CPL SITE PLAN REVIEW

3/23/2026

NOTES

Checklist item B9: Existing surface-mounted exterior lighting is shown on architectural drawing A200.

- The only exterior lighting change will be a recessed light in the overhang of the new vestibule.
- The easement for a future sign is shown on the site plan.

Checklist item C4: Refer to enclosed letter regarding engineering calculations for drainage.

Checklist item D: There are no changes in water supply and wastewater disposal.

- Replacement rest room is in approximately same place as existing.
- No additional plumbing is to be added.

Checklist item E: Landscaping next to building will be in keeping with existing.

- See plan for general layout.
- Focus will be on native plants.
- We hope to preserve existing oak tree – landscaping in that area will be contingent upon that.

Clarifying Notes on Architectural Drawings

- “Work/Study Room Addition” refers to the new addition on the Route 121 side of the building.
- “Quiet Room Addition” refers to the rebuild of the existing far non-fiction room.
- “Break Room/Book Sales” refers to the rebuild of the existing book sale room.

Re: Casco Public Library – Proposed Building Renovation and Addition
Stormwater Narrative

Dear Planning:

Trillium Engineering Group is providing this limited stormwater narrative for the Casco Public Library Site renovation project that includes a new building addition located towards the front of the existing building (facing the town square). The existing total building size is approximately 5,920 sq. ft. and the proposed total building size is approximately 7,072 sq. ft. The difference in total impervious for the project is approximately 1,159 sq. ft. This increase in impervious area is considered minimal with a de minimus overall change to the surrounding drainage system. Please refer to the existing and proposed site plans for additional information regarding the stormwater system for the property.

The existing stormwater system has a couple of field drains in the town square area that tie into the system on Route 121. The new building will interrupt the existing system so new field drains and foundation drains are planned for the proposed addition. The proposed building will have a crushed stone drip edge that will provide some treatment for the new roof area. Please see the proposed site plan that shows the new stormwater field drain system.

Conclusion

We believe that this project will not have any adverse impacts on abutters, downgradient systems or adjacent resources. Moreover, this plan includes all appropriate measures to prevent negative impacts and to keep post development flows and impacts close to the pre-developed levels. It is important to note that proper erosion control and re-vegetation of disturbed areas is essential for the proper operation of the stormwater facilities.

Thank you for taking the time to review this. Should you have any further questions or require any additional information, please do not hesitate to ask.

Sincerely,
