space. Fully support them anywhere but the Main Street down there. Protect the trails.
Screen Name Redacted 3/20/2024 03:24 PM	Open space and trails. public safety. Tree canopy. Quiet. proximity to gorge Public ambulance model. Quality and accessibility of schools. Clean, well-kept. Accessibility to PDX, and airport. WA tax, amenities of big metro. Charming downtown, walkable. Small businesses. Library programming. Job opportunities. Historical mill town- jobs and investment. Work ethic, Community pride. Volunteer culture. Focus on youth and opportunities. Responsive and approachable city staff. City size and culture. Municipal service providers. High tech buy-in, finance, educated community. Community events. Family-oriented. Small-town feel. Proximity identity.
Screen Name Redacted 3/20/2024 03:29 PM	Old fashioned charm of Downtown can’t be replicated, beautiful historic architecture Ridgeline lighting and trees The relationships, and the connections we make The limited height of the buildings Lots

	of fun events! Public safety, people feel safe and secure, clean Family focused, excellent schools Good support for small business owners Nice parks and trail systems Many artists, lovely public art, art that fits our scale Walkability Flower baskets Cohesiveness, planned and intentional Liberty Theatre, Camas Hotel, Farrell building (Camas Antiques building)—all buildings to preserve, matter to our town Good restaurants Small and subtle features like public art, gazebos and benches
Screen Name Redacted 3/20/2024 07:26 PM	It's charming, the historical buildings, restaurants, coffee shops, library, cinema, post office, boutiques.
Screen Name Redacted 3/22/2024 07:12 AM	Camas is quickly turning from special to pathetic. The masses of homes,Now apartments especially apartments in downtown without having builders pay for road improvements,impact for utilities , schools,services.
Screen Name Redacted 3/22/2024 09:01 AM	Want to see my vibrant shops and restaurants while preserving historic small downtown feel. Love the quirky activities, first fridays, themed festivals, garden festivals, camas days etc. Love how clean it is. Keep residential and commercial areas separate. Don't put large commercial buildings right next to residential areas.
Screen Name Redacted 3/25/2024 10:09 PM	I think the city still offers a feel of community that is lost in some places. I like that there are trees and green spaces.
Screen Name Redacted 3/26/2024 09:46 AM	Downtown - quality and uniqueness of shops and restaurants, street trees and flowers, walkability Trails , green space and parks including large trees
Screen Name Redacted 3/26/2024 11:07 AM	Love the food options, cute shops like Poppy and Hawk. Safe atmosphere. Strive to preserve the safety and cleanliness. Continue to keep homeless off the streets of Camas. Enhance dining options, family friendly shops and events.
Screen Name Redacted 3/26/2024 04:18 PM	It's a Cute downtown. We need to preserve our great public schools.
Screen Name Redacted 3/27/2024 11:46 AM	What makes Camas Special? Parks Nature Open Spaces Community Pride Walkability Friendly people Schools Tree-lined streets Special Events History of good planning Downtown Library Lakes Good

	football team Great location/transportation corridors What should we strive to preserve? Tree canopy High-quality education Lakes Community center Nature/trails Sense of community Arts Sports Safe/Quiet Historic look and feel of Downtown Small business friendliness Inclusiveness
Screen Name Redacted 4/01/2024 11:31 AM	· Schools XXXXX · Location · Reasonable commute to jobs · Open spaces XXX · Proximity to international airport XXX · Liberty Theater (downtown entertainment hub) · Connected community & neighborhoods “you can’t leave your house without running into a neighbor” · Natural beauty/trails/lakes XX · Many opportunities to get involved in community · Comfortable/quiet · Affordability
Screen Name Redacted 4/03/2024 08:44 AM	It’s small and nice.
Screen Name Redacted 4/03/2024 09:08 AM	Downtown Camas needs to be preserved for it's historic feel!! Be careful to stop destroying historic buildings without a great deal of community input!! Stop the growth around and near LaCamas Lake. The Lake is a mess, and needs much attention, new homes should not be added to the problem. I would hope part of the paper mill could be maintained since there would be no Camas history without the presence of the mill in Camas. Stop small lots, and keep open areas, and keep areas that could be used for farming. Limit any annexation.
Screen Name Redacted 4/03/2024 10:07 AM	Please preserve what little green space and wildlife habitat still remains. We don't need more concrete, blacktop, apartments, etc. The planned Everett St. "improvements" are an example of the poor decisions being made ... putting small businesses out of business. The small businesses downtown are a significant reason for the charm and ambience of the area. "Pave paradise, put up a parking lot"... it's a shame.
Screen Name Redacted 4/03/2024 10:24 AM	Just the whole look of downtown should be preserved. Camas Days where they close off the roads and have a big city party.
Screen Name Redacted 4/03/2024 10:43 AM	Local businesses like bookish
Screen Name Redacted 4/03/2024 11:02 AM	The down town area is nice. Reduce traffic and congestion.

Screen Name Redacted 4/03/2024 12:34 PM	It's special when things are preserved as much as possible. I think with the exceptional push for growth caused by an exceptional demand, then we should be asking for more than usual in return. 1) Do everything possible to SLOW the process down, giving extra time for preservation of natural spaces. 2) make sure the infrastructure is in place BEFORE anything else happens. 3) Demand and get a quid pro quo. For everything given up for growth, something else is preserved that might otherwise be lost.
Screen Name Redacted 4/03/2024 04:45 PM	I love historic camas. I think less new buildings and keeping camas smaller is better. I also do not think we should extend the city boundaries by the airport. More country less highly populated neighborhoods. More trials and walking biking areas, more parks. Stop developing in camas. I want smaller town not city.
Screen Name Redacted 4/03/2024 05:13 PM	Everything
Screen Name Redacted 4/03/2024 06:10 PM	The memories of places I loved that are lost and gone forever. Don't turn all the remaining open space into massive houses on tiny lots.
Screen Name Redacted 4/03/2024 10:03 PM	The preservation of small town history. New buildings should fit the history style if small town. Not modernized monstrosities.
Screen Name Redacted 4/03/2024 11:32 PM	The beauty of Camas needs to be preserved. Quit building developments with houses on top of each other. Save our trees and hurry up and fix crown park (I took the survey years ago)!
Screen Name Redacted 4/04/2024 02:26 AM	I am having a hard time finding a response to the first question. We should strive on protecting our land, our natural resources, and STOP building large developments on every open field. Our community needs safe places for teenagers And family’s to go to, such as, skating rinks, bowling alleys, or game rooms.
Screen Name Redacted 4/04/2024 07:30 AM	Camas is a small mill town...even though the mill is nothing like it used to be...it is where are roots are as a town...no need to go and make it something new. Preserve the history, preserve our trees, forest, space and small town feel
Screen Name Redacted 4/04/2024 08:05 AM	The many local shops in downtown make it very special. When we first moved here there were a lot of outdoor dinning spaces that used

	parking spaces in downtown. I miss that. In the summer the outdoor space was beautiful and gave even more charm to downtown.
Screen Name Redacted 4/04/2024 08:11 AM	Businesses
Screen Name Redacted 4/04/2024 08:23 AM	Small town feel
Screen Name Redacted 4/04/2024 08:34 AM	The improvements to the downtown core have been such a joy to watch and participate in! Let’s continue to be mindful of our history as we grow and change. Not everything old needs to be torn down and replaced with shiny new buildings.
Screen Name Redacted 4/04/2024 08:58 AM	Preserve the history of our fun town, the classic small town feel. The people, community, nature, trails, green spaces all need to be saved.
Screen Name Redacted 4/04/2024 09:54 AM	Camas is special because it has maintained the small town vibe. When I drive through the narrow downtown streets it me how little it has changed over the years I have lived here. I don't think that should ever be allowed to change.
Screen Name Redacted 4/04/2024 11:51 AM	It's closeness to the Columbia River Gorge Scenic Area. Our historic Downtown should be preserved AT ALL COSTS !! It is part of what makes Camas so special. The events downtown are so enjoyable. Being able to see other Camas residents enjoying Downtown together....as a community should. Enhance the small town appeal of this city ! Don't destroy it !
Screen Name Redacted 4/04/2024 01:01 PM	The old buildings with nice architecture. Green spaces to walk and play. The lake, although it's a mess right now and needs to be fixed.
Screen Name Redacted 4/04/2024 01:15 PM	The DCA is a mean girl clique. Top to bottom it lacks ‘community’. Benefits those that are deemed worthy, won’t even implement suggestions from people that cost little no money if it isn’t from people who are in the circle.
Screen Name Redacted 4/04/2024 01:39 PM	The lake, hiking trails, downtown and classic feel of the mill.

Screen Name Redacted 4/04/2024 01:44 PM	Camas needs to preserve it's small town character and NOT build high density apartments on top of retail buildings. KEEP HIGH DENSITY HOUSING OUT OF DOWNTOWN CAMAS !!
Screen Name Redacted 4/04/2024 06:13 PM	Don’t build any more apartment/condos. Re purpose historic buildings. Explore using 5th avenue for more shops and events. Maybe planting more trees on 5th avenue would bring more shade for this.
Screen Name Redacted 4/04/2024 06:58 PM	Good local events like farmers' market and mothers' day plant sale
Screen Name Redacted 4/04/2024 07:26 PM	Plant trees that will grow tall on 5th street. Enhance areas for small shops and businesses.
Screen Name Redacted 4/04/2024 07:36 PM	Strive to preserve commerce in downtown, encourage climate-resistant solutions in future development, maintain roads, improve pedestrian safety, improve water runoff/flooding in old neighborhoods
Screen Name Redacted 4/04/2024 11:03 PM	The small town feel. Camas has such an adorable downtown, I love the shops, restaurants, and coffee options.
Screen Name Redacted 4/05/2024 10:37 AM	More affordability and diversity would be great
Screen Name Redacted 4/05/2024 11:41 AM	Historic downtown should be left alone . No high density housing. Improve the infrastructure downtown. You need to stop over developing every open space to make more tax money. Quit annexing more area, you cannot even effectively service the area you already have!
Screen Name Redacted 4/06/2024 07:48 AM	The small town feel is important. People know their neighbors and support the local businesses. Perhaps most importantly, Camas feels safe. You aren't constantly watching your back here, like in Portland.
Screen Name Redacted 4/06/2024 02:58 PM	DO NOT TEAR DOWN ANY MORE HISTORIC BUILDINGS!!!!!!! EVER!!!! Every old building is special and needs to be saved and protected for future generations.

Screen Name Redacted 4/06/2024 11:45 PM	The most special thing is that it's far enough from Portland
Screen Name Redacted 4/08/2024 09:20 AM	the Downtown vibe, access to parking. LaCamas Lake and park. Also, driving on the north side of the LaCamas Lake is a special experience, and one that cannot be duplicated. Its special and needs to be preserved.
Screen Name Redacted 4/08/2024 09:52 AM	Walking trails and parks. Small town feel. Proximity to city and culture. Walkable downtown, the character, no empty stores, people are invested. Welcoming environment for all ages. Monthly events, something for everyone, including kids. Grocery stores and library are in accessible locations. First responders and police are the best, and their partnership with schools is appreciated. Access to hiking trails. The people. Safety. The beer. Consistently pleasant. People care about their property. Downtown is really important. People are very friendly. The dog park is very social and offers social opportunities. Tight knit business community, everyone is very supportive of each other.
Screen Name Redacted 4/08/2024 12:48 PM	• People knowing/supporting each other • Close-knit downtown business community • Great schools • Family Friendly • Close to nature (paths, lake, parks) • Clean and Safe • Don't see a homeless problem (new residents) • Downtown acts as living room – expands social fabric • Events bring people downtown, and they come back for the businesses • Compact, walkable, accessible (balanced with proximity to nature, but access to 205/14/PDX airport) • Authentic historic charm (architecture, mill town history, "Hallmark movie") • Library programing, Youth Sports programming • "We pass all our bonds"
Screen Name Redacted 4/12/2024 10:29 AM	Small businesses with community desired products/services, walkable trails that feel safe, limited large apartment complexes in favor of beautiful individual family homes, walkable downtown areas that's safe.
Screen Name Redacted 4/12/2024 01:45 PM	The frequency of community events and available events to attend. The older buildings certainly provide charm that would be missing if they were removed. Even the historic and older houses in the area contribute greatly to the community's feel.
Screen Name Redacted 4/12/2024 03:40 PM	Slow traffic in lovely tree-lined street. Great restaurants and shops but these should be added to even more. By remodeling and

	restoring, keep the old buildings and, thus, the historic feel.
Screen Name Redacted 4/12/2024 05:02 PM	Charm in historic downtown. I would like to see the character preserved. Our parks and outdoor spaces are also quite impressive.
Screen Name Redacted 4/12/2024 05:38 PM	We love the historic buildings, hanging flowers and big trees that line the downtown.
Screen Name Redacted 4/12/2024 08:46 PM	Walkability, small local businesses, and the events that draw people to participate.
Screen Name Redacted 4/12/2024 09:08 PM	The greenery and small business shops, lack of large corporations
Screen Name Redacted 4/13/2024 04:49 AM	The down area consists of old historic buildings. The 2 shops on 4 th, Camas Antique store and the Camas Hotel, remind us of the past that goes back well over 100 years, and I think showcasing that is vital. Even the mill has a history of its own. Oh I forgot, the liberty theatre and library are historic too.
Screen Name Redacted 4/13/2024 06:19 AM	Simple, accessible, vibrant but not too busy with people, parking is fairly easily regardless of event. Strive to enhance grocery shopping experience.
Screen Name Redacted 4/13/2024 07:03 AM	It has a unique collection of shops, great restaurants, and is very walkable. I do feel like churches taking over downtown space might change the vibe though.
Screen Name Redacted 4/13/2024 03:33 PM	Small town feel, small businesses, community events, park district is great, wonderful friendly feel.
Screen Name Redacted 4/13/2024 04:36 PM	The mill. This town would be NOWHERE without the mill at the epicenter. Everything Camas has /is can be traced to the mill. We do our forefathers a disservice to bad mouth the mill and its history. It’s disgusting to hear the high school now call themselves the Makers instead of the Papermakers. To come from another state and want to change this towns history is extremely narcissistic.
Screen Name Redacted	small, local shops/restaurants, and the local theatre is fantastic. The

4/13/2024 05:05 PM	downtown looks very clean and friendly and has a wonderful family feel. There's a large variety of parks and playgrounds that are all close and clean and wondeful for our family to hang out at.
Screen Name Redacted 4/13/2024 08:05 PM	The downtown is distinctively unique and should stay that way
Screen Name Redacted 4/14/2024 11:03 AM	Clean, quite with an abundance of preserved outdoor space. The downtown area is very pretty and quaint.
Screen Name Redacted 4/14/2024 11:11 AM	Camas lucked into a classic walkable core downtown before exclusionary zoning took over. Please don't ruin our downtown with more traffic. We must keep vehicle traffic at low speeds and increase access to downtown by walking, biking, or rolling. 2 of my adult family members don't drive and two more with they could reduce their driving if access was safer.
Screen Name Redacted 4/14/2024 05:39 PM	What makes it special is the hard working men and women who made this town what it is. Green spaces. Limit urban growth. Please please stop growing the city boundary. We have space within city limits to grow if needed but the more we sprawl and entice folks from elsewhere to push bigger streets, more traffic lights, etc. The more we become the suburb of LA these people are trying to move away from.
Screen Name Redacted 4/14/2024 07:17 PM	Camas is nice because of the good schools, greenery/parks/playgrounds/trails, cute downtown. There are no big box stores and it’s not cookie cutter which is a good thing. Keep it small and improve sidewalks and add crosswalks for all the kids here trying to enjoy what it has to offer.
Screen Name Redacted 4/15/2024 06:40 AM	preservation of main street buildings, the mill. that look and feel .
Screen Name Redacted 4/15/2024 10:39 AM	Small businesses are the heart of camas. It is important to continue to support our local small box stores. The post office and library are especially important landmarks. While the Mill isn't nearly as large and productive as it once was, this is a big part of Camas history and at least the interpretive lobby should be maintained.
Screen Name Redacted 4/15/2024 10:53 AM	The downtown is adorable! Keep investing in it with local businesses and expand the tree-lined streets. It could use more diverse

	businesses. It is heavy on galleries, churches, and stores catering to 'parents.' More businesses to attract the youth would be good. The addition of churches in the downtown is not helping to make it feel diverse and attractive to tourism.
Screen Name Redacted 4/15/2024 02:26 PM	quaint, small, friendly
Screen Name Redacted 4/15/2024 02:56 PM	Keeping the downtown clean and keeping the town small
Screen Name Redacted 4/15/2024 04:36 PM	You should strive to preserve the small town community feel where people feel safe, friendly and unique. Keep it small please, it doesn't need to be like the Vancouver waterfront. We don't need more cookie cutter strip mall buildings. The historic downtown is perfect the way it is, even with the mill. This is a special place that is quiet and out of the way, focused on recreation and families. We can go to Vancouver for everything else.
Screen Name Redacted 4/15/2024 05:23 PM	Local businesses and tree-lined charm.
Screen Name Redacted 4/15/2024 06:59 PM	The brick buildings, the shops, it's very quaint. Strive to keep it that way and preserve it by making the entire city a national historic site.
Screen Name Redacted 4/16/2024 09:10 AM	The family-friendly environment NEEDS to be preserved. Preserve the quality of schools, as well as parks, lakes, and greenspaces as much as possible. Limited high density - we do not want to see large, multistory apartments or office towers. Keep the small town feel - single family homes, vibrant downtown - with restaurants, shops, and small businesses. Cleanliness and safety are important - we want Camas to feel safe for families.
Screen Name Redacted 4/16/2024 09:34 AM	Small town feel of downtown, lots of activities (outdoor, Liberty theater, downtown shops, close to gorge), history with mill.
Screen Name Redacted 4/16/2024 06:51 PM	I like the small town feel, family friendly and walkability nature of it. I'm disappointed that the city chose to allow an entire block to be purchased by a church to decide what to do with a prime location. I don't mind them having a presence but to take probably the most important section of all of downtown to then decide what is available to to our community shouldn't be allowed by just one entity. I like the

	diversity that the town has and this takes away from it.
Screen Name Redacted 4/16/2024 08:21 PM	I found that Vancouver never felt like it had a feeling of community; Camas does. It has that small town feel that happened to grow a bit bigger. We should preserve that as Camas continues to grow.
Screen Name Redacted 4/17/2024 08:06 AM	Preserve as much historical character as possible while keeping buildings safe and comfortable. Keep downtown open, not packed in or it becomes uncomfortable to visit
Screen Name Redacted 4/17/2024 12:10 PM	What makes Camas special: It is a stable environment: Families who have moved here stay here. What should be preserved/enhanced: Quality of education provided by Middle and High-Schools
Screen Name Redacted 4/17/2024 02:49 PM	Old bulidings and trees, lack of strip malls, small independent businesses, great parks and green spaces with good hiking/walking
Screen Name Redacted 4/17/2024 03:57 PM	Quality of schools. Parks and green space; heritage trail, lake access, crown park, trail connectivity, and river access. Community events. Pride. Downtown flower baskets. Climate. Access to services and healthcare. Great EMS response times. Strong law enforcement. Safety. DCA. Chamber of commerce. Collaborative leadership. Care for where they live. Library programming. Small town charm.
Screen Name Redacted 4/17/2024 05:10 PM	Love that it's always had a small town feel and hope that as we continue to grow we don't stray too far from that.
Screen Name Redacted 4/17/2024 05:48 PM	It’s clean and beautiful and people clearly care about kids.
Screen Name Redacted 4/17/2024 05:58 PM	Everything I listed in #1, plus our beautiful library, the downtown area (with exceptions I’ll list later), Lacamas Lake (with exceptions I will also list later).
Screen Name Redacted 4/17/2024 09:07 PM	Small town feel. Clean look. Green and flowers
Screen Name Redacted 4/18/2024 07:28 AM	The small town feel. Don’t let big box stores kill small businesses. Keep the old look and feel of downtown.

Screen Name Redacted 4/18/2024 09:31 AM	Strong sense of community, downtown Camas is a place we enjoy going to
Screen Name Redacted 4/18/2024 09:52 AM	We enjoy that the historic downtown is clean. We'd like to see small and local business prioritized and giving them affordable rent. Rather than large businesses or churches. The friendly residents and family focus, with city events geared towards families are the best.
Screen Name Redacted 4/18/2024 02:06 PM	Sense of community.
Screen Name Redacted 4/18/2024 03:33 PM	I like the library. The rest of the building are outdated and need to be replaced.
Screen Name Redacted 4/19/2024 05:56 PM	Preserve the culture of the downtown, preserve the theater, the library.
Screen Name Redacted 4/19/2024 07:24 PM	I like the parks and downtown area.
Screen Name Redacted 4/20/2024 10:55 AM	Downtown Camas is so cute. It also always has a bit of a magical feel to me. The older buildings are certainly a critical part of that vibe. I love its walkability. I also think that the library is particularly important. I always stop in when I'm downtown.
Screen Name Redacted 4/20/2024 06:40 PM	Preserve and enhance walkability to everywhere, shops, neighbors, parks. Downtown has European town feel with all things within walking distance, focused on pedestrians and interaction with neighbors.
Screen Name Redacted 4/20/2024 07:25 PM	downtown is delightful. keep it that way it is - looks like you're going back in time. the flowers, trees, wonderful.
Screen Name Redacted 4/20/2024 08:25 PM	Keep the charm
Screen Name Redacted 4/22/2024 09:05 AM	It is not special right now. It has the potential to be special though.

Screen Name Redacted 4/22/2024 09:35 AM	The library - independent ownership. Green spaces and parks. Walkable and bikeable downtown. Strong school system. DCA. Library and parks and rec programs. Safety. Urban and rural. Mountains. Small businesses - Grains of Wrath and Natalia's Liberty theatre. Downtown.
Screen Name Redacted 4/22/2024 12:10 PM	Love the downtown charm and public library, farmer's market, first Fridays. Please preserve these. Love the neighborhood feel and the number of pedestrians and cyclists. My bipoc and lgbtqia children feel safer here than most smaller cities/towns.
Screen Name Redacted 4/23/2024 05:00 PM	I would love to see the many community events that bring people together (First Fridays, Farmers Market, etc.) continue. Growth is inevitable, but maintaining the friendly, relaxed, small-town character is critical. I would prefer to have a limited number of those multi-level complexes we're starting to see on 6th St. In the areas I grew up in, they've built too many and irreversibly changed the character of those communities. Love the idea of expanding the downtown out to include surrounding streets.
Screen Name Redacted 4/23/2024 09:08 PM	Downtown has a quaint small town feel, which is very charming.
Screen Name Redacted 4/23/2024 09:20 PM	I think the walkability is the greatest strength. I would try to enhance the city’s density by allowing for more mixed use zoning, especially in the crown park neighborhood.
Screen Name Redacted 4/26/2024 07:36 AM	the history of Camas is centered on downtown. The town was formed around the mill industry which is why roads built oriented to mill and such. At some point the mill needs to go, but the history is important & should be used as educational opportunities. The older & repurposed buildings help preserve the character and new DCA educational signs help hint into the past. Would love to see more
Screen Name Redacted 4/27/2024 12:34 PM	The forest and hiking trails within city limits is one of Camas's most valuable features, the city should strive to expand and enhance them. And the schools.
Screen Name Redacted 4/27/2024 05:02 PM	Small town feel, great old post office, library, trees. Safe to walk the streets, lots of Greenspan for quality of life

Screen Name Redacted 4/29/2024 10:59 AM	Bustling businesses, shops and restaurants! We need more high rises with shops and stores underneath apartment/condo type living. Also, needs to be more pedestrian and cyclist friendly. The sidewalks are really old and narrow. We need to add larger walkways and bike lanes all the way down to the Lacamas Creek Trail and up SE Crown Rd as well.
Screen Name Redacted 4/29/2024 12:38 PM	Keep the streets narrow and the businesses small. Maintain the hanging flower baskets.. they're stunning! The town remains small and friendly with many activities.
Screen Name Redacted 5/02/2024 09:40 AM	Cutest downtown, little town atmosphere. Public space and parks. Historical element - preserve the core. Prepare for growth. People come for the feeling and small-town vibe. Unique shops. Cleanliness, well-maintained, well-planned. Strong history of growth projections, which has preserved the home feel. PPL. Access to nature and lakes. Great place to raise kids. Uniqueness of Mill.
Screen Name Redacted 5/02/2024 09:43 AM	walkability, greenery, local businesses
Screen Name Redacted 5/02/2024 03:06 PM	quiet residential community with lots of nature
Screen Name Redacted 5/02/2024 03:30 PM	There’s not much bringing me to downtown
Screen Name Redacted 5/02/2024 09:31 PM	The walkable, small town feel is great, and the city seems to want to maintain lots of green space for citizens.
Screen Name Redacted 5/02/2024 10:20 PM	Diverse family friendly food and entertainment options plus shopping.
Screen Name Redacted 5/03/2024 08:07 AM	Historical buildings, walkable space, small retail and dining spaces are what make downtown Camas a fun place to hang out.
Screen Name Redacted 5/03/2024 08:23 AM	Cohesive feel to the community. Camas should continue to enhance areas of largest citizen agreement.

Screen Name Redacted 5/03/2024 08:42 AM	It's cute, historic, and walkable. More restaurants and dining would mean more reasons to go downtown or meet others out.
Screen Name Redacted 5/03/2024 03:27 PM	It’s picturesque. Lots of cute shops. Could enhance food options
Screen Name Redacted 5/03/2024 03:28 PM	Character - cute, non-chain shops, well maintained buildings, walkable streets
Screen Name Redacted 5/03/2024 04:05 PM	This area has an ABUNDANCE of parks and walking paths! Yrs. gone by, the Mill made Camas-town smell, undesirably. By the time I moved here: Camas no longer "smelled." YAY Camas library is a stand-out!
Screen Name Redacted 5/03/2024 04:05 PM	Much is made of the historical aspect but the city continues to let the historical infrastructure degrade. Spend the money bringing it up to code before it becomes a greater issue / emergency.
Screen Name Redacted 5/03/2024 04:05 PM	The community is very active and plans a lot of fun events. Definitely preserve the small town feeling.
Screen Name Redacted 5/03/2024 04:07 PM	The waters and trails, aswell as downtown and the wooded areas with no homes on them
Screen Name Redacted 5/03/2024 04:37 PM	Downtown is great. Preserve restraunts and bar diversity (acorn and oak!) Worried about church owning a whole block.
Screen Name Redacted 5/03/2024 05:41 PM	Parks and trails
Screen Name Redacted 5/03/2024 06:03 PM	See above.
Screen Name Redacted 5/03/2024 06:01 PM	The natural beauty, open spaces, parks, outdoor recreation. It would be amazing to turn the mill into a a cool shopping area once it isn’t running anymore.
Screen Name Redacted 5/03/2024 06:31 PM	walkability, connectivity to trails

Screen Name Redacted 5/03/2024 09:16 PM	Investments and priority placed on small business success, parks
Screen Name Redacted 5/03/2024 09:55 PM	Maintaining a clean and safe downtown, incorporating the historic charm and displaying signage about the towns history. Events are great. Events like First Fridays aren't unique to cities and towns, but Camas takes so much pride in the community, it just feels like home when attending one.
Screen Name Redacted 5/04/2024 09:19 AM	The architecture and the trees:
Screen Name Redacted 5/04/2024 09:47 AM	Shops and restaurants, hiking trails, schools. Should strive to enhance these, as well as more outdoor and indoor recreation
Screen Name Redacted 5/04/2024 04:41 PM	Walkable, human-scaled development downtown. Street trees. Please preserve and enhance pedestrian and bike access, limiting influence of automobiles. Camas parks and trails are wonderful -- please protect and improve ped/bike access to parks and trailheads.
Screen Name Redacted 5/04/2024 05:28 PM	Building and vibe, community feel
Screen Name Redacted 5/04/2024 05:30 PM	Enhance walkability and connection to the river. Camas could also get rid of the mill so that we can get back our views and connection to the riverfront.
Screen Name Redacted 5/05/2024 08:40 AM	Walkable downtown. Need more connected pathways for walking and bikes.
Screen Name Redacted 5/05/2024 09:13 AM	Good variety of community events throughout the year, as well as community ed and parks and recreation opportunities. Enhance quality of parks (e.g. consistently having bathroom facilities, public parking, pedestrian access). Preserve small businesses downtown and preferably extend operating hours so it's easier to shop small businesses.
Screen Name Redacted 5/05/2024 12:39 PM	Our natural resources must be protected. Keep our water clean for drinking and recreation. Preserve all the old buildings and homes. The

	downtown post office needs to be preserved. It's a beautiful building.
Screen Name Redacted 5/05/2024 03:21 PM	4th Street with its numerous small shops, galleries and eateries, beautiful trees and cozy sidewalks. Some of the side streets could be enhanced in the manner of 4th St.
Screen Name Redacted 5/05/2024 04:34 PM	Small-town feel. No chain stores. Everyone very friendly.
Screen Name Redacted 5/05/2024 06:11 PM	We need to focus on roads and development of the northshore area with a variety of live work areas. So many great options. Check out Northwest Crossing area in Bend, Oregon
Screen Name Redacted 5/05/2024 09:37 PM	The small town feel is something to be valued. I love that I can walk downtown and run into familiar faces. Business seem to be involved in the community and I believe that it is important that they continue to contribute to the community in a positive manner. I believe it is imperative to preserve our natural spaces. The lake, the trails, and the parks.
Screen Name Redacted 5/06/2024 02:01 PM	The streetscape is a beautiful, colorful and trendy setting with streetside dining opportunities. I believe the street and curbs have been cut lifted or repaired for so many years that a thorough repair and finish needs to be done on all concrete curb sidewalk, and asphalt surfaces.
Screen Name Redacted 5/06/2024 03:27 PM	Make it so you don't have to be a millionaire to live her.
Screen Name Redacted 5/07/2024 08:24 PM	It has a small town feel with modern amenities.
Screen Name Redacted 5/10/2024 01:55 PM	Camas is special as it has largely kept out the large box stores and restaurants from downtown. Small business is the way to go.
Screen Name Redacted 5/11/2024 02:20 PM	Camas provides a wonderful variety of green spaces, including forested areas as well as parks and trails. The natural beauty should be preserved and not decimated to make way for development. Preserve the "quaintness" and the small town feel that Camas currently exudes.

Screen Name Redacted 5/12/2024 07:25 AM	Unique shops , great library, small town
Screen Name Redacted 5/12/2024 06:47 PM	We seem to focus only on the downtown. While it's quaint it is well beyond being the focus of a city of our size. Many people live far away from the downtown. Some of the businesses are in constant turnover. We should strive to enhance the downtown but we also need to set a vision on the next generation of special and historic parts of Camas, which means we start to build them today.
Screen Name Redacted 5/13/2024 04:33 PM	A livable scale, a walkable downtown, natural resources. All of these need to be balanced against growth.
Screen Name Redacted 5/13/2024 09:22 PM	Local businesses, no corporate franchises. More focus on arts
Screen Name Redacted 5/15/2024 12:24 PM	Trails and mountain biking. Connectivity to PDX and surrounding areas.+ Greenspace.+ Not heavily built out/ very chill and peaceful. Not a lot of crime. Unique downtown/historic look. Water/rain. Hills. Clean. Community events. Lakes and parks+ Low crime/safety. Trails. Churches. Friendly people. Great schools. Public safety/1st responders. Food trucks in neighborhoods. Ecosystem in back yard/ lots of wildlife. Camas pride. School athletics. Topography/geographic location. Views/the gorge. Don pedros and other restaurants. Cold winter/warm summer. School funding. Trees and wide roads. Community education programs and services.

Optional question (348 response(s), 19 skipped)
Question type: Essay Question

Q3 What about Camas, including our historic downtown, would you like to change in the future? What can improve?

Screen Name Redacted 2/20/2024 02:02 PM	Housing diversity; increase medium and high-density housing. Connecting/expanding walking path system. Re-energizing high tech employment in town (reverse job losses from Sharp, HP, UL Labs, etc.) Improve telework infrastructure via high-speed internet/public data access. Improve access to regional transportation to better support business travel (commuter bus to airport and train stations) More secondary neighborhood small retail centers with groceries, coffee, and small shops in Grass Valley, but NOT sprawling minimart areas. Create walkable/architecturally nice areas. Dedicated food

	truck park with covered eating areas especially adjacent to other infrastructure like parks.
Screen Name Redacted 2/09/2024 07:21 PM	Create a better parking plan at the rate growth is being allowed. I had to find a different church due to lack of parking and no longer patron restaurants in Camas. Reasonable parking is no longer available. Preserve the history of Camas and why it was even founded. The young people need to know and be able to experience some of why Camas exists.
Screen Name Redacted 2/09/2024 09:12 PM	We need better infrastructure downtown. We need better streets sidewalks. We really need a central gathering. Place like a town Square or town Park that ties third, fourth, and fifth together. And eventually sixth, especially as more development happens.
Screen Name Redacted 2/10/2024 07:55 AM	We need a big parking garage. I vote for buying the lot that belongs to the mill across from Grains of Wrath. Allow the mill employees free parking and charge everyone else. It would pay for itself in no time and then it would be a source of revenue for the town.
Screen Name Redacted 2/10/2024 09:40 AM	I would like to see more sidewalks outside the downtown area, and maybe a park on the North shore of the Lacamas lake.
Screen Name Redacted 2/10/2024 11:47 AM	Downtown should not be changed at all!!! The improvements that were suppose to be made to Crown Park should happen already. Lacamas lake needs to be cleaned up and properly maintained to stop the toxic algae that grows every year.
Screen Name Redacted 2/10/2024 11:14 PM	Water quality in lakes
Screen Name Redacted 2/11/2024 10:27 AM	We need expand safe walkable areas and higher density areas for community gatherings and lifestyle enhancement. Create separate zoning for industrial or “strip mall” like development away from residential areas. Keep as much of chain stores and restaurants outside of camas.
Screen Name Redacted 2/12/2024 10:02 AM	walkability-- sidewalks are nice, but in the future it would be nice to see 4th Ave as a pedestrian only plaza. 4th Ave already feels too small for cars that are passing through and with as many pedestrians that cross it can be dangerous

Screen Name Redacted 2/12/2024 02:44 PM	Honestly, not much. There are some old buildings that need some TLC but other than that, I like the way it is.
Screen Name Redacted 2/12/2024 02:59 PM	Prioritizing a refresh/enhancements of existing parks, roads, and infrastructure before new development. Specifically, I'd love to see road/sidewalk improvements on McIntosh and southern end of Brady Rd to connect communities to the new Columbia Palisades development and to be able to handle the increase in traffic. I'd also love it if we could refresh some of our park play structures so that I don't have to drive to Vancouver so often for park play.
Screen Name Redacted 2/13/2024 08:43 AM	Add more restaurants, cafes, wine bars.
Screen Name Redacted 2/13/2024 08:52 AM	More green spaces & pedestrian walk ways.
Screen Name Redacted 2/13/2024 09:11 AM	It would be amazing to have a park with a playground within easy walking distance of downtown. Also a dog park! Be very thoughtful about future housing development and how it will impact infrastructure, schools, environmental, etc. I think it would be wise to also try to entice larger employers to come to the city so more people can live amd work within the city limits.
Screen Name Redacted 2/13/2024 09:37 AM	I wish the church didn't own the whole block. Fun places for kid and teens to hangout.
Screen Name Redacted 2/13/2024 09:42 AM	Make the entire downtown core a pedestrian zone (as can be found in European cities and towns). We'd need to develop some parking plazas around the periphery.
Screen Name Redacted 2/13/2024 10:00 AM	Stay on track with what the people want for the future, Stop the Condo generic look building that has started and make the building fit the historic look and feel or it will be lost forever. When the mill clean up comes don't fill the area with more buildings use the space for actual gathering areas and the overflow of the events that are downtown. If we get much more the infrastructure is not going to support all the influx in wanting to bring more homes to the area. Try supporting who is already here it is hard to even go enjoy the lakes anymore.

Screen Name Redacted 2/13/2024 10:42 AM	Very slow growth will preserve it all.
Screen Name Redacted 2/13/2024 10:52 AM	Continue to encourage businesses to develop in the downtown area.
Screen Name Redacted 2/13/2024 10:55 AM	Walking/Biking is very disjoined. 500 is the primary road and should connect downtown to the lake/park. We need a nice grocery store. Right now the only option is QFC, which is almost in Vancouver - Trader Joes or Zupans would be a great addition! The downtown area needs more restaurants and community areas that are open to bring regular business to the stores. A large portion of the main blocks are closed most of the time. The mill is an eye-sore
Screen Name Redacted 2/13/2024 12:18 PM	I would like to end the ugly box condos and preserve what little is still standing in our town.
Screen Name Redacted 2/13/2024 12:47 PM	Better Access to Sport Facilities and Access to said facilities...example, turf fields, swimming center, community workout facilities, generally improvement of recreational opportunities (see Tualatain Hills Park and Rec Center). Road improvements (sidewalks, bikel anes, less potholes and delayed maintenance). Improve over crowding of schools at all levels. Better maintenance of exisiting parks. Stop adding more development without adding necessary resources (schools, parks, roads) etc...to accommodate growth.
Screen Name Redacted 2/13/2024 12:49 PM	I'd like to see more new development opportunities. Let's bring in new businesses and eateries. Make the town more walkable.
Screen Name Redacted 2/13/2024 01:27 PM	More density and apts/condos. Less parking lots and more retail/dining space. Community gathering center. Finally, mill redevelopment.
Screen Name Redacted 2/13/2024 02:09 PM	I would like to see less development.
Screen Name Redacted 2/13/2024 02:59 PM	Stop creating developments with such narrow streets kids can't even play, buses and emergency vehicles can barely fit, and families have no parking.

Screen Name Redacted 2/13/2024 06:00 PM	More multi family housing. Revamp mill area and utilize space differently.
Screen Name Redacted 2/13/2024 07:02 PM	Parking, add dog park, make it affordable for small businesses to have space
Screen Name Redacted 2/13/2024 07:34 PM	Support the police. Keep the community safe and clean at all costs.
Screen Name Redacted 2/13/2024 07:53 PM	Adding more businesses (not churches) in the downtown streets and planning for the eventual mill closing.
Screen Name Redacted 2/13/2024 09:21 PM	No more sprawl. Smart downtown planning, gradually increasing density, with smart management of car traffic.
Screen Name Redacted 2/13/2024 09:29 PM	A downtown that has a broader footprint, integrated housing with businesses.
Screen Name Redacted 2/13/2024 11:33 PM	Community events should be expanded beyond downtown to assist with growth. The mill should be mostly demolished but a small portion used as a museum. Allow for low income programs to thrive like boys and girls club instead of removing. Many people depended on those resources
Screen Name Redacted 2/14/2024 05:29 AM	I think the two intersections at 6th and Adams and 6th and Dallas are not safe - I regularly see people almost get into accidents at both of them because they expect them to both be 4-way stops. Also I wish there were a few more dining options downtown - some more like casual lunch options, or maybe a small drugstore or a bakery - more ways to get your everyday shopping done while walking around so you don't have to drive elsewhere.
Screen Name Redacted 2/14/2024 08:06 AM	Downtown is beautiful. The tenant mix is perfect. We HAVE to slow down on residential development. Let’s concentrate on fixing our lakes, lack of infrastructure and another high school that will actually “See and Serve ALL students”.
Screen Name Redacted 2/14/2024 09:39 AM	More family events in and around parks and Lacamas Lake.

Screen Name Redacted 2/14/2024 12:05 PM	Downtown-- improve the infrastructure (trees, sidewalks, cross-walks, utilities) along with improved parking opportunities, safer pedestrian-automobile interactions. City-wide, with existing trails their connectivity needs improvement, as well as new trails construction as community grows. Also preserve open space and habitat - reduce opportunity for wildfires to impact them as well as to property owners structures.
Screen Name Redacted 2/15/2024 08:30 AM	The mill- see first answer. Clean up the lake. Create a trail right around long lake.
Screen Name Redacted 2/15/2024 09:16 AM	We would love to see the town be more inclusive. We feel that the town only caters to the "rich" and leaves the average person out. For example, the events that take place usually involve going from store to store - places that have gotten so snobby and out of hand!
Screen Name Redacted 2/15/2024 09:16 AM	It needs to be refreshed with a new modern library, fire department, and more shops buildings with contemporary modern architecture like the Vancouver waterfront or how the Firstenburg library looks. We need a new downtown Camas at the waterfront that connects to the historic one, or replace the old library and older downtown buildings with more modern stores and library.
Screen Name Redacted 2/15/2024 09:26 AM	Also, you do need to bring back some short term parking spots. Having to lug 20+ lb bags of dog food blocks is ridiculous. Please put a few 10 minute spots on Cedar Street. This would be good for the bagel shop too.
Screen Name Redacted 2/15/2024 09:33 AM	I would like to see more walking/biking paths that can get residents to downtown and the Lake. Everything requires a car, but when the weather is beautiful, we all want to be out doors on the trails and lake. So many cars and few parking spaces make it a nightmare for the City. If the city focused on utilizing parking areas with trails/paths for residents and visitors to use, it might make the roads safer and more pedestrian/bike friendly. Sort of what Leavenworth had for it's visitors.
Screen Name Redacted 2/15/2024 09:39 AM	This is fucked. If you don't like what is here, then fucking move somewhere else.
Screen Name Redacted	Youth centers are needed and teen leadership social building.

2/15/2024 09:46 AM

Screen Name Redacted
2/15/2024 09:44 AM

Build another high school and probably middle and elementary as well. There are so many families moving here and not enough space in the schools. Class size is a huge issue and there is not space to create more classes. It is unfortunate that Journey Church has control of such a huge chunk of the downtown. They do a lot of great things, but they also limit future possibilities.

Screen Name Redacted
2/15/2024 09:44 AM

*We need a swimming pool! *Do something with the building at 4th & Cedar. So sorry the church owns it & it doesn’t seem to be benefiting the community. Prime location.

Screen Name Redacted
2/15/2024 09:52 AM

Better communication regarding shuttle options for downtown events.

Screen Name Redacted
2/15/2024 09:58 AM

No suggestions

Screen Name Redacted
2/15/2024 10:02 AM

3rd ave - would be nice to have more trees

Screen Name Redacted
2/15/2024 10:06 AM

More communication within the community, more acceptance of new families

Screen Name Redacted
2/15/2024 10:08 AM

Reduce the large foot print of the church downtown. We need more businesses on our great main street.

Screen Name Redacted
2/15/2024 10:18 AM

I'd like to see Camas become more pedestrian centric over time. There are areas of Camas that are really sketchy still. For example, there is a section of 3rd ave heading into Washougal that we, and apparently most pedestrians, avoid due to safety issues. As you head over the river on the 3rd heading out of downtown, the road splits into 4 lanes for apparently no reason (it is 2 lanes in downtown and then 2 lanes shortly after in Washougal), and the speed limit increases to 45. There is a sidewalk on one side of the road, but it is very narrow, and there is no safety divider to protect pedestrians. I see kids on that sidewalk relatively often going to the skatepark, and it makes my skin crawl watching them because one of these days, someone will hit a pedestrian on that road and kill them. That is the definition of a Stroad and it is dangerous. I don't see adults or folks walking their dogs to the river trail because of that stretch of road. It is such an unfortunate

	spot seeing how pedestrian centric downtown is. I'd love to see Camas build on the safety of downtown and change the few Stroads in town, including this stretch, to be a lot safer. On this road specifically, there is no reason the road needs to open up to 4 lanes. It starts as 2 lanes and then ends in 2 lanes short after the 4 lane section. This is not benefiting anyone. I'd love to see the speed limit go down, because there's no reason to speed up right before the river walk trail, keeping it slower will go a long way. But specifically, I'd like to see this stretch of road take more after downtown. Let's decrease it to 2 lanes, and then create parking along the street for that river walk and a sidewalk on the other side. This would make the walkability of Camas so much better to our local natural amenities and it will show Camas' dedication to keeping our roadways safer for families.
Screen Name Redacted 2/15/2024 10:18 AM	continue to encourage small and diverse business in downtown. improve the parks. parking downtown, hard to do and not distract from the feel. The issues with the lake need to be completed, not just studied. there must be solutions.
Screen Name Redacted 2/15/2024 10:29 AM	I would like to see forward thinking on how people are going to move in and out of the downtown area. The Everett Street corridor is getting some improvements in the future, but we need to be mindful about those improvements and know that more and more people are moving to this area and that area will bottleneck very easily today. Just a truck stopping in the road for a little bit by the lake market can shut down the entire round about very quickly and stall out many people. I also think we need to be focus on the future of education. Relying on old traditional education models need to go. We need to fully support our project based schools and make way for more innovative education models. Support publicly funded language immersion, Montessori education. Offer more education models for more diverse learning.
Screen Name Redacted 2/15/2024 10:36 AM	better parking. More food choices. Clear out all homeless. Better security at night against vandalism to small businesses. Do something with all the property from the Mill that is no longer used.
Screen Name Redacted 2/15/2024 10:41 AM	Improve the outcome of the DRAFT RI workplan that does the bare minimum to address decades of waste disposal and potential contamination from a variety of known toxic chemicals the plant has used or produced and discharged.
Screen Name Redacted	Having the church local church buy out an entire block of downtown

2/15/2024 10:43 AM	feels like an encroachment that is likely to continue. I would certainly like to see it contained whatever that my look like as it is limiting to other organizations wanting to start small businesses. The church already doesn't contribute taxes and although they do not represent 1/6th of the population of Camas, they now own 1/6th of Mainstreet. It will not feel like a historic downtown if this continues.
Screen Name Redacted 2/15/2024 10:48 AM	Camas needs improved pedestrian and bicycle access on NE Everett St. between NE 23rd Ave and Lake Rd. This may alleviate some parking issues at Round and Lacamas Lakes if more people could safely walk or ride their bikes to the lakes.
Screen Name Redacted 2/15/2024 10:50 AM	More small town places to eat. We previously had a terriyaki spot and a pizza spot that promoted easy cheap meals not only for people that work in down town but people that want to come down and experience camas and not pay an arm and a leg for a burrito and beer
Screen Name Redacted 2/15/2024 10:52 AM	The crosswalks on 3rd and 6th avenue has been very dangerous and I have had quite a few encounters were I look both ways, one car stops so I begin to cross but the other side is not paying attention and have come very close to hitting me. I have also seen it happen a lot to people crossing the street, especially during big event days in Camas that happen at night when it is dark. If we could get the crosswalk signs that flash when a person is crossing the street at major crosswalk areas (Birch, Cedar, Everette), that would significantly increase the safety of both the drivers and the pedestrians.
Screen Name Redacted 2/15/2024 10:59 AM	I feel that people are staying in campers off of 6 near the shell station. The homeless is coming through to our neighborhoods now.
Screen Name Redacted 2/15/2024 10:58 AM	Input from residents. You only care about the mill, legacy interests and developers. No one trusts you.
Screen Name Redacted 2/15/2024 10:56 AM	Take down the paper mill ! Add more parking lots
Screen Name Redacted 2/15/2024 10:59 AM	Not going through with, or modifying the Everett St Corridor project so it doesn't take away parking and somehow enhances parking safety at Acorn & the Oak Restaurant. Please do not add another roundabout at 35th.

Screen Name Redacted 2/15/2024 11:17 AM	Expand the former and some-day former Mill property and make it mixed use residential, commercial and usable green space for public recreation but keep the old-town character and feel (convert parts of the old Mill to brewery/restaurant/concert/small conventions space like Edgefield
Screen Name Redacted 2/15/2024 11:30 AM	The future the mill property needs thoughtful planning to add its blocks to the core, carrying on the streetscape and LOCALLY OWNED small businesses, with varied living options thrown in.
Screen Name Redacted 2/15/2024 11:45 AM	Community event Free concerts
Screen Name Redacted 2/15/2024 11:49 AM	Continue investment in the downtown core. Would like to see more shops/restaurants and other business that make it fun to spend an afternoon shopping and eating (no more things like State Farm offices please). It would also be nice if there were more uniform signs and such that gave it a more cohesive feel. Definitely could use more night life. The old Westly Ford property would be a prime spot for someone to do something cool.
Screen Name Redacted 2/15/2024 12:41 PM	Keep it local and unique
Screen Name Redacted 2/15/2024 12:44 PM	I'm not keen on how much property Journey Church owns in downtown; it should be left to individual business owners. Businesses I'd like to see: Frozen yogurt or ice cream -- please! -- bubble tea and a high-end bakery similar to Grand Central or St. Honore in Portland.
Screen Name Redacted 2/15/2024 12:53 PM	There should be more Restaurant options . Be more culturally diverse.
Screen Name Redacted 2/15/2024 12:56 PM	More places to eat!
Screen Name Redacted 2/15/2024 01:10 PM	am noticing more transient people or homeless people in the area. If that continues and we become more like our neighboring communities we will no longer want to live in the area or shop/dine in downtown camas

Screen Name Redacted 2/15/2024 02:08 PM	Parkin g is a big big issue for downtown. Also it seems very odd that two blocks of development are owned by the church with one building still remaining empty.
Screen Name Redacted 2/15/2024 02:16 PM	I was against taking out the pool. I thought we were at least going to get a splash pad playground there. Instead, we got nothing. Am very unhappy about all that. Need more okay things like that for the younger folk. Also, very unhappy with our leadership for slipping in that new tax last year. Myself, and many others, are not going to forget that come voting time.
Screen Name Redacted 2/15/2024 02:16 PM	More nice restaurants (like feast 316, Tommy Os, Nuestra mesa) and a kid's clothing store! I know there is the used clothes but that doesn't fit our family's needs.
Screen Name Redacted 2/15/2024 03:14 PM	ATM for Bank of America We need an outdoor public swimming pool!!!!
Screen Name Redacted 2/15/2024 03:56 PM	Add more shopping with better hours
Screen Name Redacted 2/15/2024 04:23 PM	Better pedestrian crossings from 3rd is my main concern.
Screen Name Redacted 2/15/2024 04:40 PM	I would like to have focus on preserving natural beauty and slow down development of cheap strip malls. Lets focus on quality of development. I would also like to see more hotel options near or at Downtown.
Screen Name Redacted 2/15/2024 05:20 PM	The mill property redevelopment should add to the downtown, more parking downtown, better playgrounds and sports fields, maintenance of existing trails.
Screen Name Redacted 2/15/2024 05:39 PM	More higher end restaurants
Screen Name Redacted 2/15/2024 06:46 PM	Do not charge for parking. That’s part of the charm. Keep the two way streets. Keep the events and add more.
Screen Name Redacted	1.Remove the paper mill buildings and improve the entrance into

2/15/2024 07:46 PM	downtown. 2. Improve traffic control on 3rd Ave near Garfield. After the new stripping was done several years ago with the free right turn onto Garfield, the traffic is constant up Garfield because traffic doesn't need to stop and makes it very difficult to cross Garfield from the side streets. 3. Add more trees since residential development has taken so many out. 4. Parks need some serious attention with ivy and other invasives out of control, 5. Deal with water quality issues with LaCamas and Round Lake. 6. Fire/Ems costs sound out of control.
Screen Name Redacted 2/15/2024 11:23 PM	Parking Parking Parking (Is it okay to park antime in the lot north of Grains of Wrath?!?)
Screen Name Redacted 2/16/2024 12:20 AM	Perhaps have more community activities, like an every Friday night street fair.
Screen Name Redacted 2/16/2024 05:07 AM	Less churches and more restaurants. I want to keep my money here instead of driving to Vancouver or Portland. On Sundays, it is hard to park w/ the church patrons taking all the parking.
Screen Name Redacted 2/16/2024 08:08 AM	Parking needs to be addressed, cars park right up to stop signs, angle parking in front of GOW block your vision trying to pull out onto 5th Ave. All landscaping downtown on vision clearance area's should be ground level.(all tamjupiners should be removed, accidents waiting to happen) First Friday events are awesome and draw a great crowd.
Screen Name Redacted 2/16/2024 08:40 AM	I think that Camas really needs to improve its transportation and safety infrastructure. Many of the roads lack sidewalks and bike lanes, despite all the development and new houses that are being built. I think that Camas needs to prioritize establishing walking and biking connections throughout the city, connecting areas that are currently walkable and bikeable (like downtown and within some of the newer subdivisions) to the rest of Camas (e.g., non-car transportation arteries connecting new developments such as Green Mountain area to the rest of Camas downtown area).
Screen Name Redacted 2/16/2024 09:47 AM	There should be more for kids to do, especially middle-high school age. Less businesses that require you to be into alcohol/drinking.
Screen Name Redacted 2/16/2024 11:53 AM	I wouldn't change anything. I would discourage people from trying to change it too much.

Screen Name Redacted
2/16/2024 12:34 PM

Water quality within Camas should be a high priority. Nothing adds value like a pristine body of water. Having our own little Lake Tahoe would be worth the whining of folks who don’t want to give up outdated and dangerous methods of keeping a lawn green. Additionally, placing an emphasis on keeping downtown focused on thriving commercial spaces will make Camas a better place to live and visit.

Screen Name Redacted
2/16/2024 01:44 PM

The city needs a 'welcome package' for new homeowners. This should include a city map, how Camas utilites work - sewer and water charges esp, some special coupons for newcomers, etc. When we moved here only Lutz sent us a special coupon. Everything else mentioned here we had to find out on our own. Since The City of Camas handles things differently than other parts of Clark County, this information be very helpful and clear confusion for new homeowners for very little cost. As for the historic downtown - keep up the good work! Also, the weekly Camas small business newsletter is very informative and is done very well!

Screen Name Redacted
2/16/2024 04:54 PM

Close street for walking through and festivals and provide a new parking structure

Screen Name Redacted
2/16/2024 05:18 PM

We need another high school above all else. Then another middle school. The downtown church takes up most of the block tax free. I'd like to see small business thrive there instead.

Screen Name Redacted
2/16/2024 06:17 PM

As above I would leave the downtown as historic, add to the camas urban growth boundary Accommodate the growth.

Screen Name Redacted
2/17/2024 08:19 AM

Parking and xaccess.

Screen Name Redacted
2/17/2024 09:23 PM

We could really use a dog park…or two! Cleaner water in Lacamas and Round Lakes.

Screen Name Redacted
2/18/2024 09:07 AM

Make Main Street pedestrian only. It will create a better space to gather and socialize. Outdoor dining and seating areas where the parking spaces are. Cross street traffic would be allowed, but not East/West traffic. I’ve seen this in Europe and it’s amazing.

Screen Name Redacted 2/18/2024 09:38 AM	Include more gathering spaces, for meeting others for a bite. Small restaurants, places to gather for breakfast, lunch, happy hour, dinner, or dessert after a movie.
Screen Name Redacted 2/18/2024 04:15 PM	Traffic and stop building new homes
Screen Name Redacted 2/19/2024 08:42 AM	I would love to see the mill become a more beautiful or interactive part of the landscape. I know GP is holding onto mill operations with white knuckles to avoid a cleanup, but imagine covering its walls in murals or, eventually, converting the inside into apartments! I also think we could improve our food offerings and activities for teenagers downtown. Would love to see healthy fast food (like salads or grain bowls), the return of pizza, etc. I think teens could use someplace to go be teens - it's hard to get to a mall from here if you can't drive. Finally, I love Camas, but we would all benefit from a more diverse population. Right now the city is over 75% white. I'd like to see us examine why that is and how we can promote a more inclusive city.
Screen Name Redacted 2/19/2024 11:53 AM	Road bike infrastructure (more bike lanes). Cleaning up lacamas lake.
Screen Name Redacted 2/19/2024 02:23 PM	Make the downtown core walkable (vehicle free), with ample parking around it.
Screen Name Redacted 2/20/2024 02:25 PM	• Improved area or permanent cover for the Camas Farmer’s Market —larger, covered, shadier • More options for teens—activities, stores, food options • More/safer sidewalks and bike lanes • Traffic slower on 3rd Ave! So dangerous to cross. • Crossing visibility on 5th Ave at Birch • 6th & Adams intersection • A community pool accessible to all where learning to swim is a mandatory course through public schools • Extend aesthetics and amenities and lighting of 4th Ave to 3rd, 5th and 6th • Better/more downtown parking • Central gathering space in downtown with performance area and outdoor eating area • Need good deli/bakery • Kitchen store with classes • Pizza place with good management • Quality resale store for adults • Men’s clothing store • Boba shop • Affordable teen clothes • Comic book/pop culture/record store • Better electrical in downtown for events • Underground infrastructure upgrades in downtown • Safer, walkable pedestrian areas in downtown • More or improved parking in downtown • More restaurant options • More trees on 3rd, 5th and 6th • Bulb outs on 3rd and 5th to slow traffic/improve safety • Crossing lights on 3rd (if still main downtown thoroughfare) • 4th Ave car free pedestrian only area. • A central gathering space • Permanent

	covered farmer's market location with adequate electrical and water • Downtown infrastructure can accommodate the growth we need • More housing downtown and throughout town for all income levels • More activities to do downtown after 6pm • Progress and growth while keeping the sweet hometown feel • We have a community center with swimming pool accessible to all • Heritage tree program/tree City • 27 acres to the north of 6th leaving downtown developed and well and artfully connected with historic downtown creating synergy and vibrancy for both. Good flow between both • The mill property has been cleaned up and the plan for mixed use, green space, performance/gathering area and housing has been formalized and on its way to execution • An executable maintenance and preservation plan for downtown is used by City • Downtown is a thriving local and tourist destination where businesses thrive and the community absolutely loves to come to and be a part of. Downtown is used by all parts of Camas. Flow from North Shore has been figured out and all of Camas is connected and united.
Screen Name Redacted 2/20/2024 09:33 PM	Nothing comes to mind.
Screen Name Redacted 2/21/2024 10:35 AM	I love it just the way it is! Parking is becoming more challenging.
Screen Name Redacted 2/21/2024 05:11 PM	I would love to see more small businesses and unique restaurants.
Screen Name Redacted 2/22/2024 01:22 PM	More walkways, more pedestrian friendly sidewalks up Crown Road to downtown camas. Many people walking there but does not feel safe for walkers.
Screen Name Redacted 2/23/2024 09:58 AM	Maintain parks better.
Screen Name Redacted 2/24/2024 08:28 PM	I think some roads need to add stoplights/roundabouts to replace stop signs. -add more streetlights throughout the town —improve playgrounds on all our parks. The kids (and parents) are bored, and the play equipment on ALL the playgrounds in camas need a revamp. The kids need a much bigger space of play equipment to climb and play on, and consider putting a covering (shade) over the playgrounds to be able to use during the rainy season. Also safety at parks are a big issue. If there could be more fencing or landscaping between the park and the road that would help a lot! -adding more clear signage to where things are around town. -adding city garabage

	cans outside! This will help so much with all the litter around town! - More preparedness around snow days. The snow should not paralyze an entire town if we know it's going to snow every year. The city needs to fund more plows, and ice melt and be ready for the snow so the children don't miss school, and families can't go to work. -Cleaner water resources in the lakes -More parks and rec programs for littles. There is almost no programs in the area for babies, and toddlers/children under 5. Adding more classes, sports and activities would be amazing! -more speed limit signs throughout the neighborhoods to enforce slower speeds. And also more police visibility and enforcing speed limits. —more shopping options! Another grocery store (Trader Joe's, target, Whole Foods), and more clothing store options in the camas area. -Finally, a city funded indoor playground/ sports complex. This is 100% doable and a big need in our community. This could be like firstenburg center with an indoor pool, gym and other amenities, but I think it should include a very very big indoor playground. Here is a link for a reference: https://www.plymouthmn.gov/departments/parks-recreation/plymouth-community-center/indoor-playground
Screen Name Redacted 2/27/2024 09:54 AM	Needs better parking. Better police enforcement of speeding !
Screen Name Redacted 2/27/2024 10:39 AM	1. Sidewalks/Bike Lanes: We feel that sidewalks and bike lanes are of utmost importance to the community. We live off Sierra and don't feel that it's safe for our kids to walk or ride their bikes to school on Lake Rd and Everett St. 2. Clean Lakes and Trails around them. Lacamas Lake & the park around has such potential to be a wonderful community hub but it's not really maintained and set up as such, and there are so few community events held outdoors there. It would be great to have more nicely maintained grassy areas around the lake for people to congregate and play. (Love the Lodge, the events there are great!) 3. Historic Downtown: It's disappointing that so much of it is owned by the church. To us that is not historic and not enhancing or enticing. A downtown with lots of local shops, galleries, bakeries, great cafes and restaurants is what needed to boost the entire downtown. The loss of the Camas Slices is really huge. A downtown without an incredible Pizza place or 2 is really a big loss for the town. We hope a great place, or 2 or 3 come in soon. 4. Columbia Access Downtown: We are a town on the river. It would be wonderful for the downtown to expand to front the river and have wonderful trails, shops, bakeries, restaurants, artwork etc there. (Like The Old Mill District in Bend) 4. More Community Opportunities/Classes/Camps/Volunteer Opportunities/Support for middle school and high school kids 5. We LOVE the Library. Would love to see more interactive events for it.

Screen Name Redacted 2/27/2024 11:58 AM	I'd love to see safety improvements in roads, including pot hole repairs, but no more round abouts. What could improve- planning! Absurd projects like RV "resorts", which are going to become back door routes for housing, should be stopped. Do actual affordable housing. It'll yield pride in ownership and tax revenue. Be smarter about subdivisions - we don't need so many at the expense of open spaces and farm land. Otherwise, we're just Vancouver.
Screen Name Redacted 2/27/2024 02:25 PM	No more mill.
Screen Name Redacted 2/27/2024 04:18 PM	We need actual businesses not one block entirely owned by a church on the main strip. We need to change the language in the zoning to keep that from happening on the next block. The lake needs to be clean. This is such a draw and now a HUGE drawback to a community with no pool We need to get the community rec center to do more classes as well. Other states have cities with a park district. Look at great cities park district classes and event
Screen Name Redacted 2/27/2024 04:31 PM	Listen to small businesses and the community when they say they don't want something. It's appalling how the community is blatantly ignored!
Screen Name Redacted 2/27/2024 04:57 PM	Building more community, maybe creating more parking. Would also like to see some upgrades to our playgrounds/parks and have some water features added.
Screen Name Redacted 2/27/2024 06:28 PM	Do not run business out just for the sake of "progress"
Screen Name Redacted 2/27/2024 07:09 PM	We should remove the turn left option driving down NE fourth Ave turning left onto NE Adams St. The light turns red on Adams st when no one is there and creates traffic buildup. Community filter on our drinking water and protect our lakes. Put a walking / biking train around the entire Lacamas Lake!
Screen Name Redacted 2/28/2024 08:59 AM	I would like to see some more growth. More businesses, parks, special events that incentivise me to visit downtown and to stay in downtown. Too often I visit downtown for one thing, and then I leave.

Screen Name Redacted 2/28/2024 06:52 PM	Better protected bike lanes protected from traffic.
Screen Name Redacted 2/28/2024 09:06 PM	Stop building apartments, fix existing sewer lines inatead of swnding us letters to only flush toilet paper, eurin, and I wont even say the last word.some find it rude. Also.Fix the roads.housing is taking over.we used to have a great small town, waiting for more lights, also more roundabouts, turning camas into Downtown Vancouver.I am glad we have out home without kissing our neighbors.look across the lake so sad.Yet charge impact fees ect.we don't want to pay more to cover builders.
Screen Name Redacted 2/29/2024 08:38 PM	More bike lanes and bike parking. Better maintenance of lacamas Park trails. The main trail gravel is washed out and rough in sections making it dangerous for rolling ankles and difficult for using strollers.
Screen Name Redacted 2/29/2024 09:00 PM	Historic downtown is fantastic. It would be wonderful to expand it so it is larger and still prioritizes pedestrians over cars. it would be wonderful to clean up the lakes so they're safe to swim in. It would also be great to have more bicycle lanes so that it could be safe for families to cycle around the city.
Screen Name Redacted 2/29/2024 09:46 PM	Keep it up so it stays the beautiful area that it is.
Screen Name Redacted 3/01/2024 07:51 PM	Some of the buildings could use a facelift. Would love to see some of the "non historical" buildings have larger windows, be updated to be more modern so it has a better feel when inside, and so can bring better businesses like more restaurants and interesting shops, cafes. Some of the buildings are so dark and depressing and that's why the businesses fail because it's not pleasant to be inside dark old buildings.
Screen Name Redacted 3/01/2024 09:44 PM	Have more community parks , bike lanes and amenities services.
Screen Name Redacted 3/02/2024 07:37 PM	More pickleball courts, including covered courts and dedicated pickleball-only courts; ADU rules--while they help with density and provide small-sized homes, their location can compromise look and feel of the neighbordhood (such as the one on NW Dahlia Drive that just went up); keep funding the Downtown Camas Association (DCA); provide more affordable housing, so we're not just a city of wealthy; continue asking for community input--the City is doing a great job!;

	manage compulsory growth
Screen Name Redacted 3/04/2024 02:05 AM	More parking! No more downtown housing.
Screen Name Redacted 3/06/2024 05:58 PM	Slow down on housing developments so our infrastructure can adjust to the growth
Screen Name Redacted 3/06/2024 06:24 PM	I'd like to see some parks in the eastern part of Camas. The overbuilding on Friburg-Strunk is disheartening - especially the hideous huge building on the corner of NE13th (Godwin) and Friburg and the proposed gas station. Very disheartening to have giant warehouses in an area with high end homes. We could use a grocery store there, a rec center would also be appreciated. The church property for sale on Godwin near the Heritage Trail should be bought by the city and turned into a nature area. Camas needs to think about the future - instead of these big corporate complexes that are hard to fill and warehouses - why not build a multi-purpose area - a shop and live - sort of place. A destination that will draw people. Parks and recreation needs to expand.
Screen Name Redacted 3/06/2024 06:36 PM	1:Maintain and enhance architectural standards for development. 2: Roadside landscaping and maintenance needs significant improvement--irrigation, plantings, invasive species removal. Roads need resurfacing more frequently.
Screen Name Redacted 3/06/2024 07:49 PM	Better road and roadside maintenance, reduction of invasive plants, and enhancement of open space environments.
Screen Name Redacted 3/06/2024 08:09 PM	More parking downtown; when adding denser housing, put more downtown--business downtown deserve that, will help other biz flourish as well. As Camas grows, let's maintain or grow greenspaces--parks, lake; make sure we don't lose sight of their importance. Getting the big, empty ex-headquarter buildings filled is important to the overall health of Camas.
Screen Name Redacted 3/06/2024 08:05 PM	support downtown businesses by including more housing
Screen Name Redacted 3/07/2024 01:11 AM	Better parking downtown. Not wiping out so many trees. Getting very expensive.

Screen Name Redacted 3/07/2024 09:17 AM	Demolish Georgia Pacific and invest in outdoor space with restaurants, walking paths and additional small businesses
Screen Name Redacted 3/07/2024 09:33 AM	Anytime my husband and I are able to go out later at nights (when we have a babysitter), downtown camas feels like a ghost town. Also, in the summer, it's very hard to find parking near the lake and walking trails. We tried twice last year and then gave up.
Screen Name Redacted 3/07/2024 09:38 AM	development is getting a little crazy. a development by my house received a green light - with SO Many crammed in houses, even though several neighboring residents asked for alterations.
Screen Name Redacted 3/07/2024 10:04 AM	I would like to raze the paper mill and build out some amenities on the waterfront. On a smaller scale, I'd love to see more mid-price, family friendly restaurants in downtown. I still sorely miss Twilight Pizza: It was a good midpoint price range, the food and service were always amazing, and the atmosphere was so comforting and welcoming. Nuestra Mesa is, of course, excellent, but I'd like to see two or three more midprice options. I think we need a good, all-round, sit-down bakery, like Grand Central but locally owned. And for heaven's sake, get an ice cream or frozen yogurt place downtown.
Screen Name Redacted 3/07/2024 10:11 AM	I really think downtown Camas could use a food, truck corner or parking lot. Anytime there is an event there, you would have to go into a restaurant and sit for an hour or so, and pay very high prices. I have longed to go to a place where you can just pick up, a reasonable priced item and eat as you walk along the street. I usually go home early because there’s nothing to eat. I would greatly appreciate having the papermill closed down. There is still stuff spewing in the air that we don’t know what it consists of.
Screen Name Redacted 3/07/2024 10:29 AM	I'm not sure how it could be done, but having a singular church group steadily buying up downtown is absolutely going to be the downfall of the area. Losing unique shops like Camas slice has a ripple effect on the types of business and diversity of population that will visit the area. There's no parking for any of the restaurants when the church has fuctions.
Screen Name Redacted 3/07/2024 11:41 AM	Downtown Camas has become a little bit to ideological these days. It doesn’t feel quite as welcoming as it used to. Ironically, I think it’s because it is trying to be overinclusive, to the point of pandering. This

	is especially apparent in the library. I do not like to even bring my children there any more. And I am of a minority heritage.
Screen Name Redacted 3/07/2024 12:51 PM	Needs a waterfront, and contemporary shops and restaurants. Better and larger walking paths and sidewalks. Would be great to build a bridge to the Oregon side as well so less traffic on I-205
Screen Name Redacted 3/07/2024 01:27 PM	connected sidewalks
Screen Name Redacted 3/07/2024 01:44 PM	I would like to encourage more small business growth. So much of our downtown is taken up by the church where businesses for our community members could thrive. I would also like to see more diversity in businesses. And in general, Camas has a critical need for affordable housing to promote that diversity and inclusion. The water quality issue at our lake needs to be addressed. And the businesses along Everett need protection from future road expansions. Taking away all their parking is not the right answer. They are as much a part of the culture of our town as our downtown businesses.
Screen Name Redacted 3/07/2024 04:01 PM	I would love for the seasonal farmers market to be at a more convenient time for those who can't make it downtown because of a traditional work / commute schedule. I would like a simple list of available local resources when community members seek help beyond what I can provide (ie. housing, food insecurity, heating/cooling centers, utility supplement). Related, community education (partnership with the schools) on personal responsibility and empowerment to use available resources to improve personal circumstances. Improved parking, or local transportation options to the many parks, trailheads, water access points I would love to work for a local company rather than commuting into Beaverton
Screen Name Redacted 3/07/2024 07:09 PM	Natural areas around camas are blanketed with invasive English Ivy and BlackBerry bushes. These are choking out native wildlife and plants. It degrades the natural areas and reduces posible recreation.
Screen Name Redacted 3/07/2024 07:16 PM	Update parks (specifically the play structures) to accommodate family community, more businesses downtown
Screen Name Redacted 3/07/2024 09:16 PM	Camas needs more social hubs and things to do during the rainy season. I wish there was more indoor recreation options for adults and children. I wish there were community hikes and nature days like

	the ones held at Columbia Springs. I love the quaintness of historic downtown, but part of me wishes we had more modern shopping and dining like the waterfront in Vancouver or the 5th street market in Eugene. I absolutely hate that the Camas slices building was sold to the church and am not a fan of the church taking up so much prime real estate downtown. There is so much wasted space at the library and I feel like the public buildings we do have are not utilized enough. Everywhere we have lived before would have "open gym time" at the rec centers and schools where community members could use the facilities. They would also host educational and cultural activities there too. I miss having access to regular quality and free summer park programs, the programs here are sparse and seem to cater more to outsiders than they do community members. I always feel pressured to buy things when we come downtown for events, it's awkward. Camas needs to modernize a title bit
Screen Name Redacted 3/08/2024 09:15 AM	NO MORE CHURCHES IN DOWNTOWN SPACES! bring back the pizzeria or other restaurants and shops!!, also, more bus lines!!! connect us to Vancouver and Portland!!, improve water quality in wells and lakes! no more toxic algal blooms!! spend the money so we can swim all summer!, revitalize Crown Park and update the old outdated playground!
Screen Name Redacted 3/08/2024 12:32 PM	Journey church, which takes up an entire block and could be anywhere, should not be allowed to take up an entire downtown block. This area could be used for additional restaurants and shops that would entice commerce and create a more vibrant downtown community.
Screen Name Redacted 3/08/2024 12:49 PM	No community pool.
Screen Name Redacted 3/10/2024 08:13 PM	I would like to see historic building being repurposed instead of being torn down. A stop light at the intersection of 6th and Adams would be beneficial for traffic flow.
Screen Name Redacted 3/11/2024 03:15 PM	Replacing the papermill with a massive public green space; in the more near-term -- closing the main street (don't know it's name) from traffic so that we can bike and walk there, encouraging more and more varied activities that are not just spending money at shops and restaurants/cafes. Kids don't have a play area, benches could be set up in a few areas to encourage folks to hang out together

Screen Name Redacted 3/11/2024 08:30 PM	We could definitely use more dining options downtown and a space for children to play. I also think the church downtown should consider relocating to free up space for small businesses. As for the rest of camas, we need better walking paths/sidewalks for pedestrians and more parks for children that are within 10-15 min walk of any home. Lots of driving required to get to parks for kiddos isn't ideal. Being able to walk around more easily between neighborhoods would make the city feel more connected. Specifically, need a sidewalk along 16th/hood/18th by the llama farm. I've seen too many people walk along there and it doesn't seem safe. Trees - what happened to all the trees? I grew up in this area and loved all the big mature trees. So many trees have been cut down due to new developments. How can we hold developers more accountable to preserving the beauty of the natural landscape? The tiny trees that they put up are no comparison to what used to be there that made camas so desirable. The schools are good now but with all the new housing, I think people are worried of schools overcrowding and the quality of schools going down. I urge the city to be as proactive as possible to plan and forecast to ensure we can keep up with the demand for a high quality education for our children.
Screen Name Redacted 3/11/2024 10:21 PM	I think what needs improvement are the side streets. They have always been neglected and everything is always about 4th street. There are many wonderful side street stores and the downtown is tiny, so this should be doable. Every store matters, not just 4th! Flowers, benches, flags, clean up, more art, better lighting etc.
Screen Name Redacted 3/12/2024 02:43 PM	If the mill closes completely, we need to clean it up/ destruct it and put in a nice waterfront shopping and restaurant district. We also need a public pool. And more sports fields. Probably another traditional high school.
Screen Name Redacted 3/14/2024 09:17 AM	Increasing food options, adding a bakery back in
Screen Name Redacted 3/14/2024 10:58 AM	Restaurants, kids sport facilities, entertainments
Screen Name Redacted 3/15/2024 11:29 AM	More Dog Parks, Maintain walking path system Maintain 'hometown' feel of historic downtown Refocus on sports/parks - "Historically Camas always had a city pool" Better public transport especially to downtown, limiting need for additional parking Consider adding parking meters PORT Development by the river - mixed use housing/retail, expand/improve river walk Limit hirise development to

	the waterfront (eg - new condo at the 192nd bluff) For higher density housing (rental or condo), incorporate nearby amenities (grocery,restaurant, parks) - Walkable secondary retail districts in addition to downtown(eg - Grass Valley - DON"T be limited to 'mini-malls')
Screen Name Redacted 3/15/2024 08:13 PM	There is WAY too much car-dependent development, which is an utterly unsustainable ponzi scheme. See https://youtu.be/AOc8ASeHYNw?si=3E9g7It0AOQW1zqI, https://youtu.be/7IsMeKl-Sv0?si=LOwZjQvuH8HogFZH, https://youtu.be/7Nw6qyyrTeI?si=lXCQiU3WRlDGjlfI, and https://youtu.be/ORzNZUeUHAM?si=cierWsSXXEt7T1Q6. Also the city is pretty much swallowed in invasive English ivy, which the city apparently has no concerns about because they have done next to nothing to stop its spread.
Screen Name Redacted 3/16/2024 06:19 PM	I would not like to see high rise apartment buildings. It makes an area feel very urban and enclosed. We do need a public parking area that can accommodate weekend visitors.
Screen Name Redacted 3/16/2024 06:30 PM	How much of downtown is Journey Church going to own. Not a fan of this.
Screen Name Redacted 3/16/2024 06:51 PM	The church landlord situation?! What is going on with that? What is going on with that side of the street?!
Screen Name Redacted 3/16/2024 08:19 PM	I would like to have some sort of jazz festival there or some other kind of life music in summer
Screen Name Redacted 3/16/2024 08:36 PM	A city council that does things like care and do something about being sure our water is clean and safe and don't turn on a contaminated pump. Also to care about alge bloom in the lakes.
Screen Name Redacted 3/16/2024 09:32 PM	Remove paper mill and churches, add more restaurants and shops.
Screen Name Redacted 3/16/2024 11:41 PM	CAMAS. NEEDS. A POOL. Seriously, this is hands-down the hardest part about living here. I would love to see the library open on Sunday! In terms of retail options: Our town could also use a consignment shop, a pizza place, and a few more healthy-food options. Can't wait to see the Everett Corridor project results!

Screen Name Redacted 3/17/2024 01:24 AM	I'm not sure what I want to see changed...
Screen Name Redacted 3/17/2024 07:22 AM	Improve the infrastructure in downtown (water, sewer, electrical, fiber optic) and repair the streets. Expand the focus of downtown from 3rd to 5th street.
Screen Name Redacted 3/17/2024 08:14 AM	I'd like the city to stop the church from buying up all of the real estate in downtown and effectively controlling who can own a business down there and what kind of business they can open.
Screen Name Redacted 3/17/2024 08:39 AM	We need a pizza place.
Screen Name Redacted 3/17/2024 08:49 AM	Do not continue to build more. There's already too many people. You can't find parking downtown. Big events are overly crowded.
Screen Name Redacted 3/17/2024 09:01 AM	We need an affordable public pool. Shame to those who closed the old one.
Screen Name Redacted 3/17/2024 10:29 AM	First and foremost, the water needs to be cleaner. We now have to spend a considerable amount of money (after our general water bill, which isnt cheap) on water filter systems and filter replacements. Instead of other projects, this should be the main focus until resolved. In addition, I would hope that instead of building more apartments/developments, the town would focus on providing more businesses and jobs to those who live here. Many parks could also be improved for children and families.
Screen Name Redacted 3/17/2024 10:29 AM	Say no to development whenever possible. Preserve and increase natural areas, PARTICULARLY AT THE WATERFRONT. The traffic is bad enough without adding more residents to the mix!
Screen Name Redacted 3/17/2024 10:40 AM	I don't like that the church takes up such a significant amount of downtown space.
Screen Name Redacted 3/17/2024 01:45 PM	The church should not be allowed to buy more property in the downtown section.

Screen Name Redacted 3/17/2024 05:10 PM	Added public parking
Screen Name Redacted 3/17/2024 05:27 PM	Keep a portion of the historic mill and turn it into a museum that's large enough to house the Washougal museum and showcase the rest of Camas/Washougal history. Make the rest of the area a bike/walking path, places for families, pets, picnics and a view of the river. It would be the perfect place to put in an amphitheatre to host concerts. No one wants to drive down the hill or drive past the large eye sore of falling apart mill that isn't fully operational anymore. Yes, it helped the town thrive, but we need more places for families. More family entertainment. We need an entertainment center like Big Al's or Round One. A place for kids to have fun. Families are tired of leaving Camas to travel to Vancouver and Portland for things to do. Also, why not do seasonal events such as a pop up ice rink? It brings in tons of revenue which we need as a city.
Screen Name Redacted 3/17/2024 05:43 PM	We need a parking structure. There are ways to work it so it could also house a year round farmers market with covering. Suggest looking at structure in Port Angeles
Screen Name Redacted 3/17/2024 08:22 PM	Tidying up sidewalks and curbs. Preserve the post office (it could really use some paint). Codes should be put in place for new apartments being equipped with parking space and new buildings should have codes dictating characteristics of a building that can be integrated with the existing buildings. Historical buildings that are 'for sale' should be actively made known to the local community.
Screen Name Redacted 3/18/2024 02:54 AM	Nothing
Screen Name Redacted 3/18/2024 09:51 AM	We need more restaurants and variety of spots to go for entertainment downtown , less hair as. Church places on the main strip
Screen Name Redacted 3/18/2024 11:49 AM	Need an unleashed dog park somewhere. Camas and Washougal claim to be dog friendly but there are NO UNLEASED dog parks.
Screen Name Redacted 3/18/2024 11:54 AM	NO MORE DEVELOPMENT. STOP CUTTING DOWN TREES. I have been here 9 years and the population has doubled. More people should mean MORE parks and open space, but parks are being

	compromised and open space is dwindling. The ingress is at maximum. To put in more roads means less trees and that's not acceptable. We don't want a freeway running through downtown or up the canyon. Development should happen right along Hwy 14 to divert traffic away from downtown and the natural areas. Add a little shuttle bus from the 14 development and parking lots up to Camas. No more buildings above 2 stories in the downtown area and add a few small, green parks to preserve the casual feel in that area. STOP TRAFFIC on the main street from the mill to the library. Be smart about development in the blocks surrounding that area, to encourage artsy develoment - not density. Acquire more forested land for hiking and relaxing and to preserve the feel. STOP development immediately around Lacamas lakes - no one wants to "hike" with condos looking down at them. And to preserve the (already questionable) water quality. TREE ORDINANCE - save our big Sequoias and Douglas firs. Forget about "inclusion" per se, but focus on an area where ALL people would want to visit (and are welcome) because it fills them with hope and reconnects them with earth and a positive idea of America, it's NATURAL & clean, calm, safe and unique.
Screen Name Redacted 3/18/2024 01:45 PM	Downtown Camas needs to plan for growth and include denser development with buildings with ground-floor retail, apartments above (including high-end with mountain/water views) and basement secure parking (just like what is being built on 6th Street now to replace 2 churches). Please include CTRAN and public transportation planning for downtown/Crown Park as well as neighborhoods.
Screen Name Redacted 3/19/2024 10:13 AM	Connect all the walking areas, more places to eat downtown. More places with outdoor seating
Screen Name Redacted 3/20/2024 05:25 AM	Work to give incentives to take down the paper mill. It’s time has past.
Screen Name Redacted 3/20/2024 03:29 PM	Have more rental space and housing Have more parking Have safer crosswalks Have improved mass transit, connecting Camas and east Vancouver. Have shuttle services for events or transport from recreation areas Have better traffic flow Have condos and businesses on current mill property; waterfront development Have plans with developers to preserve trees, nature, and open and green spaces Develop with infrastructure in mind (infrastructure analyzed and upgrades planned now for future growth) Build an additional high school in a different area to help diffuse traffic Be a destination Have code on what business can occupy space in downtown, to ensure

	more ground level retail. No dead zones in downtown. Have increased housing at all economic levels Extend the charming aesthetic from 2nd to 7th AVE Be a place where everyone feels welcome Absorb additional mill property, both North and on the waterfront Connect with a walking/biking trail to the port Have more activities for families and teens Have a connection from the city to our trail system and lakes
Screen Name Redacted 3/20/2024 07:26 PM	More shops, restaurants and keto street parking free!
Screen Name Redacted 3/22/2024 07:12 AM	Proper impact fees charged to accommodate ridiculous tolls on utilities, roads,schools,Traffic is discouraging. Road conditions,sewer lines are ridiculous especially for existing homes that have been here for decades.We were Camas not Camas washougal.They tried for years to merge the 2 towns,yet the city has done it without voting from home owners.lets see if we can put another bar into this town.some major businesses are owned by the school district instead of being a positive within paying taxes,as well as supporting employment.UL is a rental for the School district.Sharp is now schools.what else can this town do? Where are proper cross walks.updating sewer lines in existing neighborhoods.
Screen Name Redacted 3/22/2024 09:01 AM	would love the buildings to get a facelift. modernize but don't change character of downtown. Would love to see more sidewalks on major streets especially near schools and corridors that lead to downtown.
Screen Name Redacted 3/25/2024 10:09 PM	I wish that there was more to do downtown. I would like to see more local things for our young people to do on the evenings and weekends. I would love to see more concern and intentionality about caring for the physical environment and living things. I think there could be some replanting of native plants and trees on school and city properties. I would like to see better routes for non-motorized transportation. There are times when I would like to send my kids somewhere on bikes but there are no bike lanes or even shoulder space for them to ride in.
Screen Name Redacted 3/26/2024 09:46 AM	Improve pedestrian safety - complete sidewalks and trail access. Add bike lanes separated from traffic. Restripe 6th so there is a turn lane, Increase park and trail maintenance including correct pruning of trees. Implement fire mitigation plan. Improve sidewalks downtown to reduce tripping hazards. Consider creating community town center by reducing traffic on 4th, e.g., create a pedestrian mall, only allow east-west traffic, and so on Add workforce housing with good design so it

	fits. Increase economic opportunities so people don't need to commute to Portland.
Screen Name Redacted 3/26/2024 11:07 AM	More activities for children, more dining options
Screen Name Redacted 3/26/2024 04:18 PM	Need to figure out and develop the mill if that is an option. We need more restaurants. More activity and people downtown.
Screen Name Redacted 3/27/2024 11:46 AM	What would you like to change? More mixed-use Water quality of lakes More job opportunities Preserving/expanding tree canopy No vacancies Downtown More bike trails/opportunities for riders Redo City Hall & Fire Station Future clean-up efforts @ the Mill Add Mixed=use to Mill property, clean up to mixed-use standards More sidewalks More street lights Improve connectability/walkability to services What can we improve? More housing Downtown Roadway paving Traffic safety Pedestrian/bike safety Water/sewer/storm facilities in Downtown Park/sports field improvements More resident involvement More community gathering spaces Plan for Economic Development
Screen Name Redacted 3/27/2024 03:45 PM	§ Better access to waterfront (Washougal) - waterfront redevelopment (what Vancouver has done) § More sidewalks! Near schools, Prune Hill, main thoroughfares § Housing downtown § Housing choice / variety § More neighborhood commercial to scale (hubs) § More pocket parks, dog parks § More jobs/better jobs/ career jobs for youth § More bike-ability, crosswalks, traffic diet § Improve/expand utilities and infrastructure (stormwater) § More parking downtown, especially for events ("what's reasonable for walking distance?", shuttles, accessible for elderly, disabled) § Transit § More and better connected trails § Retain community events (July 4 fireworks, farmers market) § Maintain facilities/parks/trailheads § Architectural integrity/design standards
Screen Name Redacted 3/28/2024 01:26 PM	I was very un pleasantly surprised to find the camas had allowed two bookstores within two blocks of each other recently. Camas is too small to support two bookstores, especially in the children’s arena. Within a year I predict one of them will go out of business or will begin to fail. I don’t see how this is good planning.
Screen Name Redacted 4/01/2024 11:31 AM	· Better manage open spaces · More options for teenagers downtown · Address lake algae blooms · More inclusive community (increase diversity) · New community areas outside of downtown X · Housing

	affordability and diversity X (homelessness) · Increased entertaining/dining · Expand and maintain momentum downtown · Downtown parking challenges · Infrastructure investment · Improved bike/sidewalk access · Expand lake use beyond east end · Rethink public space downtown (more public spaces)
Screen Name Redacted 4/03/2024 08:44 AM	Don’t move here from California, because your politics ruined it, and vote for the same crap. We don’t want a big town with tons of retail space or apartments. Don’t California Washington.
Screen Name Redacted 4/03/2024 09:08 AM	Keep Camas downtown intact!! All efforts possible need to be taken to preserve and maintain historic Camas buildings!!
Screen Name Redacted 4/03/2024 10:07 AM	Preserve and create more open green space!!! Quit tearing down historic buildings and replacing them with structures that do not fit in with the "historic" ambience of the downtown area.
Screen Name Redacted 4/03/2024 10:24 AM	Although I would hate to change anything about downtown and parking garage would be super nice and the church moving out of downtown would be nice so it can be more retail and restaurants.
Screen Name Redacted 4/03/2024 10:43 AM	More sports fields and better amenities for young families
Screen Name Redacted 4/03/2024 11:02 AM	Growth and development plans don't imply action to expand. A growth and development plan can be predicated on sustaining existing boundaries. Zero growth and development can be a plan as well.
Screen Name Redacted 4/03/2024 12:34 PM	Down Town Camas needs a parking structure. Like 2 stories plus a two level basement garage. Shops above, parking in the basement.
Screen Name Redacted 4/03/2024 04:45 PM	Keep it as historic as possible. New is not always better. I love all of the downtown events that camas does.
Screen Name Redacted 4/03/2024 05:13 PM	Nothing q
Screen Name Redacted 4/03/2024 06:10 PM	Re-evaluate the almost irresistible movement of local governments partnering with large business toward the destruction of natural and

	historic places in the name of progress. Make Camas local, and not just in expensive "crafts" but in agricultural produce. Don't just be a cute outpost of Portland.
Screen Name Redacted 4/03/2024 10:03 PM	Restore Crown Park to be the crown jewel it used to be. New pool or splash park. Family friendly restaurant that serves breakfast, lunch and dinner with an old town feel in the downtown area.
Screen Name Redacted 4/03/2024 11:32 PM	Please no more apartments downtown. Please keep the downtown the focal point of our community. Please keep the lake road on north shore where it is!!!!!!!!!
Screen Name Redacted 4/04/2024 02:26 AM	Keep things cleaned up. No graffiti. Stop building so many new developments Try to preserve old buildings. The beautiful church on 6th should have been preserved. I was so upset when I saw it was sold and again when it was torn down. Camas was once an ample forest, now we cannot find many areas that remind of what Camas once was. Stop developments, keep large land plots whole. Figure out a way to filter all water going into LaCamas Lake. Do not allow nearby houses to use turf or fertilizers.
Screen Name Redacted 4/04/2024 07:30 AM	Improve keeping our historic buildings and open space. Stop putting in gigantic subdivisions
Screen Name Redacted 4/04/2024 08:05 AM	I would like to have more consistent sidewalks and maybe a "lake to city trail" from Lacamas park to downtown.
Screen Name Redacted 4/04/2024 08:11 AM	Mill
Screen Name Redacted 4/04/2024 08:23 AM	More parking
Screen Name Redacted 4/04/2024 08:34 AM	I would like us to be ever mindful of economic disparity. We were, at our core, a blue collar community. While I know that has changed and many more affluent people call Camas home, let’s strive to make people at all socioeconomic levels feel welcome and included in future plans and visions.
Screen Name Redacted	Stop taking away all the historical stuff. Stop taking down the old

4/04/2024 08:58 AM	building for more HUGE ugly buildings they are taking away from the appeal of our town. Stop taking away all the trees and nature, it's taking away from the appeal of the area. The more that's taken away, the more big ugly buildings, the more us locals hate it. We loved our history, the nature, the trails and trees...now we have clear cuts everywhere with housing developments everywhere. Taking land from all the animals and causing what will be catastrophe changes to our environment
Screen Name Redacted 4/04/2024 09:54 AM	I would like to see housing expansion slow. Especially high density housing. Street design can and should be improved! Especially 18th Ave. It is the main East access to Prune Hill, yet still terminates at a stop sign on Division.
Screen Name Redacted 4/04/2024 11:51 AM	Not a whole lot ! Love it just the way it is ! I know it will change, but keep the community feel.....small town. Part of why I live here ! It's not PORTLAND !! or even Vancouver !! It's nice to come home....away from the big cities ! Stop pandering to BIG MONEY developers !! Like I said, I know things will change, just use common sense ! Something that seems non existent these days ! PRESERVE HISTORY !!
Screen Name Redacted 4/04/2024 01:01 PM	For my family, the biggest thing that needs to be fixed is the access to the lake. We like to use the boat ramps on the northeastern side (Leadbetter Rd). The ramps are broken, the parking is a mess. There is no signage telling people not to park on the ramps and although this should be common sense, they do it anyway. The city needs to spend a little money to fix it up.
Screen Name Redacted 4/04/2024 01:15 PM	Get rid of the church on Main Street. WAY too big of a footprint that does nothing to improve downtown and takes up parking. Include flags on poles of area children art work from a variety of ages to showcase our young people’s talent.
Screen Name Redacted 4/04/2024 01:39 PM	No change, why fix what’s not broken?
Screen Name Redacted 4/04/2024 01:44 PM	Keep the present buildings up to code and standing. Any new buildings have to match the building themes of present day downtown Camas. NO new apartments in downtown Camas.
Screen Name Redacted 4/04/2024 06:13 PM	Buy part of the mill parking lot off 5th and block off driving down 4th have an open walking downtown area.

Screen Name Redacted 4/04/2024 06:58 PM	Less emphasis on big money and toney, pricey kitsch and more connection with our history and local environment.
Screen Name Redacted 4/04/2024 07:26 PM	Do something about the mill. It is an eyesore coming into down. Even Washougal has plans for beautifying their downtown and making it walking friendly. The Mill is creepy, contaminated, and mostly vacant. All those buildings as you drive in on 6th are empty and ugly. And THAT is our welcome to Camas? Get the mill to start tearing down the derelict buildings and cleaning up what they don't use anymore. Georgia Pacific is no friend of Camas anymore. They are an eyesore, a hazard, and a monument to environmental destruction.
Screen Name Redacted 4/04/2024 07:36 PM	Do no allow single non-commerce entities to buy/occupy an entire block of premium retail/restaurant space downtown. Improve road conditions in the older neighborhoods. Implement climate change solutions now to avoid costly repairs in the future.
Screen Name Redacted 4/04/2024 11:03 PM	Please don’t let one church buy up all of downtown. I’d love to see a community space where classes, activities, and special events could be held during the rainy months.
Screen Name Redacted 4/05/2024 10:37 AM	Keeping roots while being open to change
Screen Name Redacted 4/05/2024 11:41 AM	Improve the infrastructure and restore the buildings. Increase parking
Screen Name Redacted 4/06/2024 07:48 AM	Nothing really, love the historic downtown area.
Screen Name Redacted 4/06/2024 02:58 PM	Nothing! Keep it like it is. Modern buildings have no place in historic downtown. Like that ugly apartment/ business building they just built not to long ago and that they are building that they had to tear down that beautiful 1912 church to make another UGLY one!
Screen Name Redacted 4/06/2024 11:45 PM	More variety of businesses downtown.
Screen Name Redacted	DT is nearly perfect, My main issue is the new neighborhoods with

4/08/2024 09:20 AM

high density. Please don't stuff the houses close together. There's already considerable traffic in our area, and with the new high-density living situations you are allowing, this will continue to get worse and worse. Camas's charm is dependent on the quaint vibe of downtown and the surrounding neighborhoods, and also the larger lots with plenty of green in the surrounding areas. Every time a new neighborhood goes in, with the houses right on each other, and narrow streets without street parking, it starts to have a Gresham and Happy Valley feel. I mean this in the most offensive way possible. I moved to Camas from Lake Oswego bacuse of the country vibes and LACK of cookie-cutter neighborhoods. In my 6 years of owning a home here, on 232nd Ave., the growth has bee too much, and an eye sore.

Screen Name Redacted
4/08/2024 09:52 AM

Preserve the trails around Lacamas Lake. Preserve the steps from the Mill Ditch. Deal with the paper mill. Have more green space and kids play areas, especially near high density housing. More sidewalks and bike lanes. Fiscally balanced. More activities for youth like bowling and roller-skating. Flashing crosswalks at 3rd and Birch. Turn 4th Ave into a pedestrian walkway/mall and have event parking nearby. Lighted parking stalls for efficient in and out. Small swimming pool for kids, but not a huge aquatics complex. A community venue for all seasons that has police and fire access. The Paper Mill is a big question mark. Lots of empty lots that could be festival parking. Multipurpose recreation facilities.

Screen Name Redacted
4/08/2024 12:48 PM

• Better access to waterfront (Washougal) - waterfront redevelopment (what Vancouver has done) • More sidewalks! Near schools, Prune Hill, main thoroughfares. • Housing downtown • Housing choice / variety • More neighborhood commercial to scale (hubs) • More pocket parks, dog parks • More jobs/better jobs/ career jobs for youth • More bike-ability, crosswalks, traffic diet • Improve/expand utilities and infrastructure (stormwater) • More parking downtown, especially for events ("what's reasonable for walking distance?", shuttles, accessible for elderly, disabled) • Transit • More and better connected trails • Retain community events (July 4 fireworks, farmers market) • Maintain facilities/parks/trailheads • Architectural integrity/design standards

Screen Name Redacted
4/12/2024 10:29 AM

We need more affordable (under 400,000) family homes with actual yard space instead of more apartments and cookie cutter housing that create traffic on roads that can't sustain it and make downtown camas events and business almost impossible to attend. We need to make sure the design of newer buildings match the esthetic of the historic downtown camas buildings. Nobody wants to see our

	beautiful downtown turned into a a cluster of modern city style buildings. Widening roads to accommodate influx of traffic caused by all the apartments and cramped housing developments only hurts home owners and business owners, and untimely will ruin our walkable areas and surrounding nature. There needs to be a better way to meet the needs of new residents without destroying what's already here. The city also needs to actually address the lake issue and make it safe. If the city is going to continue to promote it as a family and pet friendly place, they need make sure it won't kill said pets or cause people/animals to get sick. This has gone on for a ridiculous amount of years and the city already knows what the problem is. Please fix it.
Screen Name Redacted 4/12/2024 01:45 PM	More commercial opportunities (i.e. retail/food and beverage). It would also be beneficial not to allow churches to continue to absorb former commercial spaces as they are occupying some of the limited downtown space and do not contribute to local economic growth. Especially given the vast amount of people that do not partake in religious services - they create empty spaces in the community that could better serve everyone, not just attending Christians.
Screen Name Redacted 4/12/2024 03:40 PM	We don't believe downtown Camas is an appropriate place for a church. This organization should be strongly encouraged to move to a better location with the space then used for additional restaurants and shops. Maybe expand the historic hotel and/or add another by remodeling/restoring upstairs spaces in the downtown.
Screen Name Redacted 4/12/2024 05:02 PM	I would like to see more diverse offering in downtown businesses. Many of the shops and restaurants are very high end, and fall within just a few business types (fancy salons, fancy clothing stores, expensive restaurants).
Screen Name Redacted 4/12/2024 05:38 PM	Get rid of churches on the main corridor and make room for more small business everyone can enjoy. We need a pastry place, organic food, more variety. Murals on the mill and open area museum/exhibit of the history of the mill to make it beautiful enriching for preserving the history as well as preparing for the future of it.
Screen Name Redacted 4/12/2024 08:46 PM	Parking is limited and vehicle maneuverability feels tight. I wonder if it makes sense to have more one-way streets and wider pedestrian areas.

Screen Name Redacted 4/12/2024 09:08 PM	Too many churches and church owned property makes me worried about how the city will generate enough revenue that will go back into the city itself
Screen Name Redacted 4/13/2024 04:49 AM	Seeing pictures of historic Camas is really fascinating to view. If there were more opportunities to see pictures from the past that would be nice.
Screen Name Redacted 4/13/2024 06:19 AM	Our Safeway is outdated. Would love to have a market available similar to Metropolitan Market that Tacoma/Seattle has.
Screen Name Redacted 4/13/2024 07:03 AM	I think a parking structure is necessary in the future. Moderately worried about the degradation of the mill and the toxic effects of that plus the visual of an old dilapidated mill is just not appealing.
Screen Name Redacted 4/13/2024 03:33 PM	Like to see upkeep of the area, new things tried but not pushing out the old that have been with the development of the community. Balance growth and progress with our past.
Screen Name Redacted 4/13/2024 04:36 PM	We need to make decisions that allow people who were born and raised here to continue to affordably live here.
Screen Name Redacted 4/13/2024 05:05 PM	No real changes; keep Camas what it is -- resist the urban sprawl.
Screen Name Redacted 4/13/2024 08:05 PM	how about not changing anything!
Screen Name Redacted 4/14/2024 11:03 AM	The downtown area is in need of more restaurants and other attractions. A park central to downtown would be nice. It also needs to be enlarged. I think what needs to be changed in the outlining areas is all of the high density developments. Traffic is going to increase. I have seen this in other areas I have lived. Add more single family developments. Encourage families to live here.
Screen Name Redacted 4/14/2024 11:11 AM	More people, more housing, more parks, more trails! People are an asset to our community not a burden to be avoided. We need more people but we have to provide housing and transportation choices that don't negatively impact existing residents. We have wonderful public lands but they need to be better maintened and made more

	accessible. The maintenance of our trails has greatly improved in the last few years. Keep up the good work.
Screen Name Redacted 4/14/2024 05:39 PM	The push for more outside chain businesses with non local ownership is ruining the qualities of downtown we come here for.
Screen Name Redacted 4/15/2024 06:40 AM	Less congestion - negotiate with the mill to add close-in parking. Close 4th street from Adams to Dallas as pedestrian traffic only. (see Boulder, CO. as an example)
Screen Name Redacted 4/15/2024 10:39 AM	Love the historic downtown! It might be beneficial to include some foot traffic only spaces. Foot traffic is essential to the boutique shopping that is the heart of downtown.
Screen Name Redacted 4/15/2024 10:53 AM	This question is too similar to the above. Improve and enhance are pretty much the same. This is a wasted survey question -- bummer. I will try to give a different perspective to help. Regarding downtown. No more 'national chains' such as Subway, DQ, Burgerville, or Safeway. Keep the downtown dedicated to small local businesses. Incent the local real estate owners to clean up their properties. Some properties can use some upkeep. Third Ave is a main artery and lacks charm. Add it! It would've been good to put some architectural guidance to new construction. You can add new architecture that invokes an old-period charm. In essence, the old charm of Camas is very limited to a few short blocks. Regarding Camas in general. Too much development. We are losing our green spaces to roof ghettos. Enhance the rural roads --- there is more traffic on them, specifically young drivers. They need to be safer, widened, and guard rails.
Screen Name Redacted 4/15/2024 02:26 PM	the plant is an eyesore and I'd like to see decommission, consolidation plans with a timeline
Screen Name Redacted 4/15/2024 02:56 PM	Add one or two nice sit down restaurant in downtown
Screen Name Redacted 4/15/2024 04:36 PM	Downtown is amazing the way it is and draws a lot of people here. Keep the mill. I moved here to find a city just like Camas and I'd hate to see it urbanized. People should move to an area and appreciate it, not just want to change it and make it what they moved away from. I'd like the water quality to be addressed and be able to use the lake more in the summer. So if any improvements are needed, the lake could be cleaned up.

Screen Name Redacted 4/15/2024 05:23 PM	Maybe churches shouldn't buy up the entire thing?
Screen Name Redacted 4/15/2024 06:59 PM	Do not change anything downtown. Downtown is what makes Camas so special. What can be improved is more round-a-bouts and sidewalks in the older parts of town, including sidewalks on both sides of NW 18th Ave off of Division. Also fix the Division street (off of NE 6th), so it’s not so bumpy.
Screen Name Redacted 4/16/2024 09:10 AM	Continue to improve and attract small businesses to the area. Make it a destination for people in surrounding areas to come enjoy and spend their money in downtown. Continue to keep Camas from becoming like Portland. We do not want the density, the traffic, or the busy-ness of what Portland has become. Let other places build high-density housing - keep Camas feeling like a small town.
Screen Name Redacted 4/16/2024 09:34 AM	More bike lanes, limited growth compared to currently. Would like Camas to stay a smaller town. Improved cleanliness of roadways-less litter.
Screen Name Redacted 4/16/2024 03:59 PM	I don't want anything to change. In fact, I think it was awful that the church was razed to make way for tons of high rise housing and very little available parking.
Screen Name Redacted 4/16/2024 06:51 PM	As mentioned before I think it would benefit our community to have that one block section not completely be owned by one single entity. The more diverse the businesses we have here, the better it is for all. I think providing assistance to those small local shops would also be beneficial and I think looking at some sort of height/land use code for the downtown section would also be beneficial to keep the small town feel. Lastly I'm also nervous about the expansion taking over are green areas (for example north of lacamas lake).
Screen Name Redacted 4/16/2024 08:21 PM	The city government drifts to want to spend too much of the budget on things away from the core mission of the city, especially on consultants. I would like less wasted money on consultants. Sure, you might need them for expertise like engineering, but I don't see the need to spend lots of money on consultants to spin things (like marketing) for how the city wants me to vote on issues, or in marketing in general.

Screen Name Redacted 4/17/2024 08:06 AM	Better parking/walking. Keep it small
Screen Name Redacted 4/17/2024 12:10 PM	1. Make downtown Camas a pedestrian area; make it so it can be used in the evenings (street lights) 2. Develop new hiking trails (incl. several miles long ones) 3. Sidewalks on every street 4. Build a few public pickleball courts 5. Add charging stations for EV cars
Screen Name Redacted 4/17/2024 02:49 PM	I would love to see some the old mill land cleaned up and developed into more dense mixed-use to expand downtown. Better public transit would be cool to (a street car between Camas and Washougal???)
Screen Name Redacted 4/17/2024 03:57 PM	Historical downtown district. Liberty theatre/camas antiques; historical anchor. Signage/historical tour offerings. Good jobs. Small business/merchant engagement. Diversified housing and employment. Community pool. Draw more business. Expand jobs and tax base; commercial and industrial zones. More parking and housing downtown. More medical services.
Screen Name Redacted 4/17/2024 05:10 PM	No ideas at this time.
Screen Name Redacted 4/17/2024 05:48 PM	I would like to see more child friendly development happen at crown park. Whether that’s a splash pad or an updated playground of both.
Screen Name Redacted 4/17/2024 05:58 PM	Downtown Camas has been taken over by Journey Church. This prevents the use of the entire community for business purposes and has made downtown Camas less attractive to me. I rarely go down there anymore because there just aren’t enough businesses to go to. It also reduces the income for the city from business sales tax collections. I realize the city has no control over who purchases buildings downtown, but a contingent of city administrators could visit with Journey’s commercial arm and explain the problems their growth downtown has created for the city. Lacamas Lake has a terrible parking and safety problem that needs to be addressed. Swimmers, kayakers, paddle boarders, jet skis and motor boats all use the same entry/exit point which creates a serious safety issue. There is not enough parking for the amount of use the lake gets during summer months.
Screen Name Redacted	Expand core street/downtown outwards. Don’t just build new

4/17/2024 09:07 PM	architecture buildings try to keep vibe in new construction.
Screen Name Redacted 4/18/2024 07:28 AM	More walking trails. Better integration with nature.
Screen Name Redacted 4/18/2024 09:31 AM	More walkability and bikeability outside of downtown.
Screen Name Redacted 4/18/2024 09:52 AM	The fireworks situation is getting out of hand. The weather is drier and warmer and the fireworks are loud, obnoxious, and cause trauma and stress for veterans and pets. We are upset that the city has not done anything to change the fireworks rules - we'd like to see that happen ASAP.
Screen Name Redacted 4/18/2024 02:06 PM	More parking and/or public transit downtown. Events in Camas are special but difficult to attend for those not within walking distance.
Screen Name Redacted 4/18/2024 03:33 PM	Have a luxurious coffee roaster, brunch spot, private spa, small natural grocery store, a gym, retail shops from this era such as lululemon/alo, a wood fired pizzeria.
Screen Name Redacted 4/19/2024 05:56 PM	Remove the buildings of the mill and open more access to the Columbia River. Some bike lanes in the downtown area with a few bike parking areas would be nice.
Screen Name Redacted 4/19/2024 07:24 PM	I would like to have parking available for the library. The street parking is 2 hours only and it doesn't allow me to study long hours in the library without moving my car.
Screen Name Redacted 4/20/2024 10:55 AM	Obviously, the mill is a huge part of Camas's history, but it is a huge space now that could probably be better used in other ways since so few people actually work at the mill anymore. I know repurposing that space is a massive undertaking, but it's something I would hope to see happen in the future.
Screen Name Redacted 4/20/2024 06:40 PM	Improve sidewalks, quality of roads (eg along SW 6th ave) so can walk safely without worrying about having to walk on the road with some people driving carelessly. Make power lines underground or away from trees so less disruption with falling trees in winter. Bring in more businesses, more businesses, jobs and residents.

Screen Name Redacted 4/20/2024 07:25 PM	I hope any pollution issues from the plant are being addressed. I'm retired, & don't get out much, so I can't be much help here. I've seen the maps for the corridor but I've never driven around there.
Screen Name Redacted 4/20/2024 08:25 PM	More independent owned restaurants
Screen Name Redacted 4/22/2024 09:05 AM	Downtown Camas needs more housing density. More midrise housing so that more people live in the same amount of space. Then there will be enough demand for more retail businesses to make money. Then when you have more people and more businesses, it will be a thriving community. Also, prioritize sidewalks and bike lanes so people don't have to drive everywhere.
Screen Name Redacted 4/22/2024 09:35 AM	Outdoor community gathering space. Parking and housing downtown. EV charging stations. More infrastructure like electricity, water, roads and buildings. Planning for Mill property and waterfront in general. Complete streets. Public transit. Connection of neighborhoods to downtown. Preservation of native plants/ Local jobs. Preservation of open space. Lake clean-up. Another high school/technical school. Dark sky compliant lighting. Pool.
Screen Name Redacted 4/22/2024 12:10 PM	Improve street safety in neighborhoods with high visibility crosswalks and medians, add sidewalk b/t the lakes and downtown on Everett. Do not let precious downtown real estate be used for single entity non-commercial use (i.e. the church that takes up a block). Improve water runoff in old Camas neighborhoods by Crown Park. Address speeding issues on neighborhood streets, especially coming down from Prune Hill into Crown Park area. Future-plan for climate change with more tree canopy and native plants in neighborhoods to help with both heat and storm water/flooding.
Screen Name Redacted 4/23/2024 05:00 PM	More restaurants with more diverse/ethnic offerings. More places for young people (especially teens and pre-teens) to hang out.
Screen Name Redacted 4/23/2024 09:08 PM	I have a huge issue with the increased presence of the church in the downtown area. This does not illustrate an inclusive and welcoming environment to those that are not religious or of that particular faith. Adding new restaurants, cafes and shops will draw more residents to the area.

Screen Name Redacted 4/23/2024 09:20 PM	I wish there was less parking and more bike and pedestrian infrastructure. I feel that the parking lot on NE 6th & NE Birch has a lot of potential if turned into something more productive like housing/commercial like the lot across the street. I feel the same way about the parking on NE 7th & NE Adam. There's so much potential if camas captures it!
Screen Name Redacted 4/26/2024 07:36 AM	driving & parking seems to be a problem. I eventually see more road closures to allow for walking through 4th Ave for instance. The roads feel too small as it is. But traffic and parking management would be key to deal with.
Screen Name Redacted 4/27/2024 12:34 PM	A walking street with outdoor restaurants would really enhance downtown. We are also a bit concerned about a large portion of the downtown being owned by a church rather than individual commercial businesses. We also believe that Camas needs a public pool.
Screen Name Redacted 4/27/2024 05:02 PM	Keep downtown a place where people can actually come down and do business with a wide range of locally owned shops. Keep homeless from begging on streets and from camping/ doing drugs in our parks and greenspaces. PRIORITIZE SAVING TREES AND HISTORICAL BUILDINGS.
Screen Name Redacted 4/29/2024 10:59 AM	We need to add more multi-use buildings with living areas up top and shopping/restaurants at the bottom. Please also make it more pedestrian friendly with larger newer walkways and bike lanes. You're already doing this for the rest of Camas so please modernize downtown Camas as well.
Screen Name Redacted 4/29/2024 12:38 PM	More places to park… but spaces located outside the downtown to encourage walking.
Screen Name Redacted 5/02/2024 09:40 AM	Traffic. Plan for the mill; think about what is next for that area. Growth management: we need to ensure there is workforce housing. Be wary of northward growth, consider increasing density in other areas. Preserve farmland. Housing prices. Transit connections to neighboring communities. We need 55+ housing and single level housing for transitional housing. The enrollment in the school district is projected to be steady, son plan for that. Continue renewal. More park spaces. Plan for all economic levels. Plan for population growth from climate change. Work together with Washougal.

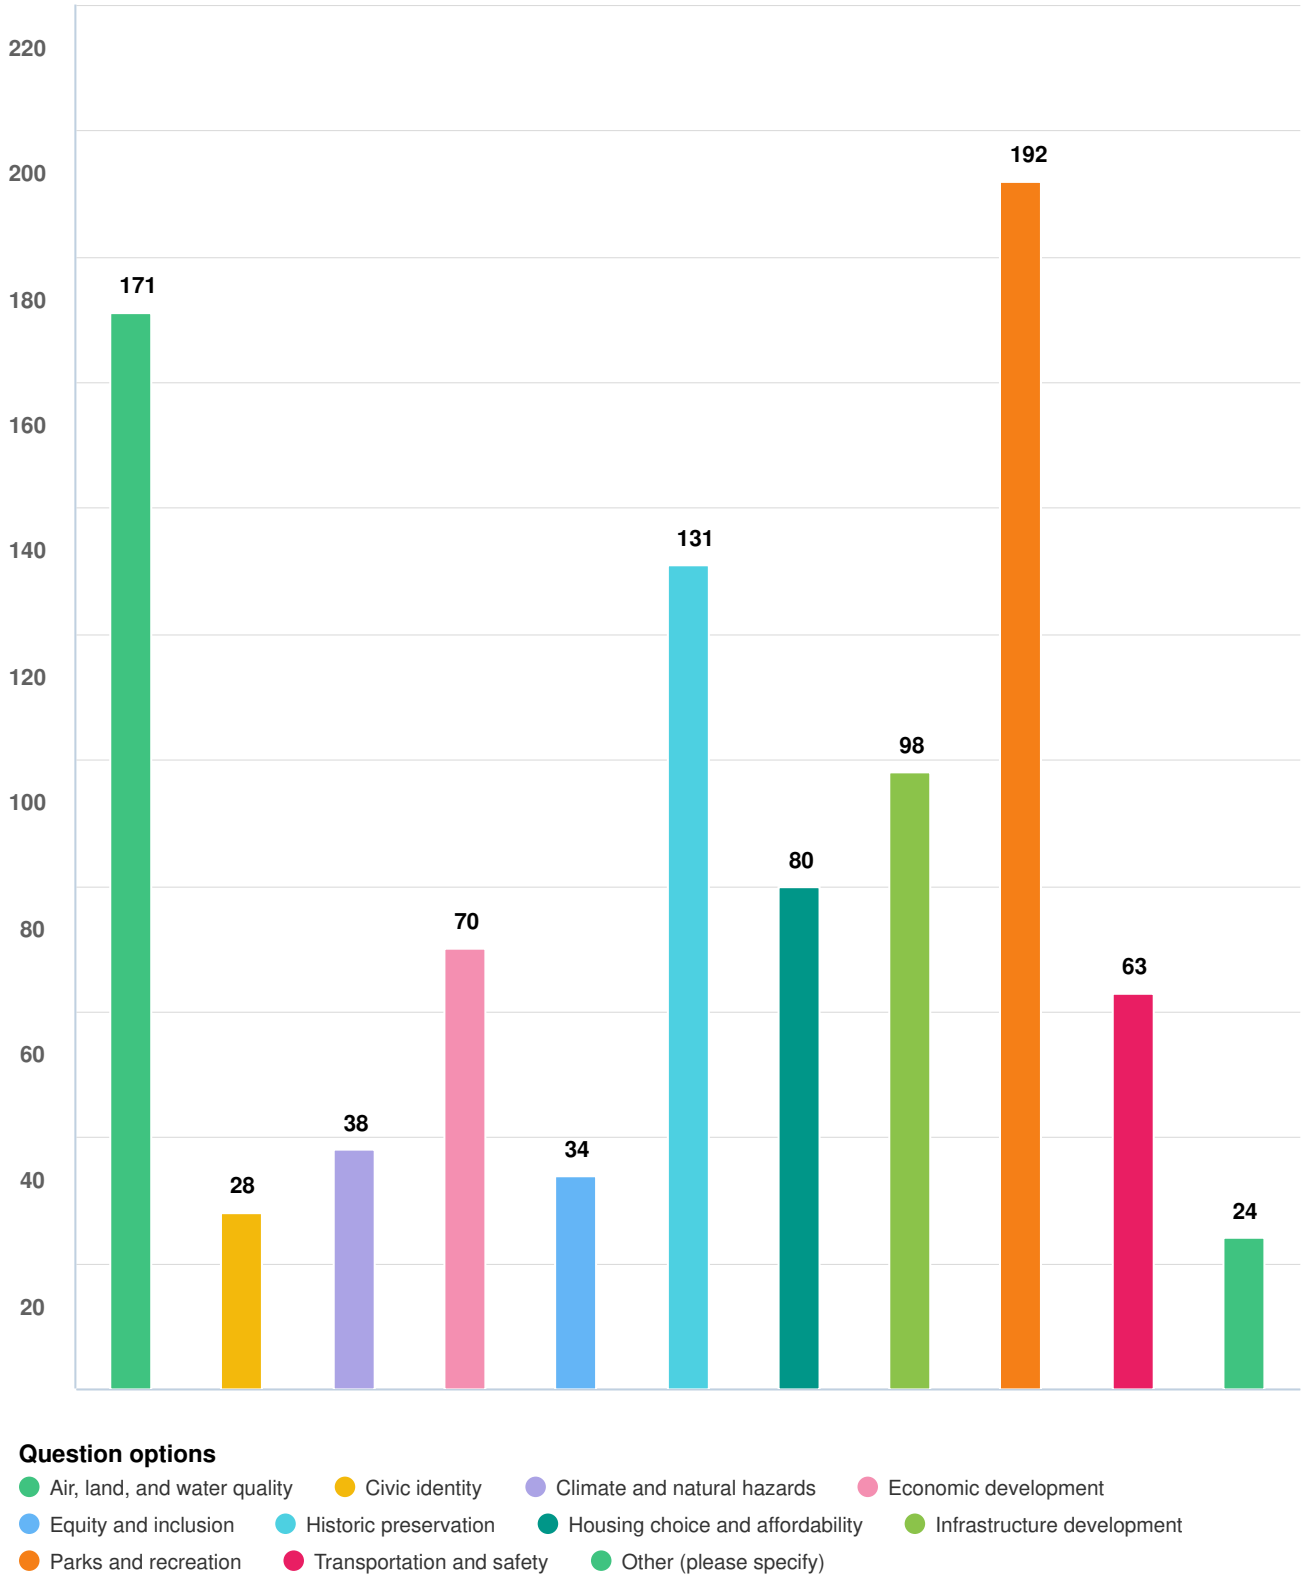
Screen Name Redacted 5/02/2024 03:06 PM	clean up the lakes
Screen Name Redacted 5/02/2024 03:30 PM	More diverse restaurants. A place for comic books or board games. A record store
Screen Name Redacted 5/02/2024 09:31 PM	Getting into downtown via anything other than a car feels really dangerous. Vehicle speeds on 6th and 3rd into and out of downtown are incredibly high. Travelling between sr14 and downtown on 6th at 25mph as opposed to the 40-50mph speeds people routinely travel at would add maybe 1-2min while improving safety and access. I would impress on the city that efforts to slow traffic and restructure 6th Ave into a shared traffic mode, two-lane road would improve safety and massively improve the possibilities for mixed-mode transportation for locals into and out of downtown.
Screen Name Redacted 5/02/2024 10:20 PM	More guaranteed small business tax incentive / breaks to allow small business to plan for the future and develop a foothold in our town.
Screen Name Redacted 5/03/2024 08:07 AM	Enhance pedestrian accesibilty. Close off 4th Ave to motor vehicles between Adams and Everett and create a pedestrian mall with permanent outdoor dining opportunities. Think Boulder’s Pearl Street Mall .
Screen Name Redacted 5/03/2024 08:23 AM	Growth in residents should be lockstep with growth in transportation and infrastructure.
Screen Name Redacted 5/03/2024 08:42 AM	Reclaim the mill; take care of the water quality of the Lacamas Lake
Screen Name Redacted 5/03/2024 03:27 PM	Would like to improve food options
Screen Name Redacted 5/03/2024 03:28 PM	The Church breaks downtown up - that really should be retail. More restaurants, gourmet shops would be good.
Screen Name Redacted 5/03/2024 04:05 PM	Historic downtown is just fine as it is. It's walkable & plenty of avail. FREE parking. Aside from the 2 safeways + the BiMart, we lack presence of larger commercial stores (like Target, Fred M, etc.) Also, having to drive long dist. to Peace Hlth. med ctr in Vanc., - - longer term, it would be nice to have a multi-specialty Peace Hlth. clinic in

	this vicinity.
Screen Name Redacted 5/03/2024 04:05 PM	Cut and trim the trees. They have dangerous limbs that need trimming
Screen Name Redacted 5/03/2024 04:05 PM	I can't think of anything I would change.
Screen Name Redacted 5/03/2024 04:07 PM	Seeing better care for the downtown sidewalks which are filled with cracks and dirt
Screen Name Redacted 5/03/2024 04:37 PM	Crown Park upgrades
Screen Name Redacted 5/03/2024 05:41 PM	More parking , make it easier to park .
Screen Name Redacted 5/03/2024 06:03 PM	1. I am very concerned about the lack of grocery stores! There is only one in Camas, and it is small, overcrowded, has no competition to keep prices down, the produce section is inadequate, and most of the rest of the store is just unhealthy junk. With all the growth going on in our area, we need access to quality food in order to avoid becoming a food desert. We need an alternative, whether it be a decently-run Whole Foods (unlike the disaster on 164th St which closed a few years ago), or a New Seasons. An alternative would be to offer double the amount of space to entice Natural Grocers to move to Camas from 192nd St. Its signature store is found in Sedona, Az., and is a dream store offering whole, organic fresh foods and healthy alternatives to the processed foods that are directly related to heart disease, diabetes, strokes, and cancer. 2. We don't need more downtown parking! We need to get out of our cars and walk. Make it pleasant to do so---if only more trees had been planned for 5th and 3rd Avenue, our city could have been transformed into an even more wonderful attraction. We got 3rd St. right---how can we expand on it? Imagine a downtown that is so attractive that it becomes a destination point for vacationers to stretch their legs, have a meal, and enjoy the quirky shops we offer. 3. Have City Council outlaw and enforce fines for those who think a loud, mufflerless car is a happy car. It is not, at least for the general public. I don't know if electric cars are a good solution to our environmental problem, but if so, more charging stations might fit our future also. 4. Solve the water problem! I am appalled that City Council plans to release known high levels of PFAS-contaminated water into the community this summer. Why not enforce water rationing by especially targeting landscape watering.

	The high earners among us can afford to dial down their pretty landscapes, but the current plan to release PFAS into our drinking water is abhorrently unfair to those on a limited income, who have no way to mitigate the carcinogens that are released into our drinking water. (Side note: using unfiltered water from the tap in Camas, my attempt to grow broccoli sprouts has only produced slimy, inedible garbage. When the water is filtered, I can grow amazing sprouts. Fix the water supply!)
Screen Name Redacted 5/03/2024 06:01 PM	A beautiful waterfront would be nice. The mill is kind of an eyesore.
Screen Name Redacted 5/03/2024 06:31 PM	more walkability/bikeability downtown and connectivity between different parts of the city. We don't need more parking -- the downtown area especially already has soooo much parking. We need density, more affordability of housing/housing choice, we need connected trails/parks, more crosswalks and bike lanes throughout the city as well as sidewalks.
Screen Name Redacted 5/03/2024 09:16 PM	Better and more continuous bike lanes and ease of biking. Follow through on the lake management plan.
Screen Name Redacted 5/03/2024 09:55 PM	Push to keep historic downtown Camas as an economic center of the city. With the increased housing development, I have concern that the historical charm will not be able to withstand the growth. I would also like to see more effort going towards addressing the PFAS in well 13 (and wherever else it may have leached to), more transparency with Camas paper mill, and proactively holding up it’s connection to Earth Day through the coordinator, Denis Hayes.
Screen Name Redacted 5/04/2024 09:19 AM	More walkability. Block off the downtown section of 4th street for pedestrians only. Include those blocks on 3rd and 5th street to look like 3rd street to include more trees and benches.
Screen Name Redacted 5/04/2024 09:47 AM	More things to walk to in various neighborhoods.
Screen Name Redacted 5/04/2024 04:41 PM	Low speed limits (cars) throughout the entire city. More, better, and safer bike lanes (protected bike lanes where possible). Connecting up of pedestrian trails and sidewalks where gaps exist. Allow for housing CHOICE -- ADUs, multi-family, etc., especially within walking distance of downtown and transit lines.

Screen Name Redacted 5/04/2024 05:28 PM	River access, walk/bike trails connecting to Lacamas Park, more restaurants
Screen Name Redacted 5/04/2024 05:30 PM	get rid of the mill asap and we'll all be better for it. property taxes from that in an of itself will help boost building more trails. use Minneapolis as an example here. stop letting all the churches take over historic downtown and allow actual businesses to flourish. for all the homes currently in the MX use area by the lakes to actually have businesses so that area can revive itself into foot traffic. look to mill valley California here as an example. reduce parking minimums for businesses so that you can let the market decide what is successful
Screen Name Redacted 5/05/2024 08:40 AM	Design for biking, walking and transit. Less focus around cars and more around people.
Screen Name Redacted 5/05/2024 09:13 AM	Operating hours of small businesses downtown. Open earlier so that parents can shop after school drop off, but before other obligations.
Screen Name Redacted 5/05/2024 12:39 PM	Stop allowing allowing big developments to be built, preserve large lots and farms. Now that we know better, remove fluoride from our drinking water.
Screen Name Redacted 5/05/2024 03:21 PM	No more mega churches taking up an entire block of shopping area in downtown. Keep the post office, library and city hall where they are and AS THEY ARE. Provide more parking for the small restaurants and businesses on GP's property, if possible, or on 3rd St.
Screen Name Redacted 5/05/2024 04:34 PM	More independently owned businesses
Screen Name Redacted 5/05/2024 06:11 PM	More action ! City of Camas purchased amazing properties including the Leadbetter house. Downtown area is thriving, focus on the lake areas!!!
Screen Name Redacted 5/05/2024 09:37 PM	I would keep big box stores and corporations out of our city to preserve the small town feel. Our city is growing astronomically and every year it seems that the original Camas I fell in love with goes away. Little by little. Our taxes also seem to go up year after year. Many old timers who grew up in this city are finding it harder and

	harder to keep up with the rising taxes. Many old folks are on fixed incomes and the new residents and increasing taxes are driving people away.
Screen Name Redacted 5/06/2024 02:01 PM	I want to see the lake clean and the trail built so that I can ride bikes, walk, and float with my family on a clean lake
Screen Name Redacted 5/06/2024 03:27 PM	Stop now it’s not getting better.
Screen Name Redacted 5/07/2024 08:24 PM	The addition of a public turf soccer field would allow youth athletes of many sports to play and train year round. As far as downtown, I think it would be great to have two blocks cordoned off from cars permanently, allowing more room for dining and socializing of pedestrians. This could be similar to Church Street in Burlington, VT or River Street in Savannah, GA. Downtown Camas will need something special to draw people from the 192nd shopping and dining center once it is complete.
Screen Name Redacted 5/10/2024 01:55 PM	I would like to see a move to safe and sane fireworks. It is the only time of the year that I would rather be anywhere else than in Camas. It is hard on pets and people alike. I would also like to see Lacamas Lake cleaned up.
Screen Name Redacted 5/11/2024 02:20 PM	Outlaw fireworks altogether.
Screen Name Redacted 5/12/2024 07:25 AM	Potentially more parking , make Main Street pedestrian only ? Keep it affordable for families
Screen Name Redacted 5/12/2024 06:47 PM	We'd like to see the scope of downtown expanded perhaps to even include a connection to the 3rd street corridor towards Washougal. And we need to plan for that. When we have grown out of Prune Hill and the North Shore, downtown will be small and cramped and still old buildings. We need multiple town centers whether they're historical or new.
Screen Name Redacted 5/13/2024 04:33 PM	The mill must break cleaned up including ensuring contamination has not already, or will threaten our drinking water. The mill, much of with is no longer in use, should be the focus of new growth. Camas need government that respects neighborhoods, and relies on more internal



organic growth versus continued push into the forests.

Screen Name Redacted
5/15/2024 12:24 PM

Lack of connectivity/end of road. Need a car to get around. Icy roads are hazardous. Not many cheap fun things to do. Lake water quality.+ Affordable housing and housing types. Infrastructure at peak times near CHS. Traffic safety - not enough exits.+ More areas like downtown. Speed limits/street designs. Rain proof facilities. Roads/walkability/lack of sidewalks.+ Lack of bike lanes. CHS needs a pool. More trees. Dog parks. Youth activities. Emergency management and snow plows. Crown park has no pool or programs. Signs not maintained. More athletic fields - rugby pitch, ice skating rink, indoor tennis, basketball, cricket

Question type: Checkbox Question

Q6 As Our Camas 2045 gets underway, what people, groups, or communities should we make sure to engage in order to make this an inclusive process?

Screen Name Redacted 2/20/2024 02:02 PM	Study the number and types of tech sector jobs left in town to better understand the needs of the companies to re-invigorate that sector.
Screen Name Redacted 2/10/2024 07:55 AM	I'd like to see our young people involved since they are the future.
Screen Name Redacted 2/10/2024 09:40 AM	Everyone who is willing to participate. Make it easily available and people will engage.
Screen Name Redacted 2/10/2024 11:47 AM	Make sure to communicate with residents that have been here for more than 10 years and not just the new transplants. I see a lot of changes being made to accommodate me comers without consideration to the people that have been here for years.
Screen Name Redacted 2/10/2024 11:14 PM	No one left behind

Screen Name Redacted 2/11/2024 10:27 AM	Create surveys for any residents to participate in
Screen Name Redacted 2/12/2024 10:02 AM	I'd like to see youth conversations. I am constantly blown away by the teens in our community for bringing keen insights & well thought out issues.
Screen Name Redacted 2/12/2024 02:44 PM	Gen X and Gen Z.
Screen Name Redacted 2/13/2024 08:52 AM	Local families & long time residents 1st, Big money Developers last
Screen Name Redacted 2/13/2024 09:37 AM	Local business owners
Screen Name Redacted 2/13/2024 09:42 AM	Area Agency on Aging Churches Schools Veterans
Screen Name Redacted 2/13/2024 10:00 AM	I believe any full time residents even the young adults in our schools should be given a reasonable chance to voice their opinion by surveys. Inside and outside of the city limits. It affects us all as a whole.
Screen Name Redacted 2/13/2024 10:55 AM	Parents and community-focused people.
Screen Name Redacted 2/13/2024 12:18 PM	This is a ridiculous survey since our city officials ignore all we want and act like they care. Everyone in this town live here because it’s a town, they do NOT want a city!!!!!! Get ride of the stupid equity and inclusion BS and do what people want! We used to be a nice conservative town until all the liberals moved here and want to change us into California or Portland. If you truly want to know what people want, then have a town meeting with Q&A’s in an evening after 7pm. Not mid week or early afternoon when people are working. And give plenty of time in advance unlike the sneaky last minute meetings that no one can attend or voice their opinions.
Screen Name Redacted 2/13/2024 12:47 PM	Camas Little League, Clark County Youth Football, Camas Business Owners, CREDC

Screen Name Redacted 2/13/2024 12:49 PM	Future homeowners, local builders, developers, and local church organizations. They understand and know the true problems of the town.
Screen Name Redacted 2/13/2024 01:27 PM	The youth of camas and young families.
Screen Name Redacted 2/13/2024 02:59 PM	Our future youth Downtown families Small businesses
Screen Name Redacted 2/13/2024 06:00 PM	Those with school age children
Screen Name Redacted 2/13/2024 07:02 PM	Open minded humans
Screen Name Redacted 2/13/2024 07:53 PM	The families that actually live here - including the traditional neighborhoods like Everett Corridor and downtown. Town Hall is WAY too insulated and homogenous with the same people on committees over and over again. Stop moon eyeing the developers that over-promise and underdeliver.
Screen Name Redacted 2/13/2024 09:21 PM	First Friday attendees ... They're invested in the community.
Screen Name Redacted 2/13/2024 09:29 PM	Get the message out through multiple communication means, including print
Screen Name Redacted 2/13/2024 11:33 PM	Organizations, neighborhoods, apartments, Events, employees of businesses (not just owners), Elk, schools, resource centers
Screen Name Redacted 2/14/2024 05:29 AM	I feel like Camas can be fairly economically stratified - there are so many ultra-wealthy and upper class people here that they are generally the ones more engaged in public processes. So just more engagement of those of us who are not on that end of the spectrum.
Screen Name Redacted 2/14/2024 08:06 AM	NO OUTSIDE CONSULTANTS. Decision makers need to have a dog in the fight. Outside consultants are absolutely ruining Vancouver and have already cost the city of Camas an exorbitant amount of money. This is a well educated community, tap into that resource.

Screen Name Redacted 2/14/2024 09:39 AM	All. Businesses, Families, Community groups, Churches, School, ect.
Screen Name Redacted 2/14/2024 05:16 PM	This is a dumb question. Your Jon is to make the information available to the community and whoever wants to get involved can do so. Seeking out specific people to be "inclusive" is very exclusive.
Screen Name Redacted 2/15/2024 08:30 AM	Parents of school age kids. Retirees. Existing Camas citizens.
Screen Name Redacted 2/15/2024 09:16 AM	Please include a variety of people from all economic backgrounds.
Screen Name Redacted 2/15/2024 09:16 AM	The East Asian population is the fastest growing group in Clark County, so include more of them please.
Screen Name Redacted 2/15/2024 09:33 AM	Residents, schools and businesses.
Screen Name Redacted 2/15/2024 09:39 AM	NOT RICH FUCKERS!
Screen Name Redacted 2/15/2024 09:44 AM	Council for the Homeless, community groups that serve the low income and struggling families, local merchants
Screen Name Redacted 2/15/2024 09:44 AM	All ages including senior citizens.
Screen Name Redacted 2/15/2024 09:58 AM	Volunteer orgs such as Rotary, Lions, Soroptimists; schools including students; businesses large and small
Screen Name Redacted 2/15/2024 10:02 AM	Representative demographic group
Screen Name Redacted 2/15/2024 10:06 AM	Everyone
Screen Name Redacted	There are so many white people in Camas. Make sure to include

2/15/2024 10:18 AM	voices and experiences of other groups. We absolutely need more options for multi family housing, so include the voices and experiences of the folks who are lower income.
Screen Name Redacted 2/15/2024 10:18 AM	invite all and see who comes.
Screen Name Redacted 2/15/2024 10:29 AM	Minority communities, members of unincorporated Camas.
Screen Name Redacted 2/15/2024 10:36 AM	Care about the Families that live in Camas, and sustaining our higher standard of living than most cities. People move to Camas, and yes most are about average income. And that's ok. We do not need to build a lot of apartments.
Screen Name Redacted 2/15/2024 10:41 AM	Senior citizens who are on fixed incomes, low income families/economically disadvantaged
Screen Name Redacted 2/15/2024 10:43 AM	Local residents and business owners from all walks of life and of all denominations.
Screen Name Redacted 2/15/2024 10:48 AM	Homeowners who live in the homes they own in Camas.
Screen Name Redacted 2/15/2024 10:50 AM	Engage with the people that work down here. If you can get businesses to employ people down town and get them to stick around it only strengthens the night scene and keeps people around. Try and make it inviting to have smaller food vendors and restaurants want to make camas home
Screen Name Redacted 2/15/2024 10:52 AM	Neighborhoods, the businesses, mill workers, schools, students and teachers
Screen Name Redacted 2/15/2024 10:58 AM	Everyone. This includes “newcomers” and others whose opinions you do not respect . cCity government is just a club and is not sincerely interested in what people want. How much are you paying consultants for this bogus exercise?
Screen Name Redacted 2/15/2024 10:56 AM	All Camas residents

Screen Name Redacted 2/15/2024 11:17 AM	Camas Ivy League, Camas Tree Protectors, Schools, Audubon Clubs, Land Trust, Friends of the Columbia River, Yakima and other native tribes
Screen Name Redacted 2/15/2024 11:30 AM	The Downtown Association goes without saying, but it would be good to throw the net to include other businesses and private residents who consider this their neighborhood.
Screen Name Redacted 2/15/2024 11:45 AM	News letters
Screen Name Redacted 2/15/2024 11:49 AM	People who actually live in Camas. Especially the downtown area. Also, please stop with the "inclusive" BS.
Screen Name Redacted 2/15/2024 12:41 PM	All communities in the camas area as well as businesses
Screen Name Redacted 2/15/2024 12:44 PM	I'd really love to see some BIPOC-owned business downtown.
Screen Name Redacted 2/15/2024 12:53 PM	New families moving into the community.
Screen Name Redacted 2/15/2024 12:56 PM	By engaging in online surveys and sending out emails -- you are including the newer generations of parents (with children who just started elementary school) that plan to be here for the next 18+ years. I think that's a great first step!
Screen Name Redacted 2/15/2024 01:07 PM	Schools, churches, Homeowners groups
Screen Name Redacted 2/15/2024 02:08 PM	Please include all If old Camas along with all the new camas.
Screen Name Redacted 2/15/2024 02:16 PM	Sometimes I think it doesn’t really matter. The loudest voices and people in power just get their way, no matter what we say. Example: We gat enough signatures to force a vote on last year's new tax. Yet, the powers that be weren’t going to let that happen. What is wrong with leadership? Aren’t they there to represent us?

Screen Name Redacted 2/15/2024 04:23 PM	The DCA, Chamber, businesses and the Port.
Screen Name Redacted 2/15/2024 04:40 PM	I would prioritize long time residents. They got us to where we are at today. I am not in this group either. But the newcomers should not have an outsized voice.
Screen Name Redacted 2/15/2024 05:20 PM	School groups including PTAs, PTOs, youth sports organizations
Screen Name Redacted 2/15/2024 05:39 PM	All that wish to be engaged will be
Screen Name Redacted 2/15/2024 06:46 PM	People who’ve been here before it became over populated and unaffordable to live.
Screen Name Redacted 2/15/2024 07:46 PM	People from all walks of life (teachers, retail owners, industrial managers, senior citizens, students, non-profits, professionals) and all age groups.
Screen Name Redacted 2/15/2024 11:23 PM	Clubs , businesses and organizations are easy to find and include, but I'd like to see school age kids have input, and survey people who live in controlled rent/ low rent housing. Their input on accessibility and usability is invaluable but often overlooked.
Screen Name Redacted 2/16/2024 05:07 AM	Enough people in different stages of life and ages .
Screen Name Redacted 2/16/2024 08:08 AM	First stop with the buzz words, get the people who actually want to engage and get the job done. Don't just add people so you are politically correct. I would actually like to see a committee get something done unlike the things our City has done in the past. Please stop having a meeting to decide what to have a meeting about. Hopefully something can actually get done.
Screen Name Redacted 2/16/2024 08:40 AM	Volunteer and community outdoor groups that are involved in open space trail development and nature conservation
Screen Name Redacted	The older generations as well as what kids want to see.

2/16/2024 09:47 AM

Screen Name Redacted
2/16/2024 11:53 AM

tax payers

Screen Name Redacted
2/16/2024 12:34 PM

Not everyone wants to be front and center when it comes to speaking up. Having as many channels available for input is key. Hearing the same old naysayers screaming about the way things ought to be holds back our community. Camas has changed a lot since its inception. There's no point trying to hold back and communication is the most important factor in determining the next steps that will move us all forward.

Screen Name Redacted
2/16/2024 05:18 PM

Include those of lower income, minorities and high school students interested in seeing positive changes in the high school.

Screen Name Redacted
2/18/2024 09:07 AM

All age groups including our youth. What do they want to see in the community that they are missing today? What will keep them here in the future?

Screen Name Redacted
2/18/2024 09:38 AM

Parks and recreation, and how to maintain our local parks when there is increasing use by visitors from Portland.

Screen Name Redacted
2/18/2024 04:15 PM

All camas residents

Screen Name Redacted
2/19/2024 08:42 AM

I know there are committees dedicated to helping create the vision plan, so those of course, along with the DCA and the school district. I would also suggest a focus group comprised maining of our non-white population to talk about equity and inclusion issues.

Screen Name Redacted
2/19/2024 02:23 PM

Lower income residents, small business owners, minorities. Pleas listen and hear them.

Screen Name Redacted
2/20/2024 09:33 PM

Residents, business owners, police/fire/ems agencies, students within the school district.

Screen Name Redacted
2/21/2024 10:35 AM

BIPOC people

Screen Name Redacted 2/22/2024 01:22 PM	Families
Screen Name Redacted 2/24/2024 08:28 PM	I believe every camas resident should be aware, so maybe every household gets a letter with updates and if they'd like to stay informed they can go to meetings, or sign up emails. I also believe you should talk to middle schoolers/ high schoolers about what they like and don't like about this town, and what could change.
Screen Name Redacted 2/26/2024 08:36 AM	The people that are actually paying for it - the homeowners. And actually listen to them this time.
Screen Name Redacted 2/27/2024 09:54 AM	Open town meetings.
Screen Name Redacted 2/27/2024 10:39 AM	parents, students, teachers, 20-30 year olds, business owners, retired residents, all races/genders But also look to leaders of other towns that have already navigated what you are looking to create here in Camas.
Screen Name Redacted 2/27/2024 11:58 AM	I'm not sure it matters. We don't get listened to anyway.
Screen Name Redacted 2/27/2024 02:25 PM	Schools, community groups and conservation organizations.
Screen Name Redacted 2/27/2024 04:31 PM	The people who live here already, not the future hundreds you want to jam in for money!
Screen Name Redacted 2/27/2024 04:57 PM	Parents and kids since many of the people that live here are families.
Screen Name Redacted 2/27/2024 07:09 PM	Water & lake preservation groups
Screen Name Redacted 2/28/2024 08:59 AM	Youth groups, sports, etc. For our family the biggest driver to get us out of the house is activities with the kids (currently 2 and 4)
Screen Name Redacted 2/28/2024 06:52 PM	New residents.

Screen Name Redacted 2/28/2024 09:06 PM	How about homeowners, long time home owners.
Screen Name Redacted 2/29/2024 08:38 PM	The busiest group of people...Young parents.
Screen Name Redacted 2/29/2024 09:00 PM	Families with young kids. Cyclists. Seniors.
Screen Name Redacted 2/29/2024 09:46 PM	You definitely should listen to what people are telling you at the council meetings and through the questionnaire's. Involve less construction company's. You are letting this town be over built. We want it to stay small.
Screen Name Redacted 3/02/2024 07:37 PM	[Our group did not have time to answer this question.] I'm using this space to provide email addresses for Question 7, as it wouldn't allow me to enter more than one: vmcomie@mac.com, mbhogan31@gmail.com, koty55@msn.com, lindadevine29@gmail.com, dawn@dawnworkman.com, sandra1128@hotmail.com, dirwin@comcast.net, sb3carter@gmail.com, patricia.barnard@yahoo.com, karimarie32@yahoo.com, deanna@deponceau.com, ann.sturgeon@gmail.com, jennywu71@hotmail.com
Screen Name Redacted 3/04/2024 02:05 AM	Long time residents
Screen Name Redacted 3/06/2024 06:24 PM	Include those of us that live on the eastern side of Camas.
Screen Name Redacted 3/06/2024 06:36 PM	Forestry management or beautification.
Screen Name Redacted 3/06/2024 08:09 PM	Lake Pointe Homeowners group
Screen Name Redacted 3/06/2024 08:05 PM	school groups
Screen Name Redacted 3/07/2024 01:11 AM	I can't speak to which groups are best to engage, but it would be great to know the actual community living here is being heard.

Screen Name Redacted 3/07/2024 09:38 AM	Long-term residents, students, parents
Screen Name Redacted 3/07/2024 10:04 AM	We need more BIPOC-owned businesses downtown.
Screen Name Redacted 3/07/2024 10:11 AM	It would be really special to have another choice for breakfast in downtown Camas. I end up driving to Vancouver to get good food on the weekends. Natalia is way overpriced, greasy, and too many hashbrowns. We need choices.
Screen Name Redacted 3/07/2024 10:29 AM	school district, Clark county parks, clark county food bank, WSU extension.
Screen Name Redacted 3/07/2024 11:41 AM	Maybe fliers with a QR code around town?
Screen Name Redacted 3/07/2024 12:51 PM	Families, business owners
Screen Name Redacted 3/07/2024 01:27 PM	eldery
Screen Name Redacted 3/07/2024 01:44 PM	We need more from the lower income community.
Screen Name Redacted 3/07/2024 04:01 PM	DCA, representation of Mill workers, representation from trade / service industry / 'blue color' workers. There is a need to balance the community discussions which is currently skewed to low oversight public service staff and high income overcommitted professionals.
Screen Name Redacted 3/07/2024 07:09 PM	Natural conservation
Screen Name Redacted 3/07/2024 09:16 PM	Please include the younger people! Camas needs to modernize a bit!
Screen Name Redacted 3/08/2024 09:15 AM	people of color; people of non-majority religions (Jews, Muslims, etc)

Screen Name Redacted 3/08/2024 12:49 PM	All community members, not just business owners or large corporations
Screen Name Redacted 3/10/2024 08:13 PM	A representative sample of our entire population, considering age, gender, ethnicity, work status, family size, etc.
Screen Name Redacted 3/11/2024 08:30 PM	As many people as possible!
Screen Name Redacted 3/15/2024 08:13 PM	Young people. People who visit Camas - what attracted them to visit? What repels them? People who understand what sustainable means. People who grew up here and would like to stay but cannot afford to live here. People who enjoy and care about nature.
Screen Name Redacted 3/16/2024 06:30 PM	People in Fern Prairie who will be impacted by airport development. How about trying to engage everyone.
Screen Name Redacted 3/16/2024 06:51 PM	You can hear many who are disgruntled with growth. I'm a transplant so I get it but also naturally a place like Camas will grow. I'd hope it is mindful of the environment, the history and the things that make this a great place to live. Smart, transparent decisions about growth and if it doesnt make sense, don't do it or build it
Screen Name Redacted 3/16/2024 08:19 PM	Teenagers
Screen Name Redacted 3/16/2024 08:36 PM	Water safety, algae bloom experts, environmental experts. And listen to them, take action.
Screen Name Redacted 3/16/2024 11:41 PM	Camas School District is an integral part of our community; I would be sure to engage with them so we can keep our schools top-tier.
Screen Name Redacted 3/17/2024 01:24 AM	I want to be involved.
Screen Name Redacted 3/17/2024 07:22 AM	Downtown business owners, long time citizens, school district reps

Screen Name Redacted 3/17/2024 08:14 AM	Please continue to engage with businesses that are affected by any changes such a streets widening, etc.
Screen Name Redacted 3/17/2024 08:39 AM	Schools, businesses, citizens, and even kids!
Screen Name Redacted 3/17/2024 09:01 AM	Prune hill communities
Screen Name Redacted 3/17/2024 10:29 AM	Everyone who is a resident of Camas should be involved. Notifying by mail and asking people to weigh in their opinions would likely be best to reach all, since many don't have social media or connect online.
Screen Name Redacted 3/17/2024 10:29 AM	Sierra Club, Friends of the Columbia Gorge
Screen Name Redacted 3/17/2024 10:40 AM	I think more high school-aged programs and events. Make the town fun for them so they'll consider staying in or returning to Camas.
Screen Name Redacted 3/17/2024 01:45 PM	Residents, people that live close by and small businesses.
Screen Name Redacted 3/17/2024 05:10 PM	Parents, people with disabilities
Screen Name Redacted 3/17/2024 05:27 PM	Diverse populations and ethnic backgrounds, people with disabilities, pet owners, families and businesses.
Screen Name Redacted 3/17/2024 08:22 PM	Locals, long time members of the community (including those living elsewhere, but still active in the community), local politicians
Screen Name Redacted 3/18/2024 02:54 AM	What’s happening in the area
Screen Name Redacted 3/18/2024 09:51 AM	Parents of students and elderly
Screen Name Redacted 3/18/2024 11:49 AM	WHAT PEOPLE?? All persons who live in Camas and/or attend Camas schools! DUH!

Screen Name Redacted 3/18/2024 11:54 AM	Note: I've been to the public meetings but NEVER felt heard. "The City" has its perspective of: develop, develop, develop! and ignores the deepfelt desires of the people who live here and pay taxes, who came for the small-town feel and the TREES, that's why I can't say I want to attend meetings. So to be more "inclusive" Don't just listen to developers who want to mine Camas for all the money they can squeeze out of it! Listen to those who live here, pay taxes, love it, are building a long-term life here, and have shown they care for it (I volunteer).
Screen Name Redacted 3/18/2024 01:45 PM	Young adults (middle and high schoolers)- this is a great way for them to.learn about civic engagement, perhaps by forming a Camas Library group or groups.
Screen Name Redacted 3/20/2024 03:19 PM	Evergreen MTB Alliance
Screen Name Redacted 3/20/2024 07:26 PM	Residents who have been here a long time. People who are retired or have a fixed income.
Screen Name Redacted 3/22/2024 07:12 AM	Be transparent.
Screen Name Redacted 3/25/2024 10:09 PM	I think you need to be as available as possible, and make sure people can access information on their own time. As a parent there are so many meetings or events to attend, that I need to be able to find the information online. Please make sure you connect with the people who may not be online or who may not be able to attend a public meeting.
Screen Name Redacted 3/26/2024 09:46 AM	PTAs and PTOs CSD Local businesses, not just downtown merchants HOAs
Screen Name Redacted 3/26/2024 11:07 AM	Jewish community
Screen Name Redacted 3/26/2024 04:18 PM	Indigenous communities

Screen Name Redacted 3/27/2024 11:46 AM	These responses are from the Planning Commission meeting held on February 21, 2024, facilitated by Yvette Sennewald.
Screen Name Redacted 3/27/2024 03:45 PM	§ Chamber of Commerce § Engage other neighborhoods outside your own. *Map out areas that are not being engaged § Youth – Boy/Girl Scouts, Teen involvement (HS) § Seniors voice needs representation (AARP) § New residents (need connection, have different/outside views) § Legacy residents (those having hard time with growth) § Renters
Screen Name Redacted 4/01/2024 11:31 AM	· Minority groups; Translation of materials, Interpreters at events, Cultural events, School cultural groups > access to parents · “Push” instead of “pull” marketing · PTAs · HOAs · Churches · Seniors (Meals on Wheels) · Leverage city committees, commissions · Community leaders
Screen Name Redacted 4/03/2024 08:44 AM	How about the people that grew up here.
Screen Name Redacted 4/03/2024 09:08 AM	Many concerned folks with Camas roots are at the Forgotten Camas Washougal group at Facebook, where many concerns about Camas are expressed.
Screen Name Redacted 4/03/2024 10:07 AM	Everyone who wishes to should have the opportunity to provide feedback. Thank you for asking for input.
Screen Name Redacted 4/03/2024 10:24 AM	Long time residents!
Screen Name Redacted 4/03/2024 12:34 PM	Ask the long time residents, and lean more on their opinions as they're the ones losing the most.
Screen Name Redacted 4/03/2024 04:45 PM	Anyone who is interested.
Screen Name Redacted 4/03/2024 06:10 PM	Outsiders who have a local historical stake and awareness. The Camas "diaspora" or "ex-pats" if you will. Find out WHY they left. And don't just hear the people who say what you want to hear.
Screen Name Redacted	Please engage the many people who are generationally a part of the

4/03/2024 11:32 PM	city. The people who know the history and the direction that the city should be going in!!!!
Screen Name Redacted 4/04/2024 02:26 AM	Facebook
Screen Name Redacted 4/04/2024 07:30 AM	All...
Screen Name Redacted 4/04/2024 08:11 AM	Disabled community
Screen Name Redacted 4/04/2024 08:23 AM	Schools and businesses
Screen Name Redacted 4/04/2024 08:34 AM	Lower income residents, seniors, folks who have lived in the community for 10 years or more,
Screen Name Redacted 4/04/2024 08:58 AM	Everyone not just to richy rich or CA transplants, it seems we don't care what us actual locals feel or want, it's all for those hoity toity people that think we need to completely change our area to satisfy their richy rich needs...this is NOT the area for that
Screen Name Redacted 4/04/2024 09:54 AM	Every homeowner in the city
Screen Name Redacted 4/04/2024 11:51 AM	Stay in touch with the people of this community. Show up at downtown events, area events and talk to people. It's the people here that make this place special ! Give the people of Camas a voice in all of these changes !! "Forgotten Camas Washougal" is a fantastic group of people who really care about this area.
Screen Name Redacted 4/04/2024 01:01 PM	I think it's important to not give lip service to the community. It seems like you've got a small group that bends your ear and you do what they want. OR I am also aware that you spend a lot of money on consultants. Maybe it's to take the pressure off of you, but in reality, the blame still falls on you even if the consultant tells you to do something. You're never going to appease EVERYONE, so do what is the next right thing, the next best thing, for the people of Camas.
Screen Name Redacted	Stop with your DEI nonsense. All people should be included. You

4/04/2024 01:15 PM	don’t need to focus on a specific group or community that is absurd.
Screen Name Redacted 4/04/2024 01:39 PM	Everyone
Screen Name Redacted 4/04/2024 01:44 PM	Jeff Hunt
Screen Name Redacted 4/04/2024 06:13 PM	Retirees. People living on fixed income cannot keep up with the increase of taxes and fees. Council should not be able to buy buildings, aka Bank of America building or close pools without a vote from the people who live here in the community!
Screen Name Redacted 4/04/2024 06:58 PM	Long-term residents. Those that value our history as a blue collar community tied to our local lake and rivers, and not by expensive speed boats and exclusive communities! Anyone that values our history. Taking out the Christian Church is nothing short of criminal! You people should be ashamed of yourselves!!!!
Screen Name Redacted 4/04/2024 07:26 PM	Stop talking about inclusion unless it means a seat at the table. You guys are a brick wall--nothing gets through. I love the town, and despise it's government.
Screen Name Redacted 4/04/2024 07:36 PM	Non religious groups (we have a LOT of Christian churches and this can make other religions or nonreligious folks feel not included and/or silenced). LGBTQIA+. Young residents.
Screen Name Redacted 4/05/2024 11:41 AM	Every citizen in the city Developers should have no say in anything Look at refining zoning Include downtown camas association Get the mill owners involved
Screen Name Redacted 4/06/2024 07:48 AM	Small business owners should definitely have priority in conversations.
Screen Name Redacted 4/06/2024 02:58 PM	Everyone
Screen Name Redacted 4/06/2024 10:49 PM	All the community, not just developers and people with deep pockets.

Screen Name Redacted 4/08/2024 09:20 AM	Not sure, I'm generally happy with the moves I've seen, other than the all-important density issue of new construction. This city shouldn't need the increased revenues from high density living. It's grown so much recently that there's plenty of new revenue coming in. BTW, tip of the hat to the designers of the roundabout near Round Lake, I think it's incredibly well done. A gorgeous, and artfully done PNW roundabout. Please stay with that level of thought and pride for our community that we love so much.
Screen Name Redacted 4/08/2024 12:48 PM	• Chamber of Commerce • Engage other neighborhoods • Youth – Boy/Girl Scouts, Teen involvement (HS) • Senior voice needs representation (AARP) • New residents (need connection, have different/outside views) • Legacy residents (those having hard time with growth) • Renters
Screen Name Redacted 4/12/2024 10:29 AM	More community surveys and making sure older residents who don't use social medial are still being included in the community decisions
Screen Name Redacted 4/12/2024 01:45 PM	All members of the community should have easy opportunity to have a voice and be involved in formulating the plan for the future of their home.
Screen Name Redacted 4/12/2024 03:40 PM	No comment other than to keep doing what you're doing. For example, we received a postcard notification of the planning process.
Screen Name Redacted 4/12/2024 05:38 PM	Everyone.
Screen Name Redacted 4/12/2024 08:46 PM	local business owners, everyone who lives near enough to consider Camas home.
Screen Name Redacted 4/12/2024 09:08 PM	30-40 year olds
Screen Name Redacted 4/13/2024 04:49 AM	I think this survey is a great start to get opinions from community. From there, you can have city officials to do an out reach for anyone who shows an interest in getting more involved in decision making for Camas. I think Steve Hogan leadership is superb and we are fortunate to have him as mayor.

Screen Name Redacted 4/13/2024 06:19 AM	Offer survey to the local high schools so our students/future community members have a say. Have the students complete the survey during school time
Screen Name Redacted 4/13/2024 07:03 AM	I think residents of downtown should have a large voice.
Screen Name Redacted 4/13/2024 03:33 PM	Business owners, representatives of various walks of life - professional, trade, young, seniors, etc., experts in development and architecture and history to help balance growth with preservation of community and history.
Screen Name Redacted 4/13/2024 04:36 PM	Listen to long time locals and not let the voice of ex-Californians drown out the loyal.
Screen Name Redacted 4/13/2024 05:05 PM	low income familys, people of minority groups
Screen Name Redacted 4/14/2024 11:03 AM	All known groups in the area should be engaged with.
Screen Name Redacted 4/14/2024 11:11 AM	Talk to people where they are at and don't rely on the handful of engaged residents who are actually paying attention. Attend public events and make it easy for folks to provide input.
Screen Name Redacted 4/14/2024 05:39 PM	People who grew up here, people who are not motivated by increasing tax dollars, profits, and development. People who are interested in conservation and preserving the qualities of camas we stay here for.
Screen Name Redacted 4/15/2024 06:40 AM	Neighborhood associations such as the Goot Park Neighborhood, Oak Park neighbors, etc, Down town businesses, Downtown Churches.
Screen Name Redacted 4/15/2024 10:39 AM	Small business owners! Their voices matter to Camas' identity much more than overpaid, out of town developers.
Screen Name Redacted 4/15/2024 10:53 AM	Include the tourism industry. Economic sustainability groups, historic preservation experts, and of course environmental experts.

Screen Name Redacted 4/15/2024 02:26 PM	diverse number of residents, local businesses and other organizations currently making Camas home
Screen Name Redacted 4/15/2024 02:56 PM	Everybody should be able to have a voice
Screen Name Redacted 4/15/2024 04:36 PM	Included Camas residents, with an emphasis on citizens who have been in the area over ten years. They were here and I'd be interested in hearing their voices, what they would like to see happen to the place they have called home longer than recent transplants. I have lived here for less than a year so I am not in that group, but preserving the home town feel is vital.
Screen Name Redacted 4/15/2024 05:23 PM	Ward meetings and presentations. The "Open House" approach to divide and conquer is not appreciated.
Screen Name Redacted 4/15/2024 06:59 PM	Include senior citizens, longtime Camas residents and children under 10 for outdoor parks (they have some of the best ideas).
Screen Name Redacted 4/16/2024 09:10 AM	Only residents of Camas - preferably, people who have resided here for at least 5 years.
Screen Name Redacted 4/16/2024 03:59 PM	The city should be honest about all the costs and increases to property taxes instead of having a bunch of "feel good" meetings with plans to widen this corroder, fix the lake, etc.
Screen Name Redacted 4/16/2024 08:21 PM	Well, I think it will be helpful to engage people who don't typically participate in this. I see a people who are unplugged. I can understand a bit why. I can understand a bit why. So often it feels like the city has already chosen what they want to do; my voice doesn't matter.
Screen Name Redacted 4/17/2024 08:06 AM	Everyone possible
Screen Name Redacted 4/17/2024 02:49 PM	I live just outside city limits. I would love to see good engagement with people living outside the city limits, since those limits could expand, with those people having a say both in Camas and whether they want to be incoorperated into the city proper.

Screen Name Redacted 4/17/2024 05:10 PM	Unsure
Screen Name Redacted 4/17/2024 05:48 PM	Parents and seniors
Screen Name Redacted 4/17/2024 05:58 PM	We need to make sure our diverse population is included and feels welcome to participate and voice their ideas and needs.
Screen Name Redacted 4/17/2024 09:07 PM	All
Screen Name Redacted 4/18/2024 07:28 AM	Hiking trails. Safety. Infrastructure
Screen Name Redacted 4/18/2024 09:31 AM	Want it to be inclusive, but I'm not sure how that is best accomplished.
Screen Name Redacted 4/18/2024 09:52 AM	We'd suggest engaging with residents from around town; being proactive to reach out to minority residents so that they feel their voices are heard as well.
Screen Name Redacted 4/18/2024 03:33 PM	Create as much opportunity as possible for residents to be involved and advocate for decisions that will impact the developments.
Screen Name Redacted 4/19/2024 05:56 PM	Retailers, school staff, WDOT because of 3rd Ave, residents, AirB&B owners, bike shop owners, hiking groups.
Screen Name Redacted 4/19/2024 07:24 PM	People with knowledge in the areas needed.
Screen Name Redacted 4/20/2024 10:55 AM	People move to Camas for the schools. Education/educators should always be at the heart of any planning.
Screen Name Redacted 4/20/2024 06:40 PM	Everyone

Screen Name Redacted 4/20/2024 08:25 PM	The people that actually live in camas
Screen Name Redacted 4/22/2024 12:10 PM	Non-religious, lgbtqia+, young citizens
Screen Name Redacted 4/23/2024 09:08 PM	A combination of lifelong and newer residents should be engaged to capture various viewpoints.
Screen Name Redacted 4/23/2024 09:20 PM	Developers, Cyclists, and students.
Screen Name Redacted 4/26/2024 07:36 AM	youth. Please engage our highschoolers. Each time I have worked with them I am impressed by their ideas and dreams. They want to help.
Screen Name Redacted 4/27/2024 12:34 PM	Young adults, Seniors and Parents of Young children.
Screen Name Redacted 4/27/2024 05:02 PM	People like me who have lived and paid taxes here for years.
Screen Name Redacted 4/29/2024 10:59 AM	Business owners, pedestrians, bicyclists
Screen Name Redacted 4/29/2024 12:38 PM	All age and economic groups. Have these issues discussed with recommendations submitted by the Camas School District students.
Screen Name Redacted 5/02/2024 03:06 PM	high school kids
Screen Name Redacted 5/02/2024 09:31 PM	I'm not sure how connected the city is to large, local Camas employers (like TSMC, Analog Devices, Fisher, etc), but its difficult to partake in city listening sessions with our work schedules and I don't often hear about them unless I go looking for them. Perhaps asking employers to advertise when these sessions are happening, to incentivize or encourage Camas residents to take time off to partake in them, or to ask local employers if they would be willing to host future listening sessions where city officials can come onsite and meet with their staff would be helpful. This would really open up the pool of folks who are able to give feedback. If you can come directly to residents in the places that they already spend 40-50 hours of their

	lives where they probably aren't having to navigate childcare or intentionally leaving work to attend, you'll get a much better cross-section of who is living and working in your community and what they need.
Screen Name Redacted 5/03/2024 08:07 AM	Better outreach to residents. I had no idea this survey was happening until I read an article in the Post-Record on May 3rd.
Screen Name Redacted 5/03/2024 01:40 PM	School groups (through PTA
Screen Name Redacted 5/03/2024 04:05 PM	Since I'm a mid age 70 resident, keeping this group engaged/informed would be a priority for me. I can already see Camas growing & changing. Being included in communications is valued.
Screen Name Redacted 5/03/2024 04:05 PM	Communities that include apartments and houses not in Prune hill. There are many underprivileged communities that no one pays attention to.
Screen Name Redacted 5/03/2024 04:05 PM	All of the people who live in Camas.
Screen Name Redacted 5/03/2024 04:07 PM	It’s already pretty inclusive
Screen Name Redacted 5/03/2024 04:37 PM	New residents
Screen Name Redacted 5/03/2024 05:41 PM	Kids/teens/senior citizens
Screen Name Redacted 5/03/2024 06:03 PM	Please DO NOT use the current format and company publicly presenting the proposed roundabouts on Everett St.!!!! Attending those meetings was a total waste of time: it could've been presented in less than 10 minutes, with another 10 minutes for Q&A. I left after 75 minutes of useless twaddle, with maps that were vague and incomprehensible. Make sure that whatever outreach you use is succinct, clear, with handouts if needed, and stop "marketing" changes like what has happened as mentioned above. It is an embarrassing waste of money for the city, and tests citizens' time and patience. Of course the area needs roundabouts. But hammering on

	it over and over again is just sucking dollars from the city for unnecessary wasted time. We deserve better than that. Don't get fooled again by a slick marketer.
Screen Name Redacted 5/03/2024 06:01 PM	All of them. Old and young
Screen Name Redacted 5/03/2024 09:16 PM	Renters and young families struggling to afford housing
Screen Name Redacted 5/03/2024 09:55 PM	Everyone, especially those that have lived in Camas for generations. Focus not only specific communities, but accessibility. I didn't learn about this survey until I saw it on Facebook, which I only use an about once a month, luckily two days before the survey ends. Put signage up historic downtown and in other highly trafficked economic areas. Mail flyers out with QR codes.
Screen Name Redacted 5/04/2024 09:19 AM	Include all the economic sectors that live in Camas.
Screen Name Redacted 5/04/2024 04:41 PM	environmental groups, school communities, neighborhood associations
Screen Name Redacted 5/04/2024 05:28 PM	All, include young people
Screen Name Redacted 5/04/2024 05:30 PM	mtb-ing trail running fishing
Screen Name Redacted 5/05/2024 08:40 AM	Low income families especially around housing availability and affordability
Screen Name Redacted 5/05/2024 09:13 AM	Young, diverse families, especially those who have recently relocated to the area. We need young families to be able to live in Camas and send their kids to Camas schools.
Screen Name Redacted 5/05/2024 12:39 PM	Facebook or USPS mail
Screen Name Redacted	Make sure to engage those people/groups who live here because of

5/05/2024 03:21 PM	the green areas, wildlife and trails. We do not want those areas to be developed or cut off from each other
Screen Name Redacted 5/05/2024 06:11 PM	School District, Larger Land owners and new businesses
Screen Name Redacted 5/05/2024 09:37 PM	Long time Camas residents. People who have seen this community grow and evolve. They have a lot to say and contribute.
Screen Name Redacted 5/06/2024 02:01 PM	Schools, Port, parents, retirees, teens, churches, event attendees,
Screen Name Redacted 5/06/2024 03:27 PM	Infrastructure
Screen Name Redacted 5/07/2024 08:24 PM	Camas is not that large. Just focus on the citizens of Camas.
Screen Name Redacted 5/12/2024 07:25 AM	Elderly and those without digital access. Young families. Those with less economic means to afford housing .
Screen Name Redacted 5/12/2024 06:47 PM	Local non-profits, service and community groups. HOAs. Don't depend on putting it out on social media.
Screen Name Redacted 5/13/2024 04:33 PM	The greatest effort should be to engage people who don't participate. Many don't participate because of work and home schedules, lack of time, lack of knowledge of the process. The needs of businesses must be considered. Finally, future generations cannot participate, but their needs must be incorporated. We should leave Camas better than we found it.
Screen Name Redacted 5/13/2024 09:22 PM	Homeowners

OurCamas2045 Mapping Tool Responses

Opportunity	COMMENT	DATE	ADDRESS
Opportunity	Trail system connecting Heritage trail to this side of the lake along the BPA power lines and connecting to the Lacamas Lake Elementary would be great to connect all the new development in Green Mountain area to the school and existing trail systems, providing walkable and bikeable transportation options within Camas	16-Feb-24	1616 Northeast 232nd Avenue, Camas, Washington 98607, United States
Opportunity	This area at the Parklands neighborhood is identified in the Camas master plan as lacking a neighborhood park. There are no walking distance park for all the homes in this neighborhood. The commercial pads have remained empty for 7 years now, and most of the neighbors would prefer a pocket park rather than an unsightly commercial building. This is a residential neighborhood and any additional commercial buildings would not be coherent.	1-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	Park	1-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	I would like to see a park at this location	1-Mar-24	3623 Northwest Mcmaster Drive, Camas, Washington 98607, United States
Opportunity	There are no community parks in walking distance from our neighborhood. This would be a lovely space for the community to gather and enjoy. No more commercial buildings please.	1-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	In our community, there is so many new developments and corporate buildings, but we need a space where we can all enjoy a neighborhood park	1-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	Excellent location for a park! Very much needed for our area!	1-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	Camas Meadows is at a crossroads - we can either add another concrete structure or create a vibrant green space for our community. The choice is clear. Our residents, both current and future, deserve a park, not another parking lot. A park in Camas Meadows means fresh air, natural beauty, and a gathering place for families. It's an investment in our health, environment, and community spirit. Let's turn this area into a green haven, not another gray footprint. Thank you for considering a brighter, greener future for our city.	2-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	In need of a community park, no walkable park in the vicinity for this large community.	2-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	We NEED a playground/park here! There is no walkable park serving allll of these homes, and more homes are currently being built. It would also help beautify the area as a contrast to the many commercial buildings popping up all around us. Camas growth has to have business and families in mind, as the balance of those two are the only way to longevity of a successful, thriving, evolving city. Thank you!	2-Mar-24	3623 Northwest Mcmaster Drive, Camas, Washington 98607, United States
Opportunity	This area needs a community park. Currently, there are no playgrounds within walking distance for the many families living in this residential area. We do not need any more empty commercial “boxes”. The City should be championing open spaces and parks.	2-Mar-24	3530 Northwest Mcmaster Drive, Camas, Washington 98607, United States
Opportunity	We need a neighborhood park, no more corporate buildings or storage unit buildings not cohesive with the families that live in our neighborhood	2-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	Please no commercial buildings here as this is by our homes and community	2-Mar-24	3937 Northwest Lake Road, Camas, Washington 98607, United States
Opportunity	As a growing community with numerous neighborhoods filled with young children, the addition of a neighborhood park would greatly enhance the childhoods experiences of our future leaders while providing a safe space for kids to congregate.	2-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	This would be a great site for a covered park and water splash playground. There are enough commercial buildings around this area but no trails or walkable places for kids to be kids. There needs to be access to safe places for kids in residential areas.	3-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	We do need a park for our kids to play nearby our house	3-Mar-24	4027 Northwest 62nd Circle, Camas, Washington 98607, United States
Opportunity	Ideal location for a community park in the fast developing master planned community of Camas Meadows	4-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	Dynamic parking fees should be implemented based on use. The more parking spots in use, the higher the fees. Provide alternatives for access to the lake such as bike racks etc. Boats and trailers should definitely pay higher fees as there are impacts to the lake water quality from the spilling of oil and gas into the water.	6-Mar-24	227 Northeast Lake Road, Camas, Washington 98607, United States
Opportunity	Develop open areas in the downtown core, add infill projects, and reduce parking lots. Move the church from the main street so that businesses which promote commerce can generate funds for the city. The church needs to find a place with less impact to the city.	6-Mar-24	605 Northeast 3rd Avenue, Camas, Washington 98607, United States
Opportunity	This section of NW Lacamas Ln suffers from very poor maintenance over the years and has become an eyesore. Many of the sunset maples planted along the roadside have died from lack of care and irrigation. The forested areas need management to encourage the success of selected trees and reduce the fire hazard. The sidewalk should be periodically cleaned so pedestrians can safely use it without fear of slipping or being entangled by blackberries.	6-Mar-24	3436 Northwest Lacamas Lane, Camas, Washington 98607, United States
Opportunity	There are no local parks and continued development of commercial buildings that only bring traffic and light pollution are not desired additions to our area.	6-Mar-24	3601 Northwest Camas Meadows Drive, Camas, Washington 98607, United States
Opportunity	In collaboration with the school district, develop an aquatic center including 25yard x 50meter competition pool and separate recreation pool on the former UL campus. The facility can provide swimming and aquatic programs for all ages, including but not limited to swim lessons, aquatic fitness, recreational year round swim team, high school swim team, lap and recreational swimming, water polo. The facility can also be used to develop a learn to swim program with the school district so that all children in Camas receive vital learn to swim instruction as part of the PE curriculum. We are surrounded by various bodies of water and learning to swim is an essential life skill that all children should have access to. Refer to current development of Lake Oswego Recreation and Aquatics Center.	6-Mar-24	2815 Northwest Leadbetter Drive, Camas, Washington 98607, United States
Opportunity	Update the very old and outdated playground equipment	8-Mar-24	623 Northeast 15th Avenue, Camas, Washington 98607, United States
Opportunity	Update the very old and outdated playground equipment	8-Mar-24	Camas Municipal Pool, 120 Northeast 17th Avenue, Camas, Washington 98607, United States
Opportunity	Relocate church and use the space for tax generating businesses like restaurants and shops	8-Mar-24	605 Northeast 3rd Avenue, Camas, Washington 98607, United States
Opportunity	Perfect area to incorporate for higher density homes	12-Mar-24	27200 Northeast 9th Street, Camas, Washington 98607, United States
Concern	A lot of speeding, racing, and extremely loud vehicles in this circle on a daily basis, most notably on the weekends.	15-Feb-24	1619 Northwest 6th Avenue, Camas, Washington 98607, United States
Concern	A lot of speeding (60 mph +) along 232nd Ave	16-Feb-24	1616 Northeast 232nd Avenue, Camas, Washington 98607, United States
Concern	U-turns should not be allowed at this busy intersection. During rush hours, this intersection is a very dangerous spot that many decide to u-turn--it creates many problems for people coming and going.	4-Mar-24	Northwest Payne Street, Camas, Washington 98607, United States
Concern	NW Payne Street has become a way for traffic to bypass Friberg-Strunk Street to get to Lake Road and head eastbound. Traffic is frequently moving at double the posted speedlimit on this road and traffic calming devices are needed--speed bumps, preferably.	4-Mar-24	6041 Northwest Payne Street, Camas, Washington 98607, United States
Concern	NW Payne Street has become a way for traffic to bypass Friberg-Strunk Street to get to Lake Road and head eastbound. Traffic is frequently moving at double the posted speedlimit on this road and traffic calming devices are needed--speed bumps, preferably.	4-Mar-24	6201 Northwest Payne Street, Camas, Washington 98607, United States
Concern	This stop sign here is often run through by cars and could have better visibility to increase safety and reduce collisions.	6-Mar-24	2335 Northwest Astor Street, Camas, Washington 98607, United States
Concern	This area currently has a yellow flashing light at this intersection that absolutely needs a stop light or turn it into a four way stop because there have been far too many almost collisions at this intersection. I see people often run the stop sign here.	6-Mar-24	513 Northeast 6th Avenue, Camas, Washington 98607, United States
Concern	This entire area is an eyesore and an environmental nightmare. The city should prioritize the shutdown and cleanup of this area. Careful planning for development should occur.	6-Mar-24	119401 SE 1 Ave, Camas, Washington 98607, United States
Concern	Rogue trail building needs to be addressed. Mountain bikers have modified terrain even after the city has removed and closed area. Notice should be made the bikes will be banned if the closures are not respected.	6-Mar-24	1701 NE 3rd Ave, Camas, Washington 98607, United States
Concern	This intersection is very dark and dangerous at night. The two dimly lit acorn lights should be replaced with downward facing brighter lights. A flashing pedestrian crossing should be installed because this is a trial access point.	6-Mar-24	Northwest Lacamas Lane, Camas, Washington 98607, United States
Concern	This section of road needs a bike lane	7-Mar-24	2305 Northeast Goodwin Road, Vancouver, Washington 98607, United States
Concern	Dahlia Rd is a common road used for connecting Prune Hill to 38th Ave. It is common for people to do double the speed limit flying down the hill. Speed bumps need to be placed here for the safety of children in the Holly Hills Neighborhood. There are lane narrowing devices in place on this road and people still drive incredibly fast and unsafe up and down this street. The lane narrowing does not help and something else needs to be incorporated please.	9-Mar-24	3429 Northwest Dahlia Drive, Camas, Washington 98607, United States
Other	Cafe Riccolo, events in downtown, library, downtown businesses and restaurants, being out on the sidewalk (From April 1st First Friday)	8-Apr-24	306 Northeast Everett Street, Camas, Washington 98607, United States
Other	Camas High School (from April 1st First Friday)	8-Apr-24	26900 Southeast 15th Street, Camas, Washington 98607, United States

Other	Heritage park and Lacamas, Lacamas has been a special summer spot. (from April 1st First Friday)	8-Apr-24	222 Northeast Lake Road, Camas, Washington 98607, United States
Other	Camas Lions Club and all the good they do (from April 1st First Friday)	8-Apr-24	Domino's Pizza, 3512 NE 3rd Ave, Camas, Washington 98607, United States
Other	Round Lake is so peaceful but also has a sense of adventure (from April 1st First Friday)	8-Apr-24	3131 Northeast Everett Street, Camas, Washington 98607, United States
Other	Walking trails and enjoying the river (from April 1st First Friday)	8-Apr-24	2565 SE 6th Ave, Camas, Washington 98607, United States
Other	Costco! Very happy we have so many shopping options (from April 1st First Friday)	8-Apr-24	4863 Northwest Lake Road, Camas, Washington 98607, United States
Other	The people, the community (from April 1st First Friday)	8-Apr-24	217 Northwest 21st Avenue, Camas, Washington 98607, United States
Other	We love converts in the park during the summer and walking our dog around the perimeter. The little library is always a must-stop too (from April 1st First Friday)	8-Apr-24	1433 Northeast Birch Street, Camas, Washington 98607, United States
Other	Lacamas Creek Bridge is a quick walk from downtown to the bridge is a go-to refresher to get out in the fresh air during the work day (from April 1st First Friday)	8-Apr-24	Lower Falls, Camas, Washington 98607, United States
Other	Paddle board and kayak and other water sports (from April 1st First Friday)	8-Apr-24	Northwest Lake Road, Camas, Washington 98607, United States
Other	The area round the port has become like home. It is so close to other areas I love - my apartment, downtown area (especially the library) the Lacamas trails and the drive to the gorge. Prior to this the Livingston Mountain area was home for me. Grew up there so it holds a special place for me.	8-Apr-24	The Puffin Cafe, 14 S A St, Washougal, Washington 98671, United States
Other	Downtown has local shops and fun events and the library. It is a friendly, small town where people know each other. (From April 1st First Friday)	8-Apr-24	528 Northeast 4th Avenue, Camas, Washington 98607, United States
Other	No comment (From April 1st First Friday)	8-Apr-24	2441 Northwest Logan Street, Camas, Washington 98607, United States
Other	As a private pilot I'd love to see an expansion of the airport and building of more hangars (From April 1st First Friday)	8-Apr-24	1109 Northeast 265th Court, Camas, Washington 98607, United States
Other	Downtown camas, First Fridays and meeting neighbors (From April 1st First Friday)	8-Apr-24	413 Northeast Everett Street, Camas, Washington 98607, United States
Other	Camas Yoga and Co! Very welcoming instructors and a great a variety of classes (From April 1st First Friday)	8-Apr-24	703 Northeast 4th Avenue, Camas, Washington 98607, United States
Other	Lacamas Lake is my happy place, I love doing stand up paddle in the summer and walking the trails in the winter (From April 1st First Friday)	8-Apr-24	Northwest Lake Road, Camas, Washington 98607, United States
Other	Downtown camas events and gatherings (From April 1st First Friday)	8-Apr-24	Fuel Medical Group, 314 ne birch st, Camas, Washington 98607, United States
Other	First Friday (From April 1st First Friday Event)	8-Apr-24	316 Northeast Dallas Street, Camas, Washington 98607, United States

OurDowntownCamas 2045 Mapping Tool Responses

CATEGORY	COMMENT	DATE	ADDRESS
Opportunity	Opportunity for Traffic calming (slowing) & bike lanes. Crossing this street can be scary because cars go way too fast.	18-Feb-24	329 Northeast 6th Avenue, Camas, Washington 98607, United States
Opportunity	Maintain/Support Downtown US Post Office: We are so lucky to have this beautiful historic USPS building in operation in downtown Camas. The copper roof and hand-painted WPA mural inside are priceless additions to the ambiance of DOwntown Camas, not to mention the convenience of having the post office close to the Library and downtown businesses. Please support and maintain this treasure! Thank you.	18-Mar-24	440 Northeast 5th Avenue, Camas, Washington 98607, United States
Opportunity	Please Add Crosswalk Here: So many people including children cross this multi-lane street at this intersection, including students from Helen Baller, Liberty and Hayes on field trips, etc. Also people cross here when they park in the neighborhood to attend events downtown. Cars usually do not stop for people waiting to cross the street (I think they don't expect people to cross because there is no formal crosswalk). There should be a striped crosswalk here for safety! Thank you.	18-Mar-24	436 Northeast Garfield Street, Camas, Washington 98607, United States
Opportunity	Excellent Model for Future Development: The newly-approved building being built here, to replace the 2 church buildings, is an excellent model for future development in the Downtown Camas area. It is essential to have denser multi-use development, with retail on the ground-floor, housing/apartments/condos on upper floors, and secured parking underground. In future, some new buildings may include office space in upper levels (with mountain/river views) for high-end business (like 125 Bank Street, Missoula, Montana). Please ensure that all future development follows a model like this. No single-story buildings should be built. Thank you.	18-Mar-24	630 Northeast 6th Avenue, Camas, Washington 98607, United States
Opportunity	YMCA/Pool Opportunity: This would be an excellent location for a future YMCA with pool. Note: For future bond measures, please DO NOT add other costs like sports fields onto a pool bond measure - it inflates costs and scares taxpayers. Keep a future bond vote lean. The past pool bond vote was a gigantic missed opportunity, alas (low interest rates). Thank you.	18-Mar-24	1101 Northwest Ash Street, Camas, Washington 98607, United States
Opportunity	This corridor has a lot of opportunity for additional mixed-used development with restaurants and apartments. The permitted office building would not serve the community so much as more retail space similar to Acorn & Oak or the Lakeside Market.	3-Apr-24	3631 Northeast Everett Street, Camas, Washington 98607, United States
Opportunity	Opportunity for an EV Charging station - Tesla Supercharger etc.	3-Apr-24	636 Northeast 2nd Avenue, Camas, Washington 98607, United States
Opportunity	This is wasted space next to the bank.	3-Apr-24	332 Northeast Cedar Street, Camas, Washington 98607, United States
Opportunity	This parking lot is wasted space and breaks up the end of Cedar in a very bad way. An anchor development here and across the way near the bank could extend Cedar	3-Apr-24	Mill City Brew Werks, 339 NE Cedar St, Camas, Washington 98607, United States
Opportunity	This street needs traffic slowing measures like a median, more vegetation, and a bike lane.	3-Apr-24	325 Northeast 3rd Avenue, Camas, Washington 98607, United States
Opportunity	Put back our pool!	4-Apr-24	120 Northeast 17th Avenue, Camas, Washington 98607, United States
Opportunity	Consider blocking off a few blocks of NE 3rd Ave for foot traffic only. Allow restaurants and pubs to push out into this pedestrian space and encourage more social and community interaction.	4-Apr-24	533 Northeast 3rd Avenue, Camas, Washington 98607, United States
Concern	Too fast! Cars go really really fast here. 4 lanes Stroad with a 25 mile an hour speeds limit. If we want people to go slow here we need to narrow the road.We could easily go down to two lanes with protected bike lanes and trees. Bike lanes that are safe enough for families will connect more people with downtown.	18-Feb-24	1642 Northeast 3rd Avenue, Camas, Washington 98607, United States
Concern	A proposed gas station and car wash at this location could create runoff to Lacamas Creek and Lacamas Lake. Local residents are keenly aware of many vehicular collisions at this intersection that are not reported in traffic reports for developers. This would add more traffic problems. Union High School is on this road.	2-Mar-24	20101 Northeast 13th Street, Camas, Washington 98607, United States
Concern	This site deserves considerable attention given its waterfront access and years of operation that have potentially impacted the soil, water and groundwater across the entire property. It should be remediated to unrestricted use and groundwater categorized (and if needed remediated) as potable water	11-Mar-24	119401 SE 1 Ave, Camas, Washington 98607, United States
Concern	Along with the mill to the north, this property should be fully remediated to unrestricted use when/where economically feasible and groundwater classified (remediated) to potable	11-Mar-24	Lewis and Clark Highway, Camas, Washington 98607, United States
Concern	Missed Opportunity: When this building was approved it should have been required to be a multi-story building with apartments/housing or high-end office space (with mountain views) on upper floors. Downtown Camas needs denser mixed-use development. No more one-story buildings should be built. Thank you.	18-Mar-24	450 Northeast 3rd Avenue, Camas, Washington 98607, United States
Concern	Dangerous Crosswalk: I cross this sidewalk most days with my child when walking to/from school. In the mornings especially, cars coming from the north (driving south) DO NOT stop. If there is a car/bus turning east onto NE 22nd, it is impossible to see people crossing in the crosswalk from the western (southbound) lane. My child and I have almost been hit several times while crossing. Drivers are always apologetic - two drivers even stopped IN the crosswalk when we were midway across the street (about 5-10 feet away from the car), rolled down their window and apologized and said they didn't see us! I wonder how many times this happens to others crossing here. This crosswalk needs a flashing light like the one further down. Thank you.	18-Mar-24	2139 Northeast Everett Street, Camas, Washington 98607, United States
Concern	Corrupt City Council using prime retail space for their offices. The city needs to move their offices!	4-Apr-24	306 Northeast Everett Street, Camas, Washington 98607, United States

Concern	People have started creating a 2nd lane of traffic at the stop sign heading out of town at the corner of the mill. While the car in the primary lane is waiting for traffic coming up Adams from the left - the downtown/mill office area - who have right-of-way to turn - or go straight- the new "2nd lane" people are sneaking around and going through the intersection while right of way traffic is also in the intersection. This started in 2020 and happens almost daily now. This intersection needs better control and signage. The 2nd lane should be right turn only or no 2nd lane space. (It's currently marked as a parking space, in front of the empty lot and below the "free public parking" lot.	4-Apr-24	430 Northeast Adams Street, Camas, Washington 98607, United States
Concern	This area has always had high pedestrian use and does not have good evening or night time lighting on the corner. It could use another crossing light as well.	4-Apr-24	1512 Northeast Everett Street, Camas, Washington 98607, United States
Concern	Walking traffic is a major driver of small businesses. Allowing a single entity to buy an entire block + more that serves no walkability on 6 days a week hurts businesses. Encourage more restaurants.	4-Apr-24	304 Northeast 4th Avenue, Camas, Washington 98607, United States
Concern	Dangerous intersection. Drivers fail to understand yield light. Convert to roundabout to allow the dominant flow of traffic.	4-Apr-24	201 Northeast 6th Avenue, Camas, Washington 98607, United States
Concern	Encourage development of retail/restaurants/commerce businesses rather than a single entity using entire block for non-commerce reasons. This is a poor use of a premium location and disrupts the feel of downtown Camas.	4-Apr-24	304 Northeast 4th Avenue, Camas, Washington 98607, United States
Concern	Three schools in the neighborhood require walking/biking/nonbus options for families nearby and NE 19th is a major road for school-age children going to and from school, as well as several pedestrians and cyclists. Both speeding and flooding on this road are common and known issues (reported to the city multiple times). The city needs to offer viable, long-term solutions for both problems.	4-Apr-24	230 Northeast 19th Avenue, Camas, Washington 98607, United States
Concern	Please consider adding a sidewalk that connects the lake recreation area to NE 22nd. This would provide safe walking/biking access from downtown all the way to the lakes.	4-Apr-24	2732 Northeast Everett Street, Camas, Washington 98607, United States
Concern	I agree that the Mill Clean Up level and adequacy is key for our City's present and future - This site deserves considerable attention given its waterfront access and years of operation that have potentially impacted the soil, water and groundwater across the entire property. It should be remediated to unrestricted use and groundwater categorized (and if needed remediated) as potable water	5-Apr-24	119401 SE 1 Ave, Camas, Washington 98607, United States
Concern	The area at the top of these steps could use some erosion control - the steps are very frequently used and you can tell right at the top there are some areas that are eroding away - don't want the steps to be damaged, or someone to fall.	5-Apr-24	756 Northeast Birch Street, Camas, Washington 98607, United States
Concern	The sidewalks are too narrow and close to the road for a 35 mph speed limit. A wider sidewalk with a buffer between the road and the sidewalk should be installed, the speed limit should be reduced to 25 mph, or the sidewalks should be relocated to run through Forest Home Park. There are often drivers traveling 5-10 mph over the speed limit who do not slow down or move over when passing children walking only a few feet away. This is a tragedy waiting to happen.	5-Apr-24	957 Northwest 6th Avenue, Camas, Washington 98607, United States
Concern	The sidewalks are too narrow and close to the road for a 35 mph speed limit. Additionally, this road has no business being four lanes. It starts as two lanes in Camas, then turns to four lanes, and then back to two in Washougal. Nearly every day, kids risk their lives walking to the skate park along this road. Reduce the number of lanes to two, lower the speed limit, widen the sidewalk, and add a bike lane.	5-Apr-24	1642 Northeast 3rd Avenue, Camas, Washington 98607, United States
Concern	Curb extensions should be added to narrow the road, slow traffic, and shorten the crosswalk distances. In the short term, this could be done cheaply by adding planters, bike racks, and art installations. A good example is Main Street in Vancouver.	5-Apr-24	231 Northeast 3rd Avenue, Camas, Washington 98607, United States
Concern	All of Crown should have sidewalks on both sides. It's dangerous for people to walk and this should go from NE 3rd Ave all the way up to at least SE Nourse Rd. for anyone walking to the highschool.	7-Apr-24	Southeast Crown Road, Camas, Washington 98607, United States
Concern	Please limit the amount of space the church can take up in downtown. Fully support everyone's right to practice their faith, but this is the part of 4th that's just dead and hurts the other retail business.	7-Apr-24	Northwest 6th Avenue, Camas, Washington 98607, United States
Concern	Please do not modernize the downtown and keep large organizations like banks, fast food, other retail chains out. One of the greatest appeals of the town is the small businesses in down town and would love to see it stay that way.	7-Apr-24	Northwest 6th Avenue, Camas, Washington 98607, United States
Concern	For new developments there should be a heavy levy on the homes to help subsidize the ever growing costs of expansion. The locals that live here should not be penalized because of growth. This is coming from someone who moved here from somewhere else. I'm happy to pay more to avoid others being hurt by the rising costs. On the flip side, give incentives for builders building homes under the median by X percentage. Give them an incentive to build lower cost homes and not million dollar McMansions.	7-Apr-24	2994 North 49th Avenue, Camas, Washington 98607, United States
Other	It would be awesome if GP allowed giant murals on the mill - could be a joint funding project. Beautifying the mill as you approach Camas would add immensely to the city while highlighting it's role in our history.	3-Apr-24	Northwest 6th Avenue, Camas, Washington 98607, United States

Our Camas 2045 Summit #1 Comment Form submissions

In response to "How do we achieve our vision? Share your top three big ideas for each topic area!"

Station 3: Our Community

- Having amenities for younger children such as smaller playgrounds, indoor play facilities, etc.
- Need for more sporting fields/indoor swimming pool for highschoolers to use
- We need to reunite our community to be supportive of everyone and encourage more diversity
- Broker a deal with GP to use the five acres where old buildings were demolished a few years ago to build a community center.
- Build a community center, arcade and mini golf.

Station 4: Our Environment

- Connect the bike infrastructure and bike rentals
- Is there a solution to the current well issue before adding more dwellings?
- We seem to be lacking mature landscaping in new construction neighborhoods, can some trees be preserved?
- Please continue including green spaces for multipurpose, especially sports rec areas for both soccer, little league, etc. (don't forget the girls softball – they have gotten the shaft when it comes to shared space) for great examples see Port of Klamath, Hazel Dells sports center and Hockinson Meadows Community Park.
- More access points to Lacamas Lake, and public transit to lake. Continuous trail around the lake.
- Encourage GP to gradually clean up the site to show they care about Camas.
- Save more parks/green spaces, keep more trees, and better garbage and recycling all over.
- How were these goals developed and how will they be used? Will there be policies that are developed as a result?
- What is a heritage tree program?
- Sometimes trees are planted too close together which makes it difficult to see oncoming traffic.
- The Port of Camas-Washougal has a program that helps property owners retrofit their buildings and improve the insulation.
- There is a coastal town in California, Los Osos, that has a walkway above marshland. There is a trail near Lacamas Lake near some lily pads and some type of boardwalk could help to stop people from walking over the lily pads.
- Parking is usually full near the trailhead for the Lacamas Heritage Trail off of NW Alexandra Lane. A larger parking lot is needed.
- Are there plans to address the well? There has been some talk about removing the well.
- The City should think about adding Redwoods to the tree canopy. They grow faster than oak or cedar trees.
- Holding listening sessions on evacuation routes is a good idea (Steve Hogan).
- Large trees should be protected at all costs. It is difficult to replace them.
- Utilities should be placed underground.
- Has the old mill come up at all in any of the vision statements?
- The City should pave the gravel pit near the mill.

Station 5: Our Neighborhoods

- More neighborhood nodes – coffee shops etc. in the suburbs.
- Need more affordable housing options – condos/townhomes
- Regulate the distance between trees when planting them. Try driving out of Deer Creek neighborhood at Ogden Street and 16th Ave to see what I mean. Once trees mature in width they block traffic sightlines on both the left and right. I have to pull into 16th Ave to see around the, albeit gorgeous, trees.
- Small pockets of business areas so people can walk from home.
- Make efforts to move power underground in some of the older neighborhoods
- Doggie waste bag stations

Station 6: Our Downtown

- More retail/restaurants would be nice to keep consistent traffic going through businesses.
- Available parking is already an issue, and I don't think a meter maid is the real solution with downtown events.
- We need a plan for potentially addressing traffic patterns at 6th Ave and Adams St.
- More diversity on type of businesses/services and more diversity in ownership. Less church/religious stamp on downtown. No chains, keep it local/small business.

Our Camas 2045 Summit #1 Poster Board Notes

In response to "Use a sticky note to write an idea for how we can achieve these goals." + indicates agreement by another attendee.

Station 3: Our Community

Goal: Camas' artistic and cultural heritage will be protected, enhanced, and commemorated.

- Start a community theatre – I'll help 503-270-7264
- Renovate/restore the community center

Goal: Community events, involvement activities, and youth focused activities will instill a sense of belonging among residents of all ages while making Camas an ideal place to raise a family.

- Create multicultural fair/event where everyone is included
- Partner with schools to have a multicultural fair

Goal: The City will promote a strong sense of community through transparent communication, outreach efforts, partnerships, and accessibility.

- Less chains of food and shopping, promote small business growth
- Partner with the school district and have regular meetings to share resources and ideas

Goal: Public places will be valued and protected spaces, with safe and well-maintained facilities that foster a sense of community and promote physical and mental health.

- Work with Camas Ivy League to maintain and control invasives
- Protect the city and county parks, remove invasive plants like Holly and blackberry and make sure modifications are for everyone
- Protect and support the library
- Use the grass are on 6th between Birch and Adams as a dog park. It will bring more people to downtown, and partner with Dog PAW, they run many parks including Dakota in Vancouver.
- We need a park/gathering space downtown. +1

Goal: Camas residents enjoy access to quality education and support their schools through partnerships and investments.

- Green Team at every school/sustainability and green practices at our schools
- Need safe transport walking corridors, also need facilities like internet
- Support economic development and green tech
- We need economic development as part of our overall vision! Bring in new businesses and support what's here!
- Add goal of strong economic development and partner with the DCA

Station 4: Our Environment

Goal: A network of parks, trails, and open space will connect neighborhoods, wildlife corridors, and natural resources and enhance the quality of life for residents and visitors.

- Heritage trailhead with parking is usually full and there are many more houses being built consider more parking for access to trail.
- Consider all the growth from new homes adds to overwhelming the park facility at round at facilities to the top side of round near lilies.
- Create boardwalk on the Lily fields trail to discourage damage by pedestrians.
- Please pave or gravel the mill ditch so it connects downtown with other amazing paths and

lakes.

Goal: Camas' infrastructure and transportation system will be able to withstand and recover quickly from extreme weather events and other hazards exacerbated by climate change.

- Bury all overhead electrical
- A pedestrian walkway on forest home Rd.
- Find upgrades to sewer and sewer systems before repaving
- Reform storm water modeling under climate scenarios to understand capacity of infrastructure and level of service requests

Goal: The City will embrace clean energy technologies to promote healthy air quality for all Camas residents.

- Retrofit older buildings to meet current code
- Clean up the GP mill to unrestricted use, recognize water clean up as potable, test at gallery wells for potential contamination of city drinking water
- Connect to our river/waterfront, stop and hold pollution sources responsible for water quality in lakes rivers and aquifers.
- More electric Car charging stations. +1

Goal: Camas' native landscape and tree canopy will be protected enhanced to maintain Camas' natural beauty and promote climate resiliency.

- Thank you for having a tree plan and maintaining our tree canopy downtown!
- Partner and support backyard habitat program
- Tree preservation on public and private property
- Save every big tree, you cannot get them back!
- Support native plants and nature spaces in the city, school green spaces and citywide bioswales. Expand list of permissible plants in bioswale.
- Redwoods.
- Remove invasive holly and blackberry
- Education to include out historical connection to founder of Earth day in city's motto and branding 'home of earth day'

Station 5: Our Neighborhoods

Goal: The City will provide public facilities that are resilient to climate change and meet the needs of the growing population.

- Recycling center instead of just garbage bins have opportunity for recycling bins.
- Please consider heat mitigation at the camas farmers market as it's getting so hot, better pavers? Covered structure or coverage system?
- Require new apartments to have air conditioning

Goal: The City will plan for and accommodate population and employment projections in a way that maintains Camas' quality of life and small town character.

- Multifamily units to allow people to walk to work but that requires a good bus system to get people around. +1

Goal: The City will cultivate a business environment that promotes local businesses and establishes Camas as a desirable place for investment

- Partners with CREDC to market the area and region to workers and tourists.

- Diverse sizes of business units, so many different businesses can exist. +1

Goal: the transportation system will accommodate anticipated growth and support the city's overall vision

- We need a lot more bike lanes particularly North Road around lake Lacamas
- As the city expanses outwards make sure the roads have the more bike lanes and sidewalk easements built by the developers buying the land
- Downtown 3rd St. must have Street elements, traffic calming to ensure pedestrian safety in crossing the street

Goal: Camas neighborhoods will be vibrant, stable, and livable with a variety of housing choices that meet all stages in the life cycle, personal preferences and a range of affordability.

- Seek to integrate all levels of income and find ways to mix into suitable areas of the community think infill with middle housing
- Too bad the Everett corridor is being sacrificed needlessly
- A YIMBY (yes, in my back yard) campaign needs to be established different housing types with different household types should not be ostracized young people and empty nesters need a place to live.

Goal: Camas will provide a setting of and quality of life that attract and retain businesses and will be home to a diverse range of employment opportunities

- Get much better. Clarify mapping with County as to buildable lands.

Goal: the multimodal transportation system will be safe and efficient for all users, facilitate access to goods and services, connect neighborhoods, and encourage healthy lifestyle choices.

- Safer bike routes
- Designated bike lanes corridors up to and through parks. +1
- Use community like bend as an example of sidewalks bike lanes and roundabouts. +1
- Connect sidewalks (Prune Hill area example, notable to walk to downtown)

Station 6: Our Downtown

Goal: Encourage redevelopment to expand opportunities Downtown for retail, office and residential.

- More downtown housing +1
- Encourage places to eat, see Vancouver Waterfront without chain restaurants.
- Partner with the Port of C-W
- Where is the vision for a properly cleaned up Mill? The City Plan is responsible for input to the state's cleanup. Without it out destiny is a sad downtown and waterfront.
- Diversity of business types. +1

Goal: Expand on civic life and services Downtown through strategic use of city owned property and vibrant community events.

- A community pool would be appreciated! +1
- A community recreation and senior center.
- Establish a community Theatre +1
- More food and food courts, better website.
- Support local business owners not generic chains.

Goal: Create a safe and connected transportation network that makes Downtown walkable, bikeable, and accessible to the rest of the city.

- Parking structure on the GP lot.
- Slow down traffic on 3rd Ave! Add trees and bulb outs and other traffic calming measures.
- Bike paths to circumnavigate new development and congestion.
- Add crosswalks on Garfield (4tj, 5th, and 6th) and at least one with a signal indicator to connect bike and pedestrian traffic safely to downtown (also through to trailheads behind church on 4th)
- Close down auto traffic on 4th street between Adams and Franklin +1
- Improve public transportation to downtown.
- More major traffic into 6th so 3rd is more pedestrian friendly.

Goal: Retain Downtown's historic character and expand its charm.

- Honor hometown heroes.
- Partner with 3-rivers museum and Clark County Historical Society
- Zone standards for mix use in downtown Camas.
- If you want to expand the City's charm, include the GP Mill in your 20 year planning process, its greyed out on your map.

Goal: Plan for a range of housing options that welcome more people to live Downtown.

- Support a straightforward and affordable permit process for ADU's especially within a mile of downtown possibly provide incentives, subsidies, breaks on property taxes etc. +1
- Live/workspaces villages and lofts with quality community spaces and gardens

Goal: Provide the right mix of development, services, and open spaces that support ways for people to live, work, and play Downtown.

- Please consider outdoor dining for sit down restaurant service, limit time from Memorial Day to Labor Day with balance of spaces taken up parking needs.
- Flex spaces for small businesses.

Our Camas 2045 Summit #1 Online Survey Submissions

An online survey was live from after the event through June 17th as an additional mechanism for feedback. The online survey received 24 responses.

1. I feel the vision statement is:

- Right on. (x8)
- Headed in the right direction, but could be improved. (x7)
- Is missing something. (x9)

2. If you feel it is missing something or could be improved, let us know how!

- Protect the small businesses already here! Don't take away CRUCIAL parking for places like acorn and oak. You're effectively dooming them. The empty property for sale near them should be used for community parking!
- Natural Beauty, safe and diverse (economically, ethically, what people do for a living and politically)
- Love the emphasis on walkability which helps foster social connection and interaction, generating connectedness in the community! Wish we had an aquatics center, but I know that was shut down unfortunately. More mixed-use buildings is nice too
- Camas locals do not want growth. We don't want more housing and businesses. We want the small town feel that we used to have.
- There is no affordable housing. The school district is losing students because young families cannot afford to move here. Utilities and taxes are pricing good families out.
- Improved transportation options in the whole Camas area - mini busses or shuttles, bike rentals, ride share programs etc. -- increase connectivity while mitigating/reducing personal vehicle use as the area density increases
- Camas is NOT inclusive. The out of state newcomers have strangled the ability for life long residents who were born and raised here to live here. There is not affordable housing and the taxes and reckless spending are out of control. The arrogance stinks.
- Increased focus on how we will maintain livability for those who have lived here for generations and cannot afford the taxes, cost of housing, and devastating impacts of urban sprawl that is at the forefront of the city's apparent plans.
- Neighborhoods need to include green spaces & trails not only for human residents but for wild plant &; animal life. Environment & community need to include space for urban/suburban farms for growing food. Downtown--"expansion" should be carefully regulated.
- "Camas is a DIVERSE and inclusive community..."
- Parking is a big issue in downtown. So if you add more businesses, you have to add more parking
- Neighborhood traffic near schools (with no bus service) should have traffic improvements to naturally slow vehicles for the sake of safety.

- The environmental section should specifically mention maintaining Lacamas Park as a priority. Can you imagine Camas with a poorly maintained Lacamas Park? The city's value would markedly decrease. (I understand multiple entities are responsible for park)
- "inclusive" is given top priority in the vision statement, but it's not a primary characteristic of Camas, nor was it found in the brainstorm survey. Who added this?

- I would like to see less church owned properties right in the center of downtown. Although I respect the religious beliefs, the massive presence takes away from more amenable area for downtown activities.
- The “living room"(downtown) has a block of buildings that don't seem to be part of it. I'm not exactly sure how the church has come to own so much of the small, intimate, downtown area. It's a shame, that space could be put to better use.
- The possessive of Camas is Camas's not Camas'
- Expanding what the City calls "downtown" - the mill's property should be viewed as part of the "downtown" footprint as it represents both constraints and large opportunities IF we include it TODAY as a part of the planning process

OUR COMMUNITY

3. How do we achieve this? Share your top three big ideas!

- Adjust zoning to allow for small business to open up shop all around camas. Not just downtown or in strip malls. But true neighborhood spots in all the developments that are driving distance from other businesses
- Continue park and library improvements, rejuvenate downtown Camas’ infrastructure to improve walkability, adding a community indoor/outdoor pool would be nice, doesn’t have to be super fancy or expensive
- We need to get rid of the two hour limit on parking in downtown so we can can support local businesses. Rather than only having time for dinner OR a movie, allow free unlimited parking so you can do both without getting a ticket.
- Listen to what the citizens want. Make things happen, don't just talk about them. Take better care of our vision clearance areas especially downtown, many hazards just waiting to happen, also breaking the cities on Municipal Codes.
- Follow through on these statements is all important!
- Lower utilities and taxes to attract families. Lower the business taxes as to not lose anymore existing businesses. Do not follow the national political ideology!!
- Leave the mill alone. It is what put the city on the map. The high school admin should be ashamed of calling the mascot Makers instead of Papermakers. We should put financial caps to ensure our original citizens are protected.
- Focus on pay for teachers opposed to admin, actively reduce sprawl, stop road expansions and developments on the north shore, maintain and care for historic places, focus on infill opposed to destroying natural areas and farmland
- your goals appear to be youth & family centered. You need to be aware of aging residents, their interests and needs.

- We need an accessible and larger community center in a central location (even if it is shared with Washougal). Downtown Camas activities couldn't be better. Engagement efforts are great--council needs to listen to citizens' wants & spend conservatively.
- Prioritize community gathering spaces. Make bike lanes accessible to major hubs with bike parking. Citizens will never prioritize healthy alternative forms of transportation if endless parking is provided across the city.
- The biggest attractions are the parks, lakes, and trails of Camas. Secondly are the excellent schools. Thirdly is the small town feel. So if you add more growth. You won’t have a small town feel anymore.
- Keep investing in art, attract more live music venues/events.

- Continue using buildings to display art. Create more public gathering spaces that are pedestrian/cyclist focused that include the natural environment and public art/cultural history.
- Community Events, clean streets, strong business network, support developers, tough on crime, keep out vagrants
- Less focus on the insidious WOKE attitude. Just accept everyone without the bend over backwards celebration, which results in a focus on differences regather than our commonalities.
- Maintaining a business friendly environment that encourages investment in new businesses such as restaurants. Utilizing public-private partnerships to bring small shops/restaurants at or near parks.

OUR ENVIRONMENT

4. How do we achieve this? Share your top three big ideas!

- Save at least some land for wildlife! Don’t develop too much and make this just another hideous bunch of cookie cutter houses and strip malls. Also, reckless driving is increasing, especially on crown road and third.
- City should buy and maintain more preserved nature land within the area. Protect all current natural areas. Slow development in green spaces and promote more density in already developed areas.
- Improve/widen more of the sidewalks downtown camas and add more bike lanes especially to N.E. 3rd Ave up Crown Rd, don’t need 4 car lanes there, continue park and infrastructure improvements, connect all trails via bike and walking paths
- Limit parking to residential passes and eliminate out of out of towners, open trails to bikes, allow park to have my bike jumps back. Stop with such environmental measures. All while stop cutting trees down m!
- Stop kicking the can down the road on maintenance of our streets. If the company fails to do the job right don't accept 1/2 ass work. Hold them accountable, also our buildings. Example Lodge building screwed up window spacing. Should have been fixed
- Follow through on these statements is all important!
- Easy. If you need to take trees down to build, then don't build there!
- Incentivize home owners to plant more trees; evaluate options for trails in residential areas and connect them to downtown; create walk/bike paths to connect Camas top to bottom, side to side - for work commute even (no cars!)
- More funding for parks. Both to improve & maintain
- Don't allow people who cut trees down to build their homes years ago to deny that same option to be afforded to others. So narcissistic. Hold Lacamas Shores accountable for their watershed issue. Leave the Everett corridor intact.
- YES! Our Camas outdoor parks/trails are un-met! YES! YES! maintain & Keep parks, trails, corridors so valuable to us all. Pls Avoid creating business/industrial developments to boost tax $$'s (which Beaverton/Hillsboro Ore did, sadly)
- Preserve open space. Preserve wildlife, wild areas, trees, agriculture, farms, not building on every available space. Trails/bike routes in connecting areas like Forest Home Road. Volunteer events to care for parks & spaces, with some kind of incentive.
- Lacamas Regional Park needs to be more responsive to trail maintenance requests and work offered by volunteers. Without volunteers the park would be overgrown and most trails would be unusable.

- Biofilter in the lakes so they are usable year-round, no more toxic algal blooms. ban harmful fertilizers
- During storms we need more snow and ice removal vehicles. Only main roads were plowed and so many people can not leave there homes if they live on streets that are not cleared
- Maintain current parks/lakes/outdoor spaces before investing in new spaces, install swales in neighborhoods to help with flooding issues, use native plantings.
- Prioritize improving collaboration between the entities that own Lacamas park AND local volunteers so that the park receives timely maintenance and enhancements. Current process excludes volunteers critical & maintenance is too delayed.
- You have a good plan here keep it up.
- By utilizing clean hydro power.
- Get the mill cleaned up; assess its risks to our drinking water; Incentivize HOAs to maintain facilities & participate more fully in our stormwater management; seek to PROTECT drinking water supplies thru sound risk planning & better wellhead protection

OUR NEIGHBORHOODS

5. How do we achieve this? Share your top three big ideas!

- Don’t overdevelop and lose all the natural beauty. Less is more
- Not sure.
- Connect all of neighborhoods and parks to downtown camas with walkable sidewalks and trails all the way to Lacamas would be great. Especially Crown Rd to NE 3rd to downtown and even to Washougal Waterfront
- I hate all of this. I want a mayor that will fight against that states growth plan. No one cares about climate change, no one wants mass transit, and especially no one wants wider roads and more round abouts. This town is getting destroyed.
- Common sense don't plant trees right beside street lights. Don't have planting areas in our sidewalks, would help with all the raised and horrible ones in neighborhoods.
- Follow through on these statements is all important!
- No public transportation in neighborhoods.
- encourage mini van shuttle services, rent a bike services, encourage personal ride sharing (co-commuting) by creating programs and digital tools for people to connect safely
- Cap taxes for people who were born here. Allow tiny homes and ADU's. Get on top of the growing homeless issue in our parks and neighborhoods.
- our goal mentions NOTHING about community Safety!! There needs to be an emphasis on crime Prevention and commitment to law enforcement, esp. if your goal is growing population.
- All developments should include green space, trails, and trees. Growth should be VERY slow, as slow as possible, to allow for adjustments to infrastructure. Less urban=more valuable and enjoyed by everyone in the long run.
- Bike lanes, playgrounds with exercise stations (think pull up and dip bars), sports courts (pickleball is the fastest growing sport in America right now)
- Add new bus routes, public transit to connect to Portland and Vancouver!!, busses to connect neighborhoods to downtown
- I think roundabouts are okay but you don’t need them everywhere. The busiest roads are Lake Road and Everett Rd.
- No new building permits until clean water is assured for all residents! Tighter restrictions on residential developer permits.

- Prioritize safe bike lanes that connect the city. By safe, I mean bike lanes that mom's & dad's feel safe using with their kids i.e. a PHYSICAL divider between car lane and bike lane for safety. This will increase # of ppl who use bikes for transportation.
- Preserve the small town vibe. Single family homes. No multi family
- Dedicated bike trails that connect neighborhoods to schools. Ensure each community has a safe walking paths that connect to parks/schools.
- TOTALLY missing the word affordable and clearly not accommodating the blue collar employees that make a City go. One only look at North Shore (Toll Brothers) and Camas Meadows (Romano) to envision what is spoken above as privileged only welcome here.

OUR DOWNTOWN

6. How do we achieve this? Share your top three big ideas!

- Another crosswalk on Garfield would be amazing
- Provide ease of development to those with a proven history of ethical growth of development.
- Needs more mixed use development, no more one story single use buildings please, yes more walkable and bikeable please, more restaurants and shopping needed, the gate to Louis Block park can be improved it looks really old, just updating downtown needed
- We don’t want to achieve this. Stop the growth, keep the small town.
- Implement pay to park in hopes of being able to get a parking garage. Parking is at a minimum now and this issue needs to be addressed ASAP. People pay to park everywhere else and they don't complain.
- Follow through on these statements is all important!
- We have enough downtown living. This keeps it clean and organized.
- Move the church from downtown to another area and use the space for businesses that actually pay tax; use that money to fund downtown upkeep;
- Increase the parking fines to better control the issue. Move the farmers market to Crown Park. Again, leave the mill alone.
- Presently, downtown Camas is NOT walkable. Each crossing of a block is a pedestrian safety matter, drivers in cars. I feel unwelcome in downtown Camas.
- Keep vital services downtown. Post Office, Library, affordable restaurants, should be prioritized over housing, wineries. New construction should be attractive, classic styles (Euro, art deco, Victorian), no big rectangles (like new apartments going in).
- Keep downtown walkable. Cars should never be a priority. If you create a beautiful downtown hub, people will come. People who walk/bike/use alternative methods of transport are more likely to spend $ at local businesses.
- Stop approving churches on the main strip. bring back a pizza by the slice place.
- I don’t know if having apartment above businesses is a good idea. Downtown is already crowded as it is. You don’t have to build on every remaining area. I often thought that downtown would be great if you made 4th street a pedestrian walkway.
- Ensure downtown remains commercial, NOT religious! A Christian church on our main street makes those of us who are not religious feel uncomfortable. A good rule - if The Satanic Temple is not welcome to do it, neither should be the Christian church.
- The historical downtown Camas St is fantastic, however it could be improved by expanding it to neighboring streets. For ex, 3rd Ave is an eyesore and not friendly to pedestrians. 5th Ave also could be developed to have a similar look & feel to 4th Ave
- Don't worry about transportation. getting to downtown is already accessible. Maybe a shuttle for seniors

- Have the church move to buildings outside the downtown area, so that the space/buildings can be used to benefit and be enjoyed by the WHOLE community.
- Redevelop the paper mill property and ensure it is safe for mixed use development.
- If you want to expand charm, start pushing to get that downtown eyesore remediated....there's nothing charming about the unseen decades of pollution there.

7. Is there anything else you would like to share about the Our Camas 2045 process?

- It looks great and like headed in the right direction for sure with focus on physical movement, getting people out of cars and more convenience for walking and social interactions and connectedness!
- No more selling land to large developers who want to cram in big houses on small lots, and stop with apartment complexes!!!! Our roads and schools do not want more growth. People moved to Camas to get away from people!!!!!!

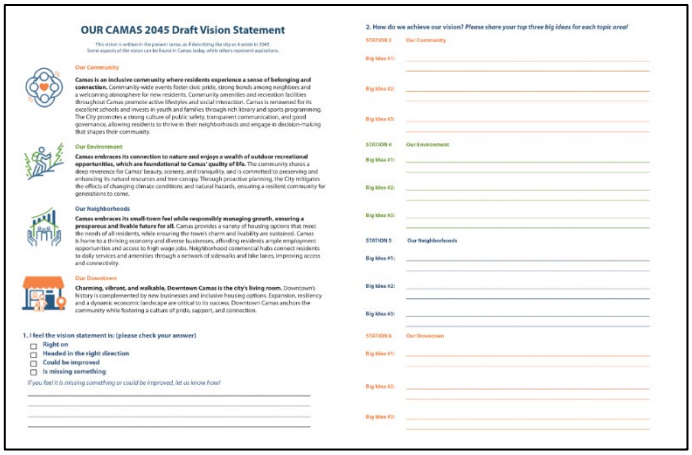
- Please add more community meetings and add the results of our (public) input to the website and follow up emails when we share our address
- Love that you're doing this and I'm super inspired to live in this community. I'd love to learn how to get involved and join you on this journey of making the vision the reality!
- The City is hemorrhaging other people's money. This has got to stop. We cannot keep spending on the backs of others.
- Camas is now a place our friends, family, credit union, etc. advise us to stay away from and build our lives elsewhere. It’s a shame what greed and development have done to our home.
- Applause for city planners, involving Camas residents in 20 yr. projections! Looking fwd. to hearing milestone efforts to sustain the lovely charm & character of Camas.
- great job thanks
- When you have meetings instead of breaking off into groups you could have various informed speakers talk about plans then take questions from audience as they sit on seats so everyone can hear
- Lacamas park needs to be specifically named and goals for its enhancement specifically outlined. Goals for bike infrastructure must include bike lanes with physical barriers that protect cyclists from cars otherwise most families will not utilize them
- I have to be honest, the Vision statement is terrible. "inclusive" is not relevant to Camas, and will be harmful to strategic planning. The rest of the vision statement is vague. The environment statement is acceptable but also redundant.
- Love that you are asking for input, and hope it is discussed and considered.
- The open house hosted in the lodge was a poor way to communicate information. Slides being shown without explanation and timed so quickly that you couldn't read all the info was disappointing. The noise in the room meant nearly shouting to be heard.

Our Camas 2045 Community Summit No. 1 Summary
June 14, 2024

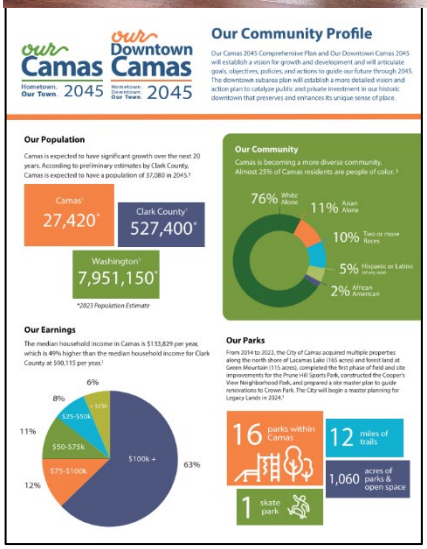
Overview

On June 12th, 2024, the City of Camas hosted *Our Camas 2045 Community Summit #1*, an open house event for its *Our Camas 2045 Comprehensive Plan and Downtown Subarea Plan* process. The purpose of this event was to report back on the outreach and engagement activities that took place over Spring 2024, reveal the draft and ask for feedback on the *Our Camas 2045 Vision Statement and Goals*, and to identify the community's big ideas for achieving the vision and goals.

More than 40 community members participated in the event at the Lacamas Lake Lodge, where kids activities and refreshments were provided. A wide range of participants included residents, business owners, families with children, and elected officials.



The event was organized with stations set up around the event space, those stations corresponded to each of the four themes identified in the draft Vision Statement. The four themes include: *Our Community; Our Environment; Our Neighborhoods; and Our Downtown*. Additionally, there were other stations that offered a project overview, results of the community outreach, and the draft vision statement.



Participants were invited to review the draft vision statement and offer their feedback and share their "big ideas" for how the community can achieve the vision and the associated goals. Each station included a project team facilitator. Ideas were captured through notetaking on sticky notes on the posters, or participants could submit them in writing through a comment form. These ideas will help guide the development of goals and policies for the Comprehensive Plan.

Since the City is additionally undertaking a Downtown Subarea Plan, additional material on opportunities, constraints and background information were provided for the *Our Downtown* station.

The comment form and community profile handed out at the event.

Feedback Analysis

Discussions were robust and collaborative, resulting in many community ideas and overall feedback. Key topics of conversation included bike infrastructure, native species mitigation, tree protection, creation of neighborhood hubs, and local business support. In addition to paper comment forms, an online survey was available to complement the discussion at the event for those who could not participate in-person. A compilation of the raw notes from the

comment forms are included in Appendix A, the raw notes from the poster boards in Appendix B, and the online survey responses are captured in Appendix C.

For the Vision Statement, in response to the question "*If you feel it [Vision] is missing something or could be improved, let us know how!*" respondents felt the Vision is missing clear strategies to protect and sustain existing small businesses, including provisions for adequate parking. In addition to concrete plans to address the lack of affordable housing to retain young families and maintain school enrollment. Respondents note the vision should reflect a genuine approach to inclusivity that considers the needs of lifelong residents, addressing the impacts of high taxes and urban sprawl.

Enhanced transportation options, such as minibuses, bike rentals, and ride-sharing programs, should be proposed to reduce reliance on personal vehicles. Additionally, there is a want for a stronger emphasis on maintaining and expanding green spaces, trails, and urban farms to preserve the city's natural beauty and community health. Effective use of downtown spaces, including addressing the significant presence of church-owned properties and integrating the mill's property into the downtown planning process, is also spoken to. Finally, the vision statement should more accurately represent inclusivity based on the community's actual characteristics and needs, rather than an imposed ideal.

In response to "*How do we achieve our vision? Share your top three big ideas for each topic area!"* The following ideas were provided by Summit participants for each Vision Theme.

Our Community

Amenities for Children and Teenagers:

- Provide smaller playgrounds and indoor play facilities for younger children.
- Establish more sporting fields and advocate for an indoor swimming pool accessible to high schoolers.

Community Unity and Diversity:

- Focus on reuniting the community and fostering diversity through inclusive initiatives.

Infrastructure and Community Enhancement:

- Improve downtown infrastructure for better walkability and accessibility.
- Enhance community facilities including parks, libraries, and possibly a community indoor/outdoor pool.
- Address parking policies to support local businesses

Fiscal Responsibility and Engagement:

- Lower utility costs and taxes to attract families and retain businesses.
- Prioritize citizen engagement and accountability in city planning and policy implementation.

Cultural and Recreational Investment:

- Preserve and expand upon Camas' cultural heritage through arts and community events.
- Invest in recreational facilities like arcade and mini-golf to enhance community activities.
- Broker a deal with local entities to utilize land for a new community center.

Our Environment

Environmental Conservation and Development:

- Preserve land for wildlife and limit excessive development.
- Promote denser development in already developed areas to conserve green spaces.

Infrastructure and Transportation:

- Enhance biking infrastructure including bike rentals and connected bike paths.
- Address water and utility issues such as the current well problem and underground utility placement.

Landscaping and Tree Preservation:

- Preserve mature landscaping and save parks and green spaces.
- Protect large trees and ensure proper spacing when planting new trees.
- Consider adding Redwoods to enhance the tree canopy.

Green Spaces and Recreation:

- Develop multipurpose green spaces, especially for sports like soccer, little league, and girls' softball.
- Improve access points and public transit to Lacamas Lake.
- Create a continuous trail around Lacamas Lake and develop boardwalks to protect natural areas.

Community Cleanliness and Maintenance:

- Enhance garbage and recycling systems citywide.
- Encourage GP (Georgia Pacific) to clean up their site for improved community aesthetics and environmental health.

Community Programs and Policies:

- Implement a heritage tree program and support property owners in retrofitting for energy efficiency.
- Hold community listening sessions on evacuation routes and develop policies based on community input.

Parking and Infrastructure:

- Address parking needs, including a larger parking lot near Lacamas Heritage Trail.
- Consider paving the gravel pit near the old mill site for improved infrastructure.

Our Neighborhoods

Environmental Conservation and Development:

- Advocate for less development to preserve natural beauty and prioritize green spaces.
- Ensure developments include green space, trails, and trees.
- Regulate tree planting to avoid blocking traffic sightlines.

Infrastructure and Transportation:

- Connect neighborhoods and parks to downtown Camas with walkable sidewalks and trails.
- Prioritize bike lanes that are physically separated from car lanes for safety.
- Support dedicated bike trails that connect neighborhoods to schools and safe walking paths.

Community Safety and Quality of Life:

- Emphasize community safety, crime prevention, and support for law enforcement as the population grows.
- Address concerns about homelessness in parks and neighborhoods.

Public Transportation and Mobility Services:

- Introduce new bus routes and public transit options connecting Camas to Portland and Vancouver.
- Encourage minivan shuttle services, bike rental services, and personal ride-sharing to improve mobility options.

Urban Planning and Growth Management:

- Advocate for slower growth to allow infrastructure adjustments and maintain the small-town vibe.
- Restrict new building permits until clean water assurance for all residents and tighten residential developer permit restrictions.
- Support more neighborhood nodes and small pockets of business areas for increased walkability.
- Promote more affordable housing options such as condos and townhomes.
- Develop tools to promote affordable housing such as density bonuses for dedicated affordable housing.

Recreational Facilities and Community Amenities:

- Support amenities like playgrounds with exercise stations, sports courts (e.g., pickleball), and biking infrastructure to promote active lifestyles.
- Install doggie waste bag stations for pet owners.

Our Downtown

Urban Development and Planning:

- Support mixed-use developments over single-use buildings.
- Improve infrastructure and aesthetic appeal of downtown and overall downtown maintenance.
- Maintain small-town charm and resist further growth.
- Implement pay-to-park system to address parking shortages, potentially leading to a parking garage.
- Increase parking fines to better manage parking issues.
- Redevelop the paper mill property for mixed-use development.
- Enhance walkability downtown and prioritize pedestrians over cars.
- Expand and beautify historical downtown areas

Community and Downtown Vitality:

- Improve pedestrian safety with additional crosswalks, addressing safety concerns at block crossings.
- Maintain vital services downtown such as Post Office, Library, and affordable restaurants.
- Prioritize commercial spaces over housing in downtown areas.
- Ensure accessibility downtown, potentially implementing a shuttle service for seniors.
- Maintain the attractiveness and accessibility of downtown without significant transportation changes.
- Increase the number of retail stores and restaurants to maintain consistent business

traffic.

Cultural and Religious Concerns:

- Propose relocating churches from downtown to enhance commercial space availability and community inclusivity.
- Advocate for maintaining downtown as a commercial rather than religious hub.

Business Diversity and Ownership:

- Encourage diversity in the types of businesses and services.
- Prioritize local and small businesses over chains.

Parking and Traffic Management:

- Address the issue of available parking.
- Develop a plan to address traffic patterns at 6th Ave and Adams St.

To ensure proper implementation of the Vision and Goals, the community was asked to share ideas on how we can achieve the goals. The following key ideas were given.

Our Community

Goal: Camas' artistic and cultural heritage will be protected, enhanced, and commemorated.

- Start a community theatre with volunteer assistance.
- Renovate/restore the community center.

Goal: Community events, involvement activities, and youth-focused activities will instill a sense of belonging among residents of all ages while making Camas an ideal place to raise a family.

- Create a multicultural fair/event that includes everyone.
- Partner with schools to host a multicultural fair.

Goal: The City will promote a strong sense of community through transparent communication, outreach efforts, partnerships, and accessibility.

- Partner with the school district for regular meetings to share resources and ideas.

Goal: Public places will be valued and protected spaces, with safe and well-maintained facilities that foster a sense of community and promote physical and mental health.

- Protect city and county parks, remove invasive plants, and ensure modifications are inclusive.
- Protect and support the library.
- Establish a park/gathering space downtown.

Goal: Camas residents enjoy access to quality education and support their schools through partnerships and investments.

- Implement a Green Team at every school and promote sustainability and green practices.
- Ensure safe walking corridors and necessary facilities like internet.

Our Environment

Goal: A network of parks, trails, and open space will connect neighborhoods, wildlife corridors, and natural resources and enhance the quality of life for residents and visitors.

- Increase parking at the Heritage trailhead to accommodate growth from new housing.
- Address the capacity of park facilities with the increase in new homes.

- Create a boardwalk on the Lily fields trail to prevent damage by pedestrians.
- Pave or gravel the mill ditch to connect downtown with other paths and lakes.

Goal: Camas' infrastructure and transportation system will be able to withstand and recover quickly from extreme weather events and other hazards exacerbated by climate change.

- Bury all overhead electrical lines.
- Upgrade sewer systems before repaving roads.
- Reform storm water modeling under climate scenarios to assess infrastructure capacity and service levels.

Goal: The City will embrace clean energy technologies to promote healthy air quality for all Camas residents.

- Retrofit older buildings to meet current codes.
- Clean up the GP mill for unrestricted use and test water for contamination.
- Connect to the river/waterfront and hold pollution sources accountable.
- Install more electric car charging stations.

Goal: Camas' native landscape and tree canopy will be protected and enhanced to maintain Camas' natural beauty and promote climate resiliency.

- Maintain and implement a tree canopy plan downtown.
- Partner with and support a backyard habitat program.
- Preserve trees on public and private property, especially large trees.
- Support native plants and nature spaces in the city, including school green spaces and citywide bioswales.
- Expand the list of permissible plants in bioswales.
- Remove invasive holly and blackberry.

Our Neighborhoods

Goal: The City will provide public facilities that are resilient to climate change and meet the needs of the growing population.

- Implement a recycling center alongside garbage bins to promote recycling.
- Improve heat mitigation at the Camas farmers market with better pavers, covered structures, or coverage systems.
- Mandate new apartments to have air conditioning.

Goal: The City will plan for and accommodate population and employment projections in a way that maintains Camas' quality of life and small-town character.

- Encourage multifamily units to support walking to work, bolstered by an improved bus system.

Goal: The City will cultivate a business environment that promotes local businesses and establishes Camas as a desirable place for investment.

- Partner with CREDC to market the area and region to workers and tourists.
- Support diverse sizes of business units to accommodate various businesses.

Goal: The transportation system will accommodate anticipated growth and support the city's overall vision.

- Expand bike lanes, particularly around North Road and Lake Lacamas.
- Ensure developers include bike lanes and sidewalk easements as the city expands outward.

- Implement street elements and traffic calming on Downtown 3rd St. for pedestrian safety.

Goal: Camas neighborhoods will be vibrant, stable, and livable with a variety of housing choices that meet all stages in the life cycle, personal preferences, and a range of affordability.

- Integrate all income levels and promote infill with middle housing.
- Encourage different housing types and household mixes.

Goal: Camas will provide a setting of quality of life that attracts and retains businesses and offers a diverse range of employment opportunities.

- Improve clarity on buildable lands through mapping with the County.

Goal: The multimodal transportation system will be safe and efficient for all users, facilitate access to goods and services, connect neighborhoods, and encourage healthy lifestyle choices.

- Enhance safety on bike routes throughout the city.
- Establish designated bike lane corridors connecting to parks.
- Use community designs like Bend as a model, emphasizing sidewalks, bike lanes, and roundabouts.
- Improve sidewalk connectivity, such as in the Prune Hill area, to enable walking access to downtown.

Our Downtown

Goal: Encourage redevelopment to expand opportunities Downtown for retail, office, and residential.

- Increase downtown housing options.
- Encourage a diversity of business types, avoiding chain restaurants.
- Partner with the Port of Camas-Washougal for collaborative projects.
- Advocate for a properly cleaned-up GP Mill area to enhance downtown and waterfront appeal.

Goal: Expand on civic life and services Downtown through strategic use of city-owned property and vibrant community events.

- Support local businesses over generic chains.
- Enhance food options and food courts, improve the city's website.

Goal: Create a safe and connected transportation network that makes Downtown walkable, bikeable, and accessible to the rest of the city.

- Build a parking structure on the GP lot.
- Implement traffic calming measures on 3rd Ave, including trees and bulb outs.
- Develop bike paths around new developments and congested areas.
- Add crosswalks on Garfield and signal indicators to connect bike and pedestrian traffic safely.
- Consider closing auto traffic on 4th Street between Adams and Franklin to enhance pedestrian access.
- Improve public transportation access to downtown.
- Enhance pedestrian and bike access via major routes like 6th Street to prioritize pedestrian friendliness on 3rd Ave.

Goal: Retain Downtown's historic character and expand its charm.

- Honor hometown heroes and collaborate with local historical societies.

- Include the GP Mill in long-term planning to preserve and expand downtown charm.

Goal: Plan for a range of housing options that welcome more people to live Downtown.

- Support a straightforward permit process for ADUs near downtown, potentially with incentives or tax breaks.
- Develop live/work villages, lofts, and community spaces with gardens.

Goal: Provide the right mix of development, services, and open spaces that support ways for people to live, work, and play Downtown.

- Consider seasonal outdoor dining options and flexible spaces for small businesses.

APPENDIX A. Comment Form submissions

In response to "How do we achieve our vision? Share your top three big ideas for each topic area!"

Station 3: Our Community

- Having amenities for younger children such as smaller playgrounds, indoor play facilities, etc.
- Need for more sporting fields/indoor swimming pool for highschoolers to use
- We need to reunite our community to be supportive of everyone and encourage more diversity
- Broker a deal with GP to use the five acres where old buildings were demolished a few years ago to build a community center.
- Build a community center, arcade and mini golf.

Station 4: Our Environment

- Connect the bike infrastructure and bike rentals
- Is there a solution to the current well issue before adding more dwellings?
- We seem to be lacking mature landscaping in new construction neighborhoods, can some trees be preserved?
- Please continue including green spaces for multipurpose, especially sports rec areas for both soccer, little league, etc. (don't forget the girls softball – they have gotten the shaft when it comes to shared space) for great examples see Port of Klamath, Hazel Dells sports center and Hockinson Meadows Community Park.
- More access points to Lacamas Lake, and public transit to lake. Continuous trail around the lake.
- Encourage GP to gradually clean up the site to show they care about Camas.
- Save more parks/green spaces, keep more trees, and better garbage and recycling all over.
- How were these goals developed and how will they be used? Will there be policies that are developed as a result?
- What is a heritage tree program?
- Sometimes trees are planted too close together which makes it difficult to see oncoming traffic.
- The Port of Camas-Washougal has a program that helps property owners retrofit their buildings and improve the insulation.
- There is a coastal town in California, Los Osos, that has a walkway above marshland. There is a trail near Lacamas Lake near some lily pads and some type of boardwalk could help to stop people from walking over the lily pads.
- Parking is usually full near the trailhead for the Lacamas Heritage Trail off of NW Alexandra Lane. A larger parking lot is needed.
- Are there plans to address the well? There has been some talk about removing the well.
- The City should think about adding Redwoods to the tree canopy. They grow faster

than oak or cedar trees.
- Holding listening sessions on evacuation routes is a good idea (Steve Hogan).
- Large trees should be protected at all costs. It is difficult to replace them.
- Utilities should be placed underground.
- Has the old mill come up at all in any of the vision statements?
- The City should pave the gravel pit near the mill.

Station 5: Our Neighborhoods
- More neighborhood nodes – coffee shops etc. in the suburbs.
- Need more affordable housing options – condos/townhomes
- Regulate the distance between trees when planting them. Try driving out of Deer Creek neighborhood at Ogden Street and 16th Ave to see what I mean. Once trees mature in width they block traffic sightlines on both the left and right. I have to pull into 16th Ave to see around the, albeit gorgeous, trees.
- Small pockets of business areas so people can walk from home.
- Make efforts to move power underground in some of the older neighborhoods
- Doggie waste bag stations

Station 6: Our Downtown
- More retail/restaurants would be nice to keep consistent traffic going through businesses.
- Available parking is already an issue, and I don't think a meter maid is the real solution with downtown events.
- We need a plan for potentially addressing traffic patterns at 6th Ave and Adams St.
- More diversity on type of businesses/services and more diversity in ownership. Less church/religious stamp on downtown. No chains, keep it local/small business.

APPENDIX B. Poster Board Notes

In response to "Use a sticky note to write an idea for how we can achieve these goals." + indicates agreement by another attendee.

Station 3: Our Community

Goal: Camas' artistic and cultural heritage will be protected, enhanced, and commemorated.

- Start a community theatre – I'll help 503-270-7264
- Renovate/restore the community center

Goal: Community events, involvement activities, and youth focused activities will instill a sense of belonging among residents of all ages while making Camas an ideal place to raise a family.

- Create multicultural fair/event where everyone is included
- Partner with schools to have a multicultural fair

Goal: The City will promote a strong sense of community through transparent communication, outreach efforts, partnerships, and accessibility.

- Less chains of food and shopping, promote small business growth
- Partner with the school district and have regular meetings to share resources and ideas

Goal: Public places will be valued and protected spaces, with safe and well-maintained facilities that foster a sense of community and promote physical and mental health.

- Work with Camas Ivy League to maintain and control invasives
- Protect the city and county parks, remove invasive plants like Holly and blackberry and make sure modifications are for everyone
- Protect and support the library
- Use the grass are on 6th between Birch and Adams as a dog park. It will bring more people to downtown, and partner with Dog PAW, they run many parks including Dakota in Vancouver.
- We need a park/gathering space downtown. +1

Goal: Camas residents enjoy access to quality education and support their schools through partnerships and investments.

- Green Team at every school/sustainability and green practices at our schools
- Need safe transport walking corridors, also need facilities like internet
- Support economic development and green tech
- We need economic development as part of our overall vision! Bring in new businesses and support what's here!
- Add goal of strong economic development and partner with the DCA

Station 4: Our Environment

Goal: A network of parks, trails, and open space will connect neighborhoods, wildlife corridors, and natural resources and enhance the quality of life for residents and visitors.

- Heritage trailhead with parking is usually full and there are many more houses being

built consider more parking for access to trail.
- Consider all the growth from new homes adds to overwhelming the park facility at round at facilities to the top side of round near lilies.
- Create boardwalk on the Lily fields trail to discourage damage by pedestrians.
- Please pave or gravel the mill ditch so it connects downtown with other amazing paths and lakes.

Goal: Camas' infrastructure and transportation system will be able to withstand and recover quickly from extreme weather events and other hazards exacerbated by climate change.
- Bury all overhead electrical
- A pedestrian walkway on forest home Rd.
- Find upgrades to sewer and sewer systems before repaving
- Reform storm water modeling under climate scenarios to understand capacity of infrastructure and level of service requests

Goal: The City will embrace clean energy technologies to promote healthy air quality for all Camas residents.
- Retrofit older buildings to meet current code
- Clean up the GP mill to unrestricted use, recognize water clean up as potable, test at gallery wells for potential contamination of city drinking water
- Connect to our river/waterfront, stop and hold pollution sources responsible for water quality in lakes rivers and aquifers.
- More electric Car charging stations. +1

Goal: Camas' native landscape and tree canopy will be protected enhanced to maintain Camas' natural beauty and promote climate resiliency.
- Thank you for having a tree plan and maintaining our tree canopy downtown!
- Partner and support backyard habitat program
- Tree preservation on public and private property
- Save every big tree, you cannot get them back!
- Support native plants and nature spaces in the city, school green spaces and citywide bioswales. Expand list of permissible plants in bioswale.
- Redwoods.
- Remove invasive holly and blackberry
- Education to include out historical connection to founder of Earth day in city's motto and branding 'home of earth day'

Station 5: Our Neighborhoods

Goal: The City will provide public facilities that are resilient to climate change and meet the needs of the growing population.
- Recycling center instead of just garbage bins have opportunity for recycling bins.
- Please consider heat mitigation at the camas farmers market as it's getting so hot, better pavers? Covered structure or coverage system?
- Require new apartments to have air conditioning

Goal: The City will plan for and accommodate population and employment projections in a way that maintains Camas' quality of life and small town character.

- Multifamily units to allow people to walk to work but that requires a good bus system to get people around. +1

Goal: The City will cultivate a business environment that promotes local businesses and establishes Camas as a desirable place for investment

- Partners with CREDC to market the area and region to workers and tourists.
- Diverse sizes of business units, so many different businesses can exist. +1

Goal: the transportation system will accommodate anticipated growth and support the city's overall vision

- We need a lot more bike lanes particularly North Road around lake Lacamas
- As the city expanses outwards make sure the roads have the more bike lanes and sidewalk easements built by the developers buying the land
- Downtown 3rd St. must have Street elements, traffic calming to ensure pedestrian safety in crossing the street

Goal: Camas neighborhoods will be vibrant, stable, and livable with a variety of housing choices that meet all stages in the life cycle, personal preferences and a range of affordability.

- Seek to integrate all levels of income and find ways to mix into suitable areas of the community think infill with middle housing
- Too bad the Everett corridor is being sacrificed needlessly
- A YIMBY (yes, in my back yard) campaign needs to be established different housing types with different household types should not be ostracized young people and empty nesters need a place to live.

Goal: Camas will provide a setting of and quality of life that attract and retain businesses and will be home to a diverse range of employment opportunities

- Get much better. Clarify mapping with County as to buildable lands.

Goal: the multimodal transportation system will be safe and efficient for all users, facilitate access to goods and services, connect neighborhoods, and encourage healthy lifestyle choices.

- Safer bike routes
- Designated bike lanes corridors up to and through parks. +1
- Use community like bend as an example of sidewalks bike lanes and roundabouts. +1
- Connect sidewalks (Prune Hill area example, notable to walk to downtown)

Station 6: Our Downtown

Goal: Encourage redevelopment to expand opportunities Downtown for retail, office and residential.

- More downtown housing +1
- Encourage places to eat, see Vancouver Waterfront without chain restaurants.

- Partner with the Port of C-W
- Where is the vision for a properly cleaned up Mill? The City Plan is responsible for input to the state's cleanup. Without it out destiny is a sad downtown and waterfront.
- Diversity of business types. +1

Goal: Expand on civic life and services Downtown through strategic use of city owned property and vibrant community events.

- A community pool would be appreciated! +1
- A community recreation and senior center.
- Establish a community Theatre +1
- More food and food courts, better website.
- Support local business owners not generic chains.

Goal: Create a safe and connected transportation network that makes Downtown walkable, bikeable, and accessible to the rest of the city.

- Parking structure on the GP lot.
- Slow down traffic on 3rd Ave! Add trees and bulb outs and other traffic calming measures.
- Bike paths to circumnavigate new development and congestion.
- Add crosswalks on Garfield (4tj, 5th, and 6th) and at least one with a signal indicator to connect bike and pedestrian traffic safely to downtown (also through to trailheads behind church on 4th)
- Close down auto traffic on 4th street between Adams and Franklin +1
- Improve public transportation to downtown.
- More major traffic into 6th so 3rd is more pedestrian friendly.

Goal: Retain Downtown's historic character and expand its charm.

- Honor hometown heroes.
- Partner with 3-rivers museum and Clark County Historical Society
- Zone standards for mix use in downtown Camas.
- If you want to expand the City's charm, include the GP Mill in your 20 year planning process, its greyed out on your map.

Goal: Plan for a range of housing options that welcome more people to live Downtown.

- Support a straightforward and affordable permit process for ADU's especially within a mile of downtown possibly provide incentives, subsidies, breaks on property taxes etc. +1
- Live/workspaces villages and lofts with quality community spaces and gardens

Goal: Provide the right mix of development, services, and open spaces that support ways for people to live, work, and play Downtown.

- Please consider outdoor dining for sit down restaurant service, limit time from Memorial Day to Labor Day with balance of spaces taken up parking needs.
- Flex spaces for small businesses.

APPENDIX C. Online Survey Submissions

An online survey was live from after the event through June 17th as an additional mechanism for feedback. The online survey received 24 responses.

1. I feel the vision statement is:

- Right on. (x8)
- Headed in the right direction, but could be improved. (x7)
- Is missing something. (x9)

2. If you feel it is missing something or could be improved, let us know how!

- Protect the small businesses already here! Don't take away CRUCIAL parking for places like acorn and oak. You're effectively dooming them. The empty property for sale near them should be used for community parking!
- Natural Beauty, safe and diverse (economically, ethically, what people do for a living and politically)
- Love the emphasis on walkability which helps foster social connection and interaction, generating connectedness in the community! Wish we had an aquatics center, but I know that was shut down unfortunately. More mixed-use buildings is nice too
- Camas locals do not want growth. We don't want more housing and businesses. We want the small town feel that we used to have.
- There is no affordable housing. The school district is losing students because young families cannot afford to move here. Utilities and taxes are pricing good families out.
- Improved transportation options in the whole Camas area - mini busses or shuttles, bike rentals, ride share programs etc. -- increase connectivity while mitigating/reducing personal vehicle use as the area density increases
- Camas is NOT inclusive. The out of state newcomers have strangled the ability for life long residents who were born and raised here to live here. There is not affordable housing and the taxes and reckless spending are out of control. The arrogance stinks.
- Increased focus on how we will maintain livability for those who have lived here for generations and cannot afford the taxes, cost of housing, and devastating impacts of urban sprawl that is at the forefront of the city's apparent plans.
- Neighborhoods need to include green spaces & trails not only for human residents but for wild plant &; animal life. Environment & community need to include space for urban/suburban farms for growing food. Downtown--"expansion" should be carefully regulated.
- "Camas is a DIVERSE and inclusive community..."
- Parking is a big issue in downtown. So if you add more businesses, you have to add more parking
- Neighborhood traffic near schools (with no bus service) should have traffic improvements to naturally slow vehicles for the sake of safety.

- The environmental section should specifically mention maintaining Lacamas Park as a priority. Can you imagine Camas with a poorly maintained Lacamas Park? The city's value would markedly decrease. (I understand multiple entities are responsible for park)
- "inclusive" is given top priority in the vision statement, but it's not a primary characteristic of Camas, nor was it found in the brainstorm survey. Who added this?
- I would like to see less church owned properties right in the center of downtown. Although I respect the religious beliefs, the massive presence takes away from more amenable area for downtown activities.
- The “living room"(downtown) has a block of buildings that don't seem to be part of it. I'm not exactly sure how the church has come to own so much of the small, intimate, downtown area. It's a shame, that space could be put to better use.
- The possessive of Camas is Camas's not Camas'
- Expanding what the City calls "downtown" - the mill's property should be viewed as part of the "downtown" footprint as it represents both constraints and large opportunities IF we include it TODAY as a part of the planning process

OUR COMMUNITY

3. How do we achieve this? Share your top three big ideas!

- Adjust zoning to allow for small business to open up shop all around camas. Not just downtown or in strip malls. But true neighborhood spots in all the developments that are driving distance from other businesses
- Continue park and library improvements, rejuvenate downtown Camas’ infrastructure to improve walkability, adding a community indoor/outdoor pool would be nice, doesn’t have to be super fancy or expensive
- We need to get rid of the two hour limit on parking in downtown so we can can support local businesses. Rather than only having time for dinner OR a movie, allow free unlimited parking so you can do both without getting a ticket.
- Listen to what the citizens want. Make things happen, don't just talk about them. Take better care of our vision clearance areas especially downtown, many hazards just waiting to happen, also breaking the cities on Municipal Codes.
- Follow through on these statements is all important!
- Lower utilities and taxes to attract families. Lower the business taxes as to not lose anymore existing businesses. Do not follow the national political ideology!!
- Leave the mill alone. It is what put the city on the map. The high school admin should be ashamed of calling the mascot Makers instead of Papermakers. We should put financial caps to ensure our original citizens are protected.
- Focus on pay for teachers opposed to admin, actively reduce sprawl, stop road expansions and developments on the north shore, maintain and care for historic places, focus on infill opposed to destroying natural areas and farmland
- your goals appear to be youth & family centered. You need to be aware of aging residents, their interests and needs.

- We need an accessible and larger community center in a central location (even if it is shared with Washougal). Downtown Camas activities couldn't be better. Engagement efforts are great--council needs to listen to citizens' wants & spend conservatively.
- Prioritize community gathering spaces. Make bike lanes accessible to major hubs with bike parking. Citizens will never prioritize healthy alternative forms of transportation if endless parking is provided across the city.
- The biggest attractions are the parks, lakes, and trails of Camas. Secondly are the excellent schools. Thirdly is the small town feel. So if you add more growth. You won't have a small town feel anymore.
- Keep investing in art, attract more live music venues/events.
- Continue using buildings to display art. Create more public gathering spaces that are pedestrian/cyclist focused that include the natural environment and public art/cultural history.
- Community Events, clean streets, strong business network, support developers, tough on crime, keep out vagrants
- Less focus on the insidious WOKE attitude. Just accept everyone without the bend over backwards celebration, which results in a focus on differences regather than our commonalities.
- Maintaining a business friendly environment that encourages investment in new businesses such as restaurants. Utilizing public-private partnerships to bring small shops/restaurants at or near parks.

OUR ENVIRONMENT

4. How do we achieve this? Share your top three big ideas!

- Save at least some land for wildlife! Don't develop too much and make this just another hideous bunch of cookie cutter houses and strip malls. Also, reckless driving is increasing, especially on crown road and third.
- City should buy and maintain more preserved nature land within the area. Protect all current natural areas. Slow development in green spaces and promote more density in already developed areas.
- Improve/widen more of the sidewalks downtown camas and add more bike lanes especially to N.E. 3rd Ave up Crown Rd, don't need 4 car lanes there, continue park and infrastructure improvements, connect all trails via bike and walking paths
- Limit parking to residential passes and eliminate out of out of towners, open trails to bikes, allow park to have my bike jumps back. Stop with such environmental measures. All while stop cutting trees down m!
- Stop kicking the can down the road on maintenance of our streets. If the company fails to do the job right don't accept 1/2 ass work. Hold them accountable, also our buildings. Example Lodge building screwed up window spacing. Should have been fixed
- Follow through on these statements is all important!
- Easy. If you need to take trees down to build, then don't build there!

- Incentivize home owners to plant more trees; evaluate options for trails in residential areas and connect them to downtown; create walk/bike paths to connect Camas top to bottom, side to side - for work commute even (no cars!)
- More funding for parks. Both to improve & maintain
- Don't allow people who cut trees down to build their homes years ago to deny that same option to be afforded to others. So narcissistic. Hold Lacamas Shores accountable for their watershed issue. Leave the Everett corridor intact.
- YES! Our Camas outdoor parks/trails are un-met! YES! YES! maintain & Keep parks, trails, corridors so valuable to us all. Pls Avoid creating business/industrial developments to boost tax $$'s (which Beaverton/Hillsboro Ore did, sadly)
- Preserve open space. Preserve wildlife, wild areas, trees, agriculture, farms, not building on every available space. Trails/bike routes in connecting areas like Forest Home Road. Volunteer events to care for parks & spaces, with some kind of incentive.
- Lacamas Regional Park needs to be more responsive to trail maintenance requests and work offered by volunteers. Without volunteers the park would be overgrown and most trails would be unusable.
- Biofilter in the lakes so they are usable year-round, no more toxic algal blooms. ban harmful fertilizers
- During storms we need more snow and ice removal vehicles. Only main roads were plowed and so many people can not leave there homes if they live on streets that are not cleared
- Maintain current parks/lakes/outdoor spaces before investing in new spaces, install swales in neighborhoods to help with flooding issues, use native plantings.
- Prioritize improving collaboration between the entities that own Lacamas park AND local volunteers so that the park receives timely maintenance and enhancements. Current process excludes volunteers critical & maintenance is too delayed.
- You have a good plan here keep it up.
- By utilizing clean hydro power.
- Get the mill cleaned up; assess its risks to our drinking water; Incentivize HOAs to maintain facilities & participate more fully in our stormwater management; seek to PROTECT drinking water supplies thru sound risk planning & better wellhead protection

OUR NEIGHBORHOODS

5. How do we achieve this? Share your top three big ideas!

- Don’t overdevelop and lose all the natural beauty. Less is more
- Not sure.
- Connect all of neighborhoods and parks to downtown camas with walkable sidewalks and trails all the way to Lacamas would be great. Especially Crown Rd to NE 3rd to downtown and even to Washougal Waterfront
- I hate all of this. I want a mayor that will fight against that states growth plan. No one cares about climate change, no one wants mass transit, and especially no one wants wider roads and more round abouts. This town is getting destroyed.

- Common sense don't plant trees right beside street lights. Don't have planting areas in our sidewalks, would help with all the raised and horrible ones in neighborhoods.
- Follow through on these statements is all important!
- No public transportation in neighborhoods.
- encourage mini van shuttle services, rent a bike services, encourage personal ride sharing (co-commuting) by creating programs and digital tools for people to connect safely
- Cap taxes for people who were born here. Allow tiny homes and ADU's. Get on top of the growing homeless issue in our parks and neighborhoods.
- our goal mentions NOTHING about community Safety!! There needs to be an emphasis on crime Prevention and commitment to law enforcement, esp. if your goal is growing population.
- All developments should include green space, trails, and trees. Growth should be VERY slow, as slow as possible, to allow for adjustments to infrastructure. Less urban=more valuable and enjoyed by everyone in the long run.
- Bike lanes, playgrounds with exercise stations (think pull up and dip bars), sports courts (pickleball is the fastest growing sport in America right now)
- Add new bus routes, public transit to connect to Portland and Vancouver!!, busses to connect neighborhoods to downtown
- I think roundabouts are okay but you don’t need them everywhere. The busiest roads are Lake Road and Everett Rd.
- No new building permits until clean water is assured for all residents! Tighter restrictions on residential developer permits.
- Prioritize safe bike lanes that connect the city. By safe, I mean bike lanes that mom's & dad's feel safe using with their kids i.e. a PHYSICAL divider between car lane and bike lane for safety. This will increase # of ppl who use bikes for transportation.
- Preserve the small town vibe. Single family homes. No multi family
- Dedicated bike trails that connect neighborhoods to schools. Ensure each community has a safe walking paths that connect to parks/schools.
- TOTALLY missing the word affordable and clearly not accommodating the blue collar employees that make a City go. One only look at North Shore (Toll Brothers) and Camas Meadows (Romano) to envision what is spoken above as privileged only welcome here.

OUR DOWNTOWN

6. How do we achieve this? Share your top three big ideas!

- Another crosswalk on Garfield would be amazing
- Provide ease of development to those with a proven history of ethical growth of development.
- Needs more mixed use development, no more one story single use buildings please, yes more walkable and bikeable please, more restaurants and shopping needed, the gate to Louis Block park can be improved it looks really old, just updating downtown needed
- We don’t want to achieve this. Stop the growth, keep the small town.

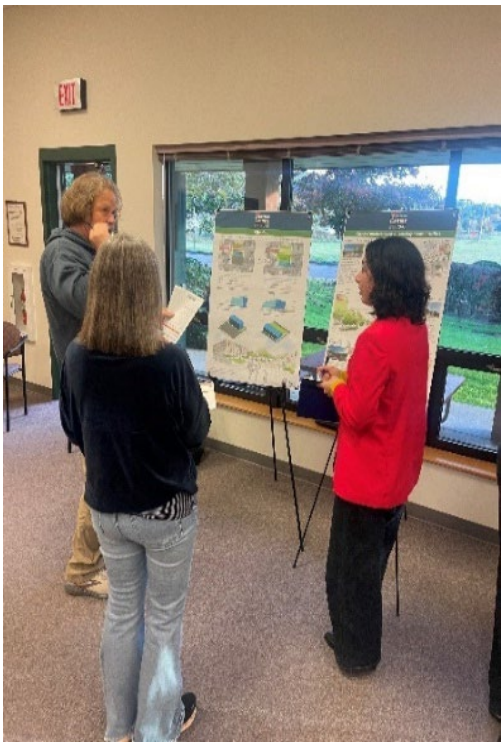
- Implement pay to park in hopes of being able to get a parking garage. Parking is at a minimum now and this issue needs to be addressed ASAP. People pay to park everywhere else and they don't complain.
- Follow through on these statements is all important!
- We have enough downtown living. This keeps it clean and organized.
- Move the church from downtown to another area and use the space for businesses that actually pay tax; use that money to fund downtown upkeep;
- Increase the parking fines to better control the issue. Move the farmers market to Crown Park. Again, leave the mill alone.
- Presently, downtown Camas is NOT walkable. Each crossing of a block is a pedestrian safety matter, drivers in cars. I feel unwelcome in downtown Camas.
- Keep vital services downtown. Post Office, Library, affordable restaurants, should be prioritized over housing, wineries. New construction should be attractive, classic styles (Euro, art deco, Victorian), no big rectangles (like new apartments going in).
- Keep downtown walkable. Cars should never be a priority. If you create a beautiful downtown hub, people will come. People who walk/bike/use alternative methods of transport are more likely to spend $ at local businesses.
- Stop approving churches on the main strip. bring back a pizza by the slice place.
- I don’t know if having apartment above businesses is a good idea. Downtown is already crowded as it is. You don’t have to build on every remaining area. I often thought that downtown would be great if you made 4th street a pedestrian walkway.
- Ensure downtown remains commercial, NOT religious! A Christian church on our main street makes those of us who are not religious feel uncomfortable. A good rule - if The Satanic Temple is not welcome to do it, neither should be the Christian church.
- The historical downtown Camas St is fantastic, however it could be improved by expanding it to neighboring streets. For ex, 3rd Ave is an eyesore and not friendly to pedestrians. 5th Ave also could be developed to have a similar look & feel to 4th Ave
- Don't worry about transportation. getting to downtown is already accessible. Maybe a shuttle for seniors
- Have the church move to buildings outside the downtown area, so that the space/buildings can be used to benefit and be enjoyed by the WHOLE community.
- Redevelop the paper mill property and ensure it is safe for mixed use development.
- If you want to expand charm, start pushing to get that downtown eyesore remediated....there's nothing charming about the unseen decades of pollution there.

7. Is there anything else you would like to share about the Our Camas 2045 process?
    - It looks great and like headed in the right direction for sure with focus on physical movement, getting people out of cars and more convenience for walking and social interactions and connectedness!
    - No more selling land to large developers who want to cram in big houses on small lots, and stop with apartment complexes!!!! Our roads and schools do not want more growth. People moved to Camas to get away from people!!!!!!

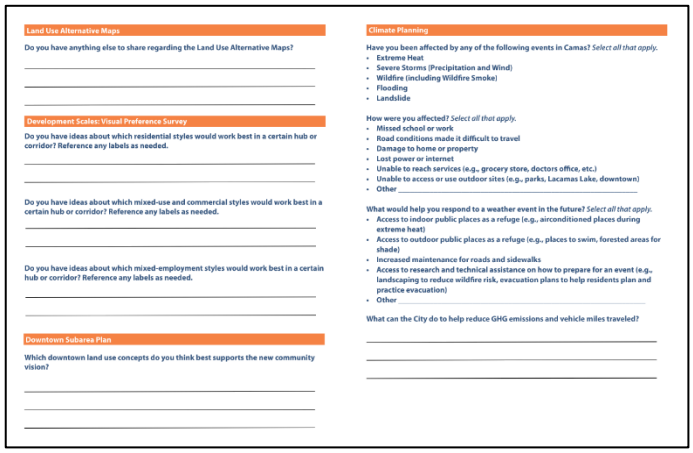
- Please add more community meetings and add the results of our (public) input to the website and follow up emails when we share our address
- Love that you're doing this and I'm super inspired to live in this community. I'd love to learn how to get involved and join you on this journey of making the vision the reality!
- The City is hemorrhaging other people's money. This has got to stop. We cannot keep spending on the backs of others.
- Camas is now a place our friends, family, credit union, etc. advise us to stay away from and build our lives elsewhere. It’s a shame what greed and development have done to our home.
- Applause for city planners, involving Camas residents in 20 yr. projections! Looking fwd. to hearing milestone efforts to sustain the lovely charm & character of Camas.
- great job thanks
- When you have meetings instead of breaking off into groups you could have various informed speakers talk about plans then take questions from audience as they sit on seats so everyone can hear
- Lacamas park needs to be specifically named and goals for its enhancement specifically outlined. Goals for bike infrastructure must include bike lanes with physical barriers that protect cyclists from cars otherwise most families will not utilize them
- I have to be honest, the Vision statement is terrible. "inclusive" is not relevant to Camas, and will be harmful to strategic planning. The rest of the vision statement is vague. The environment statement is acceptable but also redundant.
- Love that you are asking for input, and hope it is discussed and considered.
- The open house hosted in the lodge was a poor way to communicate information. Slides being shown without explanation and timed so quickly that you couldn't read all the info was disappointing. The noise in the room meant nearly shouting to be heard.

Our Camas 2045 **Community Summit No. 2 Summary**
October 22, 2024

Overview



On October 22nd, 2024, the City of Camas hosted *Our Camas 2045 Community Summit #2*, the second open house event for its *Our Camas 2045 Comprehensive Plan and Downtown Subarea Plan* process. The purpose of this event was to have community members comment on the draft land use alternatives, provide input on development scales, review development concepts for downtown, and learn about the County's climate planning efforts and Greenhouse Gas (GHG) inventory.



More than 45 community members participated in the event at the Camas-Washougal Fire Department Station 42, where kids activities and refreshments were provided.

The event was organized with stations set up around the room. Stations covered topics such as the *Our Camas 2045 Vision Statement and Outreach Draft Land Use Alternatives, Development Scales, Downtown Concepts, and Climate Planning.* Additional stations provided an overview of the project, and existing land use conditions for context.

Participant discussion and feedback was focused on the draft land use alternatives, a visual preference survey of development scales, and downtown redevelopment concepts. For the Draft Land Use Alternatives station, community members viewed proposed land use concepts through the lens of 'hubs' or 'corridors' and were asked if any key corridors or hubs were missing. The next station offered a visual preferences survey for different types of housing, mixed-use, commercial, and mixed-employment uses that could occur in a future land use alternative for Camas. The last station asked for community members to review several downtown redevelopment and streetscape concepts and offer their feedback. Each station included a project team facilitator, who took notes of the discussion on flipcharts and post-it notes. Comments and ideas were also captured through several sticky dot exercises (Appendix C) and in writing through a comment form (Appendix A). For people unable to attend the event, a complementary survey was available via the Engage Camas website. The results are available in Appendix B.

Land Use Alternative Maps

Do you have anything else to share regarding the Land Use Alternative Maps?

Development Scales: Visual Preference Survey

Do you have ideas about which residential styles would work best in a certain hub or corridor? Reference any labels as needed.

Do you have ideas about which mixed-use and commercial styles would work best in a certain hub or corridor? Reference any labels as needed.

Do you have ideas about which mixed-employment styles would work best in a certain hub or corridor? Reference any labels as needed.

Downtown Subarea Plan

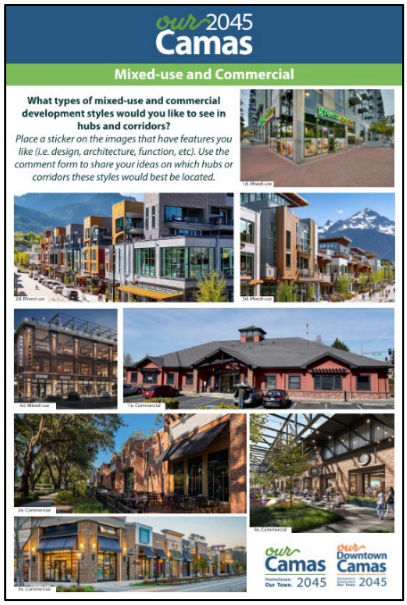
Which downtown land use concepts do you think best supports the new community vision?

Climate Planning

Have you been affected by any of the following events in Camas? *Select all that apply.*

- Extreme Heat
- Severe Storms (Precipitation and Wind)
- Wildfire (including Wildfire Smoke)
- Flooding
- Landslide

How were you affected? *Select all that apply.*



- Missed school or work
- Road conditions made it difficult to travel
- Damage to home or property
- Lost power or internet
- Unable to reach services (e.g., grocery store, doctors office, etc.)
- Unable to access or use outdoor sites (e.g., parks, Lacamas Lake, downtown)
- Other

What would help you respond to a weather event in the future? *Select all that apply.*

- Access to indoor public places as a refuge (e.g., airconditioned places during extreme heat)
- Access to outdoor public places as a refuge (e.g., places to swim, forested areas for shade)
- Increased maintenance for roads and sidewalks
- Access to research and technical assistance on how to prepare for an event (e.g., landscaping to reduce wildfire risk, evacuation plans to help residents plan and practice evacuation)
- Other

What can the City do to help reduce GHG emissions and vehicle miles traveled?

The comment form handed out at the event.

One of the Development Scales posters.

Summary of Feedback

The following sections summarize the feedback received, organized by station. This includes comments captured through discussion, comment forms and the online survey.

Draft Land Use Alternatives Station

- Most participants expressed a preference for the hub model over the corridor model. Hubs were seen as more conducive to building community, encouraging walkability, and creating spaces where residents could interact and engage in local activities. Many valued the small-town feel that hubs provide, allowing for easy access to daily needs. Some highlighted hubs as more suitable for a compact urban design, avoiding the downsides of corridor-style, car-dependent sprawl. Others noted that hubs would help concentrate community energy, drawing people to central, lively areas, which contrasts with the sprawling nature of corridors that might prioritize vehicular access and parking.
- Concerns around density varied, with some questioning whether downtown could accommodate higher-density development feasibly. North Shore residents voiced concerns about the need for a clear transition between rural/low-density areas and new, higher-density developments, with a preference for a tiered approach to prevent abrupt changes in character. Many participants expressed a desire to limit the height of downtown buildings to two stories, preserving the traditional aesthetic of the area. There was significant support for incorporating brick and other traditional materials in building façades, reinforcing Camas's historic character.
- Participants were also drawn to the idea of mixed-use developments that blend commercial and employment spaces. These were seen as essential for diversifying the local economy, creating jobs, and reducing the need for residents to shop or work outside the community. There was strong support for broadening the tax base with more commercial and retail

developments to limit the reliance on Vancouver and neighboring areas for goods and services. The potential for transforming certain underutilized properties, like the mill site, into community hubs was noted, with hopes that such projects could bring aesthetic and functional improvements to the area.

- Another priority highlighted was the importance of walkable, bike-friendly streets with green infrastructure like trees and traffic calming elements. Many participants preferred pedestrian-focused, multimodal streets with bike lanes, protected sidewalks, and transit stops that connect hubs and local neighborhoods seamlessly. Comments encouraged shifting away from auto-centric developments to form-based codes that prioritize building design and public space over specific land uses. Some attendees expressed support for removing parking minimums, which some felt hindered denser, more community-oriented development. The goal was to make hubs easily accessible on foot or by bike, fostering a community-centric lifestyle.
- Some residents advocated for single-level homes to better serve seniors and individuals with disabilities, reflecting the need for inclusive housing design. This aligns with broader suggestions that higher-density housing should be thoughtfully planned around schools and employment areas, making daily life accessible without excessive reliance on cars.
- Several residents identified specific areas that could benefit from hubs. Suggestions included developing a smaller hub at the intersection of NE Everett St and NE 15th Ave near Crown Park, enhancing the existing downtown hub, and possibly adding more hubs on Prune Hill to prevent it from being a predominantly residential area. These hubs would ideally incorporate small-scale commercial spaces, sidewalk cafes, and other community-friendly spaces. Participants noted the potential challenges of competing with Columbia Palisades but emphasized the importance of unique attractions in Camas's hubs to maintain their distinct character.

Visual Survey Development Scales Station

- ***Images of Residential Development***: The community noted the need for diverse residential options that cater to different life stages, from younger families to older adults. Brick and natural materials, paired with modern elements, are preferred for a classic look, while cottage styles were discouraged. Examples like 2a for low density and 3b for medium density (see Appendix C) — are favored in areas like North Shore, where a mix of front yards and green spaces preserve natural appeal. For central corridors like Everett, high-density options support walkability and community vibrancy without overwhelming the small-town feel. However, there's a desire to avoid towering structures near shopping areas to maintain an accessible scale. The taller buildings in Redmond, WA were cited as an undesirable style for Camas.
- ***Images of Mixed-Use and Commercial Development***: For commercial and mixed-use hubs, styles like 2d and 2e align with Camas's character by integrating small-town charm with urban functionality. Utilizing hubs in the North Shore and other regional areas are ideal for medium-density, mixed-use layouts that transition smoothly into surrounding neighborhoods. There's a strong preference for storefronts to encourage walkability and gathering spaces, as well as a

plaza near the lake, where green space and pedestrian paths promote community interaction.

- ***Images of Mixed-Employment Development***: Employment hubs should focus on smaller, adaptable buildings rather than large industrial complexes, prioritizing options like 4f and 5f with "Pacific Northwest" architectural elements. These styles align with local aesthetics by featuring sleek lines and natural materials that respect the environment, helping maintain the town's welcoming feel. Additionally, incorporating sustainable features such as green roofs or solar panels would reflect Camas's environmental values.

Downtown Sub-Area Plan Station

Land Use Concepts

- There was strong support for moderate increases in density, especially around key corridors like 3rd Avenue, where mixed-use buildings could create a lively blend of residential and commercial spaces. Many residents felt that recent apartment developments set an ideal example of density, offering a balance that complements the small-town feel. Some also embraced the idea of higher-density zones, provided they include greenspaces and plazas to support sustainability, community, and local businesses.
- Preserving the historic downtown core was a priority, with a consensus that growth around this area should retain its character. Medium-density wraps near downtown were preferred over high-rise developments, which participants felt could overshadow the town's charm. Interest in integrating the mill into plans also emerged, with suggestions to adaptively reuse the site for public and commercial spaces, such as condos, green areas, and farmers' markets, which would enrich downtown's recreational and social environment.
- Environmental considerations played a prominent role, with concerns that taller buildings could create perpetual shade, especially during winter. To maintain a pleasant downtown atmosphere, some recommended limiting taller structures to specific zones and designing south-facing facades with light-colored exteriors to reflect sunlight. Additionally, participants stressed the importance of using native plants to ensure street trees thrive in the urban landscape.

Transportation Concepts

- Transportation suggestions focused on pedestrian safety and traffic calming measures to make downtown more navigable for walkers and cyclists. The community largely opposed one-way street concepts, as these were seen as disruptive to local businesses and challenging for visitors. Instead, they advocated for improving bike connections to nearby neighborhoods and prioritizing pedestrian-friendly design, particularly on high-speed roads like NE 3rd Avenue.
- Efficient land use was a significant theme, with calls to reduce surface parking lots in favor of flexible parking solutions, allowing developers to tailor parking to actual needs. Participants felt this would improve land values, walkability, and sustainability. They also stressed the importance of greener, pedestrian-friendly streetscapes, with many favoring the Enhanced Streetscapes Option, which includes planting street trees for shade and aesthetics.

Street Enhancement & Development Studies

- Several residents specifically supported the 3rd Avenue Transformation, noting that a higher-density 3rd Avenue is preferred. Support was also shown for a Densified Downtown Street design.

Open Space Enhancements

- Community feedback revealed broad support for enhancing downtown Camas with more open and gathering spaces to create a vibrant, welcoming environment. Many participants highlighted the need for improvements to the Mill Ditch trail, which, while valued as a potential recreational asset, currently feels unsafe to some users. Residents would like to see the trail become more accessible, envisioning it as a well-lit, well-maintained pathway that connects community spaces.
- The idea of establishing a linear park along Dallas Street also received interest, as participants saw it as a way to add green space and promote walkability downtown. However, some raised concerns about the impact on on-street parking, suggesting a need to balance new open spaces with convenient access for residents, businesses, and visitors.

City Hall

- The community's feedback on Camas City Hall reflects a preference for podium parking to support a civic plaza. Residents see this as a valuable opportunity to introduce a central gathering space while maintaining essential parking capacity. The civic plaza concept received favorable feedback, especially for its potential to be located north of City Hall and offer open public seating, terraces for events, and green spaces for community gatherings.
- While most participants supported a three-story City Hall, some suggested a five-story design to maximize density without sacrificing the public plaza. The additional cost of podium construction and ensuring sufficient daylight for the northern-facing plaza were also raised. Suggestions included relocating City Hall south to 3rd Avenue to create more open space, and many community members looked to Bothell, Washington's City Hall as a model, appreciating its blend of podium parking and open public design.
- There was also a notable call for better parking options. Some people remarked that downtown currently has too much parking, while others noted the difficulty of finding parking for business employees with the existing two-hour limits. Underground parking emerged as a popular solution to both conceal and expand parking capacity, balancing the need for accessibility with the vision of a more walkable, less car-centered downtown.

<u>Climate Planning Station</u>

- There was discussion regarding stormwater management and tree canopy preservation. One resident referenced the North Shore development, expressing concern about how much of the existing tree canopy was removed. They worried that the new stormwater infrastructure, designed to direct water to an older system, may not withstand the increased flooding and extreme precipitation expected with climate change. This attendee questioned if there are any protective measures in place for existing tree canopies and restrictions on developers regarding

stormwater management to prevent overburdening outdated systems.

- Participants had questions about the building code, particularly whether it includes provisions for solar readiness or future wiring needs. Several participants asked for an update on the climate planning process, wondering if specific policies had already been drafted.
- Extreme heat, wildfires and wildfire smoke, and severe storms affected the most residents. The most common impacts were the loss of power or internet, damage to their home or property, and being unable to access or use outdoor sites. For ways that would help residents respond to a weather event, most residents noted the need for increased maintenance for roads and sidewalks, access to outdoor public places as a refuge, and access to indoor public places as a refuge.

Greenhouse Gas Inventory

- Community members emphasized increased use of electric vehicles (EVs) and suggested improving walkability to reduce dependence on car travel, particularly trips to Vancouver. Ideas included developing more mixed-use commercial spaces downtown and fostering a “shop local” culture to support area businesses and reduce transportation emissions.
- Transportation alternatives were another focal point. Residents advocated for safer pedestrian infrastructure, bike lanes, and more frequent public transit, emphasizing that these options should be of high enough quality to ensure actual usage. Many suggested connecting neighborhoods, particularly those isolated by current infrastructure limitations like Green Mountain, with safe, accessible routes to downtown. The feedback also revealed a strong interest in local job opportunities to reduce commuting. Some proposed strengthening partnerships with employers, particularly in fields like technology, to create high-quality, locally based employment options.
- Environmental initiatives were also highlighted, with suggestions for incorporating solar power in local energy strategies. One resident shared a personal account of their success with a solar roof and “power walls”, advocating for city policies that promote solar installations on rooftops and exploring biochar as a carbon sequestration tool. Others emphasized preserving existing trees, expanding green spaces, and promoting educational programs about reducing meat consumption, growing local food, and teaching young people about carbon footprints.

Natural Hazards

- Community feedback highlighted a strong interest in strategies to address the impacts of wildfire and extreme heat in Camas, with a particular focus on expanding green infrastructure. Many people expressed support for increasing shade and tree coverage, especially around schools, to mitigate heat effects on vulnerable populations.
- Participants voiced strong support for protecting Camas’s open spaces, recognizing their ecological value and the role they play in community well-being. This feedback emphasized the importance of preserving natural areas as part of Camas’s broader climate resilience efforts and integrating green infrastructure solutions across the community.

Our Camas 2045 Community Summit No. 3 Summary
January 12, 2026

Overview

Between September 15 and December 26, 2025, the City of Camas hosted *Community Summit #3* for its *Our Camas 2045 Comprehensive Plan* and *Our Downtown Camas 2045 Subarea Plan* process.

The Community Summit served as an engagement strategy to share the draft *Our Camas 2045 Comprehensive Plan* and *Our Downtown Camas 2045 Subarea Plan* with the community and help shape the next drafts and implementation actions. This summit included a mix of online engagement and in-person activities to provide community members with opportunities to review, ask questions, and provide feedback on each element (or chapter) of the draft comprehensive plan, including the Downtown subarea plan.

The City featured a different comprehensive plan element every two weeks by hosting an online survey and providing background information on the Engage Camas project websites. Summit materials (including posters, handouts, and the draft element) for each element featured during the Community Summit were available on Engage Camas. In-person engagement activities consisted of a presentation at a joint Strong Towns and Camas Earth Day Society event and a series of "Chat with a Planner" events where community members could connect with City staff.

The following figure shows the overall calendar for the summit.

Community Summit #3 Engagement Schedule

At the Strong Towns and Camas Earth Day Society event, City staff presented information on new statutory requirements for middle housing[1] (i.e., House Bills 1110 and 1337), existing zoning requirements for middle housing in Camas, and draft amendments to the City's development code and design standards (e.g., permitted unit densities, parking, dimensional standards, and unit types) to support middle housing development. Following the presentation, participants provided feedback on the following topics:

- Unit calculations and parameters for affordability;
- Accessory dwelling units (ADU), including ADU impacts to property values and proximity to neighboring properties;
- The paper mill and requirements for cleanup;
- Utility connections and fee requirements for multiple units on the same lot;
- Provisions for electric vehicles and incentives for solar technologies.

Summary of Feedback

The following sections summarize the feedback received from the online surveys hosted on the *Our Camas 2045* Engage Camas website.

Online Surveys

Each of the seven online surveys consisted of approximately 10 questions focused on actions the City could take related to goals and policies for each element. Participants were asked to review each action and consider, with the limited resources available to the City, whether it is an action the City should take. Each question included the following response options: Strongly Agree, Somewhat Agree, Neutral, Somewhat Disagree, and Strongly Disagree. Two open-ended questions also provided participants with an opportunity to share additional actions the City could consider, as well as their general thoughts on the element. The following sections summarize feedback received from each survey, organized by element. Elements with similar topics, such as Natural Environment and Climate, were administered in a combined survey and feedback covers both elements.

Community Character

Survey questions on the Community Character element were open from September 15 to September 28, and there were 36 respondents. Questions explored actions related to arts, culture, heritage, community identity, and community engagement.

- The top three most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
    - Provide development incentives (such as increasing lot coverage, density, or heights) for projects to protect natural topographic, geologic, vegetative, and hydrologic features and provide features such as tree-lined streets, rain gardens, and use of native landscaping.

[1] "Middle housing" refers to moderate density housing, with forms and densities that fall between single-family homes and multi-family buildings. Middle housing buildings are compatible in scale, form, and character with single-family houses but contain two or more attached, stacked, or clustered homes.

  - Develop educational and volunteer programs related to climate science and habitat conservation.
  - Develop a City education program to share information and educate the community on local government, city functions, and ways to engage with staff.

- In the open-ended questions, participants expressed an interest in promoting more community events downtown that feature arts and crafts or farmers markets. This includes offering more events in the winter and partnering with local school to establish art programs. Participants also mentioned the concept of aging in place and suggested that the City could consider pursuing BlueZone recognition. BlueZone is an organization that partners with local communities, health care providers, and cities to develop programs focused on well-being and human health. A general theme across the open responses included an interest in maintaining a small town feel and preserving open space areas and trees from development.

Housing

Survey questions on the Housing element were open from September 29 to October 12, and there were 50 respondents. Questions explored actions related to affordable housing, infill development, and zoning.

- The top three most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
  - Require large developments to dedicate a portion of lots/units for middle housing or ADUs as part of subdivision approval.
  - Offer financial assistance or programs to rehabilitate and repair existing housing stock.
  - Invest in existing neighborhoods to improve safety, accessibility, and livability while preserving neighborhood character.
- In the open-ended questions, participants suggested that additional actions for the City to consider could include supporting mixed-use on single family lots to increase the availability of neighborhood businesses and encouraging more infill development in existing neighborhoods to prevent sprawl and preserve natural areas. Additional suggestions for potential actions include revising the development code for ADUs to make construction and permitting more affordable. Respondents also expressed an interest in protecting rural and undeveloped areas from new subdivisions.

Natural Environment and Climate Resiliency

The joint survey on the Natural Environment and Climate Change & Resiliency elements was open from October 13 to October 26, and there were 15 respondents. Questions solicited feedback on actions related to clean water, trees, parks and recreation, trails, and climate resilience.

- The most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
  - Support cleanup efforts at the Camas Mill and other contaminated sites to protect natural resources and local water supply.
  - Develop a program (such as an Urban Forestry program) to prioritize the preservation of existing trees, develop new tree planting requirements, and support education and tree canopy data management.

  - Prepare a community wildfire protection plan that addresses wildfire prevention and requirements for fire resilient landscaping.
  - Implement targeted lake management actions to protect water quality and reduce harmful algae blooms in local waterways.

- In the open ended questions, participants suggested additional actions for the City to consider could include establishing wildlife corridors within neighborhoods, particularly at the periphery of the city, adding solar powered lights at locations throughout the city such as pedestrian crossings, involving community volunteers in environmental projects, implementing a notification system and emergency plan for wildfires , and implementing regular testing of PFAS chemicals (i.e., "forever chemicals") in the city's water supply. General feedback included respondents expressing interest in encouraging active modes of transportation (e.g., biking and walking), restoring native ecosystems, removing contaminants from the city's water supply, providing space for wildlife, and preparing for wildfires.

Economic Development

Survey questions on the Economic Development element were open from October 27 to November 7, and there were 12 respondents. Questions explored actions related to local businesses, mixed-use areas, access to goods and amenities, and living-wage jobs.

- The top three most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
  - Partner with groups such as the Chamber of Commerce, Port of Camas-Washougal, and Columbia River Economic Development Council to proactively recruit new businesses and industries and ensure that tools and incentives are in place to attract and retain living-wage employment.
  - Launch an economic development grant program to support local business and provide incentives for new businesses and industries.
  - Encourage mixed-use zoning and neighborhood business districts to increase local access to goods and services, provide more efficient use of land, and link residents with employers and businesses.
- In the open ended questions, participants suggested that additional actions for the City to consider could include implementing incentives for small and medium-sized businesses, partnering with the Port of Camas-Washougal to provide more commercial space, revising the zoning code to not allow land zoned for commercial or industrial uses to be developed as residential uses, and providing incentives for more community spaces to allow for a meeting place for clubs and adult programs. General feedback from respondents included comments on accommodating future impacts of remote work, supporting the growth of small and medium-sized businesses, and encouraging diverse commercial and industrial uses.

Transportation and Public Facilities

Survey questions on the Transportation and Public Facilities elements were open from November 10 to November 21, and there were 8 respondents. Questions explored actions related to biking, walking, schools, utilities, and first responders.

- The top three most popular actions among participants, which included responses of Strongly

Agree or Somewhat Agree, were the following:

- Develop a Safe Routes to School program by partnering with the Camas School District to make active transportation safe and fun for children traveling to and from school.
- Incorporate sustainable design features (such as daylighting, solar, and green roofs) in existing and new public buildings.
- Update the City's Stormwater Design Standards Manual to include requirements for low-impact development or green infrastructure to reduce the amount of impervious areas in new development or redevelopment projects.

- In the open ended questions, participants shared that additional actions for the City to consider could include implementing more protected bike lanes, fixing gaps in the sidewalk infrastructure, considering policies to limit light pollution, requiring the development community to provide safe bike and pedestrian infrastructure, and protecting groundwater recharge areas. General feedback from respondents focused on either prioritizing bicycles and pedestrians or only vehicles. This contrasting feedback included respondents who are interested in expanding bike and pedestrian infrastructure as well as those who would prefer to use funding for improvements to roadway facilities to limit congestion.

Land Use

Survey questions on the Land Use element were open from November 24 to December 5, and there were 47 respondents. Questions explored actions related to housing, public services, employment and recreational uses.

- The top three most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
  - Update the City's development code to incorporate design standards that are sustainable and support low climate impact. Sustainable and low climate impact design standards include things like native landscaping, energy and water efficiency standards, use of non-toxic materials in construction, and site optimization to preserve green space.
  - Collaborate with partners to encourage community events, signage, and public art that celebrate the unique identities of different areas of the city.
  - Prioritize mixed use development that encourages small businesses, provides a mix of housing types, increases pedestrian and transit connections, and includes environmentally sensitive design.
- In the open ended questions, participants shared that additional actions for the City to consider could include constructing a public disc golf course, implementing parking reform, purchasing or facilitating the purchase of right of ways, acquiring easements and land transfers for bike and walking paths, providing more youth sports facilities and parks, and increasing public access near Lacamas Lake. General feedback included preserving green spaces, providing more open space, limiting growth, and aligning transportation improvements with land use plans.

Downtown Camas

Survey questions on the Downtown Camas subarea plan were open from December 8 to December 26, and there were 5 respondents. Questions focused on potential policies and incentives that could be implemented in Downtown Camas related to transportation, housing, development regulations, and

local character.

- The top three most popular actions among participants, which included responses of Strongly Agree or Somewhat Agree, were the following:
    - Partner with local artists to create public art, murals and other interactive elements in Downtown and require new developments to provide public art.
    - Require active ground floor uses (commercial or public space) and engaging street level design (pedestrian accessible) in the Historic Main Street Core area of Downtown.
    - Develop a parking management plan for Downtown to ensure there is adequate parking for Downtown businesses and residents, and explore options for shared use parking and offsite (edge of Downtown district) parking facilities that could serve as a park and ride transit facility.
- In the open-ended questions, participants suggested that additional actions for the City to consider could include improving pedestrian crossings with flashing beacons (e.g., a crosswalk at Garfield and 6th), revising parking requirements, and establishing a parking benefit district to charge for on-street parking. General feedback included an interest in creating safer pedestrian and bicycling infrastructure, preserving the small town and working-class culture of Camas, improving curb management, refining parking requirements, and keeping Camas affordable.

Conclusion

The seven online surveys recorded responses from over 150 respondents from the community on the draft comprehensive plan and Downtown subarea plan. Surveys on housing and land use gathered the most responses with general feedback focusing on preserving existing open space as well as support for actions to encourage growth in developed areas of the city such as infill and mixed-use development or ADUs. Feedback from the Community Summit will be used to inform refinement of the draft comprehensive plan and Downtown subarea plan, including potential revisions to goals and policies, and the identification of future implementation actions.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #1
February 6th, 2024, 6:00- 7:30 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
6:00	Welcome and Introductions • *What do you love about Camas and why do you want to be on this committee?*	Alan Peters, City of Camas
6:15	*Our Camas 2045* and *Our Downtown Camas 2045* Project Overview • City goals and objectives • What is a Comprehensive Plan and Downtown Subarea Plan? • Process and Equity Framework • Key Milestones and schedule	Alan Nicole McDermott, WSP
6:30	CAC Roles and Responsibilities • Review charter • Other project committees (DCA and Climate)	Anaïs Mathez, 3J Consulting
6:40	Public Participation Plan (PPP) • Stakeholder list	Anaïs
6:50	CAC Community Conversation Kit and Group Discussion • Community Conversations Kit • CAC role and responsibilities • CAC Discussion	Anaïs CAC Members
7:20	Next Steps • Community Conversations sign-up • General meeting logistics	Nicole
7:30	Adjourn	Alan

Community Advisory Committee (CAC)
Meeting Summary #1

February 6th, 2024, 6:00-7:30 PM

Meeting Attendance
Alicia Brazington
Betty Peng
Brian K. Kuhta
Carol Collier
Carrie Schulstad
Colin Casad
Greg K. Anderson
Heidi Buhman-McNeley
Jason Irving
Kim Sogge
Matthew Clarkson
Richard "Rick" Melching
Samantha Horner
Stephanie O'Dell

Marlo Maroon – *Planning Commission Liaison*
Bonnie Carter – *City Council Liaison*
Steve Hogan – *Mayor*

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Yvette Sennewald, Planner

Consultant Team
Nicole McDermott, WSP
Aaron Carpenter, WSP
Margaret Raimann, SERA Architects
Matthew Arnold, SERA Architects
Anais Mathez, 3J Consulting

Welcome and Introductions
Mayor Hogan provided opening remarks. All attendees were invited to introduce themselves and share what they love about Camas and why they want to be on this committee. CAC members shared the following opening reflections:

What do you love about Camas?
- Beautiful place to raise kids
- Downtown walkability
- Love the natural beauty, trail system and tree canopy
- Love the small-town feel, recreation opportunities, sense of uniqueness, and protection of architectural integrity
- Parks, recreation, open space
- Neighbors, school district
- Love the regional accessibility and natural spaces
- Enjoy going to movie theatre, and the downtown isn't overrun
- Legacy/heritage/generational
- It feels safe, clean, and beautiful
- It's like "living in a Norman Rockwell painting"
- Proximity to airport

Why do you want to be on the committee?
- Civic duty
- Desire to serve the community
- Seen bad plans, seen good plans – want to lend expertise (background in civil engineering)

- Be a part of growth, not just haphazard growth
- As a former planning commissioner, witness to gaps in policy, and "NIMBYism". Desire to see housing that is affordable, equitable, for low to middle income families
- To honor past but intentionally move forward – desire to communicate what we can do versus what is beyond our control
- Wants to ensure the right kind of growth
- Advocate for people who are under-represented
- Desire to integrate newcomers with generational families. Advocate for affordable housing
- Interest in downtown
- Interested in bringing more housing to downtown
- Have background in real estate and interested in understanding the changes in Camas
- Desire to see better job growth

Our Camas 2045 and _Our Downtown Camas 2045_ Project Overview

Alan Peters, Community Development Director, provided an overview of the City's goals and objectives for the Comprehensive Plan and Downtown Plan, touching on topics like housing, economic development, climate, and downtown. Robert Maul, Planning Manager, described the role of the City's Comprehensive plan and the regulatory framework. Nicole McDermott, WSP, provided an overview of the project process, describing each phase of work from the existing conditions analysis, equity framework, visioning outreach, plan development, implementation and to eventual adoption. Nicole reviewed key milestones and the overall project schedule. CAC members asked the following clarifying questions:

- *Is there work outside of the City that is being done alongside this process?* Clark County provides population projections and works with communities in Urban Growth Areas (UGA)/unincorporated areas. Neighboring municipalities are going through the same periodic update requirement.

CAC Roles and Responsibilities

Anais Mathez, 3J Consulting, reviewed the CAC Charter. She discussed the Committee's roles and responsibilities, and described the function of other project committees, such as the Project Advisory Committee (PAC) and the Climate Policy Advisory Team (CPAT). She noted that CAC members are expected to meet eight times over the course of the next year. The meetings will cover the comprehensive plan and the downtown plan. CAC members had no questions or comments.

Public Participation Plan

Anais reviewed the draft Public Participation Plan (PPP). She described the engagement objectives and key project messages. She reviewed the draft stakeholder list, clarifying that the list is not meant to be exhaustive and represents a variety of interests and ways in which the City will engage community members in the process. Anais asked CAC members if they had additional ideas. CAC members offered the following additional stakeholders and partners to the list:

- Vancouver NAACP
- Boys and Girls Club
- Meals on Wheels
- Book clubs (through Camas Library)
- SW Washington League of United Latin American Citizens (LULAC)
- Non-school youth (4-H, Boys/Girls Scouts, STEM clubs, Sports Little League/Swim, etc.)
- Booster Club
- CEF (Camas Educational Foundation)

- Camas/Washougal Gardening Group
- Bike Clark County
- Other franchise utility companies (fiber)
- School of Blind/Deaf (Vancouver/Clark County) for Accessibility

Anais then reviewed the engagement activities and communication tools. CAC members had the following questions, clarifications and comments:

- Consider adding a performance metric or evaluation criteria in the draft PPP to ensure we are reaching all members of the community.
- *Will all engagement activities and tools (post cards, summits, online surveys) be used or are they just suggestions?* All activities and tools listed in the PPP will occur throughout the course of the project.
- *What outreach will we do with schools?* The consultant team will conduct Community Conversations with High School students through classes and clubs such as AP Government, Student Council, etc. A Tracking Log for Community Conversations will be shared with the CAC, which will be helpful to see which groups we are reaching, and when.
- *Does the online survey describe what we are doing with the information?* Yes, the survey describes how the feedback will inform the development of a Vision Statement. This Vision Statement will set the framework for policy making in the Comprehensive Plan and Downtown Subarea Plan.
- *What is the role of CAC members in directing discussion during a Community Conversation?* CAC members are encouraged to lead with a positive tone and are simply gathering and recording information, even if the discussion turns negative.
- *How do you account for over-representation in the online survey?* The visioning activities like the survey are qualitative, not quantitative (i.e. no statistical validity). The purpose of these outreach activities is to share information and have a wide variety of conversations through various mechanisms, in order to get a pulse of community aspirations and priorities. Qualitative, not quantitative review process.
- *Is there a "NextDoor" strategy? How engaged do we get on social media?* The City monitors social media and NextDoor. CAC members are welcome to share information out by linking to the EngageCamas website through their various channels.
- *What is the purpose of city-wide mailers?* The mailers are a communication tool. Mailers will be timed to announce the launch of the project and upcoming opportunities to get engaged, either by taking the online survey or attending a Community Summit. CAC members have a large role in overall outreach and engagement, ensuring we receive quality feedback and are able to extend the reach across many networks.

CAC Community Conversation Kit and Group Discussion

Anais covered the community Conversations Kit and Tracking Log, describing the method, approach and objectives. Due to limited time, CAC members did not have a chance to engage in a "Community Conversation." Staff will assess the next meeting agenda for time to conduct a group discussion.

Next Steps

Nicole reviewed next steps and general meeting logistics. The purpose of the next meeting will be to review the Equity Framework, Existing Conditions, and discuss initial feedback received through the survey and Community Conversations. Anais reminded CAC members to see her after the meeting for questions regarding the Community Conversations Kit and Tracking Log.

- CAC members agreed that the meeting day and time generally works, though one member suggested that the team consider starting these meetings earlier than 6pm.
- *Can CAC members receive key project and meeting materials via GoogleDrive?* Yes, the team can set up a file-sharing platform. Materials will also be posted to the EngageCamas website following the meetings.

Project staff thanked the committee for their attendance and adjourned the meeting at 7:45pm.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #2
March 26th, 2024, 6:00- 7:45 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
6:00 (5min)	Welcome	Alan Peters, City of Camas
6:05 (10)	Visioning Outreach Updates • Website and survey • Community conversations • Upcoming events and activities	Anais Mathez, 3J Consulting
6:15 (30)	CAC Community Conversation • Group Discussion • Kit + tracking log reminders	Anaïs CAC Members
6:45 (20)	Existing Conditions • Demographics and Community Character • Regulatory Documents • Parks, Trails, and Open Space • Climate • Utility Infrastructure and Capacity • Transportation Network	Nicole McDermott, WSP
7:05 (15)	Equity Framework • Examples • Group Discussion – What should this look like for Camas?	Nicole
7:20 (15)	DCA Mapping Opportunities & Constraints • Group Discussion	Nicole

7:35 (10)	Next Steps • Community Conversations sign-up • General meeting logistics	Anaïs, Nicole
7:45	Adjourn	Alan

Steve Hogan – *Mayor*

City Staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Yvette Sennewald, Planner

Consultant Team
Nicole McDermott, WSP
Aaron Carpenter, WSP
Anais Mathez, 3J Consulting

Welcome and Introductions

Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Visioning Outreach Updates

Anais Mathez, 3J Consulting, provided updates on the visioning outreach. Anais shared that the online survey and interactive map received over 250 responses, collectively, and that web traffic was high. She reviewed the list of Community Conversations that had been conducted, and asked CAC members for any reflections on the discussions they've been having. CAC members offered the following comments and questions:

- We've been talking about this project for a long time, but the excitement is still there. Happy for looking towards change and growth. Love downtown but know it needs to grow and grow right.
- We need to get past 'why do we have to grow' questions and get into 'what does growth look like' for the required housing and employment.
- One question from the Community Conversation was why the City is asking us what we want if they already know what is going to happen? *This is an opportunity for CAC/City to point out the change/influence these conversations/input has on the planning process.*
- Do we have goals/metrics for survey feedback responses? *The updated Public Participation Plan (PPP) includes metrics, but we are generally focused on quality over quantity.*

- Could we have talking points for FAQ/Key messages/ "soundbites"? *The PPP has key messages but a reminder that as a CAC facilitator, you don't have to have all the answers. You are mainly there to encourage discussion and capture notes.*

Anais shared that the project team hopes to wrap up Community Conversations by May, given that the Summit will report out on this feedback and that will occur in June.

CAC Community Conversation

Anais led the group through a Community Conversation and took notes on a flipchart while CAC members shared the following reflections:

What makes Camas, including our historic downtown, special today?

- People knowing/supporting each other
- Close-knit downtown business community
- Great schools
- Family Friendly
- Close to nature (paths, lake, parks)
- Clean and Safe
- Don't see a homeless problem (new residents)
- Downtown acts as living room – expands social fabric
- Events bring people downtown, and they come back for the businesses
- Compact, walkable, accessible (balanced with proximity to nature, but access to 205/14/PDX airport)
- Authentic historic charm (architecture, mill town history, "Hallmark movie")
- Library programing, Youth Sports programming
- "We pass all our bonds"

What about Camas would you like to change in the future??

- Better access to waterfront (Washougal) - waterfront redevelopment (what Vancouver has done)
- More sidewalks! Near schools, Prune Hill, main thoroughfares.
- Housing downtown
- Housing choice / variety
- More neighborhood commercial to scale (hubs)
- More pocket parks, dog parks
- More jobs/better jobs/ career jobs for youth
- More bike-ability, crosswalks, traffic diet
- Improve/expand utilities and infrastructure (stormwater)
- More parking downtown, especially for events ("what's reasonable for walking distance?", shuttles, accessible for elderly, disabled)
- Transit
- More and better connected trails

- Retain community events (July 4 fireworks, farmers market)
- Maintain facilities/parks/trailheads
- Architectural integrity/design standards

What people, groups, or communities should be involved in this process?

- Chamber of Commerce
- Engage other neighborhoods
- Youth – Boy/Girl Scouts, Teen involvement (HS)
- Senior voice needs representation (AARP)
- New residents (need connection, have different/outside views)
- Legacy residents (those having hard time with growth)
- Renters

Existing Conditions

Nicole McDermott, WSP Project Manager, provided an overview of the City's existing conditions. She reviewed data, topics and elements that will be incorporated into the Comprehensive Plan, like community character; population and employment projections; regulatory documents; natural environment; climate change; parks, trails, and open space; utility infrastructure and capital facilities; and transportation. CAC members offered the following comments and questions:

- *Why are there more jobs projected than housing?* They aren't connected in the County modeling, just based on the vacant buildable lands.
- *How has county factored in hybrid/WFH jobs?* The County has made a few adjustments to account for newer employment trends.

Equity Framework

Nicole reviewed the draft Our Camas 2045 Equity Framework. She described how the Equity Framework can guide equity considerations for the Comprehensive Plan update. The Equity Framework will be developed with the CAC based on committee and community input. She shared examples of Equity Frameworks from the City of Vancouver and King County. Nicole offered the following discussion questions:

- What resonates with you about the equity frameworks?
- How would you define Equity? Does the City or another organization currently have a definition?
- What are potential measures of success for equitable outcomes? Can climate adaptation (policies, goals, strategies, etc.) be considered a measure?
- What people, groups or communities should we reach to make this an inclusive process?

CAC members offered the following comments and questions:

- What is equity framework in general? *It's an opportunity to reflect on and confirm that we are hearing from the communities that we identified, throughout the entire process*
- I understand there unequitable policies are historic and systemic - will we inventory unequitable policies, permitting processes, etc.? *Yes, the Equity Framework can set metrics to*

make sure we are reviewing these policies.

- Hopefully the language used in the comprehensive plan is fair. "Keep Camas Camas" / "Our Camas" has different connotations and may be racially coded.
- We would be behind the times without an Equity Framework. I agree that we want equitable outcomes and buy-in from everyone. We need to ensure we hear from everyone we say we want to hear from.
- Let's involve diverse voice in process.
- Equity outcomes can look like:
    - Updates to codes/policies for obvious inequitable language.
    - Assessing if design standards preserve equitable access to parks/nature for elderly, disabled, BIPOC, lower income.
    - An improved sense of belonging.
- Audit the language and terminology in policy language
- Climate adaptation policies are important for measuring success of equitable outcomes but feels limited.
- We need to be clear in our public involvement process that we are reaching the people we want to reach.
- Equity Committee can contribute to reviewing language.
- Other measures of success include:
    - Housing choice.
    - Design standards for parks for ADA accessibility and play for all abilities.
    - Access to parks.
    - Borrow equity and "belonging" work done by the school district and incorporate in our outreach.
    - Built environment – improved capacity of civic spaces, city hall, etc.

DCA Mapping Opportunities and Constraints

Nicole provided an update on the mapping exercise conducted with the DCA on March 20th. The exercise was an initial evaluation of opportunities and constraints to consider for Downtown Camas over the next 20 years. The following comments were shared:

- Downtown Core is generally agreed, but there are additional downtown areas, sectors, areas of influence that should be accounted for.
- Area south of 3rd/2nd Street are disconnected from downtown core.
- Relocating traffic patterns to increase safety, development opportunities.
- Downtown needs better access to greenspace/new greenspace.
- The mill ditch should be reimagined.

Next Steps

Nicole reviewed next steps and general meeting logistics. Anais reminded CAC members to see her after the meeting for questions regarding the Community Conversations Kit and Tracking Log. Project staff thanked the committee for their attendance and adjourned the meeting at 7:45pm.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #3
June 4th, 2024, 5:30-7:30 PM
Zellerbach Administration Center - Board Meeting Room
841 NE 22nd Ave, Camas, WA

AGENDA

Time	Subject	Lead
5:30 (5 min)	Welcome and Introductions	Alan Peters, City of Camas
5:35 (15 min)	Project Updates • Visioning outreach updates • Downtown Opportunities and Constraints • Equity Framework • Project schedule	Nicole McDermott, WSP
5:50 (15 min)	Key Themes and Visioning Outreach • Activities and events • Key themes	Anaïs Mathez, 3J Consulting
6:05 (15min)	Our Camas 2045 Draft Vision Statement • Group Discussion – Are we on the right track? Is there anything missing?	Anaïs CAC Members
6:20 (50 min)	Our Camas 2045 Draft Goal Statements • Small Table Discussions – How do we achieve the vision?	Anaïs Nicole CAC Members
7:10 10 min	Report Out • Report out from each small table discussion	CAC Members
7:20 (10 min)	Next Steps • Community Summit on June 12th! • CAC Meeting #4, June 26th • Upcoming events and activities • Major milestones/project schedule	Nicole
7:30	Adjourn	Alan

Community Advisory Committee (CAC)
Meeting Summary #3

June 4th, 2024, 5:30- 7:30 PM

Meeting Attendance

Shannon Vizenor
Alicia Brazington
Betty Peng
Brian K. Kuhta
Greg K. Anderson
Heidi Buhman-McNeley
Jason Irving
Matthew Clarkson
Richard "Rick" Melching
Samantha Horner
Carol Collier

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Yvette Sennewald, Planner

Consultant team
Nicole McDermott, WSP, Inc.
Aaron Carpenter, WSP, Inc.
Anais Mathez, 3J Consulting

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Project Updates
Nicole McDermott, WSP, reviewed the agenda and provided project updates. Nicole touched on the visioning outreach activities and downtown opportunities and constraints. CAC members offered the following comments and questions:

- What's the difference between 'limited growth opportunities' vs. 'perceived development barriers'? *This reflects low vacancies/high turnover vs. redevelopment costs with old buildings.*

Nicole reviewed the draft equity framework and asked for the CAC to send additional thoughts, edits and questions to Alan by the following week. She explained that the draft definition of "equity" is specific to *Our Camas 2045,* but a similar framework is used in many current comprehensive plans. CAC members offered the following comments and questions:

- It is interesting to see small businesses identified as a group in the Equity Framework. Why is this? *Small businesses can be negatively/disproportionately affected by development changes, especially in downtown.*
- It would be good to better define "small businesses" for the purposes of this Equity Framework.

Visioning Outreach Updates
Anais Mathez, 3J Consulting, provided updates on the visioning outreach. Anais shared that the online survey and interactive map received over 500 responses collectively, and that web traffic was high. She reviewed the list of Community Conversations that had been conducted, and staffed community

events. CAC members reviewed a list of key themes gleaned from the compiled feedback throughout all of the outreach. CAC members offered the following comments and questions about the key themes?

- How often did the question of adding a school/high school come up? *The comment about a second high school was relatively infrequent. Most comments were themed around retaining the small-town feel and historic nature of downtown.*
- The school district recently put out a video about one of their properties. Is that connected to this process? *That is separate. The school district launched their own public engagement process to gather ideas for what to do with that property.*
- What waterfront are people referring to in their comments? *Likely the Mill property. Access to water, parks, and open space is a key theme throughout.*
- We see a lot of discussion about the church property downtown. *Yes, this is a hot button topic.*

Draft Our Camas 2045 Vision Statement

Anais described how key themes from the outreach were incorporated into the draft vision statement. She read aloud the four themes that make up the vision statement. CAC members offered the following comments and reflections:

Community Pride/Connection

- We might be too specific on community amenities. Visions should be more general and goals/policies more direct.
- Pets aren't mentioned.

Environment, Natural Beauty and Outdoor Recreation

- Check the wording of the phrase *"…mitigate increasing natural hazards…"*
- Add mention of "parks."
- Include an opening/closing statement for each theme.

Housing and Economic Development

- Interspersing residential areas with commercial is a tough move for the city. This might be more doable in Downtown and North Shore.
- Add more focus on growth and accommodating future residents.

Downtown

- Add more focus on growth.
- Public transportation is missing – accessibility and connectivity doesn't necessarily cover public transportation.

Other general comments included:

- The vision statement is very long. Consider shortening it.
- Consider bolding the first sentence of each statement.
- Consider updating the titles of each theme.
- Include a summary or list of topics that each vision theme covers. This could be added to the matrix.

Our Camas 2045 Draft Goal Statements: *Small Table Discussion Activity*
CAC members organized themselves into small groups to review draft goal statements for each theme and identify ideas for achieving the vision and goals. Each group reported back on the following ideas:

Community Pride

- Create an arts commission
- Incorporate more art murals. Distinguish between art for art vs. art for cultural heritage. This is also a point of discussion for the Equity Framework.
- Promote more events outside of downtown.
- Partner with the school district for mutual use facilities (pools, parks, etc.)
- Develop a Communication/Engagement Plan. Neighborhood Associations have a communication role with residents.
- Identify cultural heritage and provide educational history beyond the mill
- Construct public gathering spaces.

Environment

- Develop an urban forestry board with staff
- Create a Heritage Tree program
- Ensure parks are within walking distance to all neighborhoods
- Develop more EV parking.
- Expand dog parks
- Place more deer crossing signs
- Underground utilities
- Encourage the use of sustainable building materials

Housing and Economic Development

- Develop specific street standards
- Add more flexibility to design standards
- Develop more multifamily housing around schools for walkability
- Embracing middle housing/ADU development
- Utilize available land (across from Lacamas Lake)
- Expand transit services
- Remove parking requirements for high density housing
- Add solar panels to all city buildings

Downtown

- Downtown design review committee
- Architectural review committee
- Allow ADUs with minimal design requirements
- Construct a public plaza
- Revise design standards
- Expand tree planting efforts
- Encourage more street activities

Next Steps

Anais reviewed next steps. She reminded CAC members of the Community Summit on June 12th, from 4:30-6:30pm. The public will have an opportunity to provide similar feedback and ideas for the Vision and Goals. Anais also reminded CAC members that the next CAC meeting will be on June 26th from 5:30-7:30. That meeting will focus on the HNA/EOA Needs Assessment, reviewing feedback from the Summit, and conducting a mapping activity. Project staff thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #4
June 26, 2024, 5:30-7:30 PM
Zellerbach Administration Center - Board Meeting Room
841 NE 22nd Ave, Camas, WA

AGENDA

Time	Subject	Lead
5:30 (5 min)	Welcome and Introductions	Alan Peters, City of Camas
5:35 (5 min)	Community Summit #1 Debrief	Anaïs Mathez, 3J Consulting
5:40 (15 min)	Revised *Our Camas 2045* Vision and Goal Statements	Anaïs
5:55 (40 min)	Review of Housing Needs Assessment (HNA) and Draft Economic Opportunity Analysis (EOA)	Tyler Bump, ECONorthwest
6:35 (50 min)	Land Use Alternatives Workshop • Overview • Mapping activity • Report back	Nicole McDermott CAC Members
7:25 (5 min)	Next Steps • CAC Meeting #5 • Upcoming events and activities • Major milestones/project schedule	Nicole

Anais Mathez, 3J Consulting
Tyler Bump, ECONorthwest

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Project Updates
Anais Mathez, 3J Consulting, reviewed the agenda and provided project updates. Anais recapped the Community Summit #1, reviewing key topics of conversation which are outlined in CAC packets. She asked for reflections from CAC members who were present at the summit. CAC members offered the following comments:

- There did not seem to be enough talk about economic development.
- The Visioning board was a helpful explanation for people.
- Attendees seemed to have left with a more hopeful outlook.
- The frequency of comments regarding the lack of sidewalks was interesting and surprising.

Anais reviewed the updated vision statement, focusing on key changes made since the last CAC meeting. CAC members offered the following comments and questions:

- "Library and sports programing" may be limiting in the *Our Community* statement; we may consider keeping it broader.
- "Clean water" was added back in the *Our Environment* statement, based on feedback from CAC and Summit.
- A specific goal should be added for clean water.
- There is a typo in the goal statement for Downtown; add "in" to "downtown" in the third goal.

Anais clarified that the goal statements have not changed, but new goals will likely emerge as we continue in the process. Alan will bring the revised Vision Statement to City Council for adoption by resolution on July 15th.

Housing Needs Assessment/Economic Opportunities Analysis Overview
Tyler Bump, ECONorthwest, provided an overview of Camas' economic, market and housing opportunities. He reviewed the City's competitive advantages and key findings from the data analysis. Tyler noted that Camas has high retail sales, rising retail rents, and positive retail absorption. Downtown activity is back to pre-pandemic levels. He also discussed Camas' projected needed housing targets and the role of the Comprehensive Plan in meeting these targets. Discussion with the CAC focused on how which economic opportunities should be prioritized and how the City should support existing and new business. CAC members offered the following comments and questions:

- What's the jobs-to-housing ratio across the region? What is a good ratio? *Washington County is 0:9, Portland is 1:3, and Camas is 1:1, so Camas is well balanced. You can't grow housing without growing the economy.*
- Is Camas an outlier with at-home jobs? *About 25% of workers in Camas are remote. That's important to talk about in regard to local services and amenities.*
- How current is the tax data? *It is from 2022, capturing the upswing of the pandemic.*
- Is there a way to prioritize tax-generating revenue? *That can be a policy – target specific types of jobs/industries that generate higher tax revenue. A balanced mix of industries is healthy/resilient to market shifts, so a policy around a diversified economy would be smart.*
- Is there a way to grow the footprint of the downtown area? *There is room for growth in the downtown core and its edges. The downtown subarea plan will support this. Neighborhood hubs can add commercial nodes in other areas throughout the city.*
- Policies need to support housing growth and not succumb to NIMBY-ism ("not in my backyard") when affordable/dense housing comes up.
- We need to educate the community that housing choices are needed to meet the County and State target numbers.
- We need to ensure the implementation of zoning/policies can deliver these housing targets. This also becomes a communication project to tell the stories of people moving out because they can't afford to live here.

Our Camas 2045 Mapping Activity *Small Table Discussion Activity*
Nicole McDermott, WSP, shared directions for the mapping activity. CAC members organized themselves into small groups to review a large map of Camas and discuss desired future land uses, transportation connections, and areas for preservation. CAC members used different colored stickers representing different land uses and colored markers to identify trails, bike routes, transit and road connections, as well as areas for parks, nature and preservation. At the end of the mapping activity, each group reported back on the key ideas from their group:

- Promote a village feel at Pacific Rim – extend the transit route to redirect people towards downtown Camas instead of Vancouver.
- Create a connected trail out of the Mill Ditch.
- Develop a walking trail from the high school.
- Revitalize the ballfields.
- Develop the Mill into a park area surrounded by mixed-use buildings.
- Consider higher density housing near the Costco, Walmart, and school.
- Extend transit and bike lanes to connect the isolated parts of the City and create a loop around Camas.

- Create downtown connections to the Port, Oak Park and the Port of Camas-Washougal.
- Consider higher density housing and mixed use near the intersection of 38th and Parker
- Construct a downtown gateway element on 6th Avenue.

Next Steps

Nicole reviewed next steps. The CAC will meet again in early August to continue the discussion of future land uses. The CAC's feedback will be used to revise conceptual land sue alternatives to bring to Summit #2 in the fall. CAC members offered the following feedback on the mapping exercise for future use:

- Include planned development and new development on the map
- Add landmarks and street names to the map
- Identify areas that cannot be developed or changed.

Alan will follow up by email regarding dates for the next meeting in August. Nicole thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Project Updates and Debrief of Camas Days
Nicole McDermott, WSP, reviewed the agenda and provided project updates. Nicole recapped the Camas Days event and shared that the booth was well attended and there was engagement in the materials and activities provided. Alan shared that the Vision Statement was recently acknowledged by City Council in early July.

Overview of Draft Land Use Alternatives
Nicole presented the draft land use alternatives, recapping the process for creating the maps. The two alternatives reflect two concepts: focusing on growth within hubs (Alternative A) and along corridors (Alternative B).

Key characteristics of Alternative A include:
- Focuses growth into Neighborhood Hubs and Regional Hubs.
- Neighborhood Hubs – areas that have potential to support a variety of neighborhood-serving uses.
- Regional Hubs – areas that have the potential to support higher scale residential and commercial uses.
- Includes mixed-use and more employment in the western portion of the City.
- Includes pockets of higher density housing throughout the city, including south of 3rd St. in Downtown.

- Includes higher density housing near the high school.
- Includes Grove Field as new employment area.

Key characteristics of Alternative B include:

- Focuses growth into Mixed-Use Residential and Mixed-Use Commercial Corridors.
- Mixed-Use Residential – areas that are focused on more residential development with some neighborhood-serving commercial uses.
- Mixed-Use Commercial – areas that are focused on commercial and office with some higher density housing.
- Includes Mixed-Use Corridors and higher density housing in the western portion of the City.
- Similar to Alternative A, includes the following:
    - Pockets of higher density housing throughout the city, including south of 3rd St. in Downtown.
    - Includes higher density housing near the high school.
    - Includes Grove Field as new employment area.

CAC members offered the following questions:

- Are we evaluating the policies with these maps? *The policies can influence the map, and future policies may need to be added to incentivize development or guard against negative development (i.e. displacement). Policies will be discussed at a future CAC meeting.*
- What's Camas' policy on middle-housing (thresholds, etc.). *Existing multifamily housing and single-family housing standards will change to meet current state requirements in order to provide more housing/affordable housing. We don't want to do that at the detriment of jobs potential / development. Middle housing law does require Camas to allow for 2 DU per lot (4 w/in ¼ mile of transit).*

Breakout Groups: Discussion of Draft Land Use Alternatives

Anais Mathez, 3J Consulting, shared directions for the breakout group discussions. CAC members organized themselves into small groups to review the two land use alternatives side by side. CAC members were invited to reflect on the following key questions and capture their group's evaluation of the two alternatives in the worksheet provided.

- Which alternative does your group prefer? Why?
- What are some areas of agreement? What are some areas of disagreement?
- How well does each alternative support the land use goal statements?

At the end of the mapping activity, each table reported back on the key ideas from their group:

<u>Table 1:</u>

- Preference for Alternative A (Hubs)
- There was agreement that "Hubs" help retain the small-town feel
- Don't want corridors to feel like Mill Plain but do like the idea of smaller-scale corridors that could achieve small-town feel with commercial proximity

<u>Table 2:</u>

- Preference for a blended approach of Alternative A and B (Hubs and Corridors)
- There was disagreement on how to approach land uses near Parker/38th. Some preferred

keeping the natural environment.
- Alternative A (Hubs) ranked slightly higher when evaluated against the land use goals.

Table 3:
- Preference for Alternative A (Hubs), though there was interest in commercial mixed-use along some corridors
- There was agreement that "Hubs' are conducive to planned, intentional development
- There was agreement that corridors were important to help extend commercial development
- There was a desire for a hotel on HWY 14
- There was concern about creating a traffic pinch-point in the Everett Corridor
- Additional areas for housing were identified.

CAC members offered the following questions and comments:
- Are there tried and true ways to incentivize the "hub" concept? *The City prioritizing infrastructure and network improvements is important. Housing is a very important aspect for walkable commercial development as well.*
- Pushing housing density closer to industrial areas feels like it could create a scenario of "haves and have nots."

Next Steps
Nicole reviewed next steps. The second round of Community Summits for the comprehensive plan and the downtown subarea plan are currently being planned. The team will consider scheduling an additional CAC meeting in September to review refinements to the maps. The CAC offered the following final reflections:
- The Harvest Festival is on October 2nd
- Consider using the Library for the Downtown Summit
- Add landmarks and revise the color schemes for the land use alternative maps.

Nicole thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Bonnie Carter (City Council)

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager

Consultant Team
Nicole McDermott, WSP
Aaron Carpenter, WSP
Anais Mathez, 3J Consulting
Jennifer Cannon, ECOnorthwest

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Preferred Alternative Development
Anais Mathez, 3J Consulting, recapped the community summit and shared the community's feedback on the preferred alternatives. The CAC provided their thoughts and reflections, sharing that they felt the event was engaging and included younger attendees, new faces, and new discussions. Some comments included hearing the desire for more economic development and more diversified types of development. Comments also included that the meeting venue was in a good location, and that the boards were engaging and the information was well presented.

Nicole McDermott, WSP, transitioned to describing the preferred alternative and how it reflects the feedback received from the CAC, public and City staff. She described how the preferred concept focused on hub development over strip development, focusing on development at intersections and in key locations. A new overlay could influence design and form, not necessarily type of use, and certain re-designations would be required to meet housing and job targets. CAC members offered the following questions/comments:

- *Is there a need/market for the designation change?* The mixed-employment designation will allow a broader option of uses which will help encourage development in spaces that historically haven't been built up or met the needs of a

larger-scale industrial complex.

- *Is there a designated economic development manager with the city?* The City uses CREDC for economic development but the City 'sets the table' with infrastructure investment and zoning/standards. We'll look at making sure goals/policies focus on economic development and jobs growth.

Draft Comprehensive Plan Goals and Policies

Jennifer Cannon, ECOnorthwest, described the purpose of the economic and housing chapters of the Comprehensive Plan, reviewing key facts and figures. She shared recommended revisions to the vision statements for both the economic and housing chapters, reviewed existing goals for both chapters and walked through key policy updates that will be needed. CAC members offered the following questions/comments:

- *Implementation is key for momentum to actually make this plan encourage development.* Implementation will come with developing the zoning code update.
- *Incubator spaces will be huge for small business development. There currently isn't space for small businesses to operate in temporary/short-term settings like a commercial kitchen.*
- *How do we go about maintenance programs to preserve affordable housing?* City partners with non-profits to help people stay where they are (maintenance, fix, age-in-place); support affordable housing redevelopment through proper zoning.

Upon conclusion of Jennifer's presentation, CAC members engaged in breakout time to review additional content on poster boards around the room. The boards related to Camas' competitive position (strengths and weaknesses), revised vision statements for the housing and economic development chapters, as well as corresponding goal language. CAC members discussed the key questions amongst themselves and provided feedback on post-it notes. The following comments were provided by CAC members (see appendix for scanned notes):

Poster 1 Comments: Competitive Position of Camas

Strengths and Opportunities	Challenges
• *Please, please, please develop mill ditch into a compelling, easy, and beautiful trail system that is clear to connect with from downtown and level it enough to encourage local resident activity and to attract visitors and encourage use of downtown along with recreation.* • *More hotels and conference space.* • *Partner with workforce development agencies and school district CTE.* • *Have city partner with DCA more strongly with the PUT credit improvement program. We do a lot of economic development and community development and can do much more with more support.*	• *Aggressive contractor management to incentivize low-cost housing.* • *Downtown doesn't have vacancy- need development to pencil so we can get more.* • *The DCA is embracing a comprehensive downtown lighting plan – 19 buildings with a state grant- will transform safety and flow downtown.* • *Improve traffic flow on 14th, 15th, and Quinault Street.* • *School areas desperately need improved safety crossings.* • *3rd Ave. safety and bike lane grant was awarded to the City.* • *Commerce promotion.*

Poster 2 Comments: Existing Economic Goals in Plan

- *The north shore area with infill*
- *We need commercial space*
- *We need a dedicated economic development director! Or at least a dedicated plan.*
- *For business during week, kids/residents during evenings and weekends.*
- *Grass Valley mixed/light industrial park with athlete fields/parks.*
- *Why not a Grass Valley Subarea Plan?*
- *We need far more manufacturing jobs.*
- *Be clear on what kinds of businesses would be most beneficial to Camas in Grass Valley so we can all be aware when we are taking prospective businesses.*
- *Allow work/live housing along and around UGA/schools and major transportation corridors.*
- *The city should look into a City staff person for economic development. Write a grant for a position.*
- *Ensure workforce housing is available for current and future workers.*
- *Focus on tourism and bring in money.*

- *Are there model cities Camas would strive to look like? (Lake Oswego, Bend, etc.)*
- *Can we compare plans with cities that have experienced similar growth? What did they do well or not?*
- *Having diverse housing options will lead to a more diverse city.*
- *Council wants to fill an economic development director and volunteer coordinator – how to fund?*

Poster 3 Comments: Existing Housing Goals in Plan

- *Citywide: Maintain the strength, vitality, and stability of all neighborhoods and promote the development of a variety of housing choices that meet the needs of all members of the community. This goal seems very wide and difficult to achieve. Can we be more focused on affordability?*
- *More moderate density in downtown and near downtown and good connectivity (Safe, lit, easy)*
- *Be intentional- positive in messaging about adding middle housing and moderate density so community gets accustomed to why it is so important for our community and culture to include all. Show that it's not scary.*
- *Density!*
- *Consider incentivizing housing developers through zoning, taxes & fees, partnerships*
- *Partner with VHA and other orgs to identify and develop affordable housing.*
- *Partner with habitat for humanity and housing authority. Proud ground for moderate- and low-income housing.*
- *Attract a large senior housing project.*
- *More 4-5 story multi-family units, especially downtown.*
- *Builder incentives to focus on mixed use/ apartments.*
- *Green Mountain Services (commercial development), especially if expanding the UGA.*
- *Don't forget the bike paths.*
- *ADUs- make it easy to build ADUs in backyards.*
- *YIMBY policies!*
- *Incentivize small developers (housing & economic development combined!).*

Upon conclusion of the break-out, CAC members discussed their comments and questions, sharing the following:

- *What are model cities that we could copy/emulate?* We look at cities around the state and region regarding best practices for setting specific goals and policies.

Next Steps

Nicole reviewed next steps and the project schedule. The preferred alternative will be shared at a Planning Commission Briefing on December 17th and at a City Council briefing in early 2025. The CAC will meet two more times to review revised policy language for other chapters as well as the Comprehensive Plan document. The CAC's next meeting will likely be held in late February or early March 2025. Both the Comprehensive Plan and Downtown Subarea Plan are on track for adoption in Winter 2025. Nicole thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #7
April 14th, 2025 5:30-7:30 PM
Camas City Hall – Council Chambers
616 NE 4th Ave, Camas, WA 98607

AGENDA

Time	Subject	Lead
5:30 (5 min)	Welcome and Introductions	Alan Peters, City of Camas

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager

Consultant Team
Nicole McDermott, WSP
Anais Mathez, 3J Consulting

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Work-to-Date
Nicole provided a recap of the project and work done to date since the last CAC meeting. She reviewed the preferred land use alternative and described efforts in drafting initial goals and policies for the draft Plan. The CAC was reminded about the virtual *StoryMaps* survey currently live on the project website and was prompted to continue sharing this out among their networks. Nicole reviewed the project schedule, noting that certain procedural elements at the County level may delay adoption to late winter 2025 or early 2026. In the meantime, community outreach during the upcoming summer months will focus on rolling out the draft Plan through pop-up activities at community events rather than hosting a standalone, open house.

- A question was raised about how the public will get notified about these outreach opportunities.
    - Staff responded that once the list of events is confirmed, promotional materials will be posted and sent out, like a flyer, e-blast and citywide mailer.

The group discussed a list of potential community events and touchpoints, such as the Farmers' Market, Camas Days, football games, or even a passive poster board station set up at the Library.

Comprehensive Plan Elements: Draft Goals and Policies

Nicole presented each of the comprehensive plan elements, reviewing goal statements and describing key changes in policy direction. After the presentation, CAC members engaged in discussion and offered the following reflections, comments and questions:

- A committee member noted the absence of any mention of a community center.
    - Staff responded that this topic could potentially be addressed under the Community Character or Land Use elements. If it is not included, an explanation may be needed.
- A committee member asked why a swimming pool was not mentioned.
    - Staff indicated that a pool could fall under the Public Facilities element. Similar to the community center, it could be added or addressed explicitly if deemed appropriate.
- A question was raised regarding how dark sky policies apply in the Downtown area.
    - Staff explained that this could be addressed through lighting choices and the angle of lighting fixtures, such as avoiding neon signage.
- A member expressed concern about a policy discouraging gated communities, stating it had not been discussed previously.
    - Staff clarified that the intent is to promote neighborhood connectivity. This policy exists in the current Comprehensive Plan, and provisions in the development code currently support it. The group may want to either update the code to match the policy or consider removing it entirely.
- Another member questioned what it means to "discourage" gated communities and suggested the policy should prohibit them if that is the City's intent.
    - Staff agreed this could be flagged as a policy choice and noted the importance of aligning policies with existing code. They also emphasized the need to maintain pedestrian connectivity in all neighborhoods.
- A member noted the lack of a policy addressing noise pollution.
    - Staff responded that while a nuisance ordinance currently exists, it does not cover all noise-related issues. The draft plan touches on noise in residential buffer policies, but broader coverage is currently lacking in the code.
- On page 10, policy 3.3 was discussed. A member suggested it should be broadened to better reflect the intent to improve food access, including allowing farmstands.
- A member recommended that policies specific to Downtown should explicitly reference trail connections, in addition to broader multimodal connectivity.
- A question was raised about the existence of a specific architectural committee to review design standards.
    - Staff explained that clear and objective design standards are required by state law. They are reviewing which areas of the plan comply with these standards and evaluating potential updates to the design review process.
- Under policy H 1.2, a question was raised about how narrower streets could be compatible with sidewalks and bike paths.
    - Staff clarified that in low-traffic neighborhood settings, features like turn

lanes or full bike trails may not be necessary. They acknowledged that this policy might conflict with complete streets principles and may require clearer language.

- A suggestion was made to include a policy encouraging alley-loaded residential development.
- A member recommended aligning the Transportation and Housing elements more closely.
- Several comments discussed including language around tax incentives for affordable housing.
- Members noted that additional affordable housing requirements may apply to "middle housing" under state regulations.
- A land trust model was suggested as another affordable housing strategy, with the City's role limited to enabling it through policy.
- A recommendation was made to include a policy that incentivizes long-term affordable housing and acknowledges state requirements and tools such as land trusts.
    - Staff noted that policies H2-7 and H2-4 already speak to many of these strategies.
- A member asked whether the City should add a policy to reduce parking requirements for infill development to increase feasibility.
    - Staff responded that the recent state parking bill addresses this but only applies to cities with 30,000 or more residents. Camas is approaching that threshold, though.
- A comment was made that the plan should address parking availability for recreational areas, noting that it often competes with commercial parking and must also remain ADA accessible.
- Committee members emphasized the importance of consistency in language throughout the plan, pointing out variations such as "will try to" versus "will do this."
- A glossary was suggested to improve accessibility for readers, with "heat island" offered as an example of a term needing explanation.
- Members noted that the plan says little about impact fees beyond transportation. They recommended including a policy to define impact fees and describe their reasonable application, particularly in mixed-use and commercial areas.
- Concerns were raised about a lack of attention to maintenance of current investments. Members noted that while the City continues to invest in infrastructure and amenities, funding for ongoing maintenance is limited. This issue applies to housing, Downtown, parks, and trails.
- Policies should be more specific in defining how to "meet community needs" rather than simply calling for "adequate" funding.
- Members agreed that the plan should not be overly influenced by the loudest voices in the room. Policies should be grounded in broad community priorities.
- A suggestion was made to ensure policies reinforce and protect current successful

City programs so they are not deprioritized in the future.

- Several members reiterated the importance of consistent and directive language across policies. Redundancy, when purposeful, can be beneficial—particularly for decision-makers like the Planning Commission. References between overlapping policies should be clearly made.
- On page 23, the term “critical areas” should be defined in the glossary.
- Also on page 23, Shoreline policies should “reference” goals and policies rather than adopt them outright.
- On page 48, policy ED 1.6 prompted a discussion about the need for an economic development manager. The committee recommended either strengthening the language or identifying the position as a separate policy.

Next Steps

Nicole reviewed the project schedule. The CAC will meet one more time in the next few months to review development code concepts for implementation. Next steps include rolling out the draft Plan to the community. Nicole thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Comprehensive Plan Update and Downtown Subarea Plan
Community Advisory Committee (CAC)

CAC Meeting #8
September 8, 2025, 5:30-7:30 PM
City Council Chambers

AGENDA

Time	Subject	Lead
5:30 (5 min)	Welcome and Introductions	Alan Peters, City of Camas
5:35 (15 min)	Engagement Plan and Project Schedule Update	Nicole McDermott, WSP
5:50 (60 min)	Zoning Code and Comp Plan Updates • Review draft ADU and Middle Housing codes	Alan/Nicole
6:50 (30 min)	Downtown Subarea Plan Updates • Overview of Design Manual components and status	Nicole
7:20 (10 min)	Next Steps	Nicole
7:30	Adjourn	Alan

Community Advisory Committee (CAC)
Meeting Summary #8

September 8th, 2025, 5:30-7:30 PM

Meeting Attendance
Carol Collier
Betty Peng
Richard "Rick" Melching
Kim Sogge
Carrie Schulstad
Marlo Maroon
Greg K. Anderson
Heidi McNealy
Samantha Horner

City staff
Alan Peters, Community Development Director
Madeline Coulter, Planner

Consultant Team
Nicole McDermott, WSP
Aaron Carpenter, WSP

Welcome and Introductions
Alan Peters, Community Development Director, opened the meeting and welcomed CAC members.

Work-to-Date
Alan provided a recap of the project and work done to date since the last CAC meeting. He reviewed the continued engagement over the summer including tabling at Camas Days. Alan then discussed the project schedule including the roll out of Summit #3 engagement plan, discussed further below. Alan provided an overview of the continued work on the draft comprehensive plan, downtown subarea plan, downtown design manual, and zoning code amendments and explained that the comprehensive plan adoption timeline is dependent on Clark County's comprehensive plan adoption timeline in 2026.

Discussions at this point in the meeting included the following:

- Will the jobs and housing allocation numbers change by 2026?
    - *Response:* This will likely depend on the outcome of the County's agricultural/resource land study that is currently underway. If the County determines expansion onto resource lands is not needed to meet population and employment projections, then other cities in the county may not be able to meet their housing or job allocations and the County may reallocate across all the cities within the County. The City can currently meet the jobs and housing allocations without Urban Growth Area (UGA) expansion onto resource lands.

- Do we have land use alternatives that include resource land or UGA expansion?
    - *Response:* Yes, City Council asked staff to look into an alternative that includes UGA expansions or urban reserve designation on to land currently designated for agricultural use.
- Has there been community agreement on the land use alternatives?
    - *Response:* The UGA expansion onto resource lands was a specific property owner request, which the Council discussed during their workshops. Depending on the outcome of the County's study, Community Summit #3 will provide the community an opportunity to weigh in further on the alternatives.
- Are there people lobbying the County to open resource lands expansion?
    - *Response:* Yes, other cities, specifically Ridgefield and La Center have pushed for UGA expansion onto resource lands. Camas has remained neutral, since we can accommodate either way.
- Who's the representative that represents Camas as part of the County's process?
    - *Response:* Alan indicated he is the staff representative and Mayor Hogan has also provided comments at Clark County meetings.
- What are resource lands?
    - *Response:* Alan provided GMA background and described one of the purposes of the UGA is to preserve forest lands, mineral lands, and agricultural lands. Those resource lands are preserved and have to meet requirements before they are enveloped in UGA/developed.

Engagement Plan

Alan presented the new summit format. Instead of a single, one-location event, the City will engage the community online and at several in-person events over the span of a few months to answer questions and seek feedback on the draft Comprehensive Plan and Downtown Subarea Plan. The City will focus on a different comprehensive plan element every two weeks, with activities including attendance at community events, presentation to Strong Towns Camas, and online surveys.

CAC members discussed the best location to table during First Fridays in order to maximize visibility and participation. Most agreed City Hall and the Library were too far from the majority of the activity during the First Friday event. Alan indicated he would discuss with staff and identify potential locations. Additional discussions at this point in the meeting included the following:

- *Question:* Are you doing anything to engage high school students?
    - *Response:* Not directly but we certainly could notify the school district and send materials out to their email list/classrooms. City could tag school districts' social media handles to drive engagement when element posts go live.

- *Question*: Will people be able to take the survey online at the tabling event?
    - *Response*: Yes, they can benefit from the conversation with staff and respond to the survey then and there. The goal is to capture as much feedback at the events as possible. In addition to engagement at the events, the purpose of this format of the summit is to give people the opportunity to comment at their own pace over the duration of the summit.
- *Question*: Did the last comprehensive plan update have the same level of engagement as this?
    - *Response*: Community engagement was different 10 years ago during the last update, but the City did provide multiple avenues for feedback/engagement.

Zoning Code and Comprehensive Plan Updates

Alan reviewed the housing code updates that are required to meet State mandates, which include a new middle housing code and updates to the Accessory Dwelling Unit code. Draft Middle Housing and updated ADU Codes must be adopted by Dec 31, 2025 to comply with State Housing bills HB 1110 and 1337. Alan walked through the code update slides, which are included in the attached presentation.

Discussions at this point in the meeting included the following:

- *Question*: The new State mandate would allow cities to determine if ADUs would count towards the unit densities of a parcel or if ADUs would be allowed in addition to the maximum of four primary units on a parcel. Camas proposes to count ADUs towards the density count, therefore being more restrictive in the number of dwelling units on a parcel. Why be more restrictive with our ADU code than what the State allows?
    - *Response:* The City's proposed code is a more gradual change from what is in the current code while still meeting the State mandate. The new code proposes a maximum density, not minimum requirement, so neighborhood character is likely to not shift much. Redeveloping a site will not require a developer to meet a new minimum density.
- *Question:* Regarding Unit Lot Subdivisions, is there a financial tipping point when it becomes more viable to raze old homes (that may be historical/ or generally fine) to get rebuilt to max out density? Seattle/Portland is there, where old residences are demolished and rebuilt.
    - *Response:* It's unlikely for that type of redevelopment to make sense in Camas over the planning horizon given the relatively high value of homes in the City. Even without full redevelopment of a site, the new Unit Lot Subdivision requirements can provide ownership opportunities of smaller lots/units, but it is not anticipated this will be a major driver of

redevelopment in Camas.

- The CAC discussed how water and sewer connections and impact fees can affect the feasibility for property owners to develop properties under new housing codes, especially for ADUs and infill projects. Utility connections and fees/costs will severely affect affordability of this process. The City has a tiered set of fees for ADUs, and the development community continues to provide feedback on building/permitting issues for affordability. It was recommended that City staff come up with a proposal on additional affordability measures (utilities etc.) for a Council workshop.

Downtown Subarea Plan Updates

Nicole provided an update on the Draft Downtown Subarea Plan process. Aaron provided a summary of the purpose of the Downtown Design Manual and gave an overview of some of the major points for the design standards and guidelines. The meeting was coming to a close and the CAC did not have much time for discussion of these items, but offered a few questions related to parking requirements downtown, including parking requirements for new mixed-use development. The draft design manual is in process and will be reviewed by the Downtown Advisory Committee as part of their next meeting.

Next Steps

Nicole reviewed the project schedule and reminded the CAC of the upcoming Summit engagement events. Nicole thanked the committee for their attendance and adjourned the meeting at 7:30 pm.

Comprehensive Plan Update and Downtown Subarea Plan
Climate Policy Advisory Team (CPAT)

CPAT Meeting #1
March 14th, 2024, 5:00- 7:00 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
5:00	Welcome and Introductions • *What do you love about Camas and why do you want to be on this committee?*	Alan Peters, City of Camas Nicole McDermott, WSP
5:10	*Our Camas 2045* and *Our Downtown Camas 2045* Project Overview • City goals and objectives • What is a Comprehensive Plan and Downtown Subarea Plan? • Key Milestones and schedule • Public Participation Plan • Community Conversations • CPAT roles and responsibilities	Alan Nicole
5:30	Climate Planning Overview • State and federal planning requirements and guidance • Local planning resources • Existing conditions in Camas • Discussion	Sean McElroy, WSP
6:00	Equity Framework • State guidance • Example frameworks • Discussion	Nicole
6:20	Next Steps • Periodic updates via email and EngageCamas • General meeting logistics	Nicole
6:30	Adjourn	Alan

Climate Policy Advisory Team (CPAT)

Meeting Summary #1

March 14th, 2024, 5:00- 7:00 PM

Meeting Attendance
Kim Lottig
Cassi Marshall
Dan Davis
Kaitlin Tullis
Paul Henderson
Robert Carter
Morgan Van Fleet (online)
Nelson Holmberg
City staff
John Svilarich – *City Council Liaison (online)*
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Steve Wall, Public Works Director
Trang Lam, Parks and Recreation Director
Madeline Sutherland

Consultant Team
Nicole McDermott, WSP
Sean McElroy, WSP

Welcome and Introductions

Alan Peters, Community Development Director, provided opening remarks. All attendees were invited to introduce themselves and share what they love about Camas and why they want to be on this committee. CPAT members shared the following opening reflections:

What do you love about Camas?

- Easy access to greenspace
- Sense of place and civic and community pride
- People invest in the community
- Downtown walkability
- Downtown main street
- Love the small-town feel, recreation opportunities, and trail system
- Parks, recreation, open space
- People know their neighbors and there are good schools

Why do you want to be on the committee?

- Civic duty
- Concerned citizen
- Importance of climate change impact in Camas
- Policy and systemic changes can make a difference
- Be a part of growth and help climate be a priority
- Desire to serve the community
- Want to lend expertise and prior experience – members shared varying past and present

experiences that could benefit the committee, such as work on the Clark County Climate Advisory Group, experience with climate vulnerability assessments, environmental and climate justice, marketing, and vehicle electrification.
- Trang Lam, Parks and Recreation Director, shared that the Parks Department is working on a Parks and Open Space Management plan and will make recommendations to this group.

Our Camas 2045 and *Our Downtown Camas 2045* Project Overview

Alan provided an overview of the City's goals and objectives for the Comprehensive Plan and Downtown Plan, touching on topics like housing, economic development, climate, and downtown. Nicole McDermott, WSP, provided an overview of the project process, describing each phase of work from the existing conditions analysis, equity framework, visioning outreach, plan development, implementation and to eventual adoption. Nicole reviewed key milestones and the overall project schedule. CPAT members asked the following clarifying questions:

- *Is the geographic scope just the city boundaries for the existing conditions?* The existing conditions analysis looks at city boundaries and the Urban Growth Area as well as nearby influence areas. Clark County is leading the charge on climate change technical analysis (GHG inventory and vehicle miles traveled per capita). Neighboring municipalities are going through the same periodic update requirement.

CPAT Roles and Responsibilities

Nicole discussed the Committee's roles and responsibilities, and described the function of other project committees, such as the Project Advisory Committee (PAC) and the Community Advisory Committee (CAC). She noted that CPAT members are expected to meet four times over the course of the next year. The meetings will cover climate planning work currently in process by the County. Meetings will also be an opportunity for committee members to provide input on goals and policies for the new climate element in the comprehensive plan and an opportunity for members to incorporate climate goals and policies into the downtown subarea plan. CPAT members had no questions or comments.

Public Participation Plan

Nicole briefly discussed the public participation plan and its objectives and stakeholders that will be engaged in the process. Attendees received a copy of the plan for review prior to the meeting. CPAT members asked the following questions:

- *Would it be possible to receive a google drive link to access the public participation plan and other documents shared with the committee?* A similar effort is being done for the CAC and a link will be provided.
- *Renters are often neglected. Have you thought about a way to engage that subgroup of people?* In the broader engagement plan, social media channels might be reaching this group. Direct mailer will reach each community member and directs residents to visit the City's website to complete a survey. The team will discuss other ways to reach this group and could include a question in future outreach asking if the resident is an owner or renter.
- *In the Northshore subarea process, there was a disconnect between requesting feedback and*

the City's ability to change the process or outcomes to address that feedback. Is there a way for the public to understand the public engagement process and what guidelines are involved? Could work on messaging to help the public understand the limitations of the City and what can be achieved through the comprehensive plan and downtown subarea plan. It's important to communicate that goals and objectives should be attainable and that will vary for each agency and across cities.

CPAT Community Conversation Kit

Nicole covered the community Conversations Kit and Tracking Log, describing the method, approach and objectives. CPAT members did not have comments or questions.

Climate Planning Overview and Group Discussion

Sean McElroy, WSP, discussed the federal and state climate planning requirements, state guidance, and local planning resources used in the current draft of the existing conditions analysis for Camas. Nicole introduced discussion questions to help attendees brainstorm which communities in Camas are vulnerable to climate hazards. The discussion questions also invited attendees to share their experience with climate hazards in Camas. CPAT members shared the following information and asked the following questions:

Climate Hazards:

- Local schools are not prepared or equipped to respond to inclement weather days, particularly extreme heat.
- The hills in Camas could be considered a hazard for individuals with limited mobility.
- Older buildings in the city often have substandard foundations and might be more vulnerable to certain climate hazards such as flooding or severe weather.
- Most of the low-income housing in the city is located at a lower elevation and could be more vulnerable to flooding.
- Multiple members recalled a recent heat dome and fire that occurred near downtown. During the heat dome there were many residents who did not have access to air conditioning, cooling centers, or air filters. Smoke from the fire impacted residents with respiratory or lung diseases such as asthma. Communication during the fire event lacked efficiency as there was no preparedness plan.
- The increasing number of heat events raises the concern of increased demand for electricity and more pressure on the local energy grid.
- Streams, lakes, and waters surround Camas and water resources and residents living in close proximity are vulnerable to flooding and drought conditions. One member mentioned observing changes in water levels at Lacamas Lake in the summer.
- In addition to heat and cold extremes, strong east winds have had an impact on the local tree canopy.

CPAT Questions:

- *Is there a similar climate element for a similar sized city in Washington that is not that old?* There is a model element from the state guidance. The project team can look into examples from cities in other states.

- *Is the University of Washington webtool publicly available?* Staff will provide a link to the webtool.
- *What is the scope of the CPAT for dealing with hazards?* Implementation measures could arise through discussions with the CPAT. One of the priorities for the CPAT is to identify goals and policies for the climate element to address hazards. The project team involved in the Parks and Open Space Management plan will also have action items and recommendations for the climate element.
- *Are we going to be discussing whether each hazard is climate related, or will the discussion be on what we can do to prevent and adapt to each hazard?* The focus is on resiliency and the hazards likely exacerbated by climate change.

Equity Framework

Nicole discussed the intersection between equity and climate planning. Nicole provided two examples of equity frameworks from the City of Vancouver and King County that address the equity and climate nexus.

- *Will there be a metric in the framework to track success of meeting equity or climate goals?* A metric of success can be part of the equity framework that is developed. It will be important to get buy in from the community on equity priorities.
- *Will equity and climate be embedded in the comprehensive plan beyond a separate element?* This is an important question for developing the plan. Yes, the intention is to embed climate throughout the comprehensive plan and have the separate element. How this is achieved will be a topic for discussion as the project progresses.

Next Steps

Nicole reviewed next steps and general meeting logistics. The next CPAT meeting will likely be in the fall, following completion of the County's climate work. The project team will keep the group updated on the process through email. Nicole reminded CPAT members to reach out for questions and encouraged members to host community conversations.

- CPAT members agreed that the meeting day and time generally works. A zoom link would be preferable as well.
- *Can CPAT members receive a contact sheet?* Yes, the team can set up a file-sharing platform to share a contact sheet. Materials will also be posted to the EngageCamas website following the meetings.

Project staff thanked the committee for their attendance and adjourned the meeting at 7:00pm.

Comprehensive Plan Update and Downtown Subarea Plan
Climate Policy Advisory Team (CPAT)

CPAT Meeting #2
September 24th, 2024, 5:00- 6:30 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
5:00 5 mins	Welcome and Introductions	Alan Peters, City of Camas Emma Johnson, WSP
5:05 15 mins	*Our Camas 2045* and *Our Downtown Camas 2045* Project Overview • Project updates • CPAT role and responsibilities	Alan Emma
5:20 25 mins	Greenhouse Gas (GHG) Inventory • Overview of analysis and results • Q&A	Claudia Denton, Parametrix
5:45 10 mins	Vulnerability and Risk – Overview • Overview of the relationship between climate hazards, vulnerability, and risk	Emma
5:55 30 mins	Vulnerability and Risk – Group Activity • Identification of vulnerable assets in Camas o Participants will use sticky notes to identify assets vulnerable to climate hazards • Group discussion of assets and potential policies to improve resiliency	Sean McElroy, WSP Emma
6:25 5 mins	Next Steps • CPAT Meeting #3 • Upcoming events and activities	Emma
6:30	Adjourn	Alan

Climate Policy Advisory Team (CPAT)
Meeting #2 Summary

September 24th, 2024, 5:00- 6:30 PM

Meeting Attendance

Committee Members
Kim Lottig
Cassi Marshall
Dan Davis
Kaitlin Lee
Paul Anderson
Nelson Holmberg
Diana Rutherford (online)
John Svilarich – *City Council Liaison*

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Bryan Rachal, Director of Communications (online)
Madeline Sutherland, Assistant Planner

Consultant Team
Emma Johnson, WSP
Sean McElroy, WSP
Claudia Denton, Parametrix (online)

Welcome and Introductions

Alan Peters, Community Development Director, provided opening remarks. All attendees were invited to introduce themselves and share why they wanted to be on this committee. CPAT members shared the following opening reflections:

- Concerned citizen
- Importance of climate change impacts in Camas
- Policy and systemic changes can make a difference
- Want to lend expertise (background in marketing)
- Work in urban forestry
- Member of EatWell Camas
- Background in environmental consulting and environmental justice

Our Camas 2045 and *Our Downtown Camas 2045* Project Overview

Alan provided an update on the Comprehensive Plan and Downtown Subarea Plan, touching on the allocations for population, housing, and employment provided by Clark County, as well as adoption of the draft vision statement.

CPAT Roles and Responsibilities

Emma Johnson, WSP, discussed the Committee's roles and responsibilities, and described the function of other project committees, such as the Project Advisory Committee (PAC) and the Community Advisory Committee (CAC). She noted that CPAT members will meet two more times over the course

of the project. Upcoming meetings will likely cover goals and policies for the new climate element as well as future climate planning actions. CPAT members had no questions or comments.

Climate Change and Resiliency Element

Emma reviewed the purpose of the Greenhouse Gas (GHG) Emissions Reduction sub-element and Resilience sub-element, as well as supporting analysis for each. The GHG inventory report, which is complete, will support the GHG reduction sub-element. As part of the Resilience sub-element, attendees will participate in a vulnerability and risk assessment exercise to identify vulnerable assets and potential ways to improve Camas' resiliency. A focused vulnerability and risk assessment is also being prepared under the City's agreement with Clark County, which will evaluate the vulnerability of lakes and outdoor recreational areas in Camas to extreme heat. CPAT members had no questions or comments.

Camas GHG Inventory Results Presentation

Claudia Denton, Parametrix, gave a presentation on the results of a GHG emissions inventory prepared for Camas. The presentation summarized the purpose, methodology, and results of the inventory for Camas, including topics such as total, local, and imported emissions, and GHG emissions by sector. CPAT members asked the following questions:

- *Are the metrics showing total emissions or per capita emissions?* Metrics for Camas include total citywide emissions and per capita emissions, both of which include a combination of local and imported emissions (i.e., local plus imported emissions equal total emissions in Camas). There are four sectors within local and imported emissions.
- *How do emissions in Camas compare to other cities? How are we doing overall?* Some caution is recommended when comparing Camas directly to other cities, as methodologies may differ, as well as existing conditions. The best comparison will be to evaluate how emissions in Camas change over the next 3-5 years. However, generally Camas is doing well in the Building Energy sector due to the electricity grid from Clark PUD, and Goods Production emissions are slightly better than some other cities. The largest impact for GHG emissions in Camas is from large industries and refrigeration. It is recommended that communities work with local industries to reduce emissions, rather than push for them to relocate, as it is more effective to keep industries within communities that care about climate change.
- *Is the state looking into adopting a standard methodology for inventories, so that the inventories can be used to compare cities?* There are no plans at the moment, which helps avoid barriers to entry for jurisdictions or consultants wanting to conduct inventories.
- *Is the metric for solid waste based on consumption?* Actual emissions for solid waste are recorded by each landfill operator/owner and reflect the amount of methane emitted. The metric for Camas is based on the waste that is produced by Camas and transported to the landfill.
- *Some cities are requiring air conditioning for new construction. How does that counter with the policy recommendation to reduce electricity demand?* We will need to balance reducing GHG emissions with other needs, like keeping our communities safe and healthy. There are some options to reduce emissions associated with air conditioning. Heat pumps release fewer

fugitive gases and are more efficient. Supporting policies that encourage denser land uses, particularly housing, also increase energy efficiency since smaller units have smaller electricity demand.

- *Which sector includes new construction and construction vehicles?* The transportation sector includes construction vehicles. Stationary vehicles and equipment are included under the buildings and energy sector. Building materials and construction or demolition fall under the industrial processes sector.
- *Is there a breakdown of energy use by source (e.g., heating, cooling)?* No, but there are other resources and studies that can be used as a comparison to the GHG inventory data for Camas.

A copy of the Camas GHG inventory report will be sent to CPAT members following the meeting.

Climate Hazards in Camas

Emma provided an overview of the hazard rankings for climate hazards in Camas. Climate hazards with a "high" ranking include extreme heat and extreme precipitation. She also described the two maps that were prepared to visualize the location of climate hazards in Camas, but cautioned that hazards are often citywide and/or unpredictable.

Group Activity - Vulnerable Assets in Camas

Sean McElroy, WSP facilitated a group activity and discussion on vulnerable assets in Camas as part of the vulnerability and risk assessment for the Resilience sub-element. The purpose of the activity was to obtain feedback from the CPAT members about vulnerable assets in Camas that should be prioritized in the climate element. CPAT members used sticky notes to identify local assets on the climate hazard maps. The following list identifies the priority local assets/asset themes that were frequently identified:

- The lakes
- Trees (tree canopy, street trees, mature trees, native species)
- Open space (parks, trail system)
- Schools
- Emergency shelters and evacuation routes
- Power lines
- Elderly and low-income populations
- Urban development in northeast Camas

The following asset-hazard pairings and other considerations were identified on the two maps:

Map: Wildfires, Extreme Heat, & Drought

- Open space and wildfires
- Fire risk due to dead/dying vegetation
- Fire danger due to mass weed remove (fuel)
- Need for coordination with larger region fire fighters

- Fireworks
- Financial stability of schools (enrollment up and down)
- Non-point source pollution
- Private shade trees
- Tree health/canopy and heat
- Loss of native species
- Parks and loss of vegetation
- Air quality in dense neighborhoods adjacent to polluting entities
- Heat stress on low-income and elderly populations
- Heat and social networks
- Street trees, heat stress/death
- Drought and wind, resulting in large trees falling on power lines and impacting ecosystems

Map: Flooding, Landslides, & Extreme Precipitation

- Trail system and erosion
- Trees and power lines (interaction during weather events)
- Power lines and transportation
- Flooding and transportation
- Haight dam
- PFAS
- More development near the lakes – dangerous runoff
- Precipitation (snow) and tree canopy
- Snow, flood, and smoke days impact schools
- Parks and flooding
- Hills and ice
- Old/irreplaceable trees
- Trail erosion, overuse, lack of maintenance – trees dying
- Insufficient emergency shelters/backup power
- Emergency routes blocked by flooding
- Drought and wind, resulting in large trees falling on power lines and impacting ecosystems
- Financial stability of schools (enrollment up and down)
- East winds
- Stormwater overflows – erosion and pollution

Following the mapping activity, CPAT members were asked to share their top concern(s) for asset-hazard pairs and/or ideas for improving resiliency. Members shared the following:

- Flooding and extreme precipitation effects on downstream pollution and stream management
- Extreme heat and wildfire smoke effects on schools and older houses
- We need to take more steps to prevent and reduce damage from wildfires (e.g., policies to remove landscaping debris from City properties)
- Wildfire smoke effects on community health
- Extreme weather and effects on the community from a widespread power outage (a response

plan would improve our resiliency to this hazard)
- Extreme weather can/has disrupted the food distribution chain in Camas and increased food insecurity
- Extreme heat and severe weather have/will have effects on walkability and transportation access, especially for people with disabilities (e.g., hills can become inaccessible and dangerous)
- Flooding caused by the Columbia and Washougal Rivers
- Camas needs to maintain large canopy/mature trees to improve resiliency to extreme heat (need more enforcement of the City's tree plan)
- Could improve our tree canopy's resiliency to winter storms through education on tree pruning

Next Steps

Emma reviewed next steps and general meeting logistics. The project team will complete a vulnerability and risk assessment based on feedback provided during this meeting, as well as feedback from the community. The purpose of the next meeting will be to review draft policies for the climate element. Emma also reminded CPAT members of the upcoming Community Summit where attendees will have an opportunity to review land use alternatives, and the community will be asked to weigh in on climate hazards and resiliency.

Project staff thanked the committee for their attendance and adjourned the meeting at 6:30pm.

Comprehensive Plan Update and Downtown Subarea Plan
Climate Policy Advisory Team (CPAT)

CPAT Meeting #3
November 12th, 2024, 5:00 - 7:00 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
5:00 5 mins	Welcome	Alan Peters, City of Camas Emma Johnson, WSP
5:05 15 mins	*Our Camas 2045* and *Our Downtown Camas 2045* Project Updates	Alan
5:20 10 mins	Community Summit #2 and Survey Results • Review community feedback on climate hazards, GHG inventory, vulnerability, and resiliency	Sean McElroy, WSP
5:30 45 mins	Climate Resilience and GHG Reduction Goals – Group Activity • Review Department of Commerce guidance on selection of goals and policies for each sub-element • Group discussion of potential goals to improve resiliency and reduce GHGs	Emma
6:15 15 mins	Climate Policy Criteria • Review guidance and discuss approach to prioritizing climate policies	Emma
6:30 25 mins	Overburdened Communities – Group Activity • Review state requirements and guidance for addressing environmental justice • Group discussion of overburdened communities and vulnerable populations within Camas	Sean
6:55 5 mins	Next Steps • CPAT Meeting #4 • Upcoming events and activities	Emma
7:00	Adjourn	Alan

Climate Policy Advisory Team (CPAT)
Meeting #3 Summary

November 14th, 2024, 5:00- 7:00 PM

Meeting Attendance
Kim Lottig
Cassi Marshall
Dan Davis
Kaitlin Lee
Paul Anderson
John Svilarich – *City Council Liaison*

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Steve Wall, Public Works Director
Madeline Sutherland, Assistant Planner

Consultant Team
Emma Johnson, WSP
Sean McElroy, WSP

Welcome and Introductions
Alan Peters, Community Development Director, provided opening remarks. All attendees were invited to introduce themselves and participate in a short icebreaker.

Our Camas 2045 and *Our Downtown Camas 2045* Project Overview
Alan Peters provided an update on the Comprehensive Plan and Downtown Plan as well as a recap of the second Community Summit.

Community Summit #2 and Survey Results
Sean McElroy, WSP, discussed the results from an online survey, which included questions related to the impacts of natural hazards and climate resiliency and vulnerability. Community members were invited to participate in an online survey as part of the second Community Summit and provided feedback on the impact of climate hazards in their community.

Climate Resilience and GHG Reduction Goals Group Activity
Emma Johnson, WSP, reviewed the purpose of the model climate element created by the Department of Commerce (Commerce) and the role of the CPAT in reviewing, selecting, and customizing measures to reflect local conditions, values, and climate goals and targets. Clark County has shared their draft countywide planning policies, which contain the following policies related to GHG and VMT targets.

- Greenhouse gas reduction subelements shall be developed with an overall target of reaching net-zero greenhouse gas emissions by 2050 in alignment with the statewide greenhouse gas emissions reductions set forth in RCW 70A.45.020(1). Individual jurisdictions may choose to set

greenhouse gas reduction targets to achieve net-zero emissions faster than the statewide goal.

- Greenhouse gas reduction subelements shall be developed with an overall vehicle miles traveled per capita goal in alignment with the statewide vehicle miles traveled per capita goal of fifty percent reduction in annual per capita vehicle miles traveled by 2050 compared to the baseline set forth in RCW 47.01.440. Individual jurisdictions may choose to set vehicle miles traveled per capita reduction goals more ambitious than the statewide goal.

CPAT members discussed the above targets, and noted it will be difficult for a small community such as Camas to achieve. The cumulative impact on those targets would also be led by larger cities in the county such as Vancouver. The group agreed to use the statewide targets, as setting more ambitious targets would likely not be feasible.

Lead by Kim Lottig, the group reviewed each GHG reduction and resiliency goal from the model element and voted on whether the goal is a priority for the City and whether revisions are needed to tailor the goal to Camas. One key decision was to develop at least one goal to address each emissions source category from the GHG emissions inventory (Buildings & Energy, Transportation, Solid Waste and Wastewater, and Industrial Process and Product Use). CPAT members also provided notes on their worksheet for each suggested goal.

A list of the draft goals, including feedback from the meeting and potential policies, will be sent to the CPAT members following the meeting.

Climate Policy Criteria

Emma briefly reviewed the guidance recommendation for selecting GHG and resiliency policies. Most of the meeting was dedicated to reviewing the draft goals from the model element and policies will be selected once the preliminary list of goals is finalized.

Overburdened Communities Group Activity

Sean briefly discussed the state requirements and guidance for addressing climate change and environmental justice, including the definition of overburdened communities and vulnerable populations. The *Our Camas 2045* Equity Framework identifies equity communities. CPAT members were invited to share their thoughts on areas in the city that could be considered overburdened communities, and which other groups of people could be considered vulnerable populations in Camas. CPAT members identified the following as either overburdened communities or vulnerable populations:

- Oaks Park
- Housing near SR 14 and along 192nd Avenue
- Steep streets
- Lacamas Creek Post Acute
- Areas near the waterfront and mill
- Overhead utilities (e.g., power lines) near housing

- Green Mountain community

Next Steps

Emma reviewed next steps and general meeting logistics. The project team will put together a list of draft goals for the GHG and Resiliency sub-elements based on feedback provided during this meeting. The purpose of the next meeting will be to review draft policies for the climate element. Emma mentioned that the preferred land use concept will be developed based on feedback from the Community Summit and it will be reviewed by the Community Advisory Committee, Planning Commission, and City Council in late 2024/early 2025. The comprehensive plan and subarea plan will be adopted by the end of 2025, including zoning code amendments and new downtown development standards.

Project staff thanked the committee for their attendance and adjourned the meeting at 7:00pm.

Comprehensive Plan Update and Downtown Subarea Plan
Climate Policy Advisory Team (CPAT)

CPAT Meeting #4
January 23rd, 2024, 5:00 - 7:30 PM
City of Camas City Hall – Council Chambers
616 NE 4th Avenue, Camas, WA 98607

AGENDA

Time	Subject	Lead
5:00 5 mins	Welcome	Alan Peters, City of Camas Emma Johnson, WSP
5:05 5 mins	*Our Camas 2045* and *Our Downtown Camas 2045* Project Updates	Alan

5:10
135 mins
	Climate Resilience and GHG Reduction Policies – Group Activity
	• Group discussion of potential policies to improve resiliency and reduce GHGs
	• Discussion questions:
	  ○ Is this policy a priority for Camas?
	  ○ Is this policy Camas-specific?
		Sean McElroy, WSP
		Emma

7:25 5 mins	Next Steps • Upcoming events and activities	Emma

Robert Maul, Planning Manager
Steve Wall, Public Works Director
Madeline Sutherland, Assistant Planner

Consultant Team
Emma Johnson, WSP
Sean McElroy, WSP

Welcome and Introductions

Alan Peters, Community Development Director, provided opening remarks.

Our Camas 2045 and Our Downtown Camas 2045 Project Updates

Alan provided a brief update on activities for the comprehensive plan, including development of the land use alternatives and upcoming activities for the Downtown Advisory Committee and Community Advisory Committee.

Climate Resilience and GHG Reduction Policies – Group Activity

Emma Johnson and Sean McElroy, WSP, facilitated a group discussion to refine and narrow down the potential list of climate goals and policies. CPAT members were provided a handout with the current list of goals and policies as well as a table organized by goal, policy, and measure type (GHG reduction or resiliency). The group was invited to review the set of policies under each goal and indicate their preference of either removing, revising, or leaving each policy as is. CPAT members could indicate their preference with a thumbs up to keep the policy as is, thumbs to the side to revise or move the policy to another goal, or thumbs down to remove the policy.

The group decided to begin with reviewing the larger set of resiliency policies (37) before reviewing the shorter list of GHG reduction policies (27).

CPAT members provided the following general feedback:

- Revise goal and policy text to be more specific to the Camas's priorities and needs. This includes removing policies or goals that could be addressed under other elements or existing City plans (e.g., RES-8 was recommended for deletion as sustainable waste practices are

already widely adopted by the community).

- Combine GHG reduction and resiliency goals and policies to reduce redundancy (e.g., combine GHG-3 and RES-4 to address the efficiency and resiliency of the transportation system).
- Some policies are better suited as potential action items to support climate policies under the same topic (e.g., renewable energy sources).
- Confirm whether some policies are already addressed in the City's code during the code audit for Camas 2045.

Project staff thanked the committee for their attendance and adjourned the meeting at 7:30pm.

Comprehensive Plan Update and Downtown Subarea Plan
Climate Policy Advisory Team (CPAT)

CPAT Meeting #5
March 27th, 2024, 5:00 - 6:30 PM

City staff
Alan Peters, Community Development Director
Robert Maul, Planning Manager
Madeline Coulter, Assistant Planner

Consultant Team
Emma Johnson, WSP
Sean McElroy, WSP
Dana Hellman, CAPA Strategies

Welcome and Introductions

Alan Peters, Community Development Director, provided opening remarks. Dana Hellman introduced herself to the group.

Climate Goals & Policies – Changes since CPAT Meeting #4

Sean McElroy, WSP, provided an update on revisions to goals and policies included in the draft climate element. Following the previous CPAT meeting, a condensed list of goals and policies was created by moving some policies to other elements (e.g., transportation) and eliminating redundancies with other elements. The draft climate element now has 21 policies, which is down from 39 policies at the prior meeting. Policies in other elements that support climate goals will be flagged with a leaf symbol.

Looking ahead – Ways to keep the momentum going

Alan Peters gave a short introduction on the City's interest in continuing the CPAT group once the climate element is adopted, and some potential ideas for doing so. Following Alan's introduction, Emma Johnson, WSP, described examples of advisory groups from other Washington cities and counties that focus on climate change. Examples included:

- City of Bainbridge Island – Climate Change Advisory Committee
- City of Redmond – Environmental Sustainability Advisory Committee
- City of Port Townsend/Jefferson County – Climate Action Committee
- City of Pullman – Environmental Resilience Commission

Similar to the Camas Parks and Recreation Commission, these advisory committees are formed to advise the City on specific topics, such as GHG reduction, and key actions include annual progress

reports or work plans, GHG inventories, and developing or implementing a climate action plan. Members are typically appointed by each jurisdiction and include term limits. Members often include technical professionals with expertise in areas such as energy or climate science, as well as members of the public, and liaisons from government, agencies, and the business community. Emma also briefly described two examples of actions plans from the City of Redmond (Sustainability Action Plan) and Port of Vancouver (Climate Action Plan).

CPAT members provided the following feedback:

- The City of Vancouver has community engagement activities for climate topics. The City hosted a "climate pub" where residents could participate in trivia and a brainstorming session.
- Farmers markets could serve as a venue for future community engagement and education on climate action within Camas.
- Membership from NW Natural or Clark PUD on the advisory committee would add perspective from local utilities.
- The committee could collaborate with the library and serve as a standing committee for climate change or environmental sustainability.
- Members agreed that the formation of a climate focused advisory committee would be valuable to support City staff. If a climate action plan is explored, the advisory committee could help to encourage achieving goals associated with the plan. The advisory committee could also help staff apply policies from the climate element during development proposals and provide technical expertise during staff decisions.
- Members suggested that some immediate steps should be taken before presenting the idea to City Council. An initial step would be to identify how the advisory committee could support existing work or a future climate action plan.

Action items – GHG reduction & Resilience follow up measures

Dana Hellman, CAPA Strategies, reviewed a list of action items that could support the climate goals and policies, with a focus on actions that would improve community health and well-being. Dana also provided a list of actions based on the Vulnerability and Risk Assessment that was prepared by CAPA Strategies for Camas. The assessment focuses on the risk of extreme heat on outdoor recreation sites in Camas. One of Dana's recommendations includes adding language in CL-7.2 about "adaptive measures" such as short-term cooling amenities and community education/awareness building.

After Dana's overview of recommended action items, the group reviewed the current list of goals and policies to brainstorm additional ideas for action items. CPAT members shared the following feedback:

- There is an opportunity on private property to implement action items related to maintaining and expanding tree canopy.
- Friends of Trees is a nonprofit organization that helps private property owners plant trees. A partnership with this organization or similar organization could help homeowners in replacing dead or unhealthy trees.
- Action items could be developed specific to natural hazards and potential impacts such as

winter weather, erosion from heavy rains, snowplows, and downed trees.

- Proper pruning techniques for trees (e.g., removing tree suckers) should be encouraged, particularly when trees are covered with ice. The expertise of private property owners could be leveraged and shared within the community.
- Tree maintenance should be tailored to each tree species.
- Climate adaptive trees should be encouraged consistent with the Parks & Open Space Management Plan.
- Backup generators could be introduced at resiliency hubs.
- Permanent or temporary structures in the city could be identified for warming and cooling shelters. City Council has been discussing the potential need for emergency shelters.
- Action items should acknowledge the health aspects of impacts from natural hazards.

Next Steps

Sean reviewed next steps. The project team will review feedback from the meeting on action items and continue to revise the draft goals and policies for the climate element. Sean also mentioned that the Downtown Advisory Committee is currently reviewing the Downtown goals, policies, and design manual outline and the Community Advisory Committee will review all goals and policies in April. Other upcoming activities for the comprehensive plan update include finalizing the preferred alternative with City Council in April or May and community review of the draft comprehensive plan this summer.

Project staff thanked the committee for their attendance and adjourned the meeting at 6:30pm.

Downtown Subarea Plan
Our Downtown Camas 2045

DCA Meeting #1
February 6th, 2024, 3:00- 4:00 PM
Camas City Hall – Council Chambers
616 NE 4th Ave, Camas, WA 98607

AGENDA

Time	Subject	Lead
3:00	Welcome and Introductions	Margaret Raimann, SERA Design City Staff All
3:15	Project Overview and Schedule	Margaret Nicole McDermott, WSP Anais Mathez, 3J
3:25	Urban Design 101 & Initial Downtown Camas Site Assessment	Matt Arnold, SERA Design
3:55	Next Steps	Margaret
4:00	Adjourn	

MEETING SUMMARY

Welcome & Introductions

- Downtown Camas Association attendees introduced the organization, themselves, their history with Downtown, and their hopes / concerns for this process. City staff and the consultants also made their introductions.

Project Overview & Schedule

- The consultants reviewed the project purpose and schedule, placing the Downtown Subarea Plan into the context of the Comprehensive Plan efforts. In so doing, they also described the Public Participation Plan and its associated tools.

Urban Design 101

- SERA staff reviewed high level urban design principles that foster thriving downtowns, connecting those to the strengths and opportunities present in Downtown Camas today. They also previewed an activity in which the committee will be engaged at their March 2024 meeting – wherein participants will map their own assessment of Downtown.

Next Steps

- SERA and the rest of the consultant team will be preparing an existing conditions assessment for Downtown; SERA will also be conducting a series of interviews with Downtown stakeholders. Findings from these activities will be presented at the committee meeting in March 2024.

Downtown Subarea Plan
Our Downtown Camas 2045

DCA Meeting #2
March 20th, 2024, 3:00- 5:00 PM
Camas Public Library – Eva Santee Meeting Room
625 NE 4th Ave, Camas, WA 98607

3:15	Downtown Site Assessment: Existing Conditions • Assessment of physical conditions, transportation and infrastructure systems, and high-level market conditions. • Summary of stakeholder interviews	Margaret
3:40	Downtown Site Assessment: Opportunities & Constraints • Basemap drawing exercise • *What are the edges, districts, nodes, landmarks, and paths that define Downtown Camas?* • *Where are the key opportunities and constraints in Downtown Camas over the next 20 years?*	Matt Arnold, SERA Design All
4:10	Break	All
4:15	Opportunities & Constraints Mapping Exercise • To elucidate participant feedback	All
4:55	Next Steps • Community Visioning • Draft Opportunities & Constraints Memorandum	Margaret Nicole McDermott, WSP
5:00	Adjourn	

MEETING SUMMARY

Downtown Site Assessment

- Existing Conditions: SERA staff reviewed existing conditions for Downtown, highlighting key findings in terms of topography / slopes, development patterns, building forms, parks and open space, zoning, historic resources, connectivity and mobility (for automobiles, pedestrians, bicyclists, and transit), parking, and utilities.
- Market Analysis: SERA also presented market analysis findings prepared by ECONorthwest, including an assessment of retail rents and vacancies and visitor data.
- Opportunities & Constraint:
    - The SERA team presented a summary of the results from a range of stakeholder interviews conducted over the preceding weeks. Particular findings included:
        - The strong sense of place in the Downtown core and an interest in expanding that beyond 4th Avenue. Related: historic structures should be preserved and complemented somehow with new uses and buildings.
        - Positive support for Downtown businesses, and concerns that new development and investment may displace existing businesses
        - A desire to continue increasing housing density and a recognition that there is additional development potential in the area. (This was somewhat offset by concerns about the pace of development and concerns about existing zoning and development controls.)
        - An urge to improve the public realm and create more gathering places
        - Concerns about parking with increased development / density
        - Safety issues for pedestrians, particularly along 3rd and 5th Avenues.
        - Interactions with the City have generally been seen as positive.
    - The SERA team led an interactive session wherein participants created their own mental maps of Downtown, focusing on paths, edges, nodes, districts, landmarks, and gateways. Participants shared their own key findings with the group, and these will next inform the Draft Opportunities & Constraints Map and Assessment that will be presented at the committee's meeting in May.

Next Steps

- First Community Summit: 430-630p on June 12, 2024 (227 NE Lake Road, Camas)

Downtown Subarea Plan
Our Downtown Camas 2045

3:20	Downtown Opportunities & Constraints Discussion • Downtown Subareas • Gateways • Transportation • Parks & Open Space	Matt All
4:15	Break	All
4:15	Downtown Vision & Goals • Draft Vision Statement • Draft Goals	All
4:55	Next Steps	Matt Nicole McDermott, WSP
5:00	Adjourn	

MEETING SUMMARY

Downtown Subarea Plan Recap

- Committee Make-up: While the committee began with solely representation from the Downtown Camas Association, additional members were added from the project's broader Citizen Advisory Committee (CAC) and was thus renamed the Downtown Advisory Committee (DAC).

Downtown Opportunities & Constraints

- Transportation:
    - DAC members raised several questions about the pedestrian and bikeway networks, and requested that DKS (the project's transportation consultant) provide additional information to inform refinement and improvement to these facilities.
        - When considering bike movements in particular, it should be noted that e-bikes are really changing the potential for more biking by more people in Camas as the topography can be more easily overcome with an e-bike.
        - There should be more covered bike parking / end-of-trip amenities/services.
    - Could some streets be made pedestrian-only? This has previously been considered for 4th, but parking and delivery may provide challenges. Perhaps a better system for regular, temporary closures could be looked at. There was also a question as to how this might relate to the proposed plaza associated with the new fire station.
    - There are challenges at the Dallas / 6th intersection related to the lack of stop control. This causes issues for pedestrians, who have difficulties crossing at this location.
- Historic Resources:
    - DAC members stressed how important preservation is – particularly for buildings not currently on the Register (and therefore not subject to the Register's protections). It was noted that the Design Guidelines that emerge from this project could be a key piece here, but that the City could also look at incentives for maintenance of historic structures. It was noted that seismic upgrades are typically triggered by a change in use / occupancy, but that damage could cause a safety issue that would be addressed through the City's Code Enforcement.
- Land Use:
    - Consider integration of 2nd and 3rd into the development pattern of the historic core –

with complementary uses.

- Parking standards are an important consideration for new and redevelopment.

- Gateways:
  - Are gateways meant for visitors or residents? The answer may tilt the design one way or the other (but perhaps they could serve both users).
  - The Gateway off 6th from the Railroad Bridge – where should this be located? At 2nd? Or the traffic light at 3rd? Would its location change if more of the Downtown energy and development pattern crossed 3rd? Could this be a multi-block / transition gateway?
  - Another Gateway location could be along 3rd near Louis Bloch Park. (Issues with sideways in this area were noted.)

- Parks & Open Space:
  - There is a strong need for more parks / open spaces / gathering areas downtown.
  - The Mill Ditch is an important trail opportunity – and connecting downtown to the Three Lakes area is a long-held community notion. The ditch itself could be filled in to make more space for trail users, but a comprehensive plan should be developed. Also, road crossings will be key. (Question: could it be named the Virginia Warren Memorial Trail?)

Downtown Vision & Goals

- Draft Vision:
  - Consider an addition that reflects the need to nurture *current* businesses and maintain business longevity.
  - Some DAC members questioned whether the Draft statement is too packed and too long – perhaps formulaic and not 'human' enough. (The "our town" and "our downtown" sentiment is missing, as is the 'heart.')
  - The draft statement is currently missing sustainability and climate elements. (Perhaps it could mention tree-lined streets?)
  - While it speaks to the commercial and economic aspects of downtown, the sense of belonging / place is missing. (Downtown should be 'welcoming' to everyone.)

- Goals:
    - These should be more action oriented.
    - We should "retain *and expand* Downtown's historic charm" (while recognizing that there may be some tension there).
    - Could add a new goal related to growth.
    - There should be something that relates to preserving existing economic vitality.

Downtown Subarea Plan
Our Downtown Camas 2045

DAC Meeting #4
September 19th, 2024, 3:00- 5:00 PM
Council Chambers – Camas City Hall
616 N E 4th Ave, Camas, WA 98607

AGENDA

Time	Subject	Lead

4:55	Next Steps	Matt, Nicole
5:00	Adjourn	

MEETING SUMMARY

Comprehensive Plan Update

- Nicole M. provided an update on Our Camas 2045, the update of the City's Comprehensive Plan and a preview of the upcoming Community Summit #2 (10/22/24).

Vision and Goals

- Matt A. recapped the Vision Statement for Downtown (accepted by City Council) and the associated Goals.

Existing Conditions, Opportunities & Constraints

- Matt A. reviewed key pieces of the existing conditions for Downtown, emphasizing in particular the existing zoning. He then described the projected work flow for the project, explaining that the land use, development, open space, and transportation concepts being presented and worked on today by the DAC will inform not only the Downtown Plan, but the eventual zoning and design guidelines for Downtown and the broader Comprehensive Plan.

Land Use Concepts

- Matt A. described a series of land use concepts for the various subdistricts of Downtown Camas. The concepts described a range of residential / mixed-use densities and locations, and presented key questions about the desired future for the 3rd Avenue corridor.
    - Participants noted that 3rd Avenue is often seen as a barrier, and that walkability should be improved there.
    - While a couple participants thought the auto-oriented uses should be maintained on 3rd, and others leaned towards the high-density option, most felt that a mix of medium-density uses with a stronger street presence would be most appropriate. (One participant noted that there has been some reinvestment pointing towards retail and office uses along 3rd and to the south.) It was noted that taller buildings here could affect views to the river from further upland, and that this should be given further consideration.
    - Participants generally agreed that land uses and development forms adjacent / proximate to the historic core of 4th Avenue should complement and support the character and sense of place along 4th.
- Matt A. described concepts for frontages along the various corridors in Downtown, noting

that some areas should emphasize active, commercial ground floors, while others may have larger setbacks and landscaping.

Open Space Studies

- Mill Ditch:
    - Connecting Downtown to the Three Lakes continues to be important for participants, who also reminded the team that a name for a revamped Mill Ditch trail could be the Viriginia Warren Memorial Trail (as had been discussed in but not adopted through previous processes).
- New Civic Plaza:
    - Participants were generally supportive of transforming 4th between the Library and (a new) City Hall in order to create a larger public plaza there.
- Dallas Greenway:
    - While participants were somewhat skeptical about closing a portion of Dallas to auto traffic, they were generally supportive of significant enhancing Dallas to promote pedestrian and bicycle use (and safety). They wondered what this could look like on a block-by-block basis as Dallas moves through Downtown and up the hill to the north.

Transportation Studies

- Participants generally appreciated the "Slow L" option, but more broadly supported the slowing of traffic generally through Downtown, recognizing that this could be achieved via a variety of means (road diets, new development, streetscape enhancements, traffic calming improvements, etc.).
- Dallas / 3rd and Adams / 6th were suggested as possible roundabout candidates.
- Additional consideration should be given to the role of the 5th, 6th, and 2nd corridors through Downtown, and how their changing development character affect mobility.
- It was noted that the Mill property, once master planned / redeveloped, could play a key role in the overall transportation system for Downtown.

5:00	Adjourn	

Downtown Advisory Committee (DAC)
Draft Meeting #5 Summary

December 9th, 2024, 3:00- 5:00 PM

General Updates and Community Summit Updates

Margaret Raimann, SERA Design, reviewed the agenda and the purpose of the meeting. Margaret provided a recap of Community Summit #2, which took place in October 2024, and a summary of the findings from an accompanying online survey. The survey was available for community members to provide input on the content from Community Summit #2, which included both the Comprehensive Plan and the Downtown Subarea Plan. Key takeaways for the feedback on the Downtown Subarea Plan were:

- Plan for moderate increases in density, including mixed-use buildings along key corridors
- Preserve historic downtown core
- Prioritize transportation concepts that promote pedestrian safety and traffic calming
- Explore flexible parking solutions and enhanced streetscapes to allow for efficient land use, walkability, and sustainability
- Provide more open spaces and gathering spaces through a connected open space network
- Support civic hub with podium parking to allow for civic plaza space

Downtown Subarea Plan: Updated Concepts

Margaret presented updates to the preferred land use concept for Downtown as well as expanded concepts for the open space network and civic hub. Feedback from Community Summit #2 led to refinement of the land use concept, which focuses on medium-density and mixed-use development in key corridors of Downtown. The preferred land use concept balances the community's vision for residential uses Downtown and preservation of the Historic Main Street Core, while addressing market feasibility of mixed-use buildings.

DAC members offered the following questions and comments:

- How are we addressing parking in the land use concepts, particularly the perception that there is limited parking Downtown? *While there is sufficient parking available in the proximity of Downtown, part of this perception comes from the lack of safety in crossing 3rd and 5th Avenues. The DAC discussed that having dedicated city parking near the Downtown Core would help with the perception. Improved crossings and transformation of 3rd and 5th Avenues in the long term would also create safer connections and a more walkable downtown.*
- How will development at 192nd and the Port of Camas-Washougal change the potential demand for mixed-use development Downtown? *The market Downtown is unique in that it has transit and might draw different residents than these other areas. The group*

discussed the need to balance the current market realities, while recognizing the long-term planning goals of the subarea plan and the vision for more mixed-use Downtown. The DAC expressed interest in seeing mixed-use in key areas, specifically along 3rd and 5th Avenues.

- Rename the Main Street Core zone to the *Historic* Main Street Core to emphasize the importance of the historic character.

Expanded concepts for the open space network included a discussion and renderings of the Dallas Greenway and civic plaza as part of the civic hub.

DAC members offered the following questions:

- Are there precedent examples of a linear park that crosses a hillside? *The Dallas Greenway would include a significant slope to the north of Downtown. The DAC requested expanding the linear park north of 6th Avenue.*
- Can the Mill Ditch be a safer route for bikes? *The plan can clearly define how this area would be used for bikes so that there is a safe bicycling route into Downtown.*

Downtown Subarea Plan: Draft Plan Outline

Margaret presented a draft outline and storyboard that showed how the content developed for the Downtown Subarea Plan would come together in a document. This started a discussion about who the audience is for the plan to provide insight on areas to focus on in the plan.

DAC members provided input on both the groups they would like to see using the plan and how they might implement the plan:

- Developers
- Building owners
- New and current City Council members
- Downtown Camas Association
- Funding agencies
- Example to other Main Street programs
- Staff for work planning and investments
- Recruitment for new businesses
- Georgia Pacific Mill
- Historic District designation
- C-Tran
- Investment recruitment tool
- Columbia River Economic Development Council
- Visit Vancouver

Downtown Subarea Plan: Policy Discussion

Margaret and Nicole McDermott, WSP, introduced how the policies developed for the Downtown Subarea Plan will help to guide the future policy direction for implementation of the plan. Policies will also be developed for the Comprehensive Plan, but a separate set of policies

will be written for Downtown. These policies help to set priorities and provide direction to the City following adoption of the Plan. The DAC discussed policies that they would like to see written for Downtown:

- Address climate issues through policies related to encouraging reuse vs full redevelopment
- Stormwater, sewer, trees, sidewalk and other infrastructure improvements:
    - Ensure adequate infrastructure to serve land uses.
    - Make sure that timing of infrastructure is considered in the plan implementation.
- Address 3rd and 5th Avenue pedestrian safety
- Connectivity: Improve connections to and from Downtown
- Expand character of Downtown to the broader boundary defined in the plan
- Focus on pedestrian activation through plazas and public spaces
- Support economic development Downtown
- Address accessibility needs both with ADA and beyond
- Accommodate a flexibility of spaces and variety of uses through use of public space (sidewalks, parking, etc.)
- Define the historic character of 4th Avenue through specific streetscape elements.

Next Steps

The consultant team and City will be working on a draft of the subarea plan in the coming months and will share a version of the draft with the DAC.

Margaret thanked the committee for their attendance and adjourned the meeting at 5:00pm.

Downtown Subarea Plan
Our Downtown Camas 2045

DAC Meeting #6
March 24th, 2025, 3:00- 5:00 PM
Council Chambers
616 NE 4th Ave, Camas, WA

AGENDA

Time	Subject	Lead
3:00	Welcome and General Updates	Margaret Raimann, SERA
3:05	Downtown Design Guidelines Manual: Presentation • Land Use Planning and Zoning-to-Date • Sample Downtown Design Guidelines • Potential Components for Consideration	Bryan Robinson and Nicole McDermott, WSP
3:20	Downtown Design Guidelines Manual: Discussion • What features / design elements of the Main Street Core area do you want to preserve? • Are you more interested in regulating the public realm or building details? And what about each is important? • Are there any design elements of the Main Street Core that you would like to see in other areas of Downtown? • How specific / prescriptive do you want the updated Design Guidelines to be? • How do you see incentives being helpful for the implementation of the Design Guidelines?	Bryan, Nicole All
4:00	Break	All

4:05	Downtown Subarea Plan Draft Policies: Discussion [see Attachment A] • Do the policies reflect your priorities for implementation of the Downtown Subarea Plan? • What's missing from the policies? • Do you have any suggested changes to the policy language?	Margaret All
4:55	Next Steps • Draft Subarea Plan • Draft Design Guidelines	Margaret, Bryan, Nicole
5:00	Adjourn	

ATTACHMENT A

Downtown Subarea Plan
Our Downtown Camas 2045
DRAFT - Policies

The draft goals and policies listed below reflect work and discussions to-date on the Downtown Subarea Plan that will advance priorities and implementation over the next 20 years.

Goal DT-1: Architecture and Design

Retain Downtown's historic design and expand its charm.

- DT-1.1: Protect and enhance downtown's design, including the integrity of the Historic Main Street Core, through clear and objective zoning standards and design guidelines.
- DT-1.2: Explore improvements to the public realm that reinforce downtown's charm through a Streetscape Plan and continued investment in community amenities.
- DT-1.3: Ensure that downtown design standards are up-to-date and reflect the goals and policies of the Downtown Subarea Plan.
- DT-1.4: Promote the addition of street trees, landscape planters, green walls, and other landscaping elements that improve aesthetics, provide shade, and enhance the pedestrian experience.
- DT-1.5: Incorporate public art, murals, and interactive elements to create a unique sense of place.
- DT-1.6: Require new buildings to complement the existing architectural character while allowing for contemporary design elements.
- DT-1.7: Encourage the use of pedestrian-scale buildings and street lighting to highlight building facades and architectural features while enhancing safety and visibility.

Goal DT-2: Downtown Housing

Provide a range of housing options that welcome more people to live Downtown.

- DT-2.1: Allow development of a range of housing types, including both rental and ownership

options, for a range of income levels within the zoning districts in the Downtown Subarea Plan boundary.

- DT-2.2: Explore incentives to increase housing capacity and encourage the development of diverse housing types, ADUs, affordable housing, senior housing, and mixed-use or live/work units downtown.
- DT-2.3: Develop specific design standards for new housing built to complement the existing development within downtown, ensuring the regulations and permitting processes are clear and objective.
- DT-2.4: Continue to implement housing affordability strategies that meet the needs of Camas households downtown while preserving existing affordable housing.
- DT-2.5: Encourage housing downtown to provide features that foster healthy living such as community gardens, open spaces, and recreation areas.

Goal DT-3: Urban Amenities

Provide the right mix of development, services, and public spaces that support ways for people to live, work, and play Downtown.

- DT-3.1: Require active ground floor uses and engaging street level design in the Historic Main Street Core zoning district.
- DT-3.2: Support park and open space improvements and improved connectivity to the Mill Ditch Trail and Louis Bloch Park, as illustrated in the Downtown Subarea Plan.
- DT-3.3: Evaluate how Camas regulations support visitor lodging and tourism activities downtown.
- DT-3.4: Explore opportunities for additional public spaces, including public plazas, pocket parks, pedestrian-only streets, and community gardens.
- DT-3.5: Create a parklet program that converts downtown curbside parking spaces, when and where appropriate, into community seating spaces available for businesses and residents.
- DT-3.6: Establish a policy requiring that new public and private projects provide public art, including murals, sculptures, or interactive elements within public spaces.
- DT-3.7: Support and incentivize business and property owners to incorporate outdoor patios, seating areas, planters, and other landscape features that contribute to an inviting and dynamic streetscape.

Goal DT-4: Economic Development

Encourage (re)development to expand opportunities Downtown for retail, office, and residential.

- DT-4.1: Support partnerships with community groups focused on advocating for the future of Downtown Camas, such as the Downtown Camas Association.
- DT-4.2: Evaluate the Camas Municipal Code and permitting procedures to identify ways to increase flexibility in enabling businesses to expand, grow, or redevelop at existing locations.
- DT-4.3: Collaborate with public agencies, private parties, and non-profits in marketing and outreach efforts that attract visitors and sustain existing local businesses and attract new development/redevelopment while maintaining the historic charm of downtown.
- DT-4.4: Partner with the Downtown Camas Association, Camas-Washougal Chamber of Commerce, and other similar organizations to expand incentives available to small local businesses such as credit improvement programs.
- DT-4.5: Prioritize City investments that capitalize on nearby redevelopment efforts to reinforce economic and physical connections to downtown.
- DT-4.6: Evaluate financing tools to help investments in community infrastructure and encourage redevelopment of key areas.
- DT-4.7: Address infrastructure improvements necessary for redevelopment projects.
- DT-4.8: Encourage development and redevelopment that reinforces the role of public spaces in Downtown Camas as a vibrant center of activity, particularly for vulnerable populations such as youth and elderly.
- DT-4.9: Develop strategies to mitigate displacement of existing businesses downtown, particularly in areas of increased investment and redevelopment.
- DT-4.10: Work to achieve a diverse set of local businesses downtown that are complementary and economically resilient, balancing needs of residents, workers, and visitors.

Goal DT-5: Civic Life

Expand on civic life and services Downtown through strategic use of City-owned property and vibrant community events.

- DT-5.1: Ensure that city hall, the library and primary services remain downtown, in the heart of

the city.

- DT-5.2: Fulfill the vision for a central gathering place in the heart of downtown through the development of a Civic Hub, which will include a civic plaza that supports existing community events and be a catalyst for new events.
- DT-5.3: Support flexibility and provide prioritized infrastructure investments at the Civic Hub along NE 4th Ave to create shared spaces to accommodate the growth of pedestrian-friendly events including the Farmers Market.
- DT-5.4: Develop guidelines and permitting procedures that allow for seasonal or temporary use of public spaces for outdoor dining, retail displays, and community events, while ensuring pedestrian flow and safety.

Goal DT-6: Multimodal Connectivity

Create a safe and connected transportation network that makes Downtown walkable and bikeable.

- DT-6.1: Encourage placemaking and wayfinding efforts downtown to develop a distinct identity and attract visitors.
- DT-6.2: Ensure downtown sidewalks are wide, unobstructed, and well-maintained to accommodate all users.
- DT-6.3: Implement traffic-calming measures such curb extensions, raised crosswalks and intersections, and unique pavement treatments that improve pedestrian safety and enhance downtown design.
- DT-6.4: Improve bicycle infrastructure with new dedicated bike lanes, sharrows, intersection improvements, and bicycle parking and racks. Encourage the use of priority bicycle parking for community events.
- DT-6.5: Enhance connections between the Historic Main Street Core and downtown residential neighborhoods, including Evergreen Terrace and south of NE 3rd Ave.
- DT-6.6: Install benches, shade structures, and public seating along pedestrian routes to create a more comfortable walking environment.
- DT-6.7: Ensure adequate parking downtown for continued business growth and consider developing a parking management plan. Seek out opportunities for shared use parking and additional parking on the edges of the downtown district, which could also serve as a park and ride transit facility.

Downtown Advisory Committee (DAC)
Draft Meeting #6 Summary

March 24th, 2025, 3:00- 5:00 PM

Downtown Design Guidelines: Presentation and Discussion
Bryan Robinson and Nicole McDermott, WSP, presented an introduction to the process of updating the Downtown Design Guidelines Manual and Zoning Code for the new zoning districts defined in the Downtown Subarea Plan. The presentation included examples from jurisdictions with similar elements to Downtown Camas across Washington and Oregon. DAC members asked questions throughout the presentation and answered specific discussion questions.

The goal of the discussion was to understand the types of elements that the DAC would like to see regulated in the zoning code and guidelines, as well as the level of restriction / flexibility that the code and guidelines should provide for future development / redevelopment.

DAC members offered the following questions and comments:

- In general, DAC members would like to preserve / enhance the following elements in Downtown:
    - Attention to charm, scale, and intimate feel of downtown
    - Continue thoughtful approach to public art
    - Bulb-outs / curb extensions to preserve walkability
    - Flower baskets and street trees
    - Building and landscaping / tree lighting, lampposts
    - Awnings / weather protections
    - Remove permanent structures that no longer serve the public realm (e.g., giant planters on NE 4th Ave.)
    - Commercial use at ground floor, specifically restaurants and retail
    - Lighting / signage regulations (e.g., brightness restrictions)
    - Regulate public realm (e.g., building design, public space between building/street)
    - Create reliable parking options, even if it's a lot that's a few blocks away

Additional / expanded discussions about specific elements are categorized by topic below:

- Lighting:
    - Lighting layers should be considered for exterior lighting on buildings.
        - The DCA currently has a grant to add lighting to existing buildings and it could be a good standard for new buildings.
        - These standards could differ by zoning district.
    - Consider a lumen level / foot-candle limit for all lighting on buildings
    - Pedestrian lighting should be spread out beyond Main Street Core
- Public Art

    - Would like to see more follow-through / clarity on the public art fee requirement for new development
    - Public art is important, but needs to be done with care
    - The City is working on a Public Art Program as part of the Strategic Plan process
- Awnings
    - Can awnings be required with a change of use / building permit?
    - Weather protection is something that is consistently missing and should be addressed
    - Do awnings cover the door or the entire length of your building? Some DAC members stated a preference for the entire building
- "Active Ground Floor" terminology
    - What does "active" mean? Can it be specific to restaurants and retail in the Main Street Core?
    - Desire to make sure uses remain commercial on ground floor
- Height
    - Interest in zoning protection for height in the Main Street Core, and potentially also in areas outside the core
- Facades, Building Materials
    - What prevents someone from changing historic character and façade? Can we regulate color?
    - More interest in regulating aesthetics than materials. There needs to be more guidance/regulation than there currently is but not super prescriptive.
        - Does this include materials on only NE 4th? Or all materials in other zoning districts?
        - The key is the aesthetic. People love downtown's eclectic nature but want to see some sideboards around future design.
- Parklets / outdoor dining
    - Uncertainty around implementing parklets if they take up parking space; they would need a set of design standards / be attractive.
    - Concern that downtown is inviting as-is, which includes the ease of finding parking and walking around. That environment would need to remain, and if it is harder to park that might change the ease of navigating Downtown.
- Parking
    - Part of the issue with parking is not being able to "count on" a spot. Designated parking areas, even if a few blocks from a destination, might be worth it since it would more/less guarantee parking spots.
- Permitting Process / Design Manual Applicability
    - Are there thresholds for when design guidelines kick in currently?
        - *City staff stated it's currently when a building permit is required.*
    - Interest in more clarity around when design guidelines would apply, what triggers it (Change of use? New development only?)
        - The goal of the new guidelines and zoning would be to be as clear and objective as possible.

- Future proofing
    - Can the guidelines account for future building materials (e.g., cutting-edge tech for siding) or future uses, since it's a 20-year plan and there will be some unknowns?
        - Opportunities to amend zoning code and guidelines as necessary in the future for new/emerging technology.
    - Consider future options for EV charging stations, downtown Wi-Fi, consider future generations
        - Implementation plan can include exploration of this.
- Incentives
    - MFTE exists now as an incentive.
    - What other incentives would be needed in the future, even if market isn't supporting certain development now, but could be in the next 20 years?
    - Where are City initiatives vs building/developer-owner driven initiatives?
- Downtown residential zone
    - Interest in setting design standards in residential areas.
        - State regulations require the same level of requirements for missing middle housing types as SF residential.
    - Some expressed concern over redevelopment that has happened in Evergreen Terrace in terms of the style/design of the housing, others expressed a desire to maintain setbacks and scale but less concerned about design.
    - Currently the code only regulates setbacks and building code/permit.
    - Can Camas establish its own historic design guidelines/designations to preserve residential areas?
        - Discussion of a potential optional program for homeowners.

Downtown Subarea Plan Policies: Policy Discussion

Margaret Raimann, SERA Design, presented the draft policies that will accompany the Downtown Subarea Plan. DAC members received the list of draft policies along with the agenda for the meeting and provided feedback during the meeting.

DAC members offered the following feedback during the meeting:

- DT-1.7: Encourage the use of pedestrian-scale buildings and street lighting to highlight building facades and architectural features while enhancing safety and visibility.
    - Be clear about the meaning of street lighting.
    - Could this also include wayfinding signage and other signage?
- DT-1.5: Incorporate public art, murals, and interactive elements to create a unique sense of place.
    - Can we be specific here about how funds for public art are used?
- DT-2.1: Allow development of a range of housing types, including both rental and ownership options, for a range of income levels within the zoning districts in the Downtown Subarea Plan boundary.
    - Should we include language about "increasing density"?

- DT-3.1: Require active ground floor uses and engaging street level design in the Historic Main Street Core zoning district.
    - Should “active ground floor” be defined here? (Restaurants/retail?)
- DT-3.2: Support park and open space improvements and improved connectivity to the Mill Ditch Trail and Louis Bloch Park, as illustrated in the Downtown Subarea Plan.
    - Can the Mill Ditch Trail improvements be specific about bicycle connections?
- DT-3.5: Create a parklet program that converts downtown curbside parking spaces, when and where appropriate, into community seating spaces available for businesses and residents.
    - Can we add language that states the parklets are temporary?
- Add to Goal DT-3:
    - Consider fees/revenue generation for maintaining urban amenities and /or a public process for review of privately funded urban amenities.
- Goal DT-4:
    - Look at combining 4.1, 4.3, and 4.4 due to redundancies.
    - Opportunity for collaboration with the city for façade improvement programs (reduce fees, streamline permitting, etc.)
    - Consider adding a policy related to job creation; there is an opportunity for living wage jobs/innovation (light industrial uses).
- DT-6.6: Install benches, shade structures, and public seating along pedestrian routes to create a more comfortable walking environment.
    - Shade or a different pavement surface is especially important in areas where Farmers Market operates.

Next Steps

Brian, Nicole, and Margaret presented the next steps for the project, which include a draft Design Guidelines Framework Document, updated draft policies, and a Draft Subarea Plan document. DAC members were encouraged to provide additional feedback on the draft policies via email if they have more comments or questions.

The meeting adjourned at 5:05pm.

Chapter 1:
Introduction

The City of Camas created this Housing Action Plan (HAP) to encourage housing diversity, affordability, and access to opportunity for people of all incomes. The goal of the plan is to help the community achieve a greater variety of housing types and costs to better meet the needs and desires of individuals and families.

Additional objectives of the Plan include:

- Relying on thorough data and an inclusive public participation process to understand current and future housing needs.
- Assessing existing housing resources and policies and identify ways to build on or improve them.
- Outlining strategies the City of Camas plans to take to meet the community's housing needs over the next ten years and beyond.
- Furthering the city's Comprehensive Plan housing goals and be adopted by City Council.

Camas received a grant to support this project from the Washington State Department of Commerce under the Urban Residential Building Capacity Grant Program established by House Bill 1923. In 2019, the Washington State Legislature passed HB 1923 to encourage all cities under the Growth Management Act (GMA) to adopt actions to increase residential building capacity and prioritize affordable, inclusive neighborhoods. Developing a Housing Action Plan was one option through which cities could receive grant funds under HB 1923.[1]

This document outlines the process and findings of Camas's housing research, including community outreach through virtual meetings, a survey, and an interactive project website. It culminates with strategy recommendations for expanding housing diversity and affordability in Camas. Major components include:

- Community Engagement Overview
- Demographic Trends Analysis
- Housing Supply Analysis
- Housing Need Estimates & Gaps
- Recommended Housing Strategies
- Implementation Plan

Figure 1: Camas HAP Project Phases

[1] Washington State Department of Commerce, "Urban Residential Capacity Grant Program Overview." Retrieved from: https://deptofcommerce.box.com/shared/static/5r9951piax26mz19hez4j5d1gobi6l08.pdf

Following adoption of the HAP by Camas City Council, the City will work to implement strategies included in the Plan over the next several years.

Definitions

Affordable Housing

The definition used throughout this analysis is congruent with the U.S Department of Housing and Urban Development's definition of "affordable housing" as housing that costs no more than 30% of a household's total monthly gross income. For rental housing, the 30% amount would be inclusive of any tenant-paid utility costs. For homeowners, the 30% amount would include the mortgage payment, property taxes, homeowners insurance, and any homeowners' association fees.

Comprehensive Plan

"Comprehensive plans" are the centerpiece of local planning efforts. A comprehensive plan articulates a series of goals, objectives, policies, actions, and standards that are intended to guide the day-to-day decisions of elected officials and local government staff.

Growth Management Act (GMA)

The Washington State Legislature enacted the Growth Management Act (GMA) in 1990, following a lengthy process led by the Growth Strategies Commission. It was motivated by several factors, including rapid suburban development and traffic congestion and the decrease of farmland and open space. The passage of HB 2929 set forth 13 statewide goals, numerous new policies and requirements, and new planning and revenue authorities for counties and cities.

HB 2929 required counties with high growth rates, which includes Clark County, to plan. A city must follow the lead of the county in which it is located and must plan under the rules of the GMA. GMA-planning counties and cities are required to develop and adopt comprehensive plans, followed by zoning and other development regulations to implement those plans. The GMA also calls for communities to review and, if necessary, revise their plans and regulations every eight years to ensure they remain up to date.

Clark County is required to plan for the population projected to grow in the County over the next 20 years. The county and the cities are to work together to distribute growth forecasts across all cities, unincorporated growth areas, and rural areas, with an emphasis on accommodating growth within urban areas to preserve rural and natural resource lands.

HUD Area Median Family Income (HAMFI or MFI)

To determine household income limits for eligibility in federal affordable housing programs, the U.S. Department of Housing and Urban Development calculates

median family income by household size for counties and metropolitan areas throughout the United States. The median family income for a given geography and household size is the midpoint of the income distribution for similarly-sized households within that geography.

According to HUD's HAMFI data, Camas falls within the Portland-Vancouver-Hillsboro, OR-WA metropolitan area. As of 2021, HUD estimated the MFI for that area at $96,900.

Protected Classes

Title VIII of the Civil Rights Act of 1968 prohibits housing discrimination based on race, color, national origin or ancestry, sex, or religion. The 1988 Fair Housing Amendments Act added familial status and mental and physical handicap as "protected classes."

The Washington State Law Against Discrimination includes four protected classes in addition to those protected at the federal level. They include marital status, sexual orientation and gender identity, source of income, and veteran/ military status.

Zoning

"Zoning" establishes separate districts (zones) for different types of land use, such as commercial, residential, and industrial. These areas are shown on the city's Zoning Map. Within each zone, standards are adopted to regulate the size, use, and location of sites and buildings. Requirements for protecting critical areas, standards for landscaping and parking, and subdividing land are also addressed. Zoning regulations adopted by the City are contained within Title 18 of the Camas Municipal Code.

Commercial Zones are intended to provide services and employment primarily to residents. Commercial zones may also include residential development such as apartments as part of a mixed-use project. An example of a commercial site that includes residential development can be found at the Grass Valley Master Plan project on NW 20th Avenue.

Industrial Zones provide for a wide range of industrial and manufacturing uses. Types of activities in this zone include assembly, manufacturing, fabrication, processing, bulk handling and storage, research facilities, associated warehousing, and heavy trucking.

Light Industrial/Business Park Zones provide for uses, such as offices related to industrial usage, research and development, limited commercial, and associated warehousing uses. Development standards require a campus-like setting with generous landscaping and setbacks from roadways.

Multifamily Zones are intended to provide for dwellings, such as row houses, condominiums, and apartments. It is desirable for these zones to be adjacent

to parks and transportation systems (e.g., bus stops). The maximum number of units that are allowed per acre in a multifamily zone is 18 units per acre. Only 5% of the city is zoned for multifamily uses.

Single-Family Residential Zones are intended for dwellings that are typically a single dwelling or a duplex (attached dwelling). Approximately 48% of the city is zoned for single-family use. The city also allows for an Accessory Dwelling Unit (ADU) on single family lots that are not otherwise prohibited by restrictive HOA covenants.

Data Sources

Decennial Census

Data collected by the Decennial Census for 2010 and 2000 is used in this Assessment (older Census data is only used in conjunction with more recent data in order to illustrate trends). The Decennial Census data is used by the U.S. Census Bureau to create several different datasets:

2010 and 2000 Census Summary File 1 (SF 1) – This dataset contains what is known as "100% data," meaning that it contains the data collected from every household that participated in the Census and is not based on a representative sample of the population. Though this dataset is very broad in terms of coverage of the total population, it is limited in the depth of the information collected. Basic characteristics such as age, sex, and race are collected, but not more detailed information such as disability status, occupation, and income. The statistics are available for a variety of geographic levels with most tables obtainable down to the census tract or block group level.

2000 Census Summary File 3 (SF 3) – Containing sample data from approximately one in every six U.S. households, this dataset is compiled from respondents who received the "long form" Census survey. This comprehensive and highly detailed dataset contains information on such topics as ancestry, level of education, occupation, commute time to work, and home value. The SF 3 dataset was discontinued for the 2010 Census, but many of the variables from SF 3 are included in the American Community Survey.

American Community Survey (ACS)

The American Community Survey is an ongoing statistical survey that samples a small percentage of the U.S. population every year, thus providing communities with more current population and housing data throughout the 10 years between censuses. This approach trades the accuracy of the Decennial Census Data for the relative immediacy of continuously polled data from every year. ACS data is compiled from an annual sample of approximately 3 million addresses rather than an actual count (like the Decennial Census's SF 1 data) and therefore is susceptible to sampling errors. This data is released in two different formats: single-year estimates and multi-year estimates.

ACS Multi-Year Estimates – More current than Census 2010 data, this dataset is one of the most frequently used. Because sampling error is reduced when estimates are collected over a longer period of time, 5-year estimates will be more accurate (but less recent) than 1-year estimates. The 2014-2018 ACS 5-year estimates are used most often in this HAP.

Comprehensive Housing Affordability Strategy (CHAS)

CHAS data is a special tabulation of the U.S. Census Bureau's American Community Survey (ACS) that is largely not available through standard Census products. The special dataset provides counts of the number of households with a variety of housing needs, in a range of income brackets, and for different household types of particular interest to planners and policy makers. The most recent available CHAS data is based on 2013-2017 American Community Survey 5-year estimates.

City of Camas Building Permits

The City of Camas provided monthly residential building permit data from 2017 through 2020. Permit data included development type (single or multifamily) and unit square footage. Mosaic Community Planning analyzed building permit data for comparisons to 2010 and 2015 permit data included in *Camas 2035.*

Washington Center for Real Estate Research

The Washington Center for Real Estate Research provides housing data for local governments in Washington, including those developing Housing Action Plans under HB 1923, through its Housing Market Data Toolkit. The toolkit includes a compilation of relevant Census data, information about local for-sale and rental markets, housing permit and completion data, and a housing affordability index. The toolkit is publicly available at https://wcrer.be.uw.edu/housing-market-data-toolkit/.

Chapter 2:
Community Input

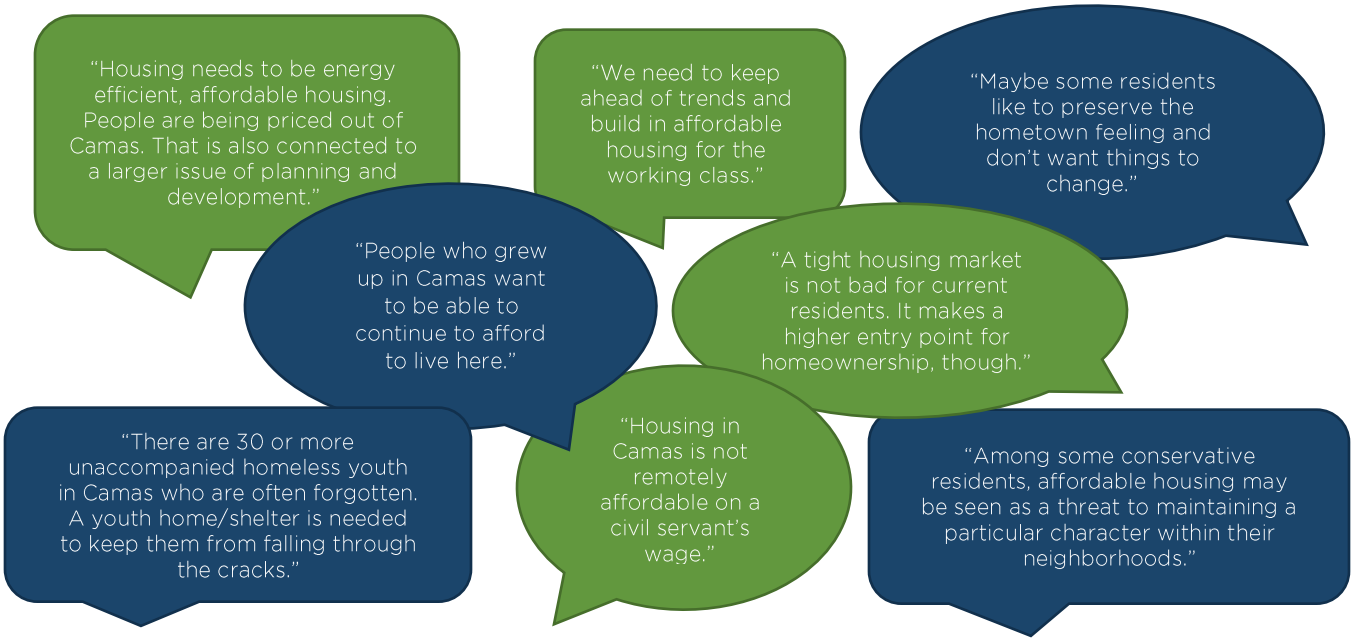
Camas residents and employees have a wide range of unique housing needs and preferences. To be successful, the Housing Action Plan must be grounded in a thorough understanding of local housing needs, as well as reflective of residents' ideas for the future. Implementation of the Plan depends on local support built, in part, through an inclusive and open community engagement process.

The City of Camas's goals for engaging the public during the HAP include:

- **Inform** residents about the Housing Action Plan, the planning process, and local housing affordability needs.
- **Understand** local housing issues, needs, and preferences, specifically those related to affordability and development opportunities and barriers.
- **Be inclusive** of a range of perspectives, including people who are particularly impacted by housing affordability, communities at risk of displacement, other vulnerable populations, and groups who have historically been left out of community planning processes.
- **Be transparent** to openly reflect the variety of viewpoints within the community, as well as the City's process used to develop and implement the Housing Action Plan.
- **Build support** for zoning and housing policies that address affordability and other issues identified by the community.

The community engagement process for the Housing Action Plan used a variety of virtual engagement tools in place of traditional face to face engagement methods. To gather input from the public, the project team conducted two virtual public meetings, seven focus groups, and maintained a website for resident engagement, including a public survey.

In total, over 300 people participated in developing the Housing Action Plan. About 50 people joined a community meeting or focus group and 307 took the survey. This section summarizes feedback received through each of these methods.



Community Meetings

Two virtual public meetings were held in September. Each meeting began with a presentation by the project team that included an overview of the HAP and a few data points about housing in Camas. The team then asked participants for their opinions on the city's housing needs and current supply through in-meeting Zoom polls and small group discussions.

Table 1: Zoom Poll Discussion Summary – Does Camas Need Greater Variety in Housing Types and Prices?

STRONGLY AGREE	NEITHER AGREE NOR DISAGREE
• Most new housing in Camas is not affordable for half of the population. • Housing should be built with a focus on active transportation, such as biking and walking, and on mitigating climate change. • With two teenage boys, I would love to have kids be able to move back as adults. However, there are not a lot of affordable or starter homes. • I was trying to help a young man who was homeless find housing but could not find anything. I do not feel like Camas has a good foothold in caring for the aging or a diverse population, including people of different ethnic backgrounds, colors, and gender identities. Camas does feel like it is a Caucasian space. I do not know that that helps us embrace a holistic view of what we could be.	• There's benefit to the vitality of a small town with some density. With a community like Camas where a lot of the population is by Vancouver, it is easy to patronize businesses there rather than downtown, so we lose vitality to businesses there. Development of downtown interests me most. • I am still learning and have no idea what we have. I thought we have a pretty diverse community, but everything can improve. • I am indifferent. What does the housing mixture look like? What are the services to provide for residents? How can new residents be supported? People are being priced out.
SOMEWHAT AGREE	**SOMEWHAT OR STRONGLY DISAGREE**
• I am still getting grounded on these issues, so I would like to know the socioeconomic spread in Camas and whether the housing needs are meeting the needs of those who live here. Are people working here having to commute because they cannot afford housing? Is it safe to bike on our roads? • There are lots of big houses in Camas and not many small housing types. • Long-time residents say they cannot afford houses here. • Retiring in Camas is questionable related to affordability and modest housing sizes. • We need more options for starter and mid-range homes. • There does need to be a greater variety of housing in Clark County as a whole. • More variety is necessary to include people 'priced out.'	• On the west side, if you look at the variety of development, there is quite a lot. Not as much strictly in the City of Camas, but in the area in general. • How would residential growth affect current homeowners, schools, and growth in the city? • I am concerned about increased density. Let us not be Portland with no parking. Impact fees do not reflect the actual price of supporting new residents. We need to pay-as-we-go and not use more bond measures to support development.

Figure 2: Comments on Housing Variety

Housing Types Most Needed in Camas

Discussion Question: What particular types of housing do you feel like are most needed in Camas (e.g. housing for students, singles, elderly, homeless, disabled, etc.)? What does housing for that population look like (apartments, single-family homes, townhomes, ADUs, etc.)?

Housing types should address the needs of minorities and homeless families (who may live "doubled-up" with other families), participants suggest. More affordable housing types might include condos, manufactured housing and mobile parks, and tiny homes – housing types that might allow the owner to accumulate equity quickly. However, additional regulations may be needed to allow these housing types in the city. Other suggestions include mixed use housing to provide walkability, access to transportation and access to nature. Some participants also posited that denser development would make service delivery more efficient. Others inquired about studying an "appropriate amount" of housing for the range of incomes in Camas, including low-income housing, as long as the city maintains its "community feel."

Families moving to Camas may be in search of good schools and greater affordability than other cities on the west coast. "Camas is still a small town asking big city questions," one participant noted. However, some feel that the prevalence of large, single-family homes does not necessarily reflect a "healthy, stable community." Some participants seek greater balance in housing types without experiencing a loss of community.

Specific housing types identified by participants include:

This Photo by Unknown Author is licensed under CC BY-SA

Starter Homes

"As kids move out, they often cannot return as adults because they cannot afford Camas."

"Potential needs are housing for kids coming back after school and family retiring here."

Accessory Dwelling Units (ADUs)

"ADUs, cluster homes could help meet need."

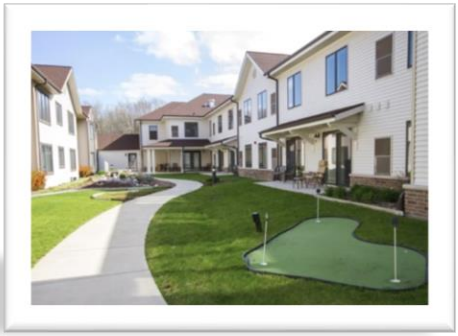
"From a real estate perspective, 99% of clients coming to Camas are families. Some ask for an ADU to bring a parent. Some go 'out in country' or out of Camas if that is a priority."

"There are 20 ADUs in the entire city and not very many permit applications coming in."

Accessible Housing

"Retirees or older population needs 'accessible' housing – e.g., no stairs."

Apartments and Condominiums



"Part of a vital downtown is going to be more residential units, apartments, or condos on those blocks."

"Camas is getting more expensive. Multifamily units are $100k/unit up north and $150k/unit here. Unfortunately, it is going to push people out."

Senior Housing

"For the elderly, we do not have much. No communities serving seniors."

Development Opportunities

Discussion Question: Are there development opportunities for housing types needed in Camas? What opportunities could Camas leverage to encourage development of housing to meet local needs? (E.g. infrastructure or amenities that would support or add value to new residential development; policy or incentive programs that would incentivize new development types, etc.)

Table 2: Community Meeting Discussion Summary – Development Opportunities and Challenges

OPPORTUNITIES
• Use tax credits to construct multi-family housing • Utilize "supports" and/or change government financing options to encourage housing diversity • Provide community amenities, such as good restaurants and other businesses that may be perceived as cool/edgy. • Increase the job base in the area to attract people. With good transportation, you may get young professionals who will want starter homes. • Continue to revitalize the downtown business district, making it easier to access. It is difficult to get downtown on a bike - roads or trails, dedicated bike path from the lake area to downtown would be good.
CHALLENGES
• Without apparent room for new housing, then one option would be to redevelop existing areas/knock down existing structures. However, I am doubtful that would be well-received. • Most HOAs do not allow ADUs on lots. • It is hard to park in downtown right now. It is not clear where housing would fit downtown or out 192nd. • Construction is occurring downtown but I do not see sites where housing could go. • Building is really expensive. The price of supplies is through the roof. • Incentives and subsidies do not work. The cost does not pencil out.

Development Barriers

Discussion Questions: Are there barriers to housing development in Camas? What barriers exist to production of needed housing types? What keeps the market from meeting these housing needs?

- Regulations, statutes, and policies.
- State laws that Camas officials must abide by and do not have control over.
- Permits and fees for single family development that are different than those for multifamily development.
- The GMA (Growth Management Act) is designed to encourage more dense building. If a city does not have much land, prices will go up.

- Available land is being used up.
- Large houses are more profitable to build.
- Demand drives housing development. Housing – attached or detached – must accommodate families since people move to Camas for schools. People do not move to Camas for the local jobs. In fact, most residents commute. People leave places like Portland and move to Camas for the natural setting and a quality of life.
- Preferences of residents who want to live in the suburbs.
- Choices made by the city on what housing to build, not what the demand is, are what matter. Participants argue that many people want to move to a good school district with affordable housing. The question, they ask, is whether the city wants to develop with more dense housing, more affordability, and with active transportation requirements.

Focus Groups and Interviews

Stakeholders participated in seven focus groups during October and November. Participants included professionals in the fields of housing and homeless services, education, government, transportation, and urban planning, as well as high school students. Several questions were posed in the focus groups and responses are summarized below.

Why are people moving to Camas?

Focus group participants describe the city as a great place to live for schools and safe neighborhoods. Residents enjoy the proximity to Portland and Portland International Airport (PDX). Camas also offers more affordability and lower taxes than Portland, Sacramento, or other California cities. The city's small-town atmosphere – resembling the feel of the old mill town – and its charming downtown provide rich and beloved character. Other features enjoyed by residents include trails and sports. Residents enjoy Camas for the quality of life available in the city.

What types of housing does Camas need more of?

Participants want housing that reflects a variety of stages of life, including housing for college students and single adults. They express a desire for entry level homes, ranging from 1,500 to 2,000 square feet or sold for less than $200,000. Stakeholders also want housing that enables seniors to age in place. There is some interest in higher density or "vertical" housing, such as apartments or condos, particularly in downtown. Some participants desire more unique housing products, and developments serving low-income residents through the local housing authority.

Is housing affordability a problem in Camas? Are there other barriers to living in Camas?

In short, yes. The city's housing supply is mostly large single-family, leaving limited housing choices for residents of a range of incomes, including lower income households. Participants acknowledge that negative perceptions about affordable housing may have racial or anti-poverty undertones. But participants suggest re-framing affordable housing, so that it is located downtown, is attractive and offers housing for professionals such as teachers. Other barriers to living in Camas include limited housing for people who want to downsize, limited housing turnover, lack of public transit, few local jobs and increasing taxes for longtime residents and retirees.

What are the challenges to the development of new housing?

One challenge may be the remaining land in the city, some of which may have steep slopes and wetlands. The cost of available land, including impact fees, may also present a challenge to development. Other challenges to having a variety of housing types may include the limited history of this product type in the city (which might make developers cautious about embarking on new housing types), limited encouragement by the city to try new housing products (e.g. building "vertically" in downtown), developers' difficulty with rezonings and difficulty making multifamily projects "pencil out." People report no incentives for affordable housing. People also report that developers are not given enough rules: that downtown zoning is too non-specific and that there should be a plan for downtown. Other indirect issues include limited bus service, the need for parking structures downtown. Although the city has a tax abatement program focused on 80% AMI, the program may not be as widely known as it could be, with some participants stating that the city offers no incentives for affordable housing. Some report that residential uses should be better balanced with commercial and industrial demands to drive down housing costs.

What are some policies or programs that Camas could enact to support a variety of housing types and price points?

Address perceptions about multi-family or affordable housing. Participants believe that, for one, the city must deal with the perceptions of current residents about multi-family or affordable housing. Where affordable housing stigma is very strong, the city should consider housing design, and should take into account how people will be welcomed in the city, or what messages they will receive if they need affordable housing. Residents desire some housing for families with lower incomes, e.g. families earning less than 80% AMI. Participants suggest new development from the Vancouver Housing Authority, inclusionary zoning, and funding for housing rehabilitation as a means to provide housing for families with lower incomes.

Try new strategies. To improve the variety of housing types in the city, participants suggest that the city address the preponderance of single-family housing, which is located even in medium density zoning districts. The city should identify new developers who are building higher densities in other locales, such as Vancouver, or inquire with developers about why they do not provide a variety of housing types (e.g. location, access to transit/bike paths/trails, etc.). There should be additional ADU development, with their use restricted for short-term rentals. Finally, the city could try out policies such as transfer of development rights, or reducing impact fees to encourage missing housing types, such as entry level housing. Some even suggest expanding the city's growth boundary.

Address parking. Participants note that a city-funded parking structure might make developers more interested in building higher density in the city. Some even suggest a parking assessment fund with designated fees per parking space.

Consider workforce housing. One downtown business, Fuel Medical Group, has younger employees and might be interested in creating housing for their workers. Workforce housing might reduce commute times and transportation costs for residents and could incentivize a range of industries in the city, allowing for a variety of workers from different educational and economic backgrounds to work and live in the city.

Address concerns about loss of character. Additional concerns address in focus groups include concerns that sprawl will have the effect of destroying natural habitats. Participants noted that there appeared to be no consequences for tree removal, nor were developers required to plant indigenous trees. While some participants like changes in the city, they acknowledge that there are genuine fears that the city will lose its small-town character and natural landscape with too much growth.

Housing Survey

A public survey was available on the *Let's Talk Camas Housing* website (letstalkcamashousing.us) from August 13, 2020 to November 12, 2020 and received 307 responses. The 19-question survey focused on participants' views on housing affordability and access, housing types and costs, and future housing development in Camas. This section shares key findings, with complete survey results available in an appendix to this Plan.

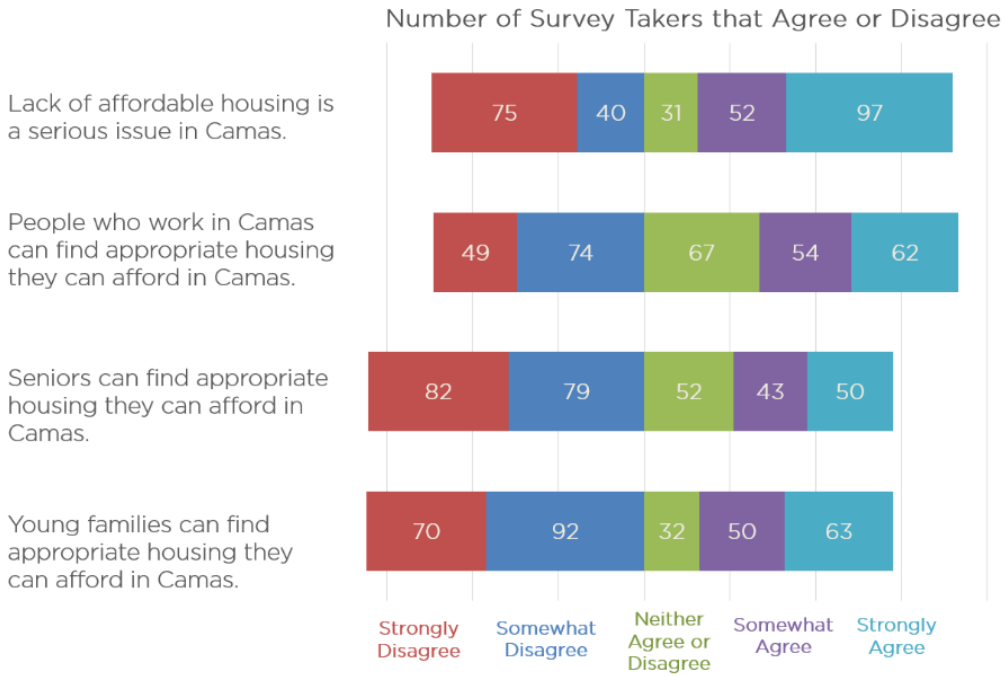
Table 3: Camas Housing Survey Participant Demographics

Participants Living and Working in Camas	• 95% of survey respondents live in Camas. • 36% of respondents work in Camas. • Respondents live in all areas of the city. The largest number of respondents (59) live closest to NE Everett Street.
Tenure and Homeownership	• 88% of respondents own their home. • 9% of respondents are renters. • 2% of respondents live with family or friends, while another 2% provide housing to more than their immediate family.
Age	• Nearly 58% of respondents are between 40 and 60 years old. • 21% were between 20 and 40 years old. Another 21% were over 60.
Income	• Just under one-third of respondent households earned between $100,000 and $149,000 annually (29%). • 40% of respondent households earn more than $150,000 per year, while 31% earn less than $100,000.
Race and Ethnicity	• 75% of respondents identified as white. 12% identified as "other," followed by respondents who were Hispanic (5.2%), Asian/Pacific Islander (4.5%), Native American (1.7%), Black (1%) and Arab or Middle Eastern (0.7%)
Representative Responses About who to Engage in the Conversation about Housing Diversity	• "Seniors, college students, unemployed, rental owners" • "BIPOC families" • "CREDC, environmental councils, public" • "Georgia Pacific" • "Only Camas citizens should have a say about Camas"

Housing Options in Camas

- More than half of all participants (56%) say they are "somewhat satisfied" or "very satisfied" with the housing options available in Camas. However, 31% are either "somewhat dissatisfied" or "very dissatisfied" with the range of available housing options.
- Cost is the leading factor that limits housing choices (identified by 49% of residents), followed by a lack of desired amenities such as outdoor space and parking (19%), and "other" reasons (14%). 31% stated that no size, cost, availability, accessibility, or qualification factors limit their housing choices.

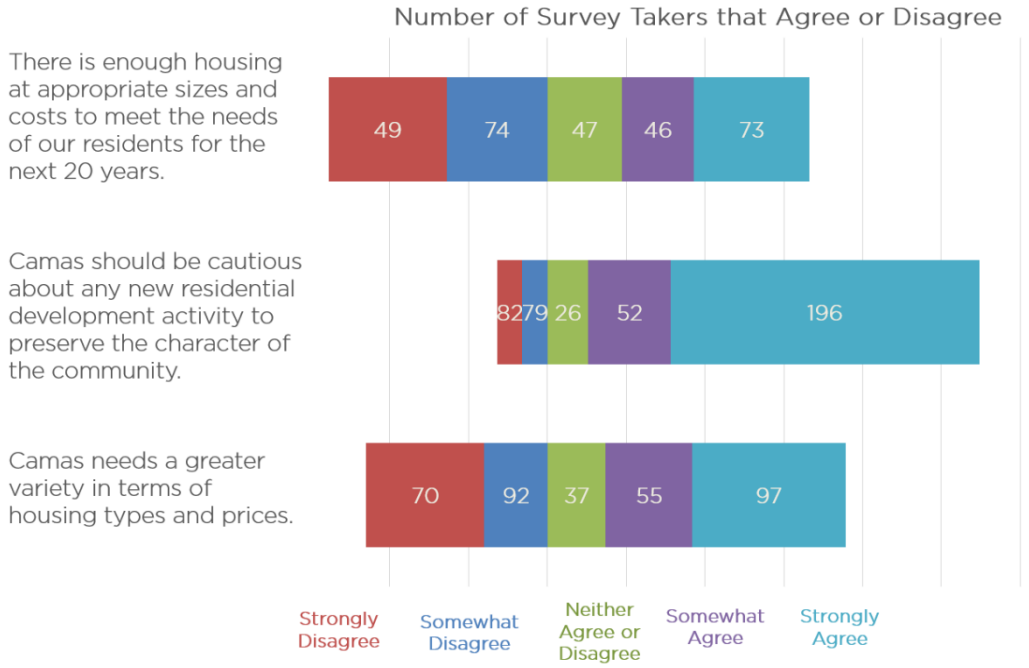
Housing Supply in Camas



- One-third of respondents (32%) "strongly agree" that lack of affordable housing is a serious issue in Camas, while 28% "strongly disagree." Looking at responses to this prompt by income shows that respondents with lower household incomes are more likely to see affordable housing as an issue in Camas.

  For participants with household incomes under $75,000, 62% either "somewhat agree" or "strongly agree" that lack of affordable housing is a serious issue in Camas; about 24% either "somewhat disagree" or "strongly disagree."

  In contrast, participants with household incomes over $150,000 were less likely to see lack of affordable housing as a serious issue in Camas. About 42% "somewhat agree" or "strongly agree" that it is a serious issue, and 45% "somewhat disagree" or "strongly disagree."



- About one-half of participants (53%) "somewhat disagree" or "strongly disagree" that young families can find appropriate housing they can afford.
- About one-half of participants (53%) "somewhat disagree" or "strongly disagree" that seniors can find appropriate housing they can afford.
- Forty percent of participants (40%) "somewhat disagree" or "strongly disagree" and 38% "somewhat agree" or "strongly agree" that people who work in Camas can find appropriate housing in Camas.

Figure 3: Housing Survey Responses to Housing Affordability

- One-third of participants (32%) "strongly agree" that Camas needs greater variety in terms of housing, while 24% "strongly disagree."
- Two-thirds of participants (64%) "strongly agree" that Camas should be cautious about any new residential development activity to preserve the character of the community.
- Forty-five percent (45%) "somewhat disagree" or "strongly disagree" that there is enough housing at appropriate sizes and costs to meet the needs of residents for the next 20 years. However, 39% "somewhat agree" or "strongly agree" that Camas has enough appropriately sized/priced housing.

Figure 4: Housing Survey Responses to Future Housing Development

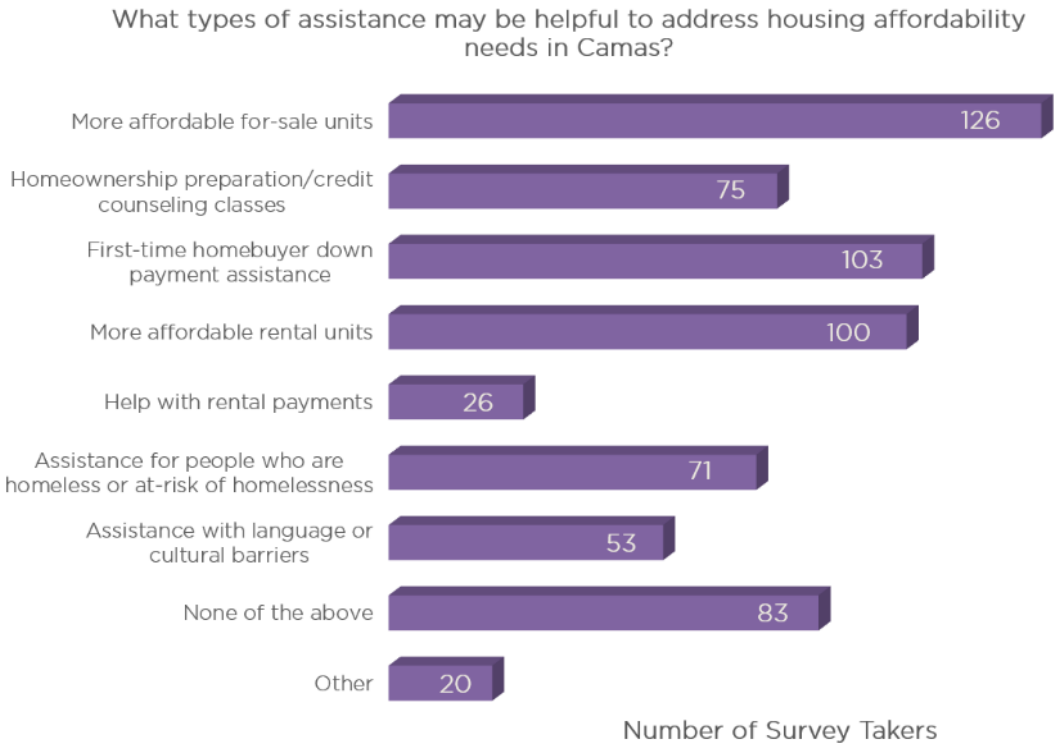
Housing Needs in Camas

- Participants note that the biggest shortage of for-sale housing occurs in the $250,000 to $349,000 price range.
- The biggest shortage of rental housing occurs in the $800 to $999 price range.
- Residents primarily feel that over the next 20 years, new housing would be most appropriate in older neighborhoods and vacant/underdeveloped commercial and industrial properties, followed by mixed-use developments.
- Most Camas residents (57%) have not considered adding an accessory dwelling unit (ADU) to their property, compared to 34% who have.
- Of those residents who gave their reasons for wanting an ADU, over one-third said they would use it to provide a residence for relatives and friends. 20

percent would provide a residence for a caregiver, and another 19 percent would earn extra income by renting out the space.

- When asked what type of assistance would be helpful to meet housing affordability needs in the city, 41% identified "more affordable for-sale units." One-third of residents said that first-time homebuyer down payment assistance and more affordable rental units would also help with housing affordability.
- The greatest barrier to obtaining housing in Camas was a lack of affordable housing. However, one-third of the respondents stated that none of the issues listed were barriers to obtaining housing.

Figure 5: Housing Survey Responses about Types of Housing Assistance



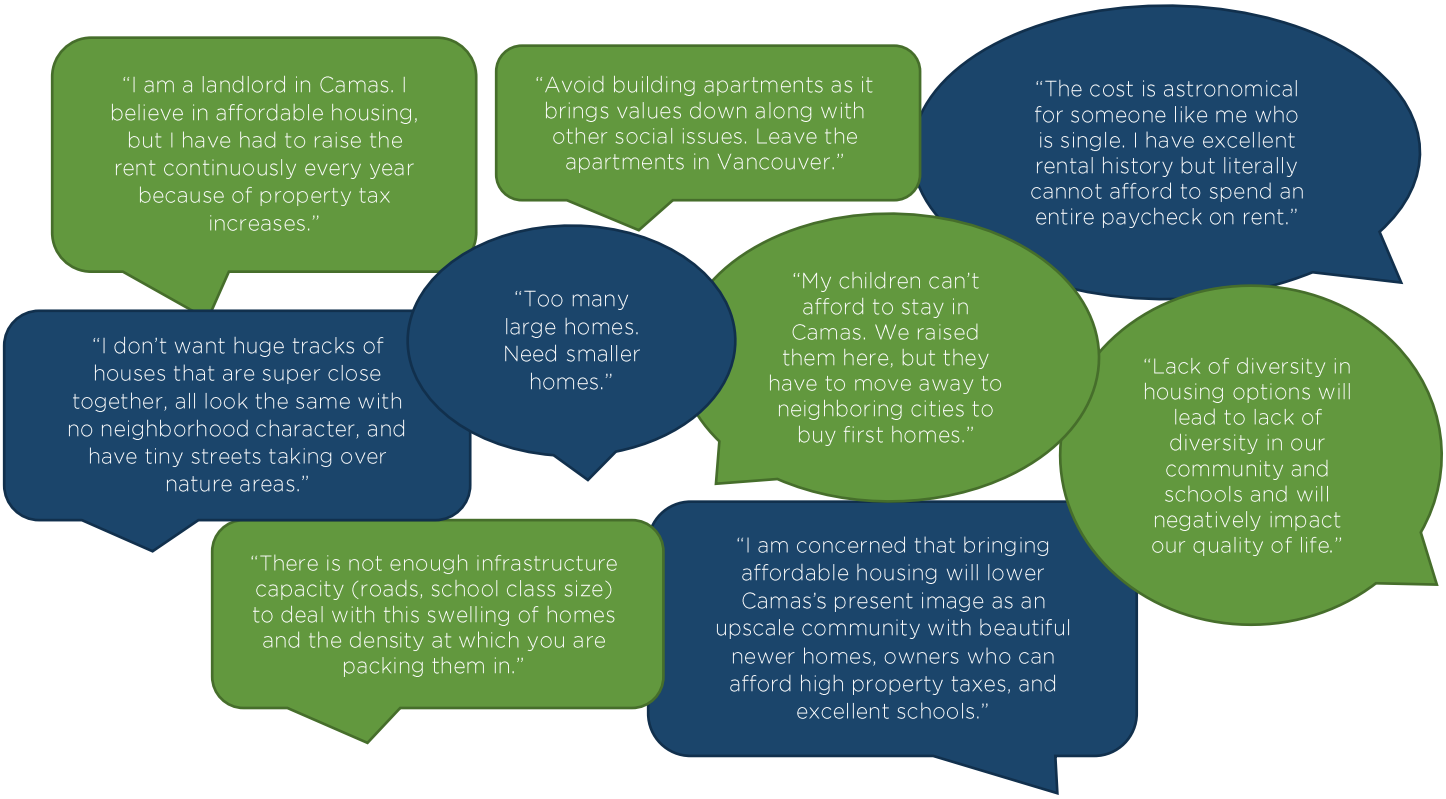


Figure 6: Representative Comments about Housing Concerns in Camas

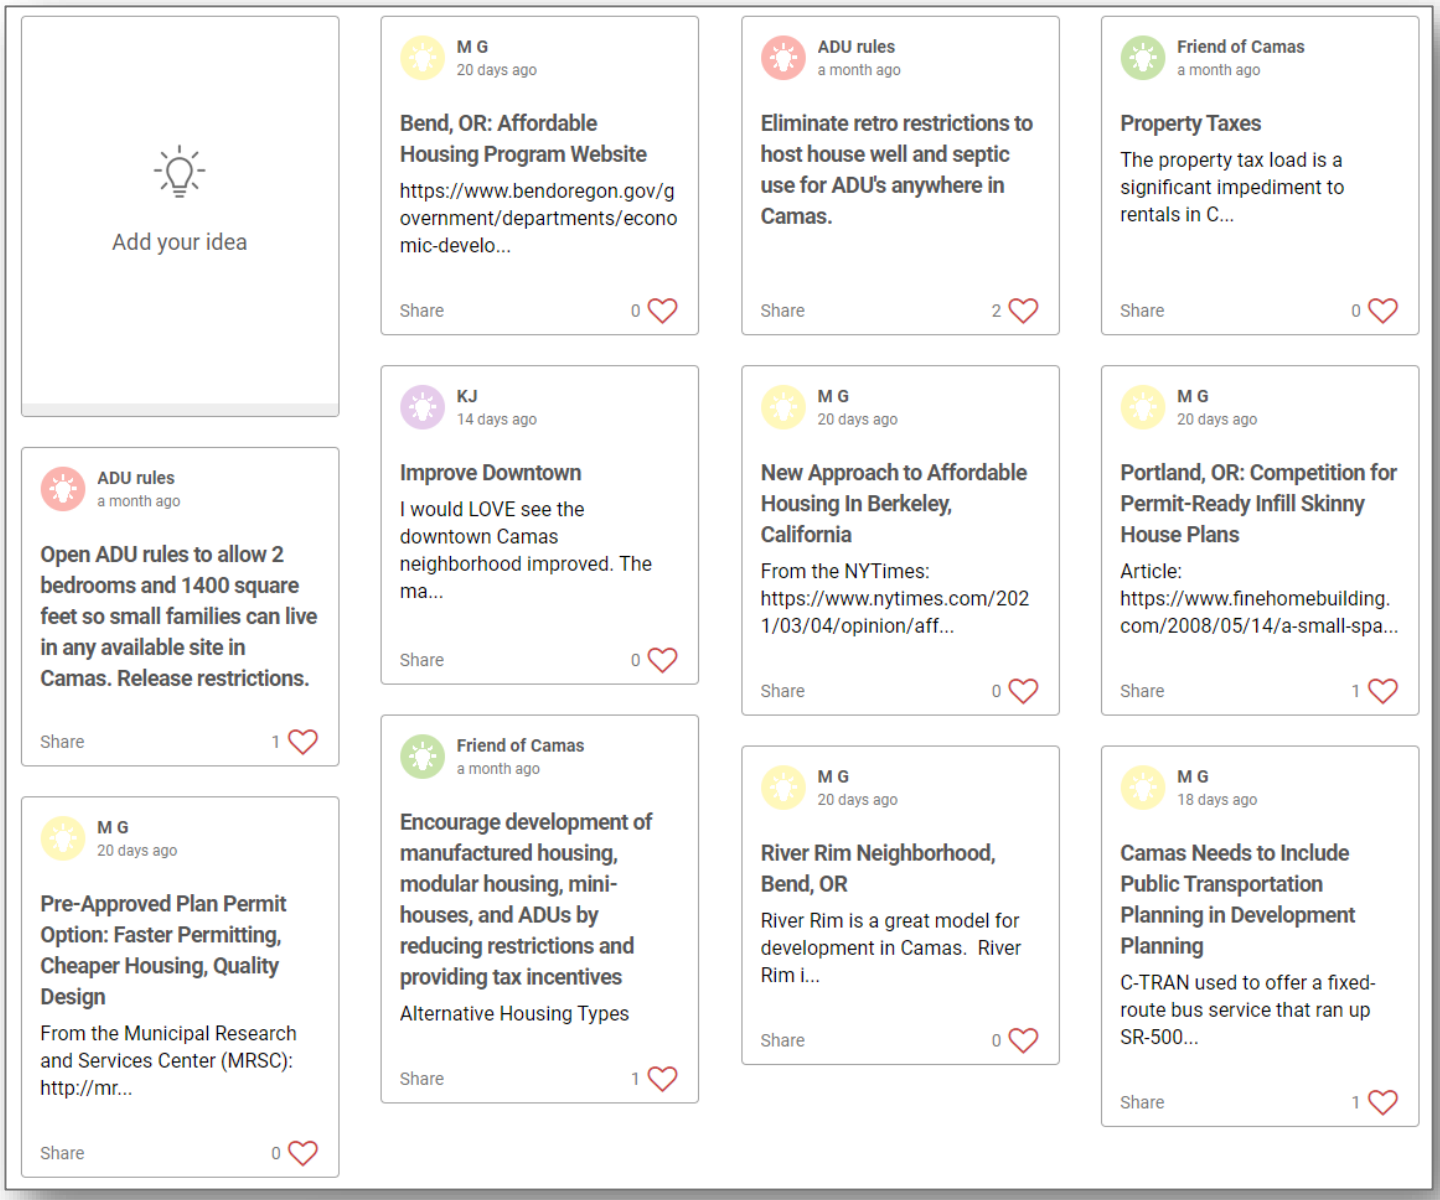

Project Website

Throughout the HAP planning process, the project team maintained an interactive website at LetsTalkCamasHousing.us. The site provided background information on the project, a schedule of upcoming meetings or other key dates, videos and discussion notes from public meetings, and presentations and drafts of the HAP. The site also offered opportunities for visitors to leave questions to be answered by the project team, share their vision for housing in Camas, and view and 'like' ideas shared by others.

Throughout the course of the project, the site received about 2,500 visits from about 1,580 people. About 150 people downloaded the HAP Draft Existing Conditions and Housing Needs document and 100 downloaded the Draft Preliminary Housing Strategies or the complete draft of the HAP.

The figure on the following page shares ideas received on the website's interactive board in response to a question asking what housing types or approaches will best meet the community's housing needs.

Figure 7: Comments Received on LetsTalkCamasHousing.us

Chapter 3:
Demographic Trends

Population Growth

As of April 2020, the City of Camas had a population of 25,140, representing a 29.9% increase from its 2010 population of 19,355. This growth rate was somewhat higher than Clark County's overall rate. During the same time period, the county's population increased by 17.4%, from 425,363 to 499,200. Camas experienced an average annual population growth rate of 2.99% from 2010 to 2020, higher than that of both Clark County (1.74%) and the state of Washington (1.39%) (see Figure 6).

Figure 8: Average Annual Population Growth Rate, City of Camas, Clark County, and State of Washington, 2010-2020

Data Source: Washington State, Office of Financial Management. (2020). April 1 official population estimates

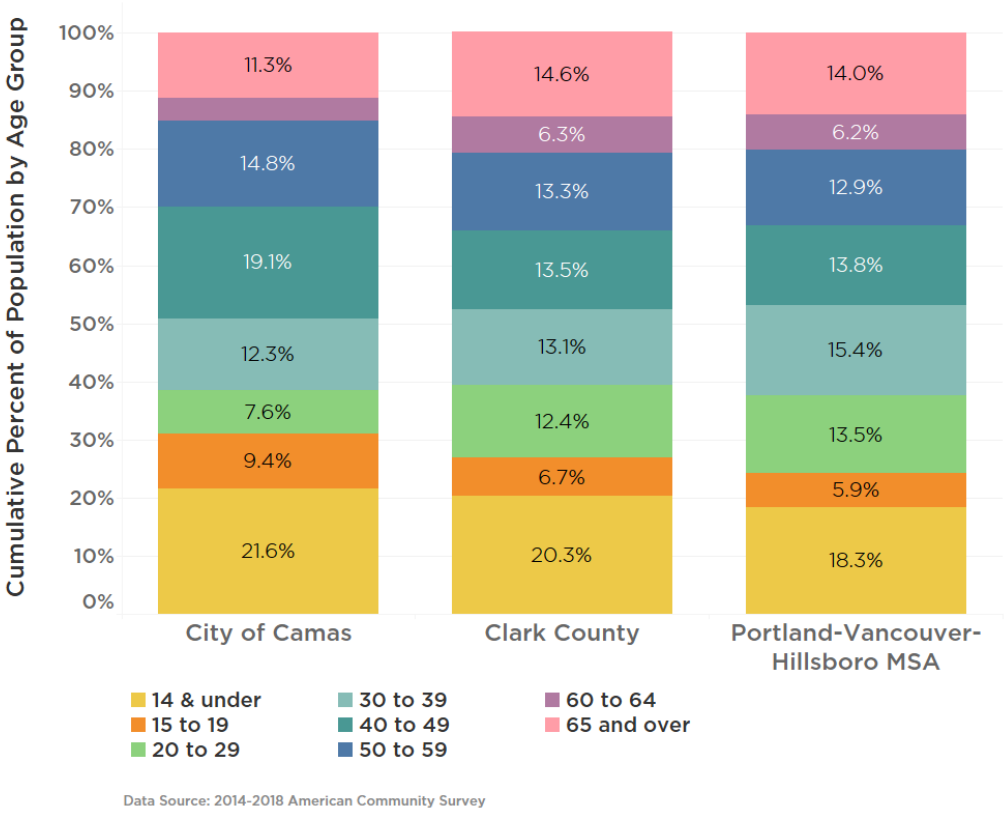
Because of the city's higher growth rate, Camas residents have made up an increasing share of Clark County's population. The city's population made up 5.0% of Clark County residents in 2020, an increase from the 2010 share of 4.6%. Camas's population increase of 5,795 residents over the 10-year period represents 7.8% of the county's overall increase of 73,837 residents.

The State of Washington Office of Financial Management projects that Clark County's population will grow to 643,522 by 2040, an increase of 28.9% from its 2020 population (see Table 4).

The City's 2016 Comprehensive Plan estimates an average annual population growth in the city of Camas of 2.46% from 2015 to 2035. The City's projected growth is based on anticipated countywide population growth, which is then allocated to each city within Clark County. Extending the city's population growth projection out through 2040 using this rate yields an estimated population of 36,912 in 2040 for Camas. Because this growth rate was adopted by the City in *Camas 2035* and was prepared in coordination with Clark County forecasts, this estimate is used in the housing need projections in Chapter 5.

Table 4: Projected Population Change, City of Camas and Clark County, 2020-2040

YEAR	2020	2025	2030	2035	2040
City of Camas with average annual growth rate of 2.46% applied to 2015 population of 22,843 (from City of Camas 2016 Comprehensive Plan)	25,140	28,471	31,284	34,098	36,912
Clark County ("medium series" projections from Washington State Office of Financial Management)	499,200	540,344	576,879	611,968	643,552



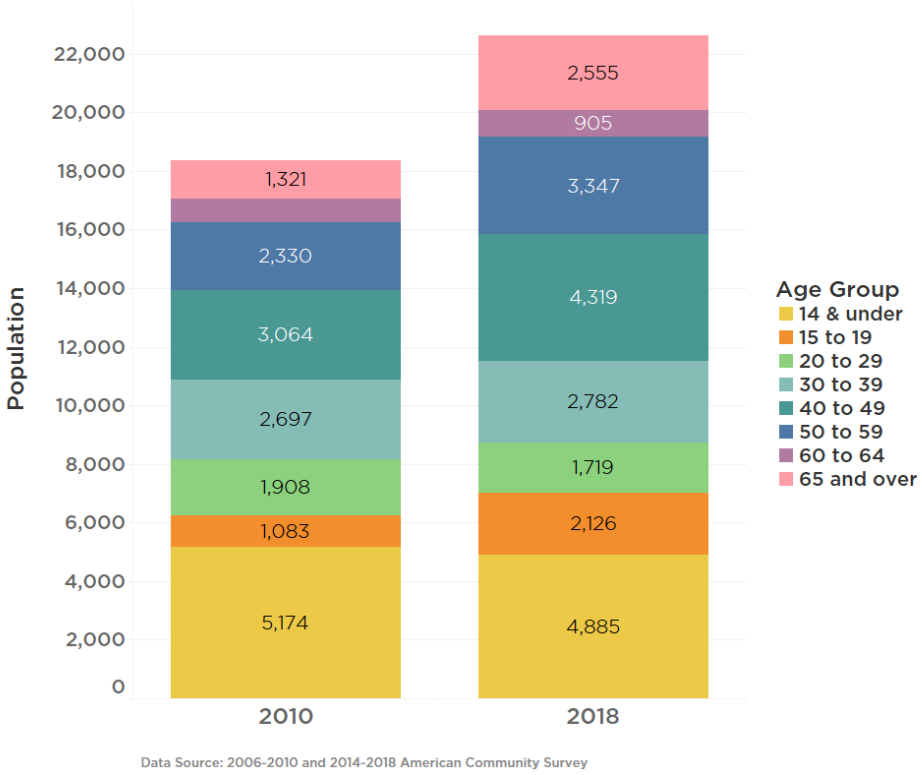
Source: Washington State, Office of Financial Management (2020), Mosaic Community Planning Calculations

Demographic Overview

Age

Composition of the population by age group varies throughout the region. Camas has slightly higher percentages of residents aged 19 and under and ages 40 to 59 compared to Clark County and the Portland-Vancouver-Hillsboro metropolitan area. At the same time, residents aged 20 to 39 and aged 60 and over comprise lower percentages of the City's population than they do that of the county and region (see Figure 9). Based on stakeholder interviews, these differences may be indicative of both push and pull factors for different age groups in Camas, including the high quality of schools in the city-- a draw for families with children-- and a lack of housing options available to meet the needs of younger adults and elderly residents, among other factors.

Figure 9: Percent of Population by Age Group, City of Camas, Clark County, and Portland-Vancouver-Hillsboro MSA, 2014-2018

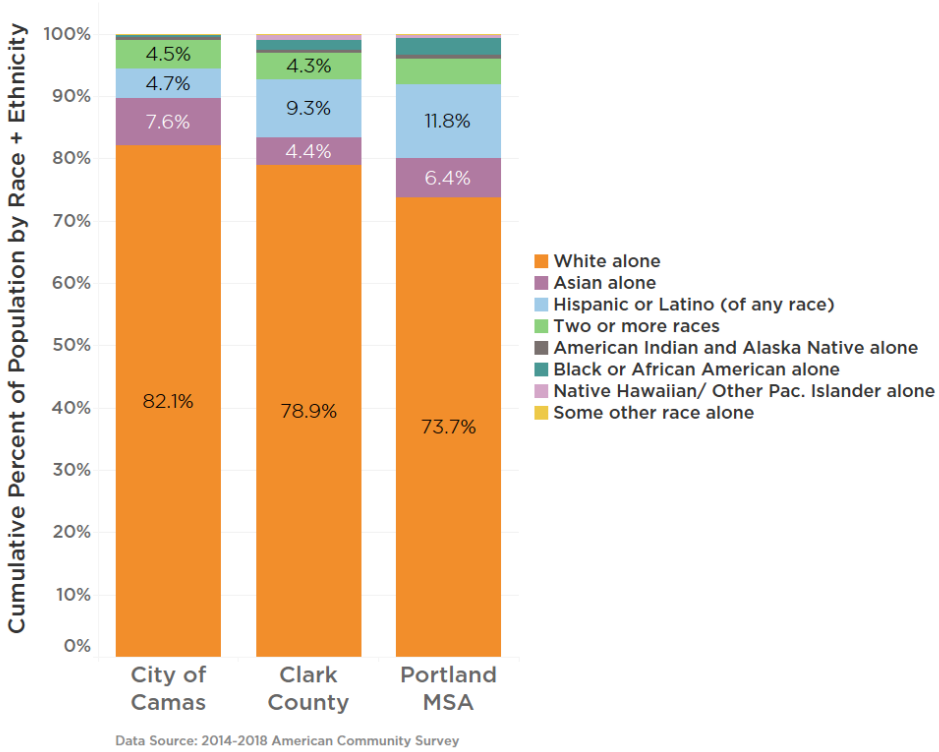


Data Source: 2014-2018 American Community Survey

The composition of the city's population by age has shifted since 2010, with much of the growth concentrated in upper age categories. About 85% of the city's population growth from 2010 to 2018 was due to increases in the numbers of residents aged 40 and over (see Figure 10). Residents in these age categories saw their share of the city's population increase during the time period, from about 40.9% to 49.2%.

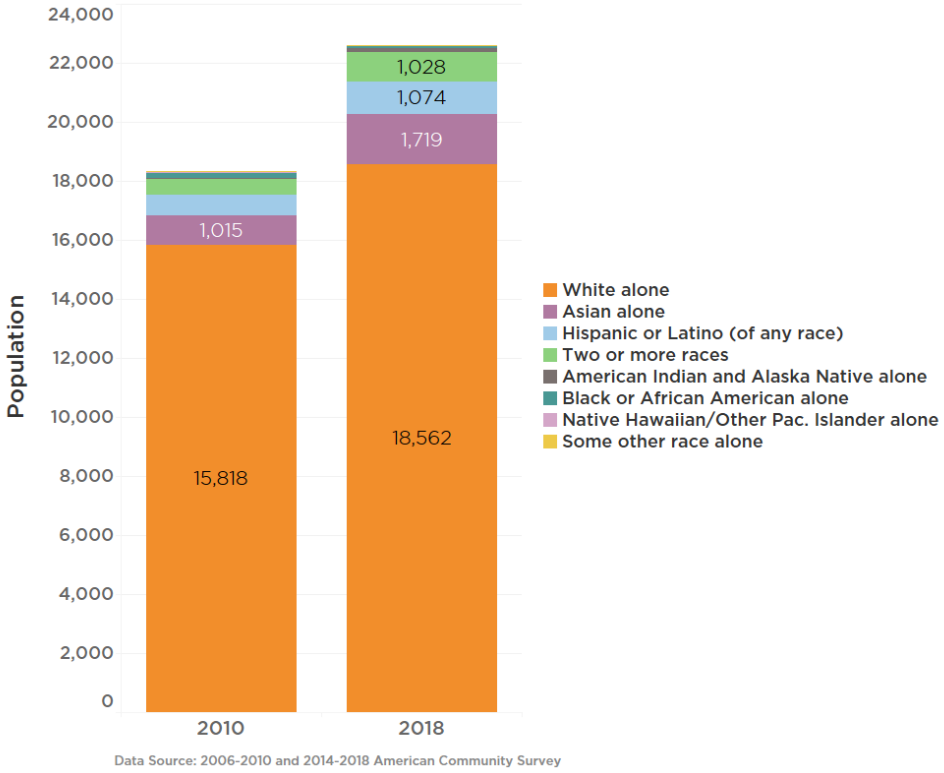
Similarly, residents under age 40 declined as a share of the city's population, making up 59.2% of all residents in 2010 and just 50.9% in 2018. All age groups under 40 years old except residents aged 15 to 19 made up a smaller share of the population in 2018 than they did in 2010. The numbers of children aged 14 and under and residents aged 20 to 29 living in the city dropped slightly, while the numbers of residents aged 30 to 39 increased slightly.

Figure 10: Population by Age Group, City of Camas, 2006-2010 and 2014-2018



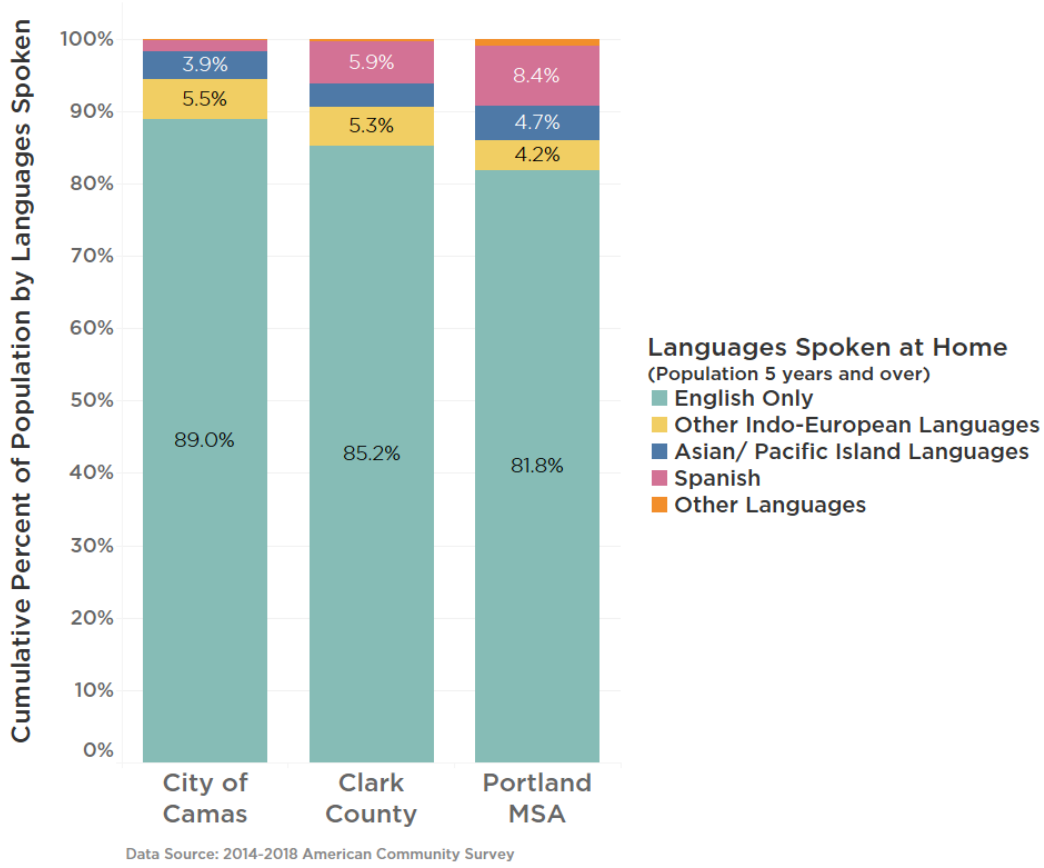
Data Source: 2006-2010 and 2014-2018 American Community Survey

Race and Ethnicity



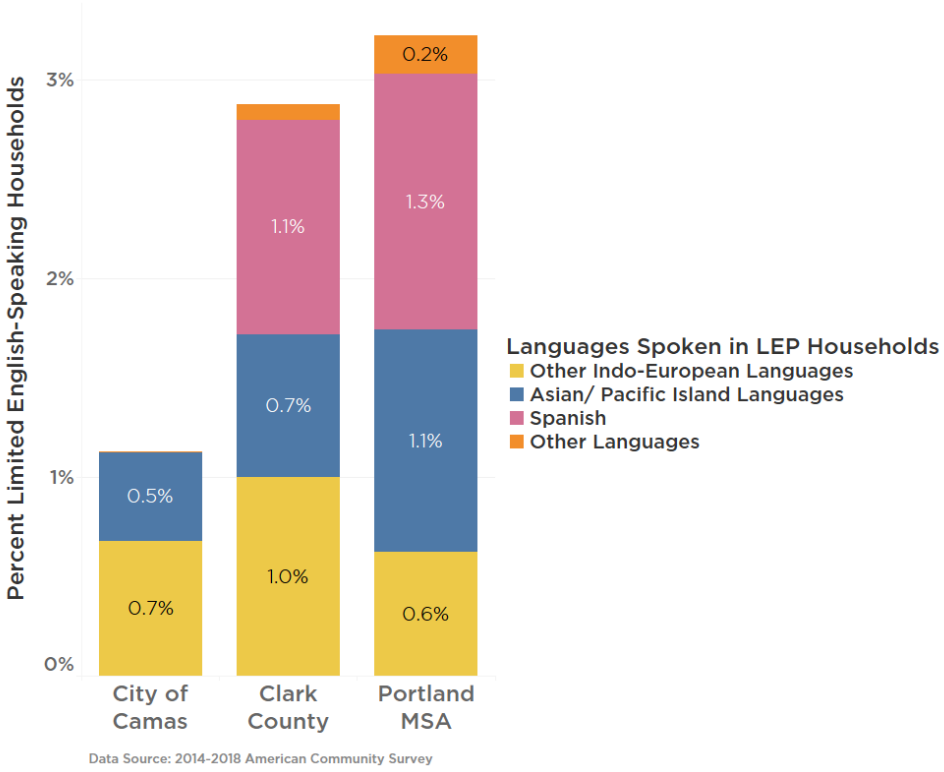
White residents make up the vast majority (82.1%) of Camas's population. Asian residents, Hispanic residents (of any race) and residents of two or more races are the next most common races and ethnicities, comprising 7.6%, 4.7%, and 4.5% of the city's population, respectively. White and Asian residents in particular make up a greater proportion of Camas's population than that of Clark County and the Portland-Vancouver-Hillsboro metropolitan area, while Hispanic and Black residents comprise a lower percentage of the population in Camas than in the county and region (see Figure 11).

Figure 11: Percent of Population by Race and Ethnicity, City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2014-2018



While white residents comprise 82.1% of the city's population, they make up a lower percentage of the city's population growth from 2010 to 2018, about 64.3%. During that time, the city experienced an increase in Asian residents (16.5% of population growth), residents of two or more races (11.6% of population growth), Hispanic residents (8.7% of population growth), and Native American residents (2.0% of population growth). The populations of Black residents, Native Hawaiian and other Pacific Islander residents, and residents of other races declined during the time period (see Figure 12).

Figure 12: Population by Race and Ethnicity, City of Camas, 2006-2010 and 2014-2018



The majority of Camas residents (89.0%) speak only English at home, while smaller percentages speak other Indo-European languages (5.5%), Asian/Pacific island languages (3.9%), Spanish (1.5%), and other languages (0.2%). Residents of Camas are less likely to speak languages other than English at home (11.0%) than those living in Clark County and the Portland-Vancouver-Hillsboro MSA, where 14.8% and 18.2% of residents speak a language other than English, respectively (see Figure 13).

Figure 13: Percent of Population by Language Spoken at Home (Population 5 Years and Over), City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2014-2018

An estimated 90 households in Camas have limited English proficiency (1.1% of all households in Camas). An estimated 54 of these households with limited English proficiency (0.7% of all households) speak other Indo-European languages, and an estimated 36 of the households speak Asian and Pacific island languages (0.5% of all households). The percentage of households with limited English proficiency in Camas (1.1%) is close to one third of that in Clark County (2.9%) and the Portland-Vancouver-Hillsboro metropolitan area (3.2%).

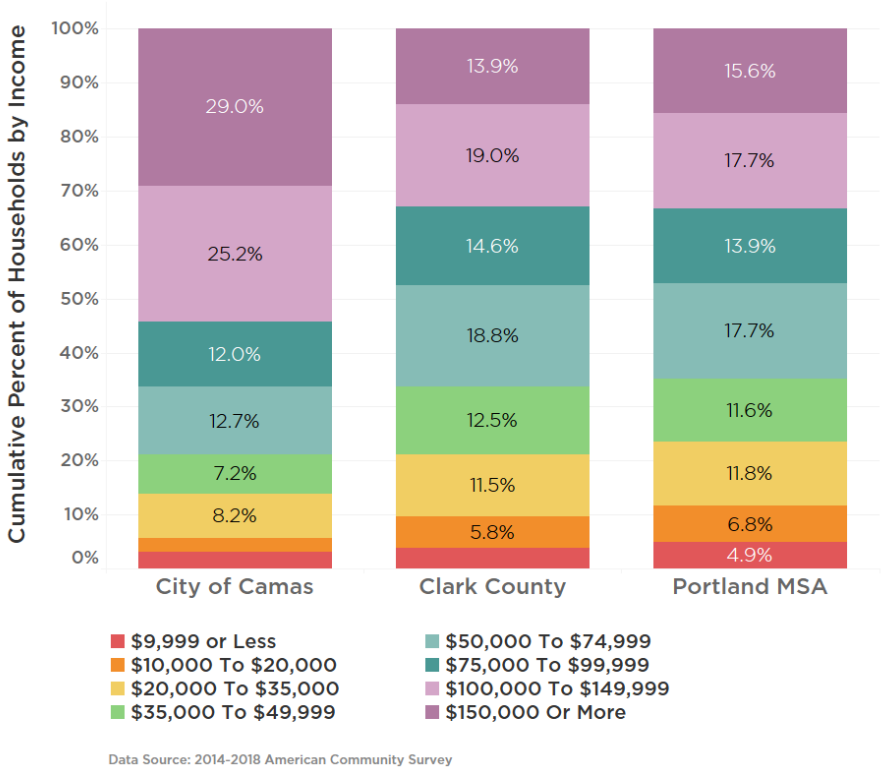


Figure 14: Percent Limited English-Speaking Households, City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2014-2018

Income

Households in the city of Camas tend to be in higher income categories than those in Clark County and the Portland-Vancouver-Hillsboro metropolitan area (see Figure 15). More than half (54.2%) of Camas households earn $100,000 or more per year, while just 13.9% earn $35,000 or less. Relative to Camas, the county and region are both home to a higher proportion of households earning at all income levels $99,999 and below per year and have lower percentages of households earning $100,000 to $149,999, and $150,000 or more. Stakeholders in focus groups and community meetings noted that high rents and home prices make finding housing in Camas particularly challenging for residents with lower incomes.

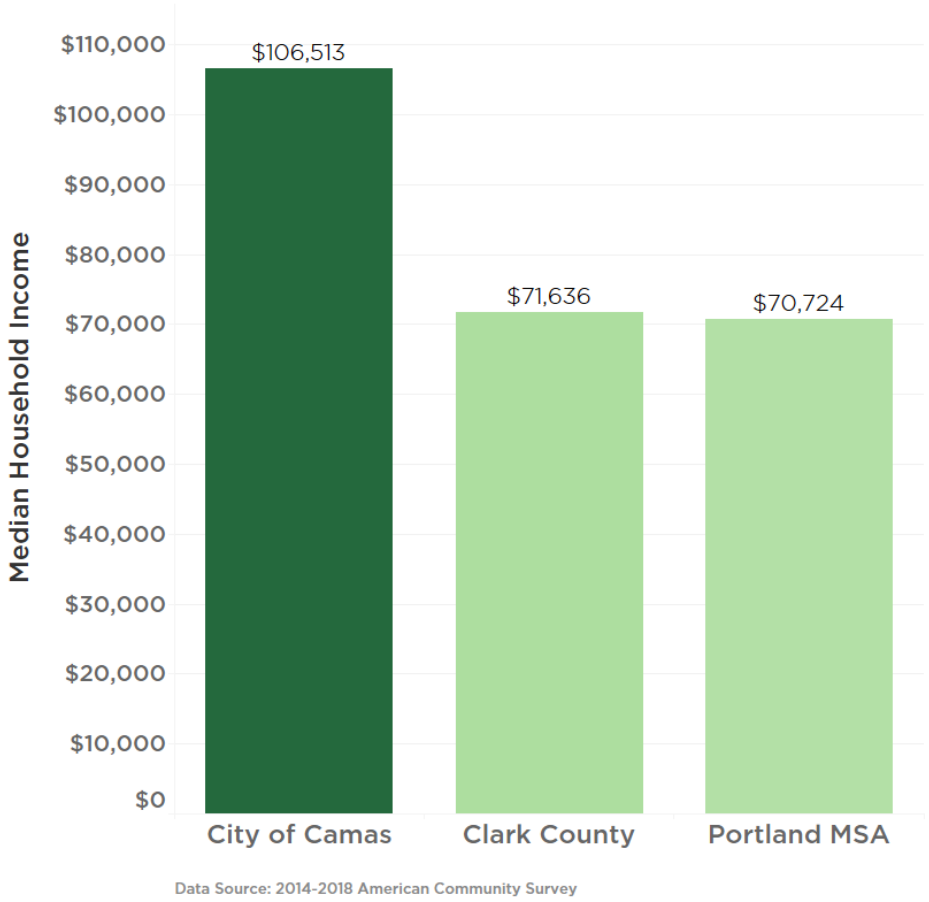

Figure 15: Population by Income Group, City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2014-2018

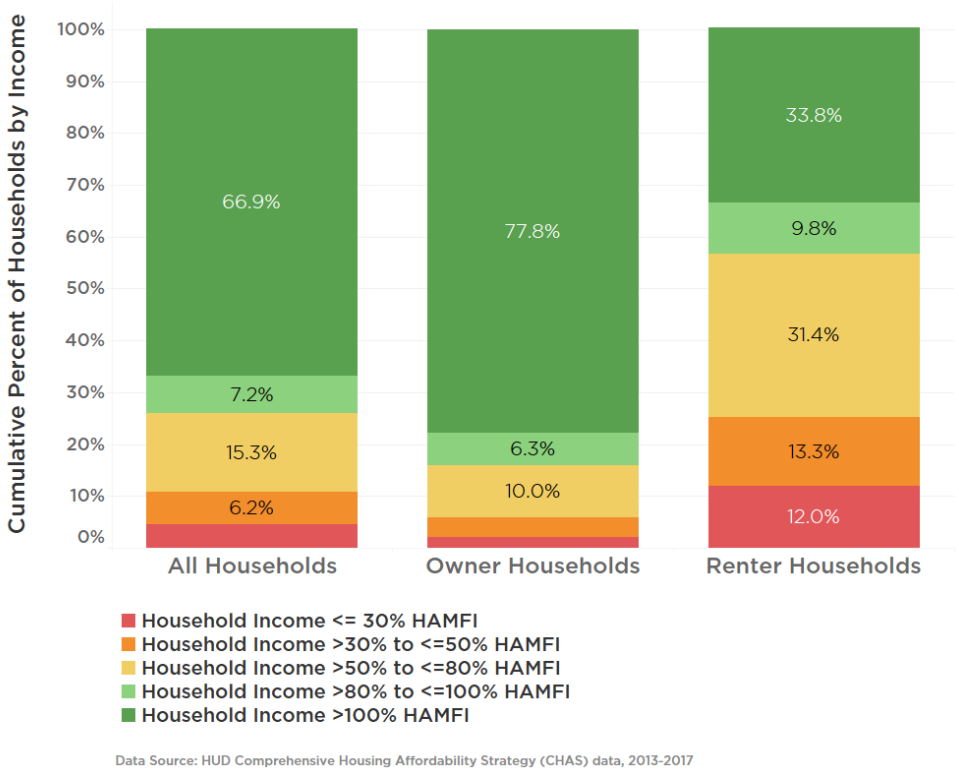
Data Source: 2014-2018 American Community Survey



Because higher percentages of Camas households fall in the upper income categories, the city's median household income ($106,513) is significantly higher than those of both Clark County and the Portland-Vancouver-Hillsboro metropolitan area ($71,636 and $70724, respectively, see Figure 16).

Figure 16: Median Household Income, City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2014-2018

An estimated 66.9% of all households in Camas have incomes greater than the HUD Area Median Family Income (HAMFI), while 33.1% of households have incomes below HAMFI (see Figure 17). Renter households in the city tend to have lower incomes than owner households, indicating that they are more likely to experience housing cost burdens. An estimated 25.3% of renter households have incomes at or below 50% HAMFI, and 31.4% have incomes between 50% and 80% HAMFI. In contrast, just 6.0% of owner households have incomes at or below 50% HAMFI, and 10.0% have incomes between 50% and 80% HAMFI.

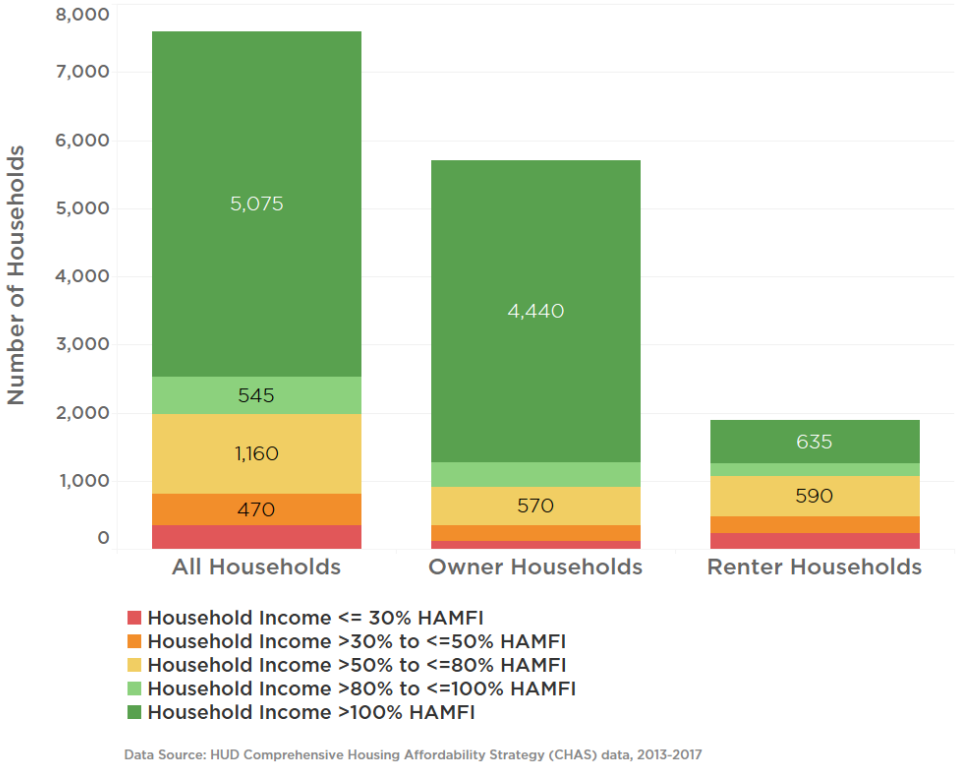


Figure 17: Percentages of Owner and Rental Households by Percent HUD Area Median Family Income, City of Camas, 2013-2017

Data Source: HUD Comprehensive Housing Affordability Strategy (CHAS) data, 2013-2017

Most households in Camas own their homes (75.2%), while a lower percentage are renters (24.8%) (see Figure 18). Renters outnumber owners in the lower income categories, while homeowners are more likely to fall in the higher income categories and, in particular, to earn more than 100% HAMFI. About seven times as many owner households as renter households earn 100% HAMFI (4,440 and 635 households, respectively). Renter households earning less than 30% HAMFI, between 30% and 50% HAMFI, and between 50% and 80% HAMFI (225, 250, and 590 households, respectively) outnumber owners in those categories (120, 220, and 570 households, respectively).

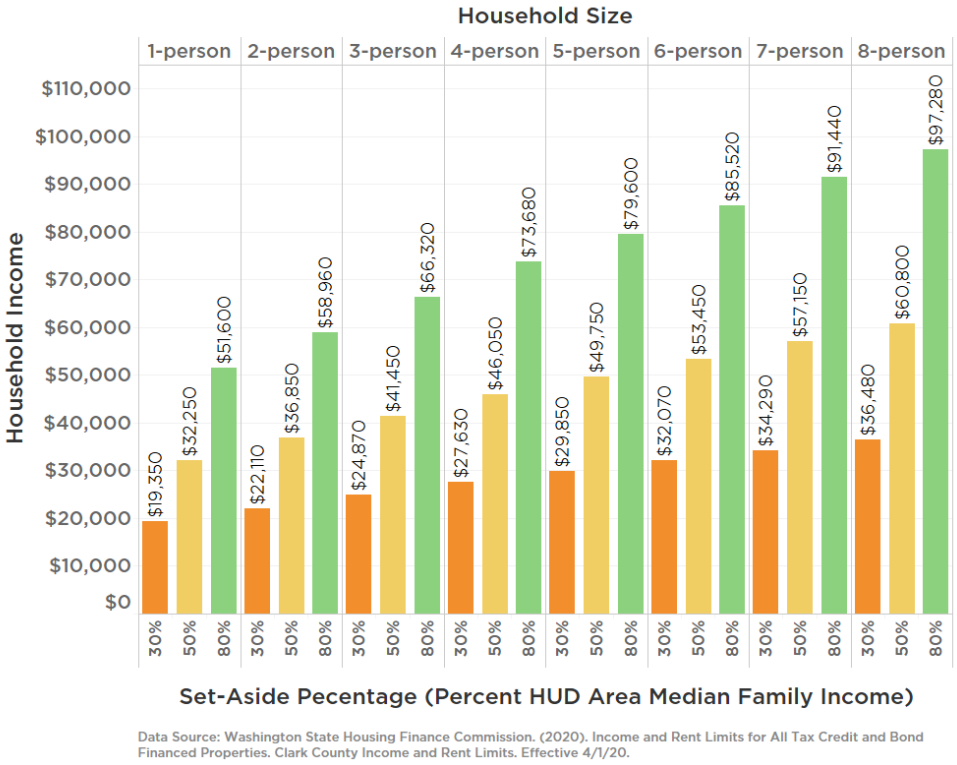

Figure 18: Numbers of Owner and Rental Households by Percent of HUD Area Median Family Income, City of Camas, 2013-2017

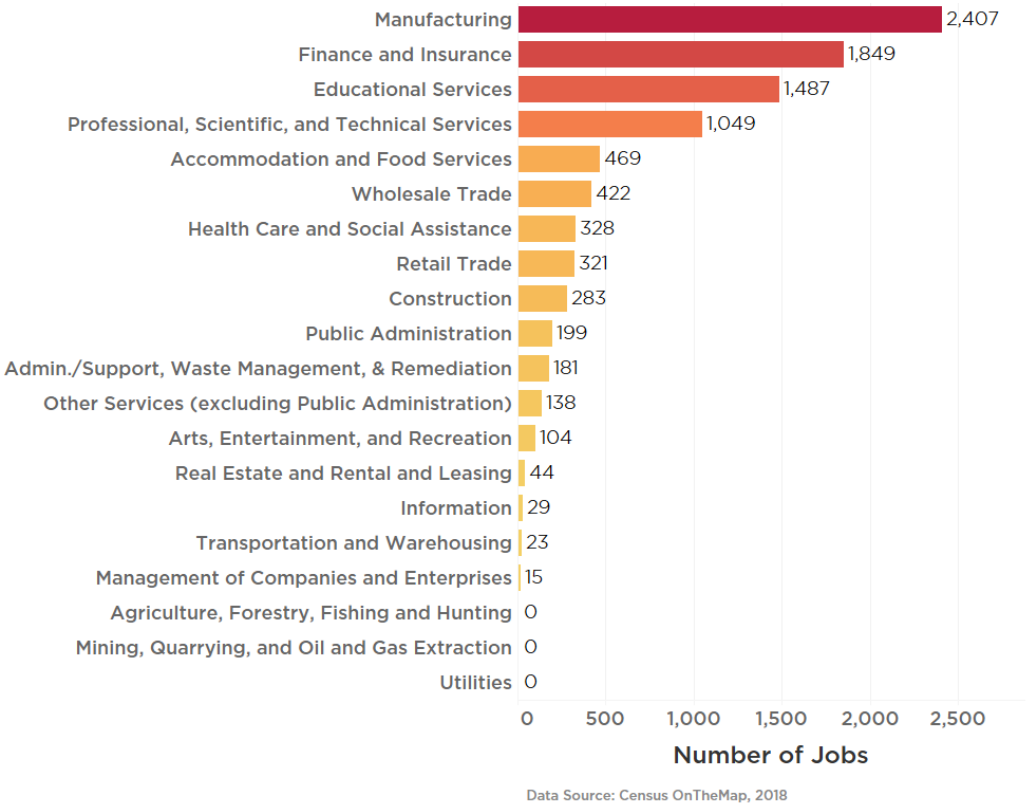
Data Source: HUD Comprehensive Housing Affordability Strategy (CHAS) data, 2013-2017

HUD's categorizations of households by income level in the previous graphs take into consideration differences in household size to reflect differences in living expenses by household size. Figure 19 shows the differences in income limits by family size for households to be classified as earning less than 30%, 50%, and 80% HAMFI in Clark County. Notably, households with more members may earn significantly more than smaller households and still be classified in the same income categories. For example, a family of six may earn up to $53,450 and be categorized as earning below 50% HAMFI, while a family of two would need to earn below $36,850 to be in that category. Similarly, a one-person household with an income of $50,000 would be considered just below 80% HAMFI, while a five-person household at that income level would fall just above 50% HAMFI. These income categories show that households at a wide range of income levels earn below 30% and up to 50% or 80% HAMFI.

Figure 19: Income Limits by Household Size for Selected Percentages of HUD Area Median Family Income, Clark County, 2020

Data Source: Washington State Housing Finance Commission. (2020). Income and Rent Limits for All Tax Credit and Bond Financed Properties. Clark County Income and Rent Limits. Effective 4/1/20.



Economic Conditions and Trends

Current Workforce and Employment Trends

An estimated 9,348 total jobs were located in the city of Camas as of 2018. Jobs in the sectors of manufacturing, finance and insurance, educational services, and professional, scientific, and technical services make up most of these jobs (72.6%, or an estimated 6,792 jobs). In addition to those top sectors, the accommodation and food services, wholesale trade, retail trade, and healthcare and social assistance sectors each provide between 300 and 500 jobs in the city (see Figure 20). Of the 9,348 jobs located in Camas, an estimated 8,969 (95.9%) are workers' primary jobs,[2] indicating that some individuals working in the city hold multiple jobs.

[2] A primary job is the highest paying job for an individual worker for the year. The count of primary jobs is the same as the count of workers.

Figure 20: Number of Jobs by NAICS Industry Sector (All Jobs), City of Camas, 2018

The top employers in 2020 were Fisher Investments (1,725 employees), Wafertech (1,000), and the Camas School District (800 employees). Fisher Investments, a professional services investment firm, comprises 20.2% of the city's jobs and represents the fastest growing sector of employment in the city (see Figure 21).

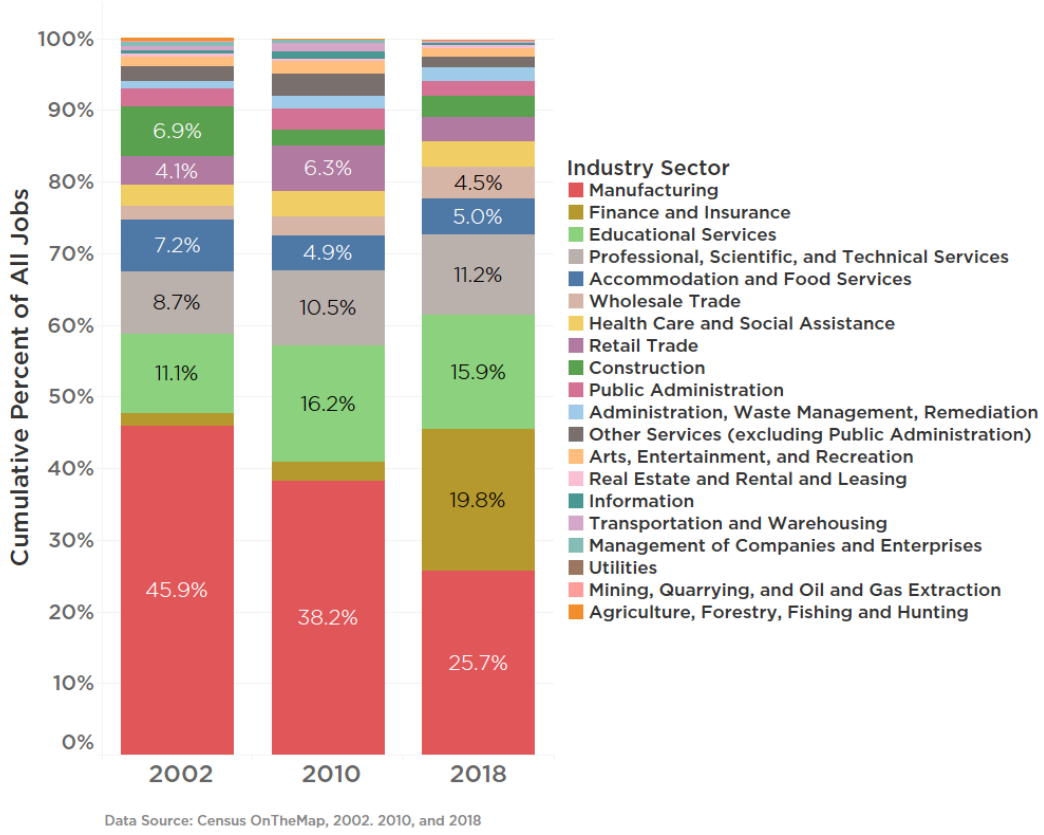


Figure 21: Principal Employers, City of Camas, 2020

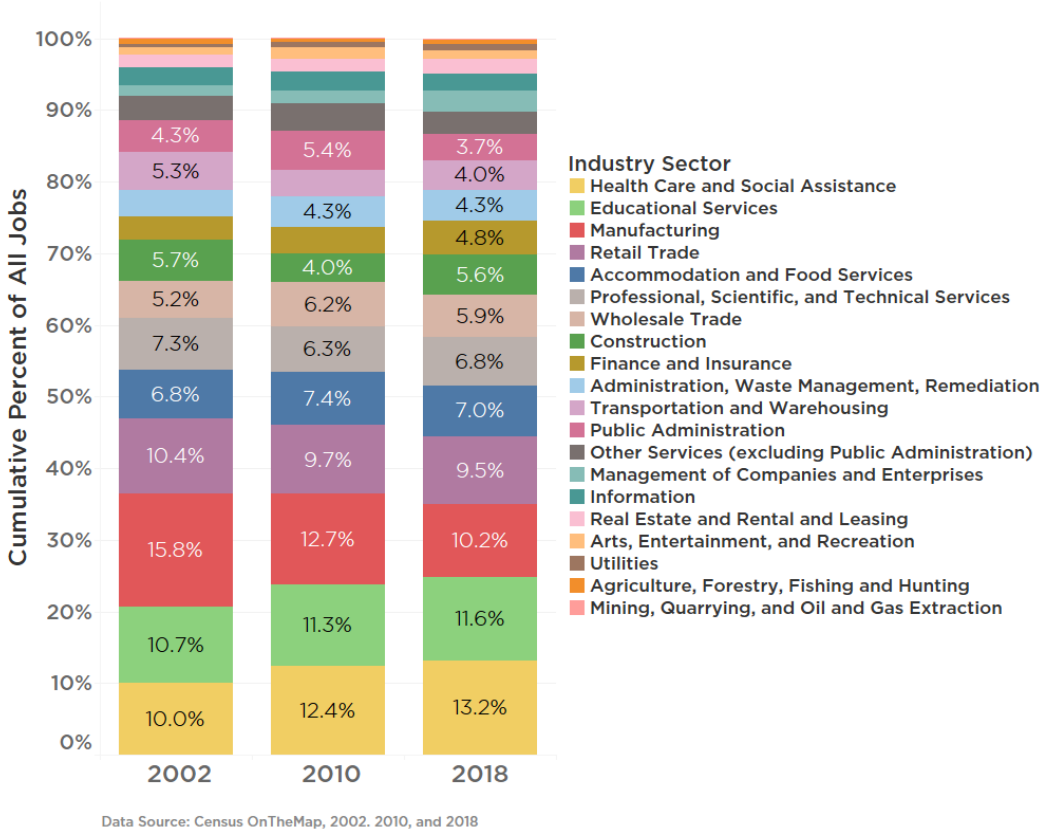
EMPLOYER	EMPLOYEES	PERCENT OF TOTAL CITY EMPLOYMENT
Fisher Investments	1,725	20.2%
Wafertech	1,000	11.7%
Camas School District	800	9.4%
Linear Technology (Analog)	340	4.0%
Sigma Design	273	3.2%
City of Camas	226	2.6%
Georgia Pacific	150	1.8%
Fuel Medical	150	1.8%
Plexys	91	1.1%
Bodycote	50	0.6%
Total	4,805	56.3%

Data Source: Washington Employment Security Department, Columbian Newspaper

While manufacturing jobs made up a high proportion of all jobs in 2018 and prior decades, the share has been declining over time, and the city's economy has become more diversified. In 2018, jobs in finance and insurance, educational services, wholesale trade, and professional, scientific, and technical services made up increasing proportions of jobs in the city (see Figure 22).

Figure 22: Jobs Located in the City of Camas by NAICS Industry Sector, 2002, 2010, and 2018 (All Jobs)



Data Source: Census OnTheMap, 2002. 2010, and 2018

While manufacturing jobs have represented the largest share of jobs based in Camas, the city's residents are employed in a more diverse array of industry sectors (see Figure 23). As manufacturing jobs declined as a proportion of jobs located in the city from 2002 to 2018, healthcare and social assistance and educational services overtook manufacturing as residents' top sources of employment. During that time period, healthcare and social assistance, finance and insurance, and management of companies and enterprises saw the greatest increases as shares of jobs held by Camas residents (3.2, 1.5, and 1.3 percentage point increases, respectively), while manufacturing and transportation and warehousing saw the greatest declines (5.6and 1.3 percentage point declines, respectively). Other industry sectors have remained relatively constant as shares of total jobs held by Camas residents, each increasing or declining as shares of jobs held by residents by less than 1 percentage point.

The differences in industry sectors of jobs located in the city and jobs held by the city's residents indicate high levels of commuting into and out of the city by workers and residents to access employment.

Figure 23: Jobs Held by Camas Residents by NAICS Industry Sector, 2002, 2010, and 2018 (All Jobs)

Data Source: Census OnTheMap, 2002. 2010, and 2018

As these shifts in industry sectors have occurred, the city has seen an increase in the numbers of jobs with higher wages, while the numbers of jobs with low and very-low wages have remained relatively constant (see Figure 24). Longitudinal Employer-Household Dynamics (LEHD) statistics track jobs in the wage categories of $1,250 per month and below ($15,000 per year and below); $1,251 to $3,333 per month ($15,001 to $39,996 per year); and $3,333 per month and above ($39,996 per year and above). Although not an exact indicator of living wages, the percentage of jobs that pay $3,333 and above can be used to approximate the potential for households to be able afford to support their families based on typical expenses, family size, composition, and location. For example, in Clark County, a household with two working adults and two children is estimated to require $73,017 per year in income before taxes to afford basic

expenses such as housing, food, childcare, medical care, transportation, taxes, and other expenses.[3]

In this way, if two workers in a household with that composition earn $39,996 per year and above, the household would typically be able to afford estimated basic expenses in Clark County. However, in the case of some other household compositions—for example, a household with two adults in which only one is working, or with two working adults and three or more children—the working individuals would need to have incomes significantly more than $39,996 per year, making the wage categories less useful in some cases. Still, these categories provide a useful benchmark for examining changes in employee wages and ability to afford basic expenses over time.

From 2010 to 2018, Camas gained an estimated 2,814 jobs with wages of $3,333 per month and above, a 78.2% increase. The city also gained an estimated 6 jobs with wages between $1,251 and $3,333 and 1 job with wages of $1,250 per month and below.

Relative to Clark County and the Portland-Vancouver-Hillsboro metropolitan area, Camas has a higher percentage of jobs that pay more than $3,333 per month and lower percentages of jobs that pay less than $3,333 per month (see Figure 25). Still, an estimated 31.4% of jobs located in the city pay less than $3,333 per month, indicating that many employees working in Camas may have difficulty meeting basic needs or affording housing in the city. Notably, the median household income in Camas is $106,513, and just 13.9% of residents earn $35,000 or less. The higher proportion of low-wage jobs located in the city relative to the low proportion of residents with lower incomes indicates that many Camas residents work at higher-paying jobs based outside of the city, while residents working lower-wage jobs often must commute into the city.

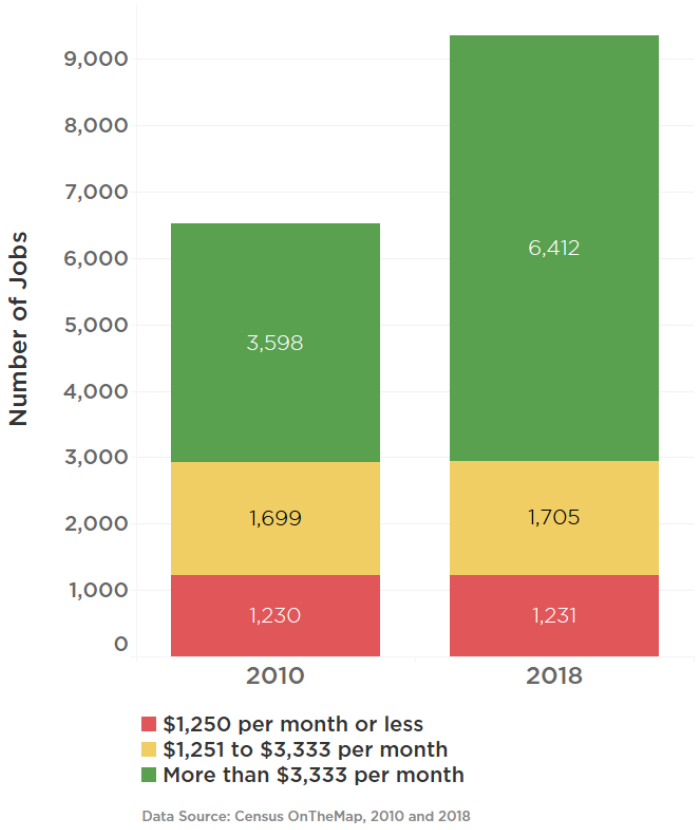
Figure 24: Number of Jobs by Wage Level (All Jobs), City of Camas, 2010 and 2018



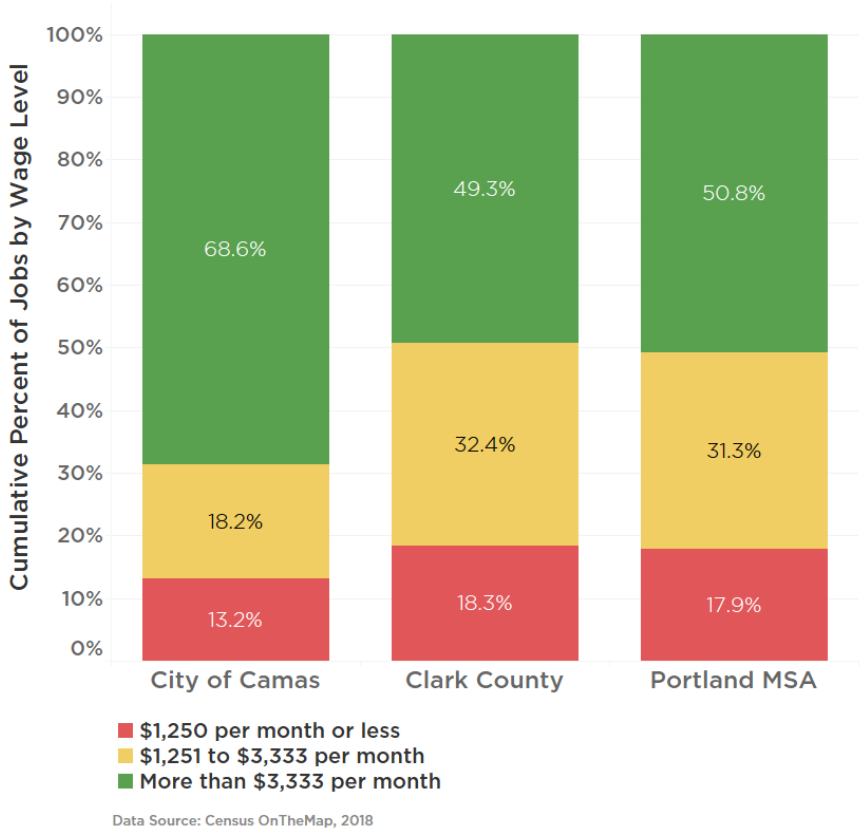


Figure 25: Percent of Jobs by Wage (All Jobs), City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2018

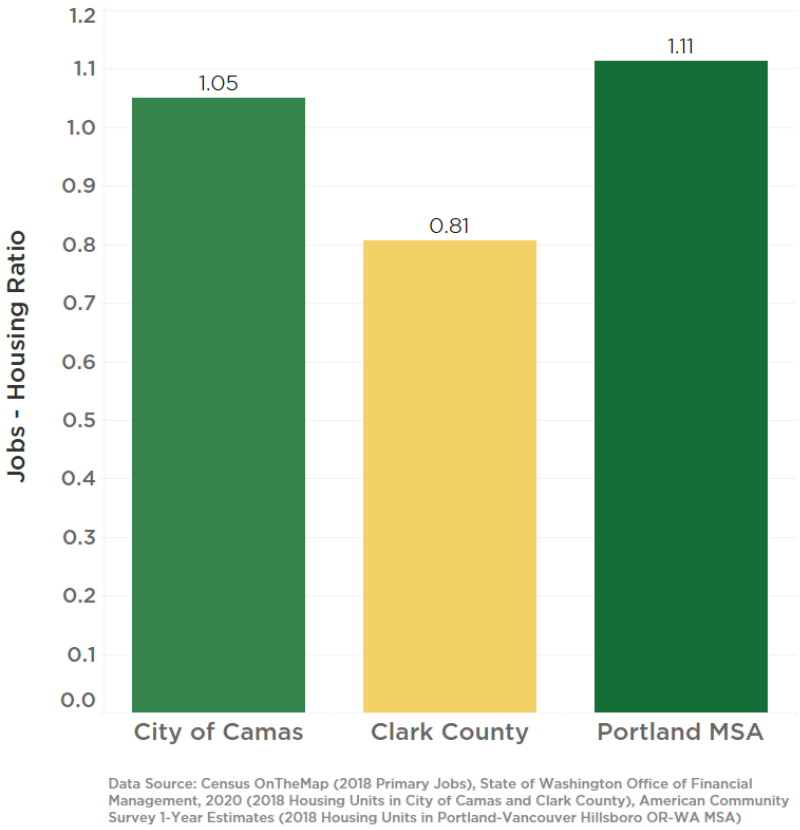
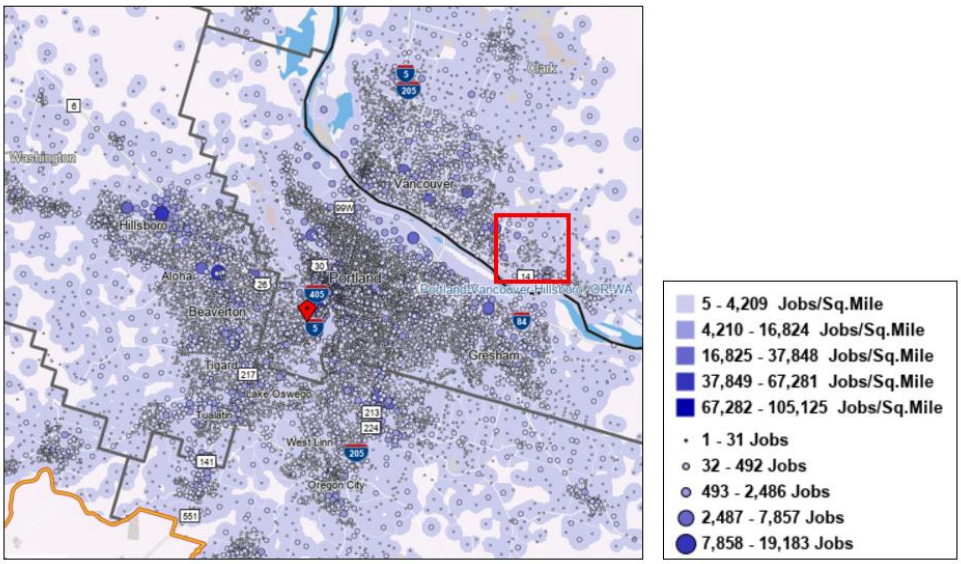


Jobs-Housing Balance

As of 2018, an estimated 8,969 primary jobs and 8,538 housing units were located in Camas, a ratio of 1.05 jobs per housing unit. In Clark County as a whole, there were an estimated 149,193 jobs and 184,794 housing units, a jobs-housing ratio of .81.

The jobs-housing ratios in Camas and the Portland-Vancouver-Hillsboro metropolitan area (a jobs-housing ratio of 1.11) are significantly higher than the county's ratio, pointing to the clustering of jobs in and around the city of Portland. Given similar unemployment and labor force participation rates among the jurisdictions, the lower jobs-housing ratio in Clark County indicates that residents living further from job centers in and around the city of Portland are more likely to commute outside of their jurisdictions for work or to work from home for employers located outside of the county.

Figure 26: Jobs – Housing Ratio, City of Camas, Clark County, and Portland-Vancouver-Hillsboro OR-WA Metro Area, 2018 (Primary Jobs)



Data Source: Census OnTheMap (2018 Primary Jobs), State of Washington Office of Financial Management, 2020 (2018 Housing Units in City of Camas and Clark County), American Community Survey 1-Year Estimates (2018 Housing Units in Portland-Vancouver Hillsboro OR-WA MSA)

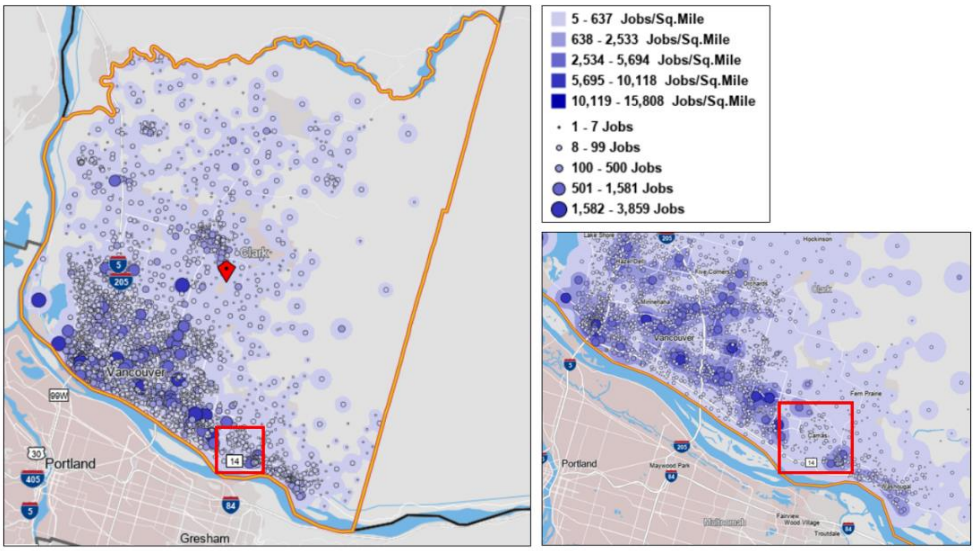
Geographic Distribution of Jobs

Jobs in the region are clustered in the city of Portland and in some of its surrounding suburbs (see Figure 27). In Clark County, jobs tend to be clustered in the southern portion of the county in and around Vancouver, which lies about 14 miles west of Camas (see Figure 28). Jobs in the city of Camas itself are clustered in the city's downtown (southeast Camas) and in the northern and western portions of the city (see Figure 29).

Figure 27: Locations of Jobs in Portland-Vancouver-Hillsboro OR-WA MSA, 2017 (All Jobs)

Data Source: Census OnTheMap, 2017. City of Camas

Figure 28: Locations of Jobs in Clark County, 2017 (All Jobs)



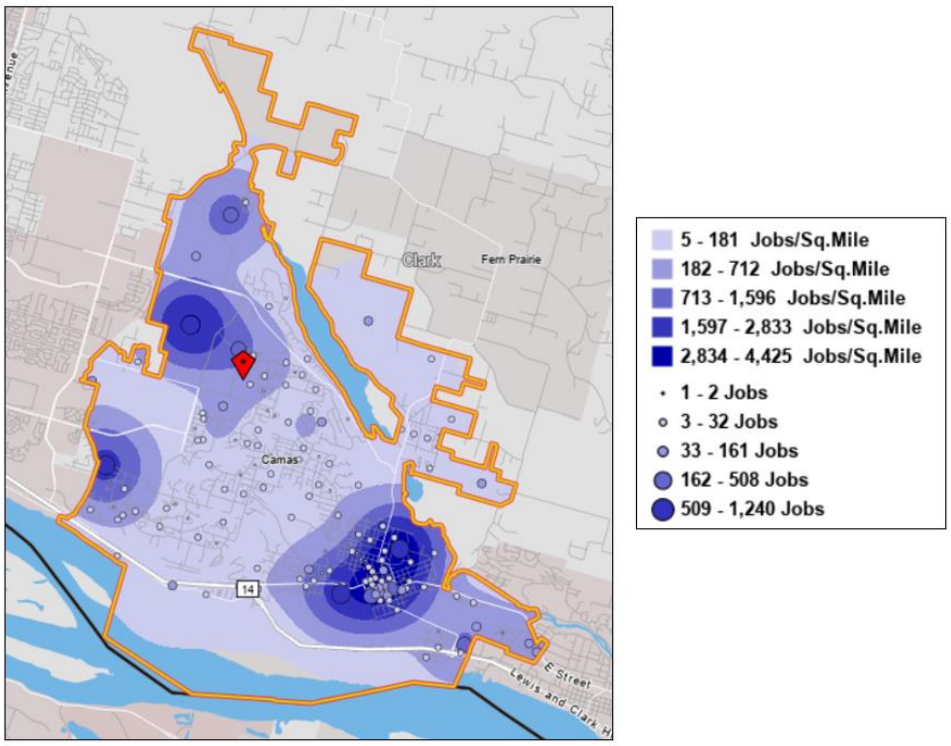


Figure 29: Locations of Jobs, City of Camas, 2017 (All Jobs)

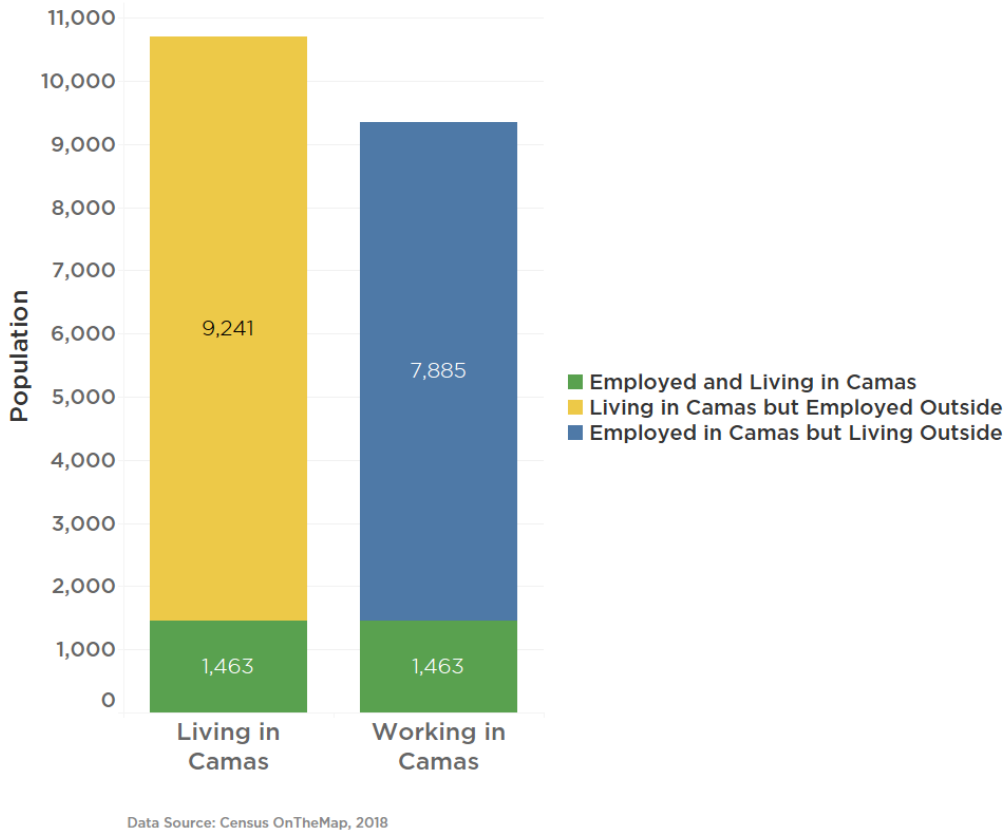

Data Source: Census OnTheMap, 2017

Commuting Patterns

While an estimated 9,348 jobs are located within the city of Camas, just 1,463 are held by residents who both live and work in the city (15.7 of jobs in Camas). An estimated 7,885 jobs (84.3% of jobs in the city) are held by workers who are employed in Camas but live outside of the city. At the same time, an estimated 9,241 of the 10,704 jobs held by Camas residents (86.3% of jobs held by residents) are located outside of the city (see Figure 30).

Residents and stakeholders who participated in this planning process also noted that Camas residents tend to be employed outside of the city or state, with some emphasizing a need to attract additional high-wage jobs to the city. Participants more often noted schools, amenities, and other quality of life factors as reasons that residents move to Camas than jobs located within the city. Stakeholders also emphasized a lack of affordable housing as a primary reason that individuals employed in Camas may have to find housing outside of the city.

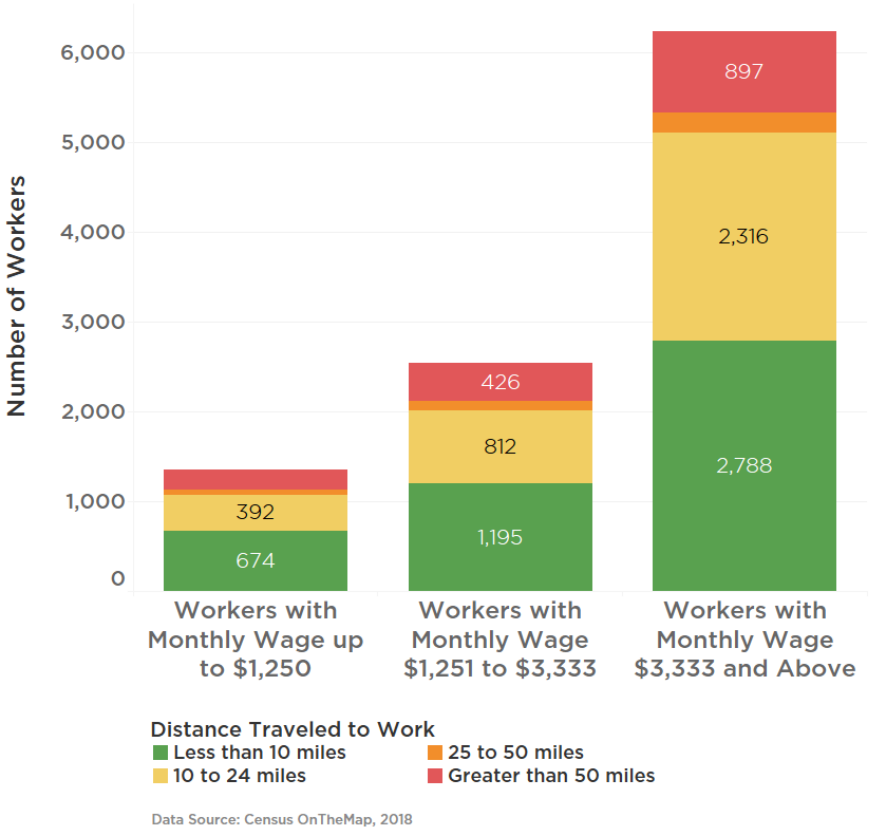

Figure 30: Commuting Patterns of Resident and Non-Resident Workers, City of Camas, 2018 (All Jobs)

Commute distances vary only slightly by workers' wage levels. An estimated 84.7% of all workers commute 50 miles or less to their jobs, and 80.8% commute less than 25 miles. At the same time, an estimated 15.3% of all workers commute more than 50 miles to their jobs, and 19.1% commute more than 25 miles.

Workers with lower wages are slightly more likely than higher-wage workers to commute more than 50 miles for their jobs (16.7% of workers with monthly wages up to $3,333, and 14.4% of workers with wages $3,333 and above). Lower-wage workers are also slightly more likely to commute less than 10 miles to work (50.0% of workers with monthly wages up to $1,250, 46.9% of workers with monthly wages of $1,251 to $3,333, and 44.8% of workers with wages $3,333 and above).

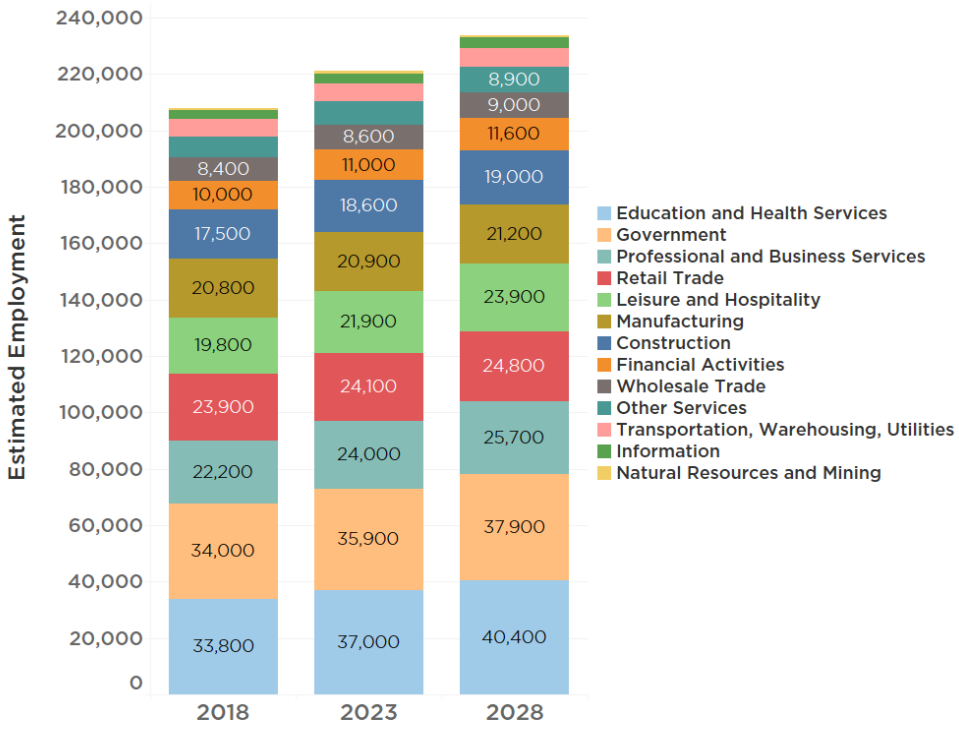

Figure 31: Distance Traveled to Work by Wage, City of Camas Residents (for Primary Jobs), 2018

Employment Projections

Total non-farm employment in the Southwest Washington region is projected to grow from 208,000 to 233,900 from 2018 to 2028, an increase of 25,900 jobs. Education and health services (40,400 jobs), government (37,900 jobs), professional and business services (25,700 jobs), and retail trade (24,800 jobs) are projected to continue providing the most jobs in the region, while the sectors projected to add the most jobs by 2028 include education and health services (6,600 jobs), leisure and hospitality (4,100 jobs), government (3,900 jobs), and professional and business services (3,500 jobs). The information, leisure and hospitality, and education and health services sectors are projected to have the fastest average annual growth rates during the time period (2.3%, 2.1%, and 2.0%, respectively). The manufacturing, retail trade, and wholesale trade sectors are projected to have the slowest average annual growth rates (0.19%, 0.38%, and 0.71%, respectively).

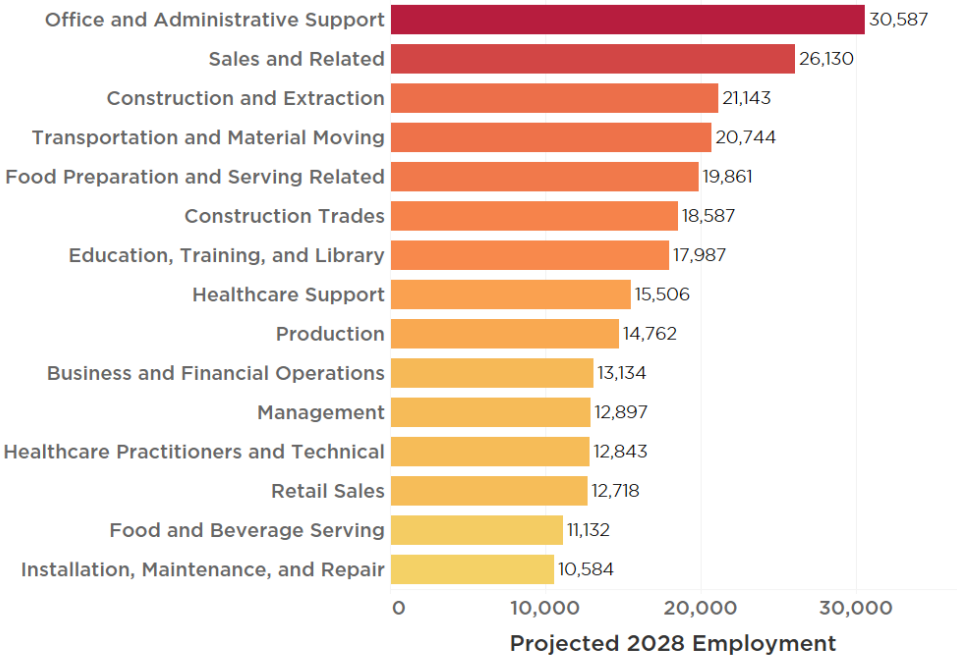

Figure 32: Projected Employment, Southwest Washington Region, 2018, 2023, and 2028

Data Source: Washington State Employment Security Department. (September 2020). Long-term industry employment projections.

Occupations projected to have the highest employment in the region in 2028 include office and administrative support (30,587 jobs), sales and related occupations (26,130 jobs), construction and extraction (21,143 jobs), and transportation and material moving (20,744 jobs) (see Figure 33). The most common occupations reflect the industry sectors with the highest projected employment, including education and health services (education, training, and library, healthcare support, and healthcare practitioners and technical occupations), professional and business services (office and administrative support, sales and related occupations, business and financial operations, and management), retail trade (retail sales), and leisure and hospitality (food preparation and serving related occupations, and food and beverage serving).

Figure 33: Projected Employment for Top Occupations*, Southwest Washington Region, 2028

*Graph includes occupations with > 10,000 projected employment in 2028

This page intentionally left blank.

Chapter 4:
Housing Supply

In 2018, the City of Camas had approximately 8,330 total housing units and was composed of 7,972 households. Between 2000 and 2018, Camas housing units and households increased 75%, with the number of households growing slightly faster than the number of housing units. Over this period, Camas also grew at faster rate than Clark County. From 2000 to 2018, the county increased its housing units by 34%, while the number of households increased by 35%.

Table 5: Total Units and Households, Camas and Clark County, WA

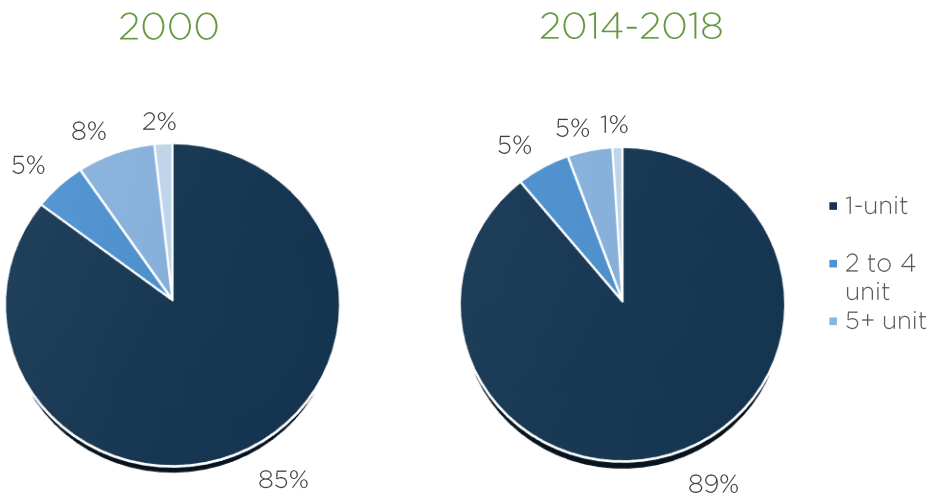
	2000		2010		2014-2018		2000-2018 PERCENT CHANGE	
	TOTAL UNITS	HOUSE HOLDS	TOTAL UNITS	HOUSE HOLDS	TOTAL UNITS	HOUSE HOLDS	TOTAL UNITS	HOUSE HOLDS
City of Camas	4,736	4,480	7,072	6,273	8,330	7,972	75.9%	77.9%
Clark County	134,030	127,208	167,413	155,042	179,523	171,522	33.9%	34.8%

Data Source: U.S. Census Bureau, Tables H003, H004, H1 and 2014-2018 5-Year American Community Survey Table B25001, B25003

An accounting of the various types of housing units in Camas finds that 89% of the city's housing units are single-unit structures, according to 2014-2018 American Community Survey data. In actual units, the number of single-unit structures in the city increased from 4,039 to 7,415, a gain of 3,376 single-unit structures.[4] Over the same period (2000-2018), duplexes, triplexes and quadraplexes continued to make up only 5% of the city's structures, although the city gained 205 duplex, triplex or quadraplex units.

Multifamily structures with 5 or more units comprised 8% of all housing units in 2000 and 5% as of 2014-2018 estimates. ACS estimates report that the city had a net increase of only 13 units in structures containing 5 units or more. However, more current date provided by the City of Camas (examined later in this chapter) indicates additional multifamily development not included in ACS estimates.

The 2014-2018 ACS data estimates 85 mobile homes within Camas, unchanged from 2000. City staff, however, note a much smaller number (about 10) through 2013, when remaining mobile homes were cleared from park land.



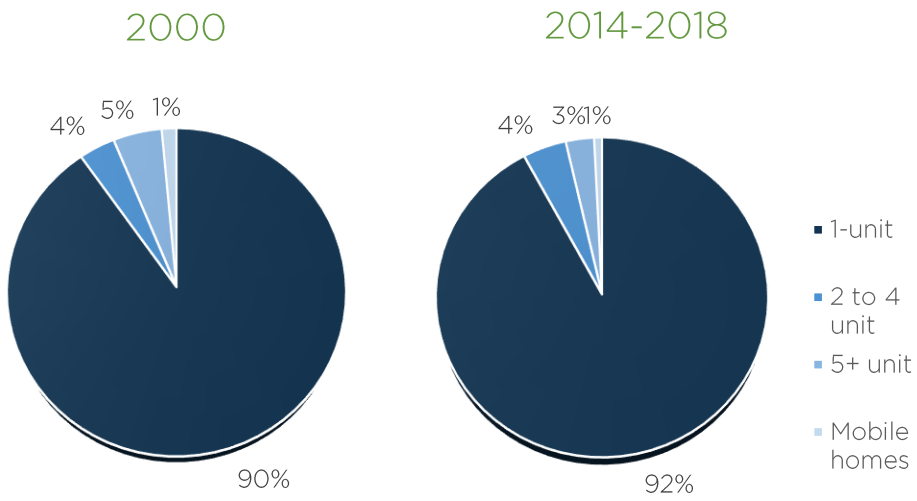
[4] Housing units broken down by structure type are indicated for the year 2000 in estimates provided by the Washington Office of Financial Management.

Table 6: Total Housing Units by Structure Type in Camas

YEAR	TOTAL HOUSING UNITS	1-UNIT	2 TO 4 UNIT	5+ UNIT	MOBILE HOMES	SPECIALS
2000	4,736	4,039	246	366	85	0
2014-2018	8,330	7,415	451	379	85	0

Data Source: OFM "Adjusted Census 2000 Population and Housing by Type of Structure and Group Quarters for the State, Counties and Cities," Table 2, 2014-2018 5-Year ACS Estimates, Table DP04

Figure 34: Percentage of Housing Units in Camas by Structure Type



As single-unit structures increased over the 18-year period, so too did the number of Camas residents who lived in single-unit structures. While the city nearly doubled in population, growth trends indicate that single-unit structures continued to be in demand for a growing number of households. By 2018, 92% of Camas residents lived in single-unit housing, up from 90% in 2000. It follows then that multifamily units, which lost supply over the 18-year period also experienced a decrease in the share of residents living in multifamily structures with 5 or more units (-2% points).

Table 7: Population in Housing Units by Structure Type, 2000

YEAR	TOTAL HOUSEHOLD POPULATION	1-UNIT	2 TO 4 UNIT	5+ UNIT	MOBILE HOMES	SPECIALS
2000	12,462	11,239	445	597	181	0
2014-2018	22,554	20,769	975	634	176	0-

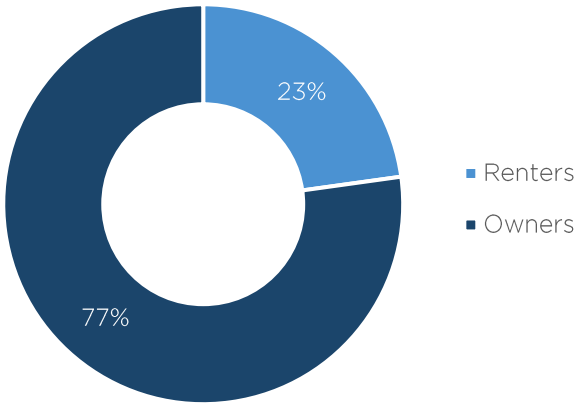
Data Source: OFM "Adjusted Census 2000 Population and Housing by Type of Structure and Group Quarters for the State, Counties and Cities," Table 2, 2014-2018 5-Year ACS Estimates, Table B25033

Figure 35: Percentage of Households living in Camas by Structure Type

Housing Tenure

In 2018, approximately 77% of Camas households owned their homes, compared to 23% who rented. Homeownership rates in Camas exceed the homeownership rates of both Clark County (67%) and the Portland-Vancouver-Hillsboro MSA (62%), as shown in Table 6. Trends in homeownership over time indicate that Camas has sustained significantly higher homeownership rates than the county and MSA, at least since 2012 (see Figure 37).

Figure 36: Share of Owners and Renters in Camas, 2018



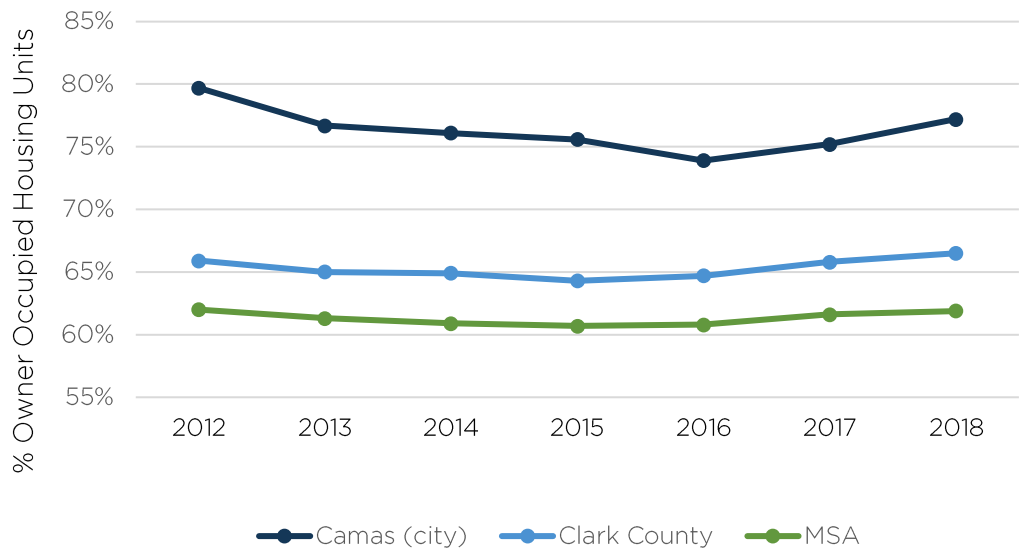


Table 8: Tenure by Households in Camas and the Region, 2014-2018

	HOUSEHOLDS	% OWNERS	% RENTERS
City of Camas	7,672	77.2%	22.8%
Clark County	171,522	66.5%	33.5%
Portland-Vancouver-Hillsboro MSA	925,631	61.9%	38.1%

Data Source: U.S. Census Bureau, Table B25003

Over the period shown below, the highest rates of homeownership in Camas occurred in 2012, when approximately 80% of residents were homeowners. Estimates indicate that 2018 showed the second highest homeownership rate for any year in this period. The city's homeownership rates dipped slightly between 2013-2017, but never fell below 73%. Camas renters made up slightly more than one-fifth (23%) of the city's residents, as shown in Table 6. By comparison, one third of Clark County residents (34%) are renters, as are nearly 40% of residents in the wider MSA.

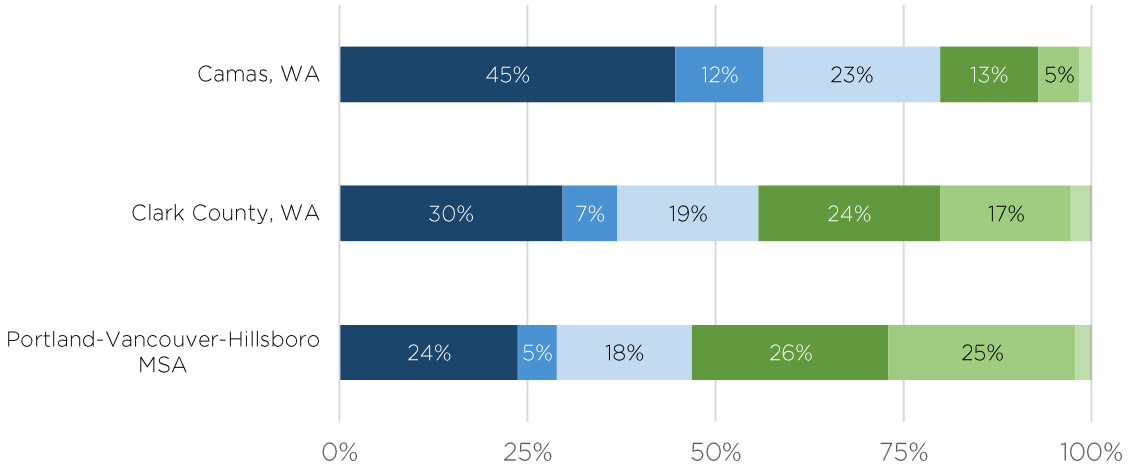
Figure 37: Camas Homeownership Rate, 2012-2018

Data Source: 5-Year ACS Estimates from 2008-2012 through 2014-2018, Table B25003

Camas's large share of single-unit structures, described earlier, indicates that a significant number of the city's renters live in single-unit structures. In 2018, 50% of Camas renters lived in detached, single-unit structures, up from 45% in 2010 (see Figure 38 and Figure 39). Eight percent of renters lived in attached, single-unit structures in 2018, down from 12% in 2010. Nearly one quarter of the city's renters (24%) lived in duplexes, triplexes and quadraplexes in 2018 (+1% point). The share of renters living in structures with 20+ units has remained at 5% since the beginning of the decade, however, the percentage of residents living in structures with 5-19 units decreased from 13% to 11% over this period.

Camas stands apart from Clark County and the MSA, which both experienced slower growth (+2% points in the county) or no growth (+0% points in the MSA) in the percentage of renters living in single unit detached housing. While Camas had fewer renters living in townhomes and rowhouses during this period (-4% points), as did Clark County (-1% point), the MSA showed an increase in households living in this housing type (+1% point). Between 2010 and 2018, both Clark County and the MSA had fewer renters living in duplexes, triplexes and quadraplexes and multifamily structures with 5-19 units (-1% point), but more renters living in structures with 20+ units (+1% point). Fewer people in Camas rented mobile homes over this period (-1.2% points), which Clark County and the MSA either showed slight increases in mobile home renters (+0.2% in Clark County) or remained essentially the same (-0.06% in the MSA).

Figure 38: Renter Occupied Housing Units by Structure Type, 2010



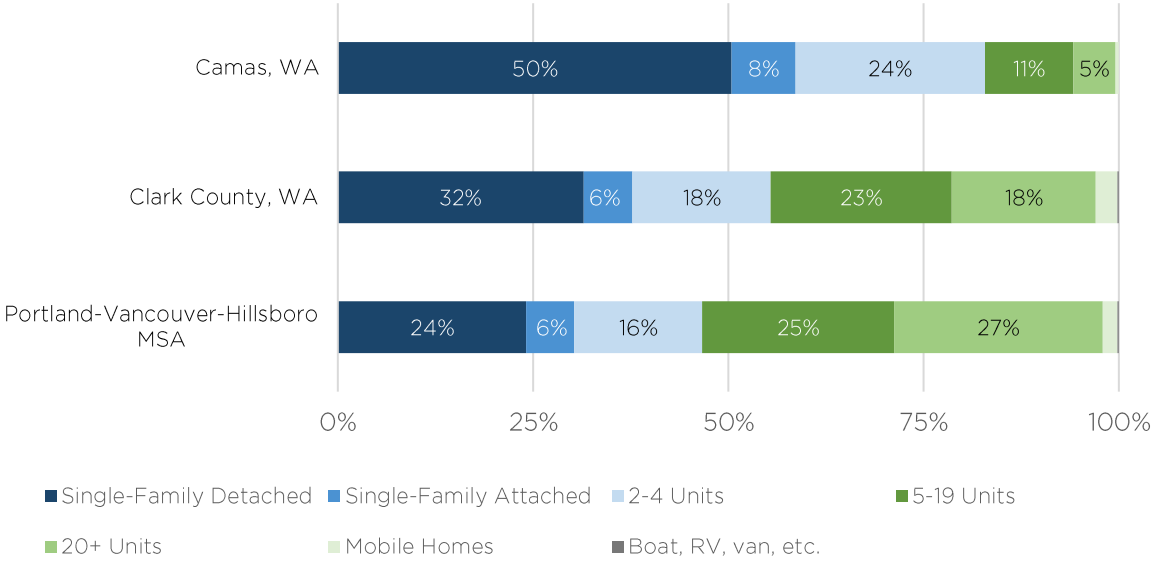


Figure 39: Renter Occupied Housing Units by Structure Type, 2014-2018

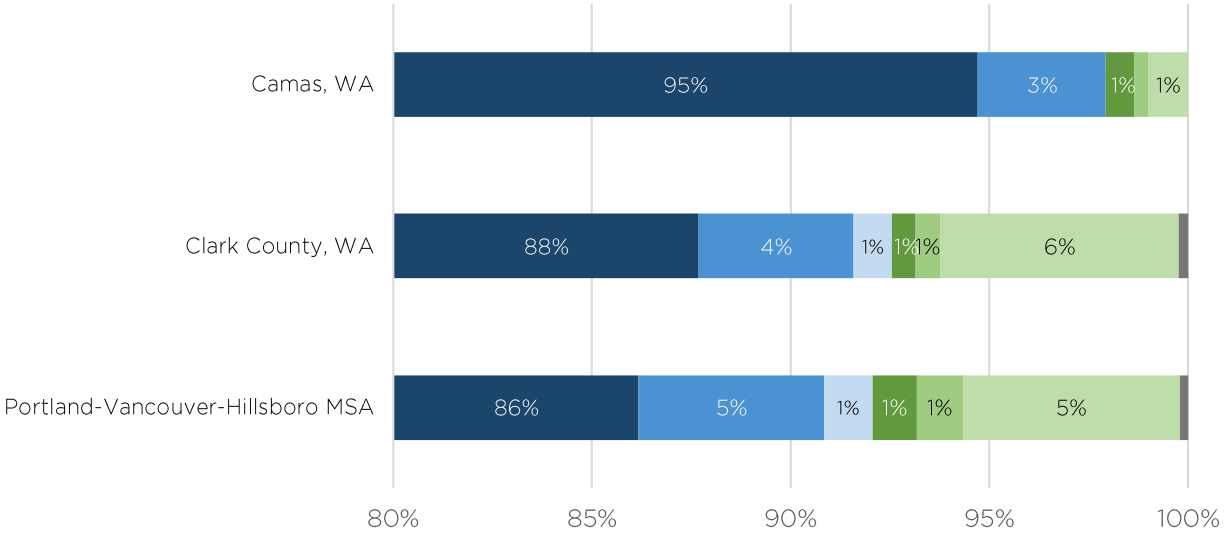
Data Source: 5-Year ACS Estimates from 2006-2010 through 2014-2018, Table B25032.
Structure types which are not labeled above had a share of less than 3%.

Unlike renters, Camas homeowners predominantly lived in single-family detached units (95%). Homeowners living in townhomes and rowhouses made up 4% of all homeowners. However, both the share of homeowners living in structures with 5-19 units and 20+ units declined over this period, even though both housing types began the decade representing less than 1% of all owner-occupied homes. Camas homeowners also owned duplexes, triplexes, quadraplexes at a rate of less than 1%. These factors may indicate homeowner preference for a specific

housing type (single-family detached), however, as shares of other housing types decrease, homeowners may have fewer multifamily options. Limited options for the purchase of homes in multi-unit structures could affect homeownership rates for single individuals, young adults, couples without children, small families, empty nesters, our other family or non-family households seeking middle-housing units for homeownership.

Figure 40: Occupied Owner Housing Units by Structure Type, 2010



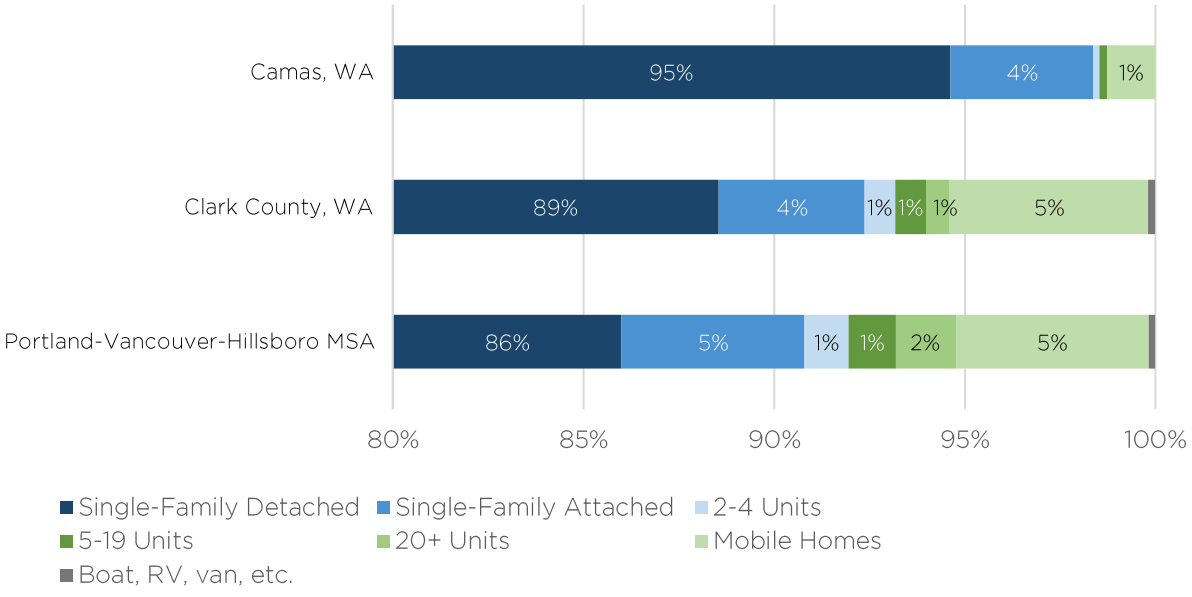


Figure 41: Occupied Owner Housing Units by Structure Type, 2014-2018

Data Source: 2006-2010 and 2014-2018 5-Year American Community Survey, Table B25032.
Structure types which are not labeled above had a share of less than 1%.

Household Size

In 2018, the average household in Camas contained 2.83 individuals. The average Camas family had 3.21 members. Both households and family sizes in Camas are larger than those in Clark County and the Portland-Vancouver-Hillsboro MSA, as shown in Table 7. Since 2010, however, average household size and average family size in Camas have decreased. Average household size decreased from 2.92 persons in 2010 to 2.83 in 2018; average family size decreased from 3.33 persons to 3.21. In contrast, both households and family sizes in Clark County and the MSA grew larger over this period.

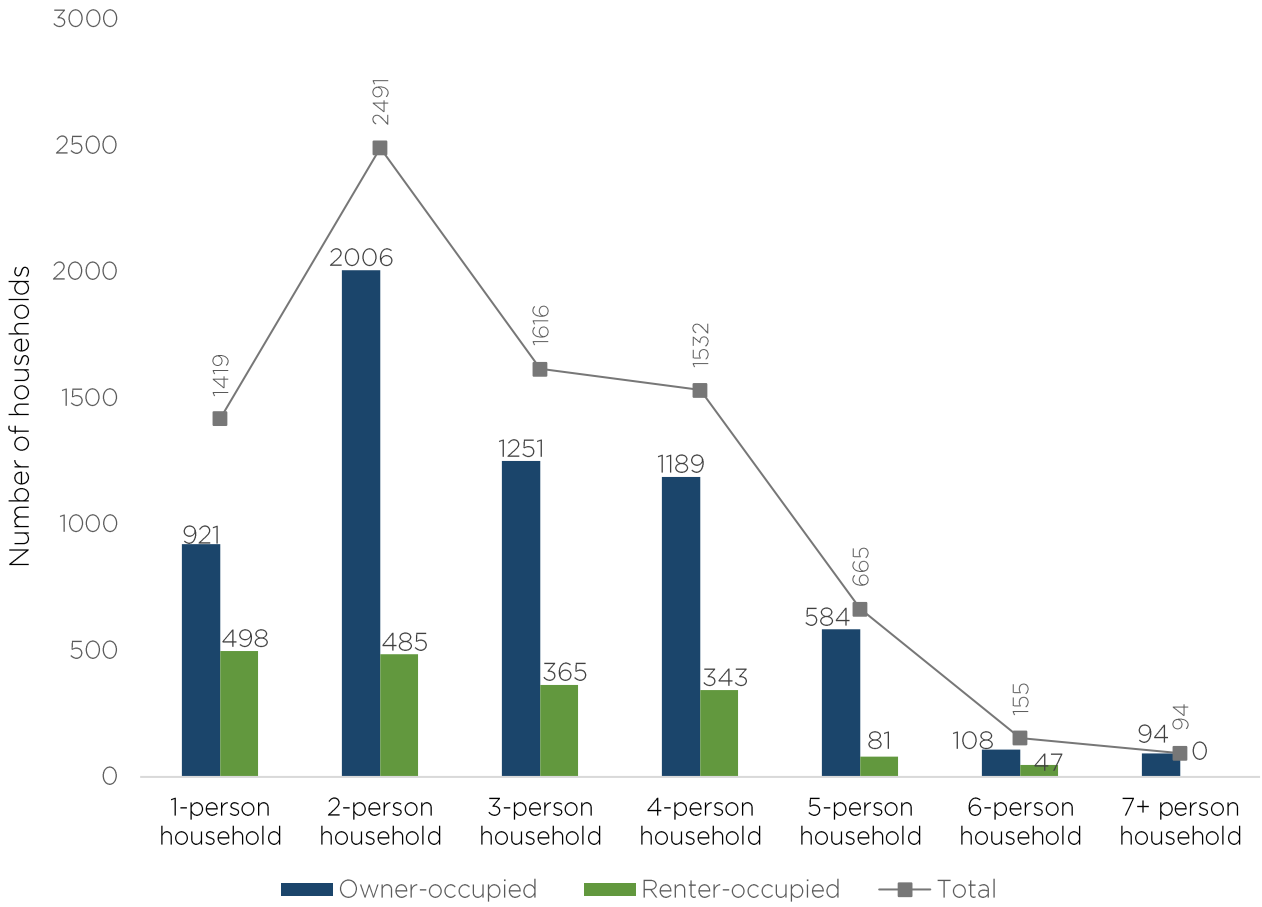

Table 9: Household Size in Camas, 2014-2018

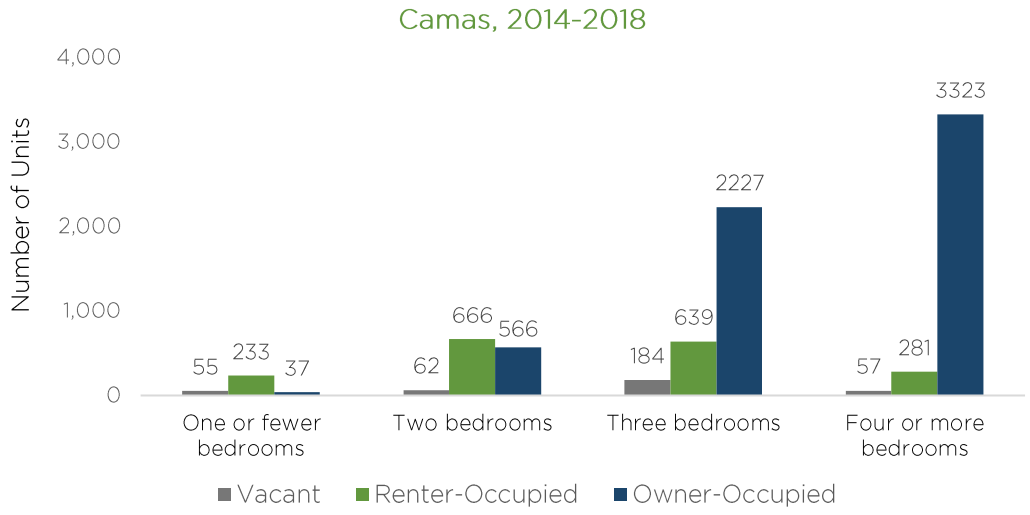
	AVERAGE HOUSEHOLD SIZE		AVERAGE FAMILY SIZE	
	2006-2010	2014-2018	2006-2010	2014-2018
City of Camas	2.92	2.83	3.33	3.21
Clark County	2.65	2.69	3.14	3.17
Portland-Vancouver-Hillsboro MSA	2.51	2.57	3.10	3.12

Data Source: U.S. Census Bureau, Table B25003

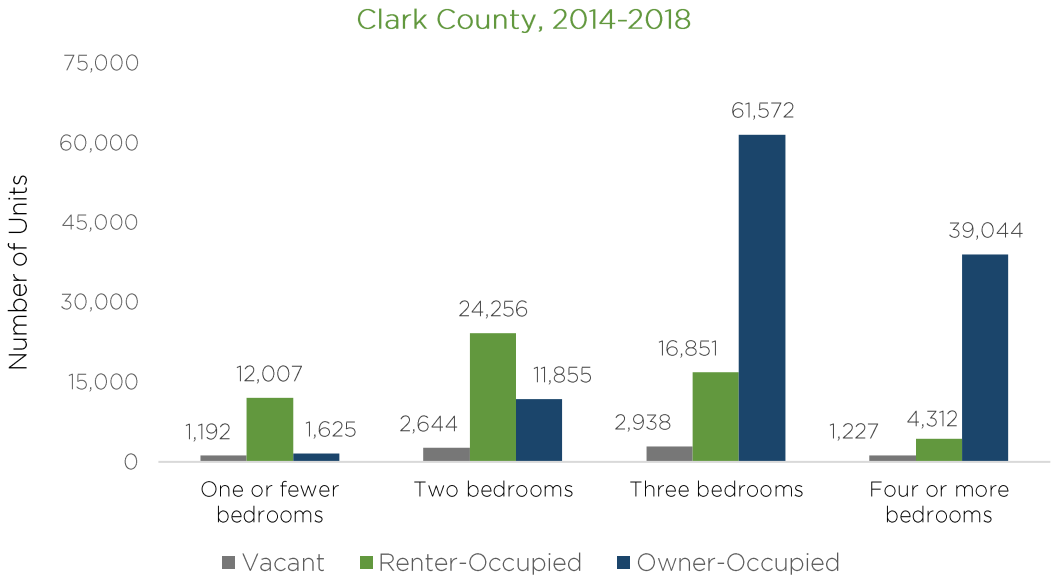
As indicated by Camas's average household size, the largest share of owner-occupied households are two-person households (2,006 households), followed by three-person households (1,251) and four-person households (1,189). Renter households tend to be smaller than owner households, with the greatest shares of renter households containing one-person (498 households) or two people (485 households). However, 45% of renter households have 3 or more members, again indicating the high rates of family rentals in the city.

Figure 42: Household Size by Housing Tenure, 2014-2018

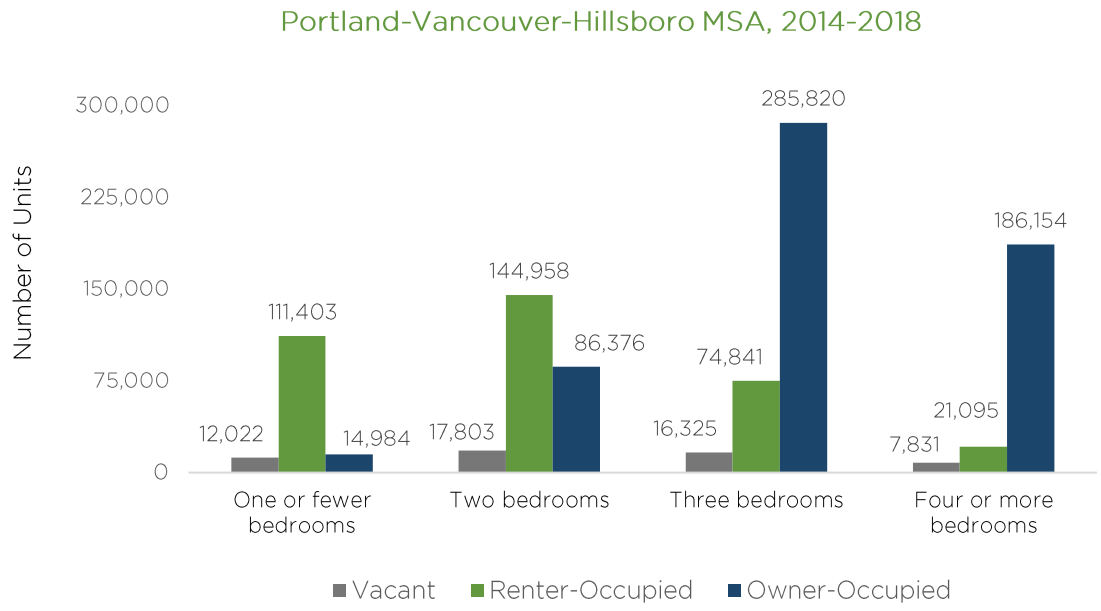
Data Source: 2014-2018 5-Year ACS Estimates, Table B25009



Unit Size



Owner-occupied housing units in Camas tend to be large units, with approximately 54% of owner-occupied units having 4 or more bedrooms. Fully 90% of owner-occupied homes have at least three bedrooms. Of the remaining 10% of owner-occupied units, 9% of owner-occupied units have two-bedrooms, while less than 1% are studios or have one bedroom. Conversely, renter-occupied units in Camas tend to be smaller than owner-occupied units. Renter units are largely two-bedroom units (37%) or three-bedroom units (35%). Four-bedroom units only make up 15% of the city's rental units, while studios and one-bedroom units make up the smallest share at 13%.



Camas's owner-occupied unit size is, on average, larger than that of Clark County or the greater MSA. In the county and region, owner units are most likely to be three-bedroom units, with three-bedroom units comprising 54% and 50% of owner-occupied housing in those jurisdictions, respectively. One-third (34%) of

homeowners in Clark County live in units with four or more bedrooms, as do nearly one-third of owner households (32%) in the MSA. Only 1.4% of owner units in Clark County and 2.6% in the MSA are studios or one-bedroom. Rental trends in the county and MSA share some similarities with Camas: two-bedroom units are the most common rental housing type in all three jurisdictions. In Camas, four-bedroom rental units make up a larger share of rental units than one-bedroom units (15% vs. 13%). This trend is reversed in the county and MSA, where one-bedroom units make up larger shares of rental housing than four-bedroom rental units (20% one-bedroom to 8% four-bedroom in the county; 32% one-bedroom to 6% four-bedroom in the MSA).

Figure 43: Number of Bedrooms

Data Source: 2014-2018 5-Year American Community Survey, Table B25042

Housing Age and Condition

Housing in Camas tends to be of newer stock than housing in Clark County and the larger MSA. In the 1990s, Camas experienced a sharp increase in housing production, compared to previous decades. Over 65% of Camas's housing was built after 1990, representing a significantly higher percentage of housing units than in Clark County (50.8% built since 1990) or in the Portland-Vancouver-Hillsboro MSA (38.5% built since 1990). American Community Survey estimates used in Figure 44 and Table 10 are based on survey data collected from 2014 through 2018, meaning that estimates of very-recently-constructed housing (i.e., the 2010 to 2018 category) do not reflect all construction since 2010. The "Housing Production" section of this chapter delves more deeply into recently constructed housing in Camas.

Newer housing stock may indicate that overall, the housing stock in Camas is in better condition than in surrounding areas where housing supply is older. It should be noted, however, that around 10% of Camas housing stock (10.7%) was built before 1940, a share that is more than double the amount of housing in Clark County built before 1940.

Figure 44: Camas Housing Units by Year Structure Built

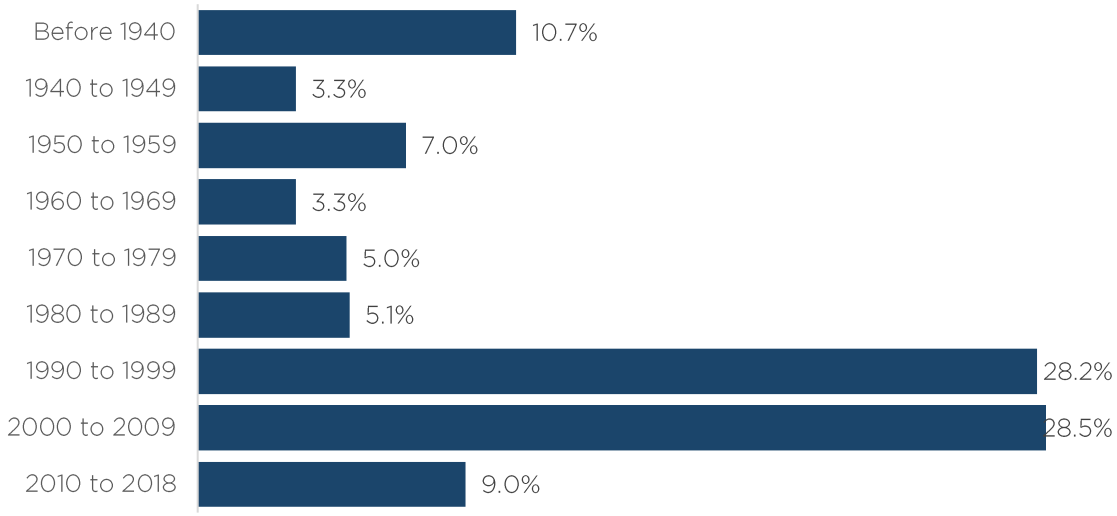


Table 10: Housing Units by Year Structure Built, 2014-2018

	CAMAS	CLARK COUNTY	PORTLAND – VANCOUVER – HILLSBORO MSA
Before 1940	10.70%	4.40%	12.30%
1940 to 1950	3.30%	3.20%	4.60%
1950 to 1960	7.00%	4.90%	7.10%
1960 to 1970	3.30%	6.80%	8.60%
1970 to 1980	5.00%	17.50%	17.50%
1980 to 1990	5.10%	12.30%	11.40%
1990 to 1999	28.20%	25.10%	18.70%
2000 to 2009	28.50%	18.90%	14.80%
2010 to 2018	9.00%	6.80%	5.00%

Data Source: 2014-2018 5-Year American Community Survey, Table B25034

While age of housing provides a general narrative about the housing conditions, other physical features related to housing condition are captured by the US Census Bureau. For example, the American Community Survey captures those households that lack complete kitchen or plumbing facilities. According to these estimates, approximately 14 homes (0.2%) in Camas lack complete kitchen facilities, such as cooking facilities, a refrigerator, or a sink with piped water. An estimated 31 homes (0.4%) lack complete plumbing facilities, meaning that they

lack hot and cold piped water, a flush toilet, or a bathtub or shower. While ACS data provides these estimates, they are subject to sampling error and the actual number of homes in Camas with a lack of complete kitchen or plumbing facilities may be lower. Overall, the data indicates that homes without complete kitchen or plumbing facilities make up very small percentages of Camas's stock, and lower shares than they do throughout the MSA.

Table 11: Housing Lacking Complete Kitchen or Plumbing Facilities, 2014-2018

	TOTAL HOUSING UNITS	LACKING COMPLETE KITCHEN FACILITIES		LACKING COMPLETE PLUMBING FACILITIES	
		NUMBER	SHARE	NUMBER	SHARE
Camas, WA	8,330	14	0.2%	31	0.4%

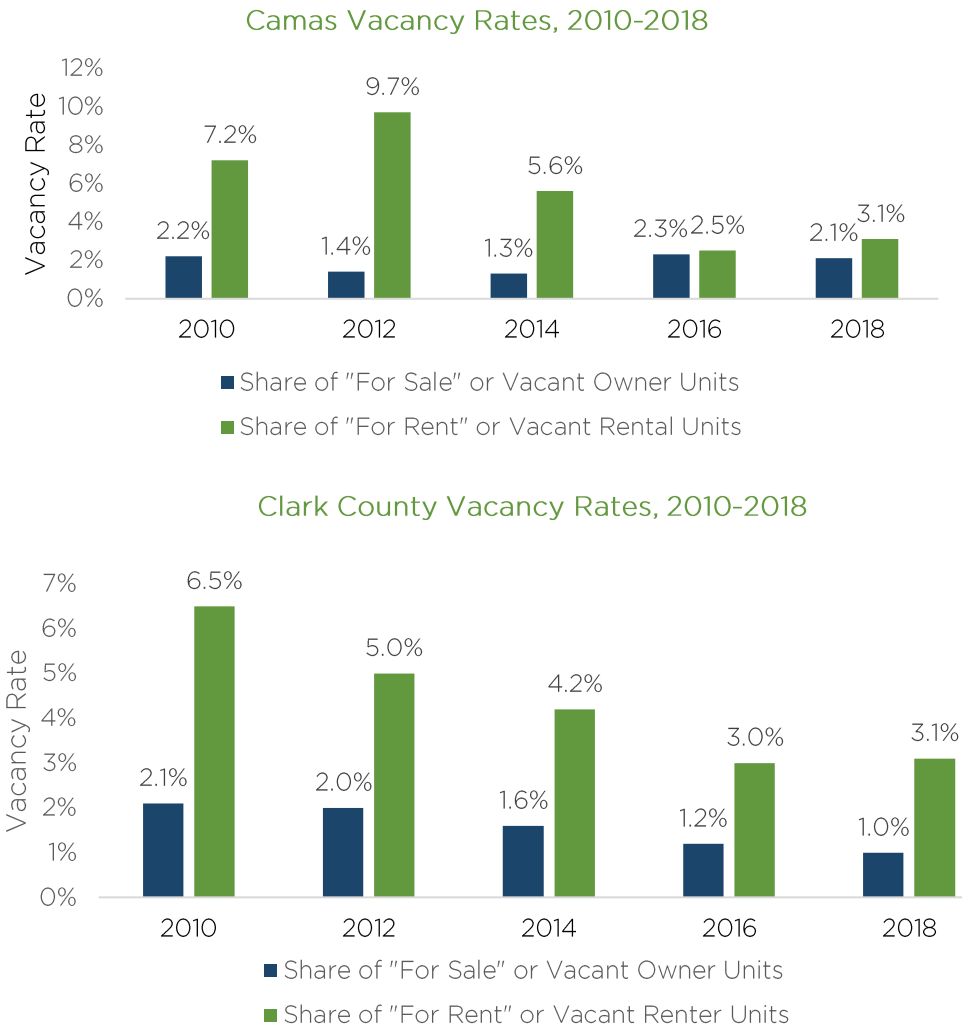
Data Source: 2014-2018 5-Year American Community Survey, Table B25051 and B25047

Vacancy Rates

Vacancy rates are important indicators of the city's housing market. In 2018, vacancy rates for units for purchase in Camas was 2.1%. Clark County and the MSA had even tighter homebuying markets, with approximately 1% vacancy in both areas. Rental vacancy rates almost universally hovered at 3% for Camas, Clark County and the MSA. Low vacancy rates, such as those seen across the region, tend to indicate a limited housing supply, higher housing prices, and loss of affordable units (or, in some cases, high risk of gentrification).



Vacancy rates in Camas, Clark County and the MSA between 2010 and 2018 are shown in Figure 45 below. The percentage of "for sale" units in Camas did not exceed 2.3% between 2010 and 2018, with some of the city's lowest "for sale" rates observed as the US emerged from the Great Recession (1.4% in 2012 and 1.3% in 2014). Rental vacancies in Camas varied widely over this period. In 2012, for example, rental vacancies reached 9.7% at the same the owner-occupied unit vacancies were reaching some of their lowest levels. By 2016, Camas's rental market had recovered; rental vacancies of 2.5% nearly matched the low vacancy rate in for-sale units. Clark County and the MSA experienced less variation in rental vacancy rates over the period. Both owner-occupied and renter vacancy rates in these jurisdictions have declined over time, with only a small uptick in all renter vacancies by 2018.

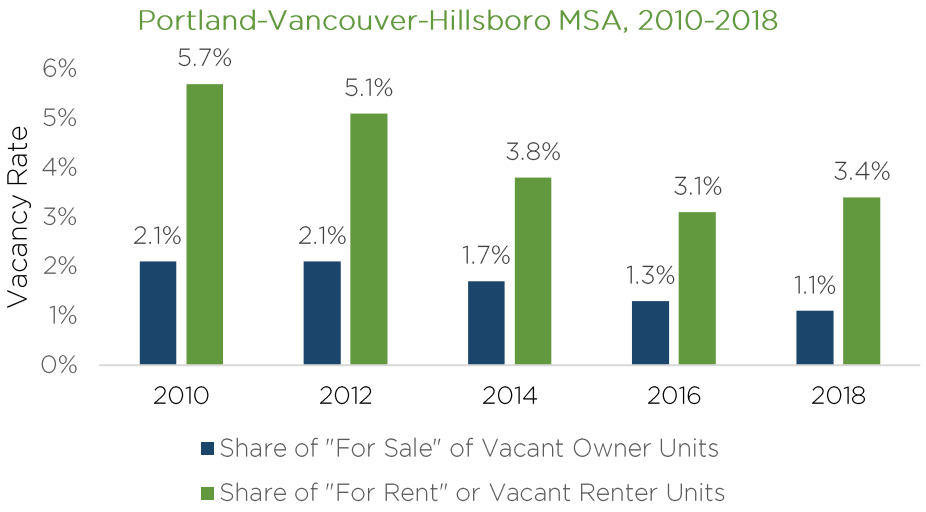


Table 12: For Sale and Rental Vacancy Rates in Camas, 2014-2018

	OWNER HOUSING UNITS			RENTAL HOUSING UNITS		
	AVAILABLE (VACANT)	TOTAL	VACANCY RATE	AVAILABLE (VACANT)	TOTAL	VACANCY RATE
City of Camas	129	6,153	2.1%	57	1,819	3.1%
Clark County	1,102	114,096	1.0%	1,790	57,426	3.1%
Portland-Vancouver-Hillsboro MSA	6,111	573,334	1.1%	11,870	352,297	3.4%

Data Source: 2014 – 2018 5-Year American Community Survey, Tables DP04 and B25004. Vacancy figures shown reflect the number of "For rent" and "For sale only" housing units.

Figure 45: Vacancy Rate

Data Source: 2006-2010 and 2014-2018 5-Year American Community Survey, Table B25004

To assist jurisdictions completing Housing Action Plans, the Washington Center for Real Estate Research (WCRER) at the University of Washington made a variety of data available to jurisdictions, including data about the local rental market. The table below shares vacancy rates for market-rate rental properties by number of bedrooms in Camas based on a survey of 20+ unit multifamily complexes prepared by WCRER in September 2020. Overall, the rental vacancy rate was low at about 1.6% for the 7 complexes (with a total of 570 units) included in the survey. One-bedroom units were more likely to have availability (4.2% vacant) while larger units (2 and 3 bedrooms) had considerably more constrained availability, including no vacant 3-bedroom units.

Low rental vacancy rates were common for the 25 communities surveyed by WCRER, with averages ranging from as low as 0.2% to as high as 6.9%. Most communities (21 out of 25) had average rental vacancy rates under 2%.

Table 13: Rental Vacancy in Properties with 20+ Units in Camas, September 2020

	1-BEDROOM		2-BEDROOM		3-BEDROOM

Housing Production

The Camas 2035 Comprehensive Plan identified trends in the city's housing production from 2010 to 2015. In 2010, Camas permitted 23 units under 1,999 square feet, 44 units between 2,000 and 3,000 sq. ft. and 73 units over 3,001 sq. ft. By 2015, the city had permitted 37 more mid-range units (2,000 to 3,000 sq. ft.) than in 2010, and 48 more units over 3,001 sq. ft. In contrast, smaller housing units (1,999 sq. ft. or less) decline over this period, with 9 fewer units permitted than in 2010. Production trends in Camas indicate a continued preference for housing units with a larger footprint. The city's limited housing supply under 1,999 sq. ft. could pose difficulties for a range of family and non-family types appropriately sized or appropriately priced housing in Camas.

Figure 46: Housing Production in Camas, 2010 and 2015

Data Source: Camas 2035 Comprehensive Plan

In 2020, Camas permitted 338 new single-family residences, about 56% above the 216 units permitted in 2015.5 The majority of these units were over 3,000 square feet (52.4%) and 45.6% were between 2,000 and 3,000 square feet. Only seven units (2.1%) were under 2,000 square feet. These trends indicate a continued preference for housing units with a larger footprint. The city's limited housing supply under 2,000 square feet poses difficulties for a range of family

[5] City of Camas permit data provided by month for 2020.

and non-family households seeking appropriately sized or appropriately priced housing in Camas.

Although there were no multifamily permits issued by the City in 2020, Camas's supply of rental housing in large, multifamily developments increased significantly in recent years. The table below indicates the city's current stock of multifamily housing, including townhomes and apartments. In 2020 alone, two new multifamily developments were completed, adding nearly 300 apartments to the city's multifamily stock. These developments added to the city's supply of smaller housing units, particularly 1-bedroom and 2-bedroom rental units.

Table 14: Multifamily Apartment and Townhouse Developments in Camas, 2020

Housing Costs

Housing cost and affordability are another important area for examination, given Camas's low vacancy rates, large unit size, and newer housing stock – variables that may indicate less affordability for both rentals and for-sale housing. Looking at housing from a bird's eye view, tools such as the Washington Center for Real Estate Research's housing affordability index (HAI) provide context for local affordability by observing housing affordability at the county level. The HAI gives a general measurement of the likelihood that middle income families can afford the mortgage on a median priced home. A score of 100 indicates the middle family can afford median home prices, and scores above 100 show increasing levels of affordability.[6] In Table 15 shown below, Clark County's scores on the HAI have been greater than 100 for the past four years, indicating that overall median income earning families experience housing affordability. First time homebuyers in Clark County, on the other hand, received scores below 100, indicating that tight markets and housing affordability directly affect first time homebuyers in the county in ways that may not be experienced by existing or long-time homeowners.

Table 15: Housing Affordability Index for Camas and Clark County, 2017 to 2020

	Q2 2017	Q2 2018	Q2 2019	Q2 2020
Clark County	123.3	109.1	114.5	125.7
Clark County, First Time Buyers	73.2	65.8	81.3	94.5
Washington State	123.7	105.4	98.4	106.2
Washington State, First Time Buyers	71.2	61.2	69.9	81.2

Data Source: Washington Center for Real Estate Research, "Housing Market Snapshot, 2017-2020."[7] http://wcrer.be.uw.edu/archived-reports/

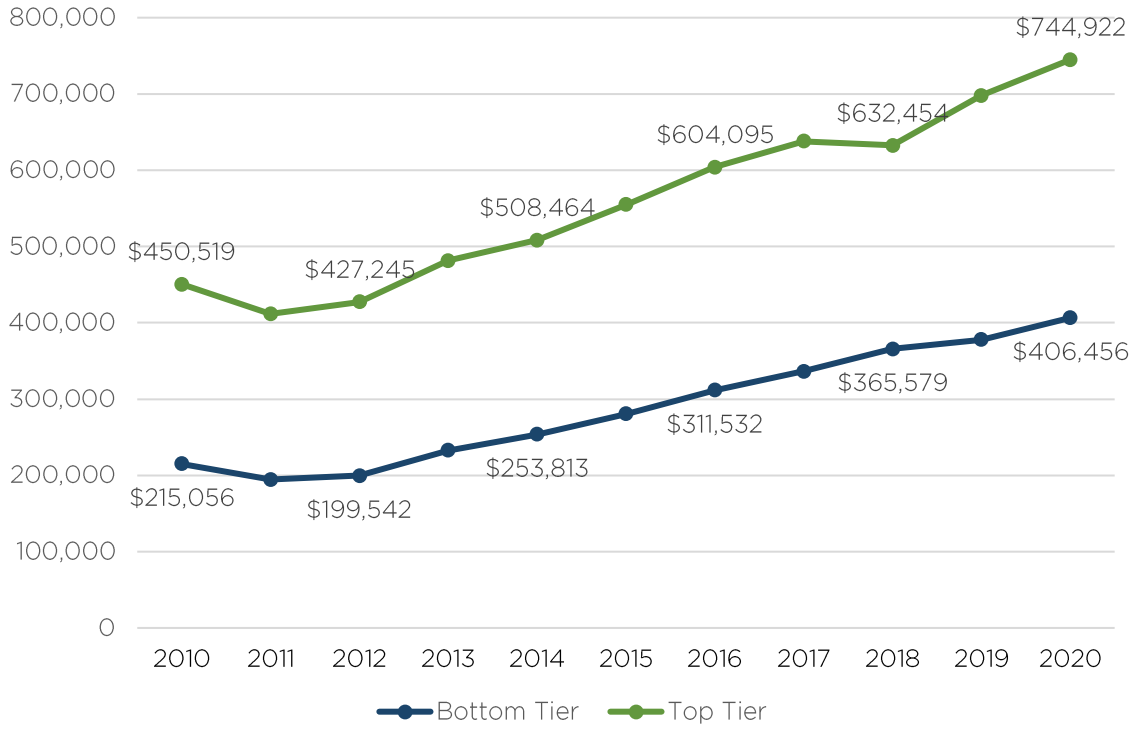
Scaling down to Camas, the affordability picture becomes starker. Figure 47 and Figure 48 indicates that Clark County home values are significantly less than values in Camas. Zillow data identifies median home values in the 65th percentile range, also called the top tier, and the 35th percentile range or bottom tier. In September 2010, the predominant range of Camas's housing values spanned

[6] Washington Center for Real Estate Research. "Housing Affordability Index, State of Washington and Counties, Fourth Quarter 2011," Accessed October 30, 2020. http://realestate.washington.edu/wp-content/uploads/2013/10/2011Q4-HAI.pdf

[7] Washington Center for Real Estate Research, "Housing Market Snapshot, 2017-2020." Accessed October 30, 2020. http://wcrer.be.uw.edu/archived-reports/

from $215,056 to $450,519. Bottom tier median housing values were $41,884 higher in Camas than in Clark County, while top tier median values were $123,007 higher in Camas. By September 2020, Camas's median home values had nearly doubled at the bottom tier - $406,456 - and had reached $744,922 at the top tier. 2020 figures indicate that bottom tier values were now $71,107 greater and top tier values were $179,764 greater than those across Clark County. Due to these differences in home value shown over time, the HAI may be an insufficient tool to interpret affordability in the city of Camas. However, the HAI does offer some instruction. Where Clark County offers limited affordability for first-time homebuyers, these pressures may be extreme for first time homebuyers in Camas, who already face challenges due to the city's limited supply of smaller starter homes.

Figure 47: Bottom and Top Tier Home Values in Camas, 2010-2020



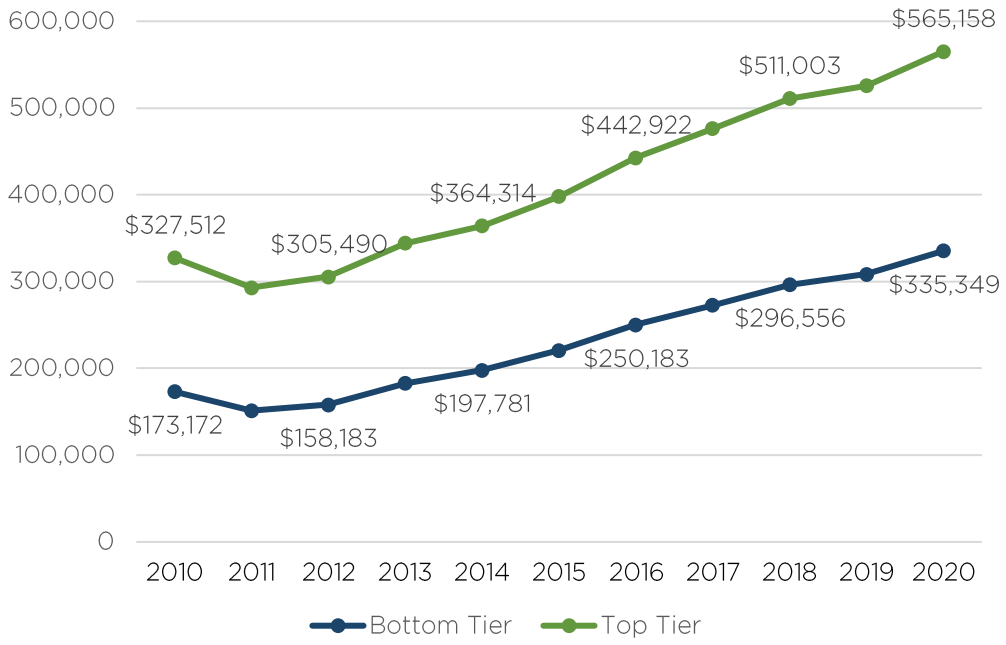


Figure 48: Existing Single Family Homes Prices in Clark County, 2010 - 2020

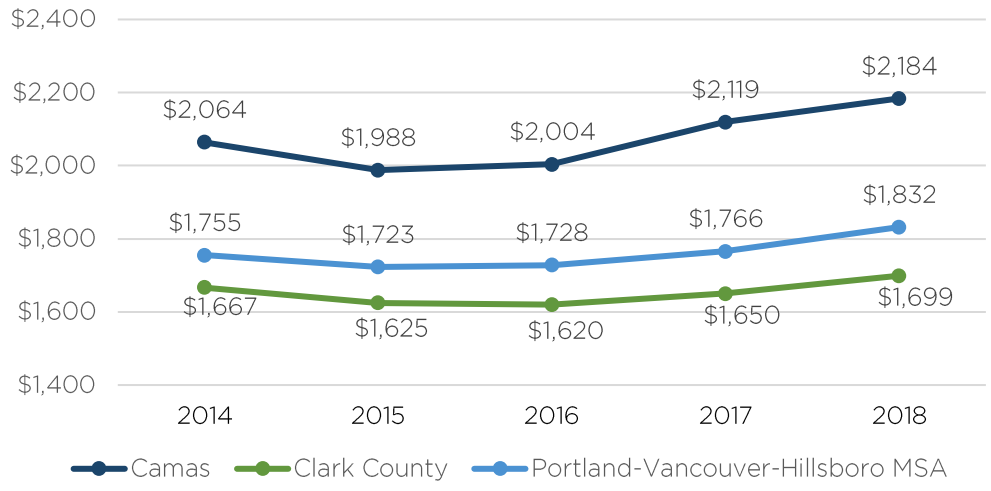
Data Source: Zillow. "Zillow Home Value Index - Bottom and Top Tier Time Series, 2010 – 2020." https://www.zillow.com/research/data/

Monthly owner and renter costs also provide insight into Camas's affordability. Table 16 below shows Census estimates of median home value in Camas. In 2018, the median home value in Camas was $403,800, compared to $296,800 in Clark County and $342,900 in the MSA. 78% of Camas residents had a mortgage in 2018, perhaps attributed to the lower age of the housing stock. Homeowners with a mortgage paid $2,184 per month in housing costs, compared to their neighbors in Clark County whose median costs were $1,699 (a difference of $485). Homeowners in the MSA spent $1,832 on monthly housing costs, or $352 less than in Camas.



Clark County and the MSA also have larger shares of homeowners without a mortgage – 27% in the county and 28% in the MSA, compared to 22% in Camas. All households without mortgages show median monthly costs that are within $100 ($535 in Clark County, $603 in the MSA, and $630 in Camas), indicating that other monthly owner costs (e.g., utilities, insurance, etc.) are relatively similar across the region and that housing value.

Table 16: Median Home Value and Monthly Owner Costs in Camas, 2018

	TOTAL OWNER-OCCUPIED UNITS	MEDIAN HOME VALUE	WITH A MORTGAGE		WITHOUT A MORTGAGE	
			SHARE OF TOTAL	MEDIAN MONTHLY OWNER COSTS	SHARE OF TOTAL	MEDIAN MONTHLY OWNER COSTS
Camas, WA	6,153	$403,800	78%	$2,184	22%	$630
Clark County, WA	114,096	$296,800	73%	$1,699	27%	$535
Portland – Vancouver – Hillsboro MSA	573,334	$342,900	72%	$1,832	28%	$603

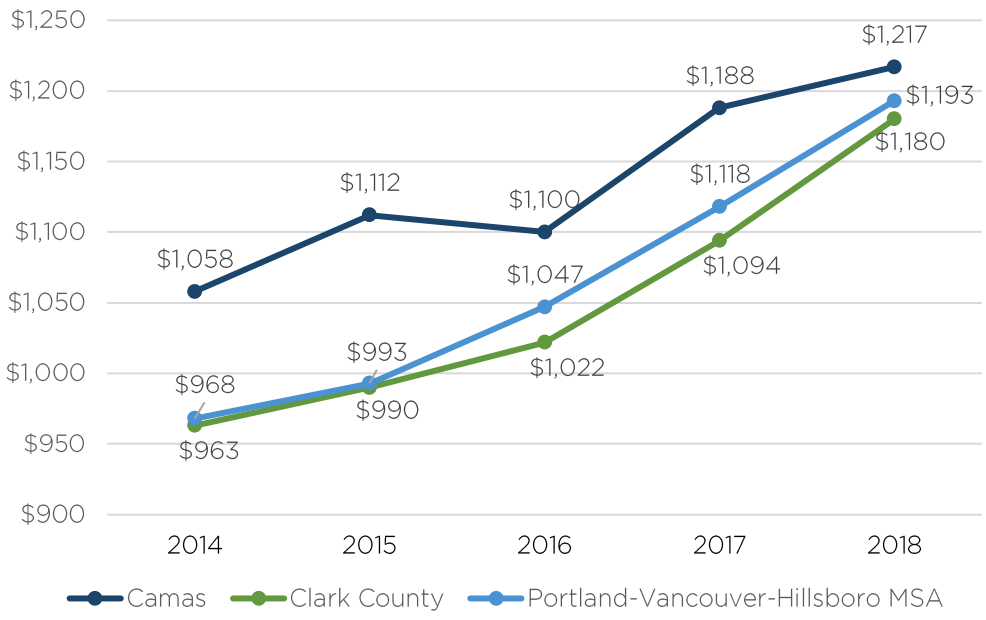
Data Source: 2014-2018 5-Year American Community Survey, Table DP04

Figure 49: Median Monthly Costs for Homeowners with a Mortgage, 2014-2018

Data Source: 2014-2018 5-Year American Community Survey, Table DP04

Rental Housing Costs

Interestingly, renter costs in Camas are more similar to renter costs in Clark County and the MSA than owner costs. The median rent in Camas is $1,217, only $24 more than in the MSA and $37 more than in Clark County. Figure 50 shows that since 2014, median rents have risen in all 3 jurisdictions. Camas's median rent increased by $159 over the 5-year period. Clark County and the MSA showed median rent increases between $217 and $225 over this period. Despite the rising rental costs, median rents in Camas are nearly $1,000 less than monthly owner costs in the city. This factor alone may cause households with lower incomes to



remain renters in Camas or to purchase homes outside of the city where owner costs may be more affordable.

Table 17: Median Renter Costs in Camas, 2018

	TOTAL RENTER-OCCUPIED UNITS	MEDIAN RENT
Camas, WA	1,819	$1,217
Clark County, WA	57,426	$1,180
Portland – Vancouver – Hillsboro MSA	352,297	$1,193

Data Source: 2014-2018 5-Year American Community Survey, Table DP04

Figure 50: Median Monthly Renter Costs, 2014-2018

The Washington Center for Real Estate Research's (WCRER's) rental market survey conducted in September 2020 also collected data about rents by number of bedrooms. Average rents in Camas by unit type are shown in the table that follows, indicating higher averages than medians reported through American Community Survey data. The average 1-bedroom rental rate was $1,299, the average 2-bedroom rented for $1,442, and the average 3-bedroom for $1,789.

Table 18: Average Rental Rates in Properties with 20+ Units in Camas, September 2020

	1-BEDROOM		2-BEDROOM		3-BEDROOM

Special Needs Housing

The most recent census data on special housing in Camas indicates that in 2010, there were two types of facilities that offered special housing in the city: nursing homes and "other non-institutional facilities." In that year, 78 Camas residents lived in nursing homes, skilled nursing facilities or other non-institutional special housing. Comparatively, there are 3,178 special housing residents in Clark County. Camas serves 2.4% of the county's population residing in special housing.

Table 20 indicates the number and type of special housing available in the county, which includes state prisons, local jails, group homes, emergency and transitional shelters, and residential treatment centers.

Table 19: Special Housing Inventory in Camas, 2010

INSTITUTIONALIZED POPULATION	FACILITY TYPE
62	Nursing facilities/Skilled-nursing facilities
16	Other noninstitutional facilities

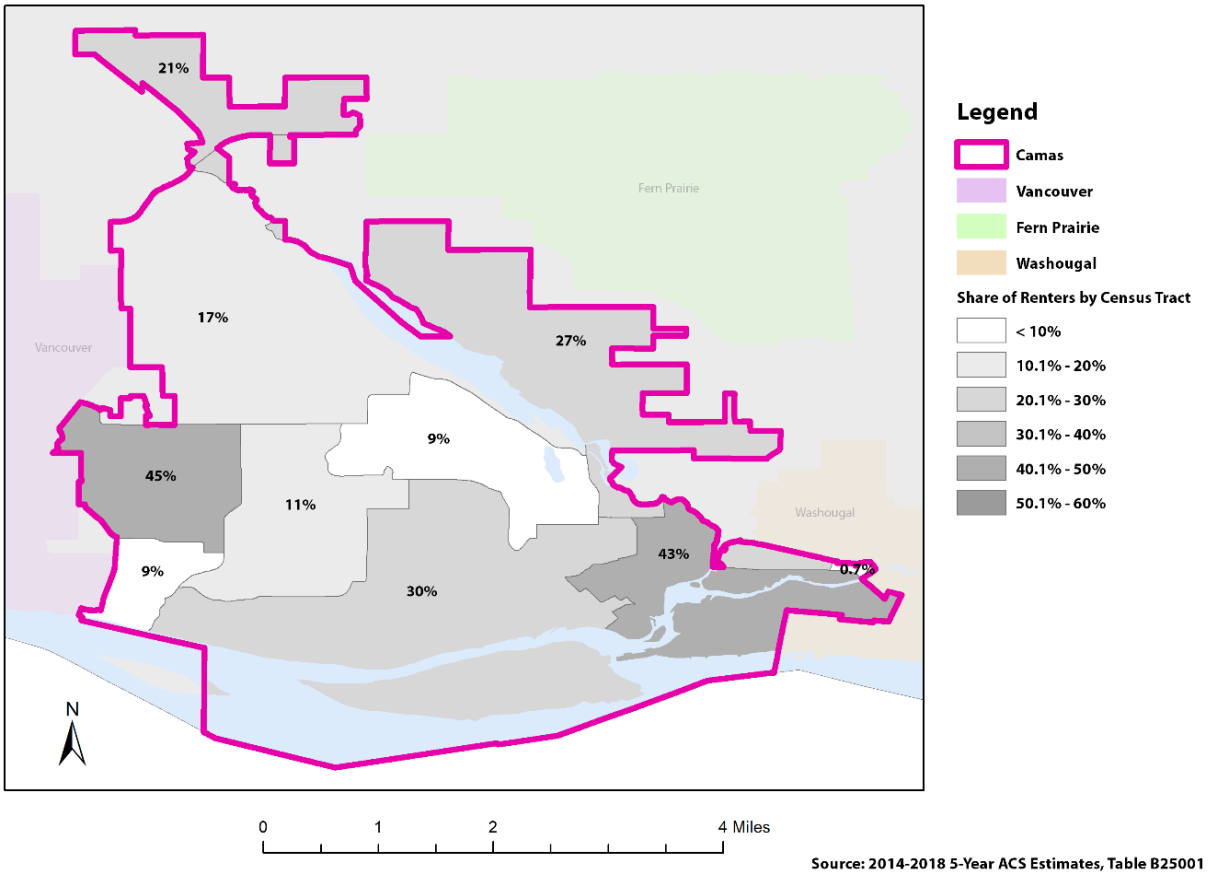
370	Emergency and transitional shelters (with sleeping facilities) for people experiencing homelessness
667	Group homes intended for adults
36	Residential treatment centers for adults
381	Workers' group living quarters and Job Corps centers
65	Other noninstitutional facilities

Data Source: 2010 Decennial Census, Table PCT20

Subsidized Housing



Camas also provides a small number of subsidized units for individuals earning low to moderate incomes in the city. Camas, which falls into the Portland-Vancouver-Hillsboro MSA, has an area median income of $74,700.[8] Therefore, subsidized housing serves households earning no more than 80% AMI, or $59,750, with many subsidized households typically earning low incomes (30 - 50% AMI) or very low incomes (30% AMI or less).

HUD "Picture of Subsidized Household" data indicates that Camas census tracts contain 92 subsidized units as of 2018: 67 housing choice vouchers and 25 project-based section 8 units. Both subsidized housing types are offered by the Vancouver Housing Authority (VHAUSA). VHAUSA manages 19 senior units at the Crown Villa Apartments, which were built in 1986. VHAUSA also offers project-based section 8 at its Camas Ridge development, which is a mixed-use project. HUD's LIHTC database does not indicate any LIHTC developments located in the city of Camas. The city's 92 subsidized units make up 1.1% of all housing units in Camas.

[8] HUD User. "FY 2017 Income Limits Documentation System." Accessed October 29, 2020. https://www.huduser.gov/portal/datasets/il/il2017/2017summary.odn

The distribution of vouchers and section 8 units is shown in the maps below. Vouchers and Project-based Section 8 units are predominantly found in census tracts with higher renter rates, such as downtown Camas and in western Camas along the Vancouver border. Since these tracts may be shared with adjacent cities, the numbers of subsidized units may be smaller than identified below.

Chapter 5:
Housing Needs

This chapter of the Housing Action Plan examines housing needs from two perspectives: first, existing housing needs by Camas households who face one or more housing problems such as affordability or overcrowding; and second, projected need for new housing units generated by population growth over the next 20 years.

Existing Housing Needs

Housing cost and condition are key components of housing need. Housing barriers may exist in a jurisdiction when some groups have greater difficulty accessing housing in good condition and that they can afford. To assess affordability and other types of housing needs, the U.S. Department of Housing and Urban Development (HUD) defines four housing problems:

1. A household is *cost burdened* if monthly housing costs (including mortgage payments, property taxes, insurance, and utilities for owners and rent and utilities for renters) exceed 30% of monthly income.
2. A household is *overcrowded* if there is more than one person per room, not including kitchen or bathrooms.
3. A housing unit *lacks complete kitchen facilities* if it lacks one or more of the following: cooking facilities, a refrigerator, or a sink with piped water.
4. A housing unit *lacks complete plumbing facilities* if it lacks one or more of the following: hot and cold piped water, a flush toilet, or a bathtub or shower.

HUD also defines four severe housing problems, including a severe cost burden (more than 50% of monthly housing income is spent on housing costs), severe overcrowding (more than 1.5 people per room, not including kitchens or bathrooms), lack of complete kitchen facilities (as described above), and lack of complete plumbing facilities (also as described above).

To assess housing need, HUD receives a special tabulation of data from the U. S. Census Bureau's American Community Survey that is largely not available through standard Census products. This data, known as Comprehensive Housing Affordability Strategy (CHAS) data, counts the number of households that fit certain combinations of HUD-specified criteria, such as housing needs by race and ethnicity.

Of the four types of housing problems, Table 17 illustrates that cost burdens affect far more households than any of the others. Over 40% of Camas renters spend more than 30% of their income on housing expenses, while about 14% spend more than 50% of their household income on these expenses. Other housing needs impact significantly fewer renters, less than 1% combined. Renters are about twice as likely to face a housing problem as homeowners, with 42.3% of renters having one or more housing needs compared to 21.0% of owners.

For homeowners, cost burdens and severe cost burdens are again the most common housing needs. About one-in-five owners in Camas spends more than 30% of their income on housing. A smaller share (6.4%) spends more than 50%. Overcrowding and a lack of complete plumbing or kitchen facilities are uncommon but impact around 75 homeowners (or about 1.3% of all Camas homeowners).

Overall, this data indicates that affordability is the key housing need for many in Camas, impacting nearly 2,000 households (1,135 owners and 785 renters).

Table 21: Estimated Housing Needs by Type in Camas, 2017

HOUSING NEED	OWNERS		RENTERS		TOTAL	
	HOUSE-HOLDS	SHARE OF TOTAL	HOUSE-HOLDS	SHARE OF TOTAL	HOUSE-HOLDS	SHARE OF TOTAL
Cost burden	1,135	19.9%	785	41.8%	1,920	25.3%
Severe cost burden	365	6.4%	270	14.4%	635	8.4%
Overcrowding	74	1.3%	14	0.7%	88	1.2%
Severe overcrowding	4	0.1%	10	0.5%	14	0.2%
Lacking complete facilities	15	0.3%	0	0.0%	15	0.2%
Total households with needs	1,200	21.0%	795	42.3%	1,995	26.3%
Total households	5,710	100.0%	795	100.0%	7,590	100.0%

Note: Households with a severe cost burden are a subset of households with a cost burden. Severely overcrowded households are a subset of overcrowded households. The number of total needs (i.e., sum of cost burdens, overcrowding, and lack of facilities) is greater than the total number of households with needs because some households have more than one of the housing problems.

Data Source: 2013-2017 Comprehensive Housing Affordability Strategy data, Tables 1, 3, 8, and 10, Retrieved from https://www.huduser.gov/portal/datasets/cp.html

To better understand how housing costs impact Camas households, Table 18 segments housing need by income level. This data shows that lower income households are heavily impacted by a lack of affordability. Of those with incomes under 30% of the median family income (MFI), four-out-of-five face difficulty finding suitable housing, including 90% of homeowners.

Affordability difficulties persist for the next two income levels (31-50% MFI and 51-80% MFI) as well, where more than one-half of households spend over 30% of income on housing.

At moderate and middle incomes (81-100% MFI and 101-120% MFI), housing needs are reduced for renters but remain high (around 38-48%) for homeowners. These figures suggest that while rental options are more limited, there are units available to moderate/middle income households and higher. Homeownership

opportunities, however, are more restricted even for households earning above the area's median income. These findings corroborate housing supply data related to home sales prices and permit data related to housing size.

Table 22: Estimated Housing Needs by Income Group in Camas, 2017

HOUSEHOLD INCOME	OWNER HOUSEHOLDS			RENTER HOUSEHOLDS			TOTAL HOUSEHOLDS		
	WITH NEEDS	TOTAL	SHARE WITH NEEDS	WITH NEEDS	TOTAL	SHARE WITH NEEDS	WITH NEEDS	TOTAL	SHARE WITH NEEDS
0-30% MFI	110	120	91.7%	170	225	75.6%	280	345	81.2%
31-50% MFI	115	220	52.3%	215	255	84.3%	330	475	69.5%
51-80% MFI	365	575	63.5%	335	590	56.8%	700	1,165	60.1%
81-100% MFI	175	360	48.6%	20	180	11.1%	195	540	36.1%
101-120% MFI	165	430	38.4%	30	185	16.2%	195	615	31.7%
120-140% MFI	95	405	23.5%	0	70	0.0%	95	475	20.0%
Over 140% MFI	175	3,600	4.9%	25	380	6.6%	200	3,980	5.0%

Note: Area Median Family Income ("MFI") is calculated by the U.S. Department of Housing and Urban Development (HUD) by household size. For the Portland-Vancouver-Hillsboro metro area (which includes Camas), the median income in 2017 was $74,700. For a four-person household, 30% AMI = $24,600, 50% AMI = $37,350, 80% AMI = $59,750, 120% AMI = $89,640, and 140% AMI = $104,580.

Data Source: 2013-2017 Comprehensive Housing Affordability Strategy data, Table 11, Retrieved from https://www.huduser.gov/portal/datasets/cp.html

A key question in housing affordability and equity is the prevalence of housing issues by householder race and ethnicity. Table 20 on the following page shows housing need rates by race and ethnicity in Camas.

For homeowners, this data shows that about one-fifth of white householders in Camas have a housing need, but that three other groups are more likely to have difficulty affording their homes. More than 90% of Native American or Alaska Native homeowners have a housing need, as do 41.4% of Hispanic or Latino homeowners and 36.0% of other or multiple race homeowners.

On the rental side, about two-out-of-five white and two-out-of-five other or multiple race households have a housing need. Only one group is more likely to face difficulty affording a place to rent – Asian or Pacific Islander households, of whom 88.2% have a housing problem. Notably, CHAS data counted no Black or African American households in Camas with a housing need, however, data indicates only a small number of Black households overall (60 total).

As some focus group participants discussed, prohibitively high housing costs are often more likely to impact households of color, meaning that elevated costs in Camas may impact the city's racial and ethnic composition. Housing need data

indicates that, particularly related to homeownership, racial and ethnic minority households, specifically Hispanics or Latinos and Native Americans or Alaska Natives, are more likely to spend more of their income to live in Camas than do white households.

Table 23: Estimated Housing Needs by Race and Ethnicity in Camas, 2017

HOUSEHOLDER RACE AND ETHNICITY	OWNER HOUSEHOLDS			RENTER HOUSEHOLDS			TOTAL HOUSEHOLDS		
	WITH NEEDS	TOTAL	SHARE WITH NEEDS	WITH NEEDS	TOTAL	SHARE WITH NEEDS	WITH NEEDS	TOTAL	SHARE WITH NEEDS
Non-Hispanic or Non-Latino									
White	1,010	4,900	20.6%	690	1,650	41.8%	1,700	6,550	26.0%
Black or African American	0	60	0.0%	0	0	0.0%	0	60	0.0%
Asian or Pacific Islander	44	434	10.1%	30	34	88.2%	74	468	15.8%

Housing Need Projections

This section focuses on housing need over the next 20 years based on population growth forecasts for the city of Camas. While the previous data discussed existing needs related to affordability and other housing issues, here we turn to the need for development of new housing units through 2040.

Table 24 estimates the need for new housing units in Camas over the next 20 years, based on current population estimates from the Washington Office of Financial Management and projected population growth rates from the City's Comprehensive Plan, *Camas 2035.* The city's 2020 population of 25,140 residents is forecast to grow by 11,772 residents over the next 20 years, reaching about 36,912 residents by 2040. Assuming an average household size of about 2.7 people, this projected population growth translates to an additional 4,360 households by 2040. Finally, assuming a vacancy rate of 5% indicates projected need for 4,589 new housing units in Camas over the next 20 years, or an average of 229 housing units per year.

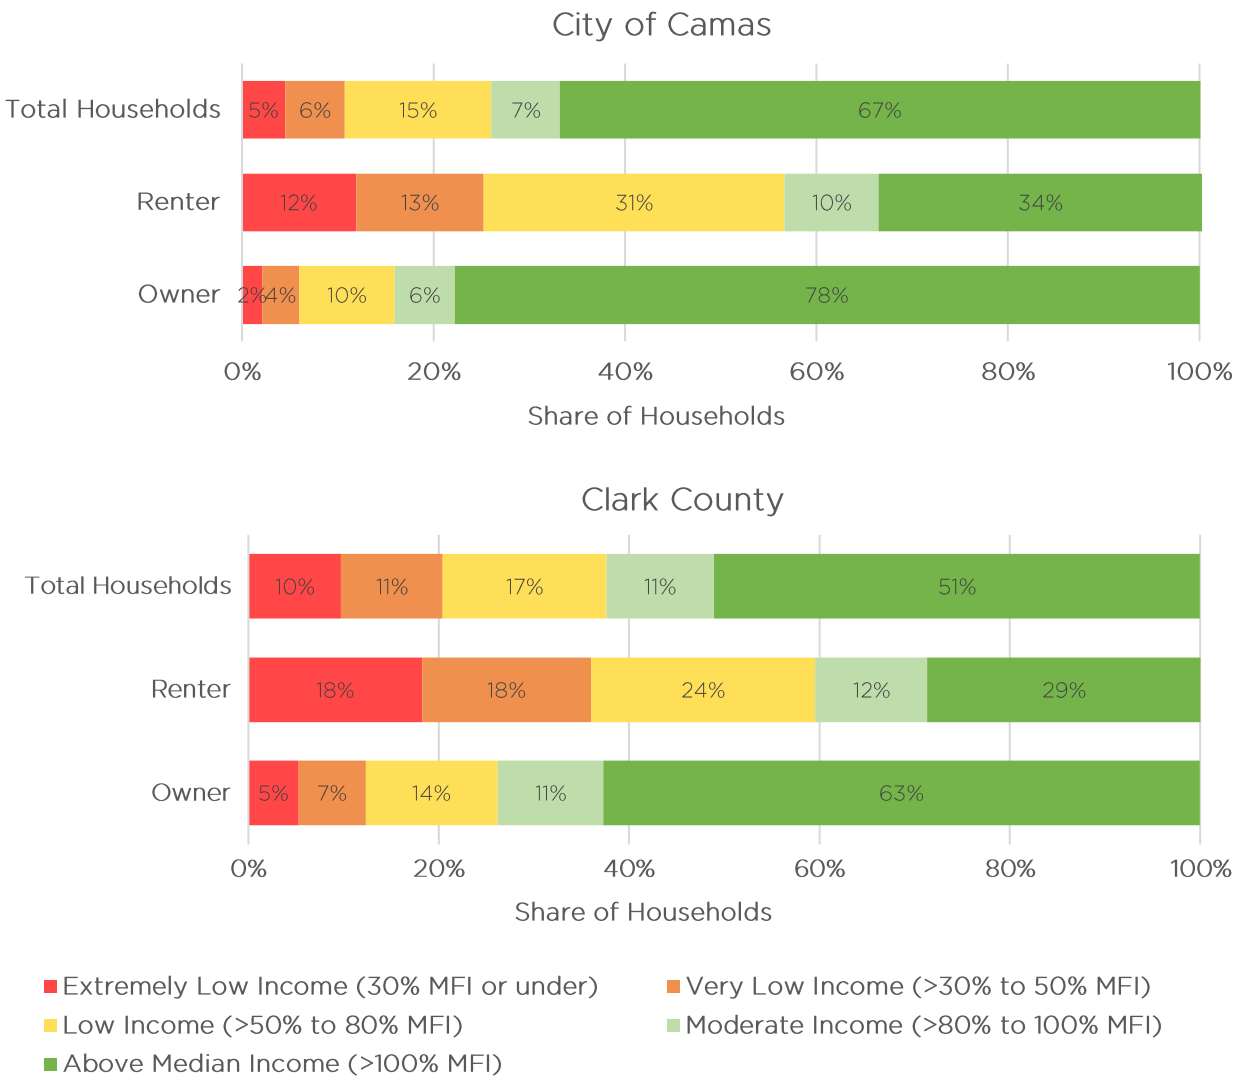

Table 24: Projected 20-Year Housing Need in City of Camas

2020 Population Estimate[1]	25,140 residents
2040 Population Projection[2]	36,912 residents
Projected Population Growth (2020-2040)	11,772 residents
Average Household Size[3]	2.7 people per household
Projected Household Growth (2020-2040)	4,360 households
Vacancy Rate Assumption[4]	5%
Projected Housing Units Needed (2020-2040)	**4,589 housing units**
Average Annual Housing Unit Production Needed	**229 housing units**

1. From State of Washington Office of Financial Management April 1, 2020 Population Estimates.
2. Projected growth rates based on population forecasts from *Camas 2035*, adopted June 2016.
3. Average household size in Clark County from 2015-2019 5-Year American Community Survey estimates. Average household size in Camas was 2.81 as of 2015-2019 5-Year ACS data, which represented a steady decline from 2.98 as of 2010-2014 5-Year ACS data. It is assumed that household size in Camas will continue to decline over the 20-year planning period to reach an average similar to that of the county.
4. From Washington State Department of Commerce's *Guidance for Developing a Housing Needs Assessment – Public Review Draft*, March 2020. The Department of Commerce considers a 5% vacancy rate to be the point where there is sufficient housing stock to allow space for people to move while maintaining a healthy level of competition in the market.

Comprehensive Housing Affordability Strategy (CHAS) data provides a breakdown of households in Camas and Clark County by income level that can be used to segment projected future housing needs. Figure 18 in Chapter 3 identified income levels for Camas households, which are presented again on the following page with a comparison to Clark County. As shown, Camas has proportionally fewer lower- and moderate-income households than Clark County. About one-third of Camas households have incomes under the median family income compared to about one-half of Clark County households with incomes under the median.

Figure 54: Share of Household by Income Level in Camas and Clark County, 2013-2017

Note: Area Median Family Income ("MFI") is calculated by the U.S. Department of Housing and Urban Development (HUD) by household size. For the Portland-Vancouver-Hillsboro metro area (which includes Camas), the median income in 2017 was $74,700. For a four-person household, 30% AMI = $24,600, 50% AMI = $37,350, 80% AMI = $59,750, 120% AMI = $89,640, and 140% AMI = $104,580.

Data Source: 2013-2017 Comprehensive Housing Affordability Strategy data, From https://www.huduser.gov/portal/datasets/cp.html

Table 25 segments projected future housing needs by household income level and tenure. Income level assumptions for projected future housing need are based on CHAS data for the city and county (shown in Figure 54) and assume that future housing development in Camas will allow for additional affordability for low- and moderate-income households beyond what is currently available. Segmentation by tenure is based on homeownership rates in Camas and Clark County by income level (also from CHAS data displayed in Figure 54).

As shown, the majority of projected future housing need in Camas (60% or 2,753 units) will be for units affordable to households with incomes at or above the area median family income. About 40% of projected future housing need will be for units affordable to households with low or moderate incomes, including a mix of rental and for-sale housing.

Table 25: Projected Future Housing Need by Income Level and Tenure

HOUSEHOLD INCOME BAND (MFI = MEDIAN FAMILY INCOME)	ASSUMED SHARE OF HOUSING NEED	20-YEAR HOUSING NEED		
		TOTAL	OWNER	RENTER
Extremely Low Income (30% MFI or under)	7%	321	112	209
Very Low Income (>30%-50% MFI)	8%	367	165	202
Low Income (>50%-80% MFI)	16%	734	367	367
Moderate Income (>80%-100% MFI)	9%	413	268	145
Above Median Income (>100% MFI)	60%	2,753	2,340	413
Total	**100%**	**4,589**	**3,254**	**1,335**

Data Source: Mosaic 20-Year Future Housing Need Projections; 2013-2017 Comprehensive Housing Affordability Strategy data, From https://www.huduser.gov/portal/datasets/cp.html

To accommodate the variety of new households anticipated, as well as to better serve existing households with difficultly affording their homes, Camas will need housing options diverse in type, tenure, and cost. The next section assesses the city's supply of vacant buildable land available to meet future housing need using Clark County's Vacant Buildable Lands Model.

Vacant Buildable Land

To assist the county and cities plan for population and job growth, Clark County maintains a Vacant Buildable Lands Model (VBLM) that analyzes potential capacity for residential, commercial, and industrial land development within urban growth areas. The VBLM identifies vacant and underutilized parcels and classifies them regarding suitability for development. Environmentally constrained land (including wetlands, land in the 100-year floodplain, slopes greater than 15 percent, designated shorelines, and other environmentally sensitive areas) are excluded. The residential model also excludes tax exempt parcels, lots under 5,000 square feet, and easements and right of ways.[9]

The VBLM applies planning assumptions to the inventory of vacant and underutilized land to estimate the potential for additional housing and employment. For residential land, the model assumes a deduction for infrastructure and for vacant, underutilized, and constrained land not expected to ever be developed to arrive at net developable acres. A "housing units per acre" standard is then applied to net developable residential acreage to estimate the potential capacity for new housing units. For Camas, the model assumes 6 housing units will be developed per net developable acre.

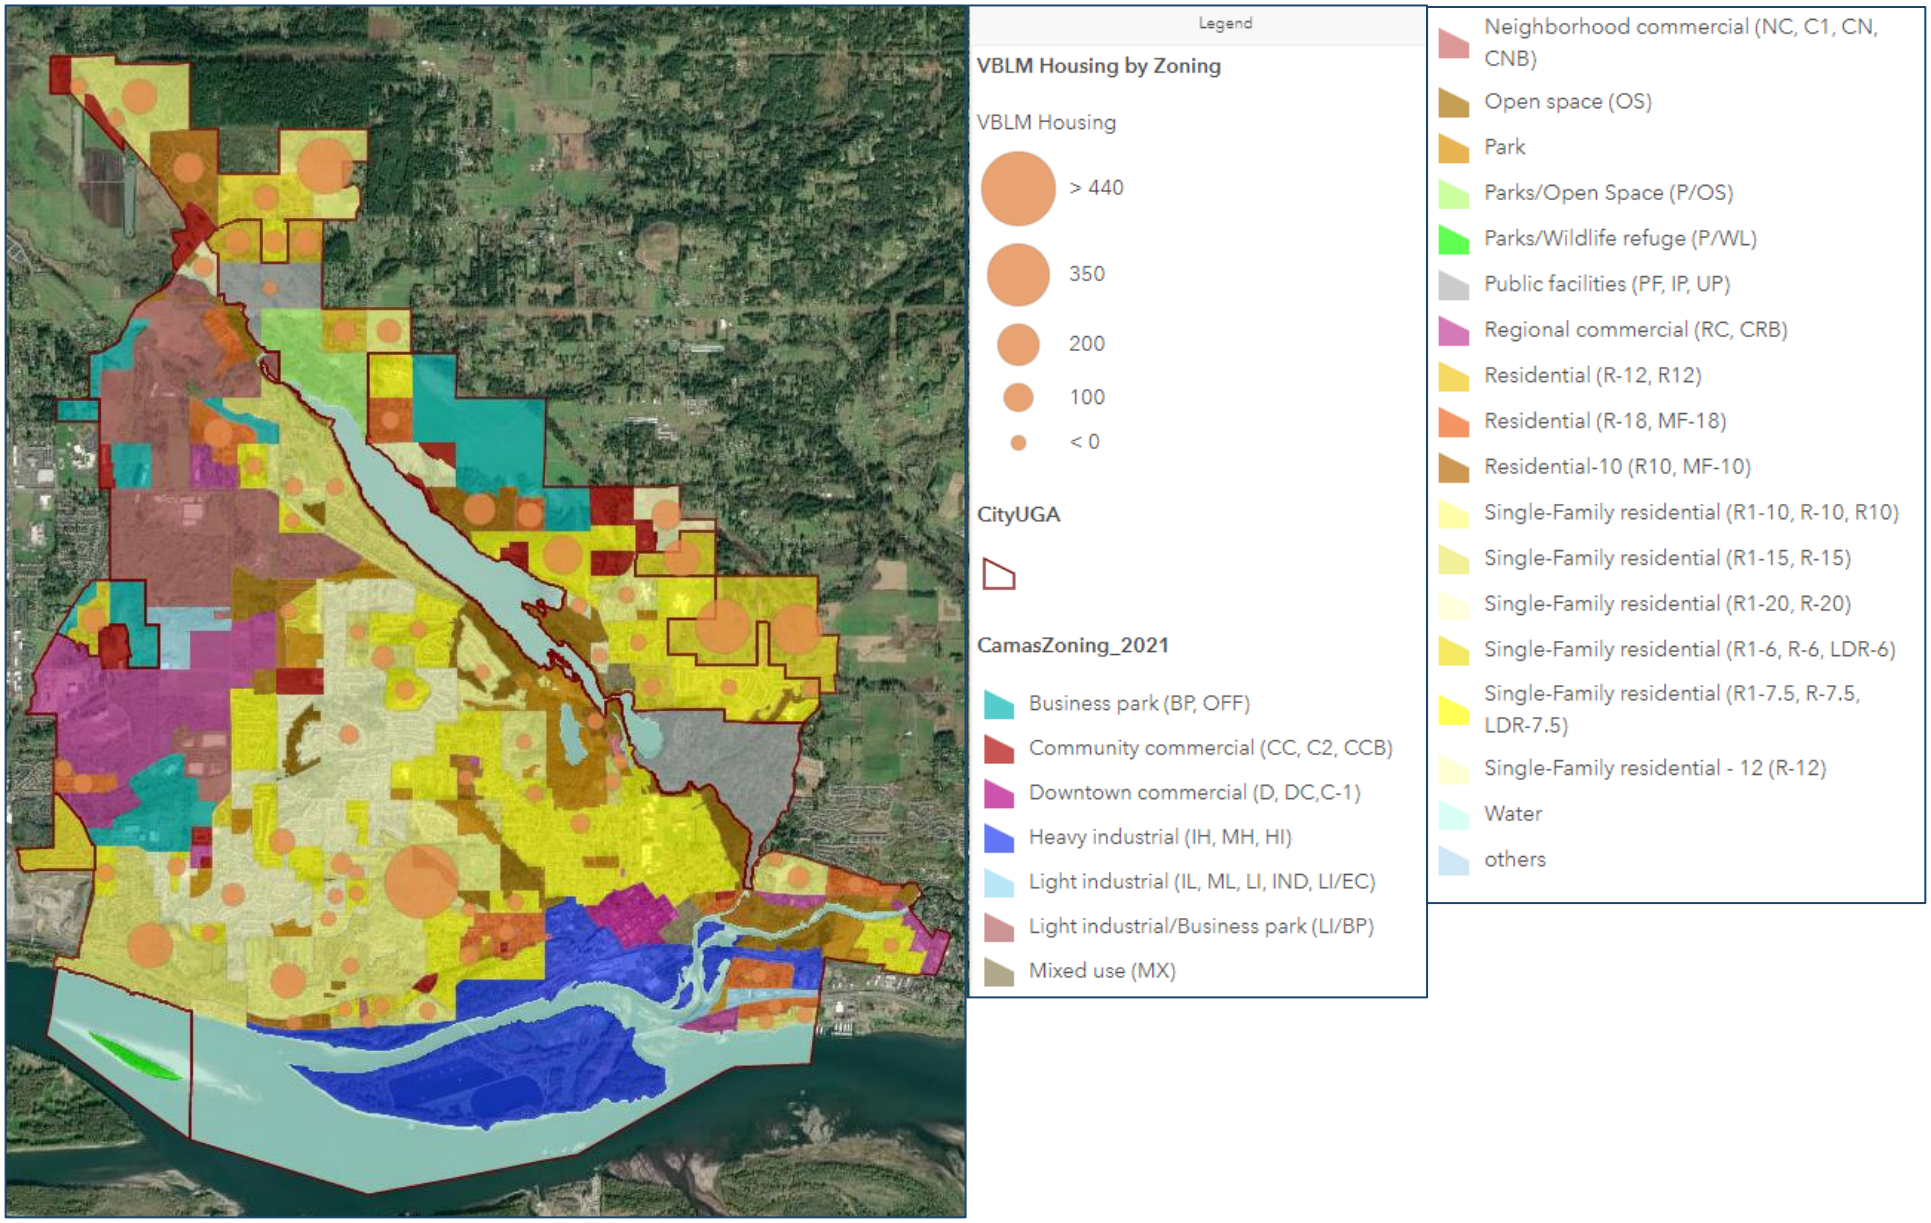

Figure 55 displays the VBLM for Camas, indicating areas of the city where vacant or underutilized residential land may support additional housing units. This model is currently under refinement by the City of Camas. City staff indicate that one area identified as having capacity for about 440 additional housing (along NW Forest Home Road) is not suitable for development due to topographical issues not captured in the VBLM.

The VBLM estimates that Camas has capacity for an additional 3,731 housing units (see Figure 55) in its urban growth area (UGA). The majority of this capacity is in single-family zoning districts (3,163 units or 84.8%), including 8.3% in low-density single-family districts (308 units), 52.3% in medium-density single-family districts (1,950 units), and 24.3% in high-density single-family districts (905 units). The VBLM estimates that vacant land zoned for multifamily housing has capacity for about 568 additional housing units.

Camas's projected future housing needs through 2040 indicate need for an additional 4,589 units. Comparing this figure to the VBLM's housing capacity estimate of about 3,731 to 4,171 units indicates that Camas may need to develop approaches to enhance residential capacity to best meet needs over the next 20 years. Strategies may include increasing average density above the 6 units/acre assumed by the VBLM or re-zoning commercial land for residential use, particularly for multifamily development. Both approaches are in keeping with recent development activity in Camas.

Chapter 6:
Housing Policy Review

Comprehensive land use planning, as embodied in the Camas 2035 Comprehensive Plan, is a critical process by which communities address myriad public policy issues such as housing, transportation, health, recreation, environmental protection, commercial and retail services, and land values, and address how the interconnection and complexity of these issues can ultimately impact the entire municipality. "The land use decisions made by a community shape its very character – what it's like to walk through, what it's like to drive through, who lives in it, what kinds of jobs and businesses exist in it, how well the natural environment survives, and whether the community is an attractive one or an ugly one."[10] Likewise, state and local policy decisions regarding land use and zoning have a direct and profound impact on housing development approaches, shaping a community or region's potential diversity, growth, and opportunity for all. Local zoning codes determine where housing can be built, the type of housing that is allowed, and the amount and density of housing that can be provided. Zoning also can directly or indirectly affect the cost of developing housing, making it harder or easier to accommodate affordable housing.

Although comprehensive plans and zoning and land use codes play an important role in regulating the health and safety of the structural environment, overly restrictive codes can negatively impact housing affordability and the diversity of housing options within a jurisdiction. Conversely, these same regulatory tools can also be wielded to increase affordability and housing choice.

This chapter will review the various policies, plans, ordinances, and programs that influence housing development in Camas and evaluate the effectiveness of this overall housing policy framework in achieving the City's housing goals as expressed in the Camas 2035 Comprehensive Plan. To evaluate how well the policy framework is working, the goals set in the comprehensive plan's housing element will be compared with data and development trends originally presented in Chapter 4.

Housing Goals

Before the Camas 2035 Comprehensive Plan was adopted by the City in 2016, the community was engaged in a robust visioning process involving multiple vision summits, a public forum, resident surveys, and other opportunities for public participation. In developing the vision, residents were asked to project out 20 years into the future imagining Camas as they would wish it to be in 2035. While the entirety of the Camas 2035 plan is united under an overarching vision statement, the plan's housing element casts this specific vision for the City's future neighborhoods and housing:

[10] John M. Levy. Contemporary Urban Planning, Eighth Edition. Upper Saddle River, NJ: Pearson Prentice Hall, 2009.

In the year 2035, residents of Camas continue to appreciate their safe, diverse, and welcoming community. Those raised in Camas will return for family-wage jobs and to ultimately retire here. Camas is a well-planned and connected city where residents enjoy pedestrian and bicycle paths between neighborhoods and to downtown. There is a wide variety and range of housing for all ages and income levels.

The housing element goes on to identify housing needs and present an analysis of the City's housing supply. From there, the plan establishes a set of three housing goals designed to guide the City toward a future with a housing supply adequate for residents of all ages and income levels. Specifically, the three housing goals are these:

Citywide Housing Goal: Maintain the strength, vitality, and stability of all neighborhoods and promote the development of a variety of housing choices that meet the needs of all members of the community.

Affordable Housing Goal: Create a diversified housing stock that meets the needs of all economic segments of the community through new developments, preservation, and collaborative partnerships.

Senior and Special Needs Housing Goal: Encourage and support a variety of housing opportunities for those with special needs, particularly those with challenges relating to age, health, or disability.

Each of these three goals is accompanied in the Camas 2035 housing element by a list of policies intended to effectuate the related goal. As these three goals represent the community's vision for the future and have been formally adopted as City policy within the scope of the comprehensive plan, they set an important standard against which to measure actual trends in housing development. Is the City's overall housing policy framework helping the Camas community realize its vision? This is the question considered in the following sections of this chapter.

Housing Policy Framework

Housing development in Camas is shaped by a framework of interconnected state and local policies that, while not always formally linked together, frequently interact with one another. At a local level, these policies are primarily functions of the zoning code, design requirements, and housing and building codes, in conjunction with the comprehensive plan. At the state level, Washington's Growth Management Act (RCW 36.70A) imposes specific housing planning regulations on counties (including Clark County) that meet certain growth

management requirements and are considered by the Act to be "fully planning" counties. Within these counties, the Growth Management Act governs local comprehensive planning processes and establishes policy goals that encourage local governments to plan proactively for housing affordability and to promote a diverse mixture of housing types and sizes to accommodate the varied needs of residents. A further set of state-level housing planning expectations are contained in draft guidance issued by the Washington Department of Commerce for communities that choose to develop Housing Action Plans.

Considering the totality of this framework that guides housing planning and development in Camas, 12 specific housing policy items are reviewed here for their impact on housing within the City. These twelve items are primarily derived from the City's zoning code, but often are responsive to state planning requirements as well. In many cases, the local policies composing this framework are in substantial alignment with the recommended actions enumerated in the Growth Management Act and the Department of Commerce's Guidance for Developing a Housing Action Plan and likely represent affirmative steps toward achieving the Camas 2035 housing goals. Other policies reviewed as part of the framework are more likely to act as barriers to increasing construction of additional affordable and market rate housing in a greater variety of housing types and at prices that are accessible to a greater range of incomes. These policy items present opportunities for adjustments that may better advance the City's housing goals.

Policies Supportive of the City's Housing Goals

Multifamily Zones: In the multifamily (MF) zones, apartments as well as duplex/two-family homes, townhomes/rowhouses, single family detached homes, and designated manufactured homes are permitted by right when complying with lot and design guidelines. This allows for more housing variety within the MF zones. It is important that these uses are permitted by right, rather than having to go through the costlier and less predictable conditional use review process. In expensive housing markets like Camas, attached housing and multifamily housing is a key element to providing affordable rental or ownership housing because higher density increases the economical use of land and spreads out building infrastructure costs among the number of dwelling units. The multifamily zones require a minimum 6 units per acre (u/a), in line with the goal set by the Comprehensive Plan for residential uses. The maximum density is set as 10 u/a in the MF-10 zones, 18 u/a in the MF-18 zone, and 24 u/a in the MF-C overlay.

The permitted uses and lot standards including minimum lot areas (3,000 sq. ft. for MF-10, 2,100 sq. ft. for MF-18, and none for the MF-C overlay), lot dimensions, setbacks, and lot coverage are reasonable for accommodating greater housing supply and density. However, density may be limited by other design criteria including maximum height allowances of 3 stories/35 feet in MF-10, 4 stories/50 ft. in MF-18, and 1 story/18 ft. in the MF-C overlay. Additionally, a relatively small share of the City's vacant buildable land (about 13%) is currently zoned for

multifamily development, and a portion of that was recently acquired by the City for use as park space.

Multifamily Tax Exemption (MFTE): A multifamily tax exemption is a waiver of property taxes to encourage and incentivize affordable housing production and redevelopment in "residential targeted areas" designated by the city. State law (RCW 84.14) allows qualifying cities to grant developers of certain residential and mixed-use projects a property tax exemption (for eight or twelve years) on the value of new residential improvements, rehabilitation, or conversion of residential buildings in the designated areas. A 12-year exemption is allowed for projects that incorporate a minimum percentage (typically 20%) of income-restricted units. Camas adopted its MFTE program in December 2014, and currently designates three targeted areas: the Downtown District, the Northwest 6th Avenue Corridor District, and the Northeast 3rd Avenue District. The ordinance provides that to be eligible for 12-year tax abatements, applicants must commit to renting or selling at least 20% of units as affordable housing to low- and moderate-income households. Projects intended exclusively for owner occupancy may meet this standard through housing affordable to moderate-income households. As of January 2021, one property, the Clara Apartments at SW 6th Avenue, has qualified for the program. 2021 will be the first year the 30-unit development (with 6 affordable units) qualifies for the tax exemption.

Mixed Use Zones: The MX and DC (Downtown Commercial) districts provide opportunity for higher density residential uses in close proximity to commercial services, retail, offices and transit in a more compact design and efficient use of land. Currently, there are two MX districts which were added during the 2016 Comprehensive Plan update, though as of January 2021 neither had yet resulted in new housing units. Single family detached, supportive housing for persons with disabilities, duplex/2-family, and designated manufactured homes are permitted by right. Multifamily and rowhouses/ townhomes are conditional uses. The minimum lot size in the MX district is 1,800 sq. ft.; maximum density permitted is 24 units per acre; and there is no maximum height restriction. In the DC district, residential uses may be permitted outright if part of a mixed-use building and where the residential units are not located on the ground level; otherwise residential uses require conditional use approval. The zoning code does not prescribe minimum lot area or maximum density for residential uses or maximum building heights in the DC district, but developments are subject to review in accordance with the adopted Downtown Design Manual.

Planned Residential Developments (PRD) and Flexible Development: The zoning code establishes some development categories that allow more flexibility and efficiency in site design, uses, and density placement. A developer may seek PRD approval, on a minimum 10 acre parcel, in both the R and MF zones, and is a way to include more diversity of housing types and lot sizes in the typically large-lot, single-family detached zones of the city while maintaining and protecting open space for recreation and environmentally sensitive areas. In Camas, an approved PRD must include both single family detached lots (with a minimum 4,000 sq. ft.) and a multifamily component, which may contain either attached or detached single-family units on lots smaller than 4,000 sq. ft. or may contain a mix of duplexes, rowhouses, apartments, and designated manufacturing homes.

However, 50-75% of dwellings must be single-family detached units. City council may grant up to a 20% density bonus above the maximum allowed in the underlying zoning district. A flexible development approval is an alternative to the PRD. In a Flexible Development, the density of residential development may be increased in accordance with the City's Density Transfer Standards of the underlying zone, or, if in a multifamily zone, then standards may reflect those of the MF-18 zone (the highest density MF zone). Building heights may be increased by one story above the underlying zoning standard.

Short Plats: Camas has adopted a short plat process for subdivision development of a parcel up to nine lots, the maximum allowed under the Growth Management Act. Short plats may be administratively approved making for a more streamlined permit process instead of needing to go through a lengthier public and city council subdivision review process. This also can provide costs savings to the developer which ideally are passed to the homebuyer. The guidance encourages jurisdictions couple the short plat process other development regulations like cottage housing, small lot development, flexible development regulations, or zero lot line development to have the most impact on housing supply and housing diversity planning goals.

Lot Size Averaging: The dimensional and density standards in the R and MF zones include lot size averaging, along with a minimum and maximum lot size and minimum and maximum density allowance. Lot size averaging can be applied to infill development, short plats, and larger subdivisions and is not limited to Planned Residential (PRD) or cluster developments. This can allow for greater diversity of lot sizes and housing types within new housing developments as individual lots located within a development may be smaller than typically permitted, provided the average of all lots does not exceed the maximum allowed density. This also can lead to more efficiency in accommodating critical areas and unusually shaped parcels, the potential for more units, and may make the smaller lots a more affordable option within the development. It also decreases the likelihood of the developer having to seek costly variances for lots that deviate slightly from the minimum lot size requirement or to go through the additional review procedures typical of Planned Residential Developments (PRDs).

Accessory Dwelling Units: An accessory dwelling unit (ADU), attached or detached, that meets the zoning code's development standards is permitted by right in any zone that permits residential uses. The property owner must occupy either the principal or accessory dwelling and the accessory dwelling must not exceed 40% of the area of the primary dwelling's living area. The City will not impose a separate water system development charge for connection of accessory dwelling units to the city water system. There are some design requirements to protect the residential character and neighboring property owners, but the ADU ordinance is quite generous when compared to other jurisdictions and offers an alternative and low-impact form of affordable housing. ADUs may be helpful in providing new and more affordable housing options in neighborhoods that are already built out or where the planning goal is to maintain single-family character but more density. ADUs may address the housing needs of seniors, small families, and a range of incomes, including middle and low-income households.

Manufactured Housing: "Designated manufactured homes" (factory constructed with pitched roofs and exterior siding similar in appearance to conventional site-built IBC single-family residences and installed on a permanent foundation) are an alternative, typically more affordable housing product and are permitted by right on individual lots in all residential R and MF zones. The zoning code also makes provision for the siting of typical manufactured homes in manufactured home parks, dwellings built on a permanent chassis with or without a permanent foundation and complying with the National Manufactured Home Construction and Safety Standards Act of 1974, as a conditional use in the MF zones. As of March 2021, Camas permits "tiny homes" in manufactured home parks, in compliance with state laws (WA State Engrossed Substitute Senate Bill 5383, July 28, 2019). However, the City of Camas has only one manufactured home park and new manufactured home parks are only allowed as a conditional use in MF zones.

Housing for Persons with Disabilities: The zoning code regulations protect housing for persons with disabilities who require group living arrangements and/or onsite supportive services. Adult family homes, residential care facilities, supported living arrangements, and housing for the disabled are expressly permitted uses in all single-family Residential and MF districts. Adult family homes, group homes, and "housing for the disabled" (which does not have a specific definition in the zoning code) also are permitted uses in the mixed-use MX and downtown DC districts. The code does not impose spacing or dispersions requirements or additional zoning permits to site these types of supportive housing for persons with disabilities.

Policies that May Impede Housing Goals

Exclusionary zoning standards in the single-family R zones: Exclusionary zoning is understood to mean zoning regulations which impose unreasonable residential design regulations that are not congruent with the actual standards necessary to protect the health and safety of current average household sizes and prevent overcrowding. Zoning policies that impose barriers to housing development by making developable land and construction costlier than they are inherently can take different forms and may include: high minimum lot sizes, low density allowances, wide street frontages, large setbacks, low maximum building heights, restrictions against infill development, restrictions on the types of housing that may be constructed in certain residential zones, arbitrary or antiquated historic preservation standards, minimum off-street parking requirements, restrictions against residential conversions to multi-unit buildings, lengthy permitting processes, development impact fees. While Camas's zoning code permits smaller lots and some housing type diversity in some PRDs, multifamily, and mixed use zones, the vast majority of land is devoted to single-family detached dwellings, with development controls related to minimum lot sizes, density, setbacks, lot coverage, height restrictions, historical preservation, etc. that limit housing diversity, density, and socioeconomic integration within many desirable neighborhoods. Camas's zoning ordinance may be overly restrictive and exclusionary to the point of artificially limiting the affordable housing inventory and directly contributing to higher housing and rental costs. The allowed uses in

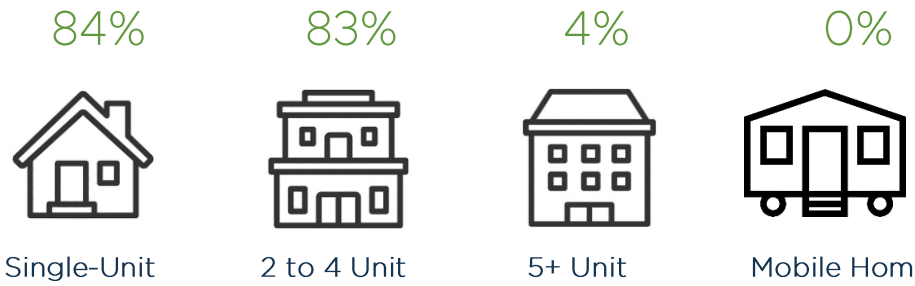
the single-family R zones are too restrictive. (Only single family detached housing and ADUs are permitted by right; duplex/2-family units are a conditional use; or duplex/2-family and apartments as part of an approved PRD.) The conditional use permit process for duplex/two-family units in the R zones adds artificial cost and uncertainty to development of these typically more affordable "missing middle" housing types and still excludes on the majority of residential land designations other small to modest-scale housing types that bridge the gap between detached single family homes and urban-scaled multifamily development like triplexes, townhouses, detached garden homes, cottage housing, courtyard apartments, and other small-scale apartment buildings.

Large minimum lot sizes and low density for majority of residential acreage: Camas's Comprehensive Plan and Plan Map show the majority of residential land use is designated for single family detached units with 4,913 acres of land in the city having a single-family zoning designation and single family uses comprising 48% of the land designations. Minimum lot sizes and maximum densities for the R zones range from 15,000 sq. ft. lots and 2.9 units per acre (u/a) in the low-density R-15 zone to 6,000 sq. ft. lots and 7.2 u/a in the high density R-6 zone. The medium density single family zones, which comprise the greatest share of the R zone acreage, include the R-12 district with a minimum lot size of 9,600 sq. ft. (12,000 sq. ft. average lot area) and maximum density of 3.6 u/a; the R-10 district with a minimum lot size of 8,000 sq. ft. (10,000 sq. ft. average lot area) and 4.3 u/a; and the R.7.5 district with a minimum lot size of 6,000 sq. ft. (7,500 sq. ft. average lot area) and 5.8 u/a density. Camas's Comprehensive Plan sets an overall average residential density of 6 u/a. Only the R-6 zone, which comprises less than 10% of the single-family land designation acreage, allows for the 6 u/a goal. Densities higher than 6 u/a are permitted (but not required) in the multifamily MF zones, which set minimum densities at 6 u/a. The zoning code does not mandate a required minimum livable floor space for dwelling units in the R zones, but the Land Development ordinance (Municipal Code 17.19.030) does provide a building envelope standard for single-family residential zones, finding "a suitable size and configuration generally includes a building envelope capable of siting a forty-foot by forty-foot square dwelling within the building envelope" or a minimum 1,600 sq. ft. one-story home.

Limited multifamily zoned land: Clark County's Vacant Buildable Land Model estimates that there are about 95 acres of developable multifamily-zoned land in the Camas UGA, making up about 13.6% of all developable residential land. However, the City recently acquired about 100 acres of multifamily-zoned land in the North Shore for use as park space. While much of this land would not be buildable due to environmental constraints, the VBLM indicates about 24 acres of potentially buildable multifamily land in that area. This acquisition thus reduces the availability of developable multifamily-zoned land in Camas to about 70 acres in locations throughout the city.

"Family" definition: While not directly related to housing development, a zoning code's definition of family can impact where groups of unrelated persons rightfully can live within a jurisdiction. Unreasonably restrictive definitions may limit the housing supply for nontraditional families and for persons with disabilities who reside together in congregate living situations. Camas's zoning

code limits the definition of "family" to persons related by blood or marriage, or two persons with functional disabilities, or not more than five unrelated persons. While this definition is consistent with state law and is not the most restrictive compared to other Washington jurisdictions, it neglects functionally equivalent relationships by adoption, foster care, or other legal guardianship connections, which is problematic under due process scrutiny. More progressive zoning and planning models define single family in terms of a "functional family" or "single housekeeping unit" sharing common space, meals, and household responsibilities, and/or leave maximum occupancy per dwelling as a matter of safety regulated by the building code rather than the zoning regulations.



Progress Toward Housing Goals

Has the City's current housing policy framework been successful in advancing the housing goals? Are the current policies working? To answer these questions, this section will revisit the three housing goals from the Camas 2035 Comprehensive Plan in the context of an analysis of actual housing development activity to determine whether progress is being made toward the community's goals and future vision for housing in the city.

In the analysis of Camas's housing supply presented in Chapter 4, the data on units by structure type indicates that share of the city's housing stock comprised of detached single-unit structures increased from 85% in 2000 to 89% as of the 2014-2018 American Community Survey estimates. Duplexes, triplexes, and quadplexes as a group held a steady 5% share of the city's housing stock over this same period. The share of housing units in multifamily structures of five or more units decreased from 8% to 5% and the share of mobile homes decreased from 2% to 1%.

In raw numbers, the data on housing by structure type reveals that the number of duplexes, triplexes, and quadplexes did increase significantly between the 2000 Census count and the 2014-2018 ACS estimates, from 246 to 451 units (an increase of 83%). Given the city's rapid overall growth during this time period, that increase was only sufficient to keep pace; the share of the city's housing stock composed of these units remained an even 5%. The number of multifamily housing units in 5+ unit striuctures was virtually unchanged (See Table 6 and Figure 34).

Figure 57: Percent Increase by Housing Type: 2000 to 2018

Data Source: OFM "Adjusted Census 2000 Population and Housing by Type of Structure and Group Quarters for the State, Counties and Cities," Table 2, 2014-2018 5-Year ACS Estimates, Table DP04

While Census Bureau estimates do not reveal substantial additional multifamily development, very-recently-constructed units do include a mix of apartment and townhome developments, including Clara Apartments (32 units), Kielo at Grass Valley (276 units), Parker Village (60 units), and Terrace at River Oaks (120 units) (See Table 14). 2020 Census data and future American Community Survey 5-Year Estimates would expected to include these additional multifamily units as new data is released.

Another indicator, this one predating the development of the Camas 2035 plan, tracks local residential building permit data by square footage. Comparing the 2010 and 2015 permit data, the number of smaller dwellings (under 2,000 square feet) constructed in Camas declined from 23 to 14, a 39% drop (see Chapter 4, Figure 46). By 2020, only 4 units smaller than 2,000 square feet were permitted, making up just 2.1% of total permits. Between 2010 and 2015, new housing construction increased markedly for larger-sized homes. For those between 2,000 and 3,000 square feet, production increased by 84%; production of homes greater than 3,001 square feet increased by 66% between 2010 and 2015. Continuing to monitor the trends within this data will be a helpful metric for evaluating progress toward the City's housing goals into the future.

The data points considered in this section suggest that the City's current housing policy framework may not be sufficient to incentivize housing development of the type and scale that will achieve the community's vision. Each of the three housing goals established by the Camas 2035 plan are grounded to a large degree in advancing variety in the city's housing stock. This variety is expected to help the city meet the housing needs of a diverse community, including households facing affordability challenges and those with special needs who may require alternatives to the predominantly single-family detached dwellings that exist today.

Using variety as a gauge, the data reviewed here presents one positive finding: the component of the city's housing stock composed of 2-, 3-, and 4-unit structures has grown at generally the same pace as the housing stock as a whole.

That this important "middle housing" market segment is experiencing growth and not being outpaced by the addition single-family structures is significant. The policies and plans underpinning this factor should be preserved or enhanced where possible for the city to continue gaining ground.

Other than that bright spot, the remaining indicators generally point to a loss of variety among larger-scale multifamily structures containing 5 or more units and in smaller units of less than 1,999 square feet. While neither of these categories declined in absolute terms, both lost share within the overall housing stock, outpaced by more rapid construction of single-family structures and larger-sized dwellings.

Chapter 7:
Housing Strategies

This chapter describes recommended strategies and implementation activities to expand housing supply, diversity, and affordability in Camas. Each strategy serves to advance one or more of the HAP goals outlined below.

Housing Action Plan Goals

Camas's Housing Action Plan responds to key housing needs and gaps identified through community engagement, analysis of current and future housing needs, demographic and housing market trends, and availability of vacant buildable land. Based on the findings outlined in Chapters 2 through 6, the planning team identified four overarching Housing Action Plan goals:

- **Develop Housing to Accommodate Growth.** Projections based on anticipated population growth indicate the need for about 4,590 additional housing units in Camas through 2040. In contrast, Clark County's Vacant Buildable Lands Model identifies capacity for an additional 3,730 housing units in Camas based on the City's current average of 6 dwelling units per acre. Thoughtful changes to Camas's zoning and development regulations can allow the City to better accommodate projected growth.

- **Diversify the Housing Mix.** Since 2010, development in Camas has trended toward larger, single-family homes. In 2020, 98% of units permitted were single-family homes over 2,000 square feet; most were over 3,000 square feet. Community input, demographic data, and housing need estimates indicate a need for more diverse housing options, including smaller homes and multifamily housing. A greater variety of housing types can better serve young families, small households, seniors, people with disabilities, and people with a greater variety of incomes. In considering smaller housing types, Camas will be deliberate about maintaining a safe pedestrian environment.

- **Increase Housing Affordability.** Most recent estimates show that for about 42% of renters and 20% of owners in Camas, housing is unaffordable. Young families, seniors, and people who work in Camas may have particular difficulty affording housing there. To an extent, diversifying the housing mix can assist in addressing affordability by offering smaller, less expensive housing types. To meet needs of households of all incomes, including lower- and moderate-income residents, however, more proactive approaches to encourage subsidized housing will be needed.

- **Preserve Existing Affordable Housing.** In addition to increasing the availability of affordable housing, Camas should adopt strategies to preserve its existing affordable housing and prevent displacement of residents. Community members noted particular concern for preservation of existing affordable housing, particularly smaller single-family properties, in older neighborhoods near downtown.

  Table 26 outlines housing strategies recommended for Camas, with each explored further in the next section.

Housing Action Plan Strategies

Upzoning Strategies

Upzoning refers to zoning code modifications that allow denser land uses in existing zoning districts to increase the buildable capacity of land. This is distinct from, but related to rezoning, which can achieve the same effect by changing the zoning classification of land to one that carries higher density standards. Upzoning can be achieved in a variety of ways, including increasing the minimum and/or maximum density allowed in a district, reducing or eliminating minimum lot sizes, reducing setback requirements, raising building height maximums, and allowing denser uses such as multifamily in single-family zones. The Washington Department of Commerce describes upzoning as a regulatory tool with particular utility in communities with "a deficit of development capacity relative to ongoing population growth, minimal activity in areas desired for development or redevelopment, or a lack of residential development near public infrastructure."[11] In isolation, upzoning can lead to increased property values and the intrinsic luxury development and displacement that can accompany it; however, as one of a variety of tools applied together, upzoning can be effective in leveraging a greater housing supply from development activity that is or would have occurred anyway.

The Case for Upzoning in Camas

Camas is growing steadily, and development sites are in demand. By making incremental increases to the minimum density required or otherwise small changes to allow options for greater density and different housing types, the City will increase its housing supply and diversity with only minimal modifications to the established character of residential zones. The increased supply will be produced by market forces, without requiring investment on the City's part beyond the infrastructure and public amenities Camas already offers. Higher densities will make more efficient use of the City's infrastructure investments.

Application of the upzoning recommendations described here may be made across-the-board for the entire city by changing the standards for existing zoning districts so that all property in a particular zoning district is subject to an amended set of standards. Alternatively, the City could approach upzoning by outright rezoning certain areas, perhaps large tracts of vacant land and/or nodes of a more urban character, to a higher density zoning classification. Under the former approach, the upzoning will affect more property owners but is achieved through a less administratively rigorous process (amending zoning district

[11] Washington State Department of Commerce. (June 2020). Guidance for Developing a Housing Action Plan-Public Review Draft. www.commerce.wa.gov/serving-communities/growth-management/growth-management-topics/planning-for-housing/.

standards) compared to the latter approach which, while more targeted, introduces the complexities of rezoning.

The greatest and most immediate impact will be achieved by applying upzoning recommendations to vacant land, areas that are harder to develop, or large lots that could accommodate being subdivided. Rezoning or amending zoning standards for established or built-out neighborhoods may not have an immediate effect on housing supply but can incrementally lead to some moderate densification over time as lots are redeveloped. While unlikely to significantly affect the City's housing supply in the near term, the utility of such a gradual tool should not be overlooked. As the city is increasingly built out, redevelopment of sites will likely become more common and upzoning established neighborhoods creates an outlet to keep development pressure from overheating the market.

Best Practices for Implementing Upzoning Policies

The Washington State Department of Commerce produced a draft guidebook in 2020 containing strategies to help Washington communities promote housing diversity and affordability through their Housing Action Plans.[12] Several of the strategies described in that guidance relate to upzoning and related tools. The best practices and considerations below are adapted from the Department of Commerce's guidebook.

- Increasing residential density makes more efficient use of existing public infrastructure; therefore, prime candidates for upzoning are neighborhoods rich in amenities such as parks and greenspace, public transportation access, commercial and retail nodes, and other place-based investments.
- The best opportunities for significant impact lie in the application of upzoning to vacant tracts of land which will have the direct effect of increasing the number of housing units produced when the property is developed thereby accommodating population growth within denser, more compact areas.
- Upzoning may increase property value and encourage development of parcels that otherwise would not have been profitable to build out. For this reason, upzoning may create an indirect incentive that can potentially be tied into affordability requirements, such as those that may be imposed under an inclusionary housing policy. Upzoning should therefore be considered in tandem with any program of affordability requirements.
- The City should be clear with residents about the intent behind any upzoning strategies it intends to implement and should carefully communicate the need for the change and how it will benefit the city and its strategic goals. It may be helpful to highlight for the public standards that are not changing (e.g. design standards, height limits, open space requirements) and how those standards will continue to ensure compatibility of denser housing development within the existing community.

[12] Ibid.

Strategy 1: Expand Housing Opportunity in Mixed Use and Downtown Commercial Districts

The City's Downtown Commercial and Mixed Use (DC and MX) districts offer some unique and nuanced opportunities to support housing density and diversity. Through some modest changes to the authorized uses in these zones, these areas, which currently offer some of the City's highest-density and most flexible land use conditions, can potentially be made more attractive for developers looking to add various housing types into their developments.

The City includes 3+ unit attached single-family uses (such as rowhouses or townhomes) in the same classification as apartments in the use table for these two zones. By breaking this out and regulating it separately from apartment and other multifamily uses, greater flexibility is added to both the DC and MX districts. In the MX district, multifamily and rowhouse-type development is currently a conditional use; Camas can allow rowhouses by right while keeping apartment development a conditional us, given the City Code's other conditions which guide development here. Similarly, in the DC district, the City can retain some modified conditions on apartment uses while opening up opportunity for 2- and 3-family dwelling types by allowing them as of right.

One key regulatory condition applied in the City's DC zone is a requirement that multifamily residential uses must be part of a mixed use building that contains no ground-level residential units in order to be permitted by right. In a commercial-focused area, the focus on ground-level retail is an important one, but the City may consider relaxing the requirement such that ground floor residential on side streets is allowed.

Rowhouses

Table 27: Proposed Changes to Authorized Uses in DC and MX Zones

RESIDENTIAL USES	CURRENT USES		PROPOSED USES	
	DC	MX	DC	MX
Adult family home, residential care facility, supported living arrangement, or housing for the disabled	P	P	P	P
Apartments	C/P*	C	C/P†	C
Assisted living	P	P	P	P
Designated manufactured homes	X	P	X	P
Duplex or two-family dwelling	C/P*	P	P	P
Residential attached housing for three or more units, e.g. rowhouses (currently grouped into the "apartments" use category)	--	--	P	P
Single-family dwelling (detached)	X	P	X	P
Cottage housing (new use designation)	--	--	X	P

* Residential uses may be outright permitted if part of a mixed use building, where residential use is not located on the ground level; otherwise it shall be a conditional use.

† Residential uses may be outright permitted if part of a mixed use building, where residential use is not located on the ground level *along the primary street frontage*; otherwise it shall be a conditional use.

Strategy 2: Consider Making Targeted Rezones during Comprehensive Plan Updates

Washington's Growth Management Act encourages cities to authorize a minimum net density of six dwelling units per acre (u/a) in all residential zones, where the residential development capacity will increase within the city. Currently, Camas sets its Comprehensive Plan goal for an average residential density of 6 u/a, but most of the designated residential land is currently zoned for a lower minimum to maximum density (dwelling units/net acre) range requirement because 48% of the city's land designation is within one of the single-family R designations. The city does not require new single-family developments to meet a minimum density, however there is a minimum unit requirement of 6 u/a in multifamily zones.

The table that follows includes all the residential zoning districts in the city and the current range of unit per acres. The highlighted zones represent the greatest percentage of city's land area that is designated for residential uses (70% overall) and do not achieve a 6 u/a minimum or average. In addition, the R-10, R-7.5, and R-6 zones have a greater share of vacant undeveloped land and underdeveloped lands compared to all other residential zones.

To achieve desired residential densities, the City of Camas can consider opportunities to selectively rezone parcels in strategic locations (urban nodes, vacant land, industrial lands) to a higher density zoning district during Comprehensive Plan updates. Ideally, rezones would reflect that the built density in the area is higher than the current zoning classification. Rezones could also focus on areas that are relatively undeveloped or underdeveloped or for focused redevelopment (e.g., mill property).

Table 28: Minimum and Maximum Densities and Residential Land in Camas's Residential Zoning Districts

ZONING DISTRICT	CURRENT DENSITY		RESIDENTIAL LAND	
	MIN	MAX	ACRES	% OF TOTAL
R-15	2-3 u/a*	2.9 u/a	716.3	15%
R-12	3-4 u/a*	3.6 u/a	925.4	19%
R-10	4-5 u/a*	4.3 u/a	989.3	20%
R-7.5	5-6 u/a*	5.8 u/a	1,534.3	31%
R-6	6-7 u/a*	7.2 u/a	191.1	4%
MF-18	6 u/a	18 u/a	312.2	6%
MF-10	6 u/a	10 u/a	245.9	5%
MF-C	6 u/a	24 u/a	0.0	0%

* In these zones, minimum density is not mandatory. Maximum density is mandatory in all zones. The current requirement is to achieve an **average** lot size for the new development.

Note: Zoning districts highlighted in yellow represent the greatest percentage of city's land area that is designated for residential uses (70% overall).

Strategy 3: Diversify Allowed Housing Types and Update Related Lot and Dimensional Standards

Since adoption of Camas's zoning code, innovative housing types not contemplated by Camas's regulations have gained more traction and popularity in other jurisdictions for providing greater housing choice and affordability: tiny homes, cottage developments, stacked flat condominiums, courtyard apartments, and cluster developments. These housing types could be added to the permitted use tables and permitted by right in any residential zone where they would comply with the density and dimensional standards.

In addition to allowing cottage housing by right in residential zones, the City should consider allowing duplexes and 3+ unit attached housing types (such as triplexes, rowhouses, and townhomes) by right in any residential zone. If these types meet the density, dimensional, and any other design standards applicable

to the zoning district, they should be allowed without a conditional use permit in order to incorporate greater variety into the City's housing stock.

Note that these housing types are typically prohibited within existing platted subdivisions and by homeowner associations. Meaning that if supported, then a further analysis on the potential effectiveness of this strategy would include a review of available vacant parcels and vacant infill lots that are unencumbered by an HOA.

Cottage Clusters in Shoreline (L) and Kirkland, WA (R)

Duplex and Triplex Housing
(from Sightline Missing Middle Homes Photo Library, https://www.flickr.com/people/sightline_middle_housing/)

Changing from conditional use to permitted use can translate to substantial building cost savings and more predictability for developers. Currently, planning fees for a residential conditional use permit start at $3,360 + $103 per unit, in addition to all the development and impact fee calculations.

Table 29: Proposed Changes to Authorized Uses in Residential and Multifamily Zones

RESIDENTIAL USES	CURRENT USES		PROPOSED USES	
	R	MF	R	MF
Adult family home, residential care facility, supported living arrangement, or housing for the disabled	P	P	P	P
Apartments	P*	P	P*	P
Assisted living	C	P	C	P
Designated manufactured homes	P	P	P	P
Duplex or two-family dwelling	C	P	P	P
Manufactured home	X	X	X	X
Manufactured home park	X	C	X	C
Nursing, rest, convalescent, retirement home	C	P	C	P
Residential attached housing for three or more units (e.g., rowhouses)	X/P*	P	P	P
Single-family dwelling (detached)	P	P	P	P
Cottage housing	X	P**	P	P

*Permitted in the R zones as part of a planned development only.

**Cottage housing is currently permitted as a zoning overlay in MF zones.

Recent state legislative updates require tiny homes and recreational vehicles to be permitted uses in manufactured home parks and allow local jurisdictions more flexibility to authorize them in other zones. This year Camas amended the development code to allow tiny homes within manufactured home parks, however they may consider including permitting provisions for tiny homes outside a 5-acre manufactured home community. Low-cost, low-impact tiny homes, especially in a cluster or "village" around common open space, should not require a minimum 5-acre parcel like MHPs or large minimum lot sizes, and could be incorporated into the traditionally single-family R zones and the MF zones. Camas could also consider relaxing the restriction on manufactured homes only being allowed in approved manufactured home parks, especially as an affordable way to site an ADU.

Where alternative housing types are authorized, the City also may consider reducing the off-street parking requirements as lower-income, generation Z, senior, and non-traditional single-family development households have been shown to have lower rates of car ownership. A parking study by a certified transportation planner or engineer may demonstrate that fewer off-street

parking spaces are needed than currently required. In addition to assessing actual parking needs, any such parking study should consider potential impacts to pedestrian safety and adjacent street congestion.

The Growth Management Act encourages cities to "create one or more zoning districts of medium density in which individual lots may be no larger than three thousand five hundred square feet and single-family residences may be no larger than one thousand two hundred square feet."[13] Lots this size are allowed under the current multifamily and mixed-use districts, but not in any medium-density single-family district. Providing such an option can make more feasible the development of more housing stock and more affordable housing types like small lot detached homes, zero lot line developments, cottage homes, townhomes/rowhouses, duplexes, triplexes, and other similar housing types compatible in scale and impact with single-family detached housing. As Camas allows new housing types, the City should update corresponding lot and dimension standards to ensure consistency.

In addition to updating lot and dimensional standards, the City should also consider updating its design standards manual to codify residential design requirements. This approach would allow for an administrative approval process for residential designs.

Rezoning and Focused Planning Efforts

Strategy 4: Focus on Key Areas with Residential Development or Redevelopment Potential. Expand More Mixed-Use Areas throughout the City.

Rezoning to a higher density would provide more flexibility and allow for greater housing diversity citywide, in particular it would support downtown housing. However, as Figure 55 (in Chapter 5 of the Housing Action Plan) shows, much of Camas's residential capacity is on larger tracts of vacant or partially-vacant land north of Lacamas Lake. To achieve a desired mix of housing types, the City should evaluate key areas with residential development or redevelopment potential and consider possible rezoning opportunities, including possible rezoning to allow more mixed-use areas and more multifamily development by right.

Looking at the North Shore area as an example, the area includes many of the city's remaining large tracts of vacant land. At least one third of land in the North Shore is considered "vacant critical" and development opportunity is limited in these environmentally sensitive areas. To preserve this land, the City recently acquired about 100 acres in that area, including some residentially-zoned land, for use as park space. While this land will not be available for residential

[13] RCW 36.70A.600(1)(m)

development, there are a few smaller, adjacent parcels with housing potential. Additionally, nearby land currently zoned as a business park may have potential for some housing development. The City should evaluate these areas and consider how updated residential zoning designations and permitted uses outlined in Strategies 2 and 3 will impact housing potential or if rezoning certain sites would better allow the city to attract desired housing types.

The City should take a similar approach for other development or redevelopment areas in Camas, such as the industrial property that is currently owned by the Georgia-Pacific mill, to identify potential planning or rezoning efforts that would best encourage development of housing to meet current and future needs.

Communicating Housing as a Priority

Community input shows a variety of viewpoints among City of Camas residents, from those that see greater housing diversity and affordability as a crucial goal to those that see no need for additional residential development, particularly apartment or affordable housing development, in the city. In implementing this Housing Action Plan, the City of Camas should also work to communicate its housing planning priorities and build understanding around the benefits of housing that meets the needs of all residents.

Strategy 5: Continue Community Conversations around Housing and Housing for All

The City of Camas should develop community conversations that last beyond this project. To date, the Housing Action Plan engaged thousands of Camas residents through the project website, social media, and readership in the newspaper and school bulletins. However, continued communication is needed.

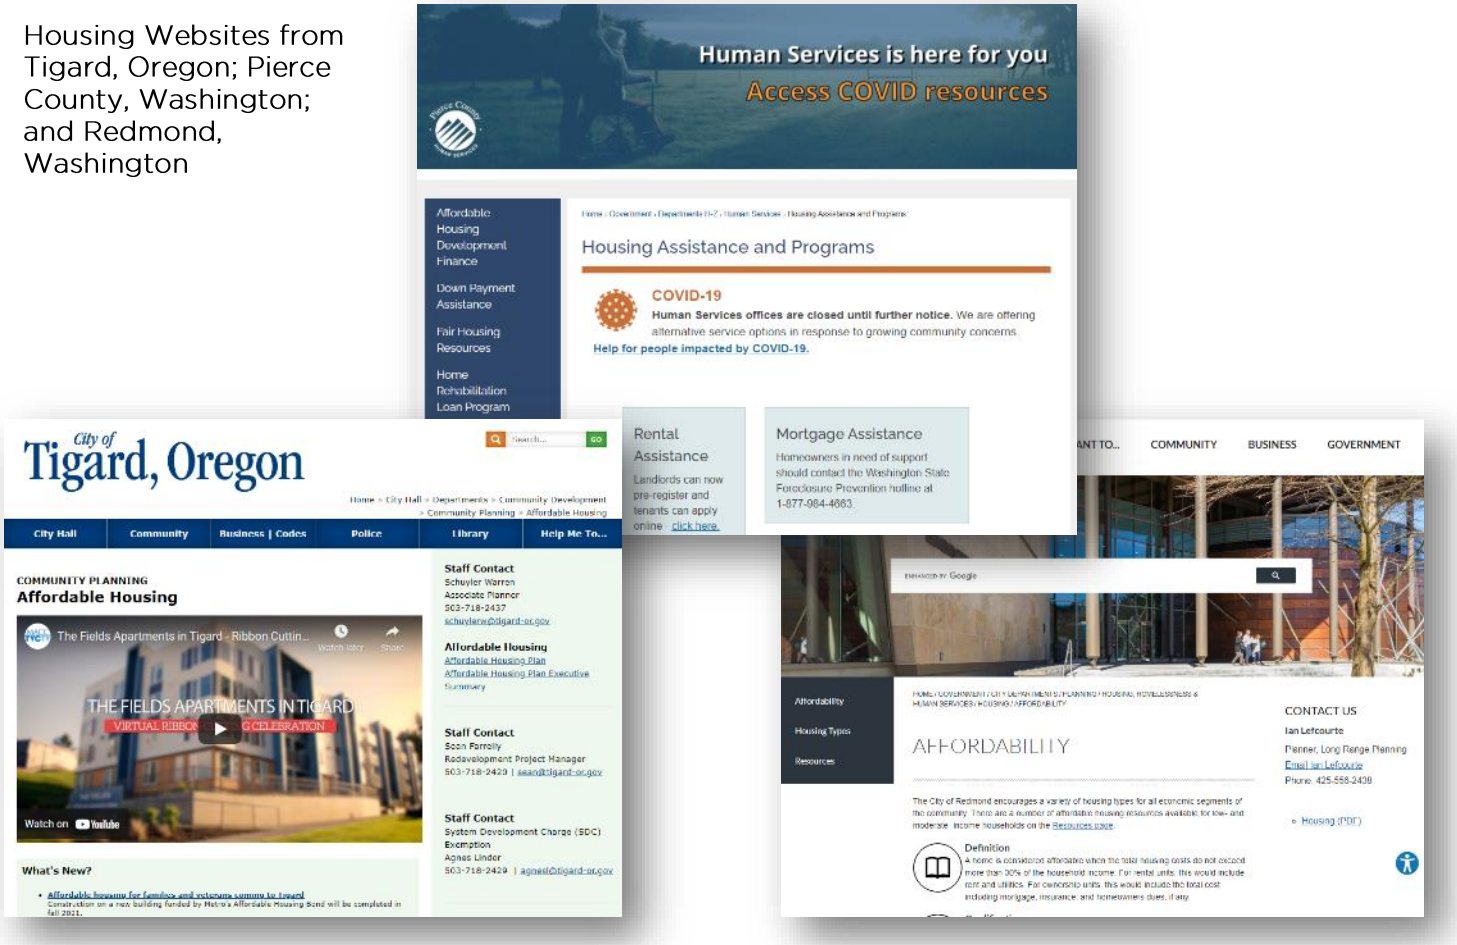
The Housing Action Plan builds on goals established in the City's Comprehensive Plan, including to:

- Promote development of a variety of housing choices that meet the needs of all members of the community;
- Create a diversified housing stock that meets the needs of all economic segments of the community through new development, preservation, and collaborative partnerships; and
- Encourage and support a variety of housing opportunities for those with special needs.

To achieve these goals and implement strategies outlined in this HAP, efforts to build understanding around housing diversity and affordability will be important. The City should foster inclusive community conversations that connect housing to other issues, such as economic vitality, jobs, schools, and transportation. The

City should focus on communicating a "housing for all" perspective and exploring connections between community values and housing. These conversations could be led by the City's library and communications teams to ensure that the topic of housing is viewed wholistically.

During the public engagement process, for example, Camas residents describe the city as a great place to live, with good schools, safe neighborhoods, and access to Portland and the airport. The city's small-town atmosphere and its charming downtown provide rich and beloved character. Other features enjoyed by residents include the city's natural landscape, its trails, and its sports activities. Residents want housing that reflects a variety of stages of life, including for college students and single adults. They express a desire for entry level homes and housing that enables seniors to age in place. There is some interest in apartments or condos, particularly in downtown, and some residents desire more unique housing products and developments serving a greater range of incomes, including low- and moderate-income residents.



The City can build on these ideas in future public engagement, including those related to HAP implementation or other planning efforts.

Strategy 6: Communicate Housing Resources and Opportunities

To communicate that housing affordability is important to the City of Camas and to inform residents and housing professionals about the availability of housing resources, Camas should develop a page on the City's website dedicated to housing. This page could share information about the current supply of affordable housing in the city, including Camas Ridge and Crown Villa Apartments, with links to the Vancouver Housing Authority. It could also provide information about first time homebuyer assistance available through the Washington State Housing Finance Commission's down payment assistance program, Proud Ground (when assistance is available in Clark County), and others. Camas could also consider hosting a home buyer education event through the Washington State Housing Finance Commission or other partner and advertising it on this page.

In addition to information for households, the City should also advertise resources available for housing developers, landlords, and other housing industry professionals, such as the City's Multifamily Tax Exemption and any other potential incentives.

Housing Websites from Tigard, Oregon; Pierce County, Washington; and Redmond, Washington

Developing Partnerships

Strategy 7: Build Partnerships to Develop and Preserve Affordable Housing for Individuals, Families, and Seniors. Explore Expansion of the MFTE Program.

Nationally, the Low Income Housing Tax Credit (LIHTC) program is the primary source of subsidy for development of new affordable housing. The LIHTC program makes available an indirect federal subsidy for investors in affordable rental housing, ultimately offsetting a portion of the development cost. As a condition of the LIHTC subsidy received, the resulting housing must meet certain affordability conditions. The Internal Revenue Service allocates LIHTCs annually to each state's housing finance agency, which then awards them on a competitive basis to project applicants within the state.

At present there are no LIHTC developments in Camas. However, the City of Camas should build capacity to build connections with LIHTC developers and the

Washington State Housing Finance Commission (WSHFC). The City could annually review the WSHFC's Qualified Allocation Plan (QAP) and work proactively to promote any city sites with scoring advantages to prospective developers. If the City inventoried available parcels and identified those that would be high scorers under the QAP, the City could directly, or through a real estate broker, market these sites to LIHTC developers. This reduces the time and expense developers put into scouting sites and communicates Camas's commitment to bringing in LIHTC housing. In doing this, the City could also focus on attracting LIHTC developers for senior properties, if desired.

Similarly, the City should continue to develop its relationship with the Vancouver Housing Authority to identify roles Camas can play in creating new affordable housing in the city and preserving existing VHA-owned or managed units.

Within this strategy (and in combination with Strategy 6), Camas could also explore the possibility of expanding its Multifamily Tax Exemption program. The City should continue to communicate that program to developers.

Developing Funding Resources

Strategy 8: Explore Funding Source and Cost Reduction Options for Affordable Housing

Periodically, state and/or the federal governments create opportunities for cities and counties to support affordable housing development and retention. This strategy encourages the city to pursue and implement a funding source or combination of sources, as it/they become available.

Possible funding sources may include proceeds from an affordable housing sales tax, loans or grants from the Washington State Housing Trust Fund, or Clark County's Community Development Block Grant (CDBG) or HOME Investment Partnership programs. CDBG funds, for example, may be used to support infrastructure development associated with affordable housing development or improve living conditions in existing low- and moderate-income neighborhoods.

Additionally, if Camas adopts an inclusionary housing policy with an in-lieu fee option, those fees can serve as source of funding for the activities listed above.

Exploring potential funding options may better support opportunities for affordable housing, such as:

- Incenting desired developments (such as affordable housing, senior housing, accessible housing, or other types identified by the City);
- Providing down payment assistance to first time buyers; and
- Helping income-eligible or senior homeowners make needed housing repairs to remain in their homes.

In addition to exploring funding sources for affordable housing, the City of Camas could also explore the possibility of restructuring the City's impact fees to reflect the size of residential structures. The current impact fee system charges the same rate for any single-family residence, regardless of size. For example, a 4,000 square foot single-family home would have the same impact fee as a 1,000 square foot home. Restructuring the impact fee system to a tiered approach based on size has the potential to reduce costs and enhance affordability of smaller, single-family properties. The City could also consider opportunities to reduce costs for existing low- and moderate-income and/or senior homeowners.

City of Camas

Housing Action Plan

APPENDIX

June 2021

Appendix A:
Implementation Plan

Camas's Housing Action Plan (HAP) outlines eight strategies for making advancements towards the City's housing goals over the next several years. For each strategy, implementation will require additional research, analysis, and refinement by City staff. Potential suggested policy or regulation changes based on HAP strategies would then be presented to the Camas Planning Commission for consideration and to City Council for approval and adoption.

The City of Camas Community Development Department develops an annual Work Plan that will incorporate HAP strategies for further research, analysis, and potential implementation. The table below suggests potential next steps, timeframe, partners, and outcome measurements for each strategy. This table is intended to guide Work Plan development but should be used flexibly as implementation of the HAP and planning needs in the Camas evolve.

Table A-1: Suggested Housing Action Plan Strategy Implementation Plan

STRATEGY	START TIMEFRAME	RESPONSIBLE PARTY & POTENTIAL PARTNERS	PROGRESS MEASUREMENTS
STRATEGY #1			
Expand housing opportunity in mixed use and downtown commercial districts	2021	• Planning Division Staff • Planning Commission	• Adoption of zoning amendment • Annual tracking of housing units permitted by type
Suggested Next Steps:	• Consider drafting a zoning code amendment revising the Authorized Use table to allow duplex and 3+ unit attached single-family housing (triplexes, quads, and rowhouses) by right in DC and MX districts and modifying conditions on the permitting of multifamily uses to allow ground-floor residential use on side streets. • Present draft zoning code amendment to Planning Commission for consideration and to City Council for approval and adoption.		
STRATEGY #2			
Consider making targeted rezones during Comprehensive Plan updates	2021/ Ongoing	• Planning Division Staff • Planning Commission	• Adoption of amended zoning map • Share of residential land by zoning district
Suggested Next Steps:	• Identify strategic locations (such as urban nodes, vacant land, and industrial lands) where rezoning may be needed to achieve desired residential mix/density or to reflect a built density that is higher than the current zoning classification. • Research and analyze potential benefits and impacts of rezoning in these areas to determine if rezoning is recommended. • If recommended, draft amended zoning map for consideration by Planning Commission and City Council during Comprehensive Plan updates.		
STRATEGY #3			
Diversify allowed housing types and update related lot and dimensional standards	2022	• Planning Division Staff • Planning Commission	• Adoption of zoning amendment • Annual tracking of housing units permitted by type
Suggested Next Steps:	• Consider drafting a zoning code amendment revising the Authorized Use table to allow cottage housing, duplexes, triplexes, quads, and rowhouses by right in all R zoning districts. Consider whether additional uses should be created (e.g., courtyard apartments, cluster developments) and add to Authorized use table as appropriate. Update minimum and maximum lot dimension standards to be consistent with new housing types. • Consider contracting with a transportation planner or engineer for a study of parking requirements to determine where and/or if off-street parking requirements can be reduced in some areas or for some housing types, and to evaluate alternative means for meeting parking requirements. • Consider updating the City's design standards manual to codify residential design requirements to allow for an administrative approval process for residential designs. • Present draft zoning code amendments and/or amended design standards manual to Planning Commission for consideration and to City Council for approval and adoption.		

STRATEGY	START TIMEFRAME	RESPONSIBLE PARTY & POTENTIAL PARTNERS	PROGRESS MEASUREMENTS
STRATEGY #4			
Strategy 4: Focus on key areas with residential development or redevelopment potential. Expand more mixed-use areas throughout the city.	2021/ Ongoing	• Planning Division Staff • Planning Commission	• Share of residential land by zoning district, including availability of land for mixed-use and multifamily development
Suggested Next Steps:	• Identify strategic locations (such as urban nodes, vacant land, and industrial lands) with residential development or redevelopment potential. • Analyze and evaluate the impact of updated residential zoning designations and permitted uses outlined in Strategies 2 and 3. Assess whether rezoning certain sites would better allow the city to attract desired housing types. Consider opportunities for increasing availability of land for mixed-use and multifamily development. Consider developing sub-area plans for key development/ redevelopment areas.		
STRATEGY #5			
Strategy 5: Continue community conversations around housing and housing for all	2022/ Ongoing	• Planning Division Staff • Communications Staff • Camas Public Library • Elected Officials • Community Organizations • Business Community	• Number of activities and number of persons engaged
Suggested Next Steps:	• Explore and develop avenues for continuing community conversations about housing, housing for all, and housing's connections to economic vitality, jobs, schools, and transportation. Such possible avenues include the Camas Public Library, City website and social media, and collaboration with community organizations.		
STRATEGY #6			
Strategy 6: Communicate available affordable housing resources	2022/ Ongoing	• Planning Division Staff • Communications Staff	• Number of website visitors • Number of inquiries about the City's MFTE or other incentives • Number of affordable housing units built
Suggested Next Steps:	• Develop a page on the City of Camas website dedicated to housing. This page could share information about the current supply of affordable housing in the city and about first time homebuyer assistance available through the Washington State Housing Finance Commission's down payment assistance program and others. • Advertise resources available for housing developers, landlords, and other housing industry professionals, such as the City's Multifamily Tax Exemption (MFTE) and any other potential incentives.		

STRATEGY	START TIMEFRAME	RESPONSIBLE PARTY & POTENTIAL PARTNERS	PROGRESS MEASUREMENTS
STRATEGY #7			
Strategy 7: Build partnerships to develop and preserve affordable housing for individuals, families, and seniors. Explore expansion of the MFTE program.	2023/ Ongoing	• Planning Division Staff • Planning Commission • Communications Staff • Development Community	• Number of developer outreach efforts • Number of inquiries about the City's MFTE or other incentives • Number of affordable housing units built
Suggested Next Steps:	• Review the Washington State Housing Finance Commission's (WSHFC's) Qualified Allocation Plan (QAP) for Low Income Housing Tax Credits (LIHTC). • Develop an outreach strategy to prospective LIHTC, including but not limited to the Vancouver Housing Authority, and developers of affordable housing or other housing types desired by the City of Camas. • Explore the possibility of expanding the City's Multifamily Tax Exemption (MFTE) program. If recommended, present to Planning Commission for consideration and to City Council for approval and adoption.		
STRATEGY #8			
Strategy 8: Explore funding source and cost reduction options for affordable housing	2022/ Ongoing	• Planning Division Staff • Planning Commission	• Adoption of a revised impact fee structure • Number of affordable housing units built or preserved
Suggested Next Steps:	• Develop a strategy for identifying and tracking potential funding opportunities for affordable housing development or retention. As possible opportunities become available, evaluate suitability in Camas and, if an opportunity is recommended by staff, present to Planning Commission and City Council for consideration. • Explore the possibility of restructuring the City's impact fees to reflect the size of residential structures. If this approach is recommended by staff, develop a revised structure for presentation to Planning Commission and City Council. • Consider opportunities to reduce costs for existing low- and moderate-income and/or senior homeowners.

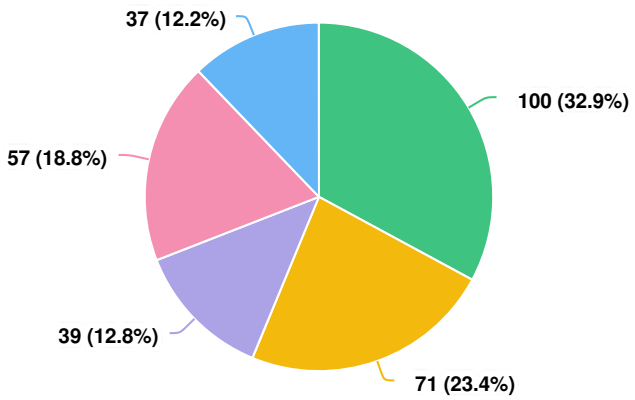
Camas Housing Survey



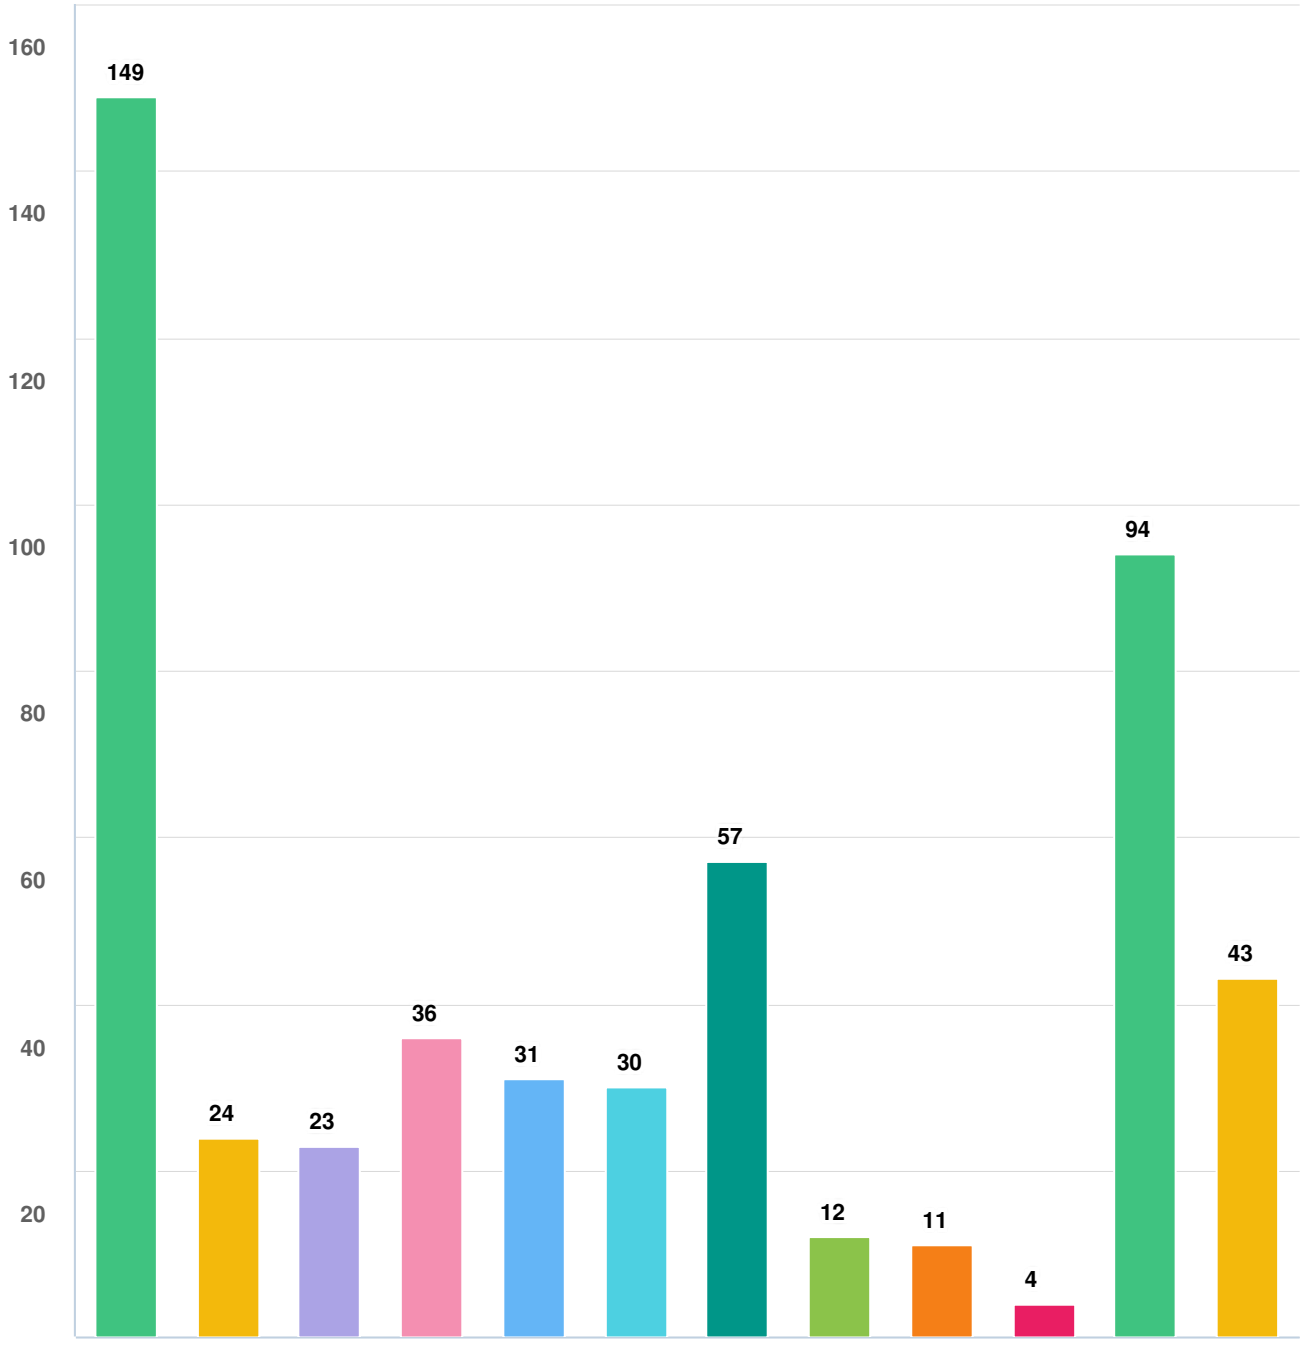
SURVEY RESPONSE REPORT

13 August 2020 - 22 June 2021

PROJECT NAME:
Your Housing Ideas

SURVEY QUESTIONS

Q1 How satisfied are you with the housing options currently available in Camas?



Question options

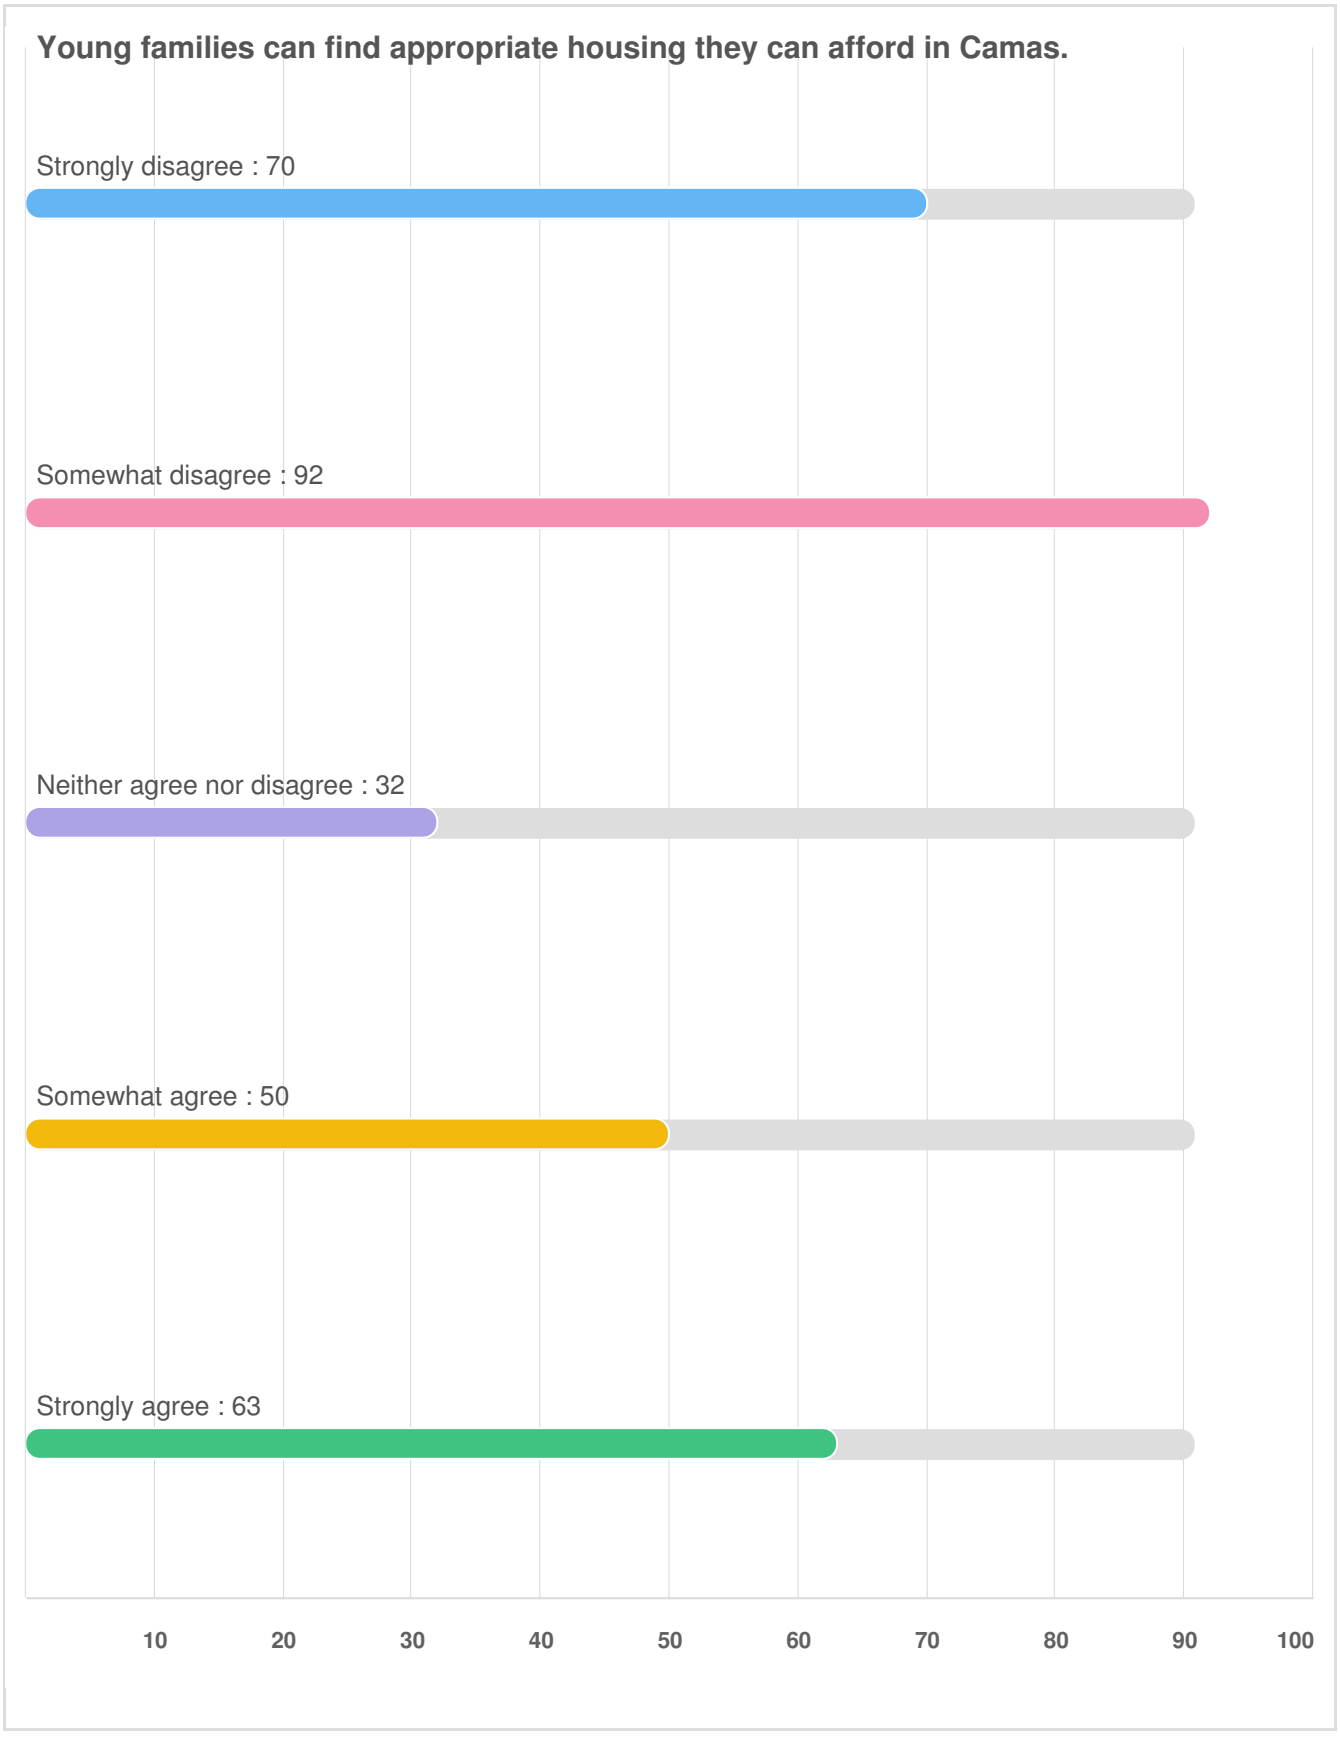
Very Satisfied | Somewhat Satisfied | Neither Satisfied nor Dissatisfied | Somewhat Dissatisfied | Very Dissatisfied

Optional question (304 response(s), 3 skipped)
Question type: Radio Button Question

Q2 Which factors most limit the housing choices available to you in Camas? Select up to three.

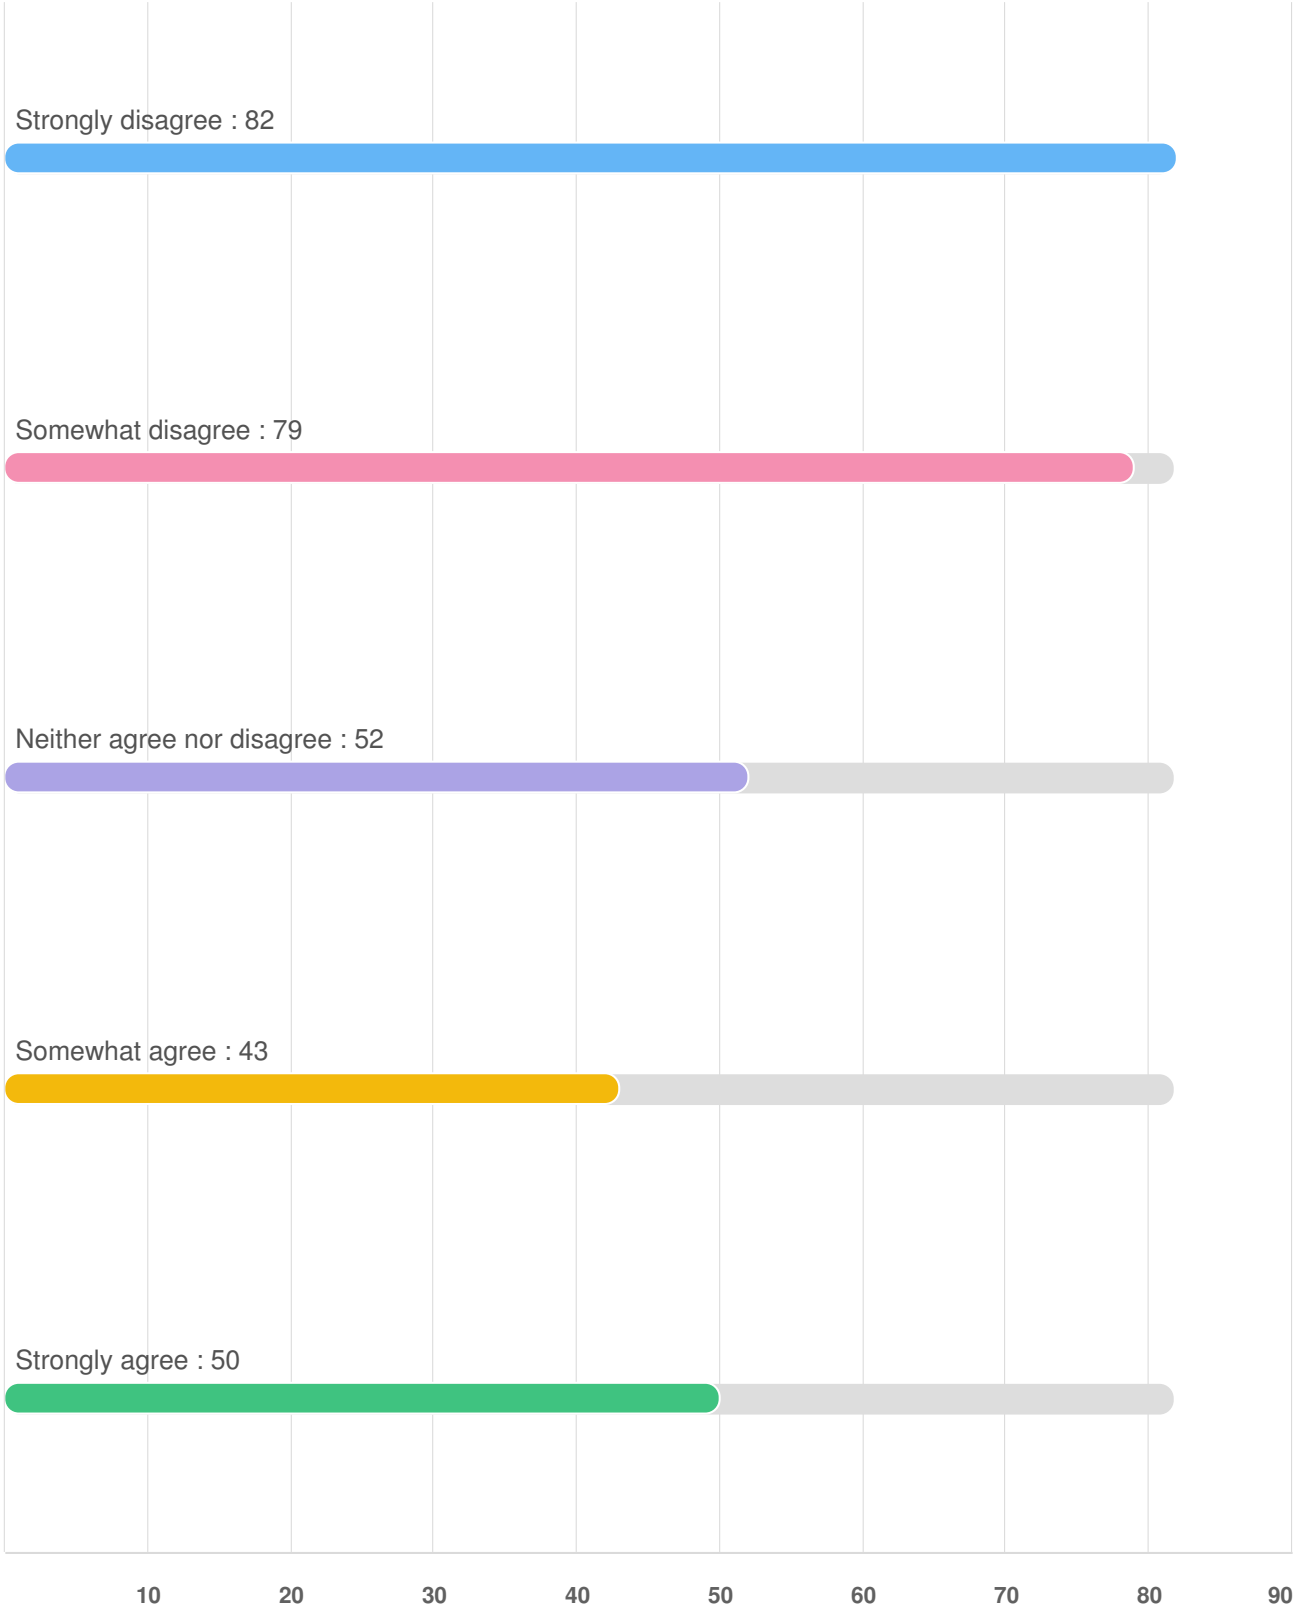
Question options

Cost
Location (too far from work, school, or other destinations)
Too small for my needs
Too large for my needs
Too few units available for sale
Too few units available for rent
Lacking desired amenities (outdoor space, parking, etc.)
Units are not accessible to persons with disabilities
Difficulty qualifying for a mortgage loan
Difficulty qualifying for a lease
None of these factors limit my housing choices
Other (please specify)

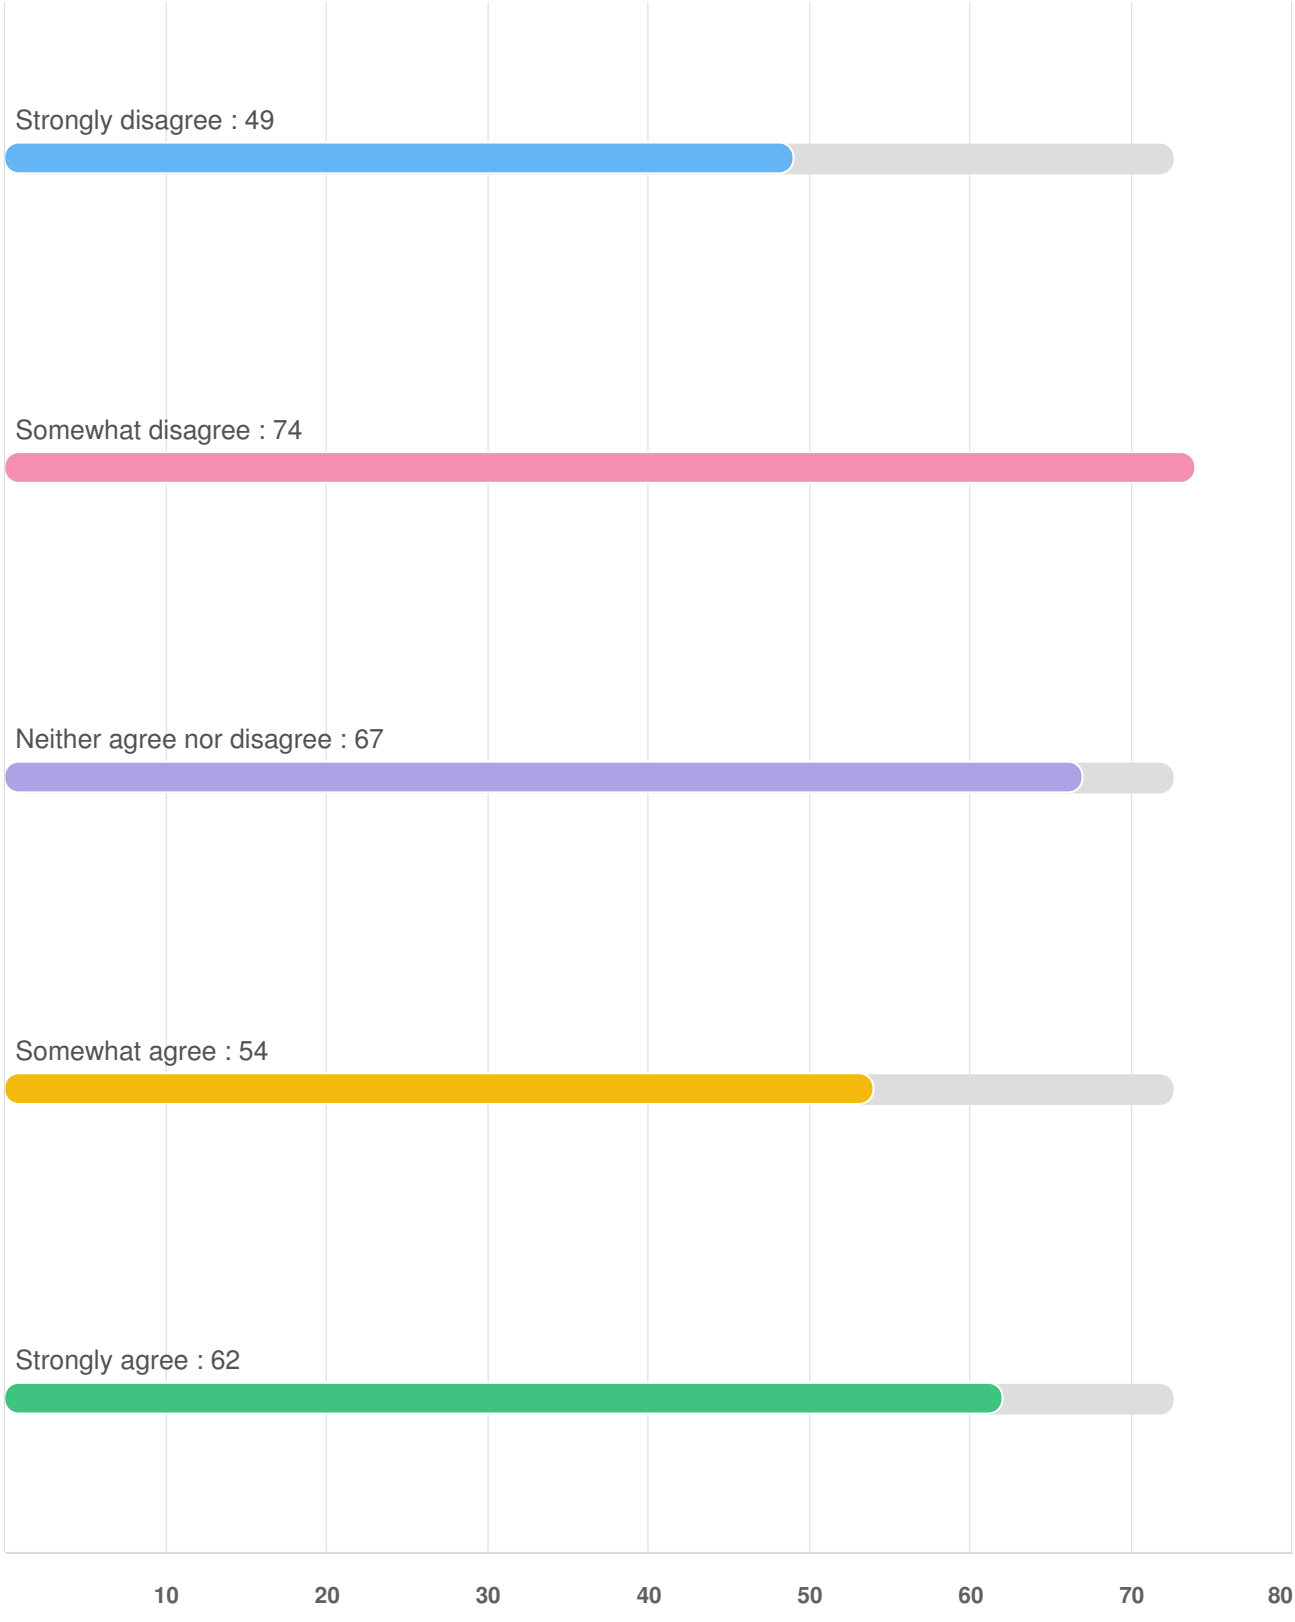


Optional question (306 response(s), 1 skipped)
Question type: Checkbox Question

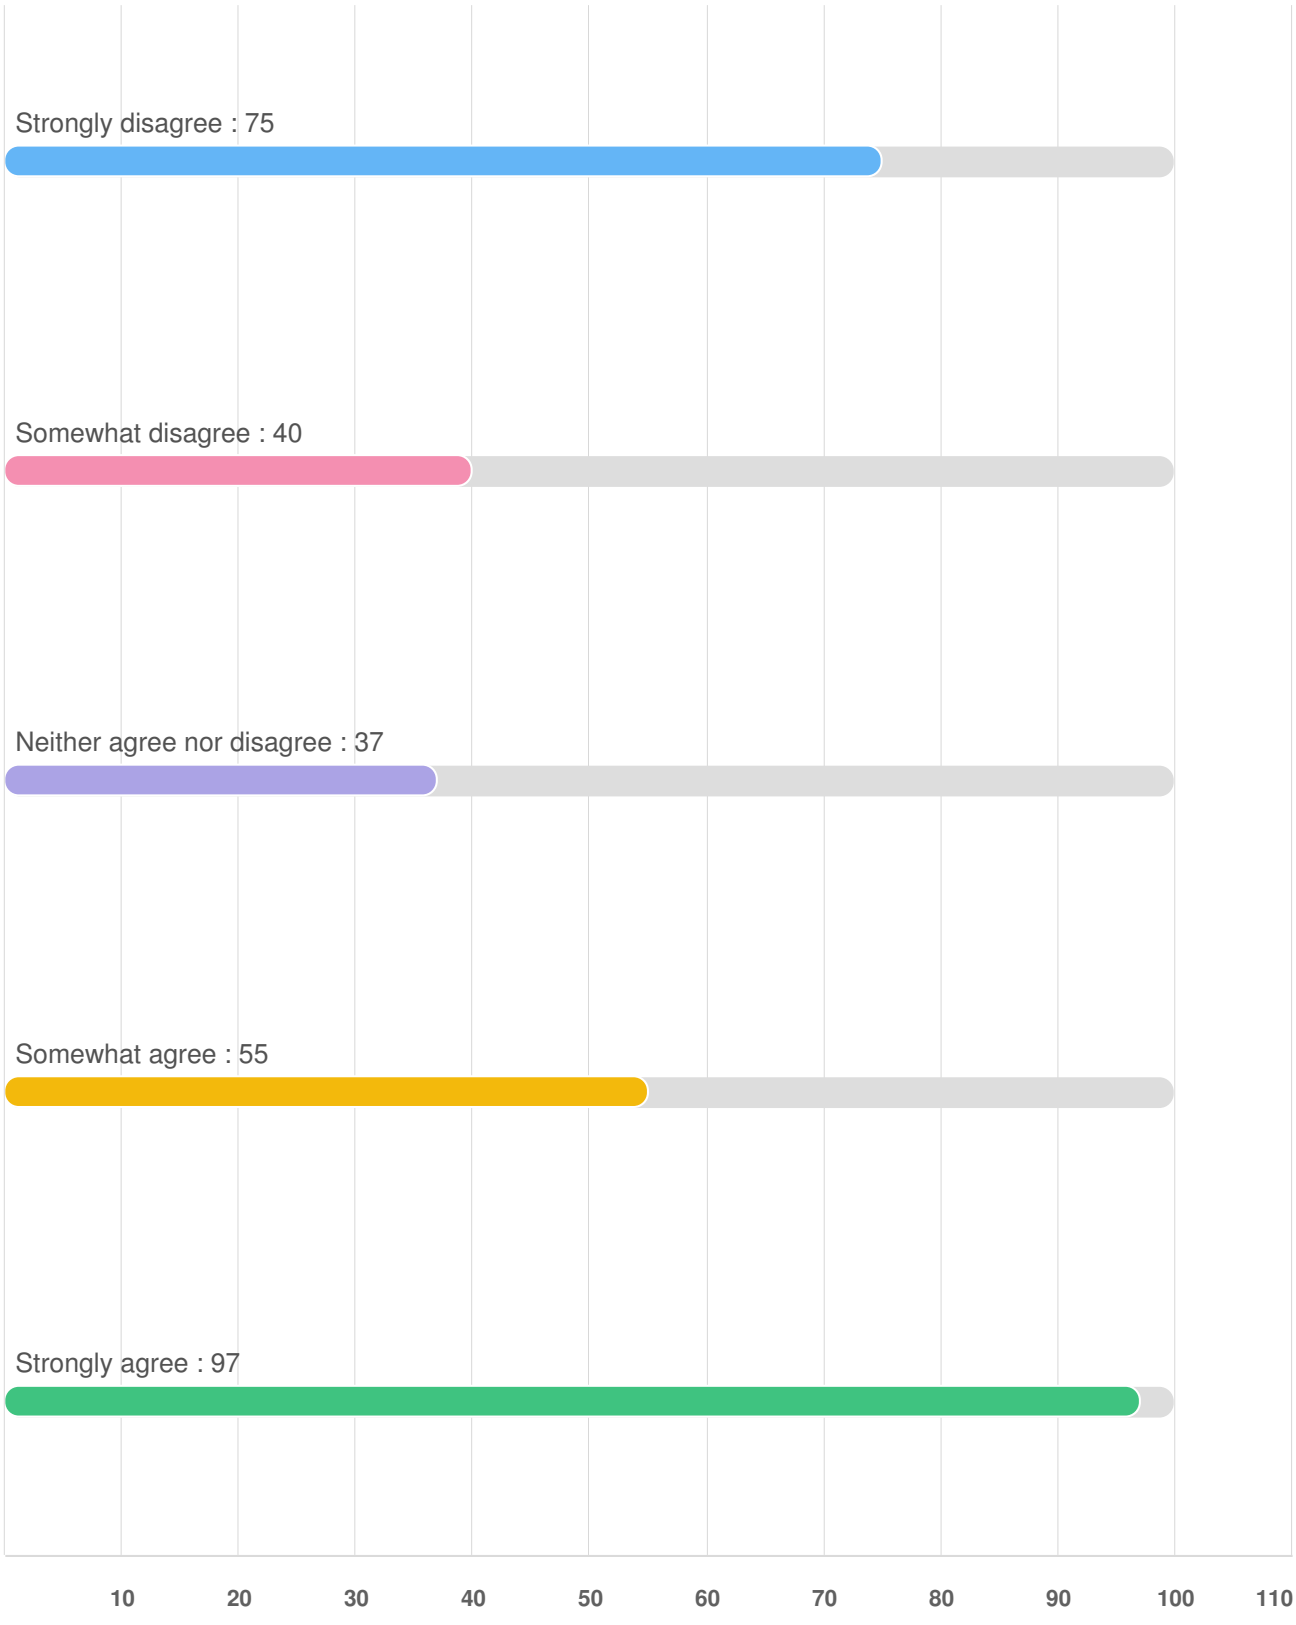
Q3 Please indicate how strongly you agree with the following statements.



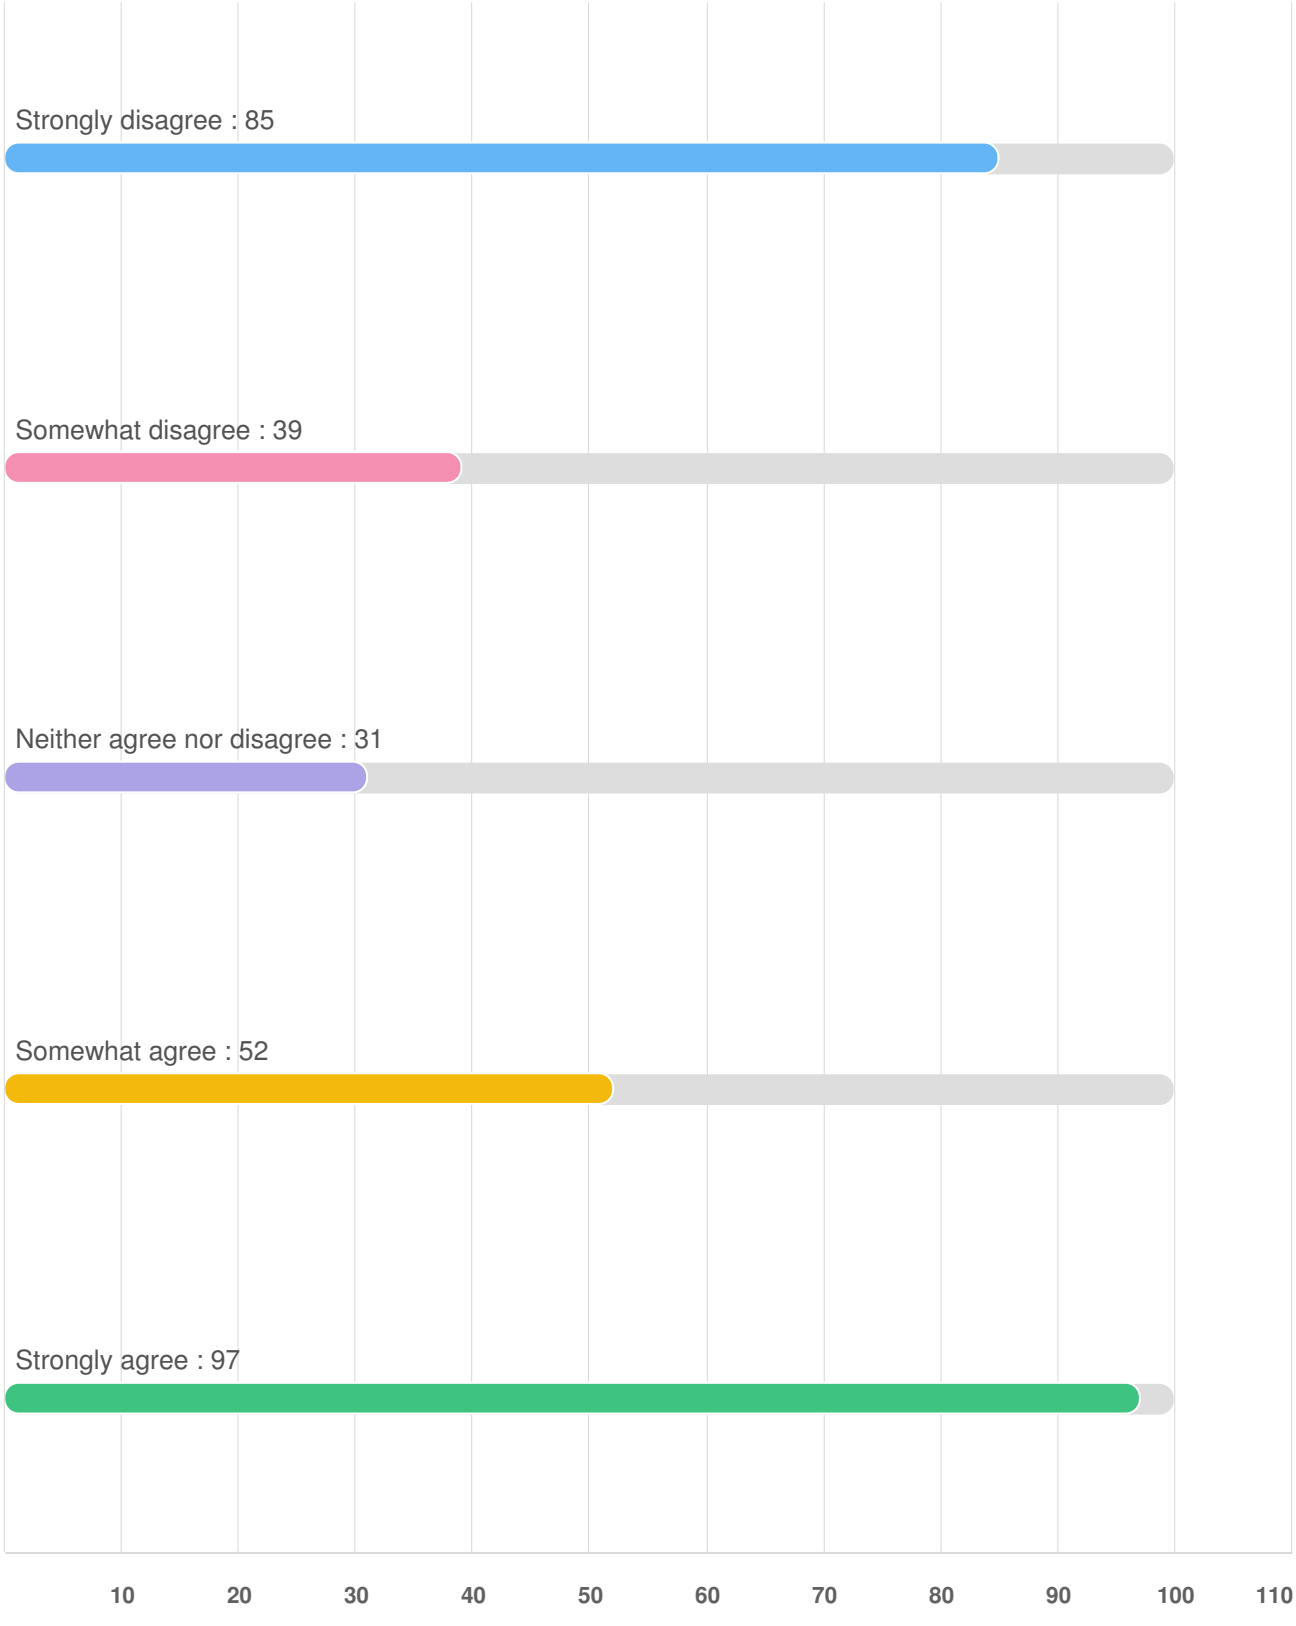
Optional question (307 response(s), 0 skipped)
Question type: Likert Question



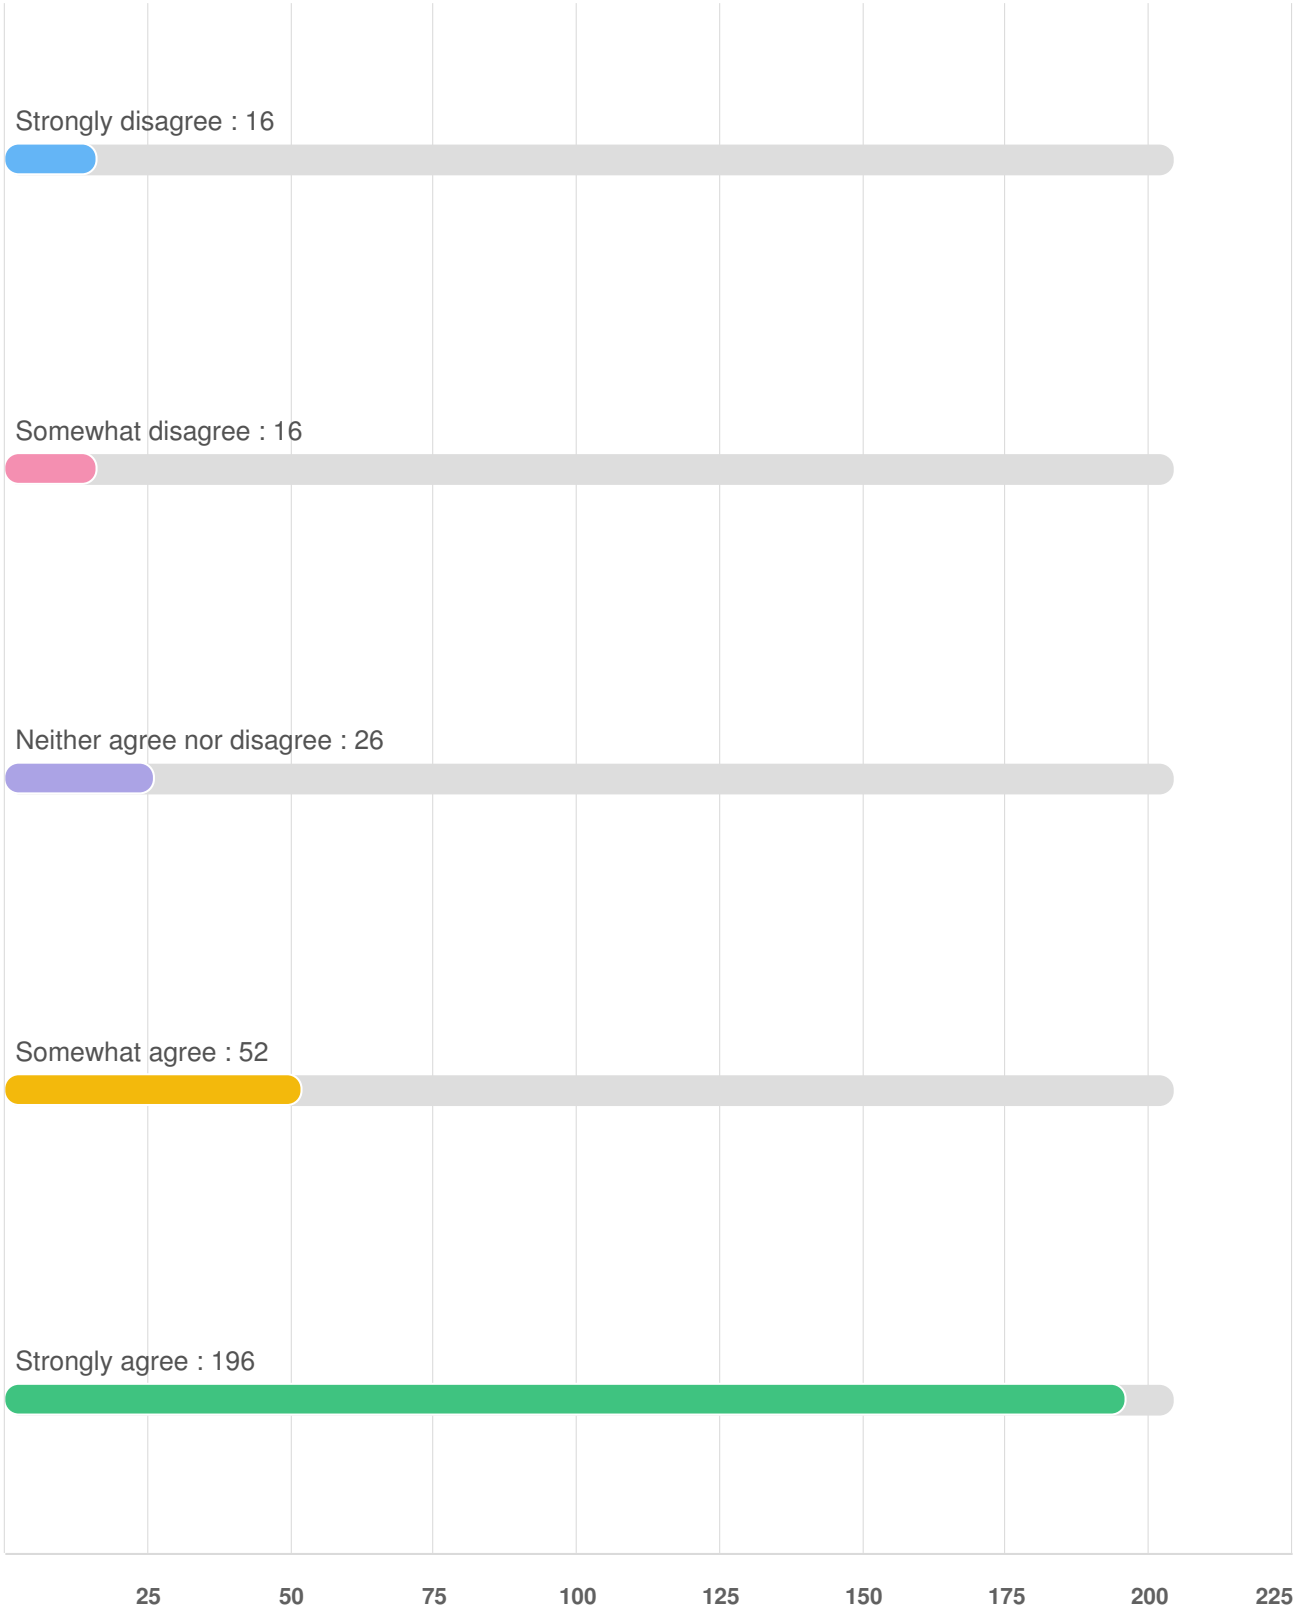
Q3 Please indicate how strongly you agree with the following statements.



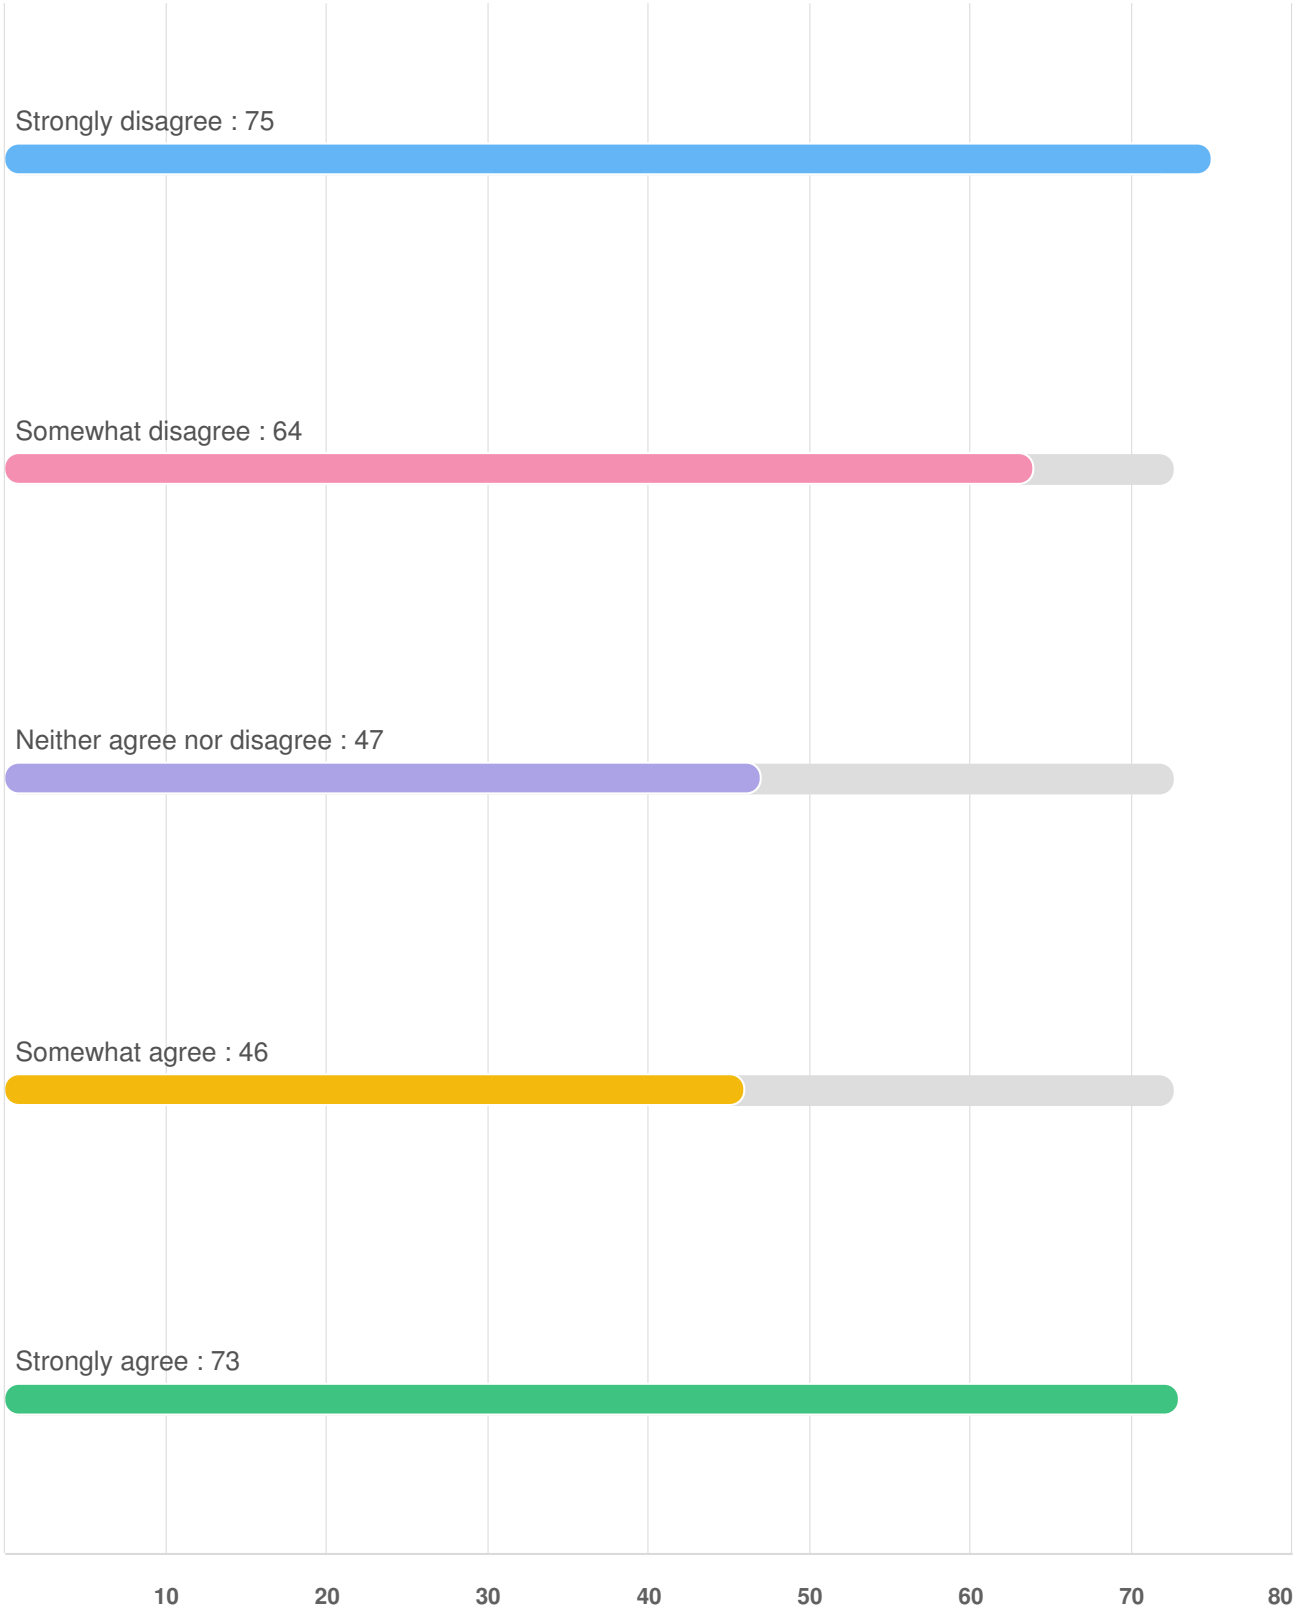
Seniors can find appropriate housing they can afford in Camas.



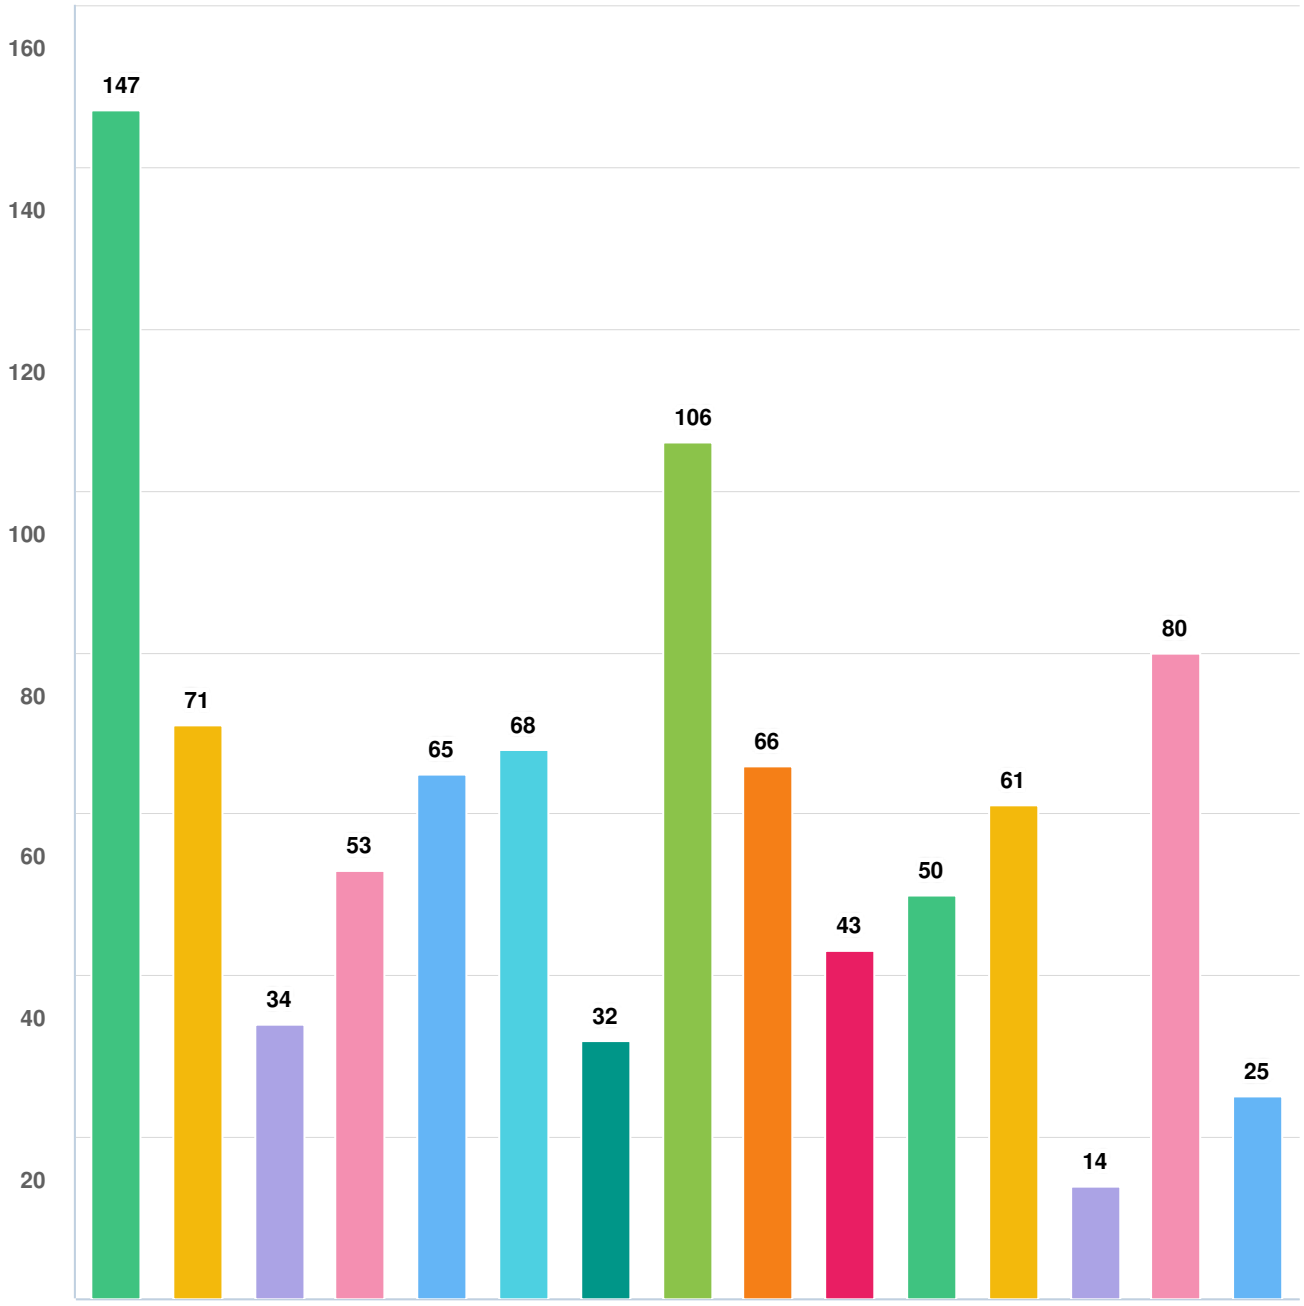
People who work in Camas can find appropriate housing they can afford in Camas.



Camas needs greater variety in terms of housing types and prices.



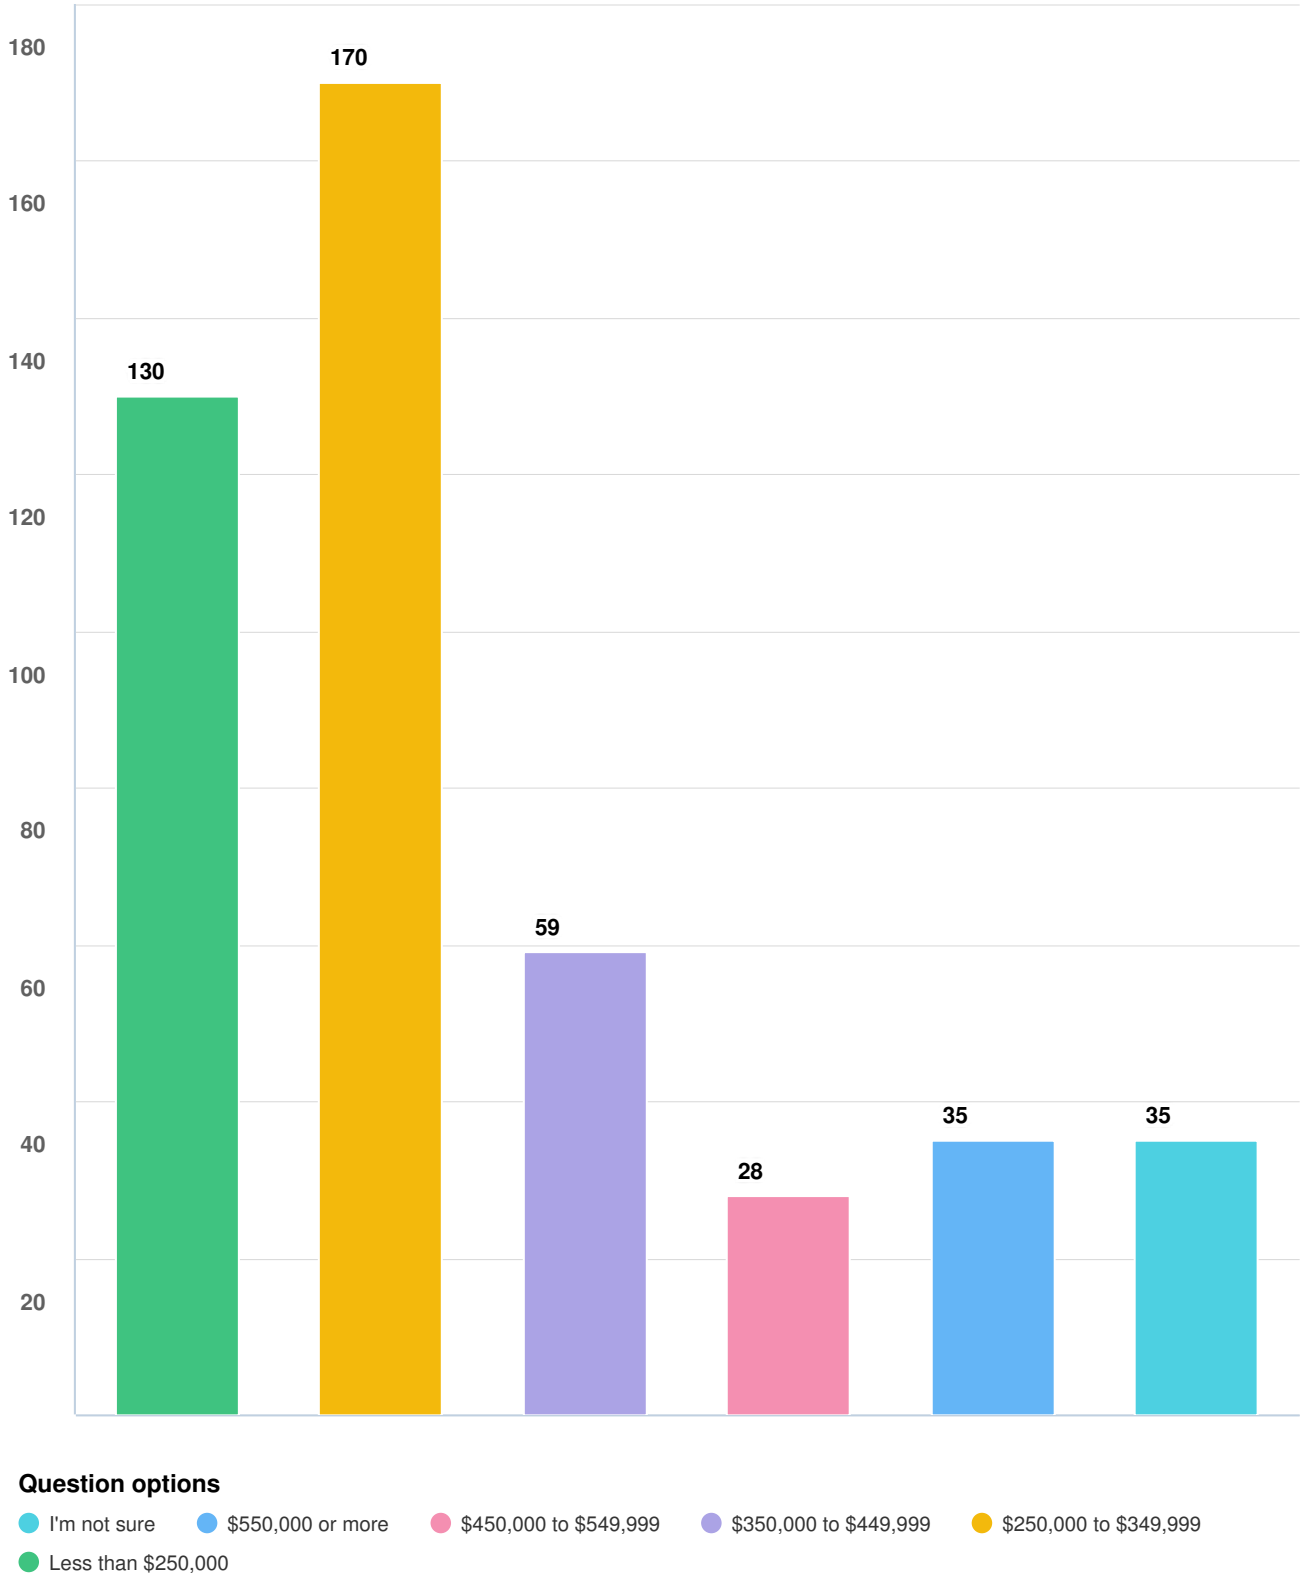
Lack of affordable housing is a serious issue in Camas.



Camas should be cautious about any new residential development activity to preserve the character of the community.

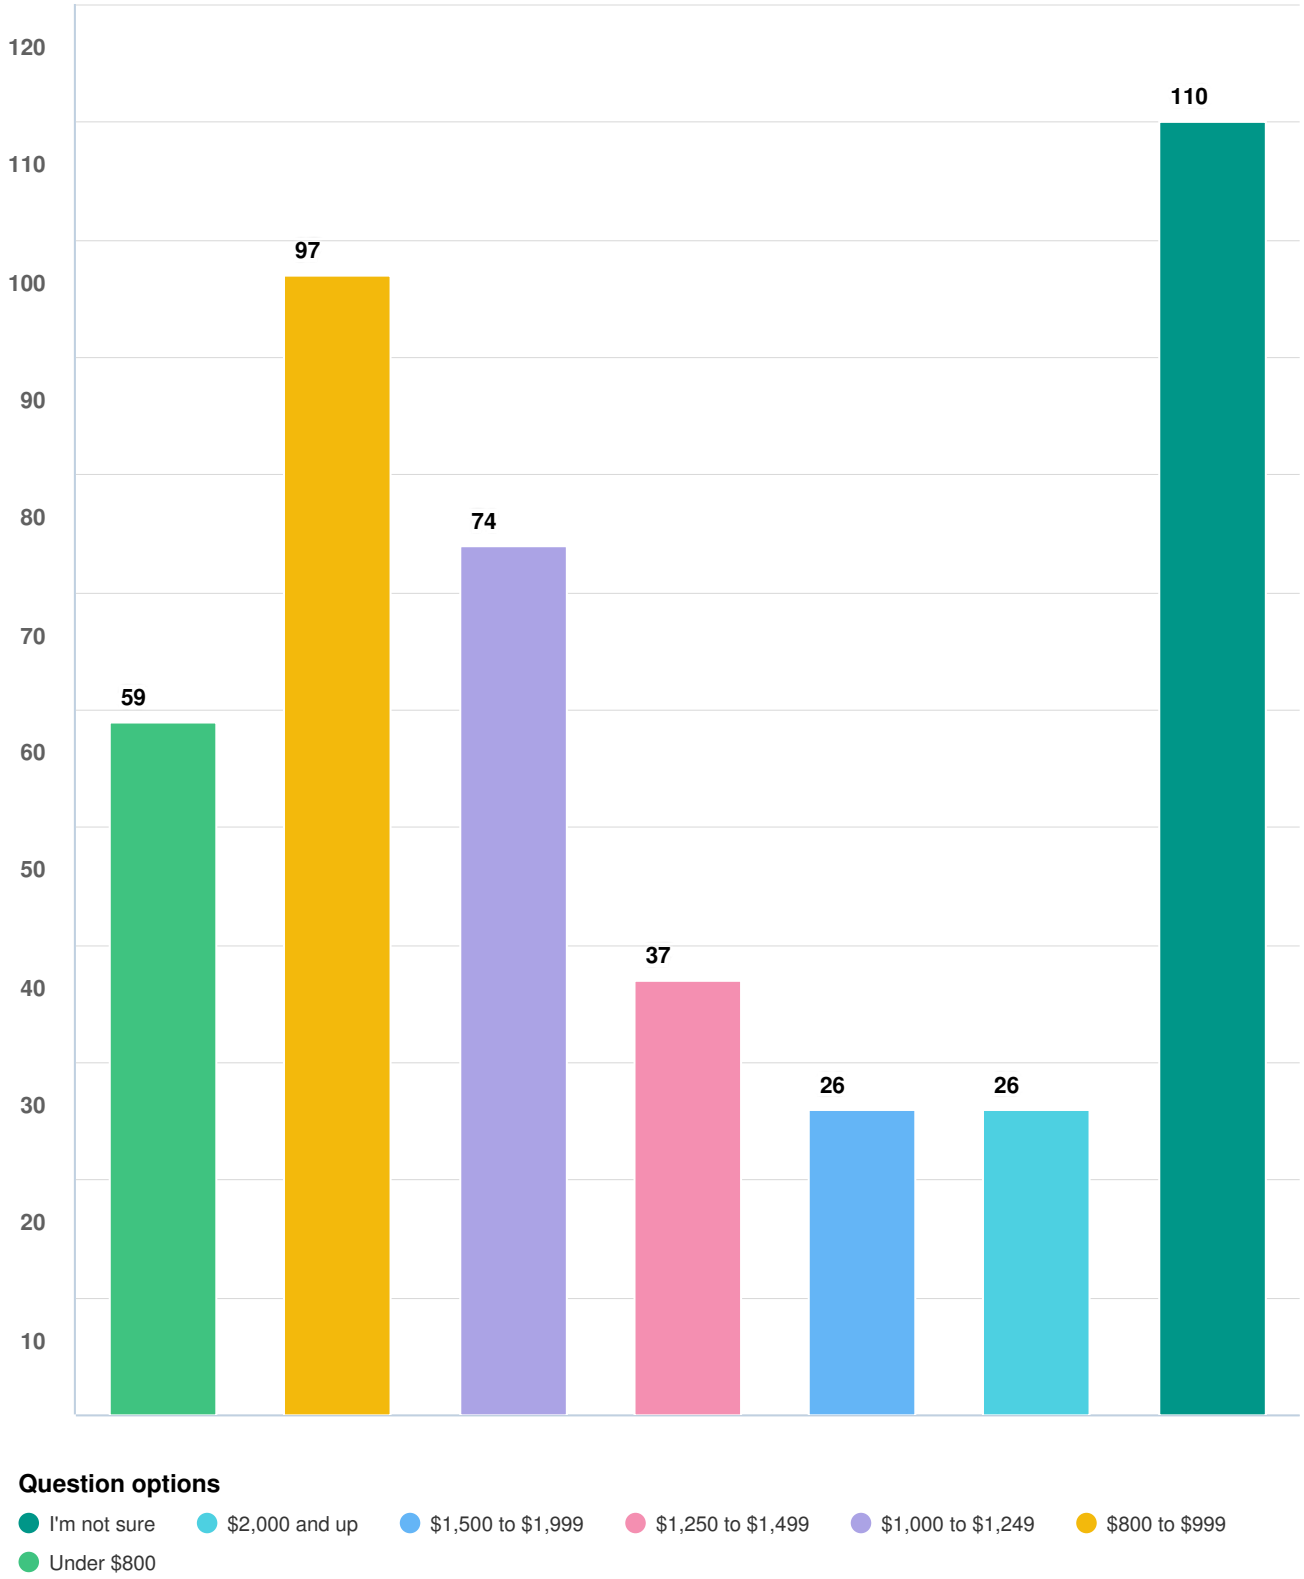
There is enough housing at appropriate sizes and costs to meet the needs of our residents for the next 20 years.

Q4 Which of the following types of housing does Camas need more of? Check all that apply.



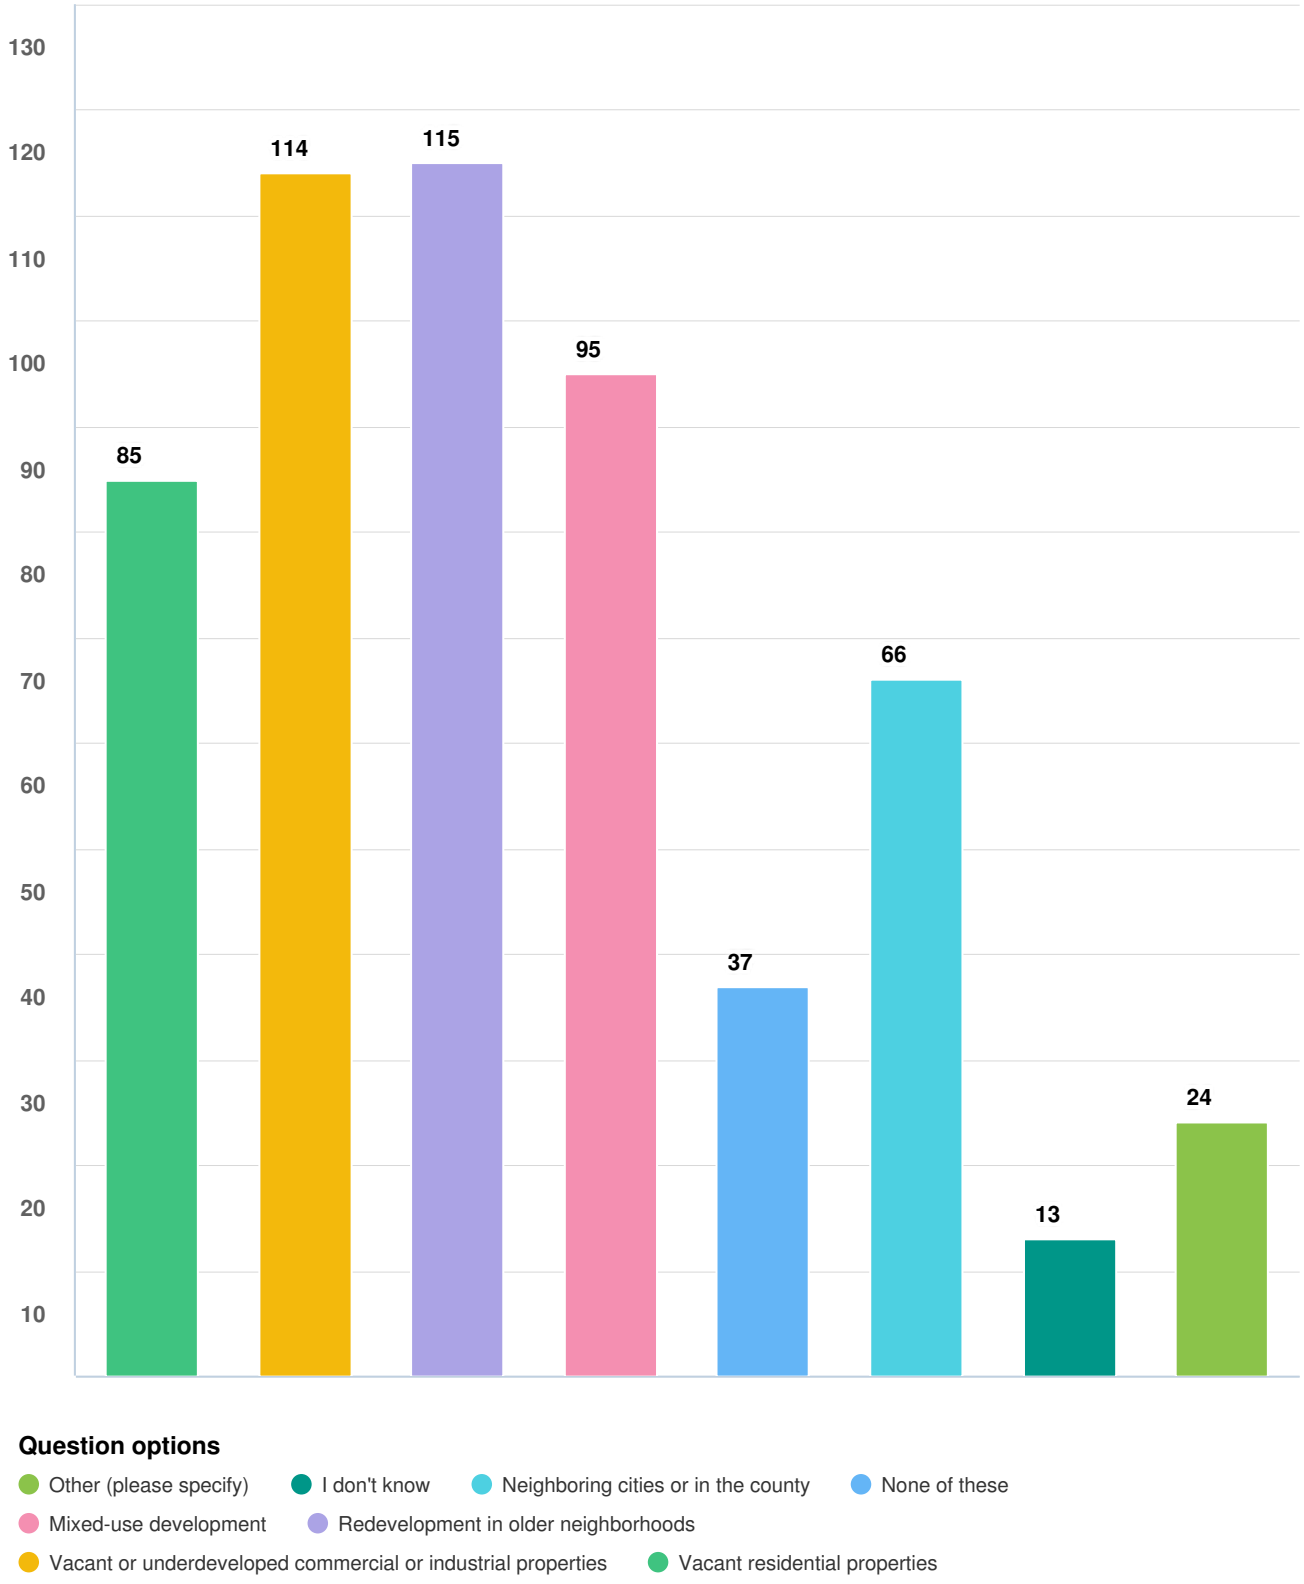
Question options

Other (please specify) · There is enough housing to meet our city's needs · I'm not sure
Accessory dwelling units (e.g., basement apartments, granny flats, carriage houses) · Tiny homes
Supportive housing for people with special needs · Accessible housing/assisted housing for people with disabilities
Senior housing · Luxury apartments · Mid-range apartments · Affordable/workforce apartments
Duplexes, triplexes, or four-plexes · Rowhouses · Large single-family homes · Small single-family homes



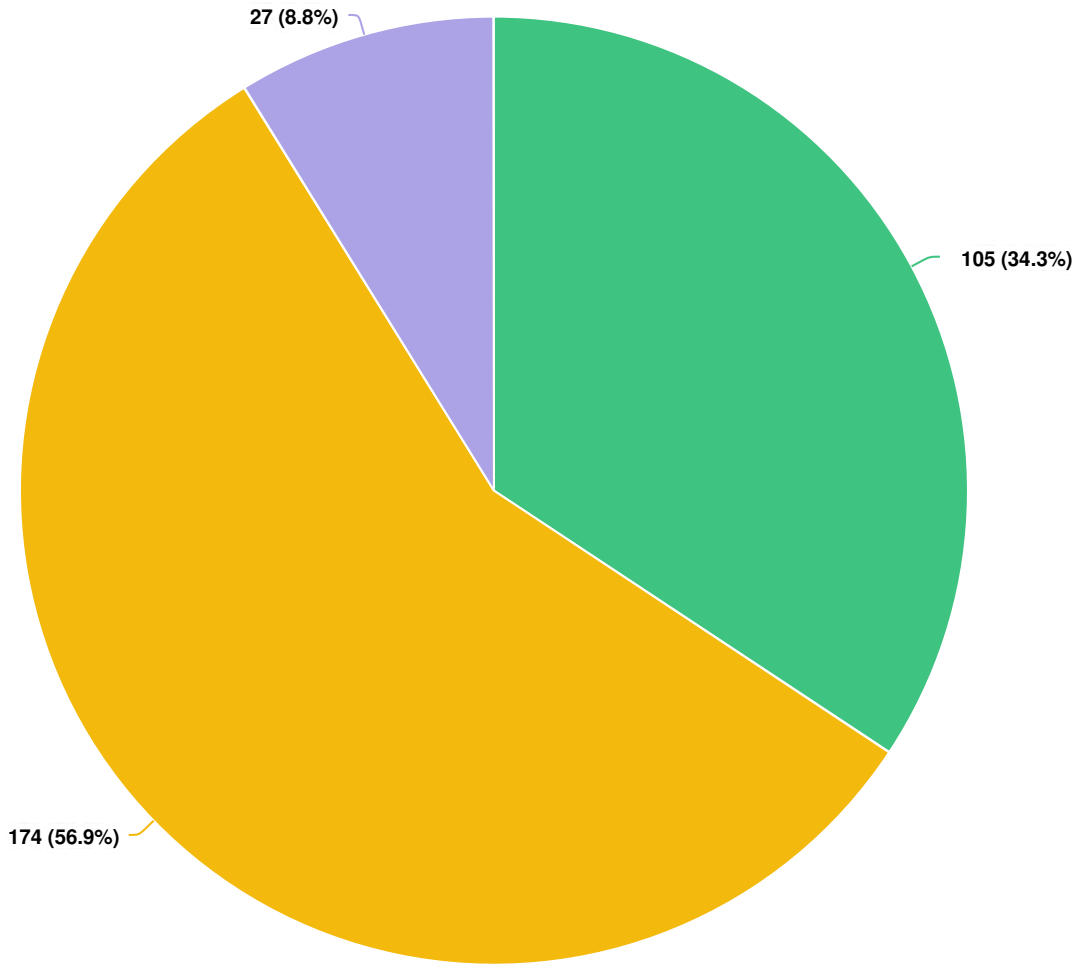
Optional question (306 response(s), 1 skipped)
Question type: Checkbox Question

Q5 In your opinion, what price range(s) have the biggest shortage of for-sale housing in Camas? Select up to two.



Optional question (302 response(s), 5 skipped)
Question type: Checkbox Question

Q6 In your opinion, what rental range(s) have the biggest shortage of rental housing in Camas? Select up to two.

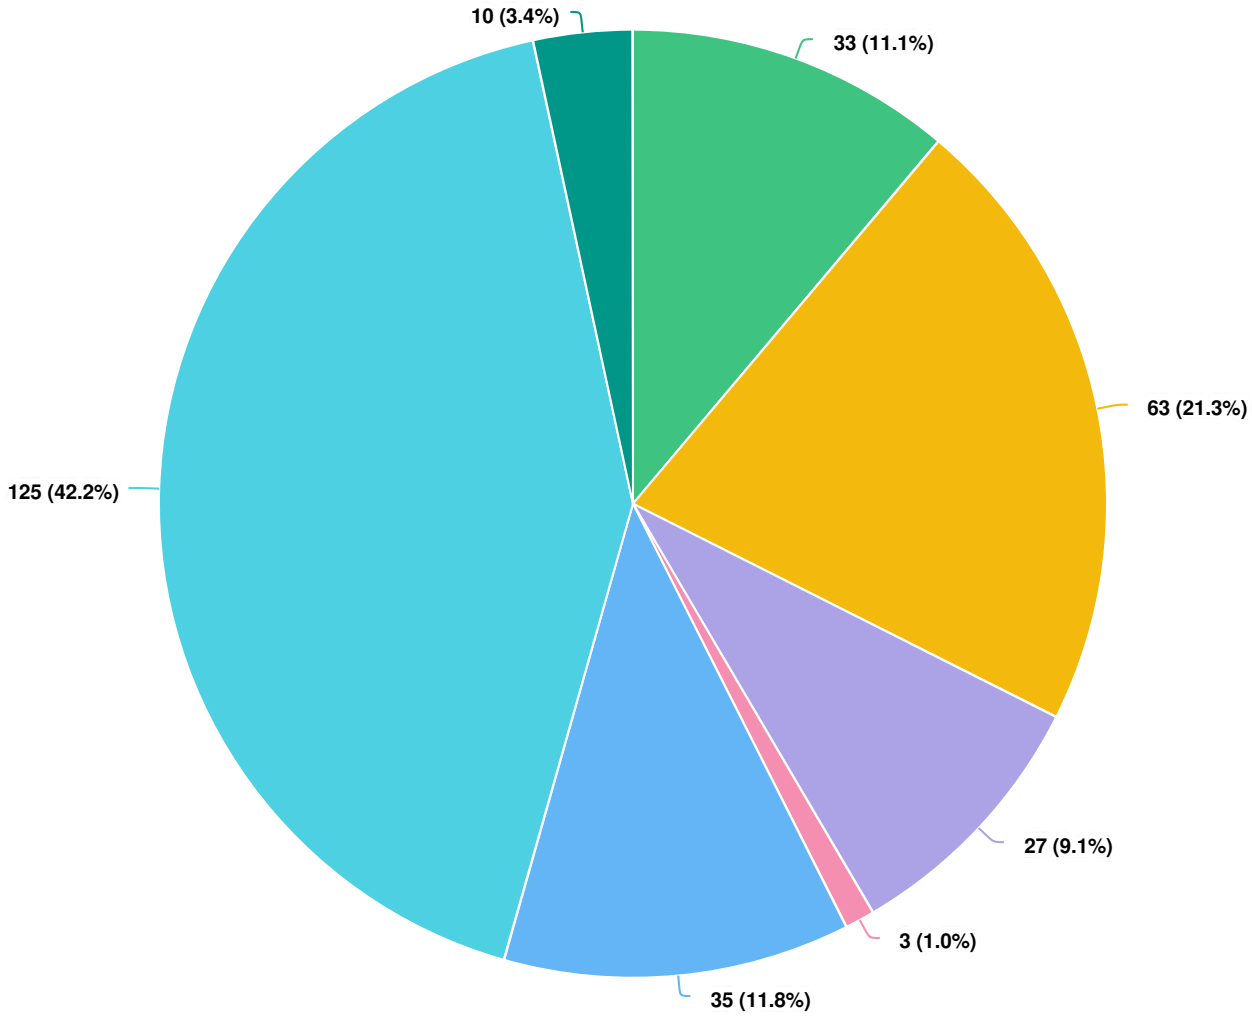


Optional question (303 response(s), 4 skipped)
Question type: Checkbox Question

Q7 Thinking about Camas over the next 20 years, where do you think new housing would be most appropriate, considering that it could be any type (e.g single family homes, ADUs, rowhouses, apartments, etc.)? Check all that apply.

Optional question (305 response(s), 2 skipped)
Question type: Checkbox Question

Q8 If you are a homeowner, have you ever considered adding an Accessory Dwelling Unit (ADU) to your property?

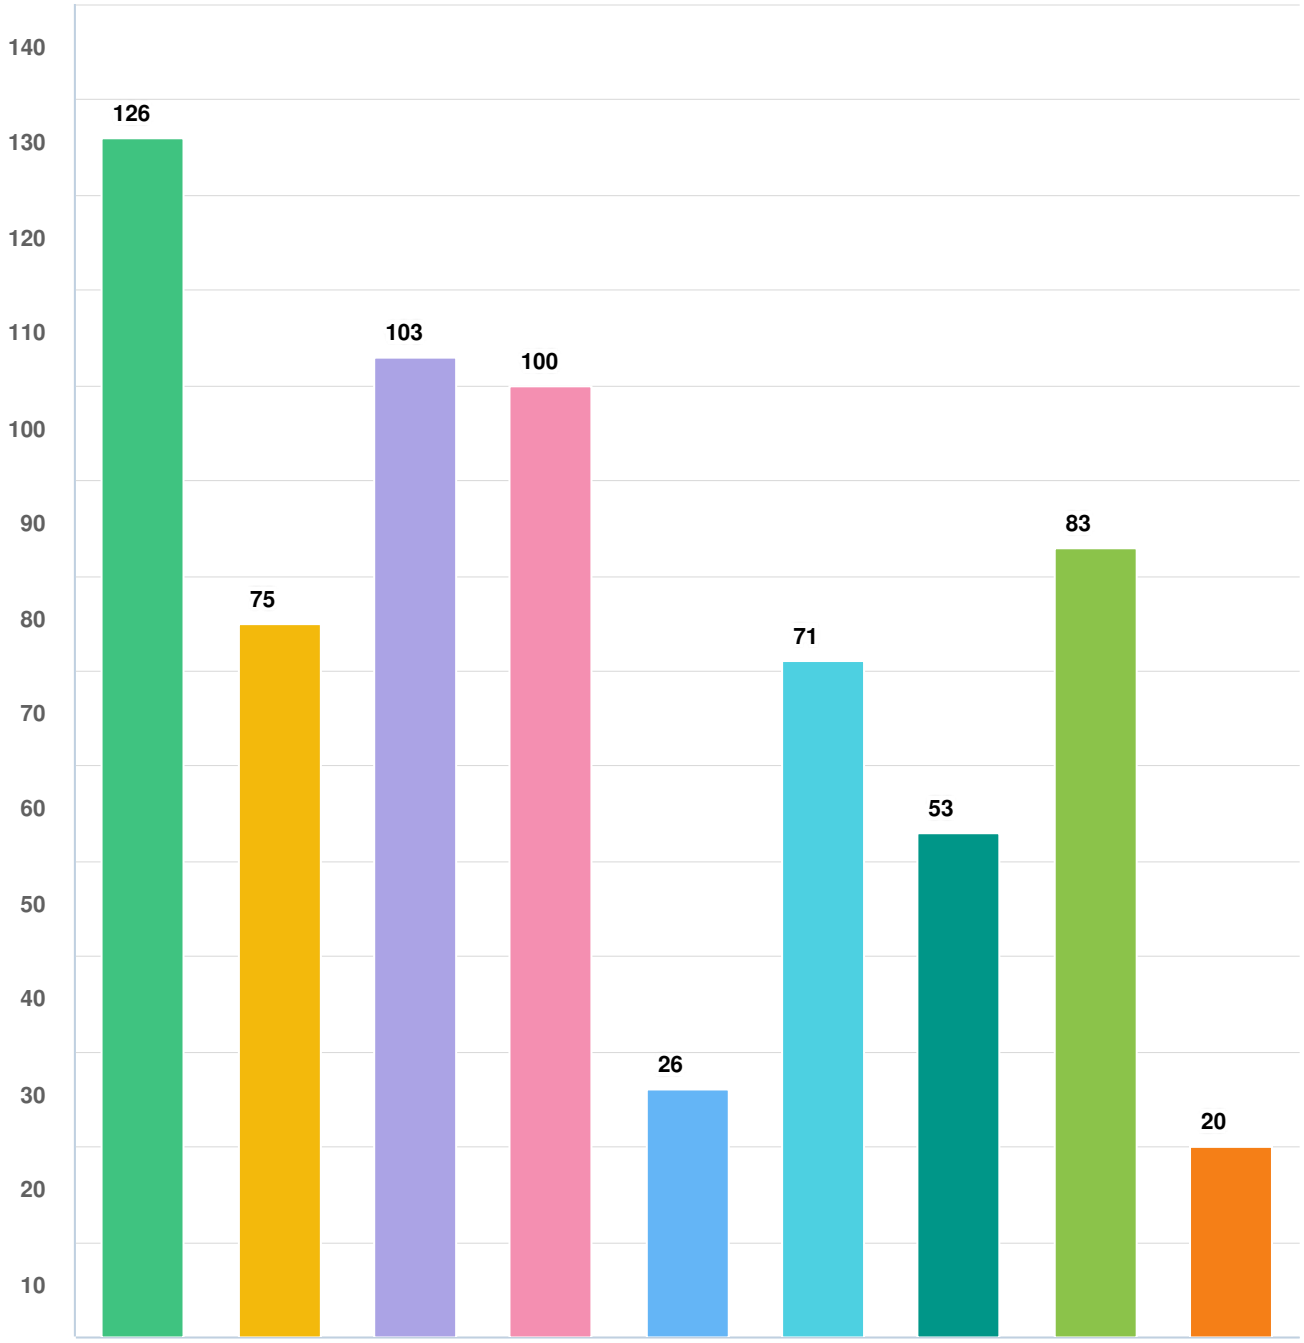


Question options

Not applicable / I am not a homeowner No Yes

Optional question (306 response(s), 1 skipped)
Question type: Radio Button Question

Q9 If you considered adding an ADU to your property, what would be your primary intent in doing so?

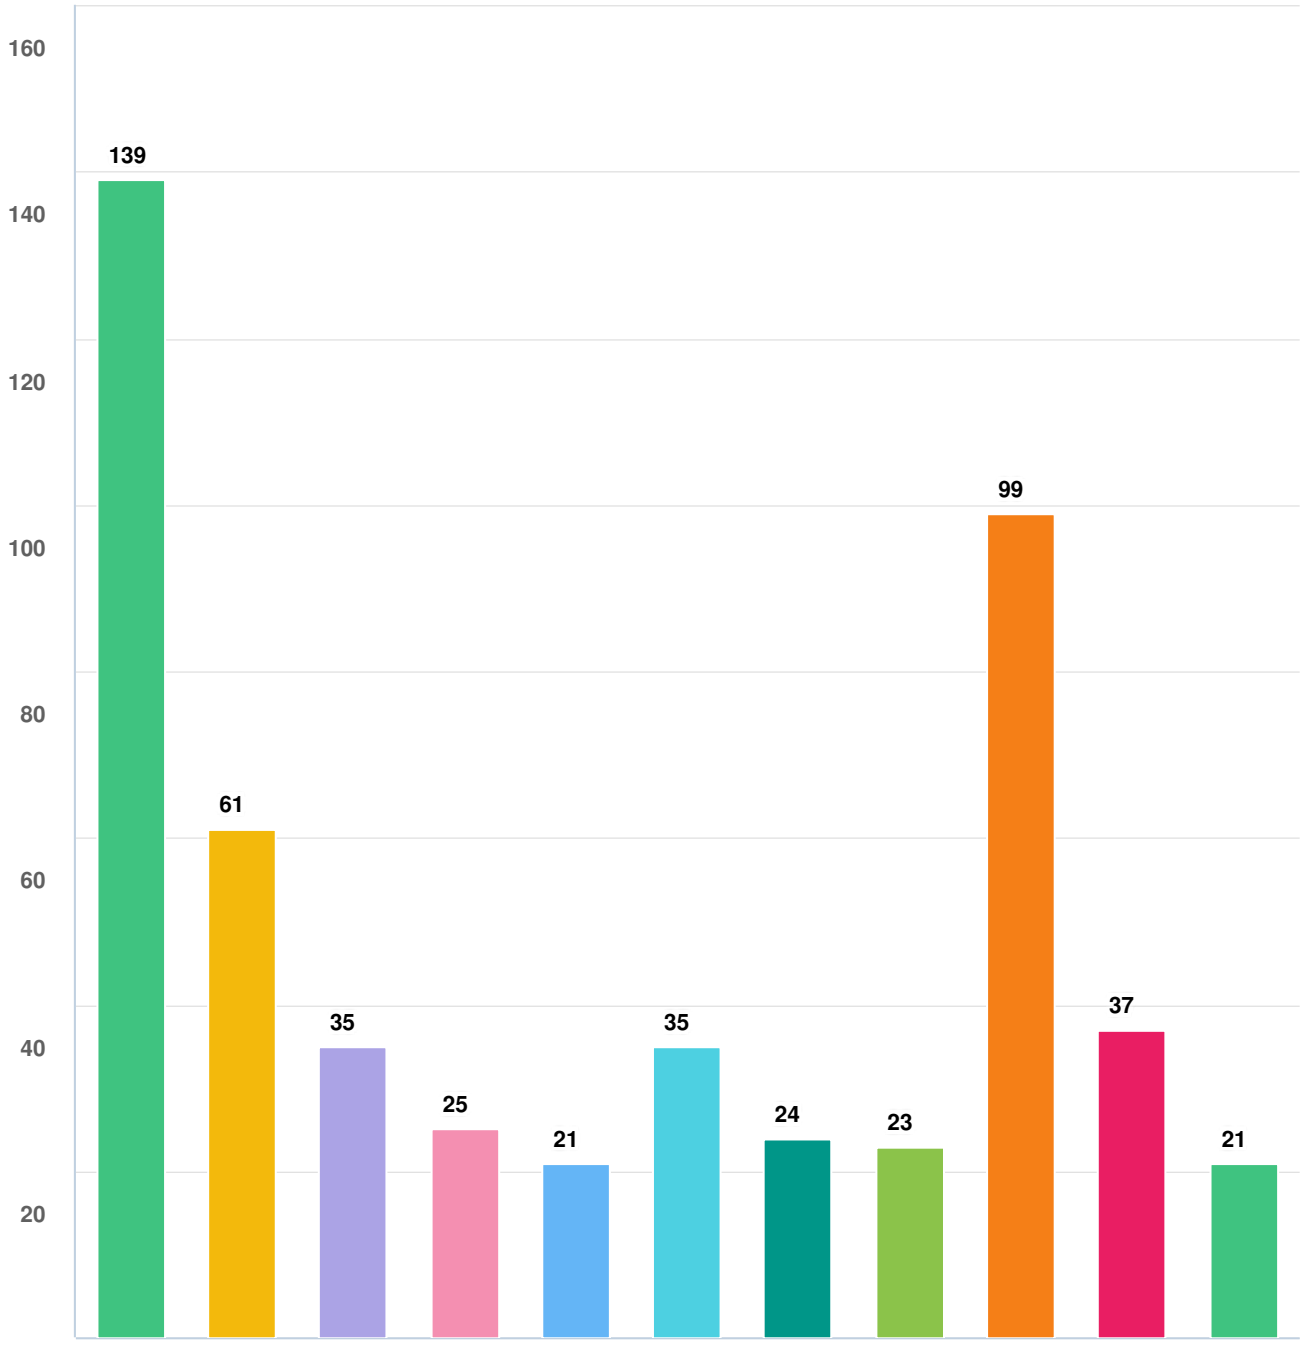


Question options

- Other (please specify)
- Not applicable
- Earn extra income by renting the space
- Increase the value of your home
- Create a guesthouse
- Provide a residence for relatives or friends
- Provide a residence for someone in need of care or a caregiver

Optional question (296 response(s), 11 skipped)
Question type: Radio Button Question

Q10 What types of assistance may be helpful to address housing affordability needs in Camas? Check all that apply.



Question options

Other (please specify) · None of the above · Assistance with language or cultural barriers · Assistance for people who are homeless or at-risk of homelessness · Help with rental payments · More affordable rental units · First-time homebuyer down payment assistance · Homeownership preparation / credit counseling classes · More affordable for-sale units

Optional question (304 response(s), 3 skipped)
Question type: Checkbox Question

Q11 Are any of the following barriers to obtaining housing in Camas? Check all that apply.

Question options

Other (please specify) I'm not sure None of the above Bias based on race or ethnicity
Discrimination or steering by real estate agents Discrimination by landlords or rental agents
Discrimination by mortgage lenders Difficulty qualifying for a lease Difficulty obtaining a mortgage
Housing is too big or too small Lack of affordable housing

Optional question (303 response(s), 4 skipped)
Question type: Checkbox Question

Q12 Are there any other issues or concerns you have about housing in Camas?

Screen Name Redacted 9/28/2020 02:19 PM	Too many cookie cutter neighborhoods that are taking over open space. Growth needs to be managed and be thoughtful.
Screen Name Redacted 9/28/2020 02:24 PM	Too much large single family housing in the hills, without enough environmental regulation.
Screen Name Redacted 9/28/2020 02:42 PM	Too many HOA's; vacant bank-owned properties; prices too high for quality of homes (both old and new); lack of housing downtown
Screen Name Redacted 9/28/2020 03:10 PM	It seems majority of residential neighborhoods are redundantly governed by private HOA. There should be easy way for new owners or potential new owners to opt-out of HOA rules and be govern solely through Camas city government.
Screen Name Redacted 9/28/2020 03:13 PM	Planning for increased housing in downtown/close to downtown for best use of space while considering parking. It's unfortunate that the people who work in downtown and make it so wonderful can not always afford to live in Camas.
Screen Name Redacted 9/28/2020 03:17 PM	Starter homes at 450k is unacceptable. 20% down for a new family starting out is not realistic. Inventory below 450k is hard to attain (multiple offers).
Screen Name Redacted 9/28/2020 03:40 PM	Camas is trying to jam way too much housing in too small an area. We already have major issues with runoff spoiling the lakes and creeks. It is not environmentally appropriate to build so much when it spoils the waterways. Also, there isn't enough fresh water supply for more homes.
Screen Name Redacted	Any new development should

9/28/2020 04:48 PM	consider development through the lens more sustainable development, reducing climate change, and promoting healthy lifestyles.
Screen Name Redacted 9/28/2020 06:15 PM	Lot sizes which are very small and offer nearly no outside open space.
Screen Name Redacted 9/28/2020 06:47 PM	Logistics. Everything gets tied up in the process and the fees are obscene. Camas can't even handle the traffic currently. Roads must be 4 lanes and roundabouts two lane. Drrr
Screen Name Redacted 9/28/2020 07:12 PM	I don't understand why we let developers squeeze so many houses on a lot and tear down all the trees.
Screen Name Redacted 9/28/2020 10:36 PM	I don't want huge tracks of houses that are super close together, all look the same with no neighborhood character, and have tiny streets taking over nature areas. I don't want Camas to look like California I want it to keep it's character. The smaller houses with distinct character in the Crown park area are much more pleasant than the new developments around Woodburn for example. I would rather variety all mixed into a neighborhood to help varieties of people to intermix and give neighborhoods interest.
Screen Name Redacted 9/28/2020 11:32 PM	The way Camas has allowed developers to ruin the Woodburn school area is shameful. It is easy to see that they allowed this for the high property tax amount we all have to pay. Each home having to pay these high property taxes twice a year - we get it it's about the money. The homes are crammed together, flag lot upon flag lot until they look like apartments complete with parking lots because there are TOO many homes in a square foot and they can't even park their cars in their 'driveways' ...The homes don't even

	appear to be up to code (they are closer than 5 ft) to the next home - it looks disgusting and takes away from our Camas charm - WE despise this - (except Californian's) so PLEASE do us all a favor and DO NOT continue to do this sort of building - it ruins our town...in many ways. So instead have the homes a respectable distance and sprinkled throughout Camas within older neighborhoods as well as new developments and in outer lying areas -- Keeping in mind the tree's - they are disappearing - WE do not want to end up a little Silicon Valley - let's be mindful of our resources and environment before they are gone - and we are nothing more than just another 'big' town.
Screen Name Redacted 9/29/2020 05:36 AM	Too many houses close together. Wrecking land that animals were using as their home.
Screen Name Redacted 9/29/2020 05:47 AM	Avoid building apartments as it brings values down along with other social issues. Leave the apartments in Vancouver
Screen Name Redacted 9/29/2020 09:50 AM	City infrastructure development needs to come before the housing development. The infrastructure needs to be paid by the developers and new homeowners. Existing homeowners should not bear the cost of new development. Any consideration of ADU or increased density in existing neighborhoods needs to include street and parking needs. Increased density will quickly change the culture and dynamics of Camas. There are plenty of lower cost housing options within minutes of Camas. Why do we feel that Camas needs to offer all types of housing? We are a suburb of Vancouver and Portland not a stand-alone city.

Screen Name Redacted 9/29/2020 10:21 AM	Probably have enough single-family homes planned. I'm concerned about schools being able to handle the increase in population.
Screen Name Redacted 9/29/2020 01:33 PM	Too many developments going in. The urban growth needs to slow. And the developments that are going on, are too tight and close to neighbors. I can't even find a house to buy that has a place for us to park our boat.
Screen Name Redacted 9/29/2020 03:08 PM	Houses are jammed together in tiny lots with no trees or open spaces
Screen Name Redacted 9/29/2020 04:20 PM	nope
Screen Name Redacted 9/29/2020 04:26 PM	over population.
Screen Name Redacted 9/30/2020 12:14 AM	traffic congestion seems to be increasing in Camas/Washougal, SPECIFICALLY commercial vehicles, double axle dump trucks, etc. both NE 3rd Ave thru town East/West That drive WAY too fast. This is making this a LESS livable community. so, no matter WHAT you may do w/ housing expansions/opportunities . . . need to consider livability factors, please. Hwy 14 roundabouts - - don't care for them.
Screen Name Redacted 9/30/2020 07:55 AM	Lack of diversity in housing options will lead to lack of diversity in our community and schools and will negatively impact our quality of life.
Screen Name Redacted 9/30/2020 11:06 AM	As we increase the density I'm concerned about having enough off-street parking. Adding to the traffic issues.
Screen Name Redacted 9/30/2020 12:10 PM	Rows and rows of new housing (whichever type) are not the only answer to creating space where people want to live. How can we increase our walkable spaces, mixed-

	use development, and access to high quality amenities for all Camas citizens?
Screen Name Redacted 9/30/2020 01:14 PM	If we have more developments, please focus on quality of construction, environmental impacts and developer-provided free space, and developers contributing to enlarging school capacity so existing citizens donipay the price.
Screen Name Redacted 9/30/2020 02:39 PM	Architecture plays a significant role in shaping the future of a community. We should be considering how our decisions might look 100 years from through social, environmental, and financial outcomes.
Screen Name Redacted 9/30/2020 02:45 PM	Please limit huge storage unit buildings
Screen Name Redacted 10/01/2020 03:58 PM	OVER-DEVELOPMENT already! Enough is enough! Not one tree is left standing when you guys let these greedy developers in. AND THEN YOU ALLOWED FOR BUILDING ON OUR WETLANDS???? WTF????
Screen Name Redacted 10/01/2020 11:43 PM	For homeowners- property taxes are out of control. They are on the verge of pricing current and new homeowners out of the city. Very unfortunate.
Screen Name Redacted 10/02/2020 10:57 AM	I see Camas trying to be everything to everyone...WE ARE NOT! We shouldn't try to fit to every one's needs. STOP giving away what most have worked hard for and want to live in an area where there is safety, good schools and good policing, low crime...that's what we work hard for and pay way too much in taxes to do so!
Screen Name Redacted 10/03/2020 09:17 AM	Our concern would be to change the dynamic in Camas . This city has small town atmosphere but provides big city amenities. Multiple dwelling

	units do not add to this city anything that is positive. Increasing traffic, crime and population is what we will get. This resident does not support multiple dwelling units.
Screen Name Redacted 10/03/2020 08:54 PM	I am concerned with how high the price is for small starter homes and that there are bidding wars for homes.
Screen Name Redacted 10/05/2020 08:05 PM	There are enough affordable housing options in Camas. I would like to see luxury condos in areas that are needing redevelopment.
Screen Name Redacted 10/06/2020 09:36 AM	We moved to Camas to get away from the big city feel, crime, vandalism, graffiti. We do not want low income housing in camas. Many homeowners will be likely to move if this happens.
Screen Name Redacted 10/06/2020 09:49 AM	Camas is known as a safe, quaint town. Increased population places the city in a high rate of crime.
Screen Name Redacted 10/06/2020 09:51 AM	You are destroying the environment and trees with all of the houses you are allowing. There is not enough infrastructure capacity (roads, school class size) to deal with this swelling of homes and the density of which you are packing them in.
Screen Name Redacted 10/06/2020 10:00 AM	Please don’t turn Camas into Portland
Screen Name Redacted 10/06/2020 10:00 AM	Affordable housing for seniors
Screen Name Redacted 10/06/2020 10:03 AM	Maintain the current housing. Don’t bring Portland’s problems to Camas by creating rampant low income or government assisted housing.
Screen Name Redacted 10/06/2020 10:19 AM	We do not want or need low income housing to drag down our property values. Let the market do its job.
Screen Name Redacted	Stop building on Camas land. We

10/06/2020 10:35 AM	are ruining the small town open country feel!
Screen Name Redacted 10/06/2020 10:36 AM	To many huge houses for the rich which drives up the market causing those who have lived here most of their lives to be unable to afford it. No more!!
Screen Name Redacted 10/06/2020 11:19 AM	We do not need the city to come in and decide what kind of housing is needed. It is up to the buyers and sellers. If you truly want to help, cut down city spending and lower taxes so people can pay off their property faster.
Screen Name Redacted 10/06/2020 11:58 AM	There are almost no options for middle class residents.
Screen Name Redacted 10/06/2020 12:03 PM	Too much development. Houses too close together.
Screen Name Redacted 10/06/2020 12:24 PM	That it is being over developed and is going to lose the charm that brought families here in the first place
Screen Name Redacted 10/06/2020 01:02 PM	We do not need more apartments or high density housing. Leave that to Vancouver and Portland. We do not want to be those places.
Screen Name Redacted 10/06/2020 03:27 PM	Yes, the City has shown a lack of respect for our green spaces and parks! Cutting down our trees and building ridiculous round abouts! More housing is just more housing and probems!!! Getting a survey like this is so disheartening- do you city employees even live in Camas or are you trying to justify your jobs?
Screen Name Redacted 10/06/2020 06:46 PM	No
Screen Name Redacted 10/06/2020 06:56 PM	We have plenty of housing and do not need to build. We need to preserve our small town
Screen Name Redacted	Sad to see the loss of green space

10/06/2020 10:58 PM	on the mountains.
Screen Name Redacted 10/08/2020 04:10 AM	Please keep Camas an aspirational town and don't dilute the tax base. Don't make the mistakes so many cities and towns make by adding density and increasing low income housing. We are not immune to the problems other cities and towns face . Attracting home buyers who are willing to pay high per capita property taxes helps the city maintain a high level of services.
Screen Name Redacted 10/08/2020 01:10 PM	Keep Camas rural.
Screen Name Redacted 10/09/2020 05:07 PM	Single story homes on large lots
Screen Name Redacted 10/09/2020 05:23 PM	The charm of the city is being ruined by over building in wildlife habitat
Screen Name Redacted 10/09/2020 05:44 PM	Impact fees and exorbitant permit and utility hookup fees have produced housing developments that only larger corporate builders can afford to make. Since govt fees are so high, we see neighborhoods that no one would aspire to live in. High density a long way from public transport is counterintuitive to what cities should desire.
Screen Name Redacted 10/09/2020 08:04 PM	Development plans for the north side of the lake need to be very, very carefully planned and considered so that the charm of Camas is not destroyed, and a larger traffic nightmare is not created. I don't think ADUs are the answer unless there are strict zoning regulations. For example, property with 2DU per acre can easily accommodate the parking issues and noise level created by an ADU. Smaller lots do not enhance livability for neighborhoods, but

	create parking headaches and additional noise and congestion. If Camas is intent on growth, it would be amazing to study master planned communities such as Highlands Ranch, CO and Rancho Santa Margarita or Ladera Ranch in Orange County. These communities have tried to balance housing needs and livability.
Screen Name Redacted 10/09/2020 08:18 PM	people afraid of growth
Screen Name Redacted 10/09/2020 08:19 PM	Small lots, crammed housing. Looking like a shitty city.
Screen Name Redacted 10/09/2020 08:33 PM	The cost is astronomical for someone like me who is single! I'm 47 years old living with my mother because of the price's of apartments! I have worked my whole life since age 15 and I never dreamed there would be a time I couldn't afford an apartment! I have excellent rental history but literally can not afford to spend an entire paycheck on rent because I am single!
Screen Name Redacted 10/09/2020 08:41 PM	The issues I have with regards to housing is that new housing will kill the natural open spaces that we were known for. Current housing around the core center of Camas is looking dilapidated and in bad need of code compliance to get these people to clean up their houses & yards...Drive around and you will see. I predict that if these eyesores continue, it will create a big divide between the old downtown and the new subdivisions...
Screen Name Redacted 10/09/2020 08:41 PM	Stop new housing developments (subdivisions) of big houses. Add public transportation. Think about schools/infrastucture (roads) before adding new housing.

Screen Name Redacted 10/09/2020 08:54 PM	Too many dangerous fireworks. Two days of the year it's uninhabitable.
Screen Name Redacted 10/09/2020 09:26 PM	Concerned about the future of the new housing developments and the condition/value they will have 20 years from now. Tract homes tend to lose value and are less likely to keep families in the city long term. If too many are built, the concentration can negatively impact the future of the Camas community.
Screen Name Redacted 10/09/2020 09:58 PM	We don't need anymore small row houses or townhouses with no backyards that cost as much as a whole house in Washougal or Vancouver.
Screen Name Redacted 10/09/2020 10:03 PM	Increased housing is destroying our city. Stop Turing us into another California LA!
Screen Name Redacted 10/09/2020 10:14 PM	When one house on property is sold (or a golf course) and the land is rezone to have lots thatvaye 5k-6k square feet is ridiculous. It is not sustainable for the Camas infrastructure especially schools.
Screen Name Redacted 10/09/2020 10:17 PM	Too many sub divisions
Screen Name Redacted 10/10/2020 01:12 AM	Too many large homes need smaller homes
Screen Name Redacted 10/10/2020 04:02 AM	None
Screen Name Redacted 10/10/2020 06:46 AM	What were the impact fees on the hundreds of new homes being built this last few years? And why the heck have our property taxes continued to increase so greatly every yr when our homes are getting older and there are so many new homes that are now paying taxes as well.

Screen Name Redacted 10/10/2020 07:47 AM	Stop any further developments. Camas is getting too big and it's affecting schools, traffic, utilities, etc!
Screen Name Redacted 10/10/2020 07:59 AM	I don’t want rapid development or the large scale addition of more housing.
Screen Name Redacted 10/10/2020 08:11 AM	I own a home outside of the city limits and there is so much red tape one has to go through to get a permit to build any structure on there property.
Screen Name Redacted 10/10/2020 08:57 AM	I am a landlord in Camas. I rent my places below market on purpose because I believe in affordable housing, and my tenants are amazing and respectful because of that. But I have had to raise the rent continuously every year because of property tax increases. That to me is the biggest hurdle for affordability.
Screen Name Redacted 10/10/2020 10:04 AM	Camas has way too much housing development going on and it's ruining the landscape and our town. Traffic, overcrowded schools are already a problem. Not enough parking downtown as it is and new building/development just continues regardless. Think about those who have lived here, those who moved here and purchased older homes to avoid contributing to development. Think about those folks who have lived here a lifetime, paid off their homes and can no longer afford to live here b/c of the high taxes! Crime has increased! Do NOT turn beautiful Camas over to greedy builders. You will turn our town into something out of California! Camasonians do NOT want that - listen to your fellow neighbors!
Screen Name Redacted 10/10/2020 10:57 AM	I am concerned with convenient, short-term solutions like ADU's that will be difficult to control, have the ability to change neighborhoods with

	overcrowding of cars, turn into VRBO's and violated CC&R's. I am not for any subsidized government housing.
Screen Name Redacted 10/10/2020 11:40 AM	Too many small lot housing divisions. Concerned about property values. Concerned about growth and increased crime.
Screen Name Redacted 10/10/2020 11:53 AM	Traffic in existing neighborhoods is an issue. The more we build, the worse it will get. Sierra Drive is a mess. There needs be a barrier put up at 38th and Sierra to eliminate the highway type situation currently on Sierra. Speed is a huge factor. These are supposed to be neighborhoods. They should only have neighborhood traffic. Not trucks, and cars passing through.
Screen Name Redacted 10/10/2020 12:16 PM	Not sure.
Screen Name Redacted 10/10/2020 01:58 PM	You have ignored citizens desire that NO development occur on the Northshore of Lacamas Lake. You have failed to ask "if" citizens even want more multi-unit apartments and rental properties, instead of being a city primarily of families who own their homes. You have failed to give us demographic information about median family income, the ages, and number of people living in a home. Do we have the infrastructure to support increased growth in housing? Everett/SR 500 is already jammed, and your roundabout will at best be a temporary fix along this main north-south corridor. You allowed the placement of the high school to be in a location that could not support the added traffic congestion the high school brought. The location of the high school in turn, triggered more home development in the northeast

	area of the city, further adding to the traffic congestion problems. We now have a mill that has laid off significant numbers of workers. Most of us see the handwriting on the wall, and that the mill will ultimately close. That means what happens with all the GP real estate? It seems to me that should be the focus of "development" discussions among the community. How to attract new businesses to the downtown area? Should we allow some of that GP land to be redeveloped into new housing? Or should it be reserved for business redevelopment? Should some of it become "mixed use" development? Should it be a park and residential, and if so, what type of residential development? We have a lot of businesses struggling right now due to COVID. How can we help them recover and create jobs in our city?
Screen Name Redacted 10/10/2020 02:07 PM	Please stop the housing developments. We are being over populated and Camas is becoming less livable. Keep apartments close to downtown, walkable and close to transit. Please keep our Camas livable, not squished together in cookie cutter houses on postage stamp size lots. Please keep this area open and livable.
Screen Name Redacted 10/10/2020 02:17 PM	Too much building, ruining the culture of the city.
Screen Name Redacted 10/10/2020 03:41 PM	My concerns are mostly around planning, zoning and character preservation. I dislike when the greenbelt buffer between the road and new housing disappears. I don't like overly groomed and manicured streets/sidewalks (i.e. Californian suburbia). I love the segments in town that have forest and trees on both sides so you forget you are right

	next to a subdivision.
Screen Name Redacted 10/10/2020 03:45 PM	It's very elite and white.
Screen Name Redacted 10/10/2020 03:46 PM	Concerned about demands placed upon the city by outside authorities (such as state government) to increase housing supply. Housing supply can adequately be addressed by the city.
Screen Name Redacted 10/10/2020 04:02 PM	No
Screen Name Redacted 10/10/2020 04:11 PM	This is not Portland and we will not sit silent while you try to impose Portland ideas in our area.
Screen Name Redacted 10/10/2020 04:22 PM	I hope City of Camas does not follow the policies followed by Portland. Folks move from Portland metro to get away from those policies.
Screen Name Redacted 10/10/2020 04:35 PM	Rising property taxes and school levies. Oh, and city government employees thinking they know what is best for Camas residents. "Of all tyrannies, a tyranny sincerely exercised for the good of its victims may be the most oppressive. It would be better to live under robber barons than under omnipotent moral busybodies. The robber baron's cruelty may sometimes sleep, his cupidity may at some point be satiated; but those who torment us for our own good will torment us without end for they do so with the approval of their own conscience." C.S. Lewis
Screen Name Redacted 10/10/2020 04:38 PM	My children can’t afford to stay in Camas. We raised them here, they graduated from Camas but have to move away to neighboring cities to buy first homes.
Screen Name Redacted 10/10/2020 04:43 PM	Stop high density housing developments. Stop taking away

	green spaces and outdoor recreation. We have plenty of housing.
Screen Name Redacted 10/10/2020 04:55 PM	Traffic, parking, road improvements needed if more development occurs. Paid for by the developers
Screen Name Redacted 10/10/2020 04:57 PM	This is NOT Portland, don't try to make it Portland. We don't need Mayor Wheeler and J. Hardesty ideals. This all seems familiar.....
Screen Name Redacted 10/10/2020 04:58 PM	I am concerned that bringing in "affordable housing" will lower Camas' present image as an upscale community with beautiful newer homes. owners who can afford high property taxes and levies, and excellent schools. Not every community needs to have tiny homes, subsidized rental properties, etc. We don't need or want this kind of development or growth, and we should avoid it, not invite or solicit it. Please don't downscale Camas or make it like Portland.
Screen Name Redacted 10/10/2020 05:06 PM	Camas is a great community that will change for the worse if we surrender to political correctness and allow it to become Portland. Those influences need to stay in Portland.
Screen Name Redacted 10/10/2020 05:20 PM	It appears we have many 'luxury' apartments but I don't see many smaller, single family homes that are in a lower price range.
Screen Name Redacted 10/10/2020 05:21 PM	Cost
Screen Name Redacted 10/10/2020 06:22 PM	loss of green\open space.
Screen Name Redacted 10/10/2020 06:36 PM	Not planned out well enough. We should sacrifice our Forrest and outdoor areas to get more people in houses. This will eliminate the reasons people want to move here.

Screen Name Redacted 10/10/2020 07:31 PM	Lack of city planning/urban sprawl
Screen Name Redacted 10/10/2020 07:44 PM	Its really important to be to preserve the greenspaces in camas as we look to add residents. Ensuring we have a good, functioning park/sidewalk/naturepath system to connect neighborhoods will keep the quality of life here and keep camas a desirable place to move. We also need to preserve accessibility of downtown!
Screen Name Redacted 10/10/2020 08:02 PM	Gads - who wrote up this questionnaire - clearly they feel there is some desperate need here - what am I missing - other than a dispassionately written questionnaire. And, just exactly when did you quit beating your wife? Seriously, you expect intelligent responses to these leading questions???
Screen Name Redacted 10/10/2020 08:34 PM	My main concern is finding a smaller affordable house if we downsize our current house.
Screen Name Redacted 10/10/2020 08:34 PM	The homeless are not dealt with. Police allow them to live in parks and neighborhoods and decrease value to homes and safety.
Screen Name Redacted 10/10/2020 08:41 PM	For someone that built their house in the mid-90s, now that I'm a senior the property taxes are more than I can afford. It's sad.
Screen Name Redacted 10/10/2020 08:44 PM	The new apartment complex in down town Camas looks horrible. It does not flow with the City. It looks just like downtown Portland, Actually I bet the builder is a Portland individual. They have no imagination. Where is the authenticity? It is a terrible reminder of what can happen to a lovely city like Camas if people do not pay attention. Shame on Camas City leaders for allowing a terrible looking

	structure to be in Camas. Where are you morals?? or your pocket book? I see
Screen Name Redacted 10/10/2020 08:57 PM	The main Issue I see is that the demand for housing of all types is higher than availability. The demand is high due to people wanting to relocate to Camas because it is such a great city. Real estate is always cyclical so if we try to add enough housing to accommodate everyone we will find a gluttony of houses when the market turns down.
Screen Name Redacted 10/10/2020 09:05 PM	Yes, let's keep Camas what it is, let's make sure it's not Going to be next Portland!
Screen Name Redacted 10/10/2020 09:40 PM	Don't want to live in a place with HOA. Want house that is 3 bed 2 bath and around 1500sq ft.
Screen Name Redacted 10/10/2020 10:23 PM	Allow market forces to drive the types and sizes of single family homes.
Screen Name Redacted 10/10/2020 10:44 PM	No
Screen Name Redacted 10/11/2020 07:25 AM	New building downtown with no new parking options
Screen Name Redacted 10/11/2020 08:10 AM	Prices have gone through the roof which is why we bought a new townhome here in Camas. The prices for a nice house were just too expensive for what you get. That's simply a function of the market and what people (us) would accept. We hated the idea of having to spend $800K for a house that would really be worth $500K in a normalized market, again which is why we just bought a new townhome and figured we'll move out of Camas when our kids graduate high school and use our equity for a home somewhere else at that time. I don't think it's a good idea for the government,

	especially a City government to artificially deflate/inflate pricing or availability. You start approving lower cost homes or affordable apartments or the like and manipulate the market all you're doing is asking for trouble down the road. Stay in the business of running the City and don't get in the business of accommodating or manipulating the local housing market. Let the market deal with that.
Screen Name Redacted 10/11/2020 08:54 AM	I am concerned there is too much building happening.
Screen Name Redacted 10/11/2020 09:02 AM	Lack of open space foresight and planning
Screen Name Redacted 10/11/2020 09:04 AM	I've experienced classism in Camas. There's a culture here that suggests that those who live "on the hill/ridge" are superior to those living "down the hill." That, in itself, made me reconsider my choice to live here.
Screen Name Redacted 10/11/2020 09:32 AM	Transit option from downtown Camas to Portland. Embrace our bedroom community status and make downtown walkable.
Screen Name Redacted 10/11/2020 10:29 AM	Too many new housing developments without concerns for the increase in traffic
Screen Name Redacted 10/11/2020 11:09 AM	I worry that open areas, wetlands, forests will be overbuilt. Especially with rental units and condo-developments. I like the small town atmosphere and worry Camas will become a subdivision extention of Vancouver.
Screen Name Redacted 10/11/2020 11:22 AM	Do NOT use Mill Lands to build residential. Even the caveats GP put in with the few they've "donated" (with headaches) to the City are startlingly clear. Learn from what happened in San Francisco - that property the US Navy sold to the

	City, insisted all clean and then huge scandal. Mill Lands need to be Super-funded. Do NOT touch them and certainly NOT for residential.
Screen Name Redacted 10/11/2020 12:21 PM	The reason people have moved into Camas and pay high property taxes is to retain a quality of life. If you dilute that quality, the people who are willing to pay for the standard will go somewhere else.
Screen Name Redacted 10/11/2020 01:47 PM	There has been too much high density building in camas that is taking away green spaces and outdoor recreation. If there's to be more development, it should be done more wisely with existing spaces.
Screen Name Redacted 10/11/2020 02:52 PM	Expand the trails and park areas
Screen Name Redacted 10/11/2020 03:49 PM	Vancouver has built a lot of affordable housing along 4th Plain. The area is notorious for high crime, awful schools and rampant homelessness. Why are we even considering replicating that in Camas. There are a lot of far more affordable areas in Clark county than Camas. If people are looking for affordability they should look elsewhere.
Screen Name Redacted 10/11/2020 10:41 PM	I hate seeing huge homes on tiny lots that tear down forests.....also way overpriced.
Screen Name Redacted 10/12/2020 11:59 AM	The city is selling out to big developers who don't care about the impact of cramming as many houses into a small case as they can to make the most money. It is ruining the landscape of the area as houses are built right on top of each other. This also impacts how many people are accessing small roads and the pathways around the lakes. Obviously the city gets more money

	from taxes for these developments but at what cost? This area is starting to look like California and is not set up for the influx of so many people living in such a small space.
Screen Name Redacted 10/12/2020 01:18 PM	Taxes
Screen Name Redacted 10/12/2020 03:12 PM	Concerns with maintaining forested areas & waterways. Very concerned with losing or not building community park space.
Screen Name Redacted 10/13/2020 03:40 AM	Sprawl is a major concern of mine, especially tearing down forests or open spaces to build.
Screen Name Redacted 10/13/2020 11:06 PM	Stop clear cutting trees and building roundabouts please.
Screen Name Redacted 10/14/2020 08:46 PM	More single-family homes under 2200 sq ft
Screen Name Redacted 10/15/2020 01:56 PM	Symbols of hate are being openly displayed in neighborhoods. Recent acts of hate and terrorism to BIPOC citizens and families have caused many to move away for their safety, i.e. the bear effigy, multiple threatening letters, and some folks have even had neighbors come to their door to tell them they are unwelcome. Don't develop lower income & accessible communities separate from mid/upper income neighborhoods! We have tons of industrial and a fair number of over sized residential properties that can be developed into mixed and multi family. The mill properties by 6th and along the river should redevelop into mixed live/work w affordable condos and give the city access to the river downtown.
Screen Name Redacted 10/16/2020 02:19 PM	Camas is becoming way too crowded. Slow the growth, especially for the wealthy.

Screen Name Redacted 10/16/2020 07:38 PM	That the city administrators are going to be more focused on cramming people into the city rather than making it a more habitable place to live. The ill-sized roads, crummy parks, and discontinuous sidewalks/bike lanes decrease the appeal of living here. Encouraging multi-unit dwellings or apartment complexes will do nothing to aid this but make more these neighborhoods subject to more crime and be less-desirable.
Screen Name Redacted 10/16/2020 07:49 PM	I do worry about adding more multi-unit rentals, as they make for more temporary citizens of Camas who do not often have the same investment in the community, yet can still vote to raise our property taxes. Also, many, many houses have been/are being added to Camas recently, yet only a little has been done to address our roads. Most of them are not wide enough to accommodate this growth, and I see plenty of congestion in our future.
Screen Name Redacted 10/17/2020 12:00 PM	Architectural style is lacking. More modern homes would really help. And we need to bury those power lines. More side walks.
Screen Name Redacted 10/17/2020 06:43 PM	Please bury powerlines so they don't keep getting taken down by trees and lose electricity every winter!
Screen Name Redacted 10/19/2020 01:35 PM	We seem to have too much high end housing and not enough midrange and affordable housing. Also I would like to ensure that our neighborhoods are intentionally mixed price so that we welcome, rather than exclude, residents. I am also not a fan of gated communities. Many of these questions seem like they require actual data rather than opinions. Seems like you would have an assessment of what housing stock is

	available across cost and need levels. Now, putting data collection aside, I can also see where knowing public perception of available housing is also useful - as long as you have a clear sense of the full demographics of those responding. You might add education, size/composition of household (#/ages, ?single, multi generational, etc)
Screen Name Redacted 10/19/2020 03:19 PM	The development of underdeveloped territory within our city worries me. I don't want any of the beautiful min-forests or plains-like areas to be cut down and replaced by more houses. I am also worried that out here, we're a little biased when it comes to race, ethnicity, some forms of religion and the relationship between these people and their real estate/rental agents.
Screen Name Redacted 10/20/2020 07:10 PM	Stop building new homes. Getting over populated and taking away from the natural setting of the city.
Screen Name Redacted 10/20/2020 07:10 PM	Stop building new homes. Over populated. Taking away from our beautiful natural environment.
Screen Name Redacted 10/20/2020 08:32 PM	We have to decide if we as a City want do things that promote the development of more housing at the current fast rate, or sit back and let nature take its course (let the market decide). I don't know what the right answer is.
Screen Name Redacted 10/22/2020 03:49 PM	My husband and I would like to buy a home in Camas but there aren't enough small homes available.
Screen Name Redacted 10/23/2020 10:07 AM	I'm concerned with cramming too many people within our current developed footprint, lowering existing home values by adding homes that take up most of their lot, or, worse, tearing apart treed areas when there

	is cleared farmland up for sale available just beyond our area. The VERY WORST thing would be to alter homes in downtown Camas in a way that destroys their historic character. The homes don't have to be huge, modern, or expensive to be special. Regardless of home size, the environment should be the #1 priority. We have the unique opportunity of designing around such beautiful nature, and taking advantage of that will protect both the environment and future values of our investments as the rest of the surrounding areas pack in as many people into cookie-cutter structures with non-indigenous landscaping that lacks anything that sets them apart from any other given city. I would've moved to Tigard or Beaverton if I wanted that.
Screen Name Redacted 10/24/2020 09:29 AM	Keep the Camas charm
Screen Name Redacted 10/25/2020 12:08 PM	Do not give cost, tax or impact fee discounts to new rental construction. If supports are required do rental assistance that goes directly to the landlord.
Screen Name Redacted 10/26/2020 11:58 AM	Is it safe / welcoming for diverse people? Are you a welcoming community?
Screen Name Redacted 10/26/2020 03:25 PM	Redlining and other discriminatory practices. lack or community resources for house-less community.
Screen Name Redacted 10/26/2020 04:48 PM	A huge majority of what is being built is luxury high end homes affordable to a small percentage of people. Also, so many forested areas have been clear cut to make way for subdivisions that are too tightly packed. Camas only seems to be focused on building residences instead of a balance between

	amenities and housing options. Camas is just one subdivision after another.
Screen Name Redacted 10/27/2020 10:08 AM	Development of enormous, overly-expensive housing developments has run amok. They are ugly, poorly built, and wipe out hundreds of acres of forest and farmland. All we seem to be doing is building for the rich.
Screen Name Redacted 10/28/2020 03:34 PM	The market has gone so crazy in Camas that a normal $450K-$500K house now goes for $800K. That is probably not accurate but close enough. Houses here are way above what a house should sell for. We decided that instead of upgrading over the next few years we'll just take our profit and move out when the last of our kids graduate from Camas HS in 5 years. Another problem I see with Camas housing is there is so much, how do I put it, cookie-cutter half-way decent housing i.e. Woodburn Hill, Green Mountain, etc that the character of Camas is changing to, - well a cookie-cutter community. I get it, those are affordable for the most part but we already see some of those even newer homes starting to age not so gracefully.
Screen Name Redacted 10/28/2020 05:47 PM	This survey is framed to elicit responses that would show support for low end housing vs. how residents want to see growth over the next 20 years.
Screen Name Redacted 10/28/2020 08:42 PM	So much private land is being purchased by outside developers. Camas is losing its green, and lush forests. We are losing so much, and feeling helpless in our own city.
Screen Name Redacted 10/28/2020 08:47 PM	There seems to be too many high-end, luxury homes. Would prefer to see smaller sized family homes and Co-op type of communities. Also

	incentives for solar and passive housing.
Screen Name Redacted 10/28/2020 08:57 PM	Increased Property taxes & high costs of homes.
Screen Name Redacted 10/28/2020 09:46 PM	Space for local farming (animals and vegetable) must be interspersed with housing development to feed the local population, we can't rely on large, faraway factory farms to feed our community. People need views of and experience in nature for well-being, and wildlife needs green space to co-exist with us. Natural space should be valued, and a certain percent of mature trees should be retained on each property developed. Any development should be planned with an eye to the future, what will the neighborhood look like in 30-50 years? There are mature, spaced-out developments in Portland that are a delight to walk thru, and there are crowded streets that are only inhabited by necessity instead of by choice.
Screen Name Redacted 10/28/2020 09:46 PM	1) Public transit access; 2) accessibility (single level living) for universal design; 3) high-density development close to downtown;
Screen Name Redacted 10/28/2020 11:24 PM	We need to express our values in this town. Law abiding- good education- and be nice!!
Screen Name Redacted 10/29/2020 12:03 AM	Do not develop north shore- build in all open spaces in city limits first
Screen Name Redacted 10/29/2020 08:06 AM	Stop forcing "affordable" housing into a market that doesn't want it. Your "affordable" housing that is at Round Lake isn't exactly affordable to those who truly need affordable housing. The market will determine what the value of a property is. Stop buying into the mentality that people should be able to live on minimum wages.

	Minimum wage is supposed to be where you start, not where you stop. Artificially inflating wages and artificially capping housing prices is the first step towards socialism.
Screen Name Redacted 10/29/2020 08:36 AM	High property taxes. And, Camas pushes and bends to developers fir new housing; but, the city doesn't take care of the older existing neighborhoods which are becoming an eyesore. The older neighborhoods are overdue for road and new sidewalk work, and underground utilities (paid by the City)
Screen Name Redacted 10/29/2020 08:44 AM	That it's going to become crowded with fewer trees, smaller lots housed shoved together and so totally ruing what remaining ambience left since this weak city has rolled over and let every greedy developer destroy open area after open area.
Screen Name Redacted 10/29/2020 09:03 AM	Grow slowly
Screen Name Redacted 10/29/2020 10:10 AM	Mega-developments that eliminate natural green space, trees, and habitat should be avoided. There should be more homes with decent sized lots created. If a development is created, a certain number of trees must be retained. We need to ensure that there are eco-barriers are created to keep contamination out of the lake systems.
Screen Name Redacted 10/29/2020 12:25 PM	The city should cater to current residents not future residents.
Screen Name Redacted 10/29/2020 03:43 PM	I'm mostly concerned that increased population density in Camas will contribute to unsatisfactory living conditions for those in the community. Packing people together isn't healthy for the individual or the city. People have the responsibility to

	financially prepare for housing well in advance of need.
Screen Name Redacted 10/29/2020 07:49 PM	Everything is so expensive. Older homes should be more affordable.
Screen Name Redacted 10/29/2020 09:13 PM	There are too many developments with HOAs. Also, unfortunately, when residential lots are split, multi-family houses are built rather than affordable single family homes. This results in more rentals rather than owner-occupied properties. Creating more opportunities for home ownership contributes to the stability of the community because of the financial and emotional investment of the people who buy them.
Screen Name Redacted 10/29/2020 09:39 PM	I would like to see Camas housing evolve with respect to our history, retaining the character of our town but moving forward with modern solutions, having sizable and affordable spaces for children and adults to play, keeping nature and its benefits easily accessible to our citizens a priority in new development.
Screen Name Redacted 10/30/2020 11:09 AM	Too many developments!!!! No longer country feel .overcrowded
Screen Name Redacted 10/30/2020 12:27 PM	The agenda to provide alittle packed in revenue chasing town turned into a small city with nothing but upper class individuals
Screen Name Redacted 10/30/2020 12:43 PM	you have no questions about protecting the natural environment. You should never develop grass valley which is home to many bird species. There are developments already at 192nd and Brady, 102nd near 38th, and others west of Lacamas Lake, this is enough protect wetlands, open space, and natural areas. They mean something to life on this planet. We are more than just

	humans. Portland is trying middle housing, density and ADU's. That is a primary reason we moved from Portland to Camas. Protect Camas. We can't provide housing for those Portland who can't tolerate the lifestyles, safety and health issues in California and Portland. My wife and I are not conservatives.
Screen Name Redacted 10/30/2020 01:10 PM	Too many track town houses being built
Screen Name Redacted 10/30/2020 01:52 PM	It would be a shame to see the character of Camas destroyed with housing covering all the nice open spaces. Let's preserve the beauty of the area. We should not cover every space with housing. When building is excessive there is a lot of tree and habitat loss. It would be good to have low-cost housing such as the Stephens Creek development in Southwest Portland. In addition to providing much needed housing, it might lead to greater ethnic diversity in the area.
Screen Name Redacted 10/30/2020 03:47 PM	Property taxes are high.
Screen Name Redacted 10/30/2020 09:44 PM	It is over developed as it is.
Screen Name Redacted 10/30/2020 11:15 PM	I am concerned by the huge, single-family homes developments that go into Camas, year after year. We don't need one more housing development full of large, expensive homes. This truly concerns me. We need diversity!!!! As the CSD Homeless Liaison, I am very concerned for our homeless youth. Can we please problem solve how to take care of these youth? Supportive housing? Youth shelter? We cannot be ignorant of the most vulnerable in our community.

Screen Name Redacted 10/31/2020 10:24 AM	NO APARTMENTS OR MOBILE HOMES PARKS
Screen Name Redacted 11/01/2020 12:46 PM	Don't change what made Camas a sought after town: nice suburban residential and open parks and farms. Camas doesn't need apartments or townhomes or low income residential, there's plenty of room for that in Vancouver.
Screen Name Redacted 11/04/2020 12:06 PM	In addition to housing, we need to ensure the infrastructure is there to support more housing. For instance, that we have room in neighboring schools or the ability to add a school in order to support an influx of families with students. And mixed use spaces allowing for, say, retail below and housing above could help with raising city funds via taxes.
Screen Name Redacted 11/04/2020 05:59 PM	Just too many LARGE homes taking over areas that make Camas special. First time home buyers or smaller families are unable to live here due to cost and lack of appropriate housing.
Screen Name Redacted 11/04/2020 06:36 PM	The lack of affordable housing is very concerning. How would a new teacher move here and teach here, for example? How would a newer firefighter be able to support their family in this community?
Screen Name Redacted 11/04/2020 07:48 PM	We have got to stop letting developers clear cut and destroy our vacant lands. I want to see the lake in lake road but I see brick walls. Also if a park or playground is added in a development it should be city property and owned and managed by the city so all residents can play not jusy those in the association of that development. Save the tree, prioritize greenspaces and hold developers accountable to all the people.

Screen Name Redacted 11/05/2020 12:46 AM	The clear-cutting of trees for developments is a serious problem. Lack of affordable housing for many who work here and for people who would make wonderful members of our community.
Screen Name Redacted 11/05/2020 07:36 AM	Can we please STOP new development....

Optional question (187 response(s), 120 skipped)
Question type: Essay Question

Q13 Which partners should be engaged in the conversation about housing diversity and affordability in Camas? What resources could they bring to the table?

Screen Name Redacted 9/28/2020 02:19 PM	I think diversity in our town is a huge concern. I'm not sure people of color feel welcomed.
Screen Name Redacted 9/28/2020 02:42 PM	Groups that support the interests of BIPOC in our community; EDI training and influence on policy in housing & development
Screen Name Redacted 9/28/2020 03:10 PM	Dissolving HOAs/or severely limiting HOAs power would increase diversity and affordability in Camas. And, at least anecdotally local real estate agents seem to promulgate negative stereotypes on dense living. But increasing density is the logical solution to increase housing supply, particularly for lower-cost units.
Screen Name Redacted 9/28/2020 03:13 PM	Downtown Camas Association—concerns and needs of downtown employees and owners. Recruiting businesses downtown and Camas in general is affected by housing availability.
Screen Name Redacted 9/28/2020 03:17 PM	The school district. Our schools need to be able to handle the growth & they are currently popping at the seams, especially CHS. More homes = 2nd traditional high school needed

	FIRST. Don't seek to attract new residents if the city cannot support them.
Screen Name Redacted 9/28/2020 03:40 PM	Housing diversity is not needed. Stop!
Screen Name Redacted 9/28/2020 06:15 PM	Banks, lending institutions, escrow companies and companies to help in ownership obstacles.
Screen Name Redacted 9/28/2020 06:47 PM	Hire the right people. Dont pay consultants
Screen Name Redacted 9/29/2020 09:50 AM	Existing homeowners are your constituency. Start there. Not your special interest groups.
Screen Name Redacted 9/29/2020 04:20 PM	banking industry / realtors
Screen Name Redacted 9/29/2020 04:26 PM	People who live here. You should ask them how they feel about overcrowding.
Screen Name Redacted 9/30/2020 12:14 AM	city, county, state governance partners; faith-based partners; seniors; families with children under age 18
Screen Name Redacted 9/30/2020 11:06 AM	LULAC - Ed Hamilton NAACP Council for the Homeless YWCA Clark County City of Vancouver City of Washougal Mortgage brokers and lenders
Screen Name Redacted 9/30/2020 12:10 PM	Camas public school district, local leaders of color (business owners, clergy, public service, volunteers, etc)
Screen Name Redacted 9/30/2020 02:21 PM	Nonprofits serving camas or Clark county.
Screen Name Redacted 9/30/2020 02:39 PM	The public is great, but not terribly useful. Most people lack the perspective and understanding to offer much value, with some rare exceptions. Perhaps having a clear objective in mind first (that is

	actionable, not just business babble) then ideating with a variety of stakeholders using design thinking frameworks to surface possible solutions would be an effective approach?
Screen Name Redacted 9/30/2020 02:45 PM	Seniors, college students, unemployed, rental owners
Screen Name Redacted 10/01/2020 03:58 PM	Shovels to plant trees, access to water for wildlife.
Screen Name Redacted 10/02/2020 10:57 AM	Seriously? Is there something I am missing on this topic? Why the concern? IS there some type of incentive to the city to do this? Perhaps the city needs to have business people on their council & in roles that can assist the City of Camas to do a better job in maintaining our small town the way it should be...clean, friendly and SAFE!
Screen Name Redacted 10/03/2020 08:54 PM	city leaders, citizen representatives, school district personnel, church communities, experts in the field, city planners
Screen Name Redacted 10/05/2020 08:05 PM	Homeowners, companies like Fisher Investments and Wafer-tech. In my opinion, the city is lacking basic amenities such as shopping and retail services. There also seems to be a decline in tech companies with the exit of Sharp and UL. I'm not sure why the school district keeps buying valuable, taxable property.
Screen Name Redacted 10/06/2020 09:36 AM	Send a survey to every single homeowner.
Screen Name Redacted 10/06/2020 09:51 AM	the community itself.
Screen Name Redacted 10/06/2020 10:03 AM	Camas Council, Clark County, HOAs in the area, major businesses in Camas, Police and Fire.

Screen Name Redacted 10/06/2020 10:19 AM	Home owners and residents. And keep the racial discrimination nonsense out of the conversation. If people have the money and good credit, they can buy in Camas. “Systemic racism” is not a problem in our community. We have people from various backgrounds...many educated and accomplished immigrants that bring vibrancy, talent and flavor to our community. What we DO NOT want or need is creating a magnet for drug addicts and people with mental illness who flock to our town to get subsidized housing. Who ever has plans to turn us into Portland had better knock it off.
Screen Name Redacted 10/06/2020 10:35 AM	Local residents only. "Experts" are not, they only have an agenda.
Screen Name Redacted 10/06/2020 11:19 AM	No one. Let the market decide. Keep government and "academic" "scholars" out of our decisions.
Screen Name Redacted 10/06/2020 11:58 AM	Teachers! Not only do they know how their wage (alone) makes home ownership in Camas an issue, but they also have direct contact with students and their parents so they can offer that perspective, as well.
Screen Name Redacted 10/06/2020 01:02 PM	Everyone. Just because someone can afford housing here doesn't mean they shouldn't have a voice.
Screen Name Redacted 10/06/2020 03:27 PM	Help our school district educate kids- and put your efforts in the right direction! This is way more important than your zoning questions-
Screen Name Redacted 10/06/2020 06:46 PM	Current residence. Do not include developers/contractors should be involved. Do not pay for “consultants”. Let the current citizens determine what they want.. don’t grow just because everyone says we need to.

Screen Name Redacted 10/06/2020 06:56 PM	Citizens only and Let us vote. No developers or consultants that have the opportunity for financial gains from the outcome. Have all decisions open for the citizens at city council meetings
Screen Name Redacted 10/06/2020 10:58 PM	None
Screen Name Redacted 10/08/2020 01:10 PM	Only Camas citizens should have say about Camas!
Screen Name Redacted 10/09/2020 05:23 PM	residents
Screen Name Redacted 10/09/2020 05:44 PM	Small builders and Camas citizens
Screen Name Redacted 10/09/2020 08:19 PM	Don’t ruin this small town.
Screen Name Redacted 10/09/2020 08:33 PM	I don’t know
Screen Name Redacted 10/09/2020 08:41 PM	Obviously certain city staff members, Camas tax payers, and representatives from a city or town going through the same thing Camas is experiencing. A wealth of knowledge is a phone call away-
Screen Name Redacted 10/09/2020 08:41 PM	Mass transit
Screen Name Redacted 10/09/2020 09:58 PM	The people of camas. Especially those who have lived here for longer than 10 years.
Screen Name Redacted 10/09/2020 10:03 PM	Stop the building!
Screen Name Redacted 10/09/2020 10:14 PM	Existing residents
Screen Name Redacted 10/09/2020 10:17 PM	None

Screen Name Redacted 10/10/2020 04:02 AM	Local Banks should be more helpful
Screen Name Redacted 10/10/2020 07:59 AM	The residents of Camas.
Screen Name Redacted 10/10/2020 08:11 AM	County and state regulations for building codes and fees to be more favorable to the builder or owner.
Screen Name Redacted 10/10/2020 08:57 AM	Small local landlords like myself should be included.
Screen Name Redacted 10/10/2020 10:04 AM	Bring to the table the current homeowners/neighbors who would be directly affected by low housing units and apartment planning BEFORE permits have been approved/issued for building. It is a known fact that crime is higher around apartments and low housing developments. Think of Camasonians and current tax paying homeowners first.
Screen Name Redacted 10/10/2020 10:15 AM	I strongly disagree with diversity initiatives since they are racist, based upon quotas and potentially illegal. Eligibility for housing, jobs/promotions should always be based upon merit and requisite qualifications.
Screen Name Redacted 10/10/2020 10:57 AM	Citizens, builder's association, get younger people with families and seniors that want to downsize involved.
Screen Name Redacted 10/10/2020 11:53 AM	Stop building. Fix what we have.
Screen Name Redacted 10/10/2020 12:16 PM	Don’t know of any
Screen Name Redacted 10/10/2020 01:58 PM	Freedom. Property rights. Tax-paying citizens. How about a diversity of farms and rural lands? How about letting the people truly decide "if" they

	want multi-million dollar homes along the Northshore? How about listening when the people say they want to focus development south of the lake? Too many special interests seek too much control. You can't even clean up Lacamas Lake. You ignore citizens wishes regarding the Northshore development. Why should we trust you will consider any input citizens offer now?
Screen Name Redacted 10/10/2020 02:07 PM	Listen to residents. I don't think we want to be squished together. Keep traffic in mind, and parks and open spaces, walking trails and such.
Screen Name Redacted 10/10/2020 02:17 PM	Do not interfere in the market conditions. Allow supply and demand to work, and if you want to help first time homeowners develop a stipend program to help with down payments.
Screen Name Redacted 10/10/2020 03:41 PM	I dont understand the question. But I do have lots of experience as a consultant for real estate developers and feel the town needs more restrictive planning.
Screen Name Redacted 10/10/2020 03:46 PM	No other "partners" needed. There are laws that address such things as housing discrimination and bank redlining. "Critical race theory" hucksters are not needed in Camas.
Screen Name Redacted 10/10/2020 04:02 PM	Camas is fine the way it is.
Screen Name Redacted 10/10/2020 04:35 PM	None because I don't think these are issues that need to be addressed or "fixed" by the city.
Screen Name Redacted 10/10/2020 04:38 PM	Builders and remodlers. We need more affordable housing not just street of dreams developments.
Screen Name Redacted 10/10/2020 04:55 PM	Don't know enough about the options available and who the 'partners' are but there should be community meetings about this

Screen Name Redacted 10/10/2020 04:57 PM	None whatsoever.
Screen Name Redacted 10/10/2020 04:58 PM	Existing homeowners for sure.....those who have made a large investment in their homes. Those organizations whose only goal is to serve the underserved with all manner of low cost housing need to hear our opposition. I am talking about "affordability" only. Diversity is an entirely different story. Latinos and African Americans should be welcomed to join the considerable presence of Asians that we already have.
Screen Name Redacted 10/10/2020 05:06 PM	Only those who understand, value and wish to preserve Camas' character. We could certainly use more affordable housing for buyers who can't afford a half million dollar home, but those options must be for people who plan to own and contribute to Camas' culture and appeal.
Screen Name Redacted 10/10/2020 05:20 PM	A diverse variety of folks representing not only sellers, buyers, lenders, landlords, but also women, men, minorities, renters, and homeowners.
Screen Name Redacted 10/10/2020 08:02 PM	How about realators?
Screen Name Redacted 10/10/2020 08:34 PM	Only those that were born and raised in the county. Californian's should not have input as they created this issue we are in.
Screen Name Redacted 10/10/2020 08:41 PM	The citizens, especially citizens that live close to any proposed development.
Screen Name Redacted 10/10/2020 10:23 PM	Don't agree with the premise, stope government meddling in market forces.
Screen Name Redacted 10/10/2020 10:44 PM	Let citizens decide for themselves.

Screen Name Redacted 10/10/2020 10:45 PM	I think Camas Is perfect. I think the development needs to stop. Camas is big enough and we're slowly loosing our small town feel with all this nonsense of development and affordability. There's plenty of diversity already. In my block alone we have at least 7 countries represented including mine of Mexico. I moved to Camas in 2005 and even back then Camas was and is a beautiful place to live. Plenty of diversity. I love it!
Screen Name Redacted 10/11/2020 07:25 AM	Habitat for humanity
Screen Name Redacted 10/11/2020 08:10 AM	I don't feel like that's the business of City government at this time. What does "housing diversity" even mean? What is affordable? Are you saying to lower the bar of entry artificially so people who normally couldn't afford housing now all of the sudden can afford housing? Problem with surveys like this is you don't define your assumptions so it's hard to understand the context around this question.
Screen Name Redacted 10/11/2020 08:54 AM	Anyone from Portland that will tell you what not to do
Screen Name Redacted 10/11/2020 09:02 AM	Environmental Parks and Open space School Board Public
Screen Name Redacted 10/11/2020 09:04 AM	Definitely a focus group of people of color, another of people with student loan debt (who would otherwise be able to buy homes in the area), and people who are working class. Each group can attest to their lived experiences and help others empathize with the real barriers to living comfortably here.
Screen Name Redacted	Land use representatives, homeless

10/11/2020 11:09 AM	and mental health professionals. Seniors.
Screen Name Redacted 10/11/2020 11:22 AM	Do your research into what other Cities have done, successfully. Mimic them. Camas seems very naive in all its Equity ways. So, you will have a steep climb in this learning.
Screen Name Redacted 10/11/2020 12:21 PM	Property owners who have vested interest in the community
Screen Name Redacted 10/11/2020 02:52 PM	Not the mega rich corporations
Screen Name Redacted 10/11/2020 03:49 PM	Partners (developers, special interest groups) that aren't donating to the campaigns of people on the city council.
Screen Name Redacted 10/11/2020 10:41 PM	Surveys from every Camas resident would be ideal.
Screen Name Redacted 10/12/2020 11:59 AM	People who are less concerned with making money and are more concerned with preserving what is a popular destination without ruining it with overcrowding and eye sore developments.
Screen Name Redacted 10/12/2020 01:18 PM	No one. If you want affordable or diversity look at other areas that are affordable and diversified. Take pride in what we have ..we can't please everyone!
Screen Name Redacted 10/12/2020 03:12 PM	Forestry service - how to live with wild animals as neighbors
Screen Name Redacted 10/13/2020 03:40 AM	People who have desired to move here but couldn't.
Screen Name Redacted 10/13/2020 11:06 PM	Students from local colleges, BIPOC community leaders in Vancouver and Portland, Homelessness prevention organizations, architects working on new types of housing that foster community and affordability

Screen Name Redacted 10/15/2020 01:56 PM	BIPOC families. Also lower income and less networked folks who may have not seen this survey. People who don't live in Camas who might move here if there were more diverse housing options. Get the mill to clean up and redevelop mill properties near downtown, and along the river.
Screen Name Redacted 10/16/2020 07:38 PM	Actual homeowners in Camas, WA, the people with a vested interest in the place they call home. We do not need mini-Portland over here.
Screen Name Redacted 10/16/2020 07:49 PM	The home owners of Camas should be engaged, as they are invested in the community and care about the well-being of the City. There are good reasons to live in Camas; let's hope we can keep them.
Screen Name Redacted 10/17/2020 12:00 PM	Home owners, builders, city personnel. I'd bring a thorough understanding of the current support that Washington offers as well as an understanding of the offerings from surrounding cities.
Screen Name Redacted 10/19/2020 01:35 PM	schools - as they hopefully have a good idea about the needs of their students' families
Screen Name Redacted 10/19/2020 03:19 PM	I am not sure.
Screen Name Redacted 10/20/2020 07:10 PM	None. Take that to Vancouver.
Screen Name Redacted 10/20/2020 07:10 PM	None
Screen Name Redacted 10/23/2020 10:07 AM	We should have an environmental council that includes cleaning up our lake and protecting the trees that guided Lewis and Clark westward. Thoughtful planning with consideration to the landscape can still allow for multi-family units.

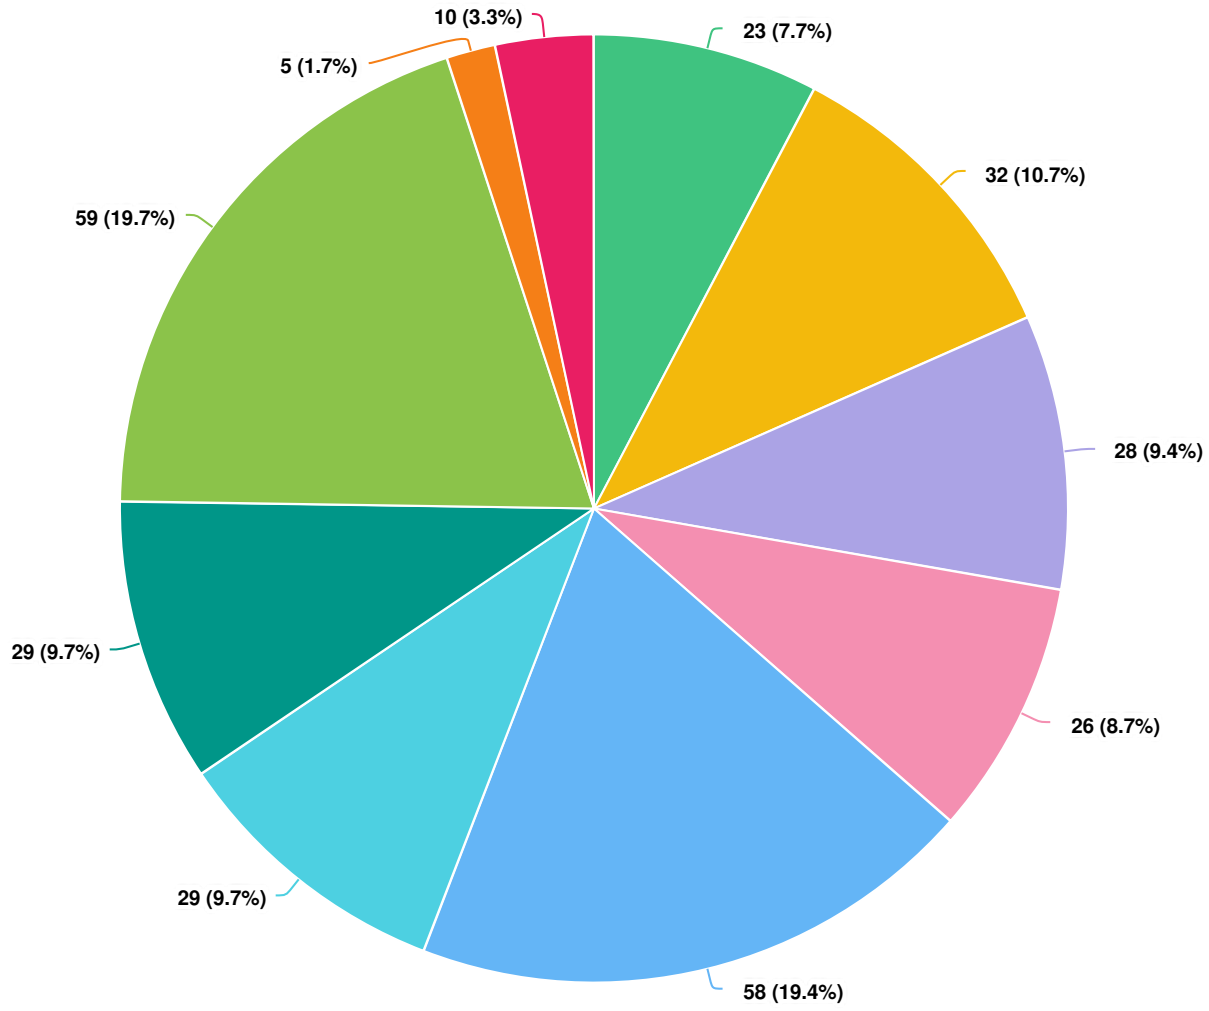
	Removal of natural resources (ie, trees...) should have considerable fees (likewise, project-crippling fines for removal without said permits) to ensure development is done with our children's futures as the first consideration. Also, and this is so important, there should be crystal clear, publicly broadcast paper trails that ensure developers, council members, city employees, and others aren't simply lining each others' pockets. We should have a paid arborist on staff for the city to aid in this process, as well as a volunteer council of local residents to cross-check the integrity of the process.
Screen Name Redacted 10/25/2020 12:08 PM	Existing landlords. Do NOT engage the BIA or a representative of the real estate profession. They will lobby. They won't be advocating for the prospective resident or for the best interests or needs of the city. We need to look towards people who have Camas long term interests at heart. We don't want the transactional!
Screen Name Redacted 10/26/2020 12:58 PM	Realtors could have good ideas. Mortgage loaners too. Financial counselors with their experiences working with families. City utility staff too because the 5 utilities billed to residences is expensive and effects affordability. County staff could provide estimated property taxes on housing, which also effects affordability.
Screen Name Redacted 10/26/2020 03:25 PM	An Equity Director would be a useful tool in helping to steer Camas into being a welcoming community to people of all races and ethnicities and people of every socioeconomic status.
Screen Name Redacted	I would love it if Camas would

10/26/2020 04:48 PM	partner with creative people who know how to properly plan for livability in terms of repurposing existing structures and creating residences that are walkable to mom & pop type markets etc. Resources they could bring is I guess previous success stories of diverse projects.
Screen Name Redacted 10/27/2020 10:08 AM	Vancouver Housing Authority, People who need housing for disabled or elderly family members, Providers of community housing for the disabled, like L'Arche. We have talked about turning our properly into a L'Arche community home, but aren't sure we can afford it. But this is a big issue for us. Our daughter was in the special ed program at Camas High, and none of her friends seem to have any housing options, and several have ended up being exploited by people who want access to their SSI checks. We can do better than this.
Screen Name Redacted 10/28/2020 03:34 PM	Honestly I have no idea. I mean, who can move the real estate market to a more normalized situation? We have buyers coming up from California cashing out, coming up here and paying silly-high prices for anything that goes for sale here in Camas. Great for the buyers for sure and great for the City of Camas tax base. Those buyers are in heaven for many reasons, including moving to our amazing, beautiful Camas. And happy to have all of them and others as neighbors but it put us in a bad spot for affordable housing here. At this point you're doing what you can in terms of "affordability" by approving communities like Woodburn Hill and Green Mountain. How could you really be more affordable than that? Those entry-level homes are about as cheap as it

	gets for single family homes. I suppose you could build cheaper homes somewhere but no one will build those, I doubt there's money for a developer for that. And I wouldn't support local tax incentives for that type of housing, that much cheaper than the entry-level homes out there. Maybe bring in developers and ask them about building lower income housing and see what they say? I wouldn't think there are any politicians who know any better than a developer or even City staff.
Screen Name Redacted 10/28/2020 05:47 PM	Residents in neighborhoods where you are desiring to put low cost housing.
Screen Name Redacted 10/28/2020 08:42 PM	Futurewise and Camas City Planning: Bring much needed information, transparency and (hopefully) solutions. Please don't sell our town.
Screen Name Redacted 10/28/2020 09:46 PM	I don't have any to suggest.
Screen Name Redacted 10/28/2020 09:46 PM	1) Camas City Council needs an Equity Subcommittee; 2) Build a working relationship/partnership C-TRAN for planning public transit to serve more Camas households efficiently -- this is an absolute priority for Camas's future attractiveness and livability; 3) While Bend, OR is not perfect, it has been dealing with similar growth issues for a long time and may provide helpful ideas/examples;
Screen Name Redacted 10/28/2020 11:24 PM	None!
Screen Name Redacted 10/29/2020 08:36 AM	Citizens, HUD, licensed city planners, agency for the aging and disabled. Designers.
Screen Name Redacted	Who says we need diversity and

10/29/2020 08:44 AM	affordable housing? This is a presumptuous assumption from typically left-wing liberals.
Screen Name Redacted 10/29/2020 09:03 AM	I'm not aware of a diversity issue in Camas. Please don't create an issue that doesn't exist.
Screen Name Redacted 10/29/2020 10:10 AM	CREDC, environmental councils, public.
Screen Name Redacted 10/29/2020 12:25 PM	Voters.
Screen Name Redacted 10/29/2020 03:43 PM	Above all, Camas residents.
Screen Name Redacted 10/29/2020 09:13 PM	I can only think of who not to ask to join conversation—large developers such as DR Horton and Lennar.
Screen Name Redacted 10/29/2020 09:39 PM	Georgia Pacific; so much of their unused and full-of-potential land could completely revolutionize our downtown.
Screen Name Redacted 10/30/2020 12:27 PM	Not all Californians and real-estate agencies/Companies.....
Screen Name Redacted 10/30/2020 12:43 PM	Environmental Organizations, less emphasis from developers, local citizenry .
Screen Name Redacted 10/30/2020 01:52 PM	Environmental groups. Environmental impact studies should be performed on any area that is being considered for development.
Screen Name Redacted 10/30/2020 03:47 PM	Clark County Housing Authority, builders, planning departments from Camas and a city with successful multi-use/multi-income housing options, homelessness leaders in our community, professionals with experience in housing diversity.
Screen Name Redacted 10/30/2020 09:44 PM	A real economic team that can balance this mess out right now.
Screen Name Redacted	CORE Industries owners, Rachel &

10/30/2020 11:15 PM	Kevin Barber. Also the owners of Sumner House. They are very involved in helping serve our community and are passionate about meeting basic needs. They have a genuine heart for the community and they have a long history in Camas. Their wisdom is invaluable.
Screen Name Redacted 10/31/2020 10:24 AM	RESIDENTS
Screen Name Redacted 11/01/2020 12:46 PM	Anything that would add more park and open space and not turn it into Vancouver or Portland.
Screen Name Redacted 11/04/2020 12:06 PM	Local equity groups, school administrators, groups advocating for seniors and lower-income residents
Screen Name Redacted 11/04/2020 07:48 PM	Groups with people of color, single parents, families who were raised here and now can't afford to buy and rise their families here.
Screen Name Redacted 11/05/2020 12:46 AM	Citizens (Especially those earning below the median income), developers, city council, homeless and at-risk outreach programs, social workers, teachers, and community-focused economists.

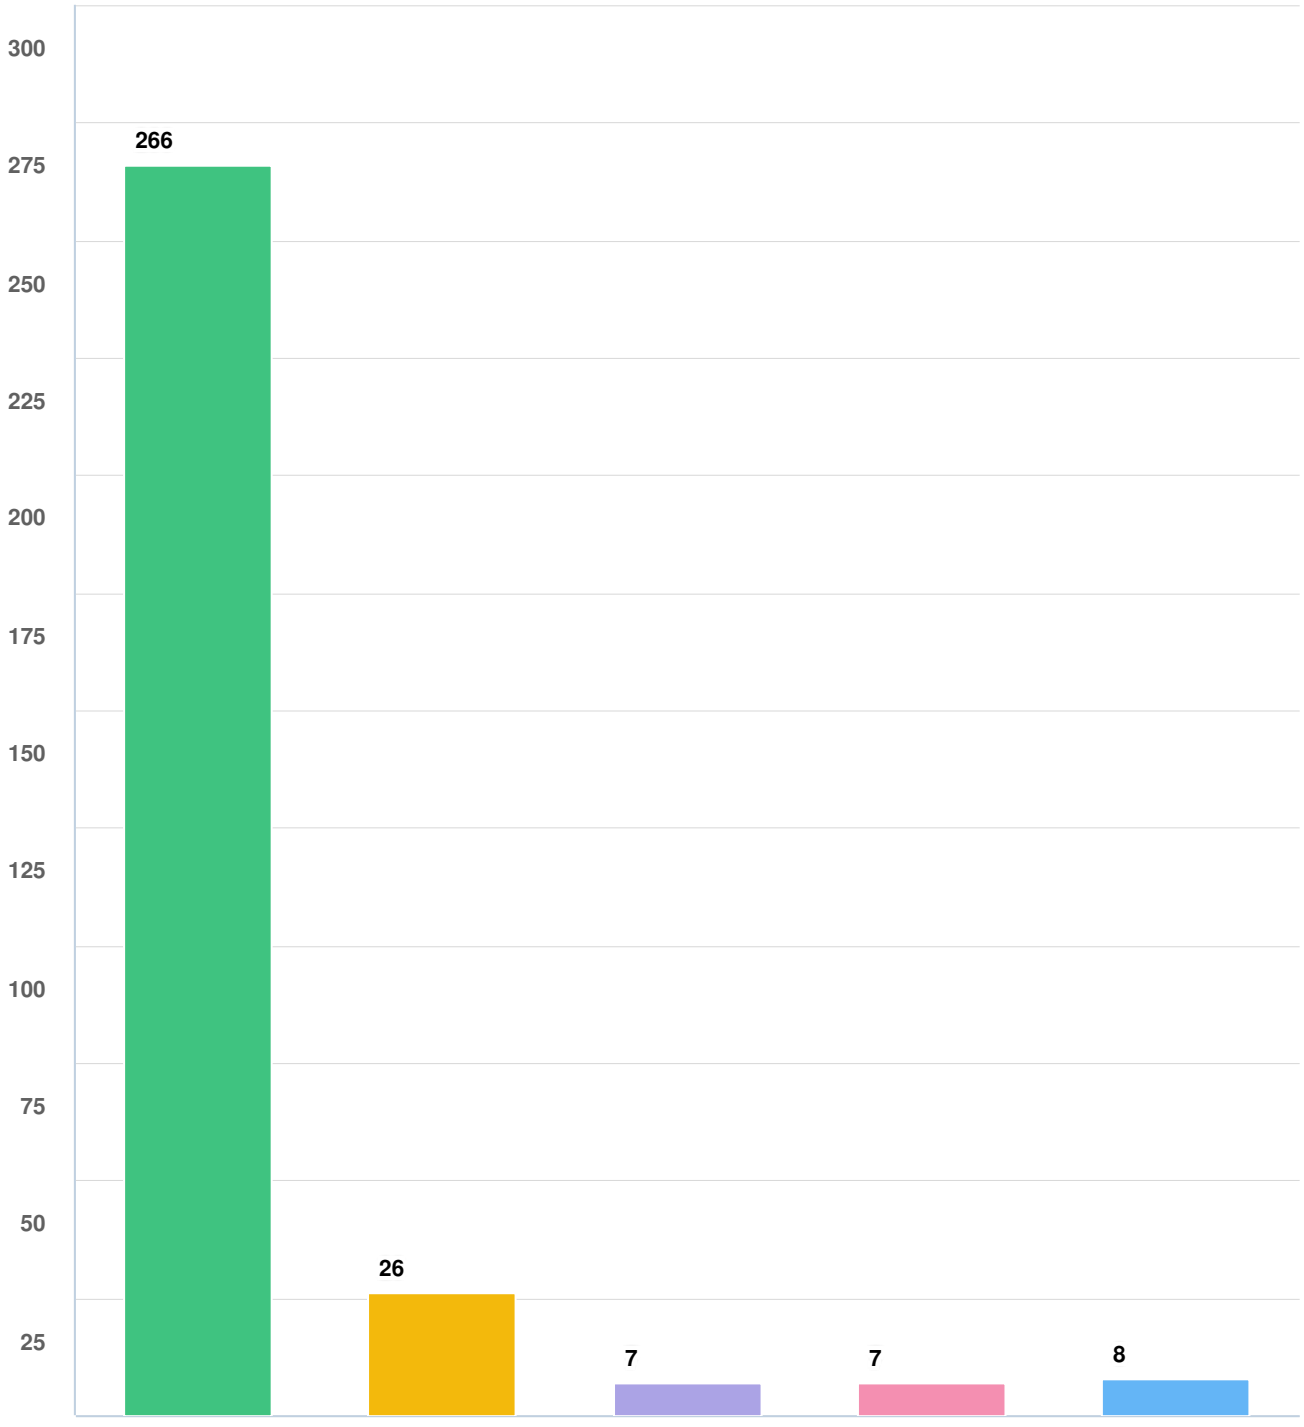


Optional question (127 response(s), 180 skipped)
Question type: Essay Question

Q14 Do you live or work in Camas? Check any that apply.

Optional question (306 response(s), 1 skipped)
Question type: Checkbox Question

Q15 What street(s) is nearest to where you live in Camas?



Question options

Not applicable / I don't live in Camas
SE 6th Avenue
NE Everett Street
NE 3rd Avenue
NW McIntosh Road
NW Lake Road
NW 38th Avenue
NW 28th Avenue / NW Fargo Street
NW 16th Avenue / NW 18th Avenue
NW 6th Avenue

Optional question (299 response(s), 8 skipped)

To City of Camas Commissioners and Staff

Subject: City's New Housing Plan

Unfortunately I am unable to make tonight's meeting since I coach a boys soccer team here in town, I did feel the need to comment on this plan, please accept this document as public testimony. I understand the City is in the process of creating a Housing Action Plan to support more housing diversity and affordability. The objective of this plan was to get public participation to understand current and future needs, the study included 300 participants, while we live in a City of 20,000 residents do you feel this was an accurate and thorough process by staff? What marketing or steps did staff take to get participants? I did not hear of the plan until after the public participation was closed, so I am worried that much of the public was not aware of this study. While I agree that diversity and affordability are valuable goals, I do not think these should be the primary goal of the City's Housing Plan. More importantly you may encourage developers to develop high rises and apartments, but you can't set the price tag of that house, nor their rent. That is at the discretion of the developer or landlord. Why aren't we evaluating our current housing situations and trying to build a better community landscape, ie. Require a percent of development to be open space or parks, public areas like play fields or community firepits, how about community markets or subdivision farmers markets like NorthWest Crossings in Bend, OR. High Density Developments require parking, when cars park on both sides of a narrow road and kids have nowhere to play except in the streets it creates driving hazards that are dangerous. Lookout Ridge in Washougal is a prime example of high density gone wrong. The Lookout Ridge Apartment structure has zero parking, cars are parked across sidewalk paths, cars are parked down the street into neighboring community's, this development is nowhere near a bus route and you cannot walk to a market? I was hoping that the City of Washougal would have seen the error of this development, yet they are looking at 3000sqft lots at NorthSide on 23rd St, the far edge of the City's UGB. There are plenty of spaces closer to Washougal and Camas Downtown Core that would accommodate 3000sqft lots. I'd encourage the City to look at Infill and redevelopment inside the city core first before adding incentives to the developers building at the edge or periphery of our town.

If the City wants to focus on affordability, I ask that you look at costs you have direct control over, like water and sewer rates, our city has some of the highest sewer and water rates in the county. Perhaps the city should be looking at sharing the cost of sewer and water extensions with our neighbor Washougal utilizing conditional use agreements. How about looking at outsourcing these services to Clark Regional WasteWater District or Clark Public Utilities. Has there ever been as study on these topics?

I ask the Council to consider these comments before making a housing plan that has incentives for developers and not the residents of Camas.

Hello,

I would like to submit my concerns for the housing plan that is being presented to you this evening, April 20th.

I have concerns that this high density housing plan is not based on what camas residents need or want. The initial housing survey was open for anyone to participate, in any city or state...this does not reflect a true picture of the housing needs/desires for camas.

Many people move to camas to get away from high density cities. I'm concerned if we require developers to build a minimum of 6 units/acre that will turn camas into an overpopulated town and cause many tax payers to consider moving.

This plan was created by a company in Georgia, which doesn't seem to make sense to me. How could a Georgia resident know or understand the uniqueness and beauty of camas? Why not hire a local company that might have better insight?

Our schools, first responders, and infrastructure will be greatly impacted by the high density plan. I understand that camas must keep within compliance of the GMA...but we've seen a lot of development in the last year or two, including the massive apartment building near 192nd. Doesn't all this development count toward GMA requirements?

I'm asking you to please not rush into approving a plan that I feel is not right for camas.

Thank you,
Charity Dubay

Subject: Let's Talk Camas Housing: Sharing some resources about inclusionary zoning
Attachments: Shared Equity Housing One-Pager.pdf

Hi Sarah and Melissa,

My name is Vince Wang and I am a resident in Camas. I learned from a recent article (https://www.camaspostrecord.com/news/2021/mar/04/no-place-to-call-home-camas-housing-study-shows-lack-of-affordable-options/) that the city is exploring IZ policies. I happen to conduct a nationwide research study on inclusionary housing and would like to share some resources. Happy to chat more if there is any question or interest in knowing more on this front.

Here is a Shelterforce article that touches some of the questions about IZ brought up by city commissioners: https://shelterforce.org/2021/03/10/inclusionary-housing-secrets-to-success/

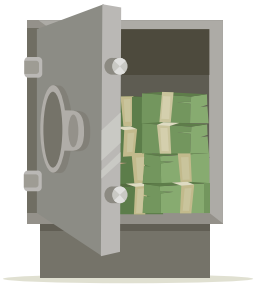
Here is the link to the newly published study: https://groundedsolutions.org/tools-for-success/resource-library/inclusionary-housing-united-statesAnd

Here is the link to the mapping tool and database: https://inclusionaryhousing.org/map/More

Broadly, I think the city could benefit from shared equity homeownership models to help lower-income, first-time homebuyers and help create inclusive and equitable communities. See the attached one-pager with some high-level information.

You can reach me via email or by cell 352-727-3747.

Best regards,
Vince



Shared Equity Housing

By the Numbers

1985-2018

Grounded Solutions Network, in partnership with the Lincoln Institute of Land Policy, has authored the most comprehensive study of shared equity housing programs conducted to date. ***Tracking Growth and Evaluating Performance of Shared Equity Homeownership Programs During Housing Market Fluctuations*** is based on data* collected from more than 4,000 housing units across 20 states over three decades, highlighting how shared equity homeownership promotes sustainable wealth building opportunities and lasting affordability for lower-income households.

*Source: HomeKeeper National Data Hub

The median shared equity household accumulates

$14,000

in earned equity. (compared to a median initial investment of $1,875)

6 out of 10

shared equity homeowners use their earned equity to eventually purchase a traditional market rate home.

7 out of 10

shared equity homeowners are first-time homebuyers

The share of minority households living in shared equity homes increased from

13% (1985-2000) to **43%** (2013-2018)

Over

99%

of shared equity homes avoid foreclosure proceedings

95%

of shared equity homes are priced affordably (under 30% of monthly income) for households earning 80 percent of AMI or below

Subject: DRAFT HOUSING STUDY

Melissa — I'm very disappointed in this draft.

I took the time to participate in two focus groups.

Nothing of the two main points I made is acknowledged even though both are quite valid. My primary point about Georgia Pacific's property is even more relevant as I watch the 27 acre lab property demolished to the ground. Surrounded on three sides by residential, but still zoned Heavy Industry, it alone could support 500 units at an M-18 designation. That's 11% of our total 2040 need! Yet it doesn't exist for purposes of this draft Study. Nor does any other part of their property which is in the process of the issuance of a cleanup order. Why not make it clear the City of Camas would support a rezoning? At least on the lab property now being demolished?

In case you haven't seen it, our community has come together to ask the State of Washington to ensure a cleanup beyond heavy industrial standards. If nothing else, so that property could be available to meet housing mandates they are imposing. https://www.camaspostrecord.com/news/2021/apr/29/camas-residents-officials-weigh-in-on-paper-mill-cleanup-plan/

You seem intent on pushing state-mandated density further out, spreading it out, and reducing parking needs. Why don't you speak to the obvious: Downtown and mill property can be a significant part of a 2040 solution.

I find it classist and disrespectful to lower-income households, seniors, and others you "assume" won't have a car. Are you suggesting they can't find a better job that needs personal transportation? Are you suggesting their medical needs are limited to bus lines or expensive Uber drives for cancer treatment in Portland? Are you suggesting they can't have the same options for education, and recreation as their fellow citizens with cars? Are you suggesting they can't shop and dine where they would like? You are taking all this freedom away with your assumption.

The truth is many will have cars, and those cars will be parked further out in neighborhoods. Great to think of a senior having to negotiate groceries for several blocks. The truth is you are creating the Portland reality where Districts like Division and Hawthorne, with their high density units without parking, are impacting adjoining neighborhoods. I hear it from Portland folks loud and clear.

I suggested an in-lieu fee to build efficient parking downtown and allow more units instead of costly on-site parking. All part of my suggestion to focus on Downtown. Not a word I could find this considered by this draft Study.

I am glad you recognize that city fees make a difference, and a small unit shouldn't pay the same fees as a 5,000 sq ft McMansion. We agree on that.

You seem to have come in with an agenda to push inclusionary housing requirements. Great…make housing more expensive for everyone else. This in part to make up for the things you could have done if your goal was to actually make housing more affordable and accessible. Quite simply, if for purposes of discussion you could build 2,000 units in the greater downtown by 2040, that's 2,000 units that don't have to be built via inclusionary requirements, among others, that either raise the price of housing or impact surrounding neighborhoods.

If you really want to build a walkable and accessible Camas, cramming more units in outlying residential areas is not the way. Building downtown is. This is our path to meet housing and climate change mandates coming from Olympia.

You are putting Camas on the way to becoming Portland. Pretending people don't have cars in areas where they are needed, Pretending only wealthier people have cars, etc. You are perpetuating classism. Why don't you ask some of the recent households that have moved from Portland why they left?

Camas deserves better from this critically needed study. Our housing market is out of control.
Frankly, I'm wondering why I bothered to participate?

I will be sharing this via social media.

Randal,
Your comments will be added to the record and provided to the Planning Commission.

In reading your comments, I interpreted that an important aspect was misunderstood.

The draft HAP provides a suite of strategies from a multitude of options to achieve the city's goals. The plan will focus on lands within the city limits, not outside the city limits. Each strategy (if the HAP is approved) must in turn be further developed, analyzed, vetted and brought back to council for adoption. For example, a density standard or change to the zoning map, would be brought through the legislative process after the HAP is approved.

It seems as if you may have missed that the downtown housing strategy is the first in priority (Version 7 attached). The second strategy in priority is focused on upzoning and rezoning **targeted areas**. One of the targeted areas *could be* the heavy industrial properties. In short, there is much more work ahead of us once the strategies of this plan are accepted by Council. The scope of the HAP does not include narrowing its focus to the block level, as that is work for the next phase.

And finally, Camas has strategies for shared parking and reductions for mixed use buildings already in our code, and so this isn't a new concept, but could be refined further based on the strategy. The rate of car ownership is a well-studied subject in relation to the total cost of housing. Meaning that if the goal is to provide housing for those whose income is below the median, then any additional factor that could lower their rent should be considered. Car ownership has been declining among certain populations, and has become a matter of choice for others. There is a body of research devoted to what they call "right sized parking", which seeks to avoid overbuilding parking. The project team can provide more context and information on this aspect at upcoming meetings.

Sarah — I don't think you fully understand me as well

Of course these are an array of strategies that are just proposals. They still have a process to go through. My point is this array would be different if, for example, this Study show specific to the mill property, the ability to accommodate 2,000 housing units of various types. That's 2,000 units that now off the table.

You and I both know when you say ""downtown" in Camas you are talking about our historic downtown and not the mill. Just like being the only Clark County property not in Clark Public Utility's jurisdiction, it seems treated as its own entity barred from anything planned over it but heavy industry.

Certainly makes the cleanup cheaper.

A growing number of people believe the mill should be on the table for conversation, especially when critical cleanup issues, such as land use, are being made. Unlike our Port, the City of Camas has been conspicuously silent about the draft clean up order and Public Participation Plan. This needs to change.

This Housing Study could easily provide the concept al road map for the Port. How about "Strategy X: working with the Port of Camas-Washougal on a conceptual plan for future reuse, such reuse to provide at least 2,000 units of housing to meet State mandates."

It defies logic the 27 acres being demolished cannot be considered for state-mandated housing, but someone's next-door lot sporting a tri-plex by right can. That is on the table.

If your response is saying the mill property is a "targeted area" then say so directly. Moreover, assign a planning goal to it for 2040 housing. Then back off some of these potentially intrusive other strategies.

I think our community needs to understand that choice, and be presented with it for discussion.

That was the point I made at two focus group discussions quite clearly. Obviously it wasn't heard.

As to "carless" people, there's a real difference between the real world and studies. Basic to your cited assumption is the resident of that unit doesn't deserve the same entitlement as everyone else: the provision of a parking spot. Why? Because the City refused to consider state-mandated housing at the mill, but instead took away your parking spot to help a developer save money to make up units that should have gone to the mill property. Whew!

Subject: RE: Checking in

Sarah –

I reviewed this document again, and believe the main 'takeaway' is a potential need to have more direct communication with actual affordable housing developers – see Developing Partnerships, Page 20 of the report. I would suggest putting together a list of sites (preferably City-owned or with amenable owner) and providing a brief zoning/development summary and cost estimate related to a pro forma for each of these sites. You could then reach out to affordable housing developers to see if they would be interested in providing feedback on the feasibility of developing, with the hope that they might actually do so ...

Happy to chat more …

BUILDING INDUSTRY ASSOCIATION OF CLARK COUNTY

May 17, 2021

Camas Planning Commission
616 NE 4th Ave.
Camas, WA 98607

RE: Camas Housing Action Plan

Dear Planning Commission and Community Development Staff;

I am writing to you on behalf of the Building Industry Association of Clark County (BIA) to respond to the request for comment on the proposed Housing Action Plan for the City of Camas. The action plan aims to explore strategies for affordable housing options and increased density.

Based on the proposed plan, we believe the majority of the strategies mentioned would be positive both for builders and the community of Camas. However, there were key points and suggestions that would disincentivize builders from building more affordable housing in Camas. The following strategies would hinder any efforts to build more housing, specifically affordable, middle-level housing in the City of Camas.

1. Mandatory Inclusionary Housing Policy in Camas:

Mandating a percentage of units built to be reserved as affordable units would hurt efforts to create more affordable housing options in the City of Camas. Providing incentives to builders such as reducing parking requirements, providing density bonuses, or other zoning-related strategies would be a better approach. Camas has the highest median household income in Clark County at $106,513 and such efforts would target those who make substantially less than the median income (60%-80% of median household income). Housing is considered affordable when 30% or less of household income is spent on housing. Based on this definition of affordable, those at the 60% level could afford a mortgage or rental payment of $1,598. We believe this is an achievable goal and mandating more stringent requirements would disincentivize building. The City of Camas needs to decide whether their intent is to create more affordable housing options for the community or if the goal is to create more low-income housing options.

Developers have a choice in when and where they build, having requirements for affordable units based on the size of the development, or requiring contribution to an affordable housing fund, creates incentives for dodging these requirements (i.e. building right below a certain size to avoid requirements). We believe the best strategy is to allow the market to dictate what is built. The city could up-zone areas in the urban core to elicit more affordable high-rise rental units, while at the same time allowing diversified housing types to create opportunities for row houses, town homes, cottage housing, and tiny homes. This strategy is exciting because it allows for homeownership rather than depending on rental units to achieve affordability. As mentioned in the plan, this could take place as a part of infill, redevelopment, vacant land development, etc. ADUs would also be a

great solution, where allowed. We are in full support of diversifying housing types as outlined in strategy three. We assert that a wholistic approach to address housing affordability is the best path forward.

2. Explore Funding Source Options for Affordable Housing:

As mentioned by the Planning Commission, monitoring outside funding sources may take a large amount of staff time. In contrast, incentives like those mentioned above and within the study would be pragmatic and efficient in the use of staff time and resources.

Moreover, the restructuring of impact fees based on the size of residential development would have the opposite effect desired. Average net profit for a builder in Clark County is 8%, well below the national average of 8.89% (according to a NYU Stern database of 7,000 companies across all sectors). Calculating these variable impact fees would enhance complexity and take more of staff's time.

In addition, builders and developers are struggling because the cost of building materials has skyrocketed. For example, framing lumber has increased the cost of new home construction by $36,000 Any additional costs will invariably be passed onto the buyer, negating any efforts to make housing more affordable. Additionally, an inflated increase of fees will not only affect current projects, but also require builders to reconsider future developments in Camas. Any increase in cost makes surrounding areas (not in Camas) more attractive to buyers and developers.

3. Explore Density Modifications in the R Zones:

We are supportive of this strategy. However, we are concerned with the suggestion of up-zoning to a 6-unit minimum density across all single family residential zoning districts. Up-zoning would be better used in urban nodes, vacant land, and the urban core in general. Downtown Camas is ripe for redevelopment and efforts should be focused there. We are concerned that increasing minimum density may lead to a loss of character for many residential areas in Camas and could discourage people from moving to Camas because the character and small town feel would be lost. As previously stated, this strategy may lead homebuyers to other jurisdictions if implemented. We agree with the Planning Commission that selective rezoning would be preferable to up-zoning.

We applaud the efforts of the Planning Commission and staff in considering and creating the Housing Action Plan. Going forward, we hope to be a partner to create mutually beneficial solutions for builders, buyers, and the City of Camas. We appreciate staff reaching out to the BIA to get our input on this matter.

Sincerely,

Justin Wood
Government Affairs Coordinator

Subject: Housing Action Plan Comments

WARNING: This message originated outside the City of Camas Mail system. DO NOT CLICK on links or open attachments unless you recognize the sender and are expecting the content. If you are unsure, click the Phish Alert button to redirect the email for ITD review.

Dear Planning Commission,

First, I'd like to acknowledge the work of the planning commission, staff, and the consultant team on the Housing Action Plan. I participated as a focus group member and know that the project team valued my input and that of other group members. The focus group represented a variety of viewpoints and the team did a great job of synthesizing our perspectives into a plan that reflects the diversity of our group and of the community as a whole.

Second, I'd like to express my support for the Housing Action Plan. The plan's goals and strategies will support the Camas 2035 Comprehensive Plan's vision of a diverse Camas, with a wide variety and range of housing for all ages and income levels. I am excited by the recommendations to expand housing opportunities in our downtown areas, to upzone the city's residential zones, and to allow for a diversity of housing types throughout the city. My neighborhood on Prune Hill includes homes ranging from 1,400 sq. ft. to 8,000 sq. ft. While all these homes are single-family, the assortment makes for an attractive streetscape and a diverse neighborhood of folks in different stages of life. If the plan is implemented, more of Camas may realize the benefits of a variety of housing types and densities present throughout our neighborhoods. If the plan is successful, more people will have access to the quality of life that Camas residents enjoy.

I encourage the planning commission to vote to recommend that the city council adopt the Housing Action Plan. And yet the plan is only a starting point. There is much work to be done if we want to realize the Camas 2035 vision, including work by the community to further explore the plan's strategies and implement them in the coming months and years.

Finally, a word about the mill. Today it is still operating, but if it someday closes, it may continue to be a jobs center, it may turn into housing, it may become a public park. More likely it will be mixed-use. But currently, the mill site is not a viable option we can count on to accommodate anticipated growth over the next 14 years. Still, the plan does not preclude the use of the mill site for future housing development (strategies 1 and 5 support this possibility), but it does not hinge our housing future on the chance that the mill will close. There are many large tracts of vacant land in our urban growth boundary that will be developed before then, and these sites provide our best opportunities to accommodate our housing needs in the coming years.

Cc: Melissa Mailloux
Subject: RE: Let's Talk Camas Housing: Sharing some resources about inclusionary zoning

Sarah and Melissa,

Thanks for inviting me to the meeting last week. You both did an excellent job in presenting the plan and facilitating the meeting. And I think all the strategies you brought to the commissioners for consideration are on target in addressing community's needs. I stayed for the most of the meeting; and I, sadness to say, left the meeting with much disappointment. I was going to put my comments below to the public channel. But now I am passing them to you, feeling this way may be more "polite." I don't know how much can be changed/challenged at this stage given decisions have already been made by the commissioners. Feel free to share my comments with anyone you think should be aware of.

In essence, I question the validity of decisions made by the commissioners in meeting the due diligence.

I left the May 18 planning commission meeting with disappointment. When commissioners interpreted community's ask for "diversity" and "affordability," what I heard is a narrow definition of those terms. Their intentionally leaving out of lower-/moderate-income residents when talking about affordability and not even say a word about race and ethnicity when talking about diversity is concerning. Also, I don't like the process of how the commissioners killed strategies 6 and 11. I observed that a couple commissioners essentially used their subjective opinions of "I feel this is wrong" to object demonstrated successful programs with long-term effect in at least some communities across the country. To be clear, I am not saying these strategies will surely be effective in our community. But the concerns brought up by a couple commissioners show plainly superficial and partial understanding of those strategies. And I don't see them bother to learn more about how these strategies could potentially benefit the community and directly help promote diversity and affordability - despite the fact that our planner and consultant have put effort to investigate more upon their previous request and suggested them to think further during the meeting. The City has invested tremendous time and resources to come up a housing plan that – ideally and desirably – works for all, but fundamental issues are intentionally left out and potentially important strategies are stricken out by in my view some short-sighted commissioners who only prioritize "lower hanging fruits."

The City is becoming more diverse, and housing market dynamics caused by regional, national, and global forces have made the affordability issue more severe to existing residents (let alone those who want to move here) and to higher income levels (and unfortunately we know that this trend is ongoing and is very likely to stay). Without the real commitment and dare to confronting these challenges, we are more likely to be headed in a more expensive, exclusive community.

RE: Draft Housing Action Plan

Dear council members:

Thank you for the opportunity to comment on your proposed draft housing action plan (HAP). We appreciate your coordination with our agency as you work to fulfill the HB 1923 grant contract to develop this plan.

Camas has done a good job at completing all of the required items within the HB 1923 grant contract. The HAP if implemented as designed will help the city meet its housing needs by accommodating the future population demand with a greater diversity of housing options and greater affordability, while addressing displacement and preserving affordable housing. We especially like and applaud city's work on the following items:

- The stakeholder focus groups and interviews, which in combination with the survey and other outreach, will help the city plan to address the specific needs and desires of Camas that may not have been evident in the data.
- The buildable lands analysis review of Camas' building capacity will be very helpful in informing the actions that will need to take place from the HAP to accommodate growth within the community.
- The specificity of the actions recommended within the strategies will help the city quickly transition to taking actions that will increase housing capacity, diversify the housing options, and address housing affordability and displacement.
- The prioritization of actions as recommended by the Planning Commission is a best practice that we recommend all cities incorporate into their HAPs. A prioritized action list will help the city quickly take next steps in its upcoming work plan to address the city's housing needs.

As the city looks to adoption and implementation of this strong set of housing strategies, we have a few suggestions for strengthening your plan.

- We recommend the city include a table of actions associated with each strategy to compile the recommendations in one place. We recommend this table include additional information that will help the city to take the next steps to implement the actions, including level of effort or amount of resources needed to complete, agencies or partners involved, and/or considerations or action needed.
- We recommend the city make a plan for how to monitor the goals within the HAP. A monitoring plan would allow the city to measure its progress and evaluate which changes have been effective at meeting the goals, and which might need modifications to meet the intended purpose.

Additionally, the Washington State legislature has funded additional grants to increase residential building capacity in the next biennium. Please be on the lookout for future funding opportunities to implement actions with this HAP coming through Commerce in the late summer or early fall.

Congratulations to the staff for the great work the draft housing action plan represents. If you have any questions or need technical assistance, please feel free to contact me at steve.roberge@commerce.wa.gov or (360) 764-0112. We extend our continued support to the City of Camas as you review this draft plan for adoption as intended direction for housing policy.

Sincerely,

Steve Roberge

Acting Mayor Ellen Burton
City of Camas
616 NE 4th Ave
Camas, WA 98607

Ellen -- For 32 years I was the US Navy's civilian representative to the State of California. Often speaking for all the military services, I spoke simple truths and spoke them plainly. I spoke to powerful interests such as International Shipping's trade association, the Los Angeles Department of Water and Power and the Pay Day Lending industry. Plain and simple truths to protect the military mission so dependent on California's land, sea and air space.

It was the voice of the Admiral, I was often reminded, when I spoke this plain truth. That's where my expression "plain truth" comes from. Plain truth can challenge the "*status quo*" making all the more reason it needs to be spoken.

Camas is at a point where plain truths are needed.

The Council voted 6-0 to recognize the Camas Mill as central to Camas' future, and state those reasons in writing to Governor Inslee's Department of Ecology Director.

With full support from the Port, Camas is on its way embracing a future with great opportunity for every interest group, including our young families. From riverfront restoration to hotels, from hi-tech offices to thousands of housing units, it all comes together consistent with protection of our historic downtown. The mill property is the future Camas where affordable housing, and other sustainable development with the lowest carbon footprint, belongs.

This future depends on proper cleanup hence the City's bold action to Director Watson. As noted in your letter it is a future offering "opportunities for a wide variety of future uses." Apparently, though, not housing.

I offer a new Housing Strategy implementing this future.

It isn't new to staff and the consultant team. I suggested in both focus groups it was the most important action this plan should take. Discussed on the next page, it was brought up more than a year ago in the North Shore visioning process.

Speaking plain truth, this strategy must be included in any Housing Action Plan reflecting evolving Camas policy.

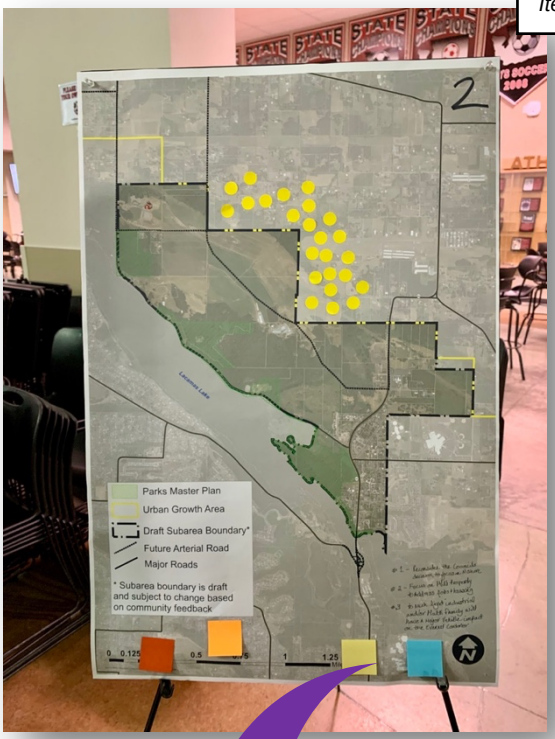
New Housing Action Plan Strategy

- Recognize decommissioned portions of the Camas Mill are desirable locations for housing consistent with affordability, high-density, and low-carbon goals. These shuttered facilities should be rezoned to mixed use and have remediation sufficient to support Camas' housing needs. The mill property and downtown should be the primary focus for maintaining affordable housing in Camas.

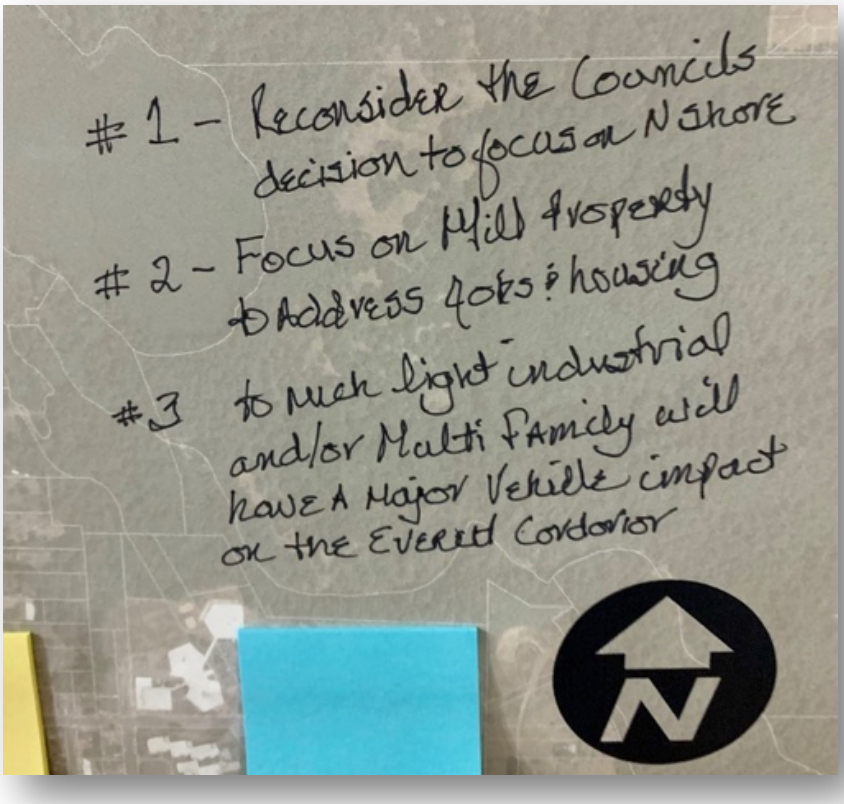
All that's needed now is a page of supporting text for explanation and context. If resources are an issue, there are any number of expert volunteers that could agree on a conceptual approach. I'll be the first Volunteer. It needn't cost money. We don't need a consultant to write it.

Just as I asked for decisive action to send a support letter to Director Watson, I ask you take decisive action directing staff to add this strategy, or something similar, before a public hearing is held.

Directing thousands of required housing units out of neighborhoods to downtown should be basic to the public discussion, and not something from an invisible voice on a Zoom call.



This was a message from the North Shore Sub-Area Plan "visioning" meeting February 4th, 2020. I heard it referred to at this past meeting.



The notes on the "winning" map, the map that refused to recognize the North Shore for intense development, said:

- #2 - Focus on Mill Property to address jobs & housing

What was #1?

- #1 - Reconsider the Councils decision to focus on N Shore

Despite not being included on the North Shore's City's web page, this map remains an expression of the people of Camas. They spoke some plain truth. It needs to be listened to. Staff needs to be told to do this.

Staff represents the community and not the other way around. Who's driving this agenda? The community or consultants?

It should be a central question in considering an Interim Mayor and/or Interim City Administrator.

It starts with this Housing Action Plan.

I hope you agree it is finally time for recognizing what Camas residents identified when last we could meet in public.

They said it clearly. Let's get started.

We can also start at next week's virtual Town Hall.

> Hi Ellen,
> I concur with Randal. The way our current downtown and the downtown into the future will truly thrive is with more close in housing and thoughtful mixed use and physical amenities that bring the community together. Let's show how this can be done not just well, but the best possible! On both the 27 acres (soon hopefully!) and the main campus when able. We know our town and our Main Street very well and this is what we're asking to have considered. Thank you.

Thank you City Council and staff for this opportunity to give comment.

It is imperative for Downtown Camas to have more close-in housing to truly thrive. For a historic downtown to be the most robust, it should be an “18 hour downtown”, 6pm-12MN and this happens when you have people living in and very close to downtown and supporting businesses during these hours.

The healthier and more robust our downtown core is, the more amenities and offerings and strength we have for our entire community.

It’s so very important that we are visioning the future for our downtown including housing. The mill property will have significant future potential and it’s important to be considering best future uses for our community now. It is key as we move forward to have housing options so people can live and work in close proximity. We want people who work in downtown to be able to afford to live in Camas, and for people with diverse income levels and ages to have the option to live close to downtown.

We appreciate that you are already looking at the downtown commercial zone as you’re considering different housing options. The DCA encourages the City to include all of downtown including future mill properties in the housing visioning and planning process. It can help satisfy housing mandates and needs, and also bolster the economic health of our downtown. Thank you.

Subject:	Revised Housing Analysis, City of Camas Comprehensive Plan Update

Section 1. Housing Element Analysis

Introduction

The City of Camas Comprehensive Plan update offers an opportunity to refine the vision, goals, and policies to address the current housing needs for the next 20 years from 2025 to 2045. The Comprehensive Plan is a foundational document that provides a vision and policy direction for managing growth and development while considering effects on the built and natural environment and public facilities.

The Housing Element will include recalibrated goals and policies to better accommodate the diverse household needs of the whole community across the income spectrum. The City is facing housing challenges that would benefit from improved access to more housing options, more affordable housing for older adults, smaller housing, more rentals and homeownership opportunities. Housing needs are not one-size-fits-all and instead should be thought of as a menu of different options with sufficient variety for different household incomes and sizes, personal or household preferences, life stages of people, and community location needs.

The Housing Element should identify sufficient land and strategies to accommodate existing and projected housing needs for all segments of the community over the next 20 years. In addition, it seeks to enhance neighborhoods, support the maintenance and improvement of existing housing stock and guide the development of new housing stock to accommodate a range of income levels, ages and special needs.

The Housing Element is supported by a housing needs analysis that quantifies existing and projected housing needs and identifies the number of housing units necessary to accommodate projected growth. Housing analysis is an important exercise as a community's housing needs tend to continually evolve based on changes in the broader economy, local demographics, and the regulatory environment.

The approach for updating the Housing Element will be informed by community input, state legislation requirements, priorities for the city, a comprehensive housing inventory and analysis based on the best available existing data, provided in the following section. This analysis evaluates the current and projected housing, existing conditions, housing market dynamics, and housing demand and includes detail on the community demographics, housing stock, housing market dynamics, expected housing demand, and special housing needs in the City of Camas. The insights from this analysis help build a factual basis for the housing policy updates.

Housing Action Plan

The City of Camas completed its Housing Action Plan in 2021, including a thorough community engagement process about current housing needs in the City. This included two virtual public meetings, seven focus groups and interviews, a housing survey with over 300 responses, a project website, and written public comments. Key findings about community priorities included:

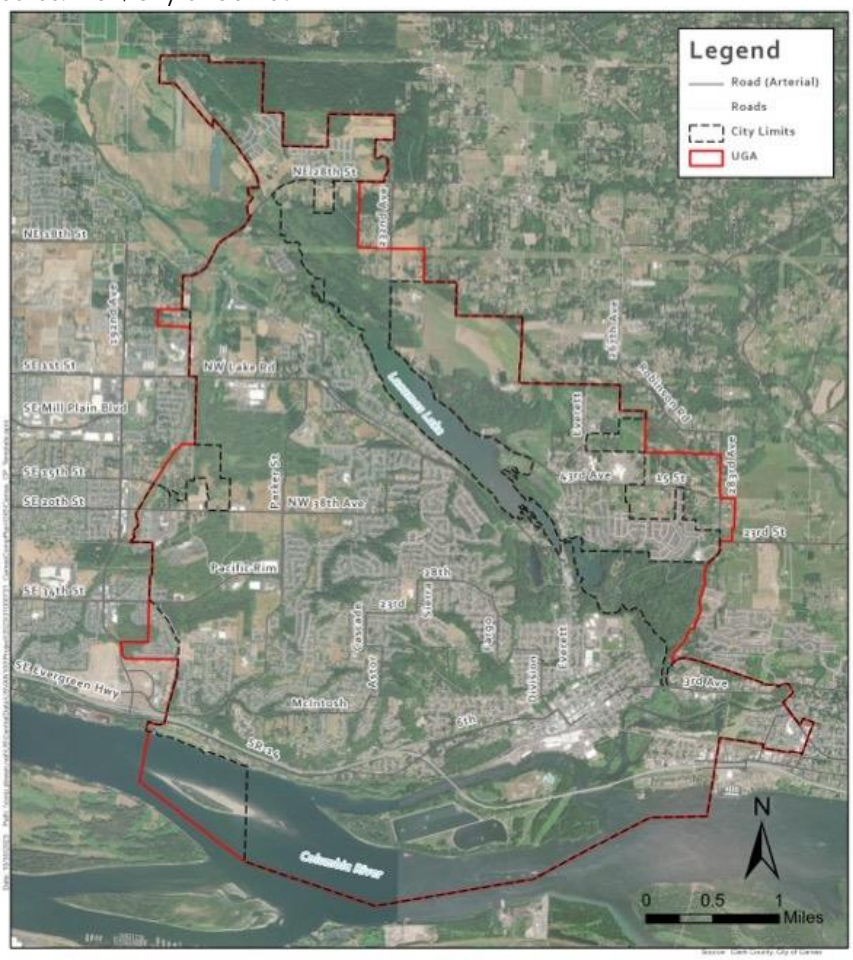
- **Camas needs a greater variety of housing choices at a range of price points to meet residents' diverse needs**. Specific types of housing needed included starter homes for young adults looking to purchase a house, accessory dwelling units (ADUs), accessible housing for older adults, and apartments/condominiums.
- **There are development opportunities and incentives that the City could deploy to support more types of housing**, such as tax credits for multifamily construction, city-funded parking structures, strategically using available land, and working with Homeowner Associations (HOAs) to remove barriers for ADU development.
- **Cost was a leading factor that participants noted for limiting housing choice in Camas.** Addressing perceptions about affordable and multifamily housing is important to meet housing needs. Much of the housing stock today is single-family detached homes, but new multifamily/ mixed-use buildings near transit and central areas could expand options in the city.

Planning Framework

The City of Camas's first Comprehensive Growth Management Plan was adopted in 1994, which was replaced by the current Comprehensive Plan in June 2016 to fulfill the requirements of Washington State's Growth Management Act (GMA). The GMA is a series of state statutes first adopted in 1990 aimed at managing population growth, particularly in the state's fast-growing areas.

In Clark County, RCW 36.70A.040 requires all cities to "fully plan" for the elements of a Comprehensive Plan, including land use, housing, capital facilities, utilities, transportation, and climate change.[1] The current update process is part of a period update also required by the GMA, as part of an established schedule by the County.

The Clark County Countywide Planning Policies provides helpful guidance on the Comprehensive Plan update. Clark County is currently in the process of updating its Comprehensive Plan and its Countywide Planning Policies. The existing 20-year growth plan spans 2015-2035 and includes a Housing Element with relevant policies for jurisdictions within the County. Please see the Appendix for a summary of the existing relevant Clark County Countywide Planning Policies.



[1] The GMA includes other optional elements for economic development, parks and recreation, conservation, energy, sub areas, and ports.

City of Camas Profile

The City of Camas is a highly desirable place to live, offering a prime location nearby the growing cities and employment centers of Vancouver and Portland, and the smaller cities of Washougal and Battle Ground in south Clark County. The city is interconnected to the Portland Metropolitan region, located east and adjacent from Vancouver and northeast of Portland (see map below). Similar to the City of Vancouver, Camas has experienced high population growth over the last two decades, with an average annual growth rate of 5.2% which is double the rate of growth in Clark County and Washington State. Camas is generally more expensive both for rental housing and home prices compared with Clark County overall, including other suburban jurisdictions and larger cities like Vancouver and Portland. However, it does offer relatively low property taxes that can attract households from Oregon; consequently, this urban area has been absorbing some of the Portland metropolitan region's population growth over the past decade. The housing market in Camas has experienced accelerating demand trickling from the region, with median housing sales prices doubling over the past decade and the cost of average market rent for a one-bedroom apartment surpassing the cost in Portland and Vancouver.

This housing needs analysis includes many comparisons to the City of Camas and to Clark County, as a whole including both incorporated and unincorporated areas in the county, and in some cases, other cities, to provide helpful comparisons.

Exhibit 1. Site Location Map, City of Camas
Source: WSP, City of Camas

Summary of Findings

A summary of key findings from this Economic Development Element analysis is provided below to help describe key insights regarding the economic context, economic opportunities and challenges, and to inform Comprehensive Plan policy updates. The next section provides the full results and detail regarding these findings.

Community Demographic Trends

- **Since 2000, Camas has grown at a faster rate than Clark County or Washington State overall, more than doubling in size by 2023.** Camas's peer cities in Clark County like Battle Ground and Washougal have also seen higher rates of growth over the County average. As the population of these smaller cities increases, demand for housing also rises and affects the way that cities like Camas must plan to meet residents' housing needs.
- **In terms of land, Camas has expanded incrementally over time through annexations.** In the 2000's and early 2010's, the City added large new areas on the north side of Lacamas Lake, with a large portion of this area zoned for multifamily housing alongside employment and commercial areas.
- **Camas is becoming a more diverse community.** The share of people of color increased from 13 in 2008-2012 to 24 in 2018-2022. The City has also become slightly more diverse compared to Clark County overall (where 21 percent of residents were people of color in 2018-2022).
- **Camas is seeing a larger share of couples and families with children** and has a higher share of both groups than the County or State. The City also had a larger median household size, particularly in owner-occupied households.
- **Median household income in Camas is higher than both Clark County and the state of Washington at $133,000 in 2018-2022.** Adjusting for inflation, median income in the City still increased by 31 percent since 2008-2012. This increase is primarily due to growth in high-income households earning over $100,000 per year.
- **Median income in Camas is above the area median income (AMI).** In 2023, HUD determined the AMI to be $114,400 for a family of four in the Portland-Vancouver-Hillsboro, OR-WA MSA (including Camas). This is lower than median income in Camas itself which was $133,000 in 2018-2022 (Exhibit 14) and has been consistently lower than the City over time.
- **Four out of five households in Camas owned their homes in 2018-2022, at a higher rate than either Clark County or Washington.** The share of renter households stayed the same in Camas since 2008-2012, showing less than a 1 percent increase over this time period.
- **County-level trends indicate that homeownership disparities exist for some groups by race and ethnicity in Pierce County,** with households who are Black or African American, American Indian or Alaska Native, Native Hawaiian or Pacific Islander, Hispanic or Latino (of any race), two or more races, or another race not listed had lower rates of homeownership.
- **At the County level, income levels also vary by race and ethnicity.** White households were generally in line with the overall median, while income was higher for American Indian or Alaska Native and

Asian households. In Clark County, households who were Black or African American, Native Hawaiian or Pacific Islander, Hispanic or Latino, two or more races, or another race had lower median household incomes than the overall average.

- **Overall levels of housing cost burden are decreasing, but more renters and low-income households experience higher rates.** In 2018-2022, 24 percent of all households experienced cost burden, lower than Clark County's rate of 33 percent overall. However, Different types of households may face varying levels of cost burden. In Camas, a higher share of renter households experienced cost burden in 2018-2022 compared to homeowners. Also in this time period, 100 percent of households earning less than $20,000 experienced severe cost burden (paying 50 percent or more of monthly income towards housing). Although cost burden is generally lower for homeowners, more people of color in Camas who own their homes experience cost burden compared to white, non-Hispanic homeowners.

Existing Housing Inventory

- **Camas and Clark County have both seen growth in their number of housing units in the past two decades.** Camas has seen a 108% change between 2000 and 2023 (annually this equates with an average of 221 new homes). The City of Camas's growth in housing units was lower than its population change (120%), indicating that the City has not been keeping pace by adding to its supply to meet the rising demand.

- **Camas and Clark County have both had steadily low vacancy rates for all housing units in total** (both at 4% in 2018-2022 with little change over the last decade). This level of vacancy is indicative of a healthy housing market with natural rates of turnover; however, the slight decrease in both the City and County could begin to indicate constrained supply of housing.

- **For two-bedroom multifamily units, Camas has seen spikes in vacancy, but these align with new construction trends** which can temporarily raise vacancy rates for newly delivered units but do not indicate long-term vacancy. In 2023, the City saw over 200 new housing units delivered, likely accounting for the fluctuation in vacancies, as well as deliveries in 2017 and 2020.

- **Since 2015, the City has permitted 2,763 new housing units.** Single detached homes have accounted for the largest share (70%) of new permits in the City of Camas, and another 8 percent were made up of attached townhomes. While apartments, condos, and units in mixed-use buildings made up 20 percent of new permits between 2015-2024, middle housing types like duplexes, triplexes, quadplexes, and accessory dwelling units (ADUs) were only 2 percent of all permits.

- **Median home sale prices in Camas and Clark County have increased over the last ten years,** with Camas's average prices generally remaining higher than the County or comparison cities of Battle Ground and Washougal. In 2023, the average home sale price in the City was **$704,000,** increasing by 119 percent since 2013. In comparison with surrounding jurisdictions, the average home sale in Camas was more expensive than the average home in the City of Portland (by $196,000) or Clark County (by $173,000) in 2023.

- **Prices are also increasing quickly in Camas and Clark County for the average 2-bedroom multifamily rental.** In 2024 year-to-date, the average 2-bedroom apartment rent was over $1,800 in the City and over $1,700 in Clark County. This indicates over a 35 percent increase since 2010 in the

City and County. Average 2-bedroom multifamily rents in Portland tracked closely with Camas in the 2010's, while rents in Vancouver remained lower (generally following countywide trends). Since 2020, rents in Camas have risen higher than both cities on average.

- **Compared with home sale price and rent increases in Camas, only households earning over 150 percent or more of AMI would be able to afford the average home in the City as of 2023.** However, the average 2-bedroom apartment is still affordable to households between 50 and 80 percent of AMI in Camas.
- **The City of Camas had 98 units of regulated affordable housing in 6 buildings** according to data from Oregon Metro and the City. Approximately half of these units are affordable respectively for residents between 30-50% of AMI and 50-80% of AMI. The City also has several long-term care residential facilities for older adults providing 135 units.

Future Housing Demand

- **Since 2000, Camas has grown at a faster rate than Clark County overall but is expected to slow based on County estimates by 2045.** The County's interim projections assume that new population growth in Camas is estimated to grow at an annual rate of 1.2% and account for 4.05% of countywide population growth.
- **County allocations show the need for 4,226 new housing units in Camas by 2045, adding around 211 new housing units per year.**
- **The City would add about 311 new units to meet the new permanent supportive housing target and 1,766 units affordable to low-income households below 80% of AMI by 2045.**
- **Camas residents with disabilities may require additional housing features for accessibility to meet their needs.** In 2018-2022, 8 percent of residents in Camas had at least one disability. The most common type of disability in the City was cognitive difficulties, followed by ambulatory and vision difficulties. These disabilities can require housing accommodations such as zero-step entryways, ramps, lifts, or other accessibility features.

Community Demographic Trends

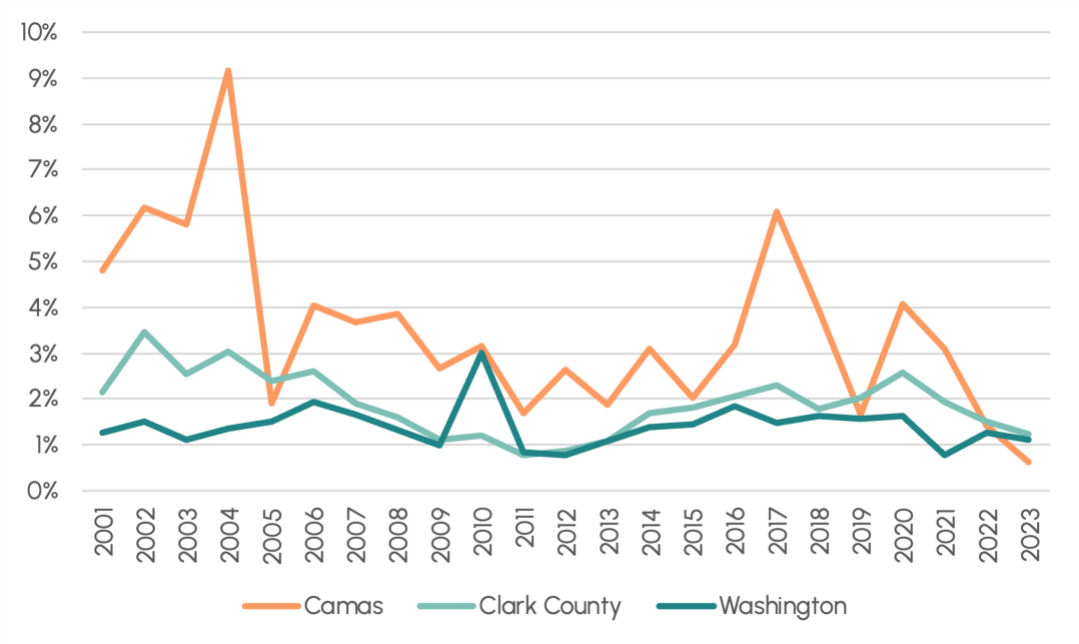
Understanding population and housing characteristics are important for context for developing policies that anticipate the needs and goals of Camas. Key trends such as population growth, household size and composition, homeownership, and residents' characteristics like age, income, and race and ethnicity provide useful information about how Camas is changing and what changes are affecting housing demand in the city. Tracking these trends also helps to work towards equitable outcomes, by recognizing where there are existing gaps and what groups may face disproportionate challenges to accessing housing that meets their needs.

This assessment relied on data primarily sourced from the United States Census Bureau's 5-year American Community Survey (ACS) estimates,[2] CoStar, Washington Office of Financial Management (OFM), the United States Department of Housing and Urban Development (HUD), and the City of Camas. Primary geographies used include the City of Camas, Clark County, and Washington State, as well as targeted comparisons with surrounding comparable cities of Battle Ground and Washougal.

In some cases, the margin of error (MOE) with the Census Bureau's ACS data and other sources can be very high, severely reducing the accuracy of some variables. This typically happens for groups with smaller sample sizes or data filtered to smaller geographies. Where data is not available at the city level, we include information at the County level.

The Washington State Office of Financial Management (OFM) provides official state and local population estimates and projections for use in the allocation of funds, growth management, and other planning functions. This section utilizes official population estimates from 2000-2023 to understand Camas's population growth over the last few decades, as well as estimates of households and projections of these data through 2044.

Population Growth, Age, Race and Ethnicity



Since 2000, Camas has grown at a faster rate than Clark County or Washington State overall, increasing by 120% (or 5.2% annually on average). The City saw its greatest increases in population in 2004, 2017, and 2020 (Exhibit 3). Camas's peer cities in Clark County like Battle Ground and Washougal have also seen higher rates of growth over the County average per year. As the population of these smaller cities increase, demand for housing also rises and affects the way that cities like Camas must plan to meet residents' housing needs.

[2] 5-year estimates use data collected over a longer period of time used to increased statistical reliability of the data by using a larger sample for geographies with populations under and small groups within a population. Since Camas's population is below the threshold of 65,000 residents, 1-year estimates are not available at the city level. This report generally uses the most current estimates at the time of writing; for ACS data this is 2018-2022, as well as comparison over time to 2008-2012 data.

Exhibit 2. Total Population, Camas, Clark County, Washington, and Comparison Geographies, 2000-2023
Source: WA Office of Financial Management (Intercensal and postcensal)

JURISDICTION	POPULATION			CHANGE, 2000-2023	PERCENT CHANGE, 2000-2023	AAGR 2000-2023
	2000	2010	2023			
City of Camas	**12,462**	**19,355**	**27,420**	**14,958**	**120%**	**5.2%**
Clark County	342,194	425,363	527,400	185,206	54%	2.4%
City of Battle Ground	9,206	17,571	21,910	12,704	138%	6.0%
City of Washougal	8,595	14,095	17,490	8,895	103%	4.5%

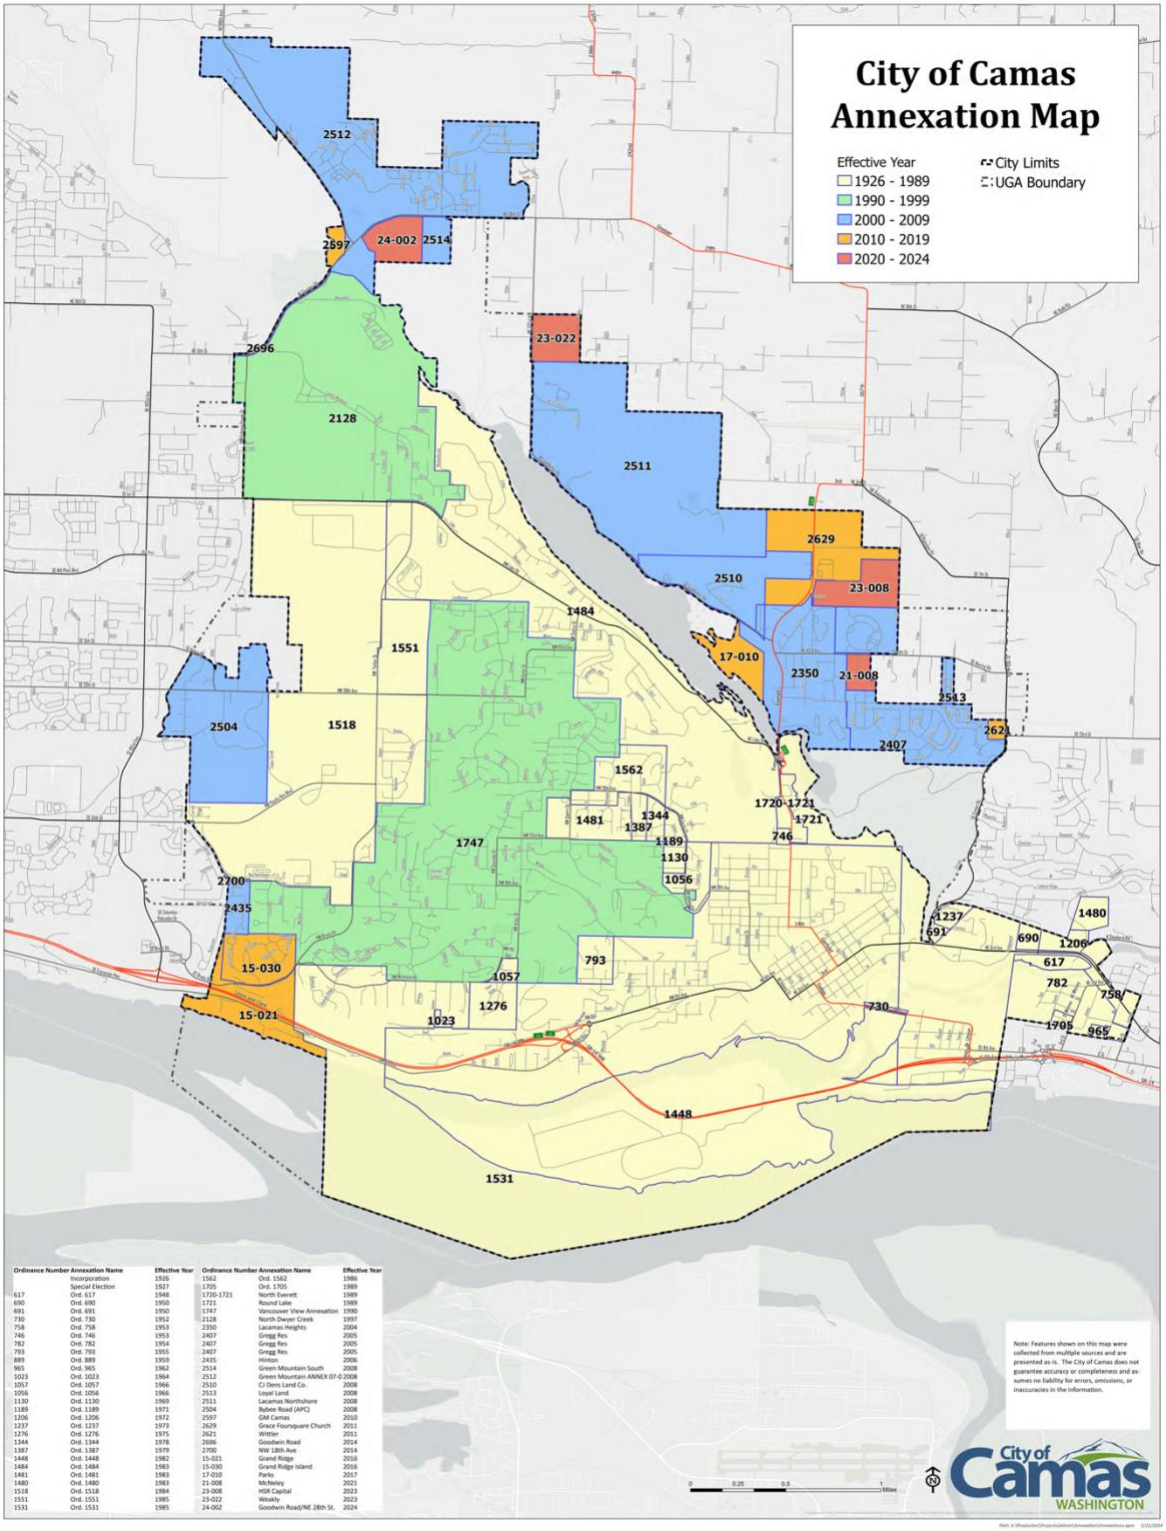

Exhibit 3. Population Growth Change Year-over-Year (YOY), Camas, Clark County, and Washington, 2000-2023
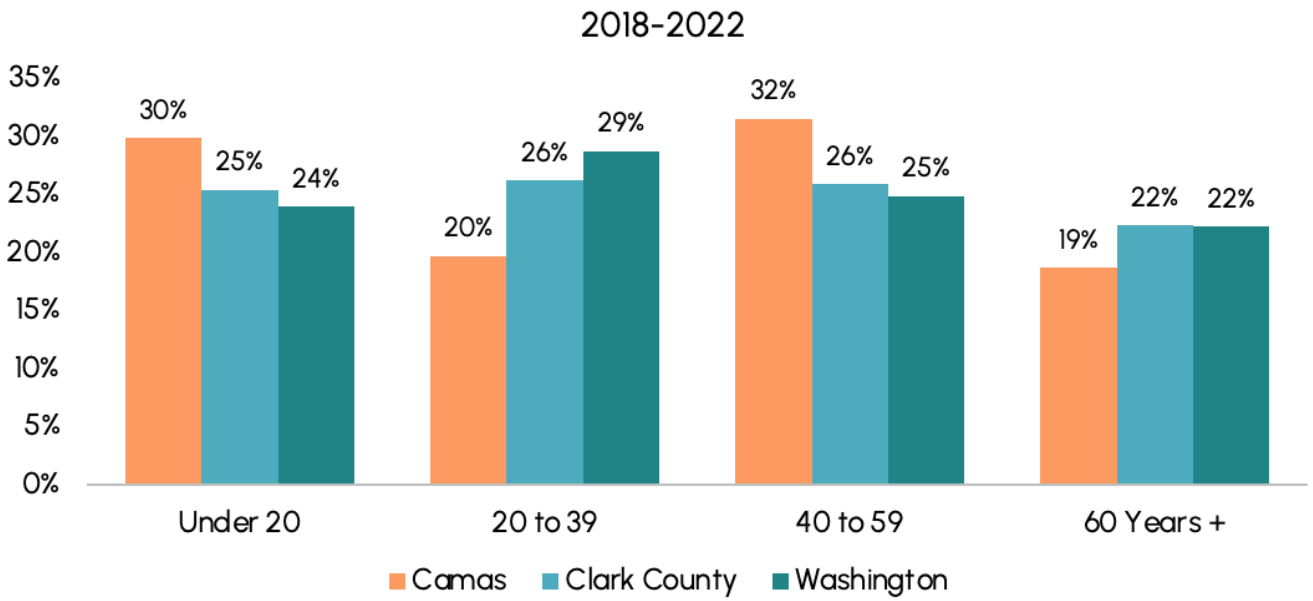
Source: WA Office of Financial Management (Intercensal and postcensal)

In terms of land, Camas has expanded incrementally over time through annexations. Although annexations can be used to bring in different types of land uses to a city (industrial, open space, etc.), the addition of new residential land use areas can increase the City's population and capacity for new housing. Exhibit 4 below shows new annexations in Camas as of 2016.[3] In the 2000's and early 2010's, the City added large new areas on the north side of Lacamas Lake, with a large portion of this area zoned for multifamily housing alongside employment and commercial areas.



[3] Since the City's most recent annexation map, it has also annexed an additional 154 acres across four parcels since 2016.

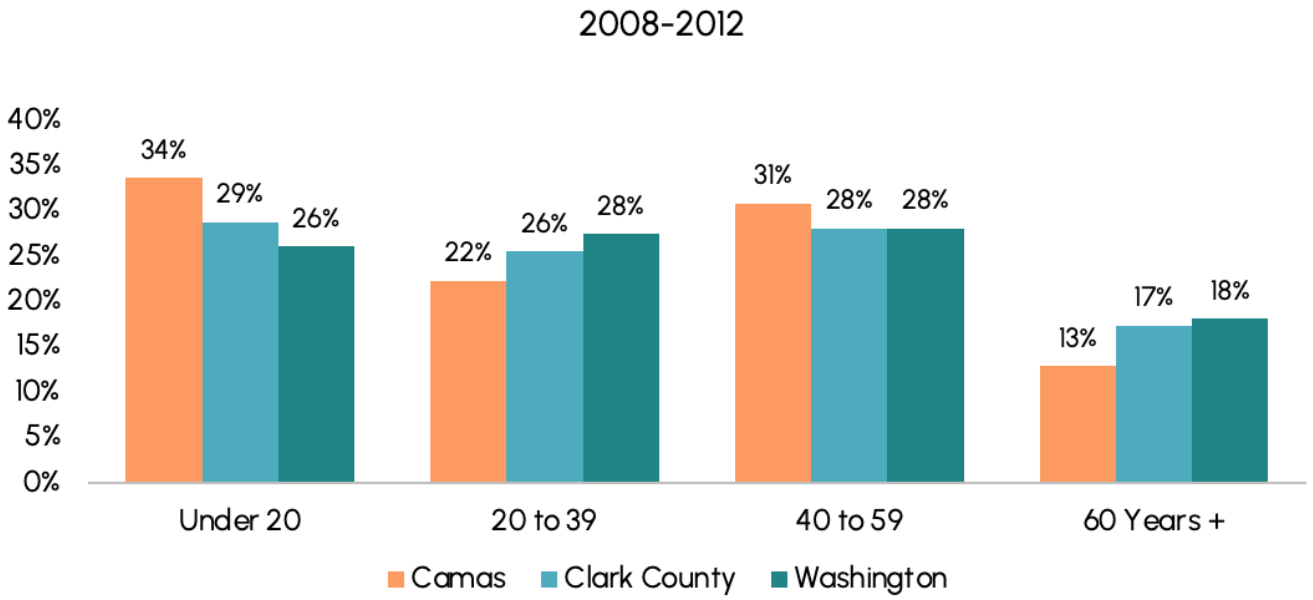


Exhibit 4. City of Camas Annexations Through 2024
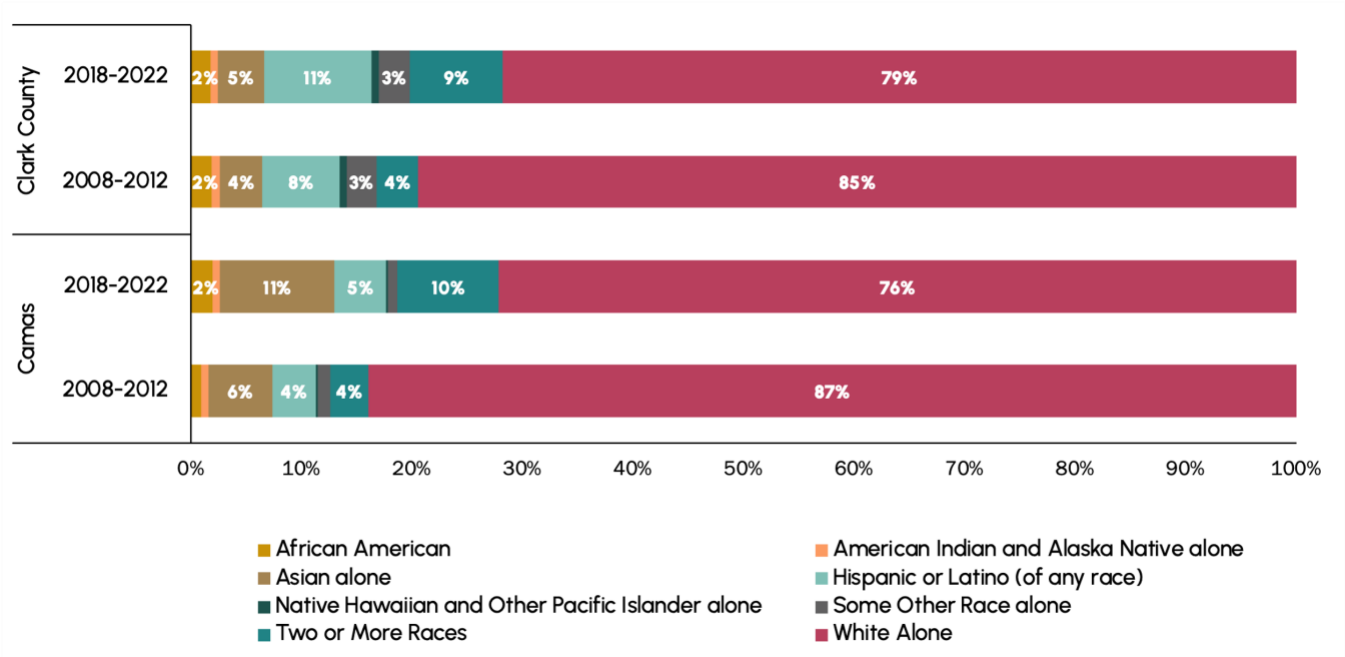
Source: City of Camas

Camas has a quickly aging population. Between 2008-2012 and 2018-2022, Camas's share of residents under 18 saw the greatest decline from 34 to 30 percent of the population while the share of residents aged 60 years or over increased in this time period from 13 to 19 percent. The share of adults between the ages of 20 and 59 remained relatively stable.

Exhibit 5. Age Distribution, Camas, Clark County, and Washington, 2008-2012, 2018-2022
Source: U.S. Census Bureau, 2008-2012, 2018-2022 ACS 5-Year Estimates.

Median age in Camas increased by 4.3 years between 2008-2012 and 2018-2022, rising faster than Clark County or the State of Washington overall. Households' housing needs can change depending on different stages of life. For example, early- to mid-career workers (typically falling in the age 20 to

39 years category), multigenerational families with children, or older persons entering retirement may all have differing needs for the location, price, size, layout, or other features of their homes.



Growth of adults aged 50 and over is also reflected in shrinking household sizes and changing types shown below in Exhibit 9 and Exhibit 10, indicating a growing need for housing to accommodate older adults.

Exhibit 6. Median Age, Camas, Clark County, Washington, and Comparison Geographies 2008-2012, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

JURISDICTION	2008-2012	2018-2022	CHANGE
City of Camas	36	40	+4.3
Clark County	37	39	+2.0
State of Washington	37	38	+0.8

Camas is becoming a more diverse community, with the share of people of color increasing between 2008-2012 and 2018-2022. The City has also become slightly more diverse compared to Clark County overall. In 2018-2022, approximately one quarter percent of residents in Camas were people of color. The City saw the greatest increase since 2008-2012 in the share of residents who are Asian or two or more races; these groups grew respectively by 5 and 6 percent points. Changes to a city's race and ethnicity profile can indicate changing housing needs due to disparate impacts of historic and systemic discriminations faced by many people of color for accessing housing.

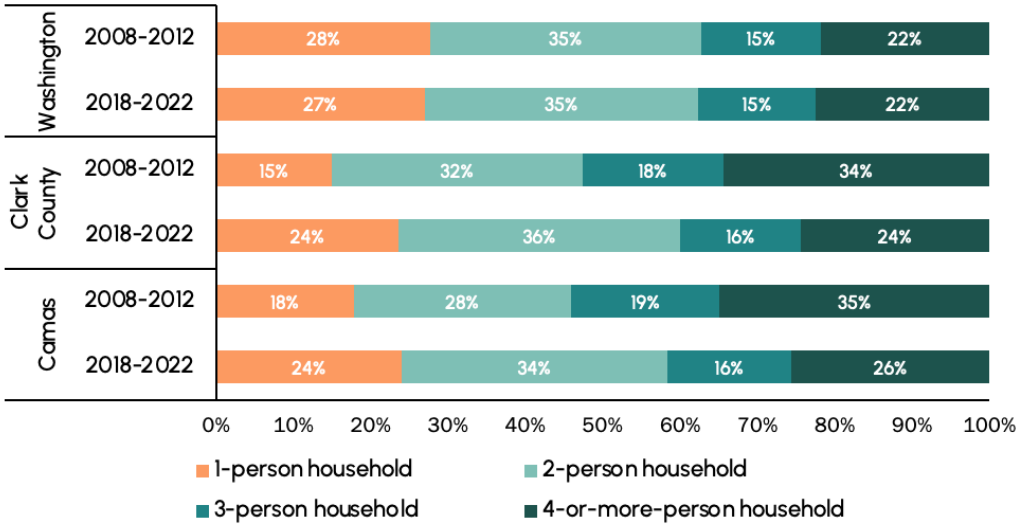
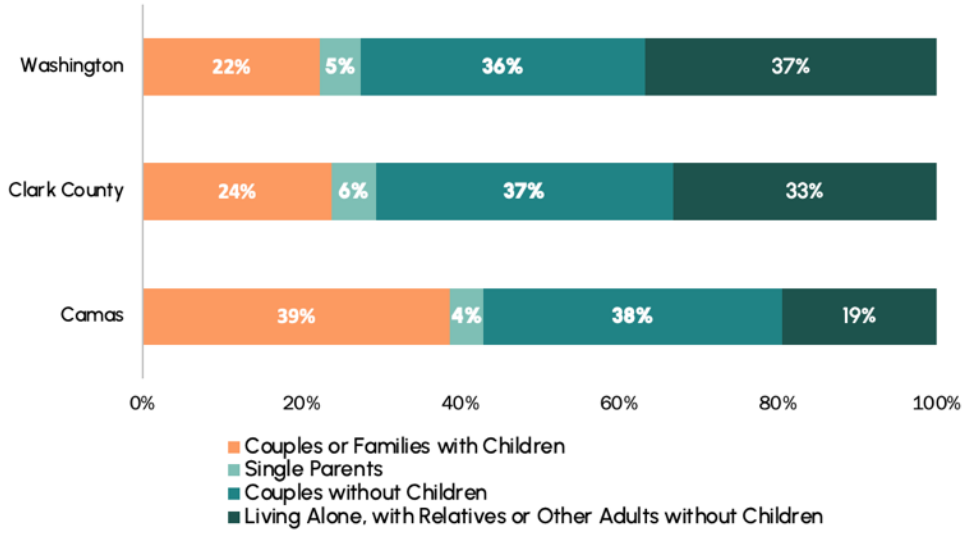
Household Trends



Change in number of households over time is helpful for understanding a number of trends alongside overall population growth, such as household formation. **Between 2000 and 2023, the City of Camas saw a higher annual rate of household growth compared to Clark County and Washington. Comparison cities of Battle Ground and Washougal saw similar or greater growth rates, increasing by 4.0 and 2.9 percent respectively per year since 2000.** Growth in smaller cities within Clark County and the region require intentional planning to make sure new housing needs are being met in the community.

Exhibit 8. Total Households, Camas, Clark County, Washington, and Comparison Geographies, 2000-2023
Source: OFM

JURISDICTION	2000	2010	2023	CHANGE 2000-2023	PERCENT CHANGE 2000-2023	AAGR (2000-2023)
City of Camas	4,736	5,952	9,833	5,097	108%	3.2%
Clark County	134,030	167,413	207,044	73,014	54%	1.9%
City of Battle Ground	3,209	5,952	7,945	4,736	148%	4.0%
City of Washougal	3,463	5,673	6,655	3,192	92%	2.9%
State of Washington	2,451,081	2,886,948	3,341,640	890,559	36%	1.4%



Changing household sizes and types have implications for the different types of housing units needed in a City. In Camas, the share of 1- and 2-person households grew between 2008-2012 and 2018-2022, while the share of 3- and 4-person households decreased. This could indicate a 'downsizing' trend where many older adults may seek out smaller units as adult children establish new households.

Exhibit 9. Household Size Distribution, Camas and Clark County, 2008-2012, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

Household types in Camas however indicate a larger share of couples or families with children in the City compared with Clark County or Washington overall, with a smaller share of residents living alone or with extended relatives. This may indicate a trend of **multigenerational households** in the city, where several generations of a family co-habitate.

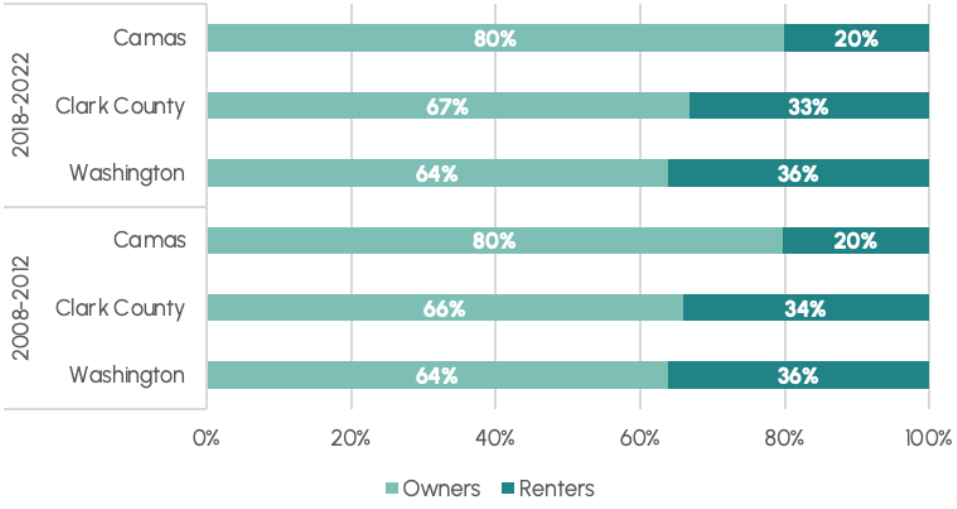


Exhibit 10. Household Type, Camas, Clark County, and Washington, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

Household Tenure

Household tenure refers to the ownership status of residents in their homes, either as owners or renters of their home. In 2018-2022, **80 percent of households in Camas owned their homes, at a higher rate than either Clark County or Washington.** The share of renter households stayed the same in Camas since 2008-2012, showing less than a 1 percent increase over this time period.

Exhibit 11. Household Tenure, Camas and Clark County, 2008-2012, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

Camas maintained a larger median household size than the County or the State in both 2008-2012 and 2018-2022, with little change in the City. In both periods owner-occupied households tended to be larger than renter households.

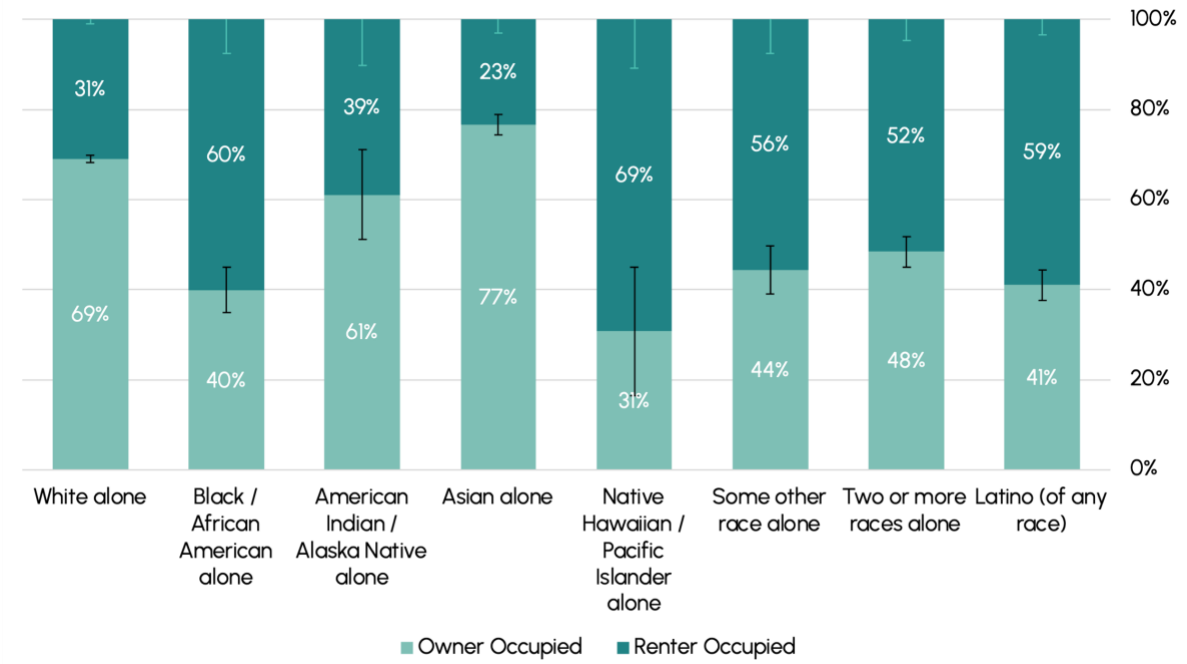

Exhibit 12. Average Household Size by Tenure, Camas, Clark County, and Washington, 2008-2012, 2018-2022

Owner-occupied units	**0.06**	-0.03	0.05
Renter-occupied units	**-0.26**	-0.03	-0.05

Homeownership rates can often vary by race and ethnicity, as many people of color face historic and systemic barriers from a legacy of discriminatory practices in the United States. In Camas today, margins of error are too high to disaggregate homeownership by race and ethnicity.

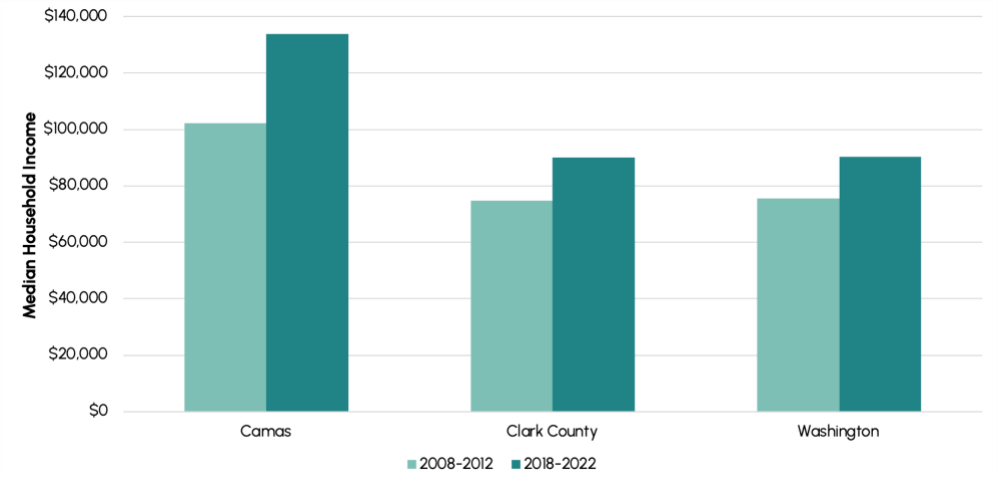
However, **County-level trends indicate that disparities exist for some groups in Clark County, with households who are Black or African American, American Indian or Alaska Native, Native Hawaiian or Pacific Islander, Hispanic or Latino (of any race), two or more races, or another race not listed had lower rates of homeownership. Native Hawaiian or Pacific Islander**, Black or African American, and Latino of any race had the lowest homeownership rates with over half renting their home. White and Asian households both had rates of homeownership above the County average overall (Exhibit 11) at 69 percent and 77 percent. Intentional policies to remove barriers to homeownership can help to reduce these disparities.

Exhibit 13. Homeownership by Race, Clark County, 2018-2022
Source: U.S. Census Bureau, 2018-2022 ACS 5-Year Estimates

Household Income Trends

Income is a critical factor for determining housing choices. A household's level of income influences both the type of housing they are able to afford (e.g., single-family detached homes, multifamily units) and their tenure (whether a household has the option to purchase a home or rent). **Median household income in Camas is higher than both Clark County and the state of Washington at $133,000 in 2018-2022. Adjusting for inflation, median income in the City still increased by 31 percent since 2008-2012. This increase is primarily due to growth in households earning over $100,000 per year (Exhibit 15).**

Exhibit 14. Median Household Income, Camas, Clark County, and Washington (2022$)
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates
Note: 2008-2012 values are adjusted for inflation



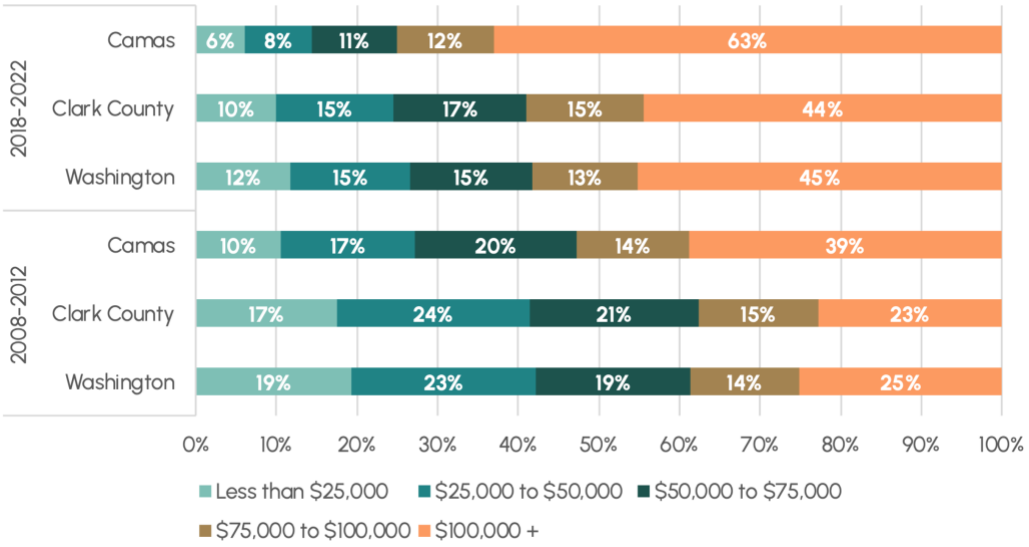


Exhibit 15. Change in Household Income Distribution, Camas and Clark County, 2008-2012, 2018-2022

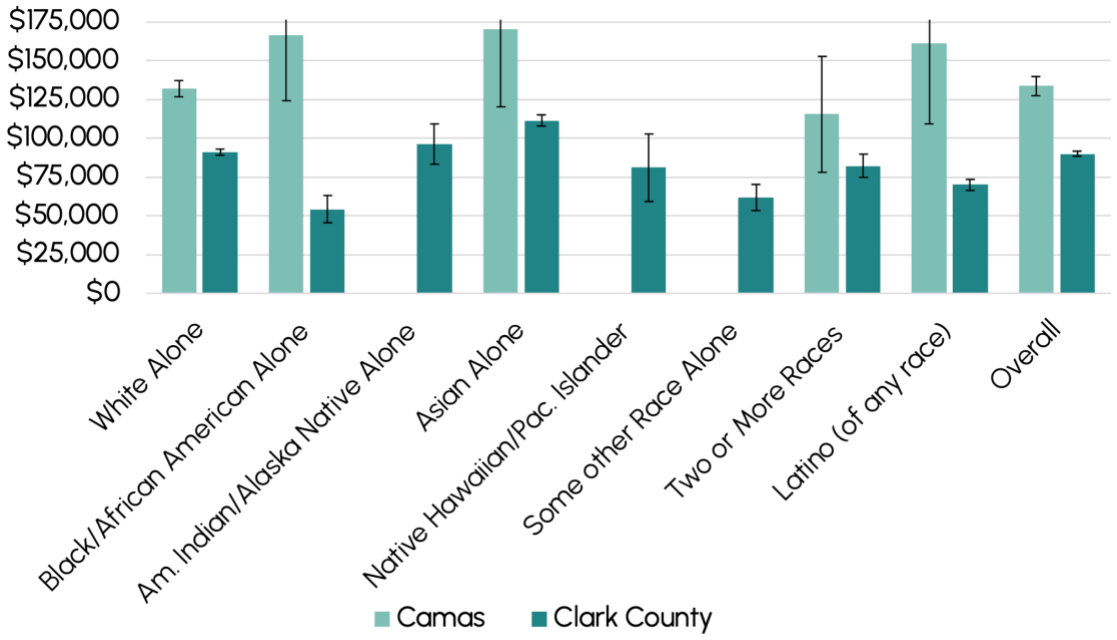


Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

Median household income is higher in Camas than in the County for all groups by race and ethnicity (where data was accurate enough to be interpreted). White residents in Camas had approximately the same median income as the City overall, while Black or African American, Asian, and Hispanic or Latino residents indicated higher median income. Household income for those who were two or more races was the only group estimated to be below average for the City. However, high margins of error for many groups in the City of Camas may lead to inaccuracies in this data.

At the County level, income for white households was generally in line with the overall median, while income was higher for American Indian or Alaska Native and Asian households. In Clark County, households who were Black or African American, Native Hawaiian or Pacific Islander, Hispanic or Latino, two or more races, or another race had lower median household incomes than the overall average. Considering the high margins of error for the data provided at the City level, it is possible that these disparities also exist for the same households of color in Camas.

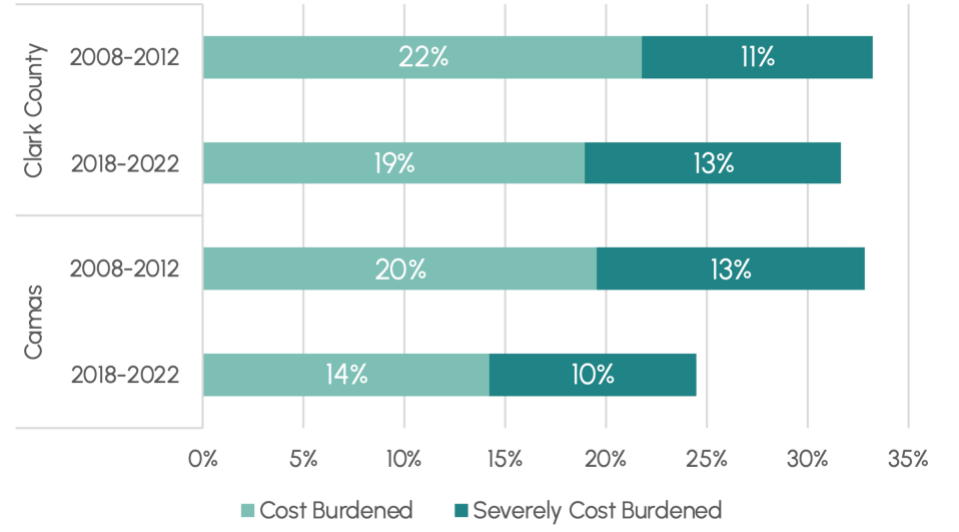
Exhibit 16. Median Household Income by Race and Ethnicity, Camas and Clark County, 2018-2022
Source: U.S. Census Bureau, 2018-2022 ACS 5-Year Estimates
Note: Due to limited data, median income for some groups is not available at the City level.

Another aspect of analyzing household incomes is the Area Median Income (AMI). AMI is defined as the midpoint of a specific area's income distribution and is defined each year by the Department of Housing and Urban Development (HUD).[4] HUD includes Camas as part of the Clark County in the Portland-Vancouver-Hillsboro, OR-WA MSA. **In 2023, HUD determined the AMI to be $114,400 for a family of four in the area. This is lower than median income in Camas itself which was $133,000 in 2018-2022 (Exhibit 14) and has been consistently lower than the City over time.**

Exhibit 17. Median Family Income (MFI) for a Family of Four, Camas and Clark County (2023$)
Source: HUD

	EXTREMELY LOW (30%)	LOW (50%)	MODERATE (80%)	MEDIAN (100%)	HIGH (120%+)
2019	$26,350	$43,950	$70,300	**$87,900**	$105.500
2023	$33,850	$56,400	$90,200	**$114,400**	$137,300

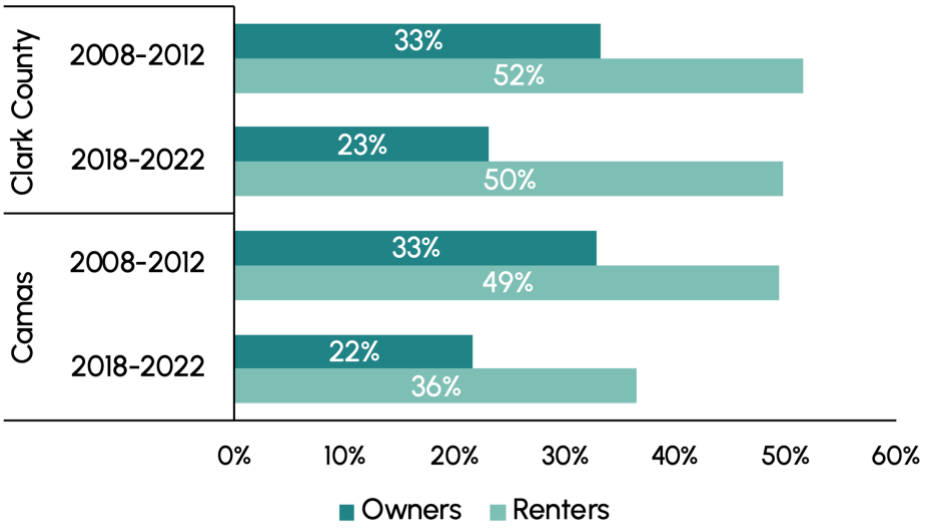
[4] AMI/ Median Family Income (MFI) looks at how much each income level can afford in housing costs which is helpful for understanding housing affordability. Each year, the HUD uses data from the U.S. Census to define an area's MFI based on family size. The MFI benchmark helps determine eligibility for HUD housing programs (often including rent-restricted housing) and supports the tracking of different housing needs for a range of household incomes. If the term AMI is used in an unqualified manor, this reference is synonymous with HUD's MFI.



Cost Burden

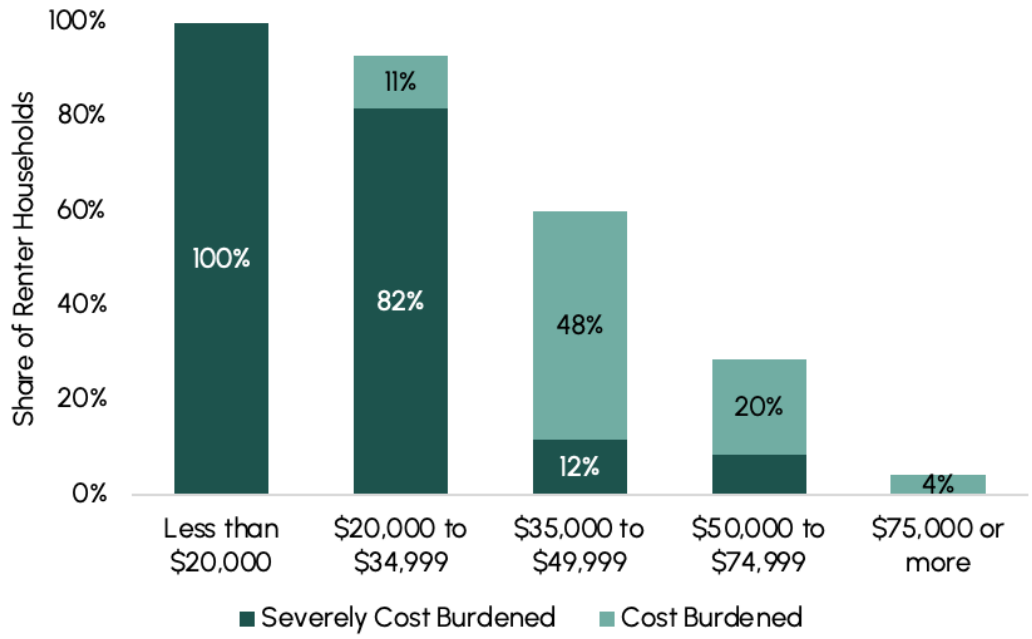
Housing costs are typically the largest portion of a household budget, and typically include mortgage or rent payment, utilities, interest, and insurance. HUD guidelines indicate that households paying more than 30% of their income on housing experience "cost burden" and households paying more than 50% experience "severe cost burden." Using cost burden as an indicator is one method of determining how well a city is meeting its need to provide housing that is affordable to all households in a community.

Cost burdening for owner-occupied households is less common because mortgage lenders typically ensure that a household can pay its debt obligations before signing off on a loan. However, cost burdening can occur when a household secures a mortgage and then sees its income decline. In addition, retired persons subsisting on a fixed income can experience cost burden associated with increased property taxes rising above their financial limitations.



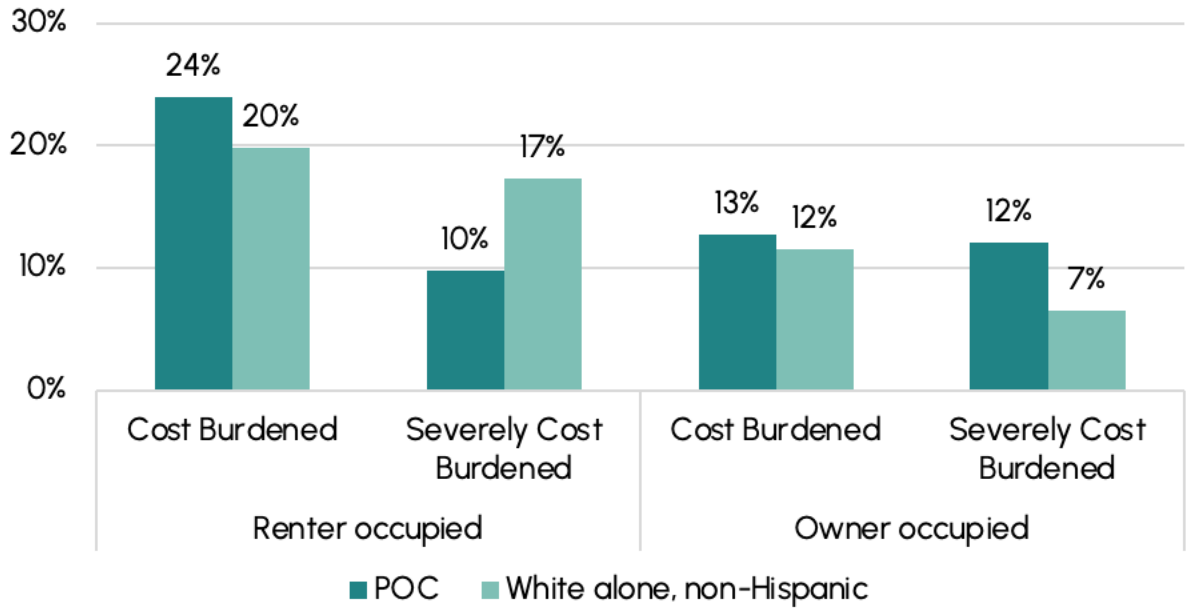
Total rates of cost burdened households decreased in Camas between 2008-2012 and 2018-2022, falling below Clark County's average. In 2018-2022, 24 percent of all households experienced cost burden, compared to 33 percent in the County overall.

Exhibit 18. Cost Burden for All Households, Camas and Clark County, 2008-2012, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates



Different types of households may face varying levels of cost burden. Renters are often more vulnerable to increasing housing costs due to property owner decisions and changing demand trends. **In Camas, a higher share of renter households experienced cost burden in 2018-2022 compared to homeowners but saw a greater decrease since 2008-2012.**

Exhibit 19. Cost Burden by Tenure, Camas and Clark County
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates



Cost burden is also higher in Camas for lower-income households, who are often less able to absorb changes to monthly housing costs. In 2018-2022, **100 percent of households earning less than $20,000 experienced severe cost burden (paying 50 percent or more of monthly income towards housing).** In comparison, 93 percent of those earning $20,000 to $34,999 per year were cost burdened or severely cost burdened. The rate of cost burden proportionately reduces for those earning higher incomes, with only four percent of those earning $75,000 or more per year experiencing any cost burden.

Exhibit 20. Cost Burden by Income, Camas, 2018-2022
Source: U.S. Census Bureau, 2008-2012 and 2018-2022 ACS 5-Year Estimates

Cost burden for people of color in Camas is generally higher compared to White, Non-Hispanic households, particularly for homeowners of color. **In 2016-2020, 25 percent of homeowners of color were cost burdened, compared to 19 percent of White, Non-Hispanic homeowners.**

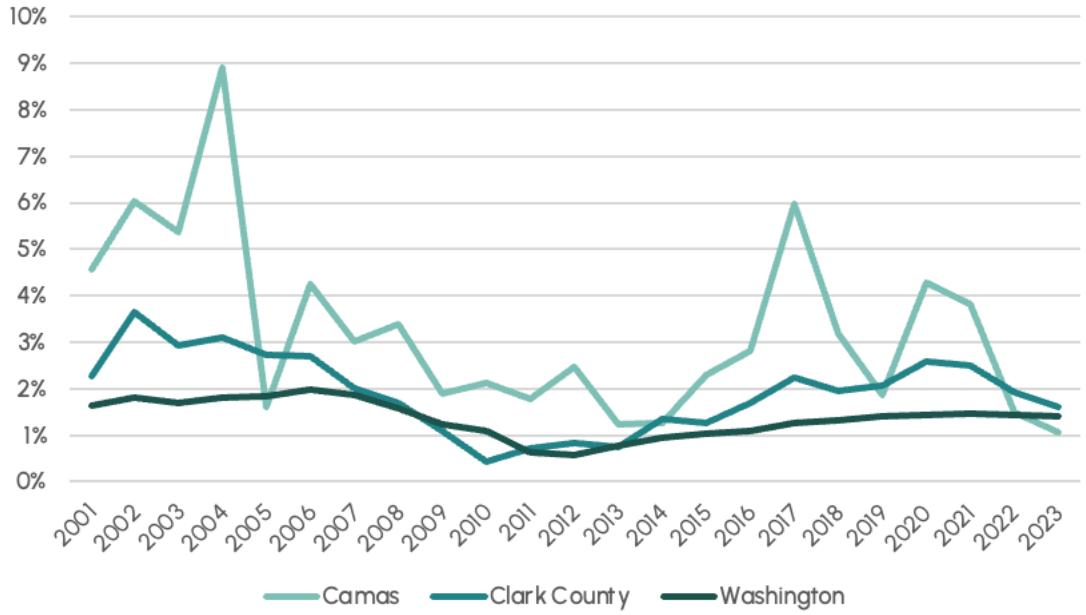
Existing Housing Inventory

Understanding the City's existing housing supply and characteristics is critical for planning to meet future housing demand. This section provides information about homes in Camas today, including growth over time, vacancy rates, housing costs, and implications for housing affordability.

Housing Units

Similar to growth in population, Camas and Clark County have both seen growth in their number of housing units in the past two decades. Camas has seen a 108% change since 2000 (annually this equals 4.7% growth or 221 new homes), representing a greater proportionate increase than both the County and Washington State.



The City of Camas's growth in housing units was lower than its population change as shown above in

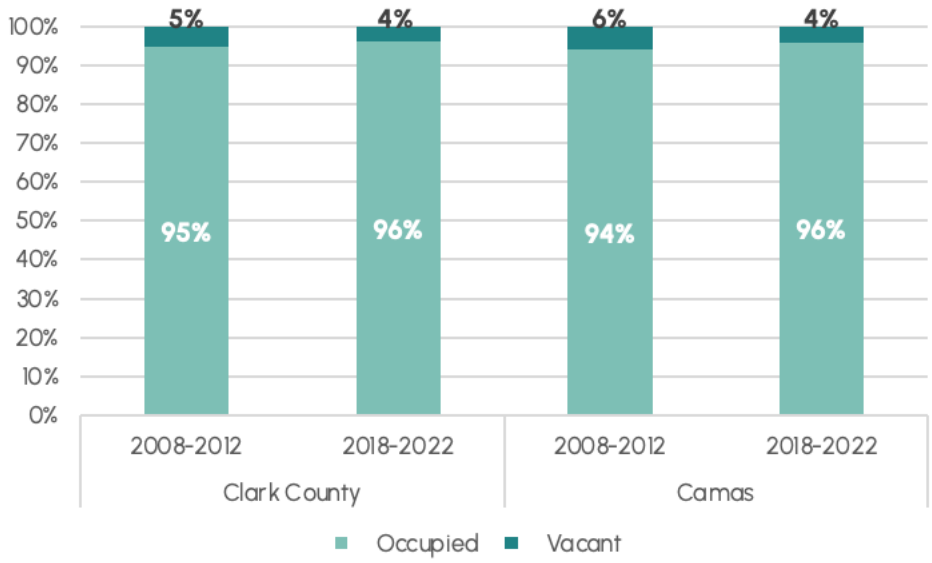
Exhibit 2 (120% or 5.3% AAGR), indicating that the City has not been keeping pace by adding to its supply to meet the rising demand. A sharp spike in housing production in 2017 and 2020 reflected population growth trends in the City (Exhibit 23).

Exhibit 22. Total Housing Units, Camas, Clark County, and Washington 2000-2022
Source: OFM

JURISDICTION	2000	2010	2023	CHANGE 2000-2023	PERCENT CHANGE 2000-2023	AAGR (2000-2023)
City of Camas	4,736	7,072	9,833	5,097	108%	4.7%
Clark County	134,030	167,413	207,044	73,014	54%	2.4%
State of Washington	2,451,081	2,886,948	3,341,640	890,559	36%	1.6%

Exhibit 23. Household Growth Change Year-over-Year (YOY), Camas, Clark County, and Washington 2000-2023
Source: WA Office of Financial Management (Intercensal and postcensal). Note: Some of the spikes in household growth were partially attributed to annexations to the City of Camas.

Vacancy Rate



The Census defines vacancy as "unoccupied housing units considered vacant."[5] Vacancy status is determined by how the unit would likely be occupied (e.g., for rent, for sale, or for seasonal use only).

[5] US Census Bureau, "American Community Survey and Puerto Rico Community Survey 2022 Subject Definitions," https://www.census.gov/programs-surveys/acs/technical-documentation/code-lists.html, 45-46.

Vacancy rates are cyclical and represent the lag between demand and the market's response to demand for additional dwelling units. Vacancy rates for rental and multifamily units are typically higher than those for owner-occupied and single-family dwelling units.

Between 2008-2012 and 2018-2022, Camas and Clark County saw steadily low vacancy rates for all housing units in total. This level of vacancy is indicative of a healthy housing market with natural rates of turnover; extremely low vacancy rates can indicate a more constrained supply that is not meeting housing demand. However, the slight decrease in both the City and County could begin to indicate constrained supply of housing.

Exhibit 24. Vacancy Rate, All Housing Units, Camas and Clark County, 2008-2012, 2018-2023
Source: ACS 5-Year Estimates

Below, Exhibit 25 shows the 2-bedroom multifamily vacancy rate for Camas according to CoStar (a real estate market platform). Camas's vacancy rate in 2024 year-to-date was high at 18.4 percent, rising quickly since 2022. The City's sharp spike in the past two years aligns with new construction trends, which can temporarily raise vacancy rates for newly delivered units but do not indicate long-term vacancy. In 2023, the City saw over 200 new housing units delivered, likely accounting for the fluctuation in vacancies, as well as deliveries in 2017 and 2020 that correspond with high vacancies. Two-bedroom vacancies have been comparatively low in Clark County overall and stood at 7.4% in 2024 YTD. New deliveries have increased over the last decade, with the most annual deliveries in 2023 (1,306 units).

Source: CoStar

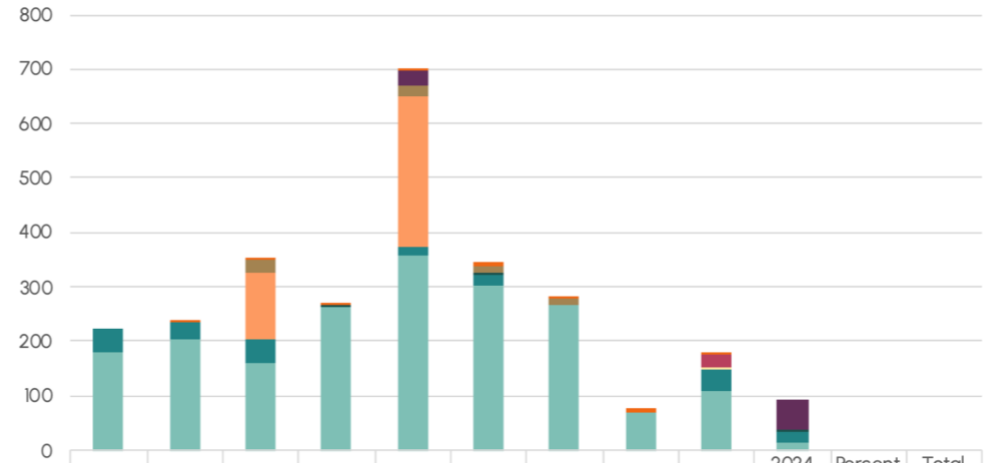
Housing Production

This analysis examined the City's building permit data from 2015 to 2023 to supplement housing development trends. Exhibit 27 below shows permitting trends for 2,763 new units by type, ranging from single-unit detached homes to units in larger multifamily developments.



MIDDLE HOUSING POLICY IN WA

'Middle housing' refers to moderate-density housing types between single-family detached homes and larger multifamily housing. HB 1110 became effective in July 2023 and requires that designated Growth Management Act (GMA) planning cities in Washington must allow certain minimum densities for middle housing within 6 months after their periodic update due date.

Camas is counted as a Tier 2 city under this policy, which must allow for 2 dwelling units per lot or higher in predominantly residential zones, as well as 4 dwelling units per lot within a quarter mile of major transit stops and for affordable housing (ESHB 1110, Sec. 3(1)(c)).

Over the last decade from 2015 to 2024 (year to date), single-unit detached homes have accounted for the largest share (70%) of new permits in the City of Camas. The second most prevalent type of permitted housing was multi-unit housing (apartments, condos, and units in mixed-use buildings) encompassing 20% of new permits. Attached townhomes comprised 8% of the total and middle housing types like duplexes, triplexes, quadplexes, and accessory dwelling units (ADUs) were only 2% of all permits.

Exhibit 27. City of Camas Housing Permit Data, 2015-2024 (YTD)
Source: City of Camas. Note: This includes permits that were finalized.

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024 YTD	Percent of Total	Total Number

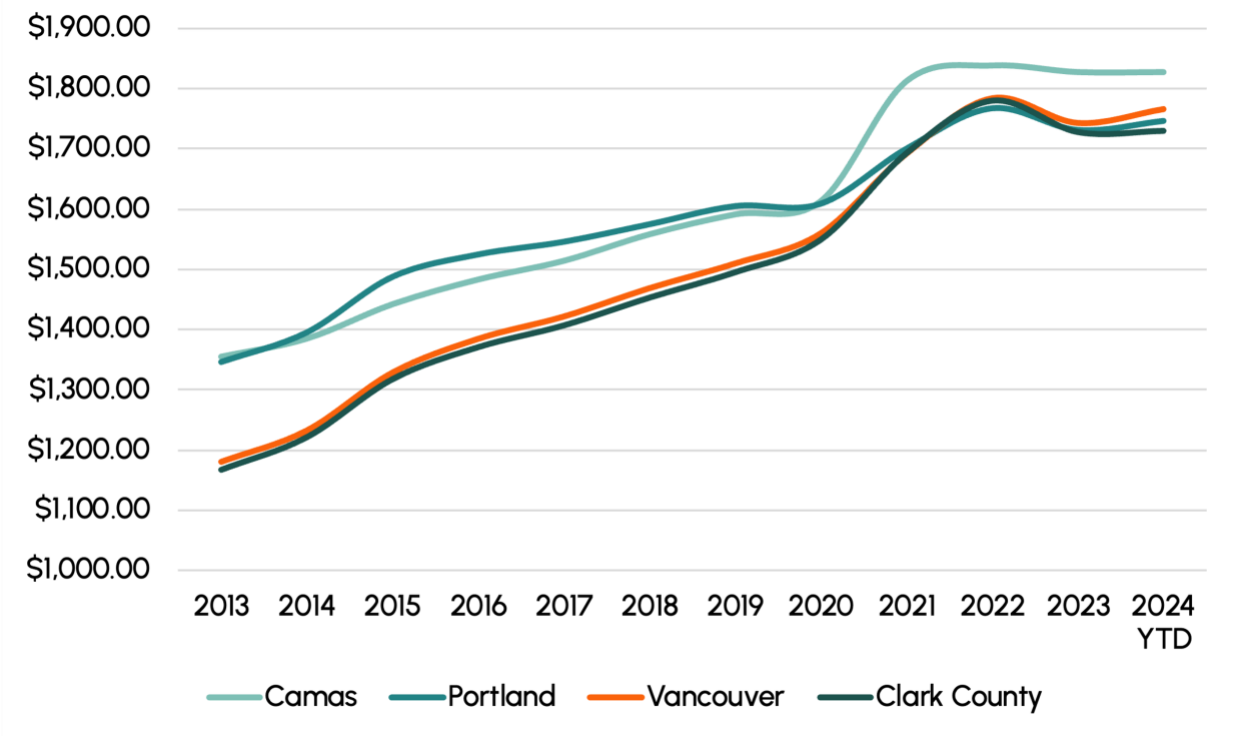
Housing Costs

Changes in housing costs relative to incomes and demographics trends have important implications for cities' supply of affordable and accessible housing. **Median home sale prices in Camas and Clark County have increased over the last ten years, with Camas's average prices generally remaining higher than the County or comparison cities of Battle Ground and Washougal.** In 2023, the average of monthly median home sale prices in the City was $704,000, increasing by 119 percent since 2013. In comparison with surrounding jurisdictions, the average home sale in Camas was more expensive than the average home in the City of Portland (by $196,000) or Clark County (by $173,000) in 2023. Other suburban cities like Battle Ground and Washougal were closer to prices in Camas but still remained lower

Exhibit 28. Change in Median Home Sale Price, Camas, 2013-2023
Source: Redfin



JURISDICTION	2013	2023	CHANGE 2013-2023	PERCENT CHANGE 2013-2023
City of Camas	$321,000	$704,000	$383,000	119%
Clark County	$225,000	$531,000	$306,000	136%
City of Battle Ground	$218,000	$566,000	$348,000	160%
City of Washougal	$244,000	$600,000	$356,000	146%
City of Vancouver	$199,000	$475,000	$276,000	139%
City of Portland	$309,000	$508,000	$199,000	64%

Prices are also increasing quickly in the City of Camas and Clark County for the average 2-bedroom multifamily rental unit. In 2024 year-to-date, the average 2-bedroom apartment rent was over $1,800 in the City and over $1,700 in Clark County (Exhibit 29). This indicates over a 35 percent increase change since 2010 in the City and County. Average 2-bedroom multifamily rents in Portland tracked closely with Camas during the 2010's, while rents in Vancouver remained lower (generally following countywide trends). Since 2020, rents in Camas have risen higher than both cities on average.

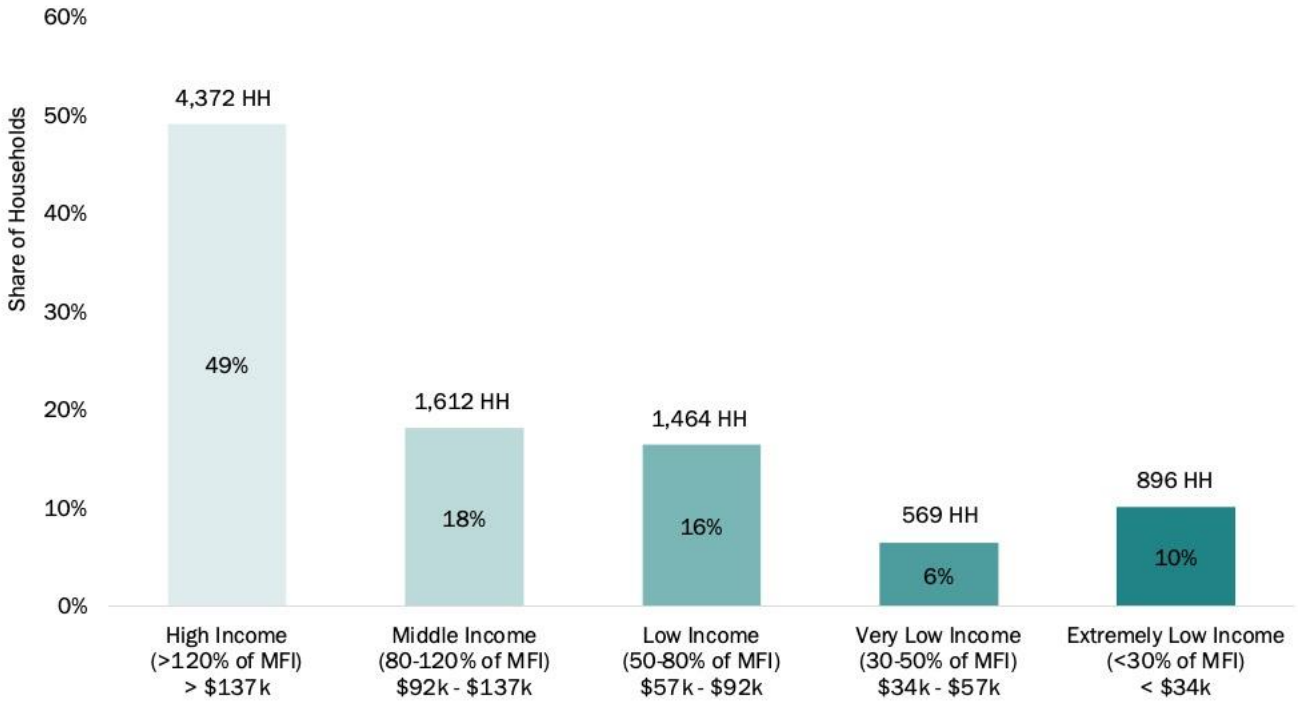


Exhibit 29. Asking Rent For 2-Bedroom Multifamily Units, 2010-2023, Camas, Portland, Vancouver, and Clark County, 2013-2024 YTD

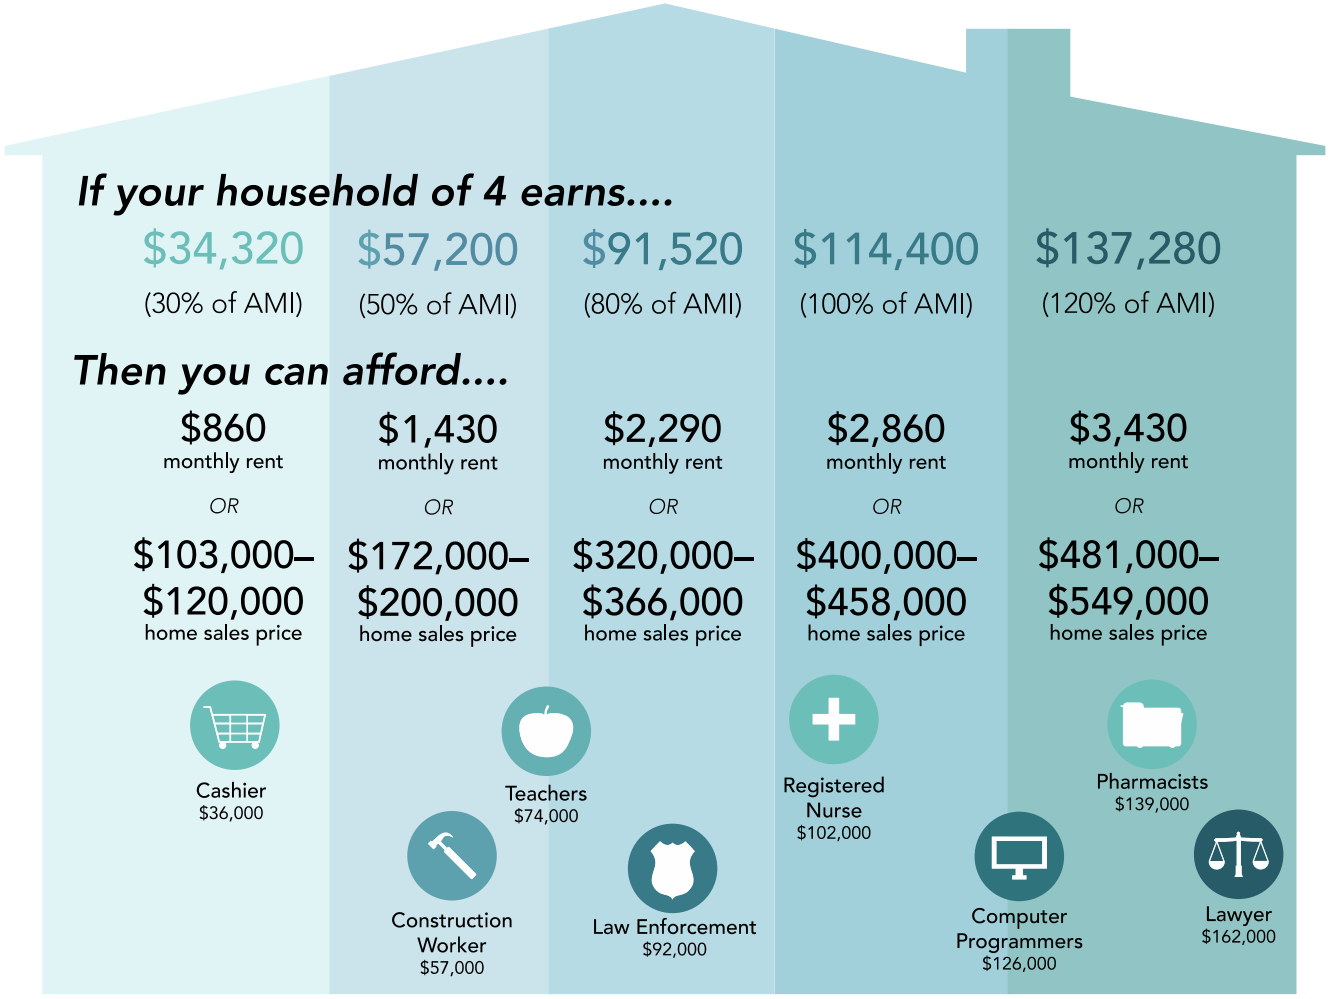
Source: CoStar



Rising housing costs also have implications for how many households are able to afford the average home. Based on HUD AMI levels in 2022, 49% of Camas households were high-income, at or above 120% of median income within the area, and an additional 18% were middle income (80-120% of AMI) (Exhibit 30). Over this period, 16% of households were considered low-income for the area (50-80% of AMI), 6% were very low income (30-50% of AMI), and 10% extremely low income (less than 30% of AMI).

Exhibit 30. Share of Households By AMI, Camas, 2022
Source: HUD, U.S. Census Bureau, 2018-2022 ACS Estimates

Compared with home sale price and rent increases in Camas, only households earning well 150% or more of AMI would be able to afford the average home in the City as of 2023. This income group generally equates with households with one or more high-earning job like pharmacists, lawyers, and computer programmers. Although rents are increasing, the average 2-bedroom apartment is still affordable to households between 50 and 80% of AMI in Camas.

Exhibit 31. Affordability by Area Median Income, 2023
Source: HUD, BLS

Projection of Future Housing Demand

Planning for future housing demand is critical to ensure that the City can meet demand driven by population growth. This section summarizes projected future housing demand for Camas to provide context for the City's housing policies.

County Comprehensive Plans and Countywide Planning Policies set population growth targets for jurisdictions within them, with current projections to 2044. Clark County is currently in the process of updating the Countywide Comprehensive Plan and growth targets. This analysis uses the County's interim population and housing allocation targets, which are anticipated to be adopted in April 2024.

Population Allocation

Exhibit 32 below demonstrates the City of Camas and Clark County's anticipated population forecast between 2023-2045. Since 2000, Camas has grown at a faster rate than the County overall with an AAGR of 5.2% in the City (including annexations), compared to the County's AAGR of 2.4% (

Exhibit 2). However, the County's estimates assume a slower growth scenario for the City in the next 22 years. With this assumption, new population growth in Camas is estimated to comprise 4.05% of growth in Clark County overall.

Exhibit 32. Population Growth Forecast, Camas and Clark County, 2023-2044
Source: Clark County Interim Population Allocations

JURISDICTION	2023 EST. POPULATION	VACANT BUILDABLE LAND MODEL CAPACITY %	2023-2045 GROWTH	2045 ESTIMATE	CHANGE (%)	AAGR
City of Camas	**29,352**	**4.26%**	**7,729** ***(4.05% of total growth)***	**37,080**	**26%**	**1.2%**
Clark County	527,400	100%	190,754 *(100% of total growth)*	718,154	36%	1.6%

Housing Allocation

The population growth forecast detailed above indicates that the City of Camas will make up 4.05 percent of new growth population in Clark County between 2023-2045 (Exhibit 32), with an AAGR of 1.2% in the City. The County's methodology also acknowledges Washington State Department of Commerce's HAPT estimates for current housing supply in Camas and allocates a number of net new units for the Urban Growth Area (UGA).

In May 2024, Clark County adopted housing allocations for jurisdictions located within county boundaries. In total, this shows an estimated **4,226 housing units** needed by 2045 in the City of Camas and its UGA.[6]

HOUSING ALLOCATIONS IN WA

In 2021, HB 1220 created a new way that communities in the state are required to plan for housing needs. This legislation requires that jurisdictions plan for sufficient land capacity for housing needs, including all economic segments of the population (moderate, low, very low and extremely low income, as well as emergency housing and permanent supportive housing).

- Since 2000, the City of Camas had an average annual growth rate of 221 new housing units per year.
- Comparatively, the City will need to add an average of 195 new housing units per year between 2024 and 2045 to reach its allocation of net new units.

[6] The Washington State Department of Commerce Housing for All Planning Tool (HAPT) provides two allocation methods for determining the share of a County's housing supply to be met by jurisdictions. Method A assumes all housing needs will be accommodated through new housing production. Method B assumes all jurisdictions will accommodate equivalent shares of the total countywide housing need at each income level, proportional to their size, in the projection year. Clark County elected to use a hybrid method of 75/25 for Camas.

The City would add about **311** new units to meet the new permanent supportive housing target and 1,766 units affordable to low-income households below 80% of AMI by 2045.

Camas currently has 143 units of housing affordable for households at or below 30% of AMI that are not Permanently Supportive Housing (PSH)[7] and 14 emergency units[8] according to the HAPT estimate. With this allocation, the City will need to accommodate 172 new units of temporary emergency housing by 2045.[9]

[7] Permanent Supportive Housing is defined as: "subsidized, leased housing with no limit on length of stay that prioritizes people who need comprehensive support services to retain tenancy and utilizes admissions practices designed to use lower barriers to entry than would be typical for other subsidized or unsubsidized rental housing, especially related to rental history, criminal history, and personal behaviors" Washington RCW 36.70A.030(31)

[8] Temporary emergency housing is defined as: "temporary indoor accommodations for individuals or families who are homeless or at imminent risk of becoming homeless that is intended to address the basic health, food, clothing, and personal hygiene needs of individuals or families. Emergency housing may or may not require occupants to enter into a lease or an occupancy agreement." – Washington RCW 36.70A.030(14)

[9] Clark County's interim allocations do not include designated temporary emergency housing units at the City level. Estimates in this section for the City of Camas are derived directly from the Department of Commerce HAPT tool.

Housing for Special Needs

In addition to overall housing market trends, some populations require additional considerations to make sure that available housing meets their needs. This section covers specific housing types, including regulated affordable units, housing for older adults, and accessibility considerations.

Affordable Housing Inventory

To date, the City of Camas has 98 units of regulated affordable housing in 5 buildings as of 2020 according to data from Oregon Metro and the City of Camas. Approximately half of these units are affordable respectively for residents between 30-50% of AMI and 50-80% of AMI.

Exhibit 34. Affordable Housing Units, Camas, 2020
Source: Oregon Metro RLIS

	REGULATED AFFORDABLE UNITS				TOTAL UNITS
	<30% AMI	30-50% AMI	50-80% AMI	80-100% AMI	
City of Camas	0	45	53	0	98

About half of affordable housing units were built in the 1990's and will soon near the end of the 30-year affordability requirement for projects receiving Low-Income Housing Tax Credit (LIHTC) funding from the US Department of Housing and Urban Development. Although projects may remain affordable past this period, these older properties may be more vulnerable to increasing rents due to market pressures and redevelopment.

Exhibit 35. Affordable Housing by Property, Camas, 2020

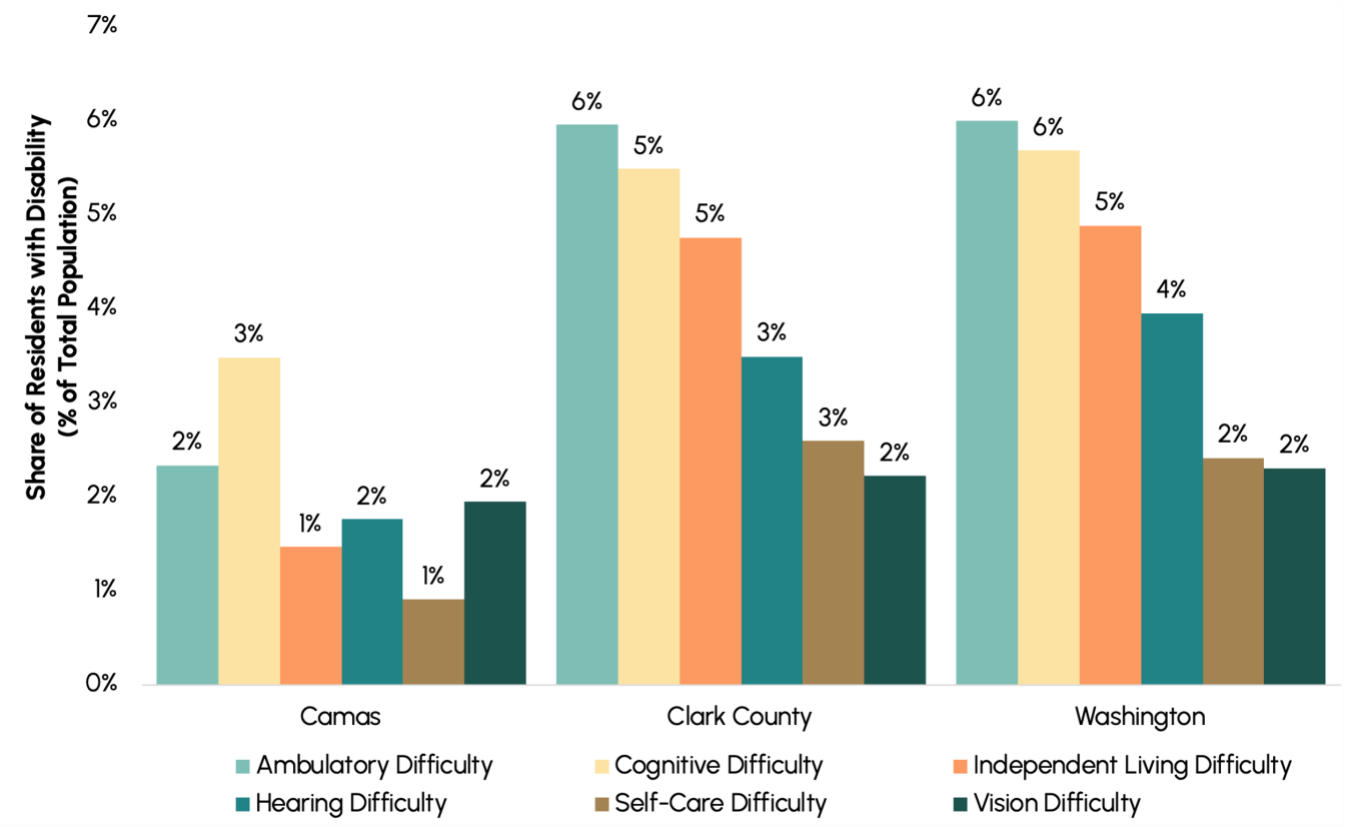
PROPERTY	REGULATED AFFORDABLE UNITS	YEAR BUILT
Clara Flats	6	2020
Camas Ridge Apartments	51	2011
Mountainview House	8	1996
940 NW 7th Ave	10	1995
1152 NE Adams St	4	1995
Crown Villa	19	1986

Housing for Older Adults

Addressing housing needs for those older adults (aged 60 and over) also requires additional considerations for housing choice. Within the group of older adults, housing needs also vary. Nationally,

the trend shows that "the 82-to-86-year-old cohort dominates the assisted living and more intensive care sector"[10] while new or near-retirees may prefer aging in place or active, age-targeted communities. Households for adults 65 years or older also typically have different financial situations than younger adults; low-income households with older adults may not have the financial resources to afford years in a nursing home and may instead choose to downsize to smaller, more affordable units. Others living nearby relatives may also choose to live in multigenerational households. Although the City of Camas has no regulated affordable housing units designated specifically for seniors, the City does have several long-term care residential facilities for older adults providing 135 units.



LONG TERM CARE RESIDENTIAL FACILITY	NUMBER OF FACILITIES	NUMBER OF UNITS (BEDS)
Nursing Home	1	83
Assisted Living	8	52
Total	9	135

Persons with Disabilities

Camas residents with disabilities may require additional housing features for accessibility to meet their needs. In 2018-2022, 8 percent of residents in Camas had at least one disability, as well as 13 percent in Clark County and 14 percent in Washington overall. The most common type of disability in the City was cognitive difficulties, followed by ambulatory and vision difficulties. These disabilities can require housing accommodations such as zero-step entryways, ramps, lifts, or other accessibility features.

Note: Individual persons may experience more than one type of disability

Section 2. Existing Housing Element Goals and Policies

Vision

In the year 2035, residents of Camas continue to appreciate their safe, diverse, and welcoming community. Those raised in Camas will return for family-wage jobs and to ultimately retire here. Camas is a well-planned and connected city where residents enjoy pedestrian and bicycle paths between neighborhoods and to downtown. There is a wide variety and range of housing for all ages and income levels.

Goals and Policies

Housing goals and policies are established to ensure adequate housing is developed throughout the City to support residents of all ages and income levels. Goals and policies are presented for three housing categories:

- *Citywide – establishes a broad housing goal and sets policies to be considered throughout the City*
- *Affordable Housing – focuses on the development of affordable housing*
- *Special Needs and Senior Housing – establishes goals and policies to address the particular needs of residents with special needs and seniors*

Citywide Housing

Citywide Housing Goal

- ***H-1: Maintain the strength, vitality, and stability of all neighborhoods and promote the development of a variety of housing choices that meet the needs of all members of the community.***

Citywide Housing Policies

- *H-1.1: Provide a range of housing options to support all ages and income levels.*
- *H-1.2: Support residential development that minimizes both impervious areas and minimizes site grading to retain the natural contours of the land. Low impact development (LID) strategies include conserving native vegetation in tracts and considering narrower streets, stormwater gardens, and other landscape practices that store and filter runoff.*
- *H-1.3: Encourage use of the optional development codes (e.g., PRD, MXPD) in order to create a variety of housing types within new developments.*

- *H-1.4: Require a percentage of newly created lots to include one or more of the following unit types (to be designated on the face of the plat):*
    - *Single-story dwellings*
    - *Barrier-free dwellings (consistent with Americans with Disabilities Act [ADA] guidelines)*
    - *ADUs, to be constructed concurrent with primary dwellings*
- *H-1.5: Ensure that housing in mixed-use buildings (or developments) will complement the commercial and retail portion of the development and increase local family-wage jobs.*
- *H-1.6: Encourage in-fill development on vacant or underutilized sites, subject to design review guidelines, that have adequate urban services, and ensure that the development is compatible with the surrounding neighborhood.*
- *H-1.7: Require all new housing developments to provide a range of housing types and sizes that are evaluated through the land use approval process and stipulated on the final plat.*

Affordable Housing

Affordable Housing Goal

- ***H-2: Create a diversified housing stock that meets the needs of all economic segments of the community through new developments, preservation, and collaborative partnerships.***

Affordable Housing Policies

- *H-2.1: Support and encourage a wide variety of housing types throughout the City to provide choice, diversity, and affordability and promote homeownership.*
- *H-2.2: Provide incentives and bonuses to encourage the development of affordable housing.*
- *H-2.3: Any comprehensive plan designation change that increases residential capacity should require a quarter (25 percent) of the new units to be affordable to households earning 50 to 80 percent of Camas' MHI at the time of development.*
- *H-2.4: All affordable housing created in the City should remain affordable for the longest possible term, whether created with public funds, through development agreements, or by regulation.*
- *H-2.5: Participate in collaborative partnerships with various local and regional public and non-profit housing groups to ensure that affordable housing is provided throughout the City.*
- *H-2.6: Provide financial assistance through collaborative partnerships to qualifying low-income residents to maintain or repair the health and safety features of their homes.*
- *H-2.7: Conduct an affordable housing study in order to determine the number of existing affordable units and assess the need for additional units. Develop policies to implement recommendations of the affordable housing study.*

Senior and Special Needs Housing

Senior and Special Needs Housing Goal

- ***H-3: Encourage and support a variety of housing opportunities for those with special needs, particularly those with challenges relating to age, health, or disability.***

Senior and Special Needs Housing Policies

- *H-3.1: Encourage special needs and senior housing to be dispersed throughout the community and close to public transportation, shopping, medical clinics, and other essential services.*
- *H-3.2: Encourage and support social and health service organizations that offer programs and facilities to help persons with special needs remain in the community.*
- *H-3.3: Treat residential structures occupied by persons with disabilities the same as residential structures occupied by a family or by non-disabled unrelated individuals.*
- *H-3.4: Support and encourage the development of smaller (less than 1,000-square foot), single-story houses through the Multi-Family Cottage Overlay or other tools.*

Appendix

Key Clark Countywide Planning Policies

Clark County is currently in the process of updating its Comprehensive Plan and its Countywide Planning Policies. The existing 20-year growth plan spans 2015-2035 and includes a Housing Element with relevant policies for jurisdictions within the County.

Key Clark County Countywide Planning Policies

- **2.1.0** *Communities, urban and rural, should contain a diversity of housing types to enable citizens from a wide range of economic levels and age groups to live within its boundaries and to ensure an adequate supply of affordable and attainable housing. Housing options available in the county include single family neighborhoods and mixed-use neighborhoods (e.g., housing above commercial storefronts, traditional grid single family neighborhoods, townhouses, multi-family developments, accessory units, boarding homes, cooperative housing and congregate housing).*
- **2.1.1** *Establish density targets with jurisdictions in the county for different types of communities, consistent with the definitions of Urban Growth Areas and Rural Centers.*
- **2.1.2** *Provide housing opportunities close to places of employment.*
- **2.1.3** *Establish maximum as well as minimum lot sizes and densities in urban areas.*
- **2.1.4** *All cities, towns and the county share the responsibility for achieving a rational and equitable distribution of affordable housing.*
- **2.1.5** *Coordinate with C-TRAN to identify and adopt appropriate densities for priority transit corridors. Ensure that the development standards for these areas are transit and pedestrian friendly. Transportation and housing strategies are to be coordinated to assure reasonable access to a variety of transportation systems and to encourage housing opportunities in locations that support development of cost effective and convenient public transportation for all segments of the population.*
- **2.1.6** *Encourage infill development that enhances the existing community character and provide a mix of housing types in all urban and rural centers. All cities and towns are to encourage infill housing as the first priority for meeting the housing needs of the community.*
- **2.1.7** *Encourage creative approaches to housing design to: accommodate higher densities attractively; increase housing affordability; ensure that infill development fits with the character of the existing neighborhood; and develop demonstration projects to assist the private sector to achieve infill goals.*
- **2.1.8** *Housing strategies are to be coordinated with availability of public facilities and services, including human services.*
- **2.1.9** *All cities, towns and the county are to provide for a variety of housing types and designs to meet the needs of people with special needs (for example those with physical, emotional, or mental disabilities), recognizing that not all housing will become accessible to special needs populations.*
- **2.1.10** *Establish a mechanism for identifying and mitigating adverse impacts on housing production and housing cost which result from adoption of new development regulations or fees.*
- **2.1.11** *Encourage and permit development of inter-generational housing, assisted living options and accessory units in order to allow people with special needs and senior citizens to live independently as possible and to reduce the need for (and cost of) social services.*
- **2.1.12** *All cities, towns and the county are to provide increased flexibility in the use of new and existing housing development to increase the potential for re-use, preservation of existing affordable housing, shared living quarters, use of accessory structures as housing, etc.*
- **2.1.13** *Housing strategies are to be coordinated with the financial community and are to be consistent with public and private financing mechanisms.*

ECOnorthwest

FROM:	Tyler Bump and Josie Rademacher, ECOnorthwest
SUBJECT:	Housing Needs and Land Capacity Analysis

Housing Needs and Land Capacity Analysis

Background

In 2021, the Washington State Legislature adopted House Bill 1220 (HB 1220), which amended the Growth Management Act (GMA) to strengthen requirements for how communities plan for housing. HB 1220 revised the GMA housing goal to require jurisdictions to "plan for and accommodate" housing affordable to all income levels, strengthening the previous goal of encouraging affordable housing. HB 1220 also established new requirements for how jurisdictions address housing needs through the housing elements of their comprehensive plans.

Under these requirements, jurisdictions must plan for housing affordable to all income levels, including moderate-, low-, very low-, and extremely low-income households, and demonstrate sufficient land capacity to accommodate those needs. This includes planning for a range of housing types and densities necessary to meet identified housing needs.

This memorandum documents ECOnorthwest's analysis of housing need and residential land capacity for the City of Camas and evaluates the City's ability to accommodate its identified housing needs consistent with GMA requirements.

Housing Needs and Capacity Analysis

Clark County's Housing Allocations for Camas

As part of its 2025 Comprehensive Plan Periodic Update, Clark County allocated population and housing growth to cities and urban growth areas (UGAs) through 2045. Clark County anticipates countywide population growth of 190,754 people between 2023 and 2045. Camas and its UGA were allocated 7,729 additional residents, resulting in a total projected population of 37,080 residents by 2045. The County's population allocation methodology is based in part on each jurisdiction's share of vacant and buildable housing capacity identified through the County's Vacant Buildable Lands Model (VBLM).

To accommodate projected growth and meet the requirements of HB 1220, Clark County also allocated housing need among jurisdictions. The County used the Washington State Department of Commerce's Housing for All Planning Tool (HAPT) to establish countywide housing need by income level and then allocated that need among jurisdictions using the County's housing allocation methodology. Clark County allocated a total need of 4,226 net new housing units to Camas and its UGA through 2045.

Exhibit 1. Clark County Countywide Housing Allocation by Income Level (% of Area Median Income or AMI)

Population Target=718,154		Permanent Housing Needs by Income Level (% of Area Median Income)						Emergency Housing
	Total	<80%		80 - 120%		>120%		
Camas	4,226	2,661	63%	765	18%	799	19%	172
Battle Ground	6,979	3,426	49%	1,423	20%	2,129	31%	237
La Center	2,123	1,050	49%	405	19%	667	31%	66

Total	103,695	5,3687	52%	17,805	17%	32,202	31%	3,986

Source: Clark County, City of Camas

For purposes of the Camas Comprehensive Plan Update, the City refined the distribution of its 4,226-unit allocation by income level using HAPT, updated housing supply information, and the County's housing allocation. This refinement maintains the County-allocated total of 4,226 net new units while adjusting the distribution among income categories to reflect updated conditions in Camas. Exhibit 2 shows the housing allocation by income level used for this analysis.

Housing Need

As described above, Clark County allocated a total need of 4,226 net new housing units to Camas and its UGA through 2045. For purposes of the Comprehensive Plan Update, the City refined the distribution of this housing need by income level using the Washington State Department of Commerce's Housing for All Planning Tool (HAPT), updated housing supply

information, and the County's housing allocation. The resulting distribution maintains the County-allocated total of 4,226 net new housing units while reflecting the housing needs identified in the City's proposed Housing Element.

Camas's housing need by income level as follows:

- 331 Permanent Supportive Housing (PSH) units
- 564 non-PSH units for households below 30% AMI (extremely low income)
- 811 units between 30 to 50% AMI (low income)
- 955 housing units between 50 and 80% AMI (low to moderate income)
- 516 units between 80 to 100% AMI (moderate income)
- 249 housing units between 100 to 120% AMI (moderate to high income)
- 799 housing units over 120% AMI (high income)

In addition to permanent housing needs, HAPT identifies a need for emergency housing. The City's proposed Housing Element identifies an existing supply of 14 emergency housing beds and a need for 172 additional emergency housing beds through 2045. These needs are addressed separately in the *Considerations for Emergency Housing* section of this memorandum.

Land Capacity by Zone

Exhibit 3 summarizes land capacity by zoning designation for the 2045 Comprehensive Plan Update Preferred Alternative 1. This summary includes total land area, developable land, assumed achieved densities, gross residential capacity, existing housing on developable land, and net residential capacity. This table summarizes total net residential capacity for all zoning designations.

Exhibit 3. Development Capacity by Zoning Designation, Preferred Land Use Alternative

Development Capacity by Zone						
Zoning Designation	Total Land Area (acres)	Developable Land (acres)	Assumed Achieved Density (units/acre)	Gross Residential Capacity	Existing Units	Net Residential Capacity (units)

Source: City of Camas, Clark County Assessor, WSP, ECOnorthwest

Exhibit 4 indicates that there are 9,541 lots in Camas that are eligible for ADU development. While recent changes to the City's development regulations allow up to two ADUs on an eligible lot, the number of ADUs that is reasonably expected to be developed through 2045 is likely to be much lower than this theoretical capacity.

To estimate a more realistic level of ADU development, the project team reviewed recent ADU production trends in Camas and assumed that future production would continue at a similar rate, with an adjustment to account for the new allowance of up to two ADUs per eligible lot. Based on discussions with City staff, approximately 10 to 15 ADUs have been developed annually in recent years. Given this historical range and the expanded ADU allowances, the analysis assumes an average production rate of 15 ADUs per year through 2045. This approach recognizes that, while regulatory changes increase the potential for

ADU development, only a small share of eligible lots is likely to develop ADUs during the planning period.

Exhibit 4. ADU Development Capacity, Preferred Land Use Alternative

ADU Capacity					
ADU-Eligble Lots	Assumed ADU Production per Year	Assumed Long-Term Housing Percentage	ADU Production Long-Term Housing	ADU Production Greater than Eligible Lots?	Total ADU Capacity
9,541	15	95%	285	No	19,082

Source: City of Camas, ECOnorthwest

Affordability Levels by Zoning Designation

To estimate the affordability levels associated with housing types allowed within each zoning designation, ECOnorthwest analyzed recent market pricing and development feasibility. Rent and sales price assumptions were based on market data collected for the pro forma analyses conducted as part of the Downtown Subarea Plan and Comprehensive Plan Update. These assumptions were used to estimate the income levels, expressed as a percentage of area median income (AMI), that could afford different housing types under current market conditions. In the case of housing units in income categories below 80% AMI, there is sufficient zoned capacity in the Comprehensive Plan Update to support units at these income levels, but further subsidy will be required to reach deeper affordability levels.

Exhibit 5 summarizes the housing types allowed within each zoning designation and the estimated affordability levels associated with those housing types. While zoning establishes where different housing types may be developed, it does not guarantee that those housing types will be built or that they will be affordable at the levels shown. In particular, housing serving lower-income households may require financial subsidies or other affordability incentives in addition to sufficient zoning and land capacity.

Exhibit 5. Affordability Level and Housing Type by Zoning Designation

Zoning Designation	Typical Housing Types Allowed	Assumed Affordability Level of Capacity Analysis
Residential Zones		
North Shore Higher Density Residential (HD-NS)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, and Cottage Courts, Small-Scale Apartments (Wood Frame), Garden-Style Apartments, and Apartments (Podium)	High Income (100% AMI - >120% AMI)
North Shore Lower Density Residential (LD-NS)	Single-family (attached/detached), Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, and Cottage Courts	High Income (100% AMI - >120% AMI)
Residential - 6,000 (R-6)	Single-family (attached/detached), Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, and Cottage Courts	High Income (100% AMI - >120% AMI)
Residential - 7,500 (R-7.5)	Single-family (attached/detached), Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, and Cottage Courts	High Income (100% AMI - >120% AMI)
Residential - 10,000 (R-10)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, Cottage Courts, and Small-Scale Apartments (Wood Frame)	High Income (100% AMI - >120% AMI)
Residential - 12 (R-12)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, Cottage Courts, and Small-Scale Apartments (Wood Frame)	High Income (100% AMI - >120% AMI)
Residential - 15,000 (R-15)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, Cottage Courts, and Small-Scale Apartments (Wood Frame)	High Income (100% AMI - >120% AMI)
Downtown Residential (DR)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, Cottage Courts, and Small-Scale Apartments (Wood Frame)	Moderate Income (>80-120% AMI)
Multifamily Residential - 18 (MF-18)	Duplexes, Triplexes, Quadplexes, 5-6 unit buildings. Townhouses, Cottage Courts, and Small-Scale Apartments (Wood Frame), Garden-Style Apartments	Low to Moderate Income (<50% AMI-80% AMI)
Multifamily Residential - 24 (MF-24)	Garden-Style Apartments, and Apartments (Podium)	Low to Moderate Income (<50% AMI-80% AMI)
ADUs (All Zone Categories)	Accessory Dwelling Units (ADUs) on Developed Residential Lots	Low to Moderate Income (<50% AMI-80% AMI)
Mixed-Use Zones		
Downtown Mixed-Use Low-Rise (DT MU-Low)	Mixed-Use (Wood Frame)	Moderate Income (>80% AMI-120% AMI)
Downtown Mixed-Use Mid-Rise (DT MU-Mid)	Mixed-Use (Podium)	Moderate Income (>80% AMI-120% AMI)
Downtown Historic Main Street Core (HSMC)	Mixed-Use (Podium)	Moderate Income (>80% AMI-120% AMI)
Mixed Use (MX)	Mixed-Use (Wood Frame), Mixed Use (Podium)	Moderate Income (>80% AMI-120% AMI)
North Shore Mixed-Use (MX-NS)	Mixed-Use (Podium)	High Income (100->120% AMI)

Considerations for Emergency Housing

Emergency housing, emergency shelters, and transitional housing are allowed uses by right in all zones across Camas that allow residential and lodging uses. Changes to the zoning map and new designations create allowances for these housing types across the applicable zones that allow residential and lodging uses across Camas. Clark County identified the need for approximately 172 emergency shelter beds in Camas. The table below summarizes the total unit capacity by zone where emergency housing, emergency shelters, and transitional housing are allowed.

Exhibit 6. Zoned Capacity for Emergency Housing and Shelters by Zoning Designation

Zoning Designation	Unit Capacity
Residential Zones

Reconciling Housing Needs and Capacity by Income Level

Exhibit 7 summarizes the reconciliation of housing needs and housing capacity by income level and zoning designation. This analysis indicates the Preferred Alternative results in a net capacity surplus of 2,254 units across Camas. Additionally, the Preferred Alternative results in capacity surpluses for all income levels.

Exhibit 7. Housing Needs and Capacity by Income Level

Income Level (% AMI) and Special Housing Needs	Allocated Housing Need	Zoning Designations Serving These Needs	Aggregated Housing Need	Total Capacity	Capacity Surplus
0-30% AMI (PSH)	331	MF-10, MF-18, and MF-24	2,661	3,402	741

VOLUME 2

Volume 2 of the Camas Transportation System Plan includes all background memoranda, and technical data that were the basis for its development. The contents of Volume 2 represent an iterative process in the development of the TSP. Refinements to various plan elements occurred throughout the process as new information was obtained. In all cases, the contents of Volume 1 supersede those in Volume 2.

CHAPTER 1.

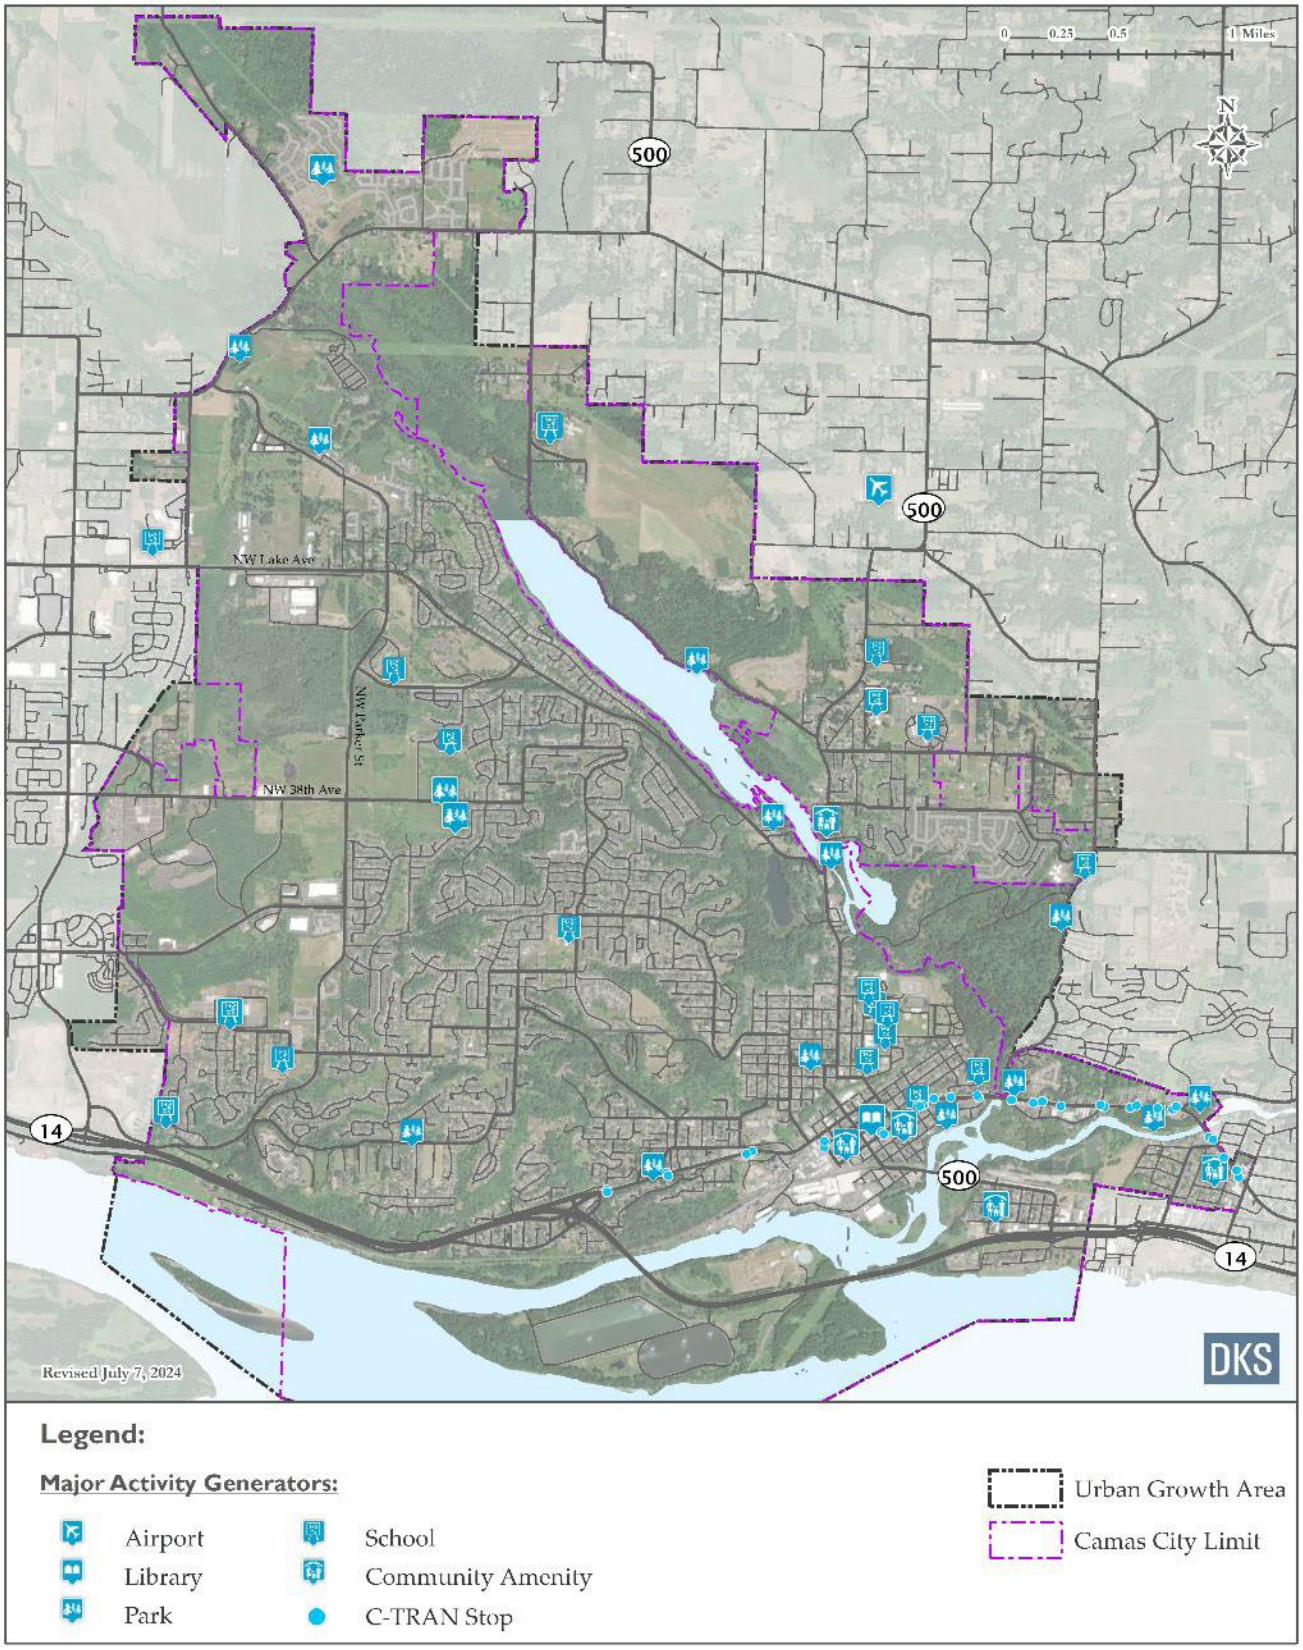
Context for the Plan

This chapter introduces the City of Camas and describes the purpose of a Transportation System Plan (TSP).

CAMAS AT A GLANCE

The City of Camas, incorporated in 1906, is located along the Columbia River in the hills of eastern Clark County. Camas is home to approximately 28,000 people and is a part of the Portland-Vancouver Metropolitan Area with a total population of approximately 2.4 million people.

Located just east of Vancouver and on the doorstep of the Columbia River Gorge, Camas is a short 30 to 40-minute drive from downtown Portland. This unique location offers diverse housing, employment and recreation opportunities. The city is home to several large, hi-tech manufacturing industries, a vibrant downtown, and many new and established neighborhoods.



PLANNING AREA

The current City limits, shown in Figure 1, generally extends from north of NE Ingle Road and portions of NE 28th Street, to north of Lacamas Lake and NE 43rd Avenue-SE 15th Street to the Columbia River and from portions of NE Friberg-Strunk Street and east of SE 192nd Avenue to portions of SE Crown Road and Lechner Street. Beyond the current City limits, is the Urban Growth Area (UGA), also shown in Figure 1. The UGA is a land use planning tool designed to control urban expansion and promote the efficient use of land, public facilities, and services. Land inside the UGA is intended for urban development that is supported by urban services such as roads, water and sewer systems, parks, schools and fire and police protection. This boundary also supports 20-years' worth of population and employment growth, of which cities must plan for urban services within their designated UGA.

Camas is responsible for planning transportation infrastructure for all modes within its designated UGA, hereby referred to as "planning area", with the TSP being the City's tool for this effort. The City's planning area generally follows the current City limits, extending beyond that in a few locations, such as south of NE 28th Street and along portions of NW 38th Avenue, SE Payne Road, SE 15th Street and SE Crown Road (see Figure 1).

The City's planning area includes four distinct areas: 1) developed incorporated areas (i.e., in the existing City limits); 2) developed unincorporated areas; 3) undeveloped incorporated areas, such as the Northshore Subarea, which is planned for future urban development; and 4) undeveloped unincorporated areas. The TSP focuses on how to improve the existing transportation system for areas 1 and 2 noted above, and how to create a new system to serve future development in areas 3 and 4.

FIGURE 1: STUDY AREA AND KEY DESTINATIONS

NORTH SHORE SUBAREA

Camas led a concept planning effort in 2021-2022 for the North Shore area, which consisted of approximately 990 acres of land north of Lacamas Lake and generally extending to the City's planning area to the north, east near SE Everett Street (SR 500), and west near NE 232nd Avenue.

Originally annexed into the current City limits in 2007, much of the North Shore consists of agricultural land and single-family residences. Since annexing the area, the city has purchased over 160 acres in the North Shore along Lacamas Lake, referred to as the Legacy Lands, which total approximately 240 acres and will be preserved for open space and recreational use.

The purpose of the North Shore subarea plan is to guide future development consistent with the community's values, and to strike a balance between preserving open space and accommodating the anticipated future urban development and the additional land necessary for homes, businesses, and public facilities. Most of the subarea is in private ownership and the area is anticipated to experience substantial growth over the next 20 years (i.e., through the TSP future horizon year of 2040). The North Shore subarea plan establishes future land uses and ultimately provided the land use assumptions that were used to develop the TSP. The conceptual alignments of transportation facilities identified in this TSP are based on the North Shore subarea plan.

PURPOSE OF THE TSP

The Camas TSP is a long-range plan to guide transportation investments within the City's planning area through the future horizon year of 2040. As the transportation element of the City's Comprehensive Plan, these transportation system improvements address current deficiencies and serve future local and regional needs, and align with the community's goals, objectives, and vision for the future. This TSP was developed through community and stakeholder input and is based on the City's transportation system needs, opportunities, and anticipated available funding. The State of Washington Growth Management Act (GMA) requires the TSP to include:

- An inventory of transportation facilities and services.
- A summary of land-use assumptions used in estimating travel forecasts.
- A summary of roadway Level of Service (LOS) standards.
- A summary of actions to address existing deficiencies (facilities not meeting level of service standards).
- A traffic demand forecast for at least ten years (in this case, twenty years based on the adopted regional land-use plan).
- A list of transportation system needs to meet current and forecasted demand.
- A finance plan that serves as the basis for the six-year transportation improvement program (TIP).

In compliance with requirements summarized above, the City of Camas created the TSP. This TSP will be used by the City to make strategic decisions about transportation system investments and will be instrumental in supporting grant applications to fund future projects, and ensuring projects are built in coordination with land use actions and future development.

CHAPTER 2.

How the Plan Was Developed

This chapter describes how the TSP was developed. The process involved a formal decision-making structure, community engagement, and a structured technical analysis.

SETTING DIRECTION FOR THE PLAN

A transportation vision, and set of goals, objectives, and performance measures (see Figure 2) were used to guide the project team in the development, evaluation, and prioritization of solutions that best fit the community and provided the basis for policies to support Plan implementation. They were established with guidance from the Project Advisory Committee (PAC).

Collectively, the transportation-related goals, policies, and evaluation criteria describe what the community wants the transportation system to do in the future, as summarized by a **vision statement**. A vision statement generally consists of an imaginative description of the desired condition in the future. It is important that the vision statement for transportation align with the community's core values.

Goals and objectives create manageable steppingstones through which the broad vision statement can be achieved. **Goals** are the first step down from the broader vision. They are broad statements that should focus on outcomes, describing a desired end state. Goals should be challenging, but not unreasonable.

Each goal is supported by more finite **policies**. In contrast to goals, policies should be specific and measurable. Where feasible, providing a targeted time period helps with objective prioritization and achievement. When developing policies, it is helpful to identify key issues or concerns that are related to the attainment of the goal.

The solutions recommended through the TSP must be consistent with the goals and policies. To accomplish this, **evaluation criteria** were developed based on the goals and policies. For the Camas TSP, they were used to inform the selection and prioritization of projects and policies for the plan by describing how well they support goal areas. The methodology for calculating the scores for each criterion can be found in Technical Memorandum #1b: Goals, Policies and Evaluation Criteria, included in the Appendix.

FIGURE 2: DIRECTION FOR THE PLAN

VISION FOR THE PLAN

The overall vision statement for the TSP is described below.

> IN 2040, RESIDENTS OF CAMAS CONTINUE TO APPRECIATE THEIR SAFE, DIVERSE, AND WELCOMING COMMUNITY AS A LIVABLE PLACE FOR PEOPLE OF ALL AGES. QUALITY PUBLIC FACILITIES, SERVICES, AND UTILITIES CONTRIBUTE TO THEIR HIGH QUALITY OF LIFE.

GOALS AND POLICIES FOR THE PLAN

The Camas TSP goals and policies are documented below (not in order of priority).

GOAL

STREETS

STREETS WILL FUNCTION FOR ALL USERS INCLUDING BICYCLISTS, PEDESTRIANS, TRANSIT USERS, AND MOTORISTS

Policy a.	Maintain the livability of Camas through proper location and design of transportation facilities, consistent with the Camas Transportation Plan, Parks, Recreation and Open Space Plan and 6-year street plan.
Policy b.	Support the need for regular street maintenance, safety and efficiency improvements, and access management measures.
Policy c.	Construct streets that are interconnected and avoid long cul-de-sacs or dead ends. Block lengths should be less than 1,000 feet.
Policy d.	Maintain the transportation system at a level that preserves user safety, facility aesthetics, and the overall integrity of the system.
Policy e.	Provide attractive streetscapes through design standards that encourage appropriate traffic volumes, speeds, and multi-modal safety.
Policy f.	Minimize access to new development and redevelopment along the City's arterials, and consolidate access points when spacing is insufficient.
Policy g.	Include enhanced roadway features such as roundabouts, decorative lighting, and landscaping for gateways.

GOAL

WALKING, BICYCLING, AND ADA MOBILITY

THE NEEDS OF BICYCLISTS, PEDESTRIANS, TRANSIT USERS, AND ACCESSIBILITY (ADA-COMPLIANT) WILL BE CONSIDERED IN ALL STREET IMPROVEMENTS AND WILL

Policy a. Enhance travel choices and provide pedestrian and bicycle routes designed especially for them, not simply along routes designed for cars. Route planning should seek shortcuts and other opportunities that give walking or biking advantages over the automobile.

Policy b. Support opportunities to increase participation of school-age children in walking or biking to school to improve their health and reduce traffic congestion.

Policy c. Include pedestrian and bicycle linkages in the construction of cul-de-sacs and other forms of dead-end streets. Existing dead-end streets should be retrofitted to provide bicycle and pedestrian linkages as practicable.

Policy d. Recognize and support Complete Street implementation in all new and retrofit

Policy e. Coordinate with schools and the community to designate safe pedestrian and bicycle routes between residential areas, schools, and public facilities.

Policy f. Increase wayfinding signage for outdoor destinations throughout the City.

Policy g. Support enhanced pedestrian improvements in the downtown and other economic development areas.

GOAL

LOCAL AND REGIONAL TRANSIT

REGIONAL TRANSIT WILL PROVIDE SAFE, EFFICIENT, AND DEPENDABLE SERVICE TO OUR COMMUNITY.

Policy a. Coordinate with local municipalities, the Washington State Department of Transportation, adjacent counties, and C-TRAN to ensure that minimum roadway and multi-modal design standards are consistent.

Policy b. Continue to advocate for quality regional transit services and an increase to service availability.

GOAL

DESIGN AND LOW-IMPACT DEVELOPMENT

THE TRANSPORTATION SYSTEM WILL BE DESIGNED TO SUPPORT COMMUNITY CHARACTER AND ENVIRONMENTAL POLICIES.

Policy a. Provide attractive streetscapes through design standards that encourage appropriate traffic volumes, speeds, robust landscaping, and safety for pedestrians and bicyclists

Policy b. Minimize cut and fill in roadway design and minimize restructuring the natural contours of the land.

Policy c. Encourage the inclusion of LID design features (e.g., rain gardens, grass pavers, pervious pavement) in the design of private driveways, parking lots, and other road surfaces.

Policy d. Continue implementing new strategies such as LED lights as a standard for new development and replacing existing inventory.

GOAL

SAFETY AND TRAFFIC CALMING

DESIGN AND CONSTRUCT SAFE TRANSPORTATION FACILITIES THAT MEET APPLICABLE REQUIREMENTS.

Policy a. Encourage traffic safety through education, enforcement, and engineering.

Policy b. Ensure that adequate access for emergency services vehicles is provided throughout the City.

Policy c. Provide design standards that encourage appropriate traffic volumes, speeds, and pedestrian safety.

Policy d. Incorporate safe pedestrian and bicycle routes between residential areas, schools, and public facilities in development.

Policy e. Require new developments to implement design standards using the Neighborhood Traffic Management Plan.

Policy f. Identify high accident areas, and implement specific measures to reduce their occurrence.

GOAL

TRANSPORTATION DEMAND MANAGEMENT

TRANSPORTATION PLANNING WILL ACHIEVE THE EFFICIENT USE OF TRANSPORTATION INFRASTRUCTURE, INCREASE ITS PERSON CARRYING CAPACITY, AND ACCOMMODATE AND FACILITATE FUTURE GROWTH CONSISTENT WITH LAND USE OBJECTIVES.

Policy a. Require large employers to implement a commute trip reduction program for employees, as mandated by the state's Commute Trip Reduction law.

Policy b. Develop Complete Street design that is supportive of the use of alternative modes of travel and adopt engineering design standards consistent with these goals.

Policy c. Support intergovernmental development review.

Policy d. Support RTC with funding and staff participation to the extent possible.

GOAL

CONCURRENCY AND LEVEL OF SERVICE

THE CITY WILL MAINTAIN THE ADOPTED LOS STANDARDS FOR ALL ARTERIALS, TRANSIT ROUTES, AND HIGHWAYS.

Policy a. Encourage growth in areas with existing or planned infrastructure capacity.

Policy b. Require new development to demonstrate that adequate person trips are available, or that multi-modal improvements to the transportation system are made to accommodate the impacts concurrent with the development.

Policy c. Utilize traffic impact fee studies, development traffic impact analyses, and corridor studies to identify deficiencies and plan improvements to maintain or improve level-of-service standards.

Policy d. Take the following actions (not in priority order) if probable funding falls short of meeting identified needs: 1) Delay development until programs, facilities, or services can be funded; 2) Obtain needed revenue or revise the transportation plan to reflect known financial resources; 3) As a last choice, change the transportation LOS standard.

GOAL

TRANSPORTATION REVENUE

MAXIMIZE THE USE OF STATE AND FEDERAL FUNDS FOR TRANSPORTATION CAPITAL, OPERATING, SERVICE, AND DEMAND IMPROVEMENTS.

Policy a. Maintain a capital improvement plan that identifies construction and improvement priorities and funding.

Policy b. Ensure that the transportation impact fee program responds to land use changes, so that connectivity occurs and new development pays its proportionate share of needed capacity.

Policy c. Support the Pavement Management System and other maintenance needs to ensure cost-effective maintenance of transportation facilities and efficient use of public funds.

Policy d. Develop equitable transportation impact fees by which land developers are assessed fair-share contributions for any transportation improvements.

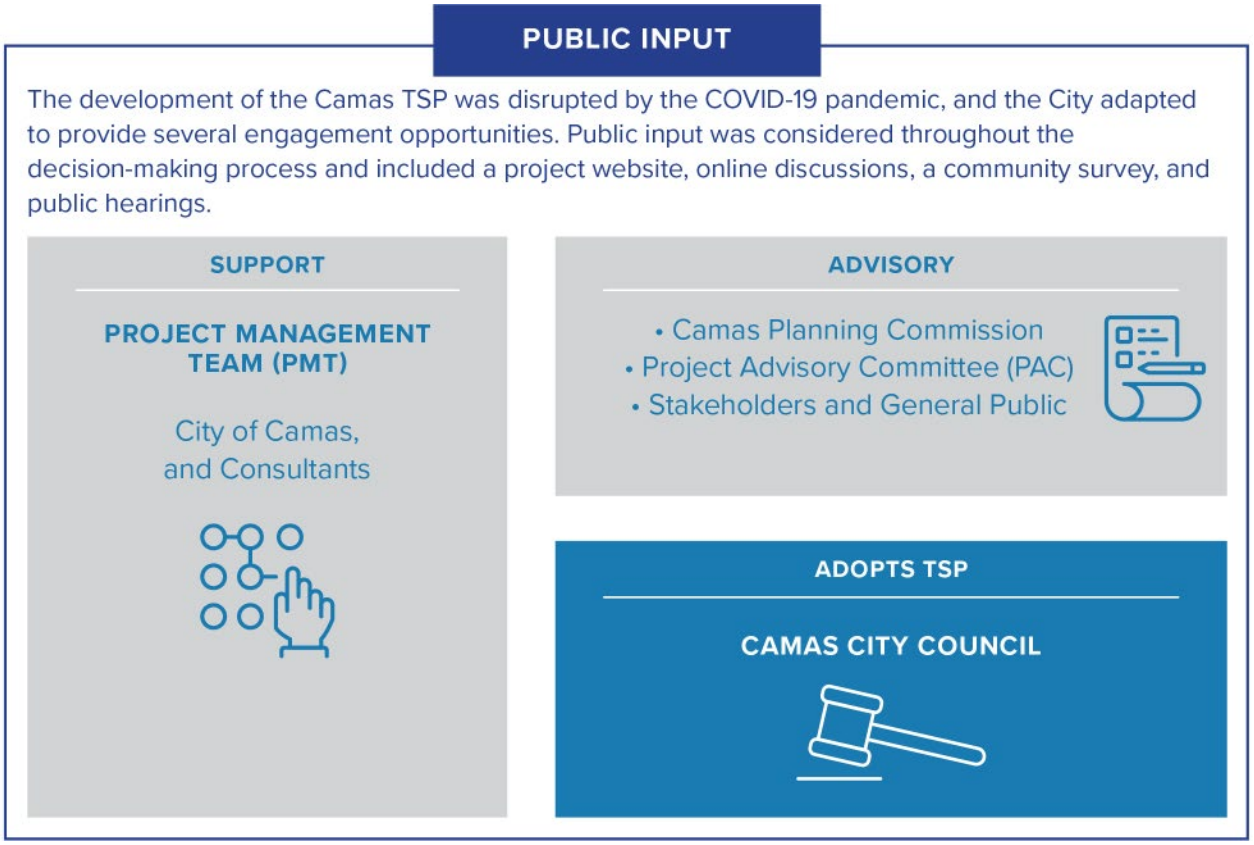
Policy e. Direct transportation funding primarily toward multi-modal improvements that will enhance safety and circulation within and between infill areas, schools, and employment centers within City limits.

Policy f. Focus transportation projects in economic development areas to act as catalysts for job growth.

PERFORMANCE BASED PLANNING PROCESS

The TSP utilizes a performance-based planning process. The community vision is distilled into measurable goals and supporting policies. These goals and policies were used to identify evaluation criteria to help evaluate potential projects to enhance transportation system performance, and to measure long-term alignment between Camas's transportation system and the community's vision, goals, and policies. The plan process is illustrated below in Figure 3, along with the key questions that were considered during three development stages of the TSP.

FIGURE 3: PERFORMANCE BASED PLANNING PROCESS



DECISION MAKING STRUCTURE

The decision-making structure for this TSP was developed to establish clear roles and responsibilities throughout the project. The decision-making structure (Figure 4) established a framework for broad-based community engagement for the project.

The development of the Camas TSP was disrupted by the COVID-19 pandemic, and the project team adapted to provide several engagement opportunities. As the TSP was developed, the Project Management Team (PMT) worked with a Project Advisory Committee (PAC) that included local business representatives, emergency service and transit providers, and agency staff members from the City of Camas, City of Vancouver, City of Washougal, Clark County, C-Tran, Southwest Washington Regional Transportation Council (RTC) and the Washington State Department of Transportation (WSDOT). The PAC was formed to provide community-based recommendations, and informed and guided the plan by reviewing draft deliverables, providing insight into community perspectives, commenting on technical and regulatory issues, and providing recommendations for the TSP.

The City Council and Planning Commission for Camas were briefed during the development of this plan throughout the process. The PMT made recommendations to the City Council based on technical analysis and community input. The City Council made all final decisions pertaining to this TSP.

FIGURE 4: CAMAS TSP ROLES AND RESPONSIBILITIES

TECHNICAL DEVELOPMENT

Figure 5 illustrates the technical tasks involved in creating the TSP. These are categorized in three major stages: the first to understand system needs and constraints, the second to develop solutions, and the third to prepare and adopt the plan. Community input guided the TSP development through all stages.

FIGURE 5: CAMAS TSP DEVELOPMENT TECHNICAL TASKS

CHAPTER 3.

Camas Transportation System Today & Tomorrow

This chapter describes the transportation system as it exists and operates today and in the future. The assessment is used to identify community transportation needs and determine where the transportation system can be improved to better accommodate them. Needs were determined based on a comprehensive multimodal existing conditions analysis and projecting future conditions through the planning horizon (2040) based on assumed growth in households and employment, and the transportation standards from Chapter 4.

FACTORS IMPACTING TRAVEL DECISIONS

Travelers often weigh a variety of factors when deciding how to commute to or from their destination. Whether the trip will be via motor vehicle, walking, bicycle, public transportation, scooter, or other mode, the choice is often a balance between ease and convenience of travel, travel cost, and travel time.

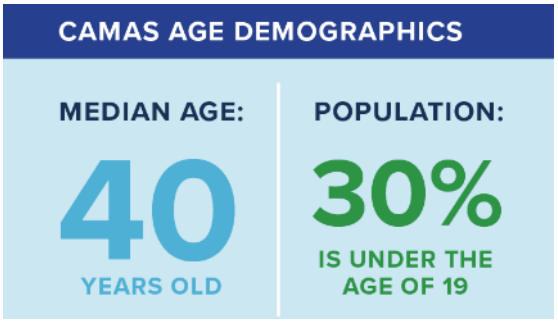
LAND USE AND KEY DESTINATIONS

Land use is a key component of transportation system planning. Where people live and where they go to work, shop, or access services and the distance between these key destinations has a big impact on how they get around and the demands they place on the transportation system.

Many trips also occur between community amenities within the City's planning area, including parks, civic (e.g., schools, libraries, community centers), essential retail and services (e.g., grocery stores, pharmacies), and medical uses. These amenities are shown earlier in Figure 1. Most homes are located to the south of Lacamas Lake, with larger employment areas Downtown (central), and at the west end of the city. Schools are located throughout the city and most civic buildings are near Downtown. The city owns and maintains 16 parks; the majority — in number and in acreage— are located in the southern half of the city. Shopping and entertainment opportunities are generally found in the Downtown, and the southeastern part of the city. Future community amenities will also likely be built as development occurs in the North Shore subarea.

Those destined for a park or school generally have a higher likelihood to walk or bicycle than those going to work or shopping. The distance of that destination also plays a role in mode choice. Trips that are shorter generally present a better opportunity to walk or bicycle, and longer distance trips more often are conducive to transit or motor vehicle modes. Residents in the City's planning area who work outside of it (as well as people who work in the City's planning area but live elsewhere) are likely to commute by motor vehicle due to travel distance, commute time, and/or lack of adequate facilities. However, some commuters may choose bicycling or transit if the regional transportation system offers convenient and comfortable biking facilities or transit services between destinations.

QUALITY AND AVAILABILITY OF FACILITIES



The availability of sidewalks, shared-use paths, curb ramps to provide wheelchair access, crosswalks, and bicycle facilities increases the comfort and access of those walking and biking. The lack of or poor quality of these facilities, particularly along or across higher volume or higher speed roadways, discourages people from utilizing non-motorized vehicle modes of transportation.

For transit, the distance to bus stops, frequency of service, route coverage, connections to other transportation modes, and amenities at stops are some of the factors that play a role in a user's decision to utilize it.

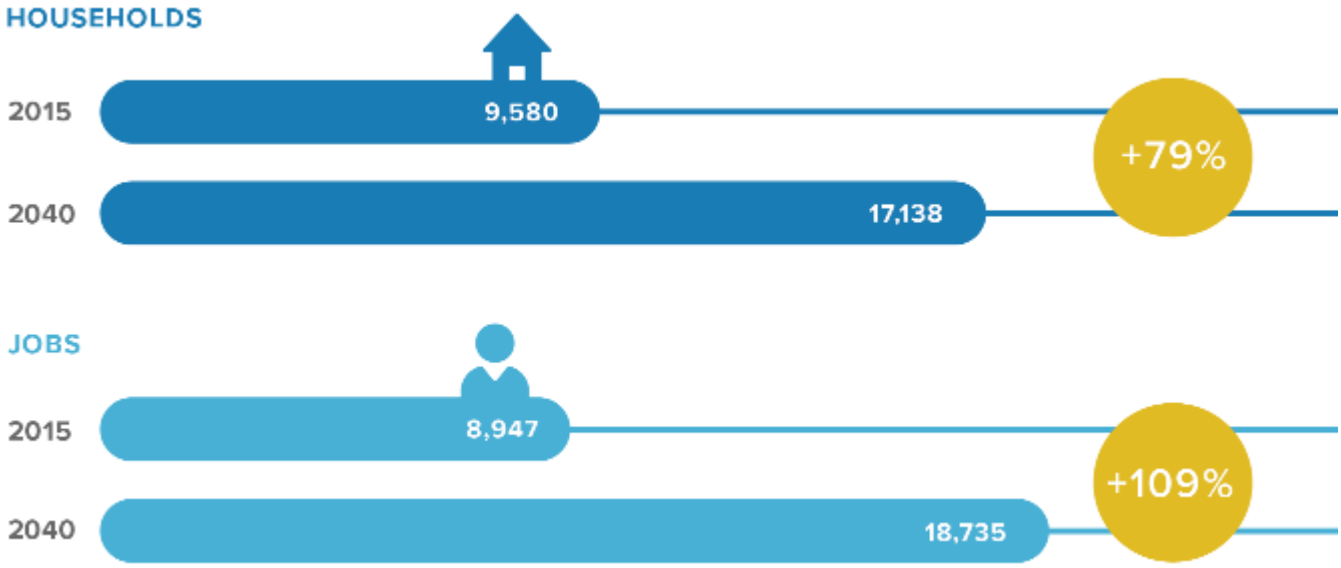
DEMOGRAPHICS

As shown in Table 1 and Figure 6, residents of Camas have a median age of 40, with about 30 percent of all residents within the school age range (i.e., under the age of 19) and about 13 percent of the population over the age of 65. Both age demographics are slightly different than those of the region and state, with the city accounting for 4 to 5 percent more school aged residents and 3 percent fewer residents aged over 65.

FIGURE 6: KEY DEMOGRAPHICS

As growth continues in the city, particularly in the North Shore subarea, it will likely continue to attract a high share of younger families. Overall, the city will continue to see people of all ages and abilities walking, biking, and using transit. It will also continue to see a higher share of school related trips when compared to other cities in the region given the significant share of younger families.

TABLE 1: CAMAS AGE DEMOGRAPHICS



AGE	CAMAS	CLARK COUNTY	WASHINGTON
UNDER 19 YEARS	30%	25%	24%
20-34 YEARS	14%	20%	22%
35-49 YEARS	22%	20%	20%
50-64 YEARS	21%	19%	18%
65 YEARS AND OLDER	13%	16%	16%
MEDIAN AGE	**40.3**	**38.8**	**38.0**

POPULATION AND EMPLOYMENT GROWTH

As growth occurs to the year 2040, the demands on the City's transportation system will be influenced by changes in population, housing, and employment. These changes in travel demands will require better ways to manage the system, more choices for getting around, and targeted improvements to make the system safer and more efficient.

The Camas planning area is growing, and it is estimated that about 7,558 more households will live here by 2040, for a total of 17,138 (see Figure 7)[1]. There are currently about 8,947 jobs in Camas's planning area, and that total is estimated to increase to 18,735, with 9,788 more people working in the City's planning area by 2040 (see Figure 7)[2].

FIGURE 7. CAMAS PLANNING AREA HOUSEHOLD AND JOB GROWTH TRENDS

Source: RTC 2015 and 2040 Travel Demand Models; based on the Camas planning area.

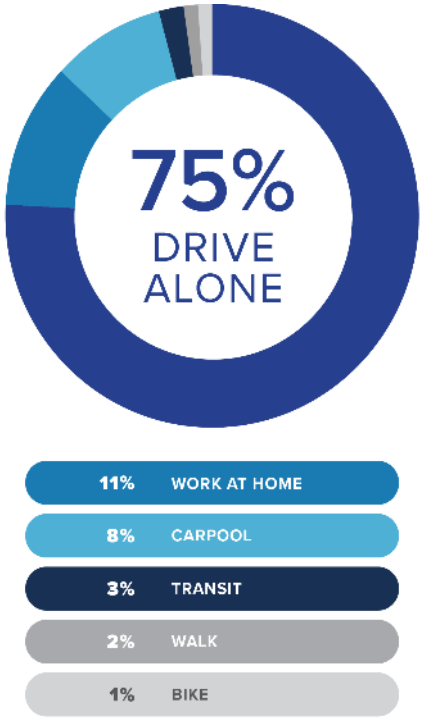
TRAVEL DEMANDS AND CHARACTERISTICS

The number of people who choose to walk, bike, ride transit, or drive along with the distances they travel is important for assessing how well existing transportation facilities serve the needs of users. Available data on travel demand, travel mode choice, and trip length are used to better understand travel behavior in the community and inform the needs analysis for the transportation system. This data is largely derived from the US Census Bureau on employment-based trips; however, no other travel data is available from this source.

The following sections provide a summary of travel demands and characteristics in the City's planning area.

[1] These locations are based on boundaries approximated by the model TAZ boundaries and may not match current and future city limits; This includes the adopted changes from the Northshore Subarea Plan (i.e., 4,150 households and 1,968 jobs).

[2] Ibid



COMMUTER TRIPS

Much of the traffic in the Camas planning area, especially during the more congested weekday peak periods, is related to employment. Residents in the Camas planning area who are employed overwhelmingly commute to work outside of the planning area (87 percent), while jobs in the planning area are overwhelmingly filled by people who live outside of the planning area (83 percent)[3].

On average, almost 75 percent of employed residents in the Camas planning area commute to work using single-occupant motor vehicles. About 8 percent of residents carpool to work and the remaining 17 percent work from home, walk, bike, take transit, or use some other means of travel (see Figure 8).

About 11 percent of employed residents in the Camas planning area worked from home pre-COVID, and that figure likely increased due to COVID-19. It seems likely that a higher percentage of workers will continue teleworking, at least part time. Any increase in the remote work share will change the demand on streets, including when and how they travel.

FIGURE 8: CAMAS PLANNING AREA COMMUTER MODE SHARE

Source: US Census Bureau, 2012-2016 American Community Survey

TRANSPORTATION DEMAND BY MODE

Pedestrian, bicycle, and motor vehicle traffic counts were conducted at key intersections throughout Camas on typical weekdays[4]. This information indicates where and when travel demand is highest for each mode of travel. It also provides a basis for assessing how well existing transportation facilities are able to meet the needs of users during peak demand periods.

- Pedestrian volumes during the PM peak hour are generally highest near downtown Camas, including along NE 3rd Avenue and NE Adams Street (the traffic count summary is included in the appendix). The highest hourly pedestrian activity during the evening peak occurred at the NW Sierra Drive intersection with NW 28th Avenue, with 30 pedestrian crossings in the one-hour period. Other study intersections with more than 15 pedestrian crossings during the one-hour period included NE 6th Avenue at NE Adams Street, NE 3rd Avenue at NE Dallas Street, NE 3rd Avenue at NE 4th Street, and Weir Road at NE 3rd Avenue.
- Bicycle volumes indicate limited biking, with the highest volumes along NW Lake Road, and NW Sierra Street (the traffic count summary is included in the appendix). During the evening peak hour, 20 of the 50 study intersections had no observed bicyclists during the

[3] US Census Bureau, OnTheMap. Home/Work Distance/Direction Analysis, 2015.

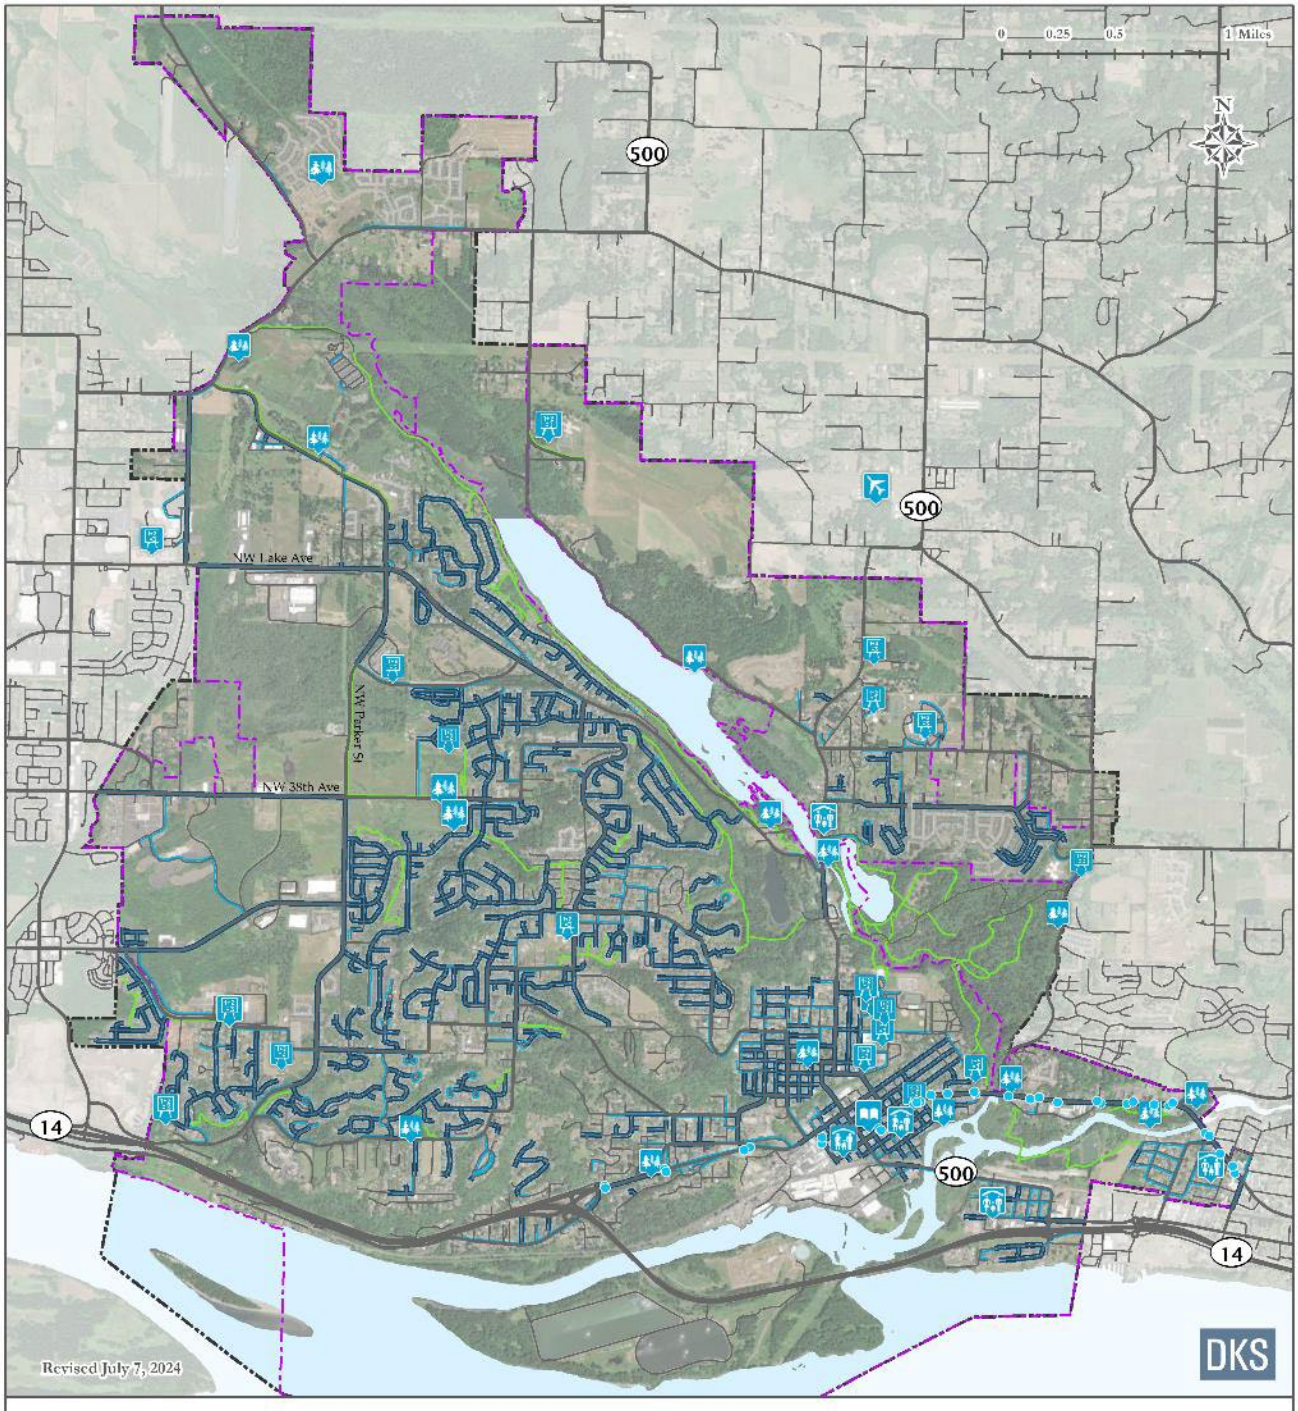
[4] Based on counts conducted in April of 2018.

one-hour period. The NE Lake Road at SR 500, NW Lake Road at NW Sierra Street, NW Lake Road at NW Leadbetter Drive, NW Sierra Street at NW 45th Avenue, and NE 6th Avenue at NE Garfield Street intersections had the highest observed bicycle volumes, with 4 or more bicyclists counted during the single hour at each of the intersections.

- Motor vehicle volumes on the roadways in Camas (the traffic count summary is included in the appendix) most commonly peak during weekday evenings between 4:50 p.m. and 5:50 p.m. The highest hourly motor vehicle volumes during the evening peak occurred along the NW 6th Avenue corridor between the SR 14 ramps and NE Adams Street, with more than 1,300 trips during the one-hour period. The NE Lake Road at NE Everett Street, and NW 6th Avenue at SR 14 Ramps intersections had the highest observed volumes, with more than 1,800 entering vehicle trips during the single hour at each of the intersections.

TRANSPORTATION SYSTEM FACTS

To address changing transportation needs within the City's planning area though 2040, the existing and future travel conditions must be considered. The transportation system review documented the existing pedestrian, bicycle, transit, and motor vehicle infrastructure. It also identified shortfalls and limitations regarding how people can travel within the city (such as lack of bike lanes or sidewalks). Solutions are identified in Chapter 5 for transportation infrastructure that is determined to not maintain acceptable service levels for residents.



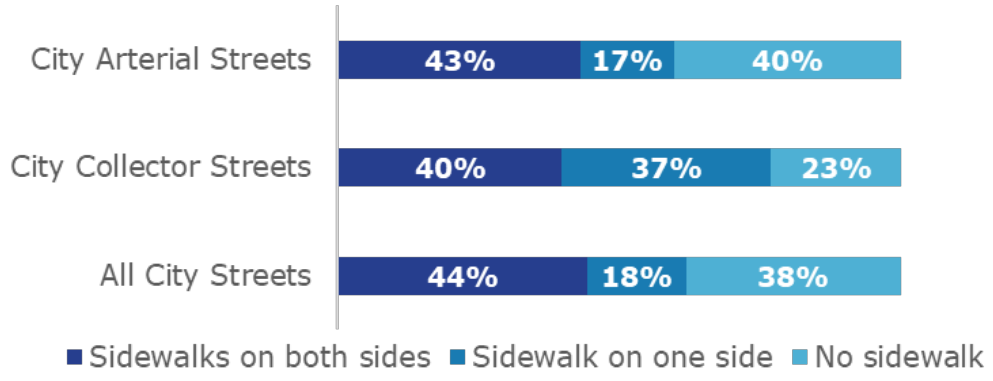
WALKING NETWORK

Walking supports healthy lifestyles, is an easy and economical way to travel, and is well suited for people of all ages and abilities. In this plan, "walking" and "pedestrian" are terms that include people who walk independently or use canes, wheelchairs, other walking aids, or strollers. Approximately two percent of commuters in the city walk to work, with three percent utilizing public transportation, which often includes walking at the beginning or end of the trip[5]. In addition to the work commute trips, walking trips are made to and from recreational areas, shopping areas, schools, and other key destinations in the City's planning area. Continuous and direct sidewalk connections to all key destinations and along all streets, in addition to safe crossing opportunities along major roadways, are essential to encourage walking and transit use.

The pedestrian network in the City's planning area, shown in Figure 9, is composed of sidewalks, shared-use paths and pedestrian trails and accessways, and is fairly well developed. The walking network in Camas is fairly well developed. A large part of downtown Camas was developed prior to 1950, a time in which sidewalks were incorporated into the design of neighborhoods and streets. Although most areas incorporated into Camas over the following decades have sidewalk coverage, a few areas do not have complete sidewalks on one side of the street, or even on both sides. These gaps are most significant in southwest, southeast, and northeast Camas, and on roadway segments outside the city limits.

[5] US Census Bureau, 2012-2016 American Community Survey

FIGURE 9: PEDESTRIAN FACILITIES



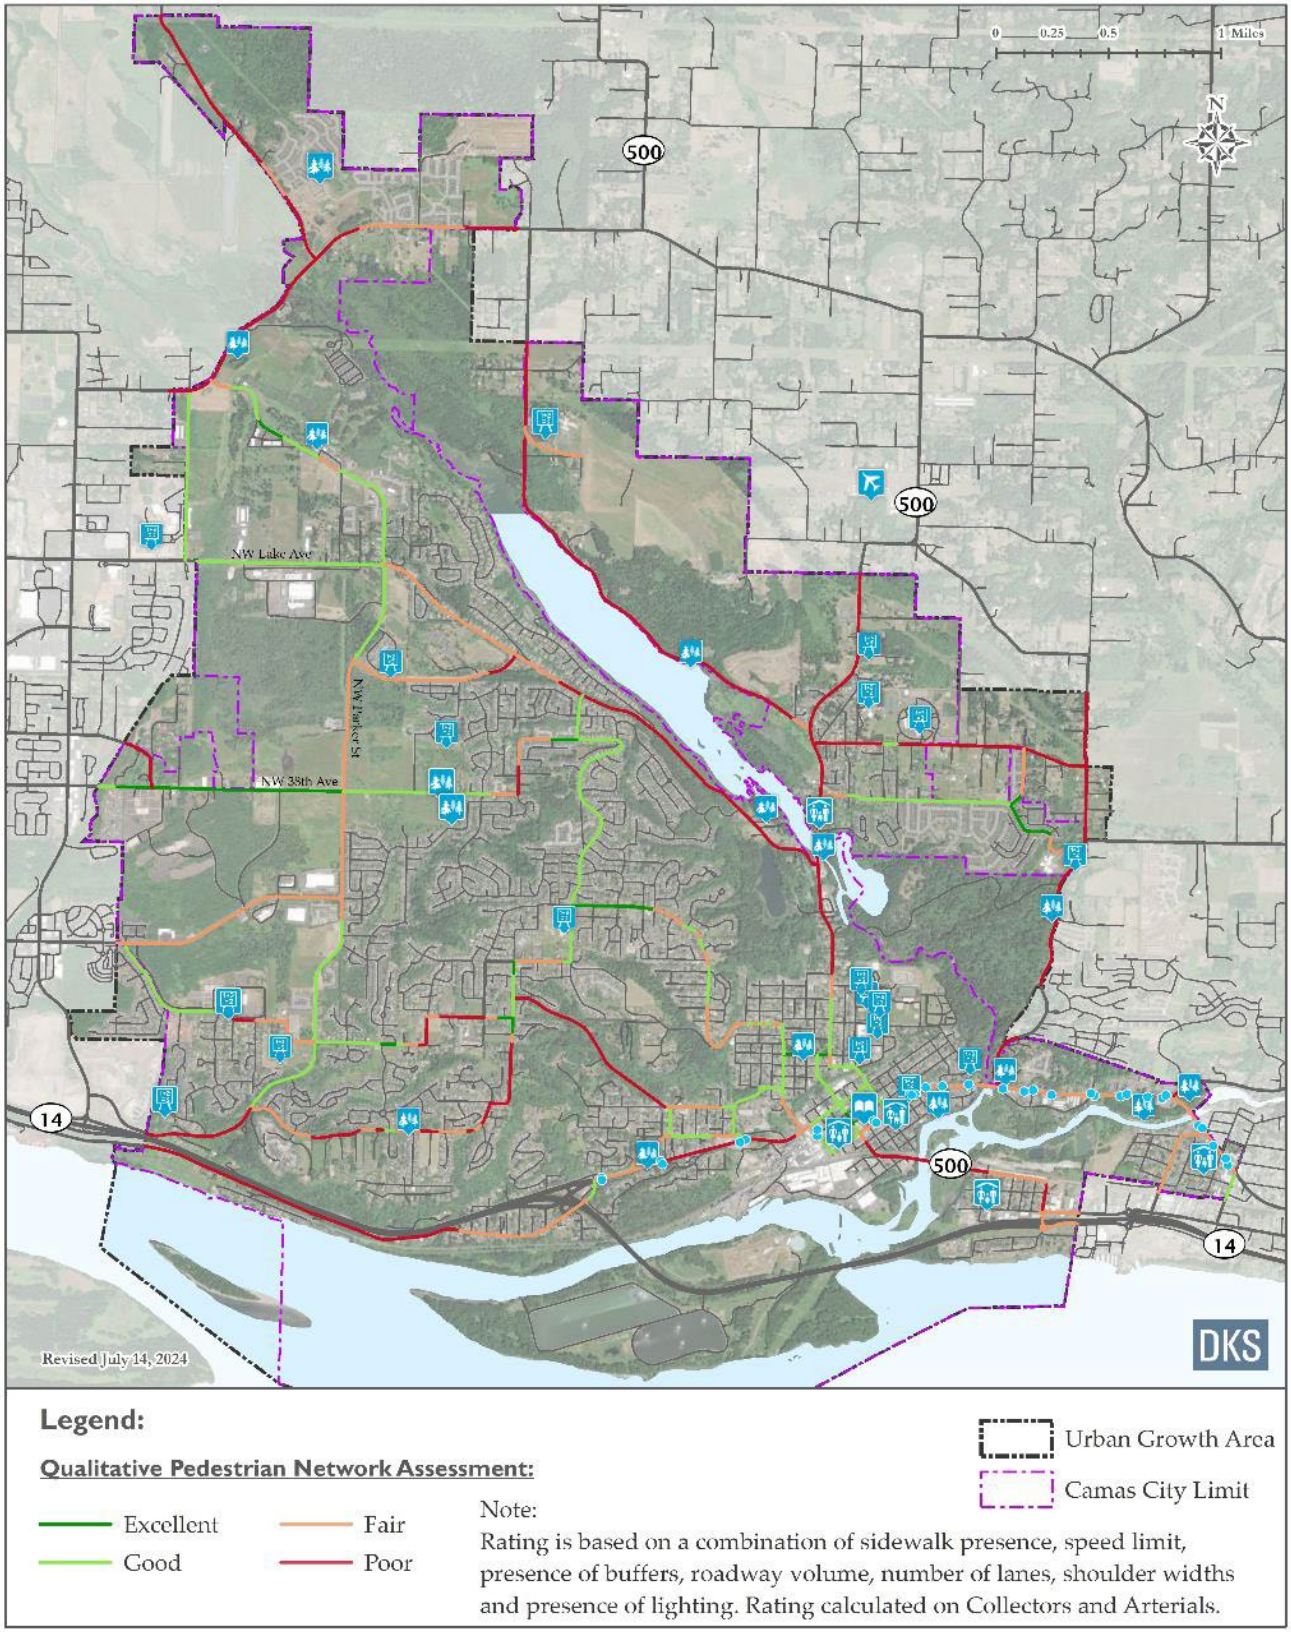
Paved shared-use paths exist along portions of NW Parker Street, NW 18th Avenue, Lacamas Lake, Washougal River, and scattered throughout the residential neighborhoods. Unpaved pedestrian only trails are located throughout the City.

Many intersections in older parts of the city lack ADA-compliant ramps, which provide important connections between sidewalks, making it easier to cross streets and handle the vertical drop at curbs. However, the city has been recently installing new curb ramps in many of these locations. The presence of curb ramps is fairly consistent along streets in downtown Camas, and in the newer neighborhoods in the city.

PEDESTRIAN FACILITY GAPS

About 38 percent of street miles (including City arterial, collector and local streets) lack sidewalk coverage along one or both sides (see Figure 10). These gaps are more common along arterial streets than collector streets, at 40 and 23 percent of the street miles with no sidewalk on either side, respectively. These numbers do not incorporate off-street shared-use paths that may run alongside some roadways. Any future streets constructed in association with development projects will be required to construct sidewalks, increasing the overall sidewalk supply.

FIGURE 10: STREET MILES WITH SIDEWALKS WITHIN CAMAS



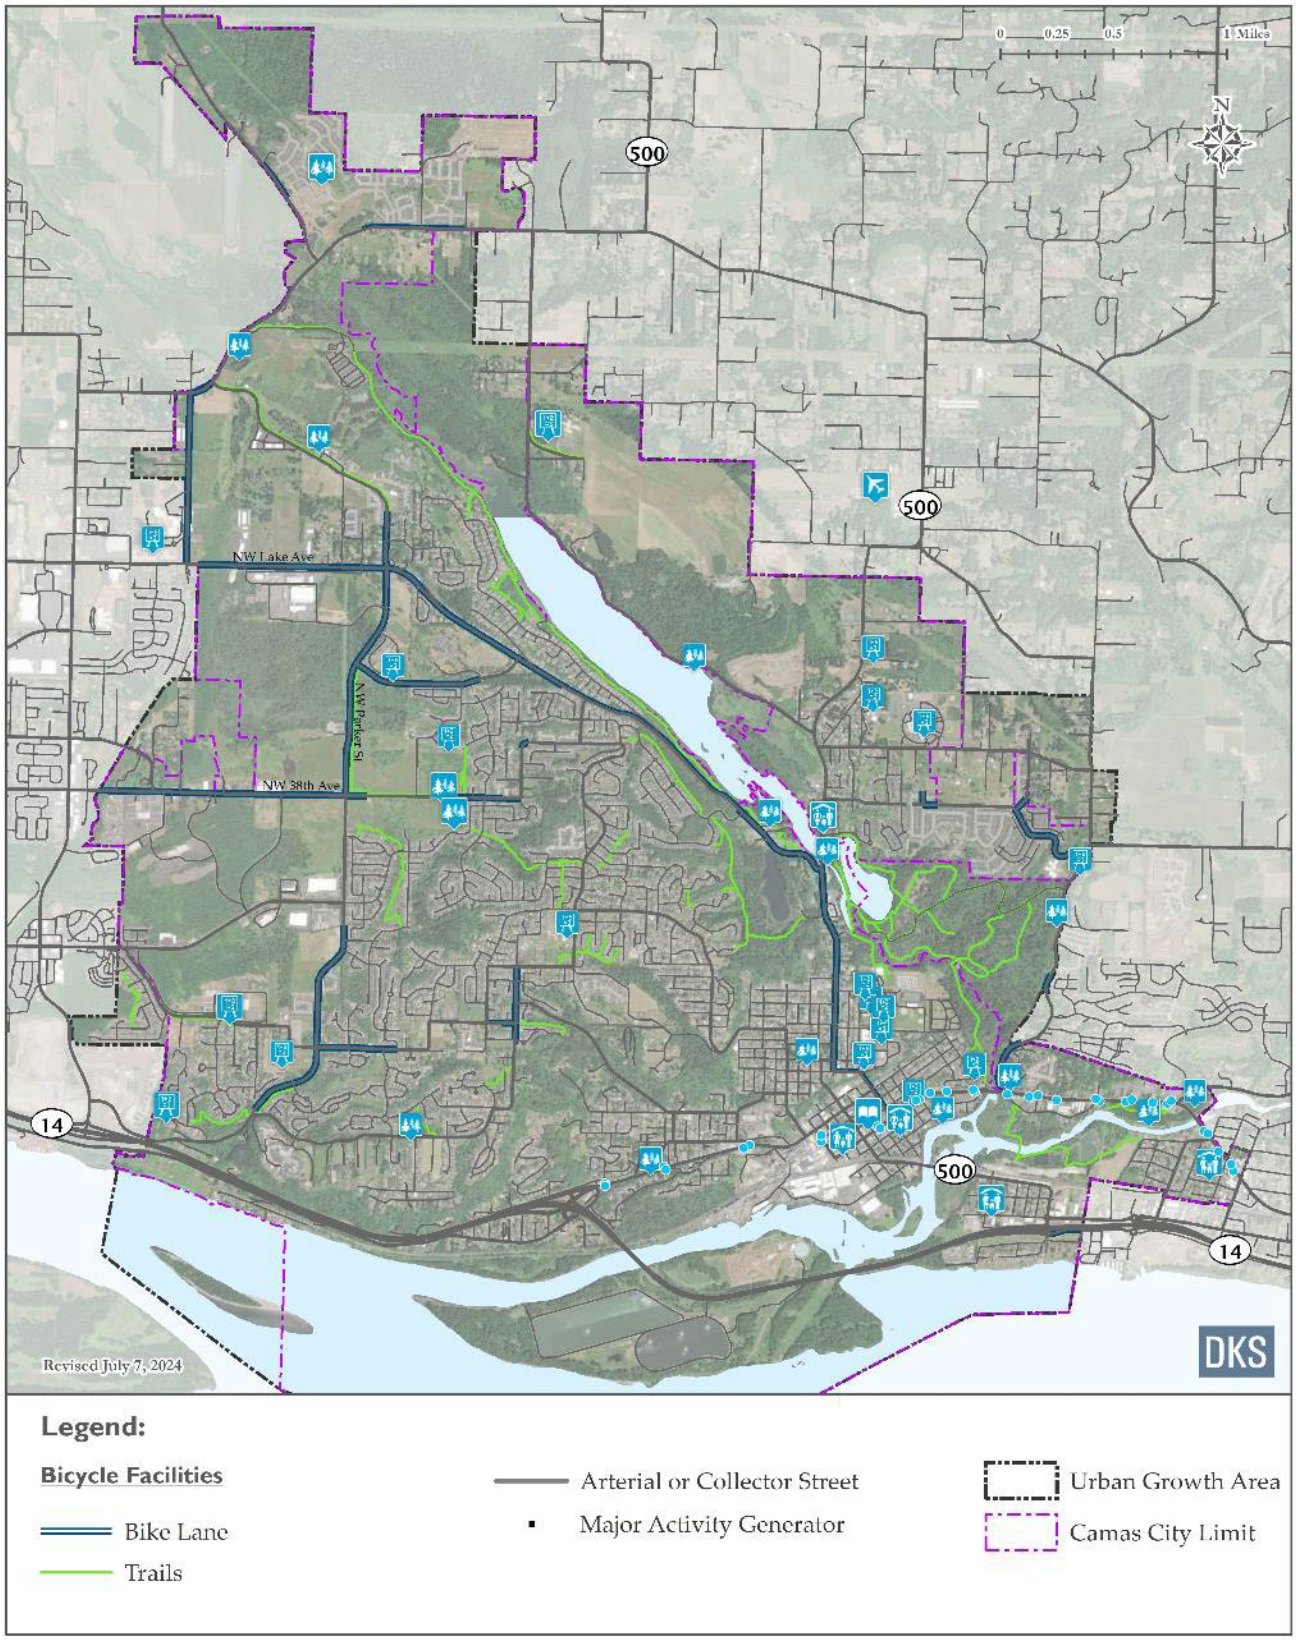
QUALITATIVE PEDESTRIAN ASSESSMENT

A qualitative pedestrian network assessment of streets in Camas is shown in Figure 11. This assessment shows the extent to which the walking network on collector and arterial streets provides a level of comfort and safety for users (see Technical Memorandum #2: Existing Conditions Analysis and Technical Memorandum #3: Future Baseline Conditions Analysis in the Appendix for more information).

About 30 percent of the collector and arterial street miles' in Camas rate "good" or "excellent" for pedestrians. However, over 35 percent of the collector and arterial street miles' rate poorly. Most of the street miles rated "poor" are located in high growth areas (i.e., household or employment growth). The pedestrian network in these areas is largely unimproved due to the rural nature of the surrounding land use but will likely be improved as future development occurs. Overall, the pedestrian network rates relatively high near downtown, and poor towards the edges of the city.

FIGURE 11: PEDESTRIAN NETWORK ASSESSMENT

BIKING NETWORK



Bicycling is important for both transportation and recreation in the Camas planning area. This includes people who bike to work and school, recreation, or running errands. Approximately one percent of commuters in the city bicycle to work[6]. Riding bicycles also plays a key role in the transportation system's ability to support healthy and active lifestyles and provide a viable alternative to the automobile. While walking tends to be a competitive choice for trips under half a mile, bicycling tends to be suited for longer trips of three miles or longer. Continuous bicycle connections between all activity generators and arterial/collector roadways are desirable to allow for safe and attractive non-motorized travel options.

The bicycle network in the City's planning area, shown in Figure 20, is composed of bike lanes, roadway shoulders, shared roadways, and shared-use paths.

- **Bike lanes** are portions of the roadway designated specifically for bicycle travel via a striped lane and pavement stencils. Standard width for a bicycle lane is six feet. The minimum width of a bicycle lane against a curb or adjacent to a parking lane is five feet. A bicycle lane may be as narrow as four feet, but only in very constrained situations. Bike lanes are most appropriate on arterials and collectors, where high traffic volumes and speeds warrant greater separation of the travel modes. Significant segments of continuous bicycle lanes exist along portions of NW Lake Road, NW 38th Avenue, NW Parker Street, NW Friberg-Strunk Street, and SR 500.
- **Shoulder bikeways** are paved with striped shoulders wide enough for bicycle travel. A six-foot paved shoulder is desired to adequately provide for bicyclists, with a four-foot minimum width in constrained areas. Roadways with shoulders less than four feet are considered shared roadways. Some shoulder bikeways are signed to alert motorists to expect bicycle travel along the roadway.
- **Shared roadways** include those on which bicyclists and motorists share the same travel lane. The most suitable roadways for shared bicycle use are those with low speeds (25 mph or less) and low traffic volumes (3,000 vehicles of fewer per day). Shared roadways, often signed as bicycle routes, serve to provide continuity to other bicycle facilities (e.g., bicycle lanes) or can be designated as a preferred route through the community. Common practice is to sign a route with standard Manual on Uniform Traffic Control Devices (MUTCD) green bicycle route signs with directional arrows and/or pavement markings. Shared roadways can have signs that highlight a special route or provide directional information in bicycling minutes or distance. Most local roadways in the city are considered shared roadways, but do not have signs or pavement markings, although some are planned to be improved in this TSP.
- **Shared-use paths** provide off-street travel for bicyclists and pedestrians, and are wider than an average sidewalk (e.g., 10 – 14 feet). Shared-use paths are typically paved (asphalt or concrete) but may also consist of an unpaved smooth surface as long as it meets Americans with Disabilities Act (ADA) standards. Paved shared-use paths exist along portions of NW Parker Street, NW 18th Avenue, Lacamas Lake, Washougal River, and scattered throughout the residential neighborhoods.

[6] US Census Bureau, 2012-2016 American Community Survey

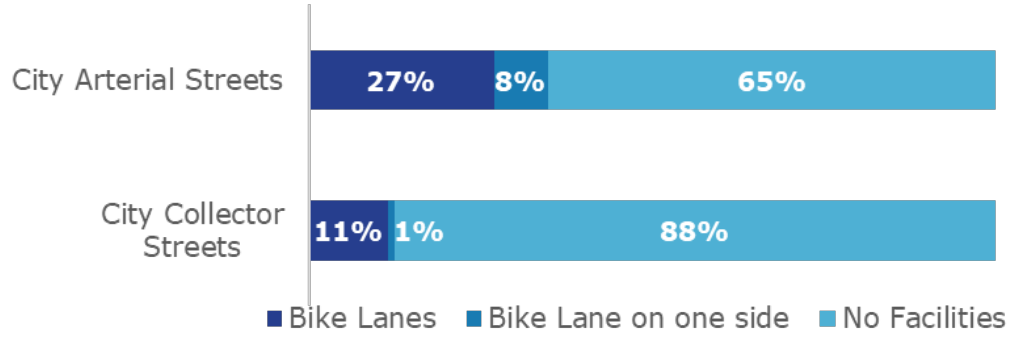


FIGURE 12: BICYCLE FACILITIES

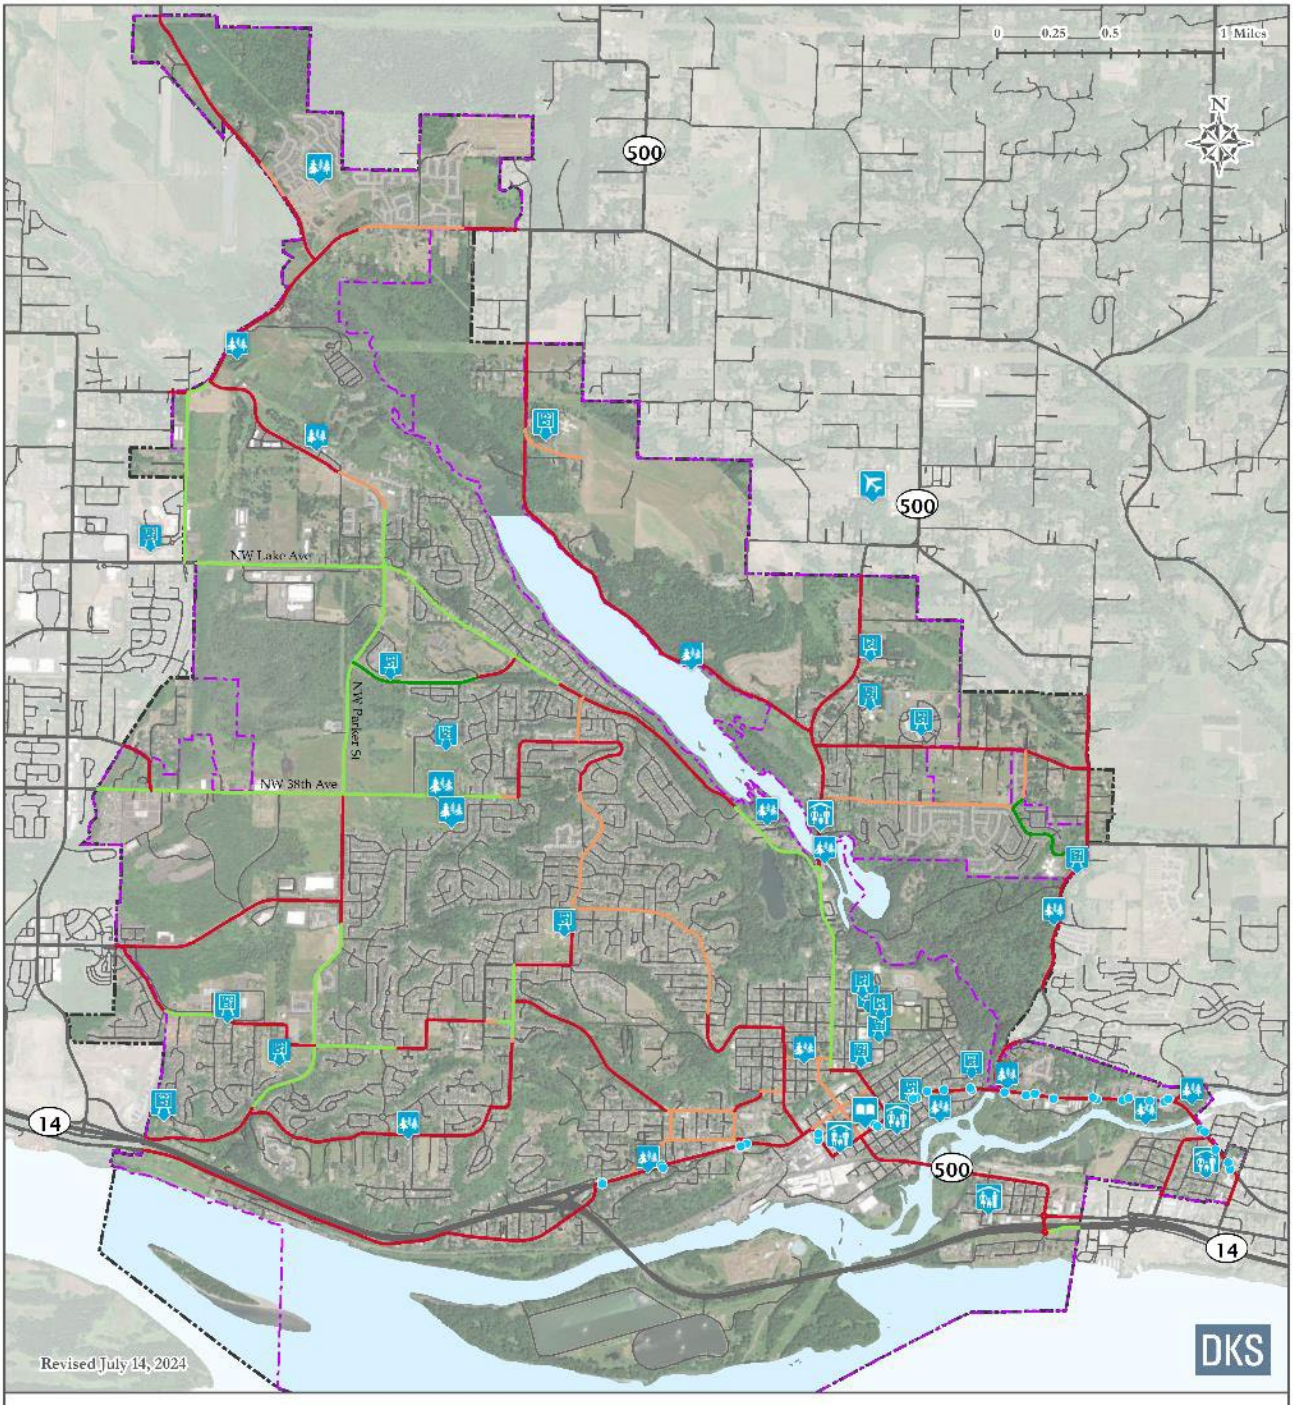
BICYCLE FACILITY GAPS

Figure 13 shows that about 65 percent of City arterial street miles and 88 percent of City collector street miles lack bicycle facilities (bike lanes or shoulder bikeways). These gaps are more common along collector streets than arterial streets, at 89 and 73 percent of the street miles with no facilities on one or both sides, respectively. These numbers do not incorporate off-street shared-use paths that may run alongside some roadways.

FIGURE 13: STREET MILES WITH BIKE FACILITIES WITHIN CAMAS



QUALITATIVE BICYCLE ASSESSMENT

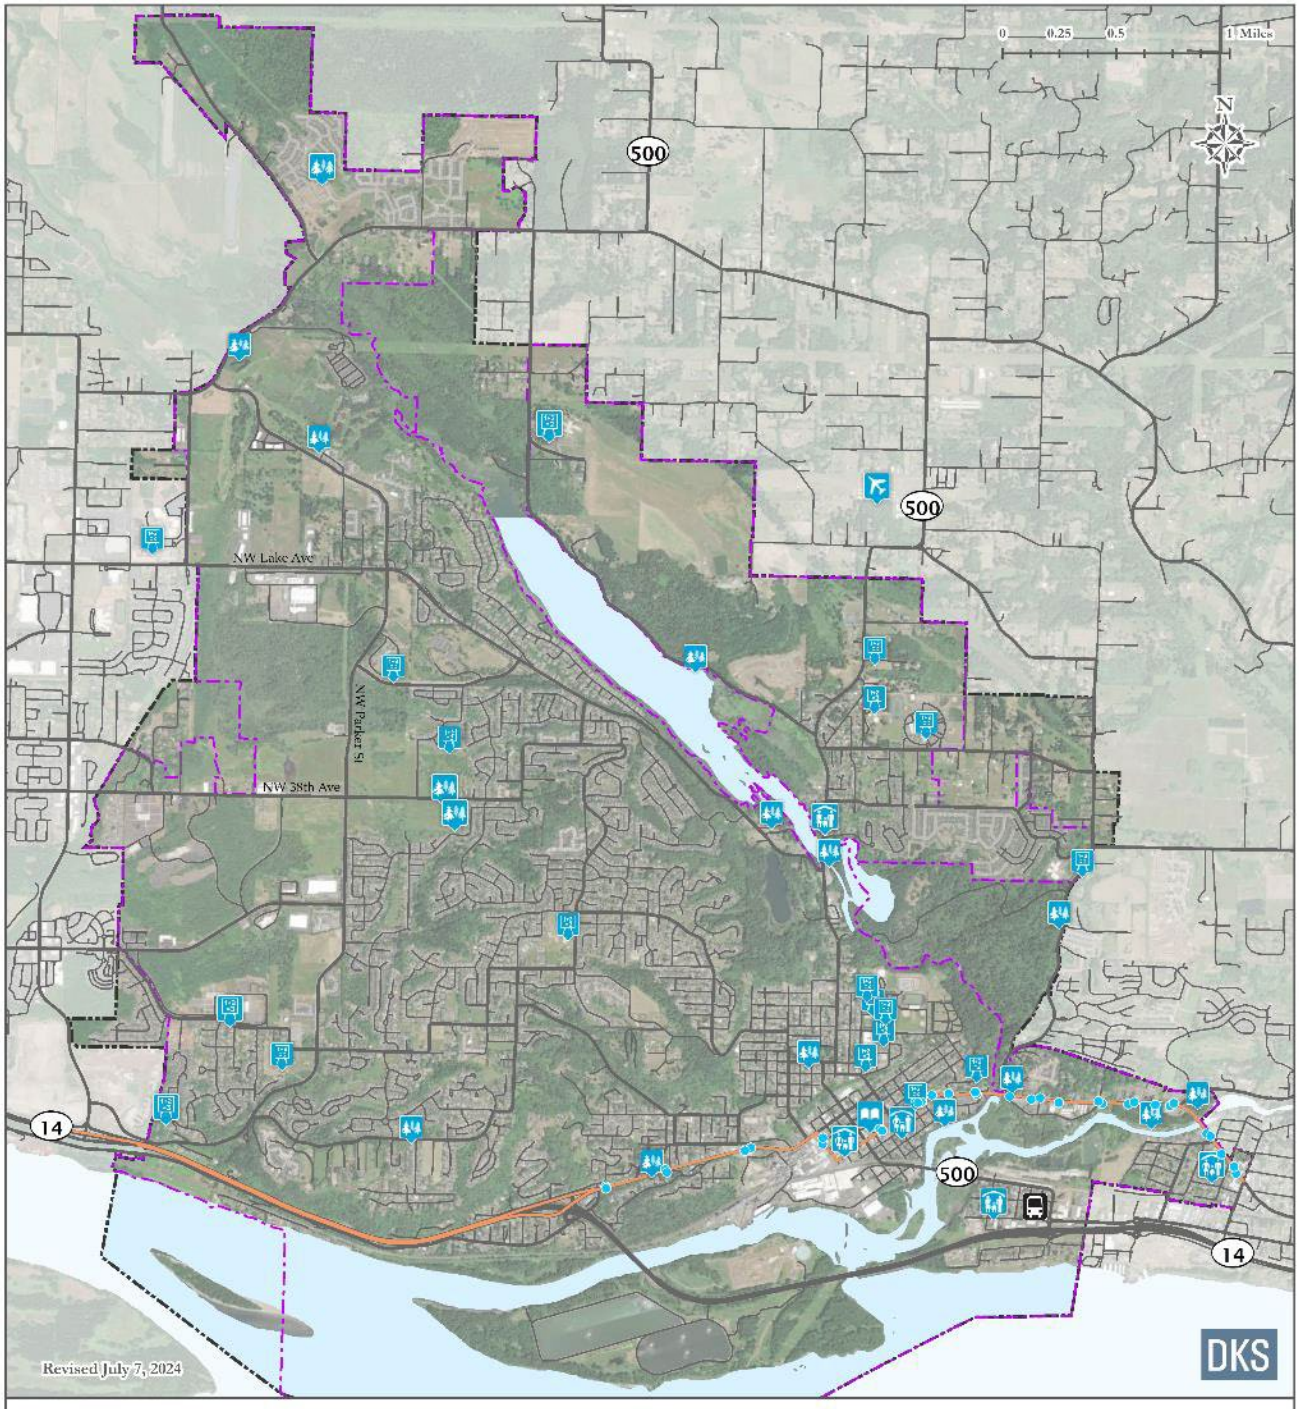
A qualitative bicycle network assessment of streets in Camas is shown in Figure 14. This assessment shows the extent to which the bicycle network on collector and arterial streets provides a level of comfort and safety for users (see Technical Memorandum #2: Existing Conditions Analysis and Technical Memorandum #3: Future Baseline Conditions Analysis in the Appendix for more information).

About 20 percent of the collector and arterial street miles' in Camas rate "good" or "excellent" for bicyclists. However, about 65 percent of the collector and arterial street miles' rate poorly for bicyclists. Overall, the bicycle network rates relatively high on the northwest side of the City and poor on the south and east side. The streets with the lowest ratings are the streets important for local and regional through travel (i.e., portions of NW 6th Avenue, NE 3rd Avenue, and SR 500), where most businesses and services are located. These streets rate low due to the relatively high motor vehicle traffic volumes and speeds and lack of separated bicycle facilities.

FIGURE 14: BICYCLE NETWORK ASSESSMENT

TRANSIT

C-TRAN provides transit service in Camas via one fixed bus route connecting the City with Vancouver and Washougal. Transit riders can transfer to other C-TRAN routes at the Fisher's Landing Transit Center in Vancouver. Figure 15 shows the route in Camas.



Bus stops in Camas are located along NW 6th Avenue near the SR 14 Ramps, NW Ivy Street, and NW Drake Street intersections, at the NE Adams Street / NE 5th Avenue, and along NE 3rd Avenue near the NE Franklin Street, NE Joy Street, NE 3rd Place, E. 1st Avenue, SE Crown Road, NE Summer Street, NE 3rd Loop, NE Shepherd Road, NE 2nd Avenue, NE Weir Street and NE Lechner Street intersections.

Each of the bus-stops are signed and the eastbound stop along NW 6th Avenue near the SR 14 Ramps provides a bus pull-out. The bus stop along NE 3rd Avenue at NE Franklin Street (near Camas City Hall) provides a bench and shelter. All remaining bus stops have no amenities. Most transit users in the city are more than a half-mile from a bus stop. A park-and-ride facility is located along SE Tampa Street, near the SE 8th Avenue / SE Union Street intersection. However, the park-and-ride is currently served by only the Connector service and not a fixed route.

The Camas/Washougal C-TRAN route travels through Camas eastbound and westbound approximately every half-hour to hour between 6:00 AM and 9:30 PM on weekdays. Service on weekends is provided approximatively every hour between 8:00 AM and 9:30 PM.

Key destinations along this route include Forest Home Park, Georgia Pacific, downtown Camas, Camas Municipal Center, Safeway, Louis Bloch Park, Washougal River Greenway, Camas Police Department, and the Lacamas Center. C-TRAN buses are equipped with a lift to allow for wheelchair access and include bicycle racks.

FIGURE 15: TRANSIT SYSTEM

STREET NETWORK

Camas streets are well connected and generally follow a grid pattern in the downtown area and nearby neighborhoods. However, the streets in the newer neighborhoods outside of these areas are more disconnected, limited at times by the topography. The major transportation routes through Camas include SR 14, SR 500, as well as a few key City roadways. SR 14 runs east-west through Camas parallel to the Columbia River. SR 14 connects Camas to Vancouver, Interstate 5 and Interstate 205 to the west, and Camas to Washougal to the east. SR 500 runs north-south through the city connecting SR 14 south of downtown with NE Fourth Plain Boulevard north of the City. In the downtown area, it runs along portions of SE 6th Avenue, NE Dallas Street, NE 3rd Avenue and NE Garfield Street.

A few key city roadways that provide north-south access are NW Brady Road, NW Parker Street, Division Street, NW Fargo Street, NW Astor Street, NW Sierra Drive, and SE Crown Road. NW Brady Road and NW Parker Street provide a connection on the west side of Camas, Division Street, NW Fargo Street, NW Astor Street and NW Sierra Drive provide connections through the central neighborhoods of Camas, and SE Crown Road provides a connection on the east side of Camas. Key east-west city roadways include NW 6th Avenue, NE 3rd Avenue, NW Pacific Rim Boulevard, NW 38th Avenue, NW Lake Road, and NE Goodwin Road, with NW 6th Avenue and NE 3rd Avenue towards the south end of the city, NW Pacific Rim Boulevard and NW 38th Avenue centered in the middle, and NW Lake Road and NE Goodwin Road in the north end of the city.

STREET NETWORK PERFORMANCE ASSESSMENT

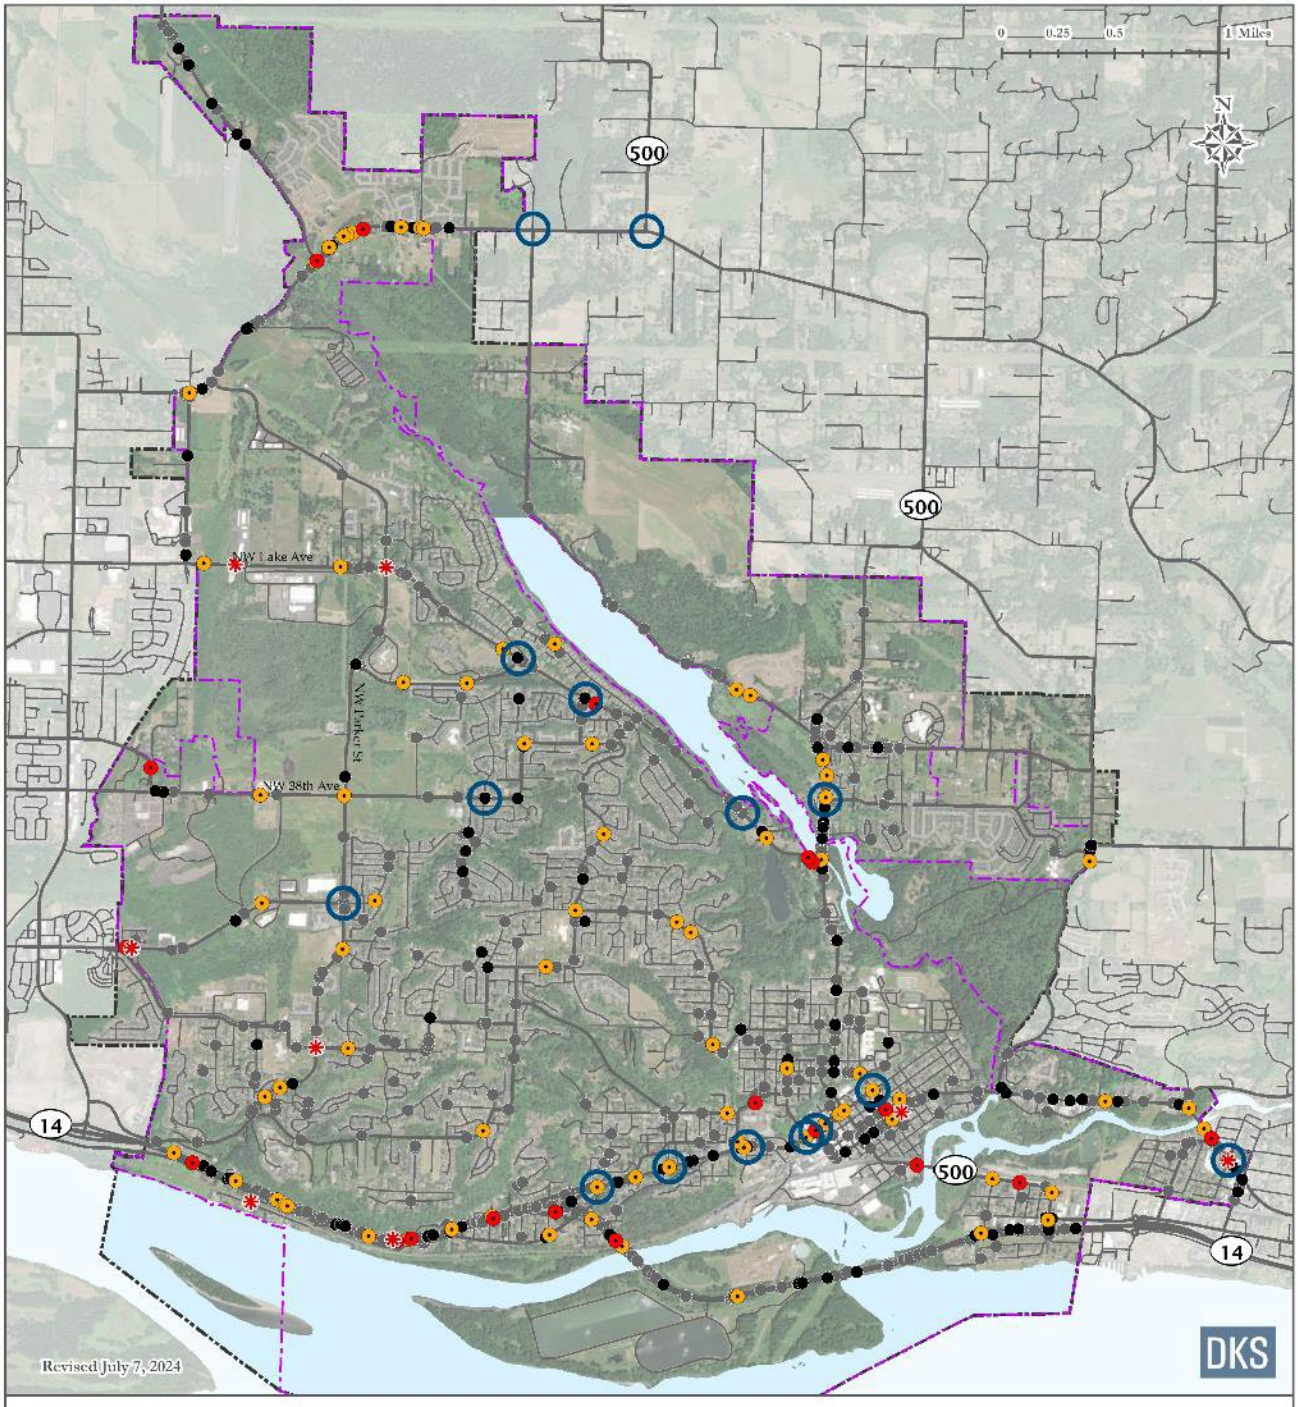
Congestion and safety for all modes was reviewed at intersections and streets in the City's planning area. This assessment shows how safe and efficient the street system is and provides information to identify needed improvements for the TSP.

Street Network Congestion

This assessment identified locations on the roadway network that operate above thresholds for congestion under current and future conditions. These are locations where motorists experience significant delay. These thresholds, identified in Chapter 4, provide a metric for assessing the impacts of new development on the transportation system and for identifying where capacity improvements may be needed. They are the basis for requiring improvements needed to sustain the transportation system as growth and development occur.

Figure 16 displays the results of the congestion analysis. The displayed conditions assume only transportation improvements to the current street network with secured funding through 2040. As shown, several intersections are expected to be congested by 2040 during the weekday p.m. peak hour. This includes several intersections along NW-NE 6th Avenue, which is expected to see a high amount of growth through 2040 as a primary connection between Downtown Camas and SR 14, and several intersections along NE 28th Street and NW Lake Road at the north end of the planning area where high growth is also expected through 2040.

Street Network Safety



This assessment monitors the safety of travel in the planning area. It was used to track collision data over a 5-year period to provide trends related to total vehicle, pedestrian, and bicyclist collisions, fatal and severe injury collisions and total fatalities and severe injuries. Figure 16 shows data for the 5-year period between 2013 and 2018, with 880 collisions occurring in the City's planning area. Of these collisions, 14 involved a pedestrian and 12 involved a bicyclist.

The pedestrian collisions occurred most frequently downtown (five crashes involving a pedestrian), and along NE 3rd Avenue between NE 4th Street and NE Weir Street (two crashes involving a pedestrian). Pedestrians sustained severe injuries in three crashes, one of which resulted in a death: at the NE 3rd Avenue / NE 4th Street, NE 3rd Avenue / NE Weir Street, and the SR 500 / NE 4th Avenue intersections. Moderate injuries to pedestrians were sustained in six of the crashes.

The majority of bicycle collisions occurred at intersections, with one at a traffic signal and six at stop-controlled locations. A cyclist sustained moderate injuries in six of the crashes. The bicycle-involved collisions occurred most often along NE 3rd Avenue between NE Sumner Court and NE Weir Street (three collisions involving a bicycle) and along SR 500 (NE Everett Street) between NE 38th Avenue and NW Lake Road (two collisions involving a bicycle).

In addition, a safety analysis was evaluated for streets in the planning area. This included an analysis of collision rates at intersections. This analysis identified the NE Ingle Road intersection with NE 28th Street as having a high collision rate, although this intersection has since been improved to include a traffic signal.

FIGURE 16: STREET NETWORK CONGESTION AND SAFETY

CHAPTER 4.

Facility and Performance Standards

Camas applies transportation standards and regulations to the construction of new transportation facilities and to the operation of all facilities to ensure they are designed appropriately, and the system functions as intended. These standards enable consistent future actions that reflect the goals and policies of the City.

STREET JURISDICTION

Roadway ownership and maintenance responsibilities depend on the roadway authority. In addition, required design and operation standards for each street and intersection vary by agency.

WSDOT, the Federal Government, and RTC also classify roadways in Camas. Within Camas, SR 14 is classified by WSDOT as a Highway of Statewide Significance (HSS)[7], and SR 500 is classified as a non-HSS facility.

The federal government also has a functional classification system that is used to determine federal aid funding eligibility. Roadways federally designated as a major collector, minor arterial, principal arterial, or interstate are eligible for federal aid. Camas' functional classification system uses the similar designations as the federal government (e.g., a city designated arterial is intended to be the same as a federally designated minor arterial and a city designated collector is intended to be the same as a federally designated major collector). Future updates to the federal functional classification system should incorporate the designations reflected in the Transportation Plan along City roadways.

RTC has identified several streets in Camas as part of the regional transportation system in the Regional Transportation Plan for Clark County, including SR 14, SR 500, Lake Road - SE 1st Street, Parker Street, Pacific Rim Boulevard - 34th Street, NW 38th Avenue – SE 20th Street, NW 6th Avenue, and NE 3rd Avenue.

NETWORK CLASSIFICATIONS AND AREA DESIGNATIONS

All streets in the TSP planning area include classifications and area designations to help support the movement of all people and help to ensure the transportation system is comfortable, convenient, safe and well connected for all users. These include functional classifications for vehicle travel and designations for mixed-use, residential, commercial, and industrial areas. The classifications and area designations combine to determine the minimum acceptable facility type and design requirements of different elements for each mode.

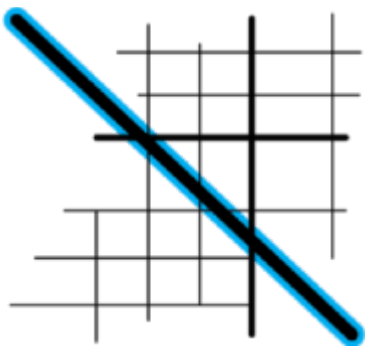
FIGURE 17: NETWORK CLASSIFICATIONS AND ROUTE DESIGNATIONS

STREET FUNCTIONAL CLASSIFICATIONS



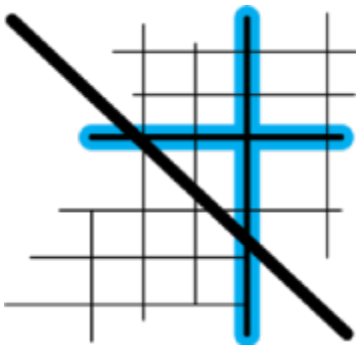
Functional classification for streets helps support the movement of vehicles and bicycles and is an important tool for managing the roadway network. The street functional classification system recognizes that individual streets do not act independently of one another but instead form a network that serves travel needs on a regional, citywide, neighborhood, and local level. By designating the management and design requirements for each roadway classification, this hierarchal system supports a network of streets that perform as desired.

The street functional classification system for roadways in the City's planning area is described below. From highest to lowest intended use, the classifications are Freeway, Arterial, Collector, Neighborhood Route, and Local Streets. For a street cross-section, the functional classification determines the minimum number of vehicle travel way lanes, bike facility, and on-street parking requirements.

Freeway

Freeways serve as the main travel routes through the City and serve the highest volume of motor vehicle traffic. Freeways are generally for longer motor vehicle trips with limited local access. SR 14 is the only freeway in Camas.

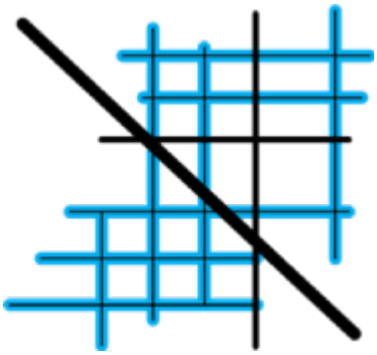
Arterial Street



Arterial Streets are primarily intended to serve regional and citywide traffic movement. Arterials provide the primary connection to other Arterial Streets or Collector Streets. They are typically spaced about one mile apart to assure accessibility and reduce the occurrence of through traffic using collectors or local streets in lieu of a well-placed arterial street. Where an Arterial Street intersects with a Local Street,

access management and/or turn restrictions may be employed to reduce traffic delay, while not adversely impacting safety and convenience for other modes. They often serve high volumes of traffic (>10,000 daily vehicles) over long distances and minimize direct access to adjacent land to support the safe and efficient movement of people and goods.

Collector Street



Collector Streets are intended to distribute traffic from Arterials Streets to streets of the same or lower classification. They provide both access and circulation within and between residential and non-residential areas. Collectors differ from arterials in that they provide more of a citywide circulation function, do not require as much access control compared to arterials, and they serve residential neighborhoods, distributing trips from the neighborhood and local street system.

Collectors generally support traffic volumes typically ranging up to 10,000 daily vehicles and speeds often managed between 25 mph and 35 mph.

Local Street

All streets not classified as Arterial or Collector are classified as Local streets. Local streets prioritize providing immediate access to adjacent land and often function as through routes for pedestrians and bicyclists. These streets should be designed to enhance the livability of neighborhoods and can generally accommodate up to 1,500 vehicles per day. A well-connected grid system of relatively short blocks can minimize excessive volumes of motor vehicles, limit out-of-direction travel, and encourage walking and biking. They should be provided at a maximum spacing of 600 feet in most cases. Speeds are not normally posted, with a statutory 25 mph speed limit in effect. Local streets are not intended to support long distance vehicular travel and are often designed to discourage through traffic without an origin or destination in the immediate area.

AREA DESIGNATIONS

To complement the street functional classifications, area designations for mixed-use, residential, commercial, and industrial areas are identified. The designations are used to determine how users of a roadway interact with the surrounding land use. Since the type and intensity of adjacent land uses and zoning directly influence the level of use by pedestrians, bicyclists and transit riders, the design of a street (including its intersections, sidewalks, and transit stops) should reflect its surroundings. The area designations balance street functional classification, adjacent land use, zoning designation and the competing travel needs by prioritizing various design elements.

Mixed-Use Area

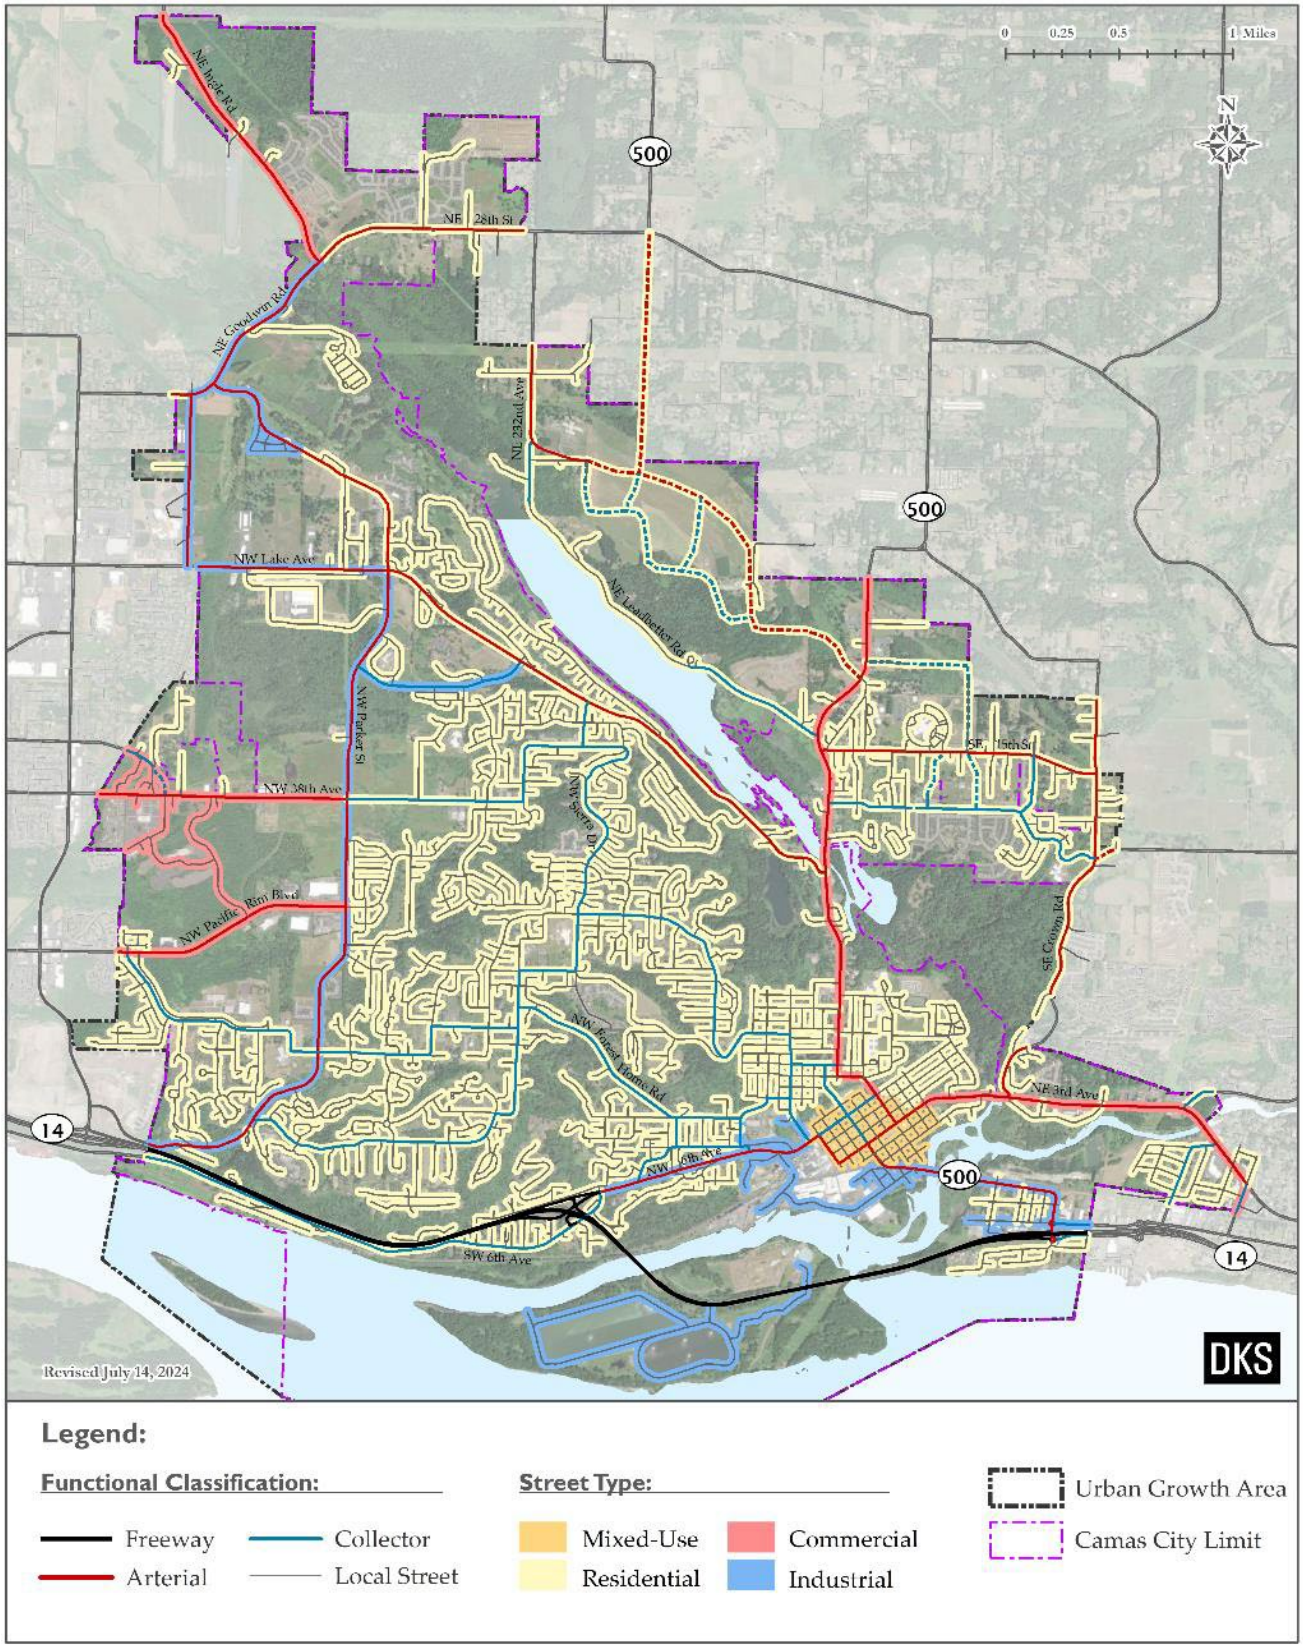
Mixed-use areas typically have a higher amount of pedestrian activity and are often on a transit route. These streets emphasize a variety of travel choices such as pedestrian, bicycle and transit use to complement the development along the street. Since mixed-use streets typically serve pedestrian oriented land uses, walking should receive the highest priority of all the travel modes. They should be designed with features such as wider sidewalks, pedestrian amenities, transit amenities, attractive landscaping, on-street parking, pedestrian crossing enhancements and bicycle lanes.

Residential Area

Residential areas consist mostly of households, although various small shops may be embedded within the neighborhood. These are areas that often connect to local parks, schools, and mixed-use areas. They should be designed to emphasize walking, while still accommodating the needs of bicyclists and motor vehicles. A high priority should be given to design elements such as traffic calming, landscape buffers, walkways/pathways/trails, on-street parking, and pedestrian safety enhancements.

Commercial Area

Commercial areas are primarily lined with retail and large employment complexes. These uses serve customers throughout the City and region and may not have a direct relationship with nearby residential neighborhoods. These areas are somewhat more auto oriented but should still accommodate pedestrians and bicyclists safely and comfortably. Design features should include landscaped medians or a two-way left turn lane, sidewalks and bike lanes, pedestrian crossing enhancements and a buffer between the roadway and the sidewalk. On-street parking should be discouraged.



Industrial Area

Industrial areas accommodate a high volume of large vehicles such as trucks, trailers and other delivery vehicles. Pedestrians and bicyclists may be less frequent in these areas but should still be accommodated safely and comfortably. Roadway widths are typically wider to accommodate larger vehicles. On-street parking should be discouraged.

STREET FUNCTIONAL CLASSIFICATION AND AREA DESIGNATION MAP

The functional classification and area designation map (Figure 18) shows the designated classification and area type for all roadways in the City's planning area, including new street extensions proposed as part of this plan (see Chapter 5). The functional classifications are determined based on the intended function they serve for motor vehicles within the planning area, and the area designations reflect how users of a roadway interact with the surrounding land use consistent with the definitions presented earlier in this chapter.

FIGURE 18: STREET FUNCTIONAL CLASSIFICATIONS AND AREA DESIGNATIONS

MULTIMODAL NETWORK DESIGN

The design of the streets in the City's planning area is based on the network classifications and area designation. All streets in the planning area are multimodal and include travel lanes and on-street parking for vehicles, sidewalks for pedestrians, and on-street or separated facilities for bicyclists. Accommodating these modes varies by the functional classification and area designations. For a typical street cross-section, the functional classification determines the minimum design requirements for the number of vehicle travel way lanes and on-street parking, and the minimum acceptable bike facility, and the area designation is used to determine the minimum acceptable design for pedestrian facilities, and the minimum travel lane and median/turn lane width. Together, these cross-section standards identify the design characteristics needed to meet the function and demand for each facility type for streets in the City's planning area. Since the actual design of a roadway can vary from segment to segment due to adjacent land uses and demands, this system allows standardization of key characteristics to provide consistency.

The following method shall be used to determine the design of new streets and the reconstruction or improvement of existing streets.

Use the following steps to determine the typical standards that apply to a roadway:

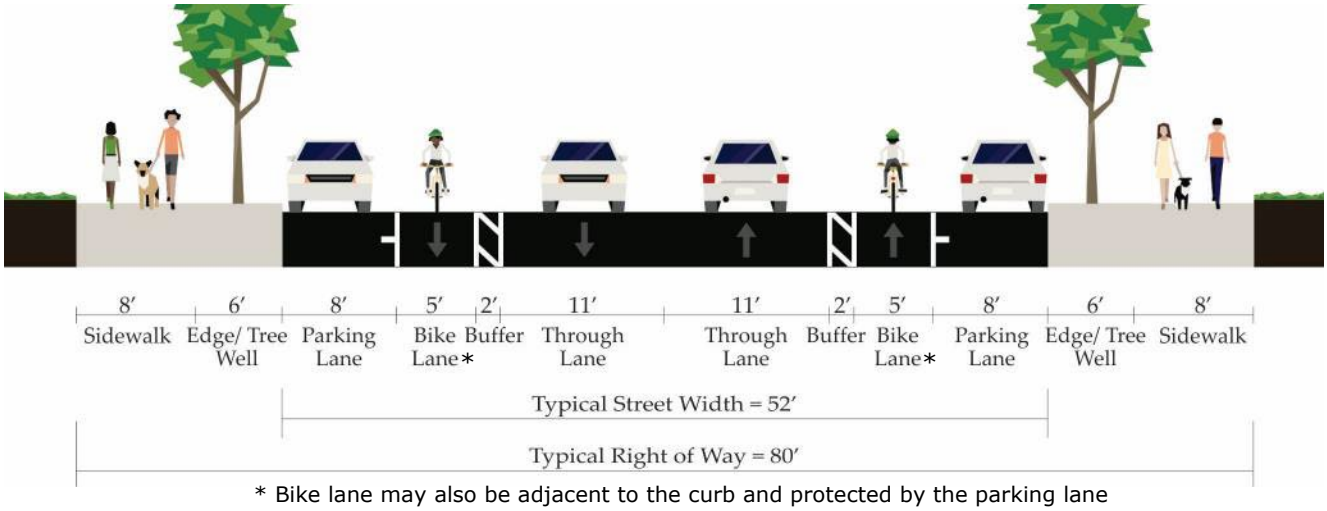
1. Confirm the functional classification and area designation that apply using Figure 18.
2. Use Table 2 to determine the typical cross-section requirements, based on the functional classification and area designation.
3. Combine the elements to determine the typical cross-section. Examples are provided in Figure 19 through Figure 30.

TABLE 2: TYPICAL STREET CROSS-SECTION REQUIREMENTS

		AREA DESIGNATION			
		MIXED-USE	**RESIDENTIAL**	**COMMERCIAL**	**INDUSTRIAL**
SIDEWALK WIDTH (ALL STREETS) *		14 ft.	12 ft.	11 ft.	11 ft.
PEDESTRIAN THROUGHWAY ZONE		*8 ft.*	*6 ft.*	*6 ft.*	*6 ft.*
FURNISHINGS/ LANDSCAPE ZONE		*4.5 ft.*	*4.5 ft.*	*4.5 ft.*	*4.5 ft.*
EDGE (CURB AND CLEARANCE)		*1.5 ft.*	*1.5 ft.*	*0.5 ft.*	*0.5 ft.*
BIKE FACILITY	Arterial Street	7 ft. Buffered Bike Lanes (includes 2 ft. buffer) **			
	Collector Street	6 ft. Bike Lanes **			
	Local Street	Shared with Travel Lane			
ON-STREET PARKING WIDTH (ALL STREETS)		8 ft	8 ft	None	None
TYPICAL THROUGH LANES (ALL STREETS)		2	2	2 to 4 **	2 to 4 **
TRAVEL LANE WIDTH	Arterial Street	11 ft.	11 ft.	12 ft.	12 ft.
	Collector Street	11 ft.	11 ft.	11 ft.	11 ft.
	Local Street	10 ft.	10 ft.	11 ft.	11 ft.
MEDIAN/ TURN LANE WIDTH	Arterial Street	11 ft. left turn lane at intersections	11 ft. left turn lane at intersections	14 ft. median/ center turn lane	14 ft. center turn lane
	Collector Street	None	None	12 ft. left turn lane at intersections	12 ft. center turn lane
	Local Street	None	None	None	None
TYPICAL STREET WIDTH	Arterial Street	52 ft	52 ft	52 to 76 ft	52 to 76 ft
	Collector Street	50 ft	50 ft	46 ft	46 ft
	Local Street	36 ft	36 ft	22 ft	22 ft
TYPICAL RIGHT OF WAY	Arterial Street	80 ft.	76 ft.	74 to 98 ft.	74 to 98 ft.
	Collector Street	78 ft.	74 ft.	68 ft.	68 ft.
	Local Street	64 ft.	60 ft.	44 ft.	44 ft.

Notes: Flexibility in street sections may be allowed for development when deemed to provide overall additional public enhancements, as determined by the City Engineer or City Engineer's designee.

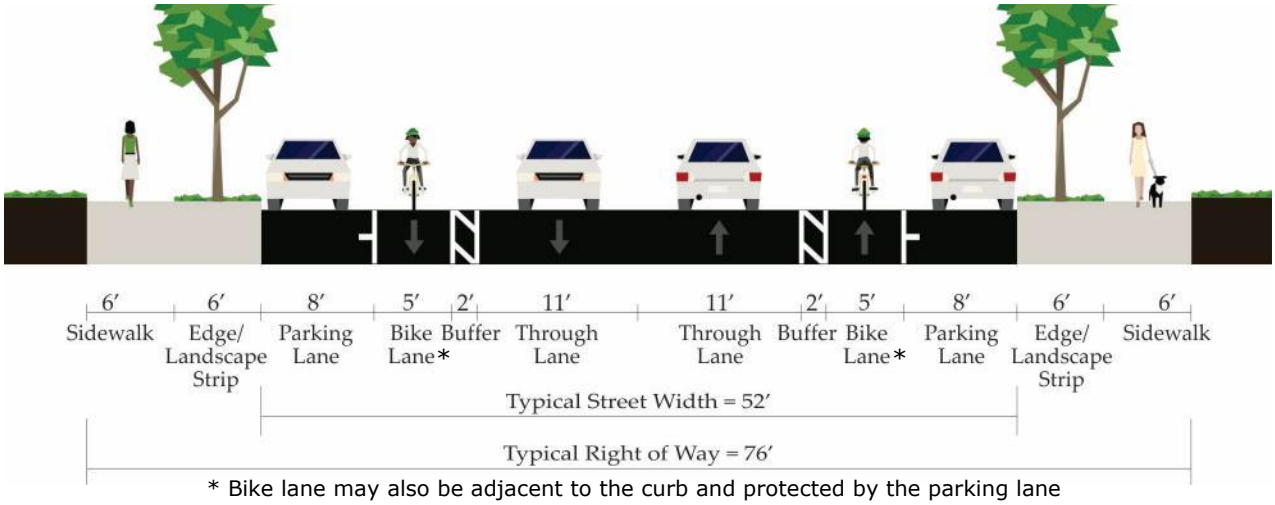
* Sidewalk may meander and include varying materials and/or color, and the landscape zone may need to be increased based on the types of trees that are to be installed.



.** Bike lane may also be adjacent to the curb and protected by the parking lane

*** Up to four lanes on arterial streets only in commercial and industrial areas.

TYPICAL STREET CROSS-SECTIONS



As detailed earlier in this chapter, the functional classification determines the minimum design requirements for the number of vehicle travel way lanes and on-street parking, and the minimum acceptable bike facility, and the area designation is used to determine the minimum acceptable design for pedestrian facilities, and the minimum travel lane and median/turn lane width. Together, these standards determine the typical cross-section for streets in the City's planning area. Several typical cross-sections examples have been highlighted below in Figure 19 through Figure 28.

FIGURE 19: TYPICAL CROSS-SECTION FOR MIXED-USE ARTERIAL STREET

* Bike lane may also be adjacent to the curb and protected by the parking lane

FIGURE 20: TYPICAL CROSS-SECTION FOR RESIDENTIAL ARTERIAL STREET

* Bike lane may also be adjacent to the curb and protected by the parking lane

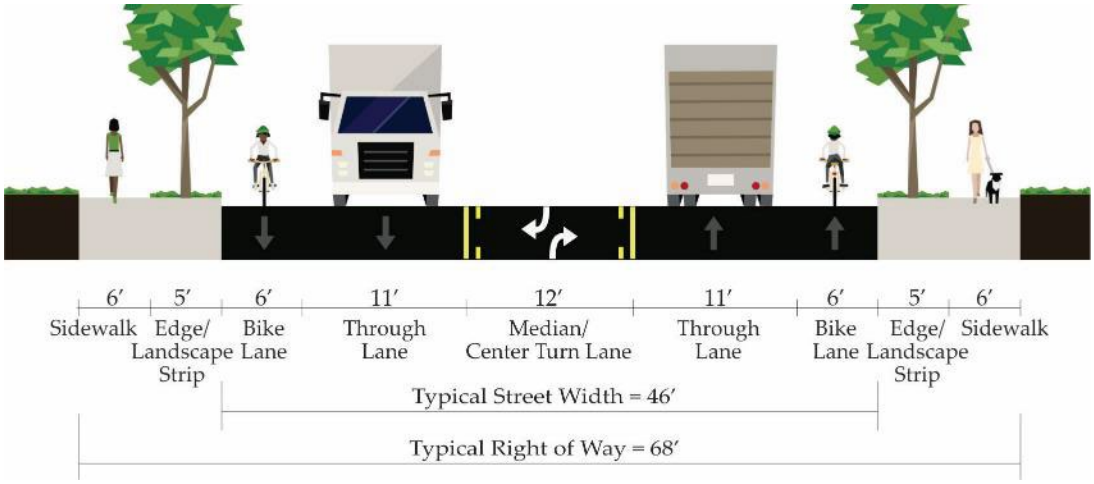

FIGURE 25: TYPICAL CROSS-SECTION FOR MIXED-USE LOCAL STREET

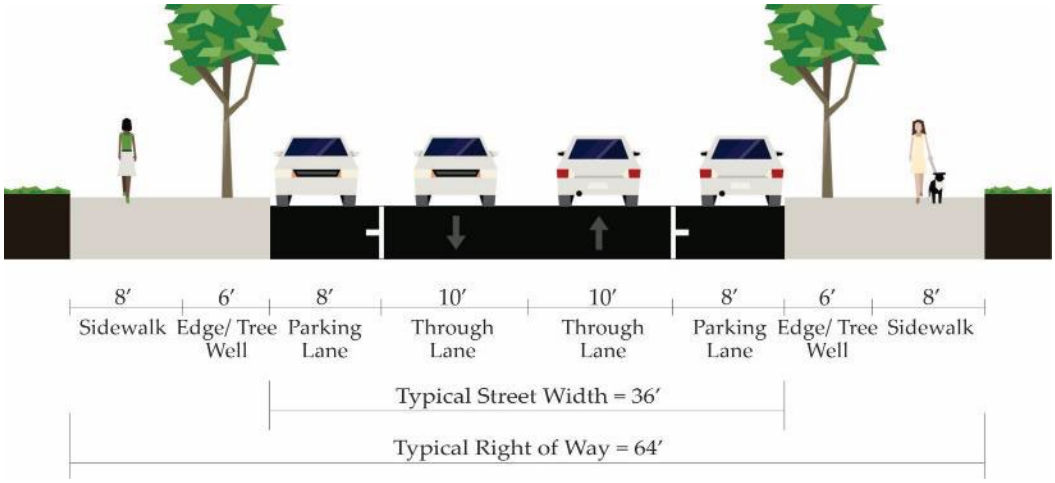

FIGURE 26: TYPICAL CROSS-SECTION FOR RESIDENTIAL LOCAL STREET

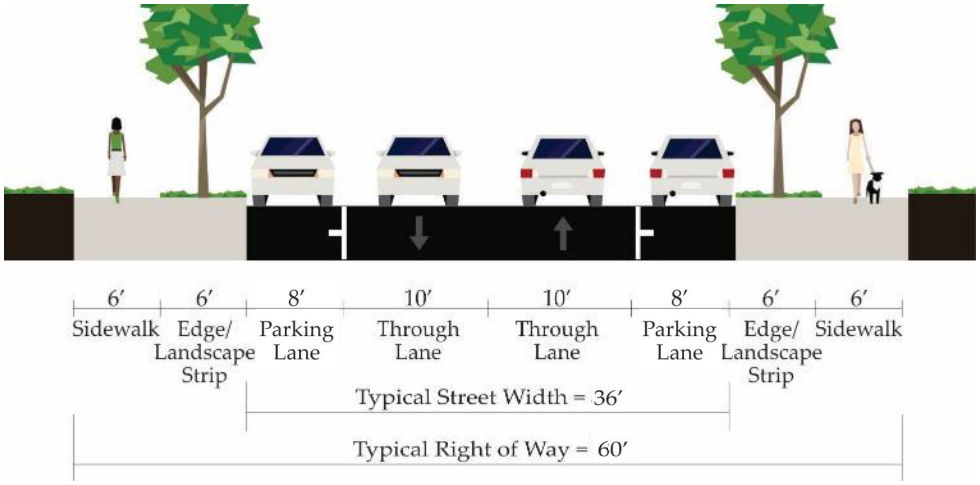

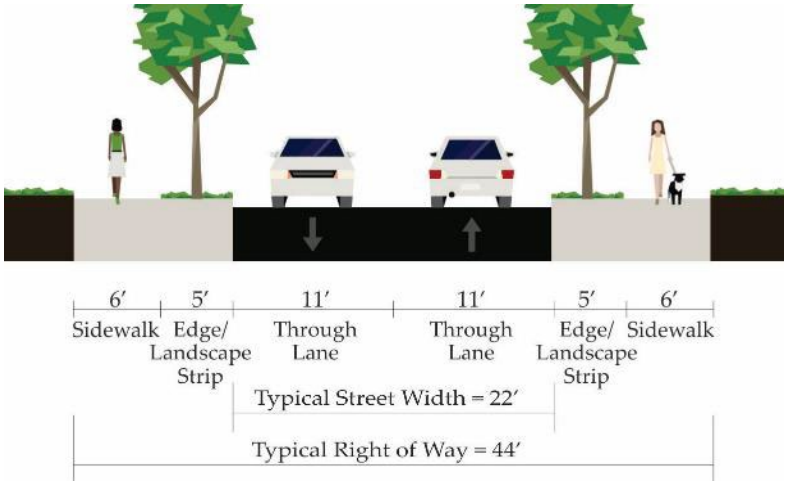

FIGURE 27: TYPICAL CROSS-SECTION FOR COMMERCIAL OR INDUSTRIAL LOCAL STREET

CONSTRAINED STREET CROSS-SECTIONS

The typical designs are intended to be implemented in newly developing or redeveloping areas of the City's planning area, where constrained conditions do not limit the ability to construct the typical cross-section. A variety of physical and natural constraints may prevent adherence to the multimodal network design requirements in this chapter. Typical design constraints include:

- Infill sites
- Innovative designs (e.g., roundabouts)
- Reallocation of right-of-way between modes (e.g., narrow travel lanes to accommodate wider bike lanes)
- Severe constraints presented by topography, environmental, or other resources present
- Existing developments and/or buildings that make it extremely difficult or impossible to meet the standards

A deviation to the street standards may be requested from the City Engineer or City Engineer's designee with justification of constraints to consider a constrained cross-section or other adjustments. The minimum acceptable cross-section configuration is shown in Table 3.

TABLE 3: CONSTRAINED ACCEPTABLE STREET CROSS-SECTION

	ARTERIAL STREET	COLLECTOR STREET	LOCAL STREET
SIDEWALK WIDTH (ALL AREA DESIGNATIONS)	10.5 ft.	9.5 ft.	9.5 ft.
PEDESTRIAN THROUGHWAY ZONE	*6 ft.*	*5 ft.*	*5 ft.*
FURNISHINGS/ LANDSCAPE ZONE	*4 ft.*	*4 ft.*	*4 ft.*
EDGE (CURB AND CLEARANCE)	*0.5 ft.*	*0.5 ft.*	*0.5 ft.*
BIKE FACILITY (ALL AREA DESIGNATIONS)	6 ft. Bike Lanes	5 ft. Bike Lanes; or Bikeway on Adjacent Corridor	Shared with Travel Lane
ON-STREET PARKING WIDTH (ALL AREA DESIGNATIONS)	None	None	None
TYPICAL THROUGH LANES (ALL AREA DESIGNATIONS)	2	2	2
TRAVEL LANE WIDTH (ALL AREA DESIGNATIONS)	11 ft.	10 ft.	10 ft.
MEDIAN/ TURN LANE WIDTH (ALL AREA DESIGNATIONS)	As Needed	As Needed	None

SIDEWALKS

Sidewalks provide for pedestrian movement and access, enhance connectivity, and promote walking. The requirements for pedestrian facilities in the City's planning area promote superior sidewalk design and encourage walking by making it more attractive. The area designations determine pedestrian facility design treatments along streets, including the width of the throughway for pedestrians, and the buffer between the vehicle travel way.

The sidewalk encompasses three zones (as shown in Figure 28), including the frontage, pedestrian throughway, and furnishings/ landscape. The minimum configuration for each of these zones is provided in Table 2. Wider widths may be considered as conditions warrant. For example, if a tree requires a wider area, the width of the landscape zone may be increased.

FIGURE 28: SIDEWALK ZONES

- The **frontage zone** describes the section where a pedestrian interacts with the adjacent buildings or private property and includes entryways and outdoor seating. This zone is typically between 1 and 3 feet wide in mixed-use areas (i.e., to accommodate outdoor seating in commercial areas or building access in residential areas) and ½ foot in other areas, and it may include a concrete or natural surface depending on the adjacent land use. The adjoining development may elect to expand this zone with additional space provided outside of and adjacent to the street right-of-way.

- The **pedestrian throughway zone** is the accessible zone in which pedestrians travel. It includes a minimum eight-foot-wide clear throughway in mixed-use areas, and six-feet wide clear throughway along streets with a Residential, Commercial, or Industrial area designation.

- The **furnishings/ landscape zone** is the sidewalk section located between the pedestrian throughway and the curb, and includes street furnishings or landscaping (e.g., benches, lighting, bicycle parking, tree wells, and/or plantings). If adjacent to on-street parking, it should also include a clearance distance between any curbside parking and the street furnishing area or landscape strip (i.e., so vehicles parking, or opening doors do not interfere with street furnishings and/or landscaping). Streets located along a transit route should incorporate furnishings to support transit ridership, such as transit shelters and benches, into the furnishings/landscape strip. It should include a minimum width between 5 to 6 feet, depending on the area designation.

BICYCLE FACILITIES

Streets should be safe and comfortable for bicyclists of all ages and abilities to encourage ridership. Building high quality bicycle infrastructure can help the City work towards achieving improved safety and public health, reduced congestion, and more equitable access.

The typical bicycle facilities shown in Table 2 and Figure 19 through Figure 27**.** for each area designation are determined based on a street's design and motor vehicle traffic conditions (i.e., expected vehicle speeds and volumes). When bike facilities are routed along the lowest speed and volume streets (i.e., streets with a Local functional classification), shared streets are typical. When the bike facilities are routed on busier or faster streets (i.e., streets with an Arterial or Collector functional classification), on-street bike lanes, which may be buffered or protected from the vehicle travel way, are typical. These may be separated from the vehicle travel way by a painted buffer and include vertical or horizonal protection, like bollards, planter boxes, curbs, or parked cars. These facilities include buffered bike lanes, cycle tracks, or shared-use paths.

Table 2 and Figure 19 through Figure 27 show the minimum bicycle facilities for streets in the City's planning area. Regardless of the area designation, Arterial Streets require 7-foot buffered bike lanes (i.e., 5-foot bike lane with 2-foot buffer), Collector Streets require 6-foot bike lanes, while Local Street typically have no on-street bike facility (i.e., bikes share the travel way with vehicular traffic). The bike lane on Arterial and Collector streets may also be adjacent to the curb and protected by the parking lane.

In general, streets with motor vehicle volumes over 3,000 per day should include conventional bike lanes at a minimum. When daily motor vehicle volumes exceed 6,000, buffered or protected bike lanes are desired. In any case, if motor vehicle travel speeds exceed 35 miles per hour, buffered or protected bicycle facilities are desired. In general, facilities that are protected or separated from the vehicle travel way include a 12-foot two-way or 6-foot one-way cycle track, 12-foot shared use path, or 7-foot buffered bike lanes. Non-separated bike lanes should be a minimum of 6-feet wide, while shared streets should include shared lane markings, with vehicle speed and volume management.

SEPARATED PEDESTRIAN AND BICYCLE FACILITIES

Some pedestrian and bicycle facilities may be separated from the right-of-way of a street, and include pedestrian trails, pedestrian, and bicycle accessway paths, and shared use paths. These facilities serve a variety of recreational, and transportation needs for pedestrians and bicyclists.

PEDESTRIAN TRAIL

Pedestrian trails offer recreational opportunities for pedestrians and are typically located in parks or natural areas. They should include a minimum width of 6 feet and may include a hard or soft surface.

ACCESSWAY PATH

Accessways provide short path segments between disconnected streets or localized recreational walking and biking opportunities. To allow for both pedestrian and bicycle travel, the accessway path must be on public easements or rights-of-way and have minimum paved surface of 10 feet, with a 2-foot shoulder on each side, and 14 feet of right-of-way. For low use segments, an accessway can be as narrow as 8 feet wide, with a 2-foot shoulder on each side and a total right-of-way of 12 feet.

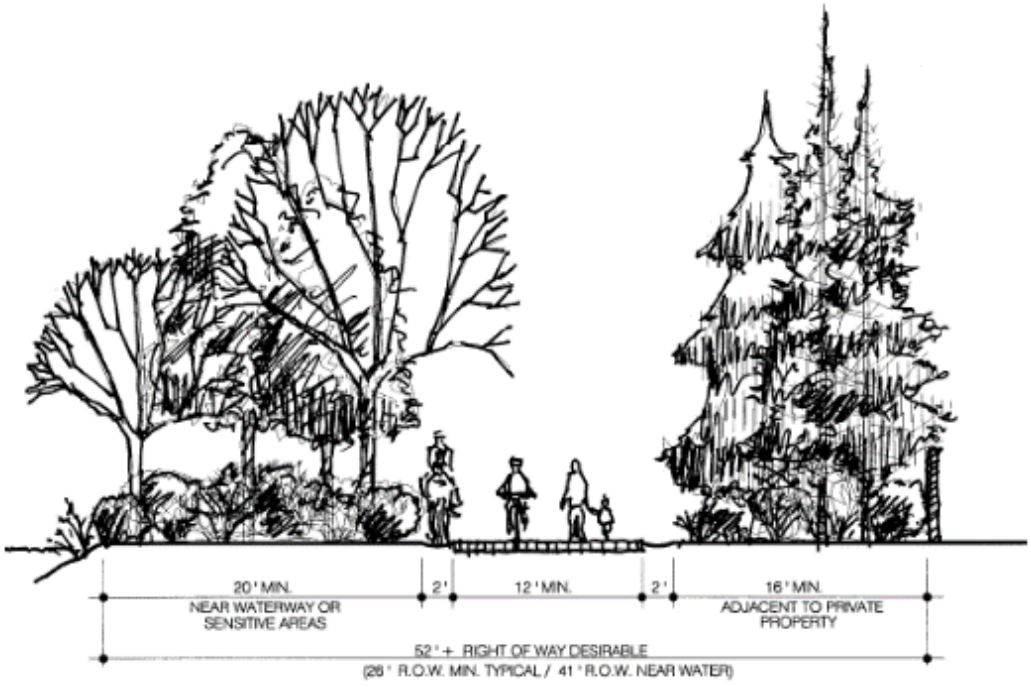
Narrower widths with a minimum paved surface of 5 feet, with a 2-foot shoulder on each side, and 9 feet of right-of-way are acceptable for an accessway serving pedestrian access only (i.e., no bicycles).

SHARED USE PATH

Shared-use paths provide longer distance off-roadway facilities for walking and biking. Depending on their location, they can serve both recreational and citywide circulation needs. Shared-use path designs vary in surface types and widths. Hard surfaces are generally better for bicycle travel. Widths need to provide ample space for both walking and biking and should be able to accommodate maintenance vehicles.

To allow for both pedestrian and bicycle travel a shared-use path should typically be at least 12 feet wide, with a 2-foot shoulder on each side, and 16 feet of right-of-way (see Figure 29). In areas with a low amount of walking or biking demand, the path can be 6 feet wide, with a 2-foot shoulder on each side and a total right-of-way of 10 feet (see Figure 30).

FIGURE 29: TYPICAL DESIGN FOR REGIONAL SHARED-USE PATHS



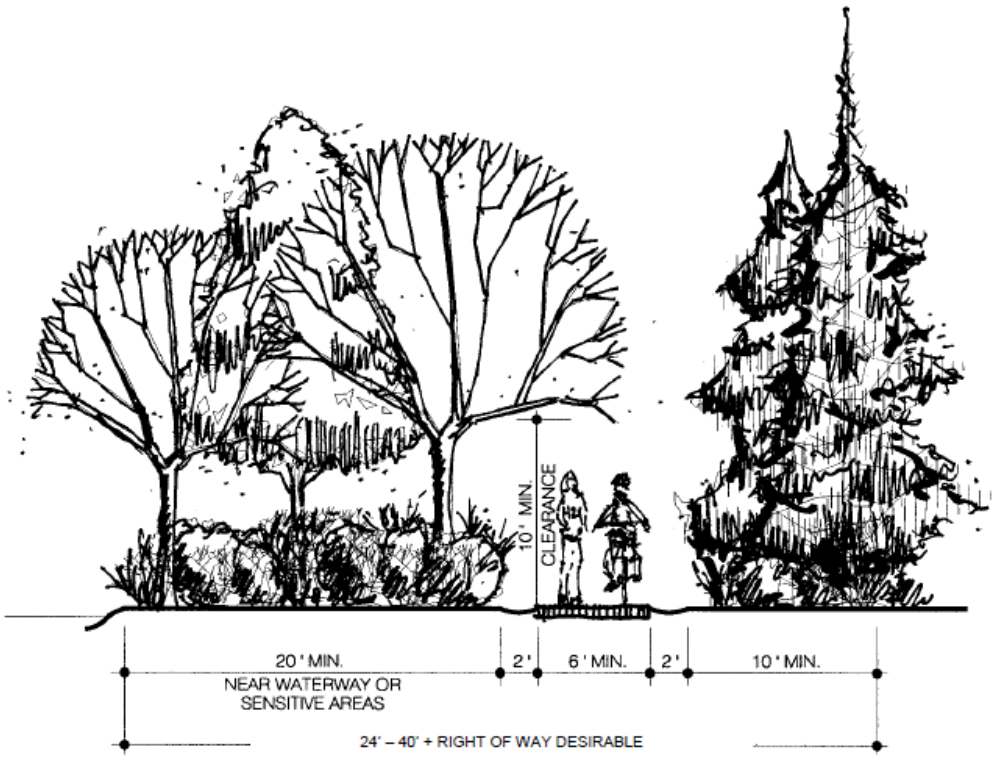


FIGURE 30: TYPICAL DESIGN FOR LOCAL SHARED-USE PATHS

PERFORMANCE STANDARDS

Performance standards are applied to the operation and design of transportation facilities to ensure that the network functions as intended. In Camas, this includes performance standards for vehicles and overall system connectivity.

VEHICLE CONGESTION THRESHOLDS

Mobility targets for streets and intersections in Camas provide a metric for assessing the impacts of new development on the existing transportation system and for identifying where capacity improvements may be needed. They are the basis for requiring improvements needed to sustain the transportation system as growth and development occur. Two methods used to gauge operational conditions for motor vehicles include volume-to-capacity (v/c) ratios and level of service (LOS).

- Volume-to-capacity (v/c) ratio: A v/c ratio is a decimal representation (between 0.00 and 1.00) of the proportion of capacity that is being used at a turn movement, approach leg, or intersection. It is determined by dividing the peak hour traffic volume by the hourly capacity of a given intersection or movement. A lower ratio indicates smooth operations and minimal delays. As the ratio approaches 1.00 (generally above 0.70), congestion noticeably increases, and performance is reduced. If the ratio is greater than 1.00, the turn movement, approach leg, or intersection is oversaturated and usually results in excessive queues and long delays.

- Level of service (LOS): LOS is a "report card" rating (A through F) based on the average delay experienced by vehicles at the intersection. LOS A, B, and C indicate conditions where traffic moves without significant delays over periods of peak hour travel demand. LOS D and E are progressively worse operating conditions. LOS F represents conditions where average vehicle delay is excessive and demand exceeds capacity, typically resulting in long queues and delays.

This TSP includes performance standards for motor vehicles. A LOS "D" and a v/c ratio not higher than 0.85 is the minimum performance standard during the highest one-hour period of the day for signalized, all-way stop and roundabout controlled intersections under City jurisdiction. These standards shall be applied to the intersection as a whole.

A LOS "E" and a v/c ratio not higher than 0.90 is the minimum performance standard during the highest one-hour period of the day for two-way stop and yield controlled intersections under City jurisdiction. These standards shall be applied to all intersection approaches serving more than 20 vehicles. Mobility standards do not apply to approaches at intersections serving 20 vehicles or fewer during the highest one-hour period of the day[8]. This mobility standard allows more flexibility in the tension between larger intersection and street designs that are sometimes needed to accommodate peak vehicle demands, and the desire to maintain smaller designs that encourage slower vehicle speeds and tend to be more accommodating to pedestrian and bicycle users.

Level of Service for Highways of Statewide Significance is set by the State. In Clark County, the standard is set as LOS "D" for urban areas, including SR 14. Level of Service for regional state highway facilities (not part of the HSS), including SR 500 in Camas, is set through the Southwest Washington Regional Transportation Council (RTC). The Southwest Washington RTC Board adopted LOS 'E' or better for non-HSS urban state highway facilities.

MULTIMODAL CONNECTIVITY

Transportation facility and access spacing standards include a broad set of techniques that balance the need to provide for efficient, safe, and timely multimodal travel with the ability to allow access to individual destinations. These standards help create a system of direct, continuous, and connected transportation facilities to minimize out-of-direction travel and decrease travel times for all users, while enhancing safety for people walking, biking, and driving by reducing conflict points.

Table 4 identifies maximum and minimum public roadway intersection, minimum private access, and maximum pedestrian and bicycle accessway spacing standards for streets in Camas. New streets or redeveloping properties must comply with these standards to the extent practical, as determined by the City Engineer or City Engineer designee. As the opportunity arises through redevelopment, strategies could be implemented along streets or at driveways not complying with

[8] When a low number of vehicles approach a stop-controlled intersection (i.e., 20 or fewer), particularly at those with high volumes on the uncontrolled major street, long delays for vehicles often result during peak periods. This can cause the intersection to operate with a peak hour v/c ratio that exceeds the adopted intersection mobility standard and can necessitate the need to expand the intersection. Therefore, stop controlled approaches with a low volume of traffic are commonly excluded from agency mobility standards.

these standards, such as shared access points, access restrictions (using a median or channelization islands), or closure of unnecessary access points, as feasible.

TABLE 4: TRANSPORTATION FACILITY AND ACCESS SPACING STANDARDS

	FUNCTIONAL CLASSIFICATION		
	ARTERIAL STREET	COLLECTOR STREET	LOCAL STREET
MAXIMUM BLOCK SIZE (PUBLIC STREET TO PUBLIC STREET)	1,000 ft.	600 ft.	600 ft.
MINIMUM BLOCK SIZE (PUBLIC STREET TO PUBLIC STREET)	600 ft.	300 ft.	150 ft.
MINIMUM DRIVEWAY SPACING (PUBLIC STREET TO DRIVEWAY AND DRIVEWAY TO DRIVEWAY) *	600 ft.**	300 ft.**	5-10 ft. ***
MINIMUM RIGHT-IN, RIGHT-OUT DRIVEWAY SPACING (PUBLIC STREET TO DRIVEWAY AND DRIVEWAY TO DRIVEWAY)	300 ft.	150 ft.	n/a
MAXIMUM DISTANCE BETWEEN PEDESTRIAN/ BICYCLE ACCESSWAYS (PUBLIC STREET TO PUBLIC STREET, PUBLIC STREET TO ACCESSWAY OR ACCESSWAY TO ACCESSWAY) ****	300 ft.	300 ft.	300 ft.

Note: All distances measured from the edge of adjacent approaches.

* All properties are allowed one driveway, which must take access from the lowest classified street.

** New residential access is not permitted along arterials or collectors.

*** Minimum driveway spacing along a local street is 5 feet for residential uses and 10 feet for non-residential uses.

**** Mid-block pedestrian and bicycle accessways on public easements or rights-of-way must be provided at spacing of no more than 300 feet if full-street connections cannot be provided, unless the connection is impractical due to topography, natural areas, inadequate sight distance, lack of supporting land use or other factors that may prevent safe connection, as determined by the City Engineer or City Engineer Designee.

STREET CROSSINGS

Streets with high traffic volumes and/or speeds and in areas with trail crossings, or nearby transit stops, residential uses, schools, parks, shopping, and employment destinations generally require enhanced street crossings with treatments, such as marked crosswalks, high visibility crossings, and curb extensions to improve safety and convenience. Crossing locations with higher volumes of pedestrians (either observed or projected) are also candidate locations for rectangular rapid flashing beacons or pedestrian hybrid beacons, which increase the visibility of the crossing for drivers.

Crossing opportunities along City streets should also align, where practical, with the transportation facility spacing standards shown earlier in this chapter to ensure pedestrian and bicycle accessways are connected and continuous across streets. Exceptions include where the connection is impractical due to topography, inadequate sight distance, high vehicle travel speeds, lack of supporting land use, or other factors that may prevent safe crossing, as determined by the City Engineer or City Engineer Designee.

Locations of enhanced pedestrian and bicycle crossing treatments along City streets should be determined using the National Cooperative Highway Research Program (NCHRP) Report 562, Improving Pedestrian Safety at Unsignalized Intersections[9]. These guidelines for pedestrian and bicycle crossing treatments are based on vehicle speed on the major street, pedestrian crossing distance, peak hour pedestrian volume, peak hour vehicle volume, and local parameters such as motorist compliance, pedestrian walking speed, and pedestrian start-up and clearance time. NCHRP Report 562 includes worksheets for inputting the variables above and identifying the appropriate treatment type. These guidelines should be reviewed with all traffic studies for any potential street crossing associated with new development in the City's planning area. Table 5 summarizes potential crossing treatments at intersections and mid-block locations for pedestrians and bicyclists.

VOLUME AND SPEED MANAGEMENT TOOLS

Volume and speed management refers to street design techniques that slow traffic and make streets safer and more pleasant for pedestrian and bicycle users and adjoining land uses without significantly changing their vehicle capacity. These design techniques encourage a more inviting environment for pedestrians and bicyclists, particularly along streets designed for shared bicycle travel.

Table 6 shows common traffic calming applications and suggests which devices may be appropriate for streets in the Camas planning area. Volume and speed management measures must balance vehicle speeds and volumes with the mobility and circulation needs of service providers, such as emergency responders. Any traffic calming project should include coordination with emergency service providers to ensure the project does not impede response times.

Volume and speed management influences driver behavior through physical and psychological means, by using one or more of the following:

- **Horizontal impediments** designed to make a driver turn the wheel and reduce the sight lines of unending pavement, which usually results in slower speeds. Examples include chicanes, roundabouts, and mini roundabouts.
- **Road narrowing** via striping, parking, or curb to reduce the drive lane widths, which slightly lower speeds. These treatments have the additional benefit of shortening pedestrian crossings, which lead to a safer multi-modal environment. Examples include curb extensions or bulbouts, or mid-block pedestrian refuge islands.
- **Closing the through road partially or fully** to disrupt travel patterns. These treatments alone may not change vehicle speeds but are effective at lowering volumes along certain streets.

TABLE 6: VOLUME AND SPEED MANAGEMENT TOOLS

TOOLS *		USE BY FUNCTIONAL CLASSIFICATION			IMPACT	
		Arterial Street	Collector Street	Local Street	Speed Reduction	Traffic Diversion
NARROWING TRAVEL LANES		✓	✓	✓	✓

CHAPTER 5.

Projects and Priorities

This chapter describes the transportation system improvement projects identified to address the system needs discussed in Chapter 3.

PROCESS FOR DEVELOPING PROJECTS

The project team developed the recommended transportation solutions using guidance provided by the project goals and with input from three main sources:

- Stakeholders (via committee meetings, online surveys, and project website comments)
- Previous Plans (such as the Camas North Shore Subarea Plan)
- Independent Project Team Evaluation (Existing and Future Transportation Conditions and Needs Evaluation)

The full list of projects in this TSP are identified to improve the transportation network along major streets in the City's planning area, regardless of their priority or their likelihood of being funded. This TSP focuses on streets in the planning area with a functional classification of Collector or higher. Additional improvements will occur with private development in the City's planning area, including the build out of the local street network consistent with the standards in Chapter 4.

The TSP planning process screens candidate projects to set aside those that may not be feasible due to environmental or existing development limitations. The remaining projects are a combination of new and previous ideas for the transportation system that seek to address the gaps and deficiencies in the city.

PROJECT FUNDING

Each project was reviewed to consider how it might be funded during the next 20 years. In general, the primary funding agency was assumed to be the current or future facility owner, as they are responsible for overseeing construction and long-term maintenance. All projects were assigned a primary funding agency which includes Camas, Clark County, RTC, and WSDOT. In some cases, funding partnerships were identified for projects that were expected to provide mutual benefits between agencies or where there were opportunities to accelerate projects to completion.

PLANNED TRANSPORTATION PROJECTS

The full project list includes 99 projects totaling over $180 million in total investments and is shown in Table 7 and Figure 31 to Figure 33. For the purposes of cost estimates, project design elements are identified, however, the actual design elements for any project are subject to change and will ultimately be determined through a preliminary and final design process and are subject to City, WSDOT, Clark County, and/or other partner agency approval. The Aspirational projects were assigned to one of several categories:

- **Multi-Modal Street Improvement** – these projects will improve or construct new multi-modal streets throughout the planning area, each with facilities for motorists, pedestrians,

and bicyclists. A total of 29 projects are identified that, as of 2024, will cost an estimated $72 million to complete.

- **Intersection Improvement** – these projects will improve safety and mobility at intersections throughout the planning area. A total of 19 projects were identified to construct new or improve existing intersections that, as of 2024, will cost an estimated $64 million to complete.
- **Pedestrian/ Bike Improvement** – these projects include stand-alone sidewalk, path and roadway crossing improvements, and an integrated network of bicycle lanes, marked on-street routes and shared-use paths to facilitate safe and convenient travel citywide. A total of 39 pedestrian and bicycle projects were identified that, as of 2024, will cost an estimated $38 million to complete.
- **Transit Enhancement** – these projects will enhance the quality and convenience for transit passengers. One transit project was identified that, as of 2024, will cost an estimated $1 million.
- **Demand/ System Management** – this will encourage more efficient usage of the transportation system. Two projects were identified that, as of 2024, will cost an estimated $450,000.

TABLE 7: PLANNED TRANSPORTATION PROJECTS

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
A	Bike Parking Program	Install new bike parking throughout the City.	$150,000		
B	Wayfinding Signage Program	Install wayfinding signage to assist pedestrians and bicyclists in choosing comfortable routes and to help visitors navigate through the City.	$300,000		
T1	Facility Improvements	Improve transit stop amenities as needed, to include sheltered stops with seating, landing pads, route information, sidewalk connections, bicycle parking and lighting.	$1,000,000		
M1	NW Pacific Rim Boulevard reconfiguration between SE Payne Road and NW Parker Street	Reconfigure the existing paved width of NW Pacific Rim Boulevard between SE Payne Road and NW Parker Street to address safety and bicycle facility gaps. Requires coordination with the City of Vancouver.	$2,450,000		
M2	NE 6th Avenue reconfiguration between Norwood Street and Adams Street	Reconfigure the existing paved width of NE 6th Avenue between Norwood Street and Adams Street to address safety and bicycle facility gaps. Included in 2024 six-year Transportation Improvement Program as Priority #11.	Included in TIP		
M3	NE 3rd Avenue reconfiguration between NE Garfield Street and 4th Street	Reconfigure the existing paved width of NE 3rd Avenue between NE Garfield Street and 4th Street to address safety and bicycle facility gaps.	$3,800,000		
M4	NE 3rd Avenue reconfiguration between 4th Street and SE Lechner Street	Reconfigure the existing paved width of NE 3rd Avenue between 4th Street and SE Lechner Street to address safety, pedestrian and bicycle facility gaps.	$450,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
M5	NE Laurel Street extension to SE 15th Street	Extend NE Laurel Street to SE 15th Street. This street should be constructed as a Collector, with sidewalks and bike lanes.	$1,000,000		
M6	NE Pioneer Street extension to SE 15th Street	Extend NE Pioneer Street to SE 15th Street. This street should be constructed as a Collector, with sidewalks and bike lanes.	$1,225,000		
M7	SE 271st Avenue extension to SE 8th Street extension	Extend/Improve SE 271st Avenue from SE 15th Street to the SE 8th Street extension. This street should be constructed as a Collector, with sidewalks and bike lanes.	$3,300,000		
M8	SE 8th Street extension between SR 500-NE Everett Street and the SE 271st Avenue extension	Extend SE 8th Street from SR 500-NE Everett Street to the SE 271st Avenue extension. This street should be constructed as a Collector, with sidewalks and bike lanes.	$2,100,000		
M9	SR 500-NE Everett Street widening between NW Lake Road and the UGA	Widen SR 500-NE Everett Street between NW Lake Road and the UGA boundary to include pedestrian and bike facilities (i.e., assumes a shared-use path on both sides per Everett Street Corridor Analysis). Includes bridge replacement. Included in 2024 six-year Transportation Improvement Program as Priority #1.	Included in TIP		
M10	Northshore Boulevard extension to SR 500-NE Everett Street	Extend Northshore Boulevard to SR 500-NE Everett Street/NE Everett Drive. This street should be constructed as an Arterial, with sidewalks and bike lanes. Included in 2024 six-year Transportation Improvement Program as Priority #9.	Included in TIP		
M11	NE 232nd Avenue widening between Northshore Boulevard and the UGA	Widen NE 232nd Avenue between Northshore Boulevard and the UGA boundary to include one travel lane in each direction, a center turn-lane/median, a bike lane and sidewalk on the west side and a shared-use path on the east side. PE included in 2024 six-year Transportation Improvement Program as Priority #27.	$4,850,000		
M12 *	NE 242nd Avenue extension from NE 28th Street to Northshore Boulevard	Extend NE 242nd Avenue extension from NE 28th Street to Northshore Boulevard. This street should be constructed as an Arterial, with sidewalks and bike lanes. PE included in 2024 six-year Transportation Improvement Program as Priority #34.	$3,100,000		
M13	Northshore Roadway A from Northshore Boulevard to Northshore Roadway C	Construct a new street between Northshore Boulevard and Northshore Roadway C. This street should be constructed as a Collector, with sidewalks and bike lanes.	$675,000		
M14	Northshore Roadway E from Northshore Boulevard to Northshore Roadway C	Construct a new street between Northshore Boulevard and Northshore Roadway C. This street should be constructed as a Collector, with sidewalks and bike lanes.	$1,275,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
M15	Northshore Roadway C from Northshore Boulevard (west) to Northshore Boulevard (east)	Construct a new street between Northshore Boulevard (west) to Northshore Boulevard (east). This street should be constructed as a Collector, with sidewalks and bike lanes.	$4,675,000		
M16	SR 500-NE Everett Street / SE 8th Street extension intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		
M17	Northshore Boulevard / Northshore Roadway C (east) intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		
M18	Northshore Boulevard / Northshore Roadway E intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		
M19	NE 28th Street widening between N Juniper Street and NE 232nd Avenue	Widen NE 28th Street between N Juniper Street and NE 232nd Avenue to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. Included in 2024 six-year Transportation Improvement Program as Priority #8.	Included in TIP		
M20	NE 28th Street widening between NE Ingle Road and N Juniper Street	Widen NE 28th Street between NE Ingle Road and N Juniper Street to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. Included in 2024 six-year Transportation Improvement Program as Priority #8.	Included in TIP		
M21	NE Goodwin Road widening between NE Ingle Road and NE 13th Street	Widen NE Goodwin Road between NE Ingle Road and NE 13th Street to include bike lanes and sidewalks. Included in 2024 six-year Transportation Improvement Program as Priority #8.	Included in TIP		
M22	NE Ingle Road widening between NE 28th Street and the UGA	Widen NE Ingle Road between NE 28th Street and the UGA to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. PE included in 2024 six-year Transportation Improvement Program as Priority #39.	$1,550,000		
M23	SE Bybee Road realignment to NW Fisher Creek Drive	Realign SE Bybee Road to intersect with NW 38th Avenue at NW Fisher Creek Drive. This street should be constructed as a Collector, with sidewalks and bike lanes. Included in 2024 six-year Transportation Improvement Program as Priority #12.	Included in TIP		
M24	Northshore Boulevard / Northshore Roadway C (west) intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
M25	NW 38th Avenue-NW Astor Street-NW 43rd Avenue widening between NW Dahlia Drive and NW Sierra Street	Widen NW 38th Avenue-NW Astor Street-NW 43rd Avenue between NW Dahlia Drive and NW Sierra Street to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. PE included in 2024 six-year Transportation Improvement Program as Priority #26.	$7,350,000		
M26	NW 16th Avenue-NW Hood Street-NW 18th Street widening between NW Klickitat Street and NW Astor Court	Widen NW 16th Avenue-NW Hood Street-NW 18th Street between NW Klickitat Street and NW Astor Court to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. Included in 2024 six-year Transportation Improvement Program as Priority #6 and #23.	$4,200,000		
M27	NW 11th Avenue-NW Astor Street widening between NW McIntosh Road and NW 16th Avenue	Widen NW 11th Avenue-NW Astor Street between NW McIntosh Road and NW 16th Avenue to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. PE included in 2024 six-year Transportation Improvement Program as Priority #22.	$5,500,000		
M28	NW McIntosh Road widening between NW Brady Road and NW 11th Avenue	Widen NW McIntosh Road between NW Brady Road and NW 11th Avenue to include one travel lane in each direction, a center turn-lane/median, bike lanes and sidewalks. PE included in 2024 six-year Transportation Improvement Program as Priority #28.	$9,325,000		
M29	SE Crown Road widening between NE 3rd Avenue and NE Woodburn Drive	Widen SE Crown Road between NE 3rd Avenue and NE Woodburn Drive to include one travel lane in each direction, left-turn lanes at intersections and a shared-use path (per the Crown Road Corridor Study). Widen the SE Crown Road approach to NE 3rd Avenue to accommodate westbound truck turning maneuvers. Requires coordination with Washougal and Clark County. Included in 2024 six-year Transportation Improvement Program as Priority #5.	Included in TIP		
M30	SE 283rd Avenue widening between NE Woodburn Drive and the SE 8th Street extension	Widen SE 283rd Avenue between NE Woodburn Drive and the SE 8th Street extension to include one travel lane in each direction, left-turn lanes at intersections and a shared-use path. Requires coordination with Clark County.	$10,250,000		
M31	SE Lechner Street reconfiguration between NE 3rd Avenue and the UGA boundary	Reconfigure SE Lechner Street between NE 3rd Avenue and the UGA boundary to include one travel lane in each direction, a center turn-lane/median and bike lanes.	$350,000		
M32	NE 6th Avenue / NE Adams Street intersection improvements	Intersection improvements (e.g., Per the Camas Safety Plan this should include the installation of a roundabout and intersection lighting; retain eastbound right-turn slip lane).	$3,975,000		
M33	NE 6th Avenue / SR 500-NE Garfield Street intersection improvements	Intersection improvements (i.e., restripe the eastbound NE 6th Avenue approach to include a separate left-turn and through/right turn lane; requires removal of on-street parking along the south side of NE 6th Avenue within 75 feet of the intersection).	$250,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
M34	SE Crown Road / SE 23rd Street-NE Woodburn Drive intersection improvements	Intersection improvements (e.g., installation of a roundabout per the Crown Road Corridor Study). Realign SE 23rd Street to intersect with NE Woodburn Drive. This street should be constructed as an Arterial, with sidewalks and bike lane. Realignment included in 2024 six-year Transportation Improvement Program as Priority #29.	Included in TIP		
M35	SR 500-NE Everett Street / NE 38th Avenue intersection improvements	Intersection improvements (i.e., installation of roundabout or a southbound left-turn lane on SR 500-NE Everett Street).	$5,450,000		
M36	SR 500-NE Everett Street / NE 43rd Avenue intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		
M37	SR 500-NE Everett Street / SE Leadbetter Road intersection improvements	Intersection improvements (i.e., installation of a median to limit SE Leadbetter Road access to left-in, right-in, right-out only).	$25,000		
M38	SR 500-NE Everett Street / Northshore Boulevard extension intersection improvements	Intersection improvements (e.g., potential installation of a roundabout per Northshore Subarea Plan).	$5,450,000		
M39 *	SR 500-NE Everett Street / SE NE 3rd Street / NE Robinson Road intersection improvements	Intersection improvements (e.g., installation of a roundabout). Requires coordination with WSDOT and Clark County.	$5,450,000		
M40 *	NE 28th Street / SR 500-NE 242nd Avenue intersection improvements	Intersection improvements (e.g., installation of a southbound left-turn lane on SR 500-NE Everett Street, eastbound left-turn lane on NE 28th Street and traffic signal, or installation of a roundabout). Requires coordination with WSDOT and Clark County.	$5,450,000		
M41 *	NE 232nd Avenue / NE 28th Street intersection improvements	Intersection improvements (e.g., installation of a roundabout or traffic signal). Requires coordination with Clark County. Included in 2024 six-year Transportation Improvement Program as Priority #20.	Included in TIP		
M42 *	NE 199th Avenue / SR 500-NE 58th Street intersection improvements	Intersection improvements (e.g., installation of a westbound left-turn lane and eastbound right-turn lane on SR 500-NE 58th Street and traffic signal, or installation of a roundabout). Requires coordination with WSDOT and Clark County.	$5,450,000		
M43	NW Camas Meadows Drive / NE Goodwin Road intersection improvements	Intersection improvements (i.e., installation of a roundabout or traffic signal). Included in 2024 six-year Transportation Improvement Program as Priority #37.	Included in TIP		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
M44	NW Lake Road / NW Sierra Street intersection improvements	Intersection improvements (i.e., installation of a roundabout). Included in 2024 six-year Transportation Improvement Program as Priority #2.	Included in TIP		
M45	Pacific Rim Boulevard / NW Parker Street intersection improvements	Intersection improvements (i.e., installation of a traffic signal). Included in 2024 six-year Transportation Improvement Program as Priority #38.	Included in TIP		
M46	NW Lake Road safety improvements from NE Everett Street to NW Leadbetter Drive	Implement safety improvements along NW Lake Road safety improvements from NE Everett Street to NW Leadbetter Drive. These include horizontal curve signing, profiled pavement marking and shoulder widening per the Camas Safety Plan.	$4,275,000		
M47	SR-14 West Camas Slough Bridge widening	Widen the SR-14 West Camas Slough Bridge to four lanes. Included in 2024 six-year Transportation Improvement Program as Priority #7. WSDOT project.	Included in TIP		
M48	Northshore Boulevard / Northshore Roadway A intersection improvements	Intersection improvements (i.e., potential installation of roundabout per the Northshore Subarea Plan).	$5,450,000		
P1	Pedestrian improvements on NW 7th Avenue between NW Fargo Street and NW Drake Street	Add pedestrian improvements to NW 7th Avenue between NW Fargo Street and NW Drake Street (i.e., complete sidewalk gaps on the south side).	$1,050,000		
P2	Pedestrian improvements on NW 10th Avenue between NW Forest Home Road and NW Elm Street	Add pedestrian improvements to NW 10th Avenue between NW Forest Home Road and NW Elm Street (i.e., complete sidewalk gaps on the north side).	$1,650,000		
P3	Pedestrian improvements on Division Street between NW 6th Avenue and NW 11th Avenue	Add pedestrian improvements to Division Street between NW 6th Avenue and NW 11th Avenue (i.e., complete sidewalk gaps on the west side).	$1,100,000		
P4	Pedestrian improvements on SR 500-SE Union Street between SE 8th Avenue and SE 6th Avenue	Add pedestrian improvements to SR 500-SE Union Street between SE 8th Avenue and SE 6th Avenue (i.e., complete sidewalk gaps on the east side).	$625,000		
P5	Pedestrian improvements on NE 2nd Avenue-NE Whitney Street between NE 3rd Avenue and SE James Street	Add pedestrian improvements to NE 2nd Avenue-NE Whitney Street between NE 3rd Avenue and SE James Street (i.e., complete sidewalk gaps on the east side).	$1,325,000		
P6	Pedestrian improvements on SR 500-NE Everett Street between NE 23rd Avenue and Fallen Leaf Lake Park	Add pedestrian improvements to SR 500-NE Everett Street between NE 23rd Avenue and Fallen Leaf Lake Park (i.e., complete sidewalk gaps on both sides).	$1,875,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
P7	Pedestrian improvements on NW Lake Road between NW Lacamas Lane and the Lacamas Lake Lodge	Add pedestrian improvements to NW Lake Road between NW Lacamas Lane and the Lacamas Lake Lodge (i.e., complete sidewalk gaps on both sides). Included in 2024 six-year Transportation Improvement Program as Priority #3.	Included in TIP		
P8	Pedestrian improvements on NE Umatilla Street between NE Woodburn Drive and SE 15th Street	Add pedestrian improvements to NE Umatilla Street between NE Woodburn Drive and SE 15th Street (i.e., complete sidewalk gaps on the east side). Requires right-of-way acquisition, outside current city limits, in part.	$1,050,000		
P9	Pedestrian improvements on NE 43rd Avenue-SE 15th Street between SR 500-NE Everett Street and SE Crown Road	Add pedestrian improvements to NE 43rd Avenue-SE 15th Street between SR 500-NE Everett Street and SE Crown Road (i.e., complete sidewalk gaps on both sides). Included in 2024 six-year Transportation Improvement Program as Priority #13 and #30.	Included in TIP		
P10	Pedestrian improvements on NW Camas Meadows Drive between NE Goodwin Road and NW Payne Street	Add pedestrian improvements to NW Camas Meadows Drive between NE Goodwin Road and NW Payne Street (i.e., complete sidewalk gaps on the south side).	$1,075,000		
P11	Pedestrian improvements on NW Leadbetter Drive between NW Parker Street and NW Lake Road	Add pedestrian improvements to NW Leadbetter Drive between NW Parker Street and NW Lake Road (i.e., complete sidewalk gaps on both sides). Included in 2024 six-year Transportation Improvement Program as Priority #19.	Included in TIP		
P12	Pedestrian improvements on NW Parker Street between NW Leadbetter Drive and NW 38th Avenue	Add pedestrian improvements to NW Parker Street between NW Leadbetter Drive and NW 38th Avenue (i.e., complete sidewalk gaps on the west side).	$2,150,000		
P13	Pedestrian improvements on SE Bybee Road between SE 196th Avenue and the SE Bybee Road realignment	Add pedestrian improvements to SE Bybee Road between SE 196th Avenue and the SE Bybee Road realignment (i.e., complete sidewalk gaps on both sides).	$1,525,000		
P14	Pedestrian improvements on NW Fargo Street between NW Kent Street and NW Fargo Loop	Add pedestrian improvements to NW Fargo Street between NW Kent Street and NW Fargo Loop (i.e., complete sidewalk gaps on the north/east side).	$2,150,000		
P15	Pedestrian improvements on NW 23rd Avenue between NW Astor Street and NW Tanner Street	Add pedestrian improvements to NW 23rd Avenue between NW Astor Street and NW Tanner Street (i.e., complete sidewalk gaps on both sides). Included in 2024 six-year Transportation Improvement Program as Priority #17.	Included in TIP		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
P16	Pedestrian improvements on NW 18th Avenue-NW Tidland Street-NW 16th Avenue between NW Whitman Street and NW Brady Road	Add pedestrian improvements to NW 18th Avenue-NW Tidland Street-NW 16th Avenue between NW Whitman Street and NW Brady Road (i.e., complete sidewalk gaps on north/east side). Included in 2024 six-year Transportation Improvement Program as Priority #24 and #25.	Included in TIP		
P17	Pedestrian improvements on NW 10th Avenue west of NW NW Norwood Street	Add pedestrian improvements to NW 10th Avenue west of NW Norwood Street (i.e., complete sidewalk gaps on the south side).	$550,000		
B1	Bicycle improvements on NW Ivy Street-NW 7th Avenue from NW 6th Avenue to NW Drake Street	Add bicycle improvements to NW Ivy Street-NW 7th Avenue from NW 6th Avenue to NW Drake Street (i.e., pavement markings/ signage designating it as a shared street for bikes).	$500,000		
B2	Bicycle improvements on NW Drake Street between NW 7th Avenue and NW 12th Avenue	Add bicycle improvements to NW Drake Street between NW 7th Avenue and NW 12th Avenue (i.e., restripe with bike lanes).	$350,000		
B3	Bicycle improvements on NW 12th Avenue-Division Street-NE 15th Avenue-NE 18th Avenue-NE 21st Avenue between NW Drake Street and SR 500-NE Everett Street	Add bicycle improvements to NW 12th Avenue-Division Street-NE 15th Avenue-NE 18th Avenue-NE 21st Avenue between NW Drake Street and SR 500-NE Everett Street (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,275,000		
B4	Bicycle improvements on NE 22nd Avenue-NE Ione Street-NE 19th Avenue-NE Oak Street-NE 6th Avenue between SR 500-NE Everett Street and NE Joy Street	Add bicycle improvements to NE 22nd Avenue-NE Ione Street-NE 19th Avenue-NE Oak Street-NE 6th Avenue between SR 500-NE Everett Street and SR 500-NE Joy Street (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,025,000		
B5	Bicycle improvements on NE 6th Avenue-NE Dallas Street-NE Joy Street between NE Adams Street and NE 3rd Avenue	Add bicycle improvements to NE 6th Avenue-NE Dallas Street-NE Joy Street between NE Adams Street and NE 3rd Avenue (i.e., pavement markings/ signage designating it as a shared street for bikes).	$925,000		
B6	Bicycle improvements on NE Woodburn Drive between Laurel Street and the NE Umatilla Street	Add bicycle improvements to NE Woodburn Drive between Laurel Street and the NE Umatilla Street (i.e., widen for bike lanes).	$2,850,000		
B7	Bicycle improvements on NE Umatilla Street between NE Woodburn Drive and SE 15th Street	Add bicycle improvements to NE Umatilla Street between NE Woodburn Drive and SE 15th Street (i.e., widen for bike lanes).	$1,750,000

B8	Bicycle improvements on NE 43rd Avenue-SE 15th Street between SR 500-NE Everett Street and SE Crown Road	Add bicycle improvements to NE 43rd Avenue-SE 15th Street between SR 500-NE Everett Street and SE Crown Road (i.e., widen for bike lanes). Included in 2024 six-year Transportation Improvement Program as Priority #13 and #30.	Included in TIP		
B9	Bicycle improvements on SE Bybee Road between SE 196th Avenue and the SE Bybee Road realignment	Add bicycle improvements to SE Bybee Road between SE 196th Avenue and the SE Bybee Road realignment (i.e., widen for bike lanes).	$2,100,000		
B10	Bicycle improvements on NW Leadbetter Drive between NW Fremont Street and NW Lake Road	Add bicycle improvements to NW Leadbetter Drive between NW Fremont Street and NW Lake Road (i.e., restripe with bike lanes).	$250,000		
B11	Bicycle improvements on NW Sierra Street between NW Lake Road and NW 43rd Avenue	Add bicycle improvements to NW Sierra Street between NW Lake Road and NW 43rd Avenue (i.e., restripe with bike lanes; requires removal of left-turn lane to NW 44th Avenue; at the NW Lake Road intersection stripe with a southbound bike lane and shared northbound left and right turn-lanes).	$250,000		
B12	Bicycle improvements on NE Fremont Street-NW Leadbetter Parkway-NW Dahlia Drive-NW 29th Avenue-NW Valley Street-NW Utah Street between NW Leadbetter Drive and NW 28th Avenue	Add bicycle improvements to NE Fremont Street-NW Leadbetter Parkway-NW Dahlia Drive-NW 29th Avenue-NW Valley Street-NW Utah Street between NW Leadbetter Drive and NW 28th Avenue (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,925,000		
B13	Bicycle improvements on NW 44th Avenue-NW Bass Street-NW 45th Avenue-NW 44th Avenue-NW Lacamas Lane-NW 35th Avenue-NW 34th Avenue-NW Norwood Street between NW Dahlia Drive and NW 28th Avenue	Add bicycle improvements to NW 44th Avenue-NW Bass Street-NW 45th Avenue-NW 44th Avenue-NW Lacamas Lane-NW 35th Avenue-NW 34th Avenue-NW Norwood Street between NW Dahlia Drive and NW 28th Avenue (i.e., pavement markings/ signage designating it as a shared street for bikes).	$2,700,000		
B14	Bicycle improvements on NW 28th Avenue-NW Fargo Street between NW Sierra Street and NW 18th Avenue	Add bicycle improvements to NW 28th Avenue-NW Fargo Street between NW Sierra Street and NW 18th Avenue (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,175,000		
B15	Bicycle improvements on NW 18th Loop between NW 18th Avenue and NW Couch Street	Add bicycle improvements to NW 18th Loop between NW 18th Avenue and NW Couch Street (i.e., restripe with a bike lane on the uphill side).	$375,000		
B16	Bicycle improvements on NW Sierra Street between NW 28th Avenue and NW 23rd Avenue	Add bicycle improvements to NW Sierra Street between NW 28th Avenue and NW 23rd Avenue (i.e., restripe with bike lanes).	$300,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
B17	Bicycle improvements on NW 23rd Avenue between NW Astor Street and NW Sierra Street	Add bicycle improvements to NW 23rd Avenue between NW Astor Street and NW Sierra Street (i.e., widen for bike lanes). Included in 2024 six-year Transportation Improvement Program as Priority #17.	Included in TIP		
B18	Bicycle improvements on NW Pacific Rim Drive-NW Endicott Street-NW 37th Avenue between NW Parker Street and NW Dahlia Drive	Add bicycle improvements to NW Pacific Rim Drive-NW Endicott Street-NW 37th Avenue between NW Parker Street and NW Dahlia Drive (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,075,000		
B19	Bicycle improvements on NW Julia Street-NW 26th Avenue-NW Maryland Street-NW Larkspur Street-NW Klickitat Street between NW Pacific Rim Drive and NW 16th Avenue	Add bicycle improvements to NW Julia Street-NW 26th Avenue-NW Maryland Street-NW Larkspur Street-NW Klickitat Street between NW Pacific Rim Drive and NW 16th Avenue (i.e., pavement markings/ signage designating it as a shared street for bikes).	$1,325,000		
B20	Bicycle improvements on NW Klickitat Street between NW 16th Avenue and NW McIntosh Road	Add bicycle improvements to NW Klickitat Street between NW 16th Avenue and NW McIntosh Road (i.e., pavement markings/ signage designating it as a shared street for bikes).	$475,000		
B21	Bicycle improvements on SE Payne Road-NW 18th Avenue-NW Tidland Street-NW 16th Avenue between NW Pacific Rim Boulevard and NW Brady Road	Add bicycle improvements to SE Payne Road-NW 18th Avenue-NW Tidland Street-NW 16th Avenue between NW Pacific Rim Boulevard and NW Brady Road (i.e., widen for bike lanes). Included in 2024 six-year Transportation Improvement Program as Priority #24 and #25.	Included in TIP		
B22	Bicycle improvements on NW 10th Avenue between NW 10th Place and NW Drake Street	Add bicycle improvements to NW 10th Avenue between NW 10th Place and NW Drake Street (i.e., pavement markings/ signage designating it as a shared street for bikes).	$800,000		
S1	Shared-use path on NW Brady Road between the City limits and NW McIntosh Road	Create a shared-use path connection along the north side of NW Brady Road between the City limits and NW McIntosh Road. Included in 2024 six-year Transportation Improvement Program as Priority #21.	Included in TIP		
S2	Shared-use path between NW 11th Avenue and NW 10th Avenue	Create a shared-use path connection between NW 11th Avenue and NW 10th Avenue. Will require grading, switchbacks and/or stairs to navigate the steep slopes.	$450,000		
S3	Shared-use path between NW 18th Avenue and NW Brady Road	Create a shared-use path connection between NW 18th Avenue and NW Brady Road.	$375,000		

ID	PROJECT DESCRIPTION	PROJECT ELEMENTS **	ESTIMATED COST (2024 DOLLARS	POTENTIAL FUNDING SOURCE	PRIORITY HORIZON
S4	Fallen Leaf Lake Park Crossing	Install a pedestrian and bicycle crossing on SR 500-NE Everett Street at Fallen Leaf Lake Park. This improvement includes a continental crossing, a median refuge island and pedestrian crosswalk signs.	$50,000		
S5	Shared-use path on NE Leadbetter Road between SR 500-NE Everett Street and the Lacamas Lake boat ramp	Create a shared-use path connection along the north side of NE Leadbetter Road between SR 500-NE Everett Street and the Lacamas Lake boat ramp.	$725,000		
S6	Shared-use path on NE Leadbetter Road between the Lacamas Lake boat ramp and NE 232nd Avenue-Northshore Boulevard	Close NE Leadbetter Road to motor vehicle traffic (except emergency services) between the Lacamas Lake boat ramp and NE 232nd Avenue-Northshore Boulevard and convert the roadway surface to a shared-use path.	$1,975,000		
S7	Lacamas Trail SE Crown Road Crossing	Install a pedestrian and bicycle crossing on Crown Road at the Lacamas Trail. As part of this project, extend the sidewalk along the west side of SE Crown Road from Woodburn Elementary to the Lacamas Trail. This improvement includes a continental crossing, a median refuge island and pedestrian crosswalk signs.	$1,725,000		
S8	E 1st Avenue Crossing	Install a pedestrian and bicycle crossing on NE 3rd Avenue at E 1st Avenue. This improvement includes a continental crossing, a median refuge island and pedestrian crosswalk signs.	$50,000		
S9	NE Weir Street Crossing	Install a pedestrian and bicycle crossing on NE 3rd Avenue at NE Weir Street. This improvement includes a continental crossing, a median refuge island and pedestrian crosswalk signs.	$50,000		

Note: * Project (or a portion of the alignment) is located outside the UGA and is shown for future planning purposes only.

** The project design elements depicted are identified for planning purposes. The actual design elements for any project are subject to change and will ultimately be determined through a preliminary and final design process and are subject to City and/or WSDOT approval.

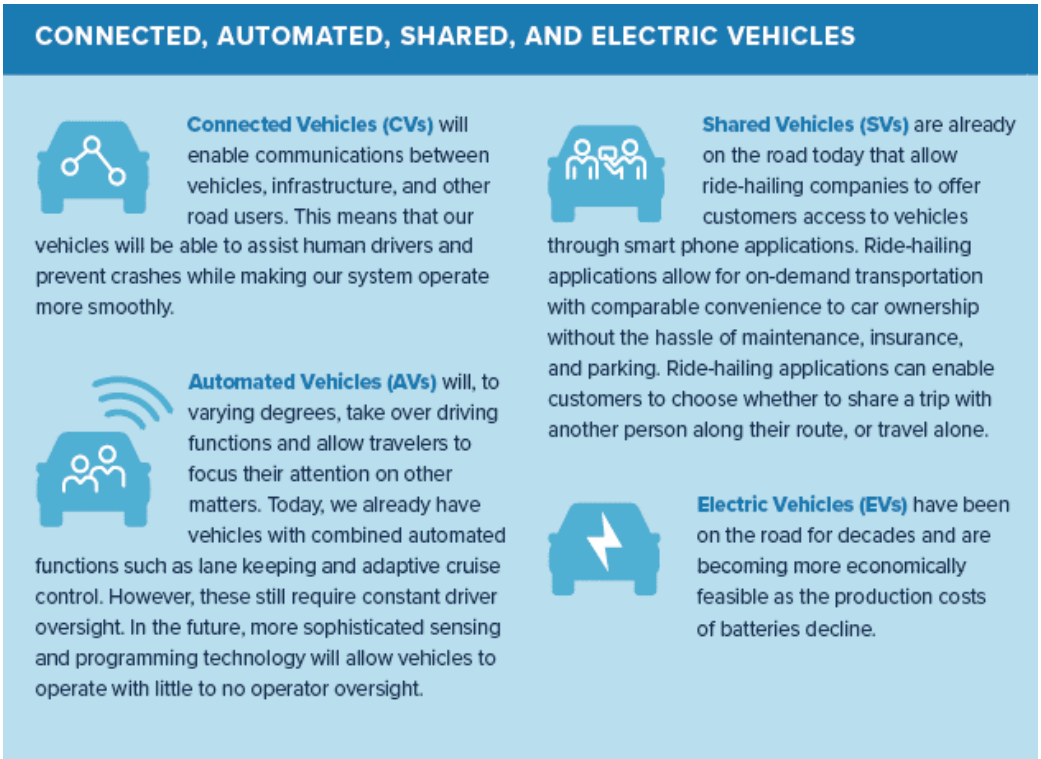
CHAPTER 6.

Future Strategies and Considerations

The following chapter provides transportation strategies and policy considerations around providing travel options, preparing for advancements in transportation through technology, and monitoring plan implementation. Some are emerging issues to be monitored, and others are ongoing but need greater emphasis or attention. Addressing these will take the City time to evaluate, and they may require future decisions from the City Council.

Furthermore, it is recognized that there are on-going community issues related to general transportation needs that will continue to evolve after the TSP process and outcomes. These issues are acknowledged in the final section along with a summary of their status and the expected path forward.



PREPARING FOR EMERGING FORMS OF MOBILITY

Emerging technologies will continue to shape roads, communities, and daily lives for generations. Vehicles are becoming more connected, automated, shared, and electric. This future is highly uncertain, but it will have significant impacts for how the transportation system is planned, designed, built, and utilized. The following sections highlight these emerging forms of mobility.

CONNECTED, AUTOMATED, SHARED, AND ELECTRIC VEHICLES

We do not know the full impacts that connected, automated, shared, and electric (CASE) vehicles will have on the transportation system. A lot depends on how they will be regulated at the federal and state levels.

Many of these vehicles will not be exclusive of the others and it is important to think of the host of implications that arise from the combination of these technologies.

There are several competing forces that will unfold as CASE vehicles are deployed.

- AVs will provide a more relaxing or productive ride experience and people may have less resistance to longer commutes.
- Shared AVs are projected to have lower fuel and operating costs, making them less expensive on a per mile basis than private vehicle ownership. This may increase demand for auto-based travel in the future.
- CV technology will allow vehicles to operate safely with closer following distance, less unnecessary braking, and better coordinated traffic control. This will increase road capacity in the long run when CVs and AVs comprise most of the public and private fleet of vehicles.
- In the near term, since AVs make up a fraction of the fleet of vehicles, road capacity could decrease as AVs will operate more slowly and cautiously than regular vehicles.
- A new class of traffic – zero-occupant vehicles – will increase traffic congestion. These could include AVs making deliveries or shared AVs circulating around the City and traveling to their next rider.
- Roadways may need to be redesigned or better maintained to accommodate the needs of automated driving systems. For instance, striping may need to be wider and more consistently maintained to ensure the vehicle's sensors can recognize it.

These points raise questions about the degree to which CASE vehicles will impact road capacity, safety, and congestion. The development and use of the technologies should be monitored closely.

ELECTRIC SCOOTER AND BIKE SHARE

Shared-use fleets of small, fully or partially human-powered vehicles such as bikes, electric bikes (e-bikes) and electric scooters (e-scooters) are forms of micromobility transportation options (see Figure 34). These vehicles are generally rented through a mobile app or kiosk, are picked up and dropped off in the public right-of-way and are meant for short point-to-point trips. These emerging transportation options are convenient and have a low cost and make it easier for people to get around without a personal vehicle.

FIGURE 34: MICROMOBILITY TRANSPORTATION OPTIONS

Bikes **E-Bikes** **E-Scooters**

Public safety has been a concern in other cities as many riders do not wear helmets or they ride on sidewalks, which creates conflicts with pedestrians. In addition, many riders do not park the vehicles properly and leave them in places that obstruct pedestrian pathways. The only time these may be on the sidewalk is if it is already parked, being parked on the curb or being walked. Both the bike and scooter should be driven with the flow of traffic in a bicycle lane or in the vehicle lane when there is no bike lane. They are also permitted on shared use pathways that are designated for shared pedestrian and bicycle travel (i.e., accessways or shared-use paths with a 10-foot width are acceptable for shared pedestrian and bicycle travel).

The rapid growth in the number of shared micromobility trips and the introduction of e-scooters has required cities to focus new attention on how best to regulate these new services in order to achieve the best public outcomes. Local government has both the authority and the responsibility to protect public health, safety, and welfare, and to ensure safe passage on and govern commerce in the public right-of-way. Cities have taken varied approaches to managing shared micromobility on their streets and chosen to exercise their authority in different ways.

Infrastructure is essential for shared micromobility to succeed as a viable transportation option. Cities must build out bike lane networks that encourage and protect riders. They must also decide where in the right-of-way shared micromobility vehicles should be parked and what locking requirements are appropriate. Some general guidelines include:

- **Parking:** In permitting shared micromobility companies to operate in the public right-of-way, cities must decide where is appropriate for companies and customers to leave their vehicles. Increasingly, cities and operators are striking a balance by encouraging customers to use "corrals" or designated shared micromobility parking zones in high volume or crowded areas, but also allowing users to drop off vehicles in the furniture zone of sidewalks. Designating locations provides cities and operators more control over the start and end location of

vehicles, increases predictability for users and non-users alike, and reduces encroachment in the public right-of-way.

- **Provide Safe Place to Ride:** To fully realize the potential of shared micromobility, cities must redesign their streets so that everyone has a safe, low-stress network of places to ride. Poor or inadequate infrastructure leads to increased injuries and fatalities. In places without clearly marked, safe places to ride, riders often report feeling safer riding on the sidewalk.
- **Restrict/Limit Access:** Some cities have areas where shared micromobility services may not operate or where vehicles must move at slower speeds to ensure safety.

Facility Condition Assessment

Volume 1: Executive Summary Report

Prepared by MENG Analysis

Contents

Introduction 1
Report Organization 1
Terminology and Abbreviations 1
List of Surveyed Facilities 3
Condition Summary 4
Cost Overview 5

Executive Summary

Introduction

In 2021, the City of Camas, Washington engaged MENG Analysis to complete a comprehensive facility condition assessment (FCA). The purpose of this assessment is to assist City staff in organizing & prioritizing maintenance backlog needs while supporting future-focused proactive facility management. Proactive facility management includes but is not limited to, planning and budgeting for short-term correction of Observed Deficiencies (ODs), and long-term major maintenance, referred to in this report as Predicted Renewals (PRs).

The surveyed facilities included 17 buildings on 11 sites. The total square footage of the surveyed buildings is just under 276,000 SF.

FCA Stats

Number of Surveyed Buildings 17	**Total SF Surveyed** 276K
Total Replacement Value of Facilities (2022 dollars) $61M	**Long-term Needs 2028-2041** $18M
2022-2027 Deficiencies $17M	**Priority[1] Needs 6 Years** $6.3M

Report Organization

This Executive Summary Report (Volume 1) presents an introduction and overview to the Facility Condition assessment process as well as summary findings across all facilities. The Facility Detail Report (Volume 2) contains the database-generated subsystem level reports.

Terminology and Abbreviations

To aid in understanding the data and concepts presented in this report, the following list includes definitions of common terms and abbreviations related to the FCA process.

Facility Condition Assessment (FCA): A structured process to document the conditions of site infrastructure and building systems. FCAs are typically performed by a multi-disciplinary team of architects, engineers, construction, and cost specialists. Facility information and condition data should be maintained in a database for ease of updating and reporting. The data should be renewed over time.

[1] Priority needs include life-safety and code issue deficiencies

Facility Condition Index (FCI): A benchmark used to compare relative condition of facilities within a portfolio of assets; derived by the following formula:

Note: There are a number of different methods used by various organizations to calculate that backlog. For this reason, using FCIs to compare City of Camas facilities to other organizations may not represent accurate equivalency.

$$FCI = \frac{\text{Backlog of Maintenance \& Repair (BMAR)}}{\text{Current Replacement Value (CRV)}}$$

This assessment uses a parametric method that calculates BMAR based on the assessed condition scores. The statistical basis is a study conducted by NASA on over 10,000 surveyed facilities that evaluated the backlog of repair items relative to qualitative condition scores 1 through 5. The parametric backlog for each system is calculated based on a statistical theoretical percentage of that system that would need repair or replacement for each of the qualitative condition scores. The costs of those systems are the facility use cost models customized for Camas. It should also be noted that we continually update our cost models based on current market conditions, so the CRV values in this report will differ from those presented in earlier reports.

Predicted Renewal Model: A theoretical forecast of when building systems will exceed their typical lifespan and funding will be required for renewals.

Remaining Useful Life: An estimate of the years that a facility system may remain serviceable or in operation before failure; which would then require system renewal or replacement.

Subsystem: The term subsystem in this report refers to a Uniformat Level 3 building systems category (e.g., B3010 - Roof Coverings; or B3020 – Roof Opening; or B3030 – Projections).

System: The term system in this report refers to a Uniformat Level 2 building system category (e.g., B30 – Roofing)

Commonly Used Abbreviations

AC = Asphalt concrete
ACT = Acoustic ceiling tile
A/V = Audio/video
AHU = Air handling unit
ASHRAE = American Society of Heating, Refrigeration, & Air Conditioning Engineers
BUR = Built-up roofing
CCTV = Closed circuit television
CFH = Cubic feet per hour (of natural gas)
CFL = Compact fluorescent
CI = Cast iron
CMU = Concrete masonry unit
CO2 = Carbon dioxide
CU = Condensing unit
Cx = Commissioning
DDC = Direct digital control
DHW = Domestic hot water
Dx = Direct expansion
EA = Each (measurable unit)
EF = Exhaust fan
EFIS = Exterior insulation finishing system
FRP = Fiber reinforced plastic
GI = Grease interceptor
GSHP = Ground-source heat pump
HID = High intensity discharge (lamps)
HM = Hollow metal
HVAC = Heating, ventilating, and air conditioning
IT = Information technology
LF = Linear feet (measurable unit)
LED = Light emitting diode
LS = Lump sum (measurable unit)

MDF = Main distribution frame
OWS = Oil/water separator
PA = Public address
P-lam = Plastic laminate
PRV = Pressure regulating valve
PTAC = Packaged terminal air conditioning
Psig = Pounds per square inch (pressure)
SS = Stainless Steel
PVC = Polyvinyl chloride
RTU = Roof top unit
RPBP = Reduced pressure backflow preventer
SF = Square feet (measurable unit)
UPS = Uninterruptible power supply
VAV = Variable air volume
VCT = Vinyl composite tile
VWC = Vinyl wall covering
VOIP = Voice over internet protocol
WAP = Wireless access point
WD = Wood

List of Surveyed Facilities

Table 1 lists the facilities surveyed during this project.

Condition Summary

Methodology

The field survey team included architects & engineers with expertise in building assessment who reviewed civil, structural, architectural, mechanical, electrical, plumbing, and site infrastructure systems to a Uniformat Level 3 detail[2]. These descriptions and scores are the basis for generating the Facility Condition Index (FCI), and Weighted Average Condition Score (WACS). Costs were developed by an experienced cost estimator familiar with the regional construction market & construction practices. The costs shown in this report are based on market rates, and not on prevailing wage requirements from the State of Washington.

Facility Condition Index (FCI)

A Facility Condition Index (FCI) is an industry standard used for benchmarking and evaluating a portfolio of facility assets over time[3]. The FCI is the ratio between a facility's Backlog of Maintenance and Repair (BMAR) and the Current Replacement Value (CRV) of the facility. Therefore, the lower the FCI, the lower the cost of maintenance backlog in relation to the cost of a full building replacement.

Common industry practice is to create a scale for interpreting the FCI as a way to prioritize facility needs. Most organizations adjust their classifications of FCI to relate to their own unique criteria. For this project, we suggest the following FCI breakdown to support decision making.

- Excellent = 0.00 – 0.05 (5%)
- Good = 0.06 – 0.10 (6% – 10%)
- Fair = 0.11 – 0.20 (11% – 20%)
- Poor = 0.21 – 0.25 (21% – 25%)
- Critical = 0.26 (26% or greater)

Weighted Average Condition Score (WACS)

Every surveyed building is broken down into Uniformat categories, systems, and subsystems. The surveyors use standard criteria for scoring each subsystem from 1 to 5, where 1 is Excellent, and 5

[2] http://www.uniformat.com/index.php/classification-of-building-elements

[3] Since 1999 GASB 34 has required government agencies to improve Basic Financial Statements, including periodic Condition Assessment of capital assets; subsequent protocols were developed by GSA, NASA, States, NCUBO and others with most sharing similar definitions of BMAR, CRV & FCI.

is Unsatisfactory[4]. These subsystem scores are combined to a weighted average (based on importance) to the system level. A similar weighed calculation is performed at the category level, resulting in a 1-5 score for the building as a whole. This is called the Weighted Average Condition Score (WACS).

For both WACS and FCI, the lower the number, the better the condition, or relative condition.

Table 2. FCI and WACS

Facility	FCI	WACS
City Hall / Station 41	0.20	3.15
City Hall Annex	0.26	3.43
Community Center	0.26	3.45
Fire Station 42	0.13	2.78
Fire Station 43	0.13	2.83
Lacamas Lake Lodge	0.07	2.21
Library	0.12	2.68
Police Station	0.11	2.53
Mobile Office	0.16	3.11
Public Works Operations Center	0.13	2.76
Scout Hall	0.20	3.54
Wastewater Treatment Plant		
Bio-solids Dryer Building	0.07	2.52
Control Building	0.05	3.04
Digester Building	0.06	2.38
Equipment Building	0.17	3.24
Main Office	0.11	2.69
UV Building	0.09	2.71

Cost Overview

Estimated costs are *calculated* for short-term Observed Deficiencies (ODs) and *modeled* for long-term Predicted Renewals (PRs). The deficiency costs in the Facility Details Report show direct costs plus typical construction markups as well as project development markups (design, management, etc.).

Table 3 shows the total deficiencies and predicted renewals for each facility.

[4] A full description of the scoring metrics for all subsystems can be provided upon request.

Table 3. Total ODs and PRs by Facility

Facility	Predicted Renewals 2028-2041	Observed Deficiency 2022-2027
City Hall / Station 41	$3,518,800	$2,804,000
City Hall Annex	$809,600	$1,102,000
Community Center	$991,600	$2,653,000
Fire Station 42	$1,494,000	$572,000

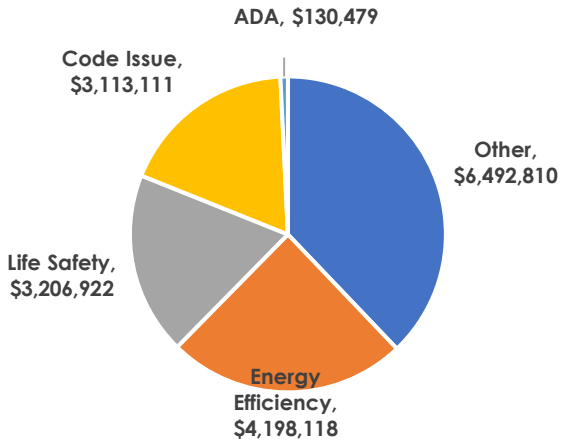
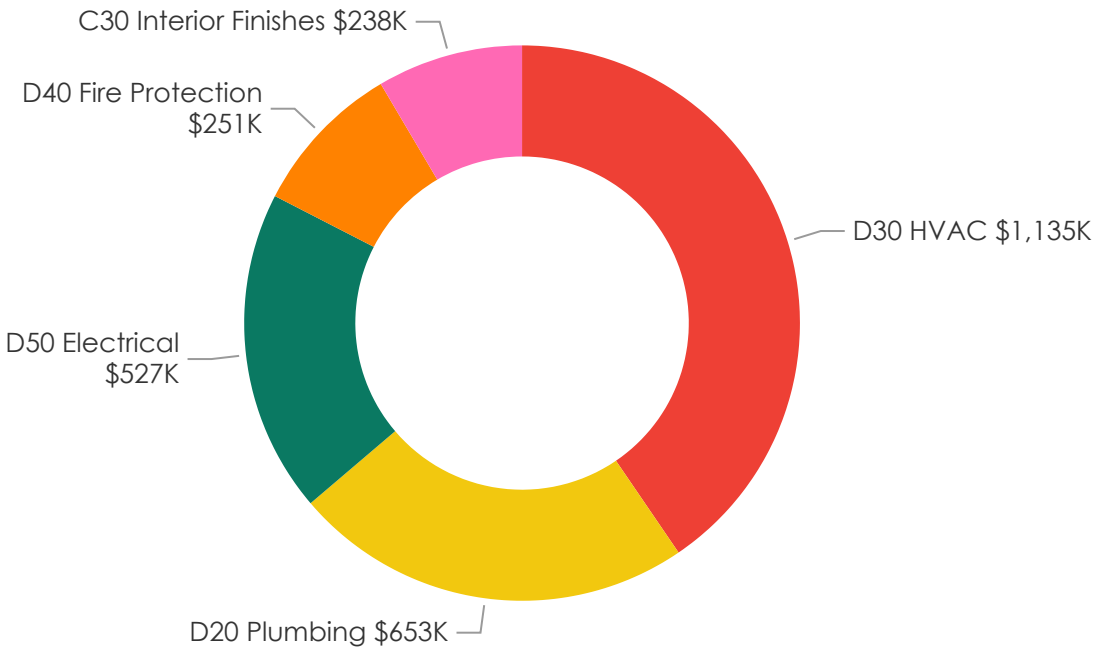
Observed Deficiencies



For a notable issue to be considered an Observed Deficiency (OD), the surveyor must think that the issue needs to be addressed within the next 5-year period, with an expected direct cost of $5,000 or greater. Each deficiency is assigned an action type to help prioritize the order in which it should be addressed. The following pie chart shows the ODs broken out by action type.

For the 2021 FCA, ODs total approximately $17M.



Priority ODs are those in the "Life Safety" and "Code Issue" categories, which total approximately $6.3M. Detailed descriptions, photos, and cost estimates of these deficiencies can be found in the Facility Details Report (Volume 2).

Pages 7 to 15 show a graphic representation of the ODs by Site, broken out to Uniformat Level 2 Systems. These graphics can be viewed in greater detail in the Microsoft BI Dashboard that accompanies this report.

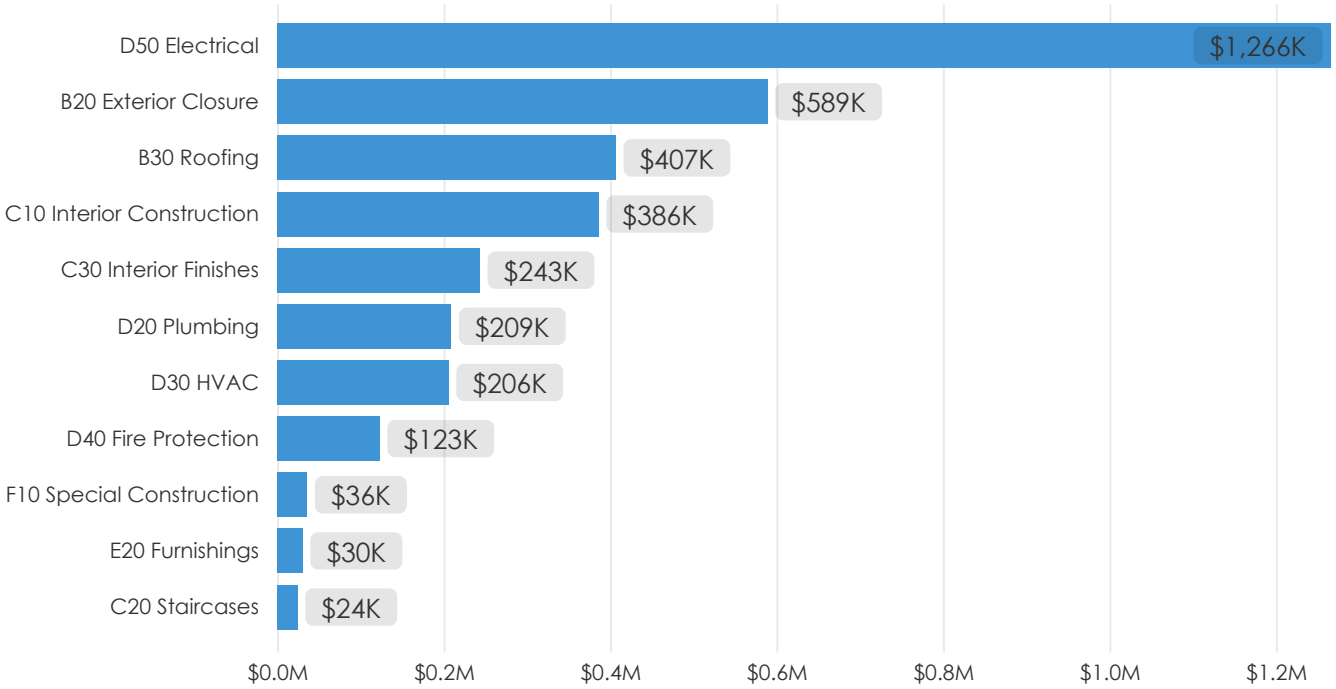
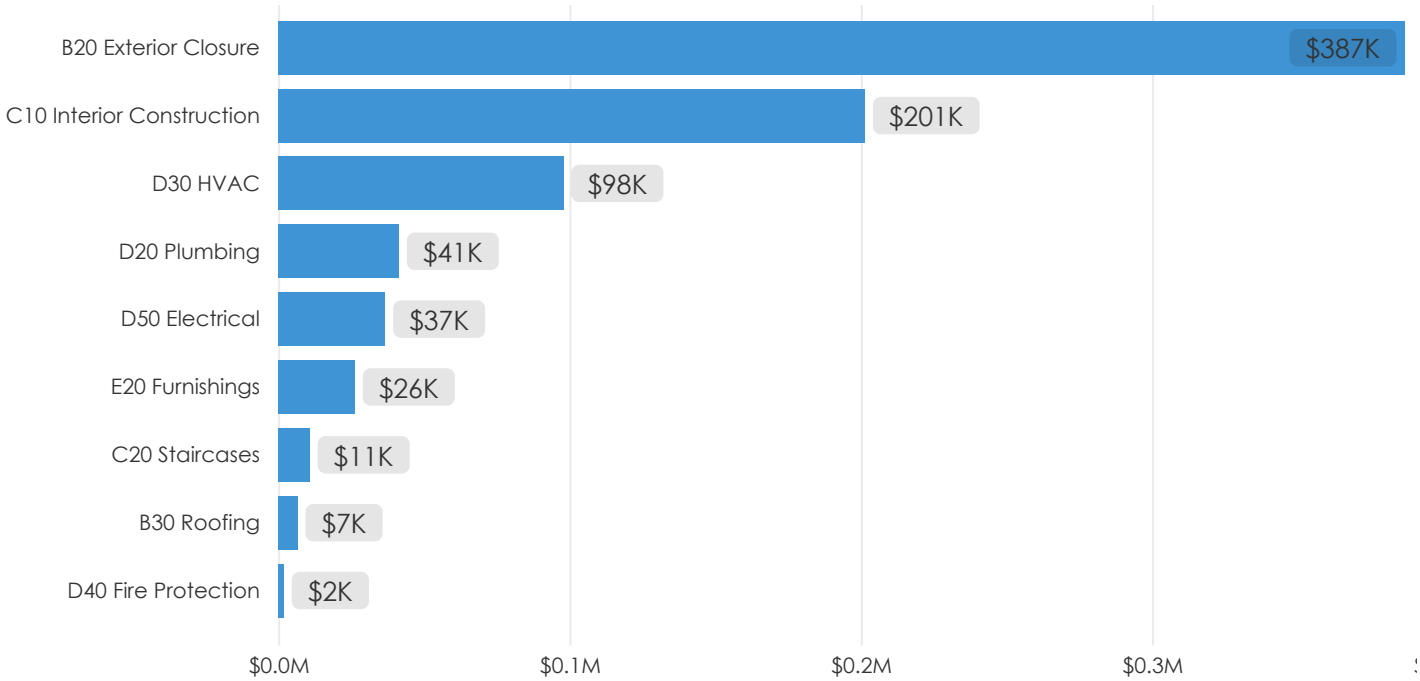
Predicted Renewals

Predicted Renewals (PRs) are modeled for the years 2028 – 2041, based on the system type, age, current condition, expected useful life, and anticipated replacement cost. These costs are based on predictive models, and therefore should be used as high-level long-term planning tool. Some systems may fail sooner or last longer than the model predicts based on maintenance practices, intensity of use, or extreme weather events.



For the time period of 2028 – 2041, the estimated PR cost is approximately $18M The highest cost year is expected to be 2029 at just under $4.5M. The detailed PR table included in the Appendix shows these PRs broken out by facility, subsystem, and year.

Figure 2. Predicted Renewal Totals by Year



Pages 17 to 25 show a graphic representation of the total predicted renewals by site, broken out by Uniformat Level 2 categories.

Facility Condition Assessment

Volume 2: Detailed Facility Report

Prepared by MENG Analysis

Facility Summary

City of Camas
City Hall / Station 41
City Hall / Station 41

616 NE 4th Ave
Camas, WA 98607

Facility Size - Gross S.F.	28,080
Year Of Original Construction	1967
Facility Use Type	Community Center
Construction Type	Heavy
# of Floors	2
Energy Source	Gas
Year Of Last Renovation	1967
Historic Register	No

			Total Project Cost	Total Project Cost Present Value
Weighted Avg Condition Score	**3.2**			
Facility Condition Index (FCI)	0.20	**Predicted Renewal Budget 2028 - 2041**	$3,048,000	$3,519,000
Current Replacement Value (CRV)	$10,371,000	**Observed Deficiencies 2022 - 2027**	$2,743,000	$2,804,000
Beginning Budget Year	2022	**Opportunity Total Project Cost**	$3,693,000	N/A

Facility Condition Summary

The building houses City Hall, administrative functions, Fire Station 41, and the permitting and land use offices. The building is a two-story concrete structure with an additional basement (a former firing range, now used for records storage). The roofing is a 2017 membrane roof, exterior walls are a combination of mid-century modern patterned precast concrete panels, and cast concrete, windows are a mix of the original mid-century tall single-pane and aluminum frame fenestrations, and other newer (1995 and 2001) insulated aluminum and vinyl windows.

HVAC is distributed water-source heat pump with separate ventilation air systems for most regularly occupied spaces. The apparatus bays and hose tower have gas-fired unit heaters. Most sub-basement spaces are not heated, but some have ventilation. Most of the HVAC system is at end of life. Similarly, much of the plumbing piping is at end of life, with multiple aged fixtures; however, the hot water heaters are relatively new. Fire sprinkler is provided in the station house (living and office) area and portions of the basement, but not the apparatus bays, City Hall offices, or City Hall garage; however, relatively modern fire alarm is provided for most areas, except for City Hall main floor. Power is modern 208V three-phase, with obsolete and under-capacity standby generator power. Lighting is mostly lay-in type with mostly aged fluorescent lamps but some upgraded to LED; many spaces include occupancy sensor lighting control. High-speed fiber-optic data is provided, including WiFi service in many regularly occupied spaces; other low-voltage systems are a mix of mostly older and some newer.

616 NE 4th Ave
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
B Shell			**2.9**			
B20 Exterior Closure						
B2030 Exterior Doors	1967	1995	3	TRB	12/01/21	Aluminum storefront. Metal overhead doors at the fire station. Reportedly, the operating mechanisms and tracks often require maintenance and adjustment (especially considering the amount of use they receive).
B30 Roofing						
B3010 Roof Coverings	1967	2017	2	TRB	12/01/21	2017 white membrane roofing. Existing roof drains from the perimeter gutters are inadequately sized for the volume and roof area (see D2040 Rain Water Drainage).
B3020 Roof Openings	1967	1995	3	TRB	12/01/21	Roof access hatch from access ladder with cage (recommend installing safety extension post at hatch). Solatube-type skylights over the fire house. Nine acrylic bubble skylights over the main entry canopy that are in need of cleaning.
B3030 Projections	1967	1967	3	TRB	12/01/21	Freestanding entry canopy at the main entrance, and a fabric canopy over the permit center walk ramp and entrance. Hose drying tower (still used for drying hoses).
C Interiors			**3.2**			
C10 Interior Construction						
C1010 Partitions	1967	1967	3	TRB	12/01/21	Gypsum on wood studs. Concrete masonry unit walls in ground and basement level areas. Toilet partitions are painted metal.
C1020 Interior Doors	1967	1967	3	TRB	12/01/21	Wood doors and frames, most accessible doors have ADA-compliant hardware, but some utility-type doors with knob hardware. Some doors with wire glass.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
C Interiors			**3.2**			
C10 Interior Construction						
C1030 Fittings	1967	1967	3	TRB	12/01/21	Chair rail and wainscot wood paneling in council chambers. Miscellaneous fire station storage and equipment fittings. One stair railing loose.
C20 Staircases						
C2010 Stair Construction	1967	1967	3	TRB	12/01/21	Concrete stairs typical, no issues reported. Metal stairs from the fire house down to the apparatus bays.
C2020 Stair Finishes	1967	1980	3	TRB	12/01/21	Carpet at lower level permitting offices is worn and torn and is a trip hazard (replace with general carpet flooring). West stair has cast non-slip treads with vinyl risers. Other stairs are exposed concrete.
C30 Interior Finishes						
C3010 Wall Finishes	1967	2000	3	TRB	12/01/21	Painted finishes.
C3020 Floor Finishes	1967	1995	4	TRB	12/01/21	Carpet in administrative and permitting areas is worn and nearing end of life.
C3030 Ceiling Finishes	1967	1995	3	TRB	12/01/21	Suspended acoustic 2x4 ceiling tiles. Some water stains and some tiles need to be replaced. Based on assumed age, the track and suspension system likely does not meet modern seismic standards.
D Services			**3.3**			
D10 Vertical Transportation						
D1090 Other Conveying Systems	1967	1967	3	DCS	12/01/21	Hose hoist and rack system at hose tower. The hose tower includes a gas-fired unit heater and exhaust fan to assist with hose drying and ventilation of the adjacent apparatus bay.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
D Services			**3.3**			
D20 Plumbing						
D2010 Plumbing Fixtures	1967	1967	3	DCS	12/01/21	Mix of older and newer fixtures, with variety of fixture types and trim (faucets and flush valves), but with no automatic trim observed. Both original rough-concrete block and newer one-piece fiberglass showers. Minimal support for decontamination, and no safety showers and/or eyewash observed throughout. Only single-height (non-ADA) drinking fountains observed. Bottled water stations set up in multiple locations.
D2020 Domestic Water Distribution	1967	1967	4	DCS	12/01/21	Mostly original galvanized water piping with low flow to some fixtures and increasing problems from rust and other particulate fouling plumbing fixture trim. Discolored water at less frequently used fixtures. Use of bottled water throughout. At least three newer domestic hot water theaters - two electric tank-type and one tankless gas-fired serving the remodeled station house area. No apparent submetering between City Hall and Fire Station 41. No apparent deduct meter for cooling tower make-up.
D2030 Sanitary Waste	1967	1967	4	DCS	12/01/21	Mostly original cast iron drain, waste, & vent (DW&V) piping, and some newer cast iron and non-metallic where observed. Many tested fixtures are slow to drain or flush. Reports of increasing frequency of back-ups and overflows. Original galvanized pipe to trap primers with uncertain performance.
D2040 Rain Water Drainage	1967	1967	4	DCS	12/01/21	Low-sloped roof to perimeter metal gutters, then down to exterior metal downspouts, in turn down to storm to north and to grade to south, with frequent back-ups and water intrusion into the building, damaging finishes and disrupting occupant work.
D2090 Other Plumbing Systems	1967	1967	3	DCS	12/01/21	Sump pump in pit at basement mechanical room. Newer air compressor in apparatus bay storage room.

D Services				**3.3**			
D30	**HVAC**						
D3010	**Energy Supply**	1967	1967	3	DCS	12/01/21	Rusty gas piping on roof; no submetering; minor maintenance to address either separately.
D3020	**Heat Generating Systems**	1967	1995	3	DCS	12/01/21	One Laars gas-fired boiler serving the water-source heat pump (WSHP) condenser water loop, with assumed recirculation pump internal to the boiler. Two gas-fired unit heaters in the apparatus bays - one older, one newer.
D3030	**Cooling Generating Systems**	1967	1985	4	DCS	12/01/21	Aging cooling tower in poor location, but with newer water chemistry control system. Dedicated condensing unit for data center cooling.
D3040	**HVAC Distribution Systems**	1967	1967	4	DCS	12/01/21	Distributed water-source heat pump (WSHP) system with condenser water loop including two 7.5-hp constant speed condenser water pumps, expansion tank and head tank. Dedicated outside air system (DOAS) ventilation with no apparent heat recovery for City Hall area with rooftop gas-pack type unit at grade to south between City Hall and Saw Shop buildings. Separate DOAS with heat recovery for the FS-41 station house area. Ductwork is a mix of sheet metal mains and sub-mains, open plenum return and factory-insulated flex-duct. While there are no operable windows for the City Hall area; many FS-41 offices and living areas do have operable windows. City Hall lobby restroom exhaust fans are reportedly not operable - minor maintenance to repair or replace.
D3050	**Terminal and Package Units**	1967	1967	4	DCS	12/01/21	Four new water-source heat pumps in City Hall finance area; otherwise reportedly all original.
D3060	**Controls and Instrumentation**	1967	1967	4	DCS	12/01/21	Standalone thermostats for each water-source heat pump, unit heater, and similar. Original relay control of central plant condenser water. No networked controls.

D30 HVAC						
D3090 Other HVAC Systems and Equipment	1967	1995	3	DCS	12/01/21	Three apparatus bay make-up air louvers, with exhaust air up and out via one side-wall propeller fan in the hose tower. The louvers are partially blocked by stored material and/or bunker gear - minor maintenance to clear airflow paths. No separate bunker gear drying room. No vehicle engine exhaust system. No carbon monoxide (CO) and/or nitrogen oxides (NOx) control or monitoring. Somewhat newer below basement slab radon gas extraction system. Original basement shooting range exhaust system - abandoned in place. Apparent floor sweep collection exhaust system, with discharge to top of the hose tower - also abandoned in place. Garage exhaust for City Hall parking garage, partially blocked by storage and no apparent make-up air system, such as screened louvers.
D40 Fire Protection						
D4010 Fire Protection Sprinkler Systems	2009	2009	3	DCS	12/01/21	Six-inch service to four-inch riser in sub-basement, with four-inch fire department connection, with 2.5-inch main serving several basement areas, and four-inch main serving the station house (office and living) areas - all in good condition. No fire sprinkler for City Hall offices or parking garage and no fire sprinkler for apparatus bays.
D4020 Stand-Pipe and Hose Systems	1967	1967	4	DCS	12/01/21	Original fire hose cabinets with hoses removed and replaced with fire extinguishers; assume galvanized pipe in poor condition, same as the potable water system.
D4030 Fire Protection Specialties	1967	1995	2	DCS	12/01/21	Fire extinguishers in cabinets and on hooks; AED in cabinet; first aid kits; special extinguishers in data center area.
D50 Electrical						
D5010 Electrical Service and Distribution	1967	1967	3	DCS	12/01/21	Square D 208V, 600A main distribution panel, supplying Panels A, B, C, D, & G, plus automatic transfer switch (ATS) via breakers; and Panels E, F, and other devices via gutter system. No renewable energy system.

Facility Summary

City of Camas
City Hall / Station 41
City Hall Infrastructure

616 NE 4th Ave
Camas, WA 98607

Facility Condition Summary

The property is fully developed, housing the combined City Hall and Fire Station 41 building, and a small asphalt parking lot on the southeast corner. There is also a small landscape zone with a picnic table and flag pole on the northwest corner of the property.

City water and fire sprinkler service, but no observed or reported irrigation. City sewer with failing side sewer connections due to age and tree root intrusion. Some piped and mostly surface sheet flow storm south to City street storm drainage. Northwest Natural gas, Clark County PUD 208V three-phase power, and high-speed fiber-optic data, plus plain old telephone service (POTS) for legacy systems.

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G20 Site Improvements						
G2010 Roadways	1967	1967	3	TRB	12/01/21	Concrete apparatus approach is broken and failing at one bay, and another will be in the future. Two bay concrete approaches replaced (one recently).
G2020 Parking Lots	1967	2000	3	TRB	12/01/21	Asphalt parking lot on the southeast corner for staff and the public. Lot is in fair condition but there are some cracks and alligatoring, and the lot is tight. No public ADA parking to access permitting.
G2030 Pedestrian Paving	1967	1967	3	TRB	12/01/21	Pedestrian paving is generally limited to public sidewalks, an ADA ramp and stair to the main entry, and an asphalt built-up ramp to the concrete landing step at the permit center. Significant street tree root upheaval is causing significant inconsistency in sidewalk surface, trip hazards, and ADA access issues. Ongoing maintenance is replacing sections and grinding off differential to prevent trip hazards. West egress concrete stair is experiencing concrete failure.
G2040 Site Development	1967	1967	3	TRB	12/01/21	Flag pole, picnic bench, minor areas of chain link fencing.
G2050 Landscaping	1967	1967	3	TRB	12/01/21	Mature landscaping with no irrigation system. Street trees are causing significant damage to sidewalks and causing ADA and trip hazards (see pedestrian paving section). Cut all landscaping material away from the face of the facility.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G30 Site Civil / Mechanical Utilities						
G3010 Water Supply	1967	1967	3	DCS	12/01/21	The original approximately two-inch water service enters from north to basement City water meter; the original meter at the sidewalk may be abandoned in place; piping is original galvanized where observed. A 2009 fire sprinkler six-inch service enters from the east side of the site, with backflow preventer in the sub-basement, and fire department connection at the street. Pressure is 130 psig observed at the riser base. No irrigation was system was reported or observed.
G3020 Sanitary Sewer	1967	1967	3	DCS	12/01/21	The side sewer to the City sewer at the street is reported to have been recently inspected and found in acceptable condition, but may need replacement in five to ten years due to age.
G3030 Storm Sewer	1967	1967	3	DCS	12/01/21	Some roof drains and several catch basins and apparatus bay apron trench drains, are piped to the City storm system at street to south. The parking lot to south mostly sheet flows downhill to the street to south. Most observed catch basins and trench drains are mostly blocked by leaves - minor maintenance to clean. No oil/water separator observed.
G3060 Fuel Distribution	1967	1967	3	DCS	12/01/21	Northwest Natural Gas meter No. 1091017 with 1,000 cfh capacity, includes seismic shut-off valve and four branch lines assumed to serve: 1) City Hall gas-fired furnace, 2) Building water-source heat pump condenser water loop boiler, 3) Apparatus bay unit heaters, and 4) Station house domestic hot water heater.
G40 Site Electrical utilities						
G4010 Electrical Distribution	1967	1967	3	DCS	12/01/21	Overhead power to utility pole-mounted pot-type transformers at pole to west, then down and underground to the main electrical room, with Clark PUD meter No. 81-464-091 nearly hidden in the small alcove between the south center of the City Hall building and the northeast corner of the private saw shop.

Facility Condition Summary

Formerly a bank constructed in 1960, with a drive-through teller addition in 1974. The design is an excellent example of mid-century modern bank architecture constructed of brick, with linear canopy overhang leading to the main entry. It is a single-story building with a full basement. Older built-up roofing with ongoing minor leak issues being addressed by maintenance. The facade is brick and exterior windows were replaced with thermally glazed units in a bronze anodized aluminum storefront. Interior finishes are generally in poor condition, and ceilings and floors contain asbestos, including ductwork.

Two HVAC systems; larger to east with air handling equipment in basement and condensing unit on roof, and smaller packaged gas-pack unit to west. Aged plumbing fixtures, and failing potable water and sewer systems. No fire sprinkler or fire alarm. Power is modern three-phase, but may be undersized at 208V, 400A. Lighting is increasingly obsolete fluorescent. Low voltage systems are a mix of mostly older and some newer.

Facility Condition Summary

The current community center is repurposed from a 1916 school building. The two-story structure (the ground floor is actually a daylight basement) is constructed of timber and wood on brick or concrete walls covered in cement plaster. There was an addition to the length of the south facade of about 12' now housing a kitchen (remodeled in 1995), bathrooms, and offices. The basement level is largely unfinished (and contains an abandoned mechanical room) and is currently used as storage for the City and other community organizations. The upper floor contains large meeting and banquet rooms and a large ball room, as well as small toilet rooms and offices.

The building is functionally inadequate for use as a proper community center. The configuration and spaces make this difficult to house parks and rec and community events, classes, and other functions. It has limited space utilization but is used by groups such as the VFA. The current toilet rooms are a large concern for these user groups, and although there is a kitchen, it is not a commercial kitchen to support functions.

Based on the age of the facility and observed structural construction details, it does not appear that this building has received any seismic safety upgrades. A seismic and structural safety evaluation should be conducted to assess the conditions, and provide recommendations for structural improvements.

HVAC is forced-air heating and cooling on the main floor (upper level) with inefficient electric resistance heat and old split-Dx cooling. There is no apparent ventilation from the mechanical system. Ventilation appears intended from operable windows, some of which are no longer operable - this may be a code violation, especially for a community center, and particularly with ongoing COVID-19 pandemic risk - further investigation is suggested prior to increased public use. The basement (lower level) has no HVAC service, excepting two electric resistance unit heaters in the two spaces at the far west end. Basement areas cannot be used for human occupancy without meeting basic code-required heat and ventilation requirements.

Plumbing is mostly original or older, with undersized children's fixtures for elementary school use; one observed domestic hot water heater; some support for the residential-type kitchen. No fire sprinkler or fire alarm, other than fire pull-stations with unclear functionality. Obsolete residential-style 120/240V, single-phase power. Aged fluorescent lighting. Minimal low voltage systems, but with apparent high-speed fiber-optic data sub-fed from the Public Works site one block to south.

City of Camas
Site: Community Center
Facility: Community Center

B1010 Floor Construction	Score	Survey Year	Budget Year	Qty	Unit Cost	Unit	Direct Cost	Marked Up Cost
	5	2021	2022	1	$25,000.00	LS	$25,000	$48,960

Deficient Material: **Structural Evaluation**

Based on the age of the facility and observed structural construction details, it does not appear that this building has received any seismic safety upgrades.

Remedial Action:

A seismic and structural safety evaluation should be conducted for the entire structure to assess the conditions, and provide recommendations for structural improvements.

Estimate provided is for structural evaluation and design only. Actual construction work to provide seismic and structural upgrades cannot be quantified at this time, but likely will be substantial.

Action Type:

Facility Summary

City of Camas
Community Center
Community Center Infrastructure

1718 SE 7th Ave
Camas, WA 98607

Facility Condition Summary

Roughly half of the property houses a community center building, and the southern side is comprised of a tight parking lot with tree island geometry that makes maintenance difficult. The landscaping around the west and north of the building is overgrown. An ADA ramp was constructed on the south side in 2008. There is an adjacent gravel overflow lot across the street to the west that is in need to vegetation removal.

City water and sewer, but no fire sprinkler or apparent irrigation. Clark PUD power, but no natural gas to this all-electric building. High-speed fiber-optic data appears sub-fed from Public Works Operations Center to south. Apparent abandoned underground fuel oil storage tank in yard to southeast.

Facility Condition Summary

Single-story fire station (with a small mezzanine for storage, MDF, self-contained breathing apparatus (SCBA) tank room, and workout equipment), offices, a large Emergency Operation Center/training/conference room, and a three-bay pull-through apparatus bay. The building is generally in good condition. The roofing is standing seam on pitched wood trusses. Exterior walls are brick veneer base and cement lap siding above on gable ends on wood frame exterior walls. Windows are thermal glazed units in aluminum frames.

HVAC includes three gas furnaces with split-Dx cooling for station house, and overhead gas-fired infrared heat for the apparatus bays. Plumbing is conventional with support for apparatus bay equipment. Fire sprinkler and alarm throughout. Power is 208V, three-phase to the separate generator building, then underground to the main fire station building. Lighting is increasingly obsolete fluorescent with all manual control. Low voltage systems are minimal and aging.

Restroom and shower sheet good flooring is delaminating near showers and staining under urinals. Kitchen flooring has deep gouges. Entry hall quarry tile finish is blistering uneven (either original fired glaze is wearing off or wax finish issue). Strip and refinish entry.
C3030 Ceiling Finishes	2001	2001	3	TRB	11/05/21	Suspended 2x4 acoustic tile. Some minor areas of water stained tile from roof leaks. Some areas of gypsum.
D Services			**2.8**			
D20 Plumbing						
D2010 Plumbing Fixtures	2001	2001	3	DCS	11/05/21	Restrooms with tank-type water closets, flush valve urinals, and manual faucet lavatories; bathrooms with same plus one-piece fiberglass showers; janitor closet with mop sink; stainless steel kitchen sinks with disposals, and dual-height drinking fountain. Water closets nearly all flush slowly, suspected due to gravity tank-type operation. All manual plumbing fixture trim (faucets and flush valves).
D2020 Domestic Water Distribution	2001	2001	3	DCS	11/05/21	City water to 1.5-inch reduced pressure backflow preventer (RPBP) to copper distribution to station house and apparatus bays; including hose reels in apparatus bays, and exterior utility wall hydrants. One gas-fired domestic hot water heater with recirculation pump on the apparatus bay mezzanine. Multiple filtered water dispensers assumed due to poor water quality. While there are reports of poor water quality fouling plumbing fixture trim, the piping itself shows minimal signs of corrosion and premature failure - hence assume ten to fifteen years remaining useful life for domestic water distribution system.

D20 Plumbing						
D2030 Sanitary Waste	2001	2001	3	DCS	11/05/21	Cast iron drain, waste, and vent (DW&V) piping where observed. Most tested flushing fixtures are slow to flush, assume mostly due to fixtures, not the DW&V piping. Two apparatus bay trench drains, assumed to drain to the exterior oil/water separator with no issues reported.
D2040 Rain Water Drainage	2001	2001	3	DCS	11/05/21	Metal gutter and downspout pipe to cast iron storm where observed; no issues reported, however, cast iron storm drainage is typically problematic - expect shortened life, compared to modern non-metallic storm drain piping; see G3030 for opportunity to collect roof rain water for drill use.
D2090 Other Plumbing Systems	2001	2001	2	DCS	11/05/21	Self-contained breathing apparatus (SCBA) charging with interconnecting high-pressure piping; apparatus and shop air compressor with refrigerated air drier and distribution; equipment is on the apparatus bay mezzanine.
D30 HVAC						
D3010 Energy Supply	2001	2001	2	DCS	11/05/21	Natural gas piping to station house furnaces, apparatus bay infrared heaters and mezzanine domestic hot water heater, kitchen range, and patio BBQ; opportunity to submeter; solenoid shut-off valve(s) interlocked with the station tone alarm call system.
D3020 Heat Generating Systems	2001	2001	3	DCS	11/05/21	Apparatus bay overhead gas-fired low-intensity infrared heaters - aging but functional; expect five to ten years remaining life with continued good maintenance. Combustion air is from the apparatus bay area, exhaust if via B-vent flue up to roof via attic space. Aging Lennox station house high-efficiency, condensing gas-fired furnaces.

Facility Summary

City of Camas
Fire Station 42
Fire Station 42 Infrastructure

4321 NW Parker Street
Camas, WA 98607

Facility Condition Summary

The property houses Fire Station 42, parking for private vehicles, approach aprons for fire fighting apparatus, and a large paved training area which houses a multi-story concrete fire training tower, and yard for practicing vehicular fire and rescue activities. Storm water treatment is a concern as it does not appear to meet modern standards for storm water containment and treatment before being released.

City water, irrigation, and fire; City sewer but via on-site septic tank with pump station to forced main to street. Utility power and natural gas, including a site-wide diesel generator in separate building. Newer high-speed fiber data and communications, plus older plain-old-telephone service (POTS) for legacy systems. Site lighting recently upgraded to LED. No site electronic security. The Camus Fire Department training tower and pumper truck drafting station is at this site, but the tower is excluded from the 2021 FCA scope. Domestic water quality is causing a variety of problems with plumbing piping, valves, and fixtures. The aging septic system is of increasing concern, despite recent pump replacement. The storm water system provides marginal drainage for several landscape areas and has lost integrity for spill containment. The generator building is overly full of combustible, flammable, and/or hazardous material, requiring removal ASAP.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G20 Site Improvements						
G2010 Roadways	2001	2001	3	TRB	11/05/21	Entry concrete curb cut and small length of asphalt drive into parking area. Concrete apron at apparatus bay. Minor cracking at asphalt drive.
G2020 Parking Lots	2001	2001	3	TRB	11/05/21	Minor alligator cracks. Sheet flow of runoff bypasses storm water quality treatment into pond, which is especially problematic at the training yard where contaminants from training on vehicles and burning can potentially enter water system.
G2030 Pedestrian Paving	2001	2001	3	TRB	11/05/21	Concrete sidewalks. Reseal joint at sidewalk adjacent to northeast corner of building.
G2040 Site Development	2001	2001	3	TRB	11/05/21	Flag pole and monument sign. Small brick enclosed patio with BBQ, smoker, brick storage room, and picnic table. Other picnic tables under awning adjacent to training room.
G2050 Landscaping	2001	2001	3	TRB	11/05/21	Mature landscaping, generally well maintained, but does need to be cut away where overgrowing bicycle rack and cut all plant materials away from building facade a minimum of twelve inches and cut tree limbs off roof (eliminate potential for pest vectors). Irrigation system is original, some spray heads are buried in the landscape and according to users, irrigation system appears to be over irrigating, creating marshy conditions in lawn and perimeter of building. Vaults are full of mud.

Facility Summary

City of Camas
Fire Station 42
Fire Station 42 Infrastructure

4321 NW Parker Street
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G30 Site Civil / Mechanical Utilities						
G3010 Water Supply	2001	2001	3	DCS	11/05/21	City water includes separate domestic and irrigation water services with estimated 1.5-inch meter for domestic and 1-inch for irrigation; irrigation backflow preventer (BP) in hand-vault outside, domestic BP inside apparatus bay. Reportedly poor City water quality is damaging piping, valves, equipment, and fixtures. Site fire loop with multiple hydrants, with fire sprinkler service to building via an in-ground vault with double-detector check valve assembly (DDCVA) and fire department connection (FDC) adjacent to vault. The vault includes a sump pump. A large underground fire truck pump test drafting vault is present north of the generator building with no issues reported; assume drafting vault make-up water is from the fire loop. Irrigation controller is in the meeting room storage closet - needs work.
G3020 Sanitary Sewer	2001	2001	3	DCS	11/05/21	Building sewer to septic tank to south; the tank is pumped via force-main to City sewer at the street. Reportedly, the system is original other than one of the pumps that was recently replaced. The control panel appears deteriorated. An oil/water separator is located at the apparatus bay south apron and assumed to serve the two apparatus bay trench drains, and further assumed to drain to the septic system.
G3030 Storm Sewer	2001	2001	3	DCS	11/05/21	Several paved area catch basins assume to drain to one of the bioswales, in turn draining to one of the three on-site storm water ponds, which in turn appear to flow to the larger City vicinity storm water pond north of the site. Significant portions of the paved areas sheet flow to swales via curb cuts. The vehicle fueling area appears to include a containment area draining to a treatment system, but this is currently blocked; the fire training fixture and car fire training areas drain to the triangular storm water pond via curb cuts, which have been blocked with apparent oil-absorbent rolls, but nearly all appear saturated.

	4	2021	2023	2	$3,500.00	EA	$7,000	$13,709

Deficient Material: **Storm drain**

Storm drain is insufficient for several landscape areas, resulting in localized flooding during heavy rain.

Remedial Action:

Install additional storm water drainage capacity for excessively wet landscape areas.

Action Type:

Facility Condition Summary

Single-story fire station (with a mezzanine and hose tower). Originally a combined Fire / Police Station, including fire administration, the building has been adapted and now dedicated to fire station operations only after 2003 (the former police sally port garage is now a storage and work out area, jail cells have been adapted as storage). Roofing is pitched metal, exterior cladding is metal, some locations over a CMU base, windows are thermal insulated operable vinyl. Several code issues identified should be addressed: fire/smoke separation at apparatus bay from living areas, auto shut off of oven/cook top and BBQ with alarm call, egress compliance from sleeping/dorm, among others.

HVAC is forced-air heating and cooling from gas furnaces with split-Dx cooling for the station house area, excepting the southeast dorm rooms which are electric split-Dx heat pump; the apparatus bays have gas-fired unit heaters. There no apparent mechanical ventilation for the station house, other than operable windows for some areas. There are small exhaust fans for the large apparatus bay area. City water with gas-fired hot water heater. No fire sprinkler, but a modern fire alarm system is present. Power is light commercial 120/240V, single-phase from Clark PUD with propane-fired generator back-up. Lighting is fluorescent with manual control. High-speed fiber and cable is present for telecommunications. A large cell tower antenna with modular equipment building is present at the back of fire station, with assumed ground-lease to AT&T.

As the fire station approaches 50 years of age, it is due modernization, with sub-optimal site traffic flow, difficult wildlife (bird) issues, marginal site storm drainage with repeated flooding at the main entry and ongoing water damage at much of the building perimeter, deteriorating hardscape and softscape, inefficient space configuration, poor thermal envelope, increasingly obsolete single-phase power, fluorescent lighting, and R-22 refrigerant HVAC equipment, minimal apparatus bay ventilation with no vehicle engine exhaust, unheated and unvented hose tower, dispersed bunker and turn-out gear management, aging plumbing fixtures and failing appliances, no fire sprinkler system, and other concerns. The site, building, and building systems should be fully modernized. The underlying pre-engineered metal building (PEMB) structure appears sound, but is typically considered sub-standard for modern permanent public safety buildings.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
C Interiors			**2.9**			
C30 Interior Finishes						
C3020 Floor Finishes	1974	2003	3	TRB	01/11/22	Carpet is stained, worn, and at end of life. VCT and sheet good areas in fair condition except for area in kitchen where flooring removed due to water damage.
C3030 Ceiling Finishes	1974	2003	3	TRB	01/11/22	Suspended acoustical tile, spot areas of water damage. Others painted hard lid.
D Services			**3.0**			
D20 Plumbing						
D2010 Plumbing Fixtures	1974	2000	3	DCS	01/11/22	Multiple restrooms and locker rooms with mostly newer water closets, urinals, and lavatories, but older showers. Failed and damaged kitchen cabinets and sink, with temporary deep sink - minor maintenance to replace sink as kitchen is rebuilt, following water damage from leaking dishwasher. Stainless steel double-basin decontamination sink in the main apparatus bay. No observed hydration station or decontamination shower. At least one water closet removed to allow repair of general construction following recent dishwasher leak - minor maintenance to reinstall or replace.
D2020 Domestic Water Distribution	1974	1974	3	DCS	01/11/22	Original 1.5-inch water service entry with galvanized steel pipe, to newer copper tubing where newer fixtures were installed about 2000; gas-fired domestic hot water heater - aging but functional with five to ten years remaining life with good maintenance. Staff report long wait times for hot water at station house fixtures, given remote domestic hot water heater in apparatus bay utility room and no apparent recirculation pump - minor maintenance to install a recirc line and pump.
D2030 Sanitary Waste	1974	1974	4	DCS	01/11/22	Cast iron drain, waste, and vent (DW&V) piping, with some fixtures flushing or draining somewhat slow, with increasing back-ups. No apparent grease interceptor for the kitchen, despite presence of a Type 1 grease hood.

Facility Summary

City of Camas
Fire Station 43
Fire Station 43 Infrastructure

1400 A Street
Washougal, WA 98671

Facility Condition Summary

Property contains the fire station, but is also the access for a very small public park to the south that includes a concrete half basketball court, and lawn area. There are also a number of connex storage containers for Fire, Police, and Parks Departments.

Just to the south of the building there is an area leased to a communications company (AT&T) and contains a fenced in cell tower and adjacent portable controls building.

Facility Condition Summary

Single-story community center with several meeting rooms, a large main hall, office, and prep kitchen. Roofing is a pitched composition shingle roof with daylight dormers, exterior cladding consists of a combination of fiber cement composite board and batten and lap siding, and areas of basalt stone base and column elements. Exposed stained timber frame look trusses and columns. Windows are thermal units in composite aluminum and wood.

HVAC is four gas furnaces in attic mezzanine with split-Dx cooling including economizer; one gas-fired fireplace, plumbing support for warming kitchen and men's and women's restrooms; no fire sprinkler, but modern fire alarm; light commercial 120/240V, single-phase power; mix of fluorescent and LED lighting; modern low-voltage systems.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
D Services			**2.3**			
D30 HVAC						
D3020 Heat Generating Systems	2014	2014	2	DCS	01/12/22	Four high-efficiency (condensing) Lennox gas-fired furnaces all located at the attic mezzanine; two larger and two smaller. The associated leak detection system is reportedly to generator false alarms, however, signs of past moisture leakage were observed - regardless, minor maintenance to correct leakage and/or repair or replace leak detection sensors.
D3030 Cooling Generating Systems	2014	2014	2	DCS	01/12/22	Four exterior split-Dx condensing units; one 2-ton, one 1.5-ton, and two 5-ton; providing service to four inside evaporator coils connected to the attic mezzanine furnaces and including condensate drainage - see D3020 for moisture detection alarm issue.
D3040 HVAC Distribution Systems	2014	2014	2	DCS	01/12/22	Forced-air heating, cooling, and ventilation with four systems (zones), each with apparent full economizer, but with unclear economizer operation - minor maintenance to investigate and correct as needed. Restroom ceiling exhaust fans, plus telecom/fire alarm control panel room ventilation cooling ceiling exhaust fan. Most or all windows are non-operable.
D3060 Controls and Instrumentation	2014	2014	3	DCS	01/12/22	Four standalone programmable thermostats with unclear economizer cycle control. The Lacamas Lake Lodge is one of the highest energy using facilities in the City building inventory; suspected due to: 1) High-use, including after hours and weekends, 2) Damaged or missing insulation in the attic space, 3) Economizer (free cooling) malfunction, and/or 4) Sub-optimized HVAC and lighting controls.
D3090 Other HVAC Systems and Equipment	2014	2014	4	DCS	01/12/22	Warming kitchen recirculating hoods - may not meet code for service above commercial gas ranges; plus limits use of the otherwise functional kitchen. Sealed combustion gas-fired fireplace in the main event space.

Facility Condition Summary

A two-story municipal library building with a basement. The building was originally constructed in 1940 with a substantial addition and remodel in 2002. Roofing is at end of life and there are constant leak issues related to roofing and flashings. Many of the windows are 2002 thermally glazed, but there are original ornamental doors and windows that are at end of life with rot and decay. Overall, the building is generally in fair to good condition with the exceptions of roofing, exterior doors, some windows, and HVAC controls which are driving the volume of maintenance issues.

HVAC is a four-pipe system with two boilers in the basement and one air-cooled chiller on roof. The four-pipe hydronic system serves five variable air volume (VAV) air handling units, in turn each supplying a network of VAV boxes with hot water reheat; full economizer for free cooling and mechanical ventilation is included. Plumbing for restroom, kitchens, drinking fountains, and utility use. Modern fire sprinkler and alarm. Power is modern 3-phase 208V, but without standby power generation. Lighting is a mix of original fluorescent, with some fixtures upgraded to LED lamps. Somewhat newer communications and data systems, but aged and failing electronic security.

While there are many complaints and problems with the HVAC system, it appears most the issues are related to obsolete and out-of-tune controls.

Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
B Shell			**2.6**			
B20 Exterior Closure						
B2010 Exterior Walls	1940	2002	3	TRB	12/03/21	Brick masonry at original building. Brick veneer on studs and cement stucco (at west "back" facade). Cement plaster is cracking and experiencing moisture intrusion. Emergency overflow also has been draining down the face of the wall, also discovered the overflow inlet pipe was incorrectly installed (see D2040 Rain Water Drainage for further information).
B2020 Exterior Windows	1940	2002	3	TRB	12/03/21	2002 thermally glazed windows in wood windows with metal exterior replaced existing windows and set in existing wood frames. Some sills were not replaced and are rotting.
B2030 Exterior Doors	1940	2002	4	TRB	12/03/21	Three 1940 wood doors and ornamental wood frame trim and single-pane ornamental glass panels and transom in poor condition. 2002 aluminum storefront entry vestibule doors at main entrance with oversized doors that are causing functional operation and maintenance issues.
B30 Roofing						
B3010 Roof Coverings	1940	2002	4	TRB	12/03/21	Cementitious tiles on sloped roofs, white membrane on low-slope roofs, rock ballast over membrane, and copper over dormers and the cupola. Roofing systems are at end of life and, combined with improper flashing and drainage, have been causing constant leak problems. The underlayment below the cementitious tiles has completely degraded, and there is a large hole in the sub-roofing at the intersection of a roof to a wall that is currently leaking. No fall restraint system.
B3020 Roof Openings	1940	2002	3	TRB	12/03/21	Long central spine gable form skylight, no issues reported. Single roof access hatch.
B3030 Projections	1940	2002	3	TRB	12/03/21	Copper clad cupola, entry canopies, east side steel sunshade (in need of cleaning).

Facility Summary

City of Camas
Library
Library

625 NE 4th Ave
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
D Services			**2.8**			
D20 Plumbing						
D2020 Domestic Water Distribution	1940	2002	2	DCS	12/03/21	City water with 2.5-inch service enters basement mechanical room without any apparent backflow prevention, but with an inside pressure reducing valve (PRV) that appears to duplicate function of outside PRV. The inside PRV and associated strainer is bypassed, hence unstrained water is distributed throughout the building, potentially fouling piping, fixtures, and especially trim - minor maintenance to reconfigure this system for proper operation. There have been several recent copper piping failures - further investigation is required as minor maintenance to determine the cause of failure and take action to reduce future failure risk. The City water system provides make-up water to the heating hot water and chilled water systems via a common small reduced pressure backflow preventer (RPBP), with separate PRVs for each. One A.O. Smith 80-gal electric domestic hot water (DHW) heater in the boiler room, with Taco recirc pump.
D2030 Sanitary Waste	1940	2002	2	DCS	12/03/21	Cast iron drain, waste, and vent (DW&V) piping where observed. Tested fixtures flush and drain well, but multiple spaces have sewer gas odor complaints - these may be due to malfunctioning floor drain trip primers - further investigation and maintenance is needed as minor maintenance.
D2040 Rain Water Drainage	1940	2002	3	DCS	12/03/21	Mix of metal gutter and downspout to storm at sloped roof, and roof and overflow roof drains at flat roof. All observed overflow roof drains are missing their code-required two-inch dams, hence the overflow roof drains flow frequently, damaging building walls and landscaping. Several gutters and/or roof drains are reportedly not piped to the site storm system. Some of the metal gutters are difficult to clean due to no roof access, and no practical access through overhanging tress. There are occupant complaints on plumbing piping water flow noises, that may be from the drain, waste, and vent and/or roof drain system - minor maintenance to further investigate and develop mitigation plan.
D30 HVAC						
D3010 Energy Supply	1940	2002	2	DCS	12/03/21	Natural gas piping to boilers and fireplace.

Library
Library

625 NE 4th Ave
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
D Services			**2.8**			
D30 HVAC						
D3020 Heat Generating Systems	1940	2002	3	DCS	12/03/21	Two aging but functional Weil McClain standard-efficiency (80%) boilers, each with 641 mbh capacity; two constant-speed 1.5-hp hot water pumps; and insulated heating water supply and return piping. The boilers should provide ten to fifteen years of additional service with continued good maintenance.
D3030 Cooling Generating Systems	1940	2002	3	DCS	12/03/21	One rooftop McQuay air-cooled chiller with two 2016 compressors, and one 2- or 3-hp constant-speed chilled water pump.
D3040 HVAC Distribution Systems	1940	2002	3	DCS	12/03/21	Four-pipe hydronic distribution piping to five McQuay variable air volume (VAV) air handling units (AHUs), each with variable-speed driven (VFD) supply and return air fans, two-stage filtration, heating coil, and cooling coil. The AHUs supply downstream VAV box terminal units. Exhaust fans for restrooms and kitchen areas. The VAV system needs re-TAB (test, adjust, and balance), as air flows were observed to be inconsistent in multiple areas.
D3050 Terminal and Package Units	1940	2002	3	DCS	12/03/21	Variable air volume (VAV) terminal units with hot water reheat coils. Five electric wall heaters in lobbies, stairwells, and utility spaces.
D3060 Controls and Instrumentation	1940	2002	4	DCS	12/03/21	Aged direct digital control (DDC) HVAC control system, with reported and observed piecemeal repairs and partial upgrades over time, but reportedly has never worked correctly. While there is an original construction TAB report, a Commissioning Report was not observed. There are many occupant comfort and noise complaints, with portable heaters and fans in use throughout, especially in staff areas. The energy use intensity (EUI) is 34, which is good for this nearly 20-year-old library, but could likely be better (lower) with improved controls.
D3090 Other HVAC Systems and Equipment	1940	2002	2	DCS	12/03/21	Gas log set fireplace with brick chimney.

Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G20 Site Improvements						
G2010 Roadways	1940	2002	3	TRB	12/03/21	Small asphalt drive ramp to the basement level loading.
G2030 Pedestrian Paving	1940	2002	3	TRB	12/03/21	City street sidewalks with root upheaval (City regularly grinding pavement slabs to thwart trip hazard).
G2040 Site Development	1940	2002	3	TRB	12/03/21	Flag pole, Library Honey Bee hive, courtyard seating amenities (central area tiles have been removed, leaving a two-inch trip hazard well). Other retaining walls (recommend moss removal). Recent past street flooding entered the exterior stair to the fire riser and mechanical rooms, and flooded the basement. Vaults also flood and drain into the building.
G2050 Landscaping	1940	2002	3	TRB	12/03/21	Mature landscaping includes trees, rose bushes, and other shrubs, bushes, and lawn areas. Landscaping on the east, south, and west were well manicured at the time of observation, but trees and shrubs on the north are significantly overgrown and provide places for hiding (safety and security issue). Cut all branches of trees away from the building, and trim back shrubs and bushes well away from the facade. A number of irrigation system heads are buried under bark and mud.

625 NE 4th Ave
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G30 Site Civil / Mechanical Utilities						
G3010 Water Supply	1940	2002	2	DCS	12/03/21	City water with two-inch meter; City fire with six-inch service; and City irrigation meter. All water services enter from east; water pressure is at 130 psig at fire sprinkler riser base, but there appears to be a pressure reducing valve (PRV) in the domestic water service hand-vault - this should be removed, as there is a newer PRV inside the basement. A backflow prevention device also appears needed - minor maintenance to make these changes. The fire service includes a six-inch fire department connection (FDC).
G3020 Sanitary Sewer	1940	2002	2	DCS	12/03/21	City sewer with no issues reported.
G3030 Storm Sewer	1940	2002	4	DCS	12/03/21	Mix of older and newer storm with multiple site and especially roof drain conveyance issues; past basement flooding from overwhelmed City street storm system uphill - City Public Works should address this as a separate project to reduce risk of flooding to the community. In the meantime, a makeshift one-foot-high piece of wood "protects" the library basement from repeat flooding.
G3060 Fuel Distribution	1940	2002	2	DCS	12/03/21	NW Natural gas rotary meter No. 626834592 with 1500 cfh capacity delivered at 2 psig; includes a mechanical seismic shut-off valve. Assume any original underground fuel oil storage tank was removed during the 2002 modernization.
G40 Site Electrical utilities						
G4010 Electrical Distribution	1940	2002	2	DCS	12/03/21	Clark PUD power down from pole to north, underground to 300 kVA utility pad-mounted 208V, three-phase transformer to north, then underground to the basement main electrical room; PUD meter No. 81-464-092; no standby generator or renewable energy, but one electric vehicle (EV) charging station to southeast.

Facility Condition Summary

A single-story police station constructed in 1997 in good to fair condition overall. The membrane roof was replaced in 2017. The exterior walls are clad in split-face CMU with precast concrete, and are in need of cleaning and resealing. Exterior windows are insulated glazing set in aluminum frames and aluminum storefront entries, in addition to hollow metal doors and frames. The facility also includes a pull-through sally port garage with overhead coiling doors on each end.

HVAC is two rooftop multi-zone units with gas furnace heat and on-board Dx cool, with supply and return duct in the ceiling space; approximately twelve exhaust fans. Plumbing is original copper piping, with newer tankless gas-fired water heater; fixtures are all manual. Fire sprinkler throughout, with mostly concealed sprinkler heads; aged fire alarm system. Power is 480/208V three-phase including both generator-backed automatic transfer switch (ATS), plus uninterruptible power supply (UPS) for critical systems. Low voltage systems include communications, data and security; with mix of older and newer.

Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
B Shell			**2.4**			
B30 Roofing						
B3010 Roof Coverings	1997	2017	2	TRB	11/30/21	2017 white membrane roof. Some leaks reported, but recently fixed. The roof is slick with dirt and algae and needs to be cleaned. Minor areas of standing water observed and debris to be cleaned. Maintenance access walk pads only extend from hatch to mechanical units, and no fall restraint connections provided.
B3020 Roof Openings	1997	1997	3	TRB	11/30/21	Pyramidal skylights, moss growth beginning to accumulate in frames (see B3010 Roof Coverings for cleaning). Roof access hatch in fair condition (but with a bent operator arm), recommend installing safety extension post at hatch.
B3030 Projections	1997	1997	3	TRB	11/30/21	Canvas entry protection canopy, in need of cleaning.
C Interiors			**2.3**			
C10 Interior Construction						
C1010 Partitions	1997	1997	2	TRB	11/30/21	A combination of light-gauge steel, and wood stud walls with gypsum wallboard. Some areas of CMU. Painted metal toilet partitions.
C1020 Interior Doors	1997	1997	2	TRB	11/30/21	Wood doors in hollow metal frames. Steel doors in detention area. Numerous doors and relites with wire glass (now not allowed by code in new construction due to safety issues).
C1030 Fittings	1997	1997	3	TRB	11/30/21	Fittings are generally in good condition, but there are some minor issues in some locations with chair rails and loose trim. Corner guards are light-duty stick-on plastic. Other miscellaneous fittings relating to police station functions.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
C Interiors			**2.3**			
C30 Interior Finishes						
C3010 Wall Finishes	1997	1997	3	TRB	11/30/21	A mix of paint, vinyl wall coverings, and wood panel accent. Areas of gypsum walls in circulation areas are seeing wear and tear.
C3020 Floor Finishes	1997	2019	1	TRB	11/30/21	2019 carpet squares, and 95% of the VCT replaced. Ceramic tile in locker and restrooms, rubber mat flooring in weight room. Areas of exposed concrete (including detention area).
C3030 Ceiling Finishes	1997	1997	3	TRB	11/30/21	Suspended acoustical tile in fair condition with some minor areas of water staining. Gypsum soffits and areas of hard lid in good condition.
D Services			**2.9**			
D20 Plumbing						
D2010 Plumbing Fixtures	1997	1997	2	DCS	11/30/21	Traditional plumbing fixtures at restrooms, locker rooms including showers, dual-height (ADA) drinking fountains, kitchens with stainless steel sinks and disposals, and janitor mop sink; all with manual trim (faucets and flush valves). At least one makeshift kitchenette in detective area.
D2020 Domestic Water Distribution	1997	1997	2	DCS	11/30/21	Two-inch city water service entry to strainer and pressure reducing valve (PRV) with copper distribution piping. The original temperature mixing valves (TMVs) appear to have been bypassed, when the new tankless gas-fired hot water heater with recirculation pump was installed. The strainer is somewhat rusty - minor maintenance to replace. The bypassed TMVs cut-off the pressure gauge - minor maintenance to relocate.
D2030 Sanitary Waste	1997	1997	3	DCS	11/30/21	Cast iron drain, waste, & vent (DW&V) piping where observed, with most tested fixtures flushing and draining slowly, reportedly due to aged waste piping.

D Services			**2.9**			
D20 Plumbing						
D2040 Rain Water Drainage	1997	1997	3	DCS	11/30/21	Roof perimeter scupper and downspouts to storm, with scupper boxes; overflow roof drain openings through parapets as well. While the scuppers and downspouts are working well, the roof slope has multiple low spots with standing water and debris - see B3010 Roof Coverings.
D2090 Other Plumbing Systems	1997	2015	3	DCS	11/30/21	Portable air compressor in the gun cleaning shop; consider a permanent system as minor maintenance. Stainless steel combination water closet and lavatory units in two holding cells. The associated Acorn valves controlling lavatory water flow need adjustment as minor maintenance.
D30 HVAC						
D3010 Energy Supply	1997	1997	3	DCS	11/30/21	Natural gas piping to two rooftop units and the domestic hot water (DHW) heater; no issues reported, noting no submetering between HVAC and DHW loads.
D3040 HVAC Distribution Systems	1997	1997	3	DCS	11/30/21	Two Seasons-4 multi-zone rooftop units with gas furnace heat and on-board R-410A direct expansion (Dx) refrigerant cooling, with variable speed supply and powered exhaust fans, and apparent full economizer (free cooling); including MERV-13 filters at time of field survey. The two rooftop units should have ten to fifteen years remaining life with continued good maintenance. Insulated sheet metal duct distribution in ceiling space to grilles, registers, and diffusers, with apparent ducted return from larger spaces and open plenum return from smaller spaces, and smoke/fire dampers where passing through rated walls. At least twelve exhaust fans; five larger on the roof and approximately seven ceiling exhaust fans discharging up to roof jacks with gravity backdraft dampers.
D3050 Terminal and Package Units	1997	1997	3	DCS	11/30/21	Two ceiling-mounted electric resistance cabinet unit heaters at the front and rear entry vestibules. Three electric resistance ceiling-hung unit heaters at the vehicle sally port and storage garage.

D Services			**2.9**			
D30 HVAC						
D3060 Controls and Instrumentation	1997	1997	4	DCS	11/30/21	Reportedly, all original (1997) Automated Logic direct digital control (DDC) system with observed mix of "Bapi" and Automated Logic thermostats (T-stats) in each temperature control zone. While overall energy efficiency is good for this 24x7 operation facility, with energy use intensity (EUI) of 49 kBtu/sf-yr, there are staff comfort, indoor air quality, and building pressurization complaints. Reportedly the Bapi T-stats have no programmed control of zone temperatures, despite having control buttons and display on-board. Reportedly, there is no remote monitoring of the DDC from outside the police station itself; however, there is an operator workstation set up in one of the storage rooms.
D3090 Other HVAC Systems and Equipment	1997	1997	3	DCS	11/30/21	Fume hood in crime lab, reportedly no longer used, but appears functional. Insufficient exhaust at the gun cleaning room - minor maintenance to increase capacity and ensure adequate make-up air is provided.
D40 Fire Protection						
D4010 Fire Protection Sprinkler Systems	1997	1997	2	DCS	11/30/21	Six-inch service to four-inch riser with 130 psig water pressure; concealed heads in most spaces, with some concealing caps falling down - minor maintenance to replace; no issues reported other than the caps.
D4030 Fire Protection Specialties	1997	1997	2	DCS	11/30/21	Fire extinguishers in cabinets; AED in cabinet.

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
D Services			**2.9**			
D50 Electrical						
D5010 Electrical Service and Distribution	1997	1997	2	DCS	11/30/21	GE 480V, 3-phase, 600A main distribution panel (MDP) appears to serve the east half (office) of the building, plus RTU-1, and sub-feeds the 480V, 400A E-panel, via the 480V, 400A automatic transfer switch (ATS). The E-panel in turn appears to supply the west half of the building including RTU-2. Both the MDP and E-panel in turn appear to sub-feed 480V, 225A distribution panels, which in turn each feed a 480/208V transformer, each in turn powering a 208V, 225A distribution panel. Additionally, a special critical 208V panel is backed by an uninterruptable power supply (UPS). Most the panels include a LineMASTER transient voltage surge suppression (TVSS) device; one in the main electrical room has failed Phase A protection - minor maintenance to repair or replace.
D5020 Lighting and Branch Wiring	1997	1997	3	DCS	11/30/21	Mostly original fixtures with mix of original fluorescent an estimated 25% upgraded LED lamps, but all with manual control; some wall switch devices are failing - minor maintenance to replace. A few receptacles are loose or damaged - minor maintenance to repair or replace. At least one space has floor receptacles, but these were not in use at time of field survey.
D5032 Low Voltage Communication	1997	1997	3	DCS	11/30/21	Original plain old telephone service (POTS) and handsets. Several police radio systems with roof and exterior wall-mounted antennas and interconnecting cabling. Audio/video (A/V) support at meeting, training, and conference rooms.
D5037 Low Voltage Fire Alarm	1997	1997	4	DCS	11/30/21	1997 Radionics zoned (analog) fire alarm control panel; includes interface with fire door hold-open devices and HVAC smoke/fire dampers.
D5038 Low Voltage Security	1997	1997	3	DCS	11/30/21	Aging 1997 Sonitrol electronic security system including card-key access control, intrusion detection and closed-circuit television (CCTV).

Facility Summary

City of Camas
Police Station
Police Station Infrastructure

2100 NE 3rd Ave
Camas, WA 98607

Facility Condition Summary

The site contains a single-story police station constructed in 1997, public parking on the north street front portion of the property, a vehicular gate secured police vehicle parking area to the east, and the sally port access drive loops through to the south and exits via a back drive street. Landscape materials (including tree limbs) should be pruned away from the facility. Generally, the site is in fair condition.

Site utilities include City water for domestic, irrigation, and fire sprinkler; City sewer; City storm; Washington Gas; Clark County PUD power; and local telecom purveyors for communications and data.

G Sitework						
G30 Site Civil / Mechanical Utilities						
G3010 Water Supply	1997	1997	2	DCS	11/30/21	Two-inch City water meter appears to supply two separate reduced-pressure backflow preventers (RPBPs) in hand-vaults for domestic water to the police station building and site landscape irrigation. The RPBPs are covered with dirt - minor maintenance to clean and test performance. Six-inch fire sprinkler service via double-detector check valve (DDCVA) in vault - the vault is partially flooded, minor maintenance to pump dry and service dry well and/or install sump pump. One fire department connection is located on the northwest corner of the building. The Rain Bird irrigation controller is wall-mounted on the west side of the building, adjacent to the electrical service yard. Water pressure is 130 psig observed at the fire sprinkler riser. If there is only one water meter, consider separating domestic from irrigation water as minor maintenance to reduce sewer bill charge from the water and sewer utility.
G3020 Sanitary Sewer	1997	1997	2	DCS	11/30/21	City sewer, with side sewer connection piping recently (Spring 2021) video inspected and found in good condition, with no tree root intrusion.
G3030 Storm Sewer	1997	1997	2	DCS	11/30/21	Both hardscape and softscape drains, plus piped roof drains, all to City storm system at street to south; no issues reported, other than some roof drain downspouts not fully connected to the underground storm piping system - minor maintenance to fully connect.
G3060 Fuel Distribution	1997	1997	2	DCS	11/30/21	Washington Gas meter No. 1167903 with 800 cfh capacity, delivering 2 psig gas via an exterior pressure reducing valve (PRV), reducing pressure to eight inches water column to building via a mechanical seismic shut-off valve. The diesel generator has an estimated 500-gallon belly tank, with unclear tank venting - confirm meets code as minor maintenance.

Facility Condition Summary

The Public Works Operations Center is a single-story building in generally fair condition housing administrative offices and work bays for various department shops and vehicular maintenance functions. The wood structure is clad with a standing seam metal roof, with vinyl lap siding, aluminum insulated glazing, and painted metal person and overhead vehicle doors.

HVAC is original gas furnaces with split-Dx cooling for office area, and gas-fired infrared heat in the high-bay shop spaces, plus exhaust and ceiling fans in the vehicle maintenance shop. Plumbing includes support for locker rooms and kitchenettes, but is minimal in the shop areas. No fire sprinkler and no fire alarm. Power is 208V three-phase, but with no standby generator. Lighting is mostly fluorescent, with some LED. Low voltage systems are minimal, but do include high-speed fiber-optic data service.

Facility: Public Works Operations Center

B1020 Roof Construction	Score	Survey Year	Budget Year	Qty	Unit Cost	Unit	Direct Cost	Marked Up Cost
	4	2021	2022	20,000	$4.00	SF	$80,000	$156,672

Deficient Material: **Roof insulation**

All applications of the vapor barrier were only face stapled and the vapor barrier is tearing away and large sections of the insulation falling down. Additionally, the seams were never sealed and there are areas where interior vapor intrusion has compromised the insulation.

Remedial Action:

Remove and reinsulate roof, and properly install, secure, and seam seal all vapor barrier joints.

As an alternative to reinstalling batt insulation and vapor barrier, you can consider spray foam insulation with vapor barrier prime and coat to the underside of insulation.

At the vehicle maintenance bay where this work has already occurred, verify the foam product used has a perm rate meeting vapor barrier standards. If not, prime and paint with a compatible vapor barrier paint system to prevent moisture intrusion into the foam.

Beginning Budget Year	2022	**Opportunity Total Project Cost**	$29,000	N/A

Facility Condition Summary

A modular building (pre-fabricated office structure) housing the City Water & Sewer Department in two offices on west half, and the Streets & Storm and Facility Maintenance in two offices in the east half. There are metal stairs to each half, but no ADA access, and no restroom or kitchenette facilities. The facility is in fair to poor condition.

HVAC is one Bard wall-pack heat pump with forced-air heating and cooling; the forced-air system no longer functions due to blockage of return air by the department separation walls. No plumbing and no fire sprinkler or fire alarm. Power and telecom are sub-fed from the adjacent main operations building; lighting is fluorescent. There is no gutter for the roof, hence rain water drains off the roof down the wood siding of the structure, slowly degrading the siding and wood trim - minor maintenance to install gutters and downspouts to grade.

Facility Summary

City of Camas
Public Works Operations Center
Public Works Infrastructure

1620 SE 8th Ave
Camas, WA 98607

Facility Condition Summary

Property houses the Public Works Operation Center main building, modular office building, and open air pre-engineered metal canopy structures for equipment and material storage. The site has a public parking area, and the remainder of the property is secured behind security fencing and gates, and include staff and city vehicle parking, and gravel storage yard for larger equipment vehicles.

City water and city sewer, but no fire sprinkler service and no storm drain service - storm is to an on-site storm water pond. Natural gas to the main operations building only. Utility power is underground to the main operations building, in turn powering all other on-site buildings, site lighting, and special loads. Site lighting is minimal. Telecommunications includes high-speed fiber-optic data and legacy plain-old-telephone-service (POTS). Special features include a large vehicle wash rack, vactor-truck decant station, deicing tank with containment, bulk materials storage, and support for extensive yard-stored vehicles and equipment, but no vehicle fueling system.

Facility Condition Summary

This simple wood building with a gable roof was the original one-room schoolhouse in Camas, constructed in 1882. It was relocated to this site in 1907 when it was subsequently repurposed as "Scout Hall" and used by both the Boy and Girl Scouts. Plumbing and electricity appear to have been added in 1930, and the old wood or coal stove replaced with a gas furnace at some point. It appears that recent renovations included metal roofing, cedar shingle siding, and thermal vinyl windows (installed in 1999).

Access to the single front entry is up a flight of concrete stairs with landing, and is not ADA accessible.

The foundation is a concern, with a mix of brick and concrete bearing blocks, with a mix of wood squash blocks, with wood beams gravity bearing. The structure is not seismically tied or secured to the foundation blocks, and there is some beam rot evident. There is about a twelve-inch open crawlspace below the structure, with no perimeter screening. The floor joists are exposed and there is no insulation. There is no vapor barrier below, and the structure is exposed to the soil below.

HVAC includes one gas-fired unit heater, and natural ventilation via operable windows with screens. Indoor plumbing with one unisex bathroom and one drinking fountain. No fire sprinkler or alarm. Single-phase, 120V-only electrical fuse panel; fluorescent lighting with manual control; and assumed abandoned plain old telephone service (POTS), with no other low-voltage systems - minor maintenance to upgrade as needed to support programs and City risk management standards, such as fire alarm, electronic security, and data service.

Detailed Assessment - Observed Deficiencies 2022 - 2027

City of Camas
Site: Scout Hall
Facility: Scout Hall

A1020 Special Foundations	Score	Survey Year	Budget Year	Qty	Unit Cost	Unit	Direct Cost	Marked Up Cost
	5	2022	2022	1	$35,000.00	LS	$35,000	$68,544

Deficient Material: **Concrete**

The foundation is a concern, with a mix of brick and concrete bearing blocks, with a mix of wood squash blocks and wood shims, with wood beams gravity bearing on the blocks. The structure is not seismically tied or secured to the foundation blocks.

Remedial Action:

Provide new foundations in a new location with the future park master plan or jack up the structure, and replace foundations with modern concrete footing/piers, seismically tied to the building structure. Recommend increasing height to provide ample crawlspace.

Action Type:

Life Safety

Copyright MENG Analysis 2022

Detailed Assessment - Observed Deficiencies 2022 - 2027

City of Camas
Site: Scout Hall
Facility: Scout Hall

B1010 Floor Construction	Score	Survey Year	Budget Year	Qty	Unit Cost	Unit	Direct Cost	Marked Up Cost
	5	2022	2022	1,200	$42.00	SF	$50,400	$98,703

Deficient Material: **Floor Framing**

The structure is not seismically tied or secured to the foundation blocks, and there is some beam rot evident. There is about an average of 12" open crawlspace below the structure, with no perimeter screening. The floor joists are exposed and there is no insulation. There is no vapor barrier below, and the structure is exposed to the soil below.

Remedial Action:

Inspect and replace any rotten or insect compromised timbers and joists. Seismically secure structure to new foundation (see A1020 Special Foundations). Insulate underside of floor deck. Install sealed vapor barrier in crawlspace. Provide crawlspace skirt with critter screening around perimeter of crawlspace to thwart infestation while maintaining natural ventilation.

Action Type:

Facility Condition Summary

A single-story building housing offices, lab, and break/conference room.

HVAC is one packaged rooftop heat pump unit, plus lab fume hood and locker room exhaust fans. Plumbing includes one locker room, one drinking fountain, and support for the lab and breakroom kitchenette. No fire sprinkler or alarm. Power sub-fed from adjacent UV Building. Fluorescent lighting with manual control. High-speed fiber-optic data and SCADA.

Facility Condition Summary

A single-story building houses the bio-solids dryer and sludge storage. A pre-engineered metal building frame integrated with CMU base. The pitched gable form roofing is standing seam metal on steel structure, walls are a combination of concrete masonry units and metal wall panels.

Gas-fired overhead infrared heaters; process exhaust fans; minimal plumbing; no fire sprinkler or alarm; power sub-fed from adjacent Equipment Building.

Beginning Budget Year	2022	**Opportunity Total Project Cost**	$252,000	N/A

Facility Condition Summary

A single-story brick building with a newer membrane roof on wood deck on wood timbers. Converted use in 1997 for controls, and contains three process pumps for secondary treatment, maintenance shop, and operator office. Underutilized, this facility can be updated to house operator work spaces into the former lab, and to accommodate needs with an addition for maintenance shop and storage (see G9090 - Other Site Systems, under Infrastructure).

HVAC includes several electric resistance unit and wall heaters with no mechanical ventilation other then the bathroom exhaust fans - however there are operable windows and doors. Small locker room. Former wet-lab, now used for makeshift office space. Original (1972) plant power system, mostly abandoned in place, plus several newer smaller panels. Aging fluorescent light fixtures. No fire sprinkler or alarm. SCADA panel.

Facility Condition Summary

Houses solid waste processing, between two aerobic digesters, and contains pumps, rotary drum sludge thickener, heat exchangers, and odor control fan no 2.

Gas-fired make-up air unit and space exhaust fan; gas-fired process boiler; plant water; no fire sprinkler or alarm; 480V three-phase industrial power, but no standby generator; fluorescent lighting; SCADA system.

Facility Condition Summary

The Equipment Building is a one-story concrete masonry building with metal trusses and low-slope roof. There is also a basement housing equipment and a small operations office. The building houses equipment for primary and secondary systems including primary treatment pumps, grit removal, secondary blowers, centrifuge, and additional primary and secondary pumps.

Multiple HVAC exhaust fans and some unit heaters, with poor ventilation in several areas, specifically the centrifuge room, with corrosive gasses damaging other systems. One restroom and plant water system. No fire sprinkler or alarm. The electrical room sub-feeds adjacent buildings and process equipment and includes a standby generator. Lighting is aging fluorescent. Minimal low voltage systems; but includes SCADA process control.

Facility Condition Summary

A single-story concrete masonry building with membrane roof on metal deck and structure. This facility houses the tertiary filtration and UV treatment, plant water reuse, and effluent pumps.

HVAC includes electric resistance heat and several exhaust fans. No significant plumbing other than plant water system. No fire sprinkler or alarm. The electrical room serves the east campus area, and includes a 250 kW standby diesel generator. Fluorescent lighting and minimal low-voltage systems, other than process control and SCADA.

Facility Summary

City of Camas
Wastewater Treatment Plant
Wastewater Treatment Plant Infrastructure

1129 SE Polk Street
Camas, WA 98607

Facility Condition Summary

This fence enclosed site contains the wastewater treatment plant and operations office serving the city.

City water, on-site sewer direct to waste-water treatment plant (WWTP), private utility natural gas, public utility power, high-speed fiber-optic data, on-site storm water management, and extensive WWTP process structures, equipment, pumps, piping, and controls.

A WWTP process study was completed by HDR in 2015, with update during the City-wide sewer plan of 2020; plus separate 2020 Gray & Osborne (G&O) Inflow & Infiltration (I&I) study in conjunction with National Pollution Discharge Elimination System (NPDES) permit - reportedly, I&I is substantial and represents a significant Operations & Maintenance (O&M) cost reduction opportunity.

Reportedly, Alliant is contracted to provide maintenance services for building facility HVAC (heating, ventilating & air-conditioning) equipment throughout the WWTP, and reportedly has a detailed list of equipment maintained - noting some equipment does not appear to be fully maintained - further investigation is suggested. All direct process equipment, including foul air exhaust, but not general space HVAC, such as general space exhaust fans and make-up air louvers, are maintained by WWTP O&M staff. WWTP staff use Rockwell Automation's "Fiix" CMMS (computerized maintenance management system) for maintenance management.

G30 Site Civil / Mechanical Utilities						
G3030 Storm Sewer	1972	1997	3	DCS	01/10/22	On-site storm water management with catch basins to storm water detention and apparent infiltration on the southwest portion of the site, reportedly with overflow to the adjacent Columbia River. Localized flooding in several areas, including at the main entry at the southeast corner of the site - minor maintenance to improve. Reportedly, the wastewater hauler truck dump pad drains to storm, instead of to WWTP influent - minor maintenance to redirect.
G3060 Fuel Distribution	1972	1997	3	DCS	01/10/22	One NW Natural gas rotary meter No. 992137 at northwest exterior wall of the Bio-solids Building, with 5,000 cfh capacity; in turn sub-feeding the adjacent Digester Building, reportedly including SCADA gas sub-metering. Additionally, digester gas is distributed from the Digester Building to both the digester boiler and to the bio-solids dryer, reportedly submetered via SCADA to each of these two buildings. Diesel generator fuel tanks are located under the generators in the Equipment and Bio-solids Buildings.
G40 Site Electrical utilities						
G4010 Electrical Distribution	1972	1997	2	DCS	01/10/22	Clark PUD utility power underground to three 480V, three-phase services: 1) Original (1972) Control Building meter No. 88-677-808, with 800A capacity, but largely no longer utilized, 2) 1997 Equipment Building meter No. 81-463-997 with 1,200A capacity, and 3) 1997 UV Building meter No. 41-401-004 (19214-C34IR3) with 600A capacity. The Equipment Building switchgear powers most of the buildings and plant equipment to west; whereas the UV Building switchgear powers the buildings and plant equipment to east, excepting the Control Building and certain loads sub-fed therefrom. There are two 250 kW diesel generators, located adjacent to the electrical rooms in both the Equipment and UV Buildings, in turn sub-feeding automatic transfer switches (ATS) in past mission-critical buildings, but not the Digester and/or Bio-solids Buildings.
G4020 Site Lighting	1972	1997	3	DCS	01/10/22	Aging high-pressure sodium and/or metal halide exterior lighting - aging but functional with no issues reported.

Facility Summary

City of Camas
Wastewater Treatment Plant
Wastewater Treatment Plant Infrastructure

1129 SE Polk Street
Camas, WA 98607

Facility Components

Systems	Original System Date	Last Renewal Date	Score	Surveyor	Survey Date	Comments
G Sitework						
G40 Site Electrical utilities						
G4030 Site Communications and Security	1972	2010	2	DCS	01/10/22	High-speed fiber-optic data service to the WWTP site for City network connection; plus separate fiber-optic system linking each building's SCADA cabinet with others. Minimal site electronic security including keypad entry gate control and limited site perimeter CCTV monitoring.
G90 Other Site Construction						
G9010 Service and Pedestrian Tunnels	1972	1997	2	DCS	01/10/22	Extensive vaults, trenches, stairs, and bridges between buildings and large process equipment - no issues reported.
G9090 Other Site Systems	1972	1972	3	TRB	01/10/22	Landscape and equipment storage. Roughly 30' x 30' garage (reroofed in 2019), but functionally obsolescent due to size.

2022 PROS Plan

Message from the Director

Core to our city, our community, and our residents are the parks, open spaces, forested lands, and recreational system that you've had a hand in building and growing. These treasured amenities compel stewardship as a core value, create great places, and engage our community to be active and healthy. It has been my great honor to start my tenure as Camas Parks & Recreation Director by working with the community, Parks and Recreation Commission, City Council, Planning Commission, City staff and the consultant team to develop this Parks, Recreation and Open Space Plan that will help guide the City and the Parks and Recreation Department over the next 6+ years to maintain, care for and grow this beautiful system we call home. Please join me on the trail to accomplishing our shared vision for Camas.

Trang K. Lam, Parks & Recreation Director

Executive Summary

The City of Camas owns and manages over 1,000 acres of parks and open spaces, which supports a range of active and passive recreation experiences. The park and recreation system provides developed parks with playgrounds, public waterfront access sites, active recreational facilities for team sports, a skate park and 12 miles of walking paths and trails.

Additionally, recreation facilities and services available within Camas are a major community asset and support the physical, mental and social health of community members. Camas residents can also access additional parks, trails, open spaces and recreational facilities provided by Clark County, the Camas School District, the Port of Camas-Washougal, and the cities of Washougal and Vancouver.

This Parks, Recreation and Open Space (PROS) Plan is a six-year guide and strategic plan for managing and enhancing park and recreation services in Camas. It establishes a path forward for providing high quality, community-driven parks, trails, open spaces and recreational opportunities. The Plan proposes updates to service standards for parks and trails and addresses goals, action items and other management considerations toward the continuation of quality recreation opportunities to benefit the residents of Camas.

Camas is preparing for continued growth, with a forecasted 2035 population of approximately 34,100. New investments in parks and recreation will be necessary to meet the needs of the community, support youth development, expand opportunities for inclusion, provide options for residents to lead healthy, active lives, and foster greater social and community connections.

This Plan was developed with the input and direction of Camas residents. The Plan inventories and evaluates existing park and recreation areas, assesses the needs for acquisition, site development

and operations, and offers specific policies and recommendations to achieve the community's goals. Through a robust and COVID-sensitive community engagement process, the Community feedback can be synthesized into three core, community priorities:

- Maintain what we have,
- Fill gaps and improve trail connections, and
- Develop and improve existing park.

With these key community priorities in mind and thorough data driven evaluation of the system, the following Plan findings and recommendations will help Camas meet its growth sustainably:

Maintain what we have

Mindful stewardship of over 1,000 acres of parks and open spaces will require strengthening of maintenance and operational approaches. Specifically, the Plan recommends the preparation of a system-wide Open Space Management Plan to guide City staff in the care, maintenance and stewardship of open space, along with an Urban Forestry Management Plan to examine the health and coverage of the urban forest. These two plans should define an implementation program that effectively carries out the maintenance and operations strategies outlined in the plans.

Fill gaps and improve trail connections & develop and improve existing parks

The Plan includes a modest acquisition program to secure strategically located sites for future parks and/or trail corridors. To connect Camas' residents to destinations throughout the City and provide healthy and safe options for walking and bicycling, the Plan recommends additional trail development, and trail connections including sidewalk and bike lane improvements, along with coordination with local subdivision and site development projects for smaller scale linkages.

Serving existing and future residents will require improvements to existing parks and additional investments in the park, trail and recreation system. To ensure existing and new parks provide desired recreational amenities and offer safe and accessible opportunities to play and gather, the PROS Plan recommends investments throughout the park system to enhance accessibility, safety and usability of park features. Recommended projects include an all-inclusive play area, water feature, pump track, sport field enhancements and mountain bike trails.

Implementing the Plan

The City has built an amazing system of developed parks, trails and open spaces. Per capita, the Camas community enjoys more park land and trail miles than other similarly sized cities. In the last decade, the City has been fortunate to add nearly 463 acres into its system. Despite flat staffing levels since 2010, developed parks have been well maintained; however, park amenities are aging out of their life cycle and levels of service for maintenance of open space have not kept up with acquisition. The City currently relies on Park Impact Fees (PIF), Real Estate Excise Taxes (REET), grants, donations, and general and special revenue funds to finance individual projects or programs. Periodically updating the existing PIF program, which assesses fees on new development to meet the increased demand for parks, will allow the City to obtain future acquisition and development funding from residential development. Dedicated, new funding will be required to finance maintenance and operations, upgrades to, and growth in the parks system to meet community needs.

The Camas community is reaching a size that will result in greater public demand for major facilities investments such as a recreation center with aquatics programs and a sports field complex, which will require additional public and policy conversations. Bond or levy will be needed to augment existing revenue to support major investments such as parkland acquisitions and development, trail development, recreational facilities, waterfront opportunities and general park element upgrades. Such mechanisms would require both political and public support. State and federal grant programs offer additional potential opportunities to leverage available local revenues to fund specific projects.

CHAPTER 1

A Thriving **CAMAS**

When my kids were young, activities such as the Easter Egg Hunt and Boo Bash were important as was safe, accessible and fun playground equipment. Without children in our household, I'm more interested in trails, both walking and biking.

- Online Open House participant

PURPOSE OF THE PLAN

The City of Camas Parks, Recreation & Open Space Plan (PROS Plan) is an update to the 2014 Parks, Recreation & Open Space Plan that builds on the previously completed planning work and incorporates the feedback from an extensive community engagement process conducted throughout 2021. This Plan creates a vision for a thriving, inclusive, and interconnected system of parks, trails, and open space that promotes recreation, health,

Photo: Paul Newmann

environmental conservation, and fiscal responsibility as integral elements of a thriving, livable Camas.

The PROS Plan serves as a blueprint for the growth, enhancement, and management of the City of Camas park and recreation system and assists in guiding decisions related to planning, acquiring, developing, and maintaining parks, open space, trails, and recreational facilities. This Plan also identifies priorities for recreation programs and special events.

The 2022 PROS Plan provides updated system inventories, demographic conditions, needs analyses, and a comprehensive capital project list. The Plan identifies parks and recreation goals and establishes a long-range plan for the Camas park and recreation system, including action items and strategies for implementation over the next six to ten years. The recommendations in this Plan are based on community input, evaluations of the existing park system, operating conditions, and fiscal considerations.

The PROS Plan is part of the City's broader Comprehensive Plan and is consistent with the guidelines established by the Washington State's Growth Management Act. The PROS Plan, updated approximately every six years, allows Camas to remain current with community interests and retain eligibility for state grants through the Washington State Recreation and Conservation Office (RCO), which administers various grant programs for outdoor recreation and conservation efforts.

Planning Process

This PROS Plan represents the culmination of a year-long planning effort, and it reflects the community's interests and needs for parks, open space, trails, and programming - balanced with the realities of budget considerations. The planning process, which included a variety of public outreach activities, encouraged public engagement to inform the development of the priorities and future direction of Camas' park and recreation system. Community members expressed their interests through surveys, an online open house, stakeholder interviews, focus group discussions, tabling at events, online outreach, Parks and Recreation Commission meetings, and City Council meetings.

In addition to community engagement, the actions identified in this Plan are based on:

- An inventory and assessment of the City's existing park and recreation facilities to establish the system's current performance and to identify needed maintenance and capital repair and replacement projects, and
- Service level and walkability assessments to quantify the system's ability to serve current and future residents.

The Plan's capital facilities section and accompanying implementation and funding strategies are intended to sustain and enhance, preserve, and steward the City's critical parks and recreation infrastructure.

Department Overview

The City of Camas Parks and Recreation Department (Department) provides and manages a wide range of places that provide year-round active and passive recreational opportunities for residents and visitors. The Department develops, operates and maintains:

- 16 developed parks, including Fallen Leaf Lake Park
- A variety of outdoor recreation facilities, ranging from playgrounds and picnic areas to boating and water access points, to sports facilities like the Camas Skate Park and Prune Hill Sports Park
- Three indoor recreation and community gathering facilities – the Camas Community Center, Lacamas Lake Lodge, and Scout Hall
- 12 miles of City trails
- Over 1,060 acres of parks and open space

The Department also provides special events and recreational programs – including sports instruction, arts and crafts, and general education programs – for residents of all ages, often in partnership with local businesses.

Guided by Values

As part of this PROS Plan update, the Parks and Recreation Commission took the opportunity to update the Department's vision and mission statements to reflect current community input. The vision and mission statements, along with the PROS Plan goals, will guide the Department's work in the coming years.

Mission:

Camas Parks and Recreation promotes a healthy and sustainable community by listening and responding to the community's needs and desires, protecting and preserving its natural spaces to improve ecological health, and developing and maintaining parks, trails and recreation programs that are welcoming for all.

Vision:

We envision Camas as a thriving, cohesive community that honors a unique legacy of coordinated parks, trails, natural areas and diverse recreation opportunities highlighted by our lakes, rivers and streams. Stewardship and thoughtful enhancement of these assets ensure a safe, healthy, active and balanced lifestyle for all.

Accomplishments Since the 2014 Plan

The 2014 PROS Plan guided City officials, management, and staff in making decisions about planning, operating, and implementing various parks and recreation services. The following represents a short list of the major accomplishments realized following the adoption of the previous Plan:

- Opened the Lacamas Lake Lodge and Conference Center
- Prepared a site master plan to guide renovations to Fallen Leaf Lake Park
- Completed the first phase of field and site improvements for the Prune Hill Sports Park
- Constructed the Cooper's View Neighborhood Park
- Prepared a site master plan to guide renovations to Crown Park
- Acquired multiple properties along the north shore of Lacamas Lake, also known as Legacy Lands, (165 acres) and forest land at Green Mountain (115 acres)

Parks & Recreation Commission

Additionally, the efforts of the Department are guided by the Parks and Recreation Commission, a seven-member advisory group to the City Council. The Commission meets monthly to provide guidance and give recommendations on policy and issues relating to the delivery of parks and recreation services. The Commissioners are appointed by the Mayor and subject to confirmation by the City Council for three year terms.

Current Challenges

Impacts of the COVID-19 Pandemic

The COVID-19 pandemic and the associated health mandates for social distancing have transformed the way municipalities plan for and conduct public engagement. To develop this Plan, the City implemented a sound public process that was compliant with health mandates by using a range of online tools for communications, engagement and community feedback.

Health mandates related to the pandemic also had dramatic impacts on the City's recreation programming and operations, requiring the temporary closure of some facilities, capacity and use restrictions, and the cancellation of recreation programming. However, with improvements in local caseloads, Camas has now begun to offer in-person recreation programs and community events.

Equity, Inclusivity & Accessibility

Much has been written lately about the subject of equity and inclusion. Maintaining and enhancing social equity across recreational opportunities and facilities should be a core function of municipal park and recreation systems. Through this PROS Plan, the City of Camas made a concerted effort to reach out to and engage its historically underrepresented communities, and the City also invested in a dual language community survey to include Spanish.

Also, portions of the City's parks, trails and open space system were developed before the Americans with Disabilities Act (ADA) was implemented. The conditions assessment identified several deficiencies related to ADA compliance. The City must continue to find ways to provide safe and

equitable access to parks, trails, open space areas, facilities, recreation programs and other services.

Growth & Development

Over the past ten years, Camas has seen rapid population growth, which is expected to continue over the coming decade. More residents and new development will increase the need for recreational spaces and experiences across the city and increase the use of existing parks and facilities. Rapid growth will also intensify existing community needs for safe and accessible walking and biking routes as well as the preservation of open space and natural resources. In response, the City should consider ways to improve recreation facilities and parks to adapt to emerging needs, complete crtical connections in the City's extensive trail network, and proactively aquire or preserve parks and open spaces in strategic areas.

Asset Management

Established park and recreation systems require ongoing maintenance to serve the community safely and effectively. Public recreation providers across the country consider maintaining existing park facilities to be a key management issue. Poorly maintained assets – from benches to playgrounds to pools – can fail, either structurally or operationally, posing safety risks and reducing their recreational value. Aging infrastructure may also fail to meet community expectations or need capital upgrades to adapt to changing community needs. However, recreation providers often struggle to establish adequate funding mechanisms for routine and preventative maintenance and repair of facilities as well as the major rehabilitation and replacement of existing recreation facilities at the end of their useful life.

This Plan includes condition assessments of the City's parks and facilities to provide a baseline of current conditions that then informs facility, maintenance, and operations policies and improvements. Proper maintenance of park and recreation assets will prevent them from deteriorating thereby reducing long-term capital and operating costs, maintaining safety, improving public perception and increasing community use.

Active Older Adults

The City of Camas' relatively older population, low rates of disability among residents over 65, and high rates of participation among residents of all ages, indicate a potential local need for active recreation opportunities for active older adults. Nationwide, active seniors are often looking at retirement age differently, and many are transitioning to new careers, finding ways to engage with their community, and focusing on their health and fitness. To meet the needs of active older residents, the City will need to consider how the City's park and recreation facilities and programming can meet the needs of this growing group.

Guiding Documents

This PROS Plan is one of several documents that comprise Camas' long-range planning and policy framework. Past community plans and other relevant documents were reviewed for policy direction and goals as they relate to parks, open space, trails, and recreation opportunities across Camas.

- Comprehensive Plan Camas 2035
- City of Camas Strategic Plan
- Camas Parks, Recreation and Open Space Plan (2014)
- City of Camas Transportation Plan
- Lacamas Lake Management Plan (under development)
- North Shore Lacamas Lake – A Vision for Conservation and Recreation (2017)
- Lewis & Clark Regional Trail Concept Plan (2020)
- Clark County Conservation Areas Acquisition Plan (2020)
- Clark County Parks, Recreation & Open Space Plan (2020)
- City of Washougal Comprehensive Parks & Recreation Plan (2021)

Contents of the Plan

The remainder of the Camas PROS Plan is organized as follows:

- Chapter 2: Community Profile – provides an overview of the City of Camas and its demographics.
- Chapter 3: Community Engagement – highlights the methods used to engage the Camas community in developing the Plan.
- Chapter 4: Classifications & Inventory – describes the existing park and recreation system.
- Chapter 5: Parks & Trails
- Chapter 6: Open Space & Stewardship
- Chapter 7: Recreation & Events
- Chapter 8: Operations & Maintenance
- Chapter 9: Goals & Objectives – provides a policy framework for the park and recreation system grouped by major functional areas and goal themes.
- Chapter 10: Capital Planning & Implementation – details a 6-year program for addressing park and recreation facility enhancements, maintenance, or expansion projects.
- Appendices: Provides technical or supporting information to the planning effort and includes survey summaries, focus group notes, recreation trends, and funding options, among others.

CHAPTER 2

Community PROFILE

Situated in the eastern, hilly portion of Clark County, the City of Camas offers many amenities for the community including a quaint yet vibrant downtown, First Friday evening family events, a beautiful public library, summer farmer's market on Wednesdays, Lacamas Lake and miles of surrounding trails to walk, and much more.

The City of Camas is located along the Columbia River and State Route 14 in southwestern Washington. Incorporated in 1906, Camas is now home to 26,065 residents. Camas prides itself on its small-town character, vibrant downtown, safe residential neighborhoods, and an abundance of open space and trails.

Most of the City is developed with single family homes interspersed with forested green spaces. The City's historic downtown attracts locals and tourists while major employers, including many high-tech manufacturers, provide employment opportunities for city and regional residents. The City is bordered to the east by the City of Washougal and by the City of Vancouver to the west. Camas is located just 20 miles from downtown Portland, Oregon.

The City of Camas provides a wide range of government services and is dedicated to maintaining the community's family-friendly character while providing sustainable economic growth and preserving the city's access to nature. The City's parks, open spaces, trails, and recreational opportunities are highly valued – for recreation, respite, and their ecosystem values.

I love the walking trails through the natural areas SO MUCH!! Would love to have more of them connected.

- Online Open House participant

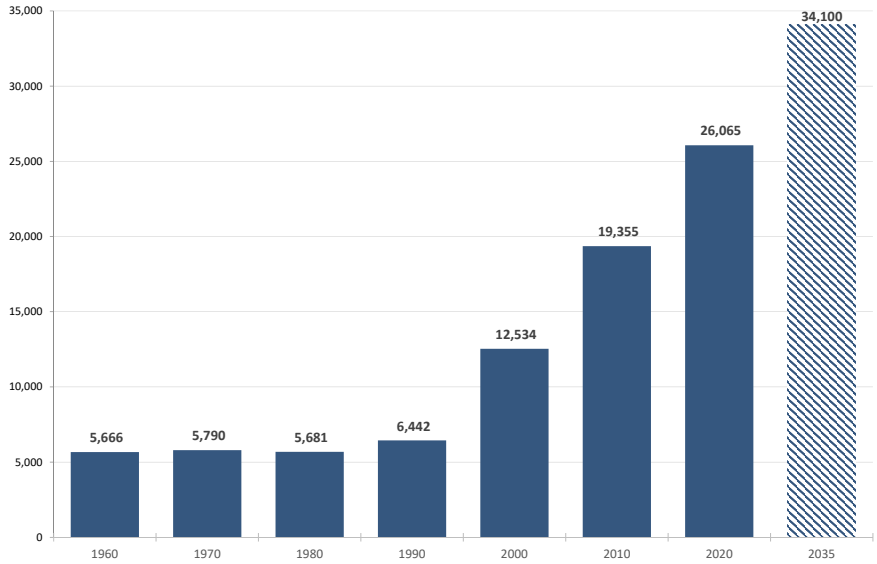
Demographic Profile

Camas is a city of over 26,000 residents and has tripled in population over the past thirty years. The city is home to many families with children, see Figure 1. The City's residents are generally very well educated and have higher incomes than other county residents. Many are employed in the education, health care, professional, or manufacturing sectors, including at the multiple technology companies located in Camas. Residents also commute to other areas of the Portland-Vancouver metropolitan region for work.

Figure 1. Population Characteristics: Camas, Clark County, and Washington

Demographics	Camas	Clark County	Washington
Population Characteristics			
Population (2020)	**26,065**	503,311	7,705,281
Population (2010)	**19,355**	426,709	6,724,540
Population (2000)	**12,534**	347,510	5,894,121
Percent Change (2000-20)	**100.0%**	45.0%	31.0%
Persons w/ Disabilities (%)	**9.1%%**	12.3%%	12.7%%
Household Characteristics			
Households	**9,234**	195,036	3,202,241
Percent with children	**45.1%**	33.8%	30.6%
Median Household Income	**$111,584**	$75,253	$73,775
Average Household Size	**2.81**	2.69	2.55
Average Family Size	**3.16**	3.15	3.09
Owner Occupancy Rate	**77.7%**	67.0%	63.0%
Age Groups			
Median Age	**40.2**	38.4	37.7
Population < 5 years of age	**5.6%**	6.2%	6.1%
Population < 18 years of age	**28.5%**	24.3%	22.2%
Population 18 - 64 years of age	**59.6%**	60.7%	62.7%
Population > 65 years of age	**11.9%**	15.0%	15.1%

Sources: Washington Office of Financial Management Population Estimates, 2020
U.S. Census, 2000 Census, 2010 Census, 2015-2019 American Community Survey



Population and Anticipated Growth

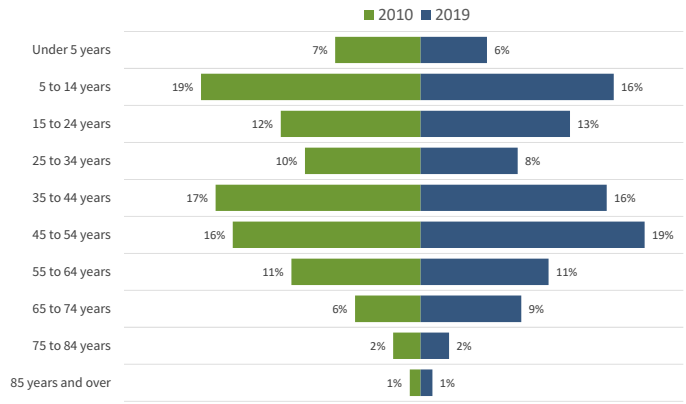
The City of Camas incorporated in 1906 and grew slowly through most of the 20th century, see Figure 2. However, the completion of the Interstate 205 bridge and the opening of Hewlett Packard and Tektronix plants in the mid-1980s spurred rapid growth. Between 1990 and 2000, Camas' population nearly doubled, from 6,442 to 12,534 residents. Continued economic expansion in the technology industry, expansion of the city limits through annexation, and the City's proximity to the growing Portland, Oregon and Vancouver, Washington have spurred steady growth in the past two decades. In 2020, Camas was home to about 26,065 residents and makes up about 5% of the total population of Clark County. Annual population growth has averaged over 5% per year over the past forty years. The Camas 2035 Comprehensive Plan projects that the city will grow to about 34,100 people by 2035, equivalent to about 2.05% annual growth over that period.

In 2020, Camas was home to 9,235 households of which 45% were families with children under 18, and 36% were individuals living alone. The 2019 average household size in Camas was 2.81 people, which is quite a bit larger than that of the county (2.69) and state (2.55).

The size of a community and its anticipated growth over time are key indicators of whether existing park and recreation facilities will be sufficient to meet future needs. Population growth can also result in increased residential density and/or the development of currently vacant land within a city, potentially increasing the need for away-from-home recreation opportunities while simultaneously reducing potential locations for park and open space acquisition. Advanced planning for parks and recreation facilities can help ensure residents can enjoy sufficient, conveniently located parks, open space, and recreation facilities while the community grows and evolves.

Figure 2. Population – Actual and Projected: 1970-2040

Age Group Distribution



Camas has a median age of 40 (2019), older than that of the county (38.4) and state (37.7). The City also has a relatively high population of families with children (45%). These demographics have important implications for park and recreation needs. Adults between 40 to 59 years old make up the city's largest 20-year population group, comprising 35% of the overall population in 2019, see Figure 3.

- Youth under 5 years of age make up 5.6% of Camas' population, see Figure 3. This group represents users of preschool and tot programs and facilities, and, as trails and open space users, are often in strollers. These individuals are the future participants in youth activities.
- Children ages 5 to 14 years make up current youth program, whole-family program, and event participants. Approximately 16% of the city's population falls into this age range.
- Teens and young adults, age 15 to 24 years, are in transition from youth programs to adult programs and participate in teen/young adult programs where available. Members of this age group are often seasonal employment seekers. About 13% of city residents are teens and young adults.

While just over one-third of residents are youth and young adults up to 24 years of age, 43% are 25 to 54 years old, and 23% are 55 and older.

- Adults ages 25 to 34 years are users of adult programs. Approximately 8% of residents are in this age category. These residents may be entering long-term relationships and establishing families.
- Adults between 35 and 54 years of age represent users of a wide range of adult programs and park facilities. Their characteristics extend from having children using preschool and youth programs to becoming empty nesters. This age group makes up 35% of the city's population.
- Older adults, ages 55 years plus, make up approximately 23% of Camas' population. This group represents users of adult and senior programs. These residents may be approaching retirement or already retired and may be spending time with grandchildren. This group also ranges from very healthy, active seniors to more physically inactive seniors.

Figure 3. Age Group Distributions: 2010 & 2019

Race and Ethnicity

According to the 2019 American Community Survey, Camas residents identified as 84% White, 8% Asian, 6% as two or more races, and less than 1% Black or African American, American Indian or Alaskan Native, Pacific Islander, or another race. Approximately 5% of people identified as Hispanic or Latino of any race. Camas' low level of racial diversity is on par with that of Clark County, where 85% of residents identify as White. Camas' population has become only modestly more diverse over the past decade, see Figure 4.

In 2019, approximately 11% of Camas' population spoke a language other than English at home; Asian and Pacific Island languages and other Indo-European languages comprise the largest non-English language groups. However, less than 3% of residents speak English 'less than very well'. Camas has a smaller percentage of people who speak a language other than English at home than compared to Clark County as a whole (15%).

Nationally, the design and marketing of municipal recreation programs have also historically been biased against serving communities of color. In addition, residents who speak languages other than English may face barriers in finding, accessing, and participating in park and recreation facilities and programs. Camas should consider how it could best provide recreational opportunities, programs, and information that are accessible and relevant to, and meet the needs of, all community members.

Figure 4. Changes in Racial Composition - 2000 to 2019

Racial Identification	2010	2019
White	87.4%	83.6%
Asian	6.0%	8.2%
Two or more races	3.6%	6.0%
Some other race	1.2%	0.4%
Black or African American	1.0%	0.8%
American Indian and Alaska Native	0.6%	0.9%
Native Hawaiian & Other Pacific Islander	0.2%	0.1%
Hispanic or Latino (of any race)	4.1%	4.9%

Persons with Disabilities

The 2019 American Community Survey reported 9.1% (2,092 persons) of Camas' population aged 5 years and older as having a disability that interferes with life activities. This is lower than the county (12.3%) and state average (12.7%). Approximately 8% of residents between 18 and 64 have a disability. Among residents 65 and older, the percentage rises to 25%, which is lower than the percentage found in the general senior population of Washington State (35%).

Planning, designing, and operating a park system that facilitates participation by residents of all abilities will help ensure compliance with Title II of the Americans with Disabilities Act (ADA). In addition to ADA, there are other accommodations that people with disabilities may need to access parks and participate in recreation programs. Camas should consider community needs for inclusive and accessible parks, recreational facilities, programs, marketing, and communications.

Employment & Education

According to the 2019 American Community Survey, the 2019 work force population of Camas was 17,743 (76%). Of this population, 68% is in the labor force, 2% is unemployed, and 32% is not in the labor force. Nearly 60% of employed residents work in a management, business, science, or arts occupation. One quarter of employed residents work the education or health care industries, while another 15% work in the professional/management industries. The manufacturing sector also employs a large percentage of local workers (approximately 13%).

Approximately 29% of Camas residents over age 25 have a bachelor's degree or higher, and 82% have at least some college education. This level of education attainment is higher than that of Clark County and the state (in which 68% and 69% of residents have some college, respectively). Additionally, 95% of city residents have a high school degree or higher, approximately four percentage points higher than the statewide average.

Higher levels of employment and educational attainment positively correlate with both the income and health status of a community – both of which have further impacts on the use and need for park and recreation facilities, as described in the next two sections.

Income & Poverty

A community's level of household income can impact the types of recreational services prioritized by community members, as well as their willingness and ability to pay for recreational services. Perhaps more importantly, household income is closely linked with levels of physical activity. Low-income households are three times more likely to live a sedentary lifestyle than middle and upper-income households, according to an analysis of national data by the Active Living by Design organization.

In 2019, the median household income in Camas was $111,584. This income level was about 50% higher than the median income for Clark County ($75,253) and Washington households ($73,775).

Higher income households have an increased ability and willingness to pay for recreation and leisure services, and they often face fewer barriers to participation. Approximately 56% of city households have incomes in the higher income brackets ($100,000 and greater), which is significantly more than across the state (36%).

At the lower end of the household income scale, approximately 6% percent of Camas households earn less than $25,000 annually, significantly fewer than households in Clark County (13%), the State of Washington (15%), and across the United States (23%). In 2019, less than 2% of the city's families were living below the poverty level, set at an income of $25,750 for a family of four. This percentage is lower than the countywide (approximately 5.8%) and statewide (7%) levels. Poverty affects 3% of youth under 18 and 4% of those 65 and older.

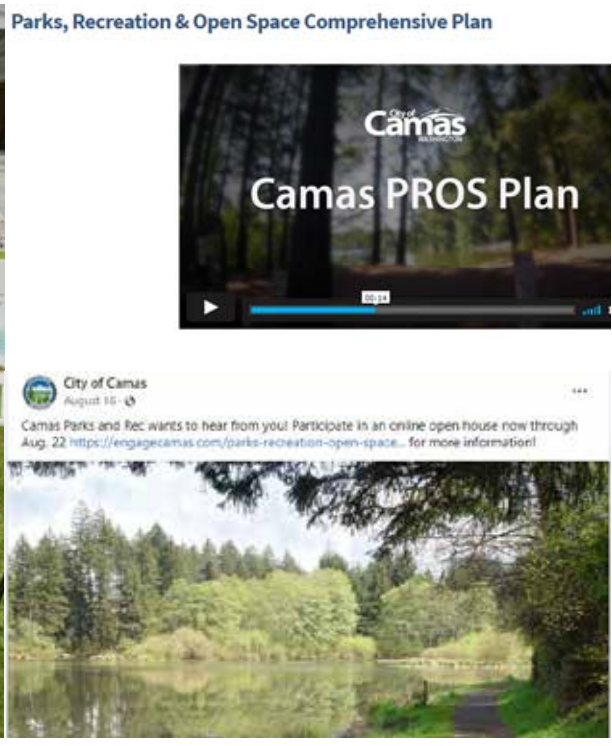
Generally, lower-income residents may face barriers to physical activity, including reduced access to parks and recreational facilities, a lack of transportation options, a lack of time, and poor health. Low-income residents may also be less financially able to afford recreational service fees or to pay for services, such as childcare, that can make physical activity possible.

Health Status

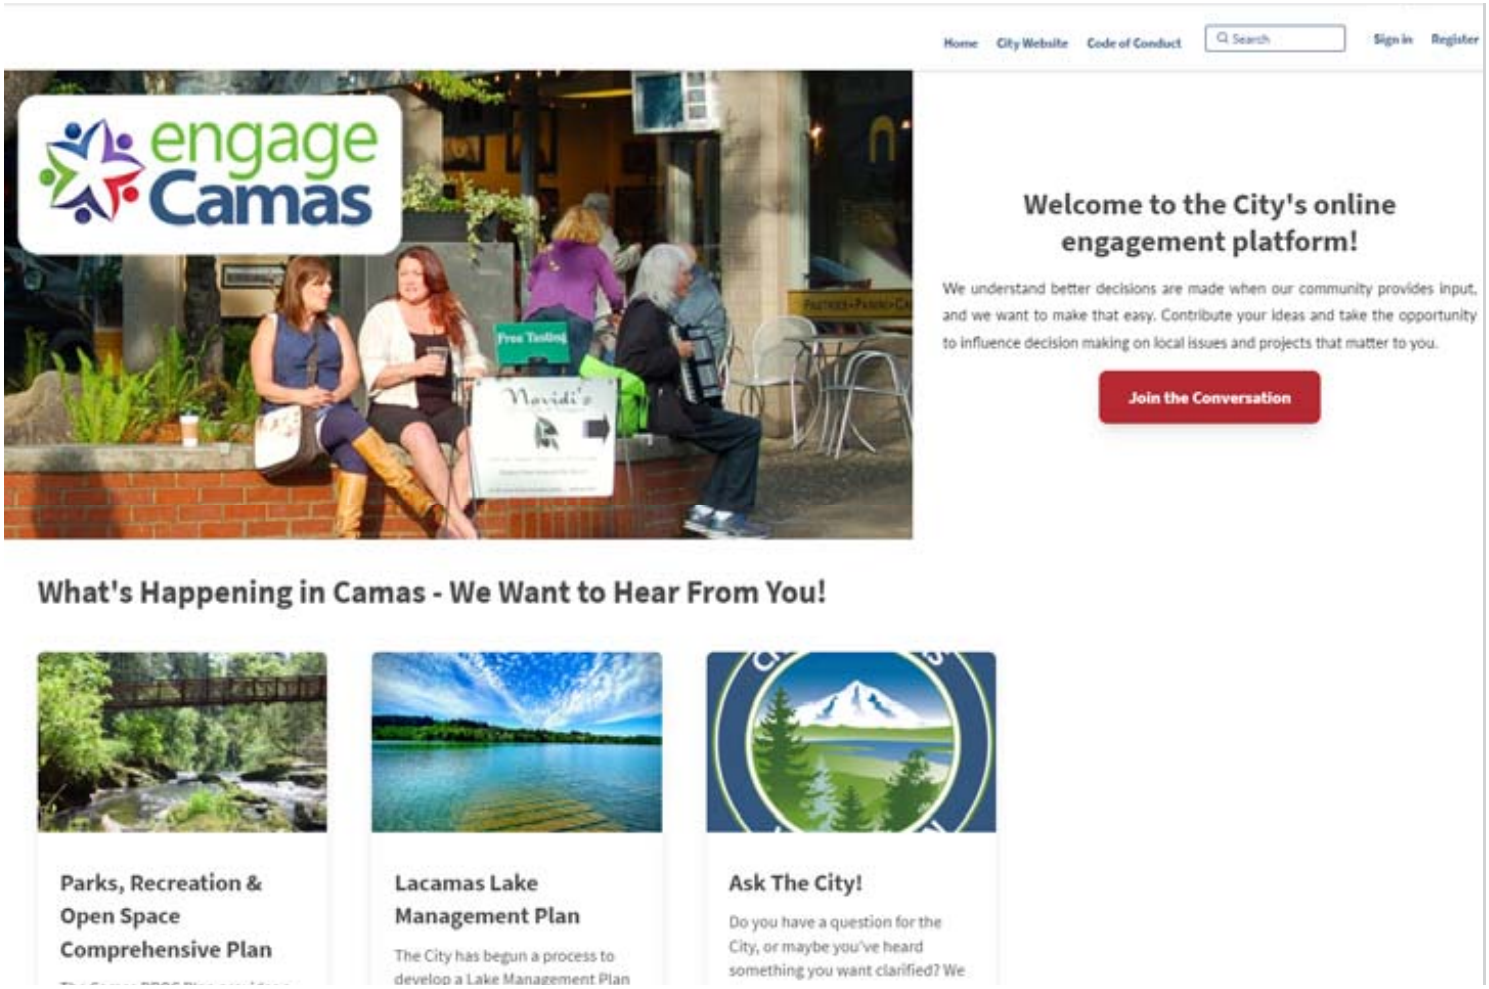
The overall health of a community's residents can impact their ability to participate in recreation and other physical activity and may also reflect, in part, the locality's level of access to appropriate and convenient green spaces, recreation opportunities, and active transportation facilities.

Information on the health of Camas residents was not immediately available. However, according to the County Health Rankings, Clark County ranks in the highest quartile of Washington counties for health outcomes, including length and quality of life.

Clark County residents also rank as some of the healthiest residents in Washington (high middle quartile) when it comes to health behaviors. Only 18% of Clark County adults ages 20 and older report getting no leisure-time physical activity – on par than the statewide average of 17%. This may be due, in part, to the large number of places to participate in physical activity, including parks and public or private community centers, gyms, or other recreational facilities. Over 96% of residents in Clark County have access to adequate physical activity opportunities, more than the 88% average for all Washington residents. However, approximately 29% of Clark County adults are overweight or obese, compared to 27% of Washington adults.



CHAPTER 3



Community **LISTENING**

Community engagement played an essential role in developing the 2022 PROS Plan. Although the planning process occurred during the COVID-19 pandemic, numerous efforts were made to connect with the community, seek their input and provide information about the project. Public outreach methods were varied and extensive, including:

- Random-sample mail survey
- Online community-wide survey in English and Spanish
- Two online open houses
- Stakeholder group discussions
- Individual stakeholder interviews
- Tabling and outreach at multiple community events
- Meetings with the Parks and Recreation Commission, Planning Commission and City Council
- Camas city website and Engage Camas online forum with interactive mapping tool, plan information and feedback opportunities
- Multiple social media postings, email blasts

Over 1,700 participants provided insights on current community preferences and priorities.

COMMUNITY SURVEY

A community-wide, online survey was conducted to assess the recreational needs and priorities of Camas residents. The City mailed 2,500 surveys to randomly chosen households in Camas on May 29, 2021, of which 509 surveys were completed and returned. Online versions of the survey in English and Spanish were posted to the City's website on June 4, 2021. An additional 874 surveys in English and two in Spanish were completed from the general, community-wide online surveys. In all, 1,385 surveys were completed.

Information about the survey was provided on the City's website and on the Engage Camas site for the PROS Plan project. It was promoted via public meeting announcements, multiple social media postings, city email blasts and an email blast through Camas School District mailing list. Print copies were made available at the Camas Library and the Camas School District Family Community Resource Center. Also, signage and flyers with QR codes were placed at numerous parks and local businesses.

The survey measured current levels of satisfaction and which facilities were primarily being used by residents. Residents were asked about future improvements and the types of recreational amenities they would like to see considered for the park system. Survey respondents were asked about:

- Performance and quality of programs and parks
- Usage of city parks and recreation facilities
- Overall satisfaction with the value of services being delivered by the city
- Opinions about the need for various park, recreation, and trail improvements
- Preference for learning about programs
- Priorities for future park and recreation services and facilities, including revenue generation and other funding tools

Significant survey findings are noted below, and a more detailed discussion of results can be found in the needs assessment chapters covering parks, open space, recreation, and trails (Chapters 6 - 8).

Major Survey Findings:

- **Livability:** Nearly all respondents (97%) feel that public parks and recreation opportunities are important or essential to the quality of life in Camas.
- **Usage:** Park visitation is high, with 88% of respondents visiting parks or recreation facilities at least once a month. The most popular activities are walking or running (80%), followed by fitness and exercise (70%), and relaxation (56%).
- **Park Amenity Priorities:** More than three in four respondents are very or somewhat supportive of adding walking trails (87%), updated (75%) and accessible (75%) playground features, and more picnic shelters (74%) to the City's existing parks. A plurality of survey respondents think that Camas does not have enough walking and biking trails (46%).
- **Recreation Facilities & Programming:** Respondents to both the mail and online survey ranked maintaining existing parks, expanding trail opportunities, building new parks, and acquiring land for future parks as their top priorities. More than half of survey respondents felt the City needed more outdoor adventure summer camps, teen activities, adult wellness classes, and programs for adults over 55.

The complete survey summary is provided in Appendix A.

Online Open House #1

The City hosted an online open house to share information about the Camas Parks, Recreation and Open Space (PROS) Plan Update with the public and dive deeper into survey responses to explore more about which park and recreation programs, services and facilities are important to them. More than 130 people visited the online open house from July 29 and August 22, 2021, and 74 community members provided responses in the online open house. The online open house was promoted via social media posts, community event tabling, email blasts and public meeting announcements.

Major Online Open House Findings:

- After-school and summer day camps, outdoor adventure camps and youth sport programs were strongly supported by respondents.
- Top park improvement priorities included building new parks on city-owned land, installing a splash pad and building additional shared-used trails.
- Other top improvements included acquiring and developing trail corridors to fill gaps and providing an off-leash dog area.

A summary of responses to the online open house is provided in Appendix B.

Stakeholder Discussions

COVID-sensitive, online focus group discussions and individual interviews with external stakeholders were conducted to more broadly assess local needs and opportunities for partnership and coordination. Stakeholders were identified by city staff based on their past coordination, their involvement, or interest in the future of recreation, park, athletic or trail facilities. The group-based discussion sessions were conducted via Zoom and occurred between July 2020 and September 2021. Representatives from the following organizations participated:

Summary meeting notes from each focus group session are provided in Appendix C.

Engage Camas Online Forum

The City of Camas has implemented an integrated online engagement platform to their city website, called Engage Camas. The PROS Plan was a highlighted city project on Engage Camas, which included information about the plan update and public process, a video introducing the project, periodic updates and interim project documents, such as presentation materials and summaries from community outreach. Engage Camas was also a primary forum for community members to offer direct feedback, comments and questions. The PROS Plan page was maintained and updated through the duration of the project.

Online Interactive Mapping

On the Engage Camas project page, the public was provided an interactive map of Camas and given the opportunity to share which parks, trails, and open spaces they currently visit in Camas; where they think improvements need to be made; and what new things they would like to see offered in Camas' park system. Eleven unique users submitted a total of 22 comments. A highlight of some of the comments follows:

- Replace the play equipment at Grass Valley Park
- Provide parking on the north side of Lacamas Lake
- At Crown Park, consider new/updated programming to tie in with programs/activities to be offered at new Garfield Performing Arts Center, splash pad or kids pool, new restroom
- Consider a splash pad or community fountain, parking lot and picnic tables at Fallen Leaf Lake

Community Event Tabling

This section summarizes the feedback received at the three tabling events held in July and August to build awareness of the PROS Plan Update and share information about the project. Approximately 50 people were engaged at these events. Tabling was held at the following times and places:

- July 31st at Heritage Park from 10 a.m.-12 p.m. and 1 p.m. - 2 p.m.
- August 17th at Concert in the Park from 6:30 p.m. - 8:30 p.m.
- August 18 at Camas Farmer's Market from 3 p.m. - 7 p.m.

Community comments ranged from concerns about water quality at the lakes, to interest in an expanded trail network, to specific park improvements and enhanced communications from the City.

Online Open House #2

The City hosted a second online open house to share information and seek feedback on the public draft of the PROS Plan in January 2022. The online open house garnered a total of 136 survey responses and 923 site visits. The majority of participants (68%) believe the PROS Plan is on the right track. The two most common requests were for a bike park/pump track and new sports fields. Many respondents would like off road/mountain biking trails and turf and/or lights added to sport fields. A few other notable requests include adding a pool, creating more trail connections, and adding more bike lanes and trails.

Parks & Recreation Commission Meetings

The Parks and Recreation Commission provided feedback on the development of the PROS Plan during five regularly scheduled public sessions. The first session occurred on April 28, 2021, immediately after the planning project was initiated. The Commission discussed the update and provided their perspectives on a vision for the system, specific challenges, opportunities, and ideas about parks, trails and programs. The Commission spent significant effort reviewing and commenting on the PROS Plan public process, project priorities, and system-wide goals and strategies to implement improvement projects. Subsequent sessions in July, September (joint with Planning Commission), October, December 2021 and January 2022 (joint with Planning Commission) were used to review public feedback and solicit direction from the Commission on priorities and recommendations for the new PROS Plan.

Other Outreach

In addition to the direct outreach opportunities described above, the Camas community was informed about the planning process through a variety of media platforms. The following methods were used to share information about the project and provide opportunities to participate and offer comments:

- City website home page
- PROS Plan project page on Engage Camas
- Email blasts to the Parks and Recreation distribution list
- Social media: Twitter & Facebook
- Media releases
- Announcements at Council and Parks & Recreation Commission public meetings
- Announcements at Stakeholder Focus Group meeting

BENEFITS OF PARKS, RECREATION & OPEN SPACE

A number of organizations and non-profits have documented the overall health and wellness benefits provided by parks, open space and trails. The Trust for Public Land published a report called *The Benefits of Parks: Why America Needs More City Parks and Open Space*. This report makes the following observations about the health, economic, environmental, and social benefits of parks and open space:

- Physical activity makes people healthier.
- Physical activity increases with access to parks.
- Contact with the natural world improves physical and psychological health.
- Value is added to community and economic development sustainability.
- Benefits of tourism are enhanced.
- Trees are effective in improving air quality and assisting with stormwater control.
- Recreational opportunities for all ages are provided.

Physical Activity Benefits

Residents in communities with increased access to parks, recreation, natural areas and trails have more opportunities for physical activity, both through recreation and active transportation. By participating in physical activity, residents can reduce their risk of being or becoming overweight or obese, decrease their likelihood of suffering from chronic diseases, such as heart disease and type-2 diabetes, and improve their levels of stress and anxiety. Nearby access to parks has been shown to increase levels of physical activity. According to studies cited in a 2010 report by the National Park and Recreation Association, the majority of people of all ages who visit parks are physically active during their visit. Also, the Centers for Disease Control and Prevention (CDC) reports that greater access to parks leads to 25% more people exercising three or more days per week.

Community Benefits

Park and recreation facilities provide opportunities to engage with family, friends, and neighbors, thereby increasing social capital and community cohesion, which can improve residents' mental health and overall well-being. People who feel that they are connected to their community and those who participate in recreational, community and other activities are more likely to have better mental and physical health and to live longer lives. Access to parks and recreational facilities has also been linked to reductions in crime, particularly juvenile delinquency.

Economic Benefits

Parks and recreation facilities can bring positive economic impacts through increased property values, increased attractiveness for businesses and workers (quality of life), and through direct increases in employment opportunities.

In Washington, outdoor recreation generates $26.2 billion in consumer spending annually, $7.6 billion in wages and salaries, and $2.3 billion in state and local tax revenue. Preserving access to outdoor recreation protects the economy, the businesses, the communities and the people who depend on the ability to play outside. According to the Outdoor Recreation Economy Report published by the Outdoor Industry Association, outdoor recreation can grow jobs and drive the economy through management and investment in parks, waters and trails as an interconnected system designed to sustain economic dividends for citizens.

CHAPTER 4

Classifications & INVENTORY

Need to provide facilities for additional outdoor activities that create community connection and activity. With the number of sporting families, Camas lacks facilities that other communities provide.
- Online Open House participant

The City of Camas manages over 1,000 acres of parks and open space lands, providing several public waterfront access sites, active recreational facilities for team sports, several playgrounds, more than 12 miles of walking paths and trails, picnic areas, and hundreds of acres of natural forest lands.

PARKLAND CLASSIFICATIONS

Parkland is classified to assist in planning for the community's recreational needs. The classifications also reflect standards that inform development decisions during site planning, in addition to operations and maintenance expectations for the level of developed facilities or natural lands. The Camas park system is composed of a hierarchy of various park types, each offering recreational opportunities and natural environmental functions. Collectively, the park system is intended to serve the full range of community needs.

Each park classification defines the site's function and expected amenities and recreational uses. The classification characteristics serve as general guidelines addressing the size and use of each park type. The following six classifications are used in Camas' park system.

Neighborhood Parks

Neighborhood parks provide close-to-home recreation opportunities. These parks provide both active and passive recreation opportunities for people living within approximately one-half mile of the park. Typical facilities found in a neighborhood park include playground equipment, picnic areas, open grass areas for passive use, outdoor basketball court, and multi-use open grass area for field sport practice. Dorothy Fox Park and Cooper's View Park are examples of typical neighborhood parks in Camas.

Neighborhood parks should be located and designed based on the scale and type of surrounding uses. During site master planning, parks in locations with higher residential density should be designed with more resilient features and facilities that can withstand more intensive use.

Site Selection & Design:

- Neighborhood park sites should be 5 to 10 acres in size. The minimum size for neighborhood parks is 3 acres when land constraints do not allow a larger site.
- At least 50% of a neighborhood park site should be suitable for active uses.
- The site should have good visibility from surrounding streets and have a minimum of 200' of street frontage.
- The site should be relatively central to the area it is intended to serve (within about ½ mile of the intended users).
- The site should be accessible by walking, bicycling, or driving. Connections to the community trail network should be provided, where possible, to facilitate walking and bicycling. Sidewalks should be provided.
- Regional-scale facilities (e.g., large sports complex, community center, etc.) should not be provided

Community Parks

Community parks are larger parks, typically between 10 and 30 acres, that provide a wide variety of recreation opportunities that appeal to the entire community. Typically, these sites are designed for active recreation, supported by facilities such as sport fields, outdoor courts, skate parks and recreation centers. Community parks can accommodate large numbers of people and offer a wider variety of facilities than neighborhood parks, such as disc golf, volleyball, tennis courts, dog parks, and group picnic areas. These parks also may serve as destination for access to water and large community events, and they may include significant natural areas and trails. For this reason, community parks require more support facilities, such as off-street parking and restrooms. Community parks can also serve as local neighborhood parks for their immediate areas, and they may be connected to schools or other community facilities. Prune Hill Sports Park and Crown Park are examples of community parks.

Site Selection & Design:

- Community park sites should be 10 to 30 acres in size. The minimum size for community parks is 6 acres when land constraints do not allow a larger site.
- At least 30% of a community park site should be suitable for active uses.
- The site should have good visibility from surrounding streets and provide parking and restrooms.
- The site should be accessible by walking, bicycling, or driving. Connections to the trail network should be provided, where possible, to facilitate walking and bicycling. Sidewalks should be provided.
- Community parks should accommodate diverse active-use recreation, such as sport fields, sport courts and large playgrounds.

Regional Parks

Regional parks may be provided by Camas and also are provided by Clark County - serving residents from throughout Clark County and beyond. Regional parks are usually larger than 50 acres in size and provide opportunities for diverse recreational activities. Facilities may include sports fields, extensive trail systems, or large picnic areas. In addition, regional parks often include passive recreation space and unique features, such as significant natural areas or access to lakes or rivers.

Site Selection & Design:

- Regional park sites should be 50 to 200 acres in size. There is no minimum size for regional parks, since the size of the site relates to the uniqueness of the landscape or recreational experience provided.
- Regional parks should provide parking and restrooms.
- The site should be accessible by walking, bicycling, or driving. Connections to the trail network should be provided, where possible, to facilitate walking and bicycling.
- Regional parks may accommodate active-use recreation and/or passive uses such as trail walking or wildlife viewing. Specialized regional amenities may be provided, such as mountain biking trails, equestrian trails, and water access (e.g., boat ramps & docks).

Special Use Areas

Special use areas are sites that are occupied by a specialized facility or that fulfill a specialized purpose. Some uses that fall into this park type include waterfront parks, pools, boat ramps, interpretive centers, botanical gardens, community gardens, single purpose sites used for a particular field sport or sites that offer indoor recreation opportunities. Fallen Leaf Softball Field, Lacamas Lodge and the Camas Community Center are examples of special use areas in Camas.

Site Selection:

- Site size should be adequate to support the proposed specialized use, as well as necessary supporting facilities, including parking, stormwater management, etc.
- Site selection criteria will be dependent on the specific specialized use proposed, and may include criteria determined through an economic feasibility study.
- The site should be accessible from the community-wide trail system.
- Prior to the addition of any special use areas, the City should prepare a detailed cost/benefit analysis and maintenance impact statement for each proposed site being considered.

Natural Open Space

Natural open space is defined as undeveloped land primarily left in its natural form with passive recreation use as a secondary objective, such as trails. This type of land often includes wetlands, steep hillsides, or other similar undevelopable spaces. In some cases, environmentally sensitive areas are considered as open space and may include wildlife habitats, stream and creek corridors, or unique and/or endangered plant species. There are currently a number of natural open space areas in Camas, and the Ostensen Canyon Greenway and the Prune Hill South Open Space are examples of natural open space.

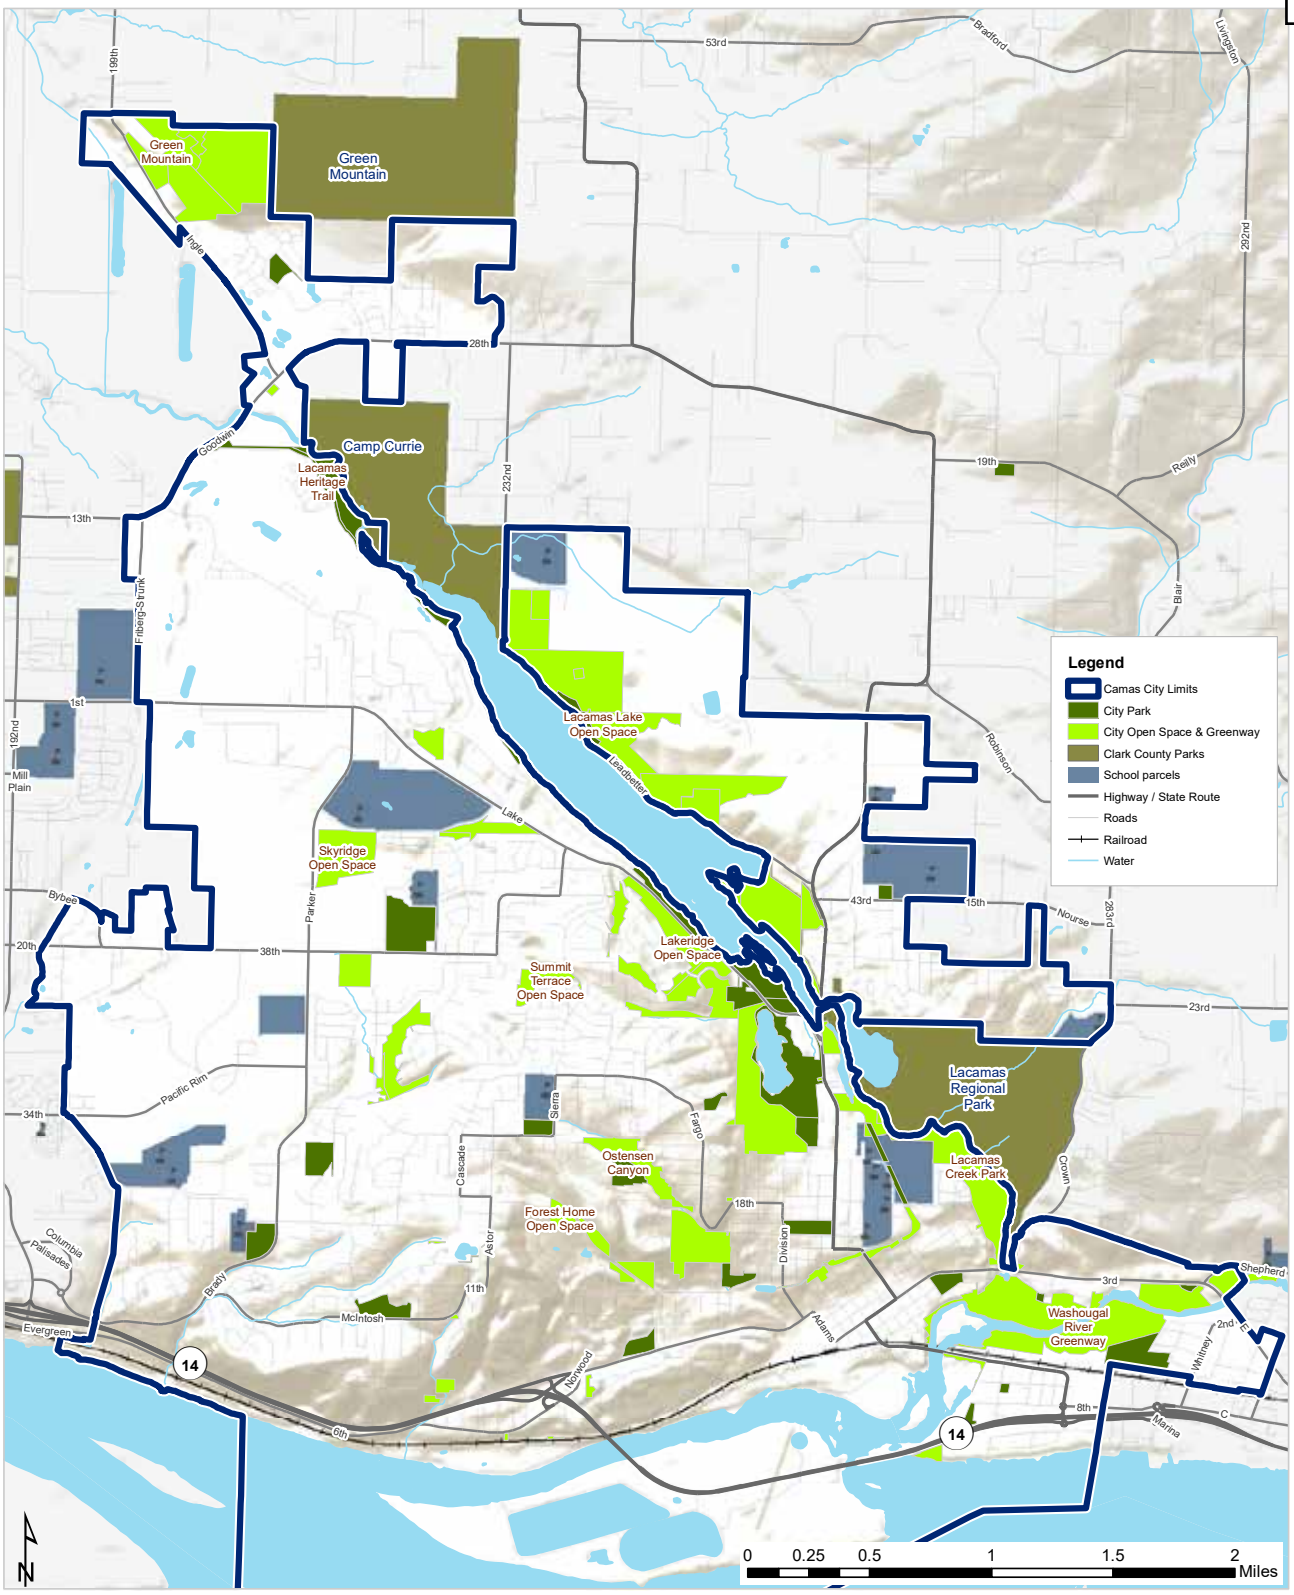
Site Selection:

- Site size should be based on natural resource and connectivity needs.
- Public use of natural open space sites should be encouraged through trails, viewpoints, and other features, but environmentally sensitive areas should be protected.
- The site should have access to a public street, to public land, or contribute to the planned open space network.
- Features in natural open space areas should be limited to those appropriate for the numbers and types of visitors the area can accommodate, while retaining its resource value, natural character, and the intended level of solitude.

Cemetery

The Camas Cemetery is an important historic and aesthetic resource for the City of Camas. Located adjacent to Lacamas Park, the cemetery is a unique, special facility and component of the park and open space system that provides a peaceful resting place and a quiet splace for reflection. The City took over the operations of the cemetery in 2007.

Park & Open Space Inventory



The park and open space inventory identifies the recreational assets within Camas. The City provides 1,068 acres of public parkland distributed among 59 parks and natural area properties, see Figure 6 and 7.

Other Recreational Opportunities Near Camas

The ownership and management of recreational resources in the larger Camas region involves several public agencies. Facilities include parks, trails, boat launches, and other attractions. Though some of these facilities are not located within city limits, their close proximity to residents of Camas makes them important components of the broader recreation ecosystem.

Homeowner Associations

Numerous homeowner associations (HOA) across Camas include open space tracts, and some include small pocket parks serving HOA residents. In all, HOA properties include 385 acres of open space and 43 acres of pocket parks.

School Districts

The Camas School District operates 19 school sites across Camas and, via use agreements, makes certain fields and gymnasiums available for community use by youth sport leagues. Evergreen School District borders Camas to the west and also makes sport fields and gymnasiums available for community use.

Clark County

Clark County provides and maintains a system of regional parks, special facilities, regional trails, greenways and natural areas, in addition to neighborhood and community parks and sports fields in or proximate to the Vancouver urban unincorporated area. The park and open space inventory identifies the recreational assets within the county. The county provides 3,325 acres of public parks and recreation facilities distributed among 88 sites, along with an additional number of greenway parcels that comprises over 3,135 acres of conserved public open space. Within and near Camas, Clark County manages Lacamas Regional Park, Camp Currie, Green Mountain, and Harmony Sports Complex.

Port of Camas-Washougal

The Port of Camas-Washougal provides several recreation opportunities for the greater Camas community.

- Captain William Clark Park at Cottonwood Beach is an 85-acre park that includes walking paths, paved parking, picnic tables, covered cooking areas, a

recognition plaza, three restroom buildings, and replicas of Chinookan canoes and Lewis and Clark's dugout canoes. A two-mile trail on top of the levee at the north side of the Park offers opportunities for hiking, jogging, biking, and horseback riding.

- The 3-mile Lewis and Clark Heritage Trail follows the Columbia River from Steamboat Landing Park to the border of the Steigerwald Lake National Wildlife Refuge. This has been connected to the Washougal Waterfront Park and trail creating a long walking trail into Camas and Washougal.
- Marina Park offers a walking path, picnic tables, an open lawn for entertainment, and a deck overlooking the marina.
- The Natural Play Area features a giant Sasquatch named Eegah along with a hill-side slide, log steppers, xylophone, drums, a boulder maze, and log balancing beams.

Other Urban Park Systems

Adjacent cities provide recreation opportunities that should be considered relevant components of the overall Camas open space system. Some facilities, such as regional trails, will require partnerships and coordination that extend beyond city boundaries. Two adjacent municipalities operate and maintain park and recreation facilities, including:

- City of Washougal: The City of Washougal has over 120 acres of park land, ranging from parks, playgrounds, sports fields, and open space. Washougal's 19 parks include special use areas, including several riverfront sites that enhance Washougal's Park system.
- City of Vancouver: The City of Vancouver serves the community with approximately 1,600 acres of parkland at 113 sites, which includes 90 parks and 20 miles of trails plus numerous natural areas. The city offers a full range of recreation programming and operates two community centers.

CHAPTER 5

Parks & TRAILS

The PROS planning process assesses recreational needs and priorities for park facilities, active use areas, and trails in Camas. The park assessment included a discussion of specific local needs with consideration given to the City's broader park system. Public input and information on park inventory conditions were also heavily relied upon in the planning process.

By considering the location, size, and the number of park facilities by type and use, along with community interests and priorities, the PROS Plan evaluates the existing and future demand for park and recreation amenities and provides recommendations for future initiatives. The six-year Capital Facilities Plan, which identifies and prioritizes crucial upgrades, improvements, and expansions, is based on the needs assessment and the recreational interests expressed by residents.

The recreational interests of Camas residents were captured in the community survey and compared to regional, state and national trend data. Local support for and interest in trails for walking and biking, water access opportunities, and kayaking align with recreation participation data from multiple sources.

Park Use Trends

Various resources have been assembled and summarized to provide an overview of current trends, market demands, and agency comparisons in the provision of parks and recreation services. This information is helpful when balanced with local insights and feedback from the community in guiding future initiatives.

The following national and state data highlights some of the current park use trends and may frame future considerations for Camas' park system. Additional trend data and summaries are provided in Appendix E.

- Nationwide, 82% of U.S. adults believe that parks and recreation are essential according to the American Engagement with Parks Survey from 2020. (1)
- 77% of survey respondents indicate that having a high-quality park, playground, public open space, or a recreation center nearby is an important factor in deciding where they want to live. (1)
- Just over half of Americans ages six and older participated in outdoor recreation at least once in 2019, the highest participation rate in five years. However, the number of outings per participant declined – continuing a decade-long trend – resulting in fewer total recreational outings (pre-pandemic). (2)
- Walking, running, hiking, and cycling saw significant increases in participation in the early months of the COVID-19 pandemic (March to June 2020). (2)
- Running, jogging, and trail running are the most popular outdoor activities across the nation, based on levels of participation, followed by fishing, hiking, biking, and camping. (2)
- Walking ranked as the top activity by participation rate (94%) in Washington State. (4)
- Trail running, day hiking, and recreational kayaking are rapidly increasing in popularity – participation in each increased more than 5% per year between 2014 and 2019. (3)
- People of all ages and income levels are interested in outdoor activities like fishing, camping, hiking, biking, bicycling, and swimming. Younger people are more interested in participating in team sports, such as soccer, basketball, and volleyball. Older adults are more likely to aspire to individual activities like swimming for fitness, bird and nature viewing, and canoeing. (3)

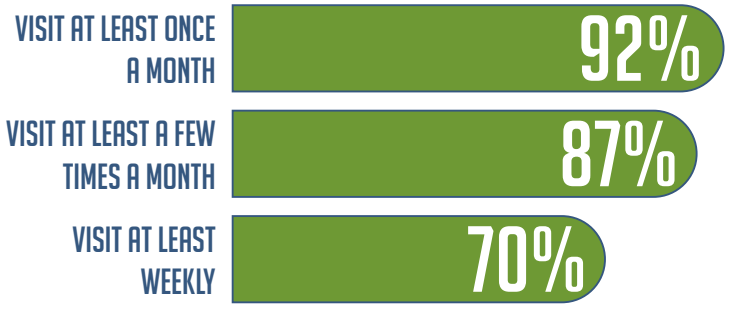
Figure 8. 5-Year Change in Outdoor Recreation Participation by Major Activity (2021 Outdoor Participation Report)

Operational & Service Challenges Due to COVID-19

A statewide survey of Washington park and recreation agencies was conducted in the second half of 2020, with a focus on service demand and operational challenges, both preceding and as a result of COVID-19. City, county, and parks and recreation district leaders were asked to complete the survey, and the survey was sent to 227 agencies - 109 cities, 39 counties, 79 Special Purpose Park Districts with 73 responses. The project was a collaboration between the Washington Recreation & Park Association, the Washington State Association of Counties, the Association of Washington Cities, and Metro Parks Tacoma.

In a question that asked the agency about how stable its outlook is for 2020 pre- and during COVID-19, the percentage of agencies that stated their outlook as very strong and stable decreased by 25 points, with 27.8% indicating as very stable at the beginning of the year to 2.8% indicating as very stable by August 1, 2020. Similarly, agencies that felt moderately or significantly underfunded and unstable rose from 5.5% to 50% by August 1, 2020.

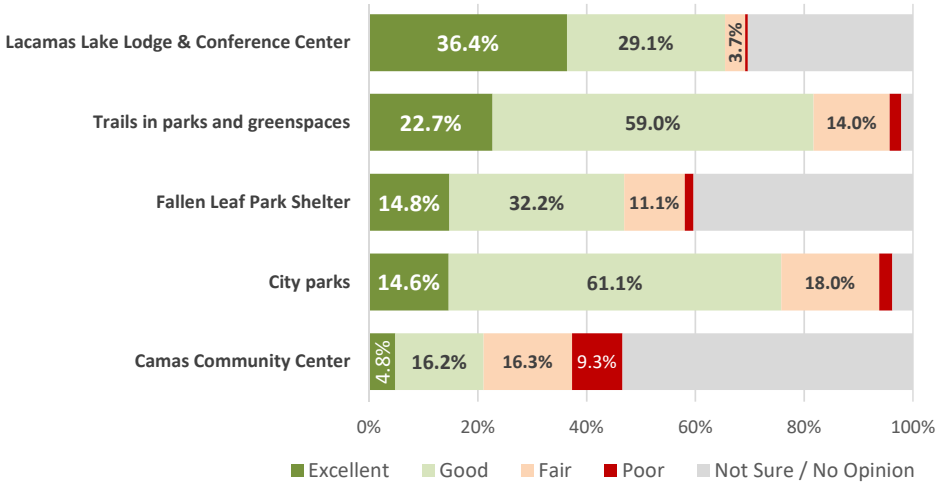
Also, significant majorities of agencies indicated service delivery impacts due to the COVID-19 pandemic in the following ways:



- Reduced ability to manage, maintain, operate, and secure passive parks to safety standards and control access (87%).
- Cancellation of special events and tourism campaigns that support local employment and drives the local economy (87%).
- Inability to operate critical community programs, pools, attractions and facilities, including services for vulnerable populations (81%).
- Lack of ability to hire/maintain seasonal employees & offer programs/services allowable under Safe Start (74%).
- Addressing public use and behaviors that put the community at risk, such as tearing down caution tape, using fields (85%).

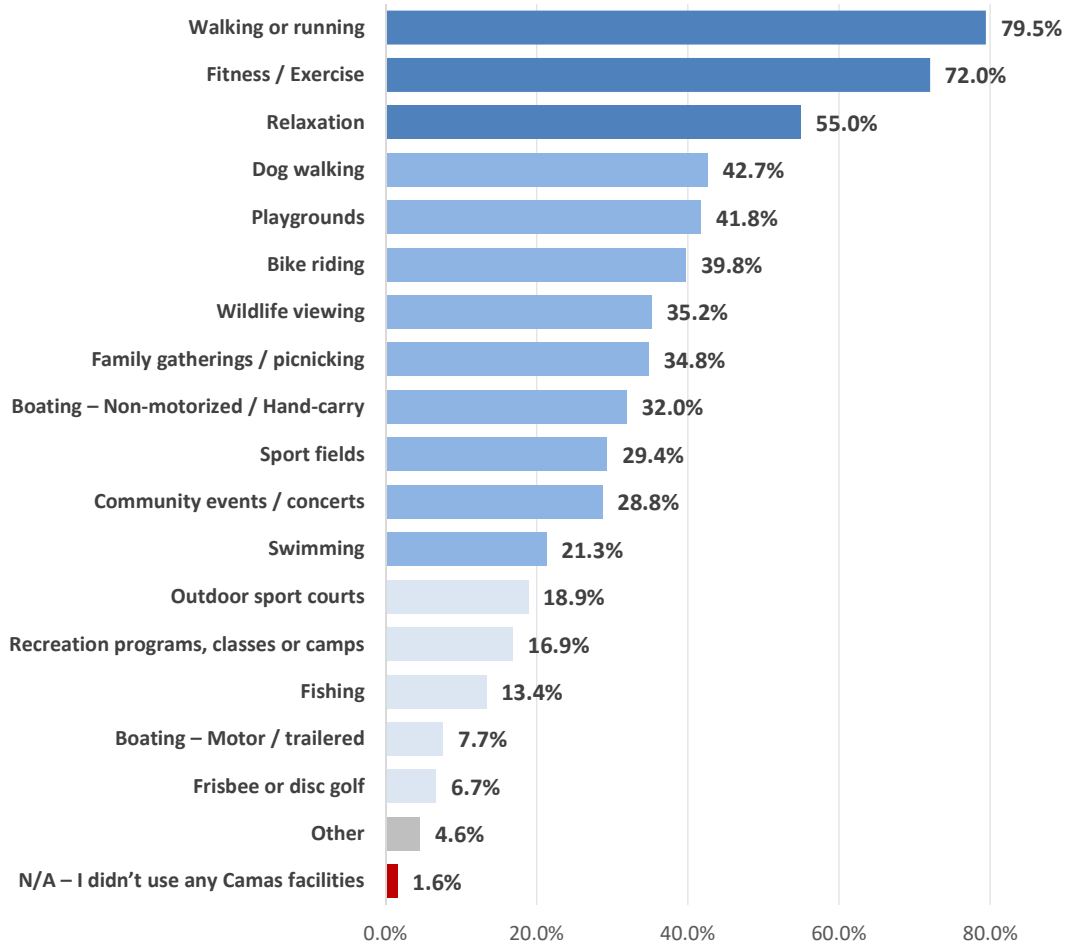
Local Insights

Local recreation demands and needs were explored through various community engagements to gather feedback on the strengths and limitations of existing recreational resources and parks available to Camas residents. Public outreach included a community survey, an online open house and several stakeholder focus group discussions to explore project priorities and opportunities to enhance the City's park system (see Appendices A, B & C). Through this outreach, nearly 1,600 responses were recorded.



The community survey confirmed that local parks, recreation options, and open space opportunities are important or essential to the quality of life in Camas. Virtually all respondents (97%) feel that local parks and recreation opportunities are important or essential to the quality of life in Camas. Respondents tend to visit frequently, with more than two in three visiting at least once a week (68%) and another 20% visiting one to three times per month.

Figure 9. Freequency of Visitation to Parks, Trails & Open Space

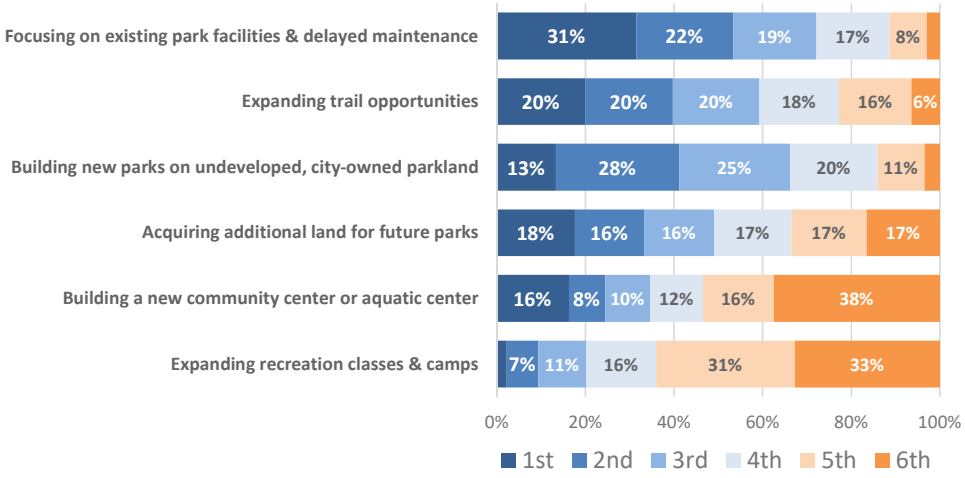


Survey respondents were asked to rate the condition of a variety of park and recreation facilities on a scale from poor to excellent. Respondents gave overwhelming high marks to the condition of the City's trails in parks and greenspaces and the parks themselves. Overall, the Lacamas Lake Lodge & Conference Center received the highest condition ratings, with 95% of respondents who provided a ranking rating it as excellent or good.

Figure 10. Sentiment of Condition of Park and Recreation Facilities.

Survey respondents visit local parks and recreation facilities for a variety of reasons. The most popular activities are walking or running (80%), followed by fitness and exercise (72%), and relaxation (55%). More than three in ten respondents visited to walk their dog (43%), visit a playground (41%), ride their bike (40%), view wildlife (35%), or attend a family gathering or picnic (35%). Relating to statewide and national trend statistics, the popularity of walking and running have consistently ranked as top outdoor activities – in alignment with Camas' survey responses.

Figure 11. Main Reasons For Visiting Local Parks and Recreation Facilities.



More than three in four respondents are very or somewhat supportive of adding walking trails (88%), updated or renovated playgrounds at existing parks (82%), all-abilities accessible playground equipment (81%), and more picnic shelters (80%) to the City's existing parks. A majority of respondents are also supportive of developing more biking trails, splash pads, off leash dog areas, pools or aquatic centers, tennis or pickleball courts, a new community center, disc golf course, and basketball courts. However, through the community survey, approximately two out of three community members are willing to travel for an unmet recreational amenity in Camas (such as splash pad, aquatic/pool center, community center and bike skills park) versus increasing taxes to pay for development of a new facility.

Recognizing the significance of trail access to the Camas community, the survey also inquired about different trail types. Respondents overwhelmingly rated unpaved trails in natural areas (94%) as very or somewhat important. Majorities of respondents also feel paved, shared use paths for pedestrians and cyclists (87%) and accessible trails (73%) are either very or somewhat important. An online open house followed the community survey to dive deeper into the community's strong interest in trails. Respondents to the online open house, 74 respondents total, noted the need to acquire land and develop trails to fill gaps in trail corridors as a top priority. Also, respondents were particularly interested in improving trail connections for the North Shore of Lacamas Lake, the Mill Ditch, Lake Road, and the Lewis & Clark Regional Trail.

Respondents were asked to rank a list of potential recreation, park, and open space investments. Generally, respondents ranked maintaining existing parks, expanding trail opportunities, building new parks, and acquiring land for future parks as top priorities. Respondents ranked offering building a new community or aquatic center and expanding program offerings as their lowest priorities. Respondents of different ages prioritized the investment options similarly, with the exception of building a new community or aquatic center, which was a higher priority for significantly more younger respondents. Respondents with children in their home tended to rate building a new community or aquatic center higher than those without children in the home, who were more likely to rate expanding trail opportunities as a high priority.

Figure 12. Park Amenities to Consider Adding to Camas Park System

Common Themes from Community Outreach

Considering all of the community feedback from the survey, online open house, stakeholder interviews, and stakeholder focus group discussions, a number of core themes and interests emerged.

Trails

- Trail connectivity is important. Complete loops and circuits, and focus on trail connectivity (connecting trail gaps).
- Enhanced linkages between residential neighborhoods and downtown via pedestrian- and bicycle-friendly routes are an important focus area.
- COVID has accelerated the trends toward higher trail usage, which include more users on trails and a wider age distribution of off-road bike riders.
- There is broad interest and excitement for the potential of expanded trail connections via the Mill Ditch property for walking/hiking and the Green Mountain acquisition for mountain biking and hiking. The Mill Ditch property for walking/hiking and the Green Mountain acquisition for mountain biking and hiking are two examples of potential projects.

Parks & Open Space

- The maintenance of existing parks and open spaces remains a key priority.
- Building new parks on undeveloped, city-owned parkland was one of the highest rated priorities.
- There has been strong interest in expanding recreational options in the park system that include the installation of a splash pad, bike skills/pump track, off leash dog areas, and tennis or pickleball courts.
- The City should provide space and amenities for programming (sport fields & courts, shelters for outdoor education, etc.) and increase sport field capacity by improving field quality and adding lighting where appropriate.
- Coordination with the school district might result in benefits for more community access to existing school fields and the development of additional sport fields.

Convenience & Support Amenities

- Upgraded and expanded access to restrooms and parking is a highly-desired user convenience improvement.
- Wayfinding, maps and communications were noted as ways to improve the user experience and familiarity with the park and trail system.

Park System Conditions Assessment

The overall condition of park infrastructure and amenities is one measure of park adequacy and assurance of public safety. Proper stewardship of park infrastructure requires developing a long-term maintenance and capital plan to ensure the safety of park users that aligns with community needs and allocates limited funding resources properly.

The current conditions of the Camas park system were assessed to identify existing site maintenance issues and opportunities for future capital improvements. The assessment included walkways, parking lots, park furniture, drainage and irrigation, lighting systems, vegetation, and other amenities. The following conditions assessment matrix summarizes the results of these assessments. They will inform the PROS Plan, including developing the project prioritization strategy for park improvements, identifying funding strategies, and updating the recommended parks six-year Capital Facilities Plan.

Park infrastructure and amenities were rated based on the following scale:

1 – Good Condition: Generally, amenities in good condition offer full functionality and do not need repairs. Good facilities have playable sports surfaces and equipment, working fixtures, and fully intact safety features (railings, fences, etc.). Good facilities may have minor cosmetic defects and encourage area residents to use the park.

2 – Fair: In general, amenities in fair condition are mainly functional, but need minor or moderate repairs. Play surfaces, equipment, fixtures, and safety features that are operational and allow play, but have deficiencies or periods where they are unusable. Fair facilities remain essential amenities for the community but may slightly discourage the use of the park by residents given the current condition.

3 – Poor: In general, amenities in poor condition are largely or completely unusable. They need significant repairs to be functional. Some examples include athletic fields that are too uneven for ball games, irreparably broken features, buildings that need structural retrofitting, etc. Poor facilities discourage residents from using the park and may present safety issues if left open or operational.
