AGENDA

OF A REGULAR MEETING
OF THE
CITY OF COACHELLA
PLANNING COMMISSION

October 7, 2026
6:00 PM

In-Person Meeting Location: City Council Chamber 1515 6th Street, Coachella, CA	**If you would like to attend the meeting via Zoom, here is the link:** https://us02web.zoom.us/j/84544257915?pwd=VTdHWitpYVdOUk1NQW8vZ1pqUm0zQT09 Or One tap mobile : +16694449171,,84544257915#,,,,*380084# Or Telephone: US: +1 669 900 6833 **Webinar ID: 845 4425 7915** **Passcode: 380084** **Spanish:** El idioma español está disponible en Zoom seleccionado la opción en la parte de abajo de la pantalla

- Public comments may be received **either in person, via email, telephonically, or via Zoom** with a limit of **250 words, or three minutes:**
  - **In Real Time:**

    If participating in real time via Zoom or phone, during the Public Comment Period, use the **"raise hand"** function on your computer, or when using a phone, participants can raise their hand by pressing *9 on the keypad.
  - **In Writing:**

    Written comments may be submitted to the Planning Commission electronically via email to **planning@coachella.org.** Transmittal **must be completed by 12:00 pm** on the day of the meeting is required. All written comments received will be forwarded to the Planning Commission and entered into the record.
  - If you wish, you may leave a message at (760) 398-3102 Ext. 122 before 12:00 p.m. on the day of the meeting.
- The **live stream** of the meeting may be **viewed online** by accessing the city's website at **www.coachella.org**, and clicking on the "**Watch Council Meetings**" tab located on the home page, and then clicking on the "live" button.

CALL TO ORDER:

PLEDGE OF ALLEGIANCE:

ROLL CALL:

APPROVAL OF AGENDA:

"At this time the Commission may announce any items being pulled from the agenda or continued to another date or request the moving of an item on the agenda."

APPROVAL OF THE MINUTES:

1. Planning Commission Meeting Minutes – July 15, 2026

WRITTEN COMMUNICATIONS:

PUBLIC COMMENTS (NON-AGENDA ITEMS):

"The public may address the Commission on any item of interest to the public that is not on the agenda, but is within the subject matter jurisdiction thereof. Please limit your comments to three (3) minutes."

REPORTS AND REQUESTS:

NON-HEARING ITEMS:

PUBLIC HEARING CALENDAR (QUASI-JUDICIAL):

2. A Public Hearing to Consider Resolution No. PC2026-26, Resolution No. PC2026-27, Resolution No. PC2026-28, Resolution No. PC2026-29, Resolution No. PC2026-30, Resolution No. PC2026-31, and Resolution No. PC2026-32 of the Planning Commission of the City of Coachella for a recommendation to conditionally approve: (1) Tentative Tract Map No. 39330; (2) Zoning Ordinance Amendment No. 26-02 to allow single-family residential uses in conjunction with a resort use as a conditional use within the Regional Commercial zone; (3) Zoning Ordinance Amendment No. 26-03 to modify the Short Term Rental Ordinance; (4) Conditional Use Permit No. 396 to approve the proposed bars and cocktail lounges, liquor sales, and special event establishment uses (5) Conditional Use Permit No. 407 to approve the proposed single-family residential use in conjunction with a resort use; (6) Architectural Review No. 25-07 to approve the site plan, architecture, associated structures and improvements, (7) Development Agreement No. 25-01 to approve a Development Agreement, for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street, and finding that the Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183Applicant: Relevant Coachella Owner, LLC

_____
Adrian Moreno
Planning Commission Secretary

STAFF REPORT
10/7/2026

TO: Planning Commission Chair and Commissioners

FROM: Kendra Reif, Community Development Director

Adrian Moreno, Senior Planner

SUBJECT: A Public Hearing to Consider Resolution No. PC2026-26, Resolution No. PC2026-27, Resolution No. PC2026-28, Resolution No. PC2026-29, Resolution No. PC2026-30, Resolution No. PC2026-31, and Resolution No. PC2026-32 of the Planning Commission of the City of Coachella for a recommendation to conditionally approve: (1) Tentative Tract Map No. 39330; (2) Zoning Ordinance Amendment No. 26-02 to allow single-family residential uses in conjunction with a resort use as a conditional use within the Regional Commercial zone; (3) Zoning Ordinance Amendment No. 26-03 to modify the Short Term Rental Ordinance; (4) Conditional Use Permit No. 396 to approve the proposed bars and cocktail lounges, liquor sales, and special event establishment uses (5) Conditional Use Permit No. 407 to approve the proposed single-family residential use in conjunction with a resort use; (6) Architectural Review No. 25-07 to approve the site plan, architecture, associated structures and improvements, (7) Development Agreement No. 25-01 to approve a Development Agreement, for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street, and finding that the Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183Applicant: Relevant Coachella Owner, LLC

PROJECT DESCRIPTION

The Applicant is proposing a hospitality focused, mixed-use development on the 87-acre site. The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites (collectively, the "SFR Units"). Of the 240 condo cottages approximately 120 will be owned by a single entity and operated as short term rentals by a hotel operator/hotel flag ("Hotel Condo Units"). The SFR Units and approximately 120 condo cottages other than the Hotel Condo Units will operate under fractional ownership, timeshare, second homes, and/or short-term rental models that will function together with the Hotel Condo Units as an integrated hospitality-oriented resort community organized around a central lagoon. These accommodations will be complemented by on-site resort amenities (i.e., recreation center, courts, spa/pool, beaches, bar and entertainment, library, restaurant), which will be used by guests/owners of this sector. The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. These sub-areas are anticipated to operate with an assumed typical weekday capacity of 500 persons and an assumed weekend capacity of 1,500.

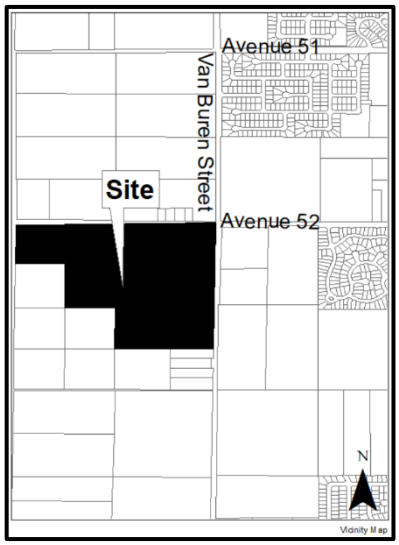

Figure 1 - Vicinity Map

Development of the project would also include landscaping, street improvements, drive aisles, and parking. Access to the project will be provided from two entry points on Avenue 52, two access points on Calhoun Street, and two access points on Van Buren Street. The project proposes 951 parking spaces and 193 cart spaces onsite.

The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/acre), which is consistent with the General Plan residential density range of 10 – 15 dwelling units per acre. The private sector also includes complimentary resort features including water amenities, club amenities, health and wellness spaces, sports and recreational amenities, additional areas for events and restaurants, roadways, and open space on the remainder of the site.

The private sector will consist of:

- 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow lots, and VIP suites
- 240 condo hotel cottages
- On-site resort amenities: recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant

The public sector is situated on approximately six acres in the northwest corner of the site and will consist of a:

- 11,950-square-foot beach club
- 28,800-square-foot beach club lounging area
- 7,690-square-foot restaurant

- 6,048-square-foot sports bar
- 11,907-square-foot back-of-house area
- 103,297-square-foot parking garage

The public sector uses have a combined FAR of approximately 0.65 and will require a future City-approved CUP and Entertainment permit, which will be sought once the plans and details for these uses are further defined during project implementation.

To facilitate the intended hospitality focus, the proposed SFR Units and condo cottages not under a single ownership will operate under fractional ownership, timeshare, second homes, and/or short-term rental models. The on-site resort amenities (i.e., recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant) will be used by guests/owners of the private sector. Exhibit 4 shows the illustrative site plan and Exhibits 5 through 7 illustrate the general areas of the resort, residential and beach club uses. To avoid any conflicts with the City's short-term rental ordinance (CMC Section 5.80), the Developer is seeking an amendment to that ordinance to provide that projects with an approved Development Agreement are exempt from the provisions of that ordinance limiting the number of units that can be owned by one owner and limiting the percent of units that can be permitted for short-term rentals, as well as any other provisions of the ordinance specifically modified in the approved Development Agreement.

The project proposes a 9.4-acre main lagoon ("Hotel Lagoon"), which will provide waterfront properties and beach uses shared between the single-family residential and resort uses. A 2.5-acre lake will be situated in the southern portion of the site. The lake will act as a detention basin and collect onsite runoff. No water contact sports will be permitted in the lake. The table below indicates the proposed sizes of the water amenities. A 0.4-acre lagoon is proposed in the public sector ("Beach Club Lagoon") and similar to the Hotel Lagoon, will allow swimming and recreational uses.

Table 1 – Water Amenities

	Acres
Hotel Lagoon	9.4
Lake (no contact)	2.5
Beach Club Lagoon	0.4
Total	*12.3*

As discussed above and indicated in Table 2, the project proposes a 9.4-acre lagoon and a 0.4-acre beach club lagoon. The proposed lagoons will be developed with Crystal Lagoon® technology. The Crystal Lagoon technology utilizes a patented solution consisting of the application of controlled pulses of small amounts of oxidants/microbicides, such as chlorine, into water in specific patterns and cycles to maintain water quality. The application cycles are determined by the system's algorithms according to the growth cycles of algae and bacteria, as well as ambient conditions and the weather. This avoids the need for maintaining a significant residual chemical level in the water. The application of additives is coordinated remotely by sensors and injectors/nozzles strategically located throughout the Hotel Lagoon and Beach Club Lagoon. The applied additives comply with National Sanitation Foundation (NSF) 60 Standards for drinking water treatment. NSF 60 Standards establish minimum health-effects requirements

to ensure that chemicals used in drinking water treatment do not introduce contaminants or impurities that could pose a risk to public health. The pulse-based disinfectants in the water achieve consistent quality and avoid water contamination from external agents, such as swimmers.

Development of the site would also include landscaping, street improvements, drive aisles, and parking.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission open the public hearing, receive public testimony, and conditionally approve Resolution No. PC2026-26, Resolution No. PC2026-27, Resolution No. PC2026-28, Resolution No. PC2026-29, Resolution No. PC2026-30, Resolution No. PC2026-31, and Resolution No. PC2026-32 of the Planning Commission of the City of Coachella for a recommendation to conditionally approve: (1) Tentative Tract Map No. 39330; (2) Zoning Ordinance Amendment No. 26-02 to allow single-family residential uses in conjunction with a resort use as a conditional use within the Regional Commercial zone; (3) Zoning Ordinance Amendment No. 26-03 to modify the Short Term Rental Ordinance; (4) Conditional Use Permit No. 396 to approve the proposed bars and cocktail lounges, liquor sales, and special event establishment uses (5) Conditional Use Permit No. 407 to approve the proposed single-family residential use in conjunction with a resort use; (6) Architectural Review No. 25-07 to approve the site plan, architecture, associated structures and improvements, (7) Development Agreement No. 25-01 to approve a Development Agreement, for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street, and finding that the project is exempt from further environmental review pursuant to Public Resources Code Section 21083.3 and State CEQA Guidelines Section 15183.

FISCAL IMPACT:

The applicant submitted a market study prepared by HVS Consulting & Valuation for the proposed COVA project, transmitted November 14, 2025. The study evaluates the market potential and financial performance of the proposed lodging, whole-ownership, fractional-ownership, and membership components. It provides information relevant to potential City revenues but does not calculate the project's net fiscal impact on the city.

The study assumes phased development beginning March 1, 2030, with stabilized lodging operations in 2033/34. It projects lodging occupancy increasing from 61 percent in the first operating year to 69 percent at stabilization, with the projected average daily rate increasing from approximately $1,532 to $1,860. Applying a 13 percent transient occupancy tax (TOT) rate to the study's projected room revenues produces the following illustrative gross revenue estimates:

Table 2 – HVS Market Study

HVS operating year	Projected room revenue	Illustrative gross TOT at 13%

2030/31	$81.52 million	$10.60 million
2031/32	$122.71 million	$15.95 million
2032/33	$141.44 million	$18.39 million
2033/34 — stabilized year	$148.97 million	$19.37 million
2034/35	$153.44 million	$19.95 million

Source: HVS Market Study, Figures 7-5 and 7-23. TOT estimates are calculated for this staff report and are not projections prepared by HVS. The operating years begin March 1 and do not correspond to the City's fiscal year.

These estimates represent gross potential TOT before the proposed rebate and other adjustments. They assume all projected room revenue constitutes taxable rent and that the 13 percent rate remains applicable. Actual receipts would depend on taxable rental activity, owner occupancy, tax-exempt stays, collection performance, and other applicable adjustments. Additional taxable charges not included in the room revenue forecast are excluded.

Proposed Transient Occupancy Tax Incentive

Section 4.5 of the proposed Development Agreement provides for a rebate of 50 percent of eligible annual TOT collections exceeding the applicable City retention threshold during the first 15 years following resort opening at Phase 1 buildout. The cumulative rebate would not exceed $25 million.

The proposed annual retention thresholds are:

Table 3 – Annual Retention Thresholds

Development milestone	Total units at milestone	Annual TOT retained by City before rebate
Phase 1 buildout	167	First $1,000,000 of actual collections
Phase 2 completion	273	First $1,500,000 of actual collections
Full resort buildout	402	First $2,000,000 of actual collections

The City would retain the applicable threshold from actual annual collections, together with 50 percent of eligible collections above that threshold. Once the 15-year incentive period expires or the $25 million rebate cap is reached, the City would retain all project TOT, subject to applicable tax requirements.

Other Revenues and Financial Obligations

The HVS study projects food and beverage revenue of approximately $41.62 million in the first operating year and $63.13 million in the stabilized year. Taxable commercial transactions may generate additional sales and transactions tax revenue. City receipts would depend on the taxable portion of sales and applicable allocation rules.

Development may also generate the City's allocated share of property taxes, applicable business taxes, permit and processing fees, and development impact fees. The proposed agreement establishes a 15-year freeze on specified development impact fees, subject to annual inflation adjustments tied to the Construction Cost Index. Applicable development fees would be payable at issuance of the certificate of occupancy for the applicable unit or structure.

The developer would construct required public improvements, extend water and sewer facilities, participate in necessary electrical infrastructure, and maintain enhanced frontage landscaping. The agreement also requires construction or funding of a portion of off-site sewer main upsizing serving other planned housing developments. These obligations may offset certain public costs, subject to the final improvement specifications, financing arrangements, credits, and reimbursement provisions.

EXECUTIVE SUMMARY:

The applicant, Relevant Coachella Owner, LLC requests that the Planning Commission recommend to the City Council the conditional approval of TTM No. 39330, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, Development Agreement No. 25-01, Zoning Ordinance Amendment No. 26-02, and Zoning Ordinance Amendment No. 26-03:

- **Resolution No. PC2026-26 - Tentative Tract Map (TTM) No. 39330** proposes a hospitality focused, mixed-use development on the 87-acre site. The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites ("SFR Units"). The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. Development of the project would also include landscaping, street improvements, drive aisles, and parking. Access to the project will be provided from two entry points on Avenue 52, two access points on Calhoun Street, and two access points on Van Buren Street. The project proposes 951 parking spaces and 193 cart spaces onsite.

- **Resolution No. PC2026-27 – Zoning Ordinance Amendment No. 26-02** would amend Chapter 17.28 – R-C Regional Commercial Zone of the Zoning Ordinance to allow single-family residential uses in conjunction with a resort use as a conditional use within the R-C zoning district.

- **Resolution No. PC2026-28 – Zoning Ordinance Amendment No. 26-03** would amend Chapter 5.80 - Regulation of Short-Term Vacation Rentals of the Business Licenses and Regulations Ordinance. The amendment would allow projects with an approved Development Agreement to be exempt from the provisions of Chapter 5.80 - Regulation of Short-Term Vacation Rentals limiting the number of units that can be owned by one owner and limiting the percent of units that can be permitted for short-term rentals, as well as any

other provisions of the ordinance specifically modified in the approved Development Agreement.

- **Resolution No. PC2026-29 – Conditional Use Permit No. 396** to approve the proposed bars and cocktail lounges, liquor sales, and special event establishment uses for the project. The special event establishment uses would include the event spaces within the private-sector hotel and resort, including the event barn and outdoor DJ island, as well as the public-sector beach club. The single-family residential uses would include

- **Resolution No. PC2026-30 – Conditional Use Permit No. 407** to approve the residential uses for the project. The private sector component of the project will consist of 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites ("SFR Units"). The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar.

- **Resolution No. PC2026-31 – Architectural Review No. 25-07** to approve the 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, VIP suites ("SFR Units"), 11,950-square-foot beach club, 7,690-square-foot restaurant, 6,048-square-foot sports bar, site plan, and associated structures and improvements.

- **Resolution No. PC2026-32 – Development Agreement No. 25-01** to approve the Development Agreement for the project.

Figure 2 - Vicinity Map

BACKGROUND:

The project site is located in the southwest portion of the City of Coachella and currently includes agricultural fields with date palm trees and grape vines. The project site also contains an irrigation pond in the central-northern area of the site, with nearby pump housing and approximately three existing support structures. These are dilapidated and uninhabitable structures with a combined estimated building footprint of approximately 6,143 square feet, and they appear to have been used in connection with past agricultural operations.

On July 7, 2025, applicant Relevant Coachella Owner, LLC submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement. The applicant subsequently submitted an application for a Zoning Ordinance Amendment Application. The "COVA" project, proposes the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street.

Table 4 – General Plan, Zoning, and Surrounding Existing Uses

Location	General Plan	Zoning	Surrounding Existing Uses

Site:	Regional Retail District	(R-C) Regional Commercial	Agriculture
North:	Regional Retail District	(R-C) Regional Commercial	Single-Family Residences (Navarra Community)
South:	Riverside County	Riverside County	Residential, Agriculture
East:	Regional Retail District, General Neighborhood	(R-C) Regional Commercial, (G-N) General Neighborhood	Residential, Agriculture (Leja Dates)
West:	Riverside County	Riverside County	Ranch

DISCUSSION/ANALYSIS

ARCHITECTURE:

The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites ("SFR Units"). The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. The private-sector architectural design reflects a contemporary modern style characterized by an earth-tone color palette, wood siding, dark metal-framed windows, and metal roofing. The public-sector architectural design reflects a contemporary modern style that is consistent with the overall architectural character of the public-sector buildings. The public beach club incorporates a distinctive agave flower-inspired design, providing a unique architectural feature that contributes to the overall visual identity of the development.

Private Sector - Hotel/Residential

Hotel Cottages

Hotel Village

Bungalow

Single Family Residence + ADU

Grand Estate Villa

Public Sector - Beach Club

Beach Club VIP Villas

Public Beach Club

LANDSCAPE COMMON AREA AND FENCE:

The project common area includes a separated sidewalk design that includes a 4-foot curb adjacent landscape buffer, 6-foot sidewalk, equestrian fence, 10-foot d.g. equestrian trail, and additional landscaping that provides a total 30-foot landscape and sidewalk common area along the entire project frontage along Calhoun Street, Avenue 52, and Van Buren Street. The Calhoun and Van

Buren Street common areas are characterized by two rows of palm trees, while Avenue 52 features a combination of palm trees and shade trees. The project includes decorative landscape lighting throughout the common areas, including tree uplighting, palm-ring lighting, and entry sign illumination. The Van Buren Street median includes tree uplighting and light poles. The common areas feature a desert native inspired landscape design incorporating drought-tolerant plant species, along with decorative gravel and boulders of varying sizes. The proposed project will provide a stucco face block wall design for fencing visible from perimeter streets with a decorative cap.

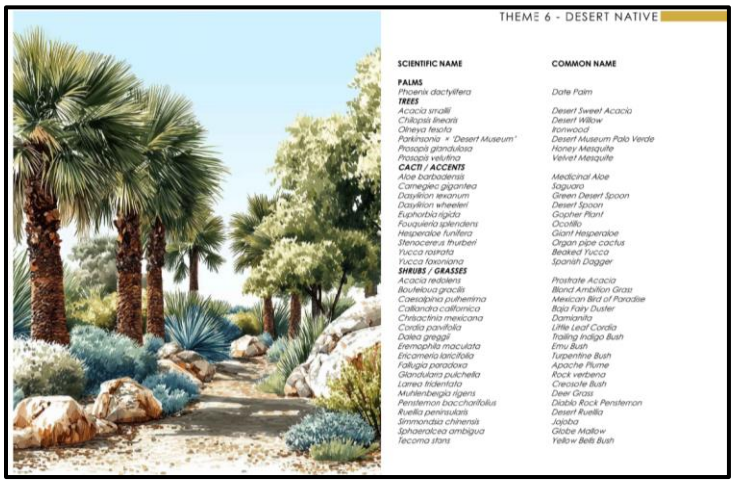

Figure 3 - Desert Native Theme - Calhoun, Avenue 52, and Van Buren Streets

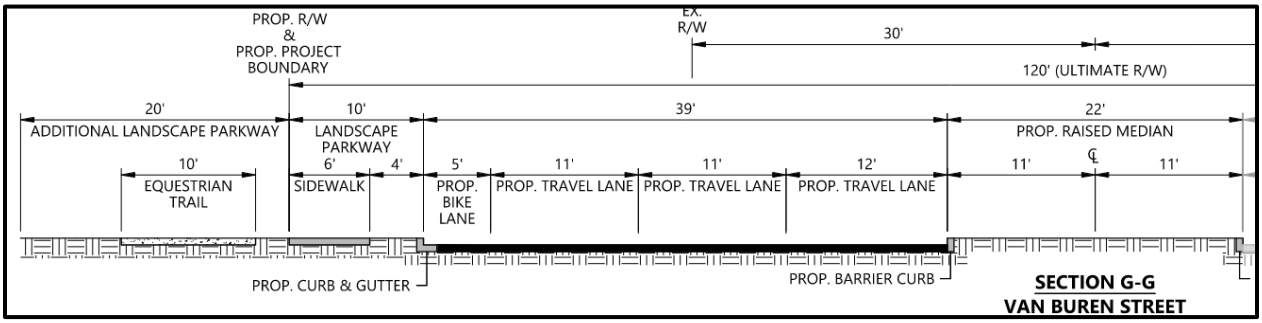

Figure 4 - Avenue 52 Common Area

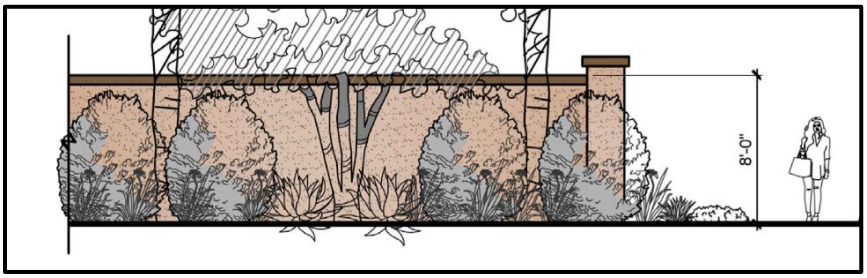

Figure 5 - Perimeter Wall Elevation

CIRCULATION:

The project will feature two primary components: a private sector and public sector. The primary entrance to the private sector is located on Avenue 52, and a secondary site entrance is located on Van Buren Street. There is a separate entrance on Van Buren Street for back of house. The public Center includes a primary entrance on Calhoun Street, and separate vehicular access points on Calhoun Street and Avenue 52.

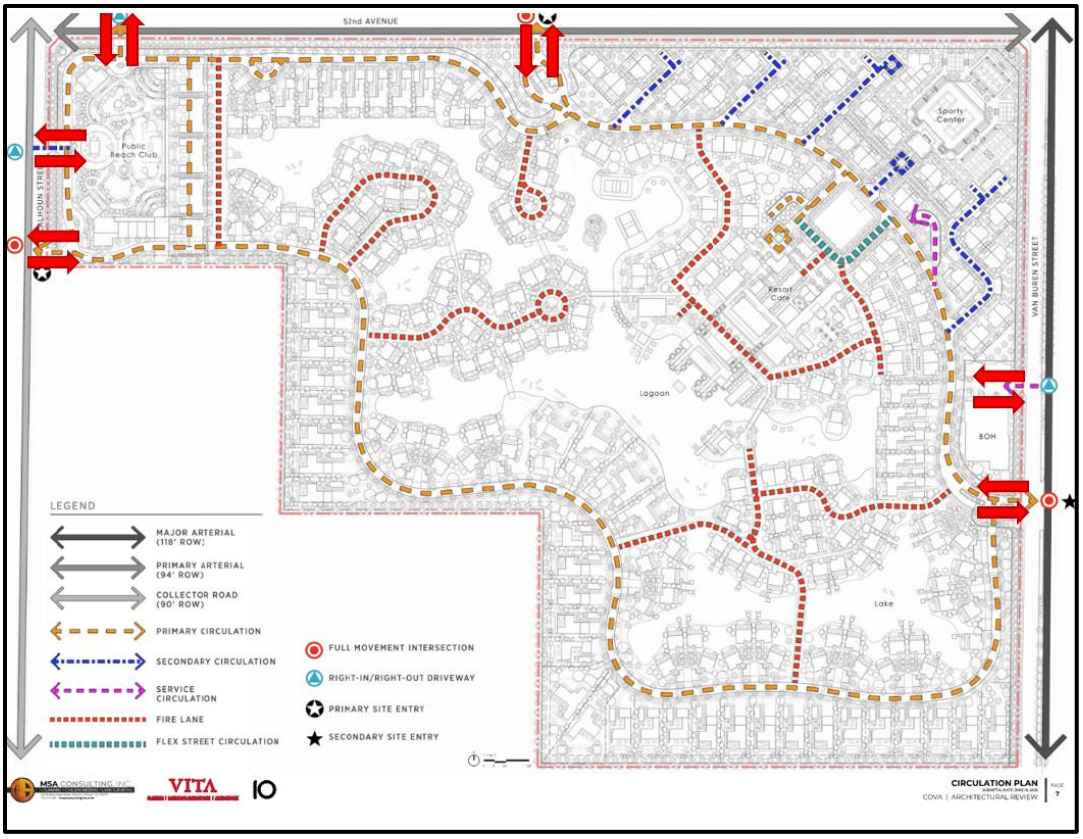

Figure 6 - COVA Circulation

PARKING:

The project provides a total of 951 parking spaces, including 202 spaces for residential uses, 428 spaces for the hotel, and 321 spaces for the beach club. Residential parking will be provided through a combination of enclosed garage spaces and off-street parking spaces. Hotel parking will be provided through a combination of surface parking, employee parking, and a 2-level underground parking structure. Beach Club parking will be provided through a two story above ground parking structure. Staff creating a parking analysis that found that there was a total of 183 missing parking spaces for the public sector, and 48 missing spaces for the private sector. As required by the conditions of approval of this project, prior to issuance of a Certificate of Occupancy for the Beach Club commercial area the applicant shall execute a signed and notarized off-site parking agreement, complete required off-site parking improvements, or implement other equivalent measures, to the satisfaction of the Community Development Director and City Engineer. As allowed by the conditions of approval of the project, The applicant may request approval of a reduced number of parking spaces by submitting a parking

analysis or other documentation to the satisfaction of city staff that demonstrates that fewer parking spaces will adequately serve the proposed use and operational characteristics of the project.

As required by the conditions of approval for this project, the city may require additional parking measures during the duration of this active use, if it is determined by the Community Development Director or City Engineer that the Beach Club Commercial or resort area traffic impacts are significant and not sufficiently mitigated with existing parking measures for the site. Additional parking measures may include the requirement of additional off-site parking, or the implementation of other equivalent measures as determined by the Community Development Director and the City Engineer. These parking measures required by staff determination shall be implemented by the property owner.

ALCOHOL USE:

As a condition of approval of this project, the project shall comply with all applicable provisions of the City of Coachella Alcohol Ordinance and the requirements of the California Department of Alcoholic Beverage Control (ABC). The applicant shall demonstrate compliance with all applicable alcohol-related zoning requirements to the satisfaction of the Community Development Director. The applicant, property owner, or operator shall submit an application for a modification to the Conditional Use Permit or, as applicable, a separate Conditional Use Permit to establish or clarify alcohol-related uses proposed by specific vendors or operators.

DEVELOPMENT AGREEMENT:

Development Agreement No. 25-01 would establish the terms governing development and operation of the COVA project, including vested development rights, infrastructure obligations, development fees, fiscal incentives, and community benefits. The proposed agreement has a 50-year term, with a 20-year period for project buildout.

The developer would be responsible for required public improvements, including streets, sidewalks, drainage, water and sewer facilities, and necessary electrical infrastructure, subject to the agreement's financing, credit, and reimbursement provisions. Improvements necessary to serve each phase would generally be completed before issuance of the first certificate of occupancy within that phase. The agreement also requires maintenance of enhanced frontage landscaping and construction or funding of a portion of off-site sewer main upsizing serving other planned housing developments.

The agreement proposes a 15-year transient occupancy tax incentive consisting of a rebate of 50 percent of eligible TOT collections above specified annual City retention thresholds, subject to a cumulative rebate cap of $25 million. The City would retain the first $1 million of actual annual collections at Phase 1 buildout, $1.5 million upon Phase 2 completion, and $2 million at full buildout. These thresholds are not guaranteed payments, and the developer would not be required to cover a collection shortfall.

The agreement also proposes a 15-year freeze on specified development impact fees, subject to annual inflation adjustments, payment of applicable development fees at certificate of occupancy, and credits for qualifying public improvements. It establishes proposed treatment of the private resort's short-term rental operations, subject to the related ordinance amendment and final agreement requirements.

Annual compliance review would provide a mechanism for monitoring the developer's performance. The final agreement, exhibits, and related approvals must establish consistent infrastructure, operational, mitigation, and continuing maintenance requirements. The agreement's fiscal implications are discussed in the Fiscal Impact section below.

CONSISTENCY WITH GENERAL PLAN:

The Project site is within the Regional Retail land use designation of the City's General Plan 2035 Update (General Plan). This designation provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment. Like the other Centers and Districts of Coachella, the Regional Retail District is organized into blocks by a combination of public and private streets that provide addresses for the businesses and organize access and parking for them. The blocks of this District may be the largest in Coachella, with buildings, landscape and signage similarly scaled up in size, but not neglecting the importance of creating a comfortable and attractive pedestrian environment for shoppers.

Allowed land uses retail, lodging, entertainment and residential uses. The allowed development intensity is 10-15 DU/AC and a FAR of .35 and 2.0. The general plan also includes standards for network and connectivity, street design, parks and open space and urban form guidelines. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/ac), which is consistent with the General Plan residential density range of 10 to 15 dwelling units per acre. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail standard of 0.35 to 2.0. The project meets the intent and purpose, intended physical character, allowed land uses, and development intensity allowed in the Regional Retail District general plan designation. The project is compatible with the design standards for network connectivity, street design, parks and open space, and urban form guidelines of the Regional Retail District general plan designation.

The project is within Subarea 3 – Van Buren Corridor. The Van Buren Corridor extends from approximately 50th to 53rd Avenues along Van Buren. Existing uses along the corridor include single-family, retail, schools and vacant land. The Van Buren Corridor is at a key location between Indio, Coachella, and La Quinta and much of the land through the corridor is still available for quality development, providing Coachella with a great opportunity to create a strong neighborhood center and regional shopping district. The Van Buren Corridor will transform into a major sub-regional retail destination that will provide a wide variety of goods and services for Coachella residents, as well as neighboring communities. The large format, regional-serving retail will be

built in a fashion so it coexists with existing and future neighborhood development in and around the Van Buren Corridor. The new commercial development will promote walkability with a mix of appropriately scaled buildings fronting the streets and large, blockscale buildings throughout. While walkable, the retail area will also provide ample parking for visitors. The commercial development will be connected to the surrounding new and existing residential areas, allowing a high degree of access and balancing the impact of traffic on the community. The project proposes a hotel, resort, residential, and commercial public beach club that is consistent with the uses and policy direction envisioned in Subarea 3 – Van Buren Corridor.

The project is consistent with the following General Plan policies.

Table 5 – General Plan Land Use and Community Character Policies

Goal	Policy	Project Consistency Analysis
Goal 2. Growth and Development. The successful transformation of Coachella from a small town into a medium-sized, full-service City that is a major economic center for the Coachella Valley.	**2.5 - High quality construction and architecture**. Require high-quality and long-lasting building materials on all new development projects in the City. Encourage innovative and quality architecture in the City with all new public and private projects.	The proposed contemporary architecture incorporates an earth-tone palette, wood siding, dark metal-framed windows, and metal roofing.
	2.6 - Architectural diversity. A diversity of architectural styles is encouraged, particularly those that have their roots in the heritage of Southern California and the Desert Southwest.	The project contributes architectural diversity through contemporary resort buildings and an agave-inspired beach club that draws on the plant forms associated with the Desert Southwest. The resort landscaping will also reintegrate existing date palms from the property, maintaining a connection to the site's agricultural history and the Coachella Valley's landscape character. Together, these features establish a distinctive resort identity connected to its regional setting.
Goal 3. Healthy Community Design. Development patterns and urban design comprised of complete, walkable, attractive,	**3.7 - Culture and entertainment hub**. Create opportunities for leisure/cultural activities in Coachella such as a movie theater, music and dancing venue, museum/gallery, cafe, or bowling alley, among many other	The proposed dining, music, entertainment, and recreational facilities contribute to the policy's leisure and entertainment objectives.

family-friendly neighborhoods, districts and corridors that support healthy and active lifestyles.	facilities to ensure teens and young adults have safe ways to enrich their social lives.	
Goal 7. Districts. A series of unique, destination-oriented districts throughout Coachella that provide space for large-format retail, industrial and resort uses in order to increase access to jobs, provide amenities for residents and improve the fiscal stability of the City.	**7.8 - Regional retail districts**. Establish major regional serving commercial centers that provide a mix of uses in a pedestrian oriented format and become vibrant destinations for people to live, work, shop and congregate. Allow a wide variety of uses to locate in Regional Retail Districts including destination retail centers, mixed use town centers, theme parks, sports venues, entertainment complexes and hotels, among other uses.	The project creates a regional destination combining lodging, dining, entertainment, recreation, and supporting residential uses. The publicly accessible beach club and commercial facilities provide gathering opportunities, while frontage sidewalks and required pedestrian connections support the pedestrian-oriented mix of uses.
	7.10 Resorts. Actively pursue the establishment of multiple resort complexes in Coachella. Locate resorts in areas of the City where city-wide connectivity will not be negatively affected by the design of the project. Such locations include adjacent to hillsides, on the edge of the Sphere of Influence and city limit where additional annexation is not expected to occur and adjacent to rivers and canals.	The project advances the objective of attracting resort development. The proposed project will be making infrastructure improvements that are consistent with what is required per the Mobility Element of the General Plan.
Goal 9. Corridors and Connectivity. A network of transportation and open space corridors throughout the City that provides a high level of connectivity for vehicles, cyclists and pedestrians.	**9.4 - Transportation corridors**. Plan and reserve transportation corridors in coordination with land use. - **Van Buren Corridor**. Facilitate the development of the Van Buren Corridor into a beautiful, shaded, pedestrian-friendly avenue that provides regional retail commercial and serves to repair the edges of existing neighborhoods of the surrounding area. - **Avenues 50 and 52.** Establish Avenues 50 and 52 as	Separated sidewalks, bicycle lanes, and landscaped frontage improvements support corridor enhancement. Shade, crossings, and connections to destinations are documented in the proposed landscape and circulation plans.

	important cross-town corridors that connect Coachella, serve as transitions between neighborhoods, provide opportunities for local-serving retail and balance the needs of multiple transport modes.	
Goal 11. Economic Development. A broad-based and long-term economic development environment for Coachella that is supportive of existing businesses and will attract new business and tourism.	**11.2 Regional presence**. Encourage economic development strategies that will cause Coachella to become a major city in the Coachella Valley and a driving force behind the area's economy.	The proposed lodging, resort, commercial, and entertainment facilities would broaden the City's regional visitor offerings.
	11.5 Jobs-housing balance. Strive to improve the jobs-housing balance in the City by actively pursuing employment uses to the City.	Resort operations, restaurants, commercial facilities, and maintenance activities would create additional employment opportunities.
	11.7 Job training. Expand job training opportunities for Coachella residents.	The Development Agreement will require the project to establish internships with the local high school and colleges and universities in the area. These partnerships will provide students with practical work experience and exposure to career opportunities associated with resort operations, supporting expanded employment training opportunities for Coachella residents.
	11.15 Creative Economy. Prioritize strategies that will create an economy full of diverse talents, trades and goods for the City. For long lasting economic success, a range of services, arts, music, entertainment and retail should be supported on all scales of the City's economy.	The project supports a diverse creative economy through proposed farmers markets and vending opportunities for local artists within the publicly accessible amenity areas. These activities provide opportunities for local vendors to showcase their products and artwork while complementing the project's dining, entertainment, and recreational uses.

Goal 12. Diversity of uses for economic development. Non-residential uses that creates a complete city and diversifies the local economy.	**12.7 Hospitality.** Expand the number and variety of hospitality options with Coachella as a means of providing jobs for residents and expanding the local tax base.	The project expands Coachella's hospitality offerings through integrated hotel and resort accommodations, dining, and recreational amenities, creating employment opportunities and additional tax revenue.
	12.9 Retail base. Encourage economic development of all scales of retail development within Coachella in order to create a stronger tax base and increase the City's tax revenue.	Taxable food, beverage, and other commercial sales may expand the City's revenue base. The proposed project will also host special event farmers markets and vending opportunities for local artists within the publicly accessible amenity areas.
Goal 13. Fiscal Stability. A City with thorough economic development strategies and reasoned decisions based on sound fiscal policies.	**13.4 Diverse tax base**. Provide a fiscally sound City with a sustainable tax base and user fees including property tax, sales tax, transient occupancy tax, utilities user tax and user fees that pay for cost of services.	Taxable lodging and commercial activity provide opportunities to diversify City revenues.
General Plan – Mobility Element		
Goals 3. Pedestrian Network. A safe pedestrian network that provides direct connections between residences, employment, shopping and civic uses.	**3.1 Pedestrian network**. Improve health outcomes by creating a safe and convenient circulation system for pedestrians that focuses on crosswalks, improves the connections between neighborhoods and commercial areas, provides places to sit or gather, pedestrian-scaled street lighting, buffers from moving vehicle traffic, and includes amenities that attract people of all ages and abilities.	The proposed separated frontage sidewalks and landscaped buffers support safe and convenient pedestrian circulation. Required pedestrian routes, driveway crossings, lighting, and connections to publicly accessible amenities are incorporated into the proposed plans and conditions of approval. The proposed project will also be conditioned to complete a decomposed granite equestrian trail on the property frontages to help ensure safe pedestrian access.
	3.4 Pedestrian connections for development. Require that all development or redevelopment projects provide pedestrian connections to the external pedestrian network.	The project shall provide direct pedestrian connections from the external sidewalk network to publicly accessible commercial and recreational facilities. The proposed project will also be

		conditioned to complete separated sidewalks and a decomposed granite equestrian trail on the property frontages to help ensure safe pedestrian access.
General Plan – Community Health + Wellness Element		
Goal 4. Public Safety and Social Support. Close-knit and safe communities.	**4.2 Community programs**. Work with community partners to create programs that provide opportunities for volunteerism and multi-generational interaction.	Proposed farmers markets and vending opportunities for local artists within the publicly accessible amenity areas will provide settings for community gathering and interaction among different generations.
Goal 4. Public Safety and Social Support. Close-knit and safe communities. **Goal 7. Jobs, Prosperity and Economic Development**. Improved economic prosperity and vibrancy of households and businesses.	**4.6 Collaboration for youth**. Explore opportunities to collaborate with Coachella Valley Unified School District along with faith-based and non-profit organizations to better serve youth.	The Development Agreement will require an internship partnership with Coachella Valley Unified School District, providing local high-school students with practical work experience and exposure to hospitality careers.
	7.2 Targeted employment training. Work with local schools, colleges, trade schools and non-profit scholarship organizations to ensure a trained and qualified workforce is available to meet the needs of projected growing industries that provide living wages for persons most in need.	The required internship partnerships will connect local educational institutions with the project's employment opportunities and provide practical experience relevant to the hospitality industry.

CONSISTENCY WITH ZONING:

The Project site is within the Regional Commercial (R-C) zoning designation of the city's Official Zoning Map. The Project is subject to the Zoning Ordinance of the City of Coachella which includes Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards for Single-Family Residential of the Coachella Municipal Code (CMC). The project proposes a hotel, resort, residential, and commercial public beach club is consistent with the permitted uses of the R-C zone, including Hotel, Resort, Restaurant, and Private Swimming Pool uses. The project requires approval of a Conditional Use Permit (CUP) to allow bars and cocktail lounges, liquor sales, and a special event establishment. The project requires approval of a CUP to allow single-family residential uses on the project site. The project includes a Zoning Ordinance Amendment to establish single-family residential uses as a conditionally permitted use in the R-C zone. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/ac), which is consistent with the R-C zoning residential density

range of 10 to 15 dwelling units per acre. The project is complaint with Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards for Single Family Residential of the CMC, except for certain development standards that comply with the standards allowed pursuant to the project Development Agreement in accordance with Chapter 17.100 – Development Agreements of the CMC.

Table 1 – (R-C) Property Development Standards Compliance

Zoning Ordinance	Complies with Code?
Residential Density. 10-15 du/ac	**Yes**. 14.4 du/ac
Design Standards. All new single-family residential development shall be designed pursuant to the design standards included in Chapter 17.19 (Supplemental Standards for Single-Family Residential).	**Yes.** The private-sector architectural design reflects a contemporary modern style characterized by an earth-tone color palette, wood siding, dark metal-framed windows, and metal roofing. The single-family residential architecture incorporates varied façade designs with building modulation and architectural articulation, contributing to a cohesive, high-quality contemporary modern aesthetic.
Lot Requirements. 1.Minimum Lot Size. (20,000) square feet for commercial uses. 2.Minimum Lot Width. None. 3.Minimum Lot Depth. None. 4.Maximum Lot Coverage. None.	**Yes.** The public club and associated parking are located at the southwest corner of Avenue 52 and Calhoun Street and consist of Lots 58 and 59 of the Tentative Tract Map. Lot 59 is approximately 4.2 acres, and Lot 58 is approximately 1.8 acres. As a result, the minimum lot size of the commercial public beach club is in compliance with the minimum lot size requirements of the Regional Commercial property development standards.
Yard Requirements Front Yard. 15 feet, except where one or both adjoining zones are residential, in which case the required yard shall be increased to equal the average of the required front yards of the adjoining zones Side Yard. There shall be no side yard requirement except where a R-C (Regional Commercial) zone adjoins a street or a	**Yes.** The project does not immediately abut any residentially zoned properties within the City of Coachella's jurisdiction. The western property frontage abuts Calhoun Street, the northern property frontage abuts Avenue 52, and the eastern property frontage abuts Van Buren Street. To the east of the project is the General Neighborhood property; however, Van Buren Street, a major arterial roadway

residential zone, in which case there shall be a side yard of not less than ten (10) feet on the side or sides adjoining said street or residential zones Rear Yard. There shall be no rear yard requirement except where the R-C (Regional Commercial) zone adjoins a residential zone, in which case there shall be a rear yard of not less than ten (10) feet adjoining that residential zone. Permitted Encroachments in Required Yards. All landscape areas shall be maintained consistent with approved landscape plans. Landscape modifications shall be approved by the planning director and referred to the planning commission for review at the director's discretion	with associated bicycle facilities, provides a separation and sufficient buffer between the project and the adjacent use. The project provides a minimum 30-foot landscape common area along all project frontage abutting perimeter streets. The southern property line abuts existing residential uses located within Riverside County and outside the City of Coachella's jurisdiction. However, the project provides a minimum 20-foot-wide landscaped setback along the southern property line, which provides additional separation and a sufficient buffer between the project and the adjacent residential uses. There are no applicable encroachments on the subject property. The landscape areas are required to be maintained in accordance with the approved landscape plans. Failure to maintain the landscaping as required by the approved landscape plans may result in code enforcement action to ensure compliance.
<u>Height Limits</u> The maximum height of all other buildings shall be two stories or thirty-five (35) feet, whichever is less, except that hotels shall have a maximum height of eighty-five (85) feet.	**Yes.** The project meets height standards allowed per the Development Agreement.
<u>Landscape Setback.</u> The minimum perimeter landscape setback for residential or hotel projects without frontage of buildings along perimeter street shall equal at minimum ten (10) feet at any point and have an average perimeter landscape setback of twenty (20) feet for the entire frontage. Equestrian and agricultural themed improvements including equestrian rail fencing, agrarian lighting, agrarian signage, 10-foot-wide decomposed granite multi-purpose trail and date palms planted twenty (20) feet on center shall be installed along Avenue 52, Van Buren Street, and Calhoun Street.	**Yes.** The project provides a minimum 30-foot landscape common area frontage along all perimeter streets. The landscape common area includes 6-foot separated sidewalk, 10-foot decomposed granite equestrian trail, landscape lighting, equally spaced palm trees along all perimeter streets which includes Avenue 52, Van Buren Street, and Calhoun Street.

Energy Efficient Design and Heat Island Reduction Strategies.	**Yes.** The project conditions of approval require the applicant to submit an energy efficient design and heat island reduction plan. At the direction of the Community Development Director, may require substitutions in trees, paving, or other items to address the energy efficient design and heat reduction plan strategies, and as described in this condition of approval.
Distance Between Buildings. No requirements, except that buildings not actually adjoining shall be determined through site plan review.	Yes. The project site plan was reviewed by City staff and the Riverside County Fire Department, and no issues were identified regarding the building separation distances shown on the site plan. As indicated above, the project complies with the applicable minimum yard setback requirements and therefore provides sufficient separation and buffering between the project and adjacent uses.
Off-Street Parking and Loading. Off-street parking and loading facilities shall be provided in accordance with the provisions of Section 17.54.010.	**Yes.** The project conditions of approval will ensure parking requirements are met.
Screening. Where the R-C zone abuts upon a residential zone, there shall be provided screening not less than six feet, or more than eight feet in height on the zone boundary line. Said screening shall be reduced to forty-two (42) inches in height within a required yard adjacent to a street or highway.	**Yes.** The subject property does not directly abut adjacent properties within the Coachella Jurisdiction Boundary. The subject property provides an eight-foot perimeter wall along Van Buren Street and Avenue 52. The subject property provides an 8-foot combination wall along the southern property line. There is an approximately 10-foot-wide vegetation swale along the southern property line which assists with reducing potential project impacts on southern adjacent properties.
Other Property Development Standards. 1.All uses shall be conducted entirely within a completely enclosed building, except for off-street parking and loading facilities, those	**Yes.** The project incorporates a Conditional Use Permit (CUP) for the special event establishment use. As required by the project's

outdoor uses permitted by Section 17.28.020(A)(7), and certain uses permitted subject to a conditional use permit by Section 17.28.020(D). 2.No building or structure having exterior walls of sheet metal shall be erected in this zone.	Conditions of Approval, prior to issuance of a Certificate of Occupancy, the applicant shall submit an Entertainment Permit application for review and approval by the City Council. This requirement ensures that outdoor activities are conducted in accordance with the development standards applicable to the Regional Commercial (R-C) Zone and that the proposed operation is subject to public review and approval through the Entertainment Permit process prior to occupancy. The project does not incorporate sheet metal as an exterior wall finish.
Architectural Review. All development in the R-C (Regional Commercial) zone, is subject to architectural review as set forth in Section 17.72.010 of this title.	**Yes.** The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo cottages, 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites ("SFR Units"). The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. The private-sector architectural design reflects a contemporary modern style characterized by an earth-tone color palette, wood siding, dark metal-framed windows, and metal roofing. The public-sector architectural design reflects a contemporary modern style that is consistent with the overall architectural character of the public-sector buildings. The public beach club incorporates a distinctive agave flower-inspired design, providing a unique architectural feature that contributes to the overall visual identity of the development. Overall, the project's architectural elements work together to create a cohesive, distinctive, and high-quality contemporary modern aesthetic.

FINDINGS:

Tentative Tract Map

Pursuant to Government Code Section 66474 and Coachella Municipal Code Section Chapter 16.12, subject to the provisions of this chapter, the Planning Commission must make the following findings for the recommendation of Tentative Map approval to the City Council:

The Planning Commission shall recommend denial of a tentative map to the City Council, as required by the Subdivision Map Act, if it makes the following findings:

1. That the proposed map is not consistent with applicable general and specific plans;

The Project site is within the Regional Retail District land use designation of the City of Coachella's General Plan 2035 Update (General Plan). This designation provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment. Like the other Centers and Districts of Coachella, the Regional Retail District is organized into blocks by a combination of public and private streets that provide addresses for the businesses and organize access and parking for them. The blocks of this District may be the largest in Coachella, with buildings, landscape and signage similarly scaled up in size, but not neglecting the importance of creating a comfortable and attractive pedestrian environment for shoppers.

This designation accommodates retail, lodging, entertainment, and single-family residential uses, with commercial activities serving regional clientele and residential uses supporting the commercial environment. The proposed COVA development integrates hotel and resort accommodations, residential units, recreational amenities, restaurants, and a public beach club within a coordinated development.

The residential component consists of 402 units, including 162 single-family residential units and 240 condominium cottages, within approximately 28 acres. Residential density is calculated using the acreage devoted to these units and excludes the commercial components of the project. The resulting density is approximately 14.4 dwelling units per acre (du/ac). The allowed development intensity in the Regional Retail District density range is 10-15 DU/AC. The Regional Retail District allows for a floor area ratio (FAR) between 0.35 and 2.0. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail District standard of 0.35 to 2.0.

The project meets the intent and purpose, intended physical character, allowed land uses, and development intensity allowed in the Regional Retail District general plan designation. The project is compatible with the design standards for network connectivity, street design, parks and open space, and urban form guidelines of the Regional Retail District general plan designation.

The project site is located within Subarea 3 – Van Buren Corridor of the General Plan's Land Use and Community Character Element. The subarea envisions a regional commercial destination that serves Coachella and neighboring communities while integrating new

commercial development with surrounding neighborhoods. The proposed subdivision supports this vision by establishing lots for an integrated hospitality, residential, recreation, dining, and entertainment development. Its consistency with the applicable subarea policies is addressed below.

Subarea Policy 1 — Diversity of Retail and Services

The project would broaden the range of commercial services and visitor amenities available along the corridor through hotel and resort accommodations, restaurants, a public beach club, and recreational and entertainment facilities. These uses would serve visitors and provide additional dining and recreation opportunities for residents of Coachella and surrounding communities. The subdivision accommodates these activities within a coordinated development, supporting the policy's objective of capitalizing on the corridor's regional location.

Subarea Policy 2 — Larger Commercial Uses

The proposed resort and public beach club are regional-serving commercial uses requiring coordinated areas for accommodations, recreation, parking, circulation, and supporting facilities. The subdivision provides separate lots for these functions while integrating them through common access and infrastructure. This arrangement supports the policy's allowance for larger commercial developments along the corridor.

Subarea Policy 3 — Transitions to Adjacent Residential Neighborhoods

The project incorporates perimeter landscaping, setbacks, walls, and designated access points to establish a transition between the development and surrounding properties. Proposed frontage improvements include landscaped buffers, sidewalks, and an equestrian trail along Calhoun Street, Avenue 52, and Van Buren Street. These features provide separation from project activities while improving the appearance and function of the adjoining streets.

The proposed conditions of approval will require that the project meet all operational requirements and standards as outlined in the Coachella Municipal Code pertaining to lighting, noise, commercial operations, and special events. Together, the site design and operational requirements are intended to limit conflicts between the resort and commercial activities and nearby residential uses.

Subarea Policy 4 — Connections to Adjacent Areas

The project proposes six vehicular access points distributed along Avenue 52, Calhoun Street, and Van Buren Street. Perimeter sidewalks and trail improvements would provide routes along the project frontage, while the internal circulation system would connect the residential accommodations, resort amenities, and commercial facilities.

These connections, together with the frontage improvements, support access between the development and adjacent areas.

Subarea Policy 5 — Pedestrian Amenities and Access to Commercial Entrances

The proposed frontage design includes separated six-foot sidewalks, landscaped buffers, trees, and an equestrian trail. These improvements would provide pedestrian facilities and landscaped separation along the adjoining streets.

With these features incorporated into the approved plans and conditions, the project would support the subarea's objective of providing a comfortable pedestrian environment and convenient access to commercial services.

Subarea Consistency Conclusion:

The proposed subdivision advances Subarea 3's commercial development objectives by accommodating regional-serving hospitality, dining, recreation, and entertainment uses. Its perimeter improvements and required compatibility measures support integration with surrounding development. Consistency with the subarea's connectivity and pedestrian design policies is supported by the public connections, crossing improvements, and entrance-access features identified in the proposed plans and conditions of approval.

The proposed subdivision accommodates an integrated mix of residential, lodging, recreation, dining, and entertainment uses consistent with the Regional Retail District designation. The residential component includes 402 units within approximately 28 acres, resulting in a density of approximately 14.4 dwelling units per acre. Commercial acreage is excluded from this residential density calculation.

As discussed above, the subdivision supports the applicable development objectives of Subarea 3 - Van Buren Corridor through its regional-serving commercial uses, frontage improvements, connections, and measures addressing compatibility with surrounding development. Based on this analysis and the required improvements identified in the conditions of approval, the proposed map is consistent with the General Plan. No applicable specific plan has been identified for the project site.

Implementation of the subdivision's single-family residential component is contingent upon City Council adoption and effectiveness of Zoning Ordinance Amendment No. 26-02, allowing single-family residential uses in conjunction with a resort use within the Regional Commercial (R-C) zone, and approval of Conditional Use Permit No. 407 authorizing those uses. The tentative map and accompanying project approvals shall incorporate this requirement.

2. That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans;

The proposed subdivision organizes residential, condominium, commercial, recreational, and open-space uses within an integrated development consistent with the General Plan's Regional Retail District designation. The subdivision includes internal circulation facilities, common-access

and emergency-vehicle easements, utility improvements, drainage facilities, and frontage improvements serving the resulting lots.

The Regional Retail District recognizes that block sizes may vary depending on the uses accommodated, while encouraging pedestrian and bicycle connections within larger developments. The project includes frontage improvements along Calhoun Street, Avenue 52, and Van Buren Street consisting of six-foot separated sidewalks, landscaped buffers, an equestrian trail, and associated landscaping. These improvements provide circulation along the project perimeter and access to project entrances. The internal circulation system connects the residential and lodging accommodations with resort amenities and supporting facilities.

The private resort component does not provide connections at every interval suggested by the General Plan. However, the combination of perimeter routes, distributed access points, and internal circulation supports movement around and within the development. Publicly accessible commercial facilities must provide pedestrian access from adjoining public sidewalks, with the applicable access improvements incorporated into the proposed plans and conditions of approval.

The project also supports Subarea 3 — Van Buren Corridor by accommodating regional-serving commercial activities, providing frontage improvements, and incorporating landscaped transitions between the development and surrounding properties. Grading, drainage, utility, and circulation improvements are subject to City review and the applicable conditions of approval.

For these reasons, the proposed subdivision design and required improvements are consistent with the City of Coachella General Plan. No applicable specific plan has been identified for the project site.

3. That the site is not physically suitable for the type of development;

The approximately 87-acre site provides land for the proposed residential and condominium development, hotel and resort uses, public beach club, supporting commercial facilities, recreational amenities, internal circulation, and drainage improvements. The proposed project is physically suitable for the proposed development project. The project is compatible with general plan guidelines of the Regional Retail District general plan designation. The project is in compliance with density requirements of the Regional Retail District general plan designation. In addition to meeting the proposed density requirements, the project proposed two access points along Avenue 52, two along Calhoun Street, and two along Van Buren Street to serve its public commercial and private resort components.

The conditions of approval require a comprehensive drainage report, precise grading and improvement plans, water and sewer plans, and compliance with the applicable engineering studies. These requirements address site grading, stormwater management, utility connections, and the improvements necessary to serve the resulting lots. Fire Department requirements address emergency access, fire protection water supply, and required fire flow.

Based on the supporting engineering and geotechnical analyses, and with implementation of the required improvements and applicable conditions of the approval, the site is physically suitable for the proposed type of development.

4. That the site is not physically suitable for the proposed density of development;

The site is physically suitable for the proposed density of development. Allowed land uses in the Regional Retail District general plan designation include retail, lodging, entertainment, and residential uses at a development intensity of 10 - 15 DU/AC. The proposed project is for the development of a hotel, resort, residential, and commercial public beach club. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/acre), which is consistent with the General Plan residential density range of 10 – 15 dwelling units per acre. The commercial component of the proposed project has a combined FAR of approximately 0.65, which is consistent with the Regional Retail District standard of 0.35 to 2.0.

The residential component is situated within a larger development that provides additional areas for circulation, recreational amenities, open space, drainage, and supporting infrastructure. The proposed subdivision establishes lots and access arrangements to accommodate these functions.

The conditions of approval require the applicant to provide the water, sewer, drainage, circulation, and fire protection improvements necessary to serve the proposed development. The required improvements must accommodate the residential component together with the demands of the commercial and resort uses, consistent with the supporting engineering studies and service-provider requirements.

Based on the proposed development arrangement and implementation of the required improvements, the site is physically suitable for the proposed density.

5. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat;

Pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, the City is the lead agency for purposes of CEQA for this Project. The City prepared a Modified Initial Study/ 15183 Checklist (15183 Checklist) to evaluate whether the proposed Project requires further review under the California Environmental Quality Act (CEQA).

The General Plan Update Environment Impact Report (EIR) determined that biological-resource impacts would be less than significant.[1] Although growth projected under the GPU could result in the loss of foraging habitat for migratory species, those impacts are expected to be less than significant due to the significant tracts of land that would be set aside as open space as proposed by the GPU Land Use Plan.[2]

The Project site consists primarily of agricultural development including date palms, grapevines, and other cultivated areas, together with disturbed and developed areas. . An irrigation pond occurs in the central-northern area of the site with nearby pump housing and additional support structures. Disturbances have eliminated the natural plant communities that historically occurred on the project site. The biological assessment prepared by ELMT Consulting identified no native or

1 City of Coachella, 2035 GPU Draft EIR, Biological Resources, at 4.3-28.
2 *Ibid*.

special-status natural communities, jurisdictional drainage or wetland features, designated critical habitat, or mapped wildlife corridors or linkages. The irrigation pond is an artificial agricultural feature that does not support fish, riparian habitat, or hydrophytic vegetation. The site is also outside a CVMSHCP Conservation Area, and the CVMSHCP does not identify modeled habitat for a covered species within or adjacent to the site. No special-status species were observed during the field survey, and the assessment found no burrowing owls, owl sign, or suitable burrows.

To ensure no impact occurs to migratory birds, the biological report suggests a pre-construction nesting bird clearance survey which will be conducted prior to ground disturbance if construction occurs between February 1st and August 31st. This recommendation is consistent with the requirements of the MBTA, California Fish and Game Code, and USFWS.

The project would be consistent with the biological-resources analysis within the GPU EIR. The project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

6. That the design of the subdivision or the type of improvements is likely to cause serious public health problems; and

The proposed subdivision is subject to conditions requiring approved water and sewer plans, necessary utility connections and improvements, and drainage facilities designed to manage on-site runoff and existing tributary flows. The applicant must construct the improvements necessary to serve the development in accordance with City and applicable service-provider requirements.

The conditions of approval also require stormwater quality management, construction stormwater controls, and dust and erosion control measures. Fire protection requirements address emergency access, adequate fire protection water supply, and required fire flow.

The recreational lagoons must comply with applicable health and sanitation requirements and obtain the necessary agency approvals for their construction and operation. Water treatment, disinfection, and recreational use must meet the requirements of the Riverside County Department of Environmental Health. The proposed stormwater detention lake is separate from the recreational lagoons and is not intended for swimming or other water-contact recreation.

The Section 15183 Checklist determined that construction and operational emissions would remain below applicable South Coast AQMD regional and localized significance thresholds, including at nearby sensitive receptors, and would not result in a peculiar, new, or substantially more severe air-quality impact than analyzed in the General Plan EIR. Compliance with South Coast AQMD Rules 402, 403, and 403.1 and Chapter 8.20 of the Municipal Code would control nuisance emissions and fugitive dust.

With implementation of the required utility, drainage, fire protection, and sanitation requirements, the subdivision design and proposed improvements are not likely to cause serious public health problems.

7. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the governing body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public.

The proposed map will not conflict with any public easements acquired for access or use by the public at large within the proposed development project. The Riverside County Office of the Fire Marshal, City of Coachella Engineering Department/Public Works Department, Coachella Water Authority, and the County of Riverside have reviewed the proposed project and no concerns pertaining to easements were identified. The subdivision of land will not conflict with easements for access through or use of property and as such, the development project's design is confirmed to be in harmony with existing public easements.

Conclusion:

Staff concludes, based on the foregoing analysis and supporting project documentation, that the proposed subdivision and its required improvements are consistent with the City of Coachella General Plan and that the grounds for denial identified in Government Code Section 66474 and Coachella Municipal Code Chapter 17.28.030 do not apply to Tentative Tract Map No. 39330.

The proposed parcel subdivision is consistent with the City of Coachella General Plan and the Coachella Municipal Code. The parcel subdivision will not conflict with easements acquired by the public at large, for access through or use of property within the proposed parcel subdivision, and it will not cause substantial environmental damage or substantially avoidably injure fish, wildlife, or their habitat. The required conditions of approval ensure the Project will not be detrimental to the public health, safety, or welfare, and the conditions prevent material injury to properties or improvements in the vicinity.

Implementation of the single-family residential component is contingent upon City Council adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and approval of Conditional Use Permit No. 407. This requirement shall be incorporated into the tentative map resolution and conditions of approval.

FINDINGS:

Zoning Ordinance Amendment No. 26-02 – Single-Family Residential Uses in the Regional Commercial (R-C) Zone.

Pursuant to Coachella Municipal Code Section 17.80.010 and Government Code Section 65860, staff recommends that the Planning Commission recommend City Council adoption of Zoning Ordinance Amendment No. 26-02 based on the following findings:

1. The amendment is consistent with and implements the General Plan's purposes, objectives, and land use provisions.

The General Plan's Regional Retail District designation allows residential uses at a density of 10 to 15 dwelling units per acre, with residential uses supporting the district's commercial

environment. The existing Regional Commercial (R-C) zoning provisions accommodate multi-family residential uses subject to a Conditional Use Permit but do not expressly provide a corresponding approval pathway for single-family residential uses.

This difference prompted the proposed amendment, which would allow single-family residential uses in conjunction with a resort, subject to a Conditional Use Permit. The amendment brings the zoning code into closer alignment with the residential uses contemplated by the General Plan while preserving the commercial purpose of the R-C zone.

For the COVA project, the amendment would provide a land use approval pathway for single-family units intended to accommodate fractional ownership within an integrated resort development. The ownership arrangement does not replace the requirement to demonstrate compliance with applicable density requirements, General Plan policies, and project approval conditions.

2. The amendment is justified by public necessity and convenience.

The amendment establishes a defined approval process for single-family residential uses associated with resort development. It responds to the difference between the General Plan's broader allowance for residential uses and the zoning code's existing conditional allowance for multi-family residential uses.

Requiring a Conditional Use Permit for single-family residential uses provides comparable discretionary review of both residential building types. Applicants may propose a residential configuration suited to an integrated resort, while the City retains the ability to evaluate whether the proposed uses are appropriate for the site and consistent with applicable policies and standards.

The amendment therefore serves public necessity and convenience by providing regulatory clarity and a consistent review mechanism for residential uses within the R-C zone.

3. The amendment promotes the general welfare.

The amendment balances flexibility for resort development with the preservation of land for regional-serving commercial activities. Requiring single-family residential uses to occur in conjunction with a resort limits the proposed allowance to integrated resort developments rather than establishing a general allowance for independent single-family subdivisions throughout the R-C zone.

The Conditional Use Permit process allows the City to evaluate whether the residential component supports the resort and maintains the development's commercial function. Review also addresses compatibility, circulation, parking, infrastructure, noise, lighting, and other relevant development and operational characteristics.

This approach promotes the general welfare by accommodating residential uses contemplated by the General Plan while retaining commercial development opportunities and review of potential conflicts with surrounding properties.

4. The amendment constitutes good zoning practice.

The amendment establishes a conditional approval pathway for single-family residential uses that is comparable to the existing Conditional Use Permit requirement for multi-family residential uses. This approach allows consideration of different residential building types while maintaining discretionary review.

Limiting the allowance to single-family residential uses in conjunction with a resort preserves the R-C zone's primary commercial purpose and reduces the potential for commercial properties to be developed as independent single-family subdivisions under this amendment. Each proposal must demonstrate an integrated relationship between its residential and resort components and satisfy the applicable Conditional Use Permit findings.

The amendment authorizes a land use category rather than independently approving fractional ownership arrangements, short-term rental operations, or a particular development. Those matters remain subject to applicable regulations and project approvals. Accordingly, the amendment provides flexibility and regulatory clarity while protecting the intended function of the commercial zone.

Conclusion

Staff concludes that Zoning Ordinance Amendment No. 26-02 brings the Regional Commercial zoning provisions into closer alignment with the General Plan's allowance for residential uses while preserving the zone's commercial purpose. The amendment provides comparable Conditional Use Permit review for single-family and multi-family residential uses and limits the proposed single-family allowance to uses developed in conjunction with a resort.

The amendment is consistent with the General Plan and is justified by public necessity, convenience, general welfare, and good zoning practice. Staff recommends that the Planning Commission adopt Resolution No. PC2026-27 recommending City Council adoption of Zoning Ordinance Amendment No. 26-02. The COVA project's single-family residential component remains subject to approval of Conditional Use Permit No. 407.

FINDINGS:

Zoning Ordinance Amendment No. 26-03 – Amendments to Chapter 5.80 – Regulation of Short-Term Vacation Rentals of the Business Licenses and Regulations Ordinance.

Zoning Ordinance Amendment No. 26-03 would amend Chapter 5.80 of Title 5, Business Licenses and Regulations, to provide exceptions for projects with approved development agreements to the short-term vacation rental permit limit per owner and the percentage limit on units permitted for short-term rental use. Additional modifications would apply only as expressly

authorized by the amended ordinance and approved development agreement. Staff recommends approval based on the following findings:

1. The amendment is consistent with and supports the General Plan's purposes and objectives.

The amendment provides flexibility to accommodate integrated hospitality developments containing residential accommodations, resort amenities, dining, recreation, and entertainment. For the COVA project, this flexibility would support the proposed relationship between residential ownership, including fractional ownership, and short-term rental operations within the resort.

Land Use and Community Character Element Policy 13.4, Diverse Tax Base, calls for a fiscally sound City supported by a sustainable and diversified tax base and user fees, including property tax, sales tax, transient occupancy tax, utilities user tax, and fees supporting the cost of services. The amendment supports this policy by accommodating visitor-serving developments that may contribute to applicable City tax revenues.

The amendment also supports Policy 13.3, Efficient Growth, by allowing the City to evaluate potential revenues alongside infrastructure obligations, public service demands, and community compatibility through the development agreement and accompanying project approvals.

2. The amendment is justified by public necessity and convenience.

Chapter 5.80 establishes limits on permit ownership and the concentration of short-term vacation rentals. These limitations regulate vacation rental activity within residential areas but may constrain integrated hospitality developments where short-term accommodations are an intended component of the approved development.

The amendment establishes a defined mechanism for accommodating these developments through approved development agreements. It allows the City to coordinate applicable rental provisions with the project's ownership structure, operating arrangements, and development obligations.

This approach provides regulatory clarity for applicants, property owners, operators, and City staff while retaining City Council review of the development agreement and the project-specific provisions governing rental operations.

3. The amendment promotes the general welfare.

The amendment allows the City to address short-term rental operations in conjunction with negotiated development obligations and enforceable project requirements. Development agreements and accompanying approvals can address management responsibilities, complaint response, security, parking, noise, infrastructure, and applicable tax reporting and payment obligations.

The justification for exceptions must address the characteristics of the qualifying development and how its operating framework protects surrounding properties and community interests. Requirements of Chapter 5.80 that are not lawfully modified remain applicable.

Accordingly, the amendment provides flexibility for qualifying developments while retaining mechanisms to address public health, safety, neighborhood compatibility, and the demands placed on City services.

4. The amendment constitutes good regulatory practice.

The amendment establishes an express framework for coordinating Chapter 5.80 with City-approved development agreements. It clarifies the availability of exceptions to permit ownership and concentration limits and provides a documented basis for administering project-specific requirements.

Each development agreement must clearly identify the property and operations it covers, together with any additional authorized modifications and applicable obligations. The amendment does not independently approve a development, establish compliance with zoning requirements, or authorize rental operations without the applicable permits and project approvals.

This approach accommodates coordinated hospitality developments while maintaining a clear distinction between the exceptions authorized by the ordinance and additional provisions expressly established through a development agreement.

Conclusion

Staff concludes that Zoning Ordinance Amendment No. 26-03 supports the General Plan's objectives for a diversified tax base and fiscally sustainable growth and is justified by public necessity, convenience, general welfare, and good regulatory practice. The amendment provides flexibility for projects with approved development agreements while retaining applicable regulatory requirements and project-specific review.

Staff recommends that the Planning Commission adopt Resolution No. PC2026-28 recommending City Council adoption of Zoning Ordinance Amendment No. 26-03. Exceptions and operating provisions applicable to the COVA project shall be coordinated with Development Agreement No. 25-01 and the accompanying project approvals.

FINDINGS:

Conditional Use – Special Event Establish Use in the (R-C) Regional Commercial Zone & Conditional Use – Single-Family Residential in conjunction with a Resort Use.

Pursuant to Coachella Municipal Guidelines Chapter 17.74, Conditional Uses, subject to the provisions of this chapter, the Planning Commission must make the following findings for conditional use approval:

Conditional Use Permit No. 396 — Bar/ Cocktail Lounges, Special Event Establishment Uses

Pursuant to Coachella Municipal Code Section 17.74.020(B), staff recommends conditional approval of the proposed special event establishment uses based on the following findings:

1. The proposed use will be in harmony with and in accordance with the objectives of the General Plan.

The proposed bars and cocktail lounges, liquor sales, and special event establishment uses are consistent with and supportive of the Regional Retail District land use designation applicable to the Project site. The proposed uses are components of the larger COVA resort development and are intended to provide dining, beverage, recreation, entertainment, and visitor-serving amenities in conjunction with the Project's hotel, resort, residential, restaurant, and other commercial uses.

The bars and cocktail lounges and associated liquor sales will complement the hospitality and visitor-serving functions of the Project, while the special event establishments will serve as a principal recreational and visitor-serving amenity within the overall resort. These uses support the development of the Project as an integrated destination rather than as a conventional residential development and are consistent with General Plan objectives encouraging commercial, hospitality, recreational, and visitor-serving development and a diversified local economy.

2. The proposed use will be compatible with the existing or intended character of the general vicinity and will not change its essential character.

The proposed bars and cocktail lounges, liquor sales, and special event establishment uses have been incorporated into the comprehensive design of the COVA resort development and are compatible with the intended hospitality, commercial, recreational, and entertainment character of the Project.

The beach club is proposed as an integral recreational and visitor-serving component of the resort rather than as an independent use unrelated to the overall development. Similarly, the bars and cocktail lounges and liquor sales are intended to operate in conjunction with the Project's hospitality, restaurant, recreational, and visitor-serving uses.

The Project's site planning and prescribed conditions of approval provide mechanisms to address potential operational effects associated with these uses, including noise, lighting, security, parking, circulation, hours of operation, alcohol service, and fire and life safety. Alcohol sales and service will also remain subject to applicable requirements of the California Department of Alcoholic Beverage Control.

With implementation of the conditions of approval and compliance with applicable City and State requirements, the proposed uses will be located, designed, constructed, operated, and maintained in a manner compatible with the intended character of the Project and surrounding area and will not change the essential character of the area.

3. Consideration has been given to scale, bulk, coverage, density, public facilities, utilities, neighborhood character, traffic generation, street capacity, and other relevant impacts.

The scale, bulk, coverage, and intensity of the proposed bars and cocktail lounges, liquor sales, and special event establishment uses have been considered as part of the overall COVA

development and the associated Architectural Review, Tentative Tract Map, Conditional Use Permits, and other Project entitlements.

The special event establishment uses and food-and-beverage uses are integrated into the overall Project site plan and will be served by the Project's proposed vehicular and pedestrian circulation systems, parking facilities, utilities, water and sewer facilities, drainage improvements, emergency access, landscaping, lighting, and other infrastructure.

The Project is subject to conditions of approval requiring the construction of necessary infrastructure and compliance with applicable requirements of the City and other responsible agencies. Potential effects associated with traffic, parking, noise, lighting, alcohol service, security, and operation of the proposed uses are addressed through the Project design, applicable Municipal Code requirements, and prescribed conditions of approval.

4. Any potentially hazardous or disturbing characteristics are justified by the common public interest as a benefit to the community as a whole.

The proposed bars and cocktail lounges, liquor sales, and special event establishment uses may have the potential to generate operational effects associated with noise, alcohol consumption, security, lighting, parking, traffic, and hours of operation. However, the proposed uses are located within and have been designed as integral components of the larger COVA resort development rather than as stand-alone uses. The proposed Project is consistent with the land use framework established by the City of Coachella General Plan and evaluated in the certified General Plan Environmental Impact Report. The General Plan EIR evaluated and contemplated the potential environmental effects associated with development of the Project area consistent with the General Plan, including potential noise impacts associated with the types and intensity of development anticipated for the area.

Potential operational impacts associated with the proposed uses have been further addressed through the Project design, applicable provisions of the Coachella Municipal Code, applicable requirements of the California Department of Alcoholic Beverage Control, and the conditions of approval imposed on Conditional Use Permit No. 396 and the Project as a whole. These requirements provide mechanisms to address noise, security, lighting, parking, circulation, alcohol service, and other operational considerations and to ensure that the uses operate in a manner compatible with surrounding and reasonably anticipated uses.

The proposed bars and cocktail lounges, liquor sales, and special event establishment uses will provide dining, recreational, entertainment, hospitality, and visitor-serving amenities that support the intended function of the COVA development as an integrated resort destination. The beach club will provide a recreational and visitor-serving amenity, while the bars, cocktail lounges, and associated liquor sales will complement the Project's restaurant, hospitality, recreational, and commercial components.

5. Vehicular approaches are designed to reasonably minimize interference with traffic on surrounding public streets or roads.

Vehicular access to the proposed bars and cocktail lounges, liquor sales, and special event establishment uses will occur through the access and internal circulation system designed for the overall COVA development. The proposed conditional uses will not rely upon separate uncontrolled access points directly serving the individual uses from surrounding public streets.

The Project provides coordinated vehicular access from the surrounding roadway network and an internal circulation system designed to distribute vehicles among the resort, residential, commercial, recreational, and visitor-serving components of the development. Parking and pedestrian circulation serving the proposed uses are similarly incorporated into the overall Project design.

The Project is subject to conditions of approval requiring compliance with applicable City engineering, circulation, access, fire, and public safety requirements. As designed and conditioned, vehicular approaches serving the proposed conditional uses will provide reasonable access while minimizing interference with traffic on surrounding public streets.

Conclusion

Based on the analysis contained in the staff report, the findings set forth herein, and the conditions of approval, the proposed bars and cocktail lounges, liquor sales, and special event establishment uses are appropriate conditional uses within the COVA development. The uses are consistent with the City of Coachella General Plan and the intended commercial, hospitality, recreational, and visitor-serving character of the Project. The General Plan EIR evaluated and contemplated potential environmental effects associated with development of the Project area consistent with the General Plan, including potential noise and land use compatibility impacts associated with the types and intensity of development anticipated for the area.

The proposed uses have been incorporated into the overall design and operation of the COVA resort development, and potential impacts related to noise, alcohol service, security, lighting, parking, traffic, circulation, and other operational characteristics have addressed through the Project design, applicable provisions of the Coachella Municipal Code, applicable State requirements, and the prescribed conditions of approval.

Conditional Use Permit No. 407 — Single-Family Residential Uses in Conjunction with a Resort

Pursuant to Coachella Municipal Code Section 17.74.020(B), staff recommends conditional approval of the proposed single-family residential uses in conjunction with a resort based on the following findings:

1. The proposed use will be in harmony with and in accordance with the objectives of the General Plan.

The General Plan's Regional Retail District designation accommodates residential uses supporting a regional-serving commercial environment. The proposed single-family residential component would be integrated with the COVA resort's lodging, recreational amenities, dining, and other commercial facilities rather than developed as an independent residential subdivision.

The overall residential component includes 162 single-family residential units and 240 condominium cottages, totaling 402 units within approximately 28 residential acres. Commercial acreage is excluded from this calculation. The resulting density is approximately 14.4 dwelling units per acre, within the General Plan's Regional Retail District range of 10 to 15 dwelling units per acre.

The integrated development supports Policy 7.8's mix of regional-serving uses and Policy 7.10's encouragement of resort development, subject to the applicable compatibility and connectivity requirements. It also supports Subarea 3's objectives for coordinated commercial development and appropriate transitions to surrounding properties.

Authorization of the single-family use is contingent upon adoption and effectiveness of Zoning Ordinance Amendment No. 26-02.

2. The proposed use will be compatible with the existing or intended character of the general vicinity and will not change its essential character.

The single-family units would be developed in conjunction with the resort and would share its circulation system, recreational amenities, infrastructure, and coordinated development framework. This relationship maintains the residential component's connection to the intended commercial function of the Regional Commercial zone.

Architecture, landscaping, setbacks, perimeter improvements, and applicable operating requirements address compatibility within the development and with surrounding properties. The relationship between residential accommodations and nearby entertainment activities must also be addressed through the project's noise analysis and approved design and operating controls.

The CUP shall require the single-family component to remain integrated with the resort as authorized by the approved plans and conditions. As conditioned, the use will be compatible with the intended character of the area.

3. Consideration has been given to scale, bulk, coverage, density, public facilities, utilities, neighborhood character, traffic generation, street capacity, and other relevant impacts.

The single-family component is evaluated together with the overall resort development through the tentative map, architectural review, environmental analysis, and infrastructure and circulation review. The overall residential density of approximately 14.4 dwelling units per acre falls within the applicable General Plan range.

The proposed project is compatible with the network and connectivity guidelines of the Regional Retail District general plan designation. The proposed project provides a block length of approximately 600 feet on Calhoun Street, 2,543 feet on Avenue 52, and 1,880 feet on Van Buren Street. In total the block length is approximately 5,023 feet. Although the project has a long block size and perimeter, the project is conditioned to construct 6-foot sidewalks, bicycle paths and multi-use paths along the entire project frontage along Calhoun Street, Avenue 52, and Van Buren Street. The project common area includes a separated sidewalk design that includes a 4-foot curb adjacent landscape buffer, 6-foot sidewalk, equestrian fence, 10-foot d.g. equestrian trail, and

additional landscaping that provides a total 30-foot landscape and sidewalk common area along the entire project frontage along Calhoun Street, Avenue 52, and Van Buren Street.

The Calhoun and Van Buren Street common areas are characterized by two rows of palm trees, while Avenue 52 features a combination of palm trees and shade trees. The project includes decorative landscape lighting throughout the common areas, including tree uplighting, palm-ring lighting, and entry sign illumination. The Van Buren Street median includes tree uplighting and light poles. The common areas feature a desert native inspired landscape design incorporating drought-tolerant plant species, along with decorative gravel and boulders of varying sizes. The proposed project will also reintegrate the existing date palms on the site into the new development design. The proposed project will provide a stucco face block wall design for fencing visible from perimeter streets with a decorative cap. Overall, these common area improvements help offset the longer block lengths by providing enhanced pedestrian connectivity, landscaping, and lighting that contribute to visual interest and enhance the overall design of the common areas along Calhoun Street, Avenue 52, and Van Buren Street.

The project's public area does provide network connectivity access points within every 400 to 500 feet as envisioned by the general plan network and connectivity guidelines. The project's public area does not provide "Virtual Blocks" due to the smaller size of the area. The project's private area does not provide network connectivity access points at 400- to 500-foot intervals. However, the perimeter common-area design and internal street network provide a high-quality circulation system that helps offset the greater spacing between network connectivity access points. The project's private area does not provide "Virtual Blocks", as the internal private street network is designed to serve the hotel, residential, and resort uses. The project design provides direct and convenient access to project amenities, and guests and residents are anticipated to navigate the site primarily by walking and golf carts, as evidenced by the 193 golf cart parking spaces planned for the project. Overall, the design of the project internal street network provides a design that serves the specific hotel, residential, resort, and commercial uses of the project. As a result, the project is consistent with the network and connectivity guidelines of the Regional Retail District general plan designation.

The proposed project is compatible with the street design guidelines of the Regional Retail District general plan designation. As indicated above, internal private street network is designed to serve the hotel, residential, and resort uses. The project design provides direct and convenient access to project amenities, and guests and residents are anticipated to navigate the site primarily by walking and golf carts, as evidenced by the 193 golf cart parking spaces planned for the project. Overall, the design of the project internal street network provides a design that serves the specific hotel, residential, resort, and commercial uses of the project. The project internal street design provides substantial palm tree cover along internal streets that are in line with the private area resort, hotel, and residential use. As a result, the project is consistent with the street design guidelines of the Regional Retail District general plan designation.

The proposed project is compatible with the parks and open space guidelines of the Regional Retail District general plan designation. The project public area provides an open space lagoon and water features that serves as an on-site resort amenity for the residents and guests of the public area.

The proposed project is compatible with the urban form guidelines of the Regional Retail District general plan designation. The buildings throughout the project are designed to be high quality and compatible with the retail, lodging, entertainment, and residential uses envisioned by the General Plan. The private-sector architectural design reflects a contemporary modern style, with building heights limited to a maximum of four stories for the proposed hotel uses. The public beach club incorporates a distinctive lotus flower-inspired design and a waterfall feature, providing unique architectural features that contributes to the overall visual identity and character of the development. The development is designed for the comfort and wayfinding of shoppers within the Regional Retail District, as the distinctive lotus flower-inspired design and waterfall feature of the public sector projects a unique and compelling image from the adjoining streets to entice passersby to visit the District. The ground-floor shopfronts are generally located near the sidewalk, creating an active and pedestrian-oriented frontage along the public right-of-way. While some shopfronts incorporate service functions facing the street, these elements do not detract from the development's architectural character or views from the public right-of-way. Parking for the project is integrated into the overall site design, and provided via private streets. Drainage improvements for the project are required to comply with city engineering conditions of approval to ensure adequate stormwater flow and drainage throughout the site. The project is also required to incorporate drought-tolerant landscaping consistent with city requirements. As a result, the project is consistent with the urban form guidelines of the Regional Retail District.

As a result, the proposed use will be located, designed, constructed, operated and maintained so as to be compatible with the existing or intended character of the general vicinity and shall not change the essential character of the same area.

The required water, sewer, drainage, fire protection, and circulation improvements must accommodate the residential units together with the commercial and resort uses.

The project's identified parking deficiencies must be resolved through an approved and implemented parking arrangement serving the affected uses.

4. Any potentially hazardous or disturbing characteristics are justified by the common public interest as a benefit to the community as a whole.

The single-family use provides a residential accommodation type within an integrated resort development while retaining commercial activities and amenities. The CUP framework allows this residential building type to be considered through discretionary review comparable to that required for multi-family residential uses.

The proposed use may accommodate fractional ownership, but ownership arrangements do not replace land use, safety, or operating requirements. Any short-term rental operations remain subject to applicable regulations, authorized development agreement provisions, and project conditions.

Potential conflicts involving residential occupancy, resort entertainment, vehicle activity, and property management must be addressed through approved design and operating requirements. As conditioned, the use supports the community interest in coordinated resort development while maintaining compatibility and protecting surrounding properties.

5. Vehicular approaches are designed to reasonably minimize interference with traffic on surrounding public streets or roads.

The private resort component is served by an entrance on Avenue 52 and two access points on Van Buren Street, including the proposed back-of-house access. Internal circulation connects the residential accommodations with resort amenities and supporting facilities.

Required engineering and Fire Department review addresses driveway design, internal circulation, emergency access, and required improvements. Residential parking, guest arrivals, service activities, and passenger pickup must be accommodated within the approved circulation and parking framework.

Subject to the supporting traffic analysis and implementation of the approved improvements, the vehicular approaches will reasonably minimize interference with surrounding streets.

Conclusion

Staff recommends conditional approval of Conditional Use Permit No. 407 for single-family residential uses in conjunction with the COVA resort. Implementation is contingent upon adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and compliance with the approved plans, applicable development standards, and conditions of approval.

The approval authorizes single-family residential uses as part of the integrated resort development. It does not authorize their operation as an independent residential subdivision or independently approve short-term rental operations.

Architectural Review

Pursuant to Coachella Municipal Guidelines Chapter 17.72, Architectural Review, subject to the provisions of this chapter, the Planning Commission must make the following findings for Architectural Review approval:

1. The proposed project is consistent with the General Plan.

The approximately 87-acre project site is designated Regional Retail District in the City of Coachella General Plan and is located within Subarea 3 – Van Buren Corridor. The project integrates hotel and resort accommodations, residential units, a publicly accessible commercial beach club, restaurants, entertainment uses, and recreational amenities. This combination supports the designation’s intended mix of commercial, lodging, entertainment, and supporting residential development.

For purposes of the residential density calculation, all 402 units are included within approximately 28 acres allocated to residential development, resulting in approximately 14.4 dwelling units per acre. The commercial components are excluded from this residential acreage calculation. The resulting residential density falls within the General Plan range of 10 to 15 dwelling units per acre. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail standard of 0.35 to 2.0. The project meets the intent and purpose, intended physical character, allowed land uses, and development intensity allowed in the Regional Retail District general plan designation. The project is compatible with the design standards for network connectivity, street design, parks and open space, and urban form guidelines of the Regional Retail District general plan designation.

The project supports the Subarea 3 direction for regional commercial destinations that coexist with surrounding neighborhoods. Its proposed landscaped frontage improvements along Avenue 52, Calhoun Street, and Van Buren Street include separated sidewalks, landscaping, and an equestrian trail. The Van Buren Corridor is at a key location between Indio, Coachella, and La Quinta and much of the land through the corridor is still available for quality development, providing Coachella with a great opportunity to create a strong neighborhood center and regional shopping district. The Van Buren Corridor will transform into a major sub-regional retail destination that will provide a wide variety of goods and services for Coachella residents, as well as neighboring communities. The large format, regional-serving retail will be built in a fashion so it coexists with existing and future neighborhood development in and around the Van Buren Corridor. The new commercial development will promote walkability with a mix of appropriately scaled buildings fronting the streets and large, block scale buildings throughout. These improvements enhance the project's interface with surrounding streets and contribute to the corridor's intended pedestrian environment.

Together, the integrated land uses, compliant residential density, architectural treatment, frontage improvements, and documented circulation design support consistency with the applicable General Plan designation and Subarea 3 policies.

2. The proposed project complies with zoning regulations.

The project site is zoned Regional Commercial (R-C). The Project is subject to the Zoning Ordinance of the City of Coachella which includes Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards for Single-Family Residential of the Coachella Municipal Code (CMC). The project proposes a hotel, resort, residential, and commercial public beach club is consistent with the permitted uses of the R-C zone, including Hotel, Resort, Restaurant, and Private Swimming Pool uses. The project requires approval of a Conditional Use Permit (CUP) to allow bars and cocktail lounges, liquor sales, and a special event establishment. The project requires approval of a CUP to allow single-family residential uses in conjunction with resort uses on the project site. The project includes a Zoning Ordinance Amendment to establish single-family residential uses in conjunction with resort uses as a conditionally permitted use in the R-C zone. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/ac), which is consistent with the R-C zoning residential density range of 10 to 15 dwelling units per acre. The project is complaint with Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards

for Single Family Residential of the CMC, except for certain development standards that comply with the standards allowed pursuant to the project Development Agreement in accordance with Chapter 17.100 – Development Agreements of the CMC.

The project is compliant with the residential density requirements, supplemental standards for single-family residential, yard requirements, landscape setback requirements, Energy Efficient Design and Heat Island Reduction Strategies, distance between building requirements, off-street parking and loading requirements, screening requirements, other property development standards, and architectural review standards as required by Chapter 17.28 – R-C Regional Commercial Zone. The project height requirements will be allowed flexible standards pursuant to the project Development Agreement in accordance with Chapter 17.100 – Development Agreements of the CMC.

The proposed single-family residential component requires adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 to establish single-family residential uses in conjunction with a resort as a conditionally permitted use within the R-C zone, together with approval of Conditional Use Permit No. 407. Implementation of the single-family residential component shall be contingent upon those approvals.

3. The proposed project is consistent with the City's design guidelines.

The project provides a coordinated architectural and landscape design for the commercial, residential, and lodging components within both the publicly accessible and private resort areas. The contemporary architectural character, complementary materials, earth-tone colors, and coordinated landscape treatments establish a cohesive development while distinguishing the buildings according to their functions.

Within the publicly accessible component, the agave-inspired beach club provides an architectural focal point complemented by the restaurants, supporting commercial facilities, lodging and residential buildings, and recreational amenities. Coordinated building placement, pedestrian connections, landscaping, and screening of service areas support compatibility among these uses.

Within the private resort component, the residential and lodging buildings incorporate complementary façade treatments, wood siding, dark metal-framed windows, and metal roofing. These features establish a consistent architectural character throughout the resort. Incorporation of existing date palms and drought-tolerant landscaping further integrates the public and private components with the surrounding desert environment.

Each commercial, lodging, and residential building shall comply with the City's applicable design requirements for its approved use and building type, including applicable single-family residential supplemental standards and multifamily objective design standards where applicable. Final plans shall demonstrate compliance with required building articulation, entry treatments, materials, screening, privacy, lighting, and pedestrian access provisions. Implementation of the single-family residential component remains contingent upon adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and approval of Conditional Use Permit No. 407.

The project is required to comply with the Supplemental Standards for Single-Family Residential, as required by the Regional Commercial zone. The project is compliant with the access and connectivity, street and pathway landscaping, parking, service and utilities, refuse and recycling, architectural variability, façade modulation and articulation, window trim and recess, building entries, building roofs, colors and materials, transitions and privacy, and accessory structures standards for single-family residential of the Coachella Municipal Code (CMC). As a result, the project is in compliance with the city's design guidelines.

Based on these design features and subject to the applicable approvals and conditions of approval, the commercial and residential components within both the publicly accessible and private resort areas are consistent with the City's applicable design guidelines.

4. The proposed development will not be detrimental to public health, safety, or welfare, or materially injurious to nearby properties and improvements.

The project's site design separates public commercial access from private resort access and includes a separate back-of-house entrance. This arrangement provides a basis for managing visitor, resident, employee, service, and emergency circulation.

The approved plans and conditions shall require accessible pedestrian routes, safe crossings where pedestrian routes intersect vehicular circulation, required emergency access, and compliance with applicable building and fire requirements. Parking and loading shall comply with applicable requirements or an expressly authorized alternative supported by the required analysis.

Exterior lighting shall be designed and directed to control glare and light spill onto adjoining properties and public streets. Refuse areas, loading areas, mechanical equipment, and utility facilities shall receive appropriate screening. Required grading, drainage, utility, and geotechnical improvements shall be incorporated into the final construction plans.

Special event and alcohol-related operations remain subject to their respective CUP requirements, including applicable controls addressing noise, attendance, hours, security, and parking. With implementation of these design requirements and operational conditions, the development will protect public health, safety, and welfare and avoid material injury to surrounding properties.

A comprehensive environmental evaluation has been completed for the project as documented in the attached §15183 Exemption Checklist. This evaluation concludes that the project qualifies for an exemption from additional environmental review because it is consistent with the development density and use characteristics established by the City General Plan, as analyzed by the City GPU EIR (SCH #2009021007), and all required findings can be made.

In accordance with CEQA Guidelines §15183, the project qualifies for an exemption because the following findings can be made:

1. The project is consistent with the development density established by existing zoning, community plan or general plan policies for which an EIR was certified.

The project is located within the City's General Plan Regional Retail District, and Regional Commercial (R-C) zoning designation. Regional Retail Districts and R-C zones allow 10 – 15 dwelling units per acre and a floor area ratio (FAR) of 0.35 – 2.0. The project would be consistent with the Regional Retail District land use designation identified for the site in the GPU. Similarly, the project would be consistent with the Regional Commercial (R-C) zoning designation for the site in the Zoning Map once the application to amend the City's Zoning Code is approved. The project proposes 14.4 dwelling units per acre and 0.65 FAR, which is consistent with the Regional Retail Districts and R-C zone.

2. There are no project specific effects which are peculiar to the project or its site, and which the GPU EIR failed to analyze as significant effects.

The subject property currently operates as a combination of an active date palm grove and grape vines that have been allowed to go fallow. The site is surrounded by agricultural uses, vacant land, and scattered residential properties. Currently, the subject property operates similarly to the surrounding uses. The project proposes to develop a hospitality project with resort, residential, and recreational uses. The project is consistent with the City's Regional Retail District land use designation and Regional Commercial zoning designation. The project will not result in project-specific effects which are peculiar to the project or its site. The project site does not contain any unique or peculiar environmental features that would result in environmental effects beyond those previously identified and analyzed.

In addition, as explained further in the §15183 Exemption Checklist below, all project impacts were adequately analyzed by the GPU EIR. Applicable mitigation measures specified within the GPU EIR have been applied to the project.

3. There are no potentially significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

Preparation of the §15183 Exemption Checklist did not identify any significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

4. There is no substantial new information which results in more severe impacts than anticipated by the GPU EIR.

As explained in the §15183 Exemption Checklist below, no new information has been identified which would result in a determination of a more severe impact than what had been anticipated by the GPU EIR.

5. The project will undertake feasible mitigation measures specified in the GPU EIR.

As explained in the §15183 Exemption Checklist, the project will undertake feasible mitigation measures specified in the GPU EIR. These GPU EIR mitigation measures will be undertaken

through project design, compliance with regulations and ordinances, or through the project's conditions of approval.

5. The project is compatible with the existing or intended character of the surrounding area and will not change its essential character.

The project's integrated commercial, resort, entertainment, and residential components are compatible with the intended Regional Retail District character of the Van Buren Corridor. The publicly accessible commercial component preserves the site's role as a regional destination, while the residential component is integrated with the resort.

The coordinated architectural materials and colors, distinctive beach club design, landscaped frontages, and decorative perimeter walls establish a consistent visual character. Required setbacks, building placement, landscape buffers, screening, and privacy treatments shall provide transitions between the project and nearby residential properties.

Compatibility also depends on the approved building heights, pedestrian connections, lighting controls, service-area treatment, and operational restrictions. These requirements shall be maintained throughout the life of the project. With these measures, the development will be compatible with the area's existing residential context and intended regional commercial character without changing its essential character.

Conclusion

Staff concludes that the findings required by Coachella Municipal Code Section 17.72.010(I) can be made for Architectural Review No. 25-07 based on the approved plans, documented standards analysis, and conditions of approval. Implementation shall be contingent upon the adoption and effectiveness of Zoning Ordinance Amendment No. 26-02, approval of the applicable conditional use permits, and effectiveness of any related approval necessary to authorize the proposed development standards. The project shall be constructed and maintained in accordance with the approved architectural, landscape, lighting, and site plans.

Development Agreement

Pursuant to Coachella Municipal Guidelines Chapter 17.100, Development Agreement, subject to the provisions of this chapter, the Planning Commission must make the following findings for Development Agreement approval:

A. Is consistent with the objectives, policies, general land uses and programs specified in the general plan and any applicable specific plan;

The approximately 87-acre project site is designated Regional Retail District and is located within Subarea 3 – Van Buren Corridor. The Development Agreement establishes a framework for implementing an integrated hotel, resort, residential, dining, entertainment, and recreational development. The publicly accessible Commercial Beach Club Sector provides commercial and recreational opportunities for residents and visitors, while the Private Resort Sector combines lodging and supporting residential accommodations with shared resort amenities.

For General Plan density purposes, all 402 units are included within approximately 28 acres allocated to residential development, resulting in approximately 14.4 dwelling units per acre. Commercial acreage is excluded from this residential density calculation. The proposed density falls within the applicable range of 10 to 15 dwelling units per acre.

The agreement supports the Regional Retail District's destination-oriented mix of uses and Subarea 3's direction for commercial development that is compatible with surrounding neighborhoods. Its obligations for public improvements and frontage landscape maintenance support implementation of the project's approved site design. The project's pedestrian connections, external connectivity, commercial intensity, and transitions to adjacent development are addressed through the General Plan consistency analysis and required project improvements.

Together with the related project approvals and documented General Plan consistency analysis, the agreement implements the applicable land use and community character objectives. No specific plan applies to the project site.

B. Is compatible with the uses authorized in and the regulations prescribed for the land use district in which the real property is located;

The project site is zoned Regional Commercial (R-C). The proposed hotel and resort use, beach club, restaurants, and supporting amenities are compatible with the commercial and hospitality uses authorized within the district, subject to applicable development standards and required permits. Special event and alcohol-related uses are subject to Conditional Use Permit No. 396 and any additional required approvals.

The single-family residential component requires adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and approval of Conditional Use Permit No. 407. These approvals would authorize single-family residential uses in conjunction with the resort while retaining the site's integrated commercial and hospitality function.

The agreement establishes development rights by reference to the approved project and applicable regulations. Any departure from otherwise applicable development standards shall be specifically identified and lawfully authorized in the final approvals. Short-term rental treatment shall conform to the adopted provisions of Zoning Ordinance Amendment No. 26-03 and the express operational requirements of the final agreement.

With effectiveness of the required amendments and permits, and incorporation of the authorized development standards, the agreement is compatible with the uses and regulations applicable to the R-C district.

C. Is in conformity with the public necessity, public convenience, general welfare and good land use practices;

The agreement coordinates development of the project with the provision of infrastructure and facilities necessary to serve its approved uses. Section 3.8.1 of the Development Agreement requires the developer to design, engineer, and construct required public improvements and

generally complete improvements serving each phase before issuance of the first certificate of occupancy within that phase, unless an earlier deadline applies.

The agreement also requires water and sewer extensions, participation in necessary electrical infrastructure, and construction or funding of a portion of off-site sewer main upsizing serving other planned housing developments. Section 4.6 of the Development Agreement requires maintenance of enhanced landscaping along the project's public street frontages.

The publicly accessible beach club, restaurants, and entertainment facilities would expand recreational and commercial opportunities. Development and operation would also create construction and permanent employment opportunities.

The agreement's infrastructure obligations, phased implementation framework, and compliance review provisions support coordinated development and delivery of the identified public benefits. Together with the related project approvals and conditions, these provisions conform to public convenience, general welfare, and good land use practices.

D. Will be detrimental to the health, safety and general welfare;

The agreement requires development in accordance with the project approvals and applicable requirements. Section 2.3 of the Development Agreement preserves application of the California Building Standards Code and applicable construction codes. Section 2.4 of the Development Agreement retains City authority to address dangerous or hazardous conditions, subject to the procedures established in the agreement.

Required improvements and conditions address emergency access, fire protection, grading, drainage, geotechnical conditions, utility service, pedestrian safety, and parking. Special event and alcohol-related operations remain subject to applicable permit requirements and approved controls governing noise, attendance, hours, security, and circulation.

The agreement's environmental provisions require compliance with CEQA, including additional review where legally required for subsequent approvals. Applicable mitigation measures and essential health and safety conditions shall remain enforceable under the final agreement.

With implementation of these requirements and safeguards, the agreement will not be detrimental to public health, safety, or general welfare.

E. Will adversely affect the orderly development of property or the preservation of property values;

The agreement provides a coordinated framework for the project's land uses, infrastructure, phasing, and continuing operational responsibilities. Required public improvements serving each phase must be completed in accordance with the agreement and project approvals, supporting orderly development and avoiding occupancy before necessary improvements are available.

The approved architectural design, landscape treatments, setbacks, screening, lighting controls, and operational conditions provide transitions between the project and surrounding properties. The developer's obligation to maintain enhanced frontage landscaping contributes to the continuing appearance of the development along Avenue 52, Calhoun Street, and Van Buren Street.

Annual compliance review and applicable enforcement procedures provide mechanisms for monitoring performance of agreement obligations. Continuing resort management, maintenance, and operational requirements shall be established in the final agreement and related approvals for the applicable properties and successors.

These provisions support orderly development and maintenance of the site while protecting surrounding properties from incompatible physical and operational effects. Accordingly, the agreement will not adversely affect orderly development or preservation of property values.

F. Will have a positive fiscal impact on the city.

The project would generate potential City revenues through taxable lodging, commercial activity, property taxes, and applicable fees. Section 4.5 of the Development Agreement proposes a rebate of 50 percent of eligible transient occupancy tax revenue exceeding the applicable annual retention threshold for the first 15 years following resort opening at Phase 1 buildout, subject to a cumulative rebate cap of $25 million.

The City would retain the first $1 million of actual annual TOT collections at Phase 1 buildout of 167 units, the first $1.5 million upon Phase 2 completion at 273 units, and the first $2 million at full buildout of 402 units. These thresholds establish priority retention of actual collections and do not constitute guaranteed developer payments. The developer is not obligated to cover a shortfall. The City would retain all project TOT after the incentive period expires or the rebate cap is reached, subject to applicable tax requirements.

PUBLIC HEARING NOTICE:

A notice of public hearing to consider the Project was published in the Desert Sun, the newspaper of record, on September 17, 2026, and a public hearing notice was mailed to property owners within a radius of 300- feet of the subject property on September 17, 2026, pursuant to Section 17.74.010G of the Coachella Municipal Code. At the time of issuance of this staff report, staff had not received public comments on this application.

ENVIRONMENTAL REVIEW:

Pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, the City is the lead agency for the Project. Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by existing general plan policies for which an environmental impact report (EIR) was certified does not require additional environmental review except as necessary to evaluate certain project-specific environmental effects.

To determine whether the Project qualifies for streamlined review under State CEQA Guidelines section 15183, the City prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist"). The 15183 Checklist evaluates whether the Project is consistent with the development density established by the Coachella General Plan Update 2035 (GPU) and whether the Project may result in environmental effects that: (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the GPU EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the GPU EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the GPU EIR was certified, are determined to have a more severe adverse impact than discussed in the GPU EIR.

The 15183 Consistency Analysis concludes that the Project is consistent with the development density established by the GPU and that none of the environmental effects identified in State CEQA Guidelines section 15183, subdivision (b), would occur. The analysis further concludes that the potential environmental effects associated with the Project were adequately analyzed in the GPU EIR and that all feasible mitigation measures from the GPU EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project. Accordingly, the Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

Upon approval of the Project, a Notice of Exemption will be prepared and filed in accordance with CEQA.

TTM NO. 39330 ALTERNATIVES:

1) Approve Resolution No. PC2026-26 recommending that the City Council approve TTM No. 39330 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-26 recommending that the City Council approve TTM No. 39330 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-26.

4) Continue this item and provide staff and the applicant with direction.

ZOA NO. 26-02 ALTERNATIVES (SFR):

1) Approve Resolution No. PC2026-27 recommending that the City Council approve ZOA No. 26-02 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-27 recommending that the City Council approve ZOA No. 26-02 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-27.

4) Continue this item and provide staff and the applicant with direction.

ZOA NO. 26-03 ALTERNATIVES (STR):

1) Approve Resolution No. PC2026-28 recommending that the City Council approve ZOA No. 26-03 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-28 recommending that the City Council approve ZOA No. 26-03 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-28.

4) Continue this item and provide staff and the applicant with direction.

CUP NO. 396 ALTERNATIVES (SPECIAL EVENT USE):

1) Approve Resolution No. PC2026-29 recommending that the City Council approve CUP No. 396 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-29 recommending that the City Council approve CUP No. 396 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-29.

4) Continue this item and provide staff and the applicant with direction.

CUP NO. 407 ALTERNATIVES (SFR USE):

1) Approve Resolution No. PC2026-30 recommending that the City Council approve CUP No. 407 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-30 recommending that the City Council approve CUP No. 407 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-30.

4) Continue this item and provide staff and the applicant with direction.

AR NO. 25-07 ALTERNATIVES:

1) Approve Resolution No. PC2026-31 recommending that the City Council approve AR No. 25-07 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-31 recommending that the City Council approve AR No. 25-07 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-31.

4) Continue this item and provide staff and the applicant with direction.

DA NO. 25-01 ALTERNATIVES:

1) Approve Resolution No. PC2026-32 recommending that the City Council approve AR No. 25-01 with the findings and conditions as recommended by Staff.

2) Approve Resolution No. PC2026-32 recommending that the City Council approve AR No. 25-01 with the findings and conditions as recommended by Staff, with modifications as proposed by the Planning Commission.

3) Deny Resolution No. PC2026-32.

4) Continue this item and provide staff and the applicant with direction.

RECOMMENDED ALTERNATIVE(S):

Staff recommends Alternative #1 for TTM No. 39330, ZOA No. 26-02, ZOA No. 26-03, CUP No. 396, CUP No. 407, AR No. 25-07, and DA No. 25-01

17. Fire – COVA Fire Access and Hose Reach Exhibit

RESOLUTION NO. PC2026-26

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA RECOMMENDING THAT THE CITY COUNCIL CONDITIONALLY APPROVE TENTATIVE TRACT MAP NO. 39330 FOR THE "COVA" PROJECT PROPOSING THE DEVELOPMENT OF A HOTEL, RESORT, RESIDENTIAL, AND COMMERCIAL PUBLIC BEACH CLUB LOCATED ON APPROXIMATELY 87 ACRES ON FOUR CONTIGUOUS PARCELS (APNS 780-040-001, 780-040-003, 780-060-001, AND 780-060-002) SOUTH OF AVENUE 52, WEST OF VAN BUREN STREET AND EAST OF CALHOUN STREET, AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED. APPLICANT: RELEVANT COACHELLA OWNER, LLC

WHEREAS, on April 22, 2015, the City approved Resolution No. 2015-03 certifying the Program Environmental Impact Report ("EIR") (SCH #2009021007) for the City of Coachella General Plan Update 2035 ("General Plan") and Climate Action Plan; adopting environmental findings, a mitigation monitoring and reporting program, and a statement of overriding considerations; and approving the General Plan and Climate Action Plan pursuant to the California Environmental Quality Act, herein incorporated by reference; and

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, and commercial, and public beach club uses on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, the Applicant subsequently submitted an application for a Zoning Ordinance Amendment related to the Project; and

WHEREAS, Tentative Tract Map No. 39330 proposes the subdivision of the approximately 87-acre Project site to accommodate an integrated hospitality-focused mixed-use development consisting of 240 condominium cottages, 162 single-family residential units, hotel and resort amenities, a public beach club, restaurant and sports bar, together with associated circulation, drainage, utility, landscaping, parking, and other infrastructure improvements; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development density

and intensity established by the General Plan; and,

WHEREAS, implementation of the single-family residential component shown on Tentative Tract Map No. 39330 is contingent upon the City Council's adoption and effectiveness of Zoning Ordinance Amendment No. 26-02, allowing single-family residential uses in conjunction with a resort use within the Regional Commercial (R-C) zone, and approval of Conditional Use Permit No. 407 authorizing such uses; and

WHEREAS, the proposed Project is consistent with and intended to implement the vision of the Coachella Municipal Code and the General Plan pertaining to land use patterns, building and site design, and public right-of-way improvements; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist"), to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, the Project site is located within Subarea 3 – Van Buren Corridor of the General Plan's Land Use and Community Character Element, and the proposed subdivision supports the Subarea's regional commercial development, connectivity, pedestrian access, and compatibility objectives through its proposed mix of uses, distributed access points, frontage improvements, landscaping, sidewalks, trails, and other required improvements; and

WHEREAS, the Subdivision Map Act also requires that, prior to any map approval, the City must find that the proposed subdivision, together with the provisions for its design and improvement of any tentative map or a parcel map, is consistent with the general plan and any applicable specific plan, and that the site is physically suitable for that type of development and the proposed density, and that the design of the subdivision is not likely

to cause serious public health problems, conflict with easements, or cause substantial environmental damage or substantially and avoidably injure fish, wildlife, or their habitat (Government Code Section 66473.5); and

WHEREAS, the Tentative Tract Map is consistent with the General Plan and meets the Regional Retail District land use designation requirements and is consistent with the requirements outlined in the Coachella Municipal Code; and

WHEREAS, the Tentative Tract Map will not conflict with easements acquired by the public at large, for access through or use of property within the proposed tract map as all such improvements will be constructed to be adequate for the Project, and it will not cause substantial environmental damage or substantially avoidably injure fish, wildlife, or their habitat; and

WHEREAS, the proposed design of the tract map improvements contemplated by the proposed parcel subdivision is not likely to be detrimental to public health, safety, or welfare as adequate sewer and water systems will be available to the tract map. The parcels have the necessary infrastructure to adequately serve the proposed development and all proposed uses as allowed by the zoning ordinances that regulate the Project Site; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA DOES HEREBY FIND DETERMINE AND RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. Compliance with California Environmental Quality Act. The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

The applicable mitigation measures adopted in connection with the General Plan Update 2035 EIR shall remain applicable to the Project and shall be incorporated into the Project's mitigation monitoring and reporting requirements.

SECTION 3. Tentative Tract Map Findings. Based upon the evidence presented at the hearing, including the staff report and written and verbal testimony, which are all incorporated herein by reference, the Planning commission hereby recommends to City Council the below findings and recommends a determination the Project complies with the necessary findings as required by Coachella Municipal Code Section 16.12 and the Subdivision Map Act. The Subdivision Map Act, in Government Code Section 66474, sets forth the findings required for tentative maps and are summarized as follows:

1. That the proposed map is not consistent with applicable general and specific plans;
The Project site is within the Regional Retail District land use designation of the City of Coachella's General Plan 2035 Update (General Plan). This designation provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this designation will cater to regional clientele and provide

a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment. Like the other Centers and Districts of Coachella, the Regional Retail District is organized into blocks by a combination of public and private streets that provide addresses for the businesses and organize access and parking for them. The blocks of this District may be the largest in Coachella, with buildings, landscape and signage similarly scaled up in size, but not neglecting the importance of creating a comfortable and attractive pedestrian environment for shoppers.

This designation accommodates retail, lodging, entertainment, and single-family residential uses, with commercial activities serving regional clientele and residential uses supporting the commercial environment. The proposed COVA development integrates hotel and resort accommodations, residential units, recreational amenities, restaurants, and a public beach club within a coordinated development.

The residential component consists of 402 units, including 162 single-family residential units and 240 condominium cottages, within approximately 28 acres. Residential density is calculated using the acreage devoted to these units and excludes the commercial components of the project. The resulting density is approximately 14.4 dwelling units per acre (du/ac). The allowed development intensity in the Regional Retail District density range is 10-15 DU/AC. The Regional Retail District allows for a floor area ratio (FAR) between 0.35 and 2.0. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail District standard of 0.35 to 2.0.

The project meets the intent and purpose, intended physical character, allowed land uses, and development intensity allowed in the Regional Retail District general plan designation. The project is compatible with the design standards for network connectivity, street design, parks and open space, and urban form guidelines of the Regional Retail District general plan designation.

The project site is located within Subarea 3 – Van Buren Corridor of the General Plan's Land Use and Community Character Element. The subarea envisions a regional commercial destination that serves Coachella and neighboring communities while integrating new commercial development with surrounding neighborhoods. The proposed subdivision supports this vision by establishing lots for an integrated hospitality, residential, recreation, dining, and entertainment development. Its consistency with the applicable subarea policies is addressed below.

Subarea Policy 1 — Diversity of Retail and Services

The project would broaden the range of commercial services and visitor amenities available along the corridor through hotel and resort accommodations, restaurants, a public beach club, and recreational and entertainment facilities. These uses would serve visitors and provide additional dining and recreation opportunities for residents of Coachella and surrounding communities. The subdivision accommodates these activities within a

coordinated development, supporting the policy's objective of capitalizing on the corridor's regional location.

Subarea Policy 2 — Larger Commercial Uses

The proposed resort and public beach club are regional-serving commercial uses requiring coordinated areas for accommodations, recreation, parking, circulation, and supporting facilities. The subdivision provides separate lots for these functions while integrating them through common access and infrastructure. This arrangement supports the policy's allowance for larger commercial developments along the corridor.

Subarea Policy 3 — Transitions to Adjacent Residential Neighborhoods

The project incorporates perimeter landscaping, setbacks, walls, and designated access points to establish a transition between the development and surrounding properties. Proposed frontage improvements include landscaped buffers, sidewalks, and an equestrian trail along Calhoun Street, Avenue 52, and Van Buren Street. These features provide separation from project activities while improving the appearance and function of the adjoining streets.

The proposed conditions of approval will require that the project meet all operational requirements and standards as outlined in the Coachella Municipal Code pertaining to lighting, noise, commercial operations, and special events. Together, the site design and operational requirements are intended to limit conflicts between the resort and commercial activities and nearby residential uses.

Subarea Policy 4 — Connections to Adjacent Areas

The project proposes six vehicular access points distributed along Avenue 52, Calhoun Street, and Van Buren Street. Perimeter sidewalks and trail improvements would provide routes along the project frontage, while the internal circulation system would connect the residential accommodations, resort amenities, and commercial facilities.

These connections, together with the frontage improvements, support access between the development and adjacent areas.

Subarea Policy 5 — Pedestrian Amenities and Access to Commercial Entrances

The proposed frontage design includes separated six-foot sidewalks, landscaped buffers, trees, and an equestrian trail. These improvements would provide pedestrian facilities and landscaped separation along the adjoining streets.

With these features incorporated into the approved plans and conditions, the project would support the subarea's objective of providing a comfortable pedestrian environment and convenient access to commercial services.

Subarea Consistency Conclusion:

The proposed subdivision advances Subarea 3's commercial development objectives by accommodating regional-serving hospitality, dining, recreation, and entertainment uses. Its perimeter improvements and required compatibility measures support integration with surrounding development. Consistency with the subarea's connectivity and pedestrian design policies is supported by the public connections, crossing improvements, and entrance-access features identified in the proposed plans and conditions of approval.

The proposed subdivision accommodates an integrated mix of residential, lodging, recreation, dining, and entertainment uses consistent with the Regional Retail District designation. The residential component includes 402 units within approximately 28 acres, resulting in a density of approximately 14.4 dwelling units per acre. Commercial acreage is excluded from this residential density calculation.

As discussed above, the subdivision supports the applicable development objectives of Subarea 3 - Van Buren Corridor through its regional-serving commercial uses, frontage improvements, connections, and measures addressing compatibility with surrounding development. Based on this analysis and the required improvements identified in the conditions of approval, the proposed map is consistent with the General Plan. No applicable specific plan has been identified for the project site.

Implementation of the subdivision's single-family residential component is contingent upon City Council adoption and effectiveness of Zoning Ordinance Amendment No. 26-02, allowing single-family residential uses in conjunction with a resort use within the Regional Commercial (R-C) zone, and approval of Conditional Use Permit No. 407 authorizing those uses. The tentative map and accompanying project approvals shall incorporate this requirement.

2. That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans;

The proposed subdivision organizes residential, condominium, commercial, recreational, and open-space uses within an integrated development consistent with the General Plan's Regional Retail District designation. The subdivision includes internal circulation facilities, common-access and emergency-vehicle easements, utility improvements, drainage facilities, and frontage improvements serving the resulting lots.

The Regional Retail District recognizes that block sizes may vary depending on the uses accommodated, while encouraging pedestrian and bicycle connections within larger developments. The project includes frontage improvements along Calhoun Street, Avenue 52, and Van Buren Street consisting of six-foot separated sidewalks, landscaped buffers, an equestrian trail, and associated landscaping. These improvements provide circulation along the project perimeter and access to project entrances. The internal circulation system connects the residential and lodging accommodations with resort amenities and supporting facilities.

The private resort component does not provide connections at every interval suggested by the General Plan. However, the combination of perimeter routes, distributed access points, and internal circulation supports movement around and within the development. Publicly

accessible commercial facilities must provide pedestrian access from adjoining public sidewalks, with the applicable access improvements incorporated into the proposed plans and conditions of approval.

The project also supports Subarea 3 — Van Buren Corridor by accommodating regional-serving commercial activities, providing frontage improvements, and incorporating landscaped transitions between the development and surrounding properties. Grading, drainage, utility, and circulation improvements are subject to City review and the applicable conditions of approval.

For these reasons, the proposed subdivision design and required improvements are consistent with the City of Coachella General Plan. No applicable specific plan has been identified for the project site.

3. That the site is not physically suitable for the type of development;

The approximately 87-acre site provides land for the proposed residential and condominium development, hotel and resort uses, public beach club, supporting commercial facilities, recreational amenities, internal circulation, and drainage improvements. The proposed project is physically suitable for the proposed development project. The project is compatible with general plan guidelines of the Regional Retail District general plan designation. The project is in compliance with density requirements of the Regional Retail District general plan designation. In addition to meeting the proposed density requirements, the project proposed two access points along Avenue 52, two along Calhoun Street, and two along Van Buren Street to serve its public commercial and private resort components.

The conditions of approval require a comprehensive drainage report, precise grading and improvement plans, water and sewer plans, and compliance with the applicable engineering studies. These requirements address site grading, stormwater management, utility connections, and the improvements necessary to serve the resulting lots. Fire Department requirements address emergency access, fire protection water supply, and required fire flow.

Based on the supporting engineering and geotechnical analyses, and with implementation of the required improvements and applicable conditions of the approval, the site is physically suitable for the proposed type of development.

4. That the site is not physically suitable for the proposed density of development;

The site is physically suitable for the proposed density of development. Allowed land uses in the Regional Retail District general plan designation include retail, lodging, entertainment, and residential uses at a development intensity of 10 - 15 DU/AC. The proposed project is for the development of a hotel, resort, residential, and commercial public beach club. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/acre), which is consistent with the General Plan residential density range of 10 – 15 dwelling units per acre. The commercial component of the proposed project has a combined FAR of approximately 0.65, which is consistent with the Regional Retail District standard of 0.35 to 2.0.

The residential component is situated within a larger development that provides additional areas for circulation, recreational amenities, open space, drainage, and supporting infrastructure. The proposed subdivision establishes lots and access arrangements to accommodate these functions.

The conditions of approval require the applicant to provide the water, sewer, drainage, circulation, and fire protection improvements necessary to serve the proposed development. The required improvements must accommodate the residential component together with the demands of the commercial and resort uses, consistent with the supporting engineering studies and service-provider requirements.

Based on the proposed development arrangement and implementation of the required improvements, the site is physically suitable for the proposed density.

5. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and unavoidably injure fish or wildlife or their habitat;

Pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, the City is the lead agency for purposes of CEQA for this Project. The City prepared a Modified Initial Study/ 15183 Checklist (15183 Checklist) to evaluate whether the proposed Project requires further review under the California Environmental Quality Act (CEQA).

The General Plan Update Environment Impact Report (EIR) determined that biological-resource impacts would be less than significant.[1] Although growth projected under the GPU could result in the loss of foraging habitat for migratory species, those impacts are expected to be less than significant due to the significant tracts of land that would be set aside as open space as proposed by the GPU Land Use Plan.[2]

The Project site consists primarily of agricultural development including date palms, grapevines, and other cultivated areas, together with disturbed and developed areas. . An irrigation pond occurs in the central-northern area of the site with nearby pump housing and additional support structures. Disturbances have eliminated the natural plant communities that historically occurred on the project site. The biological assessment prepared by ELMT Consulting identified no native or special-status natural communities, jurisdictional drainage or wetland features, designated critical habitat, or mapped wildlife corridors or linkages. The irrigation pond is an artificial agricultural feature that does not support fish, riparian habitat, or hydrophytic vegetation. The site is also outside a CVMSHCP Conservation Area, and the CVMSHCP does not identify modeled habitat for a covered species within or adjacent to the site. No special-status species were observed during the field survey, and the assessment found no burrowing owls, owl sign, or suitable burrows.

1 City of Coachella, 2035 GPU Draft EIR, Biological Resources, at 4.3-28.
2 *Ibid*.

To ensure no impact occurs to migratory birds, the biological report suggests a pre-construction nesting bird clearance survey which will be conducted prior to ground disturbance if construction occurs between February 1st and August 31st. This recommendation is consistent with the requirements of the MBTA, California Fish and Game Code, and USFWS.

The project would be consistent with the biological-resources analysis within the GPU EIR. The project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

6. That the design of the subdivision or the type of improvements is likely to cause serious public health problems; and

The proposed subdivision is subject to conditions requiring approved water and sewer plans, necessary utility connections and improvements, and drainage facilities designed to manage on-site runoff and existing tributary flows. The applicant must construct the improvements necessary to serve the development in accordance with City and applicable service-provider requirements.

The conditions of approval also require stormwater quality management, construction stormwater controls, and dust and erosion control measures. Fire protection requirements address emergency access, adequate fire protection water supply, and required fire flow.

The recreational lagoons must comply with applicable health and sanitation requirements and obtain the necessary agency approvals for their construction and operation. Water treatment, disinfection, and recreational use must meet the requirements of the Riverside County Department of Environmental Health. The proposed stormwater detention lake is separate from the recreational lagoons and is not intended for swimming or other water-contact recreation.

The Section 15183 Checklist determined that construction and operational emissions would remain below applicable South Coast AQMD regional and localized significance thresholds, including at nearby sensitive receptors, and would not result in a peculiar, new, or substantially more severe air-quality impact than analyzed in the General Plan EIR. Compliance with South Coast AQMD Rules 402, 403, and 403.1 and Chapter 8.20 of the Municipal Code would control nuisance emissions and fugitive dust.

With implementation of the required utility, drainage, fire protection, and sanitation requirements, the subdivision design and proposed improvements are not likely to cause serious public health problems.

7. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the governing body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public.

The proposed map will not conflict with any public easements acquired for access or use by the public at large within the proposed development project. The Riverside County Office of the Fire Marshal, City of Coachella Engineering Department/Public Works Department, Coachella Water Authority, and the County of Riverside have reviewed the proposed project and no concerns pertaining to easements were identified. The subdivision of land will not conflict with easements for access through or use of property and as such, the development project's design is confirmed to be in harmony with existing public easements.

SECTION 4. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Community Development Director is the custodian of the record of proceedings.

SECTION 5. Execution of Resolution. The Planning Commission Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 6. Recommendation to City Council. Based on the foregoing recitals and findings above, and the written and oral comments, facts and evidence presented, the City of Coachella Planning Commission recommends that the City Council conditionally approve Tentative Tract Map No. 39330 for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"). The applicant shall demonstrate compliance with ALL Conditions of Approval, as set forth in Exhibit "A", Tentative Tract Map in "Exhibit B", Site Plan "Exhibit C", and Development Plan Set in "Exhibit D" of this Resolution. Failure to demonstrate compliance with these conditions of approval may result in the delay of the Proposed Use or the rescinding of the City of Coachella's conditional approval. Where the term "Applicant" is used in any condition of approval, this term shall also apply to the Property Owner, any developer, or any successor in the interest of the Applicant. It is the Applicant's or Applicant's successor in interest responsibility to fully comply with the conditions of approval unless subsequently modified in accordance with the City's required processes and procedures.

SECTION 7. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

Exhibit A – Resolution No. PC2026-26

CONDITIONS OF APPROVAL FOR TENTATIVE MAP NO. 39330

General Conditions

1. Tentative Tract Map 39330 is approved for the "COVA" project proposing the development of a hotel, resort, residential, and public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street, and finding that the previously certified Environmental Impact Report adequately address all environmental impacts and no further environmental review is necessary pursuant to Public Resources Code section 21166 and CEQA Guidelines section 15183.

2. The applicant shall defend, indemnify and hold harmless the City of Coachella, its officials, officers, employees, and agents from and against any claim, action, or proceeding against the City, its officials, officers, employees or agents to attack, set aside, void or annul any project approval or condition of approval of the city concerning this project, including but not limited to any approval or condition of approval or mitigation measure imposed by the City Council or Planning Commission. The City shall promptly notify the applicant of any claim, action, or proceeding concerning the project and the City shall cooperate fully in the defense of the matter. The City reserves the right, at its own option, to choose its own attorney to represent the City, its officials, officers, employees and agents in the defense of the City Attorney, within five days of the effective date of this approval.

3. The working drawings shall include within the first four pages a list of all conditions of approval included in this resolution.

4. CC&R's. The Project shall adopt Conditions, Covenants and Restrictions (CC&R's), and act as a liaison to the City for review of the placement, type, architectural style, materials, and landscaping of all units and lots. The proposed CC&R's shall be submitted for City and Riverside County Fire review prior to recordation of final map and the City shall be a signatory of the CC&R's. The CC&Rs shall stipulate a restriction on the duration of stay for any Resort patron, to no more than 30 days. The Resort includes the hotel, villas, and residences within the Resort area. The CC&R's shall stipulate the maintenance of all common area improvements and perimeter walls, or landscape maintenance required may be stipulated through a separate Landscape Maintenance Agreement to be submitted and approved by the city.

5. Prior to the recordation of the final map the applicant shall submit detailed landscaping irrigation plans and sign plans for review and approval by the City Engineer and Development Services Director.

6. Landscape. The landscape plans for the street medians and the common area frontages along Van Buren Street, Avenue 52, and Calhoun Street shall be revised to remove any proposed decomposed granite and replace it with a minimum three-quarter inch (¾-inch) gravel, subject to the discretion, review, and approval of the Community Development Director. This requirement shall not apply to the required 10-foot-wide decomposed granite multi-purpose trail. Landscape medians shall be designed in accordance with the

2008 median design guidelines to the satisfaction of the Community Development Director.

7. Landscape. A landscape weed barrier shall be provided on city-maintained landscape areas, at the discretion of the Community Development Director and Public Works Director.

8. Landscape. The common area landscape frontages along Avenue 52 and Van Buren Street shall include a minimum 10-foot-wide decomposed granite multi-purpose trail with metal landscape edging or concrete mow curb on both edges of the trail and equestrian rail fencing, subject to review and approval by the Community Development Director.

9. Lighting. Final design of the light poles visible from the public right-of-way shall be subject to the discretion, review, and approval of the Community Development Director and Public Works Director.

10. Landscape. Landscaping and irrigation shall be provided in accordance with Section 17.54.010(J) of the Municipal Code and in accordance with the State Model Water Efficient Landscape Ordinance (AB 1881). Water budget calculations, including the Maximum Applied Water Allowance (MAWA) and Estimated Total Water Use (ETWU) shall be provided as part of the landscaping and irrigation plan.

11. Landscape. The applicant shall submit, and must obtain approval from the Community Development Director, a letter from a registered landscape architect confirming that landscaping and irrigation have been installed in accordance with the approved plans prior to issuance of a certificate of occupancy. Any damaged, dead or decayed landscaping landscape areas shall be replaced per approved landscape plans upon landscape inspection by the Community Development Department and prior to issuance of a certificate of occupancy.

12. Landscape. The Planning Division may request minor substitutions of plant materials or request additional sizing or quantity of materials during plan check.

13. Signage. Identification signs for the project shall include high quality and durable design with accent lighting. A detailed sign plan shall be submitted to the Community Development Director and the final design shall be approved by the Community Development Director. The Community Development Director may, at their discretion, elevate the review of the proposed monument signage to the Planning Commission for review as a non-hearing item.

14. Artwork. Installation of artwork visible from the public right-of-way shall be in accordance with the Coachella Municipal Code. Prior to placement of an approved artwork, applicant and the owner of the site shall execute and record a covenant in a form approved by the city for maintenance of the artwork. Review by the Public Arts Commission shall be required per municipal code requirements.

15. Entertainment Permit. Prior to issuance of a Certificate of Occupancy for the project, the applicant shall submit an Entertainment Permit application for review and approval by the City Council.

16. Parking. Applicant shall submit off-site parking agreements or equivalent parking measures to the City for review and approval. Prior to issuance of a Certificate of Occupancy for the Beach Club commercial area the applicant shall execute a signed and notarized off-site parking agreement, complete required off-site parking improvements, or implement other equivalent measures, to the satisfaction of the Community Development Director and City Engineer. If the applicant proposes to satisfy this requirement through the construction of off-site parking improvements, the construction of off-site parking improvements shall be subject to an Architectural Review public hearing in accordance with the requirements of the Municipal Code.

17. Based on the City's parking analysis, the project shall be required to provide up to 183 parking spaces for the Beach Club commercial area and 48 parking spaces for the resort component. The applicant may request approval of a reduced number of parking spaces by submitting a parking analysis or other documentation to the satisfaction of city staff that demonstrates that fewer parking spaces will adequately serve the proposed use and operational characteristics of the project. Approval of a reduction of up to ten percent (10%) of the minimum required parking identified above shall be submitted to the Community Development Director for consideration and approval as a Minor Modification. Approval or denial of the Minor Modification shall be at the discretion of the Community Development Director. If a reduction exceeding ten percent (10%) of the minimum required parking is requested by the applicant, the request shall be considered through a public hearing item as either a Modification to the approved project or Variance request from the applicant. The Planning Commission shall have the discretion to approve, conditionally approve, or deny the request.

18. Parking. The city may require additional parking measures during the duration of this active use, if it is determined by the Community Development Director or City Engineer that the Beach Club Commercial or resort area traffic impacts are significant and not sufficiently mitigated with existing parking measures for the site. Additional parking measures may include the requirement of additional off-site parking, or the implementation of other equivalent measures as determined by the Community Development Director and the City Engineer. These parking measures required by staff determination shall be implemented by the property owner.

19. Phasing. Prior to the first certificate of occupancy for Phase 1, all off-site common areas and median landscape and irrigation improvements shall be completed. This condition shall be met at the discretion of the Community Development Director.

20. Energy Efficient Design and Heat Island Reduction Strategies. New development shall submit an energy efficient design and heat island reduction plan that incorporates heat island reduction strategies such as light-colored cool roofs, light-colored paving, permeable paving, substantial shade tree coverage, shade structures and shaded asphalt paving. Energy efficient building and site design strategies shall be incorporated such as appropriate solar orientation, thermal mass, use of natural daylight and ventilation, and

shading. Shade tree plantings in surface parking areas shall be installed to provide shade over fifty (50) percent of the parking area within ten (10) years. Solar photovoltaic shade structures or shade structures with cool roofing materials shall be permitted in whole or in part in lieu of shade tree plantings. At the direction of the Community Development Director, may require substitutions in trees, paving, or other items to address the energy efficient design and heat reduction plan strategies, and as described in this condition of approval.

21. The project shall comply with all applicable provisions of the City of Coachella Alcohol Ordinance and the requirements of the California Department of Alcoholic Beverage Control (ABC). The applicant shall demonstrate compliance with all applicable alcohol-related zoning requirements to the satisfaction of the Community Development Director. The applicant, property owner, or operator shall submit an application for a modification to the Conditional Use Permit or, as applicable, a separate Conditional Use Permit to establish or clarify alcohol-related uses proposed by specific vendors or operators.

22. The project shall implement all mitigation measures as recommended by the Project CEQA 15183 Consistency Analysis Memorandum.

Building

23. All amenities shall be accessible and on an accessible path of travel.

24. Because of the anticipated demand for building inspections associated with this project and the city's limited resources for building inspectors, the owner shall compensate the city for an inspector/s or record. The inspector of record will be selected and report to the City Building Official.

25. Include required electrical vehicle charging stations and electrical vehicle charging ready spaces in parking demand calculations. (CGBSC-5.106.5)

26. Include bicycle parking in parking demand calculations. (CGBSC 5.106.4)

Utilities

27. The project is located within the service area of the City's Coachella Water Authority and Coachella Sanitary District.

28. The applicant shall submit water and sewer plans for approval.

29. The first submittal shall not be accepted without the completion of the hydraulic model.

30. A $5,000 deposit is required to initiate hydraulic modeling.

31. The City of Coachella may need additional facilities to provide for the orderly expansion of its domestic water and sanitation systems. These facilities may include pipelines, wells, reservoirs, booster pumping stations, lift stations and other facilities. The developer may

be required to install these facilities and provide land and/or easements on which some of these facilities will be located.

32. New water and sewer connections are subject to the collection of impact fees.

33. All fire lines require the installation of Double Check Detector Assemblies.

34. Backflow devices are required on all non-residential connections installed within 12" of the meter box.

35. All buildings may require individual meters.

36. Irrigation may require its own meter.

37. All water connections shall install 4G AMI master meters.

38. All service lines shall be copper tubing per the approved list of materials.

39. All materials shall be per the approved list of materials provided by the Engineering Department or the Utilities Department.

40. No new water connections shall be shown on landscaping plans, all connections shall be in the water improvement plans.

41. Trees/shrubs must have a minimum of 15' separation distance from the Utilities water/sewer laterals. Or minimum 10' separation distance from water/sewer laterals with root barrier.

42. Provide plumbing blueprints depicting sanitary, industrial, and/or grease waste line. (all lines that are applicable)

43. Illustrate domestic water and sewer point of connection to the City's utilities.

44. Provide plumbing code fixture schedule with total DFU's listed.

45. Business establishments must complete Utilities Department's wastewater discharge survey and submit to Development Services.
    a. For tenant improvements, current and proposed plumbing code fixture schedule must be provided

46. Pretreatment equipment/Sample box: (if applicable) Provide manufacture specifications and sizing chart.
    a. Pretreatment Equipment Minimum Requirements:
        i. 750 gal minimum
        ii. Clean outs and vents before and after pretreatment equipment
        iii. Sample box immediately downstream of the pretreatment equipment
        iv. Multi suite buildings requesting pretreatment installation require separate sewer lateral connection per pretreatment device
        v. Made from precast concrete form

47. Outside drains connected to the sanitary sewer are prohibited unless drains are protected from rain water by having a permanent berm within a shade structure. Storm water is prohibited from entering the sanitary sewer.

Engineering

PRIOR TO APPROVAL OF ENGINEERING PLANS or ISSUANCE OF ENGINEERING PERMITS:

Tentative Map

48. A focused Traffic Impact Analysis (TIA) shall be prepared for the project by an appropriately licensed professional engineer. Prior to the preparation of the TIA, the engineer shall submit a scoping letter for the TIA for the City Engineer's approval. The TA shall include but not limited to identification of trip generation, traffic distribution and impact on existing transportation facilities and at time of General Plan build-out, all relevant, ingress and egress movements, lines of sight, queuing analysis, and alignment studies (preliminary signing and striping plan). Applicant shall obtain approval of site access and circulation from the Fire Marshall.

49. A preliminary soils report shall be prepared for the project by an appropriately licensed professional engineer. At a minimum, the soils report shall provide specific analyses and recommendations for grading, pavement structural sections, and infiltration.

50. A comprehensive drainage report, prepared by California Registered Civil Engineer, shall be submitted for review and approval by the City Engineer prior to issuance of any permits. The report shall contain pre- and post-development hydrology maps showing on-site and off-site tributary drainage areas and shall be prepared in accordance with the requirements of the Riverside County Flood Control District. Adequate provisions shall be made to accept and conduct the existing tributary drainage flows around or through the site in a manner which will not adversely affect adjacent or downstream properties. If the design of the project includes a retention basin, it shall be sized to contain the runoff resulting from a 10-year storm event and the runoff from a 100-year storm event shall be contained within basin with shallow ponding (3.5' max.). The basin shall be designed to evacuate a 10-year storm event within 72 hours. The size of the retention basin(s) shall be determined by the hydrology report and be approved by the City Engineer. Retention basin shall be provided with a minimum of 2.00 feet sandy soil if determined to contain silt or clay materials. Maximum allowable percolation rate for design shall be 10 gal./s.f./day unless otherwise approved by the City Engineer. A percolation test for this site is required to be submitted. A combination drywell vertical drain field shall be constructed at all points where runoff enters the retention basin. Drywell & vertical drain field design shall be based on soils borings made at the proposed drywell locations after the retention basins have been rough graded. Minimum depth shall be 45-feet. A log that includes sieve analysis for each strata of the borings shall be submitted to the City Engineer for confirmation of depth of the vertical drain fields. Underground retention under the proposed parking area will be considered as an alternative to surface retention subject to the approval of the City Engineer.

51. Identify and clearly show all necessary drainage easements to implement the project in accordance with drainage law.

52. Applicant shall submit for review and approval by the City Engineer all documents related to any existing and proposed on-site and off-site easements that may affect the development of the site. All easements shall be identified on the engineering plans.

53. Applicant shall obtain approval of site access and circulation from Fire Marshall.

Final Map

54. The Final Map shall comply with the Subdivision Map Act and City of Coachella Subdivision Ordinance.

55. All public streets shall be dedicated to City of Coachella.

56. Prior to submittal of the final map to the City Council for approval, the applicant shall post securities (Bonds) to guarantee the installation of required improvements and a Subdivision Improvement Agreement shall be submitted to Engineering Division for City Engineer and City Attorney approval.

57. Prior to approval of the Final Map, the applicant shall resolve potential CVWD issues related to existing tile drains or irrigation mains located within the tract boundary or along the streets adjacent to the tract. If necessary, tile drains and irrigation lines shall be relocated and easement documents prepared for the new location of any such lines. The easement shall be shown on the final map. Plans for the tile drain or irrigation relocation shall be submitted to CVWD for approval and a copy of the plans shall be submitted to the City for evaluation regarding possible conflict with City facilities. The applicant shall submit to the City approved copies of any such relocation plans.

58. All Primary streets, including 52nd Avenue, Calhoun Street, Van Buren Street and Interior streets shall be completed prior to final occupancy for the first structure at the Tract.

59. Prepare and record necessary drainage easements, access easements and utility easements to implement the project in accordance with drainage law and site conditions to the satisfaction of the City Engineer prior to approval of the Final Maps.

60. Full Street Improvements plans, Street Improvements Bonds and Monument Bonds shall be approved prior to Approval of the Final Maps. Street improvement plans shall be in conformance with recommendations outlined in an approved Traffic Impact Analysis and may include off site intersection improvements, engineering analysis of fair share off site improvements and fully executed agreements for phasing of fair share payments if needed per the Traffic Impact analysis.

61. Internal roads shall be complete prior to final occupancy of any adjacent house.

GENERAL:

62. All proposed development shall conform to the approved engineering studies and environmental migration measures as identified in the approved traffic, drainage, soils, hydrology, etc. studies developed under the tentative and final map process.

63. A storm water quality management plan shall be prepared for the project by California Registered Civil Engineer in compliance with NPDES and State Water Quality Control Board regulations. The project shall be designed to specify preferential use of Low Impact Development Best Management Practices that reduce pollutants and runoff volume.

64. Applicant shall comply with the valley wide NPDES permit requirements including but not limited to submittal of a WQMP for plan review accompanied by a $3,000 plan check deposit for approval including executed maintenance agreement. All unused plan check fees will be refunded to the applicant upon approval of the Final WQMP.

65. The developer shall submit a Fugitive Dust Control and Erosion Control plan in accordance with Guidelines set forth by CMC and SCAQMD to maintain wind and drainage erosion and dust control for all areas disturbed by grading. Exact method(s) of such control shall be subject to review and approval by the City Engineer. No sediment is to leave the site. Additional securities, in bond form, in amount of $2,000.00 per acre of gross area, and a one-time cash deposit of $2,000.00 are required to insure compliance with this requirement. No work may be started on or off site unless the PM-10 plan has been approved, the original plans, and executed dust control agreement, are filed in the engineering department at the City of Coachella.

66. Site access improvements shall be in conformance with the requirements of Title 24 of the California Administrative Code. This shall include access ramps for off-site and on-site streets as required.

67. The applicant shall provide necessary utility easements for IID and underground overhead distribution lines within the project boundaries. Applicant shall submit to the City a letter from IID that satisfies this requirement.

68. The applicant shall pay all necessary plan check, permit and inspection fees. Fees will be determined when plans are submitted to the City Engineering Department for plan check.

ROUGH GRADING:

69. Prepare and submit rough grading and erosion control plans for the project.

70. The project's soils engineer shall certify to the adequacy of the grading plan.

71. All projects developing one (1) acre or more of total land area, or which are part of a larger phased development that will disturb one acre of land, are required to obtain coverage under the State Water Resources Control Board's (SWRCB) General Permit for storm water discharges associated with construction activity. Proof of filing a Notice of Intent (NOI) with the SWRCB for coverage under this permit is required. The Waste Discharger's Identification Number (WDID), issued by the SWRCB, must be shown on the grading plans. The project's Storm Water Pollution Prevention Plan shall be submitted for the City's review and approval.

PRECISE GRADING:

72. A precise grading/improvement plan, prepared by a California Registered Civil Engineer, showing building footprints, pad elevations, finished grades, drainage routes, retaining walls, erosion control, slope easements, and all other pertinent information shall be submitted for review and approval by the City Engineer.

73. Rough grading shall be certified by the project soils engineer prior to issuance of a permit for precise grading or building construction.

74. Provide and record a reciprocal use and maintenance agreement to assure common ingress and egress and joint maintenance of all common access, parking areas and drives.

75. If applicant is planning to build a wall, separate permits shall be required for wall construction. The maximum height of any wall shall be limited to six (6) feet as measured from an average of the ground elevations on either side.

STREET IMPROVEMENTS:

76. Street improvement plans prepared by a California Registered Civil Engineer shall be submitted for review and approval by the City Engineer. All street improvements including street lights shall be designed and constructed in conformance with City Municipal Code, General Plan, and Standards and Specifications. Street flow line grade shall have a minimum slope of 0.35 %.

77. Applicant shall construct all off-site and on-site improvements including street pavement, curb, gutter, sidewalk, street trees, perimeter walls, perimeter landscaping and irrigation, storm drain, street lights, and any other incidental works necessary to complete the improvements. Driveways shall conform to City of Coachella standards for commercial driveways with a minimum width of 24.00 feet and curbed radius entrances.

78. Applicant shall construct and dedicate the following streets and street improvements to conform to the General Plan and/or requirements of Traffic Study.

    1) 52nd Avenue- Public Roadway as shown on the RAC and per these comments shall include the following:

        a. Dedication of land within project limits is required. This street will be required to be dedicated to the ultimate General Plan width as a Primary Arterial with Bicycle Lanes with 94 feet of right-of-way as per City of Coachella General Plan.

        b. Street measured at Center line to Southerly curb shall have a width of 37-foot.

        c. Applicant shall construct all appurtenant roadway components within project limits such as, but not limited to: sidewalk, ADA ramps, Traffic control striping, legends, Traffic control signs, full

improvements for Street median and Traffic signal light, Street Lights and street name signs to the satisfaction of the City Engineer.

d. Applicant shall install curb and gutter transitions to uniformly connect to existing adjacent improvements and coordinate installation and/or relocation of fire hydrants, water meters, storm drains, wells, street lights, any kind of tree and all other appurtenances as required to the satisfaction of the City Engineer.

e. Applicant shall improve Intersection at the Southwest corner of 52nd Avenue Van Buren Street including new ADA ramps, Traffic Signal relocation and/or modification (if required), Striping and Landscaping to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

f. Applicant shall underground all existing dry utilities if existing within project limits such as, but not limited to: power poles, telecommunication poles and all other existing dry utilities.

g. Additional offsite improvements, such as intersection improvements at 52nd Avenue and Calhoun Street, installation of turning lanes, lane widening, etc. shall be installed to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

2) Calhoun Street- Public Roadway as shown on the RAC and per these comments shall include the following:

a. Dedication of land along northbound lane within the entire project limits is required. This street is classified as Collector with Bicycle Lanes with 90 feet of right-of-way as per City of Coachella General Plan.

b. Street measured at Center line to Easterly curb shall have a width of 35-foot.

c. Applicant shall construct all appurtenant roadway components within project limits such as, but not limited to: sidewalk, ADA ramps, Traffic control striping, legends, Traffic control signs, Street Lights, street name signs, turn left or right pocket to the satisfaction of the City Engineer.

d. Applicant shall construct transition street lanes south of the property limits as required to the satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

e. Applicant shall install curb and gutter transitions to uniformly connect to existing adjacent improvements and coordinate installation and/or relocation of fire hydrants, water meters, storm

drains, wells, street lights, any kind of tree and all other appurtenances as required to the satisfaction of the City Engineer.

f. Applicant shall underground all existing dry utilities if existing at northbound lane within project limits such as, but not limited to: power poles, telecommunication poles and all other existing dry utilities.

g. Applicant shall improve Full intersection of 52nd Avenue and Calhoun Street including new ADA ramps, Traffic Signal), Striping and Landscaping to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

h. Additional offsite improvements, such as intersection improvements, installation of turning lanes, lane widening, etc. shall be installed to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

3) Van Buren Street- Public Roadway as shown on the RAC and per these comments shall include the following:

a. Dedication of land along southbound lane within the entire project limits is required. This street is classified as Major Arterial with Bicycle Lanes with 118 feet of right-of-way as per City of Coachella General Plan.

b. Street measured at Center line to Westerly curb shall have a width of 49-foot.

c. Applicant shall construct all appurtenant roadway components within project limits such as, but not limited to: sidewalk, ADA ramps, Traffic control striping, legends, Traffic control signs, Street Lights, street name signs, full improvements for Street median and Traffic signal light to the satisfaction of the City Engineer.

d. Applicant shall construct transition street lanes south of the property limits as required to the satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

e. Applicant shall install curb and gutter transitions to uniformly connect to existing adjacent improvements and coordinate installation and/or relocation of fire hydrants, water meters, storm drains, wells, street lights, any kind of tree and all other appurtenances as required to the satisfaction of the City Engineer.

f. Applicant shall underground all existing dry utilities if existing at southbound lane within project limits such as, but not limited to: power poles, telecommunication poles and all other existing dry utilities.

g. Applicant shall improve Southwest intersection of 52nd Avenue and Van Buren Street including new ADA ramps, relocate or modified Traffic Signal (If require), Striping and Landscaping to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

h. Additional offsite improvements, such as intersection improvements, installation of turning lanes, lane widening, etc. shall be installed to the Satisfaction of the City Engineer and per the requirements of an approved Traffic Impact Analysis.

4) Interior Street - Private Roadway as shown on the RAC and per these comments shall include the following:

a. Interior streets within project limits shall be maintained by Homeowners association and classified as Private Streets. These streets are classified as Suburban Residential with Parking with 56 feet of right-of-way as per City of Coachella General Plan.

b. Applicant shall construct all appurtenant roadway components within project limits such as, but not limited to: sidewalk, ADA ramps, Traffic control striping, legends, Traffic control signs, Street Lights and street name signs to the satisfaction of the City Engineer.

c. Applicant shall install curb and gutter transitions to uniformly connect to existing adjacent improvements and coordinate installation and/or relocation of fire hydrants, water meters, storm drains, wells, street lights Traffic signal, and all other appurtenances as required to the satisfaction of the City Engineer.

SEWER and WATER IMPROVEMENTS:

79. Sewer & Water Improvement Plans prepared by a California Registered Civil Engineer shall be submitted for engineering plan check and City Engineer approval.

80. Applicant shall construct all off-site and on-site water improvements and any other incidental works necessary to complete the improvements. Size and location of sewer and water improvements shall be approved by the City Engineer.

PRIOR TO ISSUANCE OF BUILDING PERMITS:

81. A final soils report, compaction report and rough grading certificate shall be submitted and approved prior to issuance of any building permits.

82. Provide a set of proposed Covenants, Conditions and Restrictions (CC&R) for review and approval. The proposed CC&Rs shall contain the Association's/Owner's maintenance obligations with respect to various facilities including, but not limited to, right-of-way and private landscaping, private streets, sidewalks, utilities, street lights, and Water Quality

Management Plan (WQMP) features. This document must be submitted to and approved by the City before it is submitted to any other governmental entity.

83. Prior to issuance of building permits, all required public improvements, including landscaping and lighting of the retention basins, and landscaped areas along the exterior streets, shall be completed or secured with appropriate sureties to the satisfaction of the City Engineer. An engineering final inspection is required. "As-built" plans shall be submitted to and approved by the City Engineer. Prior to acceptance of the improvements by the City, such plans, once approved, shall be given to the city on compact disk in AutoCad format. All off-site and on-site improvements shall be completed to the satisfaction of the City Engineer prior to acceptance of improvements for maintenance by the City.

84. The applicant's Civil Engineer shall field verify and certify that all BMPs are designed, constructed, and functional in accordance with the approved WQMP.

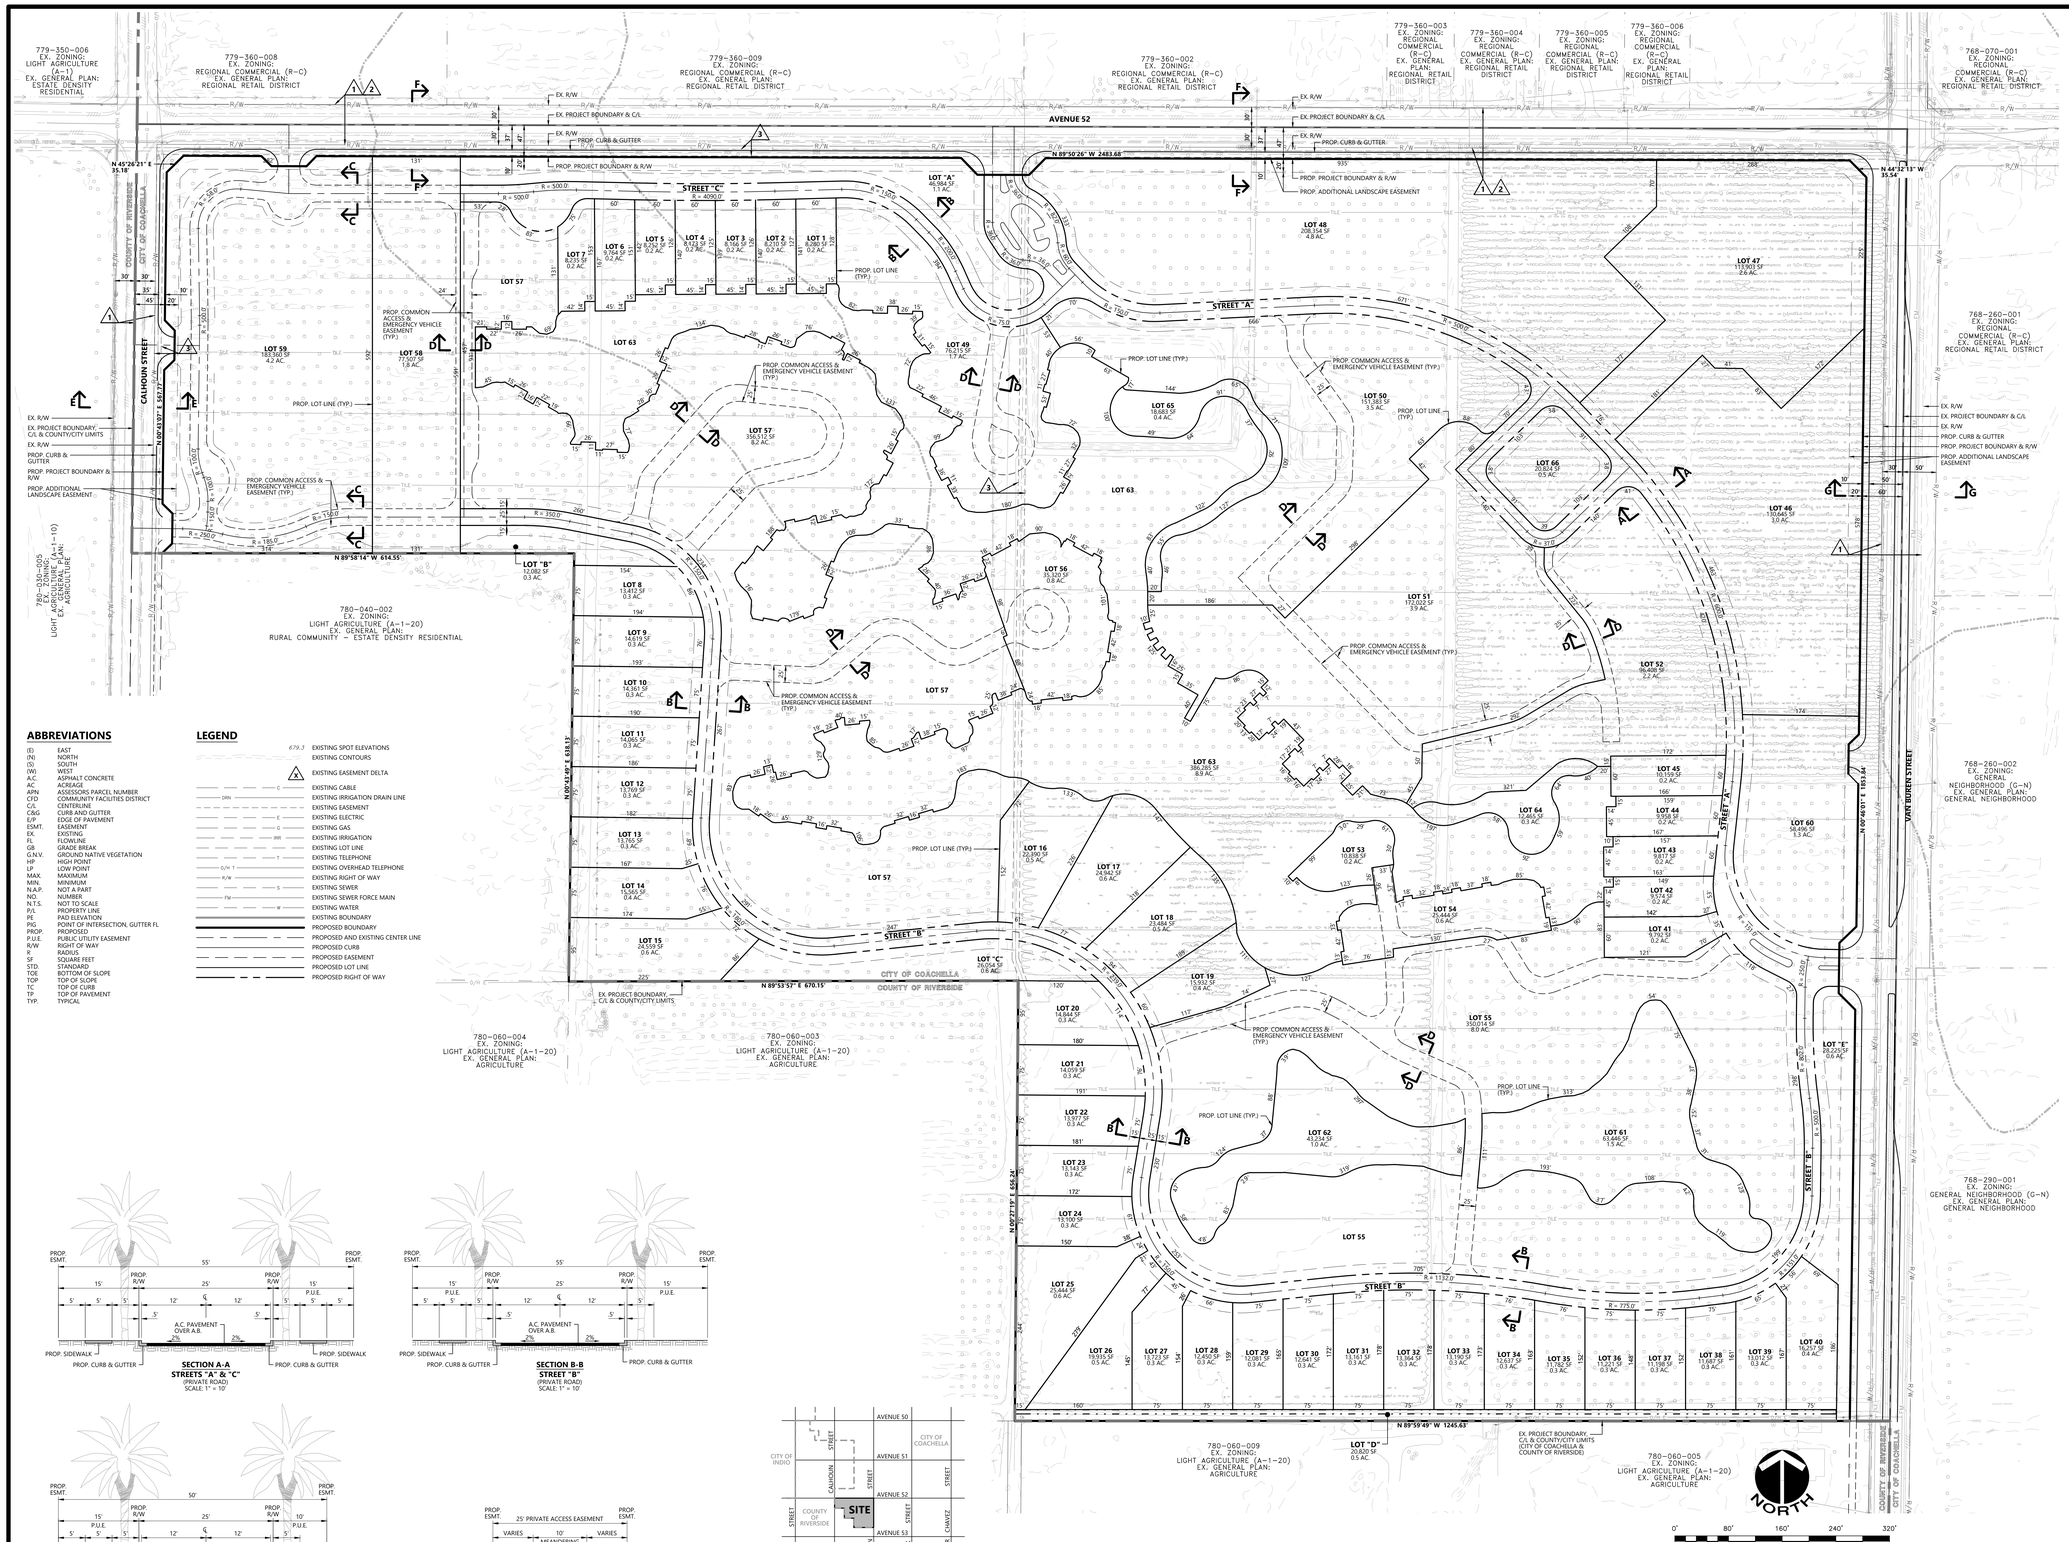
PRIOR TO RELEASE OF OCCUPANCY PERMITS/ACCEPTANCE OF PUBLIC IMPROVEMENTS:

85. Prior to issuance of certificate of occupancy, all public improvements, including landscaping and lighting of the retention basins, and landscaped areas along the exterior streets, shall be completed to the satisfaction of the City Engineer. An engineering final inspection is required. "As-built" plans shall be submitted to and approved by the City Engineer. Prior to acceptance of the improvements by the City, such plans, once approved, shall be given to the city on compact disk in AutoCad format. All off-site and on-site improvements shall be completed to the satisfaction of the City Engineer prior to acceptance of improvements for maintenance by the City.

Fire

86. Fire Department Fire Protection Water Supply and Access Review – The Fire Department will require a submittal of a site plan, building information and other supporting documentation for the review of required fire protection water supply and access. Reference CFC as amended.

87. Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B (, NFPA 1142) or other approved method. Prior to building permit issuance for new construction, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. Specific design features may increase or decrease the required fire flow. Reference CFC as amended.



88. Fire Protection Water Supplies/Hydrants - Fire hydrants shall be located no more than 400 feet from all portions of the exterior of all buildings, or 600 feet from all portions of the exterior of the building equipped with an approved fire sprinkler system, along an approved route on a fire apparatus access road/driveway, unless otherwise approved by the Fire Department. The maximum distance to a fire hydrant can be increased utilizing direction from the Riverside County Office of the Fire Marshal Policies and Standards. Reference CFC as amended.

89. Fire Department Access - Fire apparatus access roads/driveways shall be provided within 150 feet of all exterior portions of buildings, unless otherwise approved by the Fire Department. Access shall comply with requirements from the Riverside County Fire Department Policies and Standards. Reference CFC as amended.

90. Fire Department Access Turn Around – On-parcel dead-end fire apparatus access roads exceeding 150 feet in length shall provide a bulb turnaround at the terminus measuring a minimum of 45 feet outside radius and 24 feet inside radius Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC as amended and Riverside County Fire Department Policies and Standards.

91. Residential Fire Sprinklers: Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Office of the Fire Marshal for review and be approved prior to installation. Ref. CRC.

92. Materials and Construction Methods for Exterior Wildfire Exposure - Projects in the Local Responsibility Area Very High Fire Hazard Severity Zone and State Responsibility Area Very High, High, and Moderate Fire Hazard Severity Zones shall comply with Chapter 3, R337 of the California Residential Code and California Code of Regulations Title 14 Fire Safety Regulations. Reference CFC as amended.

PROJECT DESCRIPTION

COVA IS AN 87-ACRE MASTER-PLANNED DESTINATION RESORT AND RESIDENTIAL COMMUNITY LOCATED IN THE CITY OF COACHELLA, CALIFORNIA. THE DEVELOPMENT INCLUDES 162 SINGLE-FAMILY HOMES ACROSS VILLA, RANCH, AND ESTATE LOTS, ALONG WITH A 120-UNIT (240-KEY) TOWNHOME STYLE RESORT HOTEL. THE PROJECT IS DESIGNED TO DELIVER A VIBRANT, WATER-CENTRIC HOSPITALITY AND RECREATION EXPERIENCE ANCHORED BY A 10-ACRE RECREATIONAL LAGOON AND A DIVERSE PROGRAM OF RESORT AMENITIES. THE PLAN INCLUDES HOSPITALITY USES, SIGNIFICANT OPEN SPACE, AND PUBLIC-SERVING ELEMENTS THAT CONTRIBUTE TO THE CITY'S BROADER GOALS FOR ECONOMIC DEVELOPMENT, TOURISM, AND HIGH-QUALITY PLACE MAKING.

LEGAL DESCRIPTION

BEING A PORTION OF NORTH EAST 1/4 OF SECTION 12, TOWNSHIP 6 SOUTH, RANGE 7 EAST, SAN BERNARDINO MERIDIAN.

SUBMITTAL DATE: JUNE 10, 2026
COVA | ARCHITECTURAL REVIEW

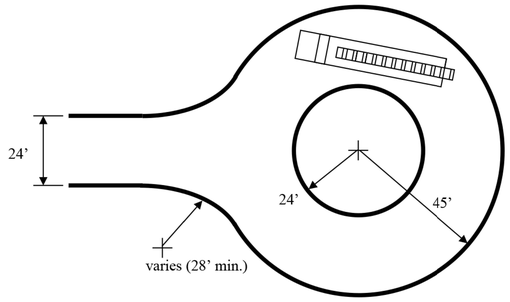
ATTACHMENT 6

"S" Curves

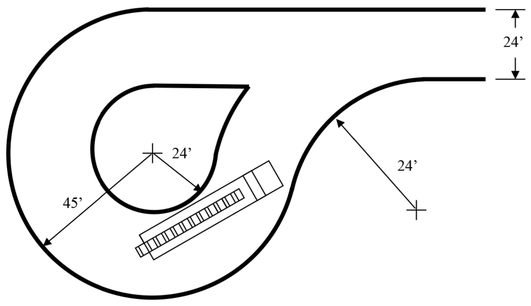
NOT PERMITTED
RVC fire apparatus are unable to negotiate tight "S" curves, such as the one shown to the left.

PERMITTED
A 60' straight leg is required between the turns in a compound curve to provide sufficient recovery distance for the apparatus. Alternatively, the length of the straight leg may be reduced if the road width and/or turning radii are increased to allow for a wider turn.



NOTE: Parking or other obstructions is not permitted in any of these configurations at the dimensions shown.

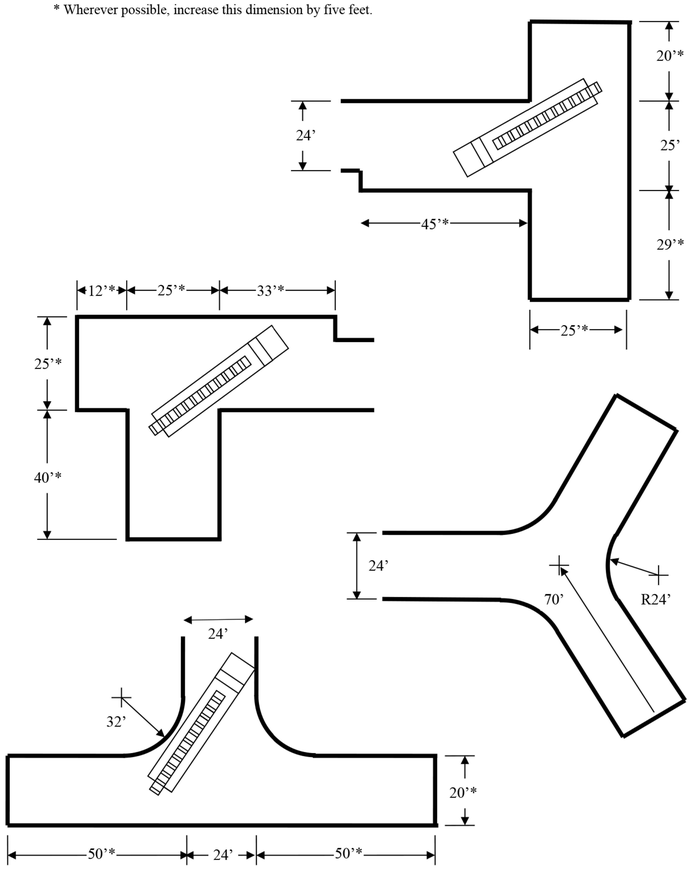
ATTACHMENT 7 (2 Pages)



Minimum Turnaround and Hammerhead Dimensions

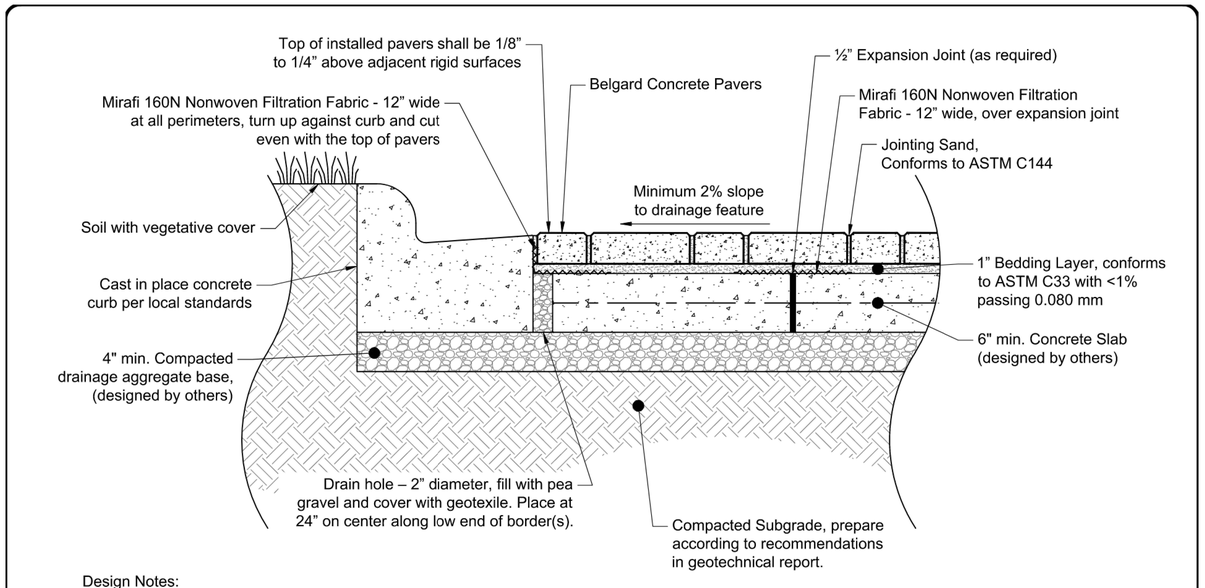
NOTE: Parking is <u>not</u> permitted in these turnarounds at the dimensions shown.

Standard turnaround



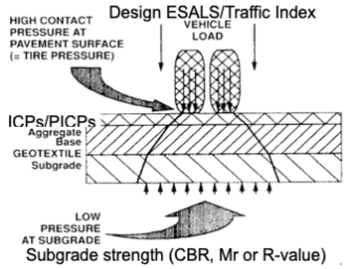
Offset turnaround

NOTE: Parking is not permitted in any of these hammerheads at the dimensions shown.



* Wherever possible, increase this dimension by five feet.

CONCRETE PAVER COLOR OPTIONS



Design Notes:

1. Cross section as shown is suitable for pedestrian and vehicular applications. Paver dimensions subject to aspect and plan ratio requirements. Contact Belgard Commercial for product selection guidance based on the intended traffic loading.
2. Depth of aggregate base subject to site specific conditions (traffic loading, soil conditions, groundwater levels, climatic conditions). Contact Belgard Commercial for design assistance.
3. Additional drain holes may be required depending on the size of the pavement area. The rule of thumb is to have at least one drain hole per 500 square feet of surface area. Storm drains should be used at low spots.
4. Drain pipes may be required within the aggregate base depending on the permeability of the subgrade soils. Verify drainage needs with the geotechnical engineer. Ensure drain pipes are able to daylight via gravity flow to surface, or connect to catch basin.
5. Ensure the geotextile above the drain hole has good drainage characteristics and is not prone to clogging.
6. Techniseal HP Nextgel jointing sand conforming to ASTM C144 may be used in pedestrian and light vehicular applications. Please contact Belgard Commercial for design assistance.

BELGARD COMMERCIAL

TRAFFIC LOADING CALCULATION EXAMPLE

Structural Pavement Section function of Subgrade Strength, Traffic Loadings and Strength of Pavement Section Components

The following calculations demonstrate that Belgard permeable and interlocking concrete pavement systems satisfy the requirements of meeting or exceeding a 75,000 lb theoretical design load as compared to the required compressive strength of pavers per the requirements in *ASTM C936 Standard Specification for Solid Concrete Interlocking Paving Units (average compressive strength of 8,000 psi).*

Step #1) Determine the maximum wheel load:

GVWR = 76,800 lbs

GAWR (front axle) = 22,800 lbs

GAWR (rear axle) = 54,000 lbs

Front Axle Wheel Loads

W_L = 22,800 lb/ 2 tires per axle = 11,400 lbs per tire

Rear Axle Wheel Loads

W_L = 54,000 lb/ 2 axles/4 tires per axle = 6,750 lbs per tire

Step #2) Increase the load by 30% to account for dynamic forces associated with moving vehicles:

Front Axle: $W_{L\text{-dynamic}}$ = 11,400 lbs x 1.30 = 14,820 lbs per tire

Rear Axle: $W_{L\text{-dynamic}}$ = 6,750 lbs x 1.30 = 8,775 lbs per tire

Step #3) Determine the tire contact area:

The Contact Area was measured for a Pierce Fire Truck (GVWR = 76,800 lbs) and was determined to be 104 in2 per front tire, and 90 in2 per rear tire. (See measurements in the attached document)

Step #4) Determine the stress exerted per tire in the dynamic load:

$$\sigma_{tire} = \frac{W_{L\text{-dynamic}}}{A_{contact}} = \frac{14{,}820\ lbs}{104\ in^2} = 142.5\ \frac{lbs}{in^2}$$

Step # 5) Compare Belgard PICP to GVWR = 76,800 lbs:

Belgard permeable and interlocking concrete pavers are manufactured to ASTM C936 standards requiring an average compressive strength of 8,000 psi. As illustrated above, the maximum theoretical tire pressure exerted on the pavement surface is 142.50 psi so stresses are effectively transferred to the base and subgrade using Belgard permeable pavers. This significant factor of safety makes Belgard permeable pavers viable solution for a flexible pavement system subjected to Fire Truck Loading.

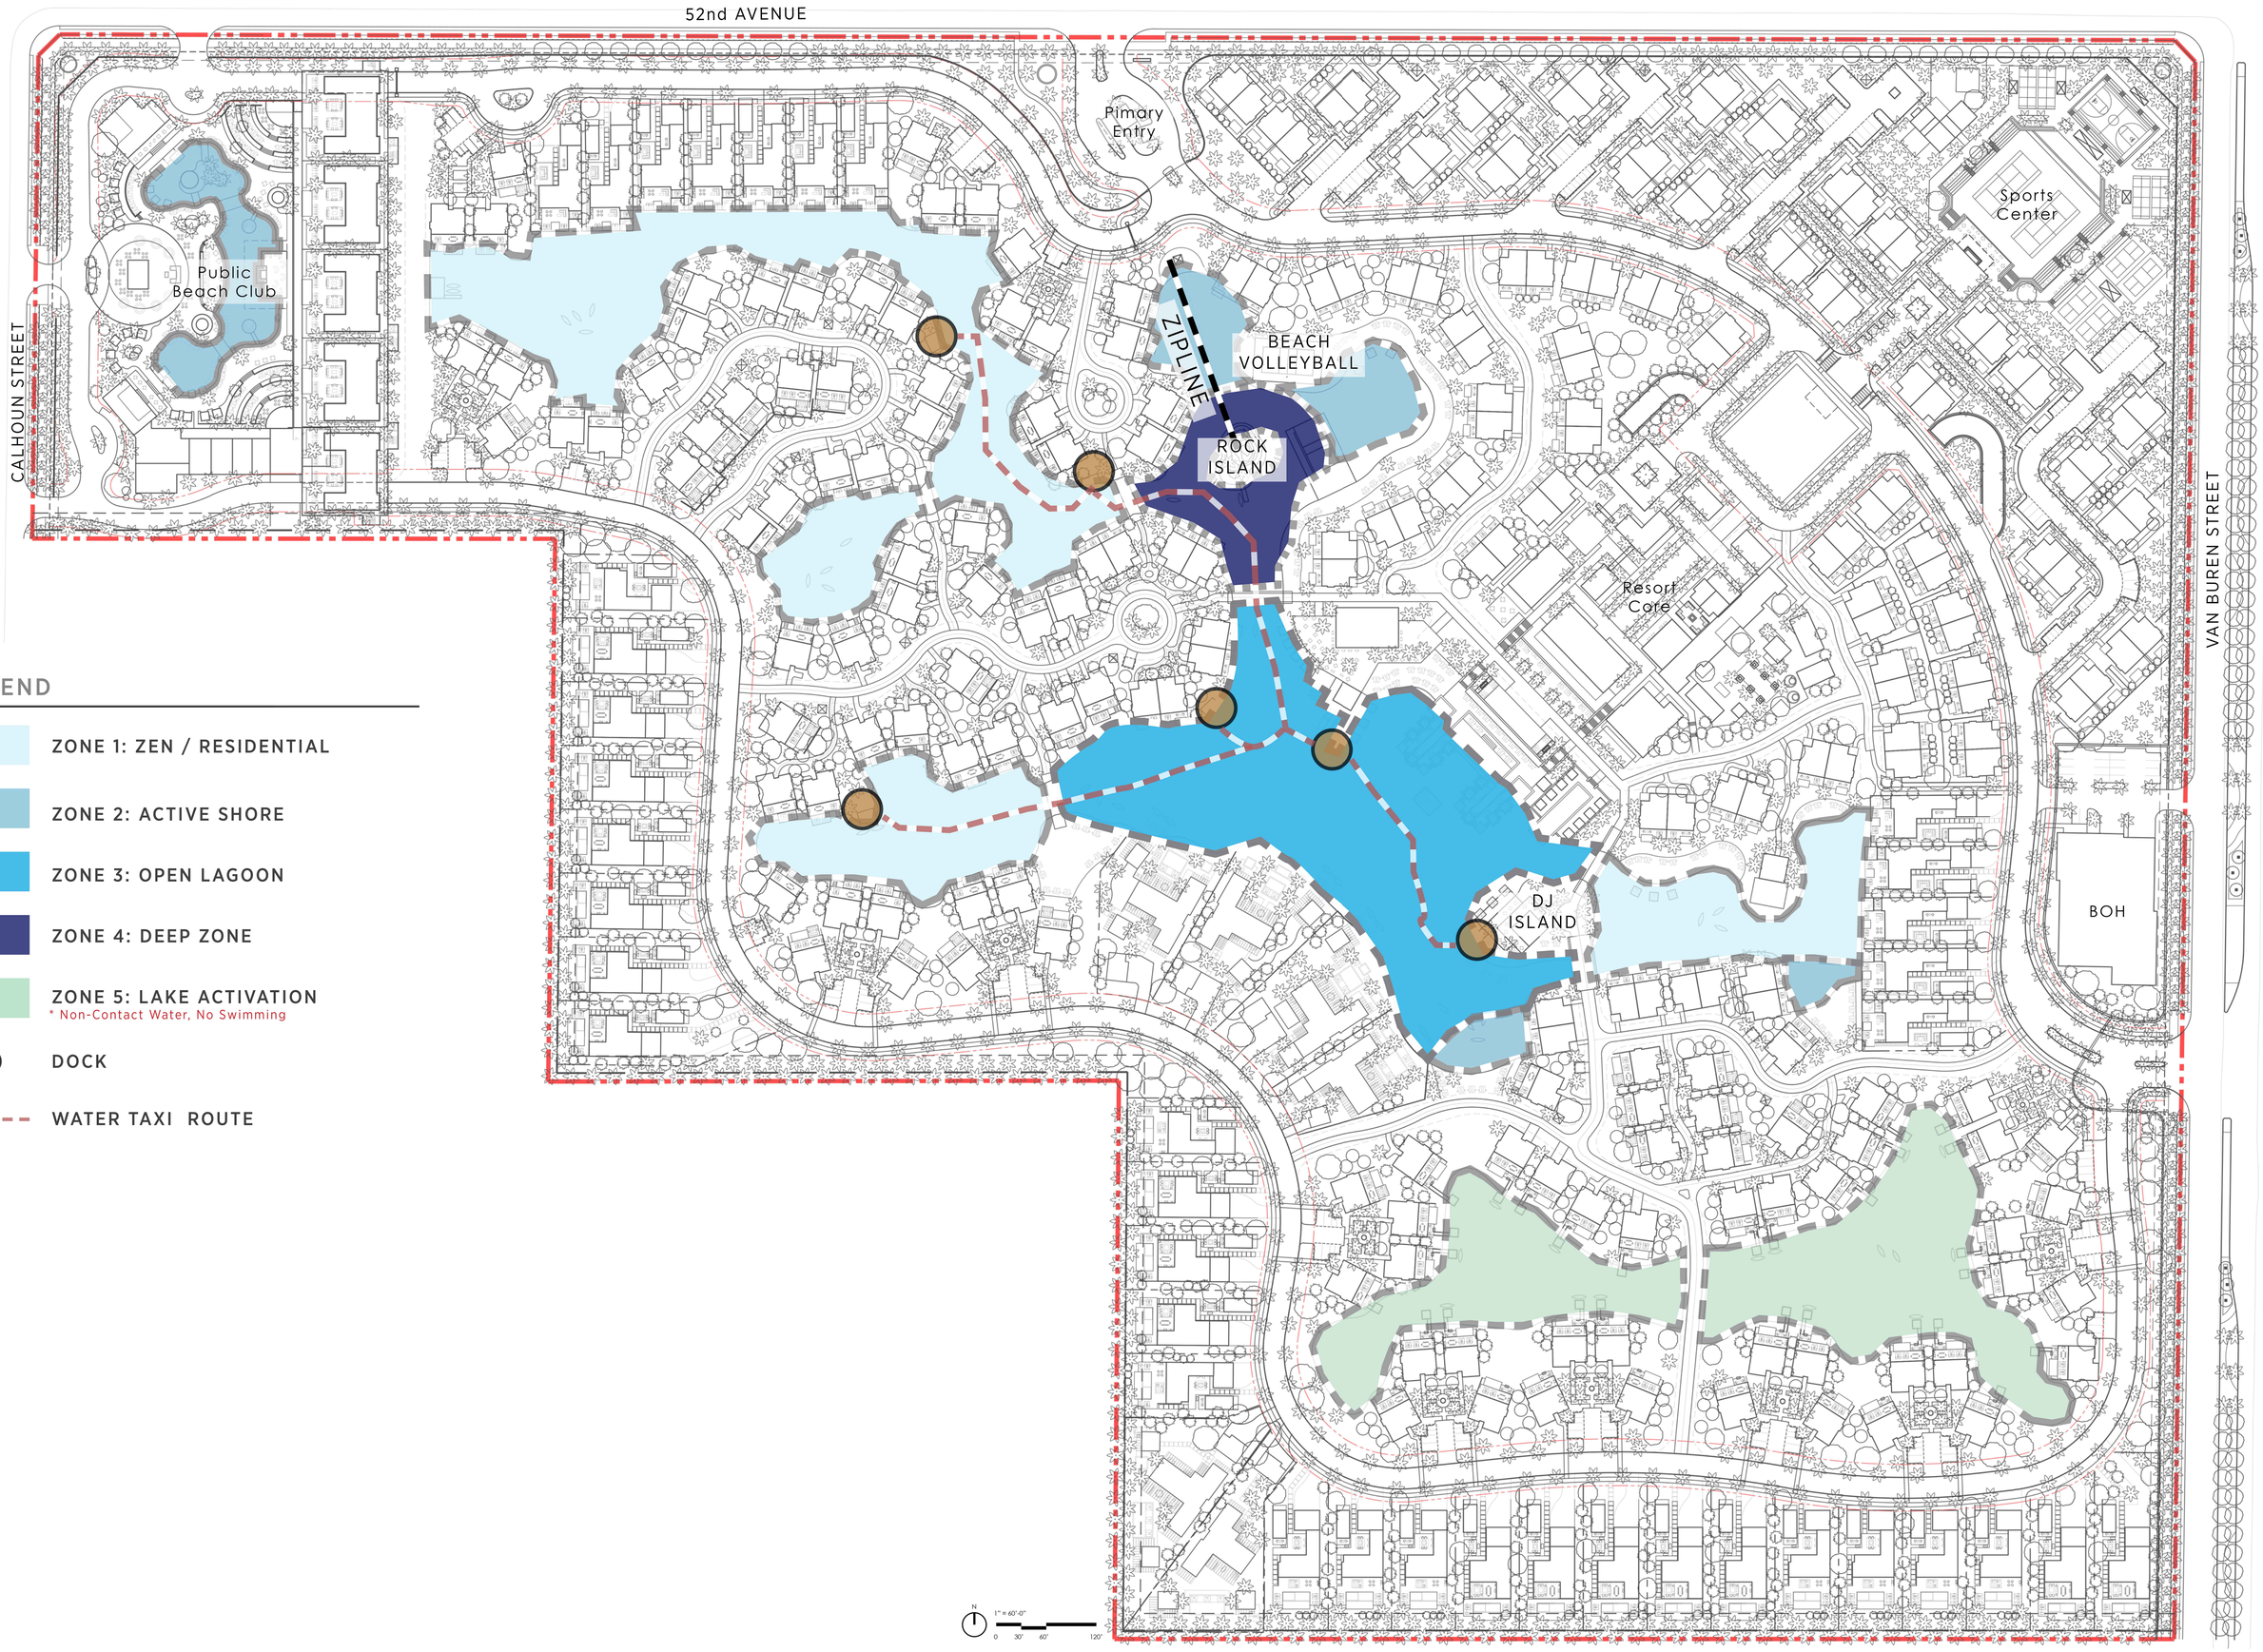
LEVEL B1 - HOSPITALITY TRASH REFUSE AREA

LEVEL L1 - BOH MAIN TRASH ENCLOSURE



LEVEL L1 - BEACH CLUB MAIN TRASH ENCLOSURE

TRASH COLLECTION INTENTION NARRATIVE

All Hospitality units and Bungalow units will be serviced by the hotel's centralized trash-operations team. Refuse generated in these areas will first be routed to the designated hospitality huts, after which it will be transported to the Hospitality Refuse Area located on Level B1 of the main hotel. From the B1 refuse area, all waste will be consolidated in the BOH Main Trash Enclosure, where Burrtec will conduct final collection.

The Beach Club maintains an independent trash enclosure within its own BOH area, allowing its waste stream to operate separately from the hotel infrastructure.

Residential units will utilize individual Burrtec bins, with collection occurring directly at the street per standard municipal procedures.

LANDSCAPE LEGEND

PALM TREES
(VERTICAL ACCENTS | 10'–60'+ TALL | ICONIC + SCULPTURAL FORM)

DESCRIPTION:
PALMS FUNCTION AS ARCHITECTURAL VERTICAL ELEMENTS. THEY PROVIDE RHYTHM, SKYLINE IDENTITY, AND RESORT CHARACTER.

CHAMAEROPS HUMILIS / MEDITERRANEAN FAN PALM
PHOENIX DACTYLIFERA / DATE PALM
WASHINGTONIA FILIFERA / CALIFORNIA FAN PALM

LARGE SHADE TREES
(APPROX. 25'–40'+ TALL | BROAD CANOPY + PRIMARY SHADE STRUCTURE)

DESCRIPTION:
DOMINANT CANOPY TREES, USED FOR SHADE PRODUCTION, SPATIAL DEFINITION, AND MICROCLIMATE COOLING. TYPICALLY WIDE-SPREADING WITH STRONG BRANCHING STRUCTURE, THEY ANCHOR MAJOR SPACES LIKE STREETS, PASEOS, AND OPEN AREAS.

CERCIDIUM PRAECOX / SONORAN PALO VERDE
CHORISIA SPECIOSA / SILK FLOSS TREE
FICUS MICROCARPA / INDIAN LAUREL FIG
PARKINSONIA X 'DESERT MUSEUM' / DESERT MUSEUM PALO VERDE
PROSOPIS GLANDULOSA / HONEY MESQUITE
PROSOPIS VELUTINA / VELVET MESQUITE
TIPUANA TIPU / TIPU TREE

LARGE SHRUBS
(APPROX. 6'–15'+ TALL | STRUCTURAL + SCREENING LAYER)

DESCRIPTION:
THESE ARE YOUR PRIMARY MASSING PLANTS—USED FOR PRIVACY, ENCLOSURE, AND BACKDROP STRUCTURE. THEY ARE UPRIGHT OR SPREADING FORMS, MODERATE DENSITY, AND STRONG SEASONAL PRESENCE (FLOWERS OR FOLIAGE).

AGAVE AMERICANA 'SUPER BLUE' / SUPER BLUE CENTURY PLANT
CAESALPINIA PULCHERRIMA / RED BIRD OF PARADISE
CORDIA PARVIFOLIA / SMALL-LEAF GEIGERTREE
DASYLIRION WHEELERI / GREY DESERT SPOON
DODONAEA VISCOSA / HOPSEED BUSH
EREMOPHILA MACULATA / SPOTTED EMU BUSH
LARREA TRIDENTATA / CREOSOTE BUSH
LEUCOPHYLLUM CANDIDUM / TEXAS SAGE
MYRTUS COMMUNIS / COMMON MYRTLE
SIMMONDSIA CHINENSIS / JOJOBA
TECOMA STANS / YELLOW BELLS
YUCCA FAXONIANA / SPANISH DAGGER
YUCCA ROSTRATA / BEAKED YUCCA

VINES
(VARIABLE HEIGHT | VERTICAL ELEMENTS + SOFTENING STRUCTURES)

DESCRIPTION:
VINES PROVIDE VERTICAL LAYERING AND ARCHITECTURAL SOFTENING. USED ON WALLS, TRELLISES, AND FENCES TO INTRODUCE COLOR, MOVEMENT, AND SEASONAL INTEREST WITHOUT INCREASING FOOTPRINT. THEY ACT AS FOCAL ELEMENTS OR CONNECTORS BETWEEN BUILT AND PLANTED ENVIRONMENTS.

ANTIGONON LEPTOPUS / CORAL VINE
BOUGAINVILLEA X 'BARBARA KARST' / BARBARA KARST BOUGAINVILLEA
CAMPSIS RADICANS / TRUMPET CREEPER
GELSEMIUM SEMPERVIRENS / CAROLINA JESSAMINE
JASMINUM SAMBAC / ARABIAN JASMINE
TRACHELOSPERMUM JASMINOIDES / CHINESE STAR JASMINE

MEDIUM SHRUBS
(APPROX. 3'–6' TALL | MID-LAYER + COLOR + TRANSITION PLANTING)

DESCRIPTION:
USED TO TRANSITION BETWEEN LARGE SHRUBS AND LOW PLANTINGS. TYPICALLY MOUNDING OR LOOSELY UPRIGHT, THESE PLANTS PROVIDE SEASONAL COLOR, TEXTURE VARIATION, AND HABITAT VALUE.

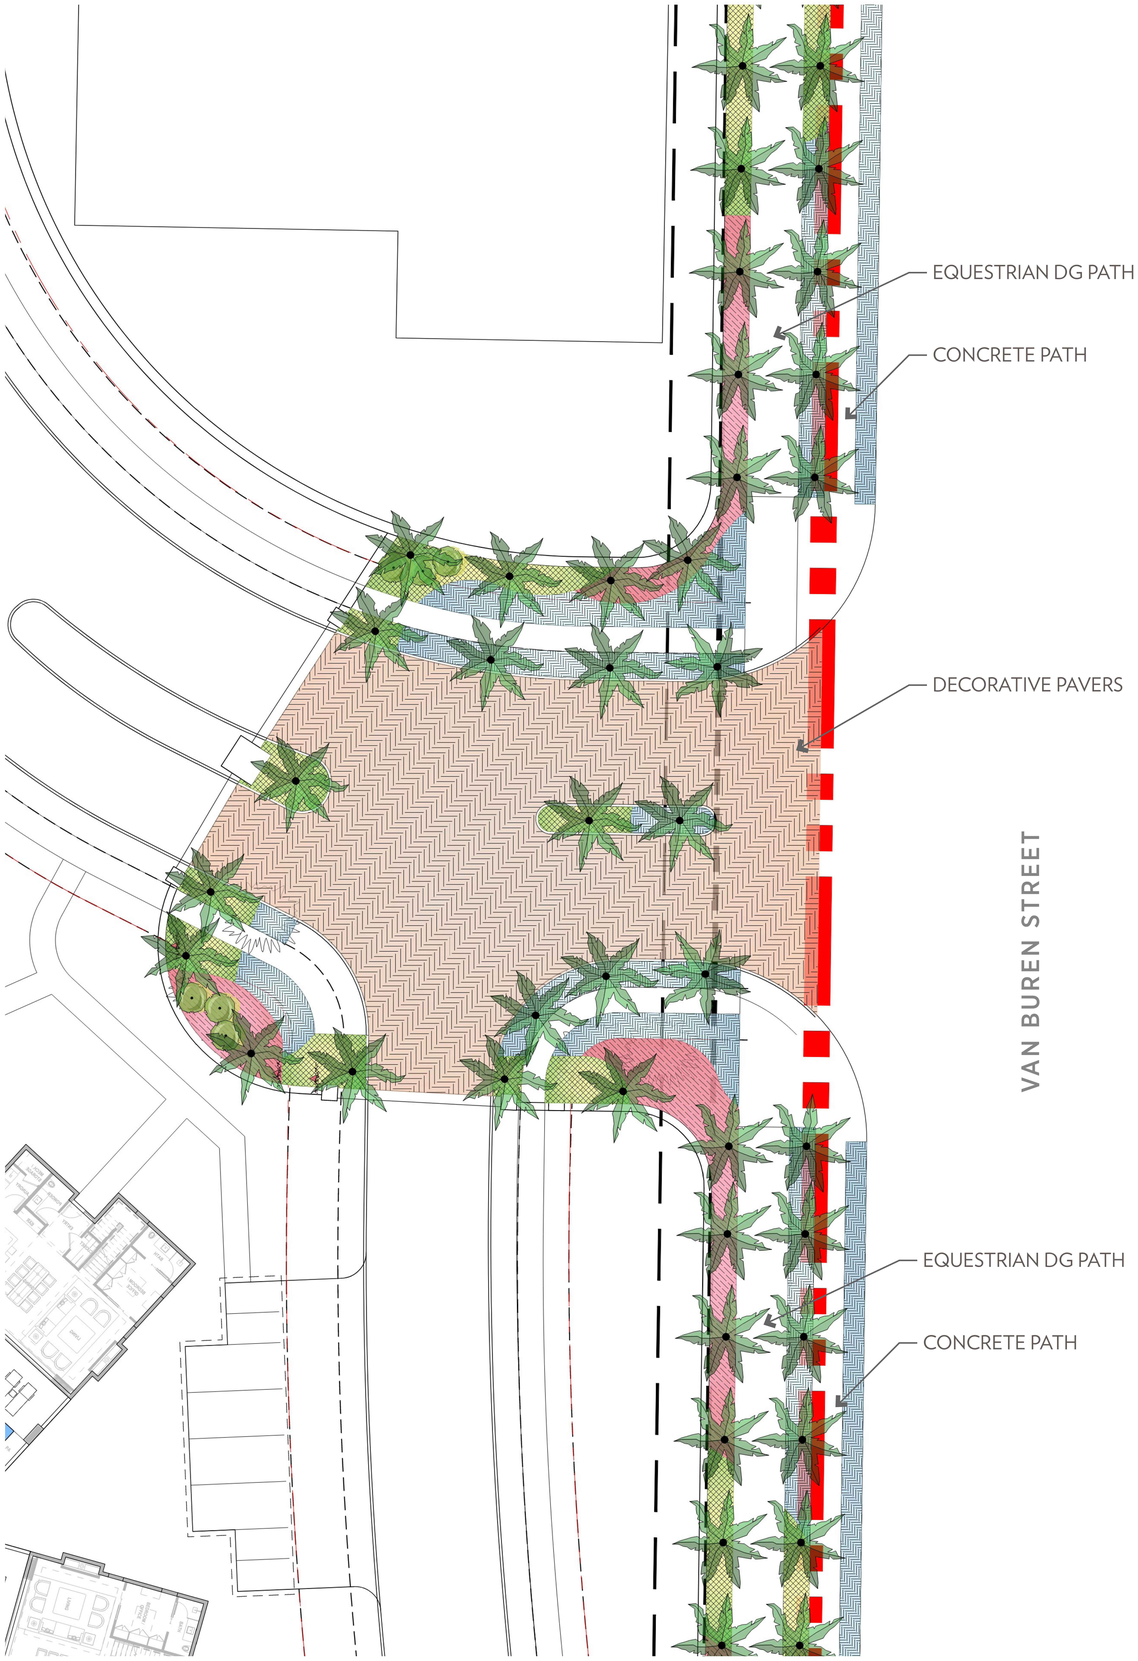
AGAVE WEBERI / WEBER AGAVE
CALLIANDRA CALIFORNICA / RED BAJA FAIRY DUSTER
EREMOPHILA HYGROPHANA / EMU BUSH
HESPERALOE FUNIFERA / GIANT HESPERALOE
HESPERALOE PARVIFLORA 'RUBY RED' / RUBY RED YUCCA
ILEX VOMITORIA / YAUPON HOLLY
LAVANDULA ANGUSTIFOLIA / ENGLISH LAVENDER
OLEA EUROPAEA 'MONTRA' / LITTLE OLLIE® OLIVE
PEROVSKIA ATRIPLICIFOLIA / RUSSIAN SAGE
RUELLIA BRITTONIANA / MEXICAN PETUNIA
SALVIA LEUCANTHA / MEXICAN BUSH SAGE

LOW SHRUBS
(APPROX. 0.5'–3' TALL | FOREGROUND + GROUND PLANE + EROSION CONTROL)

DESCRIPTION:
THIS LAYER DEFINES THE GROUND PLANE AND FINE TEXTURE. INCLUDES BOTH COMPACT SHRUBS AND SPREADING GROUNDCOVERS. THESE PLANTS ARE LOW, MOUNDING, OR TRAILING, AND ARE CRITICAL FOR WEED SUPPRESSION, SOIL STABILIZATION, AND VISUAL COHESION. USED IN MASSES OR TIGHT SPACING.

ACACIA REDOLENS 'DESERT CARPET' / DESERT CARPET BANK CATCLAW
AGAVE X 'BLUE FLAME' / BLUE FLAME AGAVE
ALOE STRIATA / CORAL ALOE
BERLANDIERA LYRATA / CHOCOLATE DAISY
BOUGAINVILLEA X 'HELEN JOHNSON' / HELEN JOHNSON COMPACT BOUGAINVILLEA
CHRYSACTINIA MEXICANA / DAMIANITA
DALEA GREGGII / TRAILING INDIGO BUSH
DIANELLA REVOLUTA / SPREADING FLAX LILY
ECHINOCACTUS GRUSONII / GOLDEN BARREL CACTUS
EREMOPHILA GLABRA 'MINGENEW GOLD' / OUTBACK SUNRISE EMU BUSH
ERICAMERIA LARICIFOLIA / TURPENTINE BUSH
EUPHORBIA RIGIDA / YELLOW SPURGE
GLANDULARIA PULCHELLA / PURPLE ROCK VERVAIN
PENSTEMON EATONII / FIRECRACKER PENSTEMON
ROSMARINUS OFFICINALIS 'PROSTRATUS' / DWARF ROSEMARY
RUELLIA PENINSULARIS / DESERT RUELLIA
SPHAERALCEA AMBIGUA / DESERT GLOBEMALLOW
TRADESCANTIA PALLIDA / PURPLE SPIDERWORT

GRASSES
(APPROX. 1'–4' TALL | MOVEMENT + TEXTURE + SOFTENING LAYER)



DESCRIPTION:

GRASSES PROVIDE MOVEMENT, FINE TEXTURE, AND VISUAL SOFTNESS IN THE LANDSCAPE. USED TO TRANSITION BETWEEN SHRUBS AND GROUND PLANE PLANTING, WHILE CONTRASTING NICELY WITH BOLD DESERT FORMS LIKE AGAVES AND CACTI. USED TO CREATE FLOW, RHYTHM, AND COHESION ACROSS PLANTING AREAS.

BOUTELOUA GRACILIS 'BLONDE AMBITION' / BLONDE AMBITION BLUE GRAMA
FESTUCA GLAUCA / BLUE FESCUE
MUHLENBERGIA CAPILLARIS / PINK MUHLY GRASS
MUHLENBERGIA RIGENS / DEER GRASS
STIPA TENUISSIMA / MEXICAN FEATHER GRASS

PHOENIX DACTYLIFERA / DATE PALM
WASHINGTONIA FILIFERA / CALIFORNIA FAN PALM

LARGE SHADE TREES
(APPROX. 25'–40'+ TALL | BROAD CANOPY + PRIMARY SHADE STRUCTURE)

DESCRIPTION:
DOMINANT CANOPY TREES, USED FOR SHADE PRODUCTION, SPATIAL DEFINITION, AND MICROCLIMATE COOLING. TYPICALLY WIDE-SPREADING WITH STRONG BRANCHING STRUCTURE, THEY ANCHOR MAJOR SPACES LIKE STREETS, PASEOS, AND OPEN AREAS.

CERCIDIUM PRAECOX / SONORAN PALO VERDE
CHORISIA SPECIOSA / SILK FLOSS TREE
FICUS MICROCARPA / INDIAN LAUREL FIG
PARKINSONIA X 'DESERT MUSEUM' / DESERT MUSEUM PALO VERDE
PROSOPIS GLANDULOSA / HONEY MESQUITE
PROSOPIS VELUTINA / VELVET MESQUITE
TIPUANA TIPU / TIPU TREE

LARGE SHRUBS
(APPROX. 6'–15'+ TALL | STRUCTURAL + SCREENING LAYER)

DESCRIPTION:
THESE ARE YOUR PRIMARY MASSING PLANTS—USED FOR PRIVACY, ENCLOSURE, AND BACKDROP STRUCTURE. THEY ARE UPRIGHT OR SPREADING FORMS, MODERATE DENSITY, AND STRONG SEASONAL PRESENCE (FLOWERS OR FOLIAGE).

AGAVE AMERICANA 'SUPER BLUE' / SUPER BLUE CENTURY PLANT
CAESALPINIA PULCHERRIMA / RED BIRD OF PARADISE
CORDIA PARVIFOLIA / SMALL-LEAF GEIGERTREE
DASYLIRION WHEELERI / GREY DESERT SPOON
DODONAEA VISCOSA / HOPSEED BUSH
EREMOPHILA MACULATA / SPOTTED EMU BUSH
LARREA TRIDENTATA / CREOSOTE BUSH
LEUCOPHYLLUM CANDIDUM / TEXAS SAGE
MYRTUS COMMUNIS / COMMON MYRTLE
SIMMONDSIA CHINENSIS / JOJOBA
TECOMA STANS / YELLOW BELLS
YUCCA FAXONIANA / SPANISH DAGGER
YUCCA ROSTRATA / BEAKED YUCCA

VINES
(VARIABLE HEIGHT | VERTICAL ELEMENTS + SOFTENING STRUCTURES)

DESCRIPTION:
VINES PROVIDE VERTICAL LAYERING AND ARCHITECTURAL SOFTENING. USED ON WALLS, TRELLISES, AND FENCES TO INTRODUCE COLOR, MOVEMENT, AND SEASONAL INTEREST WITHOUT INCREASING FOOTPRINT. THEY ACT AS FOCAL ELEMENTS OR CONNECTORS BETWEEN BUILT AND PLANTED ENVIRONMENTS.

ANTIGONON LEPTOPUS / CORAL VINE
BOUGAINVILLEA X 'BARBARA KARST' / BARBARA KARST BOUGAINVILLEA
CAMPSIS RADICANS / TRUMPET CREEPER
GELSEMIUM SEMPERVIRENS / CAROLINA JESSAMINE
JASMINUM SAMBAC / ARABIAN JASMINE
TRACHELOSPERMUM JASMINOIDES / CHINESE STAR JASMINE

MEDIUM SHRUBS
(APPROX. 3'–6' TALL | MID-LAYER + COLOR + TRANSITION PLANTING)

DESCRIPTION:
USED TO TRANSITION BETWEEN LARGE SHRUBS AND LOW PLANTINGS. TYPICALLY MOUNDING OR LOOSELY UPRIGHT, THESE PLANTS PROVIDE SEASONAL COLOR, TEXTURE VARIATION, AND HABITAT VALUE.

AGAVE WEBERI / WEBER AGAVE
CALLIANDRA CALIFORNICA / RED BAJA FAIRY DUSTER
EREMOPHILA HYGROPHANA / EMU BUSH
HESPERALOE FUNIFERA / GIANT HESPERALOE
HESPERALOE PARVIFLORA 'RUBY RED' / RUBY RED YUCCA
ILEX VOMITORIA / YAUPON HOLLY
LAVANDULA ANGUSTIFOLIA / ENGLISH LAVENDER
OLEA EUROPAEA 'MONTRA' / LITTLE OLLIE® OLIVE
PEROVSKIA ATRIPLICIFOLIA / RUSSIAN SAGE
RUELLIA BRITTONIANA / MEXICAN PETUNIA
SALVIA LEUCANTHA / MEXICAN BUSH SAGE

LOW SHRUBS
(APPROX. 0.5'–3' TALL | FOREGROUND + GROUND PLANE + EROSION CONTROL)

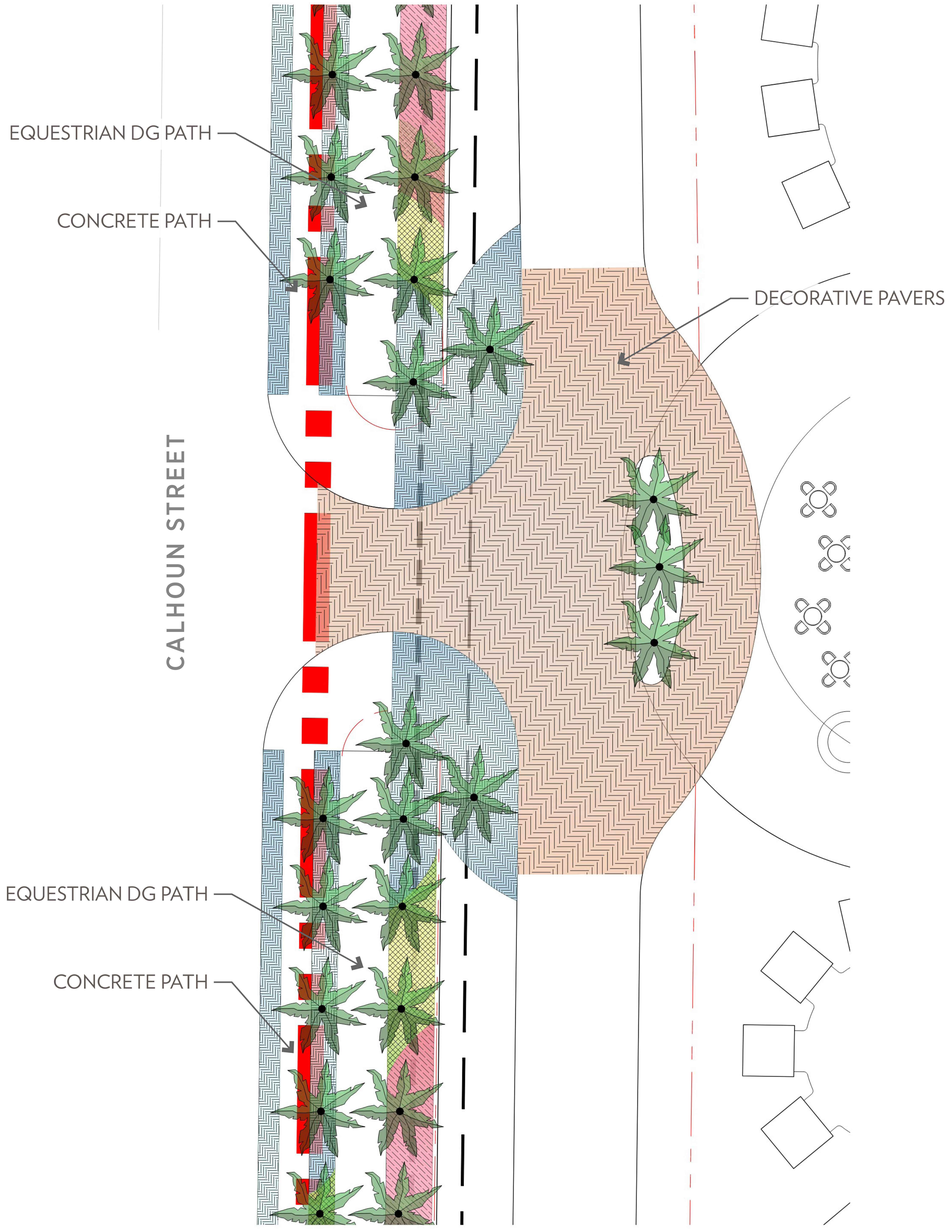
DESCRIPTION:
THIS LAYER DEFINES THE GROUND PLANE AND FINE TEXTURE. INCLUDES BOTH COMPACT SHRUBS AND SPREADING GROUNDCOVERS. THESE PLANTS ARE LOW, MOUNDING, OR TRAILING, AND ARE CRITICAL FOR WEED SUPPRESSION, SOIL STABILIZATION, AND VISUAL COHESION. USED IN MASSES OR TIGHT SPACING.

ACACIA REDOLENS 'DESERT CARPET' / DESERT CARPET BANK CATCLAW
AGAVE X 'BLUE FLAME' / BLUE FLAME AGAVE
ALOE STRIATA / CORAL ALOE
BERLANDIERA LYRATA / CHOCOLATE DAISY
BOUGAINVILLEA X 'HELEN JOHNSON' / HELEN JOHNSON COMPACT BOUGAINVILLEA
CHRYSACTINIA MEXICANA / DAMIANITA
DALEA GREGGII / TRAILING INDIGO BUSH
DIANELLA REVOLUTA / SPREADING FLAX LILY
ECHINOCACTUS GRUSONII / GOLDEN BARREL CACTUS
EREMOPHILA GLABRA 'MINGENEW GOLD' / OUTBACK SUNRISE EMU BUSH
ERICAMERIA LARICIFOLIA / TURPENTINE BUSH
EUPHORBIA RIGIDA / YELLOW SPURGE
GLANDULARIA PULCHELLA / PURPLE ROCK VERVAIN
PENSTEMON EATONII / FIRECRACKER PENSTEMON
ROSMARINUS OFFICINALIS 'PROSTRATUS' / DWARF ROSEMARY
RUELLIA PENINSULARIS / DESERT RUELLIA
SPHAERALCEA AMBIGUA / DESERT GLOBEMALLOW
TRADESCANTIA PALLIDA / PURPLE SPIDERWORT

GRASSES
(APPROX. 1'–4' TALL | MOVEMENT + TEXTURE + SOFTENING LAYER)

DESCRIPTION:

GRASSES PROVIDE MOVEMENT, FINE TEXTURE, AND VISUAL SOFTNESS IN THE LANDSCAPE. USED TO TRANSITION BETWEEN SHRUBS AND GROUND PLANE PLANTING, WHILE CONTRASTING NICELY WITH BOLD DESERT FORMS LIKE AGAVES AND CACTI. USED TO CREATE FLOW, RHYTHM, AND COHESION ACROSS PLANTING AREAS.



BOUTELOUA GRACILIS 'BLONDE AMBITION' / BLONDE AMBITION BLUE GRAMA
FESTUCA GLAUCA / BLUE FESCUE
MUHLENBERGIA CAPILLARIS / PINK MUHLY GRASS
MUHLENBERGIA RIGENS / DEER GRASS
STIPA TENUISSIMA / MEXICAN FEATHER GRASS

Luminaire Specifications

RA17

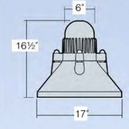

Fig. 43
Pedestrian Scale Light Fixture

Housing: The Ballast Housing is a one piece die-cast, low copper (<0.6% Cu) aluminum1 component with integral cooling fins. The Reflector Housing is one piece die-cast, low copper (<0.6% Cu) aluminum1. The Ballast Housing attaches to the Reflector Housing with stainless steel fasteners and is sealed with a silicone gasket.

Lens Frame: One piece die-cast, low copper (<0.6% Cu) aluminum1. Stainless steel hinges provided for attachment to the Reflector Housing. Stainless steel threaded fasteners provide easy access, concealed from normal view. The 3/16" thick clear flat or convex tempered glass lens seals against the reflector flange by a one piece extruded silicone gasket with fused seam, to produce a fully sealed optical chamber. The aluminum material used in the die-castings is a customized 360 aluminum alloy. Additional silicone is added to the composition to allow improved molten flow characteristics that provide greater detailing and shaping.

Mounting: Stainless steel bolts are provided to attach the luminaire to the crook arm or swept arm mounting.

Reflector Module: Specular Alzak® optical segments are rigidly mounted within a die-cast, low copper (<0.6% Cu) aluminum enclosure (spun for 17° vertical reflector) which attaches to the Reflector Housing as a one piece module. Reflectors are field rotatable in 90° increments. All sockets are factory prewired with a quick-disconnect plug for the ballast module, with wires passing through a silicone gasket to maintain sealed optical chamber integrity. The optical segments are positioned so that reflected light does not pass through the lamp arc tube. For the RA17, the reflector modules are equipped with medium base sockets rated 4KV. For the RA25, the horizontal metal halide lamp reflectors are
equipped with a pin-oriented mogul base socket with a molded silicone lamp stabilizer. All vertical reflectors, HPS horizontal reflectors, and Pulse Start reflectors are equipped with a mogul base socket rated 4KV. All optical systems are interchangeable within the housing.

Electrical Module: All electrical components are UL and CSA recognized, mounted on a single plate and factory prewired with quick-disconnect plugs for attachment to the incoming wires and the socket wires. The module attaches inside the housing using keyhole slots. All ballasts are high power factor with starting temperatures of -40°F for HPS and -20°F for MH lamp modes. See lamp and electrical data on pages 28 - 29 for ballast types and characteristics.

Finish: Super TGIC thermoset polyester powder coat paint, 2.5 mil nominal thickness, applied over a Titanated Zirconium conversion coating; A.S.T.M. 2500 hour salt spray test endurance rating. Standard colors are Black, Dark Bronze, Light Gray, Platinum Silver, or White. Custom colors are available and subject to additional charges, minimum quantities and longer lead times. Consult representative.

Certification: UL Listed to U.S. and Canadian safety standards for
wet locations. Fixture manufacturer shall employ a quality program
that is certified to meet the ISO 9001:2000 standard.

KIM LIGHTING

LTV20 Series Wall Wash
Lightvault

Specifications

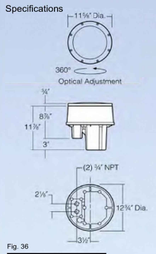

Fig. 36
In-ground Light Fixture

Lens Ring: One piece cast bronze, natural finish. Eight captive 5/8" blackened stainless steel hex-socket cap screws.
Lens: Clear tempered borosilicate glass, M° thick, flush with lens ring, slightly crowned.
Lens Gasket: One piece molded silicone, U-channel wraps completely around lens flange.
Housing: High temperature, compression molded, fiberglass impregnated, F° min. wall composite. Charcoal gray. No top lip to trap dirt and moisture. Solid brass knurled inserts molded-in to receive lens ring screws. Separate splice and ballast compartments, individual cast aluminum internal covers, with one piece molded silicone gaskets. Two L" NPT in bottom, 33 cu in.
splice area. Modular reverse draft design (top dia. smaller than bottom), body and ballast modules epoxy bonded.
Optical System: WW - one piece hydroformed reflector, specular Alzak®, black lower shield towards viewers, 360° rotation and screw locks, Wall Wash distribution. Medium base 4KV socket for H.I.D. lamps, mini-can socket for halogen lamps.
Electrical Module: High power factor ballast, -20°F starting, factory mounted and prewired to gasketed compartment cover, LTV22 only.
Fixtures must be grounded in accordance with local codes or the National Electrical Code. Failure to do so may result in serious personal injury.
Wiring: Anti-siphon barriers on all wiring to and from ballast compartment. All components wire linked for ground, quickdisconnect for removal of optical system.
Drive-over Durability: When installed in concrete (see page 4), fixture will withstand drive-over by vehicles weighing up to 5,500 lb.
Certification: UL Listed to U.S. and Canadian safety standards for wet locations. Fixture manufacturer shall employ a quality program that is audited to ISO9001 standards.

Fig. 37
In-ground Light Fixture Rock Guard

Rock Guard lens ring for lens protection in vandal prone areas. One piece cast bronze, replaces standard lens ring. Includes glass lens gasket and mounting screws.
CAUTION: On LTV22, Rock Guard will cast severe shadows on the lighted surface with clear lamps. If Rock Guard is required, use coated lamps and estimate a 50% reduction in longitudinal light throw and intensity. Rock Guard not recommended for LTV23 halogen wall wash fixtures.

The module attaches inside the housing using keyhole slots. All ballasts are high power factor with starting temperatures of -40°F for HPS and -20°F for MH lamp modes. See lamp and electrical data on pages 28 - 29 for ballast types and characteristics.

Finish: Super TGIC thermoset polyester powder coat paint, 2.5 mil nominal thickness, applied over a Titanated Zirconium conversion coating; A.S.T.M. 2500 hour salt spray test endurance rating. Standard colors are Black, Dark Bronze, Light Gray, Platinum Silver, or White. Custom colors are available and subject to additional charges, minimum quantities and longer lead times. Consult representative.

Certification: UL Listed to U.S. and Canadian safety standards for
wet locations. Fixture manufacturer shall employ a quality program
that is certified to meet the ISO 9001:2000 standard.

NOTE: All allowable pole and fixture EPAs (Effective Projected Area, which is Fixture Area x Drag Factor) are derived from the AASHTO standard (American Association of State Highway and Transportation Officials). Responsibility lies with the specifier for correct pole selection based on local codes and standards for the job location (See page **26**).

* Thickness at **Y1** section, **Y2** section is .188".

Pole reinforced, to 40' above base, to 400', remaining **Y1 section is .250", **Y2** section is .188".

Arm assemblies are included.

2 Mounting Arrangements:

NOTE: ALLOWABLE POLE EPA for jobsite wind conditions must be equal to or greater than fixture mount EPA.

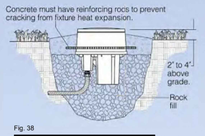
Install in Concrete

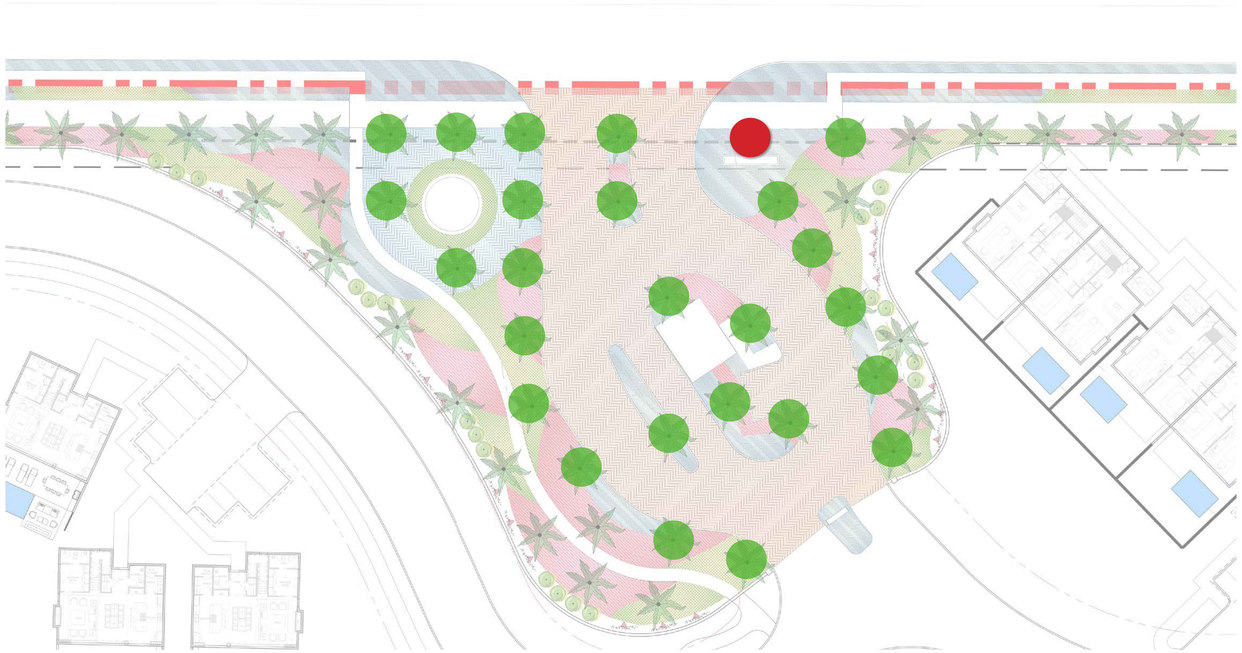
For installations in ground cover, shrubbery or lawn areas, encase the fixture in concrete. This creates a buffer zone with the additional advantage of greater fixture stability. Elevate the fixture 2" to 4" above grade, and slope the concrete away from the lens ring for drainage.

Advantages

- Cleaner, more stable installation, less susceptible to traffic and maintenance activity.
- Prevents lens overgrowth.
- Provides a defined edge for trimming.
- Provides drainage away from the lens to maintain light culput.
- Visually looks like a flush installation.

Concrete must have reinforcing rocs to prevent cracking from fixture heat expansion.





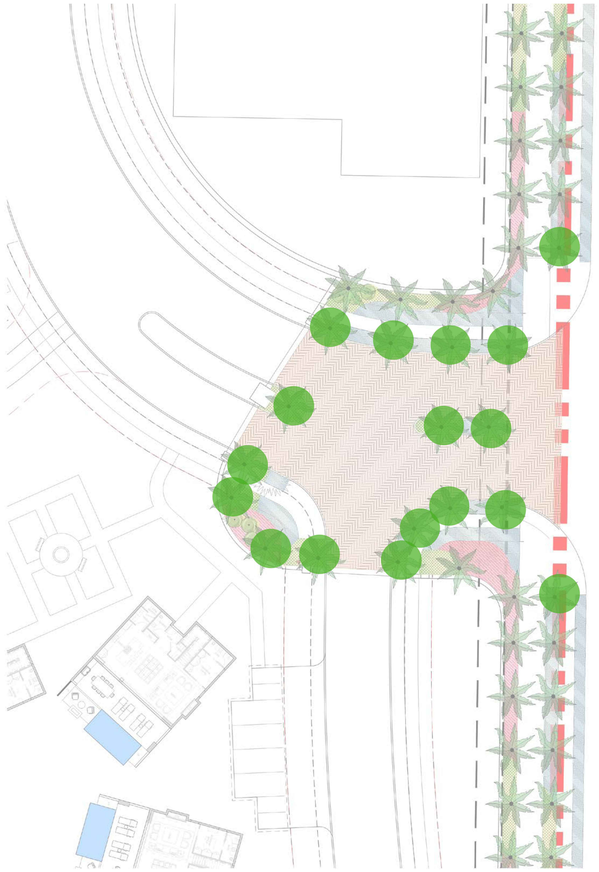


Fig. 38
In-ground Light Fixture Installation

NOTE: Always use adequate rebar surrounding the fixture to prevent cracking of the concrete due to heat expansion.

PARKING DEMAND NARRATIVE

This hotel functions as an exclusive, guest- and member-only resort. All dining, bar, and amenity areas are internal facilities serving the same population already accounted for in the lodging parking demand. Because no public access is allowed, these spaces do not generate separate parking needs, and including them would double-count the same users.

Parking demand for the project should therefore be based on:

Hotel rooms, using a 1 spaces per room, consistent with City Code; and
Assembly/event areas per City code, which remain the only true independent trip generators.

This approach more accurately reflects actual operations and avoids overstating demand for a closed, exclusive resort environment.

PARKING DEMAND NARRATIVE

For large or special events, as well as roof-terrace customer activity, any incremental parking demand that exceeds the on-site baseline will be accommodated through off-site facilities secured by agreement, supported by valet operations and shuttle service as needed. This approach ensures that even the portion of demand that cannot be met within the parking structure is fully managed through coordinated operational measures.

The Beach Club will also promote rideshare and taxi use by providing designated pick-up and drop-off areas and including clear guidance in event-related communications. With these measures in place, peak event parking demand can be effectively addressed without increasing on-site supply and without creating spillover impacts on surrounding streets.

COVA Public Beach Club Area Program

Beach Club

Area / Room	% of Total Area	Size Estimate (SF)	Notes
Indoor Bar & Lounge		3,000	Bar seats + lounge tables
Roof top Lounge		3,024	Standing +lounge tables

RESOLUTION NO. PC2026-27

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL ADOPT AN ORDINANCE AMENDING CHAPTER 17.28 OF TITLE XVII OF THE COACHELLA MUNICIPAL CODE TO ALLOW SINGLE-FAMILY RESIDENTIAL USES IN CONJUNCTION WITH A RESORT USE AS A CONDITIONAL USE WITHIN THE (R-C) REGIONAL COMMERCIAL ZONE AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED.

WHEREAS, pursuant to the authority granted to the City of Coachella ("City") by Article XI, Section 7 of the California Constitution, the City has the police power to regulate the use of land and property within the City in a manner designed to promote public convenience and general prosperity, as well as public health, welfare, and safety; and,

WHEREAS, adoption and enforcement of comprehensive zoning regulations and other land use regulations lies within the City's police power; and,

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club use on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, in late 2026, the applicant submitted an application for a Zoning Ordinance Amendment for the proposal to allow single-family residential uses within the Regional Commercial Zone regulated by Chapter 17.28 of Title XVII of the Coachella Municipal Code; and,

WHEREAS, Zoning Ordinance Amendment No. 26-02 proposes an Ordinance, attached hereto as Attachment "A" and incorporated herein by reference, amending Chapter 17.28 of Title XVII of the Coachella Municipal Code to allow single-family residential uses in conjunction with a resort use as a conditional use within the Regional Commercial (R-C) Zone; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development density and intensity established by the General Plan; and,

WHEREAS, Zoning Ordinance Amendment No. 26-02 would establish the land use

approval pathway necessary to consider the single-family residential component of the Project, which remains subject to separate approval of Conditional Use Permit No. 407 and all other applicable project approvals and conditions; and

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist") to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, after said public hearing, the Planning Commission recommended that the City Council approve this Ordinance.

NOW THEREFORE, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. CEQA. The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

SECTION 3. Recommendation to City Council. Based on the entire record before the Planning Commission, all written and oral evidence presented to the Planning Commission, and the findings made in the staff report and this Resolution, the Planning Commission of the City of Coachella hereby recommends that the City Council adopt Ordinance No. _____ entitled: "AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COACHELLA, CALIFORNIA, AMENDING CHAPTER 17.28 TO TITLE XVII OF THE COACHELLA MUNICIPAL CODE TO ALLOW SINGLE-FAMILY RESIDENTIAL USES IN CONJUNCTION WITH A RESORT USE AS A CONDITIONAL USE WITHIN THE (R-C) REGIONAL COMMERCIAL ZONE." which is attached hereto as Attachment "A" and incorporated herein by reference.

SECTION 4. Findings. The Planning Commission finds that the amendments to the Coachella Municipal Code (Zoning) proposed by the above referenced ordinance are consistent with, advances, and implements the goals and policies of the City of Coachella General Plan, including but not limited to the following:

1. The amendment is consistent with and implements the General Plan's purposes,

objectives, and land use provisions.

The General Plan's Regional Retail District designation allows residential uses at a density of 10 to 15 dwelling units per acre, with residential uses supporting the district's commercial environment. The existing Regional Commercial (R-C) zoning provisions accommodate multi-family residential uses subject to a Conditional Use Permit but do not expressly provide a corresponding approval pathway for single-family residential uses.

This difference prompted the proposed amendment, which would allow single-family residential uses in conjunction with a resort, subject to a Conditional Use Permit. The amendment brings the zoning code into closer alignment with the residential uses contemplated by the General Plan while preserving the commercial purpose of the R-C zone.

For the COVA project, the amendment would provide a land use approval pathway for single-family units intended to accommodate fractional ownership within an integrated resort development. The ownership arrangement does not replace the requirement to demonstrate compliance with applicable density requirements, General Plan policies, and project approval conditions.

2. The amendment is justified by public necessity and convenience.

The amendment establishes a defined approval process for single-family residential uses associated with resort development. It responds to the difference between the General Plan's broader allowance for residential uses and the zoning code's existing conditional allowance for multi-family residential uses.

Requiring a Conditional Use Permit for single-family residential uses provides comparable discretionary review of both residential building types. Applicants may propose a residential configuration suited to an integrated resort, while the City retains the ability to evaluate whether the proposed uses are appropriate for the site and consistent with applicable policies and standards.

The amendment therefore serves public necessity and convenience by providing regulatory clarity and a consistent review mechanism for residential uses within the R-C zone.

3. The amendment promotes the general welfare.

The amendment balances flexibility for resort development with the preservation of land for regional-serving commercial activities. Requiring single-family residential uses to occur in conjunction with a resort limits the proposed allowance to integrated resort developments rather than establishing a general allowance for independent single-family subdivisions throughout the R-C zone.

The Conditional Use Permit process allows the City to evaluate whether the residential component supports the resort and maintains the development's commercial function.

Review also addresses compatibility, circulation, parking, infrastructure, noise, lighting, and other relevant development and operational characteristics.

This approach promotes the general welfare by accommodating residential uses contemplated by the General Plan while retaining commercial development opportunities and review of potential conflicts with surrounding properties.

4. The amendment constitutes good zoning practice.

The amendment establishes a conditional approval pathway for single-family residential uses that is comparable to the existing Conditional Use Permit requirement for multi-family residential uses. This approach allows consideration of different residential building types while maintaining discretionary review.

Limiting the allowance to single-family residential uses in conjunction with a resort preserves the R-C zone's primary commercial purpose and reduces the potential for commercial properties to be developed as independent single-family subdivisions under this amendment. Each proposal must demonstrate an integrated relationship between its residential and resort components and satisfy the applicable Conditional Use Permit findings.

The amendment authorizes a land use category rather than independently approving fractional ownership arrangements, short-term rental operations, or a particular development. Those matters remain subject to applicable regulations and project approvals. Accordingly, the amendment provides flexibility and regulatory clarity while protecting the intended function of the commercial zone.

SECTION 5. Certification. The Secretary shall certify to the adoption of this Resolution.

SECTION 6. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Development Services Director is the custodian of the record of proceedings.

SECTION 7. Execution of Resolution. The Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 8. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

WHEREAS, after said public hearing, the Planning Commission recommended that the City Council approve this Ordinance.

WHEREAS, on _____ the City Council held a duly noticed public hearing to review the ordinance at which time during the hearing members of the public were given an opportunity to testify regarding the Project; and

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF COACHELLA DOES ORDAIN AS FOLLOWS:

SECTION 1. INCORPORATION OF RECITALS. The City Council hereby finds that all of the foregoing recitals presented herewith are true and correct and are hereby incorporated and adopted as findings of the City Council.

SECTION 2. Amendment to Coachella Municipal Code Title 17, Zoning, is hereby amended as identified

in Exhibit A.

SECTION 3. GENERAL PLAN CONSISTENCY FINDINGS

The City Council hereby finds that this Ordinance is consistent with, advances, and implements the goals and policies of the City of Coachella General Plan, including but not limited to the following:

1. The amendment is consistent with and implements the General Plan's purposes, objectives, and land use provisions.

The General Plan's Regional Retail District designation allows residential uses at a density of 10 to 15 dwelling units per acre, with residential uses supporting the district's commercial environment. The existing Regional Commercial (R-C) zoning provisions accommodate multi-family residential uses subject to a Conditional Use Permit but do not expressly provide a corresponding approval pathway for single-family residential uses.

This difference prompted the proposed amendment, which would allow single-family residential uses in conjunction with a resort, subject to a Conditional Use Permit. The amendment brings the zoning code into closer alignment with the residential uses contemplated by the General Plan while preserving the commercial purpose of the R-C zone.

For the COVA project, the amendment would provide a land use approval pathway for single-family units intended to accommodate fractional ownership within an integrated resort development. The ownership arrangement does not replace the requirement to demonstrate compliance with applicable density requirements, General Plan policies, and project approval conditions.

2. The amendment is justified by public necessity and convenience.

The amendment establishes a defined approval process for single-family residential uses associated with resort development. It responds to the difference between the General Plan's broader allowance for residential uses and the zoning code's existing conditional allowance for multi-family residential uses.

Requiring a Conditional Use Permit for single-family residential uses provides comparable discretionary review of both residential building types. Applicants may propose a residential configuration suited to an integrated resort, while the City retains the ability to evaluate whether the proposed uses are appropriate for the site and consistent with applicable policies and standards.

The amendment therefore serves public necessity and convenience by providing regulatory clarity and a consistent review mechanism for residential uses within the R-C zone.

3. The amendment promotes the general welfare.

The amendment balances flexibility for resort development with the preservation of land for regional-serving commercial activities. Requiring single-family residential uses to occur in conjunction with a resort limits the proposed allowance to integrated resort developments rather

than establishing a general allowance for independent single-family subdivisions throughout the R-C zone.

The Conditional Use Permit process allows the City to evaluate whether the residential component supports the resort and maintains the development's commercial function. Review also addresses compatibility, circulation, parking, infrastructure, noise, lighting, and other relevant development and operational characteristics.

This approach promotes the general welfare by accommodating residential uses contemplated by the General Plan while retaining commercial development opportunities and review of potential conflicts with surrounding properties.

4. The amendment constitutes good zoning practice.

The amendment establishes a conditional approval pathway for single-family residential uses that is comparable to the existing Conditional Use Permit requirement for multi-family residential uses. This approach allows consideration of different residential building types while maintaining discretionary review.

Limiting the allowance to single-family residential uses in conjunction with a resort preserves the R-C zone's primary commercial purpose and reduces the potential for commercial properties to be developed as independent single-family subdivisions under this amendment. Each proposal must demonstrate an integrated relationship between its residential and resort components and satisfy the applicable Conditional Use Permit findings.

The amendment authorizes a land use category rather than independently approving fractional ownership arrangements, short-term rental operations, or a particular development. Those matters remain subject to applicable regulations and project approvals. Accordingly, the amendment provides flexibility and regulatory clarity while protecting the intended function of the commercial zone.

SECTION 4. CEQA. The City Council has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the City Council makes the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant

effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.

4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

SECTION 5. Certification. The City Clerk shall certify to the adoption of this Ordinance.

SECTION 6. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Development Services Director is the custodian of the record of proceedings.

SECTION 7. Execution of the Ordinance. The Mayor shall sign this Ordinance and the City Clerk shall attest and certify to the passage and adoption thereof.

SECTION 8. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Ordinance is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Ordinance. The City Council of the City of Coachella hereby declares that it would have adopted this Ordinance and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

I hereby certify that the foregoing Ordinance was **PASSED, APPROVED AND ADOPTED** by the City Council of the City of Coachella on the XXth day of XX, 2026.

Chapter 17.28 R-C REGIONAL COMMERCIAL ZONE[1]

17.28.010 Intent and purpose.

This zone is intended to provide for and encourage a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this zone will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. Implementing the Regional Retail land use designation in the General Plan, the primary purpose of the zone is to provide for commercial opportunities, with residential uses supporting the retail environment.

(Ord. No. 1204, § 3(Exh. A.1), 7-26-23)

17.28.020 Permitted uses.

The following uses are permitted in the R-C (Regional Commercial) zone, subject to all provisions of this chapter:

A. Primary Uses.

1. All retail establishments including big box retail (> thirty-five thousand (35,000) square feet).
2. Automobile rental.
3. Hotel.
4. Motel.
5. Resort.
6. Restaurants.
7. Private swimming pools.
8. Public Utility Facilities (City-Initiated).

B. All uses permitted by Section 17.26.020 in Chapter 17.26 C-G (General Commercial).

C. Accessory Uses. The following buildings, structures, and uses are permitted when clearly incidental and accessory to primary permitted use:

1. Dwelling, where used by a proprietor, manager, or custodian of a use permitted within this zone.
2. Ice vending machines, of three-ton capacity or less subject to all other provisions of this zone. Such machines shall be located so as not to interfere with the movement of traffic on the site.

[1]Editor's note(s)—Ord. No. 1204, § 3(Exh. A.1), adopted July 26, 2023, repealed the former Ch. 17.28, §§ 17.28.010—17.28.030, and enacted a new Ch. 17.28 as set out herein. The former Ch. 17.28 pertained to C-T Tourist Commercial Zone and derived from Prior code §§ 046.01—046.03; Ord. No. 1088, § 3, adopted Dec. 14, 2016.

D. Conditional Uses. The following uses may be permitted the R-C (Regional Commercial) zone subject to obtaining a conditional use permit as specified in Section 17.74.010.

1. Amusement center or theme park.
2. Automotive repair garage as an accessory to automobile service station.
3. Automobile service station.
4. Bars and Cocktail lounges.
5. Billiard parlor.
6. Bowling alley.
7. Bus terminals, depots, and similar transit facilities.
8. Car washes as part of a multi-tenant retail center.
9. Commercial Parking Lot.
10. Drive-in or walk-up or other fast-food service establishments.
11. Exhibition hall, conference center, theater, amphitheater, auditorium.
12. Golf courses, driving ranges.
13. Hospital Uses.
14. Liquor sales, subject to Section 17.74.015;
15. Medical offices.
16. Microbreweries and taproom.
17. Mini-storage warehouse as an accessory to a permitted use.
18. Multiple-family residential (five plus units).
19. New and used automobile sales and recreational vehicle sales.
20. Recreational vehicle storage as an accessory to a permitted use.
21. Restaurants with liquor sales.
22. Skating rinks.
23. Special event establishments.
24. Sports Complex.
25. Theater, including drive-in.
26. Single-family residential uses in conjunction with a resort use.

(Ord. No. 1204, § 3(Exh. A.1), 7-26-23)

17.28.030 Property development standards.

The following standards of development shall apply in the R-C (Regional Commercial) zone:

A. Residential Density and Non-Residential Intensity.

1. Minimum Density. Ten (10) dwelling units/acre, when residential uses are provided.

2. Maximum Density. Fifteen (15) dwelling units/acre.

3. Maximum Non-Residential FAR. 2.0.

B. Residential uses shall follow the development standards in Section 17.14.030 for multi-family uses and the City of Coachella Multifamily Objective Design Standards.

C. Lot Requirements.

1. Minimum Lot Size. The minimum lot size shall be twenty thousand (20,000) square feet for commercial uses.

2. Minimum Lot Width. None.

3. Minimum Lot Depth. None.

4. Maximum Lot Coverage. None.

D. Yard Requirement.

1. Front Yard. Each lot or building site shall have a front yard of at least fifteen (15) feet in depth, except where one or both adjoining zones are residential, in which case the required yard shall be increased to equal the average of the required front yards of the adjoining zones.

2. Side Yard. There shall be no side yard requirement except where a R-C (Regional Commercial) zone adjoins a street or a residential zone, in which case there shall be a side yard of not less than ten (10) feet on the side or sides adjoining said street or residential zones. In the case of a reversed corner lot, the side yard adjoining the street shall be not less than the required front yard of the adjoining key lot to the rear.

3. Rear Yard. There shall be no rear yard requirement except where the R-C (Regional Commercial) zone adjoins a residential zone, in which case there shall be a rear yard of not less than ten (10) feet adjoining that residential zone. This shall not apply where there exists a public alley separating the two zones.

4. Permitted Encroachments in Required Yards.

a. The yards required in subsections 1—3 of this section may be used as part of an automobile parking area, provided however that a minimum three-foot wide screen planting strip shall be maintained adjacent to the planned highway right-of-way line.

b. Swimming pools provided as an accessory use to a hotel or motel may encroach into the rear two-thirds of the required front yard.

5. All landscape areas shall be maintained consistent with approved landscape plans. Landscape modifications shall be approved by the planning director and referred to the planning commission for review at the director's discretion.

E. Height Limits.

1. The maximum height of any building located within one hundred fifty (150) feet of any S-N or G-N zone, or any agricultural zone, shall be one story or twenty (20) feet, whichever is less. Vehicular rights-of-way shall be included in calculating the distance.

2. The maximum height of all other buildings shall be two stories or thirty-five (35) feet, whichever is less, except that hotels shall have a maximum height of eighty-five (85) feet.

3. Rooftop mechanical equipment shall be screened by a parapet wall or other architectural features. Any rooftop screening elements shall be architecturally consistent and well integrated with overall building architecture.

F. Landscape Setback. The minimum perimeter landscape setback for residential or hotel projects without frontage of buildings along perimeter street shall equal at minimum ten (10) feet at any point and have an average perimeter landscape setback of twenty (20) feet for the entire frontage. Equestrian and agricultural themed improvements including equestrian rail fencing, agrarian lighting, agrarian signage, 10-foot-wide decomposed granite multi-purpose trail and date palms planted twenty (20) feet on center shall be installed along Avenue 52, Van Buren Street, and Calhoun Street.

G. Energy Efficient Design and Heat Island Reduction Strategies. New development shall submit an energy efficient design and heat island reduction plan that incorporates heat island reduction strategies such as light-colored cool roofs, light-colored paving, permeable paving, substantial shade tree coverage, shade structures and shaded asphalt paving. Energy efficient building and site design strategies shall be incorporated such as appropriate solar orientation, thermal mass, use of natural daylight and ventilation, and shading. Shade tree plantings in surface parking areas shall be installed to provide shade over fifty (50) percent of the parking area within ten (10) years. Solar photovoltaic shade structures or shade structures with cool roofing materials shall be permitted in whole or in part in lieu of shade tree plantings.

H. Distance Between Buildings. No requirements, except that buildings not actually adjoining shall be determined through site plan review.

I. Off-Street Parking and Loading. Off-street parking and loading facilities shall be provided in accordance with the provisions of Section 17.54.010.

J. Screening. Where the R-C zone abuts upon a residential zone, there shall be provided screening not less than six feet, or more than eight feet in height on the zone boundary line. Said screening shall be reduced to forty-two (42) inches in height within a required yard adjacent to a street or highway.

K. Other Property Development Standards.

1. All uses shall be conducted entirely within a completely enclosed building, except for off-street parking and loading facilities, those outdoor uses permitted by Section 17.28.020(A)(7), and certain uses permitted subject to a conditional use permit by Section 17.28.020(D).

2. No building or structure having exterior walls of sheet metal shall be erected in this zone.

L. Architectural Review. All development in the R-C (Regional Commercial) zone, is subject to architectural review as set forth in Section 17.72.010 of this title.

M. All new single-family residential development shall be designed pursuant to the design standards included in Chapter 17.19 (Supplemental Standards for Single-Family Residential).

(Ord. No. 1204, § 3(Exh. A.1), 7-26-23; Ord. No. 1220, § 2(Exh. A), 2-26-25)

RESOLUTION NO. PC2026-28

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL ADOPT AN ORDINANCE AMENDING CHAPTER 5.80 OF TITLE V OF THE COACHELLA MUNICIPAL CODE TO MODIFY THE SHORT-TERM RENTAL ORDINANCE AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED.

WHEREAS, pursuant to the authority granted to the City of Coachella ("City") by Article XI, Section 7 of the California Constitution, the City has the police power to regulate the use of land and property within the City in a manner designed to promote public convenience and general prosperity, as well as public health, welfare, and safety; and,

WHEREAS, adoption and enforcement of comprehensive zoning regulations and other land use regulations lies within the City's police power; and,

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club use on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, in late 2026, the Applicant submitted an application for Zoning Ordinance Amendment No. 26-03 to amend Chapter 5.80 of Title V of the Coachella Municipal Code relating to the regulation of short-term vacation rentals; and

WHEREAS, Zoning Ordinance Amendment No. 26-03 proposes an Ordinance, attached hereto as Attachment "A" and incorporated herein by reference, amending Chapter 5.80 of Title V of the Coachella Municipal Code to provide exceptions for qualifying projects with approved development agreements to the short-term vacation rental permit limit per owner and the percentage limit on units permitted for short-term rental use, together with such additional modifications as may be expressly authorized by the amended ordinance and an approved development agreement; and

WHEREAS, Zoning Ordinance Amendment No. 26-03 establishes a regulatory mechanism through which qualifying projects with approved development agreements may receive specified exceptions or modifications to otherwise applicable provisions of Chapter 5.80, but does not independently approve short-term vacation rental operations or exempt a project from requirements of Chapter 5.80 that are not expressly modified pursuant to the Ordinance and an approved development agreement; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling

units per acre and a floor area ratio of approximately 0.65, consistent with the development density and intensity established by the General Plan; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist"), to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, after said public hearing, the Planning Commission recommended that the City Council approve this Ordinance.

NOW THEREFORE, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. CEQA. The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183

Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

SECTION 3. Recommendation to City Council. Based on the entire record before the Planning Commission, all written and oral evidence presented to the Planning Commission, and the findings made in the staff report and this Resolution, the Planning Commission of the City of Coachella hereby recommends that the City Council adopt Ordinance No. _____ entitled: "AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COACHELLA, CALIFORNIA, AMENDING CHAPTER 5.80 TO TITLE V OF THE COACHELLA MUNICIPAL CODE TO MODIFY THE SHORT-TERM RENTAL ORDINANCE" which is attached hereto as Attachment "A" and incorporated herein by reference.

SECTION 4. Findings. The Planning Commission finds that the amendments to the Coachella Municipal Code (Business Licenses and Regulations) proposed by the above referenced ordinance are consistent with, advances, and implements the goals and policies of the City of Coachella General Plan, including but not limited to the following:

1. The amendment is consistent with and supports the General Plan's purposes and objectives.

The amendment provides flexibility to accommodate integrated hospitality developments containing residential accommodations, resort amenities, dining, recreation, and entertainment. For the COVA project, this flexibility would support the proposed relationship between residential ownership, including fractional ownership, and short-term rental operations within the resort.

Land Use and Community Character Element Policy 13.4, Diverse Tax Base, calls for a fiscally sound City supported by a sustainable and diversified tax base and user fees, including property tax, sales tax, transient occupancy tax, utilities user tax, and fees

supporting the cost of services. The amendment supports this policy by accommodating visitor-serving developments that may contribute to applicable City tax revenues.

The amendment also supports Policy 13.3, Efficient Growth, by allowing the City to evaluate potential revenues alongside infrastructure obligations, public service demands, and community compatibility through the development agreement and accompanying project approvals.

2. The amendment is justified by public necessity and convenience.

Chapter 5.80 establishes limits on permit ownership and the concentration of short-term vacation rentals. These limitations regulate vacation rental activity within residential areas but may constrain integrated hospitality developments where short-term accommodations are an intended component of the approved development.

The amendment establishes a defined mechanism for accommodating these developments through approved development agreements. It allows the City to coordinate applicable rental provisions with the project's ownership structure, operating arrangements, and development obligations.

This approach provides regulatory clarity for applicants, property owners, operators, and City staff while retaining City Council review of the development agreement and the project-specific provisions governing rental operations.

3. The amendment promotes the general welfare.

The amendment allows the City to address short-term rental operations in conjunction with negotiated development obligations and enforceable project requirements. Development agreements and accompanying approvals can address management responsibilities, complaint response, security, parking, noise, infrastructure, and applicable tax reporting and payment obligations.

The justification for exceptions must address the characteristics of the qualifying development and how its operating framework protects surrounding properties and community interests. Requirements of Chapter 5.80 that are not lawfully modified remain applicable.

Accordingly, the amendment provides flexibility for qualifying developments while retaining mechanisms to address public health, safety, neighborhood compatibility, and the demands placed on City services.

4. The amendment constitutes good regulatory practice.

The amendment establishes an express framework for coordinating Chapter 5.80 with City-approved development agreements. It clarifies the availability of exceptions to permit ownership and concentration limits and provides a documented basis for administering project-specific requirements.

Each development agreement must clearly identify the property and operations it covers, together with any additional authorized modifications and applicable obligations. The amendment does not independently approve a development, establish compliance with zoning requirements, or authorize rental operations without the applicable permits and project approvals.

This approach accommodates coordinated hospitality developments while maintaining a clear distinction between the exceptions authorized by the ordinance and additional provisions expressly established through a development agreement.

SECTION 5. Certification. The Secretary shall certify to the adoption of this Resolution.

SECTION 6. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Development Services Director is the custodian of the record of proceedings.

SECTION 7. Execution of Resolution. The Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 8. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

ORDINANCE NO. ___

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COACHELLA, CALIFORNIA, AMENDING CHAPTER 5.80 TO TITLE V OF THE COACHELLA MUNICIPAL CODE TO MODIFY THE SHORT-TERM RENTAL ORDINANCE

WHEREAS, pursuant to the authority granted to the City of Coachella ("City") by Article XI, Section 7 of the California Constitution, the City has the police power to regulate the use of land and property within the City in a manner designed to promote public convenience and general prosperity, as well as public health, welfare, and safety; and,

WHEREAS, adoption and enforcement of comprehensive zoning regulations and other land use regulations lies within the City's police power; and,

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club use on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, in late 2026, the Applicant submitted an application for Zoning Ordinance Amendment No. 26-03 to amend Chapter 5.80 of Title V of the Coachella Municipal Code relating to the regulation of short-term vacation rentals; and

WHEREAS, Zoning Ordinance Amendment No. 26-03 proposes an Ordinance, attached hereto as Attachment "A" and incorporated herein by reference, amending Chapter 5.80 of Title V of the Coachella Municipal Code to provide exceptions for qualifying projects with approved development agreements to the short-term vacation rental permit limit per owner and the percentage limit on units permitted for short-term rental use, together with such additional modifications as may be expressly authorized by the amended ordinance and an approved development agreement; and

WHEREAS, Zoning Ordinance Amendment No. 26-03 establishes a regulatory mechanism through which qualifying projects with approved development agreements may receive specified exceptions or modifications to otherwise applicable provisions of Chapter 5.80, but does not independently approve short-term vacation rental operations or exempt a project from requirements of Chapter 5.80 that are not expressly modified pursuant to the Ordinance and an approved development agreement; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development density and intensity established by the

General Plan; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist"), to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, after said public hearing, the Planning Commission recommended that the City Council approve this Ordinance.

WHEREAS, on _____ the City Council held a duly noticed public hearing to review the ordinance at which time during the hearing members of the public were given an opportunity to testify regarding the Project; and

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF COACHELLA DOES ORDAIN AS FOLLOWS:

SECTION 1. INCORPORATION OF RECITALS. The City Council hereby finds that all of the foregoing recitals presented herewith are true and correct and are hereby incorporated and adopted as findings of the City Council.

SECTION 2. Amendment to Municipal Code Title 5, Business Licenses and Regulations, is hereby amended as identified in Exhibit A.

SECTION 3. GENERAL PLAN CONSISTENCY FINDINGS

The City Council hereby finds that this Ordinance is consistent with, advances, and implements the goals and policies of the City of Coachella General Plan, including but not limited to the following:

1. The amendment is consistent with and supports the General Plan's purposes and objectives.

The amendment provides flexibility to accommodate integrated hospitality developments containing residential accommodations, resort amenities, dining, recreation, and entertainment. For the COVA project, this flexibility would support the proposed relationship between residential ownership, including fractional ownership, and short-term rental operations within the resort.

Land Use and Community Character Element Policy 13.4, Diverse Tax Base, calls for a fiscally sound City supported by a sustainable and diversified tax base and user fees, including property tax, sales tax, transient occupancy tax, utilities user tax, and fees supporting the cost of services. The amendment supports this policy by accommodating visitor-serving developments that may contribute to applicable City tax revenues.

The amendment also supports Policy 13.3, Efficient Growth, by allowing the City to evaluate potential revenues alongside infrastructure obligations, public service demands, and community compatibility through the development agreement and accompanying project approvals.

2. The amendment is justified by public necessity and convenience.

Chapter 5.80 establishes limits on permit ownership and the concentration of short-term vacation rentals. These limitations regulate vacation rental activity within residential areas but may constrain integrated hospitality developments where short-term accommodations are an intended component of the approved development.

The amendment establishes a defined mechanism for accommodating these developments through approved development agreements. It allows the City to coordinate applicable rental provisions with the project's ownership structure, operating arrangements, and development obligations.

This approach provides regulatory clarity for applicants, property owners, operators, and City staff while retaining City Council review of the development agreement and the project-specific provisions governing rental operations.

3. The amendment promotes the general welfare.

The amendment allows the City to address short-term rental operations in conjunction with negotiated development obligations and enforceable project requirements. Development agreements and accompanying approvals can address management responsibilities, complaint

response, security, parking, noise, infrastructure, and applicable tax reporting and payment obligations.

The justification for exceptions must address the characteristics of the qualifying development and how its operating framework protects surrounding properties and community interests. Requirements of Chapter 5.80 that are not lawfully modified remain applicable.

Accordingly, the amendment provides flexibility for qualifying developments while retaining mechanisms to address public health, safety, neighborhood compatibility, and the demands placed on City services.

4. The amendment constitutes good regulatory practice.

The amendment establishes an express framework for coordinating Chapter 5.80 with City-approved development agreements. It clarifies the availability of exceptions to permit ownership and concentration limits and provides a documented basis for administering project-specific requirements.

Each development agreement must clearly identify the property and operations it covers, together with any additional authorized modifications and applicable obligations. The amendment does not independently approve a development, establish compliance with zoning requirements, or authorize rental operations without the applicable permits and project approvals.

This approach accommodates coordinated hospitality developments while maintaining a clear distinction between the exceptions authorized by the ordinance and additional provisions expressly established through a development agreement.

SECTION 4. CEQA. The City Council has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the City Council makes the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.

2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.

3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.

4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.

5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

SECTION 5. Certification. The City Clerk shall certify to the adoption of this Ordinance.

SECTION 6. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Development Services Director is the custodian of the record of proceedings.

SECTION 7. Execution of Ordinance. The Mayor shall sign this Ordinance and the City Clerk shall attest and certify to the passage and adoption thereof.

SECTION 8. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Ordinance is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Ordinance. The City Council of the City of Coachella hereby declares that it would have adopted this Ordinance and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

I hereby certify that the foregoing Ordinance was **PASSED, APPROVED AND ADOPTED** by the City Council of the City of Coachella on the XXth day of XX, 2026.

Chapter 5.80 REGULATION OF SHORT-TERM VACATION RENTALS

5.80.005 Purpose.

A. The purpose of this chapter is to establish regulations for the use of privately owned residential dwelling units as short-term vacation rentals to minimize secondary impacts of such uses on surrounding residential neighborhoods and to ensure the collection and payment of transient occupancy taxes.

B. This chapter is not intended to provide any owner of residential property with the right or privilege to violate any private conditions, covenants and restrictions applicable to the owner's property that may prohibit the use of such owner's residential property for short-term rental purposes as defined in this chapter.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.010 Definitions.

The definitions set forth in this section shall govern the meaning and construction of the words and phrases used in this chapter, except where the context of such words and phrases clearly indicates a different meaning or construction.

"Agent" means a person or entity, who does not hold any interest in the property and who has authority to act on behalf of the owner pursuant to Section 5.80.040.

"Annual permit" means an annual permit issued by the city to allow an owner to rent a short-term vacation rental pursuant to the regulations contained in this chapter. An annual permit shall have a term of one year from issuance and then must be renewed as provided herein.

"Bedroom" shall mean a room within a short-term vacation rental designed primarily for sleeping purposes that meets the definition of the applicable California Building, Housing and related codes currently adopted by the city.

"Good neighbor guidelines" means a document or documents prepared by the city that summarizes the general rules of conduct, consideration, and respect, including, without limitation, provisions of this Code and other applicable laws, rules or regulations pertaining to the use and occupancy of short-term vacation rentals.

"Hosting platform" or "hosting site" means a person or entity who participates in leasing short-term vacation rentals by collecting or receiving a fee, directly or indirectly through an agent or intermediary, for conducting a booking transaction using any medium of facilitation. Examples include, but are not limited to, VRBO.com, Airbnb.com, homestay.com and other internet and non-internet based services that facilitate bookings for a fee.

"Owner of a short-term vacation rental" or "owner" shall mean the person(s) or entity(ies) that hold(s) record legal and or equitable title to the subject short-term vacation rental.

"Responsible party" means the lessee of a short-term vacation rental property, as set forth in any rental oral or written contract.

"Seasonal permit" means a limited-time permit issued by the city to allow an owner to rent a short-term vacation rental at the owner's primary residence pursuant to the regulations contained in this chapter. A seasonal permit shall have a limited term from March 1 to June 1 in any year and shall not allow renting of the subject short-term vacation rental during any other time of year. A seasonal permit then must be renewed as provided herein to be used during the limited-time period in a subsequent year.

"Short-term vacation rental" shall mean a "dwelling unit" in a residential property as defined by the city's zoning ordinance, or any portion thereof, that is rented by the owner to another party for a period of not more than thirty (30) consecutive days in exchange for any form of monetary or non-monetary consideration such as but not limited to trade, fee, swap or any other means lieu of cash payments. A hotel or motel room, porch, canopy, tent, "pop-up," or other structure that is not a "dwelling unit," shall not constitute a short-term vacation rental.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.020 Administration.

The provisions of this chapter shall be administered by the finance director or such other city employee as may be designated by the city manager, hereinafter referred to as the "permit administrator." In order to facilitate orderly administration of this chapter, the permit administrator shall have the authority to make interpretations and to promulgate administrative regulations consistent with the provisions of this chapter for the purpose of interpreting, clarifying, carrying out, furthering and enforcing the requirements and provision of this chapter. A copy of such administration regulations shall be on file in the office of the city clerk.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.030 Permit requirement.

A. No owner of a short-term vacation rental shall rent, offer to rent, or advertise for rent the short-term vacation rental to another person without a valid and active annual or seasonal permit approved and issued in the manner provided for by this chapter. Annual permits shall have a term of one year from issuance and shall be required to be renewed on an annual basis in order to remain valid and active. Seasonal permits shall have a limited term from March 1 to June 1 of the year of issuance. Permits are non-transferrable. The permit shall be conspicuously posted inside the short-term vacation rental and, as set forth in Section 5.80.050, the city permit number shall be included on all advertisements or solicitations for the short-term vacation rental, including, but not limited to hosting sites, websites, social media postings, emails, and print advertisements.

B. No person shall rent, offer to rent, or advertise for rent a balcony, patio, porch, canopy, tent or other outdoor area of a short-term vacation rental property ("outdoor area") if such rental does not occur in connection with the rental of the residence or dwelling unit, or indoor portion thereof, to which the outdoor area is attached.

C. No owner may hold more than five permits of any kind at any one time, except that an owner holding more than five permits as of April 1, 2025, may renew those permits unless they have been revoked or not renewed. This limit shall apply collectively to any corporation, partnership, limited liability company or business entity holding a permit as an owner under this chapter and to any other corporation, partnership, limited liability company or business entity which is established by, owned by, controlled by, or otherwise affiliated with the permit holder. For example, if a corporation that holds five legal permits under this chapter forms another business entity, that new business entity may not obtain a permit under this chapter due to the collective limit already being reached.

D. The city many not issue annual permits to more than twenty (20) percent of the residential dwelling units located within any neighborhood of the city.

    1. For purposes of this subsection, a "neighborhood" shall be that area identified in a final recorded subdivision map as being in that neighborhood. If there is no final recorded subdivision map for a particular neighborhood, it shall be defined as the area identified in the official neighborhood map of the city.

2. If annual permits have already been issued to more than twenty (20) percent of the residential dwelling units located within a particular neighborhood, the city shall issue no further annual permits for short-term vacation rentals in that neighborhood until sufficient annual permits have expired or have been revoked to reduce the total of issued annual permits below this twenty (20) percent limit.

3. This limit shall not apply to the issuance of seasonal permits, provided the owner otherwise meets the applicable requirements of this chapter.

E. No person shall rent, offer to rent, or advertise for rent a dwelling unit, or any portion thereof, as a short-term vacation rental to any partnership, corporation, limited liability company, commercial enterprise, or similar entity.

F. No person who has rented a short-term vacation rental shall sublease such dwelling unit, or any portion thereof, to any other person or entity.

G. No person shall charge an admission fee or request or require a donation for entrance into any short-term vacation rental, independent of the lawful charges and fees for renting the short-term vacation rental.

F. Development projects with an approved development agreement shall be exempt from the limitations in subsection C and D above limiting the number of units that can be owned by one owner and limiting the percent of units that can be permitted for short-term rentals.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.040 Authorized agent or representative.

A. An owner may authorize an agent to comply with the requirements of this chapter on behalf of the owner.

B. The owner shall give prior written notice to the city of any grant of such authority, including the identity and contact information for the agent. The owner shall promptly give the city written notice of any change to any such grant of authority.

C. Notwithstanding subsection (A), the owner of the short-term vacation rental is responsible for compliance with the provisions of this chapter and the owner shall not be relieved from any personal responsibility and/or personal liability for non-compliance with any applicable law, rule or regulation pertaining to the use and occupancy of the subject short-term vacation rental, regardless of whether such non-compliance was committed by the owner's agent, a responsible party, or the occupants of the owner's short-term vacation rental or their guests. Failure of an agent to comply with this chapter shall be deemed non-compliance by the owner.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.050 Advertising shall include permit number.

A. No person shall offer to rent or advertise for rent a short-term vacation rental without including in the offer or advertisement (whether the advertisement is via website, hosting sites, social media posting, e-mail, print media, radio and/or television) the city permit number applicable to the property. If the offer to rent or advertisement contains different sizes of type or fonts, the permit number shall be printed in the same size type as the large type used in the main body of the offer or advertisement. In the case of audio-only advertising, the city permit number shall be read as part of the advertising.

B. Any person advertising or causing the advertisement of a short-term vacation rental that contains information regarding the maximum overnight occupancy of the short-term vacation rental, shall advertise only the overnight maximum occupancy limit as set forth in the permit issued pursuant to this chapter.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.060 Short-term vacation rental permit applications.

A. The owner or the owner's agent shall submit an application for a new or renewed short-term vacation rental permit required by this chapter in a form required by the city and shall contain the following information and/or documents:

1. The name, address, and telephone number of the owner of the subject short-term vacation rental.
2. The name, address, and telephone number of the owner's agent for the subject short-term vacation rental, if any.
3. The type of permit sought (annual or seasonal).
4. The address of the proposed short-term vacation rental unit.
5. The number of bedrooms in the short-term vacation rental unit.
6. A nuisance response plan containing the information required by this chapter.
7. A copy of owner's transient occupancy registration certificate and city business license.
8. An agreement in a form approved by the city and signed by the owner, whereby the owner agrees to hold harmless and indemnify the city for any actual or alleged liability arising out of conduct occurring at or rental of a short-term vacation rental.
9. An insurance certificate or other written proof of not less than one million dollars ($1,000,000.00) comprehensive general liability insurance coverage in compliance with subsection [5.80.100](R) herein, to insure against claims or injuries to persons or damages to property which may arise from or in connection with conduct occurring at or rental of a short-term vacation rental.
10. Such other information as the permit administrator deems reasonably necessary to administer this chapter.

B. Application Fee.The permit application and renewal applications shall be accompanied by an application fee in the amount established by resolution of the city council. The renewal fee shall be paid before a permit may be approved and before the short-term vacation rental may be subsequently rented.The fee shall be non-refundable and shall be sufficient to allow for comprehensive and complete enforcement of the regulations in this chapter.

C. If an owner submits a renewal application with the city prior to the permit's expiration date, the permit shall remain valid until the city renders a decision on the permit renewal. Any renewal of an annual permit shall have a term of one year following the date of expiration of the prior permit. Any renewal of a seasonal permit shall have a term from March 1 through June 1 for the upcoming year. If an owner seeking renewal of a permit fails to provide all required application information to the city within thirty (30) days following written demand by the city, the application for renewal shall be closed out, no permit renewal shall be issued, and the owner shall be required to submit a new application and fee to the city to seek a new permit.

D. Change in Ownership. Upon a change of property ownership, the permit shall automatically expire and the successor owner or successor owner's agent shall submit an application for a new permit, which must be obtained prior to continuing to rent the subject property as a short-term vacation rental. A change in ownership of a business entity that owns a short-term vacation rental property which is subject to property tax reassessment constitutes a change of ownership for the purposes of this provision and results in the expiration of the permit. Notwithstanding the above, a change of short-term vacation rental ownership between family members or among spouses, including as a result of death or divorce or transfer to a personal or family trust, shall not result in expiration of a permit. "Family members" shall mean spouses, as

well as biological or adopted children, parents, brothers/sisters, grandparents, grandchildren, uncles, aunts, nephews or nieces of the owner. An owner shall notify the city in writing of any change in ownership, whether or not resulting in expiration of the permit, not later than fourteen (14) days after the change.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.070 Content of nuisance response plans.

A. Each nuisance response plan accompanying an application for a permit required by this chapter shall contain the following information and otherwise be in a form required by the permit administrator.

   1. The mailing address and telephone number of the owner or owners of the residential dwelling unit to be used as a short-term vacation rental pursuant to the permit;

   2. The name, address and telephone number of the local contact person or persons who will be available in person and by telephone twnety-four (24) hours per day, and who will be responsible for responding to or causing a prompt response to a phone call by code enforcement within fifteen (15) minutes and within forty-five (45) minutes in person at the rental location to a nuisance or other complaint arising out of the occupancy, condition, operation or use of the short-term rental(s) by responsible parties, occupants, and/or their guests and for undertaking remedial action to resolve any such nuisance or other complaint or correct a violation.

B. The manner of assuring timely corrective action to remedy the conditions that caused the nuisance or other complaint. For the purposes of this chapter, "timely corrective action" shall include, at a minimum, a telephone call to the responsible party within fifteen (15) minutes of being informed by the city of the nuisance or other complaint.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.080 Amendment of response plans.

At any time following the issuance of a permit required by this chapter, the owner of the short-term vacation rental being operated pursuant to such permit may change the content of the nuisance response plan by filing an amended response plan with the permit administrator. Such amended response plan shall contain all of the information and be in the form required by Section 5.80.070 of this chapter, and shall be accompanied by an amended response plan fee, if any, in an amount established by the resolution of the city council to recover the costs of review and enforcement of the nuisance response plan.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.090 Permit approval and issuance.

A. Upon receipt of an application for a permit required by this chapter, the permit administrator will review the application and supporting documents, and will approve and issue a permit to the owner of the property or properties that are the subject(s) of the application that authorizes the use and occupancy of such property as a short-term vacation rental if the permit administrator finds that the required application fee has been paid, the nuisance response plan submitted with the application conforms to the requirements of this chapter and the short-term vacation rental complies with the provisions of Section 5.80.100 of this chapter. Any permit issued shall contain on its face its annual or seasonal status and the overnight maximum occupancy limit as determined by Section 5.80.100 of this chapter.

B. An application may be denied if the applicant has had a prior short-term vacation rental application for the same unit revoked within the past twelve (12) calendar months. An application for a new or renewed permit may also be denied if the owner has any unpaid city taxes or fines outstanding that the owner is responsible for, if all administrative appeals have been exhausted, unless the owner has entered into an agreement with the city for payment of said taxes or fines that allows renewal of a permit.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.100 Operational requirements and performance standards established.

A. Each owner, and each responsible party or occupant of a short-term vacation rental, shall at all times comply with or cause compliance with the operational and performance standards applicable to short-term vacation rentals they own, lease or occupy, as established by this section.

B. The owner and agent shall ensure that the short-term vacation rental complies with all applicable codes regarding fire, building and safety, and all other relevant laws and ordinances.

C. The owner shall require the responsible party to be an adult twenty-one (21) years of age or older. The responsible party shall provide a telephone number to the owner and shall be accessible to the owner by telephone at all times.

D. Prior to occupancy, the owner or agent shall obtain the name, address, and driver's license number or a copy of the passport of the responsible party. The owner or agent shall also provide to the responsible party a copy of the city's good neighbor guidelines. The responsible party is legally responsible for compliance of all occupants of the short-term vacation rental or their guests with all provisions of this chapter and/or the Coachella Municipal Code. This information shall be readily available upon request of any police officer or employee of the city authorized to enforce this chapter or state law.

E. The owner shall limit overnight occupancy of the short-term vacation rental to the following:

1. The maximum number of overnight occupants shall not exceed two persons per bedroom plus two additional persons. The number of bedrooms in a short-term vacation rental shall be verified by the permit administrator using county assessor and/or city building records, prior to the issuance of a permit.

2. Notwithstanding the above, the city may permit increased overnight occupancy greater than the limits above for single family residential lots that are at least one-half acre in area. An owner whose lot meets this criterion may apply to the city for increased overnight occupancy greater than the limits set forth above. The permit administrator may request an interior and/or exterior site visit in order to verify the facts stated in the application and/or may request additional written or photographic documentation from the owner to support the application for increased overnight occupancy. The owner shall be present during any site visit. The permit administrator may allow the increased overnight occupancy if he or she determines that it will not cause undue negative effects or otherwise be detrimental to the surrounding neighborhood. The permit administrator may impose reasonable time limits and conditions of approval for the increased overnight occupancy. The permit administrator's determination on an application for increased overnight occupancy shall be final. No hearing shall be required or conducted. The permit administrator shall be afforded broad discretion with respect to applications for increased overnight occupancy.

F. During the hours of 10:00 p.m. through 8:00 a.m. of the following day, the short-term vacation rental shall not exceed the overnight maximum occupancy limit, except as allowed by the permit administrator pursuant to subsection (E) above.

G. Parking. One vehicle per bedroom shall be permitted for the rented premises with a total maximum of four vehicles on any rented premises. All vehicles of occupants of the short-term residential rental shall be parked only in an approved driveway or garage on the premises. For purposes of this chapter, a "vehicle" shall include passenger cars, trucks, towing trailers, boats and off-road vehicles. Notwithstanding the above, the permit administrator may allow for additional parking on the rented premises beyond these limits as part of an application for increased overnight occupancy under subsection (E) above.

H. Trash and refuse shall not be left stored within public view, except in proper containers for the purpose of collection by the city's authorized waste hauler on scheduled trash collection days. The owner of the short-term vacation rental shall provide sufficient trash collection containers and service to meet the demand of the occupants. No trash container shall be placed in or adjacent to a street or public right-of-way for collection service more than twenty-four (24) hours prior to the normal collection time. Containers shall be removed from, within or adjacent to the street or right-of-way within twenty-four (24) hours after collection.

I. A short-term vacation rental may be rented pursuant to either an oral or written agreement between the owner and the responsible party.

1. Each written rental agreement for a short-term vacation rental shall include the following terms, notifications and disclosures, which shall also be posted in a conspicuous location inside the unit;

a. The name, age, address of the responsible party along with a copy of the responsible party's government issued identification.

b. The maximum number of overnight occupants that are permitted pursuant to the overnight maximum occupancy limit set forth in the permit.

c. A list containing the names of all guests that will occupy the short-term vacation rental provided to the owner by the responsible party, including a list of their vehicles by make and model and license plate numbers.

d. An acknowledgment and agreement of the responsible party that he or she is legally responsible for compliance of all occupants of the short-term vacation rental and their guests with all provisions of this chapter and/or the Coachella Municipal Code.

e. Notification, acknowledgement and agreement of the responsible party that failure to comply with the maximum overnight occupancy limit and/or operational requirements in the provisions of Section 5.80.100 and the subsequent refusal to comply with the instructions of the owner, agent and/or local contact person in order to remedy such violations, shall subject the responsible party and his/her guests and/or other occupants to an immediate order to vacate the short-term vacation rental by the owner or local contact person in accordance with the provisions contained within the rental agreement.

f. The trash pick-up day and applicable rules and regulations pertaining to leaving or storing trash or refuse on the exterior of the property.

g. Notification that the responsible party and/or occupant(s) may be cited or fined by the city and/or immediately evicted by the owner or agent pursuant to state law, in addition to any other remedies available at law, for creating a disturbance or for violating any provisions of this chapter.

h. Notification that failure to conform to the overnight occupancy requirements of the short-term vacation rental is a violation of this chapter.

i. Notification that amplified sound, including radios, televisions and other electronic devices are subject to the city's noise ordinance as set forth in Coachella Municipal Code Chapter 7.04.

j. A notification about the prohibition on illegal loud parties, along with notification of the city' s right to recover the costs of special enforcement needed to address certain loud parties under the circumstances described in Coachella Municipal Code Sections 7.05.010 through 7.05.060.

k. A notification about the requirement that the occupant(s) participate in neighborhood quiet hours by avoiding parties and loud social events between the hours of 10:00 p.m. and 8:00 a.m. unless otherwise allowed by the permit administrator under subsection [5.80.100](E) of this chapter.

l. The name of the owner, agent, or local contact person, of the short-term vacation rental, and a telephone number at which each may be reached at all times.

m. A copy of the good neighbor guidelines which may from time to time be prepared and amended by the permit administrator. These guidelines may include location specific information, such as local speed limits.

n. Notification that the property is part of the city of Coachella's short-term vacation rental program.

o. A copy of this chapter of the Coachella Municipal Code, as it may be amended from time to time.

2. The written rental agreement and documentation of compliance with this subsection (I) shall be maintained by the owner and/or agent for a period of three years and be made readily available upon request of the permit administrator or any police officer or employee of the city authorized to enforce this chapter or state law.

J. During the rental term of each short-term vacation rental, the owner, agent or local contact person shall be available by phone and in-person twenty-four (24) hours per day, seven days per week for the purpose of: (i) responding to the city and to the responsible party by telephone within fifteen (15) minutes of complaints regarding the occupancy, condition, operation or use of the short-term vacation rental; (ii) responding in-person within forty-five (45) minutes to any additional or successive complaints regarding the occupancy, condition, operation or use short-term vacation rental; and (iii) taking action to resolve any complaint and/or correct any violation as set forth in subsection (K) of this Section 5.80.100.

K. Upon receipt of a nuisance complaint or such other complaint or upon notification that any occupant and/or guest of the short-term vacation rental has created unreasonable noise or disturbances, engaged in disorderly conduct, or committed violations of this chapter, the Coachella Municipal Code or any state law, the owner, agent or the local contact person shall promptly respond to such complaint and take corrective action to remedy the complaint and prevent a recurrence of such conduct by those occupants or guests. For purposes of this paragraph, "promptly respond" shall mean a response by telephone to the responsible party within fifteen (15) minutes of the complaint whereby the responsible party is advised of the nature of the complaint and a correction of any violation is made and a physical presence at the premises of the short-term vacation rental within forty-five (45) minutes to any unresolved, additional or successive complaints regarding the occupancy, condition, operation or use short-term vacation rental whereby the responsible party or other occupant is advised of the nature of the complaint and a correction of any violation is made. If the nature of the violation involves an action that would take more than an hour, "promptly respond" shall mean notifying the permit administrator of the nature of the complaint and thereafter diligently pursuing to completion the correction of the violation. Failure of the owner, agent or the local contact person to promptly respond and/or to take timely corrective action regarding the occupancy, condition, operation, or use of the short-term vacation rental shall be a violation of this chapter and shall be grounds for the imposition of penalties as set forth in this chapter and/or revocation or suspension of the permit. An owner, agent or local contact person is not required or authorized to act as a peace officer or to intervene in situations that pose a risk to personal safety. The owner, agent or the local contact person shall keep and maintain a written log or other record of the nature of the complaint or violation and the date, and time of each complaint, disturbance, response and the corrective action taken. Such written log or record shall be

readily available upon request of the city, including the permit administrator, and any police officer or employee of the city authorized to enforce this chapter or state law and shall be retained for a minimum of three years.

L. The owner, agent and/or local contact person shall order the responsible party and his/her guests and/or other occupants to immediately vacate the short-term vacation rental if the responsible party and/or guests or other occupants fail to comply with the maximum overnight occupancy limit and/or violate the provisions of this chapter and subsequently refuse to comply with the instructions of the owner, agent and/or local contact person in order to remedy or correct the violation.

M. The owner shall keep written records documenting compliance with all elements of the performance standards and the approved nuisance response plan. Such records shall be retained for a minimum of three years and shall be available during regular business hours upon request of the city, including the permit administrator, and any police officer or employee of the city authorized to enforce this chapter or state law.

N. The short-term vacation rental use shall not involve the use of commercial vehicles for the delivery of materials to and from the premises beyond those commercial vehicles normally associated with residential uses nor storage of delivered materials beyond those items which would normally be associated with a residential use of property.

O. The operational requirements and performance standards may be modified by the permit administrator upon request of the owner or agent based upon site specific circumstances for the purpose of allowing reasonable accommodation of a short-term vacation rental occupant as may be required by state or federal disability laws. All requests must be in writing and shall identify how the strict application of the standard conditions creates an unreasonable hardship to an occupant such that, if the requirement is not modified, reasonable use of the property for a short-term vacation rental by an occupant would not be allowed. Any hardships identified must relate to physical constraints to the subject site and shall not be self-induced or economic. Any modifications of the standard conditions shall not further exacerbate an already existing problem.

P. The permit administrator shall have the authority to impose additional conditions on the use of any given short-term vacation rental unit to ensure that any potential secondary effects unique to the subject vacation rental unit are avoided or adequately mitigated.

Q. No radio receiver, musical instrument, phonograph, loudspeaker, sound amplifier, or other any machine or device for the producing or reproducing of any sound may be operated on the vacation rental property unless it is in compliance with the city's noise ordinance.

R. The owner shall, at the owner's expense, procure and maintain, for the duration of any permit, comprehensive general liability insurance with a limit of no less than one million dollars ($1,000,000.00) per occurrence to insure against claims for injuries to persons or damages to property which may arise from or in connection with rental or operation of a short-term vacation rental. Such insurance shall be at least as broad as the latest version of Insurance Services Office Commercial General Liability coverage (occurrence form CG 0001).

S. No accessory dwelling unit (ADU) may be rented as a short-term vacation rental in the city.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.105 Payment of transient occupancy taxes.

A. The owner and/or the agent is responsible for collecting and remitting transient occupancy tax to the city and shall comply with all provisions of Section 4.28.030 et. seq. of the Municipal Code concerning transient

occupancy taxes, including, but not limited to, submission of a return in accordance with Chapter 4.28, which shall be filed even if the vacation rental unit was not rented during each such reporting period.

B. Beginning April 1, 2025, hosting platforms shall be responsible for collecting all applicable transient occupancy taxes and remitting the same to the city. The hosting platform shall be considered an agent of the owner/host for purposes of transient occupancy tax collections and remittance pursuant to Chapter 4.28.

C. Owners and/or agents shall be responsible for submitting transient occupancy tax forms reporting nightly stays and gross receipts even if a hosting platform is remitting the taxes due on their behalf.

D. Permittees making two or more late submittals in a 12-month period shall not have their permit renewed upon expiration.

E. Owners shall provide all transient occupancy tax-related documents to the city within five business days of the city's written request, as more particularly set forth in Section 5.80.150. If any documents are not in the possession of an owner but are in the possession of an agent, the owner shall promptly request said documents from the agent within three business days of the city's written request and the documents shall be provided to the city within five business days thereafter.

F. Timely payment of applicable transient occupancy taxes for a short-term vacation rental shall not excuse an owner's noncompliance with any other provisions of this chapter and the city may impose fines or take other action as set forth in this chapter to address said noncompliance.

(Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.110 Terminating the use of a property as short-term rental.

Where the owner of property used and occupied as a short-term vacation rental pursuant to a permit approved and issued in the manner provided for by this chapter determines to terminate such use and restore the property either to an owner-occupied residence or a long-term rental, the property owner shall promptly cause a notice of such determination/termination to be filed with the permit administrator. Once such notice is received by the city, the property shall not again be leased, offered for lease or otherwise occupied as a short-term vacation rental until a new permit is obtained by the owner.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.120 Violations.

A. It is unlawful and a violation of this chapter for any person or entity owning, renting, leasing, occupying or having charge, control or possession of any real or improved property within the City of Coachella to cause, permit, maintain or allow any violation of this chapter to exist thereon. Any person who violates any provision of this chapter is guilty of a misdemeanor. Such violation is punishable as set forth in Section 1.08 of this Code. Each and every day, or portion thereof, that a violation of this chapter exists constitutes a separate and distinct violation.

B. Alternatively, this chapter may be enforced through the issuance of an administrative citation in accordance with Chapter 1.08 of this Code, except that the fine for each separate violation shall be as follows: (1) an administrative fine in an amount not to exceed one thousand dollars ($1,000.00) for the first citation; (2) an administrative fine an amount not to exceed two thousand dollars ($2,000.00) for a second citation issued for the same offense within a 12-month period of the date of the first offense; and (3) an administrative fine in an amount not to exceed three thousand dollars ($3,000.00) for a third and any subsequent citation issued for the same offense within a 12-month period of the date of the first offense. Each and every day such a violation exists shall constitute a separate and distinct violation of this chapter.

C. Notwithstanding subsection (B) of this Section 5.80.120, operating a short-term vacation rental without a valid permit shall be subject to an administrative fine in the following amounts: (1) an administrative fine in an amount not to exceed one thousand five hundred dollars ($1,500.00) for the first citation; (2) an administrative fine in an amount not to exceed three thousand dollars ($3,000.00) for a second citation issued for the same offense within a 12-month period of the date of the first offense; and (3) an administrative fine in an amount not to exceed five thousand dollars ($5,000.00) for a third and any subsequent citation issued for the same offense within a 12-month period of the date of the first offense. Each and every day such a violation exists shall constitute a separate and distinct violation of this chapter.

D. In addition to the foregoing, a violation of any provision of this chapter shall constitute a public nuisance and shall be subject to abatement by the city by means of a civil action or administrative abatement pursuant to Chapter 3.10 of this Code, and each day such condition continues it shall be regarded as a new and separate offense.

E. This remedies provided for in this section are in addition to, and not in lieu of, all other legal remedies, criminal or civil, which may be pursued by the city to address any violation of this chapter.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.130 Permit suspension, modification or revocation.

A. In addition to any other remedy provided by this chapter, a permit issued pursuant to this chapter may be suspended, modified or revoked for any violations of this chapter, for violation of any other law on the premises of the short-term vacation rental, or for the maintenance of such other conditions as may be shown to be injurious to the public health and safety or if the applicant made any false, misleading or fraudulent statement of a material fact in the application for permit, or any report or record required to be filed pursuant to this chapter.

B. Prior to suspension, modification or revocation of a permit, a hearing shall be held thereon by the permit administrator or a hearing officer designated by the permit administrator. The permittee shall be notified in writing of the grounds for suspension, modification or revocation of the permit at least ten (10) days prior to the scheduled hearing. The decision of the permit administrator or hearing officer shall be rendered within five days of the hearing. The decision shall be in writing, and shall set forth the findings and reasons for the decision. The decision of the permit administrator or hearing officer is final.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.140 Hosting platforms.

A. Subject to applicable laws, hosting platforms shall, upon written request by the city, promptly disclose to the city each short-term vacation rental located in the city that they list, the host ID, listing ID, and names of the persons responsible for each such listing, the address of each such listing, the length of stay for each such listing, and the price paid for each stay.

B. A hosting platform shall promptly remove any listing upon receipt of a take-down notice from the city indicating that a listing violates applicable legal requirements.

C. A hosting platform is responsible for collecting and remitting transient occupancy taxes on behalf of their hosts in accordance with this Code, either directly to the city or through the owner/agent.

D. A hosting platform shall require all hosts to include a valid permit number in a designated field dedicated to the license number.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.150 Records and inspection.

Each owner or agent shall provide access to each short-term vacation rental and any records related to the use and occupancy of the short-term vacation rental to the city manager or his designee at any time during normal business hours, for the purpose of inspection or audit to determine that the objective and conditions of this chapter are being fulfilled.

(Ord. No. 1105, § 2, 5-10-17; Ord. No. 1221, § 1, 2-26-25; Ord. No. 1222, § 1, 3-12-25)

5.80.160 Requirements not exclusive.

The requirements of this chapter shall be in addition to any license, permit or fee required under any other provision of the Coachella Municipal Code. The issuance of any permit pursuant to this chapter shall not relieve any person of the obligation to comply with all other provisions of the Coachella Municipal Code pertaining to the use and occupancy of the short-term vacation rental or the property on which it is located.

(Ord. No. 1105, § 2, 5-10-17)

RESOLUTION NO. PC2026-29

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA RECOMMENDING THAT THE CITY COUNCIL CONDITIONALLY APPROVE CONDITIONAL USE PERMIT NO. 396 TO APPROVE THE PROPOSED BARS, COCKTAIL LOUNGES, LIQUOR SALES, AND SPECIAL EVENT ESTABLISHMENT USES, FOR THE "COVA" PROJECT PROPOSING THE DEVELOPMENT OF A HOTEL, RESORT, RESIDENTIAL, AND COMMERCIAL PUBLIC BEACH CLUB LOCATED ON APPROXIMATELY 87 ACRES ON FOUR CONTIGUOUS PARCELS (APNS 780-040-001, 780-040-003, 780-060-001, AND 780-060-002) SOUTH OF AVENUE 52, WEST OF VAN BUREN STREET AND EAST OF CALHOUN STREET, AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED. APPLICANT: RELEVANT COACHELLA OWNER, LLC

WHEREAS, on April 22, 2015, the City approved Resolution No. 2015-03 certifying the Program Environmental Impact Report ("EIR") (SCH #2009021007) for the City of Coachella General Plan Update 2035 ("General Plan") and Climate Action Plan; adopting environmental findings, a mitigation monitoring and reporting program, and a statement of overriding considerations; and approving the General Plan and Climate Action Plan pursuant to the California Environmental Quality Act, herein incorporated by reference; and

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club uses on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, the Applicant subsequently submitted applications for Zoning Ordinance Amendment Nos. 26-02 and 26-03 as related entitlements for the Project; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan 2035 land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development density and intensity established by the General Plan; and,

WHEREAS, Conditional Use Permit No. 396 proposes to authorize bars and cocktail lounges, liquor sales, and special event establishment uses in conjunction with the COVA Project, including special event activities within designated areas of the private-

sector hotel and resort, including the event barn and outdoor DJ island, as well as the public-sector beach club; and

WHEREAS, the proposed Project is consistent with and intended to implement the vision of the Coachella Municipal Code and the General Plan pertaining to land use patterns, building and site design, and public right-of-way improvements; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist"), to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA DOES HEREBY FIND DETERMINE AND RESOLVE AS FOLLOWS:

SECTION 1. Incorporation of Recitals. The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. Compliance with California Environmental Quality Act. The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

The applicable mitigation measures adopted in connection with the General Plan Update 2035 (GPU) EIR shall remain applicable to the Project and shall be incorporated into the Project's mitigation monitoring and reporting requirements.

SECTION 3. Conditional Use Permit Findings. Based upon the evidence presented at the hearing, including the staff report and written and verbal testimony, which are all incorporated herein by reference, the Planning commission finds that:

1. The proposed use will be in harmony with and in accordance with the objectives of the General Plan.

The proposed bars and cocktail lounges, liquor sales, and special event establishment are consistent with and supportive of the Regional Retail District land use designation applicable to the Project site. The proposed uses are components of the larger COVA resort development and are intended to provide dining, beverage, recreation, entertainment, and visitor-serving amenities in conjunction with the Project's hotel, resort, residential, restaurant, and other commercial uses.

The bars and cocktail lounges and associated liquor sales will complement the hospitality and visitor-serving functions of the Project, while the special event establishment will serve as a principal recreational and visitor-serving amenity within the overall resort. These uses support the development of the Project as an integrated destination rather than as a conventional residential development and are consistent with General Plan objectives encouraging commercial, hospitality, recreational, and visitor-serving development and a diversified local economy.

2. The proposed use will be compatible with the existing or intended character of the general vicinity and will not change its essential character.

The proposed bars and cocktail lounges, liquor sales, and special event establishment have been incorporated into the comprehensive design of the COVA resort development and are compatible with the intended hospitality, commercial, recreational, and entertainment character of the Project.

The proposed special event establishments serve an integral recreational and visitor-serving component of the resort rather than as an independent use unrelated to the overall development. Similarly, the bars and cocktail lounges and liquor sales are intended to operate in conjunction with the Project's hospitality, restaurant, recreational, and visitor-serving uses.

The Project's site planning and prescribed conditions of approval provide mechanisms to address potential operational effects associated with these uses, including noise, lighting, security, parking, circulation, hours of operation, alcohol service, and fire and life safety. Alcohol sales and service will also remain subject to applicable requirements of the California Department of Alcoholic Beverage Control.

With implementation of the conditions of approval and compliance with applicable City and State requirements, the proposed uses will be located, designed, constructed, operated, and maintained in a manner compatible with the intended character of the Project and surrounding area and will not change the essential character of the area.

3. Consideration has been given to scale, bulk, coverage, density, public facilities, utilities, neighborhood character, traffic generation, street capacity, and other relevant impacts.

The scale, bulk, coverage, and intensity of the proposed bars and cocktail lounges, liquor sales, and special event establishments have been considered as part of the overall COVA

development and the associated Architectural Review, Tentative Tract Map, Conditional Use Permits, and other Project entitlements.

The special event establishments and food-and-beverage uses are integrated into the overall Project site plan and will be served by the Project's proposed vehicular and pedestrian circulation systems, parking facilities, utilities, water and sewer facilities, drainage improvements, emergency access, landscaping, lighting, and other infrastructure.

The Project is subject to conditions of approval requiring the construction of necessary infrastructure and compliance with applicable requirements of the City and other responsible agencies. Potential effects associated with traffic, parking, noise, lighting, alcohol service, security, and operation of the proposed uses are addressed through the Project design, applicable Municipal Code requirements, and prescribed conditions of approval.

4. Any potentially hazardous or disturbing characteristics are justified by the common public interest as a benefit to the community as a whole.

The proposed bars and cocktail lounges, liquor sales, and special event establishments may have the potential to generate operational effects associated with noise, alcohol consumption, security, lighting, parking, traffic, and hours of operation. However, the proposed uses are located within and have been designed as integral components of the larger COVA resort development rather than as stand-alone uses. The proposed Project is consistent with the land use framework established by the City of Coachella General Plan and evaluated in the certified General Plan Environmental Impact Report. The General Plan EIR evaluated and contemplated the potential environmental effects associated with development of the Project area consistent with the General Plan, including potential noise impacts associated with the types and intensity of development anticipated for the area.

Potential operational impacts associated with the proposed uses have been further addressed through the Project design, applicable provisions of the Coachella Municipal Code, applicable requirements of the California Department of Alcoholic Beverage Control, and the conditions of approval imposed on Conditional Use Permit No. 396 and the Project as a whole. These requirements provide mechanisms to address noise, security, lighting, parking, circulation, alcohol service, and other operational considerations and to ensure that the uses operate in a manner compatible with surrounding and reasonably anticipated uses.

The proposed bars and cocktail lounges, liquor sales, and special event establishments will provide dining, recreational, entertainment, hospitality, and visitor-serving amenities that support the intended function of the COVA development as an integrated resort destination. The special event establishments will provide a recreational and visitor-serving amenity, while the bars, cocktail lounges, and associated liquor sales will complement the Project's restaurant, hospitality, recreational, and commercial components.

5. Vehicular approaches are designed to reasonably minimize interference with traffic on surrounding public streets or roads.

Vehicular access to the proposed bars and cocktail lounges, liquor sales, and special event establishments will occur through the access and internal circulation system designed for the overall COVA development. The proposed conditional uses will not rely upon separate uncontrolled access points directly serving the individual uses from surrounding public streets.

The Project provides coordinated vehicular access from the surrounding roadway network and an internal circulation system designed to distribute vehicles among the resort, residential, commercial, recreational, and visitor-serving components of the development. Parking and pedestrian circulation serving the proposed uses are similarly incorporated into the overall Project design.

The Project is subject to conditions of approval requiring compliance with applicable City engineering, circulation, access, fire, and public safety requirements. As designed and conditioned, vehicular approaches serving the proposed conditional uses will provide reasonable access while minimizing interference with traffic on surrounding public streets.

SECTION 4. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Community Development Director is the custodian of the record of proceedings.

SECTION 5. Execution of Resolution. The Planning Commission Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 6. Recommendation to City Council. Based on the foregoing recitals and findings, and the written and oral comments, facts, and evidence presented, the City of Coachella Planning Commission recommends that the City Council conditionally approve Conditional Use Permit No. 396 to authorize bars and cocktail lounges, liquor sales, and special event establishment uses, including special event activities within the designated event barn, outdoor DJ island, and public event areas, for the "COVA" Project located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street, and east of Calhoun Street ("Project"), subject to the Conditions of Approval set forth in Exhibit "A" of this Resolution.

SECTION 7. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

Exhibit A – Resolution No. PC2026-29

CONDITIONS OF APPROVAL FOR CONDITIONAL USE PERMIT NO. 396

General Conditions

1. Conditional Use Permit No. 396 is approved for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"), and determine, pursuant to State CEQA Guidelines Section 15183, that no further environmental review is required.

2. The applicant shall defend, indemnify and hold harmless the City of Coachella, its officials, officers, employees, and agents from and against any claim, action, or proceeding against the City, its officials, officers, employees or agents to attack, set aside, void or annul any project approval or condition of approval of the city concerning this project, including but not limited to any approval or condition of approval or mitigation measure imposed by the City Council or Planning Commission. The City shall promptly notify the applicant of any claim, action, or proceeding concerning the project and the City shall cooperate fully in the defense of the matter. The City reserves the right, at its own option, to choose its own attorney to represent the City, its officials, officers, employees and agents in the defense of the City Attorney, within five days of the effective date of this approval.

3. The applicant shall comply with all requirements and conditions of approval as included in Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01, and any modifications or extensions thereof, as listed in those Resolutions for each respective approval.

RESOLUTION NO. PC2026-30

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA RECOMMENDING THAT THE CITY COUNCIL CONDITIONALLY APPROVE CONDITIONAL USE PERMIT NO. 407 TO APPROVE THE PROPOSED SINGLE-FAMILY RESIDENTIAL USES IN CONJUNCTION WITH A RESORT USE, FOR THE "COVA" PROJECT PROPOSING THE DEVELOPMENT OF A HOTEL, RESORT, RESIDENTIAL, AND COMMERCIAL PUBLIC BEACH CLUB LOCATED ON APPROXIMATELY 87 ACRES ON FOUR CONTIGUOUS PARCELS (APNS 780-040-001, 780-040-003, 780-060-001, AND 780-060-002) SOUTH OF AVENUE 52, WEST OF VAN BUREN STREET AND EAST OF CALHOUN STREET, AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED. APPLICANT: RELEVANT COACHELLA OWNER, LLC

WHEREAS, on April 22, 2015, the City approved Resolution No. 2015-03 certifying the Program Environmental Impact Report ("EIR") (SCH #2009021007) for the City of Coachella General Plan Update 2035 ("General Plan") and Climate Action Plan; adopting environmental findings, a mitigation monitoring and reporting program, and a statement of overriding considerations; and approving the General Plan and Climate Action Plan pursuant to the California Environmental Quality Act, herein incorporated by reference; and

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club uses on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, Conditional Use Permit No. 407 proposes to authorize 162 single-family residential units in conjunction with the COVA resort, including estate lots, zero lot line lots, bungalow condominiums, and VIP suites, as part of the integrated resort development; and

WHEREAS, the Applicant subsequently submitted an application for Zoning Ordinance Amendment No. 26-02 to amend Chapter 17.28 of Title XVII of the Coachella Municipal Code to allow single-family residential uses in conjunction with a resort use as a conditional use within the Regional Commercial (R-C) Zone; and

WHEREAS, implementation of the single-family residential uses proposed under Conditional Use Permit No. 407 is contingent upon City Council adoption and effectiveness of Zoning Ordinance Amendment No. 26-02; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan 2035 land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development density and intensity established by the General Plan; and,

WHEREAS, the proposed Project is consistent with and intended to implement the vision of the Coachella Municipal Code and the General Plan pertaining to land use patterns, building and site design, and public right-of-way improvements; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist") to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both

written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA DOES HEREBY FIND DETERMINE AND RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. **Compliance with California Environmental Quality Act.** The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

The applicable mitigation measures adopted in connection with the General Plan Update 2035 (GPU) EIR shall remain applicable to the Project and shall be incorporated into the Project's mitigation monitoring and reporting requirements.

SECTION 3. Conditional Use Permit Findings. Based upon the evidence presented at the hearing, including the staff report and written and verbal testimony, which are all incorporated herein by reference, the Planning commission finds that:

1. The proposed use will be in harmony with and in accordance with the objectives of the General Plan.

The General Plan's Regional Retail District designation accommodates residential uses supporting a regional-serving commercial environment. The proposed single-family residential component would be integrated with the COVA resort's lodging, recreational amenities, dining, and other commercial facilities rather than developed as an independent residential subdivision.

The overall residential component includes 162 single-family residential units and 240 condominium cottages, totaling 402 units within approximately 28 residential acres. Commercial acreage is excluded from this calculation. The resulting density is approximately 14.4 dwelling units per acre, within the General Plan's Regional Retail District range of 10 to 15 dwelling units per acre.

The integrated development supports Policy 7.8's mix of regional-serving uses and Policy 7.10's encouragement of resort development, subject to the applicable compatibility and connectivity requirements. It also supports Subarea 3's objectives for coordinated commercial development and appropriate transitions to surrounding properties.

Authorization of the single-family use is contingent upon adoption and effectiveness of Zoning Ordinance Amendment No. 26-02.

2. The proposed use will be compatible with the existing or intended character of the general vicinity and will not change its essential character.

The single-family units would be developed in conjunction with the resort and would share its circulation system, recreational amenities, infrastructure, and coordinated development framework. This relationship maintains the residential component's connection to the intended commercial function of the Regional Commercial zone.

Architecture, landscaping, setbacks, perimeter improvements, and applicable operating requirements address compatibility within the development and with surrounding properties. The relationship between residential accommodations and nearby entertainment activities must also be addressed through the project's noise analysis and approved design and operating controls.

The CUP shall require the single-family component to remain integrated with the resort as authorized by the approved plans and conditions. As conditioned, the use will be compatible with the intended character of the area.

3. Consideration has been given to scale, bulk, coverage, density, public facilities, utilities, neighborhood character, traffic generation, street capacity, and other relevant impacts.

The single-family component is evaluated together with the overall resort development through the tentative map, architectural review, environmental analysis, and infrastructure and circulation review. The overall residential density of approximately 14.4 dwelling units per acre falls within the applicable General Plan range.

The proposed project is compatible with the network and connectivity guidelines of the Regional Retail District general plan designation. The proposed project provides a block length of approximately 600 feet on Calhoun Street, 2,543 feet on Avenue 52, and 1,880 feet on Van Buren Street. In total the block length is approximately 5,023 feet. Although the project has a long block size and perimeter, the project is conditioned to construct 6-foot sidewalks, bicycle paths and multi-use paths along the entire project frontage along Calhoun Street, Avenue 52, and Van Buren Street. The project common area includes a separated sidewalk design that includes a 4-foot curb adjacent landscape buffer, 6-foot sidewalk, equestrian fence, 10-foot d.g. equestrian trail, and additional landscaping that provides a total 30-foot landscape and sidewalk common area along the entire project frontage along Calhoun Street, Avenue 52, and Van Buren Street.

The Calhoun and Van Buren Street common areas are characterized by two rows of palm trees, while Avenue 52 features a combination of palm trees and shade trees. The project includes decorative landscape lighting throughout the common areas, including tree uplighting, palm-ring lighting, and entry sign illumination. The Van Buren Street median includes tree uplighting and light poles. The common areas feature a desert native inspired landscape design incorporating drought-tolerant plant species, along with decorative gravel and boulders of varying sizes. The proposed project will also reintegrate the existing date palms on the site into the new development design. The proposed project will provide a stucco face block wall design for fencing visible from perimeter streets with a decorative cap. Overall, these common area improvements help offset the longer block lengths by providing enhanced pedestrian connectivity, landscaping, and lighting that contribute to visual interest and enhance the overall design of the common areas along Calhoun Street, Avenue 52, and Van Buren Street.

The project's public area does provide network connectivity access points within every 400 to 500 feet as envisioned by the general plan network and connectivity guidelines. The project's public area does not provide "Virtual Blocks" due to the smaller size of the area. The project's private area does not provide network connectivity access points at 400- to 500-foot intervals. However, the perimeter common-area design and internal street network provide a high-quality circulation system that helps offset the greater spacing between network connectivity access points. The project's private area does not provide "Virtual Blocks", as the internal private street network is designed to serve the hotel, residential, and resort uses. The project design provides direct and convenient access to project amenities, and guests and residents are anticipated to navigate the site primarily by walking and golf carts, as evidenced by the 193 golf cart parking spaces planned for the project. Overall, the design of the project internal street network provides a design that serves the specific hotel, residential, resort, and commercial uses of the project. As a result, the project is consistent

with the network and connectivity guidelines of the Regional Retail District general plan designation.

The proposed project is compatible with the street design guidelines of the Regional Retail District general plan designation. As indicated above, internal private street network is designed to serve the hotel, residential, and resort uses. The project design provides direct and convenient access to project amenities, and guests and residents are anticipated to navigate the site primarily by walking and golf carts, as evidenced by the 193 golf cart parking spaces planned for the project. Overall, the design of the project internal street network provides a design that serves the specific hotel, residential, resort, and commercial uses of the project. The project internal street design provides substantial palm tree cover along internal streets that are in line with the private area resort, hotel, and residential use. As a result, the project is consistent with the street design guidelines of the Regional Retail District general plan designation.

The proposed project is compatible with the parks and open space guidelines of the Regional Retail District general plan designation. The project public area provides an open space lagoon and water features that serves as an on-site resort amenity for the residents and guests of the public area.

The proposed project is compatible with the urban form guidelines of the Regional Retail District general plan designation. The buildings throughout the project are designed to be high quality and compatible with the retail, lodging, entertainment, and residential uses envisioned by the General Plan. The private-sector architectural design reflects a contemporary modern style, with building heights limited to a maximum of four stories for the proposed hotel uses. The public beach club incorporates a distinctive agave flower-inspired design and a waterfall feature, providing unique architectural features that contributes to the overall visual identity and character of the development. The development is designed for the comfort and wayfinding of shoppers within the Regional Retail District, as the distinctive agave flower-inspired design and waterfall feature of the public sector projects a unique and compelling image from the adjoining streets to entice passersby to visit the District. The ground-floor shopfronts are generally located near the sidewalk, creating an active and pedestrian-oriented frontage along the public right-of-way. While some shopfronts incorporate service functions facing the street, these elements do not detract from the development’s architectural character or views from the public right-of-way. Parking for the project is integrated into the overall site design, and provided via private streets. Drainage improvements for the project are required to comply with city engineering conditions of approval to ensure adequate stormwater flow and drainage throughout the site. The project is also required to incorporate drought-tolerant landscaping consistent with city requirements. As a result, the project is consistent with the urban form guidelines of the Regional Retail District.

As a result, the proposed use will be located, designed, constructed, operated and maintained so as to be compatible with the existing or intended character of the general vicinity and shall not change the essential character of the same area.

The required water, sewer, drainage, fire protection, and circulation improvements must accommodate the residential units together with the commercial and resort uses.

The project's identified parking deficiencies must be resolved through an approved and implemented parking arrangement serving the affected uses.

4. Any potentially hazardous or disturbing characteristics are justified by the common public interest as a benefit to the community as a whole.

The single-family use provides a residential accommodation type within an integrated resort development while retaining commercial activities and amenities. The CUP framework allows this residential building type to be considered through discretionary review comparable to that required for multi-family residential uses.

The proposed use may accommodate fractional ownership, but ownership arrangements do not replace land use, safety, or operating requirements. Any short-term rental operations remain subject to applicable regulations, authorized development agreement provisions, and project conditions.

Potential conflicts involving residential occupancy, resort entertainment, vehicle activity, and property management must be addressed through approved design and operating requirements. As conditioned, the use supports the community interest in coordinated resort development while maintaining compatibility and protecting surrounding properties.

5. Vehicular approaches are designed to reasonably minimize interference with traffic on surrounding public streets or roads.

The private resort component is served by an entrance on Avenue 52 and two access points on Van Buren Street, including the proposed back-of-house access. Internal circulation connects the residential accommodations with resort amenities and supporting facilities.

Required engineering and Fire Department review addresses driveway design, internal circulation, emergency access, and required improvements. Residential parking, guest arrivals, service activities, and passenger pickup must be accommodated within the approved circulation and parking framework.

Subject to the supporting traffic analysis and implementation of the approved improvements, the vehicular approaches will reasonably minimize interference with surrounding streets.

SECTION 4. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Community Development Director is the custodian of the record of proceedings.

SECTION 5. Execution of Resolution. The Planning Commission Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 6. Recommendation to City Council. Based on the foregoing recitals and findings above, and the written and oral comments, facts and evidence presented, the City of Coachella Planning Commission recommends the City Council to conditionally approve Conditional Use Permit No. 407 for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"). The applicant shall demonstrate compliance with ALL Conditions of Approval, as set forth in Exhibit "A" of this Resolution. Failure to demonstrate compliance with these conditions of approval may result in the delay of the Proposed Use or the rescinding of the City of Coachella's conditional approval. Where the term "Applicant" is used in any condition of approval, this term shall also apply to the Property Owner, any developer, or any successor in the interest of the Applicant. It is the Applicant's or Applicant's successor in interest responsibility to fully comply with the conditions of approval unless subsequently modified in accordance with the City's required processes and procedures.

SECTION 7. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

Exhibit A – Resolution No. PC2026-30

CONDITIONS OF APPROVAL FOR CONDITIONAL USE PERMIT NO. 407

General Conditions

1. Conditional Use Permit No. 407 is approved for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"), and determine, pursuant to State CEQA Guidelines Section 15183, that no further environmental review is required.

2. The applicant shall defend, indemnify and hold harmless the City of Coachella, its officials, officers, employees, and agents from and against any claim, action, or proceeding against the City, its officials, officers, employees or agents to attack, set aside, void or annul any project approval or condition of approval of the city concerning this project, including but not limited to any approval or condition of approval or mitigation measure imposed by the City Council or Planning Commission. The City shall promptly notify the applicant of any claim, action, or proceeding concerning the project and the City shall cooperate fully in the defense of the matter. The City reserves the right, at its own option, to choose its own attorney to represent the City, its officials, officers, employees and agents in the defense of the City Attorney, within five days of the effective date of this approval.

3. The applicant shall comply with all requirements and conditions of approval as included in Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01, and any modifications or extensions thereof, as listed in those Resolutions for each respective approval.

RESOLUTION NO. PC2026-31

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA RECOMMENDING THAT THE CITY COUNCIL CONDITIONALLY APPROVE ARCHITECTURAL REVIEW NO. 25-07 TO APPROVE THE SITE PLAN, ARCHITECTURE, ASSOCIATED STRUCTURES AND IMPROVEMENTS FOR THE "COVA" PROJECT PROPOSING THE DEVELOPMENT OF A HOTEL, RESORT, RESIDENTIAL, AND COMMERCIAL PUBLIC BEACH CLUB LOCATED ON APPROXIMATELY 87 ACRES ON FOUR CONTIGUOUS PARCELS (APNS 780-040-001, 780-040-003, 780-060-001, AND 780-060-002) SOUTH OF AVENUE 52, WEST OF VAN BUREN STREET AND EAST OF CALHOUN STREET, AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED. APPLICANT: RELEVANT COACHELLA OWNER, LLC

WHEREAS, on April 22, 2015, the City approved Resolution No. 2015-03 certifying the Program Environmental Impact Report ("EIR") (SCH #2009021007) for the City of Coachella General Plan Update 2035 ("General Plan") and Climate Action Plan; adopting environmental findings, a mitigation monitoring and reporting program, and a statement of overriding considerations; and approving the General Plan and Climate Action Plan pursuant to the California Environmental Quality Act, herein incorporated by reference; and

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of hotel, resort, residential, commercial and public beach club uses on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, Architectural Review No. 25-07 proposes approval of the site plan, architecture, landscaping, associated structures, and site improvements for the COVA Project, including the commercial, lodging, resort, residential, recreational, and publicly accessible beach club components of the Project; and

WHEREAS, the Applicant subsequently submitted applications for Zoning Ordinance Amendment Nos. 26-02 and 26-03 as related entitlements for the Project; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan 2035 land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development

density and intensity established by the General Plan; and,

WHEREAS, the proposed Project is consistent with and intended to implement the vision of the Coachella Municipal Code and the General Plan pertaining to land use patterns, building and site design, and public right-of-way improvements; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist") to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA DOES HEREBY FIND DETERMINE AND RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. **Compliance with California Environmental Quality Act.** The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH No. 2009021007), the 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

The applicable mitigation measures adopted in connection with the General Plan Update 2035 (GPU) EIR shall remain applicable to the Project and shall be incorporated into the Project's mitigation monitoring and reporting requirements.

SECTION 3. Architectural Review Findings. Based upon the evidence presented at the hearing, including the staff report and written and verbal testimony, which are all incorporated herein by reference, the Planning Commission finds that:

1. The proposed project is consistent with the General Plan.

The approximately 87-acre project site is designated Regional Retail District in the City of Coachella General Plan and is located within Subarea 3 – Van Buren Corridor. The project integrates hotel and resort accommodations, residential units, a publicly accessible commercial beach club, restaurants, entertainment uses, and recreational amenities. This combination supports the designation's intended mix of commercial, lodging, entertainment, and supporting residential development.

For purposes of the residential density calculation, all 402 units are included within approximately 28 acres allocated to residential development, resulting in approximately 14.4 dwelling units per acre. The commercial components are excluded from this residential acreage calculation. The resulting residential density falls within the General Plan range of 10 to 15 dwelling units per acre. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail standard of 0.35 to 2.0. The project meets the intent and purpose, intended physical character, allowed land uses, and development intensity allowed in the Regional Retail District general plan designation. The project is compatible with the design standards for network connectivity, street design, parks and open space, and urban form guidelines of the Regional Retail District general plan designation.

The project supports the Subarea 3 direction for regional commercial destinations that coexist with surrounding neighborhoods. Its proposed landscaped frontage improvements along Avenue 52, Calhoun Street, and Van Buren Street include separated sidewalks, landscaping, and an equestrian trail. The Van Buren Corridor is at a key location between Indio, Coachella, and La Quinta and much of the land through the corridor is still available for quality development, providing Coachella with a great opportunity to create a strong neighborhood center and regional shopping district. The Van Buren Corridor will transform into a major sub-regional retail destination that will provide a wide variety of goods and services for Coachella residents, as well as neighboring communities. The large format, regional-serving retail will be built in a fashion so it coexists with existing and future neighborhood development in and around the Van Buren Corridor. The new commercial development will promote walkability with a mix of appropriately scaled buildings fronting the streets and large, block scale buildings throughout. These improvements enhance the project's interface with surrounding streets and contribute to the corridor's intended pedestrian environment.

Together, the integrated land uses, compliant residential density, architectural treatment, frontage improvements, and documented circulation design support consistency with the applicable General Plan designation and Subarea 3 policies.

2. The proposed project complies with zoning regulations.

The project site is zoned Regional Commercial (R-C). The Project is subject to the Zoning Ordinance of the City of Coachella which includes Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards for Single-Family Residential of the Coachella Municipal Code (CMC). The project proposes a hotel, resort, residential, and commercial public beach club is consistent with the permitted uses of the R-C zone, including Hotel, Resort, Restaurant, and Private Swimming Pool uses. The project requires

approval of a Conditional Use Permit (CUP) to allow bars and cocktail lounges, liquor sales, and a special event establishment. The project requires approval of a CUP to allow single-family residential uses in conjunction with resort uses on the project site. The project includes a Zoning Ordinance Amendment to establish single-family residential uses in conjunction with resort uses as a conditionally permitted use in the R-C zone. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/ac), which is consistent with the R-C zoning residential density range of 10 to 15 dwelling units per acre. The project is compliant with Chapter 17.28 R-C Regional Commercial Zone and Chapter 17.19 Supplemental Standards for Single Family Residential of the CMC, except for certain development standards that comply with the standards allowed pursuant to the project Development Agreement in accordance with Chapter 17.100 – Development Agreements of the CMC.

The project is compliant with the residential density requirements, supplemental standards for single-family residential, yard requirements, landscape setback requirements, Energy Efficient Design and Heat Island Reduction Strategies, distance between building requirements, off-street parking and loading requirements, screening requirements, other property development standards, and architectural review standards as required by Chapter 17.28 – R-C Regional Commercial Zone. The project height requirements will be allowed flexible standards pursuant to the project Development Agreement in accordance with Chapter 17.100 – Development Agreements of the CMC.

The proposed single-family residential component requires adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 to establish single-family residential uses in conjunction with a resort as a conditionally permitted use within the R-C zone, together with approval of Conditional Use Permit No. 407. Implementation of the single-family residential component shall be contingent upon those approvals.

3. The proposed project is consistent with the City's design guidelines.

The project provides a coordinated architectural and landscape design for the commercial, residential, and lodging components within both the publicly accessible and private resort areas. The contemporary architectural character, complementary materials, earth-tone colors, and coordinated landscape treatments establish a cohesive development while distinguishing the buildings according to their functions.

Within the publicly accessible component, the agave-inspired beach club provides an architectural focal point complemented by the restaurants, supporting commercial facilities, lodging and residential buildings, and recreational amenities. Coordinated building placement, pedestrian connections, landscaping, and screening of service areas support compatibility among these uses.

Within the private resort component, the residential and lodging buildings incorporate complementary façade treatments, wood siding, dark metal-framed windows, and metal roofing. These features establish a consistent architectural character throughout the resort. Incorporation of existing date palms and drought-tolerant landscaping further integrates the public and private components with the surrounding desert environment.

Each commercial, lodging, and residential building shall comply with the City's applicable design requirements for its approved use and building type, including applicable single-family residential supplemental standards and multifamily objective design standards where applicable. Final plans shall demonstrate compliance with required building articulation, entry treatments, materials, screening, privacy, lighting, and pedestrian access provisions. Implementation of the single-family residential component remains contingent upon adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and approval of Conditional Use Permit No. 407.

The project is required to comply with the Supplemental Standards for Single-Family Residential, as required by the Regional Commercial zone. The project is compliant with the access and connectivity, street and pathway landscaping, parking, service and utilities, refuse and recycling, architectural variability, façade modulation and articulation, window trim and recess, building entries, building roofs, colors and materials, transitions and privacy, and accessory structures standards for single-family residential of the Coachella Municipal Code (CMC). As a result, the project is in compliance with the city's design guidelines.

Based on these design features and subject to the applicable approvals and conditions of approval, the commercial and residential components within both the publicly accessible and private resort areas are consistent with the City's applicable design guidelines.

4. The proposed development will not be detrimental to public health, safety, or welfare, or materially injurious to nearby properties and improvements.

The project's site design separates public commercial access from private resort access and includes a separate back-of-house entrance. This arrangement provides a basis for managing visitor, resident, employee, service, and emergency circulation.

The approved plans and conditions shall require accessible pedestrian routes, safe crossings where pedestrian routes intersect vehicular circulation, required emergency access, and compliance with applicable building and fire requirements. Parking and loading shall comply with applicable requirements or an expressly authorized alternative supported by the required analysis.

Exterior lighting shall be designed and directed to control glare and light spill onto adjoining properties and public streets. Refuse areas, loading areas, mechanical equipment, and utility facilities shall receive appropriate screening. Required grading, drainage, utility, and geotechnical improvements shall be incorporated into the final construction plans.

Special event and alcohol-related operations remain subject to their respective CUP requirements, including applicable controls addressing noise, attendance, hours, security, and parking. With implementation of these design requirements and operational conditions, the development will protect public health, safety, and welfare and avoid material injury to surrounding properties.

Furthermore, the project is consistent with the analysis performed for the GPU EIR. Further, the GPU EIR adequately anticipated and described the impacts of the project, identified applicable mitigation measures necessary to reduce project specific impacts, and the project implements these mitigation measures (see Table 1.0-1, Impacts Overview Matrix, of the GPU EIR for complete list of GPU Mitigation Measures).

A comprehensive environmental evaluation has been completed for the project as documented in the attached §15183 Exemption Checklist. This evaluation concludes that the project qualifies for an exemption from additional environmental review because it is consistent with the development density and use characteristics established by the City General Plan, as analyzed by the City GPU EIR (SCH #2009021007), and all required findings can be made.

In accordance with CEQA Guidelines §15183, the project qualifies for an exemption because the following findings can be made:

1. The project is consistent with the development density established by existing zoning, community plan or general plan policies for which an EIR was certified.

The project is located within the City's General Plan Regional Retail District, and Regional Commercial (R-C) zoning designation. Regional Retail Districts and R-C zones allow 10 – 15 dwelling units per acre and a floor area ratio (FAR) of 0.35 – 2.0. The project would be consistent with the Regional Retail District land use designation identified for the site in the GPU. Similarly, the project would be consistent with the Regional Commercial (R-C) zoning designation for the site in the Zoning Map once the application to amend the City's Zoning Code is approved, as discussed above. The project proposes 14.4 dwelling units per acre and 0.65 FAR, which is consistent with the Regional Retail Districts and R-C zone.

2. There are no project specific effects which are peculiar to the project or its site, and which the GPU EIR failed to analyze as significant effects.

The subject property currently operates as a combination of an active date palm grove and grape vines that have been allowed to go fallow. The site is surrounded by agricultural uses, vacant land, and scattered residential properties. Currently, the subject property operates similarly to the surrounding uses. The project proposes to develop a hospitality project with resort, residential, and recreational uses. The project is consistent with the City's Regional Retail District land use designation and Regional Commercial zoning designation. The project does not propose project-specific effects which are peculiar to the project or its site. The project site does not contain any unique or peculiar environmental features that would result in environmental effects beyond those previously identified and analyzed.

In addition, as explained further in the §15183 Exemption Checklist below, all project impacts were adequately analyzed by the GPU EIR. Applicable mitigation measures specified within the GPU EIR have been applied to the project.

3. There are no potentially significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

Preparation of the §15183 Exemption Checklist did not identify any significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

4. There is no substantial new information which results in more severe impacts than anticipated by the GPU EIR.

As explained in the §15183 Exemption Checklist below, no new information has been identified which would result in a determination of a more severe impact than what had been anticipated by the GPU EIR.

5. The project will undertake feasible mitigation measures specified in the GPU EIR.

As explained in the §15183 Exemption Checklist below, the project will undertake feasible mitigation measures specified in the GPU EIR. These GPU EIR mitigation measures will be undertaken through project design, compliance with regulations and ordinances, or through the project's conditions of approval.

5. The project is compatible with the existing or intended character of the surrounding area and will not change its essential character.

The project's integrated commercial, resort, entertainment, and residential components are compatible with the intended Regional Retail District character of the Van Buren Corridor. The publicly accessible commercial component preserves the site's role as a regional destination, while the residential component is integrated with the resort.

The coordinated architectural materials and colors, distinctive beach club design, landscaped frontages, and decorative perimeter walls establish a consistent visual character. Required setbacks, building placement, landscape buffers, screening, and privacy treatments shall provide transitions between the project and nearby residential properties.

Compatibility also depends on the approved building heights, pedestrian connections, lighting controls, service-area treatment, and operational restrictions. These requirements shall be maintained throughout the life of the project. With these measures, the development will be compatible with the area's existing residential context and intended regional commercial character without changing its essential character.

SECTION 4. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Community Development Director is the custodian of the record of proceedings.

SECTION 5. Execution of Resolution. The Planning Commission Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 6. Recommendation to City Council. Based on the foregoing recitals and findings above, and the written and oral comments, facts and evidence presented, the City of Coachella Planning Commission recommends the City Council to conditionally approve Architectural Review No. 25-07 for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"). The applicant shall demonstrate compliance with ALL Conditions of Approval, as set forth in Exhibit "A" of this Resolution. Failure to demonstrate compliance with these conditions of approval may result in the delay of the Proposed Use or the rescinding of the City of Coachella's conditional approval. Where the term "Applicant" is used in any condition of approval, this term shall also apply to the Property Owner, any developer, or any successor in the interest of the Applicant. It is the Applicant's or Applicant's successor in interest responsibility to fully comply with the conditions of approval unless subsequently modified in accordance with the City's required processes and procedures.

SECTION 7. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED APPROVED and ADOPTED this 7th day of October 2026.

Exhibit A – Resolution No. PC2026-31

CONDITIONS OF APPROVAL FOR ARCHITECTURAL REVIEW NO. 25-07

General Conditions

1. Architectural Review No. 25-07 is approved for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"), and determine, pursuant to State CEQA Guidelines Section 15183, that no further environmental review is required.

2. The applicant shall defend, indemnify and hold harmless the City of Coachella, its officials, officers, employees, and agents from and against any claim, action, or proceeding against the City, its officials, officers, employees or agents to attack, set aside, void or annul any project approval or condition of approval of the city concerning this project, including but not limited to any approval or condition of approval or mitigation measure imposed by the City Council or Planning Commission. The City shall promptly notify the applicant of any claim, action, or proceeding concerning the project and the City shall cooperate fully in the defense of the matter. The City reserves the right, at its own option, to choose its own attorney to represent the City, its officials, officers, employees and agents in the defense of the City Attorney, within five days of the effective date of this approval.

3. The applicant shall comply with all requirements and conditions of approval as included in Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01, and any modifications or extensions thereof, as listed in those Resolutions for each respective approval.

RESOLUTION NO. PC2026-32

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF COACHELLA RECOMMENDING THAT THE CITY COUNCIL ADOPT AN ORDINANCE APPROVING DEVELOPMENT AGREEMENT NO. 25-01 FOR THE "COVA" PROJECT PROPOSING THE DEVELOPMENT OF A HOTEL, RESORT, RESIDENTIAL, AND COMMERCIAL PUBLIC BEACH CLUB LOCATED ON APPROXIMATELY 87 ACRES ON FOUR CONTIGUOUS PARCELS (APNS 780-040-001, 780-040-003, 780-060-001, AND 780-060-002) SOUTH OF AVENUE 52, WEST OF VAN BUREN STREET AND EAST OF CALHOUN STREET, AND DETERMINE, PURSUANT TO STATE CEQA GUIDELINES SECTION 15183, THAT NO FURTHER ENVIRONMENTAL REVIEW IS REQUIRED. APPLICANT: RELEVANT COACHELLA OWNER, LLC

WHEREAS, on April 22, 2015, the City approved Resolution No. 2015-03 certifying the program environmental impact report ("EIR") (SCH #2009021007) for the City of Coachella General Plan Update 2035 ("General Plan") and Climate Action Plan; adopting environmental findings, a mitigation monitoring and reporting program, and a statement of overriding considerations; and approving the general plan and climate action plan pursuant to the California Environmental Quality Act, herein incorporated by reference; and

WHEREAS, on July 7, 2025, Relevant Coachella Owner, LLC ("Applicant"), submitted an application for a Tentative Tract Map, Architectural Review, Conditional Use Permit, Environmental Assessment, and Development Agreement for the proposed "COVA" project, consisting of a hotel, resort, residential, commercial and public beach club uses on approximately 87 acres comprising four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) located south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"); and

WHEREAS, Development Agreement No. 25-01 establishes the terms governing the development and operation of the COVA Project, including vested development rights, infrastructure obligations, development fees, fiscal incentives, community benefits, and continuing operational and maintenance obligations, and provides for a 50-year term with a 20-year period for Project buildout; and

WHEREAS, the Applicant subsequently submitted applications for Zoning Ordinance Amendment Nos. 26-02 and 26-03 as related entitlements for the Project; and

WHEREAS, the Project site has a zoning designation of (R-C) Regional Commercial and a General Plan 2035 land use designation of Regional Retail District, which allows a residential density of 10 to 15 dwelling units per acre and a floor area ratio of 0.35 to 2.0. The Project proposes a residential density of approximately 14.4 dwelling units per acre and a floor area ratio of approximately 0.65, consistent with the development

density and intensity established by the General Plan; and,

WHEREAS, the proposed Project is consistent with and intended to implement the vision of the Coachella Municipal Code and the General Plan pertaining to land use patterns, building and site design, and public right-of-way improvements; and,

WHEREAS, Public Resources Code section 21083.3 and State CEQA Guidelines section 15183 provide that a project consistent with the development density established by an existing general plan for which an EIR was certified does not require additional environmental review except as necessary to examine whether the project would result in project-specific significant effects peculiar to the project or its site; and

WHEREAS, the City, as lead agency under the CEQA, prepared a Modified Initial Study/Section 15183 Checklist for the Project (the "15183 Checklist") to determine whether further environmental review of the Project is required; and

WHEREAS, the 15183 Checklist concludes that the Project would not result in any environmental effects that (1) are peculiar to the Project or the parcel on which the Project would be located; (2) were not analyzed as significant effects in the certified General Plan EIR; (3) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (4) are previously identified significant effects that, as a result of substantial new information not known when the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR. The 15183 Checklist further concludes that the potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR and that all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project; and

WHEREAS, a notice of a public hearing to consider Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01 was issued in accordance with Coachella Municipal Code Section 16.12.110, 17.72.010J, 17.74.010G, 17.80.010E, and 17.100.060 inclusive of the publication on September 17, 2026, of a legal public hearing notice which was published in the Desert Sun, the City's newspaper of record and mailing of a public hearing notice to a certified list of property owners within 300 feet of the subject properties on September 17, 2026; and,

WHEREAS, on October 7, 2026, the Planning Commission held a duly noticed public hearing to consider the application for the Project during which evidence, both written and oral, including the staff report and supporting documents, was presented at said hearing; and,

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, THE PLANNING COMMISSION OF THE CITY OF COACHELLA, CALIFORNIA DOES HEREBY FIND DETERMINE AND RESOLVE AS FOLLOWS:

SECTION 1. **Incorporation of Recitals.** The Planning Commission hereby specifically finds that all of the facts set forth in the recitals of this Resolution are true and correct and are incorporated into this Resolution by reference and constitute a material part of this Resolution.

SECTION 2. **Compliance with California Environmental Quality Act.** The Planning Commission has reviewed and considered the previously certified Coachella General Plan Update 2035 EIR (SCH #2009021007), 15183 Checklist and supporting technical studies prepared for the Project, the staff report, all written and oral comments received, and the entire administrative record. Based on substantial evidence in the record, the Planning Commission recommends that the City Council make the following determinations:

1) The 15183 Checklist was prepared in compliance with CEQA and the State CEQA Guidelines and reflects the City's independent judgment and analysis.
2) The Project is consistent with the City's General Plan Update 2035 for which an EIR was certified.
3) The Project would not result in any environmental effects that: (a) are peculiar to the Project or the parcel on which the Project would be located; (b) were not analyzed as significant effects in the certified General Plan EIR; (c) are potentially significant off-site or cumulative impacts that were not discussed in the General Plan EIR; or (d) are previously identified significant effects that, as a result of substantial new information not known at the time the General Plan EIR was certified, are determined to have a more severe adverse impact than discussed in the General Plan EIR.
4) All potential environmental effects associated with the Project are within the scope of the impacts analyzed in the General Plan EIR, and all feasible mitigation measures from the General Plan EIR applicable to the Project, together with applicable uniformly applied development policies and standards, have been incorporated into or otherwise apply to the Project.
5) The Project is exempt from further environmental review pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

The applicable mitigation measures adopted in connection with the General Plan Update 2035 (GPU) EIR shall remain applicable to the Project and shall be incorporated into the Project's mitigation monitoring and reporting requirements.

SECTION 3. Development Agreement Findings. Based upon the evidence presented at the hearing, including the staff report and written and verbal testimony, which are all incorporated herein by reference, the Planning Commission finds that:

A. Is consistent with the objectives, policies, general land uses and programs specified in the general plan and any applicable specific plan;

The approximately 87-acre project site is designated Regional Retail District and is located within Subarea 3 – Van Buren Corridor. The Development Agreement establishes a framework for implementing an integrated hotel, resort, residential, dining, entertainment, and recreational development. The publicly accessible Commercial Beach Club Sector provides commercial and recreational opportunities for residents and visitors, while the Private Resort Sector combines lodging and supporting residential accommodations with shared resort amenities.

For General Plan density purposes, all 402 units are included within approximately 28 acres allocated to residential development, resulting in approximately 14.4 dwelling units per acre. Commercial acreage is excluded from this residential density calculation. The proposed density falls within the applicable range of 10 to 15 dwelling units per acre.

The agreement supports the Regional Retail District's destination-oriented mix of uses and Subarea 3's direction for commercial development that is compatible with surrounding neighborhoods. Its obligations for public improvements and frontage landscape maintenance support implementation of the project's approved site design. The project's pedestrian connections, external connectivity, commercial intensity, and transitions to adjacent development are addressed through the General Plan consistency analysis and required project improvements.

Together with the related project approvals and documented General Plan consistency analysis, the agreement implements the applicable land use and community character objectives. No specific plan applies to the project site.

B. Is compatible with the uses authorized in and the regulations prescribed for the land use district in which the real property is located;

The project site is zoned Regional Commercial (R-C). The proposed hotel and resort use, beach club, restaurants, and supporting amenities are compatible with the commercial and hospitality uses authorized within the district, subject to applicable development standards and required permits. Special event and alcohol-related uses are subject to Conditional Use Permit No. 396 and any additional required approvals.

The single-family residential component requires adoption and effectiveness of Zoning Ordinance Amendment No. 26-02 and approval of Conditional Use Permit No. 407. These approvals would authorize single-family residential uses in conjunction with the resort while retaining the site's integrated commercial and hospitality function.

The agreement establishes development rights by reference to the approved project and applicable regulations. Any departure from otherwise applicable development standards shall be specifically identified and lawfully authorized in the final approvals. Short-term rental treatment shall conform to the adopted provisions of Zoning Ordinance Amendment No. 26-03 and the express operational requirements of the final agreement.

With effectiveness of the required amendments and permits, and incorporation of the authorized development standards, the agreement is compatible with the uses and regulations applicable to the R-C district.

C. Is in conformity with the public necessity, public convenience, general welfare and good land use practices;

The agreement coordinates development of the project with the provision of infrastructure and facilities necessary to serve its approved uses. Section 3.8.1 of the Development Agreement requires the developer to design, engineer, and construct required public improvements and generally complete improvements serving each phase before issuance of the first certificate of occupancy within that phase, unless an earlier deadline applies.

The agreement also requires water and sewer extensions, participation in necessary electrical infrastructure, and construction or funding of a portion of off-site sewer main upsizing serving other planned housing developments. Section 4.6 of the Development Agreement requires maintenance of enhanced landscaping along the project's public street frontages.

The publicly accessible beach club, restaurants, and entertainment facilities would expand recreational and commercial opportunities. Development and operation would also create construction and permanent employment opportunities.

The agreement's infrastructure obligations, phased implementation framework, and compliance review provisions support coordinated development and delivery of the identified public benefits. Together with the related project approvals and conditions, these provisions conform to public convenience, general welfare, and good land use practices.

D. Will be detrimental to the health, safety and general welfare;

The agreement requires development in accordance with the project approvals and applicable requirements. Section 2.3 of the Development Agreement preserves application of the California Building Standards Code and applicable construction codes. Section 2.4 of the Development Agreement retains City authority to address dangerous or hazardous conditions, subject to the procedures established in the agreement.

Required improvements and conditions address emergency access, fire protection, grading, drainage, geotechnical conditions, utility service, pedestrian safety, and parking. Special event and alcohol-related operations remain subject to applicable permit requirements and approved controls governing noise, attendance, hours, security, and circulation.

The agreement's environmental provisions require compliance with CEQA, including additional review where legally required for subsequent approvals. Applicable mitigation measures and essential health and safety conditions shall remain enforceable under the final agreement.

With implementation of these requirements and safeguards, the agreement will not be detrimental to public health, safety, or general welfare.

E. Will adversely affect the orderly development of property or the preservation of property values;

The agreement provides a coordinated framework for the project's land uses, infrastructure, phasing, and continuing operational responsibilities. Required public improvements serving each phase must be completed in accordance with the agreement and project approvals, supporting orderly development and avoiding occupancy before necessary improvements are available.

The approved architectural design, landscape treatments, setbacks, screening, lighting controls, and operational conditions provide transitions between the project and surrounding properties. The developer's obligation to maintain enhanced frontage landscaping contributes to the continuing appearance of the development along Avenue 52, Calhoun Street, and Van Buren Street.

Annual compliance review and applicable enforcement procedures provide mechanisms for monitoring performance of agreement obligations. Continuing resort management, maintenance, and operational requirements shall be established in the final agreement and related approvals for the applicable properties and successors.

These provisions support orderly development and maintenance of the site while protecting surrounding properties from incompatible physical and operational effects. Accordingly, the agreement will not adversely affect orderly development or preservation of property values.

F. Will have a positive fiscal impact on the city.

The project would generate potential City revenues through taxable lodging, commercial activity, property taxes, and applicable fees. Section 4.5 of the Development Agreement proposes a rebate of 50 percent of eligible transient occupancy tax revenue exceeding the applicable annual retention threshold for the first 15 years following resort opening at Phase 1 buildout, subject to a cumulative rebate cap of $25 million.

The City would retain the first $1 million of actual annual TOT collections at Phase 1 buildout of 167 units, the first $1.5 million upon Phase 2 completion at 273 units, and the first $2 million at full buildout of 402 units. These thresholds establish priority retention of actual collections and do not constitute guaranteed developer payments. The developer is not obligated to cover a shortfall. The City would retain all project TOT after the incentive period expires or the rebate cap is reached, subject to applicable tax requirements.

SECTION 4. Location and Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at Coachella Civic Center. The Community Development Director is the custodian of the record of proceedings.

SECTION 5. Execution of Resolution. The Planning Commission Chairperson shall sign this Resolution and the Planning Commission Secretary shall attest and certify to the passage and adoption thereof.

SECTION 6. Recommendation to City Council. Based on the foregoing recitals and findings above, and the written and oral comments, facts and evidence presented, the City of Coachella Planning Commission recommends that the City Council adopt an ordinance approving Development Agreement No. 25-01 for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"). The applicant shall demonstrate compliance with ALL Conditions of Approval, as set forth in Exhibit "A" and Development Agreement in Exhibit "B" of this Resolution. Failure to demonstrate compliance with these conditions of approval may result in the delay of the Proposed Use or the rescinding of the City of Coachella's conditional approval. Where the term "Applicant" is used in any condition of approval, this term shall also apply to the Property Owner, any developer, or any successor in the interest of the Applicant. It is the Applicant's or Applicant's successor in interest responsibility to fully comply with the conditions of approval unless subsequently modified in accordance with the City's required processes and procedures.

SECTION 7. Severability. If any section, subsection, sentence, clause, phrase, or portion of this Resolution is for any reason held to be invalid or unconstitutional by the decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The Planning Commission of the City of Coachella hereby declares that it would have adopted this Resolution and each section, subsection, sentence, clause, phrase, or portion thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, phrases, or portions be declared invalid or unconstitutional.

PASSED, APPROVED, and ADOPTED this 7th day of October 2026.

Exhibit A – Resolution No. PC2026-32

CONDITIONS OF APPROVAL FOR DEVELOPMENT AGREEMENT NO. 25-01

General Conditions

1. Development Agreement No. 25-01 is approved for the "COVA" project proposing the development of a hotel, resort, residential, and commercial public beach club located on approximately 87 acres on four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street ("Project"), and determine, pursuant to State CEQA Guidelines Section 15183, that no further environmental review is required.

2. The applicant shall defend, indemnify and hold harmless the City of Coachella, its officials, officers, employees, and agents from and against any claim, action, or proceeding against the City, its officials, officers, employees or agents to attack, set aside, void or annul any project approval or condition of approval of the city concerning this project, including but not limited to any approval or condition of approval or mitigation measure imposed by the City Council or Planning Commission. The City shall promptly notify the applicant of any claim, action, or proceeding concerning the project and the City shall cooperate fully in the defense of the matter. The City reserves the right, at its own option, to choose its own attorney to represent the City, its officials, officers, employees and agents in the defense of the City Attorney, within five days of the effective date of this approval.

3. The applicant shall comply with all requirements and conditions of approval as included in Tentative Tract Map No. 39330, Zoning Ordinance Amendment No. 26-02, Zoning Ordinance Amendment No. 26-03, Conditional Use Permit No. 396, Conditional Use Permit No. 407, Architectural Review No. 25-07, and Development Agreement No. 25-01, and any modifications or extensions thereof, as listed in those Resolutions for each respective approval.

DEVELOPMENT AGREEMENT
BETWEEN
THE CITY OF COACHELLA
AND
RELEVANT COACHELLA OWNER, LLC

THIS DEVELOPMENT AGREEMENT ("**Agreement**") dated for reference purposes only as of _____, 2026, and effective as of the Effective Date, is by and between the **City of Coachella**, a California municipal corporation ("**City**"), and **Relevant Coachella Owner, LLC,** a Delaware limited liability company ("**Developer**") pursuant to the authority of Sections 65864 *et seq.* of the California Government Code. City and Developer are also sometimes referred to individually as a "**Party**" and together as the "**Parties**." An index of all capitalized defined terms is included at the end of this document.

RECITALS

This Agreement is entered upon the basis of the following facts, understandings and intentions of City and Developer.

A. In order to strengthen the public planning process, encourage private participation in comprehensive planning, and reduce the economic costs and risk of development, the Legislature of the State of California enacted Section 65864 *et seq*. of the Government Code (the "**Development Agreement Statute**"), which authorizes the City and a developer having a legal or equitable interest in real property to enter into a binding development agreement, establishing certain development rights in the property.

B. Developer is the owner of that certain real property located in the City of Coachella, County of Riverside, California and legally described on **Exhibit A** attached hereto and incorporated herein (the "**Property**" or "**Project Site**"). The rights and obligations of Developer under this Agreement shall attach to all property currently owned by Developer, as described on Exhibit A, upon recordation of this Agreement. The Project Site is located south of Avenue 52, west of Van Buren Street, and east of Calhoun Street, in the southwestern portion of the City, and is comprised of four contiguous parcels totaling approximately 87 acres in size. The Assessor's Parcel Numbers (APNs) for the Project Site are 780-040-001, 780-040-003, 780-060-001, and 780-060-002.

C. Developer intends to develop the Property with a hospitality-oriented, mixed-use resort community known as "**COVA**", consisting of a Private Resort Sector and a Commercial Beach Club Sector, including up to 402 total units comprised of 240 condo cottages and 162 single-family residential units, a recreational lagoon and associated water features, resort amenities, and a public-facing beach club, restaurant, and sports bar, as well as associated infrastructure, roadways, landscaping, parking, and signage (the "**Project**") as depicted in **Exhibit B**. The Project is more fully described in, and subject to, (i) this Agreement, (ii) the amendment of the City's Zoning Code to allow single-family residential uses within the Regional Commercial (RC) zone, approved by the City Council on _____ by Resolution No. _____, (iii) the CEQA Guideline 15183 consistency determination/exemption checklist prepared for the Project

(the "**CEQA Compliance Documentation**"), approved by the City Council on _____ by City Council Resolution No. _____, (iv) Tentative Tract Map No. 39330, (v) the Conditional Use Permit, Architectural Review, and Entertainment Permit approved or to be approved by the City Council for the Project, (vi) any future discretionary or ministerial approvals and/or permits issued for the Project (collectively, the "**Project Site Development Permits**"), and (vii) the conditions of approval associated with each and all of the foregoing approvals (collectively, the "**Conditions of Approval**") as depicted in **Exhibit H**. The documents, permits, approvals, and conditions described in the foregoing clauses (i) through (vii) are collectively referenced herein as the "**Project Approvals**" or "**Entitlements**."

D. In connection with the Project Approvals, Developer has also applied for (i) an amendment to the City's Short-Term Rental Ordinance (Coachella Municipal Code Chapter 5.80) to exempt projects with an approved development agreement from the provisions of that ordinance limiting the number of units that may be owned by a single owner and limiting the percentage of units that may be permitted for short-term rental use, as well as any other provisions of that ordinance specifically modified by this Agreement, and (ii) confirmation that the Private Resort Sector shall be treated as a First Class Hotel under the City's Municipal Code, rather than as a residential project, for purposes of short-term vacation rental ("**STVR**") regulation (collectively, the "**STVR Ordinance Amendment**").

E. The complexity, magnitude and long-range nature of the Project would be difficult for Developer to undertake if the City had not determined, through this Development Agreement, to inject a sufficient degree of certainty in the land use regulatory process to justify the substantial financial investment associated with development of the Project. As a result of the execution of this Agreement, both Parties can be assured that the Project can proceed without disruption caused by a change in planning and development policies and requirements, which assurance will thereby reduce the actual or perceived risk of planning, financing, and proceeding with construction of the Project.

F. For the reasons recited herein, City and Developer have determined that the Project is a development for which this Development Agreement is appropriate. This Development Agreement will eliminate or reduce uncertainty regarding Project Approvals, thereby encouraging planning for, investment in, and commitment to the use and development of the Property. Development of the Project will in turn provide substantial employment, transient occupancy tax, and sales tax benefits, as well as other public benefits, thereby achieving the goals and purposes for which the Development Agreement Statute was enacted.

G. The City Council has determined that this Agreement is consistent with the City's General Plan, including the goals and objectives thereof, including the Regional Retail District land use designation applicable to the Project Site, subject to applicable mitigation measures and regulatory requirements as depicted in **Exhibit G**, in accordance with the CEQA Compliance Documentation.

H. All actions taken by the City in connection with approving this Agreement have been duly taken in accordance with all applicable legal requirements, including the California Environmental Quality Act (*Public Resources Code* Section 21000, et seq.) ("**CEQA**"), and all other requirements for notice, public hearings, findings, votes and procedural matters. In

connection therewith, the City Council has found and determined that this Agreement is consistent with and part of the Project Approvals and that the Project qualifies for a consistency exemption under CEQA Guideline 15183, and that all potentially significant environmental effects of the Project Approvals, as well as feasible measures to mitigate those effects to the maximum extent feasible, have been analyzed and disclosed as set forth in the CEQA Compliance Documentation.

I. On _____, 2026, the City Council adopted its Ordinance No.___ approving this Agreement.

NOW, THEREFORE, in consideration of the foregoing recitals of fact and the mutual covenants and promises set forth herein, the City and Developer hereby agree as follows:

AGREEMENT

ARTICLE 1
GENERAL PROVISIONS

1.1 **Incorporation of Preamble, Recitals, and Exhibits**. The preamble paragraph, Recitals, Exhibits, and any Appendices, and all defined terms contained therein, are hereby incorporated into this Agreement by this reference as if set forth in full.

1.2 **Definitions**. The capitalized terms used in this Agreement shall have the meanings set forth in **Appendix I** attached hereto and otherwise as defined in the body of this Agreement.

1.3 **Term**.

1.3.1 **Effective Date**. This Agreement shall become effective upon the later of (i) the effective date of Ordinance No. _____ approving this Agreement, or (ii) the expiration of the period for challenging the ordinance or this Agreement under CEQA, or, if timely challenged, the date such challenge is finally resolved in favor of the validity of this Agreement (the "**Effective Date**"). Notwithstanding the foregoing or any provision of this Agreement to the contrary, if after all appeals or time to appeal have been exhausted, a court of competent jurisdiction enters a final judgment or issuance of a final order directed to the City to set aside, withdraw, or abrogate the approval of this Agreement, then this Agreement shall be deemed to have no force or effect upon either Party.

1.3.2 **Term of Agreement**. The term of this Agreement shall commence upon the Effective Date and shall continue in full force and effect thereafter for a period of fifty (50) years (the "**Term**"), unless earlier terminated as provided elsewhere in this Agreement or extended by mutual written agreement of the Parties. The Parties acknowledge that the extended Term is warranted in light of the operational characteristics of the Project's transient occupancy tax and sales tax generating uses, and to permit the resort and residential uses contemplated by the Project within the Property's existing commercial zoning designation. Notwithstanding the foregoing, the provisions of this Agreement governing the buildout, construction, and phasing of the Project (including the obligations set forth in Article 3) shall be limited to a period of twenty (20) years from the Effective Date (the "**Buildout Period**"), but all other rights and obligations of the Parties under this Agreement, including the Vested Elements and the Community Benefits, shall continue for the balance of the Term.

ARTICLE 2
APPLICABLE LAW

2.1 **Applicable Rules**. Except as otherwise expressly provided in this Agreement, during the Term, the Project Approvals, including any future applications for discretionary or ministerial approvals and/or permits necessary or convenient for implementation of the Project (collectively, "**Subsequent Approvals**") shall be processed, considered, reviewed, and acted upon in accordance with the rules, regulations, ordinances, and officially adopted policies of the City in full force and effect as of the Effective Date of this Agreement (collectively, the

"**Applicable Rules**"). The Applicable Rules include the City's confirmation that the single-family residential units within the Project constitute an allowed use on the Property and that the STVR Ordinance Amendment applies to the Project as described in Recital D.

2.2 **Future Changes to Applicable Rules**.

2.2.1 To the extent any changes in the Applicable Rules, or any provisions of future general plans, specific plans, zoning ordinances, or other rules, regulations, ordinances or policies (whether adopted by means of ordinance, initiative, referenda, resolution, policy, order, moratorium, or other means) of the City (collectively, "**Future Changes to the Applicable Rules**") are not in conflict with the Vested Elements (as defined in Section 3.2 below), such Future Changes to the Applicable Rules shall be applicable to the Project.

2.2.2 Future Changes to the Applicable Rules shall be deemed to be in "conflict" with the Vested Elements if any one of the following would occur:

2.2.2.1 Alter or change any land use, including permitted or conditional uses, of the Project Site from that permitted under this Agreement and the Applicable Rules, including the permitted use of the Private Resort Sector for short-term vacation rentals as a First Class Hotel use.

2.2.2.2 Limit or reduce the height or bulk of the Project, or any portion thereof, or otherwise require any reduction in the height or bulk of individual proposed buildings or other improvements from that permitted under this Agreement and the Applicable Rules.

2.2.2.3 Limit or reduce the density or intensity of the Project, or any portion thereof, or otherwise require any reduction in the square footage, number of proposed units or buildings, parking or loading spaces, or other improvements from that permitted under this Agreement and the Applicable Rules.

2.2.2.4 Except as otherwise provided in this Agreement, in any manner unreasonably control, delay, or limit the rate, timing, phasing, or sequencing of the approval, development, or construction of all or part of the Project.

2.2.2.5 Increase any Development Fees, except as expressly permitted by this Agreement.

2.2.2.6 Except as otherwise provided in this Agreement, materially increase (by an amount greater than 15%) the cost of performance of, or preclude compliance with, any provision of the Project Approvals.

2.2.2.7 Conflict with or materially increase the obligations of Developer under this Agreement.

2.2.2.8 Adversely affect in any material respect the rights of Developer under this Agreement, including Developer's vested right to operate short-term vacation rentals as described in Section 3.2.

2.2.2.9 Except as otherwise provided in this Agreement, limit or restrict the availability of public utilities, services, infrastructure, or facilities (for example, without limitation, water rights, water connection or sewage capacity rights, sewer connections, electrical service, etc.) to the Project.

2.2.2.10 Except as expressly provided herein, impose limits or controls in the rate, timing, phasing, or sequencing of development of the Project beyond those existing on the Effective Date.

2.2.2.11 Limit or control the location of buildings, structures, grading, or other improvements of the Project inconsistently with or more restrictively than limitations included in the Project Approvals.

2.2.2.12 Apply to the Project any Future Changes to the Applicable Rules otherwise allowed by this Agreement that are not uniformly applied to all substantially similar types of development projects and project sites under the City's jurisdiction.

2.2.2.13 Require the issuance of additional permits or approvals by the City other than those required by the Applicable Rules.

2.2.2.14 Establish, enact, increase, or impose against the Project or Property any fees, assessments, or other monetary obligations other than those specifically permitted by this Agreement; provided, however, that the foregoing shall not prevent or limit the imposition or collection of any generally applicable real or personal property taxes, transient occupancy taxes, or any generally applicable sales, use, excise taxes, or business license fees with respect to any commercial uses within the Project.

2.2.2.15 Impose against the Project any condition, dedication, or other exaction not specifically authorized by the Project Approvals, the Applicable Rules, or this Agreement.

2.2.2.16 Subject to Section 2.7, limit the processing of applications and approvals of Subsequent Approvals, including without limitation Future Changes to the Applicable Rules that require additional processing of such applications and approvals of Subsequent Approvals.

2.2.3 To the extent that Future Changes to the Applicable Rules conflict with the Vested Elements, they shall not apply to the Project and the Vested Elements shall apply to the Project, except as provided in this Section 2.2.3 and in Sections 2.3 through 2.6, inclusive. A Future Change in the Applicable Rules that conflicts with the Vested Elements shall nonetheless apply to the Property and the Project if, and only if (i) consented to in writing by Developer in its sole and absolute discretion; (ii) it is determined by the City, and evidenced through express findings supported by substantial evidence, that the change or provision is reasonably required in order to prevent a condition dangerous to the public health or safety as set forth in Section 2.4 below; (iii) required by changes in State or Federal law as set forth in Section 2.5 below; (iv) it consists of changes in, or new fees permitted by, Section 4.2.3.2; (v) it consists of revisions to, or new Uniform Code Regulations to the extent permitted by Section 2.3 below; or (vi) it is otherwise

expressly permitted by this Agreement. In the event of any of the foregoing, the applicable Future Change to the Applicable Rules shall be deemed to be a part of the Applicable Rules.

2.2.4 Pursuant to Section 65865.4 of the Development Agreement Statute, unless this Agreement is terminated by mutual agreement of the Parties as provided for under Section 8.1, or terminated pursuant to Section 8.2, either Party may enforce this Agreement notwithstanding any Future Changes to the Applicable Rules.

2.3 **Applicability of Uniform Code Regulations**. Notwithstanding any provision herein to the contrary, nothing in this Agreement shall preclude the City from applying to the Project any provisions, requirements, rules, or regulations applicable across the City's jurisdiction that are contained at any time during the Term in the California Building Standards Code, as amended by the City in accordance with the California Health and Safety Code, including requirements of the applicable Building Code, Administrative Code, Energy Code, Residential Code, Mechanical Code, Electrical Code, Plumbing Code, Fire Code, or other applicable construction codes (collectively, "**Uniform Code Regulations**").

2.4 **Public Health and Safety Exception**. The City shall exercise its discretion under this Agreement and the Applicable Rules in a manner which is consistent with the public health, safety, and welfare. Notwithstanding any provision in this Agreement to the contrary, and in addition to application to the Project of Uniform Code Regulations, City shall retain, at all times, its authority to take any legally valid action necessary to protect persons or property from dangerous or hazardous conditions which create a threat to the public health or safety, including, without limitation, authority to condition or deny a permit, approval, or agreement or other entitlement or to change or adopt any new regulations applicable to the Project so long as such condition or denial or new law (i) is limited solely to addressing a specific and identifiable issue in each case required to protect the physical health and safety of the public, and (ii) is based on written findings by City and transmitted to Developer, specifically identifying, based on objective and quantifiable evidence in the official record, the precise nature and extent of the dangerous or hazardous conditions requiring such condition or denial or change in the Applicable Rules, why there are no reasonable alternatives to the imposition of such condition or denial or changes in the law, and how such condition or denial or new law would alleviate the dangerous or hazardous condition ("**Public Health and Safety Exception**"). Developer retains the right to dispute any City reliance on the Public Health and Safety Exception.

2.5 **Changes in State or Federal Laws**. In accordance with Government Code Section 65869.5, in the event that state or federal laws or regulations enacted after the Effective Date ("**State or Federal Law**") prevent or preclude compliance with one or more provisions of this Agreement, the Parties shall meet in good faith for a period not exceeding sixty (60) days (unless such period is extended by mutual written consent of the Parties) to determine the feasibility of any modification or suspension of this Agreement that may be necessary to comply with such State or Federal Law, to determine the effect such modification or suspension would have on the purposes and intent of this Agreement and the Vested Elements, and to prepare such modification. Following the meeting between the Parties, the provisions of this Development Agreement may, to the extent feasible, and upon mutual agreement of the Parties, be modified or suspended, but only to the minimum extent necessary to comply with such State or Federal Law. In such an event, this Development Agreement together with any required modifications

shall continue in full force and effect. In the event that the State or Federal Law operates to frustrate materially and irremediably (a) the Vested Elements, or (b) the City's right to receive the community benefits as set forth in this Agreement, Developer, in the event of item (a), or the City, in the event of item (b), may terminate this Agreement. In addition, Developer shall have the right to challenge (by any method, including litigation), at its sole cost, the State or Federal Law preventing compliance with, or performance of, the terms of this Development Agreement and, in the event that such challenge is successful, this Development Agreement shall remain unmodified and in full force and effect, unless the Parties mutually agree otherwise, except that if the Term of this Development Agreement would otherwise terminate during the period of any such challenge and Developer has not commenced with the development of the Project in accordance with this Development Agreement as a result of such challenge, the Term shall be extended for the period of any such challenge. If Developer raises such a challenge, then City agrees, upon Developer's written request and at Developer's sole cost and expense, to cooperate with Developer concerning Developer's challenge, which cooperation shall be subject to the provisions of Section 6.2; provided, however, that City shall not have any obligation to commence, prosecute, or defend any litigation with respect to any such challenge.

2.6 **CEQA**. Nothing in this Agreement shall be deemed to limit the City's ability to comply or compel Developer compliance with CEQA, including the CEQA Compliance Documentation and any applicable General Plan mitigation measures or other uniformly applied development policies and standards identified therein (collectively, "**GPU Mitigation Measures**").

2.7 **Subsequent Approvals**.

2.7.1 Processing of Subsequent Approvals. To develop the Project as contemplated in this Agreement, the Project will require land use approvals, entitlements, development permits, and use and/or construction approvals other than the Initial Approvals, which may include, without limitation: final subdivision and condominium maps, conditional and administrative use permits, entertainment permits, plot plans, street abandonments, design plan approvals, certificates of compliance, demolition permits, improvement agreements, infrastructure agreements, grading permits, building permits, right of way permits, site plans, sewer and water connection permits, certificates of occupancy, parcel and condominium maps, encroachment permits, ABC license approvals related to the Commercial Beach Club Sector, and amendments thereto and to the Project Approvals (collectively, "**Subsequent Approvals**"). City, provided Developer submits all legally required material, reports, and requisite data in order to deem any subsequent approvals complete, will accept, make completeness determinations, and process, promptly and diligently to completion, all applications for Subsequent Approvals in accordance with Applicable Rules and the terms of this Agreement. At such time as any Subsequent Approval is approved by the City, then such Subsequent Approval shall become subject to all the terms and conditions of this Development Agreement applicable to Project Approvals and shall be treated as a "**Project Approval**" under this Development Agreement.

2.7.2 Scope of Review of Subsequent Approvals. By approving the Initial Approvals and this Agreement, City has made a final policy decision that the Project is in the best interests of the public health, safety, and general welfare. Accordingly, City shall not use its authority in considering any application for a discretionary Subsequent Approval to change the

policy decisions reflected by the Initial Approvals or otherwise to prevent or delay development of the Project as set forth in the Initial Approvals. Instead, the Subsequent Approvals shall be deemed to be tools to implement those final policy decisions. The scope of the review of applications for Subsequent Approvals shall be limited to a review of substantial conformity with the Vested Elements as set forth and subject to Section 3.2 (and except as otherwise provided by Sections 2.2 through 2.6, inclusive, and other Applicable Rules). Where such conformity/compliance exists, City shall not deny an application for a Subsequent Approval. This paragraph includes, without limitation, the Entertainment Permit and any ABC-related approvals for the Commercial Beach Club Sector described in Section 4.6.

2.7.3 Conditions of Subsequent Approvals.

(a) City shall have the right to impose reasonable conditions upon Subsequent Approvals including, without limitation, normal and customary dedications for rights of way or easements for public access, utilities, water, sewers, and drainage necessary for the Project; provided, however, such conditions and dedications shall not be inconsistent with the Applicable Rules, nor inconsistent with the development of the Project as contemplated by this Agreement except to the extent required by the Applicable Rules. Developer may protest any conditions, dedications, or fees while continuing to develop the Property. In the event of a protest by Developer, the City retains the right to pause any Subsequent Approval processes until the protest is resolved, to ensure that the Project proceeds in a manner consistent with the City's interests and regulations, but the City shall not withhold or delay any permit or other approval for any aspect of the Project not directly subject to the Subsequent Approval that is the subject of the protest.

(b) Conditions imposed on Subsequent Approvals may only require dedications or reservations for, or construction or funding of, Public Improvements beyond those already included or referenced in the Initial Approvals, the Mitigation Measures (except to the extent required by CEQA in connection with any Subsequent Approvals) or Section 3.8.1, in the event of a Public Health and Safety Exception, as defined in Section 2.4 of this Agreement. In addition, any and all conditions imposed on Subsequent Approvals for the Project must comply with Section 4.2 (Payment of Fees and Costs).

2.8 **Regulatory Agency Approvals**. The Parties acknowledge and agree that, in addition to the Initial Approvals and any Subsequent Approvals, the Project, including the provision of some of the community benefits, may require Developer to obtain approvals or clearances from various Regulatory Agencies, other third-party public agencies and utilities (collectively, the "**Third-Party Agency Approvals**"). Without limitation, the Third-Party Agency Approvals may include approvals or clearances from the Coachella Water Authority, the Imperial Irrigation District ("**IID**"), the Regional Water Quality Control Board ("**RWQCB**"), the State Water Resources Control Board ("**SWRCB**"), the South Coast Air Quality Management District ("**SCAQMD**"), and the California Department of Alcoholic Beverage Control with respect to the Commercial Beach Club Sector. Developer agrees to use diligent and commercially reasonable efforts to procure the Third-Party Agency Approvals. If requested by Developer, the City shall cooperate with Developer, at Developer's sole cost, in Developer's efforts to obtain the Third-Party Agency Approvals. If after using all reasonable efforts, Developer is unable to obtain any Third-Party Agency Approval needed in order for Developer

to develop the Project or meet its obligations under this Agreement, including providing the public benefits described in this Agreement, such inability shall constitute a Permitted Delay subject to the provisions of Section 11.6.

2.9 **Changes to Development Agreement Statute**. This Agreement has been entered into in reliance upon the provisions of the Development Agreement Statute as those provisions existed at the Effective Date. No amendment or addition to those provisions, which would materially affect the interpretation or enforceability of this Agreement, shall be applicable to this Agreement unless such amendment or addition is specifically required by the California Legislature, or is mandated by a court of competent jurisdiction. In the event of the application of such a change in the Development Agreement Statute, the Parties shall meet in good faith to determine the feasibility of any modification or suspension of this Agreement that may be necessary to comply with such change in law and to determine the effect such modification or suspension would have on the purposes and intent of this Agreement and the Vested Elements. Following the meeting between the Parties, the provisions of this Agreement may, to the extent feasible and upon mutual agreement of the Parties, be modified or suspended but only to the minimum extent necessary to comply with such change in law. If such amendment or change is permissive rather than mandatory, this Agreement shall not be affected by the same unless the Parties mutually agree in writing to amend this Agreement to permit such applicability.

ARTICLE 3
DEVELOPMENT OF THE PROJECT

3.1 **Development Rights**. Developer shall have a vested right to develop the Project on the Property, in accordance with the Vested Elements.

3.2 **Vested Elements**. The overall design, development, construction, and use of the Project and all improvements in connection therewith, including without limitation, permitted uses of the Property (including the Private Resort Sector and Commercial Beach Club Sector uses described in Section 4.6, and the right to operate short-term vacation rentals as described in Recital D and the STVR Ordinance Amendment), the maximum density of development, the intensity of use, the maximum height and size of the proposed buildings, provisions for reservation or dedication of land for public purposes, the conditions, terms, restrictions, and requirements for subsequent discretionary actions, the provisions for and financing for Public Improvements, and the other terms and conditions of development applicable to the Property are as set forth in the Project Approvals, and are hereby vested in Developer, subject to, and as provided in, the provisions of this Development Agreement (the "**Vested Elements**"). The intent of this Section 3.2 is to cause all development rights which may be required to develop the Project in accordance with this Agreement and the Project Approvals to be deemed to be "vested rights" as that term is defined under California law applicable to the development of land or property and the right of a public agency to regulate or control such development of land or property. City hereby agrees to be bound with respect to the Vested Elements, subject to Developer's full and timely compliance with the terms and conditions of this Agreement, the Project Approvals, and all Applicable Rules. By stating that the terms and conditions of this Agreement and the Project Approvals control the overall design, development and construction of the Project, this Agreement is consistent with the requirements of California Government Code Section 65865.2 (requiring a development agreement to state permitted uses of the

property, the density or intensity of use, the maximum height and size of proposed buildings and provisions for reservation or dedication of land for public purposes). Notwithstanding the preceding provisions of this Section 3.2 or any other provision in this Agreement to the contrary, in the event of any conflict between the terms and conditions of any Project Approvals (including Developer's rights and obligations thereunder) other than as provided in the body of this Agreement, including without limitation any Subsequent Approvals, and the terms and conditions of this Agreement (including Developer's rights and obligations hereunder), the terms and conditions of this Agreement shall control. For the avoidance of doubt, in the event of any conflict between the body of this Agreement and the Conditions of Approval or GPU Mitigation Measures attached as exhibits hereto, the terms and conditions set forth int eh body of this Agreement shall control.

3.3 **Life of Subdivision Maps and Other Project Approvals**.

3.3.1 Life of Subdivision Maps. The terms (lifespan) of Tentative Tract Map No. 39330 and any other Subdivision Maps approved by the City for the Project shall be automatically extended such that such maps remain in effect for a period of time coterminous with the Term of this Agreement, or such longer period as may be permitted under state law.

3.3.2 Life of Other Project Approvals. The term of all other Project Approvals, including all implementing approvals, conditional use permits ("CUPs"), architectural review approvals, and the Entertainment Permit, shall be automatically extended such that the Project Approvals remain in effect for the same term as the Term of this Agreement, with the exception of construction permit approvals, which shall be valid for the period of time identified within the applicable California Building Standards Code.

3.3.3 Termination of Agreement. In the event that this Agreement is terminated prior to the expiration of the Term of the Agreement for any reason other than a Developer Event of Default, the term of any Subdivision Map approved by the City for the Project or any other Project Approval, as well as the vesting period for any vesting Subdivision Map approved as a Project Approval, shall be the term otherwise applicable to such approval in accordance with the California Subdivision Map Act, which term shall commence to run on the date that such termination of this Agreement takes effect. In the event of any termination of this Agreement for a Developer Event of Default, the provisions of Section 8.2.3 shall govern with respect to the term of the Project Approvals.

3.4 **Compliance with CEQA**. The Parties acknowledge that the City has determined, pursuant to Section 15183 of the CEQA Guidelines, that the environmental effects of the Project have been adequately addressed by the environmental review previously conducted for the applicable General Plan and the CEQA Compliance Documentation prepared for the Project, except to the extent that further environmental review is expressly required pursuant to CEQA Guidelines Section 15183. The CEQA Compliance Documentation addresses the potential environmental effects of the Project as described in the Initial Approvals and identifies the GPU Mitigation Measures, if any, applicable to the Project. In considering any Subsequent Approval, the City shall rely upon the CEQA Compliance Documentation and the environmental review previously conducted for the applicable General Plan to the fullest extent permitted by CEQA, including CEQA Guidelines Section 15183. The City shall not require preparation of a

new initial study, negative declaration, environmental impact report, or other environmental document, repeat environmental analysis previously conducted, or impose additional mitigation measures with respect to environmental effects previously analyzed and adequately addressed, except to the extent expressly required by CEQA. Nothing in this Agreement shall limit the City's authority to conduct such additional environmental review or impose such additional mitigation measures in connection with a Subsequent Approval as are required by CEQA, including where changes to the Project or other circumstances result in environmental effects for which additional environmental review is required pursuant to CEQA Guidelines Section 15183 or other applicable provisions of CEQA. Any such additional environmental review and mitigation shall be limited to the environmental effects for which additional review or mitigation is required by CEQA and shall not include reconsideration of environmental effects previously analyzed and adequately addressed to the extent CEQA precludes or does not require such reconsideration.

3.5 **Compliance with Project Approvals**. In developing the Project, Developer shall at all times comply with the Project Approvals and Applicable Rules, and Developer further agrees that all improvements required to be constructed by Developer for the Project (including all onsite improvements and offsite improvements) shall be constructed in accordance with this Agreement, the Project Approvals, and Applicable Law.

3.6 **Development Timing**.

3.6.1 *Pardee* Finding. Development of the Project Site is permitted to occur in phases as described and contemplated in **Exhibit C** ("**Construction Phasing**"). The Parties wish to avoid the result of *Pardee Construction Co. v. City of Camarillo*, 37 Cal.3d 465 (1984), where the failure of the parties there to expressly provide for the timing of development resulted in the court's determination that a later-adopted initiative restricting the timing of development prevailed over the parties' agreement. Accordingly, the Parties acknowledge and agree that Developer shall have the right, subject to the provisions of the Project Approvals and the requirements of Sections 4.1 and 4.2 of this Agreement, to develop the Project at such time and in such phases as Developer deems appropriate in the exercise of its subjective business judgment, subject to the Buildout Period described in Section 1.3.2.

3.7 **Final Subdivision and Condominium Maps**. Developer may from time to time file applications for Subsequent Approvals of final subdivision and condominium maps (including phased final maps) with respect to some or all of the Project Site in accordance with the provisions of the Subdivision Map Act.

3.8 **Provision and Financing of Public Improvements**.

3.8.1 Construction and Dedication. Subject to the other provisions of this Agreement, Developer shall be responsible for the design, engineering, and construction of all roadways, sidewalks, drainage, sewer, water, storm drain, and electrical distribution improvements, and all other infrastructure and improvements for the Project, including any onsite improvements or offsite improvements, that may or are to be dedicated or otherwise made available for public use pursuant to this Agreement or the Project Approvals ("**Public Improvements**"). The Public Improvements to be constructed by Developer are further identified in **Exhibit C**. Except as set forth in this Section 3.8.1 or otherwise agreed to in writing by the

City, in its reasonable discretion, all Public Improvements necessary to serve any particular phase of the Project shall be completed prior to the City's issuance of the first Certificate of Occupancy for any development within that phase or any earlier date specified in the Project Approvals.

3.8.2 Energy Infrastructure. The Parties shall cooperate in good faith to facilitate the delivery of adequate electrical service to the Project Site, the details of which remain to be determined but may include the construction of a new IID substation on or off the Project Site, new distribution facilities extending from an area substation, and/or the incorporation of on-site alternative energy facilities, including solar generation and battery storage systems. Developer shall pay its fair share of the cost of any new or upgraded electrical infrastructure required to serve the Project, and the Parties shall reasonably cooperate in good faith in pursuing a cost-sharing and/or reimbursement arrangement with IID or other third parties to the extent either Party advances or funds costs for such infrastructure in excess of that Party's fair share of total costs. In the event the City adopts or applies a fee to fund electrical infrastructure, Developer shall be entitled to credit against any such fee for all amounts spent by Developer on publicly owned electrical infrastructure.

3.8.3 Developer shall maintain and be liable for all Public Improvements until formally accepted by City, or when finally accepted by another authority if another authority has jurisdiction over the Public Improvements, and/or when finally accepted by a public utility if a public utility has jurisdiction over the Public Improvements. Upon completion of required Public Improvements hereunder in conformance with the approved plans, Developer shall offer for dedication to City, from time to time as such Public Improvements are completed, those Public Improvements for which the Project Approvals require such offer of dedication, and City shall promptly accept from Developer such completed Public Improvements in accordance with Applicable Rules (the "**Dedicated Public Improvements**"). Developer may offer dedication of Dedicated Public Improvements in phases and City shall not refuse to accept such phased dedications or refuse phased releases of bonds or other security so long as all other conditions and requirements for acceptance have been satisfied by Developer, and subject to any such conditions to the Project Approvals pertaining to maintenance of the Public Improvements following acceptance. Upon Developer's request, and at Developer's sole cost, City shall reasonably cooperate with Developer (a) to locate any new easements required for the Project so as to minimize interference with development of the Project, and (b) in Developer's efforts to relocate or remove easements to facilitate development of the Project, provided that such cooperation does not entail any financial or legal liability for the City.

3.8.4 Financing. Except as otherwise expressly provided in this Agreement or negotiated with the City, Developer shall fund all Public Improvements for the Project by means of its own funds and any other means of financing, subject to approval by the City, as generally described in this Section 3.8.4 (the "**Financing Plan**"). The City agrees to use best efforts to reasonably cooperate with Developer in the formation of a Mello-Roos Community Facilities District ("**CFD**") or other assessment district or other financing mechanism, as deemed appropriate by Developer to help implement the Financing Plan, provided that such cooperation does not entail any financial or legal liability for the City, including but not limited to entering into Joint Community Facilities Agreements ("**JCFAs**") with the Coachella Water Authority, IID, and/or other public agencies to fund public facilities, including capital facilities fees and development impact fees of the City and any participating agency (each, a "**Financing Mechanism**") that

Developer in its sole discretion may elect to initiate related to the Project as and when so requested by Developer, provided that such Financing Mechanisms shall be subject to the following:

3.8.4.1 Developer shall, without need for a written request from the City, advance amounts necessary to pay all actual costs and expenses of City to evaluate and structure any Financing Mechanism, to the end that City will not be obligated to pay any costs related to the formation or implementation of any Financing Mechanism. Developer shall pay all costs of formation and administration of any CFD formed pursuant to this Section.

3.8.4.2 Any Financing Mechanism will provide for the reimbursement to Developer of any advances by Developer described in Section 3.8.4.1, and any other costs incurred by Developer that are related to the Financing Mechanism, such as the costs of legal counsel, special tax consultants, engineers, etc. Developer agrees to promptly submit to City a detailed accounting of all such other costs incurred by Developer, along with supporting documentation, at such time as Developer makes application for reimbursement.

3.8.4.3 City shall, without limiting its discretion, consult with Developer prior to engaging any consultant (including bond counsel, underwriters, appraisers, market absorption analysts, financial advisors, special tax consultants, assessment engineers, and other consultants deemed necessary to accomplish any financing). However, City retains the sole right to make the final selection of any such consultants.

3.8.4.4 Developer shall submit to City Developer's phasing plan for any Public Improvements to be financed, including the priority and financing needs, as well as proposed improvement areas and/or tax zones. City shall act as the lead agency in forming the Financing Mechanism, with one or more Improvement Areas and/or Tax Zones, and will use available proceeds of any public financing in accordance with such priorities, and as otherwise provided in this Agreement. Any Financing Mechanism may fund capital facilities and development impact fees of the City and any participating agency, and any other public improvements owned and maintained by a public agency.

3.8.4.5 City and Developer will determine, following consultation with any other participating public agencies, the means by which any Public Improvements may be acquired by City or other public agency, as applicable.

3.8.4.6 In addition, any financing may include amounts necessary to discharge any assessment, special tax, or other liens on the Property.

3.8.4.7 Any public financing shall be secured solely by assessments or special taxes levied within the respective district, proceeds of the bonds issued that are placed in a bond fund, reserve fund, or other such fund for the financing and investment earnings thereon.

3.8.4.8 The payment of actual initial and annual administrative costs of City to be incurred in connection with any Financing Mechanism shall be adequately assured, through the inclusion in any assessment or special tax methodology of appropriate provision for such costs as estimated by City, to the end that City shall not be called upon to provide for any initial or annual administrative costs related to any Financing Mechanism.

3.8.4.9 The bond term of any Financing Mechanism shall not exceed thirty-five (35) years, and bonds may be issued in one or more series; the maximum effective tax rate shall not exceed two percent (2.00%), and special taxes shall be authorized to escalate by two percent (2.00%) annually. The first CFD formed pursuant to this Section may be formed no earlier than the time of recording of the first Final Map for the Project.

3.8.4.10 The status of Entitlement applications and fee deposits as of the Effective Date is summarized in **Exhibit D** (Summary of Entitlement Applications and Fee Deposits).

ARTICLE 4
OBLIGATIONS OF DEVELOPER

4.1 **Energy and Utility Infrastructure Cooperation**.

4.1.1 Cooperation in Facilitating Electrical Service. The Parties shall reasonably cooperate in good faith in facilitating adequate electrical service to the Project, as described in Section 3.8.2. Developer shall connect the Project to existing water, sewer, gas, and electrical facilities serving the Project Site and shall construct all onsite and offsite utility extensions required to serve the Project, as identified in the applicable Project Approvals.

4.1.2 Water and Sewer Connections. Developer shall extend public water and sewer lines to the Project Site from the nearest existing mains, including the extension of approximately 2,760 feet of 12-inch public water lines and approximately 174 feet of 12-inch public sewer lines, as more particularly described in the Project Approvals, and shall construct all interior public and private utility lines necessary to serve the Project.

4.2 **Payment of Fees and Costs**.

4.2.1 General. All fees, exactions, dedications, reservations, or other impositions to which the Project would be subject, but for this Development Agreement, are referred to in this Development Agreement either as "Administrative Fees" or "Development Fees". Developer shall timely pay or perform, as applicable, all Administrative Fees and Development Fees applicable to the Project or the Project Site in accordance with the terms of this Agreement.

4.2.2 Administrative Fees. As used in this Agreement, "**Administrative Fees**" means fees charged by the City, on a City-wide basis in effect at the time to cover the costs of City's review of applications for any permit or other approval or review or inspection by City. Administrative Fees are not Development Fees. Applications for Subsequent Approvals shall be charged, and Developer shall timely pay to the City, Administrative Fees to allow City to recover its actual and reasonable costs of processing Subsequent Approvals. Administrative Fees shall be paid in accordance with the City's ordinances or requirements, as applicable, and the provisions of this Section. Without limiting the foregoing, Developer shall reimburse City or pay directly all reasonable and actual costs relating to the hiring of consultants and the performing of studies as may be necessary to review or process any applications for Project Approvals or perform any related environmental review and City shall provide Developer with detailed invoices relating thereto as part of any reimbursement request. Prior to engaging the services of any such consultant, or authorizing the expenditure of any funds for such consultant, the City shall consult with

Developer in an effort to mutually agree to terms regarding (i) the scope of work to be performed, (ii) the projected costs associated with the work, and (iii) the particular consultant that would be engaged to perform the work.

4.2.3 Development Impact Fees ("DIF").

(a) Definition. As used in this Agreement, "**Development Fees**" or "**DIF**" means all fees, contributions, exactions, dedications, reservations, or impositions, other than taxes or assessments, whether established for or imposed upon the Project individually or as part of a class of projects, that are imposed by City on the Project in connection with any Project Approval for any purpose, including, without limitation, defraying all or a portion of the cost of public services and/or facilities construction, improvement, operation, and maintenance attributable to the burden created by the Project. Development Fees do not include: (a) any Administrative Fee; (b) any GPU Mitigation Measure (unless the Mitigation Measure consists of payment of a Development Fee); (c) any Community Benefit to be provided by Developer hereunder; (d) taxes or special assessments, including the Transient Occupancy Tax described in Section 4.5; (e) any utility connection fees in effect from time to time generally applicable on a City-wide basis to similar land uses as the Project; or (f) any fees, taxes, assessments, or impositions imposed by other entities that the City collects on behalf of such other entities, all of which shall be due and payable by Developer as and when due in accordance with applicable law.

(b) Applicability, Freeze, and Payment. No Development Fees shall be applicable to the Project except as provided in this Agreement. The Project shall be subject only to the Development Fees as set forth in **Exhibit E** ("**Existing Development Fees**"), except as otherwise expressly permitted by this Section 4.2.3.2. There shall be no increase in the amounts of the Existing Development Fees, and no new categories of Development Fees shall apply to the Project, for a period of fifteen (15) years from the Effective Date of this Agreement (the "**DIF Freeze Period**"), subject to a reasonable automatic annual inflation adjustment tied to the Construction Cost Index. Following expiration of the DIF Freeze Period, Development Fees shall be paid at the amounts then in effect at the time of payment. Developer shall pay all applicable Development Fees at the time of issuance of the certificate of occupancy for the applicable unit or structure.

(c) Fee Credits. Developer shall receive Development Impact Fee offsets and credits ("**Fee Credits**") for all Public Improvements constructed by Developer that are included in the City's capital improvement plans and/or any fee studies supporting the City's adopted Development Fees, in the amounts set forth in **Exhibit E**, or as may be subsequently agreed to in writing by the Parties.

4.3 **Hold Harmless and Indemnification of City**. To the fullest extent permitted by law, Developer shall defend with counsel of Developer's choosing, subject to approval by City, and hold harmless the City and its elected and other officials, officers, agents, and employees ("**Indemnified Parties**") from and against any third party Claims brought against the Indemnified Parties: (a) to attack, set aside, void, or annul this Agreement; or (b) resulting or arising from death or injury to any person or for any damage to or loss of property resulting directly or indirectly from Developer's performance of this Agreement, except to the extent such Claims for death, injury, damage, or loss are ultimately determined by a court to be the result of

the gross negligence or willful misconduct of the City. In the event a third-party Claim is commenced against the City, City shall give prompt notice of same to Developer, which notice shall be a condition of Developer's obligations under this Section 4.3. If Developer is required to defend the City as set forth above, Developer shall be entitled to select legal counsel to defend the City, subject to the City's approval, at Developer's cost. In the event of a court order issued as a result of a successful legal challenge as described in item (a) above, the City shall, to the extent permitted by law or court order, in good faith seek to comply with the court order in such a manner as will maintain the integrity of the Project Approvals and avoid or minimize to the greatest extent possible (i) any impact to the development of the Project as provided for in, and contemplated by, the Vested Elements, or (ii) any conflict with the Vested Elements or frustration of the intent or purpose of the Vested Elements.

4.4 **Payment of Prevailing Wages**.

4.4.1 Developer acknowledges that the City has made no representation, express or implied, to Developer or any person associated with Developer regarding whether or not laborers employed relative to the construction and installation of improvements on the Property, if any, must be paid the prevailing per diem wage rate for their labor classification, as determined by the State of California, pursuant to California Labor Code Sections 1720, et seq. Developer agrees with the City that Developer shall assume the responsibility and be solely responsible for determining whether or not laborers employed relative to any construction of capital improvements on the Property or for the Development must be paid the prevailing per diem wage rate for their labor classification, as determined by the State of California, pursuant to California Labor Code Sections 1720, et seq.

4.4.2 If Civil Code sections 9550 et seq. require contractors to procure a payment bond for the improvements on the Property, then the Developer shall ensure that its contractors deliver the required bond.

4.4.3 Developer, on behalf of itself, its successors, and assigns, waives and releases the City from any right of action that may be available to any of them pursuant to California Labor Code Sections 1726 and 1781. Developer acknowledges the protections of California Civil Code Section 1542 relative to the waiver and release contained in this Section 4.4, which reads as follows:

> A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE AND THAT, IF KNOWN BY HIM OR HER, WOULD HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.
>
> BY INITIALING BELOW, DEVELOPER KNOWINGLY AND VOLUNTARILY WAIVES THE PROVISIONS OF CALIFORNIA CIVIL CODE SECTION 1542 SOLELY IN CONNECTION WITH THE WAIVERS AND RELEASES OF THIS SECTION 4.4:

Developer's Initials

Developer's Initials

4.4.4 Developer shall defend with counsel reasonably acceptable to the City, indemnify and hold harmless City and its elected officials, officers, employees, agents and contractors from any and all liability, costs, claims, damages, fines, penalties and expense, including costs of litigation and attorneys' fees, arising out of or in any way connected with Developer's construction of the facilities and improvements described in this Agreement, and Developer shall indemnify, defend with counsel reasonably acceptable to the City and hold harmless the City against any claims pursuant to California Labor Code Section 1781 arising from this Agreement or the construction or installation of any improvements on the Property or for the Development, in accordance with the terms of this Section 4.4.

4.5 **Transient Occupancy Tax Rebate**.

4.5.1 Purpose. The Project is designed as a resort community that is anticipated to generate substantial transient occupancy tax ("**TOT**") and sales tax revenue for the City. In consideration of Developer's substantial investment in the Project's resort infrastructure and amenities, and consistent with the City's Hotel Operations Incentive Plan, City agrees to rebate a portion of the TOT generated by the Project as set forth in this Section 4.5.

4.5.2 Rebate Percentages. Subject to the Annual Minimum Payments described in Section 4.5.3 and the Rebate Cap described in Section 4.5.4, City shall rebate fifty percent (50%) of the TOT generated by the Project during the first fifteen (15) years following the opening of the resort at buildout of Phase 1 of the Project.

4.5.3 Annual Minimum Payments to City. Notwithstanding Section 4.5.2, City shall receive the first TOT revenue generated by the Project each year, before any rebate to Developer, until the City has received the following annual minimum amounts: (i) beginning upon opening of the resort at buildout of Phase 1 of the Project (167 total units), the first $1,000,000 in TOT revenue in that year; (ii) upon completion of Phase 2 (273 total units), the first $1,500,000 in TOT revenue in that year; and (iii) upon buildout of the resort (402 total units), the first $2,000,000 in TOT revenue in that year (collectively, the "**Annual Minimum Payments**"). Only TOT revenue in excess of the applicable Annual Minimum Payment for that year is subject to rebate under Section 4.5.2.

4.5.4 Lifetime Cap. The cumulative TOT rebated to Developer under this Section 4.5 over the life of this Agreement shall not exceed the total sum of Twenty-Five Million Dollars ($25,000,000.00) (the "**Rebate Cap**"). Once the Rebate Cap has been reached, City shall retain one hundred percent (100%) of TOT generated by the Project for the remainder of the Term.

4.5.5 No PILOT. This Section 4.5 does not constitute a payment in lieu of taxes and does not obligate Developer to make up any shortfall between actual TOT collected and the Annual Minimum Payments.

4.5.6 Reporting. Developer shall provide the City with such periodic reporting of TOT collections, short-term rental activity, and ADI documentation as the City may reasonably request to administer this Section 4.5.

4.6 **Provision of Community Benefits**. Developer will provide the development of an underutilized agricultural site into a destination resort community generating substantial new employment opportunities, transient occupancy tax revenue, and sales tax revenue for the City, thereby supporting the City's long-term fiscal and economic stability. In connection with the Project, Developer is providing the following benefits to the City and area residents (collectively, "**Community Benefits**"):

4.6.1 Fiscal Benefits. The Project is projected to generate substantial TOT and sales tax revenue, supporting the City's General Fund and long-term economic stability.

4.6.2 Public Infrastructure Improvements. Developer shall construct public infrastructure improvements to streets, sidewalks, utilities, and other public facilities serving the Project, and shall fund or construct a portion of the off-site sewer main upsizing needed to serve other planned housing developments in the City, as further described in **Exhibit C**.

4.6.3 Enhanced Landscaping. Developer shall maintain enhanced landscaping on all public street frontages of the Project, as described in the Project Approvals.

4.6.4 Employment. The Project will provide well-paying construction jobs for local labor, as well as permanent jobs ranging from entry-level to managerial positions in connection with the operation of the resort, beach club, restaurant, and sports bar.

4.6.5 No Affordable Housing Obligation. Developer shall not be conditioned to construct or provide any affordable housing units in connection with the Project.

4.7 **Scope of Development; Private Resort Sector and Commercial Beach Club Sector**. The Project is a mixed-use development comprised of two principal components:

4.7.1 Private Resort Sector. The Private Resort Sector shall consist of up to 240 condo hotel cottages and 162 single-family residential units, consisting of a combination of estate lots, zero lot line lots, bungalow condominiums, and VIP suites, that will operate collectively as a first-class resort operation, together with a recreational lagoon, pool/spa, courts, and other recreational amenities, and restaurant, bar, and clubhouse facilities. Units within the Private Resort Sector may be sold under a fractional ownership, timeshare, second-home, or other applicable model, with fee-simple deeded fractional interests to be managed and maintained by Developer or a licensed property management company. All units within the Private Resort Sector shall be available for TOT-generating short-term vacation rentals, centrally managed by an owners' association, club, and/or licensed property management company. Consistent with Recital D, this portion of the Project shall be treated as a First Class Hotel under the City's Municipal Code, rather than as a residential project, and shall be exempt from the short-term vacation rental provisions of

Coachella Municipal Code Chapter 5.80, subject to the reporting, operational, and TOT payment requirements set forth in this Agreement.

4.7.2 Commercial Beach Club Sector. The Commercial Beach Club Sector shall consist of a recreational lagoon and associated commercial beach club amenities, including a beach club, restaurant, and sports bar, and associated entertainment venues, that will be available to owners and resort guests as well as to the general public through reservation or event access. The parties agree that Developer shall be entitled to have live music and extended hours of operation for the Commercial Beach Club Sector's restaurant and entertainment uses to accommodate late-night operations, subject to compliance with applicable Alcoholic Beverage Control permit requirements and the Entertainment Permit.

4.8 **Developer Representations and Warranties**. Developer represents, warrants, and covenants to the City, as of the Effective Date and thereafter during the Term, as follows:

4.8.1 Authority. Developer is a California limited liability company duly organized and validly existing, and is authorized to own property and do business in the State of California. Developer has the capacity and full right, power, and lawful authority to own its property and perform the terms and covenants of this Agreement, and the execution, delivery, and performance of this Agreement by Developer has been fully authorized by all requisite action on the part of Developer. The person(s) executing this Agreement on behalf of Developer has all requisite power, right, and authority to do so and to bind Developer to this Agreement.

4.8.2 Valid Binding Agreement. This Agreement and all other documents and instruments which have been executed and delivered by or on behalf of Developer pursuant to or in connection with this Agreement constitute or, if not yet executed or delivered, will when so executed and delivered constitute legal, valid, and binding obligations of Developer, enforceable against Developer in accordance with their respective terms, except as such enforceability may be limited by bankruptcy, insolvency, reorganization, arrangement, and other laws affecting creditors' rights, or by application of equitable principles. Developer has no knowledge of any inability to perform its obligations under this Agreement. The execution and delivery of this Agreement by Developer have been duly and validly authorized by all necessary action. No consent, authorization, or approval of, or other action by, and no notice to or filing with any governmental authority, regulatory body, or any other person is required for the execution, delivery, and performance by Developer of this Agreement or any of the terms and covenants herein or therein.

4.8.3 No Breach of Law or Agreement. Neither the execution nor delivery of this Agreement or of any other documents or instruments executed and delivered, or to be executed or delivered, pursuant to this Agreement, nor the performance of any provision, condition, covenant, or other term hereof or thereof, will conflict with or result in a breach of or default under any agreement to which Developer is a party or will result in the creation or imposition of any lien upon any assets or property of Developer, other than liens established in accordance with this Agreement.

4.8.4 Pending Proceedings. Developer has no knowledge of any default under any law or regulation or under any order of any court, arbitrator, board, commission or agency,

and there are no known claims, actions, suits, or proceeding pending or, to the knowledge of Developer, threatened against or affecting Developer, at law or in equity, before any court, arbitrator, board, commission, or agency which might, if determined adversely to Developer, materially affect Developer's ability to perform its obligations under this Agreement.

ARTICLE 5
OBLIGATIONS OF CITY

5.1 **Cooperation on Energy Infrastructure**. City shall reasonably cooperate in good faith and support Developer's efforts to secure adequate electrical service to the Project, including cooperating with Developer's efforts to enter into a cost-sharing and reimbursement agreement with IID as described in Section 3.8.2. If City adopts or collects a surcharge or other fee or financing mechanism to fund electrical infrastructure within the City, the infrastructure costs incurred by Developer for the Project in excess of Developer's fair-share shall be given the highest priority (at least on par with any other electrical infrastructure) in receiving City funding contribution or reimbursement from the proceeds of such surcharge, fee, or other financing mechanism, which shall be in addition to fee credits for all amounts spent by Developer on publicly owned electrical infrastructure.

5.2 **Water and Sewer Service**. City shall cooperate and facilitate Developer's connection of the Project to water and sewer service from the Coachella Water Authority, and shall reasonably cooperate with Developer to ensure that, prior to issuance of the first building permit for the Project, adequate means and methods for providing water and sewer service to the Project are in place.

5.3 **Processing During Third-Party Litigation**. The filing of any third-party lawsuit(s) against the City or Developer relating to this Agreement, the Project Approvals, or other development issues affecting the Project or the Project Site, shall not delay or stop the development, processing, or construction of the Project or the issuance of Subsequent Approvals unless the third party obtains an injunction or other court order preventing the activity.

5.4 **Expedited Processing**. The Parties agree that Developer must be able to proceed rapidly with the development of the Property and, accordingly, that expedited City review of Subsequent Approvals, including but not limited to improvement plans, final maps, modifications to Project Approvals, building permits and construction inspections, is essential to the successful completion of the Project. Accordingly, to the extent that the applications and submittals are in conformity with the Project Approvals, Applicable Rules, and this Agreement, and adequate funding exists therefor, City agrees to provide adequate City resources to diligently accept, review, and take action on all subsequent applications and submittals made to City by Developer in furtherance of the Project. Similarly, to the extent that adequate funding exists therefor, City shall provide adequate City resources to promptly review and approve improvement plans, conduct construction inspections, and accept completed public facilities. Developer agrees to reimburse the City for all costs associated with providing expedited services, above and beyond those costs covered by the City's Processing Fees. In the event City does not have adequate resources, City shall authorize the use of "contract labor" for inspection and plan review purposes, which shall be reimbursed by Developer, pursuant to a mutually agreeable reimbursement agreement that also specifies any fee credit to Developer to avoid Developer

paying more than once for the same plan check, inspection, or other City service. City shall consult with Developer concerning the selection of the most knowledgeable, efficient and available "contract labor" for purposes of providing inspection and plan review duties for the City and the Project; provided, however, that City shall retain the exclusive right to select any "contract labor" it deems suitable.

5.5 **Exemption from Future Ordinances That Would Limit the Project**. Except as otherwise expressly provided in this Agreement, City agrees that the Project shall be exempt from any future ordinances that would limit construction on the Project Site or the uses proposed for the Project as set forth in the Project Approvals.

ARTICLE 6
MUTUAL OBLIGATIONS

6.1 **Notice of Completion or Revocation**. Upon the Parties' completion of performance or revocation of this Agreement, a written statement acknowledging such completion or revocation, signed by the appropriate agents of City and Developer, shall be recorded in the Office of the Recorder of the County of Riverside, California.

6.2 **Estoppel**. Each Party hereto shall provide, upon the request of the other Party and within thirty (30) days of such request, a signed estoppel certificate in a reasonable form for the benefit of third parties.

6.3 **Good Faith and Fair Dealing**. The Parties shall cooperate with each other and act in good faith in complying with the provisions of this Agreement. In their course of performance under this Agreement, the Parties shall cooperate and shall undertake such actions as may be reasonably necessary and appropriate to implement the Project as contemplated by this Agreement.

6.4 **Other Necessary Acts**. Each Party shall execute, acknowledge, and deliver to the other all further instruments and documents and shall take such further actions as may be reasonably necessary to carry out this Agreement in order to provide and secure to each Party the full and complete enjoyment of its rights and privileges hereunder.

6.5 **Compliance with Financing Plan**. Developer shall at all times comply with applicable provisions of the Financing Plan and Developer and City shall each at all times comply with their respective obligations under applicable provisions of the Financing Mechanism.

ARTICLE 7
ANNUAL REVIEW OF DEVELOPER'S COMPLIANCE

7.1 **Procedure**. The annual review required by Government Code Section 65865.1 shall be conducted for the purposes and in the manner stated in those laws as further provided herein ("**Annual Review**"). As part of each Annual Review, Developer must demonstrate good faith compliance with the provisions of the Development Agreement. Not more than sixty (60) days and not less than forty-five (45) days prior to the Annual Review Date, City shall provide Developer with written notice for Developer to provide a letter to the City containing substantial

evidence to show compliance with this Agreement. Within sixty (60) days after Developer submits its letter, City shall review the information submitted by Developer and all other available evidence on Developer's compliance with this Agreement. All such other available evidence shall, upon receipt by the City, be made available as soon as possible to Developer. City shall notify Developer in writing whether Developer has complied with the terms of this Agreement. If the City finds that Developer has not complied with the provisions of the Development Agreement, City may issue a finding of noncompliance. City's finding of compliance or noncompliance may be appealed to the City Council within ten (10) days after the issuance of such finding, and upon the filing of such an appeal, the City shall schedule a City Council hearing in accordance with the City's Municipal Code. The issuance of a finding of compliance or finding of noncompliance by the City and the expiration of the appeal period without appeal, or the confirmation of the issuance of the finding on such appeal, will conclude the review for the applicable period and such determination will be final, subject only to judicial review. In the absence of the City notice required above, to commence the annual review process, Developer shall be deemed to be in good faith compliance with the provisions of this Development Agreement until such annual review is subsequently completed.

7.1.1 Annual Review Costs. In accordance with Government Code Section 65865.1, Developer shall reimburse City for the actual and reasonable costs incurred in conducting each Annual Review, provided that: (a) City shall provide Developer with a written invoice identifying the Annual Review costs incurred; (b) reimbursable costs shall be limited to those directly related to the Annual Review process; (c) the total cost for any single Annual Review shall not exceed $2,500.00, unless otherwise agreed to in writing by the Parties; and (d) Developer shall have the right to dispute any Annual Review costs it believes to be unreasonable, in which case the Parties shall meet and confer in accordance with Section 10.2 of this Agreement to resolve any such dispute. City shall make reasonable efforts to minimize Annual Review costs.

7.2 **Noncompliance and Cure**. If City finds that Developer is not in compliance, City must specify in writing to the Developer the respects in which the Developer has failed to comply, and must set forth terms of compliance and specify a reasonable time for the Developer to meet the terms of compliance. Unless alleged noncompliance is an immediate threat to public health and safety, City shall grant a cure period of at least sixty (60) days and shall extend the sixty (60) day period if Developer is proceeding in good faith to cure the noncompliance and additional time is reasonably needed for Developer to prosecute such cure to completion. If Developer does not comply with any terms of compliance within the prescribed time limits, this Agreement will be subject to termination or modification by the City as applicable. Developer shall have the right to appeal any determination of non-compliance, and upon any unsuccessful appeal to the City Council, to seek judicial review.

7.3 **Effect on Permitted Transferees**. If Developer has transferred a portion of the Project to a Permitted Transferee (other than a Developer Affiliate) pursuant to Article 9 of this Agreement, then the Annual Review shall be conducted separately with respect to each such Permitted Transferee. If such Annual Review results in a final determination that such Permitted Transferee has not complied with this Agreement, such determination and any resulting termination or modification of this Agreement by the City shall be effective only as to the Permitted Transferee to whom the determination is made and the portions of the Project Site in which such Permitted Transferee has an interest. Such Permitted Transferee shall have the right

to appeal the City's determination of non-compliance, as described above. Such a termination or modification shall have no effect on Developer or any other Permitted Transferees which have an ownership interest in the Property, and which are in compliance with this Agreement.

ARTICLE 8
AMENDMENT; TERMINATION

8.1 **Amendment or Termination of Agreement**. This Agreement may be amended from time to time or canceled in whole or in part by mutual consent of both Parties in writing in accordance with the provisions of the Development Agreement Statute. Review and approval of an amendment to this Agreement shall be strictly limited to consideration of only those provisions to be added or modified. All amendments to this Agreement shall automatically become part of the Project Approvals. Notwithstanding the foregoing, no Insubstantial Modification or Operating Memorandum approved pursuant to Section 8.3, or the approval of a Subsequent Approval pursuant to Section 2.7, shall require an amendment to this Agreement. Upon approval, any such amendment shall be deemed to be incorporated automatically into the Project and the Vested Elements under this Agreement (subject to any conditions set forth in the amendment or Subsequent Approval).

8.2 **Expiration; Termination**.

8.3 Expiration of Term. Except as otherwise expressly provided in this Agreement, this Agreement shall be deemed terminated and of no further effect upon the expiration of the Term of this Agreement as set forth in Section 1.3; provided however, that such expiration shall not affect any right, duty, or expiration date arising from the Project Approvals (other than this Agreement) and, provided further that such expiration shall not relieve or release Developer from any obligation or liability for any Developer Event of Default arising prior to such expiration. As to any specific lot or unit containing a residential dwelling within the Project, this Agreement shall terminate as to such lot or unit upon the issuance by the City of a certificate of occupancy for the dwelling and the close of escrow of the initial sale of that dwelling, if applicable.

8.3.1 Survival of Obligations. Upon the expiration or termination of this Agreement as provided herein, neither Party shall have any further right or obligation with respect to the Property under this Agreement except with respect to any obligation that is specifically set forth as surviving the expiration or termination of this Agreement.

8.3.2 Termination by City. Notwithstanding any other provision of this Agreement, City shall not have the right to terminate this Agreement with respect to all or any portion of the Property before the expiration of the Term unless the City complies with all termination procedures set forth in the Development Agreement Statute and there is an alleged Developer Event of Default and such Developer Event of Default is not cured pursuant to Article 7 or Article 10 and Developer has first been afforded an opportunity to be heard regarding the alleged default before the City Council, and this Agreement is terminated only with respect to that portion of the Property to which the default applies. In the event of such termination by the City, the Project Approvals with respect to such portion of the Property shall automatically terminate and be of no further force or effect notwithstanding any provision to the contrary in the Project Approvals.

8.4 **Insubstantial Modifications and Operating Memoranda**. The Parties acknowledge that refinements and further development of the Project may demonstrate that minor changes are appropriate with respect to the details of the Project development and the performance of the parties under this Agreement. The parties desire to retain a certain degree of flexibility with respect to the details of the Project development and with respect to those items covered in general terms under this Agreement, and thus desire to provide a streamlined method of approving insubstantial modifications to, or clarifications of the Parties' responsibilities and obligations under this Agreement. Therefore, any minor modification or clarification to this Agreement which does not materially modify (i) the Term of this Agreement; (ii) permitted uses of the Project Site, (iii) maximum density or intensity of use within the Project, except as specifically allowed in the Project Approvals, (iv) provisions for the reservation or dedication of land, (v) conditions, terms, restrictions or requirements for subsequent discretionary actions, or (vi) monetary obligations of Developer (hereinafter an "**Insubstantial Modification**"), and that can be processed under CEQA as exempt from CEQA, or with the preparation of an addendum to the CEQA Compliance Documentation, shall not require a public hearing or City Council approval prior to the parties executing a modification to this Agreement. By way of example only, changes to the mix of unit types and allowed uses within the conceptual site plan that do not exceed the total unit count or square footage allowed on the Project site and do not materially increase the trip generation or VMT caused by the Project are anticipated to constitute Insubstantial Modifications. Either Party may propose an Insubstantial Modification, consent to which shall not be unreasonably withheld, conditioned, or delayed by the other Party. Upon receiving a written request from the Developer for a modification to this Agreement, the City Manager or a designated representative will evaluate the request. The evaluation will consider: (1) whether the requested modification falls under the definition of an "Insubstantial Modification"; (2) whether the requested modification aligns with Applicable Rules (excluding that portion of this Agreement sought to be modified); and (3) whether the requested modification aligns with the objectives of this Agreement. The City Manager will not unreasonably withhold a decision, but will also ensure the City's interests are adequately protected. If the City Manager or designee determines that the requested modification is an "Insubstantial Modification" that is consistent with Applicable Rules and tends to promote the goals of this Agreement, the proposed modification will be approved by the City as an Insubstantial Modification, and a written modification will be executed by the Parties and attached to this Agreement as an operating memorandum ("**Operating Memorandum**"). Neither an Operating Memorandum nor an Insubstantial Modification shall be deemed an "amendment" to this Agreement under Government Code Section 65858.

8.5 **Amendments to Project Approvals**. Notwithstanding any other provision of this Agreement, Developer may seek and City may review and grant amendments or modifications to the Project Approvals (including the Subsequent Approvals) subject to the following (except that the procedures for amendment of this Agreement are set forth in Section 8.1). Project Approvals (except for this Agreement) may be amended or modified from time to time, but only at the written request of Developer (at the City's discretion, subject to the terms of this Agreement) or with the written consent of Developer (at its sole discretion) and in accordance with Section 3.4 and relevant provisions of the City Municipal Code. All amendments to the Project Approvals shall automatically become part of the Project Approvals. The permitted uses of the Property, the intensity of use, the maximum height and size of the proposed buildings, provisions for reservation or dedication of land for public purposes, the

conditions, terms, restrictions and requirements for subsequent discretionary actions, the provisions for Public Improvements and financing of Public Improvements, and the other terms and conditions of development as set forth in all such amendments shall automatically become Vested Elements pursuant to this Agreement (subject to any conditions set forth in the amendments) without requiring an amendment to this Agreement. Amendments to the Project Approvals shall be governed by the Project Approvals and the Applicable Rules, subject to Section 3.4. City shall not request, process, or consent to any amendment to the Project Approvals that would affect the Property or the Project without Developer's prior written consent.

ARTICLE 9
TRANSFER AND ASSIGNMENT; RELEASE; RIGHTS OF MORTGAGEES; CONSTRUCTIVE NOTICE

9.1 **Right to Assign**. Provided that there does not then exist a Developer Event of Default, Developer shall have the right at any time during the Term, subject to the provisions of this Section 9.1, to sell, mortgage, hypothecate, assign, or transfer all or a portion of its rights, duties, and obligations arising under this Agreement (each, a "**Transfer**") to any person, partnership, joint venture, firm, or corporation (each, a "**Transferee**"). No Transfer shall be permitted unless made pursuant to a sale, assignment, or other transfer of all or a portion of Developer's interest in the Property. Notwithstanding any other provision of this Agreement to the contrary, each of the following Transfers are permitted and shall not require City consent under this Section 9.1:

9.1.1 Any Transfer for financing purposes to secure the funds necessary for construction and/or permanent financing of the Project;

9.1.2 An assignment of this Agreement to a parent or subsidiary of Developer or a company under common ownership with Developer ("**Developer Affiliate**"); provided such Developer Affiliate executes and delivers to the City a recordable Assignment and Assumption Agreement substantially in the form attached hereto as **Exhibit F** and otherwise reasonably acceptable to City ("**Assignment and Assumption Agreement**"); or

9.1.3 Dedications and grants of easements and rights of way required in accordance with the Project Approvals.

Any and all other Transfers hereunder, other than the sale, lease, or fractional conveyance of a residential unit, condo cottage, or commercial space within the Project to an end purchaser, tenant, or fractional owner in the ordinary course of business, shall require the prior written consent of the City, which consent shall not be unreasonably withheld or delayed. City's withholding of consent shall be deemed reasonable if, in light of the proposed Transferee's experience, reputation and financial resources, such Transferee would not, in City's reasonable determination, be able to perform the obligations proposed to be assumed by such Transferee. Such determination made by the City will be appealable to the City Council and subject to judicial review. If City consents to any such Transfer, the Transferee shall, in addition to any other conditions upon such consent, execute and deliver to City an Assignment and Assumption Agreement. Any Transfer consented to by City, or permitted without City's consent pursuant to this Section 9.1, is herein referred to as

a "**Permitted Transfer**" and the Transferee of a Permitted Transfer is herein referred to as a "**Permitted Transferee**."

9.2 **Release upon Permitted Transfer**. Effective upon any Permitted Transfer pursuant to Section 9.1, except for a Permitted Transfer to a Developer Affiliate pursuant to Section 9.1.2, Developer shall be released from its obligations under this Agreement with respect to the Property, or portion thereof so transferred, only after the City's written confirmation of successful transfer of obligations to the Transferee. Thereafter, a default under this Agreement by Developer shall not be considered or acted upon by City as a default by the Permitted Transferee and shall not affect the Permitted Transferee's rights or obligations hereunder. Likewise, a default by a Permitted Transferee shall not be considered or acted upon by the City as a default by Developer and shall not affect Developer's retained rights and obligations hereunder. The City is entitled to enforce each and every such obligation assumed by the Permitted Transferee directly against the Permitted Transferee as if the Permitted Transferee were an original signatory to this Agreement with respect to such obligation. A Permitted Transfer to a Developer Affiliate shall not relieve or release Developer from any of its obligations hereunder unless otherwise specifically agreed to in writing by the City in its sole discretion, which shall not be unreasonably withheld. Notwithstanding the foregoing provisions of this Section or any other provision of this Agreement to the contrary, a Permitted Transfer shall not relieve or release Developer from: (a) any indemnity obligations of Developer hereunder arising or accruing from any events occurring prior to the Permitted Transfer; or (b) any liability of Developer for any Developer Event of Default occurring prior to the Permitted Transfer unless otherwise specifically agreed to in writing by City, in its sole discretion, which shall not be unreasonably withheld.

9.3 **Rights of Mortgagees; Not Obligated to Construct; Right to Cure Default**.

9.3.1 Mortgagee Protection. This Agreement shall not prevent or limit Developer in any manner, at Developer's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust, or other security device securing financing with respect to the Property ("**Mortgage**"). This Agreement shall be superior and senior to any lien placed upon the Property or any portion thereof after the date of recording this Agreement, including the lien of any Mortgage. Notwithstanding the foregoing, no breach hereof shall defeat, render invalid, diminish, or impair the lien of any Mortgage made in good faith and for value, but all of the terms and conditions contained in this Agreement shall be binding upon and effective against and inure to the benefit of any person or entity, including any deed of trust beneficiary or mortgagee ("**Mortgagee**") who acquires title to the Property, or any portion thereof, by foreclosure, trustee's sale, deed in lieu of foreclosure, or otherwise.

9.3.2 Mortgagee Not Obligated. Notwithstanding the provisions of Section 9.3.1, no Mortgagee (including a Mortgagee who obtains title to Developer's interest in the Property or the Project or any portion thereof as a result of foreclosure proceedings or transfer in lieu of foreclosure) shall in any way be obligated by the provisions of this Agreement to construct or complete the Project, unless the Mortgagee expressly assumes such obligation by written notice to City or by written agreement with City. Nothing in this Agreement shall be deemed to construe, permit, or authorize any such Mortgagee to devote the Property or the Project or any portion thereof to any uses or to construct any improvements thereon other than those uses or

improvements provided for or authorized by this Agreement, or by the Project Approvals and Applicable Rules, and only to the extent Mortgagee complies with the terms of this Agreement and executes and delivers to the City, in a form and with terms reasonably acceptable to City, an assumption agreement of Developer's obligations hereunder.

9.3.3 Notice of Default to Mortgagee, Right of Mortgagee to Cure. If City timely receives a notice from a Mortgagee requesting a copy of any Notice of Default given to Developer hereunder and specifying the address for service thereof, then City shall deliver to such Mortgagee, concurrently with service thereon to Developer, any notice given to Developer with respect to any claim by the City that Developer has committed a default, and if the City makes a determination of noncompliance hereunder, City shall likewise serve notice of such noncompliance on such Mortgagee concurrently with service thereof on Developer. If Developer does not cure or remedy the claimed default within the applicable cure period set forth in this Agreement, then City shall provide notice of such ("**Developer Non-Cure Notice**") to each Mortgagee who has previously made a written request to the City therefore. Each such Mortgagee shall (insofar as the rights of the City are concerned) have the right, at its option, to cure or remedy or commence to cure or remedy any such default within (a) fifteen (15) days (with respect to monetary defaults only) after receipt of the Developer Non-Cure Notice, or (b) sixty (60) days (with respect to non-monetary defaults), after receipt of the Developer Non-Cure Notice unless a further extension of time to cure is granted in writing by City. In case of a default which is not susceptible of being cured by such Mortgagee (including a bankruptcy of Developer), such Event of Default does not have to be cured. If a Mortgagee is required to obtain possession of the Property (or a portion thereof) in order to cure or remedy any claimed Event of Default, the time to cure shall be tolled so long as the Mortgagee is attempting in good faith to obtain possession, including by appointment of a receiver or foreclosure, and the Mortgagee shall be deemed to have timely cured or remedied the claimed Event of Default, provided the Mortgagee commences the proceedings necessary to obtain possession within sixty (60) days after receipt of the Developer Non-Cure Notice, diligently pursues such proceedings to completion, and after obtaining possession diligently completes such cure or remedy.

9.4 **Constructive Notice**. Every person or entity who now or hereafter owns or acquires any right, title, or interest in or to any portion of the Project or the Project Site and undertakes any development activities at the Project Site is, and shall be, constructively deemed to have consented and agreed to, and is obligated by, all of the terms and conditions of this Agreement, whether or not any reference to this Agreement is contained in the instrument by which such person acquired an interest in the Project or the Project Site.

ARTICLE 10
ENFORCEMENT OF AGREEMENT; REMEDIES FOR DEFAULT; DISPUTE RESOLUTION

10.1 **Events of Default**. Subject to any extensions of time by mutual consent of the Parties, in writing, and subject to the provisions of Section 11.6 regarding Permitted Delays and a Mortgagee's right to cure pursuant to Section 9.3, any failure by either Party (a "**Defaulting Party**") to perform any material term or provision of this Agreement shall constitute an event of default by the Defaulting Party ("**Event of Default**") (i) if such Defaulting Party does not cure such failure within sixty (60) days (such sixty (60) day period is not in addition to any sixty (60)

day cure period under Section 7.2, if Section 7.2 is applicable) following written notice of default from the other Party ("**Notice of Default**"), where such failure is of a nature that can be cured within such sixty (60) day period, or (ii) if such failure is not of a nature which can be cured within such sixty (60) day period, the Defaulting Party does not within such sixty (60) day period commence efforts to cure such failure, or thereafter does not within a reasonable time prosecute to completion such cure. Any Notice of Default given hereunder shall specify in detail the nature of the failures in performance that the noticing Party claims constitutes the Event of Default, all facts constituting substantial evidence of such failure, and the manner in which such failure may be satisfactorily cured in accordance with the terms and conditions of this Agreement. During the time periods herein specified for cure of a failure of performance, the Defaulting Party shall not be considered to be in default for purposes of (a) termination of this Agreement, (b) institution of legal proceedings with respect thereto, or (c) issuance of any Subsequent Approval with respect to the Project. The waiver by either Party of any Event of Default under this Agreement shall not operate as a waiver of any subsequent breach of the same or any other provision of this Agreement.

10.2 **Emergency Working Group Meeting**. Notwithstanding any other provision in this Agreement, neither Developer nor City shall commence any legal action, or willfully engage in any other act or omission inconsistent with the terms of this Agreement, including but not limited to withholding or delaying prompt issuance of any ministerial Subsequent Approvals by City, (collectively, a "**Self-Help Remedy**"), without first initiating, and participating in good faith in, an "**Emergency Working Group Meeting**" pursuant to the terms of this Section. Upon receipt of any Notice of Default, or upon the existence of any dispute or disagreement between the Parties arising out of or relating to this Agreement and/or the Project, any party may initiate an Emergency Working Group Meeting to address and seek to resolve the dispute or disagreement by giving written notice to the other Party setting forth the nature of the issue in dispute and the desire to hold an immediate Emergency Working Group Meeting. The Meeting shall be held within ten (10) business days of the written notice, unless extended by mutual written agreement of the Parties. The Emergency Working Group shall consist of the following members: (1) the City Manager; (2) the City Planning Director; (3) City Public Works Director; (4) City Building Official; (5) City Attorney; (6) Developer's President, Vice President or Managing Member; (7) Developer's project manager or other employee appointed by Developer; (8) Developer's legal counsel; and (9) at Developer's election, up to two other representatives of Developer, if Developer owns any interest in the Property at the time of the dispute. Nothing herein shall be construed to extend the time period for this Emergency Working Group Meeting obligation beyond the sixty (60) day cure period referred to in Section 10.1 (even if the sixty (60) day cure period itself is extended pursuant to Section 10.1(ii)) unless the Parties agree otherwise in writing.

10.3 **Remedies and Termination**. If, after notice, Emergency Working Group Meeting, and expiration of the cure periods and procedures set forth in Sections 10.1 and 10.2 (subject to the provisions of Section 10.2), the alleged Event of Default is not cured, the non-Defaulting Party, at its option, may institute legal proceedings pursuant to Section 10.4 and/or terminate this Agreement pursuant to Section 8.2.3 or Section 10.4.2 (as applicable). In the event that this Agreement is terminated pursuant to Section 8.2.3 or Section 10.4.2 and litigation is instituted that results in a final decision that such termination was improper, then this Agreement shall immediately be reinstated as though it had never been terminated.

10.4 **Legal Action by Parties**.

10.4.1 Remedies. Either Party may, in addition to any other rights or remedies, institute legal action to cure, correct, or remedy any Event of Default, enforce any covenant or agreement herein, enjoin any threatened or attempted violation thereof, enforce by specific performance the obligations and rights of the Parties hereto, or obtain any remedies consistent with the purpose of this Development Agreement. Without limiting the foregoing, in the event of a Developer Event of Default (that is not timely cured in accordance with Section 10.1), City may cease and terminate all processing of any applications for Subsequent Approvals to the extent otherwise permitted by Applicable Law. All remedies shall be cumulative and not exclusive of one another, and the exercise of any one or more of these remedies shall not constitute a waiver or election with respect to any other available remedy.

10.4.2 Limited Damages. Except as expressly set forth in this Section 10.4.2, neither Party shall be liable in damages for any default under this Agreement, it being expressly understood and agreed that, except as set forth below, the sole legal remedy available to either Party for a breach or violation of this Development Agreement by the other Party shall be an action in mandamus, specific performance, or other injunctive or declaratory relief to enforce the provisions of this Agreement by the other Party or to terminate this Agreement. This limitation on damages shall not preclude actions by a Party to enforce payments of monies or the performance of obligations requiring an obligation of money from the other Party pursuant to any of the following: (a) to make any payment due under any indemnity in this Agreement; (b) to advance or reimburse monies required under this Agreement; or (c) to pay attorneys' fees and costs as set forth in Section 10.5 or when required by an arbitrator or a court with jurisdiction. In no event shall either Party be liable hereunder for any consequential, special, or punitive damages. Notwithstanding anything to the contrary contained in this Agreement, in no event shall: (i) any partner, officer, director, member, shareholder, employee, affiliate, manager, representative, or agent of Developer be personally liable for any breach of this Agreement by Developer or for any amount which may become due to the City under the terms of this Agreement; or (ii) any board, commission, department, member, commissioner, officer, agent, or employee of the City be personally liable for any breach of this Agreement by City or for any amount which may become due to Developer under the terms of this Agreement.

10.5 **Attorneys' Fees**. Should any legal action be brought by either Party against the other for default under this Agreement or to enforce or interpret any provision hereof, the Party prevailing in such action shall be entitled to recover against the non-prevailing Party its reasonable attorneys' fees and costs incurred in such action. The provisions of this Section 10.5 shall survive the expiration or termination of this Agreement.

10.6 **Nexus/Reasonable Relationship Challenges**. Developer consents to, and waives any rights it may have now or in the future to challenge the legal validity of, the conditions or requirements set forth in this Agreement including, without limitation, any claim that they constitute an abuse of the police power, violate substantive due process, deny equal protection of the laws, effect a taking of property without payment of just compensation, or impose an unlawful tax. Developer reserves the right, however, to challenge in court any future fee, exaction, or other Applicable Rules that would, in Developer's opinion, conflict with

Applicable Law (including this Agreement) or reduce the development rights provided by this Agreement.

10.7 **No Waiver**. No waiver of any provision of this Agreement shall be binding unless executed in writing by the Party making the waiver. No waiver of any provision of this Agreement shall be deemed to constitute a waiver of any other provision, whether or not similar, nor shall any waiver constitute a continuing waiver unless the written waiver so specifies. Except as otherwise expressly provided in this Agreement, any failure or delay by a Party in asserting any of its rights or remedies as to any default shall not operate as a waiver of any default or of any such rights or remedies, nor shall it deprive any such Party of its right to institute and maintain any actions or proceedings that it may deem necessary to protect, assert, or enforce any such rights or remedies.

ARTICLE 11
MISCELLANEOUS PROVISIONS

11.1 **Entire Agreement**. This Agreement, including the preamble paragraph, Recitals, and Exhibits constitute the entire understanding and agreement between the Parties with respect to the subject matter of this Agreement.

11.2 **Binding Covenants; Run With the Land**. All of the provisions, agreements, rights, powers, standards, terms, covenants, and obligations contained in this Agreement shall be binding upon the Parties and their respective successors (by merger, reorganization, consolidation, or otherwise) and assigns, devisees, administrators, representatives, lessees, and all of the persons or entities acquiring the Property or any portion thereof, or any interest therein, whether by operation of law or in any manner whatsoever, and shall inure to the benefit of the Parties and their respective successors (by merger, consolidation, or otherwise) and assigns. All of the provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land pursuant to applicable law, including but not limited to, Section 1468 of the Civil Code of the State of California.

11.3 **Applicable Law and Venue**. This Agreement has been executed and delivered in and shall be interpreted, construed, and enforced in accordance with the laws of the State of California, without reference to any of its conflict of laws principles. All rights and obligations of the Parties under this Agreement are to be performed in the County of Riverside. The exclusive venue for any disputes or legal actions hereunder or arising out of or in connection with this Agreement shall be the Superior Court of California in and for the County of Riverside and all Parties waive their respective rights to change venue pursuant to Section 394 of the Code of Civil Procedure.

11.4 **Construction of Agreement**. The Parties have mutually negotiated the terms and conditions of this Agreement and its terms and provisions have been reviewed and revised by legal counsel for both City and Developer. Accordingly, no presumption or rule that ambiguities shall be construed against the drafting Party shall apply to the interpretation or enforcement of this Agreement. Language in this Agreement shall be construed as a whole and in accordance with its true meaning. As used herein: (a) the singular shall include the plural (and vice versa) and the masculine or neuter gender shall include the feminine gender (and vice

versa) where the context so requires; (b) locative adverbs such as "herein," "hereto," "hereof," and "hereunder" shall refer to this Agreement in its entirety and not to any specific section or paragraph; (c) the terms "include," "including," and similar terms shall be construed as though followed immediately by the phrase "but not limited to;" (d) "shall" and "must" are mandatory and "may" is permissive; and (e) "or" is not necessarily exclusive. Each reference in this Agreement to this Agreement shall be deemed to refer to this Agreement as amended from time to time pursuant to the provisions of this Agreement, as applicable, whether or not the particular reference refers to such possible amendment.

11.5 **Project Is a Private Undertaking; No Joint Venture or Partnership**. The development proposed to be undertaken by Developer on the Project Site is a private development, except for that portion to be devoted to Public Improvements to be constructed by Developer. Developer is not a state or governmental actor with respect to any activity conducted by the Developer hereunder. City has no interest in, responsibility for, or duty to third persons concerning any of said improvements. Nothing in this Agreement, in any actions or negotiations leading to this Agreement, in any acts or omissions under this Agreement, or otherwise is intended to or does establish the City and Developer as partners, co-venturers, or principal and agent with one another.

11.6 **Force Majeure**. Subject to the limitations set forth below, performance by any Party of its obligations hereunder shall be excused and the required date for performance thereof shall be extended day for day during any period of "**Permitted Delay**" as hereinafter defined, subject, however, to the requirement that Developer must promptly communicate with the City concerning the delay and provide reasonable documentation of Developer's good faith efforts to diligently pursue performance as required under this Agreement. For purposes hereof, Permitted Delay shall mean delay beyond the reasonable control and without the fault of the Party claiming the delay (and despite the good faith efforts of such Party) first arising after the Effective Date (except for item (xii) below) including, but not limited to: (i) acts of God; (ii) civil commotion; (iii) riots; (iv) strikes, picketing, or other labor disputes; (v) shortages of materials or supplies; (vi) damage to work in progress by reason of fire, floods, earthquake, or other casualties; (vii) an Event of Default of the other Party; (viii) restrictions imposed or mandated by any regulatory authorities, utility providers, or other public agencies, or delays in obtaining any Third-Party Agency Approvals; (ix) enactment of conflicting state or federal laws or regulations, (x) judicial decisions or similar legal incapacity to perform, (xi) epidemics and pandemics, including COVID 19-induced restrictions on the ability of any Party to perform its obligations of this Agreement; (xii) litigation brought by a third party attacking the validity of this Agreement; and (xiii) delays caused by the City.

11.7 **Recordation**. Pursuant to Section 65868.5 of the Development Agreement Statute the City shall cause this Agreement to be recorded with the Riverside County Recorder within ten (10) days after execution of the Agreement or any amendment thereto, with costs to be borne by Developer.

11.8 **Signature in Counterparts**. This Agreement may be executed in duplicate counterpart originals, each of which is deemed to be an original, and all of which when taken together shall constitute one and the same instrument.

11.9 **Computation of Time; Time of the Essence**. All references in this Agreement to "days" shall mean calendar days unless expressly referred to as "business days." The time in which any act is to be done under this Agreement is computed by excluding the first day, and including the last day, unless the last day is a Saturday, Sunday, or holiday, and then that day is also excluded. If the day for performance of any obligation under this Agreement is a Saturday, Sunday, or holiday, then the time for performance of that obligation shall be extended to the first following day that is not a Saturday, Sunday, or holiday under the laws of California.

11.10 **Notices**. Any notice, demand, or other communication required to be given by Developer or City pursuant to this Agreement shall be in writing and shall be sufficiently given if (a) addressed as set forth below and (b) delivered in one of the following ways, and shall be deemed to have been delivered or received (i) three (3) days after the date when deposited in the United States registered or certified mail, return receipt requested, with postage prepaid (except in the event of a postal disruption, by strike or otherwise, in the United States), (ii) when personally delivered, (iii) when sent by electronic means, provided receipt was promptly confirmed in writing by another means of notice allowed in this Section 11.10 within one (1) business day, or (iv) one business day after the date deposited with a nationally recognized courier service (e.g., Federal Express) for next day delivery. The current principal office addresses and email addresses of the City and Developer are as follows:

To City:	City of Coachella 53990 Enterprise Way Coachella, CA 92236 Attn: [___] E-mail: [___]
With a copy to:	[City Attorney's office / outside counsel] Attn: [___] E-mail: [___]
To Developer:	Relevant Coachella Owner, LLC [Address] Attention: [___] E-mail: [___]
With a copy to:	[___] [Address] E-mail: [___]

Either Party to this Agreement may at any time, upon written notice delivered via certified mail or email to the other Party, designate any other person or address in substitution of the person and address to which such notice or communication shall be given.

If failure to respond to a specified notice, request, demand, or other communication within a specified period would result in a deemed approval, a conclusive presumption, a prohibition against further action or protest, or other adverse result specifically provided under this Agreement, the notice, request, demand, or other communication shall state clearly and unambiguously on the

first page, with reference to the applicable provisions of this Agreement, that failure to respond in a timely manner could have a specified adverse result.

11.11 **No Third Party Beneficiaries**. This Agreement and all provisions hereof is made and entered into for the sole protection and benefit of City, Developer, and their successors and assigns. No other person shall have right of action based upon any provision in this Agreement.

11.12 **Conflict of Interest**. No member, official, or employee of City shall make any decision relating to this Agreement which affects his or her personal interest or the interest of any corporation, partnership, or association in which he or she is directly or indirectly interested.

11.13 **Severability**. If any term, provision, covenant, or condition of this Agreement or its application to any Party or circumstance is held by a court of competent jurisdiction to be invalid, void, or unenforceable to any extent, the remaining provisions of this Agreement or the application of the term, provision, condition, or covenant to persons or circumstances other than those as to whom or which it is invalid or unenforceable, shall not be affected and shall continue in full force and effect to the fullest extent permitted by law, unless enforcement of the remaining portions of the Agreement would be unreasonable or grossly inequitable under all the circumstances or would frustrate the purposes of this Agreement.

11.14 **Further City Actions**. Except as may be otherwise specifically provided herein, whenever any approval, notice, direction, consent, request, waiver, or other action by the City is required or permitted under this Agreement, such action may be given, made, or taken by the Designee. The Designee is authorized to execute and deliver, on behalf of the City and to take any action necessary or desirable to effectuate the provisions and intent of this Agreement.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the day and year first above written.

Exhibit A

Legal Description Of Property

Certain real property consisting of approximately 87 acres located in the City of Coachella, County of Riverside, California, legally described on Exhibit A attached to the Development Agreement, comprised of four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) generally located south of Avenue 52, west of Van Buren Street, and east of Calhoun Street.

Exhibit B

Project Description

The proposed Project would include the development of a hospitality-oriented, mixed-use resort community on approximately 87 acres in the southwestern portion of the City of Coachella, currently comprised of date palm and grape agricultural fields, an irrigation pond, and approximately three dilapidated agricultural support structures. The Project consists of a Private Resort Sector and a Commercial Beach Club Sector organized around a central 9.4-acre recreational lagoon. Below is a summary of the Project components:

- The Private Resort Sector consists of 240 condo cottages (of which up to 120 will be owned by a single entity and operated as short-term rentals by a hotel operator) and 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites, totaling up to 402 units on approximately 28 acres.
- On-site resort amenities include recreational courts, a spa/pool, the lagoon and water features, a bar and entertainment venue, a library, and a restaurant, for the use of guests and owners of the Private Resort Sector.
- The Commercial Beach Club Sector is situated on approximately six acres in the northwest corner of the Project Site and consists of an 11,950-square-foot beach club, a 28,800-square-foot beach club lounging area, a 7,690-square-foot restaurant, a 6,048-square-foot sports bar, an 11,907-square-foot back-of-house area, and a 103,297-square-foot parking garage, available to owners and resort guests as well as the general public through reservation or event access.
- A 2.5-acre lake situated in the southern portion of the Project Site will act as a stormwater detention basin. A 0.4-acre lagoon is proposed within the Commercial Beach Club Sector.
- Development of the Project will also include landscaping, street improvements, drive aisles, and parking, with 951 parking spaces and 193 cart spaces proposed on-site. Access will be provided from two access points on Avenue 52, two access points on Calhoun Street, and one or more access points on Van Buren Street.
- Utility connections to the Coachella Water Authority water and sewer mains, Southern California Gas Company natural gas facilities, and IID electrical facilities are proposed as part of Project implementation, together with on-site solar generation and battery storage systems.

Exhibit C

Construction Phasing And Public Improvements

The Project Site is proposed to be developed in four phases:

- Phase 1 will include the water features, the Commercial Beach Club Sector, and the resort uses of the Private Resort Sector and occupies the majority of the Project Site.
- Phase 2 will develop the residential uses south of the lagoon and surrounding the proposed lakes.
- Phase 3 will include the residential estate lots south of Phase 2.
- Phase 4 will develop the residential estate lots south and west of Phases 2 and 3.

For purposes of the Transient Occupancy Tax rebate structure described in Section 4.5, Phase 1 buildout corresponds to 167 total units, Phase 2 completion corresponds to 273 total units, and full buildout corresponds to 402 total units.

Public Improvements to be constructed by Developer include roadway, sewer, water, storm drain, and electrical distribution improvements serving the Project, together with a portion of the off-site sewer main upsizing needed to serve other planned housing developments in the City, as more particularly described in the Project Approvals.

[Detailed phasing table and public improvement specifications to be attached.]

Exhibit D

Existing Development Fees and Credits

[Existing Development Impact Fee schedule applicable to the Project as of the Effective Date, and Fee Credits available to Developer under Section 4.2.3.3, to be attached.]

Notes: Project subject to applicable regional and City-wide impact fees in effect at time of payment, subject to the fifteen (15) year DIF Freeze Period described in Section 4.2.3.2.

Exhibit F

Form: Assignment And Assumption Agreement

REQUESTED BY
AND WHEN RECORDED MAIL TO:

Exempt From Recording Fee Pursuant to Government Code § 27383

ASSIGNMENT AND ASSUMPTION AGREEMENT

This Assignment and Assumption Agreement ("Assignment") is entered into this ____ day of ____, 20__ by and between [DEVELOPER ENTITY], a [California ___] ("Assignor") and _____, a _____ ("Assignee") with reference to the following:

RECITALS

A. Assignor is the owner in fee simple of certain real property located in the City of Coachella, California, and legally described on Exhibit A attached hereto and incorporated herein by this reference (the "Property" or "Site").

B. On _____ the Assignor and the City of Coachella, a California municipal corporation and charter city ("City") entered into that certain Development Agreement, which was recorded against the [Site or Development Property] in the Official Records of the County of Riverside on _____, as Instrument No. _____ (the "Development Agreement").

C. Pursuant to the terms of the Development Agreement, the Site was to be used for a hospitality-oriented mixed-use resort development known as COVA (the "Project").

D. Assignor now desires to transfer the Site to Assignee, and concurrently therewith, to transfer to Assignee all of Assignor's rights and responsibilities under the Project Agreements [to the extent that such rights and responsibilities relate to the Site].

NOW, THEREFORE, in consideration of the foregoing Recitals, which are incorporated herein by this reference, and for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. Assignor hereby assigns to Assignee all of Assignor's rights and responsibilities under the terms of the Development Agreement, [but only to the extent that such rights and responsibilities arise from the ownership of the Project and/or Site] from

and after the "Effective Date" (as that term is defined in Section 4 below) of this Assignment (collectively, the "Assigned Rights and Obligations").

2. Assignee hereby accepts the foregoing assignment of the Assigned Rights and Obligations, and agrees to be bound by the terms of the Development Agreement [to the extent that such terms affect or are affected by ownership of the Site].

3. The parties hereto acknowledge and agree that Assignee shall not be responsible for any of the obligations of the Development Agreement which arise from ownership of any portion of the Site and which arise prior to the Effective Date hereof. As such, a default by Assignor under the Development Agreement prior to the Effective Date hereof ("Assignor's Default") shall not be deemed a default by Assignee, and Assignor shall indemnify, defend and hold harmless Assignee from any and all losses, claims or liability, including without limitation reasonable attorneys' fees and costs, arising from an Assignor's Default. A default by Assignee under the Development Agreement with respect to the Site after the Effective Date hereof ("Assignee's Default") shall not be deemed a default by Assignor, and Assignee shall indemnify, defend and hold harmless Assignor from any and all losses, claims or liability, including without limitation reasonable attorneys' fees and costs, arising from an Assignee's Default.

4. This Assignment shall be deemed effective upon the last of the following events to occur: (a) conveyance of the Site to Assignee as evidenced by the recording of the grant deed therefor in the Official Records of the County of Riverside, California, and (b) the written consent to this Assignment by the City with respect to the Assigned Obligations arising under the Project Agreements (herein referred to as the "Effective Date").

5. Except as otherwise described in paragraph 4 above, the parties hereto each warrant and represent that they have taken all necessary corporate action to authorize the execution and performance of this Assignment and that the individuals executing this document on behalf of the parties are authorized to do so, and by doing so, create binding obligations as described herein of the party represented.

6. This Assignment shall be governed by the internal laws of the State of California, without regard to conflict of law principles.

7. This Assignment may be signed in counterparts which, when signed by both parties hereto, shall constitute a binding agreement.

WHEREFORE, the parties hereto have executed this Assignment on the date first written above.

Exhibit G

(General Plan Update EIR Mitigation Measures and Uniformly Applicable Development Policies and Standards)

Exhibit H

(Conditions of Approval)

APPENDIX I

1. DEFINED TERMS.
   a. **Administrative Fees.** Fees charged by the City, on a City-wide basis in effect at the time of payment to cover the costs of City's review of applications for any permit or other approval or review or inspection by City.
   b. **Agreement.** This Development Agreement between the City of Coachella and [DEVELOPER ENTITY].
   c. **Annual Minimum Payments.** The annual minimum amounts of TOT revenue to be received by City before any TOT rebate to Developer, as described in Section 4.5.3 of the Agreement.
   d. **Annual Review.** Annual review as required by Government Code Section 65865.1 and further described in Article 7 of this Agreement.
   e. **Applicable Rules.** The rules, regulations, ordinances, and officially adopted policies of the City in full force and effect as of the Effective Date of this Agreement.
   f. **Assignment and Assumption Agreement.** A duly executed agreement between Developer and a Permitted Transferee whereby the Developer assigns and the Permitted Transferee assumes all of Developer's rights and obligations under this Agreement as to that portion of the Project Site or Property transferred to that Permitted Transferee pursuant to the provisions of Article 9 of this Agreement.
   g. **Buildout Period.** The twenty (20) year period from the Effective Date within which the Project is to be constructed, as described in Section 1.3.2 of the Agreement.
   h. **CEQA.** California Environmental Quality Act (*Public Resources Code Section 21000, et seq.*)
   i. **CEQA Compliance Documentation.** The CEQA Guideline 15183 consistency determination/exemption checklist prepared for the Project, as approved by the City Council as described in Recital C.
   j. **CFD.** Mello-Roos Community Facilities District.
   k. **City.** The City of Coachella.
   l. **Commercial Beach Club Sector.** The public-facing beach club, restaurant, sports bar, and associated entertainment amenities described in Section 4.6.2 of the Agreement.
   m. **Community Benefits.** The extraordinary benefits provided by Developer to City and its residents, as more specifically described in Section 4.5 [Community Benefits] of this Agreement.
   n. **Conditions of Approval.** The conditions of approval imposed by the City on the Project Site Development Permits, as identified in Recital C of the Agreement.
   o. **Construction Cost Index.** The Construction Cost Index published monthly by the Engineering News-Record (ENR) to track changes in the cost of construction over time, to the extent incorporated into the City's Existing Development Fees.
   p. **Construction Phasing.** Development of the Project Site is permitted to occur in phases as described and contemplated in Exhibit C.
   q. **Dedicated Public Improvements.** Those Public Improvements constructed by or on behalf of Developer that have been accepted by City in accordance with the Applicable Rules.
   r. **Defaulting Party.** Party who fails to perform any material term or provision of this Agreement as more fully described in Section 10.1 of the Agreement.

s. **Developer.** [DEVELOPER ENTITY], a [California ___].

t. **Developer Affiliate.** A parent or subsidiary of Developer or a company under common ownership with Developer.

u. **Developer Event of Default.** Any failure by Developer to perform any material term or provision of this Agreement that is not cured within 60 days following written notice of default from City (or such further time as may be reasonably required to cure), as more fully described in Article 10 of this Agreement.

v. **Development Agreement Statute.** Sections 65864 et seq. of the Government Code.

w. **Development Fees or DIF.** All fees, contributions, exactions, dedications, reservations, or impositions, other than taxes or assessments, whether established for or imposed upon the Project individually or as part of a class of projects, that are imposed by City on the Project in connection with any Project Approval for any purpose, including, without limitation, defraying all or a portion of the cost of public services and/or facilities construction, improvement, operation, and maintenance attributable to the burden created by the Project.

x. **DIF Freeze Period.** The fifteen (15) year period from the Effective Date during which the Existing Development Fees are frozen, subject to inflation adjustment, as described in Section 4.2.3.2 of the Agreement.

y. **Effective Date.** The later to occur of (i) the effective date of Ordinance No. ____ approving this Agreement, or (ii) the expiration of the CEQA challenge period, or, if timely challenged, the date such challenge is finally resolved in favor of the validity of this Agreement.

z. **Event of Default.** Any failure by either Party to perform any material term or provision of this Agreement that is not cured within 60 days following written notice of default from the other Party (or such further time as may be reasonably required to cure), as more fully described in Article 10 of this Agreement.

aa. **Existing Development Fees.** The Development Fees applicable to the Project as set forth on Exhibit E.

bb. **Fee Credits.** The Development Impact Fee offsets and credits applicable to the Project as set forth on Exhibit E and described in Section 4.2.3.3 of the Agreement.

cc. **Financing Mechanism.** A Mello-Roos Community Facilities District or other financing district used to fund public facilities.

dd. **Future Changes to the Applicable Rules.** Any changes in the Applicable Rules, or any provisions of future general plans, specific plans, zoning ordinances, or other rules, regulations, ordinances or policies (whether adopted by means of ordinance, initiative, referenda, resolution, policy, order, moratorium, or other means) occurring after the Effective Date.

ee. **IID.** Imperial Irrigation District.

ff. **Indemnified Parties.** The City and its elected and other officials, officers, agents, and employees.

gg. **Insubstantial Modification.** Any minor modification or clarification to this Agreement which does <u>not</u> materially modify (i) the Term of this Agreement; (ii) permitted uses of the Project Site, (iii) maximum density or intensity of use within the Project, except as specifically allowed in the Project Approvals, (iv) provisions for the reservation or dedication of land, (v) conditions, terms, restrictions or requirements for subsequent discretionary actions, or (vi) monetary obligations of Developer.

hh. **GPU Mitigation Measures.** Mitigation measures and uniformly applied development policies and standards identified in the CEQA Compliance Documentation.

ii. **Mortgage.** Any mortgage, deed of trust, or other security device securing financing with respect to the Property.

jj. **Mortgagee.** Any deed of trust beneficiary, mortgagee or other secured party who acquires title to the Property, or any portion thereof, by foreclosure, trustee's sale, or deed in lieu of foreclosure.

kk. **Notice of Default.** Written notice to a Party asserting that Party's failure to perform a material term of the Agreement.

ll. **Operating Memorandum.** Written modification executed by Parties approved by City Manager or designee as an Insubstantial Modification.

mm. **Party or Parties.** City of Coachella and [DEVELOPER ENTITY].

nn. **Permitted Delay.** Delay beyond the reasonable control and without the fault of the Party claiming the delay (and despite the good faith efforts of such Party) first arising after the Effective Date (except for item (xii) below) including, but not limited to: (i) acts of God; (ii) civil commotion; (iii) riots; (iv) strikes, picketing, or other labor disputes; (v) shortages of materials or supplies; (vi) damage to work in progress by reason of fire, floods, earthquake, or other casualties; (vii) an Event of Default of the other Party; (viii) restrictions imposed or mandated by any regulatory authorities, utility providers, or other public agencies, or delays in obtaining any Third-Party Agency Approvals; (ix) enactment of conflicting state or federal laws or regulations, (x) judicial decisions or similar legal incapacity to perform, (xi) epidemics and pandemics, including COVID 19-induced restrictions on the ability of any Party to perform its obligations of this Agreement; (xii) litigation brought by a third party attacking the validity of this Agreement; and (xiii) delays caused by the City.

oo. **Permitted Transfer.** Any Transfer consented to by City or permitted without City's consent under Section 9.1 of the Agreement.

pp. **Permitted Transferee.** Transferee of a Permitted Transfer.

qq. **Private Resort Sector.** The condo cottages, single-family residential units, and associated resort amenities described in Section 4.6.1 of the Agreement.

rr. **Project.** Development of the Property with a hospitality-oriented, mixed-use resort community, including the Private Resort Sector and the Commercial Beach Club Sector, together with associated infrastructure, roadways, landscaping, parking, and signage.

ss. **Project Approvals.** (i) This Agreement, (ii) the amendment of the City's Zoning Code to allow single-family residential uses within the Regional Commercial (RC) zone, approved by the City Council on _____ by Resolution No. _____, (iii) the CEQA Compliance Documentation approved by the City Council on _____ by City Council Resolution No. _____, (iv) Tentative Tract Map No. 39330, (v) the Conditional Use Permit, Architectural Review, and Entertainment Permit approved or to be approved by the City Council for the Project, (vi) any future discretionary or ministerial approvals and/or permits issued for the Project (collectively, the "Project Site Development Permits"), and (vii) the conditions of approval associated with each and all of the foregoing approvals.

tt. **Project Site Development Permits.** Any future discretionary or ministerial approvals and/or permits issued for the Project.

uu. **Property or Project Site.** Certain real property consisting of approximately 87 acres located in the City of Coachella, County of Riverside, California, legally described on Exhibit A attached to the Development Agreement and generally located south of Avenue 52, west of Van Buren Street, and east of Calhoun Street.

vv. **Public Health and Safety Exception.** City's authority to take any legally valid action necessary to protect persons or property from dangerous or hazardous conditions which create a threat to the public health or safety, including, without limitation, authority to condition or deny a permit, approval, or agreement or other entitlement or to change or adopt any new regulations applicable to the Project so long as such condition or denial or new law (i) is limited solely to addressing a specific and identifiable issue in each case required to protect the physical health and safety of the public, and (ii) is based on written findings by City and transmitted to Developer, specifically identifying, based on objective and quantifiable evidence in the official record, the precise nature and extent of the dangerous or hazardous conditions requiring such condition or denial or change in the Applicable Rules, why there are no reasonable alternatives to the imposition of such condition or denial or changes in the law, and how such condition or denial or new law would alleviate the dangerous or hazardous condition.

ww. **Public Improvements.** All roadways, sidewalks, drainage, sewer, water, storm drain, and electrical distribution improvements, and all other infrastructure and improvements for the Project, including any onsite improvements or offsite improvements, that may or are to be dedicated or otherwise made available for public use pursuant to this Agreement or the Project Approvals.

xx. **State or Federal Law.** A state or federal law or regulation enacted after the Effective Date.

yy. **STVR Ordinance Amendment.** The amendment to Coachella Municipal Code Chapter 5.80 and related confirmation that the Private Resort Sector is a First Class Hotel use, as described in Recital D of the Agreement.

zz. **Subsequent Approvals.** Any future applications for discretionary or ministerial approvals and/or permits necessary or convenient for implementation of the Project, which may include, without limitation: final subdivision and condominium maps, conditional and administrative use permits, entertainment permits, plot plans, street abandonments, design plan approvals, certificates of compliance, demolition permits, improvement agreements, infrastructure agreements, grading permits, building permits, right of way permits, site plans, sewer and water connection permits, certificates of occupancy, parcel and condominium maps, encroachment permits, ABC license approvals, and amendments thereto and to the Project Approvals.

aaa. **Term.** The fifty (50) year term of this Agreement, as may be extended or terminated, as described in Section 1.3.2 of the Agreement.

bbb. **Third-Party Agency Approvals.** Required approvals or clearances from various Regulatory Agencies, other third-party public agencies and utilities.

ccc. **TOT.** Transient occupancy tax.

ddd. **Transfer.** Any sale, mortgage, hypothecation, assignment or transfer all or a portion of Developer's rights, duties, and obligations arising under this Agreement.

eee. **Transferee.** Any person, partnership, joint venture, firm, or corporation who is receiving all or a portion of Developer's rights, duties, and obligations arising under this Agreement pursuant to a Transfer.

fff. **Uniform Code Regulations.** California Building Standards Code, as amended by the City in accordance with the California Health and Safety Code, including requirements of the applicable Building Code, Administrative Code, Energy Code, Residential Code, Mechanical Code, Electrical Code, Plumbing Code, Fire Code, or other applicable construction codes.

ggg. **Vested Elements.** The overall design, development, construction, and use of the Project and all improvements in connection therewith, including without limitation, permitted uses of the Property, the maximum density of development, the intensity of use, the maximum height and size of the proposed buildings, provisions for reservation or dedication of land for public purposes, the conditions, terms, restrictions, and requirements for subsequent discretionary actions, the provisions for and financing for public improvements, and the other terms and conditions of development applicable to the Property as set forth in the Project Approvals.

Subject: Energy Efficient Design & Heat Island Reduction Plan for TTM 39330, CUP 396, EA 25-03-COVA

Dear Adrian,

This letter provides the requested Energy Efficient Design and Heat Island Reduction Plan pursuant to the City of Coachella Municipal Code and summarizes the Project's consistency with the City of Coachella Climate Action Plan (CAP) Development Review Checklist, based on the information evaluated in the Project's CEQA analysis and incorporated into the Project design.

1. Energy Efficient Design and Heat Island Reduction Plan (CMC)

Per the City's Municipal Code, new development shall submit an energy efficient design and heat island reduction plan incorporating strategies such as light-colored cool roofs, light-colored paving, permeable paving, substantial shade tree coverage, shade structures, and shaded asphalt paving, and shall incorporate energy-efficient building and site design strategies including appropriate solar orientation, thermal mass, use of natural daylight and ventilation, and shading.

Project Overview

The approximately 86-acre Project proposes development of 165 single-family units, 244 condo hotel units, recreational amenities, approximately 12 acres of water features, and associated improvements (including pedestrian sidewalks, paved aisles, parking spaces, and landscaping).

A. Heat Island Reduction Strategies

The Project will incorporate the following heat island reduction strategies through the final architectural, civil, and landscape plans:

- Cool roofs: Use of light-colored cool roofing materials consistent with current energy code requirements and project specifications.
- Hardscape treatments: Use of light-colored paving and shaded asphalt paving where feasible, and incorporation of permeable paving in appropriate locations as reflected in the civil and landscape plans.

- Shade coverage: Provision of substantial shade tree coverage and shade structures (including shade structures with cool roofing materials and/or solar photovoltaic shade structures) within pedestrian areas and parking areas to reduce surface temperatures and improve comfort.

B. Energy-Efficient Building and Site Design Strategies

Consistent with the Municipal Code and the Project's CEQA Energy analysis, the Project will incorporate:

- Appropriate solar orientation in site planning and building design to maximize energy efficiency and reduce solar heat gain;
- Building design strategies supporting thermal performance (including thermal mass and envelope performance, as applicable);
- Natural daylighting and ventilation strategies where feasible; and
- Shading through architectural features and landscape design.

C. Parking Lot Shade Requirement

The Municipal Code requires that shade tree plantings in surface parking areas be installed to provide shade over fifty (50) percent of the parking area within ten (10) years. The Project will comply by providing shade through a combination of:

- The Landscape Plan has been designed to place enough trees adjacent to sidewalks to provide shading of project sidewalks within 5 years of Project operation
- Solar photovoltaic shade structures and/or shade structures with cool roofing materials, which are permitted in whole or in part in lieu of shade tree plantings.

2. CEQA Energy Commitments Supporting the Plan

The CEQA Energy analysis concludes the Project is not anticipated to use an unnecessary or wasteful amount of energy and will comply with applicable State and local regulations to conserve energy and reduce greenhouse gas emissions. Key Project commitments include:

- Compliance with Title 20 (Appliance Efficiency Standards) and Title 24 Building Energy Efficiency Standards and CALGreen Building Standards Code;
- Use of energy-efficient appliances and high-efficiency lighting;
- Covered parking stalls with PV solar facilities;
- Receipt of a will-serve letter from IID and construction of a new on-site substation to provide electrical power to the Project site;
- Incorporation of solar generation and battery storage systems to help offset electricity demand from the regional grid;

- On-site solar systems that will provide 50 percent of electricity for single-family homes, condos/townhomes, movie theaters, and restaurants; and
- Full electrification of all residential buildings (single-family homes and condos/townhomes), eliminating natural gas use for those buildings.

The CEQA analysis further concludes the Project would not obstruct applicable State or local plans for renewable energy or energy efficiency and would be consistent with the State's climate direction (including the 2022 CARB Scoping Plan pathway toward carbon neutrality by 2045).

3. City of Coachella CAP – Development Review Checklist Consistency (Summary)

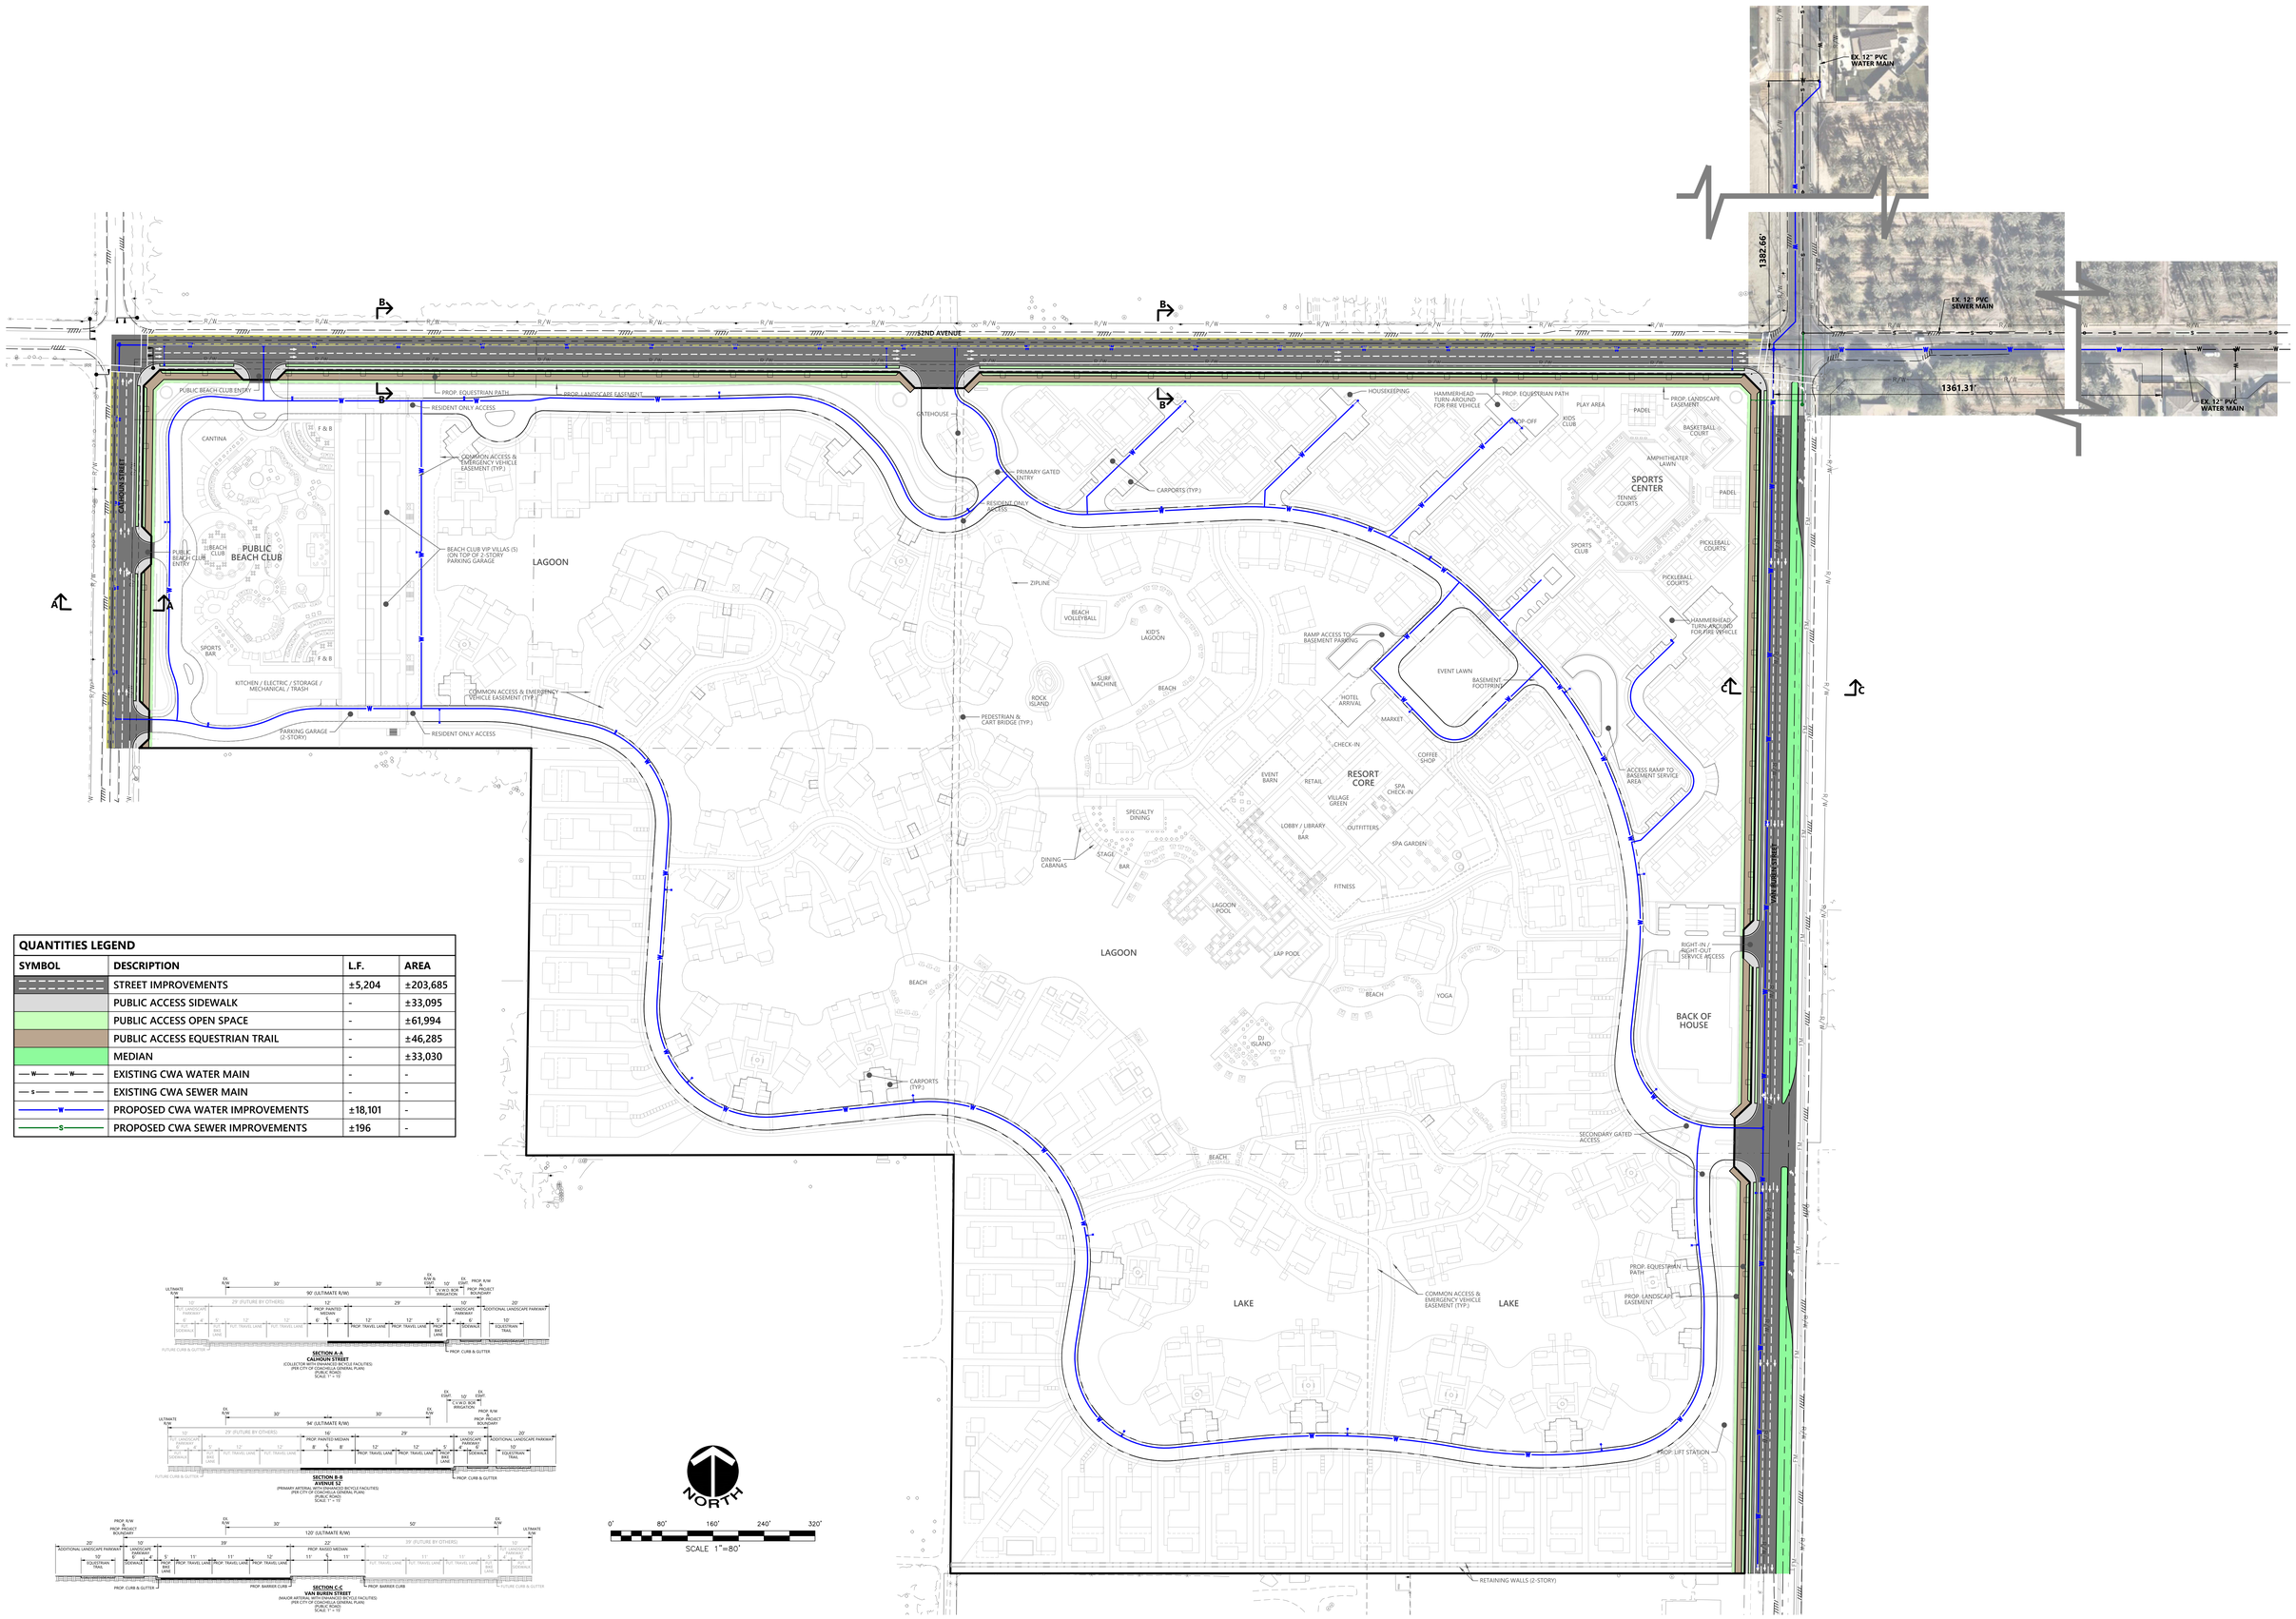
The City of Coachella CAP recommends GHG emissions targets consistent with State reduction targets and includes a development review checklist to determine compliance and eligibility for streamlining. Compliance with the CAP is determined based on checklist responses, and a "No" response to an applicable Project Design Feature requires project adjustment or an alternative compliance path.

Based on the Project's design features, CEQA commitments, and applicable regulatory requirements, the Project is consistent with the CAP Development Review Checklist items provided, including (summary highlights):

- Recycling: Designated recycling and trash service consistent with SB 939 requirements.
- General Plan Consistency / Subarea Character / Urban Form: Land uses allowed under the General Plan designation and consistent with the Regional Retail District vision and intent.
- Urban Forest: Landscape plan designed consistent with City guidelines requiring shade trees at approximately one tree per 50 feet along street frontages, open space frontages, and public walkways.
- Construction Emissions: Construction emissions reduction measures (including limiting idling beyond regulatory requirements and use of electric/hybrid equipment where feasible) consistent with the identified Project Design Features.
- Recycled Content / CD&D Waste: Construction recycling/diversion and reuse commitments consistent with applicable State law and Municipal Code requirements (including AB 341 and CALGreen).
- Energy Efficiency / Passive Solar Design / Solar Orientation: Project commitments to exceed Title 24 and incorporate passive solar design and orientation strategies consistent with CAP checklist standards.
- Shaded Public Spaces / Urban Heat Island: Shading provided through trees and/or shade structures to meet shading targets for public spaces and reduce heat island effects, supported by cool roof/cool pavement strategies and shade trees.

- Solar Energy: On-site PV systems providing 50% electricity for identified land uses consistent with the CAP checklist development standard (through implementation of MM GHG-2, as cited in the CEQA analysis).
- Pedestrian Connectivity / Complete Streets Elements: Internal pedestrian pathways linking uses and connecting to surrounding streets/sidewalk networks; traffic calming and low-speed private road design.
- EV Infrastructure / Lighting: Compliance with current Title 24 requirements for EV charging and energy-efficient LED lighting for streets and parking lots.
- Water / Stormwater / LID / Purple Pipe / Greywater Readiness: Low-impact design stormwater strategies and water efficiency commitments consistent with CAP checklist development standards and applicable regulations.

4. Conclusion



The enclosed information provides the City-requested Energy Efficient Design and Heat Island Reduction Plan and demonstrates the Project's consistency with the City's CAP development review checklist standards as summarized above. The Project will implement these strategies through final construction documents and applicable permit conditions.

Please let me know if any additional information is needed.

Thank you,

Nicole Vann

NOTICE OF PUBLIC HEARING
CITY OF COACHELLA PLANNING COMMISSION MEETING

NOTICE IS HEREBY GIVEN that the Planning Commission of the City of Coachella ("Planning Commission") will hold a public hearing on Wednesday, October 7th, 2026 at 6:00 p.m. at 1515 Sixth Street, Coachella CA 92236 to consider oral and written testimony regarding the "COVA" project, including Tentative Tract Map No. 39330, Conditional Use Permit No. 396, Architectural Review No. 25-07, Development Agreement No. 25-01, Zoning Ordinance Amendment No. 26-02 and Zoning Ordinance Amendment No. 26-03. The project proposes development of a hospitality focused, mixed-use development located on approximately 87 acres located on four contiguous parcels identified as APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002, generally south of Avenue 52, west of Van Buren Street and east of Calhoun Street.

The Planning Commission will consider making recommendations to the City Council on the following entitlements: Tentative Tract Map No. 39330, Conditional Use Permit No. 396, Architectural Review No. 25-07, Development Agreement No. 25-01, Zoning Ordinance Amendment No. 26-02 to allow single-family residential uses in the Regional Commercial Zone, and Zoning Ordinance Amendment No. 26-03 relating to the City's short-term rental regulations.

The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo cottages, and 162 single-family residential (SFR) units. Of the 240 condo cottages approximately 120 will be owned by a single entity and operated as short term rentals by a hotel operator/hotel flag ("Hotel Condo Units"). The SFR units and up to 120 condo cottages will operate under fractional ownership, timeshare, second homes, and/or short-term rental models that will function together with the Hotel Condo Units as an integrated hospitality-oriented resort community organized around a central lagoon. These accommodations will be complemented by on-site resort amenities (i.e., recreation center, courts, spa/pool, beaches, bar and entertainment, library, restaurant), which will be used by guests/owners of this sector. The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. These sub-areas are anticipated to operate with an assumed typical weekday capacity of 500 persons and an assumed weekend capacity of 1,500.

Development of the project would also include landscaping, street improvements, drive aisles, and parking. Access to the project will be provided from two entry points on Avenue 52, two access points on Calhoun Street, and two access points on Van Buren Street. The project proposes 951 parking spaces and 193 cart spaces onsite. The project includes a Conditional Use Permit (CUP) to approve the proposed special event establishment use and single-family residential use. The project includes a Development Agreement (DA).

The existing zoning designation is Regional Commercial (RC), which is consistent with the Regional Retail District except that single-family residential uses are not an expressly allowed use in this zone. Accordingly, the project analyzed in this document includes an application by the Developer to amend the City's Zoning Code to allow single-family residential uses in the Regional Commercial zone to bring the zone into full consistency with the General Plan land use designation.

To avoid any conflicts with the City's short-term rental ordinance (CMC Section 5.80), the Developer is seeking an amendment to that ordinance to provide that projects with an approved Development Agreement are exempt from the provisions of that ordinance limiting the number of units that can be owned by one owner and limiting the percent of units that can be permitted for short-term rentals, as well as any other provisions of the ordinance specifically modified in the approved Development Agreement. Applicant: Relevant Coachella Owner, LLC.

Pursuant to the California Environmental Quality Act ("CEQA"), Public Resources Code section 21083.3 and State CEQA Guidelines section 15183, projects that are consistent with the development density established by a general plan, community plan, or zoning action for which an environmental impact report ("EIR") was certified generally do not require additional environmental review, except to examine project-specific significant effects that are peculiar to the project or its site. The City has analyzed the project and determined that it is consistent with the development density established in the City's General Plan, for which the City Council certified an EIR on April 22, 2015 (Resolution No. 2015-03). The analysis further concludes that the Project will not result in: (1) environmental effects peculiar to the project or the parcel; (2) significant effects that were not analyzed in the General Plan EIR; (3) potentially significant off-site or cumulative impacts not discussed in the General Plan EIR; or (4) previously identified significant effects that, due to substantial new information unavailable when the General Plan EIR was certified, would be more severe than analyzed in that EIR. Accordingly, no additional environmental review is required for the project pursuant to Public Resources Code section 21083.3 and State CEQA Guidelines section 15183.

Copies of the Application materials submitted are available for public inspection at the Coachella Development Services Department 53990 Enterprise Way, Coachella, CA 92236 between the hours of 7:00 am and 6:00 pm, Monday through Thursday. City Hall is closed on Fridays. (Se Habla Español).

In addition to submitting written comments at the address noted above, you may email cityclerk@coachella.org or call (760) 398-3102 before 12:00 p.m. on the day of the meeting to leave a voice message. You may request to speak via zoom by contacting the City Clerk through the above means before 12:00 p.m. on the day of the meeting and requesting a Zoom link to the meeting. Public comments either received via email, telephonically or via Zoom must be limited to a maximum of 250 words written or three minutes spoken.

The live stream of the meeting may be viewed online by accessing the City's website at www.coachella.org, and clicking on the "Agendas/Minutes" tab located on the home page, and finding the Zoom Meetings link to the meeting on the posted agenda.

If any individual or group challenges this action in court, issues raised may be limited to those issues raised at the public hearing described in this notice or in written testimony. Any questions or comments may be directed to:

Pursuant to your request, we herewith submit our market study pertaining to the above-captioned property. We have inspected the real estate and analyzed the market conditions in the Coachella Valley, California, area. We have studied the proposed project, and the results of our fieldwork and analysis are presented in this report. We have also reviewed the proposed improvements for this site.

We hereby certify that we have no undisclosed interest in the property, and our employment and compensation are not contingent upon our findings. This study is subject to the comments made throughout this report and to all assumptions and limiting conditions set forth herein.

Sincerely,
HVS Consulting & Valuation

1. Executive Summary

Subject of the Market Study

The subject of the market study is a site measuring 3,713,926 square feet (85.26 acres) that is planned to be improved with a phased luxury-level, wellness focused mixed- use project featuring residential, hotel, club, and co-ownership components; the hotel and residences are anticipated to be associated with a to-be-determined brand. The preliminary brands under consideration include Auberge, Rosewood, One and Only, One Hotels, and Montage. We assume the brand will be one of the preliminary brands or a similar brand within the luxury hotel tier.

The property, which is expected to open on March 1, 2030 (Phase 1), will feature 402 rentable units, inclusive of the following components which will participate within in a rental program.

- 240-room Condo-Hotel Townhomes featuring one-bedroom units
- 51 three and four-bedroom whole ownership Villas
- 39 four and five-bedroom whole ownership Residences
- 6 eight-bedroom whole ownership Estates
- 5 whole ownership Sky Villas

The concept of the proposed subject property will be focused on wellness, and is designed to be the premier destination for wellness in the Coachella Valley, featured wellness focused facilities such as an on-site longevity clinic, two-story fitness center, luxury spa, immersive outdoor onsen, 25-meter lap pool, and an island dedicated to yoga and meditation. In addition, the resort will feature a ten-acre swimmable lagoon in the center of the site which will offer sandy beaches, nine food & beverage outlets, sports center, surf machine, club membership program, beach club and live music venue, library, event spaces, outdoor amphitheater, kid's club, kid's pool, splash pad, and working barn. The property will also contain ample parking capacity and all necessary back-of-the-house space.

The illustrated master plan for the proposed COVA Coachella is illustrated on the following page.

FIGURE 1-1 ILLISTRATED MASTER PLAN FOR THE PROPOSED COVA COACHELLA

RENDERING OF THE PROJECT

The subject site's location is 83857 52nd Avenue, Coachella, California 92236.

Summary of Pertinent Projections

A summary of pertinent projections for the property's hotel, whole ownership, co-ownership, and members club components, are presented in the following tables,

Pertinent Dates

The date of the report is November 11, 2025. The subject site was inspected by Gary L. Johnson on October 13, 2025. The first phase of the property is expected to open on March 1, 2030. The additional phases of the resort are anticipated to open on December 1, 2030, November 1, 2031, and September 1, 2032.

The phasing plan is illustrated in the following bullet points.

Phase 1 – Opening March 1, 2030

- 208 Condo-Hotel Units
- 12 Residences
- 9 Villas
- 6 Co-Ownership Villas
- 5 Sky Villas

Phase 2 – Opening December 1, 2030

- 55 Co-Ownership Villas
- 42 Villas (Whole Ownership)
- 32 Condo-Hotel Units
- 4 Estates

Phase 3 – Opening November 1, 2031

- 14 Residences

Phase 4 – September 1, 2032

- 13 Residences
- 2 Estates

Ownership of the Subject Site

The current owner of the subject site is Relevant Coachella Owner, LLC; the parent company of this owning entity is Relevant Partners, which is based in Hollywood, California. Relevant Partners is a vertically integrated real estate company specializing in highly branded, hospitality-centric residential development and investment. The partners have combined over 80 years of developing and financing projects, have raised over three billion for US real estate and private equity across over 30 projects, and have a network of over 600 limited partners across eight projects.

Management and Franchise Assumptions

Details pertaining to management terms were not yet determined at the time of this report; however, we assume that the proposed hotel will be managed by a professional hotel-operating company, with fees deducted at rates consistent with current market standards. Our projections reflect a total management fee of 3.0% of total revenues.

The preliminary brands under consideration include Auberge, Rosewood, One and Only, One Hotels, and Montage. Although a specific franchise affiliation and/or brand has yet to be finalized, based upon a review of several published franchise fees for brands that fall within the recommended product tier. The proposed hotel will reportedly be managed by the brand throughout the forecast period; as such, it will not be subject to franchise fees.

The subject whole ownership and co-ownership components are anticipated to be privately owned by third parties but will be required to participate in a rental program to be marketed for hotel use. Terms of the agreement were not yet determined at the time of this report. Based on our conversation with the developer, we have assumed the revenue generated by the rental program will be split between the unit owners and property ownership (50.0%/50.0%) after a 12.0% service charge.

Scope of Work

The methodology used to develop this study is based on the market research and valuation techniques set forth in the textbooks authored by Hospitality Valuation Services for the American Institute of Real Estate Appraisers and the Appraisal Institute, entitled *The Valuation of Hotels and Motels,*[1] *Hotels, Motels and Restaurants: Valuations and Market Studies,*[2] *The Computerized Income Approach to Hotel/Motel Market Studies and Valuations,*[3] *Hotels and Motels: A Guide to Market Analysis, Investment Analysis, and Valuations,*[4] and *Hotels and Motels – Valuations and Market Studies.*[5]

1. All information was collected and analyzed by the staff of HVS Consulting & Valuation. Information was supplied by the client and/or the property's development team.
2. The subject site has been evaluated from the viewpoint of its physical utility for the future operation of a mixed-use resort, as well as access, visibility, and other relevant factors.
3. The subject property's proposed improvements have been reviewed for their expected quality of construction, design, and layout efficiency.
4. The surrounding economic environment, on both an area and neighborhood level, has been reviewed to identify specific hostelry-related economic and demographic trends that may have an impact on future demand for hotels, co-ownership, and whole ownership.
5. Dividing the market for hotel accommodations into individual segments defines specific market characteristics for the types of travelers expected to utilize the area's hotels. The factors investigated include purpose of visit, average length of stay, facilities and amenities required, seasonality, daily demand fluctuations, and price sensitivity.
6. An analysis of existing and proposed competition provides an indication of the current accommodated demand, along with market penetration and the degree of competitiveness.
7. Documentation for an occupancy and ADR projection is derived utilizing the build-up approach based on an analysis of lodging activity.
8. Comparable whole ownership sales from Coachella Valley, as well as other comparable markets, were researched and reviewed to determine the appropriate market-based price points that could reasonably be achieved for the subject whole ownership components.
9. Review of reasonable commissions and closing costs, inclusive of administrative and general expenses, marketing, legal and other expenses were deducted to arrive at the forecast net sale proceeds for the proposed subject whole ownership components.
10. A detailed projection of income and expense made in accordance with the Uniform System of Accounts for the Lodging Industry (USALI) sets forth the anticipated economic benefits of the subject property's hotel component.

2. Description of the Site and Neighborhood

The suitability of the land for the operation of a mixed-use property is an important consideration affecting the economic viability of a property and its ultimate marketability. Factors such as size, topography, access, visibility, and the availability of utilities have a direct impact on the desirability of a particular site.

The subject site is located in an affluent neighborhood on the west site of Coachella, in the southwest quadrant of the intersection formed by Van Buren Street and 52nd Avenue. The subject site is proximate to the renowned Madison Club, The Hideaway Golf Club, and the Coachella Music Festival grounds. This site is in the city of Coachella, California.

LOCATION MAP

Physical Characteristics

The subject site comprises three contiguous parcels, which collectively measure approximately 85.26 acres, or 3,713,926 square feet. Identification of the subject parcel's is illustrated in the following table.

FIGURE 2-1 IDENTIFICATION OF THE SUBJECT PARCELS

Property ID #	Square Feet	Acres
780040003	2,862,328	65.71
780060002	428,630	9.84
780060001	422,968	9.71
Total	3,713,926	85.26

The parcel's adjacent uses are set forth in the following table.

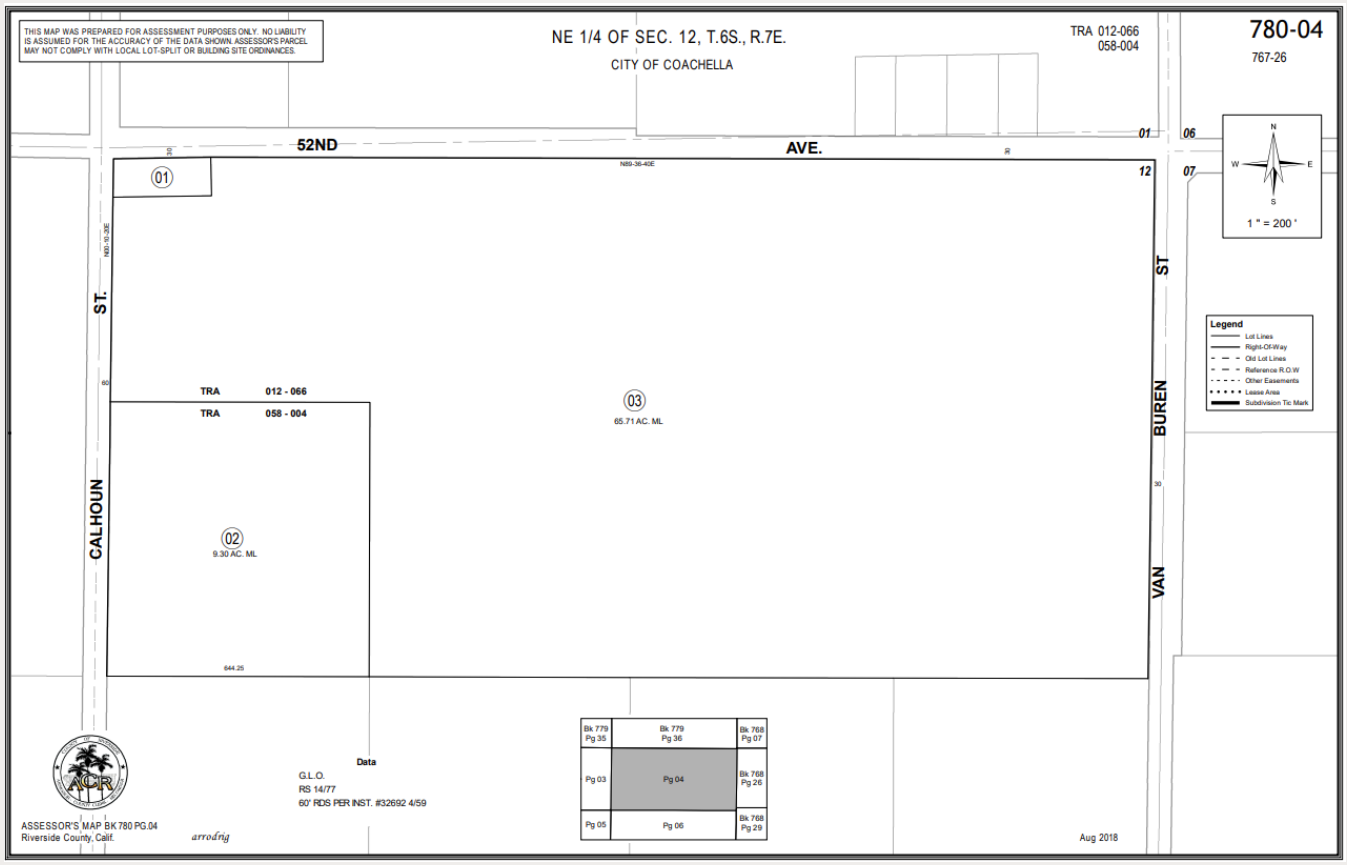

FIGURE 2-2 SUBJECT PARCEL'S ADJACENT USES

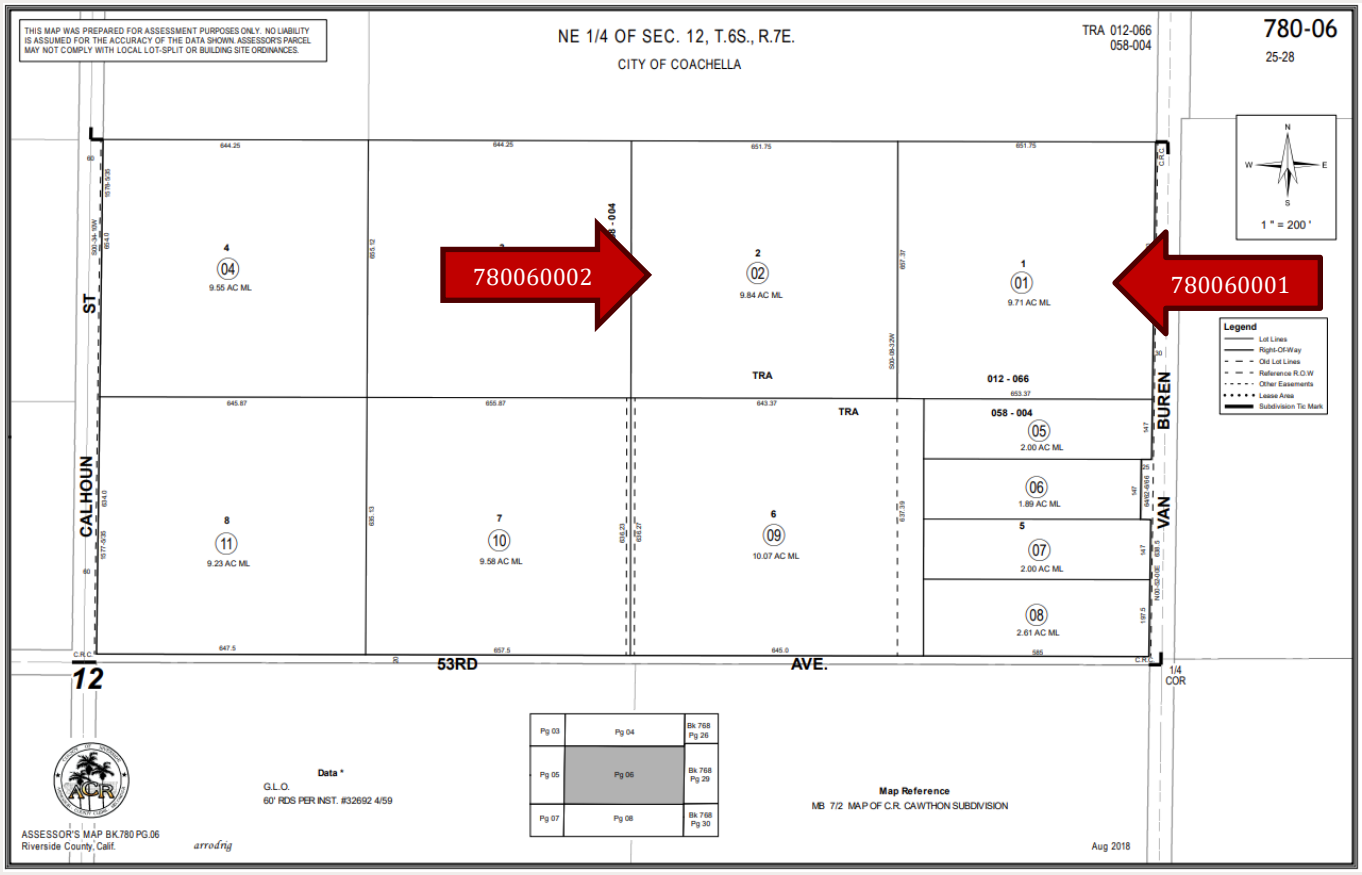
Direction	Adjacent Use
North	52nd Avenue
East	Van Buren Street
South	Agriculture
West	Calhoun Street, Agriculture



Topography and Site Utility

The topography of the site is generally flat and its shape should permit efficient use of the site for the buildings and other improvements, as well as ingress and egress. Upon completion of all construction efforts, the subject site will not contain any significant portion of undeveloped land that could be sold, entitled, and developed for alternate use. It is expected that the site will be developed fully with building and site improvements, thus contributing to the overall profitability of the resort.

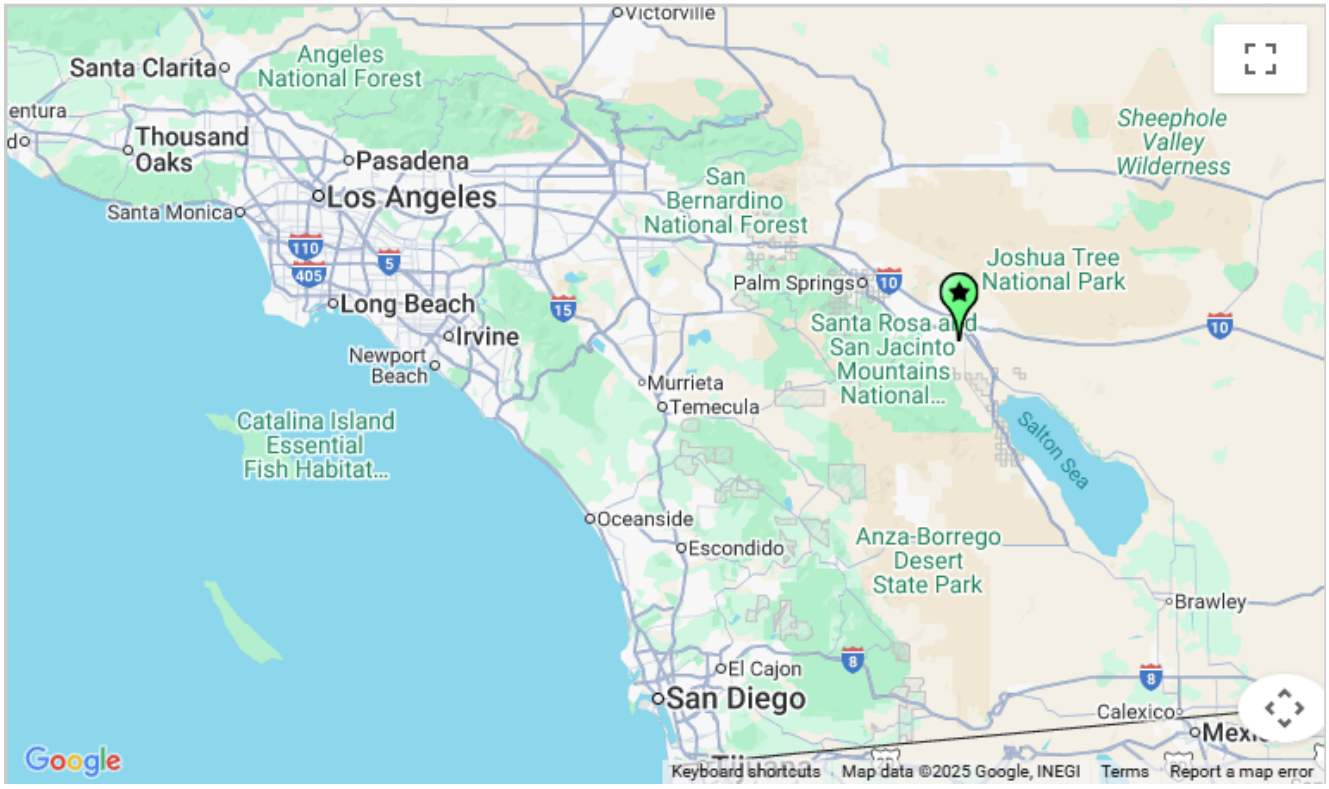
AERIAL VIEW OF SUBJECT SITE

VIEW OF SUBJECT SITE, AS OF OCTOBER 13, 2025

VIEW FROM SITE TO THE NORTHEAST



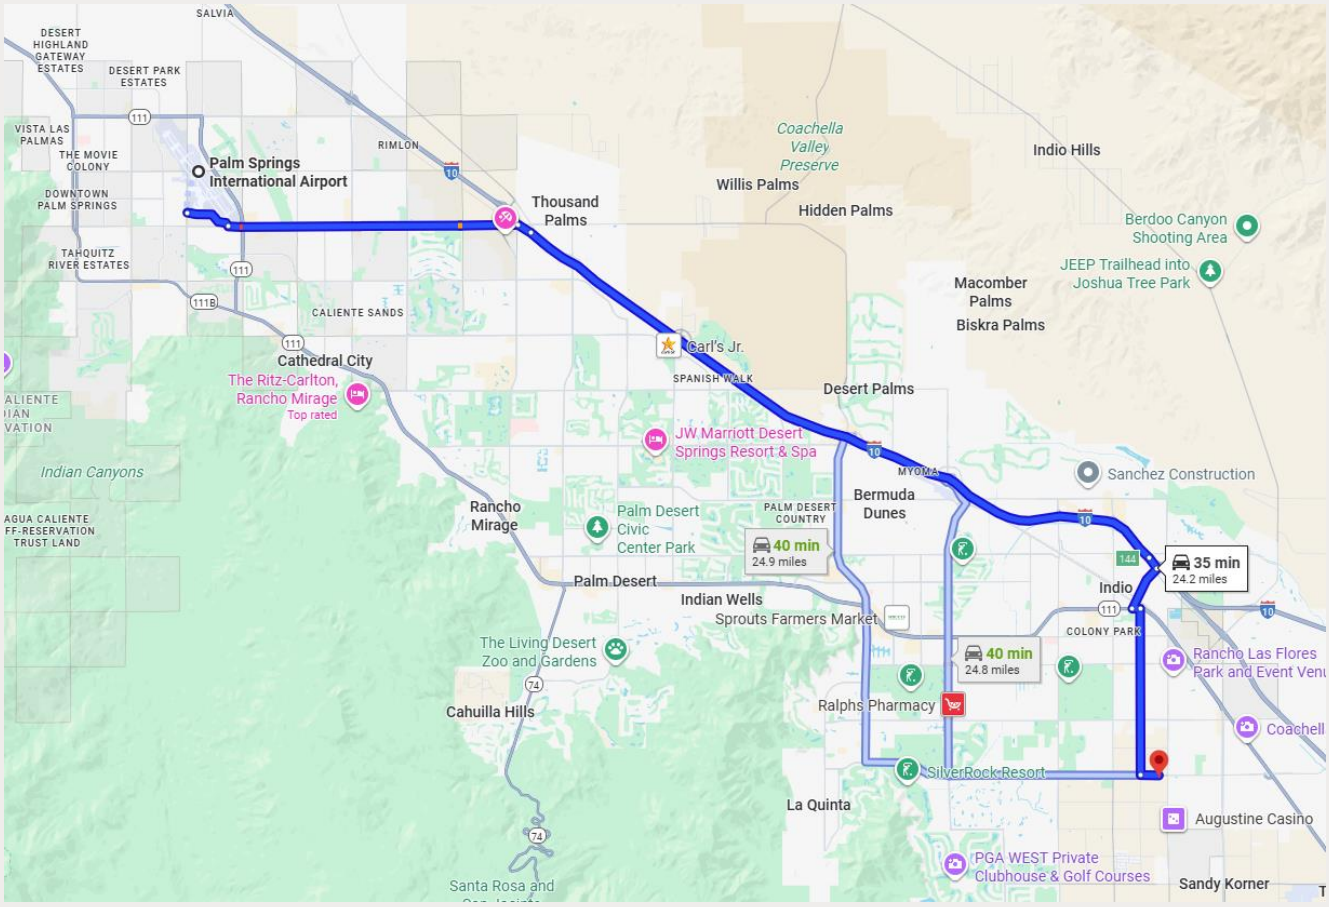
VIEW FROM SITE TO THE NORTHWEST

Access and Visibility

It is important to analyze the site with respect to regional and local transportation routes and demand generators, including ease of access. The subject site is readily accessible to a variety of local and county roads, as well as state and interstate highways.

MAP OF REGIONAL ACCESS ROUTES

Primary regional access through the area is provided by east/west Interstate 10, which extends to such cities as Phoenix, Arizona, to the east and the Los Angeles metro area to the west. North/south State Highway 111 is another major route, which provides local access to the desert cities of Palm Springs, Cathedral City, Palm Desert, Indian Wells, La Quinta, and Indio, and generally parallels Interstate 10 roughly five miles southwest of the interstate. State Highways 62, 74, and 86 also extend from Interstate 10 in this region and provide access to smaller communities in this part of the state.

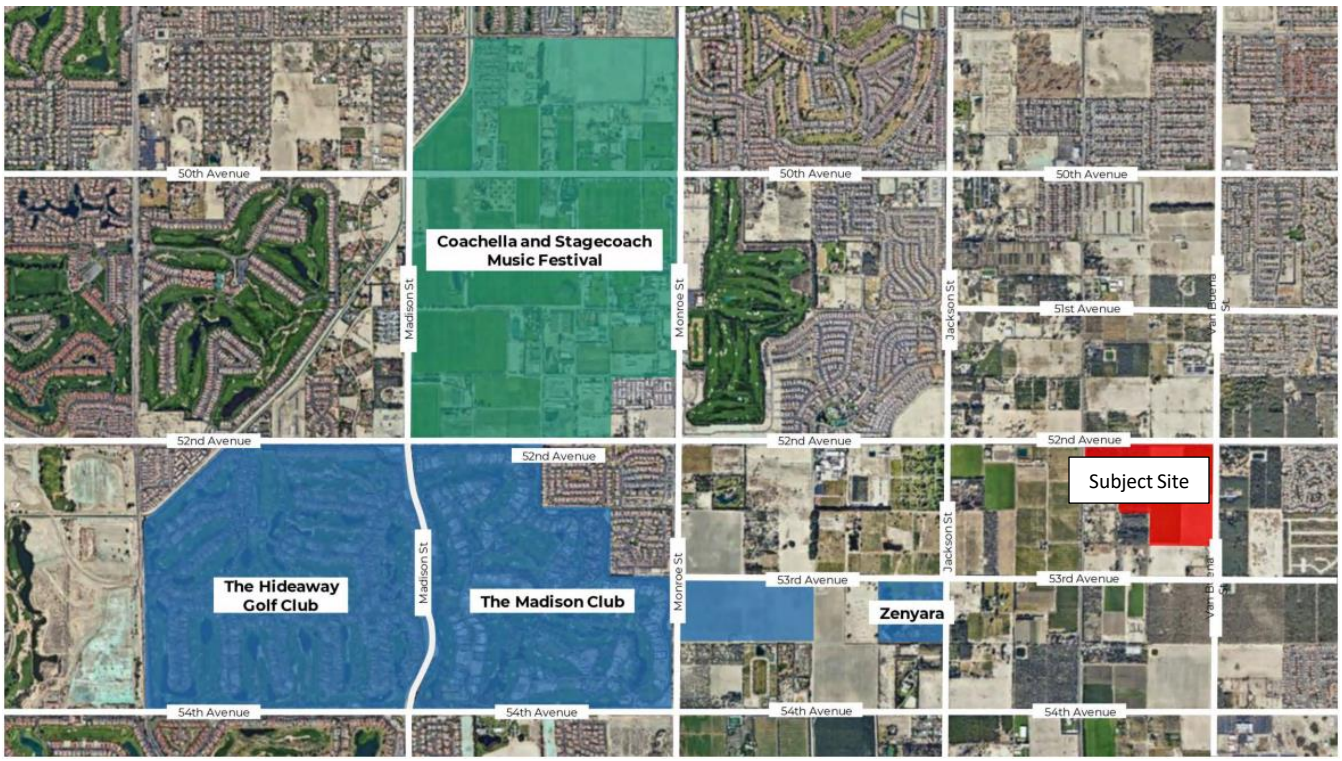


Primary vehicular access to the subject site is provided by 52nd Avenue. Access is also be available from Van Buren Street. The subject site is located near a busy intersection and is relatively simple to locate from Interstate 10, which is the

nearest major highway. The proposed subject property is anticipated to have adequate signage at the street. Overall, the subject site benefits from good accessibility, and the proposed resort is expected to enjoy good visibility from within its local neighborhood.

Airport Access

The proposed subject property will be served by Palm Springs International Airport, which is located approximately 18 miles to the northwest of the subject site.



MAP OF AIRPORT ACCESS ROUTES

Neighborhood

The neighborhood that surrounds the subject site is generally defined by 48th Avenue to the north, Harrison Street to the east, Airport Boulevard to the south, and Jefferson Street to the west. The neighborhood is characterized by luxury residential area, golf courses, and agricultural area, primarily citrus fruit and date palms. Some specific entities in the area include the Coachella and Stagecoach Music Festival grounds, Madison Club, Hideaway Club, and Zenyara Luxury Resort Villas. Prominent golf courses in the vicinity include the Mountain View Country Club, PGA West, and The Quarry at La Quinta.

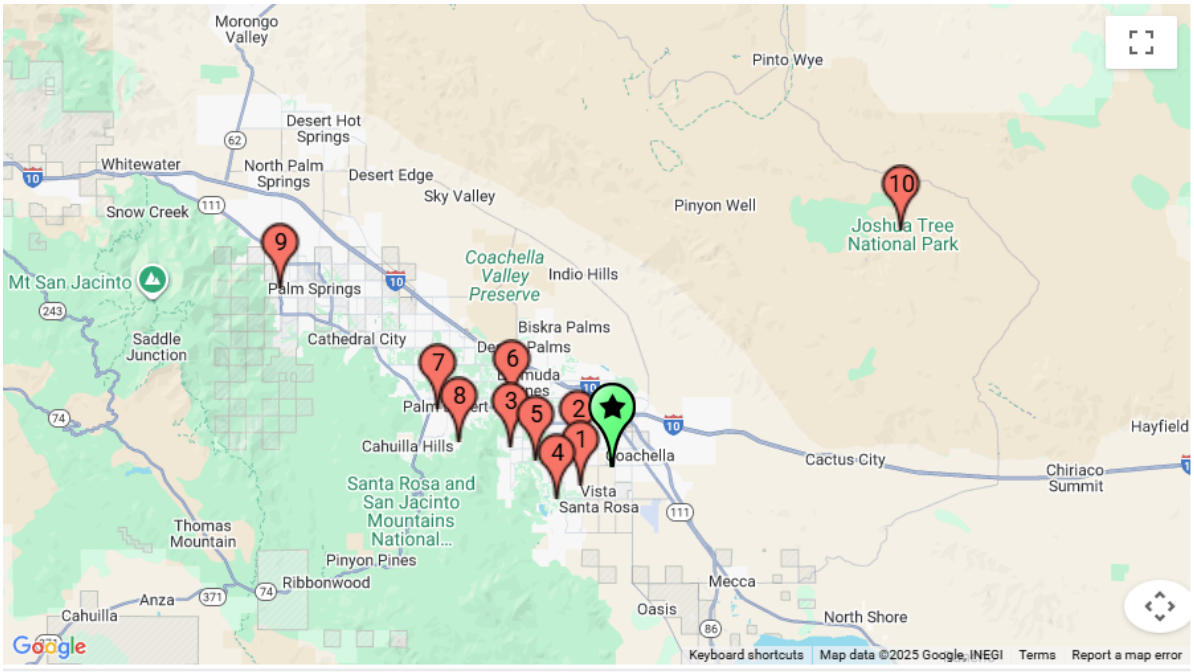
AERIAL MAP OF NEIGHBORHOOD

In general, this neighborhood is in the stable stage of its life cycle. Recent notable changes in the greater neighborhood include the planned development of a 2,200-acre master planned La Entrada community in Coachella. La Entrada is an approved plan that will include 7,800 master planned residential units in several distinct villages linked by over 550 acres of open space. Plans also include over 1.5 million square feet of retail and mixed use space, along with over 175 acres of sports/entertainment uses at a planned freeway interchange located at Avenue 50

and Interstate 10. The project's freeway interchange at Interstate 10 is expected to commence construction in late 2017 and open in early 2019.

Another significant development in the market is the construction of the Montage project in La Quinta; however, after numerous delays that put the developer, SilverRock Development Company in breach of contract with the city, the developer defaulted on the project and filed for bankruptcy on August 5, 2024. A motion to sell the raw and partially improved land to Turnbridge Equities was filed by the debtors on August 15, 2015. On October 21, 2025, a bankruptcy judge granted a motion for the sale to Turnbridge Equities allow the property to enter into escrow. The La Quinta City Council approved a reinstated and amended development agreement for the project under the new ownership, which is outlined as follows:

- One luxury hotel with approximately 154 guestrooms.
- 55,000-square-foot banquet/shared use facilities.
- 445 residences to include 29 branded residences north of the hotel with a private clubhouse, 70 condos and 293 homes east of the hotel, which can be short-term vacation rentals from which the city would receive TOT.
- 40,000-square-foot commercial area.
- 17,000-square-foot public golf clubhouse which will be moved closer to the entrance off of Avenue 52 and other public amenities for easier public access.
- 20,000-square-foot residential amenities building.



It is rumored but not yet confirmed that the project will be affiliated with Four Seasons Hotels and Resorts.

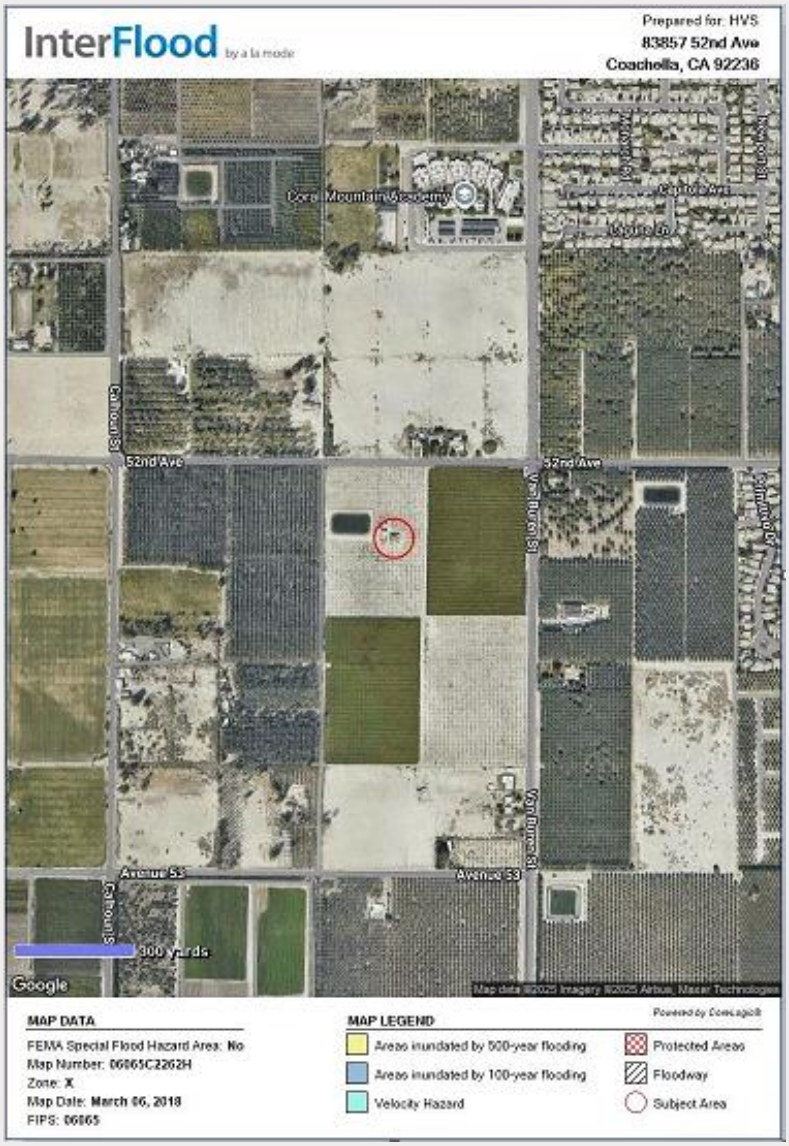
Overall, the supportive nature of the development in the immediate area is considered appropriate for and conducive to the operation of a fractional ownership resort.

Proximity to Local Demand Generators and Attractions

The subject site is located near the area's primary generators of lodging demand. A sample of these demand generators is reflected on the following map, including respective distances from and drive times to the subject site. Overall, the subject site is well situated with respect to demand generators.

ACCESS TO DEMAND GENERATORS AND ATTRACTIONS

	Demand Generator	Approx. Time from Subject Property	Approx. Distance
	Subject Property		
1	Coachella Valley Music and Arts Festival	7 minutes	3.3 miles
2	Empire Polo Club	8 minutes	3.5 miles
3	The La Quinta Country Club	15 minutes	8.0 miles
4	PGA WEST Pete Dye Stadium Course	13 minutes	6.1 miles
5	Old Town La Quinta	13 minutes	6.9 miles
6	Indian Wells Tennis Garden	20 minutes	10.3 miles
7	El Paseo Shopping District	28 minutes	14.4 miles
8	The Living Desert Zoo and Gardens	30 minutes	15.2 miles
9	Downtown Palm Springs	43 minutes	29.9 miles
10	Joshua Tree National Park	1 hour, 17 minutes	63.3 miles



Utilities

The subject site is assumed to be served by all necessary utilities.

Flood Zone

According to the Federal Emergency Management Agency, the subject site is located in flood zone X.

FIGURE 2-3 COPY OF FLOOD MAP AND COVER

The flood zone definition for the Zone X designation is as follows: the flood insurance rate zone that corresponds to areas outside the 100-year floodplains, areas of 100-year sheet flow flooding where average depths are less than 1 foot, areas of 100-year steam flooding where the contributing drainage area is less than 1 square mile, or areas protected from the 100-year flood by levees. No Base Flood elevations or depths are shown within this zone.

Zoning

According to the local planning office, the subject property is zoned as follows: R-C - Regional Commercial. Additional details pertaining to the proposed subject property's zoning regulations are summarized in the following table.

FIGURE 2-4 ZONING

Municipality Governing Zoning	City of Coachella
Current Zoning	Regional Commercial
Current Use	Agricultural
Is Current Use Permitted?	Yes
Is Change in Zoning Likely?	No
Permitted Uses	Retail, Lodging, Entertainment, and Residential
Legally Non-Conforming	Not Applicable

According to the local planning office website, the subject project is currently under review for approval.

We assume that all necessary permits and approvals will be secured (including the appropriate liquor license as applicable) and that the subject property will be constructed in accordance with local zoning ordinances, building codes, and all other applicable regulations. Our zoning analysis should be verified before any physical changes are made to the site.

Conclusion

We have analyzed the issues of size, topography, access, visibility, and the availability of utilities. The subject site is favorably located near affluent residential developments and supporting amenities. In general, the site should be well suited for future hotel, residential, and co-ownership use, with acceptable access, visibility, and topography for an effective operation.

3. Description of the Proposed Improvements

Project Overview

The Proposed COVA Coachella will be a phased luxury-level, wellness focused mixed- use project featuring residential, hotel, membership club, and co-ownership components; the hotel and residences are anticipated to be associated with a to-be-determined brand. The preliminary brands under consideration include Auberge, Rosewood, One and Only, One Hotels, and Montage. We assume the brand will be one of the preliminary brands or a similar brand within the luxury hotel tier.

The property, which is expected to open on March 1, 2030 (Phase 1), will feature 402 rentable units, inclusive of the following components, which will participate within in a rental program.

- 240-room Condo-Hotel Townhomes featuring one-bedroom units
- 51 three and four-bedroom whole ownership Villas
- 39 four and five-bedroom whole ownership Residences
- 6 eight-bedroom whole ownership Estates
- 5 whole ownership Sky Villas

The first phase of the property is expected to open on March 1, 2030. The additional phases of the resort are anticipated to open on December 1, 2030, November 1, 2031 and September 1, 2032. Further details regarding the phased developments is provided later in this narrative,

The concept of the proposed subject property will be focused on wellness, and is designed to be the premier destination for wellness in the Coachella Valley, featured wellness focused facilities such as an on-site longevity clinic, two-story fitness center, luxury spa, immersive outdoor onsen, 25-meter lap pool, and an island dedicated to yoga and meditation. In addition, the resort will feature a ten-acre swimmable lagoon in the center of the site which will offer sandy beaches, eleven food & beverage outlets, sports center, surf machine, club membership program, beach club and live music venue, library, event spaces, outdoor amphitheater, kid's club, kid's pool, splash pad, and working barn. The property will also contain ample parking capacity and all necessary back-of-the-house space.

The illustrated master plan for the proposed COVA Coachella is illustrated on the following page.

FIGURE 3-1 ILLISTRATED MASTER PLAN FOR THE PROPOSED COVA COACHELLA

Summary of the Facilities

Based on information provided by the proposed subject hotel's development representatives, the following table summarizes the facilities that are expected to be available at the proposed subject property.

FIGURE 3-2 PROPOSED FACILITIES SUMMARY

Residential Unit Configuration	Number of Units
Condo Hotel Units	240
Villas - Whole Ownership	51
Villas - Co-Ownership	61
Residences	39
Estates	6
Sky Villas	5
Total	402

Food & Beverage Facilities	Seating Capacity
Cova Bistro	181
Asador	153
Cova Island	TBD
Lobby Bar + Rooftop Bar	195-260
Coffee by Cova	TBD
Vino Vinile	168
La Fleur	500
Cova Coastal	318
Cova Beach Club	258

Amenities & Services	
Ten-Acre Swimable Lagoon	Beaches
Sports Center	Fitness Center
Surf Machine	Live Music Venue
Library	Working Barn
Longevity Clinic	Full-Service Spa
Lap Pool	Oxygen Onsen
Event Spaces	Outdoor Amphitheater
Membership Club	Working Barn
Kid's Club	Kid's Pool/Splash Pad

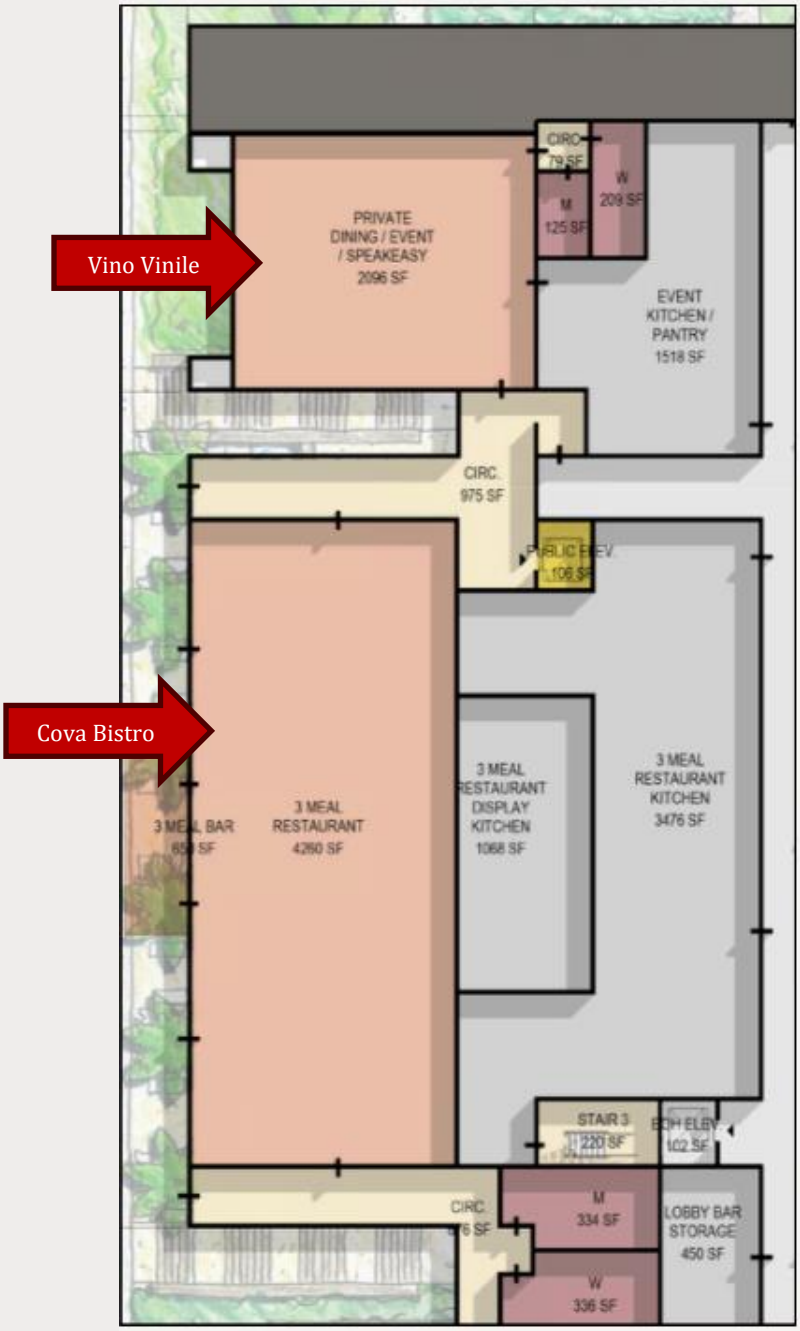
The phasing plan is illustrated in the following table.

FIGURE 3-2 PHASING PLAN

	Phase 1	Phase 2	Phase 3	Phase 4	Total
One-Bedroom Condo-Hotel Units	208	32			240
Villas - Whole Ownership	9	42			51
Villas - Co-Ownership	6	55			61
Residences	12		14	13	39
Estates		4		2	6
Sky Villas	5				5

Food and Beverage Facilities

The proposed subject property's food and beverage operation is anticipated to be an important component of the resort. The food and beverage program is strategically designed to operate as one cohesive system, establishing the property as a culinary hub for the entire region. With six distinct outlets for the hotel and residences and three for the Beach Club, the programming is deliberately balanced to prevent self-cannibalization. The planned cuisines – American, Mexican, Seafood, Mediterranean, Italian, and Tropical – ensure a broad appeal with over-saturation. This multi-outlet approach is a deliberate strategy to attract the high-end local population. The program is designed to serve as a wellness and social anchor, seamlessly transitioning from daytime leisure at the pool, lagoon, or beach to vibrant evening experiences, Furthermore, the entire program is built to be an event-connected value, with operational models and design features that can scale to meet the needs of peak-season festivals and events.



Cova Bistro

Cova Bistro will be the hotel's main restaurant and will be open for three meals a day. The concept will be a refined wine country bistro offering a seasonal menu from breakfast to dinner, with a focus on expertly prepared dishes and an international wine program. The culinary experience will be elevated by an in-house pastry chef, creative cocktails, and special services like tableside fish de-boning.

Vino Vinile

The concept for Vino Vinile will be an exclusive, intimate bar at the hotel that will combine a high-end beverage and light food program with a curated, intentional vinyl listening experience to foster social connection. The atmosphere will be designed for a multi-sensory indulgence, making music a central part of the experience.

COVA BISTRO AND VINO VINILE

Asador

Asador will be a Spanish-themed restaurant, where guests can embark on a culinary journey to the Iberian Peninsula, savoring traditional dishes prepared with an authentic Asador grill and enjoying large, communal platters of food. The refined yet relaxed ambiance, extensive Spanish win list, and charcuteria boards is designed to create an immersive dining experience to feel like a castle veranda overlooking the coast.

ASADOR

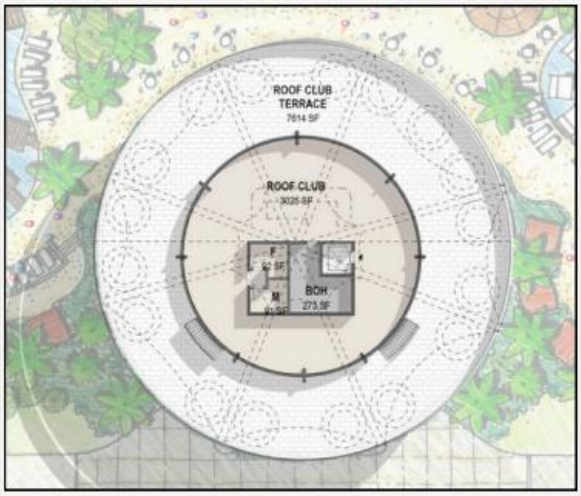
Cova Island

The concept for Cova Island is to offer a relaxed, tiki-style escape on a private island, featuring cocktails, wines, and simple fresh food like ahi bowls and conch fritters.

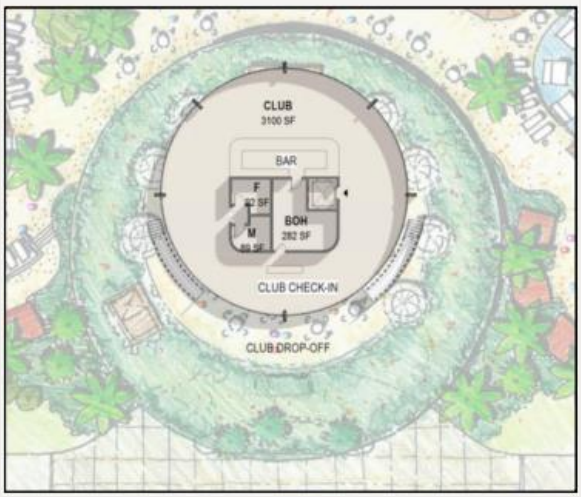
Lobby Bar + Rooftop Bar

This two-story bar located at the hotel will be a social hub that will transition from a coffee bar in the morning to a sophisticated evening lounge and will feature views from the second-floor windows.

LOBBY BAR + ROOFTOP BAR

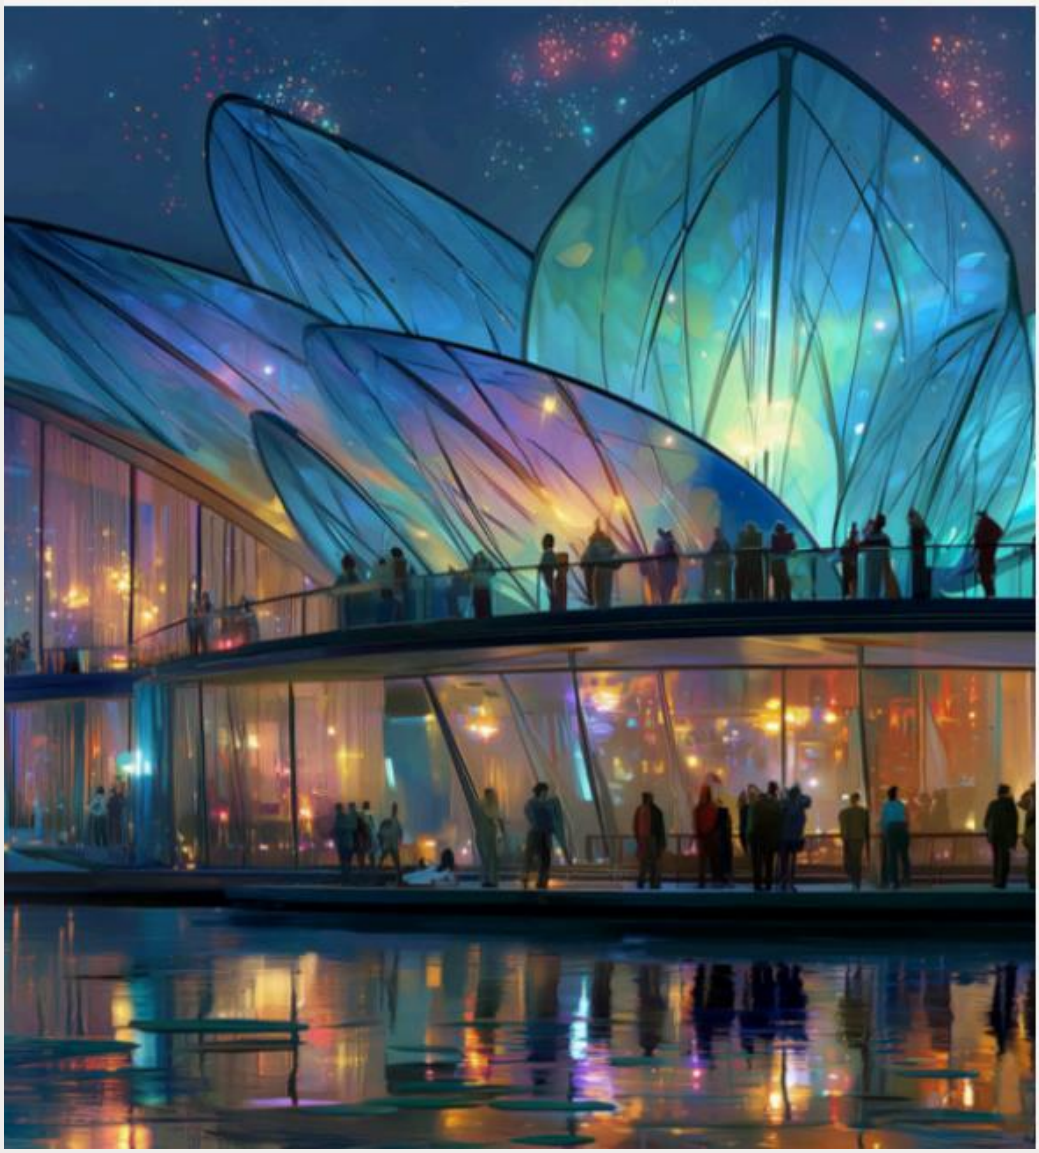


Coffee by Cova



In collaboration with the hotel's main restaurant (Cova Bistro), Coffee by Cova will offer a selection of artisanal, seasonal pastries and coffee.

La Fleur



La Fleur will be the main bar and architectural centerpiece of the COVA Beach Club, offering a sophisticated, indoor-outdoor atmosphere and panoramic views from its second-floor location. Its cocktail program will feature large-format drinks for sharing and a signature menu of floral and botanical-infused concoctions, complimenting the space's vibrant energy.

LA FLEUR

RENDERING OF LA FLEUR

Cova Coastal

Located within the COVA Beach Club, the Coca Coastal oyster bar will offer a refined coastal dining experience with complimentary entertainment. Cova Coastal will feature fresh raw bar selections, seafood towers, and classic dishes, and operational ability to serve large crowds.

Cova Cantina

The concept for Cova Cantina will be a vibrant cantina offering an upscale, street-food-inspired dining experience, featuring crafted tacos and other Mexican fare, along with a bar boasting over 300 tequilas and an assortment of margaritas.

COVA CANTINA

The COVA Beach club layout is illustrated in the following rendering.

ADA and Environmental

We assume that the resort buildings will be built according to all pertinent codes and brand standards. Moreover, we assume its construction will not create any environmental hazards (such as mold) and that the property will fully comply with the Americans with Disabilities Act.

Capital Expenditures

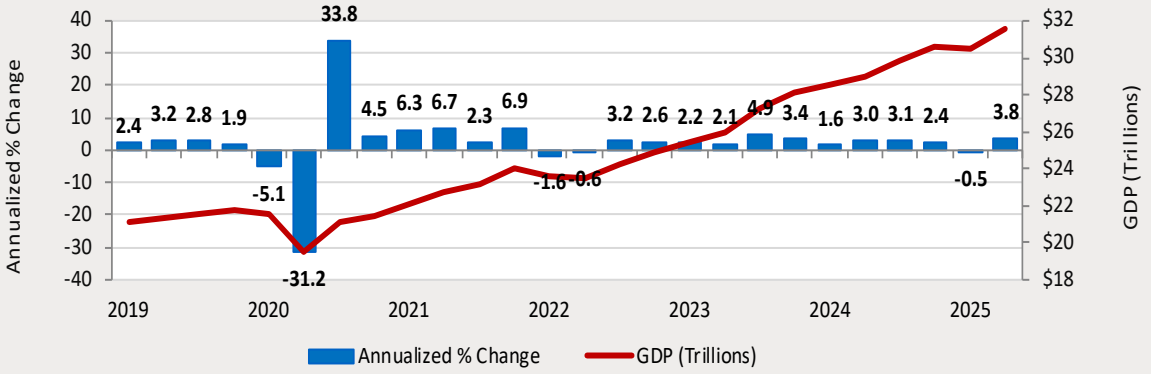
Our analysis assumes that, after its opening, the hotel will require ongoing upgrades and periodic renovations in order to maintain its competitive level in this market and to remain compliant with brand standards. These costs should be adequately funded by the forecasted reserve for replacement, as long as a successful, ongoing preventive-maintenance program is employed by hotel staff.

Construction Budget

The construction budget for the Proposed COVA Coachella, as provided by the project developer, is preliminarily estimated to be $858,000,000. A detailed construction budget was not available at the time of this report.

4. Market Area Analysis

The economic vitality of the market area and neighborhood surrounding the subject site is an important consideration in forecasting lodging demand and future income potential. Economic and demographic trends that reflect the amount of visitation provide a basis from which to project lodging demand. The purpose of the market area analysis is to review available economic and demographic data to determine whether the local market will undergo economic growth, stabilize, or decline. In addition to predicting the direction of the economy, the rate of change must be quantified. These trends are then correlated based on their propensity to reflect variations in lodging demand, with the objective of forecasting the amount of growth or decline in visitation by individual market segment (e.g., commercial, meeting and group, and leisure).



National Economic Overview

The local market and economy are influenced by national trends; thus, consideration of these trends is an important premise to this market-area analysis. The U.S. economy was severely affected by the COVID-19 pandemic, as illustrated in the following discussion. The onset of the pandemic resulted in decreased business activity, causing widespread economic hardships, including higher levels of unemployment. The depth and duration of this impact was influenced by the course of the pandemic and the nature and extent of restrictions on business and travel activity; the period of greatest impact was 2020. The shift of work locations from office environments to home offices also limited corporate transient and group travel. By all measures, the national economy had recovered from this downturn by year-end 2024, having recorded notable growth, while some select markets and sectors had experienced slower growth and were continuing to recover as of early 2025.

Gross domestic product (GDP) is a key measure of a country's economic health and trends. Research has also identified a high degree of correlation between GDP and lodging demand. For the eight quarters leading up to 2020, GDP quarterly growth ranged between 0.9% and 3.8%, reflecting moderate economic expansion. The impact of the pandemic was considerable in 2020. As shutdowns halted major components of the U.S. economy from mid-March through May, GDP contracted by an annualized rate of 31.2% in Q2 2020, the largest such decline in U.S. history. While shocking, this GDP decline was offset by a significant rebound in economic activity in Q3 2020, greatly moderating the overall impact for the year. The U.S. economy grew by 33.8% on an annualized basis in the third quarter, followed by more modest gains in the five quarters that followed through the end of 2021, with GDP having surpassed the pre-pandemic peak by Q1 2021. A pullback during the

first half of 2022 was driven by the trade deficit and decreases in government spending and inventory investment, although the decline was offset by gains during the second half of the year.

FIGURE 4-1 UNITED STATES GDP GROWTH RATE

Sources: tradingeconomics.com, Bureau of Economic Analysis

The positive trend continued through 2023 and 2024, registering 2.5% and 2.4% increases for the year, respectively. GDP then declined slightly (-0.5%) and bounced back by 3.8% in the first two quarters of 2025, respectively. According to the July 30, 2025, report from the Bureau of Economic Analysis, "The increase in real GDP in the second quarter primarily reflected a decrease in imports, which are a subtraction in the calculation of GDP, and an increase in consumer spending. These movements were partly offset by decreases in investment and exports." Within the hotel sector, 2025 was expected to bring a more active deal environment given this recent stability in growth; however, a pullback in international travel to the United States and the uncertainty surrounding what effect the tariffs would have on prices, trade, employment, and domestic travel prompted some buyers to retreat. As such, transaction activity has been relatively muted thus far in 2025. We will be closely monitoring how these changes impact employment, hotel demand, ADRs, transaction activity and, ultimately, hotel values.

The Wall Street Journal (WSJ) publishes an economic forecasting survey each quarter. Per the latest survey (July 2025), economists were newly optimistic that the United States would avoid a recession, reporting an average 33.0% probability that the country would experience a recession during the next twelve months (22.0% and 45.0% were the average probability levels for the same question in January 2025 and April 2025, respectively). Chad Moutray, chief economist at the

National Restaurant Association, was quoted, "Despite numerous headwinds, the U.S. economy is proving stubbornly resilient. Consumers are continuing to spend, but the mood has clearly shifted from bold to careful." Key averages from the latest release are illustrated in the following table.

FIGURE 4-2 GDP, CPI, AND UNEMPLOYMENT PREDICTIONS

Driven by supply-chain disruptions and pent-up consumer demand, prices for most goods and services increased substantially in the wake of the pandemic; the CPI increased by 7.0% in 2021 and 6.5% in 2022. The Fed addressed inflation through successive interest-rate hikes (seven in 2022, and another four in 2023), and the pace of inflation decelerated, falling to the low 3.0% range by the end of 2023. While inflation increased to 3.5% by March 2024, it has since illustrated a slow and gradual decline, registering a relatively low 2.4% as of September 2024. In September, the Fed cut the federal funds rate for the first time since the COVID-19 pandemic, acknowledging the positive economic data and lower inflation in recent months, and two additional cuts followed in November and December. Prior to the September 2024 meeting, the target rate was between 5.25% and 5.5%. As of mid-

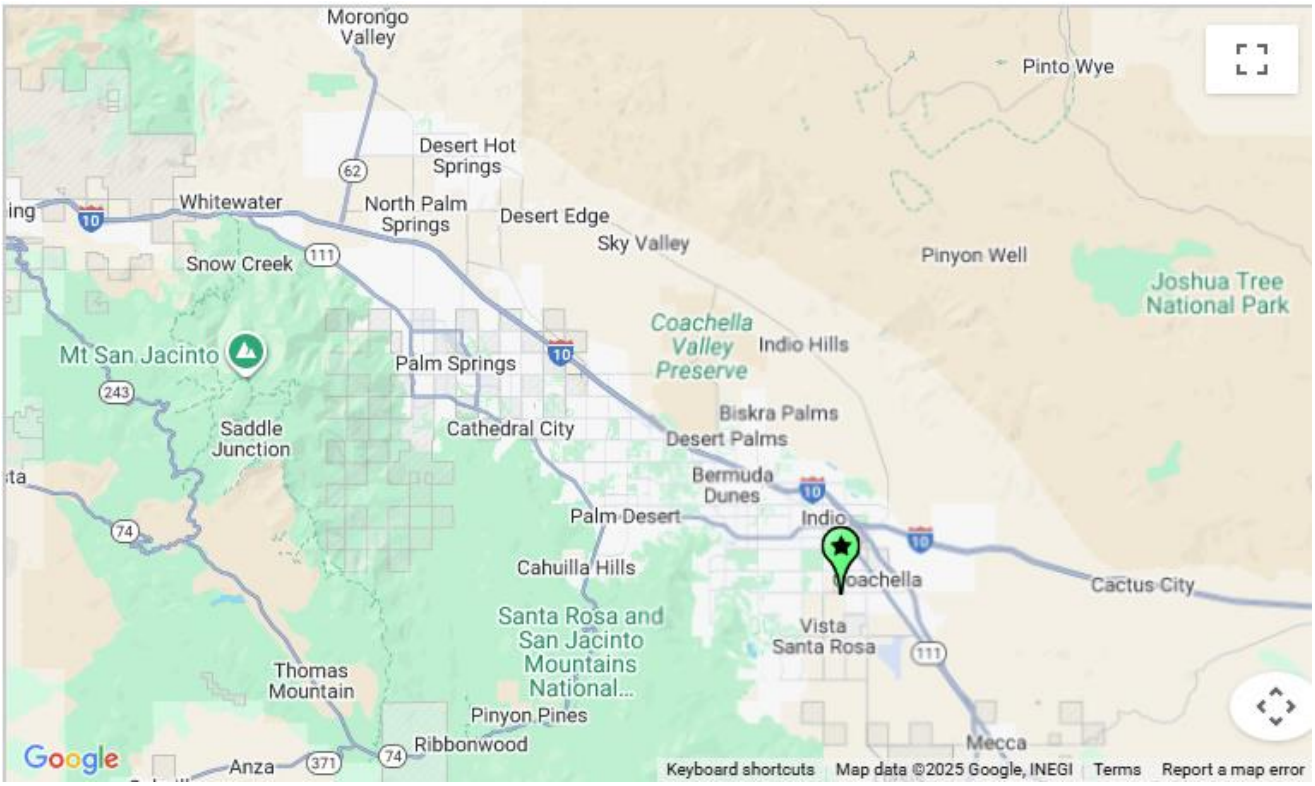
year 2025, it stood between 4.25% and 4.5%. On September 17, 2025, the Fed cut interest rates by a quarter percentage point, to a range of 4.0% to 4.25% (its first reduction of 2025), and projected two more cuts later this year. "Job gains have slowed," Fed officials said in a statement released following the meeting, "and the unemployment rate has edged up," noting that unemployment still remains relatively low.

The successive increases in GDP, lower inflation levels, cuts to the Fed rate in 2024, and strong job growth through Q1 2025 painted a positive picture of the U.S. economy. However, the first week of April 2025 sparked a notable change for this picture with the announcement of significant tariffs. As the year has progressed, many have been revised downward; these revisions, combined with the continued resiliency of the U.S. economy and gains in employment, have bolstered markets. Over time, expectations emerged that a recession in the near term was less likely, compared to the sentiment in March/April. Nevertheless, it remains unclear how the new policies of the current administration will ultimately impact the economy and the hotel sector.

Per the WSJ survey, unemployment levels are anticipated to remain relatively stable, hovering near the 4.4% mark. In the July 2025 survey, economists were asked what effect the current administration's preferences regarding interest rates would have under the next Fed chairman. Roughly 36.0% of respondents said that interest rates would be lower than otherwise based on the administration's influence, with 57.0% responding that no influence or change would occur based on this factor. Accordingly, economists surveyed expect the Fed funds rate to end 2025 at just under 4.0% and moderate downward by 70 basis points by the end of 2026. Moreover, inflation is anticipated to remain somewhat elevated, at just over 3.0% by December 2025, followed by a decline, falling to roughly 2.6% by the end of 2026.

Within the hospitality industry, labor availability and costs remain a concern for hotel operators, although these issues have diminished somewhat since the height of the pandemic. Inflation benefited the industry by supporting strong ADR growth in most markets but also resulted in increased expenses, which put pressure on profitability. Inflation moderated significantly and was approaching the Fed's target of 2.0% as of mid-year 2025, which was considered a positive factor; however, the impact of the newly announced tariffs in July 2025 may reverse this trend of inflation. We continue to closely monitor how these policy changes are affecting the U.S. lodging market and the local market analyzed within this report, as explained in the following chapter.

In preparing this report, we have considered the impact of these factors on the lodging and investment markets to the best of our ability. However, our analysis



only considers what is known at the time of the effective date of the report, and there is a high degree of uncertainty currently influencing the market and the economy.

Market Area Definition

The market area for a lodging facility is the geographical region where the sources of demand and the competitive supply are located. The subject site is located in the city of Coachella, the county of Riverside, and the state of California. The Coachella Valley extends for approximately 45 miles in Riverside County and comprises the following nine cities: Palm Springs, Rancho Mirage, Palm Desert, La Quinta, Indio, Indian Wells, Desert Hot Springs, Coachella, and Cathedral City. The popular resort community of Palm Springs sits at the northwest end of the Valley. Palm Springs is often described as a small city with the cultural amenities of an urban area, featuring eclectic boutiques, mid-century-inspired furniture and home décor stores, dining, and recreational opportunities. Typically, the population nearly doubles during the winter months with part-time residents from colder climates who own second homes in the area due to its warmer temperatures. Tourism is typically the major industry in this area, with a variety of attractions and special events drawing significant numbers of leisure travelers.

The subject property's market area can be defined by its Combined Statistical Area (CSA): Los Angeles-Long Beach, CA. The CSA represents adjacent metropolitan and micropolitan statistical areas that have a moderate degree of employment interchange. Micropolitan statistical areas represent urban areas in the United States based around a core city or town with a population of 10,000 to 49,999; the MSA requires the presence of a core city of at least 50,000 people and a total population of at least 100,000 (75,000 in New England). The following exhibit illustrates the market area.

MAP OF MARKET AREA

Economic and Demographic Review

A primary source of economic and demographic statistics used in this analysis is the *Complete Economic and Demographic Data Source* published by Woods & Poole Economics, Inc.—a well-regarded forecasting service based in Washington, D.C. Using a database containing more than 900 variables for each county in the nation, Woods & Poole employs a sophisticated regional model to forecast economic and demographic trends. Historical statistics are based on census data and information published by the Bureau of Economic Analysis. Projections are formulated by Woods & Poole, and all dollar amounts have been adjusted for inflation, thus reflecting real change.

These data are summarized in the following table.

FIGURE 4-3 ECONOMIC AND DEMOGRAPHIC DATA SUMMARY

* Inflation Adjusted

Source: Woods & Poole Economics, Inc.

The U.S. population grew at an average annual compounded rate of 0.6% from 2010 through 2024. The county's population has increased at a quicker pace than the nation's population; the average annual growth rate of 1.0% between 2010 and 2024 reflects a gradually expanding area. Per-capita personal income increased modestly, at 2.1% on average annually for the county between 2010 and 2024. Local wealth indexes have remained stable in recent years, registering a low 78.1 level for the county in 2024.

Food and beverage sales totaled $4,930 million in the county in 2024, versus $2,842 million in 2010. This reflects a 4.0% average annual change. The pace of growth is anticipated to be 3.5% through 2029. The retail sales sector demonstrated an annual increase of 3.6% from 2010 to 2024. An increase of 2.9% average annual change is expected in county retail sales through 2029.

Workforce Characteristics

The characteristics of an area's workforce provide an indication of the type and amount of transient visitation likely to be generated by local businesses. Sectors such as finance, insurance, and real estate (FIRE); wholesale trade; and services produce a considerable number of visitors who are not particularly rate sensitive. The government sector often generates transient room nights, but per-diem reimbursement allowances often limit the accommodations selection to budget and mid-priced lodging facilities. Contributions from manufacturing, construction, transportation, communications, and public utilities (TCPU) employers can also be important, depending on the company type.

The following table sets forth the county workforce distribution by business sector in 2010, 2020, and 2024, as well as a forecast for 2029.

Source: Woods & Poole Economics, Inc.

The preceding data illustrate the long-term employment trends in this market, including the recent impact of the pandemic and the subsequent recovery. Forecasts developed by Woods & Poole Economics, Inc. anticipate that total employment in the county will change by 2.0% on average annually through 2029. The trend is above the forecast rate of change for the United States as a whole during the same period.

The following table illustrates historical and projected employment, households, population, and average household income data, as provided by REIS for the overall San Bernardino/Riverside market, inclusive of the Coachella Valley.

Source: U.S. Bureau of Labor Statistics

Prior to the pandemic, U.S. unemployment levels were firmly below the 4.6% level recorded in 2006 and 2007, the peak years of the economic cycle prior to the Great Recession. The national unemployment rate during the months leading up to the COVID-19 pandemic were in the 3.5%–3.7% range, reflecting a trend of stability and strength. However, in April 2020, after the onset of the pandemic, unemployment rose to 14.7%, while employment dropped by 20.7 million. Steady gains in employment have generally been registered since that time; however, job gains have fluctuated in recent months. The national unemployment rate was 4.3% in August 2025; approximately 79,000 and 22,000 new jobs were registered in July and August, respectively, following a contraction of about 13,000 jobs in June. In August, gains in healthcare employment were partially offset by losses in federal government jobs and in mining, quarrying, and oil and gas (O&G) extraction employment.

Locally, the unemployment rate was 5.3% in 2024; for this same area in 2025, the most recent month's unemployment rate was registered at 6.5%, versus 6.0% for the same month in 2024. As illustrated in the table, unemployment declined in 2016, and this positive trend generally continued through 2019. Economic development officials noted that local employment remained strong within the tourism and healthcare sectors. However, unemployment data for 2020 illustrate a sharp increase given the effects of the COVID-19 pandemic and related global economic crisis, which resulted in temporary closures of area resorts and attractions. Unemployment declined in 2021 and 2022 as the economy began to rebound, and the most recent comparative period shows where the local market stands in 2025 relative to the same month of 2024. The increase in the year-to-date period can be attributed to the slowdown in retail trade due to the inflationary environment.

Major Business and Industry

Providing additional context for understanding the nature of the regional economy, the following table presents a list of the major employers in the proposed subject property's market.

FIGURE 4-8 MAJOR EMPLOYERS

Rank	Employer	Number of Employees
1	Palm Springs Unified School District	2,716
2	Desert Regional Medical Center	2,591
3	Agua Caliente Casino Palm Springs	621

Source: City of Palm Springs, CAFR 2024

Tourism has been the cornerstone of the local economy for some time, and this sector has realized notable growth during the last decade, as a younger generation is discovering the Coachella Valley and as certain submarkets are being revitalized. The popularity of special events and festivals, such as the Coachella Valley Music & Arts Festival, has been intensifying over the years, as well. The $250-million, 10,000-seat Coachella Valley Arena in Palm Desert opened in December 2022; it hosts the Seattle Kraken's American Hockey League team, as well as entertainment

events throughout the year. In October 2021, Los Angeles-based concert promoter Goldenvoice assumed operation of the Empire Polo Club in Indio, which allowed it to continue to host festivals, such as the Coachella Valley Music Festival, and to open up the facility to a broader spectrum of special events and private functions. In nearby Rancho Mirage, a 600-acre Disney-themed residential community known as Cotino broke ground in 2022, and the first residents are expected to arrive in the fall of 2025. The Agua Caliente Cultural Plaza opened in 2023, featuring a 48,000-square-foot museum. Despite the COVID-19 pandemic, the Coachella Valley has emerged as one of the top drive-to destinations in California given its proximity to three metropolitan areas, the attractiveness of the sprawling resort layouts, and the abundance of outdoor activities. In 2024, according to the Greater Palm Springs Tourism Authority, 14.5 million visitors spent $7.4 billion in the Greater Palm Springs economy, with year-over-year increases of 1.0% and 1.1%, respectively. Visitor activity generated a total economic impact of $9.1 billion.

Convention Activity

A convention center serves as a gauge of visitation trends to a particular market. Convention centers also generate significant levels of demand for area hotels and serve as a focal point for community activity. Typically, hotels within the closest proximity to a convention center—up to three miles away—will benefit the most. Hotels serving as headquarters for an event benefit the most by way of premium rates and hosting related banquet events. During the largest of conventions, peripheral hotels may benefit from compression within the city as a whole.

The Palm Springs Convention Center (PSCC) contains a total of 261,000 square feet of new rentable space, which includes 120,000 square feet of exhibit space divisible into five sections, 21 breakout rooms of various sizes, and an 18,000-square-foot lobby with panoramic mountain views. Following a $32.3 million expansion, the Center reopened in the fall of 2005 as a new state-of-the-art facility, offering a twelve-bay loading dock, outdoor function space, and high-speed Internet access. The Center is proximate to downtown hotels and restaurants and is located only a few minutes' drive from the Palm Springs International Airport. The other major meeting venue in the Coachella Valley region is the Desert Springs JW Marriott Resort & Spa in Palm Desert. The resort features 210,000 square feet of indoor and outdoor meeting space, 833 guestrooms, and 51 suites. This facility is considered one of the area's premier meeting destinations.

PALM SPRINGS CONVENTION CENTER

The following table illustrates recent usage statistics for this facility.

FIGURE 4-9 CONVENTION CENTER STATISTICS

Year	Number of Conventions	Percent Change	Number of Delegates	Percent Change
2016	105	—	141,824	—
2017	110	4.8 %	130,592	(7.9) %
2018	102	(7.3)	120,437	(7.8)
2019	120	17.6	135,375	12.4
2020	37	(69.2)	61,059	(54.9)
2021	54	45.9	43,835	(28.2)

The year-end 2024 statistics were not available at the time of this report.

Airport Traffic

Airport passenger counts are important indicators of lodging demand. Depending on the type of service provided by a particular airfield, a sizable percentage of arriving passengers may require hotel accommodations. Trends showing changes in passenger counts also reflect local business activity and the overall economic health of the area.

Palm Springs International Airport (PSP), a public airport offering commercial airline service in Riverside County, serves a population of over 500,000 permanent residents in the Coachella Valley. The airport covers 940 acres, featuring two runways and one single terminal. PSP is highly seasonal, in that many flights do not operate during the summer. Major commercial airlines provide nonstop service to/from cities such as Dallas, Denver, Los Angeles, Phoenix, San Francisco, and Seattle, among others. Due to the increased passenger traffic, the City plans to spend approximately $100 million on airport infrastructure projects, including a remodel of the ticketing hall and construction of a new baggage-handling system. The baggage system was added in 2021, and the airport recently completed a $5.7-million renovation and expansion of the baggage handling area in 2023. Additionally, expansions to TSA checkpoints and restrooms, as well as new carpeting throughout the airport, are planned as part of the Airport Master Plan approved in 2015, which is slated for completion by 2026. Other long-term plans include expansions or additions of terminals and a new rental-car center; however, timelines for these projects have yet to be set.

The following table illustrates recent operating statistics for the Palm Springs International Airport, which is the primary airport facility serving the proposed subject property's submarket.

FIGURE 4-10 AIRPORT STATISTICS - PALM SPRINGS INTERNATIONAL AIRPORT

Year	Passenger Traffic	Percent Change*	Percent Change**
2015	1,888,657	—	—
2016	1,998,206	5.8 %	5.8 %
2017	2,100,072	5.1	5.4
2018	2,327,018	10.8	7.2

2025	2,155,547	4.4 %	—

*Annual average compounded percentage change from the previous year

**Annual average compounded percentage change from first year of data

Source: Palm Springs International Airport

This facility recorded 3,230,914 passengers in 2024. The change in passenger traffic between 2023 and 2024 was -0.2%. The average annual change during the period shown was 6.1%. Data from 2020 illustrate a significant decline given the impact of the COVID-19 pandemic and the travel restrictions that were implemented. However, the 2021 data show a substantial rebound in passenger traffic, a trend that continued through 2022 and 2023 when passenger volume surpassed the level achieved in 2019, driven largely by Palm Springs' popularity as a leisure destination. This positive trend continued in the year-to-date 2024 period, albeit at a slower pace.

Tourist Attractions

The subject market benefits from a variety of tourism and leisure attractions in the area. Tourism in the Coachella Valley is strongest from January through April, when the area enjoys cooler desert temperatures but a warmer climate than most other cities; the weather is especially welcoming to those visiting from the northern regions. The area is popular as a resort, golf, and tennis destination. Other leisure demand generators include Downtown Palm Springs, Fantasy Springs Resort Casino, and Agua Caliente Casino. Special events also play a role during key

weekends, with major events usually occurring in March or April. Over three weekends, Indio's Empire Polo Club hosts the world-renowned Coachella Valley Music & Arts Festival, as well as the Stagecoach Country Music Festival. Although the festivals were canceled in 2020 and 2021 due to COVID-19 precautions within Riverside County, the valley's events were back in full swing beginning in 2022. Other key events that take place in the Coachella Valley include the BNP Paribas Open tennis championships, which were held in March 2023, and Palm Springs International Film Festival, which was held in January 2023. Now that conditions are beginning to normalize, no major changes related to these attributes of the market are expected over the long term.

EMPIRE POLO CLUB

Conclusion

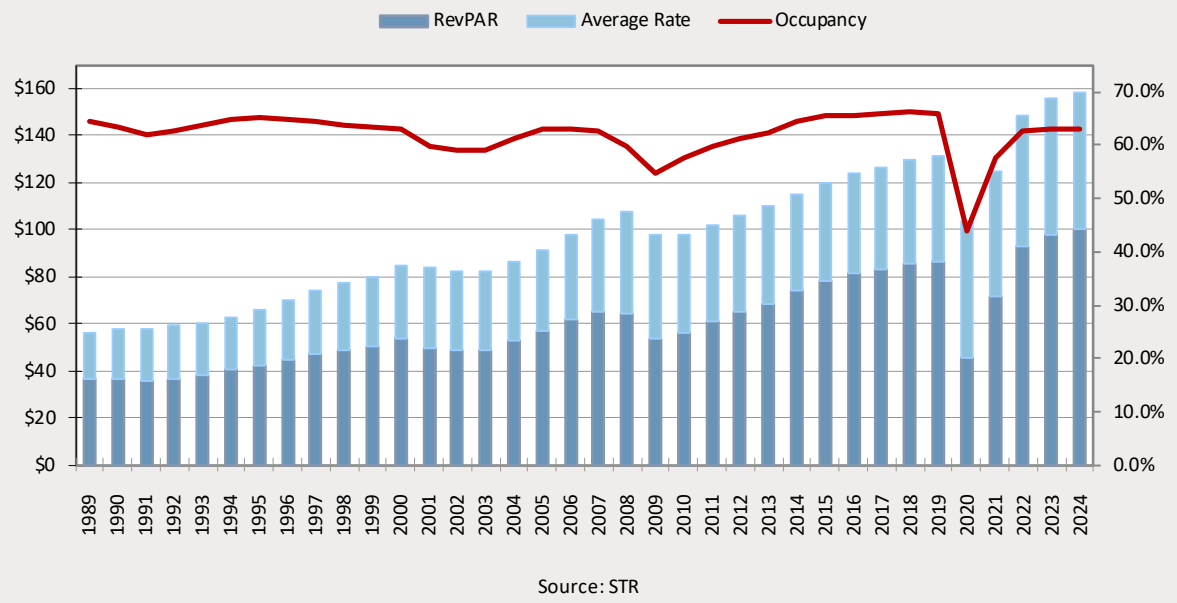
This section discussed a wide variety of economic indicators for the market area. The Coachella Valley market area has experienced an economic rebound following the impacts of the COVID-19 pandemic. As noted previously, the local economy is primarily led by the tourism industry and the popularity of special events in the region. Tourism rebounded in the summer of 2021 and strengthened through year-to-date 2025 given the area's location within driving distance of the Los Angeles and San Diego metropolitan areas. Thus, the near-term market outlook is overall

positive given the return of special events, the area's reputation as one of the nation's premier leisure destinations.

5. Hotel Supply and Demand Analysis

In the lodging industry, price varies directly, but not proportionately, with demand and inversely, but not proportionately, with supply. Supply is measured by the number of guestrooms available, and demand is measured by the number of rooms occupied; the net effect of supply and demand toward equilibrium results in a prevailing price, or average daily rate (ADR). The purpose of this section is to investigate current supply and demand trends, as indicated by the current competitive market, and to set forth a basis for the projection of future supply and demand growth.

Definition of Subject Hotel Market



The subject site is located in the greater Coachella Valley lodging market. The proposed subject hotel is expected to compete with five hotels on a primary level based on their location in the subject market. We have considered an additional nine hotels located in comparable markets that were selected as benchmarks because they reflect similar characteristics as the proposed subject property.

National Trends Overview

A hotel's local lodging market is most directly affected by the supply and demand trends within the immediate area. However, individual markets are also influenced by conditions in the national lodging market. We have reviewed national lodging trends to provide a context for the forecast of the supply and demand for the proposed subject hotel's competitive set.

STR is an independent research firm that compiles data on the lodging industry, and this information is routinely used by typical hotel buyers. The following STR diagram presents annual hotel occupancy, ADR, and rooms revenue per available room (RevPAR) data since 1989. RevPAR is calculated by multiplying occupancy by ADR and provides an indication of how well rooms revenue is being maximized.

FIGURE 5-1 NATIONAL OCCUPANCY, ADR, AND REVPAR TRENDS

Source: STR

The preceding chart illustrates the impact of the recessions of the early 1990s, 2000s, the financial crisis of 2008/09, and the 2020/21 pandemic on the U.S. lodging industry. In each case, the downturn caused lodging demand to drop, resulting in an occupancy decline. The aggregate ADR also fell, as hoteliers used price as a marketing tool to attract demand and support occupancy levels. As occupancy recovered, ADR growth resumed, although the ADR recovery lagged somewhat behind occupancy levels, as price discounts contributed to the initial recovery of demand. Following the financial crisis of the Great Recession, occupancy fell by over eight points, and ADR declined by 5.9%, resulting in an 18.3% decrease in RevPAR. The market recovered steadily thereafter, with occupancy surpassing the 65.0% mark in 2015, and ADR also consistently growing, albeit at a decelerating pace.

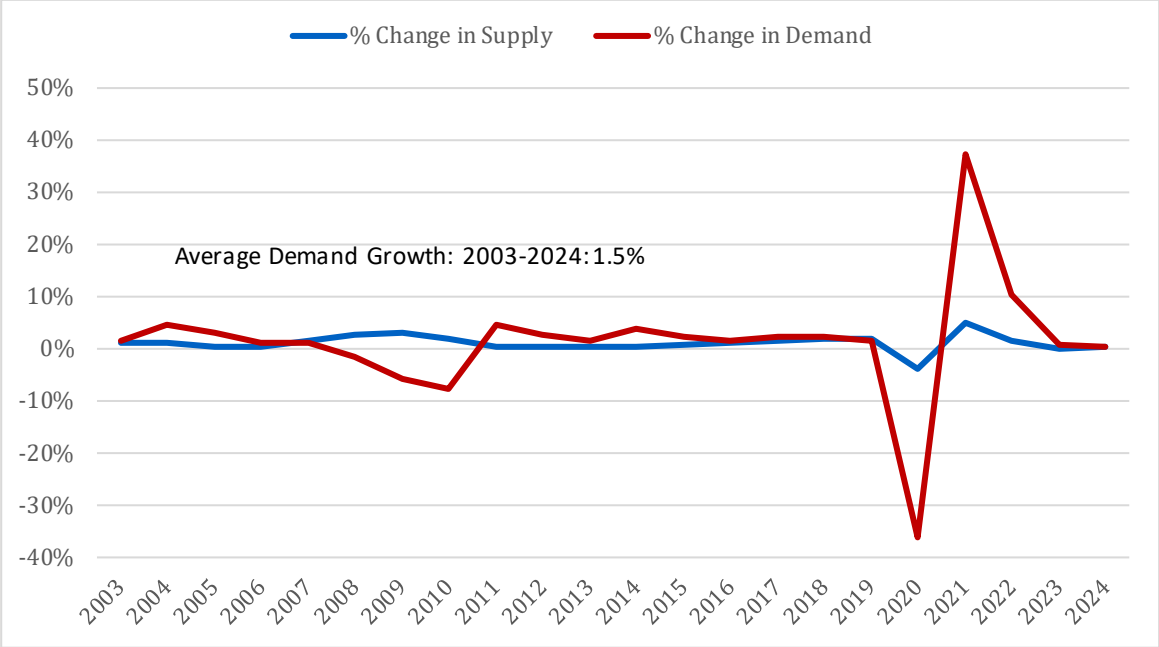
Source: STR - September 2025 Lodging Review



The following graph illustrates the performance of the U.S. lodging industry from 2019 through year-to-date 2025, expressed as a percentage of 2019 levels of occupancy, ADR and RevPAR, demonstrating the pace and pattern of the recovery.

FIGURE 5-4 NATIONAL PERFORMANCE COMPARED TO 2019 LEVELS

A lodging market's performance is influenced by changes in supply and demand levels. The following graph illustrates the percentage change in these two metrics for the U.S. lodging industry as a whole since 2003, as reported by STR.

FIGURE 5-5 HISTORICAL CHANGES IN SUPPLY AND DEMAND – U.S. LODGING INDUSTRY

Source: STR

Excluding fluctuations due to the Great Recession in 2008/09 and the pandemic from 2020 to 2022, supply growth ranged between 0.4% to 2.0%, averaging 1.1% in these years. The pace of supply growth slowed significantly in the two to three years following the downturns in 2001/02, 2008/09, and 2020/21, reflecting the decline in new project-starts during these periods. As the market moved out of these cycles, supply growth accelerated. The impact of the pandemic caused a decline in supply, as hotels temporarily suspended operations or closed, in many cases for conversion to alternate use. The reopening of the temporarily closed properties caused an artificial spike in supply growth. Supply growth in 2023 through early 2025 reflects the high cost of construction, as well as the limited availability of financing for new construction. Thus, the pace of supply growth is expected to remain muted through 2026.

The changes in demand, as measured by the number of occupied rooms, display similar patterns. The years following the noted recessionary periods reflect relatively strong growth, as the market recovered from these downturns. Excluding the years of downturn and recovery, demand growth ranged from 1.0% to 4.6%.

Historical Supply and Demand Data

STR is an independent research firm that compiles and publishes data on the lodging industry, routinely used by typical hotel buyers. HVS has ordered and analyzed an STR Trend Report of historical supply and demand data for a group of hotels considered applicable to this analysis for the proposed subject hotels. This information is presented in the following table, along with the market-wide occupancy, ADR, and RevPAR.

In response to the travel restrictions and the decline in demand associated with the COVID-19 pandemic, numerous hotels in markets across the nation temporarily suspended operations. During these suspensions, hotels were typically closed to the public, with the majority of staff furloughed, although key management and maintenance staff were retained to preserve the property and prepare for reopening. We note that ten hotels In the defined competitive set temporarily suspended operations because of the COVID-19 pandemic; however, all have since reopened. It is important to note that we have adjusted STR data to reflect the total available rooms in the market and true occupancy, regardless of suspended operations at competitive hotels.

The second chart presents the monthly data for 2020 through the year-to-date 2025 period, illustrating the fluctuations in occupancy and ADR. The impact of the pandemic and the timing and pace of the subsequent recovery are reflected in the data.

FIGURE 5-8 HISTORICAL SUPPLY AND DEMAND TRENDS (STR)

It is important to note some limitations of the STR data. Hotels are occasionally added to or removed from the sample; furthermore, not every property reports data in a consistent and timely manner. These factors can influence the overall quality of the information by skewing the results, and these inconsistencies may also cause the STR data to differ from the results of our competitive survey. Nonetheless, STR data provide the best indication of aggregate growth or decline in existing supply and demand; thus, these trends have been considered in our analysis. Opening dates, as available, are presented for each reporting hotel on the previous table.

The STR data for the competitive set reflect a market-wide occupancy level of 2024 in 56.4%, which compares to 58.2% for 2023. The STR data for the competitive set reflect a market-wide ADR level of $540.38 in 2024, which compares to $529.02 for 2023. These occupancy and ADR trends resulted in a RevPAR level of $304.94 in 2024.

The following table illustrates the monthly occupancy, ADR, and RevPAR for the competitive set measured as a percentage of 2019 levels.

FIGURE 5-9 OCCUPANCY, ADR, AND REVPAR AS A PERCENTAGE OF 2019 LEVELS

Source: STR

The illustrated occupancy and ADR patterns reflect important seasonal characteristics. We have reviewed these trends in developing our forthcoming forecast of market-wide demand and average rate. The peak season for Coachella Valley typically extends from late January through April. In particular, the strongest months are March and April; during that time, the number of special events throughout the Coachella Valley usually spikes, drawing thousands of travelers to

the area. The months of May and the fall months represent shoulder periods but still attract significant levels of visitation given the favorable climate. The hot summer months and the cooler December through early January period are considered the area's off-season. During the off-season, weekend occupancies can still remain high; however, as hotel operators typically offer significant rate discounts and group incentives to attract travelers. We note that seasonality dynamics in this market have somewhat shifted in the wake of the COVID-19 pandemic as increased lifestyle flexibility, such as the ability to work from home, has resulted in demand during non-traditional periods.

Patterns of Demand

A review of the trends in occupancy and ADR by day of the week provides some insight into the impact that the current economic conditions have had on the competitive lodging market. The data, as provided by STR, are illustrated in the following tables.

FIGURE 5-11 OCCUPANCY BY DAY OF WEEK (TRAILING 12 MONTHS)

Source: STR

Demand typically spikes in the Coachella Valley market on Friday and Saturday nights, primarily due to the leisure focus in the area. Demand levels typically drop off considerably on Monday, Tuesday, and Wednesday nights, Our research revealed that demand has increased on Thursday and Monday nights during and after the

pandemic as travelers extend their trips due to the more flexible working schedules in a remote working environment.

SUPPLY

Based on an evaluation of the occupancy, rate structure, market orientation, chain affiliation, location, facilities, amenities, reputation, and quality of each area hotel, as well as the comments of management representatives, we have identified properties that are expected to be competitive with the Proposed COVA Coachella.

Primary Competition

The following table summarizes the important operating characteristics of the future primary competitors and the aggregate secondary competitors. This information was compiled from personal interviews, inspections, online resources, and our in-house database of operating and hotel facility data. In cases where exact operating data for an individual property (or properties) were not available, we have used these resources, as well as the STR data, to estimate positioning within the market.

Est. 2024	531	50 - 55	325 - 350	170 - 180	90 - 95	60 - 65

The Grand Hyatt Indian Wells Resort & Spa features a new waterpark with dueling slides, a lazy river, and a splash pad, as well as additional pools, five food and beverage outlets, a full-service spa and fitness center, and tennis facilities. This hotel benefits from its family friendly recreational amenities, recent renovations, and location near the Indian Wells Tennis Garden. Following its most recent sale in 2022, the hotel completed an extensive $50 million ($94,700 per room) renovation and was rebranded as a Grand Hyatt. Overall, the property was reported to be in very good condition. Its location is similar to that of the Proposed COVA Coachella.

COMPETITOR #2 - JW MARRIOTT DESERT SPRINGS RESORT

JW Marriott Desert Springs Resort
74855 Country Club Drive
Palm Desert, CA

FIGURE 5-18 ESTIMATED HISTORICAL OPERATING STATISTICS

Year	Wtd. Annual Room Count	Occupancy	Average Rate	RevPAR	Occupancy Penetration	Yield Penetration

Est. 2024	783	50 - 55	375 - 400	200 - 210	90 - 95	70 - 75

This historic property opened in 1926 with 51 casitas and limited hotel facilities and quickly became a popular getaway for Hollywood stars, The La Quinta Resort is located among high-end residential developments and private golf clubs, thereby providing a sense of seclusion relative to the more developed Coachella Valley cities such as Palm Desert, Indian Wells, and Rancho Mirage. In November 2021, the resort was rebranded from Waldorf Astoria to Hilton's Curio Collection. The property is currently undergoing a multi=phase $70 million ($89,400 per room) guestroom renovation, which is expected to be completed by 2029. Overall, the property was reported to be in good condition. Its location is similar to that of the Proposed COVA Coachella.

COMPETITOR #4 - PARKER PALM SPRINGS

Parker Palm Springs
4200 East Palm Canyon Drive
Palm Springs, CA

FIGURE 5-20 ESTIMATED HISTORICAL OPERATING STATISTICS

Year	Wtd. Annual Room Count	Occupancy	Average Rate	RevPAR	Occupancy Penetration	Yield Penetration
Est. 2019	144	60 - 65 %	$400 - $425	$250 - $260	100 - 110 %	120 - 130 %

Est. 2024	144	45 - 50	675 - 700	325 - 350	80 - 85	110 - 120

This hotel is known for its unique décor, manicured gardens, and popular food and beverage outlets. The hotel is decorated by renowned interior designer Jonathan Adler. The property's interior grounds are maintained exclusively for hotel guests, which adds to its luxury allure. The hotel's expansive spa was renovated in early 2019, and the hotel also offers a private residence and large villas; these larger rooms increase the overall average rate of this property. Overall, the property was reported to be in good condition. Its location is similar to that of the Proposed COVA Coachella.

COMPETITOR #5 - RITZ-CARLTON RANCHO MIRAGE

Ritz-Carlton Rancho Mirage
68900 Frank Sinatra Drive
Rancho Mirage, CA

Est. 2021	244	45 - 50	650 - 675	300 - 325	100 - 110	150 - 160
Est. 2022	244	60 - 65	575 - 600	350 - 375	100 - 110	120 - 130
Est. 2023	244	55 - 60	550 - 575	300 - 325	95 - 100	110 - 120
Est. 2024	252	55 - 60	575 - 600	325 - 350	100 - 110	110 - 120

The property was closed in 2006 for a property-wide renovation, but the project was delayed given the Great Recession and the subsequent default of the previous owner; the hotel reopened in 2014 after a change in ownership and an extensive renovation. The Ritz-Carlton Rancho Mirage is the largest luxury property on the west end of the Coachella Valley and offers sweeping views owing to its mountainside configuration. The hotel benefits from a favorable reputation for attentive service and a very high standard for its food and beverage operation. Overall, the property was reported to be in good condition. Its location is similar to that of the Proposed COVA Coachella.

Secondary Competitors

We have also reviewed other hotels in separate markets for properties that share similar characteristics with the Proposed COVA Coachella as additional benchmarks, which were weighted on a secondary basis. The room count of each secondary competitor has been weighted based on its assumed degree of similarity with the proposed subject hotel. The following table sets forth the pertinent operating characteristics of the secondary competitors.

FIGURE 5-22 SECONDARY COMPETITORS – OPERATING PERFORMANCE

		Est. Segmentation			Estimated 2023				Estimated 2024			
Property	Number of Rooms	Transient	Meeting and Group	Total Competitive Level	Weighted Annual Room Count	Occ.	Average Rate	RevPAR	Weighted Annual Room Count	Occ.	Average Rate	RevPAR

** Specific occupancy and average rate data was utilized in our analysis, but is presented in ranges in the above table for the purposes of confidentiality.*

Supply Changes

It is important to consider any new hotels that may have an impact on the proposed subject hotel's operating performance. Potentially competitive hotels that have recently opened, are under construction, or that may be in the early development stages are noted below. The list is categorized by the principal submarkets within the city.

FIGURE 5-23 POTENTIALLY COMPETITIVE HOTEL DEVELOPMENT ACTIVITY

Proposed Hotel Name	Estimated Number of Rooms	Hotel Product Tier	Development Stage
Coachella Valley, California			
Former Montage (rumored Four Seasons), La Quinta	154	Luxury	Speculative
Thompson Palm Springs, Palm Springs	168	Luxury	Recently Opened
Orchard Tree, an Auberge Resort, Palm Springs	64	Luxury	Development on Hold
Napa Area, California			
Calistoga Hills, a Rosewood Resort, Calistoga	110	Luxury	Site Work Underway
Six Senses Napa, Pope Valley	95	Luxury	Early Development
French Laundry Hotel, Yountville	TBD	Luxury	Development on Hold
Utah			
Grand Hyatt Deer Valley, Park City	387	Luxury	Recently Opened
Ameyalli Resort, Midway	80	Luxury	Under Construction
Spirit Mountain Resort, Orderville	40	Luxury	Site Work Underway

Of the hotels listed in the preceding table, we have identified the following new supply that is expected to have some degree of competitive interaction with the proposed subject hotel based on location, anticipated market orientation and price point, and/or operating profile.

FIGURE 5-24 NEW SUPPLY

Proposed Property	Number of Rooms	Total Competitive Level	Weighted Room Count	Estimated Opening Date	Development Stage
Proposed COVA Coachella	222	100 %	222	March 1, 2030	Early Development
Former Montage (rumored Four Seasons), La Quinta	154	50	77	January 1, 2028	Speculative
Totals/Averages	**376**		**299**		

The former Montage project in La Quinta was originally planned to be developed with a Montage Hotel and Residences; however, after numerous delays that put the developer, SilverRock Development Company in breach of contract with the city, the developer defaulted on the project and filed for bankruptcy on August 5, 2024. A motion to sell the raw and partially improved land to Turnbridge Equities was filed by the debtors on August 15, 2015. On October 21, 2025, a bankruptcy judge granted a motion for the sale to Turnbridge Equities allow the property to enter into escrow. The La Quinta City Council approved a reinstated and amended development agreement for the project under the new ownership, which is outlined as follows:

- One luxury hotel with approximately 154 guestrooms.
- 55,000-square-foot banquet/shared use facilities.
- 445 residences to include 29 branded residences north of the hotel with a private clubhouse, 70 condos and 293 homes east of the hotel, which can be short-term vacation rentals from which the city would receive TOT.
- 40,000-square-foot commercial area.
- 17,000-square-foot public golf clubhouse which will be moved closer to the entrance off of Avenue 52 and other public amenities for easier public access.
- 20,000-square-foot residential amenities building.

It is rumored but not yet confirmed that the project will be affiliated with Four Seasons Hotels and Resorts. Given the uncertainty of this project going forward, it has been weighted secondarily competitive in our analysis.

The subject units that will be available for rental will be developed in phases. It is important to note that the developer plans to retain ownership of 52 condo-hotel units that we assume will be developed in the first phase. All remaining units, exclusive of 61 units which will be sold for co-ownership use, will be sold to third parties who will be required to participate in a rental program. Based on the discussions with the developer, owner usage will range from 21 to 30 days. We have assumed an average of 25 days for owner usage in our analysis. To account for owner usage, we have reflected the average annual number of units that will be available for rental, as illustrated in the following table. Note that the rental availability factor is calculated by 340 annual rental days divided by 365 days (equals 93.15%).

FIGURE 5-25 SUBJECT UNIT CALCULATION

Phase	Total Units	Rental Availability Factor	Available Units for Rental	Rounded
Phase 1 - Developer Owned Units	52	100.00%	52.00	52
Phase 1 - Third-Party Owned Units	182	93.15%	169.53	170
Phase 1 - Total Units	234			222
Phase 2 - Third-Party Owned Units	78	93.15%	72.66	73
Phase 3 - Third-Party Owned Units	14	93.15%	13.04	13
Phase 4 - Third-Party Owned Units	15	93.15%	13.97	14
Total	**341**			**322**

The 222 units in Phase 1 are included in new supply in our analysis. The remaining phases are included as expansions in our analysis.

In response to the travel restrictions and the decline in demand associated with the COVID-19 pandemic, numerous hotels in markets across the nation temporarily suspended operations. During these suspensions, hotels were typically closed to the public, with the majority of staff furloughed, although key management and maintenance staff were retained to preserve the property and prepare for reopening. We note that ten hotels In the defined competitive set temporarily suspended operations because of the COVID-19 pandemic; however, all have since reopened. It is important to note that we have adjusted STR data to reflect the total available rooms in the market and true occupancy, regardless of suspended operations at competitive hotels.

While we have taken reasonable steps to investigate proposed hotel projects and their status, due to the nature of real estate development, it is impossible to determine with certainty every hotel that will be opened in the future or what their marketing strategies and effect on the market will be. Depending on the outcome of current and future projects, the operating potential of the proposed subject hotel may be affected. Future improvement in market conditions will raise the risk of increased competition. Our forthcoming forecast of stabilized occupancy and ADR is intended to reflect such risk.

Supply Conclusion

We have identified various properties that are expected to be competitive to some degree with the proposed subject hotel. We have also investigated potential increases in competitive supply. The Proposed COVA Coachella should enter a dynamic market of varying product types and price points. Next, we will present our forecast for demand change, using the historical supply data presented as a starting point.

DEMAND

The following table presents the most recent trends for the subject hotel market as tracked by HVS. These data pertain to the competitors discussed previously in this section; performance results are estimated, rounded for the competition, and weighted if there are secondary competitors present. In this respect, the information in the table differs from the previously presented STR data and is consistent with the supply-and-demand analysis developed for this report.

FIGURE 5-26 HISTORICAL MARKET TRENDS

Year	Accommodated Room Nights	% Change	Room Nights Available	% Change	Market Occupancy	Market ADR	% Change	Market RevPAR	% Change
Est. 2019	783,915	—	1,273,576	—	61.6 %	$338.74	—	$208.50	—
Est. 2020	361,963	(53.8) %	1,273,576	0.0 %	28.4	397.96	17.5 %	113.10	(45.8) %
Est. 2021	545,327	50.7	1,273,576	0.0	42.8	458.08	15.1	196.14	73.4
Est. 2022	766,899	40.6	1,298,769	2.0	59.0	489.25	6.8	288.89	47.3
Est. 2023	761,375	(0.7)	1,307,759	0.7	58.2	488.60	(0.1)	284.46	(1.5)
Est. 2024	739,373	(2.9)	1,311,044	0.3	56.4	499.05	2.1	281.44	(1.1)
Avg. Annual Compounded Chg., Est. 2019-Est. 2024:		(1.2) %		0.6 %			8.1 %		6.2 %

Although not shown in the preceding table, as a point of comparison, the year-to-date 2025 STR trend data indicates a market occupancy level of 69.8% versus 61.1% for the same period of time in 2024. Moreover, ADR registered $606.36 for the year-to-date 2025 period, reflecting a change of 0.7 % when compared with the ADR for the same period of time in 2024.

Demand Analysis Using Market Segmentation

For the purpose of demand analysis, the overall market is divided into individual segments based on the nature of travel. Based on our fieldwork, area analysis, and knowledge of the local lodging market, we estimate the 2024 distribution of accommodated-room-night demand as follows.

FIGURE 5-27 BASE-YEAR ACCOMMODATED-ROOM-NIGHT DEMAND

	2024 Marketwide	
Market Segment	Accommodated Demand	Percentage of Total
Transient	442,141	60 %
Meeting and Group	297,232	40
Total	**739,373**	**100 %**

In the base year, the market's demand mix comprised transient demand, with this segment representing roughly 60% of the accommodated room nights in this Coachella submarket. The meeting and group segment comprised 40% of the total.

Using the distribution of accommodated hotel demand as a starting point, we will analyze the characteristics of each market segment in an effort to determine future trends in room-night demand.

Transient Segment

Transient demand consists of individuals and families spending time in an area or passing through en route to other destinations; this segment represents travelers that are not associated with a group or room-night contract. Travel purposes include business, sightseeing, recreation, or visiting friends and relatives. Transient demand also includes room nights booked through Internet sites such as Expedia, Hotels.com, and Priceline; however, this demand may include group and convention attendees who use these channels to take advantage of any discounts that may be available on these sites. In resort destinations, transient demand is strongest Friday and Saturday nights, and all week during holiday periods and the summer months. In urban and suburban destinations, transient demand is typically strongest on Tuesday, Wednesday, and Thursday nights. The typical length of stay ranges from one to four days, depending on the destination and travel purpose. The rate of double occupancy typically ranges from 1.0 to 3.0 people per room, with higher double occupancy occurring in resort destinations. Price sensitivity tends to vary with product type. All-suite properties with inclusive food and beverage or luxury

destination properties tend to drive strong transient room rates, with discounted rates offered at older or value-oriented hotels with limited amenities. For destination locations, future transient demand is related to the overall economic health of the primary source cities for visitation; the overall economic health of the surrounding neighborhood is considered for urban and suburban locations.

The San Diego, Orange County, and Los Angeles metropolitan markets have consistently been the primary feeder markets for transient demand in the Coachella Valley, as visitors to the area typically travel by car. The area is also popular among Canadians and northern U.S. residents who typically visit the area during the winter months because of the warmer climate. Transient visitation to the Coachella Valley traditionally slows in the summer months given the extreme desert heat; however, summer demand has risen in recent years with the growth of day-club and music-event marketing. However, transient demand declined significantly in 2020 and early 2021 because of the COVID-19 pandemic. A notable rebound commenced in the spring of 2021 once restrictions had been lifted, with transient demand increasing through 2022 due to strong demand for drive-to destinations, such as Coachella Valley. Demand in this segment declined in 2023 as domestic leisure demand moderated following the easing of international travel restrictions. We expect transient demand to increase in 2025, which is supported by the year-to-date data in the STR report. Despite the headwinds impacting the hotel performance in general in 2025, performance strength remains in high-end chain scales (luxury tier), especially in the leisure transient segment, with international markets making up for the decline in travelers from the U.S. and Canada. Thereafter, moderate growth is forecast through the stabilized year, which should be supported by strengthening economic conditions, increase airlifts, and given the relatively recent opening of the Acrisure Arena.

Meeting and Group Segment

The meeting-and-group market includes meetings, seminars, conventions, trade association shows, and similar gatherings of ten or more people. Peak convention demand typically occurs in the spring and fall. Although there are numerous classifications within the meeting-and-group segment, the primary categories considered in this analysis are corporate groups, associations, and SMERFE (social, military, ethnic, religious, fraternal, and educational) groups. Corporate groups typically meet during the business week, most commonly in the spring and fall months. These groups tend to be the most profitable for hotels, as they typically pay higher rates and usually generate ancillary revenues including food and beverage and/or banquet revenue. SMERFE groups are typically price-sensitive and tend to meet on weekends and during the summer months or holiday season, when greater discounts are usually available; these groups generate limited ancillary revenues. Association demand is generally divided on a geographical basis, with national, regional, and state associations representing the most common sources. Professional associations and/or those supported by members' employers often

meet on weekdays, while other associations prefer to hold events on weekends. The profile and revenue potential of associations varies depending on the group and the purpose of the meeting or event.

The Coachella Valley competes with San Diego, coastal Orange County, Arizona cities (such as Phoenix, Scottsdale, and Tucson), and Las Vegas for group business. Increased airlift at Palm Springs International Airport and the general improvement in local hotel product have resulted in a significant strengthening of group business overall. Corporate retreats, social events, and SMERFE-related groups have increased along the growing popularity of the Coachella Valley. However, meeting and group demand was nearly non-existent in 2020 given the implications associated with the COVID-19 pandemic. Groups slowly returned to the market in late 2021, with more groups returning in 2022 through 2024. Moderate growth in the meeting and group segment is forecast through the stabilized year. The opening of subject property should induce demand given its brand-new high quality event facilities.

Base Demand Growth Rates

The purpose of segmenting the lodging market is to define each major type of demand, identify customer characteristics, and estimate future growth trends. Starting with an analysis of the local area, two segments were defined as representing the proposed subject hotel's lodging market. Various types of economic and demographic data were then evaluated to determine their propensity to reflect changes in hotel demand. Based on this procedure, we forecast the following average annual compounded market-segment growth rates.

FIGURE 5-28 AVERAGE ANNUAL COMPOUNDED MARKET-SEGMENT GROWTH RATES

	Annual Growth Rate									
Market Segment	**2025**	**2026**	**2027**	**2028**	**2029**	**2030**	**2031**	**2032**	**2033**	**2034**
Transient	2.0 %	2.0 %	2.0 %	1.0 %	1.0 %	1.0 %	1.0 %	1.0 %	1.0 %	0.0 %

Accommodated Demand and Market-wide Occupancy

Based upon a review of the market dynamics in the proposed subject hotel's competitive environment, we have forecast growth rates for each market segment. Using the calculated potential demand for the market, we have determined market-wide accommodated demand based on the inherent limitations of demand fluctuations and other factors in the market area.

The following table details our projection of lodging demand growth for the subject market, including the total number of occupied room nights and any residual unaccommodated demand in the market.

FIGURE 5-29 FORECAST OF MARKET OCCUPANCY

[1] Opening in March 2030 of the 100% competitive, 222-room Proposed COVA Coachella

[2] Opening in January 2028 of the 50% competitive, 154-room Former Montage (rumored Four Seasons), La Quinta

[A] Change of room count in December 2030 of the 100% competitive, Proposed COVA Coachella

[B] Change of room count in November 2031 of the 100% competitive, Proposed COVA Coachella

[C] Change of room count in September 2032 of the 100% competitive, Proposed COVA Coachella

The defined competitive market of hotels experienced a sharp occupancy decline in 2020 and early 2021 because of the severe downturn in travel associated with the COVID-19 pandemic. Year-to-date trends in 2025 reflect that improvement is occurring in the luxury tier. Projected growth through the stabilized year should be supported by the ongoing return of group events, the improved airlift, and the continued return of growth in the popularity of Coachella Valley as a resort destination.

6. Projection of Hotel Occupancy and Average Rate

Along with average rate results, the occupancy levels achieved by a hotel are the foundation of the property's financial performance. Most of a lodging facility's other revenue sources (such as food and beverage, other operated departments, and miscellaneous income) are driven by the number of guests, and many expense levels also vary with occupancy. To a certain degree, occupancy attainment can be manipulated by management. For example, hotel operators may choose to lower rates in an effort to maximize occupancy. Our forecasts reflect the operating strategy that we believe would be implemented by a typical, professional hotel management team to achieve an optimal mix of occupancy and average rate.

Penetration Rate Analysis

The proposed subject hotel's forecasted market share and occupancy levels are based upon its anticipated competitive position within the market, as quantified by its penetration rate. The penetration rate is the ratio of a hotel's market share to its fair share.

Base-Year Penetration Rates by Market Segment

In the following table, the penetration rates attained by the primary competitors and the aggregate secondary competitors are set forth for each segment for the base year.

FIGURE 6-1 HISTORICAL PENETRATION RATES

Property	Transient	Meeting and Group	Overall
Grand Hyatt Indian Wells Resort & Villas	84 %	102 %	91 %
JW Marriott Desert Springs Resort	103	126	112
La Quinta Resort & Club, Curio Collection by Hiltor	94	93	93
Parker Palm Springs	114	42	85
Ritz-Carlton Rancho Mirage	118	75	101
Secondary Competition	104	96	101

The Ritz-Carlton Rancho Mirage achieved the highest penetration rate within the transient segment. The highest penetration rate in the meeting and group segment was achieved by the JW Marriott Desert Springs Resort.

Forecast of Subject Property's Occupancy

Because the supply and demand balance for the competitive market is dynamic, there is a circular relationship between the penetration factors of each hotel in the market. The performance of individual new hotels has a direct effect upon the aggregate performance of the market and, consequently, upon the calculated penetration factor for each hotel in each market segment. The same is true when the performance of existing hotels changes, either positively (following a refurbishment, for example) or negatively (when a poorly maintained or marketed hotel loses market share).

A hotel's penetration factor is calculated as its achieved market share of demand divided by its fair share of demand. Thus, if one hotel's penetration performance increases, thereby increasing its achieved market share, this leaves less demand available in the market for the other hotels to capture, and the penetration performance of one or more of those other hotels consequently declines (other things remaining equal). This type of market share adjustment takes place every time there is a change in supply or a change in the relative penetration performance of one or more hotels in the competitive market. Our projections of penetration, demand capture, and occupancy performance for the proposed subject hotel account for these types of adjustments to market share within the defined competitive market.

The proposed subject hotel's occupancy forecast is set forth as follows, with the adjusted projected penetration rates used as a basis for calculating the amount of captured market demand.

FIGURE 6-2 FORECAST OF SUBJECT PROPERTY'S OCCUPANCY

Market Segment	2030	2031	2032	2033	2034
Transient					
Demand	483,421	488,255	493,138	498,069	498,069

The proposed subject hotel's transient penetration level is positioned at an above-market-average level, supported by its anticipated lifestyle hotel product focused on wellness in a highly amenitized resort setting. Furthermore, the proposed subject property should benefit from its planned luxury brand affiliation, Auberge, Rosewood, One and Only, One Hotels, Montage or similar, and its unique location with proximity to numerous private golf clubs, high-end residential developments, and special event venues. The proposed subject hotel's penetration in the meeting and group segment is also positioned at an above-market-average level given its planned offering of resort amenities and outdoor venues, which should allow it to become a popular destination for incentive groups, executive level meetings, and social events such as weddings.

These positioned segment penetration rates result in the following market segmentation forecast.

FIGURE 6-3 MARKET SEGMENTATION FORECAST – SUBJECT PROPERTY

	2030	2031	2032	2033	2034
Transient	62 %	62 %	61 %	61 %	61 %
Meeting and Group	38	38	39	39	39
Total	100 %	100 %	100 %	100 %	100 %

Based on our analysis of the proposed subject hotel and market area, we have selected a stabilized occupancy level of 69%. The stabilized occupancy is intended to reflect the anticipated results of the property over its remaining economic life given all changes in the life cycle of the hotel. Thus, the stabilized occupancy excludes from consideration any abnormal relationship between supply and demand, as well as any nonrecurring conditions that may result in unusually high or low occupancies. Although the proposed subject hotel may operate at occupancies above this stabilized level, we believe it equally possible for new competition and temporary economic downturns to force the occupancy below this selected point of stability.

Average Rate Analysis

One of the most important considerations in estimating the potential performance of a lodging facility is a supportable forecast of its attainable average rate (ADR), which is more formally defined as the average rate per occupied room; ADR can be calculated by dividing the total rooms revenue achieved during a specified period by the number of rooms sold during the same period. The projected ADR and the anticipated occupancy percentage are used to forecast rooms revenue, which in turn provides the basis for estimating most other income and expense categories.

Competitive Position

Although the ADR analysis presented here follows the occupancy projection, these two statistics are highly correlated; in reality, one cannot project occupancy without making specific assumptions regarding ADR. This relationship is best illustrated by revenue per available room (RevPAR), which reflects a property's ability to maximize rooms revenue. The following table summarizes the historical ADR and RevPAR levels of the proposed subject hotel's future primary competitors.

FIGURE 6-4 BASE-YEAR ADR AND REVPAR OF THE COMPETITORS

Property	Estimated 2024 Average Room Rate	Average Room Rate Penetration	Occupancy	Occupancy Penetration	Rooms Revenue Per Available Room (RevPAR)	RevPAR Penetration
Grand Hyatt Indian Wells Resort & Villas	$325 - $350	65 - 70 %	50 - 55 %	90 - 95 %	$170 - $180	60 - 65 %
JW Marriott Desert Springs Resort	300 - 325	60 - 65	60 - 65	110 - 120	190 - 200	65 - 70
La Quinta Resort & Club, Curio Collection by Hilton	375 - 400	75 - 80	50 - 55	90 - 95	200 - 210	70 - 75
Parker Palm Springs	675 - 700	130 - 140	45 - 50	80 - 85	325 - 350	110 - 120
Ritz-Carlton Rancho Mirage	575 - 600	110 - 120	55 - 60	100 - 110	325 - 350	110 - 120
Average - Primary Competitors	$384.36	77.0 %	56.2 %	99.6 %	$215.90	76.7 %
Average - Secondary Competitors	792.98	158.9	57.0	101.0	451.80	160.5
Overall Average	**$499.05**	100.0 %	56.4 %	100.0 %	**$281.44**	100.0 %
Subject As If Stabilized (In 2024 Dollars)	**$1,497.30**	**300.0 %**	**67.1 %**	**119.0 %**	**$1,004.47**	**356.9 %**

The Parker Palm Springs achieved the highest estimated average rate in the local competitive set, by a significant margin, because of their luxury product offering, popularity with-end clientele, and resort-style amenities.

It is important for the reader to understand that the average rate projection is inclusive of all units that will be included in the subject rental program, which will include the condo-hotel, villas, residences, sky villas, and estates. We have selected the rate position of $670, in base-year dollars (2024), for the proposed subject property's condo hotel rooms. We have positioned the condo-hotel room's ADR in the 2024 base year in consideration of its wellness-focused wellness facilities, new facility, large room units which will average 1,248 square feet, and its location. The ADR positioning of the villas, residences, sky villas, and estates was estimated based on considerations of the size of the units, and review of price premiums of similar units at selected Auberge and Four Seasons affiliated branded residences. The following table illustrates that the overall rate position, inclusive of the condo-hotel, villas, residences, sky villas, and estates is $1,490, in base-year dollars (2024).

FIGURE 6-5 BASE-YEAR ADR POSITIONING BY UNIT TYPE

Unit Types	Total Units	Rentable Units	Implied Stabilized Occupancy	Base Year ADR	Implied Occupied Rooms	Implied Rooms Revenue
Condo Hotel	240	228	70%	$670	58,254	$39,030,180
Villas	51	47	68%	3,150	11,665	36,746,010
Residences	39	36	66%	3,450	8,672	29,919,780
Sky Villas	5	5	50%	4,050	913	3,695,625
Estates	6	6	62%	8,150	1,358	11,066,070
Totals	**341**	**322**	**69%**	**$1,490**	**80,862**	**$120,457,665**

The following table presents the ADR forecast for the market and the proposed subject hotel on a calendar-year basis, as well as the resulting ADR penetration level. The proposed subject hotel's projected ADR (as if stabilized) is then fiscalized to correspond with the hotel's anticipated date of opening for each forecast year.

ADR Expressed in Base-Year Dollars Deflated @ Inflation Rate				$1,418.56	$1,418.56	$1,418.56	$1,276.70	$1,418.56	$1,418.56

Market-wide rates generally trended up through 2022, with significant gains realized between 2020 and 2022 due to strong demand for resort destinations during the pandemic. Average rates corrected marginally in 2023 due to a pullback in domestic leisure transient demand and an increase in lower-rated meeting and group demand. As forecast, the competitive market's modest ADR forecast for 2025 reflect recent year-to-date trends. Thereafter, we expect rates to continue to increase through the stabilized year in consideration of strengthening economic conditions, increased airlift, and continued growth in the popularity of Coachella Valley as a resort destination.

The proposed subject hotel's ADR penetration level is forecast to reach approximately 300% by the stabilized period, consistent with our stabilized ADR positioning which is inclusive of all the product which will participate in the rental program. Based on our review of the proposed improvements and the anticipated profile of the hotel product and its operation, it is our opinion that the ADR penetration level should be achieved with appropriate management and marketing. The proposed hotel's positioned stabilized ADR is projected to increase at the same rate as the overall market's ADR, prior to consideration of any ADR discounting during the hotel's ramp-up period.

The following table sets forth our forecast of the proposed subject hotel's occupancy, ADR, and RevPAR, with corresponding penetration levels, for the first projection year through the stabilized year of operation. The competitive market's historical and projected occupancy, ADR, and RevPAR levels are presented for comparison.

A discount of 10% has been applied to the stabilized room rates projected for the first two years of operation, as would be expected for a new property of this type as it builds its reputation and becomes established in the market. Note that our forecast of income and expense, which follows later in this report, assumes an underlying inflation rate of 3.0%.

The following occupancies and average rates will be used to project the proposed subject hotel's rooms revenue; this forecast reflects years beginning on March 1, 2030, which correspond with our financial projections.

FIGURE 6-8 FORECASTS OF OCCUPANCY, AVERAGE RATE, AND REVPAR

Year	Occupancy	Average Rate Before Discount	Discount	Average Rate After Discount	ADR % Change	RevPAR	RevPAR % Change
2030/31	61 %	$1,702.20	10.0 %	$1,531.98	-7.3	$934.51	—

2033/34	69	1,860.04	0.0	1,860.04	3.0	1,283.43	3.0

7. Projection of Hotel Income and Expense

In this chapter of our report, we have compiled a forecast of income and expense for the proposed subject hotel. This forecast is based on the facilities program set forth previously, as well as the occupancy and ADR forecast discussed previously.

The forecast of income and expense is expressed in current dollars for each year. The stabilized year is intended to reflect the anticipated operating results of the property over its remaining economic life given any or all applicable stages of build-up, plateau, and decline in the life cycle of the hotel. Thus, income and expense estimates from the stabilized year forward exclude from consideration any abnormal relationship between supply and demand, as well as any nonrecurring conditions that may result in unusual revenues or expenses. The ten-year period reflects the typical holding period of large real estate assets such as hotels. In addition, the ten-year period provides for the stabilization of income streams and comparison of yields with alternate types of real estate. The forecasted income streams reflect the future benefits of owning specific rights in income-producing real estate.

Comparable Operating Statements

In order to project future income and expense for the proposed subject hotel, we have included a sample of individual comparable operating statements from our database of hotel statistics. All financial data are presented according to the three most common measures of industry performance: ratio to sales (RTS), amounts per available room (PAR), and amounts per occupied room night (POR). These historical income and expense statements will be used as benchmarks in our forthcoming forecast of income and expense. The proposed subject hotel's stabilized statement of income and expense, deflated to 2024 dollars, is also presented.

The departmental income of the comparable properties ranged from 51.0% to 61.3% of total revenue. Our forecast anticipates that the proposed subject hotel's departmental income will stabilize at 60.7%. The comparable properties achieved a gross operating profit (GOP) ranging from 27.4% to 41.2% of total revenue. It is important to note the primary consideration was given to the ratio of sales given the subject property's higher rates for the larger unit types participating in the rental program, relative to the comparable properties. We will refer to the comparable operating data in our discussion of each line item, which follows later in this section of the report.

Fixed and Variable Component Analysis

HVS uses a fixed and variable component model to project a lodging facility's revenue and expense levels. This model is based on the premise that hotel revenues and expenses have one component that is fixed and another that varies directly with occupancy and facility usage. A projection can be made by taking a known level of revenue or expense and calculating its fixed and variable components. The fixed component is then increased in tandem with the underlying rate of inflation, while the variable component is adjusted for a specific measure of volume such as total revenue.

The actual forecast is derived by adjusting each year's revenue and expense by the amount fixed (the fixed expense multiplied by the inflated base-year amount) plus the variable amount (the variable expense multiplied by the inflated base-year amount) multiplied by the ratio of the projection year's occupancy to the base-year occupancy (in the case of departmental revenue and expense) or the ratio of the projection year's revenue to the base year's revenue (in the case of undistributed operating expenses). Fixed expenses remain fixed, increasing only with inflation. Our discussion of the revenue and expense forecast in this report is based upon the output derived from the fixed and variable model. This forecast of revenue and expense is accomplished through a systematic approach, following the format of the Uniform System of Accounts for the Lodging Industry (USALI). Each category of revenue and expense is estimated separately and combined at the end in the final statement of income and expense.

Inflation and Appreciation Assumptions

In consideration of the trends in the Consumer Price Index (CPI), inflation factors that directly influence lodging properties, projections set forth by economists surveyed, and the Federal Reserve's target inflation rate, we have applied a 3.0% underlying inflation rate in our analysis.

This annual rate of growth is applied to income and expenses after the stabilized year to reflect the longer-term expectation of asset appreciation by typical investors. This position is based on interviews with numerous market participants indicating a distinction in the expectations of near-term cost inflation (e.g., related to labor and supplies) versus long-term income growth that drives appreciation. Any exceptions to the application of the assumed underlying inflation and EBITDA Less Replacement Reserve growth rates are discussed in our write-ups of individual income and expense items.

Forecast of Revenue and Expense

Based on an analysis that will be detailed throughout this section, we have formulated a revenue-and-expense forecast through the fifth projection year, including amounts per available room and per occupied room, as illustrated in the following table. The second table illustrates our ten-year forecast of income and expense, presented with a lesser degree of detail. The forecasts pertain to years that begin on March 1, 2030, expressed in inflated dollars for each year (figures in the forecast year columns have been divided by 1,000 and reflect thousands of dollars).

*Departmental expenses are expressed as a percentage of departmental revenues.

The following description sets forth the basis for the forecast of income and expense. We anticipate that it will take four years for the proposed subject hotel to reach a stabilized level of operation. Each revenue and expense item has been forecast based upon our review of the proposed subject hotel's operating budget and comparable income and expense statements. The forecast is based upon fiscal years beginning March 1, 2030, expressed in inflated dollars for each year.

Rooms Revenue

Rooms revenue is determined by two variables: occupancy and average rate (ADR). We projected occupancy and ADR in a previous section of this report. The proposed subject hotel is expected to stabilize at an occupancy level of 69% with an ADR of $1,860.04 in 2033/34. Following the stabilized year, the proposed subject hotel's ADR is projected to increase along with the underlying rate of growth assigned to EBITDA Less Replacement Reserve.

Food & Beverage Revenue

Food and beverage (F&B) revenue is generated by a hotel's restaurants, lounges, coffee shops, snack bars, banquet rooms, and room service. In addition to providing a source of revenue, these outlets serve as an amenity that assists in the sale of guestrooms. With the exception of properties with active lounges or banquet facilities that draw local residents, in-house guests generally represent a substantial percentage of a hotel's F&B patrons. In the case of the Proposed COVA Coachella, the F&B department will include nine food and beverage outs; moreover, the resort will feature extensive event space. The proposed subject hotel's food and beverage operation is expected to be an important component of the hotel. We have relied on food and beverage projections based on a comprehensive food and beverage market analysis completed by Julian H. King.

Although F&B revenue varies directly with changes in occupancy, the small portion generated by banquet sales and outside capture is relatively fixed.

FIGURE 7-6 FOOD & BEVERAGE REVENUE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Food & Beverage Revenue							
Percentage of Revenue	24.3 %	37.1 %	38.5 %	35.2 %	42.7 %	30.9 %	27.9 %
Per Available Room	$53,138	$140,836	$79,935	$49,413	$72,906	$174,149	$151,394
Per Occupied Room	$269.50	$577.01	$302.91	$218.35	$337.13	$782.17	$601.13

Other Operated Departments Revenue

According to the USALI, other operated departments include any major or minor operated department other than rooms and F&B. The proposed subject hotel's other operated departments revenue sources are expected to include items such as the hotel's parking operations, pool cabana rentals, the resort's gift shop, telephone charges, upgraded Internet charges, valet laundry, and dry cleaning fees, and other minor items. Based on our review of operations with a similar extent of offerings, we have positioned an appropriate revenue level for the proposed subject hotel.

FIGURE 7-7 OTHER OPERATED DEPARTMENTS REVENUE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized

Per Available Room	$20,515	$22,289	$19,042	$24,135	$18,553	$23,515	$16,883
Per Occupied Room	$104.05	$91.32	$72.16	$106.65	$85.79	$105.61	$67.04

Spa/Treatment Cabanas Income

The proposed subject property's spa/treatment cabanas are expected to be an important amenity for the resort given its wellness-focused design and amenities. Based on our review of comparable operating statements, we have positioned an appropriate revenue level given the resort's planned facility and price point. We forecast the proposed subject hotel's spa/treatment cabanas to stabilize at $27.61 per occupied room by the stabilized year, 2033/34.

FIGURE 7-8 SPA/TREATMENT CABANAS INCOME

Property	Year of Data	Number of Rooms	Occupancy	Average Daily Rate	Number of Treatment Rooms	% of Total Revenue	Revenue Per Occupied Room	Revenue Per Treatment Room	Spa Expense Ratio

Deflated Stabilized		318	69.0	1,419	5	1.8	38.21	61,200	70.5

Resort Fees

The hotel is anticipated to generate additional revenue through resort fees, which typically include the use of services and amenities such as Internet access, local telephone calls, and other complimentary or discounted services such as access to preferred tee times or similar services. We have positioned revenues in this line item based on our review of the local comparable competitive operations. We have forecast a 60.0% capture rate, which is supported by our understanding of the area comps. The following table illustrates resort fees within the competitive set.

FIGURE 7-9 LOCAL COMPETITIVE SET – RESORT FEES

Property	Resort Fee
Ritz-Carlton Rancho Mirage	$50.00
Parker Palm Springs	$49.00
La Quinta Resort & club, Curio Collection	$45.00
Grand Hyatt Indian Wells Resort & Spa	$45.00
JW Marriott Desert Springs Resort	$45.00
Proposed CAVA Coachella	$45.00
Assumed Capture Rate	60.0%
Projected Resort Fee (Base-Year)	**$27.00**

Miscellaneous Income

The miscellaneous income sources comprise those other than guestrooms, F&B, and the other operated departments. The proposed subject hotel's miscellaneous income revenues are expected to include attrition fees, cancellation charges, and other minor items. Based on our review of operations with a similar extent of offerings, we have positioned an appropriate revenue level for the proposed subject hotel. Changes in this revenue item through the projection period result from the application of the underlying inflation rate and projected changes in occupancy.

FIGURE 7-10 MISCELLANEOUS INCOME

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	1.3 %	5.3 %	2.2 %	1.0 %	1.5 %	0.7 %	0.5 %
Per Available Room	$2,862	$20,214	$4,632	$1,471	$2,564	$4,150	$2,979
Per Occupied Room	$14.51	$82.82	$17.55	$6.50	$11.86	$18.64	$11.83

Rooms Expense

Rooms expense consists of items related to the sale and upkeep of guestrooms and public space. Salaries, wages, and employee benefits account for a substantial portion of this category. Although payroll varies somewhat with occupancy, and managers can generally scale the level of service staff on hand to meet an expected occupancy level, much of a hotel's payroll is fixed. A base level of front desk personnel, housekeepers, and supervisors must be maintained at all times. As a result, salaries, wages, and employee benefits are only moderately sensitive to changes in occupancy.

Commissions and reservations are usually based on room sales and, thus, are highly sensitive to changes in occupancy and ADR. While guest supplies vary 100% with occupancy, linens and other operating expenses are only slightly affected by volume. The proposed subject hotel's rooms department expense has been positioned based upon our review of the comparable operating data and our understanding of the hotel's future service level and price point.

FIGURE 7-11 ROOMS EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	21.7 %	29.4 %	26.1 %	25.4 %	26.5 %	36.6 %	26.2 %
Per Available Room	$30,944	$57,717	$27,229	$16,620	$20,293	$124,967	$93,617
Per Occupied Room	$156.94	$236.47	$103.18	$73.44	$93.84	$561.27	$371.72

Food & Beverage Expense

Food expenses consist of items necessary for the primary operation of a hotel's food and banquet facilities. The costs associated with food sales and payroll are moderately to highly correlated to food revenues. Items such as dishware, linens, and uniforms are less dependent on volume. Although the other expense items are basically fixed, they represent a relatively insignificant factor. Beverage expenses consist of items necessary for the operation of a hotel's lounge and bar areas. The costs associated with beverage sales and payroll are moderately to highly correlated to beverage revenues. The proposed subject hotel's food and beverage operation is expected to be efficiently managed and operated at an expense level that is in line with other comparable operations.

FIGURE 7-12 FOOD & BEVERAGE EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	84.0 %	77.2 %	75.4 %	58.4 %	69.8 %	74.0 %	71.0 %
Per Available Room	$44,634	$108,781	$60,251	$28,865	$50,880	$128,871	$107,490
Per Occupied Room	$226.37	$445.68	$228.32	$127.55	$235.28	$578.80	$426.80

Other Operated Departments Expense

Other operated departments expense includes all expenses reflected in the summary statements for the divisions associated in these categories, as discussed previously in this chapter. The proposed subject hotel's other operated departments revenue sources are expected to include items such as the hotel's parking operations, pool cabana rentals, the resort's gift shop, telephone charges, upgraded Internet charges, valet laundry and dry cleaning fees, and other minor items. Based on our review of operations with a similar extent of offerings, we have positioned an appropriate revenue level for the proposed subject hotel.

FIGURE 7-13 OTHER OPERATED DEPARTMENTS EXPENSE

Per Occupied Room	$46.52	$80.89	$43.78	$76.69	$33.90	$46.63	$26.94

Spa/Treatment Cabanas Expense

The proposed subject property's spa/treatment cabanas is expected to be efficiently managed and operated at a market-appropriate level. We have projected a stabilized expense ratio of 70.0 in 2033/34.

Our projection of spa/treatment cabanas is presented in the following table.

FIGURE 7-14 SPA/TREATMENT CABANAS INCOME

Property	Year of Data	Number of Rooms	Occupancy	Average Daily Rate	Number of Treatment Rooms	% of Total Revenue	Revenue Per Occupied Room	Revenue Per Treatment Room	Spa Expense Ratio
Comp 1	2014/15	50	67.0 %	$1,189	5	7.3 %	$132.93	$326,313	64.6 %

Forecast Year 1		318	61.0 %	$1,532	5	2.2 %	$55.37	$58,924	81.9 %
Deflated Stabilized		318	69.0	1,419	5	1.8	38.21	61,200	70.5

Administrative & General Expense

Administrative and general expense includes the salaries and wages of all administrative personnel who are not directly associated with a particular department. Expense items related to the management and operation of the property are also allocated to this category.

Most administrative and general expenses are relatively fixed. The exceptions are cash overages and shortages; commissions on credit card charges; provision for doubtful accounts, which are moderately affected by the number of transactions or total revenue; and salaries, wages, and benefits, which are very slightly influenced by volume. Based upon our review of the comparable operating data and the expected scope of facility for the proposed subject hotel, we have positioned the administrative and general expense level at a market- and property-supported level.

FIGURE 7-15 ADMINISTRATIVE & GENERAL EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	8.7 %	8.3 %	8.6 %	7.5 %	7.1 %	3.4 %	2.5 %
Per Available Room	$19,125	$31,551	$17,838	$10,584	$12,153	$18,994	$13,805
Per Occupied Room	$97.00	$129.26	$67.60	$46.77	$56.20	$85.31	$54.81

Information & Telecommunications Systems Expense

Information and telecommunications systems expense consists of all costs associated with a hotel's technology infrastructure. This includes the costs of cell phones, administrative call and Internet services, and complimentary call and Internet services. Expenses in this category are typically organized by type of technology or the area benefiting from the technology solution. We expect the proposed subject hotel's information and telecommunications systems to be well managed. Expense levels should stabilize at a typical level for a property of this type.

FIGURE 7-16 INFORMATION & TELECOMMUNICATIONS SYSTEMS EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	1.3 %	1.2 %	1.3 %	0.9 %	1.6 %	0.6 %	0.4 %
Per Available Room	$2,751	$4,543	$2,655	$1,291	$2,686	$3,205	$2,330
Per Occupied Room	$13.95	$18.61	$10.06	$5.70	$12.42	$14.40	$9.25

Marketing Expense

Marketing expense consists of all costs associated with advertising, sales, and promotion; these activities are intended to attract and retain customers. Marketing can be used to create an image, develop customer awareness, and stimulate patronage of a property's various facilities.

The marketing category is unique in that all expense items, with the exception of fees and commissions, are totally controlled by management. Most hotel operators establish an annual marketing budget that sets forth all planned expenditures. If the budget is followed, total marketing expenses can be projected accurately.

Marketing expenditures are unusual because, although there is a lag period before results are realized, the benefits are often extended over a long period. Depending on the type and scope of the advertising and promotion program implemented, the lag time can be as short as a few weeks or as long as several years. However, the favorable results of an effective marketing campaign tend to linger, and a property often enjoys the benefits of concentrated sales efforts for many months. Based upon our review of the comparable operating data and the expected scope of facility for the proposed subject hotel, we have positioned the marketing expense level at a market- and property-supported level.

FIGURE 7-17 MARKETING EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	4.5 %	5.7 %	6.8 %	6.5 %	9.1 %	2.7 %	2.1 %
Per Available Room	$9,844	$21,666	$14,199	$9,118	$15,564	$15,433	$11,216
Per Occupied Room	$49.93	$88.77	$53.81	$40.29	$71.97	$69.31	$44.54

Franchise Fee

As previously discussed, the proposed subject property is expected to be operated by the brand; as such, there will be no franchise agreement, and no franchise fees are expected to be required throughout the ten-year forecast period.

Property Operations & Maintenance

Property operations and maintenance expense is another expense category that is largely controlled by management. Except for repairs that are necessary to keep the facility open and prevent damage (e.g., plumbing, heating, and electrical items), most maintenance can be deferred for varying lengths of time.

Maintenance is an accumulating expense. If management elects to postpone performing a required repair, the expenditure has not been eliminated, only deferred until a later date. A lodging facility that operates with a lower-than-normal maintenance budget is likely to accumulate a considerable amount of deferred maintenance.

The age of a lodging facility has a strong influence on the required level of maintenance. A new or thoroughly renovated property is protected for several years by modern equipment and manufacturers' warranties. However, as a hostelry grows older, maintenance expenses escalate. A well-organized preventive maintenance system often helps delay deterioration, but most facilities face higher property operations and maintenance costs each year, regardless of the occupancy trend. The quality of initial construction can also have a direct impact on future maintenance requirements. The use of high-quality building materials and construction methods generally reduces the need for maintenance expenditures over the long term.

We expect the proposed subject hotel's maintenance operation to be well managed. Expense levels should stabilize at a typical level for a property of this type. Changes in this expense item through the projection period result from the application of the underlying inflation rate and projected changes in occupancy.

FIGURE 7-18 PROPERTY OPERATIONS & MAINTENANCE EXPENSE

Per Occupied Room	$24.72	$75.31	$37.50	$29.32	$33.23	$42.12	$27.06

Utilities Expense

The utilities consumption of a lodging facility takes several forms, including water and space heating, air conditioning, lighting, cooking fuel, and other miscellaneous power requirements. The most common sources of hotel utilities are electricity, natural gas, fuel oil, and steam. This category also includes the cost of water service.

Total energy cost depends on the source and quantity of fuel used. Electricity tends to be the most expensive source, followed by oil and gas. Although all hotels consume a sizable amount of electricity, many properties supplement their utility requirements with less expensive sources, such as gas and oil, for heating and cooking. The changes in this utilities line item through the projection period are a result of the application of the underlying inflation rate and projected changes in occupancy.

FIGURE 7-19 UTILITIES EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	1.6 %	3.6 %	2.7 %	2.0 %	2.7 %	0.9 %	0.7 %
Per Available Room	$3,476	$13,571	$5,711	$2,876	$4,672	$5,105	$3,710
Per Occupied Room	$17.63	$55.60	$21.64	$12.71	$21.61	$22.93	$14.73

Management Fee

Management expense consists of the fees paid to the managing agent contracted to operate the property. Some companies provide management services and a brand-name affiliation (first-tier management company), while others provide management services alone (second-tier management company). Some management contracts specify only a base fee (usually a percentage of total revenue), while others call for both a base fee and an incentive fee (usually a percentage of defined profit). Basic hotel management fees are often based on a percentage of total revenue, which means they have no fixed component. While base fees typically range from 2.0% to 4.0% of total revenue, incentive fees are deal specific and often are calculated as a percentage of income available after debt

service and, in some cases, after a preferred return on equity. Total management fees for the proposed subject hotel have been forecast at 3.0% of total revenue.

Property Taxes

Real estate in the state of California is assessed at 100% of market value upon the sale, expansion, or new construction of a property. Once established, the assessed value of a property can increase by no more than 2.0% per year, according to state law. A reassessment is triggered by the sale, expansion, or improvement of a property. For purposes of this analysis, we have calculated the first year's property tax burden based on the estimated market value of the subject property determined by our analysis. Real and personal property are taxed at the same rate.

In most states, the comparison of a hotel's assessed value with that of comparable hotels is the same taxing jurisdiction can provide insight into whether or not the property is fairly assessed. The assessed value of the land and improvements is divided by the hotel's number of rooms to provide a unit of comparison with other hotels. This is a useful tool in most states, where properties are periodically reassessed to market value. However, in California, the comparison of assessed values is generally irrelevant due to Proposition 13, enacted in 1978, which removed the relationship between a property's assessed value and its market value. Under Proposition 13, a property is reassessed upon sale to market value, which generally presumed to be the sales price; therefore, the assessed value is increased at a maximum of 2.0% per year. Trends in appreciation and depreciation caused by market fluctuations are not reflected in a property's assessed value in California, unless there is a sales transaction. Thus, comparable hotels in California can have markedly different assessed values, depending upon when the last sales transaction occurred.

Tax rates are based on the city and county budgets, which change annually. The most recent tax rate in this jurisdiction was reported at 0.8200%.

Based on state law and the current tax rate, the proposed subject property's projected property tax expenses levels are calculated as follows.

FIGURE 7-20 PROPOSED SUBJECT PROPERTY'S TAX CALCULATION

Estimated Market Value		Tax Rate	First Year's Tax Burden
$508,000,000	x	0.82%	$4,165,600

It is our understanding that the third-party owners will be responsible for property taxes. An adjustment to property taxes based on sales projection of the units that will participate in the rental program on a prorated basis based on the percent of

units owned by the developer. Please see Chapter 8 for detail on the projected sales pace of unit sales. The following table illustrates the projected developer's share on annual property taxes. Beginning in 2035/36 and thereafter, the residential units are projected to be sold out and the developer's property tax burden will be the proportional property tax for 52 developer-owned units.

FIGURE 7-21 INSURANCE EXPENSE - DEVELOPER

	Estimated Property Tax	Developer Owned Units	Developer's Share of Property Tax
2030/31	$4,165,600	77.8%	$3,239,171
2031/32	4,248,912	64.0%	2,719,304
2032/33	4,333,890	48.8%	2,114,938
2033/34	4,420,568	34.5%	1,525,096
2034/35	4,508,979	22.0%	991,975
2035/36	4,599,159	16.1%	740,465
2036/37	4,691,142	16.1%	755,274
2037/38	4,784,965	16.1%	770,379
2038/39	4,880,664	16.1%	785,787
2040/41	4,978,278	16.1%	801,503

Insurance Expense

The insurance expense category consists of the cost of insuring the hotel and its contents against damage or destruction by fire, weather, sprinkler leakage, boiler explosion, plate glass breakage, and so forth. General insurance costs also include premiums relating to liability, fidelity, and theft coverage.

Insurance rates are based on many factors, including building design and construction, fire detection and extinguishing equipment, fire district, distance from the firehouse, and the area's fire experience. Insurance expenses do not vary with occupancy.

FIGURE 7-22 INSURANCE EXPENSE

	Comparable Operating Statements					Proposed Subject Property Forecast	
	#1	#2	#3	#4	#5	2030/31	Deflated Stabilized
Percentage of Revenue	0.5 %	0.2 %	0.7 %	1.7 %	1.2 %	0.3 %	0.2 %
Per Available Room	$1,197	$935	$1,477	$2,394	$2,106	$1,895	$1,187
Per Occupied Room	$6.07	$3.83	$5.60	$10.58	$9.74	$8.51	$4.71

RMP Revenue Distribution

The rental management program (RMP) revenue distribution to third-party owners is included as a fixed expense and is equal to 50.0% of rooms revenue, after a 12.0% service charge. An adjustment was made for the sales projection for sales of the units that will be participating in the rental management program. Please Chapter 8 in this report for detail regarding the projected sales pace of unit sales.

The owner revenue distribution calculation is presented in the following table.

FIGURE 7-23 FORECAST OF THIRD-PARTY OWNER REVENUE DISTRIBUTION

	2030/31	2031/32	2032/33	2033/34	2034/35
Gross Room Revenue	$81,521,710	$122,708,780	$141,444,800	$148,967,300	$153,436,310

Reserve for Replacement

Furniture, fixtures, and equipment (FF&E) are essential to the operation of a lodging facility, and their quality often influences a property's class. This category includes all non-real estate items that are capitalized, rather than expensed. The FF&E of a hotel are exposed to heavy use and must be replaced at regular intervals. The useful life of these items is determined by their quality, durability, and the amount of guest traffic and use.

Periodic replacement of FF&E is essential to maintain the quality, image, and income-producing potential of a lodging facility. Because capitalized expenditures are not included in the operating statement but affect an owner's cash flow, a forecast of income and expense should reflect these expenses in the form of an appropriate reserve for replacement.

The International Society of Hospitality Consultants (ISHC) oversees a major industry-sponsored study of the capital expenditure requirements for full-service/luxury, select-service, and extended-stay hotels. The most recent study was published in 2023.[6] Historical capital expenditures of well-maintained hotels were investigated through the compilation of data provided by most of the major hotel companies in the United States. A prospective analysis of future capital expenditure requirements was also performed based upon the cost to replace short- and long-lived building components over a hotel's economic life. The study showed that the capital expenditure requirements for hotels vary significantly from year to year and depend upon both the actual and effective ages of a property. The results of this study showed that hotel lenders and investors are requiring reserves for replacement ranging from 4.0% to 5.0% of total revenue.

Based on the results of our analysis and on our review of the proposed subject asset and comparable lodging facilities, as well as on our industry expertise, we estimate that a reserve for replacement of 4.0% of total revenues is sufficient to provide for the timely and periodic replacement of the subject property's FF&E. This amount has been ramped up during the initial projection period.

Forecast of Revenue and Expense Conclusion

Projected total revenue, gross operating profit, and EBITDA Less Replacement Reserve are set forth in the following table.

[6] The International Society of Hotel Consultants, *CapEx 2023, A Study of Capital Expenditures in the U.S. Hotel Industry*.

FIGURE 7-24 FORECAST OF REVENUE AND EXPENSE CONCLUSION

		Total Revenue		Gross Operating Profit		House Profit Ratio	EBITDA Less Replacement Reserve		
	Year	Total	% Change	Total	% Change		Total	% Change	As a % of Ttl Rev
Projected	2030/31	$134,487,000	—	$56,470,000	—	42.0 %	$38,235,000	—	28.4 %
	2031/32	180,615,000	34.3 %	94,507,000	67.4 %	52.3	61,613,000	61.1 %	34.1

8. Residential Prices and Sales Pace

Whole Ownership Component Overview

The planned condominium unit mix and average square feet per unit type, is detailed in the following table.

PLANNED WHOLE OWNERSHIP UNIT MIX

Unit Types	Number of Units	Avg. SF per Unit	Total SF
Condo-Hotel Townhomes	188	1,248	234,624
Three/Four Bedroom Villas	51	2,600	132,600
Sky Villas	5	4,629	23,145
Four/Five Bedroom Residences	39	4,598	179,307
Eight Bedroom Estates	6	6,740	40,440
Total	**289**	**2,111**	**610,116**

In addition, the proposed subject property will offer 61 units which will be structured as co-ownership product, which 1/4th and 1/8th share ownership. The co-ownership product will be described separately in the following report section.

The proposed COVA Coachella will feature a variety of unit types, ranging from a condo-hotel one-bedroom unit, to three and four-bedroom villas, up to a vacation home which will offer from four to eight bedrooms (to be marketed as Residences and Estates).

All whole ownership products will have access to the resort's amenities, facilities, and services. The concept of the proposed subject property will be focused on wellness and is designed to be the premier destination for wellness in the Coachella Valley, featuring wellness focused facilities such as an on-site longevity clinic, two-story fitness center, luxury spa, immersive outdoor onsen, 25-meter lap pool, and an island dedicated to yoga and meditation. In addition, the resort will feature a ten-acre swimmable lagoon in the center of the site which will offer sandy beaches, nine food & beverage outlets, sports center, surf machine, club membership program, beach club and live music venue, library, event spaces, outdoor amphitheater, kid's club, kid's pool, splash pad, and working barn.

Each townhome, villa, and home will be designed with modern, rustic luxury to merge indoor and outdoor living. The whole ownership units are positioned for privacy, views, and water access.

The proposed subject property is expected to managed by the brand. As previously discussed, the brand affiliation has not been selected yet. The preliminary brands under consideration include Auberge, Rosewood, One and Only, One Hotels, and Montage. We assume the brand will be one of the preliminary brands or a similar brand within the luxury hotel tier. The third-party owners will be required to participate in a rental program, which will provide the owner with potential revenue to offset their purchase. Based on our conversation with the developer, the terms of the agreement will be 21 to 30 days annual usage and revenue generated by the rental program will be split between the unit owners and property ownership (50.0%/50.0%) after a 12.0% service charge.

The following renderings illustrate view of the subject whole ownership units.

Buyer Profile

Market participants indicated that the majority of the potential buyers in Coachella Valley are those living in other parts of California, especially from the San Diego, Orange County, and Los Angeles metropolitan markets, as well as those with a primary home in Seattle, Portland, or other colder climate cities, such as New York and Chicago. Typically, buyers are in search of a third or fourth home and intend to spend a week or several weeks in both the spring and fall months. Visitation to the Coachella Valley traditionally slows in the summer months given the extreme desert heat; however, summer demand has risen in recent years with the growth of day club and music event marketing. We expect that the buyers will also be seeking an investment property and are looking to offset expenses through participation in a rental management program.

Luxury Residences Market Overview

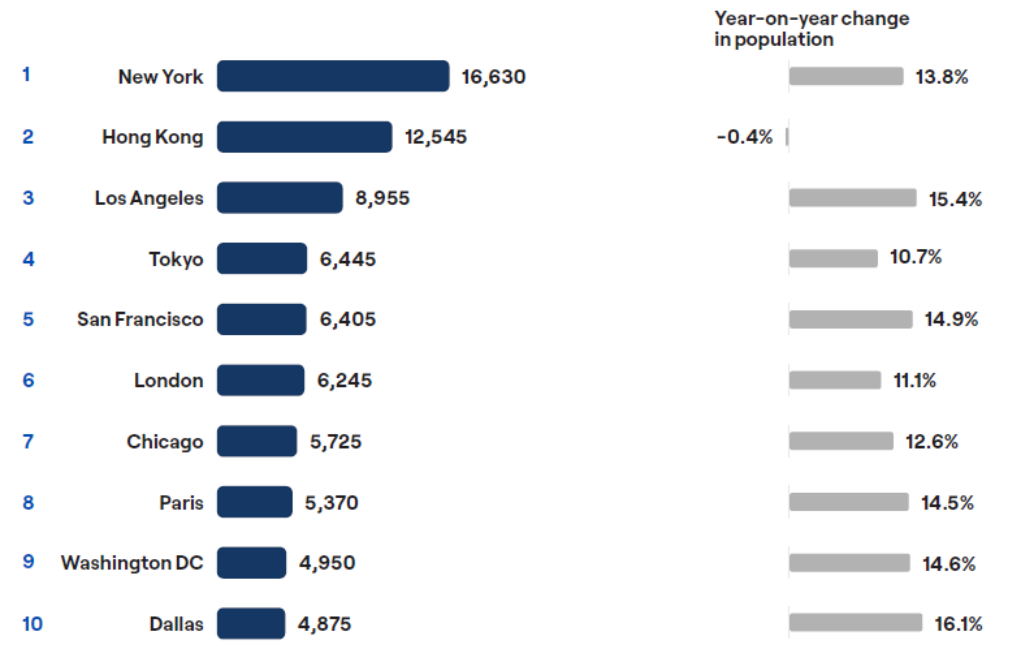
The vacation/second-home industry in the United States enjoyed significant prosperity early in the last decade, slowed during the Great Recession, and resurged in recent years. The National Association of Realtors (NAR) defines second-home owners as those who own one or more residential properties in addition to a primary residence and who use their second home for either vacation or investment purposes. Investment properties and vacation residences share similar real estate attributes; vacation homes are properties primarily owned for recreational use by an owner, family, and friends, while investment properties are owned primarily to rent to others. The overall market experienced an increase from 2019 through early 2022. A modest correction is ongoing given the increased cost of debt; the ongoing correction is less at the higher price point as many buyers are all-cash buyers not influenced by interest rates. Per conversations with brokers and developers, the influence on the overall luxury market has been somewhat muted given the high prevalence of all-cash buyers and/or the high net worth of the buyers.

Demand increases for global ultra-luxury residences in the future will be driven by the growth of global wealth. Oxford Economics forecasts that the highest growth in terms of number of high-income households over the next five years is projected in the Americas, Asia Pacific, the Middle East, and European regions.

High-End Luxury Demographics

The increasing number of high-net-worth (HNW) individuals and ultra-high-net-worth (UHNW) individuals globally has fueled consumer demand for luxury and ultra-luxury lodging and residences, particularly in resort locations. These savvy travelers are looking for new experiences on their trips, driving the demand for ultra-luxury experiential resort accommodations. Operators have been able to increase the pricing of their product aggressively, with little consumer resistance, which in turn has led to outsized increases in the profitability of high-end luxury lodging assets. Profitability gains are driving increased interest in the development of new luxury product to serve this market. The long lead time and high cost to develop these properties and the depth of demand will help insulate these assets from competitive pressure.

Demographics around the world, and particularly in the United States, provide a strong underpinning for the ultra-luxury sector. At year-end 2023, North America continued to occupy the top spot of the wealth pyramid, with over 160,000 UHNW individuals (wealth above $30 million USD).



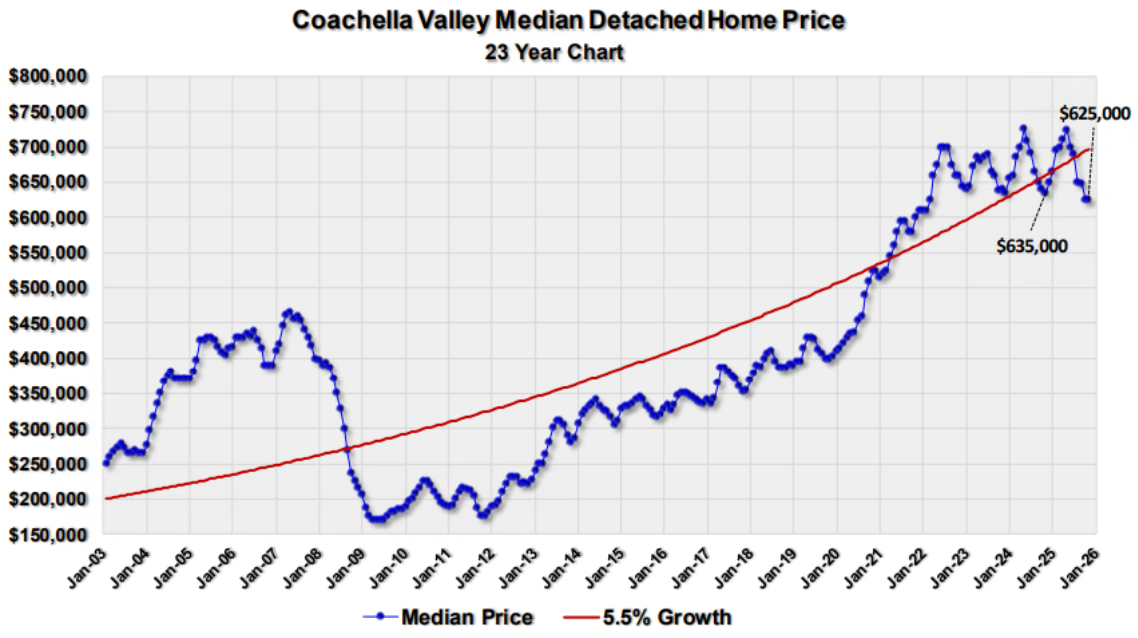
UHNW INDIVIDUALS IN 2023 (SOURCE: WEALTH-X, AN ALTRATA COMPANY)

The United States added the most household wealth in 2023, followed by China, Canada, India, and Australia. The most recent World Ultra Wealth Report, published by Altrata, indicated 12.0% in North America for UHNW numbers in 2023, with continued growth expected over the next five years.

According to Altrata, growth in North America in 2023 was largely driven by equity returns from tech stocks. Wealth growth was notable in New York, Los Angeles, San Francisco, Chicago, Washington DC, and Dallas, as indicated below.

TOP CITIES FOR UHNW POPULATION IN 2023 (SOURCE: WEALTH-X, AN ALTRATA COMPANY)

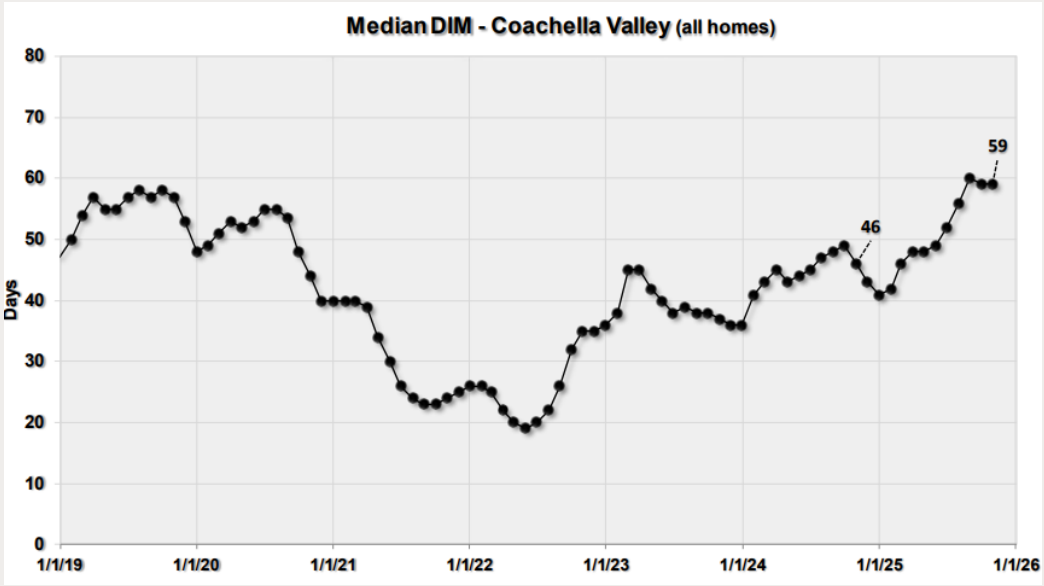
In conclusion, the U.S. and global demand for luxury and ultra-luxury resorts and resort residential products has been growing at a rapid pace in recent years given the strong growth in the number and net worth of the HNW and UHNW population. Despite near-term concerns regarding economic growth, this trend is anticipated to continue, providing a significant base of demand for luxury residential products.



Coachella Valley Market Overview

Due to high interest rates and lower-than-normal inventory, the residential market in the Coachella Valley began to cool down in 2023. However, in early 2025, inventory reached its highest point since before the pandemic in 2019. Since the beginning of the year, inventory has been improving, and the inventory is now comparable to before the pandemic. Nevertheless, our conversations with market participants indicate that the popularity of Coachella Valley has grown tremendously over the last decade, which further intensified following the onset of the pandemic due to buyers seeking homes in a scenic environment with easy access to outdoor recreational activities. The primary homebuyers in the Coachella Valley are those living in other parts of California, as well as those with a primary home in Seattle, Portland, or other colder climate cities, such as New York and Chicago.

The Palm Springs Regional Association of Realtors and the California Desert Association of Realtors publish monthly trends on the status of the current residential market, which we have reviewed to assist in estimating estimated pricing for the proposed subject property.



The following chart reflects the median detached price for homes throughout the Coachella Valley. As noted below, prices did not exceed pre-2008 recession levels until 2021. The latest data as of October 2025 ended the month at $625,000, which is difference of -1.6% from last year. The median price usually hits its seasonal low in the fall and its high in the spring. The table clearly shows that detached homes in the Coachella Valley have generally maintained the price gains they made after the pandemic.

COACHELLA VALLEY MEDIAN DETACHED PRICE – SOURCE: THE DESERT HOUSING REPORT, OCT. 2025

At the end of October 2025, the median number of "days in the market" in the Coachella Valley was 59 days, which is 13 days higher than last year. The median selling time in the region has generally been running between 40 and 55 days over the last two years,

COACHELLA VALLEY DAYS ON MARKET – SOURCE: THE DESERT HOUSING AUTHORITY, OCT. 2025

Coachella Valley Luxury Home Market

The Coachella Valley is home to some of the most exclusive private residential communities in Southern California. The majority of the high-end luxury residential communities are located in Indian Wells, Rancho Mirage, and La Quinta, including the Madison Club, the Hideaway, and the Bighorn. It is important to note that the subject site has an address in Coachella; however, it is within the outer southwestern most boundary of Coachella, and it situated within a few blocks of the most affluent developments in the Coachella Valley. Our interviews with market participants indicated that the luxury home market is not typically influenced by high interest rates but greater economic uncertainty has impacted sales pace, which prompted more incentives offered by sellers. Moreover, luxury home sales in the Coachella Valley are also somewhat challenged by the lack of newer inventory. Many of the luxury homes were built before 2009, which provides an opportunity for the proposed subject property.

In conclusion, our research shows the Coachella Valley, especially the luxury segment, has been moderately impacted by the high interest rate environment and economic uncertainty, which is reflected in the comparatively high levels of

inventory. However, pricing remains near record high levels with little to no declines in some submarkets. Overall, the outlook for the market remains positive given the strong population base in the Los Angeles basin and the growing popularity of the Coachella Valley among homebuyers from colder climates.

Comparable Regional Branded Properties

The proposed subject whole ownership component is expected to appeal to a unique set of buyers who are attracted to the location, brand, and product (i.e., a whole ownership product with a rental program). Given the overlapping buyer profiles throughout the region for similar product types, we have reviewed recent sales of other branded residences throughout the greater California market.

The Residences at Stanly Ranch

The Residences at Stanly Ranch comprise of 70 three- to six-bedroom single-family homes ("Vineyard Homes") and 40 two-bedroom, turnkey furnished resort residences ("Villas"). These residences are situated within Stanly Ranch's 712 heirloom acres of rolling California vineyards, eucalyptus trees, and walking and biking trails. The Vineyard Homes feature eleven floor plans which include single-level, two-level, and three-level layouts which range from 2,300 to 5,600 square feet of indoor living space. All homes feature private, heated pools, lush, covered courtyards, gourmet kitchens, covered loggias, and offer optional upgrades for outdoor fire pits and outdoor kitchens, and two interior design color palette selections owners may choose from. Each open-layout great room is highlighted by vaulted ceilings and an exquisite marble fireplace set between connections to outdoor lounge venues, ideal for entertaining guests. The primary suites feature a spa-inspired bath, outdoor shower, fireplace, and walk-in closet. Owners of the Vineyard Homes also have the option to join the Stanly Ranch Club; membership of the club offers residents access to facilities and amenities at the nearby 130-room Stanly Ranch, an Auberge Resort.

The Villas feature two floor plans, both of which offer roughly 1,780 square feet of indoor living space. Vaulted ceilings and full-height glass doors open to a covered, outdoor venue overlooking vineyards and inspired contemporary architecture. The villas are fully furnished and include dual temperature-controlled wine columns, spa-inspired bath with heated floors, and multiple stone fireplaces. Exterior spaces include an outdoor lounge and built-in outdoor kitchen. These condominium-style Villas are also supported by a rental management program.

The first phase of Stanly Ranch's residential development was completed in September 2024, which includes 24 Vineyard Homes and 20 Villas. The publicly available sales prices of the 3 Vineyard Homes and 1 Villas that were sold in 2024 averaged $1,950 per square feet.

Four Seasons Private Residences Napa Valley

The Four Seasons Private Residences Napa Valley comprise 20 one- and two-story villas that offer between 2,500 to 3,460 square feet of interior living space. All twenty Residences feature two full master bedrooms with five-fixture bathrooms, walk-in closets, an owner's wine cellar, luxuriously appointed dining and entertaining spaces, and generous covered outdoor terraces for relaxing with family and friends in a vineyard setting. Each Residence also includes a full two-car garage and spacious closets and storage for full-time residence. Owners of these residences also have the option of participating in a rental management program operated by the adjacent Four Seasons Resort Napa Valley.

The publicly available sales prices of the 19 residences that were sold between 2021 and 2024 averaged approximately $1,715 per square feet.

Montage Residences Healdsburg

The Montage Residences Healdsburg comprise 25 turnkey Harvest Homes and 15 custom Estate Homesites, all of which are eligible to participate in a rental management program. The Harvest Homes feature two-level, four-bedroom layouts offering 3,132 square feet of indoor living space and include amenities such as a private plunge pool, a dedicated garage with convenient golf cart access, and a lock-off secondary primary bedroom suite.

The Estate Homesites are set across two enclaves—the northern enclave can be sited for custom homes, while the southern homesites offer site-specific home designs. Each homesite sits amidst shady groves of carefully preserved native trees and provides a generous canvas upon which to build a distinct wine country estate.

The publicly available sales prices of the 17 residences that were sold between 2022 and 2024 averaged approximately $1,870 per square feet.

Sales of the three comparable branded residences indicate a pricing range of $1,714 to $1,985 per square feet. However, it is important to note that as the effective date of this report, Stanly Ranch was still in the early stages of selling its first phase of residential development.

The pricing of various brand residential comparables from throughout California are illustrated in the following table.

These data are summarized in the following table.

COMPARABLE BRANDED RESIDENCES IN CALIFORNIA - SALES SUMMARY

Comparable	Notes	Total # of Units	Year Built	Period Analyzed	# Units Sold	Avg. SF/Unit Sold	Avg. Sale Price/Unit	Avg. Price/SF
Mandarin Oriental Residences, Beverly Hills	Residential Only	54	2022	2022 to 2024	10	2,166	$6,966,001	$3,216
The Residences at Stanly Ranch - Vineyard Homes	Hotel & Residences	70	2022	2024	3	3,150	6,251,667	1,985

Source: MLS & HVS Database

The regional branded residences sales comparables indicated a range of $817 to $3,216 per square foot, with an overall average sales price of $1,832 per square foot, or a median sales price of $1,751 per square foot.

Local Residential Comps

The Madison Club

The Madison Club is located less than two miles west of the subject site. It the highest-rated private residential community in the subject neighborhood. The Madison Club is highly exclusive, with an initiation fee of $250,000 and annual dues exceeding $45,000. During the period reviewed from 2023 through year-to-date 2025, ten residences within the Madison Club have been sold at prices ranging from $5,153,750 to $31,750,000. The average price per square foot was $1,591, and the median price per square foot was $1,556. Recent residential sales within the Madison Club are shown in the following table.

THE MADISON CLUB – SALES DATA 2023 THROUGH YEAR-TO-DATE 2025

Date of Sale	Address	Sale Price	SF	Price per SF	Beds	Baths	Lot	Year Built
7/01/2025	81413 Columbus Way	$12,100,000	7,638	$1,584	5	6	0.64	2014

The Hideaway Club

The Hideaway Club is located adjacent to, and directly to the west of the Madison Club. The Hideaway Club is also a highly rated private residential community; however, it is not as exclusive as The Madison Club. We reviewed sales within the Hideaway Club from 2023 through year-to-date 2025. During this time frame the average price per square foot was $1,078, and the median price per square foot was $1,092. Recent residential sales within the Hideaway Club are presented in the following table.

THE HIDEAWAY CLUB – SALES DATA 2024 THROUGH YEAR-TO-DATE 2025

Date of Sale	Address	Sale Price	SF	Price per SF	Beds	Baths	Lot	Year Built

In addition, the following table illustrates selected recent luxury residential sales from within or near PGA West, a popular golf community and private club community in the subject neighborhood. PGA West features nine golf course designed by renown golfers such as Jack Nicklaus, Arnold Palmer and Greg Norman. This resort is marketed as the "Western Home of Golf in America." The selected sales represented transactions that occurred from January through October 2025. The average price per square foot in 2025 was $948, and the median price per square foot was $944. The selected sales from 2025 within or near PGA West are listed in the following table.

SELECTED SALES WITHIN OR NEAR PGA WEST - 2025

Date of Sale	Address	Sale Price	SF	Price per SF	Beds	Baths	Lot	Year Built

AVERAGE		**3,492,559**	**3,684**	**948**	**3.6**	**4.6**	**0.77**	**2015**

It is important to note that the local residential sales data represents resale homes (versus new construction) and does not benefit from a brand affiliation or private club setting.

As a last benchmark, we reviewed the presales from the former Proposed Montage Resort in La Quinta. After numerous delays, the developer was in breach of contract with the city and subsequently defaulted on the project and filed for bankruptcy in August 2024. Ten presales were made prior to the bankruptcy for five two-bedroom residences, four three-bedroom residences, and one four-bedroom residence. In our opinion, although these presales did not become confirmed sales, they are relevant benchmarks since the presales were made in the market. The average prices for the presales at the former Proposed Montage Resort are illustrated in the following table.

PRESALE SALES FOR MONTAGE BRANDED RESIDENCES - PRESALES

Unit Type	Square Feet	Average Sales Price	Average Price per SF
2BR	1,787	$2,655,899	$1,486
3BR	2,113	3,085,899	1,460
4BR	3,520	4,255,899	1,209

Subject Sales Prices and Sales Pace Projection

A summary of the whole ownership comparables and our reconciled price positioning of the subject's whole ownership component are illustrated in the following table.

COMPARABLES SUMMARY AND SUBJECT PRICE POSITIONING (BASE YEAR)

	Avg. SF/ Unit Sold	Average Sale Price	Average Price per SF
Regional Branded Residences	2,232	$4,344,194	$1,832
The Madison Club	9,911	15,764,375	1,591
The Hideaway Club	5,842	6,295,000	1,078
Within or Near PGA West	3,684	3,492,559	948
Former Proposed Montage Resort	2,473	3,332,566	1,385
Proposed COVA Coachella	**1,980**	**$2,574,000**	**$1,300**

We have positioned the subject's whole ownership price points below the regional branded residences and the Madison Club and above the Hideaway Club and other local comps within or near PGA West. A majority of the regional branded residence clubs are located in urban areas of San Francisco or Los Angeles which represents higher priced real estate and the Madison Club represents the highest luxury residential development in the market, with exclusivity with high security and the prestige of being home to several well-known celebrities. It is our opinion that the subject property's whole ownership price points should be higher than the Hideaway Club and other local comp prices given the subject's new construction, as well as consideration of the planned high-quality food and beverage outlets, wellness-focused facilities, recreation amenities and nine-acre lagoon within the resort. While the subject's reconciled price point is positioned below the pre-sale prices of the former Montage Resort, we also note that it was a failed project and the pre-sales that were sold were a small number. We believe that the reconciled price positioning of $1,300 will allow for an efficient sales pace which is important given

the large amount of whole ownership inventory that will be sold. Furthermore, the reconciled price point can be marketed as a value proposition, especially when also considering that the owner will participate in a rental program which will offset the investment. In addition, this price positioning will allow for somewhat aggressive price increases as project sales gains momentum.

The reconciled price points, in 2025 dollars, based on our analysis of the market, is shown in the following table.

RECONCILED MARKET-BASED PRICES (BASE YEAR)

Unit Types	Avg. SF per Unit	Price Per SF	Price Per Unit
Condo-Hotel Townhomes	1,248	$1,300	$1,622,400
Three/Four Bedroom Villas	2,600	1,300	3,380,000
Sky Villas	4,629	1,300	6,017,700
Four/Five Bedroom Residences	4,598	1,300	5,977,400
Eight Bedroom Estates	6,740	1,300	8,762,000

We have made the following assumption for the whole ownership sellout.

- Pre-sales will begin on March 1, 2028, two years before the opening date of the property on March 1, 2030.
- We estimate 66 whole ownership units, or roughly 20% of the inventory, will be sold during the pre-sales period.
- The base price positioning will be assumed during the pre-sales period, then will increase 5.0% annually beginning on the first projection year, 2030/31.
- The total sellout period, exclusive of pre-sales, will be five years, resulting in a sellout of the subject whole ownership units in 2034/35.

The whole ownership sellout is illustrated in the following table.

WHOLE OWNERSHIP SALES PROJECTION

	Units Sold	Total SF Sold	Avg. Sales Price per SF	Sales Volume
2028/30 [A]	56	96,808	$1,300	$125,851,000
2030/31 [B]	41	82,052	1,365	112,001,400
2031/32 [C]	52	118,819	1,433	170,297,222
2032/33 [D]	54	136,521	1,505	205,452,044
2033/34 [E]	45	91,130	1,580	143,999,324
2034/35 [F]	41	84,786	1,659	140,673,541
	289	**610,116**	**$1,472**	**$898,274,529**

A - Pre-sales, 45 condo hotel units, 4 residences, 2 Sky Villas, and 5 Villas

B - 30 condo hotel units, 7 residences, 1 Sky Villa, and 3 Villas

C - 30 condo hotel units, 1 Estate, 8 residences, 2 Sky Villas, and 11 Villas

D - 30 condo hotel units, 5 Estates, 8 residences, and 11 Villas

E - 28 condo hotel units, 6 residences, and 11 Villas

F - 25 condo hotel units, 6 residences, and 10 Villas

Cost of Sales

The cost of sales pertains to direct costs incurred in selling the subject whole ownership such as broker commissions, sales and marketing costs, and closing fees. Broker commissions pertain to fees to be paid to listing and selling brokers. Sales and marketing costs pertain to costs incurred in the marketing to potential buyers. Costs included under this category are advertising, promotion, direct marketing, administrative costs, research, and other overhead costs. Closing fees refer to the costs associated with producing the necessary closing documents, title work, legal work, and recording fees. We have assumed a 12.50% expense ratio in our projection, as presented in the following table.

COST OF SALES

Component	% Cost
Branded License Fee	5.00%
Broker's Commission	5.00%
Legal, Escrow, and Closing Costs	1.00%
Sales and Marketing	1.50%
Total Cost of Sales	**12.50%**

Whole Ownership Cash Flow Forecast

Based on the above discussed parameters, we have compiled an annual cash flow forecast for the proposed subject property's whole ownership component. Our annual cash flow forecast covers the estimated sellout period from March 1, 2030 through February 28, 2035, exclusive of pre-sales (from March 1, 2028 through February 28, 2030.

WHOLE OWNERSHIP COMPONENT, PROPOSED COVA COACHELLA – CASH FLOW FORECAST

	2028/30 Presales	2030/31	2031/32	2032/33	2033/34	2034/35	Totals
Sales:

9. Co-Ownership Interest Share Prices and Sales Pace

This chapter begins with a shared ownership/co-ownership industry overview.

Shared Ownership/ Co-Ownership Industry Overview

This section presents an overview of the shared-ownership resort real estate industry to provide the reader with an understanding of the current state of the industry, as well as the characteristics of the industry's target markets. A brief regional overview follows the overview of the shared ownership industry.

It is important for the reader to understand the co-ownership interest is historically referred to fractional ownership and is identified within the Ragatz report (described below) as fractional interest projects or private residence clubs. The proposed subject property intends to market the "private residence club" as co-ownership interest ownership. For clarity the references to fractional interests in the industry overview are the same interest as will be sold at the proposed subject property as co-ownership interest ownership.

The information presented within this section was obtained from *The Shared-Ownership Resort Real Estate Industry in North America: 2025*, a detailed survey of the industry in 2024 in North America (including the United States, Canada, the Caribbean and Mexico). This survey was conducted in 2024 by Ragatz Associates, an internationally recognized consulting and market research firm focused on the industry.

The 2025 industry report, as prepared by Ragatz Associates, represents the 25th annual survey conducted since 1999. Findings from this report are based on telephone interviews with developers, resort managers, marketing and sales directors, and/or other appropriate contacts at all identified fractional projects that were closing sales or conducting pre-sales activity during 2024.

Some 336 fractional interest projects and private residence clubs were identified in the survey. Of the 336 developments, 26 were in active sales at the time of this report, including eight fractional interest projects and 18 private residence clubs. The 26 active projects represent the same number as in 2023, and 1257less than the 153 in the industry's peak year of 2007. During 2024, three new projects started, and three existing resorts stopped sales prior to reaching sell-out.

For the purposes of this section, it is important to distinguish the two major components of the overall fractional industry:

(1) fractional interest projects

(2) private residence clubs

The two components are similar, in that both typically sell deeded ownership in shares of vacation homes, ranging from a 1/21 share with two weeks of annual use to a 1/4 share with three months of annual use. However, the two components vary in terms of price, quality of product, and degree of service and amenities. Given these distinctions, Ragatz Associates simply assumes that product selling for less than $1,000 per square foot falls into the fractional interest category, and product selling for more than $1,000 per square foot falls into the private residence club category. Private residence clubs also are typically characterized by having a more prime site, as well as more services, amenities, and owner benefits.

The following table illustrates the fractional ownership resorts currently in the regional market, according to Ragatz.

FRACTIONAL OWNERSHIP RESORTS IN THE REGIONAL MARKET, ACCORDING TO RAGATZ

ARIZONA		
Club At Hidden Meadow Ranch	Greer, AZ	East AZ Mountains
Quality Hill Resort Villas	Pinetop, AZ	East AZ Mountains
Rancho Manana Private Residence Club & Spa	Cave Creek, AZ	Phoenix Area
Rocks Luxury Residence Club	Scottsdale, AZ	Phoenix Area
Scottsdale Club Villas	Scottsdale, AZ	Phoenix Area
Villas at Seven Canyons	Sedona, AZ	Sedona

CALIFORNIA		
Residence Club at PGA West	La Quinta, CA	Coachella Valley
4 Seasons at Desert Breezes	Palm Desert, CA	Coachella Valley
Dunes Club	Palm Springs, CA	Coachella Valley
Villas of Gold Mountain	Clio, CA	Lake Tahoe Area
The Mountain Club	Kirkwood, CA	Lake Tahoe Area
Sentinals Private Ownership Club	Kirkwood, CA	Lake Tahoe Area
Northstar Club	Northstar, CA	Lake Tahoe Area
Marriott Grand Residences Club	South Lake Tahoe, CA	Lake Tahoe Area
Sierra Shores	South Lake Tahoe, CA	Lake Tahoe Area
Tonopalo Private Residence Club	Tahoe Vista, CA	Lake Tahoe Area
Old Greenwood	Truckee, CA	Lake Tahoe Area
Northstar Lodge A Hyatt Residence Club	Truckee, CA	Lake Tahoe Area
Club at Big Bear Lake	Big Bear Lake, CA	Los Angeles Area
Villas at The Grand Del Mar	Carmel Valley, CA	Monterey Area
Calistoga Ranch	Calistoga, CA	Napa Wine Country
Orchard at The Carneros Inn	Napa, CA	Napa Wine Country
Mayacama	Santa Rosa, CA	Napa Wine Country
Residence Club at Nakoma Golf Resort	Clio, CA	Northern CA
Villas at Rancho Valencia	La Jolla, CA	San Diego Area
Residence Club on Mission Beach	San Diego, CA	San Diego Area
Fairmont Heritage Place Ghirardelli Square	San Francisco, CA	San Francisco Area
Pacaso	San Francisco, CA	San Francisco Area
80/50 Mammoth	Mammoth Lakes, CA	Yosemite Nat. Park
Obsidian	Mammoth Lakes, CA	Yosemite Nat. Park

NEVADA		
Residence Club at Southshore	Zephr Cove, NV	Lake Tahoe Area

Unit Characteristics

At this point in the evolution of the shared-ownership industry, developments remain fairly small in size. For the 26 active developments, the average number units currently built is 26. This average is 33 units for fractional interest projects and 23 units for private residence clubs. When including under-construction and additionally planned units, the overall average increases to 30. This includes 38 units for fractional interest projects and 27 for private residence clubs. The Proposed COCA Coachella is planned to contain 61 units to be sold as co-ownership interest shares, with 248 1/8th shares from 31 units and 120 1/4th co-ownership shares to be sold from 30 units. Thus, the number of planned co-ownership units in the proposed subject property is significantly higher than the average unit count for the industry.

Unit Types

The most popular size of units in the shared-ownership industry are two- and three-bedroom units in fractional interest projects and three- and four-bedroom units in private residence clubs. The following table illustrates the industry-average (as a percentage), and the planned unit mix for the proposed subject property (as a percentage). The proposed subject property intends to sell co-ownership interest from three- and four-bedroom villa units. The final number of three- and four-bedrooms has not yet been determined; however, the planned unit mix for the subject property is aligned with the most popular unit types in the industry.

UNIT MIX

	Private Residence Club Projects	COVA Coachella
Studio Units	0.0%	0.0%
One-Bedroom Units	6.6%	0.0%
Two-Bedroom Units	23.8%	0.0%
Three-Bedroom Units	32.4%	100.0%
Four-Bedroom Units	37.1%	100.0%

Unit Size

The overall weighted average unit size of private residence clubs was 2,000 square feet in 2024. The weighted average unit sizes of private residence clubs (in 2022) and the average unit size planned for the subject inventory are summarized in the following table.

WEIGHTED AVERAGE SIZE OF UNITS

	Private Residence Club Projects	COVA Coachella
Studio Units	n/a	n/a
One-Bedroom Units	$830	n/a
Two-Bedroom Units	1,370	n/a
Three-Bedroom Units	1,980	$2600 *
Four-Bedroom Units	4,025	2600 *
AVERAGE	$2,115	$2,600

* Unit size for three- and four-bedrooms units has not yet been determined

The final decisions for the unit mix and unit size for the proposed subject property's three- and four-bedroom units have not yet been determined. Nonetheless, the planned overall size of the subject three/four-bedroom units appear to be aligned with the industry.

Size of Shares

There is a wide diversity with regard to size of share, i.e., the ratio of owners-per-unit. Some nine sizes of shares are found, ranging from a 1/21 to 1/4, inclusive of fractional interest projects and private residence clubs. According to the survey, the size of shares for private residence clubs ranges from less than 1/12 to 1/8. Some sizes are significantly more frequent, and variations exist between different projects.

The proposed subject property will offer the following use options, as follows.

- 1/8th co-ownership shares, 31 units, or 50.8% of the units
- 1/4th co-ownership share, 30 units, or 49.2% of the units

SIZE OF SHARE

Size of Share	Private Residence Clubs	COVA Coachella
less than 1/12	5.6%	0.0%
1/12	5.6%	0.0%
1/10 or 1/9	27.8%	0.0%
1/8	33.3%	50.8%
1/7, 1/6 or 1/5	16.7%	0.0%
1/4	11.1%	49.2%
Total	100.0%	100.0%

Among private residence clubs, 61.1% offer either a 1/10th or 1/9th share (27.8%), or a 1/8th share (33.3%. Only 27.8% offer more than a 1/8th share.

Fractional interest projects will typically offer larger share sizes. One of the reasons for variations in sizes of shares between the two components is because private residence clubs are typically in communities where land costs and construction costs are very high, and there is a scarcity of available developable land, which results in high real estate prices. Application of high prices to larger shares, such as a 1/4th share, provides a challenge for concept of a "value proposition." Conversely, fractional interest projects are typically in locations with lower real estate prices; thus, application of lower prices (per SF) to larger shares results in fractional share prices that can still be marketed as a "value proposition" relative to alternative second-home options.

In the case of the proposed subject property, approximately 51% of the units will offer a 1/8th share, and approximately 49% of the units will offer a 1/4th share. In our opinion, the planned use plan is reasonable and market-supported, given that, combined with the whole ownership product, it will provide a range of price points that will fit to wide spectrum of potential buyers. As discussed above, typically private residence clubs do not offer a 1/4th share size because the application of a high price (on a per SF basis) results in a fractional share price that is not a value proposition relative to alternative second-home options. However, Coachella Valley, and the subject neighborhood in particular, are unique because the alternative second homes in the neighborhood are very high, typically ranging from $3 million to $15 million or higher. The very high real estate prices in the neighborhood should provide an opportunity to provide quarter shares (1/4th shares) as an option for longer use, while still providing a lower fractional price relative to alternatives in the market.

Use Plans/Reservation Systems

As with sizes of shares, there is a wide variety in use plans/reservation systems in the shared-ownership industry. Some are simple, providing a high degree of certainty regarding the times of the year when owners can use their vacation home, but limited flexibility. Others are complicated, providing a high degree of flexibility, but less certainty.

Three basic types can be summarized as follows:

1) a '**set calendar**' whereby owners have access to the exact same time every year.

2) a '**rotating calendar**' whereby an owner's use rotates forward on a pre-determined schedule every year (e.g., for a 1/12 share owner, the first week of each quarter in the first year of ownership, the second week of each quarter in the second year, and so forth).

3) a '**rotating priority**' whereby all owners have the opportunity to reserve some of their time (usually the high seasons) six to 12 months ahead of use, with duplicate reservations being addressed by a rotating priority system (e.g., owner one in year one receives their first choice, while owner two receives their first choice in year two, and owner one drops to the bottom of the pecking order, and so forth). Non-high demand time is often placed in a space-available pool for all owners to equally access.

These three basic plans vary between private residence clubs. The "set calendar" system is used at 14.5% of private residence clubs. The "rotating calendar" system is also used by 14.5% of private residence clubs and the "rotating priority" system is used by 56.3% of private residence clubs. Lastly, a hybrid/other reservation system is used by 14.7% of private residence clubs.

USE PLAN/RESERVATION SYSTEM

Use Plan/ Reservation System	Private Residence Clubs
"set calendar"	14.5%
"rotating calendar"	14.5%
"rotating priority"	56.3%
hybrid/other total	14.7%
Total	100.0%

We recommend that the proposed subject property utilize a "rotating priority" reservation system.

On-site amenities are extensive in the shared-ownership industry. The following table illustrates the availability of selected amenities at private residence clubs as well as planned at the proposed subject property.

AMENITIES

Amenity	Private Residence Club	Subject Property
Swimming Pool	78.9%	X
Exercise Facility	93.0%	X
Whirlpool Spa	63.1%	X
Restaurant	68.4%	X
Private Storage Lockers	84.2%	
Spa/Spa Treatments	71.9%	X
Tennis	33.3%	X
Golf Course	22.8%	
Fishing	14.0%	
Ski-In/Out	34.9%	
Beach	30.1%	X

As illustrated in the table above, the proposed subject property will benefit from an extensive wellness focused amenity base that will include the most popular amenities within the industry.

PRICES

At least three approaches can be used to analyze pricing structures in the shared ownership industry, including:

- Price per share.
- Price per week.
- Price per square foot.

As previously discussed, the subject property will offer approximately 51% of the inventory as a 1/8th fractional share, and approximately 49% as a 1/4th share (quarter share). Given that the 1/12th fractional share will be the primary product, for purposes of comparison with the Ragatz survey, we have focused on the subject's

1/12th fractional product. The detailed methodology for reconciling to the subject fractional price points is detailed later in this report.

Price per Share

Price per share is considered the least useful approach to compare pricing because of confusion created by mixing together different sizes of shares, ranging from a 1/15 to a 1/4. The average price per share typically increases with the number of bedrooms, as shown below.

PRICE PER SHARE

Bedrooms	Private Residence Club Projects	1/8th Share COVA Coachella	1/4th Share COVA Coachella
Studio	n/a	n/a	n/a
One	$146,250	n/a	n/a
Two	168,800	n/a	n/a
Three	440,800	$490,000	$980,000
Four	816,750	490,000	980,000
Average	**$519,050**	**$490,000**	**$980,000**

As previously mentioned above, the price per share analysis is the least useful approach to compare pricing because of confusion created by mixing together different sizes of shares. However, we note that the overall average share price for private resident club projects is $519,050 which falls between the projected price for the subject property's 1/4th and 1/8th shares.

Price per Week

A second way of analyzing pricing is on a per week basis as this approach equalizes the sizes of shares. This figure is arrived at by dividing the price of the share by the number of usage weeks. As shown below, the overall average per week price for private residence clubs was $90,175 in 2024.

PRICE PER WEEK

Bedrooms	Private Residence Club Projects	COVA Coachella
Studio	n/a	n/a
One	$23,625	n/a
Two	35,150	n/a
Three	85,800	$81,667
Four	130,700	81,667
Average	**$90,175**	**$81,667**

Per week prices also vary according to the number of bedrooms and size of share. Note that we have assumed that the subject's owners will have six and twelve usage weeks annually for the 1/8th and 1/4th share, respectively. The subject's usage results in the same price per week for the two share sizes.

Price per Square Foot

Generally, the most useful approach in analyzing share prices in the shared-ownership industry is on a per square foot basis. This figure is calculated by dividing the forecast gross sellout per unit (for a given unit type) by the total interior square feet in the unit.

Average per square foot prices also vary in accord with the number of bedrooms, as shown below.

PRICE PER SQUARE FOOT

Bedrooms	Private Residence Club Projects	COVA Coachella
Studio	n/a	n/a
One	$1,650	n/a
Two	1,600	n/a
Three	2,050	$1,508
Four	1,600	1,508
Average	**$1,650**	**$1,508**

From our review of the Ragatz survey, given that 38.9% of private residence clubs have an average price per square foot of $2,000 or more (as shown in the following table), it appears that some projects in very high real estate markets have weighted the average price for the industry higher relative to the average project. This likely explains why the subject's price per square foot is marginally lower than the weighted average price per square foot for the industry.

The following table illustrates the distribution of prices per square foot at the private residence clubs who participated in the Ragatz survey.

DISTRIBUTION OF AVERAGE PRICE PER SQUARE FOOT

Average Price Per Square Foot	Private Residence Clubs
$1,000 to $1,499	50.0%
$1,500 to $1,999	11.1%
$2,000 or more	38.9%
Total	100.0%

Overall, the industry average price provides support for the proposed COVA Coachella's planned pricing as being reasonable.

Co-Ownership Ownership Overview – Coachella Valley

We have researched co-ownership resorts in the Coachella Valley. Based on our research there are two co-ownership resorts in the market that are in active, first-generation fractional sales, as follows.

- PGA West Residence Club, La Quinta
- Picaso – 46 individual homes located in Palm Springs (33), Cathedral (9), Palm Desert (8), Indian Wells (8), and La Quinta (8)

In addition, there are two older legacy co-ownership resorts, 4 Seasons at Desert Breezes (Palm Desert) and Dunes Club (Palm Springs), that have been sold out of first-generation co-ownership interest inventory for several years.

PGA West Residence Club is considered a significantly lower quality product compared to the proposed subject property, with very limited amenities. PGA West Residence Club offered two share sizes, 1/9th ($120,000) and 1/4th ($250,000). The lower share prices reflect the lower quality level.

The Picaso co-ownership product comprises 46 individual homes with a varying level of quality, but it is important to note that there are no amenities or support facilities associated with the Picaso co-ownership product.

The Picaso business model is to acquire high-end real estate in popular vacation markets. These are purchased under newly created limited liability companies, or LLCs, which serve as the financial vehicles for the Picaso transaction. Picaso typically targets luxury homes worth between two to four times the median cost of housing in an area. After any renovations, remodeling, and furnishings that Picaso finds necessary, the company divides the LLCs that own its homes into 1/8th shares, which are marketed to potential investors by local real estate agents. To calculate the price of the shares, Picaso adds the home preparation expenses at-cost to the acquisition price of the home and divides it by eight. Picaso then adds a service fee to each of the shares, which is how the company makes money on the initial transaction.

As an example of how the model works in the Coachella Valley, at one home in Palm Springs, which Picaso has named "Amber" (the company names all of its properties), this formula translated into 1/8th shares which sell for $569,000 each, for a total home "value" of $4,552,000. Property records indicate that Picaso purchased the home in February 2023 for $3,350,000. Thus, the total renovation costs, inclusive of the Picaso service fee (profit), equated to $1,202,000.

After all the shares in a home are sold, Picaso transitions to a property management role. It arranges service and maintenance on the property and coordinates co-owners' use of the home through a digital scheduling platform. Picaso charges a per-share monthly fee for these services, which serves as a secondary source of revenue for the company.

Owners of the 1/8th shares are allowed to reserve use of the home for up to 44 days annually. Each share entitles owners to use one "special date" per year, which includes peak-demand periods such as Christmas.

Currently, Picaso offers a variety of price points for a 1/8th share in the Coachella Valley, ranging from $115,000 to $695,000, depending on the quality level of the home, as well as the locational attributes.

Pricing Conclusion

It is our opinion that there are no true comparable co-ownership resorts in the Coachella Valley. The proposed subject property will be a luxury level, wellness focused resort with a wide range of amenities and facilities that will represent a new standard for this market. We have placed primary weight for our pricing conclusion on our review of the whole ownership comparables that were detailed in the previous report chapter, *Residential Prices and Sales Prices*. We believe this is a

reasonable approach given that the villas that will contain the co-ownership units, will also be sold as whole ownership units. Furthermore, since co-ownership interest is an alternative to a second-home purchase, the methodology for whole ownership is considered a reasonable approach.

As detailed in the previous chapter, we concluded to a base price of $1,300 per square foot for whole ownership. The co-ownership units will average 2,600 square feet, the application of $1,300 per square foot results in a whole ownership value of $3,380,000 for the co-ownership villas.

Methodology for Premium Relative to Whole Ownership

The methodology of applying a 1.5 to 2.0 multiplier to the whole ownership value to arrive at the gross sellout potential of the unit on a co-ownership basis is the standard pricing methodology in the co-ownership industry. The multiplier of 1.5 is the most commonly used, with the higher end of the scale reserved for projects of extreme luxury and quality.

Other factors the influence a higher multiplier are locations considered "first tier" nationally or internationally recognized resort locations, scarcity of the destination attraction (such as a limited ski season, etc.), high barriers to entry for new real estate development, and acceptance of the product in the market.

The proposed subject property is expected to be developed at an above average luxury and quality level. However, we note that the sales comparables included homes that represent generally an equal level of luxury and quality levels. The other factors for mark-up consideration, including scarcity of the destination and barriers to entry, are considered average for the industry. Based on consideration of each of these factors, we concluded that a multiplier of 1.5 is appropriate for the proposed subject property.

The mark up calculation utilizing a 1.5 factor to calculate the subject share prices, is illustrated in the following table,

MARK UP CALCULATION OF THE SUBJECT CO-OWNERSHIP SHARE PRICES

	Three/Four-Bedroom
Square Feet	2,600
Price Per SF	$1,300
Whole Ownership Market Value Per Unit	**$3,380,000**
Mark-Up	1.5
Adjusted Market Value Per Unit (Annual)	**$5,070,000**
1/8th Share	$633,750
1/8th Share (Rounded)	**$634,000**
1/4th Share	$1,267,500
1/4th Share (Rounded)	**$1,267,500**

Sales Pace

The total number of co-ownership interests are summarized in the following table.

SUMMARY OF SUBJECT CO-OWNERSHIP INTERESTS

	Units	Total Shares	Price Per Share
1/8th Co-Ownership Shares	31	248	$634,000
1/4th Co-Ownership Shares	30	120	$1,267,500
Total/Average	**61**	**368**	**$840,576**

The sales pace for the co-ownership sellout is projected with a similar proportional sales pace as the subject's whole ownership, given that the co-ownership interests will be sold as an alternative option for prospective buyers.

We have made the following assumption for the co-ownership interests sellout.

- Pre-sales will begin on March 1, 2028, two years before the opening date of the property on March 1, 2030.
- We estimate 27 co-ownership interests, or roughly 9.5% of the inventory, will be sold during the pre-sales period.

- The base price positioning will be assumed during the pre-sales period, then will increase 5.0% annually beginning on the first projection year, 2030/31.

- The total sellout period, exclusive of pre-sales, will be five years, resulting in a sellout of the subject co-ownership interests in 2034/35.

The co-ownership interest sellout is illustrated in the following table.

CO-OWNERSHIP INTEREST SALES PROJECTION

	1/8th Shares Sold	1/4th Shares Sold	1/8th Share Price	1/4th Share Price	Total Sales Volume
2028/30 *	20	15	$634,000	$1,267,500	$31,692,500
2030/31	35	22	665,700	1,330,875	52,578,750
2031/32	43	22	698,985	1,397,419	60,799,568
2032/33	50	21	733,934	1,467,290	67,509,796
2033/34	50	20	770,631	1,540,654	69,344,632
2034/35	50	20	809,163	1,617,687	72,811,863
	248	**120**	**$11,920**	**$2,956,143**	**$354,737,108**

* Pre-sales, March 1, 2028 through February 28, 2030

Sales and Marketing Expenses

Sales and marketing costs include payroll and related expenses, commissions, advertising, marketing lead generation program costs, and overhead expenses related to the sales and marketing function.

Overall industrywide sales and marketing expenses averages, as percentage of gross sales, for co-ownership resorts range from 12% to 22% with most falling in the 15% to 22% range. For the subject's co-ownership product, we utilized a sales and marketing expense ratio of 16% in the first projection year, stabilizing at 15% in the second projection year, and thereafter throughout the sellout period.

Co-Ownership Interest Cash Flow Forecast

Based on the above parameters discussed above, we have compiled an annual cash flow forecast for the proposed subject property's co-ownership interest component. Our annual cash flow forecast covers the estimated sellout period from March 1, 2030 through February 28, 2035, exclusive of pre-sales (from March 1, 2028 through February 28, 2030.

CO-OWNERSHIP INTEREST COMPONENT, PROPOSED COVA COACHELLA – CASH FLOW FORECAST

	2028/30 Presales	2030/31	2031/32	2032/33	2033/34	2034/35	Totals
Sales:							
1/8th Shares Sold	20	35	43	50	50	50	**248**
1/8th Share Sales Price	$634,000	$665,700	$698,985	$733,934	$770,631	$809,163	
1/8th Shares Sales Revenue	$12,680,000	$23,299,500	$30,056,355	$36,696,713	$38,531,548	$40,458,126	**$181,722,241**
1/4th Shares Sold	15	22	22	21	20	20	**120**
1/4th Share Sales Price	$1,267,500	$1,330,875	$1,397,419	$1,467,290	$1,540,654	$1,617,687	
1/4th Shares Sales Revenue	$19,012,500	$29,279,250	$30,743,213	$30,813,083	$30,813,083	$32,353,738	**$173,014,867**
Total Revenue	**$31,692,500**	**$52,578,750**	**$60,799,568**	**$67,509,796**	**$69,344,632**	**$72,811,863**	**$354,737,108**
Sales & Marketing	$5,070,800	$8,412,600	$9,119,935	$10,126,469	$10,401,695	$10,921,779	**$54,053,279**
Net Sale Proceeds	**$26,621,700**	**$44,166,150**	**$51,679,632**	**$57,383,327**	**$58,942,937**	**$61,890,084**	**$300,683,829**

10. Club Membership Program

The private members' club sector is experiencing growth driven by exclusivity and premium amenities. A significant development in the sector has been the emergence of private members' clubs within branded residential developments. One transformative trend reshaping the private member's club sector is the integration of comprehensive health and longevity services. The wealthy are not just seeking exclusivity anymore, they are seeking longevity, and some clubs are positioning themselves as partners in this pursuit by providing access to wellness facilities and programs.

The growing trend for longevity and wellness provides an opportunity for the proposed subject property to attract memberships from the high-income neighborhoods which are located within close proximity to the resort who have interest in longevity and wellness.

The concept of the proposed subject property will be focused on wellness and was designed to be the premier destination for wellness in the Coachella Valley, featuring wellness focused facilities such as an on-site longevity clinic, two-story fitness center, luxury spa, immersive outdoor onsen, 25-meter lap pool, and an island dedicated to yoga and meditation. The subject property's planned membership club is designed to blend a sense of community, sports, wellness, longevity, along with access to the resort's food and beverage outlets and their own private beach in the desert.

The benefits of the proposed subject property's club membership will include, but not be limited to, the following amenities and facilities.

- Access to all food and beverage outlets, including featured restaurants at the Clubhouse, waterfront dining, and specialty restaurants within the private gates.
- Access to sports facilities, including tennis, pickleball, padel, pickleball, fitness center, and beach volleyball.
- Access to state-of-the-art wellness and longevity programing.
- Access to all lagoon-based amenities and activities, including paddle boarding, kayaking, beach cabanas, surf machine, kid's area, and over an over the water zip line.

- Private entry to the Cova Beach Club, including free access to the public beach club for all music and entertainment venues.

Profiles and summaries of membership club comparables are illustrated in the following table.

MEMBERSHIP CLUB COMPARABLES

The Battery, San Francisco, CA
Members: 5,000
F&B and Event Spaces, Fitness Center, Spa, Member Events
Initiation Fees: $1,000 (non-refundable)
Annual Dues: $2,700

Rosewood Miramar Club, Montecito, CA (Santa Barbara)
Members: Approximately 200
Beach Cabanas, Fitness Center, Spa, Fine Dining, Beach Butler Service
Initiation Fees: $200,000
Annual Dues: $25,000

Auberge Stanly Ranch Club, Napa, CA
Members: Approximately 50
Fitness Studios and Classes, Spa, Private Pool, Fine Dining, Programmed Events
Initiation Fees: $100,000 (included in home purchase price)
Annual Dues: 2BR - $2,500 / 3BR - $3,000 / 4BR - $3,500 / 5BR - $4,000

Soho House, 44 Locations Worldwide
Members: Over 190,000 Members Worldwide
Varies by Location but Typically includes Finess Center, Spa, Culinary Offerings and Private Dining
Initiation Fees: $460 to $1,080 based on age and access
Annual Dues: $1,350 to $4,899 based on age and access

San Vincente Bungalows, West Hollywood, CA (also club locations in Santa Monica, CA and New York City)
Members: Over 750 (highly selective, requires nomination by a member, but does not confer acceptance)
Grand Dining Room (restaurant and bars), Private Dining, Terrace, Pool
Initiation Fees: $7,500
Annual Dues: $4,200

The net operating revenue from the proposed subject property's membership club component has been forecast based on a ramp up in membership to the cap of 2,000. The cap is expected to be in place to maintain the exclusivity of the membership club program, as well as to maintain the resort's capacity level to provide a high service level. Our forecast assumes that the cap will be reached in the second projection year. Based on our review of various membership clubs, we forecast an initiation fee of $250 and annual dues of $2.500 in the first projection year. The initiation fees and dues are expected to increase annually at the underlying rate of inflation (3.0%). A member turnover rate of 5.0% has also been forecast. Membership expenses are anticipated to include payroll for a membership concierge manager. Additional expenses would include membership invitation costs, marketing, welcome kits, member-specific programs, and other minor item. We have projected an expense ratio of 5.0% of total membership revenue.

MEMBERSHIP CLUB SALES PROJECTION

Membership	2030/31	2031/32	2032/33	2033/34	2034/35
New Members	1,000	1,050	100	100	100
Members Turnover (5%)		(50)	(100)	(100)	(100)
Total Members	**1,000**	**2,000**	**2,000**	**2,000**	**2,000**
Membership - Initiation Rate	$250	$258	$265	$273	$281
Membership - Annual Rate	$2,500	$2,575	$2,652	$2,732	$2,814
Membership - Initiation Fees	$250,000	$270,375	$26,523	$27,318	$28,138
Membership - Annual Dues	$2,500,000	$5,150,000	$5,304,500	$5,463,635	$5,627,544
Total Membership Revenue	**$2,750,000**	**$5,420,375**	**$5,331,023**	**$5,490,953**	**$5,655,682**
Less Membership Expense (5%)	$137,500	$271,019	$266,551	$274,548	$282,784
Net Membership Revenue	**$2,612,500**	**$5,149,356**	**$5,064,471**	**$5,216,406**	**$5,372,898**

11. Statement of Assumptions and Limiting Conditions

1. This report is set forth as a market study of the proposed subject hotel; this is not an appraisal report.
2. This report is to be used in whole and not in part; furthermore, all statements of assumptions and limiting conditions apply to the entire report, including any additional forms or addenda items presented.
3. No responsibility is assumed for matters of a legal nature, nor do we render any opinion as to title, which is assumed marketable and free of any deed restrictions and easements; the property is evaluated as free and clear unless otherwise stated.
4. We assume that there are no hidden or unapparent conditions of the sub-soil or structures, such as underground storage tanks, that would affect the property's development potential. No responsibility is assumed for these conditions or for any engineering that may be required to discover them.
5. We have not considered the presence of potentially hazardous materials or any form of toxic waste on the project site. We are not qualified to detect hazardous substances and urge the client to retain an expert in this field if desired.
6. The Americans with Disabilities Act (ADA) became effective on January 26, 1992. We have assumed the proposed hotel would be designed and constructed to be in full compliance with the ADA.
7. We have made no survey of the site, and we assume no responsibility in connection with such matters. Sketches, photographs, maps, and other exhibits are included to assist the reader in visualizing the property. It is assumed that the use of the described real estate will be within the boundaries of the property described, and that no encroachment will exist.
8. All information, financial operating statements, estimates, and opinions obtained from parties not employed by HVS Consulting & Valuation, are assumed true and correct. We can assume no liability resulting from misinformation.
9. Unless noted, we assume that there are no encroachments, zoning violations, or building violations encumbering the subject site.
10. The property is assumed to be in full compliance with all applicable federal, state, local, and private codes, laws, consents, licenses, and regulations (including the appropriate liquor license if applicable), and that all licenses,

permits, certificates, franchises, and so forth can be freely renewed or transferred to a purchaser.

11. All mortgages, liens, encumbrances, leases, and servitudes have been disregarded unless specified otherwise.

12. None of this material may be reproduced in any form without our written permission, and the report cannot be disseminated to the public through advertising, public relations, news, sales, or other media.

13. We are not required to give testimony or attendance in court because of this analysis without previous arrangements and shall do so only when our standard per-diem fees and travel costs have been paid prior to the appearance.

14. If the reader is making a fiduciary or individual investment decision and has any questions concerning the material presented in this report, it is recommended that the reader contact us.

15. We take no responsibility for any events or circumstances that take place subsequent to the date of our field inspection.

16. The quality of a lodging facility's onsite management has a direct effect on a property's economic viability. The financial forecasts presented in this analysis assume responsible ownership and competent management. Any departure from this assumption may have a significant impact on the projected operating results.

17. The financial analysis presented in this report is based upon assumptions, estimates, and evaluations of the market conditions in the local and national economy, which may be subject to sharp rises and declines. Over the projection period considered in our analysis, wages and other operating expenses may increase or decrease because of market volatility and economic forces outside the control of the hotel's management. We assume that the price of hotel rooms, food, beverages, and other sources of revenue to the hotel will be adjusted to offset any increases or decreases in related costs. We do not guarantee that our estimates will be attained, but they have been developed based upon information obtained during the course of our market research and are intended to reflect the expectations of a typical hotel investor as of the stated date of the report.

18. This analysis assumes continuation of all Internal Revenue Service tax code provisions as stated or interpreted on either the date of this analysis or the date of our field inspection, whichever occurs first.

19. Many of the figures presented in this report were generated using sophisticated computer models that make calculations based on numbers carried out internally to many decimal places. In the interest of simplicity,

most numbers have been rounded to the nearest tenth of a percent; thus, these figures may be subject to small rounding errors.

20. It is agreed that our liability to the client is limited to the amount of the fee paid as liquidated damages. Our responsibility is limited to the client; the use of this report by third parties shall be solely at the risk of the client and/or third parties. The use of this report is also subject to the terms and conditions set forth in our engagement letter with the client.

21. Evaluating and comprising financial forecasts for hotels is both a science and an art. Although this analysis employs various mathematical calculations to provide projections, the final forecasts are subjective and may be influenced by our experience and other factors not specifically set forth in this report.

22. This study was prepared by HVS Consulting & Valuation. All opinions, recommendations, and conclusions expressed during the course of this assignment are rendered by our staff as company employees, rather than as individuals.

CHAPTER 1: Project Description

1.1 Project Site, Location, and Existing Conditions

The COVA project is proposing the development of a luxury lifestyle resort on approximately 87 acres in the City of Coachella (City). The site is formed by four contiguous parcels (APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002) south of Avenue 52, west of Van Buren Street and east of Calhoun Street. The project site is located in the southwest portion of the City of Coachella and currently includes agricultural fields with date palm trees and grape vines. The project site also contains an irrigation pond in the central-northern area of the site, with nearby pump housing and approximately three existing support structures. These are dilapidated and uninhabitable structures with a combined estimated building footprint of approximately 6,143 square feet, and they appear to have been used in connection with past agricultural operations.

1.2 General Plan Land Use and Zoning Designations

The existing General Plan Land Use designation for the project site is Regional Retail District. The Regional Retail District land use designation allows for a wide range of retail, lodging, entertainment, and residential uses, with a focus on connectivity between these allowed uses throughout the project area. Residential uses are allowed at a density of 10 – 15 dwelling units per acre, and commercial densities are allowed at a density of 0.35 – 2.0 floor area ratio (FAR). Heights are generally one- and two-story buildings but may be up to four stories for mixed use projects, with further increased heights permitted in special circumstances such as hotels and iconic buildings or structures. The existing zoning designation is Regional Commercial (RC), which is consistent with the Regional Retail District, except that single-family residential uses are not an expressly allowed use in this zone. Accordingly, the project analyzed in this document includes an application by the Developer to amend the City's Zoning Code to allow single-family residential uses in the Regional Commercial zone to bring the zone into full consistency with the General Plan land use designation. With that minor revision to the City's Zoning Code, the project is consistent with the existing land use and zoning designations, as explained in more detail below.

1.3 Surrounding Uses

The project is surrounded by existing agricultural uses, vacant land, and scattered residential homes. Avenue 52 delineates the project's northern boundary, Van Buren Street delineates the project's eastern boundary, and Calhoun Street delineates a portion of the eastern boundary. The northern and eastern properties are located within the City of Coachella's jurisdiction, while the western and southern properties are located within Riverside County's jurisdiction.

The land use and zoning designations for the surrounding areas are depicted in the table below.

Table 1 Surrounding Uses - Land Use and Zoning Designations

Property	Jurisdiction	Use	Land Use	Zoning
Site	City of Coachella	Agriculture, with Three Abandoned Structures	Regional Retail District	Regional Commercial (RC)
North	City of Coachella	Vacant Lot, Scattered Residential Homes, Agriculture	Regional Retail District	Regional Commercial (RC)
South	Unincorporated,	Residential Homes,	Agriculture	A-1-10, A-1-20

	Riverside County	Agriculture, Vacant Lot		
East	City of Coachella	Agriculture	Regional Retail District, General Neighborhood	Regional Commercial (RC), General Neighborhood (GN)
West	Unincorporated, Riverside County	Agriculture, Vacant Lot	Agriculture and Estate Density Residential	A-1-10, A-1-20

1.4 Project Description

The Applicant is proposing a hospitality focused, mixed-use development on the 87-acre site. The project will feature two primary components: a private sector and public sector. The private sector will consist of 240 condo hotel cottages and 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow condominiums, and VIP suites. These units will operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models that will function together as an integrated hospitality-oriented resort community organized around a central lagoon. These accommodations will be complemented by on-site resort amenities (i.e., recreation center, courts, spa/pool, beaches, bar and entertainment, library, restaurant), which will be used by guests/owners of this sector. The public sector will consist of an 11,950-square-foot beach club, 7,690-square-foot restaurant, and a 6,048-square-foot sports bar. These sub-areas are anticipated to operate with an assumed typical weekday capacity of 500 persons and an assumed weekend capacity of 1,500.

Development of the project would also include landscaping, street improvements, drive aisles, and parking. Access to the project will be provided from two access points on Avenue 52, two access points on Calhoun Street, and two access points on Van Buren Street. The project proposes 951 parking spaces and 193 cart spaces onsite.

The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/acre), which is consistent with the General Plan residential density range of 10 – 15 dwelling units per acre. The private sector also includes complimentary resort features, including water amenities, club amenities, health and wellness spaces, sports and recreational amenities, additional areas for events and restaurants, roadways, and open space on the remainder of the site.

The private sector will consist of:

- 162 single-family residential units comprised of estate lots, zero lot line lots, bungalow lots, and VIP suites
- 240 condo hotel cottages
- On-site resort amenities: recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant

The public sector is situated on approximately six acres in the northwest corner of the site and will consist of a:

- 11,950-square-foot beach club
- 28,800-square-foot beach club lounging area
- 7,690-square-foot restaurant
- 6,048-square-foot sports bar
- 11,907-square-foot back-of-house area
- 103,297-square-foot parking garage

The public sector uses have a combined FAR of approximately 0.65 and will require a future City-approved Conditional Use Permit (CUP) and Entertainment Permit, which will be sought once the plans and details for these uses are further defined during project implementation.

To facilitate the intended hospitality focus, the proposed single-family residential units and condo hotel units will operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models. The on-site resort amenities (i.e., recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant) will be used by guests/owners of the private sector. Exhibit 4 shows the illustrative site plan and Exhibits 5 through 7 illustrate the general areas of the resort, residential and beach club uses. To avoid any conflicts with the City's short-term rental ordinance, the Developer is seeking an amendment to that ordinance to provide that projects with an approved Development Agreement are exempt from the provisions of that ordinance limiting the number of units that can be owned by one owner and limiting the percent of units that can be permitted for short-term rentals, as well as any other provisions of the ordinance specifically modified in the approved Development Agreement.

The project proposes a 9.4-acre main lagoon ("Hotel Lagoon"), which will provide waterfront properties and beach uses shared between the single-family residential and resort uses. A 2.5-acre lake will be situated in the southern portion of the site. The lake will act as a detention basin and collect onsite runoff. No water contact sports (i.e., swimming, etc.) will be permitted in the lake. A 0.4-acre lagoon is proposed in the public sector ("Beach Club Lagoon") and, similar to the Hotel Lagoon, will allow swimming and recreational uses. The table below indicates the proposed sizes of the water amenities.

Table 2 Water Amenities

	Acres
Hotel Lagoon	9.4
Lake (no contact)	2.5
Beach Club Lagoon	0.4
Total	*12.3*

As discussed above and indicated in Table 2, the project proposes the 9.4-acre Hotel Lagoon and the 0.4-acre Beach Club Lagoon. The proposed lagoons will be developed with Crystal Lagoon® technology. Crystal Lagoon technology maintains water quality by utilizing a patented solution consisting of the application of controlled pulses of small amounts of oxidants/microbicides, such as chlorine, into water in specific patterns and cycles. The application cycles are determined by the system's algorithms according to the growth cycles of algae and bacteria, as well as ambient conditions and the weather. This technology avoids the need to maintain a significant residual chemical level in the water. The application of additives is coordinated remotely by sensors and injectors/nozzles strategically located throughout the Hotel Lagoon and Beach Club Lagoon. The applied additives comply with National Sanitation Foundation (NSF) 60 Standards for drinking water treatment.[1] NSF 60 Standards establish minimum health-effects requirements to ensure that chemicals used in drinking water treatment do not introduce contaminants or impurities that could pose a risk to public health. The pulse-based disinfectants in the water achieve consistent quality and avoid water contamination from external agents, such as swimmers.

Development of the site would also include landscaping, street improvements, drive aisles, and parking.

Circulation

Access to the project will be provided from two access points on Avenue 52, two access points on Calhoun

1 Water and Wastewater Standards, NSF Standards, website: https://www.nsf.org/nsf-standards/standards-portfolio/water-wastewater-standards.

Street, and two access points on Van Buren Street. The project includes three full access driveways on Calhoun Street (1), Avenue 52 (1), and Van Buren Street (1). In addition, Calhoun Street will have a right-in/right-out driveway and Avenue 52 will have a right-in/right-out exit only driveway. Public sector access is available exclusively off Calhoun Street; private sector access can be made via Avenue 52 or Van Buren Street, as well as through the Calhoun Street driveway. Exhibit 8 illustrates the project circulation plan.

Access to the resort and residential portions of the site will be gated. A manned gated access point and remote access will be located on Avenue 52, and a service gate and remote entry gates will occur along Van Buren Street. The public Beach Club area will not include gated access points from Avenue 52 and Calhoun Street. See Exhibit 9 for the site security plan.

Moreover, street frontages will be constructed with curb and gutter improvements, sidewalks, and landscaping. The project proposes 951 parking spaces and 193 cart spaces onsite, as indicated in the table below. The parking spaces provided for the project will be consistent with Section 17.54.010, Parking Requirements, of the Coachella Municipal Code (CMC).

Table 3 Parking Provided*

Use	Units	Car Spaces	Parking Ratio	Cart Spaces
Single-Family Residential				
Grand Estate Lots	6 Grand Estate Lots	12	2.0 spaces/unit	12
Estate Lots	27 Estate Lots	54	2.0 spaces/unit	27
Zero Lot Line Lots	12 Residence	24	2.0 spaces/unit	-
Bungalows (Vehicular Access)	112 Bungalows	51	1.0 spaces/unit	
Bungalows (Cart Access)		61	1.0 spaces/unit	104
Beach Club (2-Level Parking Garage)	5 VIP Villas	321	-	-
Single-Family Residential Total	*162 Units*	*523*		*143*
Condo Hotel				
Hotel (2-Level Basement Parking Garage)	240 Hotel Cottages	360	-	50
Hotel (Surface Parking at Grove)		50	-	-
Hotel (Surface Parking at BOH)		18	-	-
Condo Hotel Total	*240 Units*	*428*		*50*
Project Total	**402 Units**	**951**	**-**	**193**

*Compliant with Section 17.54.010, Parking Requirements, of the Coachella Municipal Code.

Landscape

The project proposes multiple landscape themes throughout the project. Each theme will include native and drought-tolerant trees and plants, which will be approved by the City and water district. The various themes are summarized below and illustrated in Exhibit 10.

- Desert Native: The project frontages will consist of the Desert Native landscape theme. This landscape theme will include date palms, various trees (acacia, willow, ironwood, palo verde, mesquite), cactus and accent plants (aloe, saguaro, green desert spoon, gopher plant, ocotillo, organ pipe cactus, yucca), and shrubs and grasses to blend the existing desert environment with the project frontage.
- Agrarian Heritage: The internal primary street will consist of the Agrarian Heritage landscape theme. This landscape theme will include date palms, various trees (acacia, willow, olive, palo

verde, mesquite), cactus and accent plants (aloe, agave, green desert spoon, gopher plant, yucca), and shrubs and grasses.

- Beach: The Beach Club Lagoon and Hotel Lagoon frontages, and an island will incorporate a Beach landscape theme. This landscape theme will include various palms (date, Mediterranean fan, Mexican fan), trees (acacia, willow Tashkentensis, olive, ironwood, mesquite), cactus and accent plants (century plant, aloe, yucca), and shrubs and grasses to contribute to the casual and coastal feel of this area.
- The Grove: The primary resort entry and the sports center and some condo hotel units will consist of the Grove landscape theme. This landscape theme will include date palms, various trees (acacia, willow, olive, Tashkentensis, ironwood, palo verde, mesquite), cactus and accents (aloe, agave, saguaro, green desert spoon, gopher plant, yucca), and various shrubs and grasses to generate a structured landscape.
- Desert Oasis: The resort core and estate lots across from the resort beach (separated by the Hotel Lagoon) will consist of the Desert Oasis landscape theme. This landscape theme will include various palms (sago, Mediterranean fan, date, Canary Island date, and California fan), trees (acacia, desert willow, olive, citrus, ironwood, palo verde, mesquite), cactus and accent plantings (agave, aloe vera, aloe, yucca), and various shrubs and grasses that will contribute to a desert oasis environment with lush refuge, vertical drama, and shade.
- Desert Lush: The residential use and some of the resort units will consist of the Desert Lush landscape theme. This landscape theme will include various palms (date, Mediterranean fan, California), trees (acacia, willow Tashkentensis, olive, ironwood, palo verde, mesquite), cactus and accent plants (aloe, agave, gopher plant, yucca), and shrubs and grasses to generate residential comfort, seasonal color, and layered texture throughout this area.
- Spa Water Garden: The resort spa will consist of the Spa Water Garden landscape theme. This landscape theme will include various palms (Mediterranean fan, date), trees (acacia, willow, jacaranda, ironwood, crape myrtle), and shrubs and grasses to create a naturalistic, low maintenance, and habitat-friendly environment at the resort spa.

In addition to the proposed landscaping, the project also proposes 8-foot privacy walls along the northern, eastern, southern, and portions of the western property boundaries (see Exhibit 9, Site Security Plan).

Utilities

Areas surrounding the project site are served by electricity, natural gas, water, and sewer facilities. The proposed project will be required to connect to existing facilities, as summarized below.

The site is served by natural gas uses by Southern California Gas Company (SoCalGas). Overhead power lines occur north of the project (along Avenue 52), east of the project (along Van Buren Street), and west of the project (along Calhoun Street). The proposed project has received a will-serve letter from the Imperial Irrigation District (IID) that is conditioned on an additional substation and distribution facilities being constructed in the general project area. The project has designated a potential site for a substation, but based on current electrical infrastructure planning in the area, it is expected that the new substation will be constructed off-site in the area with new distribution conduits (if required) to be constructed in existing road rights-of-way to serve the project. The future IID substation is expected to serve multiple projects in the area, both within and outside the City of Coachella, and as an independent project, it will be subject to its own environmental review under the California Environmental Quality Act (CEQA) once the substation project and location have been determined. The project would also incorporate solar generation and battery storage systems to help offset electricity demand from the regional grid. These systems would reduce reliance on off-site energy sources and support overall energy efficiency. In the future, the project may consider implementing a microgrid or geothermal system to further offset demand

on the grid; however, these features are not part of the current project proposal and are not evaluated as a component of the project at this time. See the Energy Resources and Utilities and Service Systems discussions of this document for further analysis.

The project will connect to existing water and sewer mains. Existing water mains occur on Van Buren Street, approximately 0.26 miles north of the project, and Avenue 52, approximately 0.26 miles east of the project. The project will connect to these mains and extend 12-inch public lines 0.26 miles south from the existing Van Buren Street main, and 0.26 miles west from the existing Avenue 52 main. The project will extend a total of approximately 2,760 feet of 12-inch public water lines to the project. Public 12-inch water lines will occur within the public beach and resort main streets. Public 8-inch water lines will occur throughout the project within the residential areas. See the Utilities and Service Systems discussion of this document for further analysis.

Existing sewer lines within proximity to the proposed project are located at the Avenue 52 and Van Buren Street intersection, the Fredrick Street and Avenue 53 intersection, and Avenue 64. The project will connect to the existing 12-inch sewer main at the Avenue 52 and Van Buren Street intersection and extend approximately 174 feet of 12-inch public sewer lines to the project. The proposed public sewer line will connect to a private sewer force main, which will connect to private 8-inch sewer mains throughout the site.

Drainage
The site's topography is generally flat and gradually slopes to the southeast. Project stormwater drainage is designed to collect onsite runoff and convey them to onsite facilities via street flow to localized low points where they will be conveyed via underground storm drain lines to the irrigation pond (i.e., the 2.5-acre lake) located in the southern portion of the site.

Demolition and Construction
As previously stated, the project currently operates as a date palm grove. The project site also contains an irrigation pond in the central-northern area of the site, with nearby pump hosing and approximately three existing structures. The combined estimated building footprint of the structures is approximately 6,143 square feet. These existing structures will require demolition and off-site removal as part of the proposed project construction activities. The date palm grove will also be cleared as a part of the site preparation phase.

The site is proposed to be developed over four phases. Phase 1 will include the water features, public beach club, and resort uses. Phase 1 covers the majority of the site. Phase 2 will develop the residential uses south of the Hotel Lagoon and surrounding the proposed lake. Phase 3 will include the residential estate lots south of Phase 2. Finally, Phase 4 will develop the residential estate lots south and west of Phases 2 and 3. The grading design for the project site balances, avoiding the need to import or export dirt in connection with mass grading the site.

Operation
The resort characteristics of the project are unique, designed to function as an internal destination with resort home dwelling units, dining experiences, on-site resort amenities, outdoor and recreational spaces, and entertainment areas. This is projected to result in locally serving options for the City of Coachella and regionally for the Coachella Valley, attracting those already in the area to vacation or visit for local events.

The project would be affected by typical seasonality trends observed within the Coachella Valley and further confirmed through market research conducted by the developer. Time of year use distribution will

be concentrated between mid-February through May, with the lowest demand generally occurring mid-July through the end of September and the first half of December.

The resort and residential project will accommodate many of the needs of the guests onsite. Many of guests' daily needs would be accommodated by the resort lodging, recreation, dining, and entertainment options without leaving the property. A significant share of the public facing restaurant, beach club, and event space are anticipated to be used by onsite guests.

Entitlements

A Tentative Tract Map (TTM No. 39330) will identify the various proposed lots for subdivision and condominium purposes, specifically splitting the site into single family residential, condominium, public beach club, back of house, amenity, street, and open space lots. The project will also undergo evaluation in Architectural Review and CUP Review. Approval of these entitlements will render the project in full compliance with City regulations.

A Development Agreement is being prepared for the project. The Development Agreement will vest the applicant's right to develop the COVA project area pursuant to the entitlements described above, address short-term rentals within the project area, ensure that the project has a net positive fiscal impact on the City, and ensure the timely completion of infrastructure to serve the project and surrounding area. The Development Agreement will also ensure that all uniformly applied development policies or standards previously adopted by the City and applicable to the Project, and all mitigation measures identified in the General Plan Update and this CEQA Section 15183 Exemption Checklist, are enforceable by the City as project requirements.

As noted above, the project also includes two accompanying applications to (1) amend the City's Zoning Code for the Regional Commercial zone to allow single-family residential use and bring it into conformity with the General Plan land use designation for the site (Regional Retail District), and (2) amend the City's Short-Term Rental Ordinance to exempt projects with an approved Development Agreement from the provisions of that ordinance limiting the number of units that can be owned by a single owner and limiting the percent of units that can be permitted for short-term rentals, as well as any other provisions of the ordinance specifically modified in the approved Development Agreement.

Other public agencies whose approval is required:

- Regional Water Quality Control Board (RWQCB)
- Coachella Water Authority (CWA)
- State Water Resources Control Board (SWRCB)
- South Coast Air Quality Management District (SCAQMD)

CHAPTER 2: Statement of Reasons for Exemption from Additional Environmental Review and 15183 Checklist (Pursuant to CEQA Guidelines §15183)

2.1 Overview of 15183 Checklist

California Public Resources Code Section 21083.3 and California Code of Regulations, Title 14 (CEQA Guidelines) Section 15183 provide an exemption from additional environmental review for projects that are consistent with the development density established by existing zoning, community plan or general plan policies for which an Environmental Impact Report (EIR) was certified, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. Section 15183 of the CEQA Guidelines specifies that examination of environmental effects shall be limited to those effects that: (1) are peculiar to the project or the parcel on which the project would be located, and were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent; (2) are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action; or (3) are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR. Section 15183, subdivision (c) of the CEQA Guidelines further specifies that if an impact is not peculiar to the parcel or to the proposed project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, then an additional EIR need not be prepared for that project solely on the basis of that impact.

2.2 General Plan Update Program Environmental Impact Report

The General Plan is a state-mandated document that outlines goals, policies, and programs that provide the framework for future development in the City and its Sphere of Influence (SOI). The City of Coachella General Plan Update 2035 (GPU) provides the City with a long-term plan intended to guide development within the City while assisting decision-making in the City. The GPU was adopted on April 22, 2015 and has a horizon year of 2035.[2] The City Council of the City of Coachella approved amendments to GPU on July 26, 2023 and September 13, 2023. The GPU addresses land use, all modes of transportation, housing, and safety; includes a comprehensive update to the City's General Plan; and addresses the development of a Climate Action Plan (CAP). Through the GPU, the City's General Plan was reorganized into eight elements (Land Use and Community Character, Mobility, Community Health and Wellness, Sustainability and the Natural Environment, Safety, Infrastructure and Public Services, Noise, and Housing). The GPU's General Plan Land Use Designations map includes 15 land use designations.[3] Each use provides direction on use, intensity/density, form, and character. The analysis contained in the GPU Program EIR focuses on both the GPU and the CAP, addressed together as the GPU. In addition, the City adopted a new Housing Element on September 13, 2023 and a revised Land Use and Community Character Element on June 28, 2023.

The passage of Assembly Bill 32 (AB 32), the California Global Warming Solutions Act, in 2006 prompted cities and counties to develop plans to reduce greenhouse gas (GHG) emissions by 2020 and beyond. To demonstrate that the City is doing its part to meet the requirements of AB 32, the GPU was required to provide measures to mitigate its GHG emissions impacts. Thus, the purpose of developing a CAP for the City is to align the City's General Plan with the state's GHG emissions reduction efforts. The CAP is a blueprint for reducing GHG emissions associated with GPU buildout and meeting mandated GHG reduction targets. The CAP addresses climate change at the local level by focusing on the major sources of GHG emissions in the City; establishing a detailed long-term strategy to achieve GHG emissions reduction targets; and providing a framework for compliance with federal, state, and local regulations. Ultimately, the CAP identifies reasonable and effective GHG reduction measures and informs mitigation strategies for the GPU EIR.

The GPU EIR was certified in conjunction with adoption of the GPU on April 22, 2015. The GPU EIR comprehensively evaluated environmental impacts that would result from implementation of the GPU, including information related to existing site conditions, analyses of the types and magnitude of project-level and cumulative environmental impacts, and feasible mitigation measures that could reduce or avoid environmental impacts.

2 City of Coachella, General Plan 2035 (Apr. 22, 2015), https://www.coachella.org/home/showpublisheddocument/10698/638906775782700000.
3 City of Coachella, General Plan 2035, General Plan Land Use Designations, pg. 04-59 (Apr. 22, 2015).

2.3 Summary of Findings

The project is consistent with the analysis performed for the GPU EIR. Further, the GPU EIR adequately anticipated and described the impacts of the project, identified applicable mitigation measures necessary to reduce project specific impacts, and the project implements these mitigation measures (see Table 1.0-1, Impacts Overview Matrix, of the GPU EIR for complete list of GPU Mitigation Measures).

A comprehensive environmental evaluation has been completed for the project as documented in the attached §15183 Exemption Checklist. This evaluation concludes that the project qualifies for an exemption from additional environmental review because it is consistent with the development density and use characteristics established by the City General Plan, as analyzed by the City GPU EIR (SCH #2009021007), and all required findings can be made.

In accordance with CEQA Guidelines §15183, the project qualifies for an exemption because the following findings can be made:

1. **The project is consistent with the development density established by existing zoning, community plan or general plan policies for which an EIR was certified.**

   The project is located within the City's General Plan Regional Retail District, and Regional Commercial (R-C) zoning designation. Regional Retail Districts and R-C zones allow 10 – 15 dwelling units per acre and a floor area ratio (FAR) of 0.35 – 2.0. The project would be consistent with the Regional Retail District land use designation identified for the site in the GPU. Similarly, the project would be consistent with the Regional Commercial (R-C) zoning designation for the site in the Zoning Map once the application to amend the City's Zoning Code is approved, as discussed above. The project proposes 14.4 dwelling units per acre and 0.65 FAR, which is consistent with the Regional Retail Districts and R-C zone.

2. **There are no project specific effects which are peculiar to the project or its site, and which the GPU EIR failed to analyze as significant effects.**

   The subject property currently operates as a combination of an active date palm grove and grape vines that have been allowed to go fallow. The site is surrounded by agricultural uses, vacant land, and scattered residential properties. Currently, the subject property operates similarly to the surrounding uses. The project proposes to develop a hospitality project with resort, residential, and recreational uses. The project is consistent with the City's Regional Retail District land use designation and Regional Commercial zoning designation. The project does not propose project-specific effects which are peculiar to the project or its site. The project site does not contain any unique or peculiar environmental features that would result in environmental effects beyond those previously identified and analyzed.

   In addition, as explained further in the §15183 Exemption Checklist below, all project impacts were adequately analyzed by the GPU EIR. Applicable mitigation measures specified within the GPU EIR have been applied to the project.

3. **There are no potentially significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.**

   Preparation of the §15183 Exemption Checklist did not identify any significant off-site and/or cumulative impacts which the GPU EIR failed to evaluate.

4. **There is no substantial new information which results in more severe impacts than anticipated by the GPU EIR.**

   As explained in the §15183 Exemption Checklist below, no new information has been identified which would result in a determination of a more severe impact than what had been anticipated by the GPU EIR.

5. **The project will undertake feasible mitigation measures specified in the GPU EIR.**

   As explained in the §15183 Exemption Checklist below, the project will undertake feasible mitigation measures specified in the GPU EIR. These GPU EIR mitigation measures will be undertaken through project design, compliance with regulations and ordinances, or through the project's conditions of approval.

CHAPTER 3: CEQA Guidelines §15183 Exemption Checklist

3.1 Overview

This checklist provides an analysis of potential environmental impacts resulting from the project. Following the format of CEQA Guidelines Appendix G, environmental effects are evaluated to determine if the project would result in a potentially significant impact triggering additional review under CEQA Guidelines §15183.

- Items checked "Peculiar Impact that is not Substantially Mitigated" indicate that the project could result in a peculiar impact, including a physical change that belongs exclusively or especially to the project or that is a distinctive characteristic of the project or the project site and that peculiar impact is not substantially mitigated by the imposition of uniformly applied development policies or standards. (CEQA Guidelines §15183(b)(1), (f).)
- Items checked "Impact not Analyzed as Significant Effect in the General Plan EIR" indicate that the project could result in a significant effect that was not analyzed as significant in the February 2015 GPU EIR (SCH No. 2009021007). Such a project impact is not significant if it can be substantially mitigated by the imposition of uniformly applied development policies or standards. (CEQA Guidelines §15183(b)(2), (c), (f).)
- Items checked "Potentially Significant Offsite or Cumulative Impact Not Discussed in the GPU EIR" indicate the project could result in a significant offsite or cumulative impact that was not discussed in the General Plan EIR. Such an offsite or cumulative project impact is not significant if it can be substantially mitigated by the imposition of uniformly applied development policies or standards. (CEQA Guidelines §15183(b)(3), (c), (f).)
- Items checked "Adverse Impact More Severe Based on Substantial New Information" indicate that there is new information that leads to a determination that the project impact is more severe than discussed in the GPU EIR. Such an impact is not more severe if it can be substantially mitigated by the imposition of uniformly applied development policies or standards. (CEQA Guidelines §15183(b)(4), (c), (f).)
- Items checked "No New Impact" indicate that potential impacts from the Project have been adequately analyzed in the GPU EIR.

A project does not qualify for a §15183 exemption if it is determined that it would result in the following: 1) a peculiar impact that was not identified as a significant impact under the GPU PEIR; 2) a more severe impact due to new information; or 3) a potentially significant off-site impact or cumulative impact not discussed in the GPU EIR.

A summary of each potential environmental effect is provided below the checklist for each subject area. A list of references, significance guidelines, and technical studies used to support the analysis is attached in the Appendices. The Appendix contains a list of GPU EIR mitigation measures.

3.2 Checklist Analysis

1. AESTHETICS -- Would the project**:**	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning or other regulations governing scenic quality?	☐	☐	☐	☐	☒
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☐	☐	☐	☒

Sources: "California Scenic Highway Mapping System," 2019; 2035 Coachella General Plan Update, 2015; Coachella Municipal Code

Setting

The topography in the City of Coachella, and surrounding cities, is defined as a low and relatively flat desert basin bounded by mountainous terrain as a result of past seismic activity.[4] The most notable surrounding mountain ranges are the Santa Rosa Mountains to the south and southwest, the San Jacinto Mountains and San Gorgonio Mountains to the northwest, the Little San Bernardino Mountains and the Indio Hills to the north and northeast, and the Mecca Hills to the east. The topographic variety in the Coachella Valley includes elevations from over 10,000 feet at the Mount San Jacinto peak, 1,000 feet in the Mecca Hills, to approximately 160 feet below sea level south of Thermal.[5] Although the elevation varies widely, the City of Coachella is relatively flat, with a gentle slope from northwest to southeast. The project site is located in the southwestern portion of the City. The 87-acre site operates as date palm groves and grape vineyards. Historical imagery indicates that the project site operated as agricultural uses since at least 1984.[6] The date palms and grape trellises align the project frontages, and three small, dilapidated structures are found in the center of the project. It should be noted that agricultural uses are not currently a compatible use with the existing land use designation (Regional Retail District) and zoning designation (Regional Commercial) (CMC Section 17.28.020 – Permitted uses). Therefore, this is a legal non-conforming use.

Properties surrounding the proposed project include existing residential homes, vacant land, and agricultural land (see Exhibit 3, Aerial Map, above). Avenue 52 delineates the project's northern boundary, Van Buren Street

4 City of Coachella, General Plan 2035: Existing Conditions, at 3-24 (Apr. 22, 2015).
5 Ibid.
6 Phase I Environmental Site Assessment, Sladden Engineering (Appendix F.1).

delineates the project's eastern boundary, and Calhoun Street delineates a portion of the project's western boundary. The surrounding rights-of-way are paved.

Proposed Project

The project proposes the construction of a residential and resort community. The project will consist of 162 single family residential units and 240 condo hotel cottages for a total of 402 units. The project also proposes water amenities, club amenities, health and wellness spaces, sports and recreational amenities, and additional areas for events and restaurants. The project will improve the existing street frontages with a perimeter wall and landscaping complementing the desert environment. The buildings will also have modern architecture with a neutral color palate consisting of browns, greys, and various earth tones. See discussion c, below, for conceptual renderings of the project.

General Plan

The City of Coachella categorizes the different land uses into six specific designations. These six different designations include: Ranchos, Neighborhoods, Centers, Districts, Specific Plans, and Public.[7] The project is in the City's District Designation, which provides primary retail and entertainment areas, and provides jobs and economic development opportunities. District Designations include four subareas: Suburban Retail, Regional Retail, Industrial, and Resort.[8] The project is in the Regional Retail District of the City which provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats.[9] These include regional shopping centers, mixed designation centers or similar uses. The intended physical character for Regional Retail Districts is organized in blocks by a combination of public and private streets that provide access and parking for them. The blocks of this District may be the largest for the City, with buildings, landscape, and signage similarly scaled up in size, but not neglecting the importance of creating a comfortable and attractive pedestrian environment for shoppers. Development intensities for Regional Retail Districts vary from 10 to 15 dwelling units per acre, with a commercial floor area ratio (FAR) 0.35 to 2.0.[10] The proposed project is consistent with the Regional Retail District land use designation.

Zoning

The zoning designation for the site is Regional Commercial (RC). RC zones are intended to provide for and encourage a wide range of shopping and entertainment in a variety of urban and suburban formats.[11] These include regional shopping centers, mixed destination centers, or similar uses. The uses allowed in this zone will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of this zone is to provide commercial opportunities with residential uses supporting the retail environment. The project is consistent with the existing zoning designation once the application to amend the Zoning Code is approved, as discussed above.

a) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[12] The GPU lists Policies 6.1 (view corridor preservation) and 10.8 (preservation of natural land features) in the Sustainability and Natural Environment Element to ensure the protection of scenic vistas in the City. No mitigation is required. Scenic vistas provide valuable aesthetic resources, including expansive landscape views of the Coachella Valley, to the residents and patrons of the City and SOI (i.e., "Planning Area"). Scenic vistas within the Planning Area include views of the Mecca Hills in the eastern portion of the of the Planning Area. Additional scenic vistas that are not within the Planning Area (but can be seen from within the Planning Area) include the Santa Rosa and San Jacinto Mountains, which can be viewed to the west and southwest of the Planning Area, and the

11 Zoning Code Section 17.28.010.
12 City of Coachella, General Plan 2035 Update: Draft Environmental Impact Report (GPU Draft EIR), Aesthetic Resources, at 4.1-5 (October 2014), available at https://cityofcoachellageneralplanupdate.weebly.com/uploads/1/2/1/2/12129446/4.1_-_aesthetic_resources.pdf.

Little San Bernardino Mountains, which can be viewed to the north and northwest of the Planning Area. According to the GPU, the natural topography of the hills, the existing agricultural uses, and the views of the surrounding mountains should be maintained and preserved for their scenic quality.[13] The value of scenery can be highly subjective due to personal preferences and opinions. Scenic value is generally affected by the presence and intensity of neighboring man-made improvements, such as structures, overhead utilities, and landscaping. Certain man-made features can either add to or obstruct from a scenic vista.

The project site is located in the southwestern corner of Coachella, in the General Plan's Regional Retail District land use designation and RC zoning designation. The 87-acre project property is surrounded by existing, scattered residential homes, vacant land, and agricultural land. Avenue 52 delineates the project's northern boundary, Van Buren Street delineates the project's eastern boundary, and Calhoun Street delineates a portion of the project's western boundary. The surrounding rights-of-way are paved.

The project will consist of 162 single family residential units and 240 condo hotel cottages, for a total of 402 units. The project also proposes water amenities, club amenities, health and wellness spaces, sports and recreational amenities, and additional areas for events and restaurants. The buildings will vary from one to two stories. Ingress and egress from the project will be provided by two access points on Calhoun Street, two access points on Van Buren Street, and two access points on Avenue 52. Street improvements include curb and gutter improvements and perimeter landscaping as part of project development.

According to the GPU, hillsides and mountains in the Coachella Valley create scenic vistas around the City.[14] From the project site, views of the San Jacinto Mountains to the west, Santa Rosa Mountains to the south, and Little San Bernardino Mountains to the north and northeast are distant. The surrounding mountains are largely observed by motorists and pedestrians travelling along the rights-of-way, and the private properties north, south, east, and west of the project. Due to the distance of the mountain vistas, baseline and some midrange views are obstructed; however, peak views are visible from the roadways adjacent to the proposed project. Depending on viewpoint location, the views of these mountain ranges are partially or fully obstructed by existing manmade structures (i.e., buildings), infrastructure (i.e., utility poles), agricultural properties (i.e., trees from surrounding groves), and landscaping. The following discussion analyzes the project's impact on scenic vistas from the surrounding rights-of-way and the surrounding properties.

Analysis from Van Buren Street (East)

Van Buren Street is a north-south trending roadway that delineates the project's eastern boundary. From the segment of Van Buren Street along the project's frontage, views of the Little San Bernardino Mountains to the north, the Santa Rosa Mountains to the south and southwest, and the San Jacinto Mountains to the northwest, are distant. Existing structures, agriculture/vegetation, and manmade facilities obstruct the baseline views of the mountains from Van Buren Street. However, mid-range and peak views are visible. Views of the Mecca Hills to the east are obstructed by existing agriculture/vegetation.

As previously stated, the San Jacinto Mountains are northwest of the project and distant (approximately 19 miles from Van Buren Street). Currently, baseline and mid-range views of the San Jacinto Mountains are obstructed by the existing vineyards onsite. Development of the proposed project would result in the brief obstruction of the San Jacinto Mountains (to the northwest) and Santa Rosa Mountains (to the southwest) from motorists and pedestrians traveling along Van Buren Street.

The project proposes the resort hotel facility at the northeast corner of the site and residences along the central, southern, and southeastern portion of the site. The buildings proposed along the eastern side of the site will include condo hotels, and residences. These buildings will be two-stories in height and set back from the roadway, compliant with the zoning code, to allow for reduced impacts of the views of the San Jacinto Mountains. Additionally, the proposed building's roof types and rooflines will vary from simple and flat roof forms with slopes. The proposed building height and rooflines are typical of those throughout the City and

13 City of Coachella, General Plan 2035: Land Use & Community Character, at 04-3 (Apr. 22, 2015).
14 *Id.*, at 02-13.

existing residential and commercial buildings. Moreover, building height variations and breaks in-between buildings allow for visual relief and views of San Jacinto Mountains from motorists and pedestrians traveling along Van Buren Street. Building obstructions will also be brief until the motorist passes the buildings. The project will be developed in compliance with the CMC.

Due to the direction of traffic being north-south along Van Buren Street, the primary scenic vistas observed from the right-of-way includes the Little San Bernardino Mountains to the north and Santa Rosa Mountains to the south. Thus, due to the project's location west of Van Buren Street, the project will not impact the views of the Santa Rosa Mountains to the south or the Little San Bernardino Mountains to the north.

Overall, impacts to the scenic vistas when viewed from Van Buren Street would be less than significant.

Analysis from Avenue 52 and Existing Properties (North)

As previously stated, Avenue 52 is the east-west right-of-way that delineates the project's northern boundary. North of Avenue 52 includes vacant lots, agricultural properties, and single-family residences. From Avenue 52 and the existing residential structures, views of the Little San Bernardino Mountains to the north and east, the Santa Rosa Mountains to the south and southwest, and the San Jacinto Mountains to the northwest, are distant. Existing structures, landscaping/vegetation, and manmade facilities (i.e., utility posts, etc.) obstruct the baseline views of the mountains. However, mid-range and peak views are visible depending on viewpoint location.

Development of the proposed project would result in the partial obstruction of the Santa Rosa Mountains to the south. The buildings proposed along the northern side of the site will include condo hotels and residences. These buildings will be two-stories in height and set back from the roadway, compliant with Section 17.28.030 of the CMC, to allow for reduced impacts of the views of the Santa Rosa Mountains. The project proposes building heights up to 30 feet, with chimneys reaching 34 feet. According to Section 17.28.030, the maximum heights in R-C zones shall be two stories or thirty-five (35) feet, whichever is less. Maximum heights allowed for hotels can be eighty-five (85) feet. Additionally, the proposed building's roof types and rooflines will vary from simple and flat roof forms with slopes. The proposed building height and rooflines are typical of those throughout the City and existing residential and commercial buildings. Moreover, building height variations and breaks in-between buildings allow for visual relief and views of Santa Rosa Mountains. Buildings will be set back greater than 30 feet from the Avenue 52 right-of-way. Per the CMC, the minimum perimeter setback for residential or hotel projects without frontage of buildings along perimeter street shall equal at minimum 10 feet at any point and have an average perimeter landscape setback of 20 feet for the entire frontage. An equestrian trail is also proposed along the project frontages, including along Avenue 52. The project will be developed in compliance with the CMC. The proposed setbacks, rooflines, and building height restrictions ensure that the scenic views of the hills and mountains are protected, consistent with GPU Policies 6.1 and 10.8.

Additionally, per Section 17.28.030(L) of the CMC, all development in the RC zone is subject to Architectural Review as set forth in CMC Section 17.72.010. In accordance with the CMC, Architectural Review will provide flexibility in the placement and interrelationship of structures and uses subject to Architectural Review; provide for the implementation of sound site plan design concepts while maintaining the overall intensity of land use and density of population; review the site plan of those uses which are not intrinsically objectionable to the predominant use category of the district, but which have inherent characteristics which, if not properly handled, have potentials for becoming detrimental to the health, safety, or general welfare of the public, or to neighboring land uses; determine whether or not a proposed development will properly comply with the architectural guidelines of the city and the provisions and development standards required by this chapter or as prescribed by the planning director, or other authorized agent; and improve the quality of development and to provide a mechanism whereby the city can insure well-designed development.

Due to the direction of traffic being east-west along Avenue 52, the primary scenic vistas observed from the right-of-way include the Santa Rosa Mountains to the south and the Mecca Hills to the east. Because of the project's location south of Avenue 52, the project will not obstruct existing primary views observed along Avenue 52.

The project will not impact the views of the San Jacinto Mountains to the northwest or the Little San Bernardino Mountains to the north. Overall, the project would result in less than significant impacts to scenic vistas when viewed from the properties north of the project.

Analysis from Existing Properties (South)

The property south of the project consists of residential structures, agricultural fields, and vacant lots. The closest residential structure is located approximately 50 feet from the project's southeastern boundary. From the existing structure, views of the Little San Bernardino Mountains to the north, the Santa Rosa Mountains to the south, and the San Jacinto Mountains to the northwest are distant. Existing structures, landscaping/vegetation, and manmade facilities obstruct the baseline views of the mountains. However, mid-range and peak views are partially visible depending on viewpoint location.

Development of the proposed project would result in the obstruction of the Little San Bernardino Mountains to the north. The buildings proposed along the southern side of the site will include residences and 8-foot privacy walls for security purposes. These buildings will be two-stories in height and set back from the southern boundary, compliant with the zoning code, to allow for reduced impacts of the views of the Little San Bernardino Mountains. Additionally, the proposed building's roof types and rooflines will vary from simple and flat roof forms with slopes. The proposed building height and rooflines are typical of those throughout the City and existing residential buildings. The project will be developed in compliance with the CMC.

Moreover, the project will not impact the southern property's view of the Santa Rosa Mountain to the south or the Mecca Hills to the east because the project is located north of the property. Additionally, due to the distance of the San Jacinto Mountain to the northwest, views of the mountain would not be impacted. Therefore, the project would result in less than significant impacts to scenic vistas when viewed from the developed property south of the project.

Analysis from Calhoun Street and Existing Properties (West)

As previously stated, Calhoun Street is a north-south trending right-of-way that delineates a portion of the project's western boundary. The remainder of the project's western boundary is delineated by existing residences and agricultural properties. West of Calhoun Street includes agricultural lots. From Calhoun Street, views of the Little San Bernardino Mountains to the north, Santa Rosa Mountains to the south, and San Jacinto Mountains to the northwest are distant. Existing structures, agriculture/vegetation, and manmade facilities (i.e., utility posts, etc.) obstruct the baseline views of the mountains. However, mid-range and peak views are partially visible depending on viewpoint location. From the existing residences southwest of the project, views of the San Jacinto Mountains to the northwest and Santa Rosa Mountains to the southwest are distant, and baseline views are partially obstructed by existing vegetation and manmade facilities. Views of the Little San Bernardino Mountains to the north and Santa Rosa Mountains to the south are obstructed by existing vegetation, structures, and manmade facilities. Views of the Mecca Hills are obstructed by existing agriculture/vegetation.

Development of the proposed project would not result in obstructions to the Little San Bernardino Mountains because views of the Mountain are currently obstructed by existing vegetation/agriculture. Moreover, the project will not impact the western properties views of the San Jacinto Mountains to the northwest or Santa Rosa Mountains to the south and southwest due to the project's location east of these properties. Overall, the project would result in less than significant impacts to scenic vistas when viewed from the developed properties west of the project.

Construction activities associated with the proposed project would be temporary and would include site clearing and installation of construction fencing along the perimeter of the site. Although construction activities and fencing may temporarily alter views of the project site, they would not substantially obstruct or adversely affect views of the surrounding scenic vistas from public rights-of-way. Construction fencing would be removed as development progresses, and views of the surrounding scenic vistas discussed above would remain available from public rights-of-way, depending on viewpoint location.

Conclusion

The project proposes the development of a residential and resort community and will be developed consistent with the Regional Retail District land use designation and Regional Commercial zoning designation. The proposed project buildings along the property boundaries will be two stories and set back from the property line to reduce impacts to the surrounding viewsheds. The project will also be surrounded by an 8-foot privacy wall along the southern, eastern, northern property boundaries, and portions of the western property boundaries, typical of resort properties or residential communities in the City.

Overall, the proposed project is not anticipated to adversely alter the existing viewshed on any scenic vistas, and less than significant impacts are expected.

As previously stated, the GPU EIR concluded that impacts to scenic vistas would be less than significant. As the project would have a less than significant impact for the reasons detailed above, the project would not increase impacts identified within the GPU EIR, and there is no new information of substantial importance than what was identified within the GPU EIR.

b) **Less than Significant Impact.** The State Scenic Highway Program was established to preserve and enhance the natural beauty of California.[15] It not only adds to the pleasure of the residents but also encourages the growth of recreation and tourism in the State. The Department of Transportation (Caltrans) manages the State Scenic Highway Program. To be listed as a scenic highway, the road must traverse an area of outstanding scenic quality, containing striking views, flora, geology, or other unique natural attributes.[16] There are three officially designated state scenic highways in Riverside County. They include Highway 273, 62, and the closest, Highway 74, which is approximately 11 miles northwest of the project site. The northern section Highway 111 (Palm Springs to Palm Desert) and the southern section (Mecca to the Salton Sea) is categorized as an eligible state scenic highway, but it is not officially designated. The southern section is the closest eligible state scenic highway and is located approximately 7.75 miles southeast of the project.

The GPU EIR concluded that the GPU would not result in impacts to scenic resources within a State scenic highway.[17] According to the GPU, the Policies 6.2 (restricting new billboards on scenic roadways), 10.9 (encouraging the preservation of agricultural and other lands), and 13.16 (encouraging parks and trails to be designed to conserve scenic and natural features) in the Sustainability and Natural Environment Element to ensure the protection of scenic resources in the City. No mitigation is required. The GPU EIR states that there are no designated, or eligible, State scenic highways within the Planning Area. However, major historic highways within the Planning Area include Old Highway 99 (now Dillon Road between Grapefruit Boulevard and Interstate 10), Old Highway 86 (Harrison Street south of Grapefruit Boulevard), and Old Highway 111 (Grapefruit Boulevard), and Highway 86-S Expressway south of Interstate 10. These historic highways represent visual corridors and serve as an aesthetic resource for the City.[18] Although there are no designated State scenic highways, the GPU provides policies that minimize aesthetic obstruction along these highways. The project lies two miles west of the closest City designated visual corridor, Grapefruit Boulevard, thus, development of the project will not impact the aesthetic resource. Moreover, the property does not contain any landmarks or scenic resources, such as trees, rock outcroppings, or historic buildings that may be altered or damaged by utilization of the site.

The proposed project is not located within close proximity to any designated County or State scenic highway, as identified by Caltrans. Therefore, development of the proposed project would not result in adverse impacts to scenic resources adjacent to or near a State scenic highway. No impacts are expected.

As previously stated, the GPU EIR concluded that impacts to scenic resources within a state scenic highway

15 Cal. Streets & Highways Code § 260 (West 2025).
16 Caltrans, *Scenic Highway Guidelines* § II (Apr. 12, 2012), available at https://www.cahighways.org/caltrans-resources/scenic/120412-scenic_highway_guidelines.pdf.
17 City of Coachella, General Plan 2035 Update: Draft Environmental Impact Report (GPU Draft EIR), Aesthetic Resources, at 4.1-6 (October 2014), available at https://cityofcoachellageneralplanupdate.weebly.com/uploads/1/2/1/2/12129446/4.1_-_aesthetic_resources.pdf.
18 *Id.*, at 4.1-8.

would be less than significant. As the project would have a less than significant impact for the reasons detailed above, the project would not increase impacts identified within the GPU EIR.

c) **Less than Significant Impact.** According to the City's GPU, the preservation of the natural beauty and scenic quality of the City is a community goal.[19] The Planning Area has a unique visual characteristic in its scenic geographical location, agricultural and rancho history, and quality architecture of historic buildings. The expected growth under the GPU will turn Coachella into a medium-sized city with many more amenities and services to offer visitors and residents. The physical development under the GPU could change the existing visual characteristic of the City, thus resulting in significant and unavoidable impacts.[20] Although the alteration of the existing landscape is unavoidable due to future development, the views of the mountains and the rural, agricultural character should be respected, maintained, and preserved.[21] The GPU outlines various land uses throughout the City. The GPU provides detailed guidance on the type of buildings that should be constructed in each land use in order to create the form and character sought by the GPU. The GPU also lists various policies to help preserve the existing visual character of the City where it is deemed valuable, or direct future development to either enhance the existing visual character of the City or create a new complementary visual character.[22] The policies focus on the City's character and identity (Policy 2.2), urban design as identity (Policy 2.3), natural context (i.e., topography, farmlands, waterway corridors) (Policy 2.4), and high-quality construction and architecture (Policy 2.5). With the implementation of the policies, design guidelines and development strategies presented in the GPU, impacts to visual character are reduced. However, based on the overall scale of growth under the GPU, there is potential for significant impacts to the visual character of the City.

The project site is located in a developed area of the City, where agricultural properties and vacant lots are within the immediate vicinity, but residential and commercial uses are a mile east. The project site is currently characterized by agricultural land, specifically date palm groves and grape vineyards, similar to the surrounding properties.

As previously stated, the project site is within Regional Retail District land use designation. The intended physical character for Regional Retail Districts is to be developed into blocks by a combination of public and private streets that provide addresses for the businesses and organize access and parking for them. The blocks of this District may be the largest in Coachella with buildings, landscape, and signage similarly scaled up in size, but not neglecting the importance of creating a comfortable and attractive pedestrian environment for shoppers.

Urban form guidelines for Regional Retail Districts are established in the Coachella GPU.[23] Per the guidelines, building heights for this District are generally one or two stories, but may be up to four stories, particularly for mixed use projects, and exceptions are allowed in special circumstances. The Regional Retail District (including its streets, buildings, parking fields, and signage) should be designed for the comfort and wayfinding of shoppers within the District, while projecting a unique and compelling image from the adjoining highways.[24] The project is consistent with the Regional Retail District land use designation and guidelines associated with this designation.

The zoning designation for the project site is Regional Commercial ("RC"). The Coachella GPU and Municipal Code Chapter 17.28 provides guidance on permitted uses and building types that should be constructed to create the form and character envisioned by the City. All developments in the RC zone are subject to Architectural Review.[25] The project will comply with the City's standards for projects in RC zones, except that building heights will exceed the one-story height specified in the zoning code (but will be substantially below the heights

permitted under the GPU and analyzed in the GPU EIR. The table below lists the development standards for RC Zones.

Table I-1 RC Zone Development Standards

Development Standards	RC Zone Development Standards
Lot Requirements	
Minimum Lot Size	20,000 sf for commercial uses
Minimum Lot Width	None
Minimum Lot Depth	None
Maximum Lot Coverage	None
Yard Requirements	
Front Yard	15 ft in depth, except where one or both adjoining zones are residential, in which case the required yard shall be increased to equal the average of the required front yards of the adjoining zones.
Side Yard	No side yard requirement except where a RC zone adjoins a street or a residential zone, in which case there shall be a side yard of not less than 10 feet on the side or sides adjoining said street or residential zones. In the case of a reversed corner lot, the side lot adjoining the street shall be not less than the required front yard of the adjoining key lot to the rear.
Rear Yard	No rear yard requirement except where the RC zone adjoins a residential zone, in which case there shall be a rear yard of not less than 10 feet adjoining that residential zone.
Permitted Encroachments in Required Yards	The yards required for front/rear/side yards (above) may be used as part of an automobile parking area, provided however that a minimum 3-ft wide screen planting strip shall be maintained adjacent to the planned highway right-of-way line.
Height Limits	
Height Limits	Within 150-ft of any RS, single family residential zone, or any agricultural zone, shall be 1 story or 20 ft, whichever is less. - Maximum height of all other buildings shall be 2 stories or 35 feet, whichever is less, except that hotels shall have a maximum height of 85 ft.
Additional Requirements	
Distance Between Buildings	No requirements, except that buildings not actually adjoining shall be determined through site plan review.
Off Street Parking and Loading	Off-street parking and loading facilities shall be provided in accordance with the provisions of Section 17.54.010.
Screening	Where the RC zone abuts upon a residential zone, there shall be provided screening not less than 6 ft, or more than 8 ft in height on the zone boundary line. Said screening shall be reduced to 42 inches in height within a required yard adjacent to a street or highway.
Architectural Review	All development in RC zone is subject to Architectural Review set forth in Section 17.72.010 of this title.

Source: Section 17.28.030, RC Property Development Standards, Coachella Municipal Code.

The project proposes residential units and resort cottages that will vary from one- to two-stories. Currently, there is a residential structure south of the project site and agricultural uses south of the project site. The project proposes residential units consisting of two-story buildings along the southern portion of the site. The proposed residential structures will be setback from the southern project boundary by approximately 45 feet and separated by the southern property by a 8-foot tall perimeter wall. The perimeter wall will separate the project from the southern properties. Accordingly, the two story buildings will not cause any significant visual character compatibility impacts and will be consistent with the height and visual character of the development analyzed in the GPU EIR.

The project proposes a mixed-use community on approximately 87 acres of agricultural land south of Avenue 52 and west of Van Buren Street. The project is designed to have modern architecture, with natural wood facades that will complement the desert landscape and the existing surroundings. The architectural features will create texture and wall breaks, and natural finishes. Project landscaping will include a mix of various trees, shrubs and ground coverings to provide shade for pedestrians, and vertical variation and interest.

The project is designed to be an attractive resort property with high-end and unique amenities including multiple water features. The images below illustrate building elevations, visual simulations, and color and materials.

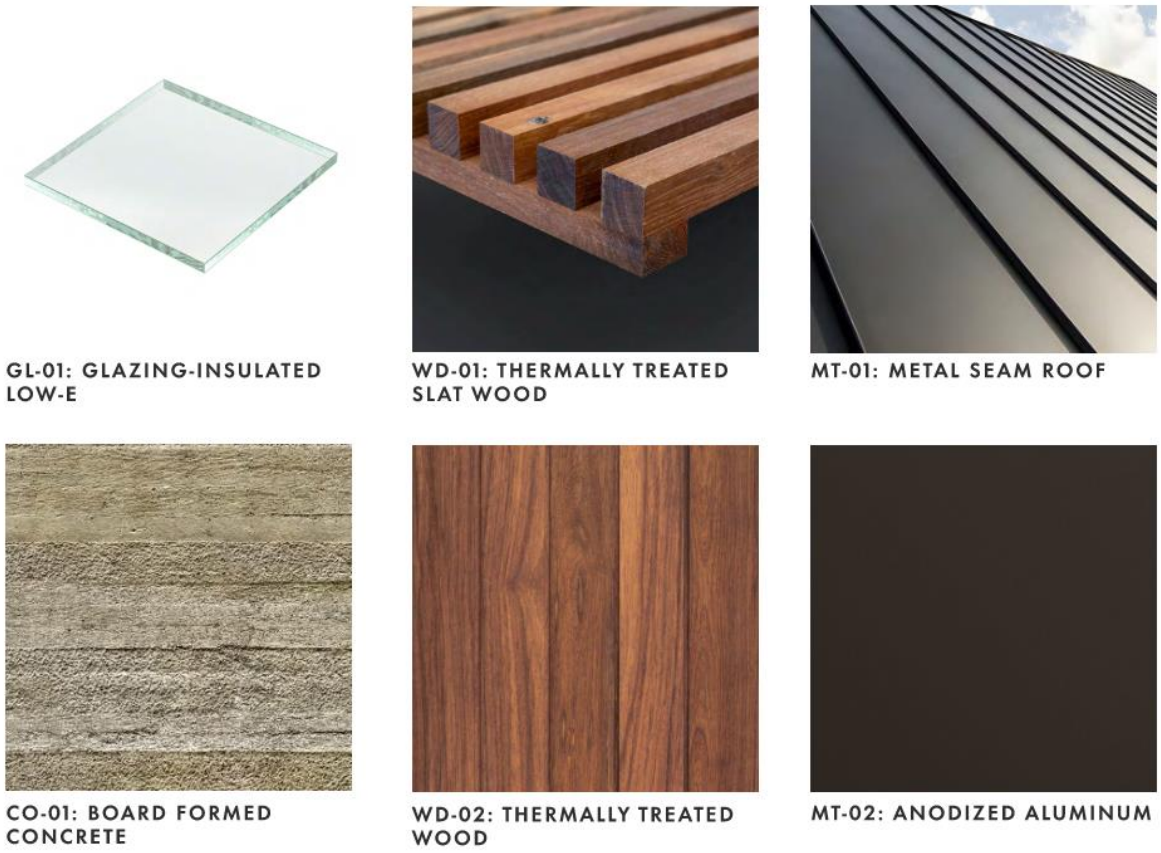

Exhibit I-7 Project Materials Board

Additionally, the project is required to go through Architectural Review. The objectives of Architectural Review are to provide flexibility in the placement and interrelationship of the proposed structures and uses; to provide for the implementation of sound site plan design concepts while maintaining the overall intensity of land use and density of population; to review the site plan of those uses which are not intrinsically objectionable to the predominant use category of the district, but have inherent characteristics which, if not properly handled, have potentials for becoming detrimental to the health, safety, or general welfare of the public, or to neighboring land uses; to determine whether or not a proposed development will properly comply with the architectural guidelines of the city and the provisions and development standards required by this chapter or as prescribed by the planning director, or other authorized agent; to improve the quality of development and to provide a mechanism whereby the city can insure well-designed development.[26]

Moreover, the project will comply with Policies 2.3 and 2.5 of the GPU. Policy 2.3 recognizes that the City can differentiate itself from other Coachella Valley cities through urban design practices such as the development of complete neighborhoods, preservation of agriculture and open space, pedestrian-oriented design and sustainable development practice, and Policy 2.5, requires high-quality and long-lasting building materials on all new development projects in the City. The project will develop a complete neighborhood and provide sidewalk and street improvements to allow for pedestrian use. The project also proposes high-quality building materials to develop a desirable residential and resort community in the City.

With the proposed enhancements, the modern architecture, and Architectural Review, the project is not expected to conflict with applicable zoning and other regulations governing scenic quality. Thus, less than significant impacts are expected.

As previously stated, the GPU EIR concluded that impacts to the visual character of the City would be

26 CMC § 17.72.010.

significant and unavoidable due to the anticipated total amount of growth in the City.[27] However, the project would not have any new or more severe impacts than previously analyzed in the General Plan and would not have any impacts peculiar to the site for the reasons detailed above, including that the scale and intensity of development would be substantially below what is permitted in the General Plan's Regional Commercial District. Therefore, the project would be consistent with the GPU EIR and would not increase impacts identified within the GPU EIR and there is no new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact.** The GPU EIR concluded that impacts to light and glare would be less than significant.[28] GPU Policy 6.5 requires light pollution from outdoor sources to be limited, especially in rural, hillside and mountain areas, and open spaces, to maintain darkness for night time viewing. Currently, nighttime glare exists in the western portion of the City where dense neighborhoods are a source of nighttime lights. This lighting affects nighttime views and sometimes creates a glare for exterior land that is less developed and has fewer nighttime light sources. Nighttime glare and light intrusion are minimized through the selection of appropriate lighting and light shields that limit light spill from individual properties.

The GPU EIR states that as development occurs under the GPU, additional sources of light will also be created, especially as agricultural lands are converted into urban uses to accommodate the anticipated growing population. New development would introduce new light sources that are typical of urban development projects. The new urban uses would include light sources such as street and parking lot lighting, landscape lighting, illuminated signs, exterior lighting on lamps and buildings, security lighting, and automobile lighting (i.e., headlights).[29]

As explained previously, the project site is located in the Regional Retail District land use designation in the City of Coachella. The project site currently operates as date palm tree groves and grape vineyards. Existing sources of onsite lighting may include the supporting structure in the center of the site. However, due to the agricultural uses currently onsite, the site does not contribute to daytime or nighttime glare.

The properties surrounding the project site include agricultural properties, residential homes, and vacant lots. Therefore, sources of fixed nighttime lighting can be attributed to the existing homes in the vicinity to the project site. Home lighting typically consists of low-intensity, wall-mounted, downward-oriented fixtures in the patio, side and front yards of homes. The rights-of-way adjacent to the project site do not include streetlights. Non-fixed sources of daytime or nighttime lighting are attributed to vehicular traffic in the surrounding area.

The proposed project can be expected to generate increased levels of light and glare from interior and exterior building lighting, safety and security lighting, landscape and signage lighting and vehicles accessing the site. However, the project will be required to adhere to the lighting standards established in the CMC. Chapter 17.54.010(K) (Off-Street Parking and Loading: Lighting) of the CMC states that parking area lighting is not always required; however, if lit parking areas are required, parking lighting fixtures shall include hoods provided and adjusted, so as to preclude the direct glare of the light from shining onto property or streets. The project shall comply with Chapter 17.54.010(K) in order to provide lighting for cars and pedestrians without generating excess light and spillage.

Pertaining to glare, the project would not introduce buildings with large reflective surfaces that would generate substantial glare, nor would the project involve new sources of high-intensity lighting that would be deemed incompatible with the surrounding existing properties. As illustrated in Exhibit I-7, above, the project materials will consist of concrete, wood, and anodized aluminum. The concrete and wood are natural, non-reflective materials. The anodized aluminum is coated to reduce reflectivity. The proposed structures are expected to have light finishes (including white) combined with earth-tones that do not have highly reflective properties or other conditions that would cause substantial daytime or nighttime glare. Less than significant impacts are expected.

27 City of Coachella, GPU Draft EIR, Aesthetics, at 4.1-7.
28 City of Coachella, GPU Draft EIR, Aesthetics, at 4.1-9.
29 *Ibid.*

As previously stated, the GPU EIR concluded that impacts to light and glare would be less than significant. As the project would have a less than significant impact for the reasons detailed above, the project would not increase impacts identified within the GPU EIR, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Aesthetics, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not negatively affect a scenic vista, scenic resources within a state scenic highway, or the existing visual character. Additionally, the project will not create a new source of substantial light or glare.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR. The EIR adequately addressed the potential for impacts to aesthetic resources related to the buildout of the City.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. Compliance with Sections 17.28.030, 17.72.101, 17.54.010 of the CMC, and General Plan Policies 2.3 and 2.5 from the Land Use and Community Form Element, and Policies 6.1 and 10.8 from the Sustainability and Natural Environmental Element ensure that potential impacts to aesthetic resources would remain less than significant.

2. AGRICULTURAL RESOURCES – Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact

Sources: *California Farmland Mapping and Monitoring Program*, California Department of Conservation, 2022; California Williamson Act Enrollment Finder, 2024; City of Coachella 2035 General Plan Update, 2015; City of Coachella Official Zoning Map, April 2023.

a) **Significant and Unavoidable Impacts.** The GPU states that implementation of the General Plan would convert 9,862 acres of farmland to urbanized use. The GPU EIR determined this would result in significant and unavoidable impacts[30]. To combat the impacts of farmland conversion, the City divided the planning area into 17 subareas and placed every parcel in the City in one of these subareas.[31] The purpose of the subareas is to define an overall vision and specific policy direction that supplements the General Plan Designations and the Citywide goals and policies. The General Plan includes numerous goals and policies to minimize impacts to agricultural resources. Most notably, the implementation of the 17 subareas is meant to focus development in a direction that is reflective of the growing city population, while also preserving certain subareas for agricultural use. For example, Subarea 1 contains existing residential developments and is envisioned to serve as an infill development of new neighborhoods in the future, whereas Subarea 15 and Subarea 16 will highly prioritize farmland conservation.[32]

To manage the urbanization of land throughout the City with consideration to agricultural uses, Policy 2.14 in the General Plan reserves Subareas 13, 15, and 16 to maintain their current land or agriculture use until the identified High Priority Development Areas and Growth Expansion Areas are at least 60 percent developed with urban uses or preserved open spaces.[33] The City's approach to development as proposed by the General Plan (described in Policies 2.12, 2.13, and 2.14) would help reduce the impact to agricultural resources by focusing new development in High Priority Development Areas and Growth Expansion Areas and prohibiting or limiting development of land in Subareas 13, 15, and 16. These subareas are in the northeastern and southeastern part of the City. If the General Plan is implemented as proposed, all the growth anticipated to occur in Coachella by 2035 could be accommodated without any development in Subarea 16.

The project site is located within Subarea 3, the "Van Buren Corridor."[34] The vision of Subarea 3 is that it will transform into a major sub-regional retail destination that will provide a wide variety of goods and services for

30 City of Coachella, 2035 GPU Draft EIR, Agricultural Resources, at 4.2-10.
31 City of Coachella, General Plan 2035 Update: Land Use & Community Character, at 04-2 (Apr. 22, 2015).
32 *Id.*, at 04-66 – 04-67, 04-82 – 04-83.
33 *Id.*, at 04.86 – 0.4-87.
34 *Id.*, at 04-68.

Coachella residents, as well as neighboring communities. Subarea 3 does not contain plans to preserve agricultural land[35]; therefore, based on the vision for Subarea 3 within the General Plan, the project site is expected to be developed in the future. Due to the project's location in Subarea 3, it is not designated as an area intended to reserve its current agriculture uses, per Policies 2.12, 2.13, and 2.14. The proposed project will consist of a mixed-use development with residential and commercial components.

According to the Farmland Mapping and Monitoring Program (FMMP) by the California Department of Conservation[36], the property is designated as Prime Farmland. Prime Farmland is defined by the Department of Conservation as irrigated land with the best combination of physical and chemical features able to sustain long term production of agricultural crops.[37] This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Although the project site is designated as Prime Farmland, the project is consistent with the GPU and the direction for Subarea 3, for which the impacts to agricultural land have already been considered in the GPU EIR. The properties on all sides of the project are classified as Prime Farmland and Farmland of Local Importance and are encompassed within Subarea 3.

As previously stated, the GPU EIR determined impacts to Prime Farmland, Unique Farmland, or Farmland of Statewide Importance would be significant and unavoidable. To minimize the impacts to agricultural resources, the GPU divides the City into 17 Subareas to channel development in a way that supported the planning area's growing population while preserving existing agricultural land. Because the proposed project is consistent with the City's land use designation and the City's vision for Subarea 3, the project would be consistent with the analysis within the GPU EIR. The project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Significant and Unavoidable Impacts**. As previously discussed, implementation of the General Plan would convert farmland to urbanized use, and the GPU EIR determined that impacts would be significant and unavoidable.[38] Through the implementation of Subareas, the GPU identifies land use types to support agricultural production, and agricultural activities are to be highly prioritized for conservation within Subarea 15 and Subarea 16. The project site is located within Subarea 3, the "Van Buren Corridor." The vision of Subarea 3 is that it will transform into a major sub-regional retail destination that will provide a wide variety of goods and services for Coachella residents, as well as neighboring communities. Subarea 3 does not contain plans to preserve agricultural land. Based on the GPU EIR, the project site, in its current state, will likely be converted to non-agricultural uses based on the vision of the City for Subarea 3.

Furthermore, the land use designation for the proposed project site is Regional Retail District, which does not allow for agricultural use. According to the 2024 California Williamson Act Enrollment Finder, no portion of land within the proposed project site is recognized as being under a Williamson Act Contract. Because the proposed project is consistent with the City's land use designation, is consistent with the City's vision for Subarea 3, and is not subject to any Williamson Act Contracts, the project is consistent with the analysis within the GPU EIR. The project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impacts**. The GPU EIR determined impacts to be less than significant.[39] As outlined in the General Plan, the City plans on accommodating a population growth of over 94,000 residents within the next two decades. Moreover, the broader Coachella Valley region is projected to grow by nearly 500,000 new residents. The City of Coachella does not have the financial means or political support to purchase all the threatened agricultural land in Coachella to prevent conversion to urban uses. Additionally, the City cannot accommodate this growth and avoid impacts to agriculture land simply because there is not enough non-agriculture land in the City. Instead, the General Plan presents a strategy of managing the transition from

39 City of Coachella, 2035 GPU Draft EIR, Agricultural Resources, at 4.2-16.

agricultural to urban uses through focused growth areas, market support, and land use controls with the intent of preventing the premature conversion of agricultural lands.[40] Implementation of the GPU EIR would result in the development of urban uses adjacent to farmland throughout the City, of which impacts could be considered potentially significant.

To manage the urbanization of land throughout the City with consideration to agricultural land, Policy 2.14 in the General Plan reserves Subareas 13, 15, and 16 to maintain their current land or agriculture use until the identified High Priority Development Areas and Growth Expansion Areas are at least 60 percent developed with urban uses or preserved open spaces.[41] The City's approach to development as proposed by the General Plan (described in Policies 2.12, 2.13, and 2.14) would help reduce the impact to agricultural resources by focusing new development in High Priority Development Areas and Growth Expansion Areas and prohibiting or limiting development of land in Subareas 13, 15, and 16. These subareas are in the northeastern and southeastern part of the City. If the General Plan is implemented as proposed, all the growth anticipated to occur in Coachella by 2035 could be accommodated without any development in Subarea 16. Furthermore, the implementation of policies 10.8 and 10.9 in the Sustainability and Natural Resource Element would provide provisions of buffers and right-to-farm policies that protect nearby agricultural operations.[42]

The proposed project's adherence to Policies 2.12, 2.13, 2.14, 10.8, and 10.9 would limit the project's impact on neighboring farmland and is consistent with the analysis within the GPU EIR. All land surrounding the project is anticipated to be converted to non-agricultural uses through the buildout of the General Plan. The proposed project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Additional current CEQA Agriculture resources thresholds not included in the GPU EIR include potential impacts relating to forest land and timberland. Discussion is provided for informational purposes. The Planning Area of the City of Coachella does not have any forest land or timberland. As a result, no areas are zoned as forest land in the City of Coachella and there would be no loss of forest land or conversion of forest land to non-forest use. No impacts are anticipated.

Conclusion:

With regards to the issue area of Agricultural and Forestry Resources, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the impact to agricultural resources.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR..
4. No mitigation measures are required within the GPU EIR for agricultural resources. Compliance with General Plan Policies 2.12, 2.13, 2.14, 10.8, and 10.9 ensures that potential impacts to agricultural resources would occur such that they are accounted for within the GPU EIR.

a) **Less than Significant Impact.** The GPU EIR determined that the GPU would not conflict with or obstruct implementation of the applicable air quality plan, and therefore the impact would be less than significant.43 The GPU was found to be consistent with regional growth forecasts, applicable AQMP control measures, and California Air Resources Board (CARB) siting recommendations. The GPU's population projections were found to generally align with the Southern California Association of Government's (SCAG) growth forecasts, which form the basis of the AQMP's land use and transportation assumptions. Because AQMP growth assumptions are based on SCAG forecasts, the GPU's growth trajectory was deemed consistent with the AQMP.

The GPU included numerous policies that would reduce per capita emissions through land use design, walkability, and multimodal transportation. These policies, such as enhanced pedestrian connectivity, bicycle infrastructure, and compact development, are consistent with research showing that infill and compact development reduce VMT and associated emissions compared to greenfield development. The GPU was found to align with SCAQMD control measures applicable to the Coachella Valley, including those addressing PM_{10} emissions from construction, disturbed lands, unpaved surfaces, and agricultural activities. Policies in the Sustainability + Natural Environment Element support dust control, minimize new pollutant sources, and establish buffers near agricultural uses.

Since the GPU was found to be consistent with SCAG growth forecasts, applicable AQMP control measures, and CARB siting guidance, the GPU EIR concluded that the GPU would not conflict with or obstruct implementation of the applicable air quality plan. Accordingly, the impact was found to be less than significant.

43 City of Coachella, GPU Draft EIR, Air Quality, 4.11-12.

Current AQMP Framework

The project site and Coachella Valley are situated within the Riverside County portion of the Salton Sea Air Basin (SSAB), under jurisdiction of the SCAQMD and the adopted 2022 Air Quality Management Plan (2022 AQMP), superseding the 2016 AQMP and the 2012 AQMP that were in effect during the GPU EIR analysis. The 2022 AQMP provides updated strategies for air quality attainment while recognizing the challenges from experiencing the worst levels of ground-level ozone (smog) and among the highest levels of fine particulate matter (PM2.5) in the nation, despite the progress in air pollution reduction.[44] The 2022 AQMP also recognizes the Coachella Valley's necessity to meet federal ozone standards due to transport of pollution from the upwind South Coast Air Basin. As a result, the updated strategies focus on reducing emissions of nitrogen oxides (NOx), the key pollutant that creates ozone, by 67 percent more than is required by adopted rules and regulations in 2037.[45] This is to be achieved in part through the deployment and regulation of zero emission technologies across all stationary and mobile sources, combined with additional controls over stationary sources that currently account for approximately 20 percent of NOx emissions. The 2022 AQMP recognizes that the overwhelming majority of NOx emissions are from heavy-duty trucks, ships, and other State and federally regulated mobile sources that are mostly beyond the SCAQMD's control; therefore, State and federal regulatory action will help meet the AQMP goals. The 2022 AQMP does not involve numeric revisions to the SCAQMD Air Quality Significance Thresholds, nor is it understood to implement land use and land development restrictions. The Air Quality Significance Thresholds are uniformly applied to the governed region, including the Coachella Valley.[46] The 2022 AQMP accounts for information and assumptions from the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) to support the integration of land use and transportation toward meeting the federal Clean Air Act requirements.[47] Local air quality is measured at three established Coachella Valley monitoring stations that are part of the SCAQMD 2025 Annual Air Quality Monitoring Network Plan: Palm Springs (AQS ID 060655001), Indio (AQS ID 060652007), and Mecca (Saul Martinez - AQS ID 060652005).[48]

The 2022 AQMP provides guidance for the State Implementation Plans (SIP) for attainment of the applicable ambient air quality standards. The Coachella Valley region is in non-attainment for Particulate Matter (PM10) and Ozone (O3),[49] which are described below.

Particulate Matter (PM10):

PM10 is a criteria air pollutant consisting of particulate matter (airborne particles) with an aerodynamic diameter of up to 10 microns.[50] In terms of health effects, elevated levels of ambient particulate matter are linked to increases in respiratory infections, number and severity of asthma attacks, the number of hospital admissions, and mortality rates. As indicated in the 2022 AQMP, the Coachella Valley is currently designated as a serious nonattainment area for PM10.

PM10 levels in the Coachella Valley are largely attributed to sources of fugitive dust (e.g., construction activities, re-entrained dust from paved and unpaved road travel, and natural wind-blown sources). The Coachella Valley is subject to frequent high winds that generate wind-blown sand and dust, leading to high episodic PM10 concentrations, especially from disturbed soil and natural desert blow sand areas.

The Final 2003 Coachella Valley PM10 State Implementation Plan (CVSIP) was approved by the U.S. Environmental Protection Agency (EPA) on December 14, 2005.[51] It incorporated updated planning assumptions, fugitive dust source emissions estimates, mobile source emissions estimates, and attainment modeling with control strategies and measure commitments. Some of those measures are reflected in SCAQMD Rules 403 and 403.1, which are enacted to reduce or prevent man-made fugitive dust sources with their associated PM10 emissions.

Rule 403.1 recognizes blowsand as a form of larger particulate matter that can contribute to the production of the smaller PM10 (Particulate Matter with a diameter of 10 micrometers or smaller) particles in two ways: (1) by direct particle erosion and fragmentation as natural PM10, and (2) by secondary effects, as sand deposits on road surfaces. SCAQMD has defined a Coachella Valley Blowsand Zone as the corridor of land extending two miles on either side of the Interstate 10 (I-10) Freeway, beginning at the SR-111/I-10 junction and continuing southeast to the I-10/ Jefferson Street interchange in Indio. The project site is located in the City of Coachella and therefore is outside of the Coachella Valley Blowsand Zone.

Ozone and Ozone Precursors:

Ozone (O3) is a photochemical oxidant formed through chemical reactions of nitrogen oxides (NOx), volatile organic compounds (VOCs), and oxygen in the presence of sunlight.[52] In terms of health effects, individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are the most susceptible sub-groups for the effects of ozone.

The Coachella Valley portion of the SSAB is deemed to be in nonattainment for the 1997 8-hour ozone standard.[53] The Coachella Valley is unique in its geography due to its location downwind from the South Coast Air Basin (SCAB). As such, when high levels of ozone are formed in the SCAB upstream, they are transported to the Coachella Valley. Similarly, when ozone precursors such as NOx and VOCs are emitted from mobile and stationary sources located in the SCAB, they are also transported to the Coachella Valley. The 2022 AQMP has found and established that the Coachella Valley does not have large sources of smog-forming emissions and therefore, local sources of air pollution have a limited impact on ozone levels compared to the transport of ozone precursors generated upwind in SCAB.[54] Based on the 2022 AQMP, the attainment date for the said ozone standard is August 2033.[55] In accordance with AB 1318 Mitigation Fees Fund, SCAQMD continues to reduce ozone and improve air quality in the Coachella Valley, in part by providing more than $50 million in grant funding towards paving dirt roads and parking lots, clean energy projects and cleaner vehicles.56 Future emission reductions anticipated to occur in the South Coast Air Basin associated with current and planned regulations on mobile and stationary sources are expected to contribute to improvements in ozone air quality in the Coachella Valley and lead to attainment of the standard.

Eastern Coachella Valley Community Emissions Reduction Plan:

The project site is situated within the Eastern Coachella Valley (ECV) Community Emissions Reduction Plan (CERP) area, which was approved in July 2021 as part of the implementation of Assembly Bill 617 (AB 617).[57] AB 617 was signed into law in 2017 to address the disproportionate impacts of air pollution on environmental

justice communities.[58] The ECV boundary under AB 617 includes the incorporated and unincorporated portions of the Eastern Coachella Valley and City of Coachella. The CERP was developed to achieve air pollution emission and exposure reductions within the ECV community and address this community's air quality priorities. The plan describes the community outreach conducted to develop the CERP and provides emissions and exposure reduction actions, an implementation schedule, and an enforcement plan. The CERP finds that the primary sources of air pollution emissions in the ECV community are on-road vehicles, farming equipment, trains, off-road equipment, and certain industrial activities. The ECV is also deemed to be highly impacted by the declining Salton Sea levels, resulting in increasing dust emissions from the Salton Sea playa.

To protect public health, the CERP has identified efforts for improved monitoring, collaboration, and enforcement activities to be undertaken by the various responsible agencies across the ECV. Both CARB and SCAQMD enforcement staff have had a presence in the community of ECV for many years. From 2017 through 2019, CARB conducted over 1,500 inspections and South Coast AQMD responded to approximately 370 complaints and conducted over 300 inspections within the Eastern Coachella Valley community. CERP indicates that both CARB and South Coast AQMD will continue to coordinate their enforcement programs to address air pollution sources effectively within their respective jurisdictions. The most relevant topics and concerns of the CERP applicable to the project are 1) pesticides, 2) fugitive road dust and off-roading, and 3) open burning/illegal dumping.

Regional Significance Threshold Criteria:

SCAQMD considers air quality impacts significant when a project has the potential to cause or contribute to regional or localized exceedances of federal or state ambient air quality standards, such as the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS). To support lead agencies in making significance determinations, SCAQMD has established quantitative thresholds for short-term construction emissions and long-term operational emissions, covering both direct and indirect sources. Table III-1 presents the SCAQMD Air Quality Significance Thresholds, published in March 2023, which were used to evaluate the project's emissions.

Table III-1 SCAQMD's Air Quality Significance Thresholds (Pounds/Day)

Emission Source	CO	VOC	NOx	SOx	PM10	PM2.5
Construction	550	75	100	150	150	55
Operation	550	55	55	150	150	55

Source: Air Quality Analysis Guidance Handbook and SCAQMD Air Quality Significance Thresholds, March 2023

Localized Significance Threshold Criteria:

The SCAQMD developed the Final Localized Significance Threshold (LST) Methodology to identify potential localized air quality impacts that could contribute to, or cause, exceedances of federal or state ambient air quality standards.[59] The methodology was created in response to environmental justice and community health concerns regarding exposure to criteria pollutants. LST analysis evaluates whether a project may generate significant localized impacts at the nearest sensitive receptors, including schools, churches, residences, hospitals, day care centers, and elderly care facilities. The methodology establishes separation distances between project sites and sensitive receptors, ranging from 25 meters (82 feet) to 500 meters (1,640 feet). LST thresholds represent the maximum emissions a project can generate without exceeding the most stringent applicable ambient air quality standard at the nearest receptor, accounting for ambient concentrations in each source receptor area, project size, and receptor distance. Meeting the lowest allowable emissions thresholds ensures compliance with the most protective standards for the project area.

58 Cal. Health & Safety Code § 39607.1 (West 2025).
59 SCAQMD, Localized Significance Thresholds, http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

SCAQMD divides its jurisdiction into 37 source receptor areas (SRAs) for applying LSTs. The proposed development is located in SRA 30, which covers the Coachella Valley and the City of Coachella.[60] LSTs apply only to certain criteria pollutants, including carbon monoxide (CO), oxides of nitrogen (NOx), particulate matter 10 microns or smaller (PM10), and particulate matter 2.5 microns or smaller (PM2.5).

Methodology:

The current analysis and findings are based on the results of the project-specific *COVA Air Quality Impact Analysis* (AQIA), completed in November of 2025[61] to evaluate the potential impacts to air quality associated with construction and operation of the project and identify measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD. The AQIA relied on the most current version of the California Emissions Estimator Model™ (CalEEMod) Version 2022[62] which is the adopted software from the California Air Pollution Control Officers Association (CAPCOA) to quantify construction emissions and operational emissions from land development projects. The software is designed to calculate criteria pollutants and greenhouse gas emissions using widely accepted methodologies from project-specific and accepted default data inputs. Sources of these methodologies and default data include, but are not limited to, the United States Environmental Protection Agency (USEPA) AP-42 emission factors, CARB vehicle emission models, studies commissioned by California agencies such as the California Energy Commission (CEC) and CalRecycle.

The AQIA modeled the criteria air emissions from the proposed project land uses and dimensions consisting of 409 units: 165 two-story single-family residences (SFR) and 244 condo hotel units.[63] The development factors also included a crystal lagoon, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas and kids play spaces. The factors and reasoning for calculating construction and operational emissions are summarized below and fully described in Appendix A.

Construction Emission Factors

Demolition Activities: The AQIA observed that the project site contains approximately three existing structures. The combined estimated building footprint of these structures is approximately 6,143 square feet. These existing structures will require demolition and off-site removal as part of the proposed project construction activities.

Construction Emission Factors: The AQIA utilized a construction duration from August of 2026 through December of 2030 for activities involving demolition, site preparation, grading, building construction, paving and architectural coating. This construction time frame represents a "conservative" analysis scenario. If construction begins after the above-indicated dates, the associated emission factors will be lower, as regulatory standards become more stringent over time and the analysis year advances. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per the CEQA Guidelines. Consistent with industry standards and typical construction practices, each piece of construction equipment factored into the construction scenario is assumed to operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the City code.

Operational Emission Factors

60 SCAQMD, SRA City Table, http://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.aqmd.gov%2Fdocs%2Fdefault-source%2Fceqa%2Fhandbook%2Flocalized-significance-thresholds%2Fsra-city-table.xls%3Fsfvrsn%3D94641d61_2&wdOrigin=BROWSELINK.
61 COVA Air Quality Impact Analysis (AQIA), Urban Crossroads, November 2025 (Appendix A).
62 CalEEMod Version 2022.1 (User Guide) (California Air Pollution Control Officers Association, Apr. 2022).
63 Note: The AQIA analysis was prepared using an earlier project description with 409 units. The currently proposed Project includes 402 units, representing a reduction in development intensity relative to the analyzed scenario.

The AQIA factored operational activities consisting of mobile, area, and energy sources as subsequently described.

Operational Mobile Source Emissions: The operational air quality emissions derive primarily from vehicle trips generated by the project, including employee and visitor/attendee trips associated with the proposed use. Trip characteristics available from the COVA Traffic Impact Analysis were utilized in the AQIA.

Fugitive Dust Related to Vehicular Travel: Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of brake and tire wear particulates. The emissions estimate for travel on paved roads was calculated using CalEEMod.

Operational Area Source Emission Factors

Architectural Coatings: Over a period of time the buildings that are part of this Project would require maintenance and would therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings. The emissions associated with architectural coatings were calculated using CalEEMod.

Consumer Products: Consumer products include, but are not limited to, detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

Landscape Maintenance Equipment: Landscape maintenance equipment generates emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that on October 9, 2021, Governor Gavin Newsom signed AB 1346.[64] The bill aims to ban the sale of new gasoline-powered equipment under 25 gross horsepower (known as small off-road engines [SOREs]) by January 1, 2024, which is now in effect. However, for purposes of analysis, the emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod, and do not incorporate the emissions reductions that would be realized from implementation of AB 1346.

Operational Energy Source Emission Factors

Combustion Emissions Associated with Electricity and Natural Gas: Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity. However, because electrical generating facilities for the project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SSAB, criteria pollutant emissions from offsite generation of electricity are excluded from the evaluation of significance. Natural gas and electricity usage associated with the project were calculated by CalEEMod using default parameters.

This analysis also incorporates the fugitive dust control measures required during construction under the City's Dust Control Ordinance and SCAQMD Rules 403 and 403.1. The measures of temporary soil stabilization required under this local regulatory framework are designed to prevent sediment track-out onto public roads, prevent visible dust emissions from exceeding a 20-percent opacity, and prevent visible dust emissions from extending more than 100 feet (vertically or horizontally from the origin of a source) or crossing any property line. Being a requirement in the Coachella Valley, the dust control practices are not considered mitigation.

Table III-2 demonstrates that the construction-related activities consisting of demolition, site preparation, grading, utilities/building construction, paving, and architectural coating associated with the proposed project

64 Cal. Legis. Info., Assembly Bill 1346 (Berman & Gonzalez) – Chapter 753, Statutes of 2021 (approved by Governor Oct. 9, 2021).

will not exceed the applicable SCAQMD Air Quality Significance Thresholds for criteria pollutants, including PM10 and Ozone precursors. As a standard requirement, dust control measures will be implemented during construction as part of a City-approved fugitive dust control plan in accordance with SCAQMD Rule 403/403.1 and the City of Coachella dust control requirements per Chapter 8.20 (Fugitive Dust Control) of the Municipal Code. The requirements apply to construction-related work practices, construction and demolition activities, performance standards, and reporting/recordkeeping. Project operators required to submit a fugitive dust control plan must ensure that visible fugitive dust does not exceed 20 percent opacity, travel more than 100 feet from its source, or cross a property line. By fully implementing and maintaining all required control measures, keeping complete and accurate records, and documenting any high wind conditions on the affected day, operators can demonstrate compliance and avoid violations during high wind episodes, even if visible emissions temporarily increase. Thus, a less than significant impact would occur for the construction-related emissions in relation to the applicable South Coast AQMD Air Quality Significance Thresholds.

Table III-2 Summary of Construction Emissions (Unmitigated) (Pounds/Day)

Construction Emissions						
Year	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Summer						
2026	3.40	30.20	29.00	0.05	1.63	1.23
2027	4.39	37.20	55.90	0.09	6.06	2.66

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: COVA Air Quality Impact Analysis, 3.4.5 Construction Emissions Summary, Urban Crossroads, Inc. November 2025 (Appendix A).

The AQIA analysis also calculated the long-term operational air pollutant emissions that would occur during the life of the project. These operations include area, energy, and mobile sources. As shown in Table III-3 below, the project-related operational emissions of criteria pollutants are also not expected to exceed the SCAQMD Air Quality Significance Thresholds. Therefore, a less than significant impact is expected for operational emissions from the project.

Table III-3 Summary of Operational Emissions (Unmitigated) (Pounds/Day)

Operational Emissions

Source: COVA Air Quality Impact Analysis, 3.5.4 Operational Emissions Summary, Urban Crossroads, Inc. November 2025 (Appendix A).

As introduced previously, the 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 RTP/SCS, a planning document that supports the integration of land use and transportation to help the region meet the federal Clean Air Act (CAA) requirements. The project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below.

SCAG adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the federal metropolitan planning organization (MPO) requirements under the Sustainable communities and Climate Protection Act. It should be noted that although the 2024-2050 RTP was released after approval of the 2022 AQMP, the 2022 AQMP is reliant in part upon the general plan land use designations.

AQMP consistency was evaluated using the criteria provided in Chapter 12 of South Coast AQMD's 1993 CEQA Air Quality Handbook. The evaluation considers whether the project is consistent with regional growth forecasts and whether project emissions could impede implementation of the AQMP's attainment strategies. The relevant consistency indicators are discussed below. (21).

Consistency Criterion No. 1

Potential to result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refer to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

Construction Impacts – Consistency Criterion 1

As evaluated, the project's localized and regional construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

Operational Impacts – Consistency Criterion 1

As evaluated, the project's localized and regional operation-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the project is determined to be consistent with the first criterion.

Consistency Criterion No. 2

Potential to exceed the assumptions in the AQMP based on the years of project build-out phase. The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. As discussed above, development consistent with the growth projections in City of Coachella General Plan is considered to be consistent with the AQMP.

Construction Impacts – Consistency Criterion 2

Peak day emissions generated by construction activities are largely independent of land use assignments but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

Operational Impacts – Consistency Criterion 2

The proposed project consists of 402 units: 162 two-story SFR and 240 condo hotel units, two crystal lagoons, a non-contact recreational lake, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas, and kids play spaces. These uses are consistent with the City of Coachella General Plan designates the Project site as "Regional Retail District" land uses and "Regional Commercial" zoning uses.

The Regional Retail District designation provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers, or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment.

The Regional Commercial Zoning Designation is intended to provide for and encourage a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this zone will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. Implementing the Regional Retail land use designation in the General Plan, the zone's primary purpose is to provide for commercial opportunities, with residential uses supporting the retail environment.

In conclusion, the proposed Project is consistent with the City's development intensities allowed under the existing designations. Additionally, the project on an individual basis does not have an impact and, as such, the proposed project would not conflict with the goals and objectives of the AQMP. Furthermore, the project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the project is determined to be consistent with the second criterion.

Eastern Coachella Valley Community Emissions Reduction Plan: As previously introduced, the project is located within the ECV CERP, approved by SCAQMD in July 2021. The CERP was developed to achieve air pollution emission and exposure reductions within the ECV community and address this community's air quality priorities. CERP calls for coordination with various agencies, including CARB and SCAQMD, to improve air monitoring, collaboration, and enforcement across various sectors. The CERP finds that the primary sources of air pollution emissions in the ECV community are on-road vehicles, farming equipment, trains, off-road equipment, and certain industrial activities. The ECV is also deemed to be highly impacted by the declining Salton Sea levels, resulting in increasing dust emissions from the Salton Sea playa. The most relevant topics of

the CERP applicable to the project are 1) pesticides, 2) fugitive road dust and off-roading, and 3) open burning/illegal dumping and the Greenleaf Desert View Power Plant (DVP) facility.

Pesticides: The ECV community includes a large amount of agricultural activity with associated use of pesticides that has raised concerns over the adverse health effects. The CERP recognizes that CARB, SCAQMD, Department of Pesticide Regulation (DPR), and Office of Environmental Health Hazard Assessment (OEHHA) are to be responsible for undertaking continued research and air monitoring to identify exposure reductions. The project will convert existing agricultural uses (date palm orchards and grape vines) into a residential and resort community. The existing use of pesticides associated with date palm and grape cultivation will be discontinued and reduced to the site landscaping needs. Thus, the proposed development will not constitute a new source of agricultural pesticide application and would not interfere with the measures undertaken by the responsible agencies.

Fugitive Road Dust and Off-Roading: The CERP identifies a concern over inhalable particulate matter (PM10) emitted from unpaved and paved roadways and from dust resuspended by off-road vehicles. To address community concerns about emissions from fugitive road dust and off-roading in ECV, the CERP has identified additional agency monitoring and enforcement efforts, combined with the pursuit of opportunities to implement paving to reduced unpaved travel.

The project will include the appropriate street and driveway improvements (paving) at its property frontage on 52nd Street, Calhoun Street, and Van Buren Street, thus eliminating the unpaved shoulder condition that would otherwise contribute to fugitive dust. During construction, fugitive dust will be regulated by an approved dust control plan under SCAQMD Rule 403/403.1 and under the City's Dust Control Ordinance (Chapter 8.20). Therefore, project implementation would not interfere with or impede CERP implementation on this community concern.

Open Burning and Illegal Dumping: The CERP identified as concern over agricultural burning, particularly associated with grapes, dates, citrus, and other crops. To address community concerns about open burning and illegal dumping emissions and exposures, the CERP has identified additional agency monitoring and enforcement efforts, combined with the pursuit of opportunities to work with agricultural operators for reduced open burning activities. The proposed project would not involve new potential sources of open burning or illegal activity. Therefore, project implementation would not interfere or impede CERP implementation on this community concern.

Greenleaf Desert View Power Plant (DVP): The DVP facility has previously been identified as a community concern for air quality in the ECV study area under this plan. This facility has been in operation since 1992. Since this facility is located on tribal land, it is regulated by Region 9 of the U.S. EPA. The CERP acknowledges the concerns raised about air pollutant emissions from this facility and has established various actions under the SCAQMD responsibility to compile further information about the facility emissions, including monitoring and air quality measurements, and implement reduction measures as necessary. On April 30, 2024, the operator of DVP announced an indefinite idling of operations. The proposed development would not interfere or impede CERP implementation on this community concern involving the closed DVP facility.

In summary, the project would not have the potential to result in or cause NAAQS or CAAQS violations. The project would not exceed the regional or localized construction and operational thresholds, and the project's development intensity is consistent with the development intensities evaluated with the GPU EIR. As such, the project is therefore considered to be consistent with the AQMP as determined for the GPU implementation. Pertaining to the obstruction of an applicable air quality plan, less than significant impacts are anticipated. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact.** The GPU EIR evaluated whether its implementation would violate any air quality standard or contribute substantially to an existing or projected air quality violation, and impacts were

determined to be less than significant.65 The GPU EIR estimated Citywide emissions for 2035 with SCAQMD's CalEEMod model, reported in tons per year, for comparison to regional emissions. The EIR estimated the long-term emissions taking into account the implementation of GPU policies that increased density, improved walkability, and expanded transit access. Coachella's estimated emissions were compared to District-wide emissions projected for 2030 in the effective AQMP for VOC, NOx, CO, SOx, and PM2.5. Coachella's future operational emissions were found to represent less than one percent of total regional emissions. This comparison was considered conservative because regional emissions were expected to increase between 2030 and 2035. In addition, the GPU's transportation and land use policies were expected to reduce per-capita emissions by improving multimodal travel options. Based on the EIR analysis, the City's long-term emissions were not expected to exceed regional levels or represent a disproportionate share and were found to be consistent with regional forecasts; therefore, impacts were less than significant.

The GPU EIR also found that the potential to create CO "hotspots" at congested intersections from GPU implementation would be less than significant. CO hotspot analysis represents the standard method for evaluating localized air quality impacts from traffic related emissions, as CO is the most likely to exhibit intersection level concentration increases under congested conditions. Although CO concentrations could increase near intersections with severe congestion, the Coachella Valley had been in attainment of state and federal CO standards for nearly 30 years, with long-term monitoring data showing a steady decline in CO levels due to cleaner vehicles, improved fuels, and inspection programs. The highest recent 8-hour CO concentration (0.6 ppm in 2011) remained far below the 9.0 ppm standard.66

Screening criteria indicated that CO hotspot analysis would be warranted only at intersections operating at loss of service (LOS) E or F where project traffic would significantly increase congestion. However, the GPU included roadway improvements and circulation policies that would increase capacity, reduce vehicle use, and support alternative transportation. With these measures in place, traffic operations would not deteriorate to levels that would cause exceedances of the 1-hour or 8-hour CO standards.

Accordingly, even with increased vehicle trips under the GPU, localized CO concentrations would remain below ambient air quality standards. Localized air quality impacts related to CO hotspots were determined to be less than significant, and no additional mitigation was required. The GPU EIR did not identify or evaluate any other types of localized pollutant exceedances, and no evidence has since emerged indicating that other localized exceedances have occurred or would reasonably be expected to occur under GPU implementation.

The GPU recognized that ozone exceedances in the Coachella Valley were primarily driven by emissions transported from the SCAB rather than by local sources. The EIR noted that SCAQMD had not imposed region-specific ozone control measures for this reason, and regional modeling in the 2012 AQMP projected attainment of federal ozone standards even with substantial population growth in Coachella Valley. Although construction and operational activities associated with GPU implementation would generate ozone precursors, the City's contribution to regional emissions was minimal, and implementation of GPU land use, mobility, and sustainability policies would further reduce local precursor emissions. As a result, growth under the GPU was not expected to impede regional progress toward ozone attainment.

As discussed previously, the Coachella Valley portion of the SSAB is in nonattainment for the 1997 8-hour ozone standard.[67] Under the 2022 AQMP, the target attainment date for this standard is August 2033.[68] SCAQMD has established that the Coachella Valley does not have large sources of smog-forming emissions and, therefore, local sources of air pollution have a limited impact on ozone levels compared to the transport of ozone precursors generated upwind in SCAB. As demonstrated in Tables III-2 and III-3, short-term construction and long-term operational emissions associated with the residential land use component of the Specific Plan

65 City of Coachella, *General Plan Update Draft EIR*, Air Quality Section (Section 4.11), pg. 4.11-12.
66 City of Coachella, *General Plan Update Draft EIR*, Air Quality Section (Section 4.11), pg. 4.11-21.
67 Request for Reclassification of Coachella Valley for the 1997 8-Hour Ozone Standard, S. C. A. Q. M. D. (undated) at ES-1.
68 2022 Air Quality Management Plan for the South Coast Air Quality Management District, *Chapter 1 – Introduction*, at 1-1, 1-9 (Dec. 2022).

would not exceed the SCAQMD Air Quality Significance Thresholds for ozone precursors, such as NOx and Reactive Organic Gas (ROG)/VOC. Therefore, pertaining to the ozone nonattainment status, the proposed project would not result in an exceedance to the applicable threshold or result in a cumulatively considerable net increase in the precursors of this criteria pollutant.

As recognized in the GPU EIR, the Coachella Valley is designated as a serious nonattainment area for PM10 and is under the EPA-approved Coachella Valley PM10 State Implementation Plan with an attainment strategy for meeting the PM10 standard.[69] Some of the existing measures include the requirement of detailed fugitive dust control plans from builders that specify the use of more aggressive and frequent watering, soil stabilization, wind screens, and phased development to minimize fugitive dust. Appropriate air quality measures to prevent fugitive dust are required by the City's Fugitive Dust Control ordinance and plan implementation requirements, which are consistent with SCAQMD Rules 403 and 403.1 that apply to the Coachella Valley strategy for reducing fugitive dust emissions. Under the City's dust control regulations per Chapter 8.20 (Fugitive Dust Control) of the Municipal Code, a Fugitive Dust Control Plan must be prepared and approved prior to any grading, earth-moving, demolition, or building operation with a disturbed surface area of more than five thousand (5,000) square feet. Consistent with SCAQMD Rules 403 and 403.1, implementation of the Fugitive Dust Control Plan is required to occur under the supervision of an individual with training on Dust Control in the Coachella Valley. The plan will include methods to prevent sediment track-out onto public roads, prevent visible dust emissions from exceeding a 20-percent opacity, and prevent visible dust emissions from extending more than 100 feet (vertically or horizontally from the origin of a source) or crossing any property line. The most widely used measures include proper construction phasing, proper maintenance/cleaning of construction equipment, soil stabilization, installation of track-out prevention devices, and wind fencing. As shown in Tables III-2 and III-3, project-related short-term construction and long-term operational emissions that factor in the required soil stabilization measures are expected to not exceed the applicable SCAQMD Air Quality Significance Thresholds for PM10.

Pertaining to the attainment efforts of PM10, ozone precursors, and other criteria pollutants, the proposed project would not result in an exceedance to the applicable thresholds or result in a cumulatively considerable net increase. Less than significant impacts are anticipated. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impact.** The GPU EIR concluded under Impact 4.11-2 that construction-related emissions would result in a less-than-significant impact to local air quality because implementation of the General Plan Update would not generate substantial emissions of air pollutants in areas near sensitive receptors. Construction activities associated with future development under the proposed CGPU were anticipated to generate temporary emissions from construction equipment, truck trips, soil disturbance, worker vehicles, and architectural coatings; however, these emissions were not expected to result in adverse air quality effects at nearby sensitive receptor locations.70 These activities would emit ozone precursors (NOx and CO) and fugitive dust (PM10), and demolition activities posed the potential to release asbestos or other toxic air contaminants. Because detailed information on future development was not available at the programmatic level, the analysis relied on a qualitative assessment. GPU policies, such as maintaining buffers from sensitive receptors (Policy 11.3) and requiring construction practices that limited emissions and dust (Policy 11.8), were found to reduce overall impacts. Compliance with SCAQMD Rules 402, 403, and 403.1 would further minimize emissions by requiring best available dust control measures and fugitive dust control plans for construction sites. With adherence to GPU policies and SCAQMD rules, construction-related air quality impacts were reduced to less than significant, and no mitigation measures were required.

69 South Coast Air Quality Management District, Coachella Valley PM10 Plan – Final 2002 CVSIP (2002).
California Air Resources Board, Coachella Valley PM10 Redesignation Request & Maintenance Plan ES-1 (Feb. 2010).
70 City of Coachella, *General Plan Update Draft EIR*, Air Quality Section (Section 4.11), pg. 4.11-28.

A sensitive receptor is a person or group in the population particularly susceptible (i.e. more susceptible than the population at large) to health effects due to exposure to an air contaminant. Sensitive receptors and the facilities that house them are of particular concern if they are located in close proximity to localized sources of CO, toxic air contaminants, or odors. Residences, long-term health care facilities, schools, rehabilitation centers, playgrounds, convalescent centers, childcare centers, retirement homes, and athletic facilities are generally considered sensitive receptors.

The AQIA has evaluated the project settings to identify potential sensitive receptors. Localized air quality impacts were evaluated at sensitive receptor land uses nearest the project site. All distances were measured from the project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the project site. These receptor locations are located as follows:

R1: Location R1 represents the existing residence at 83890 52nd Avenue, approximately 104 feet north of the project site. Receptor R1 is placed at the building façade facing the project site.

R2: Location R2 represents the existing residence at 84045 52nd Venue, approximately 130 feet east of the project site Receptor R2 is placed in the private outdoor living area (backyard) facing the project site.

R3: Location R3 represents the existing residence at 52815 Van Buren Street, approximately 59 feet south of the project site. Receptor R3 is placed in the private outdoor living area (backyard) facing the project site.

R4: Location R4 represents the existing residence, approximately 56 feet southwest of the project site. Receptor R4 is placed at the building façade facing the project site.

R5: Location R5 represents the existing residence at 53465 52nd Avenue, approximately 834 feet west of the project site. Receptor R5 is placed at the building façade facing the project site.

SCAQMD recommends that the nearest sensitive receptor be considered when determining a project's impact. The nearest land use where an individual could remain for 24 hours to the project site has been used to determine localized construction and operational air quality impacts for emissions of PM10 and PM2.5 (since PM10 and PM2.5 thresholds are based on a 24-hour averaging time). Consistent with LST Methodology, the nearest industrial/commercial use to the project site is used to determine construction and operational LST air impacts for emissions of NOX and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assumed that an individual could be present at these sites for periods of one to 8 hours.

As displayed in Table III-4, emissions during the peak construction activity will not exceed the SCAQMD's localized significance thresholds at the maximally exposed receptor location. All other modeled locations in the study area would experience lower concentrations, resulting in a reduced impact. As such, the project's localized impacts during construction activity would be less than significant.

Table III-4 Summary of Localized Construction Emissions (In Pounds/Day)

Peak Construction	CO		NO_2	PM_{10}	$PM_{2.5}$
	Averaging Time				
	1-Hour	8-Hours	1-Hour	24-Hours	24-Hours
Peak Day Localized Emissions	0.02	0.01	0.02	1.81	0.99
Background Concentration [A]	1.10	0.80	0.038		
Total Concentration	1.12	0.81	0.05	1.81	0.99
SCAQMD Localized Significance Threshold	20	9	0.18	10.4	10.4
Threshold Exceeded?	NO	NO	NO	NO	NO

Source: COVA Air Quality Impact Analysis, 3.6.7 Construction-Source Localized Emissions, Urban Crossroads, Inc. November 2025 (Appendix A).

Pertaining to operational-source localized emissions, the total development of the project is to consist of 162 two-story SFR and 240 condo hotel units. The development includes two lagoons, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas, and kids play spaces. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed. Moreover, project-related traffic at any intersections in the vicinity of the project would not cause or contribute to a CO hotspot since the background concentrations are low and any contribution from project traffic would be negligible.

The potential impact of project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis in the AQIA indicate that the project would not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during project construction.

Additionally, the project would not exceed the SCAQMD localized significance thresholds during operational activity. Further Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

Friant Ranch Case: In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, the California Supreme Court held that an EIR's air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided.

Most local agencies, including the City of Coachella, have not conducted their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally-specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in causing asthma), existing scientific tools cannot accurately estimate health impacts of the project's air emissions without undue speculation. Instead, readers are directed to the project's air quality impact analysis above, which provides extensive information concerning the quantifiable and non-quantifiable health risks related to the Project's construction and long-term operation.

Notwithstanding, the project-specific AQIA evaluated the proposed project's localized impact to air quality for emissions of CO, NOx, PM10, and PM2.5 by comparing the proposed project's on-site emissions to the SCAQMD's applicable LST thresholds. The LST analysis above determined that the project would not result in emissions exceeding SCAQMD's LSTs. Therefore, the proposed project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NOx, PM10, and PM2.5. As the project's emissions would comply with federal, state, and local air quality standards, the proposed project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level and would not provide a reliable indicator of health effects if modeled.

The project would not result in emissions capable of exposing sensitive receptors to localized substantial pollutant concentrations. Moreover, the proposed project would not situate new housing in a location known to be exposed to existing or planned sources of substantial emissions. Less than significant impacts are anticipated. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact.** The GPU EIR found that long-term emissions associated with future development under the GPU would be less than significant.71 While individual projects could exceed SCAQMD project-level thresholds, such projects would undergo separate CEQA review and incorporate feasible mitigation as needed. At the programmatic level, long-term emissions were evaluated by comparing GPU buildout to SCAG regional growth forecasts and to future regional emissions in the 2012 AQMP. The GPU EIR assessed that SCAQMD rules 402 (Nuisance) and 410 (Odors from Transfer Stations and Material Recovery Facilities) would help address offensive odor concerns within the GPU planning area, as these rules have mechanisms for citizen complaints to local governments and the SCAQMD that can lead to enforcement on facilities.

Overall growth under the GPU would remain generally consistent with regional planning assumptions. GPU policies promoting higher density, walkability, mixed-use development, and multimodal transportation would reduce per-capita vehicle miles traveled and support applicable SCAQMD and CARB control measures.

CalEEMod modeling for 2035 showed that Coachella's future operational emissions would represent less than one percent of total regional emissions across all criteria pollutants. This comparison is conservative because regional emissions would increase between 2030 and 2035. With GPU policies reducing reliance on automobiles and improving transportation efficiency, long-term emissions would remain consistent with regional forecasts. Therefore, impacts were determined to be less than significant.

Pertaining to odors, the GPU EIR assessed that SCAQMD rules 402 (Nuisance) and 410 (Odors from Transfer Stations and Material Recovery Facilities) would help address offensive odor concerns within the GPU planning area, as these rules have mechanisms for citizen complaints to local governments and the SCAQMD that can lead to enforcement on facilities.

Objectionable odors can be associated with toxic or non-toxic emissions. While odors seldom cause physical harm, they can be unpleasant and lead to considerable annoyance and distress among the public. Examples of facilities commonly known to generate considerable odors include agricultural operations such as livestock and farming, wastewater treatment plants, food processing facilities, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities.

Per the ECV CERP, the project area is exposed to odor concerns associated with elevated levels of hydrogen sulfide (H2S) that occur from natural processes in the Salton Sea. H2S odor events are primarily observed during the hot summer months, when emissions from the Salton Sea are transported northwest toward inland areas of the Coachella Valley. As part of the ECV CERP, SCAQMD has expanded the H2S monitoring network to identify the origin, provide real-time H2S data, and inform community members of potential odor events.

The project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed project's (long-term operational) uses. Standard construction requirements under Rule 403, which call for contractors to operate properly maintained equipment to minimize emissions, would also help reduce odor impacts from construction.

The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction; thus, it is considered less than significant. It is expected that project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. The project site's water features would be properly operated with mechanical aeration, circulation, and maintained to prevent these features from

71 City of Coachella, General Plan Update Draft EIR, Air Quality Section (Section 4.11), pg. 4.11-19.

presenting an additional source of objectionable odors. The proposed development would not conflict with or obstruct with the ECV CERP strategies for addressing odor concerns from the Salton Sea.

Therefore, odors and other emissions (such as those leading to odors) associated with construction and operations activities of the proposed project would be less than significant and no mitigation is required. As a result, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Air Quality, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project-specific Air Quality Impact Analysis determined that construction and operational emissions would not exceed the applicable South Coast Air Quality Management District (SCAQMD) regional significance thresholds for criteria pollutants, including ozone precursors, PM10, and PM2.5. Localized Significance Threshold analyses also demonstrated that emissions at nearby sensitive receptors would remain below applicable thresholds.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR evaluated consistency with the applicable Air Quality Management Plan, regional and cumulative criteria pollutant emissions, localized air quality impacts, exposure of sensitive receptors, and odor impacts associated with buildout of the General Plan. The Program EIR concluded that implementation of the City of Coachella General Plan 2035 would not conflict with regional air quality planning efforts and would result in less-than-significant air quality impacts.
3. No substantial new information has been identified which results in an impact more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. Although the applicable air quality planning framework has been updated through adoption of the 2022 Air Quality Management Plan and the Eastern Coachella Valley Community Emissions Reduction Plan, the project-specific Air Quality Impact Analysis demonstrates that construction and operational emissions would remain below applicable regional and localized significance thresholds. The Project would also remain consistent with the assumptions, goals, and attainment strategies of the current Air Quality Management Plan and would not interfere with implementation of the Eastern Coachella Valley Community Emissions Reduction Plan.
4. No mitigation measures were identified in the GPU EIR for air quality impacts. Compliance with SCAQMD Rules 402, 403, and 403.1; Chapter 8.20 (Fugitive Dust Control) of the City of Coachella Municipal Code; and applicable General Plan policies related to air quality protection, dust control, compatible land use planning, and multimodal transportation would ensure that potential impacts related to criteria pollutants, localized air quality, sensitive receptors, and odors would remain less than significant.

Sources: City of Coachella 2035 General Plan Update, 2015; Coachella Valley Multiple Species Habitat Conservation Plan, 2007; *Habitat Assessment and CVMSHCP Consistency Analysis*, ELMT Consulting (ELMT), April 2025.

a) **Less Than Significant with Mitigation**. Because the City is not fully developed, the biodiversity surrounding the planning area could be negatively impacted by growth under the General Plan. The GPU EIR determined that impacts would be less than significant with mitigation.[72] However, Subarea 3, in which the proposed project will be developed, is not indicated to include sensitive wildlife or plant species within the GPU EIR. Regardless, this does not exclude the presence of sensitive species, and therefore the development of the planning area will be required to adhere to the following policy to ensure that impacts are not significant:

72 City of Coachella, 2035 GPU Draft EIR, Biological Resources, at 4.3-23.

9.8. Sensitive Species. Require projects proposing to develop in Subareas 5, 6, and 7 to conduct surveys to determine if there is occurrence of sensitive species within the project area. If sensitive species are present, projects must implement mitigation measures necessary as prescribed by a qualified biologist and approved by any applicable resource agency in order to receive necessary City permits.

Despite existing in Subarea 3, the proposed project had a biological survey and subsequent report prepared for site by ELMT in February 2025 (Appendix B). The report states that the 87-acre project site supports an agricultural land cover type in the form of row crops. Agricultural segments for date palm (*Phoenix dactylifera*) and grape (*Vitis sp.*) occur throughout the proposed project site. These areas consist of dense monocultures of the aforementioned crop species. Additional plant species in the agricultural areas onsite include Russian thistle (*Salsola tragus*), Saharan mustard (*Brassica tournefortii*), Mediterranean mustard (*Hirschfeldia incana*), and prickly lettuce (*Lactuca seriola*).

The developed area of the project site contains an irrigation pond in the central-northern area of the site, with nearby pump housing and approximately three existing support structures. These are dilapidated and uninhabitable structures with a combined estimated building footprint of approximately 6,143 square feet, and they appear to have been used in connection with past agricultural operations. These areas are predominantly void of vegetation with the exception of a few weedy, ruderal, and nonnative/invasive species. The pond was primarily inundated due to recent pumping practices and precipitation and serves to irrigate the surrounding agricultural areas onsite. The irrigation pond does not support hydrophytic vegetation or wetland-obligate species.

No special-status plant species were observed on-site during the field investigation. Based on habitat requirements for specific special-status plant species and the availability and quality of habitats on-site, it was determined the project site does not have potential to support any special-status plant species known to occur in the area, and all are presumed absent due to the removal of native habitats through historical agricultural land use and development within the project site. Therefore, no impact is expected to occur on special-status plant species. This is consistent with the determination for Subarea 3 in the GPU EIR.

The project site provides suitable habitat to support reptilian species adapted to disturbed environments and conditions in the Coachella Valley. No reptilian species were detected onsite during the investigation.

The project site provides suitable foraging and nesting habitat for avian species adapted to routine human disturbance and desert environments. The 2025 California Natural Diversity Data Base by California Department of Fish and Wildlife (CDFW) lists a total of 26 special-status wildlife species as having the potential to occur within the Indio quadrangle (list available in the Habitat Assessment in Appendix B). No special-status animal species were observed on-site during the field investigation. Based on habitat requirements for the identified special-status wildlife species, known distributions, and the routine disturbance, it was determined that the proposed project site has a high potential to support Cooper's hawk (*Astur cooperii*) due to suitable foraging habitat. However, Cooper's hawk is not a State or federally listed species. Further, it was determined that no other special-status wildlife species have the potential to occur on-site, and all are presumed absent. Although the project site has a high potential to support Cooper's hawk occurrences, it is not expected to nest onsite due to the location of the site lying outside of the typical breeding range for the species. In addition, the ELMT biological survey and report states that "No bat species are expected to roost on-site due to a lack of suitable roosting habitat (i.e., trees, crevices, abandoned structures) within and surrounding the project site. " This is consistent with the General Plan EIR, which concluded that no special status bat species are expected to occur in the planning area.

No nest of any avian species was found within the project boundaries. However, the project site and surrounding areas contain numerous suitable nesting sites. Nesting birds are protected pursuant to the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (Sections 3503, 3503.3, 3511, and 3513 of the California Fish and Game Code prohibit the take, possession, or destruction of birds, their nests or eggs). Therefore, to

ensure impacts to any special status birds would be less than significant, the biological report recommends a pre-construction nesting bird clearance survey shall be conducted prior to ground disturbance if construction occurs between February 1st and August 31st. The biologist conducting the clearance survey should document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the pre-construction clearance survey, construction activities should stay outside of a no-disturbance buffer. The size of the no-disturbance buffer will be determined by the wildlife biologist and will depend on the level of noise and/or surrounding anthropogenic disturbances, line of sight between the nest and the construction activity, type and duration of construction activity, ambient noise, species habituation, and topographical barriers. The biological report states that the pre-construction nesting bird survey is compliant with and will be performed per the MBTA and California Fish and Game Code, detailed above. While surveys are not included in the original text of the MBTA and Game Code, the United States Fish and Wildlife Services (USFWS) formally recognizes and provides best management practices for nesting bird surveys.[73] The implementation of these practices will reduce impacts to migratory and nesting birds within the project site.

The biological report states that if construction occurs between February 1st and August 31st, a pre-construction clearance survey for nesting birds should be conducted within three (3) days of the start of any vegetation removal or ground disturbing activities to ensure that no nesting birds will be disturbed during construction. The biologist conducting the clearance survey should document a negative survey with a brief letter report indicating that no impacts to active avian nests will occur. If an active avian nest is discovered during the pre-construction clearance survey, construction activities are to stay outside of a no-disturbance buffer. The size of the no-disturbance buffer will be determined by the wildlife biologist and will depend on the level of noise and/or surrounding anthropogenic disturbances, line of sight between the nest and the construction activity, type and duration of construction activity, ambient noise, species habituation, and topographical barriers. These factors will be evaluated on a case-by-case basis when developing buffer distances; Limits of construction to avoid an active nest will be established in the field with flagging, fencing, or other appropriate barriers; and construction personnel will be instructed on the sensitivity of nest areas. A biological monitor should be present to delineate the boundaries of the buffer area and to monitor the active nest to ensure that nesting behavior is not adversely affected by the construction activity. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, construction activities within the buffer area can occur.[74]

One functionally non-covered and sensitive avian species was a possible occupant of the project site and vicinity: the burrowing owl (*Athene cunicularia*). The burrowing owl, a candidate endangered species under the California Endangered Species Act (CESA), was not observed or detected on or near the project site. The existing agricultural crops do not provide line-of-sight observations favored by burrowing owl. Further, the trees found onsite and surrounding electrical poles north of the project site provide suitable perching opportunities for large raptors (i.e., red-tailed hawks) that can prey on burrowing owl. Based on the results of the field investigation, it was determined that the project site does not have potential to support burrowing owl, and focused surveys are not recommended.

The project area is located within the Plan Area of the Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP), which outlines policies for conservation of habitats and natural communities. According to Figure 4-1 of the CVMSHCP, the site is not designated as a conservation area. Additionally, the site is not located immediately adjacent to a Conservation Area of the CVMSHCP and is therefore not subject to CVMSHCP requirements regarding lands adjoining Conservation Areas. The project is required as a standard condition to comply with and pay the relevant CVMSHCP Land Development Mitigation Fees (LDMF). This is required in the City's Municipal Code, Chapter 4.48: Coachella Valley Multiple Species Habitat Conservation Plan/Natural Community Conservation Plan Mitigation Fee.

As previously discussed, the GPU EIR determined impacts to special status species as significant and unavoidable. However, the EIR determined impacts to be less than significant with the incorporation of a

73 United States Fish and Wildlife Services, *Nationwide Avoidance & Minimization Measures for Birds*, 2024, https://www.fws.gov/media/nationwide-avoidance-minimization-measures-birds
74 *Habitat Assessment and CVMSHCP Consistency Analysis*, ELMT Consulting (ELMT), April 2025, at page 21.
80237.00027\45404105.1
80237.00027\45491467.1

biological site assessment and adherence to any mitigation proposed by a qualified biologist. The proposed project will have avoidance measures in place for nesting migratory birds and will be and the requirement to pay the LDMF by the City Municipal Code. Therefore, the project would be consistent with the analysis within the GPU EIR. The project would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact**. Within the planning area, riparian habitat occurs in a very limited area north of the City near the Whitewater River. Impacts of the GPU were determined to be less than significant.[75] There are no other occurrences of riparian habitat within the City. Due to the dispersed nature of riparian habitat, the planning area does not support associated sensitive species. The proposed project does not contain nor is it adjacent to any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the CDFW or U.S. Fish and Wildlife Service. There is no blue line stream within the project property as depicted on the United States Geological Survey topographic maps or National Hydrography Dataset.[76] Therefore, the project would be consistent with the analysis within the GPU EIR and would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impact.** The GPU determined that impacts would be less than significant.[77] Though there is potential for impact on migratory species from the loss of forage areas for these species from such growth as projected by the GPU, these impacts are expected to be less than significant due to the significant tracts of land that would be set aside as open space as proposed by the GPU Land Use Plan.[78]

No migratory wildlife corridors or native wildlife nursery sites are found on the project or adjacent properties. As previously discussed, the site consists primarily of agricultural development in the form of row crops in the central and eastern portion of the site and a palm plantation within the western portion. An irrigation pond occurs in the central-northern area of the site with nearby pump housing and additional support structures. Disturbances have eliminated the natural plant communities that historically occurred on the project site. Moreover, there are no existing drainages that would support wildlife nursery sites or corridors, and the site is not located in a known wildlife corridor. To ensure no impact occurs to migratory birds, the biological report prepared by ELMT suggests a pre-construction nesting bird clearance survey which will be conducted prior to ground disturbance if construction occurs between February 1st and August 31st. This recommendation is consistent with the requirements of the MBTA, California Fish and Game Code, and USFWS.

As previously discussed, the GPU EIR determined impacts to wildlife movement corridors as less than significant. The project would be consistent with the analysis within the GPU EIR. The project would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact**. The City of Coachella and its SOI are located within the area for the CVMSHCP. According to the GPU EIR, impacts to this resource were anticipated to be less than significant.[79] There is very little CVMSHCP Conservation Land within the Planning Area, occurring in Subarea 17 only. Under the GPU, these areas are proposed for preservation as open space. Additionally, the GPU identifies and provides policy for the City to support and adhere to the CVMSHCP. To ensure compliance with the CVMSHCP, the following policies can be found in the Sustainability + Natural Environment Element of the GPU.[80]

75 City of Coachella, 2035 GPU Draft EIR, Biological Resources, at 4.3-26.
76 Riverside County Map My County Interactive Map, *Blueline Streams* (2025), https://gis1.countyofriverside.us/Html5Viewer/?viewer=MMC_Public.
77 City of Coachella, 2035 GPU Draft EIR, Biological Resources, at 4.3-28.
78 *Ibid*.

79 *Id.*, at 4.3-29.
80 City of Coachella, General Plan 2035 Update: Sustainability & Natural Environment, at 07.9 – 0.7-10 (Apr. 22, 2015).

9.4 **Conservation and preservation easements.** Develop a program to facilitate the creation of conservation and preservation easements that identifies key habitat areas, habitat corridors and sensitive biological resources and:

- Establishes a simple process for land owners to grant easements, including identifying organizations or agencies capable of holding the easements; and
- Provides information to the landowners of identified properties about the benefits of conservation and preservation easements.

9.5 **Multiple species habitat conservation plan.** Support and adhere to the Coachella Valley Multiple Species Habitat Conservation Plan.

10.2 **Whitewater river corridor.** Preserve a public open space corridor of trails and wildlife habitat along the Whitewater River.

10.7 **Wildlife corridors.** Establish and preserve wildlife corridors.

As previously stated, the project site occurs in Subarea 3 and is not located within or adjacent to a designated Conservation Area under CVMSHCP. Therefore, it is not subject to CVMSHCP requirements regarding lands adjoining Conservation Areas. The CVMHSCP implements a Local Development Mitigation Fee for all new development to support the acquisition of conservation lands. The fee would be applied per Chapter 4.48 of the City of CMC. Based on these provisions, the applicable fees would be collected, and the project is expected to comply with the policies outlined in the Sustainability + Natural Environment Element of the GPU, which were designed in accordance with provisions of the CVMSHCP. There are no local tree preservation policies or ordinances in place. The proposed project will include landscaping improvements in a manner that is consistent with local development standards. The project will comply with landscaping policies outlined in the Sustainability + Natural Environment Element of the GPU and the CVMSHCP. Policies include integration of native, drought tolerant desert plants as well as site-sensitive architectural designs with the goal of providing or enhancing wildlife habitat and extending the desert environment into the urban design of the city. There are no other unique local policies or ordinances protecting biological resources that would cause a conflict, nor does the site support valuable biological resources that could be affected.

As stated, the GPU EIR found impacts to a habitat conservation plan to be less than significant. The project would be consistent with the analysis within the GPU EIR and it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Additional current CEQA Biological Resources thresholds not addressed in the GPU EIR include those pertaining to impacts on state or federally protected wetlands. This is provided for informational purposes. The project site does not contain, nor is it adjacent to, federally protected wetlands, marshes, or other drainage features. As a result, implementation of the proposed project would not result in direct removal, filling, or other hydrological interruption of these resources. The project applicant will also be required to develop and implement a Project-Specific Water Quality Management Plan (WQMP) to ensure that the project does not contribute pollutants of concern from storm runoff. Therefore, no impacts are anticipated.

Conclusion:

With regards to the issue area of Biological Resources, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the potential impacts to biological resources.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. The biological report prepared by

ELMT Consulting is consistent with the findings and assumptions of the Program EIR.

4. No mitigation measures are required within the GPU EIR. Recommendations pertaining to pre-construction surveys are compliant with requirements established by the MBTA, California Fish and Game Code, and the USFWS. Recommendations will reduce impacts to nesting birds to less than significant levels. The project specific impacts would be less than significant with the adherence to the MBTA, CDFW Fish and Game Code, and USFWS.

5. CULTURAL RESOURCES AND TRIBAL CULTURAL RESOURCES - Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☐	☒

Source: City of Coachella General Plan 2035, 2015; City of Coachella General Plan 2035 Draft Environmental Impact Report, 2015; Cultural Resources Survey Report Ranch at Coachella, CRM Tech, June 2025).

a) No Impact. CEQA establishes that "a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment."[81] "Substantial adverse change" means "demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired."[82] CEQA Guidelines state that the term "historical

81 Pub. Res. Code § 21084.1.
82 *Id.* at § 5020.1(q).

resource" applies to any such resources listed in or determined to be eligible for listing in the California Register of Historical Resources, included in a local register of historical resources, or determined to be historically significant by the lead agency.[83]

Records searches of historical/archaeological resources were conducted at the South Coastal Information Center (SCIC) at the San Diego State University on February 11, 2025 by CRM Tech (Appendix C).[84] Digital maps, records, and databases for previously identified cultural resources and existing cultural resources reports within a one-mile radius of the project were reviewed as a part of the records search. Previously identified cultural resources included properties designated as California Historical Landmarks, as well as those listed in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), or the California Historical Resources Inventory (CHRIS). Historical research also included a review of published literature in local and regional history, US General Land Office (GLO) land survey plat maps dated 1856, U.S. Geological Survey (USGS) topographic maps dated 1904-1979, aerial/satellite photographs taken in 1953-2025, as well as materials presented in past studies on the project area.

Within the one-mile scope of the records search, SCIC records identified 56 additional studies and 36 additional cultural resources, including 30 sites and six isolates. Eight of the sites and five of the isolates were prehistoric in origin, consisting mainly of habitation remains, a resource procurement area, scattered ceramic and lithic artifacts, and a cremation site. The other 22 sites and one isolate dated to the historic period and consisted of various buildings, farm/ranch complexes, structural remains, refuse items, and a cemetery. None of these sites or isolates was found in the immediate vicinity of the project area. Therefore, none of them requires further consideration during the study.

According to the SCIC records, the project area was covered in its entirety by three similar cultural resources surveys completed in 2005, 2006, and 2008. As a result of the 2005 and 2006 surveys, a farm complex dating to the 1940s-1950s, including two single-family residences, and an isolated prehistoric groundstone artifact were recorded on the property and subsequently designated 33-014903 and 33-014904 in the CHRIS. Since all three of these surveys are now more than 10 years old, they are considered out-of-date for statutory compliance purposes today.

Site 33-014903 was first recorded during the 2005 and 2006 studies on the project area as a farm complex dating to the 1940s-1950s era. Used for table grape and date cultivation at the time, the farm contained two single-family residences, both constructed in or around 1949-1950, along with ancillary buildings such as two work sheds. The 2008 study on the project area reported that by then one of the residences at was no longer extant. During the field survey for the study, it was observed that the farm remained operational, with date palms planted on approximately two-thirds of the total acreage. The grape vines on the rest of the land, meanwhile, appeared to have been abandoned. The surviving residence had also been abandoned and was in a dilapidated state.

Isolate 33-014904 was recorded during the 2006 study on the project area as a granitic biface mano. No other prehistoric cultural material was observed nearby, and the mano was collected at the time since it could be easily obscured by shifting surface silt. Neither the 2008 survey nor the current survey found any artifacts or archaeological features on the surface at or near the isolate. At the time of the field survey, the location of the isolate was occupied by rows of table grape vines, but the vineyard operation appeared to have been abandoned. A dense collection of fallen foliage and overgrown grass obscured much of the ground surface between the vines.

The Cultural Resources Survey determined that the localities do not meet CEQA definition of a "historical resource." As an isolate, or a locality with fewer than three artifacts, 33-014904 by definition does not qualify as an archaeological site due to the lack of contextual integrity. As such, it would not be considered

83 Cal. Code Regs. tit. 14, § 15064.5(a).
84 Cultural Resources Survey Report Ranch at Coachella, CRM Tech, June 2025 (Appendix C).

a potential "historical resource" if it remained extant in the field. Regarding Site 33-014904, the 2005 and 2006 studies both concluded that the farm, or the residences individually, did not appear to meet any of the criteria for listing in the CRHR. No other potential historical resources were encountered. Therefore, it was determined that no historical resources exist within the project area.

The proposed project is consistent with the GPU EIR, which finds impacts to historical resources less than significant through adherence to existing regulatory requirements and the following General Plan policies:[85]

- **Policy 12.2 (Tribal Coordination):** Requires notification of California Native American tribes and organizations of proposed projects that have the potential to adversely impact cultural resources.
- **Policy 12.4 (Preservation of Historic Resources):** Where practical, encourages the preservation of historic resources.
- **Policy 12.5 (Document Historic Resources):** When it is not practical to preserve a historic resource, requires the architectural details and design elements of historic structures to be preserved during renovations and remodels.

Therefore, there are no recognizable potential historical resources as defined in Section 15064.5 of the CEQA Guidelines that would be adversely affected by the proposed project. No impacts are anticipated. The project would be consistent with the analysis within the GP EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GP EIR.

b) Less Than Significant Impact. As previously discussed, CRM Tech conducted a records search with the SCIC. Within the one-mile scope of the records search, SCIC records identified 56 additional studies and 36 additional cultural resources, including 30 sites and six isolates. Eight of the sites and five of the isolates were prehistoric in origin, consisting mainly of habitation remains, a resource procurement area, scattered ceramic and lithic artifacts, and a cremation site. The other 22 sites and one isolate dated to the historic period and consisted of various buildings, farm/ranch complexes, structural remains, refuse items, and a cemetery. None of the sites or isolates were found in the immediate vicinity of the project area. Therefore, further study was not conducted.

According to SCIC records, the project area was covered in its entirety by three similar cultural resources surveys completed in 2005, 2006, and 2008. As a result of the 2005 and 2006 surveys, a farm complex dating to the 1940s-1950s, including two single-family residences, and an isolated prehistoric groundstone artifact were recorded on the property and subsequently designated 33-014903 and 33-014904 in CHRIS. However, the 2008 survey noted that one of the residences a part of Site 33-014903 was no longer extant, and CRM Tech's survey noted that the other residence has been abandoned and was in a dilapidated state. Moreover, Isolate 33-014904 is no longer extant in the field.

Based on these findings, the proposed project will have no impact on any known historical resources, as discussed above. However, sources consulted during this study suggest that the project area was the site of early settlement activities dating at least to the early 20th century, before the onset of widespread settlement and development in the Coachella Valley. In addition, the project location lies in the relatively close proximity to an important Desert Cahuilla village known as La Mesa dated around the turn of the century (now a part of the Augustine Indian Reservation). As a result, the project area demonstrates the potential for subsurface archaeological deposits of both prehistoric and early historical origin.

On February 13, 2025, CRM Tech submitted a written request to the State of California Native American Heritage Commission (NAHC) for a records search in the commission's Sacred Lands File. The NAHC is the State of California's trustee agency for the protection of "tribal cultural resources," as defined by the California Public Resources Code section 21074, and is tasked with identifying and cataloging properties

85 City of Coachella, General Plan 2035 Update: Sustainability & Natural Environment, at 07-12 (Apr. 22, 2015).

of Native American cultural value. In the meantime, in accordance with previously established consultation protocol with the Desert Cahuilla tribes, CRM Tech also notified, by email and telephone, the nearby Torres Martinez Desert Cahuilla Indians of the upcoming archaeological field survey and invited tribal participation.

In response to CRM Tech's inquiry, the NAHC states in a letter dated March 3, 2025, that the Sacred Lands File identified no Native American cultural resources in the project vicinity. Noting that the lack of specific information in the Sacred Lands File does not necessarily indicate the absence of such resources, however, the NAHC recommended that local Native American groups be consulted for further information and provided a referral list of 25 individuals associated with 12 local Native American groups. The Torres Martinez Desert Cahuilla Indians were notified of the archaeological fieldwork and invited to participate, but no response was received during the preparation and completion of the Cultural Resources Survey.

The proposed project is consistent with the City of Coachella General Plan 2035 EIR, which finds impacts to unique archaeological resources less than significant through adherence to existing regulatory requirements and the following General Plan policies:[86]

- **Policy 10.3 (Archaeological Resource Preservation):** Requires preservation of important archaeological and paleontological resources from loss or destruction, and requires development to include appropriate mitigation to protect the quality and integrity of these resources.

- **Policy 10.4 (Mitigation and Preservation of Cultural Resources):** Requires development to avoid archaeological and paleontological resources whenever possible. If complete avoidance is not possible, requires development to minimize and fully mitigate the impacts to the resources.

- **Policy 10.5 (Grading):** Requires that proposed projects involving a significant amount of grading have an archaeological and paleontological survey conducted before construction.

Therefore, impacts to unique archaeological resources would be less than significant and the project would be consistent with the analysis within the GP EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GP EIR.

c) Less Than Significant Impact. As discussed above, the records search at the SCIC as well as the archaeological survey of the project area did not identify a cultural resource onsite. Moreover, the NAHC Sacred Lands File search was negative for known tribal resources. Pursuant to the State of California Health and Safety Code section 7050.5 and the CEQA Guidelines section 15064.5 require that in the event of discovery or recognition of any human remains in any location other that a dedicated cemetery, there shall be no further excavation or disturbance of the site, or any nearby area reasonably suspected to overlay adjacent remains, until the County Coroner has examined the remains. If the coroner determines the remains to be Native American or has reason to believe that they are those of Native American, the coroner shall contact the Native American Heritage Commission by telephone within 24-hours. Pursuant to the California Health and Safety Code, proper actions shall take place in the event of a discovery or recognition of any human remains during project construction activities.

The proposed project is consistent with the GPU EIR, which similarly identifies the potential for discovery of human remains during ground-disturbing activities and requires compliance with California Health and Safety Code section 7050.5, CEQA Guidelines section 15064.5, and the California Native American Graves Protection and Repatriation Act, consistent with General Plan Policy 12.1 and 12.6:[87]

86 *Id*., at 07-10.
87 *Id*., at 07-12 – 07-13.

- **Policy 12.1 (Disturbance of human remains):** Requires that any human remains discovered on proposed project sites, the project must implement mitigation measures to prevent impacts to human remains in order to receive permit approval.

- **Policy 12.6 (Discovery of human remains):** Requires any discovered human remains to be treated with respect and dignity, fully complying with the California Native American Graves Protection and Repatriation Act and other applicable laws.

Adherence to these existing requirements reduces impacts to less than significant. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) Less than Significant Impact. According to the GPU EIR Paleontological Resources Sensitivity Exhibit 88the project area is located within a portion of the planning area with low sensitivity, or probability, for having paleontological resources. Impacts to paleontological resources within the planning area were deemed to be less than significant due to currently developed conditions. The proposed project is consistent with the GPU EIR, which finds impacts to paleontological resources less than significant through adherence to existing regulatory requirements and General Plan Policies 10.3, 10.4, and 10.5, as discussed above, as well as the following additional policy:[89]

- **Policy 12.7 (Paleontological Resources):** Requires any paleontological artifacts found within the City or Sphere of Influence to be reported to the City and temporarily loaned to local museums such as the Western Science Center for Archaeology and Paleontology in Hemet, CA.

Therefore, less than significant impacts to paleontological resources are anticipated. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR

e.i) No Impact. As discussed in the Historical Resources section above, no historical resources were identified within the project area. No tribal cultural resources meeting the definition of Public Resources Code section 21074, including any site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American tribe, that are listed or eligible for listing in the CRHR or a local register of historical resources, were identified within the project area.

The project area lies in relatively close proximity to an important Desert Cahuilla village known as La Mesa dated around the turn of the century, now a part of the Augustine Indian Reservation. In consideration of this proximity, CRM Tech submitted a written request to the NAHC for a Sacred Lands File search. The NAHC responded in a letter dated March 3, 2025 that the Sacred Lands File identified no Native American cultural resources in the project vicinity. The Torres Martinez Desert Cahuilla Indians were notified of the archaeological fieldwork and invited to participate, but no response was received during the course of the study.

Because the proposed project is processed as a General Plan Consistency Analysis pursuant to CEQA Guidelines Section 15183 and Public Resources Code Section 21083.3 formal AB 52 tribal consultation is not required. The proposed project is consistent with the GPU EIR, which requires coordination with Native American tribes and organizations pursuant to General Plan Policy 12.2 (Tribal Coordination). Therefore, no impacts to tribal cultural resources listed or eligible for listing in the California Register or a local register are anticipated. The project would be consistent with the analysis within the GPU EIR because it would not

88 GPU EIR Section 4.4 Cultural Resources Figure 4.4.3 Paleontological Resources Sensitivity.
89 *Id*., at 07-13.

create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

e.ii) Less than Significant Impact. As discussed above, the NAHC Sacred Lands File search produced negative results for Native American cultural resources in the project vicinity, and the Torres Martinez Desert Cahuilla Indians were notified and invited to participate in the archaeological fieldwork but did not respond. No other tribes responded during the course of the study.

No tribal cultural resources were identified during the field survey or through the records search process that have been determined, in the lead agency's discretion and supported by substantial evidence, to be significant pursuant to the criteria set forth in subdivision (c) of Public Resources Code section 5024.1.

However, the project area retains sensitivity for buried tribal cultural resources due to the isolated prehistoric artifacts and cremation site previously documented within the records search area, as well as the project's proximity to the historic Desert Cahuilla village of La Mesa.

The proposed project is consistent with the GPU EIR, which directly addresses this sensitivity through the following applicable policies:[90]

- **Policy 10.4 (Mitigation and Preservation of Cultural Resources):** Requires development to avoid archaeological and paleontological resources whenever possible. If complete avoidance is not feasible, requires development to minimize and fully mitigate impacts to those resources.

- **Policy 12.2 (Tribal Coordination):** Requires notification of California Native American tribes and organizations of proposed projects that have the potential to adversely impact cultural resources.

Adherence to these policies ensures that any Tribal Cultural Resources encountered during project implementation would be appropriately avoided, minimized, or mitigated in coordination with local Native American groups. Because the proposed project is processed as a General Plan Consistency Analysis pursuant to CEQA Guidelines Section 15183 and Public Resources Code Section 21083.3, formal AB 52 tribal consultation is not required. With adherence to the applicable General Plan policies, impacts to Tribal Cultural Resources, as defined in Public Resources Code Section 21074, would be less than significant. As such, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, or introduce new information of substantial importance beyond that identified within the GPU EIR.

Conclusion:

With regards to the issue area of Cultural and Tribal Cultural Resources, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project area does not contain any historical, archaeological, or tribal cultural resources listed or eligible for listing in any federal, state, or local register.

2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the potential for discovery of buried prehistoric and historic resources within the planning area, including areas of Native American sensitivity.

3. No substantial new information has been identified which results in an impact more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. The records search, Sacred Lands File search, and tribal outreach conducted by CRM Tech are consistent with the findings and assumptions of the

90 *Id*., at 07-10, 07-12.

Program EIR.

4. No mitigation measures were identified in the GPU EIR for historical or archaeological resources. Compliance with General Plan Policies 10.3, 10.4, 10.5, 12.1, 12.2, 12.4, 12.5, 12.6, and 12.7 ensures that potential impacts to cultural and tribal cultural resources would remain less than significant.

6. ENERGY -- Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy of energy efficiency?	☐	☐	☐	☐	☒

Sources: The City of Coachella 2035 General Plan, 2015; City of Coachella Climate Action Plan, 2014; California Energy Consumption Database, California Energy Commission, 2025; Greenhouse Gas Analysis, Urban Crossroads, Inc. November 2025[91] (Appendix E); U.S. Energy Information Administration, 2025.

Energy use was not specifically analyzed within the GPU EIR as a separate issue area under CEQA. At the time, Energy Use was contained within Appendix F of the CEQA Guidelines and since then has been moved to the issue areas within Appendix G of the CEQA Guidelines. However, the issue of energy use in general was discussed within the GPU and GPU EIR within the Sustainability and Natural Environment Element. The analysis below specifically evaluates the energy use of the project for informational purposes.

a) **Less than Significant Impact.** The project site occupies approximately 87 acres of land west of Van Buren Street, south of Avenue 52, and east of Calhoun Street in the City of Coachella. The project proposes a mixed-use development consisting of residential, resort, and recreational uses with 162 two-story single-family residences, 240 condo hotel cottages, Crystal Lagoon water features, a lake, restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas, and kids play spaces. Total buildout will result in 402 units, private sector uses ((i.e., onsite resort amenities, recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant), approximately 170,000 square feet of public sector uses (i.e., beach club, bar, restaurant, etc.), and approximately 12 acres of water features. Associated improvements include pedestrian walkways and sidewalks, and paved drive aisles and parking spaces.

According to the City of Coachella's Climate Action Plan (CAP), energy is used for heating and cooling, transportation, manufacturing, and producing food.[92] The most common sources of energy include fossil fuels like oil, gasoline, natural gas, and coal. The consumption of these energy sources leads to the production of greenhouse gas (GHG) emissions. In 2010, total GHG emissions in Coachella were approximately 382,787 metric tons (MTCO2e), a 22 percent increase over 2005 emissions of 312,628 MTCO2e.[93] This number accounts for direct emissions from the on-site combustion of fuels and the combustion of fuel in vehicles, as well as indirect emissions associated with community electricity consumption, and emissions from solid waste generated, crop management and water consumed by Coachella. The residential sector was the third largest producer of GHG emissions within the City, after transportation and commercial/industrial. The City of Coachella established various methods to reduce energy-related GHG emissions produced by the City in the CAP.

Electricity is provided to the City of Coachella by Imperial Irrigation District (IID). IID is the sixth-largest utility in California, has an energy service area of 6,471 square miles, serving more than 166,000 customers and controlling more than 1,100 megawatts (MW) of energy.[94] Electricity is delivered through high voltage

91 Greenhouse Gas Analysis, Urban Crossroads, Inc. November 2025 (Appendix E).
92 City of Coachella, CAP, at 1 (April 22, 2015).
93 City of Coachella, GPU Draft EIR, Greenhouse Gases, at 4.12-4, 4.12-7; *see also* City of Coachella, General Plan Update 2035: Existing Conditions, at 03-17 (April 22, 2015).
94 Imperial Irrigation District, Power: About IID Power (2025), https://www.iid.com/power.

transmission and low voltage distribution power lines. Distribution power lines transport anywhere from 4 kV to 69 kV, while transmission lines can transport 69 kV to 765 kV of electricity. Distribution power poles lie on the northern boundary of the project.

The Southern California Gas Company (SoCalGas or the Gas Company) provides natural gas to the City of Coachella, including the project site. Natural gas is used primarily for space and water heating, as well as cooking. High pressure distribution pipelines operate at pressures above 60 pounds per square inch (psi) and deliver gas in smaller volumes to the lower pressure distribution system.

The project is expected to consume energy in the form of electricity, natural gas, and petroleum during project construction and operation. In November 2025, a Greenhouse Gas Analysis was prepared by Urban Crossroads, Inc. to evaluate project-related construction and operational emissions (Appendix E). Urban Crossroads utilized the most recent version of California Air Pollution Control Officers Association's (CAPCOA) modelling resource (CalEEMod 2022.1.1.30) to calculate construction-source and operational-source emissions and energy consumption.

Electricity

According to the California Energy Commission (CEC), Riverside County consumed approximately 17,418 million kWh (GWh) in 2024.[95] Electricity is provided to the City of Coachella, and the project site, by IID. In 2024, IID's service area consumed 3,645 million kWh (GWh) of electricity.[96] Electricity use resulted in the second largest emissions produced community-wide, behind petroleum (discussed further below).

Construction

Temporary electrical power for lighting and electronic equipment, such as computers inside interim construction trailers, would be provided by IID. Electricity consumed for onsite construction trailers, which are used by managerial staff during the hours of construction activities, and electrically powered hand tools are expected to use a minimal amount of electricity. However, the electricity used for such activities would be temporary and negligible. Most energy used during construction would be from petroleum consumption (discussed further below).

Operation

The project proposes the operation of 162 single family units, 240 condo hotel cottages, recreational amenities (i.e., restaurants, bar, event spaces, kids play areas, spas, etc.), 12 acres of water features, and associated improvements (i.e., pedestrian sidewalks, and paved aisles, parking spaces, and landscaping). According to the CalEEMod calculations the project is expected to generate the demand for approximately 13,497,884 kWh of annual unmitigated electricity use for the site and approximately 6,862,266 kWh/yr of annual mitigated electricity use, as depicted in the table below.

Table VI-1 Operational Electricity Demand

Land Use	Electricity Use (kWh/yr)	
	Unmitigated	Mitigated
Single Family Housing	1,545,056	768,447
Condo/Townhouse	1,790,418	893,101

Total	**13,497,884**	**6,862,266**

Sources: Greenhouse Gas Analysis, Urban Crossroads, Inc. November 2025 (Appendix E).

The project would not result in the use of excessive amounts of electricity and would not result in the need to develop additional sources of energy. Even though energy use at the project would not be excessive, the project would incorporate several measures directed at minimizing energy use. These measures include applying energy efficient design building shells and building components, such as windows, roof systems, electrical lighting systems, and heating, ventilating, and air conditioning systems to meet the most current Title 24 California Building Standards Code, as well as providing low-flow appliances and covered parking stalls. Therefore, reducing the use of electricity during project operation.

The proposed project has received a will-serve letter from IID and would contribute financially to a new regional substation to provide electrical power to the project site. The project would also incorporate solar generation and battery storage systems to help offset electricity demand from the regional grid. The project-specific Greenhouse Gas Analysis (Appendix E) recommends 50 percent of electricity for single-family homes, condos/townhomes, movie theaters, and restaurants to be provided by on-site solar systems/photovoltaic systems (GHG-2). This is consistent with the City Climate Action Plan, which recommends the incorporation of solar/photovoltaic systems into all new construction. For single family homes built prior to 2020, provide 10 percent of the projected electricity demand via onsite solar photovoltaics. For single family homes built between 2020 and 2035, provide 25 percent of the projected electricity demand via onsite solar photovoltaics. For non-residential and multi-family residential buildings built prior to 2020, provide 20 percent of the project electricity demand via onsite solar photovoltaics. For non-residential and multi-family residential buildings built between 2020 and 2035, provide 50 percent of the project electricity demand via onsite solar photovoltaics. It is likely that the majority of the solar/photovoltaic systems will occur on rooftops, with the battery storage being mounted nearby. These systems would reduce reliance on off-site energy sources and support overall energy efficiency. In the future, the project may consider implementing a microgrid or geothermal system to further offset demand on the grid; however, these features are not part of the current project proposal and are not evaluated as a component of the project at this time. Electrical improvements will take place within the boundaries of the project and will not result in significant environmental impacts.

Natural Gas

Natural gas is provided to the City of Coachella, and the project site, by SoCalGas. According to the CEC, SoCalGas provided 4,959 millions of therms in 2024, while Riverside County consumed 426.7 millions of therms in 2024.[98]

97 The project does not propose the construction or operation of a movie theater. The "Movie Theater (No Matinee)" land use subtype was used in the modeling, which, per the CalEEMod User Guide, consist of audience seating, single or multiple screens and auditoriums, a lobby and a refreshment stand. Movie theaters without matinees show movies on weekday evenings and weekends only; there are no weekday daytime showings. This land use subtype was used in the modelling because it was the closest use to the Project's operation of the beach club use, since the beach club will not open sooner than 11:00 a.m., similar to a movie theater, with a majority of the trips arriving in close duration to each other. Both the movie theater and the beach club are entertainment uses open all day and night, where people come and stay for a few hours, and arrival and departure times are spread out throughout the day with multiple rounds of event/movie turnover.

98 California Energy Commission, *California Natural Gas Consumption Dashboard – Annual Agency and County Totals* (data last updated Sept. 5, 2025), https://data.cnra.ca.gov/dataset/california-natural-gas-consumption.

Note, the CalEEMod program uses thousand British thermal units (kBTU) to quantify natural gas use, where 1 therm equals approximately 99.976 kBTU. For example, an approximately 600,000 therm increase of natural gas consumption between 2005 and 2010 is equivalent to approximately 59,985,680 kBTU. Thousand British thermal units will be used when analyzing the potential project-related natural gas consumption below.

Construction

Natural gas is not anticipated to be required during construction of the project. Fuels used for construction would primarily consist of diesel and gasoline, which are discussed under the following petroleum subsection. Any minor amounts of natural gas that may be consumed because of project construction would be temporary and negligible and would not have an adverse effect.

Operation

The consumption of natural gas typically occurs during building heating, water heating, and cooking, which will occur during project operation. The project's expected natural gas consumption was calculated using the CalEEMod default values. Based on the CalEEMod calculations, the project is estimated to consume approximately 11,356,473 kBTU of natural gas annually during operation of the restaurant and recreational uses. This is displayed in Table VI-2, Operational Natural Gas Demand, below.

Table VI-2 Operational Natural Gas Demand[1]

	Natural Gas Use
Land Use	kBTU/yr
Single Family Housing	0
Condo/Townhouse	0
Movie Theater (No Matinee)[99]	9,024,353
Quality Restaurant	2,332,120
User Defined Residential	0
Parking Lot	0
Recreational Swimming Pool	0
Other Asphalt Surfaces	0
Total	11,356,473

Sources: Greenhouse Gas Analysis, Urban Crossroads, Inc. November 2025 (Appendix E).
CalEEMod Modeling utilized for electricity consumption during operation.
Note: 1. Mitigated and unmitigated natural gas use is the same.

As such, the project would result in a long-term increase in demand for natural gas. However, the project would be designed to comply with Title 24, Part 6 of the California Code of Regulations (CCR). Moreover, the residential buildings (single-family homes and condos/townhomes) will be fully electrified, eliminating the use of natural gas. This is identified in Measure GHG-1 (see Appendix E, Greenhouse Gas Analysis, and the Greenhouse Gas Emissions discussion). Natural gas consumption would be appropriate and not place a significant burden on SoCalGas services.

Petroleum

99 *See Id. 85.* The project does not propose the construction or operation of a movie theater. The "Movie Theater (No Matinee)" land use was used in the modeling because the use is similar to those proposed in the project.

Petroleum is the main energy source for transportation in the U.S., accounting for 89 percent in 2025.[100] In 2024, California consumed 26.4 billion gallons of petroleum, including 13.6 billion gallons of finished gasoline and 3.5 billion gallons of diesel.[101] Gasoline and other vehicle fuels are commercially provided commodities and would be available to the project via commercial outlets.[102] Technological advances, market trends, consumer behavior, and government policies could result in significant changes to fuel consumption by type and total. Various policies, rules, and regulations have been enacted to improve vehicle fuel efficiency, promote the development and use of alternative fuels, reduce transportation-source air pollutants and GHG emissions, and reduce vehicle miles traveled (VMT) at federal and state levels. Technological advances have made use of other energy resources or alternative transportation modes increasingly feasible, as market forces have driven the price of petroleum products steadily upward.

The transportation sector within the City of Coachella produced approximately 206,909 $MTCO_2e$ in 2010, being the largest contributor to GHG emissions in the City.[103] Overall, the transportation sector emitted 54 percent of the City's GHG emissions in 2010. Transportation sector emissions were estimated in the City's CAP by applying conversion factors to daily VMT. It was estimated that 75 percent of the GHG emissions from the transportation sector were the result of burning gasoline, and the remainder resulted from burning diesel fuel.[104]

Construction

Petroleum would be consumed throughout construction of the project. Fuel consumed by construction equipment would be the primary energy resource expended over the course of construction, while VMT associated with the transportation of construction materials and construction worker commutes would also result in petroleum consumption. Heavy-duty equipment used for project construction would rely on diesel fuel, as would haul trucks involved in off-hauling materials from excavation. Construction workers are expected to travel to and from the project site in gasoline-powered passenger vehicles. There are no unusual project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities or use of equipment that would not conform to current emission standards (and related fuel efficiencies).

Heavy-duty construction equipment of various types would be used during each phase of construction. CalEEMod was used to estimate construction equipment usage. Fuel consumption from construction equipment was estimated by converting the total CO2 emissions from each construction phase to gallons using the conversion factors shown in the tables included below.

Table VI-3, Construction Worker Gasoline Demand (below), illustrates the demand of gasoline fuel for construction worker trips to and from the site. Construction worker demand equals a total of 236,744.6 gallons of gasoline during operation of the project.

Table VI-3 Construction Worker Gasoline Demand

Phase	Days	Trips	Miles	VMT	KgCO2e	Kg/CO2/Gallon[1]	Gallons

Table VI-6, Hauling Diesel Fuel Demand (below), illustrates the demand of diesel fuel for hauling trips to and from the site. These trips are associated with the removal of materials (i.e., dirt, vegetation, etc.) during the demolition phase. Hauling demand equals a total of 221 gallons of diesel fuel.

Table VI-6 Hauling Diesel Fuel Demand

Phase	Days	Trips	Miles	VMT	KgCO2e	Kg/CO2/Gallon	Gallons
Demolition	75	0.95	20	1,425	2,250	10.18	221.0
Total							**221.0**

Overall, the project is estimated to consume approximately 236,744.6 gallons of gasoline and 375,490.1 gallons of diesel fuel during the project's construction phases. In total, the project will consume approximately 612,234.7 gallons of petroleum. Petroleum use is necessary to operate construction equipment. Recent amendments to the In-Use Off-Road Diesel-Fueled Fleets Regulation were approved by CARB in 2022. The 2022 amendments expand requirements that any added vehicles be cleaner and accelerate the phase-out of older, higher-emitting engineers from existing fleets. Specifically, the 2022 amendments require that added vehicles be cleaner than previously required and that older, dirtier engines be removed from operation. In effect, only

Tier 4 or cleaner engines may be added to large and medium fleets starting January 1, 2024.[105] Fleet owners are required to report all vehicles to CARB through their online reporting system (DOORS).[106] The 2022 amendments require that fleets no longer operate vehicles with Tier 0, 1 or 2 off-road engines and comparable on-road vehicles over a 12-year period, between 2024 and 2036. The vehicle emissions standards will reduce both tailpipe and evaporative emissions from passenger cars, light-duty trucks, medium duty passenger vehicles, and some heavy-duty vehicles. Due to CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation and amendment, it is anticipated that construction equipment will include Tier 3 and 4 engines, therefore would be newer off-road equipment units.

The energy used during the construction of the project would be limited to the development of the project and would not require long-term petroleum use. Additionally, there are no unusual project characteristics or construction processes that require the use of equipment that would be more energy intensive than is used for comparable activities or use of equipment that would not conform to current emissions standards (and related fuel efficiencies). Thus, project construction would not consume petroleum in a wasteful or inefficient manner.

Operation

Lowering transportation emissions requires making vehicles and their fuels cleaner, reducing the length of driving trips, managing the demand for travel, and providing alternatives such as walking, biking, and transit for travel. According to the Coachella CAP, in 2010 the City produced approximately 900,000 vehicle miles traveled each day, producing 180,078 MTCO2e from transportation-related emissions.[107]

According to the figures provided by the CalEEMod calculations, the project would have an estimated annual VMT of 12,144,280, depicted in Table VI-7 below. Total mobile source CO2e is 3,500 MT per year, or 3,550,000 kg per year. CalEEMod assumes 92.5 percent of VMT burns gasoline, while the remaining 7.5 percent burn diesel. Thus, of the 3,550,000 kg of mobile emissions, 3,283,750 kg is generated by gasoline combustion, and 266,250 kg is generated by diesel combustion. The project would have an annual gasoline demand of 369,375.7 gallons and an annual diesel demand of 26,154.2 gallons, as displayed in the following Table VI-8.

Table VI-7 Operational Petroleum Demand

	Annual VMT
Combined Land Uses	12,144,280
Total	12,144,280

Table VI-8 Operational Annual Petroleum

	Annual VMT	**KgCO2e**	**Kg/CO2/Gallon**	**Annual Gallons**
Gasoline	11,233,459	3,283,750	8.89	369,375.7
Petroleum	910,821	266,250	10.18	26,154.2
Total				395,529.9

Over the lifetime of the project, the fuel efficiency of vehicles in use is expected to increase, as older vehicles are replaced with newer, more efficient models. Therefore, it is expected that the amount of petroleum consumed due to the vehicle trips to and from the project site during operation would decrease over time. Additional advancement of technology includes the use of plug-in hybrid and zero emission vehicles in California, which will also decrease the amount of future petroleum consumed in the state. With the foregoing, operation of the project is expected to use decreasing amounts of petroleum over time due to advances in fuel economy.

105 Amendments to the In-Use Off-Road Diesel-Fueled Fleets Regulation, California Air Resources Board (2023), https://ww2.arb.ca.gov/resources/fact-sheets/fact-sheet-added-vehicle-restrictions-and-tier-phase-out-requirements.
106 In-Use Off-Road Diesel-Fueled Fleets Regulation, California Air Resources Board (2026), https://ww2.arb.ca.gov/our-work/programs/use-road-diesel-fueled-fleets-regulation/about.
107 City of Coachella, CAP, at 46 (Apr. 22, 2015).

Additionally, the proposed mixed-use project would reduce VMT traveled in the area since it is likely that the residents and visitors of the site would stay on the project site and enjoy the onsite restaurants and amenities. Commercial uses are located approximately 1 mile east of the project along Harrison Street.

Bus services, provided by SunLine Transit, will also be accessible to the project. Bus Route 8 provides the closest bus stops to the project, located a mile east and north of the project, at Cesar Chavez and Avenue 52, and Avenue 50 and Van Buren, respectively. Bus Route 8 travels from Coachella to North Indio, with connections to other routes throughout the Coachella Valley. The availability of bus lines and services will reduce the amount of potential VMT created by the proposed project.

Although the project would result in an increase in petroleum use during construction and operation compared to the existing, vacant conditions, the project would comply with the City's GPU, City Municipal Code, and CAP regarding VMT reduction. Project Design Feature 3 has been provided and requires the project applicant to ensure that any business operating within the proposed project (including both construction and operations of the proposed project) with 20 or more full-time onsite employees shall implement at least one of the following programs: (1) Pre-tax election program to allow employees to exclude wages for commuting costs for transit or vanpools; (2) An employer supplied transit pass; (3) Employer provided transit; or (4) Other, similar demand management programs.[108] With implementation of Project Design Feature 3, the project will be consistent with the transportation demand management in the CAP to reduce automobile trip generation related to employment. Additionally, the project would provide a pedestrian access network that internally links the proposed commercial uses to the surrounding uses. Providing a pedestrian access network to link areas within the project site and surrounding areas encourages people to walk instead of drive, therefore reducing the regional VMT and associated vehicular-source emissions. Given these considerations, petroleum consumption associated with the project operation would not be considered excessive.

Development and operation of the proposed project would increase demand for energy in the project area and in the service areas of IID and SoCalGas Company. However, based on the findings described above, project construction and operation are not anticipated to result in potentially significant impacts due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact**. The approximately 87-acre project site proposes the development of 162 single family units, 240 condo hotel units, recreational amenities, 12 acres of water features, and associated improvements (i.e., pedestrian sidewalks, and paved aisles, parking spaces, and landscaping). As stated in the previous discussion, project development and operation are not anticipated to use an unnecessary or wasteful amount of energy resources. To ensure the conservation of energy, the state of California and the City of Coachella implement various regulations in order to be more energy efficient and reduce the amount of GHG emissions. Some of the state-wide and local regulations are listed below.

State Regulations

Assembly Bill 32

Assembly Bill 32 (AB 32) was signed in 2006 to establish and reduce the amounts of GHGs being emitted on a state-wide level.[109] Specifically, AB 32 requires a reduction of emissions to 1990 levels by 2020.[110] It plans to do this by establishing an annual reporting program for significant sources. Energy efficiency goals listed in AB 32 include maximizing energy efficiency building and appliance standards, pursuing additional efficiency efforts including new technologies, and pursuing new policy and implementation mechanisms.

108 COVA Greenhouse Gas Analysis, Urban Crossroads, Inc., 2026. Appendix E, at 59.
109 Cal. Air Res. Bd., AB 32: The California Global Warming Solutions Act of 2006 (Sept. 28, 2018).
110 Cal. Health & Saf. Code § 38550 (West 2025).

Senate Bill 32

Senate Bill 32 (SB 32) was signed in 2016 and requires the reduction of greenhouse gas emissions to 40 percent below 1990 levels by the year 2030. SB 32 stresses the continued effort to reduce greenhouse gas emissions to protect all areas of the state, especially disadvantaged communities, as those communities are affected first by the impacts of climate change.

CARB Scoping Plan

A specific requirement of AB 32 was to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020.[111] CARB developed an AB 32 Scoping Plan that contains strategies to achieve the 2020 emissions cap. The initial Scoping Plan was approved in 2008, and contains a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the State's long-range climate objectives.[112] Updates to the Scoping Plan occurred in 2014,[113] 2017,[114] and 2022.[115]

Assembly Bill 1493/Pavley Regulations

California Assembly Bill 1493 (AB 1493), enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks.[116] In 2005, CARB submitted a "waiver" request to the EPA from a portion of the federal Clean Air Act in order to allow the State to set more stringent tailpipe emission standards for CO2 and other GHG emissions from passenger vehicles and light duty trucks.[117] On December 19, 2007, the EPA announced that it denied the "waiver" request.[118] On January 21, 2009, CARB submitted a letter to the EPA administrator regarding the State's request to reconsider the waiver denial.[119] The EPA approved the waiver on June 30, 2009.[120]

Executive Order S-3-05

Executive Order (EO) S-3-05, passed in 2005, established reduction targets of an 80 percent of 1990 levels reduction by 2050, and created agencies to achieve these targets.[121] The passage of this regulation requires the use of more energy efficient practices regarding building development and operation in order to reduce the amount of GHGs produced.

Senate Bill 1389 and California Integrated Energy Policy Report

Senate Bill 1389 (SB 1389) required the CEC to prepare an integrated energy plan every other year that analyzed electricity, natural gas, and transportation fuel consumption. SB 1389 was passed in 2002. The CEC is responsible for preparing the Integrated Energy Policy Report (IEPR), which identifies major trends related to energy supply and demand in California.[122] The IEPR provides policy recommendations to conserve resources, protect the environment, and ensure public health and safety, and maintain a healthy economy. The IEPR calls for the state to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this

policy, the IEPR identifies a number of strategies, including assistance to public agencies and fleet operators and encouragement of urban designs that reduce VMT and accommodate pedestrian and bicycle access.

Title 20: Appliance Efficiency Standards

The CCR regulates the sale of appliances in California.[123] The Appliance Efficiency Regulations include standards for both federally regulated appliances and non-federally regulated appliances. Twenty-three categories of appliances are included in the scope of these regulations. The standards within these regulations apply to appliances that are sold or offered for sale in California, except those sold wholesale in California for final retail sale outside the state and those designed and sold exclusively for use in recreational vehicles or other mobile equipment.

Title 24: Building Energy Efficiency Standards and CALGreen Building Standards Code

In addition to Title 20 of the CCR, Parts 6 and 11 of Title 24 also outline energy efficient building designs for new development. The CCR's Building Energy Efficiency Standards (Title 24, Part 6) and the CALGreen Building Standards Code (Title 24, Part 11) establish mandatory guidelines and standards requiring more energy efficient new and existing developments. The CEC adopted the Building Energy Efficient Standards for all new residential and nonresidential construction to reduce GHGs as a part of the California Building Code, Title 24. The Building Energy Efficiency Standards emphasize the use of heat pumps for space heating and water heating, and it encourages the use of photovoltaic and battery storage systems and other demand flexible technology to operate together with heat pumps to enable California buildings to be responsive to climate change. Title 24, Part 11, establishes design and development methods that include environmentally responsible site selection, building design, building siting, and development to protect, restore, and enhance the environmental quality of the site and respect the integrity of adjacent properties. The proposed project will be required to comply with the state implemented standards for energy efficient new developments.

California's Renewable Portfolio Standards

The California Renewable Portfolio Standards will reduce GHG emissions by requiring utility companies, such as IID, to switch from non-renewable resources, such as coal-fired power plants, to renewable resources, such as wind turbines and solar power.[124]

Low Carbon Fuel Standard

The Low Carbon Fuel Standard (LCFS), or Executive Order (EO) S-1-07, establishes a low carbon fuel standard for transportation fuels in California.[125] EO S-1-07 was enacted to reduce carbon intensity in transportation fuels as compared to conventional petroleum fuels, such as gasoline and diesel. It requires that the carbon intensity of California's transportation fuels be reduced at least 10 percent by 2020.

Clean Car Standards

The Clean Car Standards, otherwise known as Pavley 1493, sets more stringent vehicle fuel economy standards for cars and light trucks that reduce greenhouse gas emissions.[126] In 2009, the federal government enabled the state of California to enforce stricter tailpipe emissions limits on new passenger vehicles.[127] In 2010, the US EPA and the Department of Transportation's National Highway Safety Administration announced new vehicle GHG emission standards and corporate average fuel economy standards that reinforce California's standard.[128]

CARB's recent 2022 amendments to the In-Use Off-Road Diesel-Fueled Fleets Regulation expand requirements that any added fleet vehicles be cleaner and accelerate the phase-out of older, higher-emitting engines from existing fleets. The 2022 amendments require that added vehicles be cleaner than previously required and that older, dirtier engines be removed from operation. In effect, only Tier 4 or cleaner engines may be added to large and medium fleets starting January 1, 2024.[129] Fleet owners are required to report all vehicles to CARB through their online reporting system (DOORS).[130] The 2022 amendments require that fleets no longer operate vehicles with Tier 0, 1 or 2 off-road engines and comparable on-road vehicles over a 12-year period, between 2024 and 2036. The vehicle emissions standards will reduce both tailpipe and evaporative emissions from passenger cars, light-duty trucks, medium duty passenger vehicles, and some heavy-duty vehicles. Due to CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation and amendments, it is anticipated that construction equipment will include Tier 4 engines, therefore would be newer off-road equipment units.

City Regulations

The City of Coachella Climate Action Plan

The City of Coachella adopted their CAP in 2015 in order to achieve community-wide GHG reductions.[131] The CAP quantifies emissions from the build-out of the City and includes additional policies and implementation actions to help Coachella further reduce emissions. The CAP analyzes policies from the GPU that reduce energy use, VMT, resource consumption, and GHG emissions, comparing the emissions to voluntary statewide emissions targets outlined in the California Climate Action Scoping Plan and Executive Order S-03-05. In compliance with the statewide emission targets, the City established a per service population 2020 emissions reduction target of 15 percent below 2010 levels and a 2035 emissions reduction target of 49 percent below 2010 levels.[132]

The CAP organizes the General Plan policies into six strategies to reduce emissions reductions throughout the City: building and infrastructure energy efficiency, renewable energy generation, land use and transportation, vegetation and open space, solid waste, and water use.[133] According to the CAP, residential and non-residential buildings produce approximately 39 percent of Coachella's emissions and are a primary target for the CAP. The City plans to achieve this reduction through energy efficiency policies for homes, and businesses including energy performance targets to construct buildings 15 percent more energy efficient than Title 24 standards.

Coachella General Plan Update

Coachella's GPU emphasizes the importance of increasing energy conservation and efficiency and reducing energy consumption and emissions within its City. The various goals and policies outlined within the Sustainability and Natural Environment Element of the GPU focus on City development and its impact to climate change, energy, and water resources while presenting the goal to implement green building design into new developments in the City.[134] Reoccurring policies include GHG emissions reductions, water conservation methods, energy efficient building design, and implementation of renewable energy sources. Goal 2 specifically requires an energy efficient community that relies primarily on renewable and non-polluting energy sources.[135] Policies within this goal include building design strategies such as passive solar design, use of alternative energy, construction standards, and energy performance targets in order to create a more energy efficient community.

Another goal in the GPU is to establish efficient land use and transportation patterns in order to reduce emissions and VMT while improving air quality. The overall goal is to reduce energy consumption in the City to improve air quality, reduce GHG emissions, increase the quality of life for the City's residents.

Coachella Municipal Code

Similar to the City's CAP and GPU, the CMC also encourages the reduction of air pollution created by vehicle emissions. Chapter 12.40, Transportation Demand Management Program, of the CMC, is intended to protect the public health, welfare, and safety by reducing air pollution caused by vehicle trips and VMT. This chapter is intended to reduce emissions by requiring the development of a trip reduction and travel demand element to the congestion management plan (CMP), and it also requires the adoption and implementation of trip reduction and travel demand ordinances by local agencies.

The project proposes a mixed-use, residential, resort, and recreational community on 87 acres in the City of Coachella. The project will comply with state-implemented building standards such as those outlined in Title 20 and Title 24 of the California Code of Regulations. Energy efficient appliances, high efficiency lighting and covered parking stalls with photovoltaic solar facilities will be implemented during project operation. As stated in the previous discussion, project-related energy consumption and VMT created by the project are not anticipated to be substantial. Construction activities would require the use of equipment that would be more energy intensive than is used for comparable activities. Additionally, new construction equipment will comply with the Tier 3 and 4 program engines, per CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation,[136] and therefore would be newer off-road equipment units.

The project would not impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan. Some of the current transportation sector policies the project will comply with (through vehicle manufacturer compliance) include: Advanced Clean Cars II, Advanced Clean Trucks, Advanced Clean Fleets, Zero Emission Forklifts, Off-Road Zero-Emission Targeted Manufacturer Rule, Clean Off-Road Fleet Recognition Program, Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation, carbon pricing through the Cap-and-Trade Program, and the LCFS. As such, the project would be consistent with the 2022 Scoping Plan.

The project property is located in a built urban environment, surrounded by existing uses. Existing elementary schools, parks, and bus stops all lie within a half-mile radius of the project property. Pedestrian pathways that internally link all uses and connect to all existing planned external streets are proposed in the project design, which will assist in reducing potential project-related VMT.

The project has designated a potential on-site location for a substation as a contingency measure but based on current electrical infrastructure planning in the area, it is expected that the new substation will be constructed off-site in the area with new distribution conduits (if required) to be constructed in existing public road rights-of-way to serve the project. The project will contribute financially to a fair share contribution for a regional substation. The future IID substation is expected to serve multiple projects in the area, both within and outside the City of Coachella, and as an independent project, it will be subject to its own environmental review under CEQA once the substation project and location have been determined. The project would also incorporate solar generation and battery storage systems to help offset electricity demand from the regional grid. On-site solar systems will provide 50 percent of electricity for single-family homes, condos/townhomes, recreational uses, and restaurants. Additionally, all residential buildings (single-family homes and condos/townhomes) will be fully electrified, eliminating the use of natural gas. These systems would reduce reliance on off-site energy sources and support overall energy efficiency. In the future, the project may consider implementing a microgrid or geothermal system to further offset demand on the grid; however, these features are not part of the current project proposal and are not evaluated as a component of the project at this time. Electrical improvements will take place within the boundaries of the project and will not result in significant environmental impacts.

136 Amendments to the In-Use Off-Road Diesel-Fueled Fleets Regulation, California Air Resources Board, 2023. https://ww2.arb.ca.gov/resources/fact-sheets/fact-sheet-added-vehicle-restrictions-and-tier-phase-out-requirements
In-Use Off-Road Diesel-Fueled Fleets Regulation, California Air Resources Board, 2026. https://ww2.arb.ca.gov/our-work/programs/use-road-diesel-fueled-fleets-regulation/about.

The project property will comply with all applicable State and local guidelines and regulations regarding energy efficient building design and standards. Therefore, the proposed project is not anticipated to conflict or obstruct a state or local plan for renewable energy or energy efficiency. Less than significant impacts are expected.

The City is consistent with the State planning efforts for energy efficiency. Additionally, the project is consistent with the applicable strategies of the City of Coachella's Climate Action Plan, as well as CARB's Scoping Plan. The project property will comply with all applicable federal, state, and local guidelines and regulations regarding energy efficient building design and standards. Therefore, the proposed project is not anticipated to conflict or obstruct a state or local plan for renewable energy or energy efficiency. The project proposes transient lodging uses and will not have any long-term effects on an energy provider's future energy development or future energy conservation strategies. Less than significant impacts are expected. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Energy Resources, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not result in wasteful, inefficient or unnecessary consumption of energy resources or conflict with a state or local plan for renewable energy or energy efficiency.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. The project is consistent with the applicable strategies of the City of Coachella's Climate Action Plan, as well as CARB's Scoping Plan. The project property will comply with all applicable federal, state, and local guidelines and regulations regarding energy efficient building design and standards. The project specific impacts would be less than significant.

Sources: The City of Coachella 2035 General Plan, 2015; The City of Coachella 2035 General Plan Update EIR, 2015; Technical Background Report to the Safety Element of the General Plan for the City of Coachella, 2014; Geotechnical Investigation, Sladden Engineering, 2024; City of Coachella Municipal Code Chapter 15.66; Sustainable Groundwater Management Act (SGMA) Data Viewer; Federal Emergency Management Agency (FEMA) map number 06065C2262H, effective March 6, 2018; Riverside County General Plan EIR, 2015.

a) i. **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[137] The GPU EIR concluded that the GPU policies related to fault hazards in the Safety Element provides mechanisms for identifying and avoiding threats from fault rupture. Particularly Policy 1.1, which requires new development to be designed in accordance with the most recent California Building Code; Policy 1.2, which requires all new

137 City of Coachella, 2035 GPU Draft EIR, Geology and Soils, at 4.5-21.

habitable buildings and structures to be designed and built to be seismically resistant; and Policy 1.4, which promotes the strengthening of infrastructure and utilities to make them more earthquake resistant.[138]

After consulting the Alquist-Priolo Earthquake Fault Zone Map issued by the State Geologist, it was concluded that the subject property lies approximately 3.8 miles southeast of the closest Alquist-Priolo Earthquake Fault Zone. Therefore, the project site is not located on an active fault or within an Alquist-Priolo Earthquake Fault Zone.

Additionally, Sladden Engineering conducted a project-specific Geotechnical Investigation in July 2024 (Appendix D).[139] The purpose of the Geotechnical Investigation was to determine specific engineering characteristics of the near surface soil on the site to provide recommendations for foundation design and site preparation. The investigation included field exploration, drilling exploratory boreholes, laboratory tests, literature review, performing site-specific ground motion procedures, and engineering analysis. There were no signs of active surface fault rupture or secondary seismic effects on the project property during Sladden Engineering's site assessment. However, the Geotechnical Investigation provided recommendations for site clearing and foundation preparation to reduce the potential impacts of seismic events. These recommendations are consistent with Policy 2.1 and 2.2 in the GPU EIR. Policy 1.2 requires that all development proposals in the City to conduct, as a condition of approval, geotechnical and engineering geological investigations, prepared by state-certified professionals (geotechnical engineers and engineering geologists, as appropriate) following the most recent guidelines of the California Geological Survey and similar organizations, that address, as a minimum, the site-specific geologic hazards identified in the Technical Background Report. This includes the hazard of slope failure in, and adjacent to, hillside areas. Policy 2.2 requires all new developments to mitigate the geologic hazards that have the potential to have an impact on habitable structures and other improvements. The Geotechnical Investigation recommendations include but are not limited to the following:

1. Site Clearing: Any vegetation associated root systems, or underground utilities and debris, should be removed from the proposed building areas, and the resulting excavations should be properly backfilled.

2. Preparation of building and foundation areas: To provide firm and uniform bearing conditions, over-excavation and re-compaction throughout the proposed building areas is recommended. All artificial fill soil and native low density near surface native soil should be removed to a depth of at least 5 feet below existing grade or 4 feet below the bottom of the footings, whichever is deeper. Remedial grading should extend laterally for a maximum of five feet beyond the building limits. The exposed native soil should be scarified, moisture-conditioned to near optimum, and compacted to at least 90% relative compaction before placing new fill. The removed soil can then be replaced as compacted engineered fill.

3. Compaction: Soil used as engineered fill must be free of organic matter, debris, and other unsuitable materials. Fill should be placed in loose lifts no thicker than six inches. If imported fill is needed, it should be low to non-expansive and meet the following criteria: Plasticity Index < 12, Liquid Limit < 35, 15–35% passing the #200 sieve, and a maximum aggregate size of 3 inches. Both the subgrade and fill should be compacted to at least 90% relative compaction using suitable equipment. A Sladden Engineering representative should observe the exposed subgrade before placing fill. Compaction testing must be performed on each lift to verify proper placement.

4. Shrinkage and Subsidence: Volumetric shrinkage of the material that is excavated and replaced as controlled compacted fill should be anticipated. It is estimated that this shrinkage should be between 10 and 20 percent. Subsidence of the surfaces that are scarified and compacted should be between 1 tenth and 3 tenths of a foot. This will vary depending upon the type of equipment used, the moisture content of the soil at the time of grading and the actual degree of compaction attained.

138 City of Coachella, General Plan 2035: Safety Element, at 08-4 (Apr. 22, 2015).
139 Geotechnical Investigation, Sladden Engineering, 2024 (Appendix D).

These recommendations will be incorporated into project design and are subject to development plan approval by the City. These recommendations are consistent with policies in the GPU EIR relating to fault rupture.

In addition to the recommendations provided in the Geotechnical Investigation, the CMC reflects the possible impacts of potential seismic hazards in Chapter 15.66, Seismic Hazards Mitigation. New buildings are required to follow these codes to be structurally stronger and more likely to survive an earthquake, with the main purpose of preventing the collapse of buildings.

With the foregoing, risks associated with fault rupture at the project site are considered low since the project site is not located within the Alquist-Priolo Earthquake Fault Zone and will comply with required building codes, recommendations provided in the Geotechnical Investigation, and the implementation of Policies 1.1, 1.2, 1.4, 2.1 and 2.2. The project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, and impacts would be less than significant. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

ii. **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[140] In order to reduce hazards associated with ground shaking impacts on people and buildings, the City of Coachella requires new buildings to be constructed in accordance with the most recent edition of the California Building Code (CBC) and CMC. The City implements the latest seismic safety design standards outlined in both the General Plan Technical Background Report, and the most recent CBC. Required adherence to the Uniform Building Code (UBC) for this seismic area will reduce the potential for nearly all impacts related to ground shaking for newly constructed buildings to a less than significant level. In particular, Section 15.08.030, Amendments to the California Building Code – Building Code Section 3403.5, includes requirements for new construction in Coachella that are more stringent than the standard CBC. Additionally, Chapter 15.66, Seismic Hazard Mitigation, identifies those buildings in the City that are most susceptible to earthquake damage and requires certain mitigation measures to protect the lives of persons working and residing in Coachella. Several proposed policies to minimize the effects of seismic ground shaking from the Safety Element of the GPU are listed below:[141]

1.3 **Strengthened and seismically retrofitted older structures.** Promote the strengthening of older structures to make them more resistant to seismic shaking. This includes encouraging owners of potentially hazardous buildings, such as pre-1952 wood-frame structures, concrete tilt-ups, pre-1971 reinforced masonry, soft-story, multi-family residential buildings and manufactured homes, to assess the seismic vulnerability of their structures and conduct seismic retrofitting as necessary to improve the buildings' resistance to seismic shaking.

1.5 **Seismically damaged buildings.** Prohibit any additions or reconstruction of structures damaged by seismic hazards, unless the structure is re-located to a safer area, or it can be demonstrated the proposed project and its occupants can be protected from future, recurrent damage by implementing mitigation measures not present in the original, damaged structure.

2.7 **Damaged buildings.** Prohibit any additions or reconstruction of habitable structures destroyed or damaged by geologic hazards unless the structure is relocated to a safer area or the applicant proves that the remedial measures proposed will mitigate the unsafe geological conditions so the proposed project and its occupants can be protected from future, recurrent damage.

The project site is in a seismically active region where earthquakes originating on local and regional seismic faults can produce severe ground shaking. Like most of the Coachella Valley, the project site has been subjected to past ground shaking by nearby faults. According to the project-specific Geotechnical Investigation, activity from nearby active faults is expected to produce strong seismic shaking during the design life of the proposed project. As stated in the previous discussion, the project will be required to implement the recommendations provided in the Geotechnical Investigations that will address the site's main geological concerns, which include

140 City of Coachella, 2035 GPU Draft EIR, Geology and Soils, at 4.5-24.
141 City of Coachella, General Plan 2035: Safety Element, at 08-4, 08-6 (Apr. 22, 2015).

the presence of artificial fill soil, loose and potentially compressible near-surface soil, and the potential for seismic settlement, mitigating the impact of strong seismic ground shaking. The project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking, and impacts would be less than significant. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

iii. **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[142] The General Plan's Technical Background Report addresses the different forms of ground failure that the City of Coachella may be susceptible to after the event of an earthquake, including liquefaction, settlement, and slope failure. Liquefaction, according to the Technical Background Report, typically occurs in saturated, loose, fine- to medium-grained sandy to silty soils in the presence of ground accelerations of 0.2g, and groundwater within 50 feet below the ground surface. In the event of an earthquake, the increase of subsurface water pressure may fill the pores and increase subsurface water pressure, causing the soil to lose strength and behave like a liquid, potentially compromising the ground. The GPU listed the following policies in the Safety Element to address liquefaction:[143]

1.6 **Liquefaction assessment studies.** Require liquefaction assessment studies be conducted for all projects proposed in areas identified as potentially susceptible to liquefaction (Plate 1-3, Technical Background Report). These studies need to be conducted in accordance with the provisions in the Seismic Hazards Mapping Act and the most recent version of the California Geological Survey's Special Publication 117: Guidelines for Evaluating and Mitigating Seismic Hazards in California.

1.7 **Liquefaction mitigation.** In areas where geotechnical testing shows the sediments are susceptible to liquefaction, require the implementation of mitigation measures as a condition of approval. Liquefaction mitigation measures shall be applied to all habitable structures, bridges, roadways, major utility lines and park improvements to be built in these areas.

2.8 **Critical facility siting**. Regulate the location of new essential or critical facilities in areas that could be affected by geologic hazards by comparing, during the project feasibility stage, the location of the proposed facilities with the mapped areas in the Technical Background Report identified as susceptible to natural hazards.

According to the General Plan *Seismic Hazard Zones Map* in the Technical Background Report (Plate 1.3), the project site is in an area with high liquefaction susceptibility due to the youthful, unconsolidated sediments, and historically shallow groundwater within 30 feet of the ground surface.

According to the Sustainable Groundwater Management Act (SGMA) Data Viewer, one of the nearest monitored public wells to the project is identified as State Well 06S07E13J003S, approximately 1.2 miles south of the subject property.[144] Based on the most recent monitoring information, reported on March 11, 2025, the depth to groundwater at this well site was approximately 56.8 feet. During the boring tests for the project-specific Geotechnical Investigation, a groundwater depth of approximately 35 feet below the existing ground surface was found onsite. The native soil throughout the site consists primarily of fine-grained silty sand (SM), sandy silt (ML), and sandy clay (CL). Based on the current depth to groundwater and the generally uniform soil conditions underlying the site, differential seismic settlements are expected to be less than 1 inch over a horizontal distance of approximately 100 feet.

Settlement is a potential consequence of seismic activity and liquefaction, where the excess pore pressure generated by ground shaking and leading to liquefaction is associated with the tendency for loosely compacted, saturated soil to rearrange into a denser configuration during shaking. Dissipation of that excess pore pressure will produce volume decreases (termed consolidation or compaction) within the soil that may be manifested at

142 City of Coachella, 2035 GPU Draft EIR, Geology and Soils, at 4.5-25.
143 City of Coachella, General Plan 2035: Safety Element, at 08-4, 08-6 (Apr. 22, 2015).
144 SGMA Data Viewer, https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#gwlevels.

the ground surface as settlement. Unconsolidated young alluvial deposits are especially susceptible to this hazard. Mitigation measures for seismically induced settlement and liquefaction are similar, according to the GPU Technical Background Report. The measures generally fall into one of two categories: (1) ground improvement and (2) foundation design. Recommended methods of ground improvement involve over-excavation and re-compaction of low-density soils, removal of excess groundwater, and densification of soils.

In addition to the Technical Background Report, the project-specific Geotechnical Investigation recommends the stripping of vegetation, root systems, and debris, over-excavation and re-compaction, and compaction. The recommendations provided in the Geotechnical Investigation are consistent with Policy 2.1 and 2.2 in the GPU EIR. With the implementation of Policy 2.1 and 2.2, impacts from seismically induced liquefaction, settlement, and ground failure on the project would be less than significant. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

iv. **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant[145]. The project site and much of the surrounding lands are predominantly urbanized and level. A majority of the City has a 0 to 10 percent grade, including the project site. Areas with a 10 percent grade or greater involves the areas along the San Andreas Fault east of the project site. There are no natural slopes or other geologic conditions that would render the area susceptible to unstable slopes and landslides. According to Plate 1-3, *Seismic Hazard Zones*, in the Technical Background Report of the GPU, the project site is not located in an area that is susceptible to seismically induced rockfalls, rockslides, soil falls, soil slides, or soil slumps. Therefore, impacts are less than significant. The project is found to be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[146] The proposed project site is located in the western portion of the City of Coachella, on land that was previously utilized for agricultural purposes. The majority of the City has a grade of 0 to 10 percent, meaning that Coachella is relatively flat. The Technical Report in the City of Coachella's General Plan claims lake and distal fan as being a substantial deposit of the City, including the project site (Plate 2-1a, b, *Geologic Map* and *Explanation for Geologic Map*). This consists of predominantly fine-grained sand, silt, and clay. According to the project-specific Geotechnical Investigation, native soil throughout the site consists primarily of fine-grained silty sand (SM), sandy silt (ML) and clay (CL). Silty sand was the most prominent soil within the exploratory bores, but sandy silt and sandy clay were also encountered. The various soil components are vital to the stability of the project site specifically regarding landslides, lateral spreading, subsidence, liquefaction, or collapse.

As described above, relatively uniform grained sand and silty sand layers were encountered at the project site. When paired with the presence of groundwater at 35 feet below ground surface (bgs) at the site, the soils make the project site potentially susceptible to liquefaction during seismic shaking at its current state. Liquefaction is the process in which loose, saturated granular soil loses strength as a result of cyclic loading. The strength loss is a result of a decrease in granular sand volume and a positive increase in pore pressures. Generally, liquefaction can occur if all of the following conditions apply: liquefaction-susceptible soil, groundwater within a depth of 50 feet or less, and strong seismic shaking.

Since the site is potentially susceptible to liquefaction without mitigation, it could also be susceptible to settlement and lateral spreading, which also requires a shallow water table or proximity to a water source that could cause inundation of onsite soils. As stated in the project-specific Geotechnical Investigation, the main geotechnical concerns are the presence of artificial fill soil, the presence of loose and potentially compressible near-surface native soil throughout the project site and the potential seismic settlements.

As described in the GPU EIR, settlement or collapsible soils typically occur in recently deposited sediments

145 City of Coachella, 2035 GPU Draft EIR, Geology and Soils, at 4.5-27.
146 *Id.*, at 4.5-28.

that accumulated in arid or semi-arid environments.[147] Collapsible soils do not appear to be widespread in the planning area, but most likely do occur in localized areas, especially in those with distal fan and lake deposits. The project-specific Geotechnical Investigation determined that settlement resulting from the anticipated foundation loads should be minimal provided that the recommendations included in their Geotechnical Investigation are considered in foundation design and construction to reduce impacts to less than significant. In addition, site clearing, the preparation of building and foundation areas, soil compaction, and shrinkage and subsidence tests, as recommended in the project-specific recommendations in the Geotechnical Investigation ensure that impacts from liquefaction and lateral spreading are less than significant. The site is not susceptible to landslides due to its relatively flat terrain and distance from mountainous slopes, and although tectonic subsidence has been documented in the Coachella Valley, it is not known to occur in the project vicinity. Therefore, no impact would occur to the project site relating to landslides.

The project would not result in on- or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse, and impacts would be less than significant. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impact.** The GPU EIR states that new development would need to meet California's Building Standard Codes in order to obtain permits for construction, as well as comply with maintenance codes enforced through code enforcement. Adherence to these regulations and standards will ensure that people or structures are not impacted by expansive soils. Additionally, prior to approval of development projects, geotechnical investigation reports are required for projects to determine if the development site is subject to expansive soils and other geological hazards. Therefore, the GPU EIR concluded this impact to be less than significant.[148]

Sladden Engineering composed a project-specific Geotechnical Investigation in July 2024. The purpose of the Geotechnical Investigation was to determine specific engineering characteristics of the near surface soil on the site to provide recommendations for foundation design and site preparation. The investigation included field exploration, drilling exploratory boreholes, laboratory tests, literature review, performing site-specific ground motion procedures, and engineering analysis. According to the 2024 Geotechnical Investigation, the native soil throughout the site consists primarily of silty sand (SM), sandy silt (ML) and sandy clay (CL). Silty sand and sandy silt were the most prominent soils discovered during bore testing. Sandy clay was also encountered during the bore test. Laboratory testing conducted by Sladden Engineering indicated that the materials underlying the site are considered to have a "very low" expansion potential, in accordance with the UBC Standard 18-2. The expansion potential of the subsurface soil should be reevaluated after grading.

Risks of structural damage caused by expansive soils at the project site are anticipated to be less than significant with the implementation of GPU EIR Policy 2.1 and 2.2. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[149] The loss and erosion of topsoil is addressed through the implementation of City regulations and requirements for development within the Planning Area, including CMC Chapters 8.20 (Fugitive Dust Control) and 13.16 (Water Quality Control), discussed below. Only projects in compliance with existing regulations would be granted development permits. No mitigation measures are required.

Windborne erosion is a widespread concern in Riverside County, especially in the Coachella Valley. Approximately 20 percent of land area in the County is vulnerable to "high" and "very high" wind erosion. The Coachella Valley floor, including the subject property, is highly susceptible to wind erosion due to the high

147 *Id.*, at 4.5-16.
148 Id., at 4.5-29.
149 *Id.*, at 4.5-30.

winds funneled from the west.[150] Windborne erosion not only causes physical and structural damage but also damages public health by causing respiratory problems. The proposed project will require activities such as clearing onsite vegetation, construction, and other ground disturbances by heavy machinery that could result in the loss of some topsoil and generate particulate matter. The City of Coachella requires mitigation of this hazard with the implementation of a Fugitive Dust Control Plan (CMC Chapter 8.20, Fugitive Dust Control). The Fugitive Dust Control Plan is a document that describes fugitive dust sources at a site and the corresponding control measures. Pursuant to SCAQMD Rules 403 and 403.1, the project is required to implement the Fugitive Dust Control Plan and the use of best management practices (BMPs) during operations capable of generating fugitive dust in the Coachella Valley.

In addition to windborne erosion, a majority of the City, including the project site, is susceptible to water erosion due to the distal fan and lake deposits. According to FEMA map number 06065C2262H, effective March 6, 2018, the entire project is located within the FEMA Flood Zone X, which are areas determined to have moderate to low flood risk. Flood Zone X corresponds to areas of 500-year flood, areas of 100-year flood with average depths of less than one foot or with drainage areas less than one square mile, and areas protected by levees from 100-year flood. Approximately 2.9 miles east of the project property is the Coachella Valley Stormwater Channel, which FEMA designates as Flood Zone A. This flood zone is defined as an area subject to inundation by the 1-percent-annual-chance flood event and likely to create erosion within the zone.

The mitigation of waterborne erosion at the project site during construction activities includes the developer's compliance with the State's most current Construction General Permit (CGP) (Order No. 2022-0057-DWQ). Compliance with the CGP involves the development and implementation of a project-specific Stormwater Pollution Prevention Plan (SWPPP) designed to reduce potential adverse impacts to surface water quality during the period of construction.[151] The required plan will identify the locations and types of construction activities requiring BMPs and other necessary compliance measures to prevent soil erosion and stormwater runoff pollution. The plan will also identify the limits of allowable construction-related disturbance to prevent any exceedances or violations. Waterborne erosion and the City's Standard Conditions associated with it are thoroughly discussed in the Hydrology and Water Quality Section of this document.

The project would not result in substantial soil erosion or the loss of topsoil, and impacts would be less than significant. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

e) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[152] The project does not propose the use of septic tanks or alternative wastewater disposal systems. Therefore, no impact would occur. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Geology and Soils, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed geological and soil hazards with appropriate policies and recommendations.

150 Riverside County 2016 General Plan Safety Element, at S-38, (revised June 25, 2024), https://planning.rctlma.org/sites/g/files/aldnop416/files/2024-07/Safety%20Element.pdf?archive-consent=true.
151 The SWPPP is also enforced in Chapter 13.16, Water Quality Control, of the CMC.
152 City of Coachella, 2035 GPU Draft EIR, Geology and Soils, at 4.5-32.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. The recommendations of the Geotechnical Investigation by Sladden Engineering are consistent with the findings and assumptions of the Program EIR.

4. No mitigation measures are required within the GPU EIR for geological or soil resources. Compliance with General Plan Policies 2.1 and 2.2 ensures that potential impacts to geological and soil resources would remain less than significant.

a) **Less than Significant with Mitigation**.

The GPU EIR determined that GPU implementation would result in emission increases representing significant impacts, but such impacts would be mitigated under full adoption and implementation of State, GPU, and CAP measures and strategies. The GPU EIR further concluded that although existing State, federal, and local policies would reduce emissions sufficiently to meet the SCAQMD 2020 service population threshold, implementation of the GPU would introduce new GHG emission sources.[153] Even with these additions, the combined effect of GPU policies and broader State and federal reduction programs would keep 2020 emissions below the SCAQMD threshold of 6.6 $MTCO_2e$ per service population. However, emissions would still exceed the City's more stringent 2035 target of 4.2 $MTCO_2e$ per service population. Modeling prepared for the City's Climate Action Plan reached similar conclusions, showing that while State programs and GPU policies would achieve substantial reductions, additional measures would be required to meet the 2035 efficiency target.

The CAP evaluated reductions achievable through State programs, GPU policies, and additional CAP-recommended measures. State policies incorporated into the CAP, such as the Renewable Energy Portfolio Standard, Title 24, the Low Carbon Fuel Standard, and the Pavley Clean Cars standards, were estimated to reduce emissions by approximately 211,740 MT CO_2E in 2020 and 407,924 MT CO_2E in 2035.[154] GPU policies across the Land Use, Mobility, Sustainability and Natural Environment, Safety, and Infrastructure and Public Services Elements were estimated to provide an additional 126,306 MT CO_2E reduction in 2020 and 231,707 MT CO_2E in 2035.[155]

In total, combined federal, State, and GPU-level reductions would lower Citywide emissions by approximately 338,046 MT CO_2E in 2020, resulting in a per-service-population value of 6.2 MT CO_2E, below the SCAQMD

153 City of Coachella, General Plan 2035: Safety Element, at 08-4, 08-6 (Apr. 22, 2015).
154 City of Coachella, GPU Draft EIR: Greenhouse Gases, at 4.12-13.
155 City of Coachella, CAP, at 41 (Apr. 22, 2015).

threshold.[156] By 2035, these combined measures would reduce emissions by approximately 639,630 MT CO_2E, resulting in 5.4 MT CO_2E per service population, which would still exceed the City's 2035 target.[157]

The CAP also evaluated more aggressive implementation programs and additional measures not included in the GPU. Full implementation of these strategies could achieve approximately 838,494 MT CO_2E in reductions by 2035, meeting the 4.2 MT CO_2E target.[158] However, because the CAP had not yet been adopted, there was no assurance these measures would be implemented. As a result, the GPU EIR found that impacts would be significant but mitigable. Mitigation requires implementation of the Additional CAP Measures identified in Table 18 of the CAP, or other equally effective strategies, to achieve 4.2 MT CO_2E per service population or less by 2035.

To address the long-term adverse impacts associated with global climate change, California has established a regulatory framework that continues to guide statewide GHG reduction efforts and inform CEQA analysis. California's regulatory framework continues to serve as the foundation for addressing the long-term adverse impacts associated with global climate change. The Global Warming Solutions Act of 2006 (AB 32) requires CARB to reduce statewide greenhouse gas emissions to 1990 levels by 2020, establishing the basis for the State's climate policy and informing the development of localized Climate Action Plans, including the City's CAP. Senate Bill 32 (SB 32), signed in 2016, strengthened this framework by requiring statewide emissions to be reduced to 40 percent below 1990 levels by 2030, ensuring that the State's regulatory structure remains central to guiding ongoing and future GHG reduction efforts.

California's annual statewide GHG emission inventory is a relevant tool for tracking California's progress in reducing GHGs and achieving the statewide GHG target. The GHG inventory relies on data collected through various California Global Warming Solutions Act (AB 32) programs. Based on the most recent *California Greenhouse Gas Emissions from 2000 to 2023, Trends of Emissions and Other Indicators*, released on November 4, 2025, statewide GHG emissions in 2023 totaled 360.4 $MMTCO_2e$, a reduction of 11.2 $MMTCO_2e$, 3.0 percent, from 2022 and the lowest level recorded across the 2000 to 2023 inventory period.[159] The data indicates that California continues its long-term downward emissions trend, driven by notable reductions across major transportation, industrial, and electricity sectors.

The City of Coachella developed their CAP in 2014 and adopted it on April 22, 2015 in order to achieve community-wide GHG emissions reductions.[160] The CAP quantifies emissions from the build-out of the City and includes additional policies and implementation actions to help Coachella further reduce emissions. The CAP analyzes policies from the GPU that reduce energy use, VMT, resource consumption, and GHG emissions, comparing the emissions to voluntary statewide emissions targets outlined in the California Climate Action Scoping Plan and Executive Order S-03-05. In compliance with the statewide emission targets, the City established a per service population 2020 emissions reduction target of 15 percent below 2010 levels and a 2035 emissions reduction target of 49 percent below 2010 levels. The CAP has also established a 2035 target of 4.2 MTCO2e per service population.[161]

To achieve the targets, CAP organizes the General Plan polices into six strategies to reduce emissions reductions throughout the City: building and infrastructure energy efficiency, renewable energy generation, land use and transportation, vegetation and open space, solid waste, and water use.[162] According to the CAP, residential and non-residential buildings produce approximately 39 percent of Coachella's emissions and are a primary target for the CAP.[163] The City plans to achieve this reduction through energy efficiency policies for homes, and

businesses including energy performance targets to construct buildings 15 percent more energy efficient than Title 24 standards.

The *COVA Greenhouse Gas Analysis* (GHGA) was completed in November of 2025 to evaluate project-related construction and operational emissions and determine the level of GHG impacts as a result of constructing and operating the project.[164] The GHGA relied on the most current version of the California Emissions Estimator Model™ (CalEEMod) Version 2022, which is the adopted software from the California Air Pollution Control Officers Association (CAPCOA) to quantify construction emissions and operational GHG emissions from land development projects. The GHGA modeled GHG emissions from the proposed project land uses and dimensions consisting of 409 units: 165 two-story SFR and 244 condo hotel units.[165] The development factors also included a crystal lagoon and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas, and kids play spaces.

SCAQMD defines the SP as the total residents and employees associated with a project. The origin of the SP is based on CARB's 2008 Scoping Plan.[166] The 2008 Scoping Plan identified that based on the GHG emissions inventories for the state, the people of California generate approximately 14 tons of GHG emissions per capita and would need to reduce annual emissions to approximately 10 tons per capita in order to meet the GHG reduction target of AB 32.[167] Because people who live in California generally work in California, the SP metric did not include employees. As CEQA significance thresholds were being determined by air districts, the air districts considered applying this efficiency metric to their air district boundaries. Consistent with methodology provided by the Regional Targets Advisory Committee (RTAC) as part of the Senate Bill No. 375 – Sustainable Communities and Climate Protection Act of 2008. target setting discussions, the definition of SP was amended to include employees in addition to residents. This is because the transportation sector is the primary source of project-related GHG emissions; unlike the state as a whole, people who work in one county/air district may not live in the same county/air district boundary. Also, people who live in a county/air district boundary would also have other trip ends such as school, parks, and retail uses. As such, the air district/county boundary as a whole did not take into account other users within the site.

Relevant to the proposed project, the SCAQMD Tier 4 Option 3 was to utilize an efficiency target. SCAQMD has proposed targets for project-level and plan-level analysis. At the September 2010 working group meeting, the SCAQMD recommended a project-level efficiency target of 4.8 $MTCO_2e$/SP as a target. [168]

The calculations behind this option are based on the same inventory calculated by CARB. The 4.8 MT/SP target is based on the same statewide 2020 GHG inventory in the CARB Scoping Plan, i.e., 295,530,000 $MTCO_2e$/yr. To derive the project level SP of 4.8 metric ton, SCAQMD took the 2020 statewide GHG reduction target for land use only (295,530,000 $MTCO_2e$/yr) and divided it by the total 2020 statewide population plus the total statewide employment for land use only (44,135,923 + 17,064,489) (i.e., (295,530,000 $MTCO_2e$/yr)/(44,135,923 + 17,064,489) = 4.8 $MTCO_2e$/yr). Thus, SCAQMD's threshold is another metric for assessing compliance with AB 32, just based on using numbers attributable to certain sectors and trying to break down the analysis to a finer grain based on a per person methodology associated with land use-related sectors.

This approach is a widely accepted screening threshold used by numerous cities in the basin and is based on the SCAQMD staff's proposed GHG screening threshold for stationary source emissions for non-industrial projects, as described in the SCAQMD's Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans.[169] The SCAQMD's Interim CEQA GHG Significance Threshold for Stationary Sources,

164 Greenhouse Gas Analysis, Urban Crossroads, Inc. November 2025 (Appendix E).
165 Note: The GHG analysis was prepared using an earlier project description with 409 units. The currently proposed Project includes 402 units, representing a reduction in development intensity relative to the analyzed scenario.
166 California Air Resources Board, Climate Change Scoping Plan – A Framework for Change (Dec. 2008).
167 *Id*., at ES-1.
168 South Coast Air Quality Management District (SCAQMD), *Draft Guidance Document: Interim CEQA Greenhouse Gas (GHG) Significance Threshold* (October 2008), available at https://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf.
169 Ibid.

Rules and Plans identifies a screening threshold to determine whether additional analysis is required. As noted by the SCAQMD:

> *"…the…screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects...the policy objective of [SCAQMD's] recommended interim GHG significance threshold proposal is to achieve an emission capture rate of 90 percent of all new or modified stationary source projects. A GHG significance threshold based on a 90 percent emission capture rate may be more appropriate to address the long-term adverse impacts associated with global climate change because most projects will be required to implement GHG reduction measures. Further, a 90 percent emission capture rate sets the emission threshold low enough to capture a substantial fraction of future stationary source projects that will be constructed to accommodate future statewide population and economic growth, while setting the emission threshold high enough to exclude small projects that will in aggregate contribute a relatively small fraction of the cumulative statewide GHG emissions. This assertion is based on the fact that [SCAQMD] staff estimates that these GHG emissions would account for slightly less than one percent of future 2050 statewide GHG emissions target (85 [MMTCO2e/yr]). In addition, these small projects may be subject to future applicable GHG control regulations that would further reduce their overall future contribution to the statewide GHG inventory. Finally, these small sources are already subject to [Best Available Control Technology] (BACT) for criteria pollutants and are more likely to be single-permit facilities, so they are more likely to have few opportunities readily available to reduce GHG emissions from other parts of their facility."* [170]

Although the SCAQMD's draft significance criteria have not been adopted, the City has determined that the SCAQMD's project-level efficiency threshold methodology can be used to set an appropriate significance criterion by which to determine whether the project emits a significant amount of GHG. To determine a project-level GHG efficiency threshold for the project's Opening Year of 2030, a linear interpolation was used between the known targets of 2020 and 2045.

CARB's 2022 Scoping Plan establishes a goal of reducing statewide GHG emissions by 85% below 1990 levels by 2045.[171] Applying this 85% reduction to the previously established 2020 threshold of 4.8 $MTCO_2e$/SP, the resulting efficiency target for 2045 is 0.72 $MTCO_2e$/yr. A linear interpolation was applied between the established targets for 2020 and 2045 to calculate a project-level GHG efficiency threshold for the project's Opening Year of 2030, yielding a threshold of 3.17 $MTCO_2e$/SP. According to the population generation of the COVA Transportation Analysis Report , buildout of the project has the potential to generate a future population of approximately 2,380 people, including approximately 330 employees for commercial uses and 2,050 residents for residential uses. The threshold of 3.17 $MTCO_2e$/SP is more conservative than the City's target of 4.2 $MTCO_2e$/SP. 172

The GHGA applied the SCAQMD's efficiency-based methodology to establish a project-level GHG threshold for the 2030 opening year, using linear interpolation between the established 2020 and 2045 statewide reduction targets. This approach yielded a significance threshold of 3.17 $MTCO_2e$ per service population (SP). The project's unmitigated emissions were estimated at 3.27 $MTCO_2e$/SP, which would exceed the threshold and result in a potentially significant impact. To evaluate consistency with the City of Coachella General Plan 2035 (GPU), City of Coachella Climate Action Plan (CAP), and applicable State requirements, the GHGA incorporated GHG-1 through GHG-8 into the emissions analysis. These actions are project-level implementation measures derived from adopted GPU policies, CAP measures, and applicable regulatory standards. As summarized in Table Table VIII – 1, each action is tied to a specific GPU policy, CAP measure, or regulatory requirement and could be incorporated into the project as conditions of approval to ensure implementation during construction and operation. The subsequent discussion summarizes the relationship between GHG-1 through GHG-8 and the applicable GPU policies, CAP measures, and regulatory standards supporting their inclusion in the GHGA. With implementation of GHG-1 through GHG-8, project emissions

170 *Id*., at 3-2 – 3-3.
171 CARB, 2022 Scoping Plan for Achieving Carbon Neutrality (Dec. 15, 2022), at 1.

would be reduced to approximately 2.81 $MTCO_2e$/SP, which is below the applicable significance threshold of 3.17 $MTCO_2e$/SP.

Table VIII – 1 Project Consistency with City of Coachella GPU Policies, CAP Measures, and Regulatory Standards

City of Coachella GPU Policies	City of Coachella CAP Measure / Regulatory Standard	Project Measure
SNE Policy 2.6 (Energy Performance Targets - New Construction); SNE Policy 2.7 (Energy Performance Targets - Existing Buildings)	Energy Efficiency and Renewable Energy Strategies; Title 24/CALGreen	**GHG-1** Building Electrification
SNE Policy 2.3 (Alternative Energy); SNE Policy 2.6 (Energy Performance Targets - New Construction); SNE Policy 2.7 (Energy Performance Targets - Existing Buildings); SNE Policy 2.12 (Solar Access)	Solar Energy Development Standard; Climate-Ready Development Standard requiring onsite solar PV. For nonresidential and multifamily residential buildings constructed between 2020 and 2035, provide 50% of project electricity demand via onsite solar photovoltaics.	**GHG-2** On-Site Solar PV (50% Demand)
SNE Policy 3.1 (Conservation Performance Targets - New Construction)	Water Conservation Performance Targets	**GHG-3** Indoor Water Conservation
SNE Policy 3.7 (Landscape Design); SNE Policy 13.14 (Sustainable Landscaping)	Landscape Water Reduction Strategy	**GHG-4** Water-Efficient Landscaping
IPS Policy 5.3 (Solid Waste Diversion and Recycling); IPS Policy 5.4 (Zero Waste); IPS Policy 5.9 (Greener Waste Management Practices); IPS Policy 5.15 (On-Site Collection and Storage of Recyclables)	Solid Waste Reduction and Recycling Measures	**GHG-5** Waste Diversion Program
No specific GPU policy identified; measure primarily implements CAP and State regulatory requirements.	Construction Emissions Reduction Development Standard; CARB Off-Road Diesel Vehicle Regulation (5-minute idling limit)	**GHG-6** Construction Equipment Idling Restrictions
SNE Policy 2.3 (Alternative Energy); SNE Policy 2.11 (Building and Facility Energy Efficiency Upgrades)	Construction Emissions Reduction Development Standard encouraging electric or hybrid-electric construction equipment and alternative fuels.	**GHG-7** Electric Construction Equipment and Temporary Electrical Service
Mobility Policy 5.1 (Transit Improvements); Mobility Policy 5.4 (Transit-Accessible Development); Mobility Policy 5.6 (Commute Survey); Mobility Policy 5.7 (Safe Routes to Transit)	Transportation Demand Management Development Standard for nonresidential projects with 20 or more employees.	**GHG-8** Transportation Demand Management Program
Notes: GPU = City of Coachella General Plan 2035; CAP = City of Coachella Climate Action Plan; SNE = Sustainability and Natural Environment Element; IPS = Infrastructure and Public Services Element; CARB = California Air Resources Board. Policy references correspond to the applicable goals and policies contained in the City of Coachella General Plan 2035.		

GHG-1 through GHG-8 would implement existing greenhouse gas reduction strategies contained in the City of Coachella General Plan 2035 (GPU), the City of Coachella Climate Action Plan (CAP), and applicable State regulations.

GHG-1 and GHG-2 would implement GPU energy policies related to alternative energy, energy performance targets, and solar access, as well as CAP strategies promoting building electrification, renewable energy generation, and onsite solar photovoltaic systems. GHG-3 and GHG-4 would implement GPU and CAP water conservation strategies through high-efficiency fixtures, reduced potable water demand, drought-tolerant landscaping, and efficient irrigation practices. GHG-5 would implement GPU and CAP solid waste reduction objectives through diversion, recycling, composting, and waste minimization practices. GHG-6 and GHG-7 would implement the CAP's Construction Emissions Reduction Development Standard and applicable State requirements by reducing fuel consumption and emissions from construction equipment through idling restrictions, temporary electrical service connections, and increased use of electric-powered equipment. GHG-8 would implement the CAP Transportation Demand Management Development Standard and support GPU Mobility Element policies that promote transit use, transit-accessible development, vanpooling, ridesharing, and reductions in single-occupant vehicle trips.

Collectively, GHG-1 through GHG-8 would be consistent with, and in several instances would exceed, the performance standards and reduction strategies identified in the City of Coachella CAP. Because these actions would be tied to adopted GPU policies, CAP measures, and applicable regulatory requirements, they could be incorporated into the project as conditions of approval and implemented during construction and operation. Implementation of these actions would help reduce project-generated greenhouse gas emissions and support consistency with the City's greenhouse gas reduction goals and strategies.

The project's unmitigated emissions of 3.27 $MTCO_2e$/SP would be substantially lower than the Citywide 2035 emissions level modeled in the CAP of 5.4 $MTCO_2e$/SP and would also be below the City's more aggressive 2035 efficiency target of 4.2 $MTCO_2e$/SP. As discussed above, implementation of GHG-1 through GHG-8 would further reduce project emissions to approximately 2.81 $MTCO_2e$/SP, which is approximately 48 percent lower than the modeled 2035 CAP emissions level and approximately 33 percent lower than the City's 2035 efficiency target. These reductions demonstrate that the project would be consistent with the GPU and CAP greenhouse gas reduction framework and would perform substantially better than the emissions levels anticipated under the City's long-term planning documents. Accordingly, the project would not result in a new or more severe greenhouse gas impact than those evaluated in the GPU Program EIR. Consistent with CEQA Guidelines Section 15183, implementation of GHG-1 through GHG-8 would ensure consistency with the applicable GPU policies, CAP measures, and regulatory requirements, and no new information of substantial importance has been identified that would require additional environmental review beyond that contained in the GPU Program EIR.

b) **Less than Significant Impacts:** The GPU EIR determined that the policies, programs, measures, and actions of the GPU were consistent with CARB's Scoping Plan, which served as the statewide strategy for achieving the goals of AB 32.173 This impact was therefore considered less than significant. Implementation of the GPU was determined to result in GHG emissions associated with construction and operational activities. However, in order for the City of Coachella and the State of California to meet their GHG reduction goals, both the efficiency of construction practices and the manner in which new and modified development operated were required to become more GHG efficient. Implementation of GPU policies and programs, together with the CAP, would affect the major GHG-producing sectors in the City, helping the City progress toward its reduction targets and maintain consistency with the Scoping Plan, SCAG RTP, and SCS. Therefore, the proposed project would be consistent with applicable GHG reduction plans. The GPU's consistency with the SCAG Sustainable Communities Strategy was discussed in Chapter 4.9, Circulation.

In addition to being consistent with the policies and goals of the adopted RTP and SCS, the proposed GPU would also be consistent with the RTP and SCS goal to achieve reductions in per capita GHG emissions of 8 percent by 2020 and 13 percent by 2035. Based on the GHG emission estimates in the CAP, implementation of the GPU, in combination with State initiatives, would reduce annual GHG emissions from 8.2 MT CO_2E per service population in 2010 to 6.2 MT CO_2E per service population in 2020 and 5.4 MT CO_2E per service population in 2035. These values represented reductions of approximately 25 percent and 34 percent by 2020

173 City of Coachella, GPU Draft EIR, Greenhouse Gases, at 4.12-16.

and 2035, respectively. While per service population and per capita metrics are not identical, the reductions demonstrated that the GPU would be generally consistent with the GHG reduction goals in the adopted RTP and SCS.

The GPU was developed to reduce GHG emissions consistent with AB 32 reduction goals. The GPU would implement numerous policies that reduce emissions from transportation, energy, water, and solid waste sources. Implementation of these policies supported CARB's Scoping Plan goals to achieve reductions from land use and development-related sources and to promote more GHG-efficient growth without constraining population or economic expansion. The GPU policies would reduce emissions across all sectors identified in the Climate Change Scoping Plan and would not preclude or obstruct its implementation. Therefore, the policies, programs, measures, and actions of the GPU were consistent with CARB's Scoping Plan, which served as the statewide strategy for achieving the goals of AB 32. This impact was therefore considered less than significant. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

Conclusion:

With regards to the issue area of Greenhouse Gas Emissions, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The Project's greenhouse gas emissions were evaluated using a project-specific Greenhouse Gas Analysis and the SCAQMD efficiency-based service population methodology. The analysis determined that unmitigated emissions would be 3.27 $MTCO_2e$ per service population (SP), and implementation of GHG-1 through GHG-8 would reduce emissions to approximately 2.81 $MTCO_2e$/SP, which is below the applicable significance threshold of 3.17 $MTCO_2e$/SP.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR evaluated the cumulative nature of greenhouse gas emissions, consistency with State greenhouse gas reduction goals, implementation of the City of Coachella Climate Action Plan (CAP), and the effectiveness of General Plan policies designed to reduce emissions from transportation, energy consumption, water use, and solid waste generation. The Program EIR concluded that implementation of CAP measures and General Plan policies would substantially reduce greenhouse gas emissions associated with future development accommodated under the General Plan.
3. No substantial new information has been identified which results in an impact more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. Since certification of the Program EIR, California has continued to implement and expand greenhouse gas reduction programs through implementation of AB 32, SB 32, updated Climate Change Scoping Plans, renewable energy requirements, building efficiency standards, and transportation-related emissions reduction programs. The project-specific Greenhouse Gas Analysis demonstrates that the Project would be consistent with the assumptions, goals, and reduction strategies incorporated into the City of Coachella CAP and would not result in greenhouse gas impacts more severe than those evaluated in the Program EIR.
4. The GPU EIR determined that greenhouse gas impacts would be significant but mitigable through implementation of General Plan policies, Climate Action Plan measures, and other equally effective greenhouse gas reduction strategies. Consistent with the GPU EIR, GHG-1 through GHG-8 implement applicable City of Coachella General Plan 2035 policies, City of Coachella CAP measures, and State regulatory requirements related to energy efficiency, renewable energy generation, water conservation, waste reduction, transportation demand management, and construction emissions reductions. These measures can be incorporated into the Project as conditions of approval and would ensure that Project emissions remain below the applicable significance threshold and consistent with the City's greenhouse gas

reduction framework. Accordingly, greenhouse gas impacts would remain less than significant.

9. HAZARDS AND HAZARDOUS MATERIALS – Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☐	☒
f) For a project near a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☐	☒

a/b) **Less than Significant Impact.** The development of the Planning Area would include industrial and commercial land uses that could indirectly contribute to the temporary or continuous transportation of hazardous materials;

however, the GPU EIR concluded this impact to be less than significant with the implementation of existing regulations and policies regarding the transport of hazardous materials through the Planning Area.[174] The regulations and policies would reduce future potential risk and environmental impacts to a minimum by requiring safe transport, ongoing vehicle inspections, state licensing of transporters and effective response to spills. Per the GPU EIR, the GPU provides policies and guidelines to help steer the vision for development over the coming decades. The most likely occurrence of an impact occurring through the release of hazardous materials would occur on industrial land in the City. Additionally, there is an extensive framework of state and federal laws regulating the safe use, storage, disposal, and cleanup of hazardous waste.[175] No mitigation measures are required.

The project proposes the development of a mixed-use community with single family residences, condo hotels, suites, water amenities, and additional amenities including restaurants and bars, health and wellness, sports and recreational facilities. The project site is currently occupied by agricultural uses. The proposed project is not expected to involve the use of any hazardous materials with the operation of the residential community.

The Code of Federal Regulations defines hazardous materials based on ignitability, reactivity, corrosivity, and/or toxic properties.[176] The State of California defines hazardous materials as substances that are toxic, ignitable, or flammable, reactive and/or corrosive, which have the capacity of causing harm or a health hazard during normal exposure or an accidental release.[177] As a result, the use and management of hazardous or potentially hazardous substances is regulated under existing state, federal and local laws. Hazardous waste requires special handling and disposal methods to reduce their potential to damage public health and the environment. Manufacturer's specifications also dictate the proper use, handling, and disposal methods for the specific substances.

Project construction would involve the use of heavy equipment that has a potential for fuel and oil spills due to the usage of fuel, oil, lubricants, and other potentially flammable substances. The contractor will be required to identify a staging area for storing these materials, as well as other practices to prevent any hazardous discharge or release into the environment, in their Storm Water Pollution Prevention Plan (SWPPP). The SWPPP requires a list of pollutant sources and the identification of construction areas where additional control measures are necessary to prevent pollutants from being discharged. BMPs are necessary for proper material delivery and storage, material use, and spill prevention and control. The measures will outline the required physical improvements and procedures to prevent impacts of pollutants and hazardous materials to workers and the environment during construction. For example, all construction materials including paints, solvents, and petroleum products must be stored in controlled areas and according to the manufacturer's specifications. Additionally, perimeter controls (fencing with wind screen), linear sediment barriers (gravel bags, fiber rolls, or silt fencing), and access restrictions (gates) would help prevent temporary impact to the public and environment; therefore, less than significant impacts during the construction of the project site are expected.

Operation of the project includes residential units, a commercial component, and water features, including a 9.4-acre Hotel Lagoon, 0.4-acre Beach Club Lagoon, and 2.5-acre lake. Development of the project, including the Lagoon and lake, will not result in export of soils, as the site will be balanced. The nature of these uses is not expected to involve, as a primary activity, the routine transport, use, or disposal of hazardous materials in quantities or in a manner that would pose a threat to the project and its surroundings by creating a significant hazard through foreseeable accident conditions involving the release of hazardous materials into the environment. The regular operation of the proposed project would not result in the use of hazardous materials in amounts that exceed what is typically required for resort, commercial, and residential uses. The handling, application, and storage of cleaning agents, building maintenance products, paints, solvents, and other related substances used to carry out the necessary operations in each facility is expected to occur within the project in

174 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-9.
175 *Id.*, at 4.6-11.
176 CFR Title 40, Part 261.
177 Cal. Code Regs. tit. 8, § 5161.

a manner typical of similar projects throughout the City. Additionally, these materials would not be present in sufficient quantities to pose a significant hazard to public health and safety or the environment.

The California Department of Public Health is authorized to establish standards for public swimming facilities. According to Section 65529, Public Pool Disinfection, of Title 22 of the CCR, it is required that public pools, when open or in use, be disinfected continuously by a chemical that imparts a disinfectant consistent with minimum and maximum concentrations, also determined in Section 65529. If halogens other than chlorine are used, residuals of equivalent strength shall be maintained. Records of the routine maintenance and repairs are also required per the CCR. Additionally, the pool operator shall maintain a test kit for measuring the disinfectant residual, pH and, if used, cyanuric acid concentration in the public pool. The public water features shall be required to adhere to all applicable standards and regulations within the CCR, the California Building Code, and the California Electrical Code regarding public swimming pools. The enforcing agency that would evaluate the plans prior to construction would be the Riverside County Department of Environmental Health.

The no contact recreational lake will also be required to implement the measures required by the Riverside County Department of Environmental Health.

Residential and resort uses, by nature, do not typically result in the use of hazardous materials in large quantities. The project proposes resort uses and recreational uses. The resort uses will consist of condo hotel units, suites, restaurants, bars, and fitness and spa areas. The recreational use will consist of a kids' area and sports courts. The regular operation of the proposed project will involve the handling, application, and storage of cleaning agents, building maintenance products, paints, solvents, and other related substances commonly used with residential and resort maintenance. However, these materials are not typically stored in quantities that could be harmful to the public or environment. The materials required for the maintenance of landscaped areas (i.e., fertilizers, pesticides, etc.), the water features, and the proposed buildings will be stored onsite and regulated by State and local law, including Fire Department regulations requiring proper storage and inspection. These regulations, including those imposed by both the County of Riverside and the Fire Department, are designed to lower impacts to less than significant levels. Compliance with these procedures will ensure that the use, transport, and disposal of hazardous materials would not impact the public or environment or result in the accidental release of hazardous materials.

The handling, application and storage of cleaning agents, building maintenance products, paints, solvents, and other related substances is expected to occur within the project in order to carry out the necessary operations for the residential, community, and recreational uses. However, these materials would not be present in sufficient quantities that pose a significant hazard to public health and safety, or the environment. Less than significant impacts are anticipated. The project would handle all hazardous materials in accordance with all applicable federal, state, and local regulations. As noted previously, residential and resort communities do not typically store, use, or handle hazardous materials in large quantities. Therefore, accidental conditions involving the release of hazardous materials are unlikely. The project is required to follow industry regulations related to use and storage of maintenance-related chemicals. Less than significant impacts are expected to result from project implementation.

As previously stated, the GPU EIR determined impacts from transport, use, and disposal of hazardous materials and accidental release of hazardous materials to be less than significant.[178] As the project would have a less than significant impact for the reasons listed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[179] The GPU lists policies that protect school properties from the release of emissions. Policy 5.3 prohibits the placement of proposed new facilities that will be involved in the production, use, storage, transport or disposal of hazardous

178 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-9.
179 *Id.*, at 4.6-11.

materials near existing land uses or new sensitive facilities (like schools, child-care centers, nursing homes, senior housing, etc.) that may be adversely affected by such activities. Policy 6.14 avoids locating new sensitive uses such as schools, child-care centers, multifamily housing and senior housing in proximity to sources of pollution (e.g., I-10, truck routes, busy roadways and agricultural land where pesticides and chemical fertilizers are used regularly) and vice versa.[180] Based upon existing regulations and policies in the GPU, the GPU EIR concluded that environmental impacts on schools from hazardous emissions would result in no significant impacts.

The closest school to the project site is Coral Mountain Academy, located approximately 0.26 miles north of the project. As previously discussed, the project proposes the development of a residential and resort community with recreational amenities. During the construction of the project, the contractor will be required to identify a staging area for storing materials, as well as other practices to prevent any hazardous discharge or release into the environment, in their SWPPP. The SWPPP requires a list of pollutant sources and the identification of construction areas where additional control measures are necessary to prevent pollutants from being discharged. BMPs are necessary for proper material delivery and storage, material use, and spill prevention and control. The measures will outline the required physical improvements and procedures to prevent impacts of pollutants and hazardous materials to workers and the environment during construction. For example, all construction materials (including paints, solvents, and petroleum products) must be stored in controlled areas and according to the manufacturer's specifications. Additionally, perimeter controls (fencing with wind screen), linear sediment barriers (gravel bags, fiber rolls, or silt fencing), and access restrictions (gates) would help prevent temporary impact to the public and environment. These standard operational procedures and protocols, as well as the BMPs, will minimize any potential public exposure to hazardous materials. The nature of the project during operation would not involve the use or handling of hazardous substances in qualities or conditions. Therefore, hazardous material-related impacts to schools are expected to be less than significant.

As previously discussed, the GPU EIR determined impacts to school sites would be less than significant. As the project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[181] At the time the GPU EIR was written, there was one registered site containing hazardous materials pursuant to Government Code Section 65962.5. This site was located approximately 1.40 northeast of the project site, at 1577 First Street, and stored pesticides and fertilizers. Due to the distance of the registered site from the proposed project, no impacts are expected. The GPU also established policies to prevent negative environmental impacts of hazardous materials sites. These include policies that enforce disclosure laws that require facilities to identify the hazardous materials and wastes utilized on a site (Policy 5.1) and the effective response from fire and sheriff departments (Policy 5.2); prohibit the placement of facilities that use, store or transport hazardous materials or waste near sensitive uses (Policy 5.3); and provide continued support of programs and recycling centers that accept hazardous substances (i.e., paint, paint thinner, used waste oil, etc.).

As previously discussed, the project site proposes the development of a mixed-use community on approximately 87 acres west of Van Buren Street, south of Avenue 52, and east of Calhoun Street in Coachella. Previous land uses include agricultural operations, primarily date palm groves and grape vineyards.

Record searches on the project property were performed within multiple database platforms, pursuant to Government Code 65962.5 and its subsections. The resources consulted included GeoTracker, EnviroStor and the EPA Enforcement and Compliance History Online (ECHO).

180 "Where such uses are located in proximity to sources of air pollution, use building design, construction and technology techniques to mitigate the negative effects of air pollution on indoor air quality. For guidance consult with the South Coast Air Quality Management District, CARB's Air Quality and Land Use Handbook, or other more recent scientific studies or tools." City of Coachella, General Plan 2035: Safety Element, at 8-11 (Apr. 22, 2015).
181 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-12.

GeoTracker is a database maintained by the State of California Water Resources Control Board that provides online access to environmental data.[182] It serves as the management system for tracking regulatory data on sites that can potentially impact groundwater, particularly those requiring groundwater cleanup, and permitted facilities, such as operating underground storage tanks and land disposal sites.

EnviroStor is a database maintained by the State of California Department of Toxic Substances Control (DTSC).[183] The EnviroStor database identifies sites with known contamination or sites for which there may be reasons to investigate further. It includes the identification of formerly contaminated properties that have been released for reuse; properties where environmental deed restrictions have been recorded to prevent inappropriate land uses; and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Moreover, the ECHO database focuses on inspection, violation, and enforcement data for the Clean Air Act (CAA), Clean Water Act (CWA), and Resource Conservation and Recovery Act (RCRA) and also includes Safe Drinking Water Act (SDWA) and Toxics Release Inventory (TRI) data.[184]

In May 2025, a search was performed on all three database platforms. The three consulted databases did not list any facilities related to the project site. Two of the three databases, however, recorded sites within a half-mile radius of the project property. The results are described below:

The GeoTracker database search results showed that there are no Underground Storage Tank (UST) and Leaking Underground Storage Tanks (LUST) Cleanup Sites associated with the project or within a half-mile radius of the project property.

The EnviroStor database revealed one facility within a half-mile radius of the project property. The site is registered as a school investigation site for the proposed, West Coachella Elementary School located at Van Buren Street and Avenue 52, north of the project site. As of July 2002, no further action was recommended for the site. Therefore, this site is not expected to impact the project.

The Enforcement and Compliance History Online (ECHO) database did not reveal a facility within the project site or within a half-mile radius of the project.

In addition to the online database searches, a Phase I Environmental Site Assessment (ESA) and Phase II ESA[185] were completed for the project site to determine whether Recognized Environmental Concerns (REC) were identified onsite. In 2008, Moore Twinning completed a Phase I and II ESA to assess potential environmental persistent chemicals (OCPs and arsenic).[186] The results of the 2008 studies revealed detectable concentrations of dichlorodiphenyldichloroethylene (DDE) and dichlorodiphenyltrichloroethane (DDT) in the near surface and attenuated with depth to two deep bgs. However, the environmental concerns associated with these were low and below regulatory threshold.

In June 2024, Sladden Engineering completed a Phase I ESA[187] for the project site, which identified the presence of DDE, DDT and other hydrocarbons due to the previous and ongoing onsite farming/agricultural use along with the findings of the previous environmental reports. Due to these findings, Sladden Engineering

182 California State Water Resources Control Board, *About GeoTracker* ("GeoTracker is the State Board's Internet-accessible database system used … to track and archive compliance data …") (last updated Aug. 10, 2023), https://www.waterboards.ca.gov/ust/electronic_submittal/about.html.

recommended that a Phase II shallow soil sampling laboratory testing program be performed.

In November 2024, Kimley-Horn prepared a Phase II ESA[188] to determine the absence/presence of hazardous materials in concentrations of concern by completing soil sampling and testing throughout the site. Kimley-Horn completed soil sampling throughout the site in July 2024, which consisted of 64 discrete soil samples within the 50-acre date grove, 36 discrete soil samples within the 26-acre grape vineyard, and 3 soil samples near the residential structure onsite, for a total of 103 discrete soil samples. Field observations did not discover staining or odors in the samples that would indicate the presence of contaminants. The laboratory results did not identify exceedances of pesticides or arsenic in the agricultural areas, or exceedances of pesticides, arsenic or TPH in the soil near the residential structure. One exceedance of 4,4-DDE was detected in a residential sample adjacent to the water well and fertilizer storage area in the July 2024 sampling event, and one exceedance of Dieldrin was detected in residential sample near the former residence. Therefore, additional samples were collected in September 2024, which determined DDE was below the residential screening level, and Dieldrin exceeded exceedance levels.

The Phase II ESA concluded that the laboratory analytical results do not indicate evidence for significant release(s) associated with the historical agricultural operations conducted at the project site based on the REC identified within the Phase I ESA. Traces of the pesticides: chlordane, endosulfan I and II, endrin, heptachlorepoxide, methoxychlor, and toxaphene, and Total Petroleum Hydrocarbons (TPH) were also discovered. The detected levels of pesticides are below the California Regional Water Quality Control Board Environmental Screening Levels (ESL) for residential soil and for the protection of soil and groundwater and would not likely trigger actions if reported to a regulatory agency. Arsenic was detected at concentrations that exceed the ESLs for residential soil; however, the concentrations of arsenic reported in the soil samples collected during this investigation are below the typical Southern California background level of 11 mg/kg per DTSC, Human and Ecological Risk Office (HERO). Areas around the former residential structure indicate exceedances above the residential screening level for 4,4-DDE and Dieldrin. As the property's intent is for a resort development, these de minimis areas should be isolated or removed prior to mass grading. If the property is planned for commercial development versus residential, the detections of 4,4-DDE is below the 8.27 mg/kg screening level and dieldrin is below the 1.6 mg/kg screening level. The location of the former residential structure, where the exceedances were found, would be developed into the proposed Hotel Lagoon and resort cottages.

The GPU includes policies that address soil contamination and require investigation and remediation prior to development. Specifically, Policy 6.10 (Agriculture Soil Quality), which requires testing of land previously used for agricultural purposes and mandates that, if contaminants are present, soils shall be treated and re-tested or, if necessary, removed; and Policy 6.11 (Soil Quality), which also requires soil testing on sites with potential chemical exposure and implementation of a remediation strategy or reduce or eliminate contamination.[189] Consistent with these policies, and applicable federal and state regulations, contaminated soils identified on the project site would be remediated, including removal and disposal of the contaminated soil, per DTSC regulations, prior to grading activities. Therefore, the proposed project would not result in a new or more severe hazardous materials impact than those analyzed in the GPU EIR. Moreover, impacts related to hazardous materials would be addressed through compliance with the GPU policies.

As previously discussed, the GPU EIR determined impacts from existing hazardous material sites to be less than significant. Per the GPU EIR, all future development would be required to comply with applicable federal and state laws and local regulations pertaining to hazardous materials, including but not limited to Title 22 of the CCR, the California Building Code, the California Electrical Code, the Riverside County Department of Environmental Health, and CEQA. As the proposed project would have a less than significant impact for the reasons discussed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

188 Phase II Environmental Site Assessment, Kimly Horn (Appendix F.2).
189 City of Coachella, General Plan 2035: Safety Element, at 08-10 (Apr. 22, 2015).

e/f) **Less than Significant Impact.** The GPU EIR concluded that impacts related to private airstrips or public airports would be less than significant.[190] No mitigation measures are necessary. The southern portion of the Planning Area is within proximity of the Jacqueline Cochran Regional Airport. Properties within two miles will comply with GPU policies to reduce potential hazards from airports, including requiring the conformance of the airport land use and safety plans (Policy 10.4); coordinating with airport authorities and the City to meet the region's aviation needs (Policy 10.5); and review from the Airport Land Use Commission (Policy 10.6).[191]

The Jacqueline Cochran Regional Airport is located approximately 2.8 miles southeast of the project site and is not located within the boundaries of the airport's land use compatibility plan. The project site is also not located in the vicinity of a private airstrip. The project will not result in safety hazards or excessive noise for people living or working in the area. No impacts are expected.

As previously discussed, the GPU EIR determined impacts to public and private airports will not be significant. As the proposed project would have no impact due to its distance from a private airstrip or public airport, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

g) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant.[192] No mitigation measures are required. According to the GPU EIR, development proposed under the GPU would need to comply with existing emergency response plans, as to not interfere with carefully planned evacuation routes or regulations. The GPU Safety Element presents policies to prevent interference with plans, including a commitment for the City to update the Local Hazard Mitigation Plan (Policy 8.1), emergency response (Policy 8.2), disaster response plans (Policy 3.7), fire response (Policy 4.4), medical response (Policy 8.4), emergency exercises (Policy 8.6), as well as providing emergency response training, community training programs, and local preparedness plans (Policies 8.14, 8.15 and 8.17).[193]

The City of Coachella's Technical Background Report to the Safety Element Update analyzes various safety hazards within the City.[194] These potential hazards include seismic hazards, geologic hazards, fire hazards, hazardous materials management, and severe weather hazards. The preparation, response, and recovery of these hazards are outlined within Chapter 7 of the Technical Background Report. According to Chapter 7, the City of Coachella is a participant member of the Riverside County Operational Area Multi-Jurisdictional Hazard Mitigation Plan (HMP), approved by FEMA in 2005, and ongoing updates to the document.

The Coachella Fire Department Station is the closest fire station to the project site, located approximately 1.7 driving miles northeast of the project site at 1377 6th Street. The closest police station to the project site is the Indio Police Department, at 46800 Jackson Street, and is 3.5 driving miles northwest of the project site. Thermal Sheriff Station at 86625 Airport Boulevard is approximately 5 driving miles southeast of the project property. The Police Department typically serves as the lead organization in carrying out evacuations, supported by the Fire Department as appropriate. The Public Works Department typically assists in the identification of the best evacuation routes and in barricading the evacuated areas.

As depicted in Plate 7-2, *Potential Emergency Shelters and Evacuation Routes*, in the Technical Background Report, Avenue 52, immediately north of the project, is the closest City designated evacuation route to the project.

The project lies within the City's Regional Retail District and is surrounded by existing agricultural and residential properties. Implementation of the proposed project would not significantly modify the existing

190 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-14.
191 City of Coachella, General Plan 2035: Community Character, at 04-96 (Apr. 22, 2015).
192 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-15.
193 City of Coachella, General Plan 2035: Safety, at 08-7 – 08-8, 08-12 – 08-14 (Apr. 22, 2015).
194 *See* City of Coachella, Document Central, https://www.coachella.org/services/document-central/-folder-165.

circulation pattern in the area or adversely impact emergency evacuation procedures as the site is currently bordered by established paved improvements. The proposed project is consistent with the GPU land use and zoning designations. The City's Circulation system was planned to accommodate buildout conditions, and roadway classifications identified in the GPU are intended to address projected traffic volumes.[195]

The proposed parking and circulation plans will be reviewed by the Fire and Police Departments to assure that the project's ingress/egress driveways and roads are adequate for accommodating emergency vehicles. A Traffic Control Plan may be required as a condition of approval to be implemented throughout all construction activities. This plan will work to reduce potential impacts that may arise due to conflicts with construction traffic. If required, the plan would be submitted to the Fire Department for review prior to development in order to assure that the project does not interfere with emergency access during development. Less than significant impacts are anticipated.

As the project would have a less than significant impact for the reasons discussed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

h) **Less than Significant Impacts.** The GPU EIR concluded the impact of wildfires to be less than significant.[196] No mitigation measures are required. According to the GPU, new developments, whether they are new urban or new agricultural uses, would be required to maintain a protective buffer, such as landscape setbacks, hedgerows, windrows, or canopy trees, that ensures urban and agriculture uses land use conflicts do not occur (Policy 5.8). Additionally, vegetation control methods are required to reduce the hazard of wildland fire (Policy 4.1), and to ensure that fire services such as firefighting equipment and personnel, infrastructure and response times, are adequate for all sections of the City. To that end, continue to regularly evaluate specific fire hazard areas, and adopt reasonable safety standards, such as adequacy of nearby water supplies, fire-retardant roofing materials, fire-equipment accessible routes, clarity of addresses, street signage and street maintenance (Policy 4.4).

The areas of Southern California are susceptible to wildfires all year round due to the region's weather, topography, and vegetation conditions. The Coachella Valley's hot dry summer and autumn weather is ideal to generate the dry vegetation that fuels most wildfires. The California Board of Forestry (CDF) ranks fire hazard of wildland areas of the State using four main criteria: fuels, weather, assets at risk, and level of service. The project site is located on relatively flat topography. The project site and its surroundings are located outside of the Very High Fire Hazard Severity Zone (FHSZ) for Local Responsibility Area and outside of the Very High/High/Moderate FHSZ for State and Federal Responsibility Areas.[197] The project will include the on-site fire protection facilities necessary to satisfy the local Fire Department requirements. The project will also include streets that accommodate fire equipment, with appropriate turnaround radiuses, consistent with Policy 4.4 of the GPU. Additionally, the project will include block walls, perimeter landscaping that is routinely maintained, and setbacks compliant with GPU Policies 5.8 and 4.1. No impacts related to wildland fire are expected.

As the project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Hazards and Hazardous Materials, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not result in the use,

195 City of Coachella General Plan Update: Mobility Element, at 5-1 and 5-7.
196 City of Coachella, GPU Draft EIR: Hazardous Materials, at 4.6-18.
197 Cal Fire Fire Hazard Severity Zone Map (2025) https://experience.arcgis.com/experience/5065c998b4b0462f9ec3c6c226c610a9.

storage or transport of hazardous materials, or the release of hazardous materials. Moreover, the project would not impact a local school, airport, evacuation/emergency response plan, hazardous materials site, or lands vulnerable to wildfires.

2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR. The EIR adequately addressed the potential for hazardous material release or use, and impact within the planning area.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR. The database searches and findings within the Phase I and II ESAs are consistent with the findings and assumptions in the GPU EIR.

4. No mitigation measures are required within the GPU EIR. Compliance with the GPU Policies 5.8, 4.1, 4.4, 6.10, and 6.11 and regulations established by the California Department of Public Health, Riverside County Department of Environmental Health, California Building Code, and Electrical Code, and Construction General Permit (SWPPP) ensures that potential impacts to hazards and hazardous materials would remain less than significant.

10. HYDROLOGY AND WATER QUALITY -- Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:					
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☐	☒
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	☐	☐	☒
iii) create or contribute runoff water which would exceed the capacity of existing or planned storm-water drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☐	☒
iv) impede or redirect flood flows?	☐	☐	☐	☐	☒

Sources: Flood Insurance Rate Map, FEMA map number 06065C2262H, effective March 6, 2018; 2035 Coachella General Plan, 2015, City of Coachella; Water Quality Control Plan for the Colorado River Basin Region, January 2019; 2020 Coachella Valley Regional Urban Water Management Plan, June 2021)

a) **Less than Significant Impacts**. The GPU EIR determined that impacts would be less than significant.198 The EIR found that implementation of the GPU would not violate applicable water quality standards or waste discharge requirements. Federal, state, and local regulations, including the Clean Water Act, the Porter-Cologne Water Quality Control Act, Regional Water Quality Control Plans, and the Safe Drinking Water Act, establish a comprehensive framework that governs pollutant discharges, protects surface and groundwater quality, and requires compliance as a condition of development approval. As the GPU Planning Area grows, all new development projects would continue to be subject to these requirements that prohibit activities that could degrade water quality or impair beneficial uses. The GPU included supporting policies that reinforce

198 City of Coachella, GPU Draft EIR, Water Quality and Hydrology, 4.7-17.

compliance with existing regulations by limiting pollutant discharges and ensuring that water quality in local waterways meets applicable state and federal standards. Because future development must demonstrate compliance during permitting and ongoing operations, and because violations would trigger corrective actions or cessation of activities, implementation of the GPU would not result in significant impacts related to water quality standards or waste discharge requirements.

General Plan Policies Supporting the Protection of Water Quality and Compliance with State and Federal Standards

Sustainability and Natural Environment Element

Goal 3. Water Resources. Protected and readily available water resources for community and environmental use.

Policy 3.4 - Low Impact Development: Require the use of low-impact development strategies to minimize urban run-off, increase site infiltration, manage stormwater and recharge groundwater supplies.

Policy 3.8 - Groundwater Infiltration: Encourage the use of above-ground and natural stormwater facilities in new development and redevelopment, such as grassy or vegetated swales, permeable paving and rain gardens.

Goal 7. Waterways. Waterways and desert washes that serve a natural, environmental function and provide aesthetically pleasing open space for the community.

Policy 7.1 - Pollution Prevention: Limit the amount and concentration of pollutants released into the City's waterways.

Policy 7.2 - Development Impacts: When considering development applications, require consideration of onsite detainment of stormwater runoff and require the incorporation of appropriate stormwater treatment and control measures, in accordance with the most recent NPDES permit requirements.

Policy 7.3 - Soil Erosion: Require the prevention of water-born soil erosion from sites, especially those undergoing grading and mining activities.

Policy 7.4 - Water Quality: Ensure water quality in the City's waterways meets applicable state and federal standards.

Infrastructure and Public Services Element

Goal 2. Water Supply Facilities. Water supply facilities that meet future growth within the city and assure a high-quality and reliable supply of water to current and future residents.

Policy 2.9 - Water Supply Source Protection: Protect local groundwater resources from localized and regional contamination sources such as septic tanks, underground storage tanks, industrial businesses and urban runoff.

Goal 4. Stormwater Capacity. Sufficient stormwater drainage facilities and services that are environmentally sensitive, accommodate growth and protect residents and property.

Policy 4.5 - New Development: Require the preparation of drainage studies that evaluate adherence to City stormwater design requirements and incorporate measures to prevent on- or off-site flooding with all new development applications."

Policy 4.6 - Stormwater Pollution Prevention: "Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Summary of Regulatory Framework Relevant to Hydrology and Water Quality:

Hydrology refers to the occurrence, distribution, and movement of surface water, including water found in rivers and stormwater drainage systems. Stormwater particularly refers to the surface runoff and drainage resulting from rain events. Stormwater runoff and surface drainage patterns are determined by the soil conditions, topography, and associated gradients of the land. Surface water quality refers to selected physical, chemical, or biological characteristics found in stormwater in relation to existing standards. Groundwater is the

water found underground in the voids in soil, sand, and rock. It is stored in and moves slowly through aquifers. Groundwater supplies are naturally replenished, or recharged, by precipitation that seeps into the land's surface and by replenishment efforts made by local water agencies.

The Clean Water Act (CWA) of 1972 was enacted to restore and maintain the chemical, physical, and biological integrity of the nation's waters by regulating the discharge of pollutants to waters of the U.S. from point sources. The National Pollutant Discharge Elimination System (NPDES) was enacted as a program under the CWA to regulate non-point source discharges from urban land runoff and other diffused sources that were also found to contribute to runoff pollution. Under CWA, the EPA delegated the NPDES program responsibility to various state, tribal, and territorial governments, enabling them to perform many of the permitting, administrative, and enforcement aspects of the program. California is a delegated NPDES state and has authority to administer the NPDES program within its limits.

The Porter-Cologne Water Quality Control Act is the principal law governing water quality regulation for surface waters in California, thus effectuating the delegated provisions of the federal CWA and its NPDES program.[199] It has set forth a comprehensive program to protect water quality and the beneficial uses applicable to surface waters, wetlands, and groundwater and to point and nonpoint sources of pollution. The Porter-Cologne Act establishes that, as a matter of policy, all the waters of the State shall be protected; all activities and factors affecting the quality of water shall be regulated to attain the highest water quality within reason; and the state must be prepared to exercise its full power and jurisdiction to protect the quality of water in the state from degradation. The Porter-Cologne Act established the State Water Resources Control Board (SWRCB) and nine California Regional Water Quality Control Boards (RWQCBs), including Region 7, Colorado River Basin Regional Water Quality Control Board, which has jurisdiction in the City of Coachella and project site.

Under this framework, the Colorado River Basin Water Quality Control Plan (Basin Plan) serves as the guiding document prepared, adopted, and maintained to identify the existing and potential beneficial uses of waters of the State and establish water quality objectives to protect these uses. It is worth noting that as defined in Section 13374 of the California Water Code (CWC), the term "Waste Discharge Requirements" (WDRs) is equivalent of the term "permits" and is therefore attained through a regulatory compliance process. Compliance with WDRs is achieved through the appropriate permit registration process under the applicable NPDES program described in this section.

At the regional level, the project is located within the Whitewater River Watershed, which is an arid desert region encompassing approximately 1,645 square miles. Within this watershed, an area of approximately 367 square miles (22 percent), encompassing most of the existing development in the Coachella Valley region, is regulated under the established Whitewater River Region Municipal Separate Storm Sewer System Permit (MS4 Permit). The Riverside County Flood Control and Water Conservation District (RCFC&WCD), Coachella Valley Water District, and the incorporated Coachella Valley cities, including Coachella, have joint permittee responsibility for coordinating the regional MS4 Permit compliance programs and other activities aimed at reducing potential pollutants in urban runoff from land development construction, municipal, commercial, and industrial areas to the maximum extent possible. These public entities are generally in charge of stormwater management within their jurisdiction.

At the City level, Chapter 13.16 (Water Quality Control) of the CMC serves as the local stormwater management standard, aligning with the MS4, NPDES, and CWA programs.

Existing Drainage Conditions:

The project site consists of relatively level terrain that is actively maintained to support and irrigate agricultural fields planted with date palm orchards and grapevines. According to the USDA Natural Resources Conservation Series, Web Soil Survey, the on-site mapped soil series include Gilman fine sandy loam, Indio fine sandy loam,

199 California Water Code §§ 13000 *et seq*.

Indio very fine sandy loam (It), and Coachella fine sand. The majority of these soils are classified under Hydrologic Soil Group B, which is characterized by moderate runoff potential and moderate infiltration rates. The property's street frontage lacks public or private stormwater infrastructure, such as curbs, gutters, or drainage conveyance lines.

Summary of Regional Groundwater Resource Management:

The project site is located within the domestic water service area of Coachella Water Authority (CWA), the primary domestic water purveyor for the City of Coachella which relies on groundwater as the primary supply.

The Coachella Valley Groundwater Basin is the primary groundwater source for the project region's domestic water purveyors, including CWA. Based on the California Department of Water Resources (DWR), the Coachella Valley Groundwater Basin has an approximate storage capacity of 39.2 million acre-feet (AF) of water within the upper 1,000 feet and is divided into four subbasins: Indio, Mission Creek, Desert Hot Springs, and San Gorgonio.[200] The project site is specifically underlain by the Indio Subbasin, which is also known as the Whitewater River Subbasin. DWR has estimated that the Indio Subbasin contains approximately 29.8 million AF of water in the first 1,000 feet below the ground surface, representing approximately 76 percent of the total groundwater in the Coachella Valley Groundwater Basin.[201] Local groundwater management is currently taking place under the framework of the 2020 Coachella Valley Regional Urban Water Management Plan (2020 RUWMP), the preparation of which involved the collaboration of the six urban water suppliers in the Coachella Valley, including CWA.[202] The 2020 RUWMP describes the region's water supplies and anticipated demands through 2045, along with each agency's programs to encourage efficient water use.

Indio Subbasin is served by the operation and maintenance of three replenishment facilities: 1) the Whitewater River Groundwater Replenishment Facility, 2) the Thomas E. Levy Groundwater Replenishment Facility, and 3) the Palm Desert Groundwater Replenishment Facility.[203] Artificial replenishment, or recharge, is recognized by the water districts as one of the most effective methods available for preserving local groundwater supplies, reversing aquifer overdraft and meeting demand by domestic consumers.[204] According to the CVWD, the primary operator of these facilities, local agencies have percolated over 650 billion gallons of water back into the aquifer.[205] Combined with water conservation and efficiency requirements, individual development projects can contribute to groundwater sustainability by implementing the required stormwater retention and retention facilities.

The collaboration among CWA, CVWD, and other local water districts has resulted in an established water conservation, water reuse, and groundwater recharge strategy to ensure water availability and system capacity to meet the growing needs of the City. These planning efforts include: residential and commercial landscape and irrigation upgrade rebates, water audits, water conservation kits, budget-tiered rate structure, water conservation workshops, and a Memorandum of Understanding to help ensure a sufficient and reliable water supply for development projects within the City and in its SOI.

80237.00027\45491467.1

In the City of Coachella, engineering requirements related to storm drain design, stormwater management, and water quality are primarily established through the City's Engineering Design Manual, Standard Plans, and Standard Specifications, which govern grading, drainage infrastructure, and construction practices. These local requirements operate in conjunction with the City's Municipal Code Chapter 13.16 (Water Quality Control) and Chapter 15.56 (Floodplain Management), which mandate compliance with water quality protection measures, pollutant control practices, adequate drainage, and stormwater discharge regulations. Together, these City-adopted standards form the foundational regulatory framework for evaluating drainage and water quality considerations, supplemented by regional MS4 level criteria that guide hydrology methods, storm drain sizing, and stormwater facility design. Therefore, subsequent references to the City's engineering requirements pertain to ensuring adequate sizing and related design measures that must be incorporated into improvement plans, which are subject to review and approval by the City of Coachella.

Proposed Project

Project implementation will comply with the applicable CWA, NPDES, state, and local regulations designed to prevent violations or impacts to surface water quality standards and waste discharge requirements pertinent to surface or groundwater quality. This form of compliance must be demonstrated to the City and other regulatory entities prior to site disturbance and grading.

During the period of construction, the project proponent must comply with the State's most current NPDES Construction General Permit (2022 CGP), which requires the preparation of a Notice of Intent (NOI) and a project-specific SWPPP, designed to prevent potential adverse impacts to surface water quality, including erosion and siltation, during the period of construction. The NOI and SWPPP are submitted to the SWRCB for approval and permit coverage. The SWPPP is a site-specific compliance plan required to identify a strategy of storm water BMPs in accordance with Section XIV (SWPPP Requirements) of the 2022 CGP. Storm water BMPs refer to a schedule of activities, prohibitions, practices, maintenance procedures, and other management practices to avoid, eliminate, or reduce the pollution of the receiving waters, primarily focused on preventing erosion, siltation, illicit discharge, and contamination. The SWPPP will include such measures as erosion control, sediment control, storm drain inlet protection, proper waste management and pollution prevention. The SWPPP must be prepared concurrently with final engineering design and must meet all NPDES plan review elements for acceptance by the City of Coachella. Compliance and plan implementation during construction will be regulated and enforced as part of the local agency site inspection protocols.

In order to obtain a grading permit, the project proponent is also required to submit and obtain approval for a Project-Specific Water Quality Management Plan (WQMP) in accordance with the current standards of the *Whitewater River Region Water Quality Management Plan for Urban Runoff*, the *Whitewater River Watershed MS4 Permit*, and the City of Coachella's engineering requirements. The WQMP is a compliance plan required to account for the stormwater facilities and management conditions to be followed by the site operator during the life of the project (post-construction). A Preliminary WQMP and Hydrology Report have been prepared for this project in order to meet the City's engineering approval requirements. Based on preliminary engineering, grading and hydrology design, the project site is represented by a single drainage management area (tributary area) covering the entire project site. Stormwater runoff volume resulting from the worst-case 100-year storm event will be conveyed southerly along stabilized surface and piped flows to designated retention facilities, where the stormwater runoff volume will be contained. The proposed method of stormwater retention will involve designated irrigation ponds or basins with available freeboard that has been sized to contain the full stormwater volume generated across the project site. This conclusion is supported by the post-construction runoff calculations in the Preliminary Hydrology Report and the demonstrated volumetric capacity of the proposed retention basins, which together show that the provided storage is sufficient to accommodate the calculated runoff volume. All storm drain and retention facilities will be privately constructed and maintained as part of the project scope. Storm drain inlets connected to this retention facility may be equipped with screening methods to filter out potential trash, organic debris, and other solids. The storm drain outlets may also be configured to allow for adequate screening prior to discharge into the private retention facilities. The provided retention volumetric capacity will comply with the local development requirements for retention and,

in doing so, will also adequately retain the smaller stormwater volume for water quality purposes, as defined by Section 2.3 (Implementation of WQMP Requirements) of the Whitewater River Region WQMP Guidance. As a result, project runoff will be completely contained within the project proponent's facilities and will not result in discharge capable of resulting in downstream hydrologic modifications or a contribution of urban runoff pollutants that would affect surface water quality. As a standard requirement per the City of Coachella's Engineering Requirements, all elements of the WQMP implementation, including maintenance, must be documented during the life of the project. Maintenance implementation will be required based on a standard WQMP Agreement to be executed prior to issuance of a grading permit. The project's engineering plans, hydrology report, and WQMP will be subject to City review and approval to validate MS4 compliance.

In summary, during construction and operation, project implementation will require plan- and permit-based compliance with CWA, NPDES, and local regulations to prevent impacts to water quality standards and the beneficial uses assigned to local receiving waters. Following City engineering review and approval, the stormwater capture and management strategy for on- and off-site runoff will avoid waste discharge violations through the implementation of properly sized retention facilities. Less than significant impacts are expected.

This assessment is consistent with the GPU EIR's finding that future development would be required to demonstrate compliance during permitting and ongoing operations as required by federal, state, and local regulations. Therefore, the project would be consistent with the analysis within the GPU EIR and it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact.** The GPU EIR determined that this impact associated with this threshold would be less than significant. The EIR found that groundwater in the Planning Area had been subject to long-term overdraft because more water was extracted from the Whitewater River Basin than was naturally replenished. This deficit contributed to declining groundwater levels, reduced surface water, land subsidence, degraded water quality, and the potential for saltwater intrusion, all of which could have resulted in significant and irreversible environmental impacts. Historical data evaluated during the GPU EIR preparation showed a steady decrease in basin storage, and projected population growth would have increased demand on the groundwater supply.

Regional planning efforts, including the Coachella Valley Urban Water Management Plan (2010), identified strategies such as groundwater recharge, water conservation, recycled water use, and expanded reliance on Colorado River and State Water Project supplies to stabilize long-term water availability. Goal 3 and Policies 3.1 through 3.10 of the GPU Sustainability and Natural Environment Element included policies promoting greywater use, groundwater recharge, and water-efficient development. Because projected water demands represented a small proportion of the basin's overall capacity and recharge programs were expected to offset future use, the EIR concluded that groundwater supply impacts under the GPU would be less than significant.

The established groundwater replenishment facilities previously described for the Indio Subbasin are not located on or near the project. Therefore, from the aspect of land use and location, project implementation is not deemed to be in conflict with any existing or planned groundwater recharge facility or associated infrastructure.

A project-specific Water Supply Assessment (WSA) has been prepared for the COVA project to evaluate the project's anticipated water demand. The assessment considered the proposed land uses and associated landscaping. This WSA was prepared in compliance with the requirements under SB 610 and SB 1262 by MSA Consulting Inc. in consultation with CWA and the City of Coachella, although pending a formal approval, the WSA is undergoing the last stages of agency review. . The project is anticipated to utilize the CWA Domestic System to provide water to the residential, commercial, amenity, and public Beach Club Lagoon portions of the site. CVWD Canal Water will be utilized for the irrigation and stormwater lake, and subsequently, the open space irrigation. A new well would be constructed to supply the proposed Hotel Lagoon at a location to be determined during final site design. The well would be sited, permitted, and installed in accordance with County of Riverside Department of Environmental Health requirements. Following selection of the well location, a

Registered Well Driller would prepare and submit the required permit application to the County for review and approval. Compliance with the County's well permitting and approval process would ensure that potential impacts to groundwater quantity and quality remain less than significant. The WSA analysis concluded that sufficient water supplies exist, or will exist based on current water planning assumptions, to meet the projected demands of the project, in addition to current and future projected water demands within CWA's service area in normal, single-dry, and multiple-dry years over a 20-year projection. This WSA will be reviewed every five years, or in the event that the water planning assumptions have changed, until the project begins construction to ensure it remains accurate and no significant changes to either the project or available water supply has occurred. The combination of water sources proposed to serve the project is not anticipated to result in a substantial depletion of groundwater supplies or significantly interfere with groundwater recharge in a manner that would hinder the sustainable management of the basin.

Moreover, proposed project aligns with the local and regional groundwater recharge strategies by implementing on-site retention and low impact development improvements as part of the site design. Project's stormwater management design includes a system of on-site retention facilities designed to collect and retain storm water runoff resulting from the controlling 100-year event, in accordance with the City's engineering standards. As such, the entire volume of stormwater runoff generated on-site up to the 100-year event will be contained on-site, contributing to groundwater recharge. As a function of the WQMP, operation of the development will include the required non-structural and structural pollution source control measures that work toward the protection of groundwater quality during the life of the project and under the project owner's responsibility. Non-structural source control measures consist of site operations, activities, and/or programs to be finalized in the WQMP and implemented by the project operator to educate site managers, employees, and users to prevent potential pollutants from being produced, coming into contact with the storm drain system. Structural source control measures consist of physical facility design standards to prevent direct contact between potential pollutants and stormwater runoff. The storm drain and retention system will be privately operated and maintained during the life of the project per a required WQMP agreement to be entered between the project proponent and the City. The proposed facilities are therefore not expected to violate or interfere with the groundwater quality. Regarding groundwater quality, less than significant impacts are anticipated.

Therefore, the project would be consistent with the analysis within the GPU EIR and it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

c) i) **Less than Significant Impacts**. The GPU EIR determined that impacts associated with this threshold would be less than significant.[206] The EIR found that altering existing drainage patterns under the GPU had the potential to redirect historic water flows into areas not capable of handling increased runoff, which could have resulted in erosion, over saturated soils, land loss, and changes to stream stability. Such erosion related impacts could have permanently affected ground surfaces, stream channels, and associated ecosystems. Although no intentional relocation of waterways was planned, portions of the Whitewater River were partially channelized and could have been affected by runoff or soil disturbance from adjacent development. Construction activities and localized changes in drainage also had the potential to increase erosion and negatively affect fish, wildlife, structures, and nearby populations.

However, the EIR determined that existing federal and state regulations, including the Clean Water Act, NPDES Program, and Streambed Alteration Agreement requirements, prohibited development that would substantially alter waterways or degrade stream flows.207 Goal 7, Policies 7.1 through 7.6 of the GPU Sustainability and Natural Environment Element also included supporting policies to minimize erosion through sustainable site design and water conscious development practices. With these regulatory protections and existing channelization infrastructure in place, the EIR concluded that impacts related to erosion, sedimentation, or substantial changes in drainage patterns would have been less than significant.

206 City of Coachella, GPU Draft EIR, Water Quality and Hydrology, 4.7-22.
207 City of Coachella, GPU Draft EIR, Water Quality and Hydrology, 4.7-22 – 23.

The project site has been historically maintained to support agricultural uses and does not have any naturally occurring drainage courses or flood-prone patterns. Therefore, development of the site would not result in any alteration or obstruction of a natural river, stream, or other naturally occurring drainage course. As a standard requirement under the local development standards and City of Coachella's Engineering Requirements, the project will implement the necessary street improvements along the parcel frontage to provide adequate street drainage.

Based on the USDA Natural Resources Conservation Service Web Soil Survey, the site soils primarily correspond to Hydrologic Soil Group B, which is characterized for having moderate infiltration rates and moderate runoff potential.[208] Given the absence of drainage patterns and slopes, the site soils are not deemed to be prone to existing erosion or siltation in a considerable manner.

As a standard practice, erosion and siltation conditions will be prevented during construction and operation through the required compliance plans. The required SWPPP will include BMPs for proper soil stabilization and perimeter controls to prevent erosion and siltation from being generated by site clearing, grading, and construction activities. Upon completion, all construction related soil disturbance will be properly restored to a stabilized condition consisting of permanent project improvements (structures, hardscape, street pavement, and landscaping) with the properly designed storm drainage system and retention system of adequate capacity according to the City's engineering standards. The storm drainage system and retention facility will be subject to final design review and approval by the City to ensure compliance with the City's engineering standards.

During the life of the project, the ongoing maintenance and operation of facilities will ensure that all permanently improved ground surfaces are adequately maintained. As required by Chapter 13.16 (Water Quality Control) of the CMC and the City of Coachella's Infrastructure Development Standards, all project-related runoff must be adequately handled along engineered conveyances (sheet flow, swales, gutters, or pipes) to the designated retention facilities. Proposed curb and gutter improvements along the project frontage will contribute to adequate drainage in an area that was previously unimproved. The privately constructed and operated on-site storm drain system will be a function of the site plan and final engineering plans subject to City review and approval. Less than significant impacts are anticipated regarding substantial erosion or siltation, on- or off-site.

Therefore, the project would be consistent with the analysis within the GPU EIR and would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

ii) **Less than Significant Impacts**. The GPU EIR determined that impacts associated with this threshold would be less than significant.[209] The EIR found that altering existing drainage patterns under the GPU had the potential to redirect flows into areas not capable of accommodating new runoff, which could have resulted in flooding, erosion, and long-term changes to waterway stability and habitat. Such changes could have exposed structures, wildlife, and natural environments to temporary or permanent flood damage. Although no intentional modification of the Whitewater River or Coachella Canal was planned, the partially channelized Whitewater River could have been affected by unintended changes in drainage patterns or increased runoff from development. Because the GPU did not determine site specific drainage designs, localized construction activities and grading could also have contributed to erosion or flooding risks.

However, the EIR determined that existing federal and state regulations, including the CWA, NPDES Program, and Streambed Alteration Agreement requirements, prohibited development that would substantially alter waterways or increase flood hazards. GPU Policies 7.6 (Waterways as Amenities), 10.9 (Preservation of Natural Land Features), and 13.12 (Active Recreational Areas) of the Sustainability + Natural Environment Element, and Policy 4.5 (New Development) of the Infrastructure + Public Services Element, also included policies requiring development to assess and maintain existing drainage patterns, incorporate water conscious design,

208 https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx.
209 City of Coachella, GPU Draft EIR, Water Quality and Hydrology, 4.7-23.

and avoid creating new flood risks. With these regulatory protections and policy measures in place, the EIR concluded that potential impacts related to drainage pattern changes and associated flooding would have been less than significant.

The project's on-site stormwater retention system has been adequately sized to protect the proposed buildings and facilities from flooding conditions up to the controlling 100-year storm event. According to FEMA Flood Insurance Rate Maps (FIRMs) (Panel 06065C2262H), entire project property is located within Zone X, which is designated as an "area of minimal flood hazard."

As a standard Floodplain Management and Water Quality Control requirement under the City's Code of Ordinances, the proposed development includes adequate improvements and storm drain system to handle the relevant hydrologic conditions in a way that prevents inundation to the proposed structures and facilities. The project will introduce impervious surfaces (buildings, hardscape, asphalt, etc.) to the project property, but it will also include the required storm drain system (catch basins, lines, outlets, and retention facilities) to intercept, convey, and retain the controlling storm event stormwater volume from the site, therefore preventing a condition of urban runoff to the local surroundings or to the publicly maintained regional stormwater infrastructure. In adhering to the City's engineering and retention requirements, the proposed development will provide on-site retention facilities sized for the project's stormwater quantities and therefore is not expected to substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site. Less than significant impacts are anticipated.

Therefore, the project would be consistent with the analysis within the GPU EIR, and it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

iii) **Less than Significant Impacts**. The GPU EIR determined that impacts associated with this threshold would be less than significant.[210] The EIR found that stormwater runoff within the Planning Area increased as development and human activity intensified, carrying pollutants such as litter, oil, fertilizers, and sediments into storm drains and natural waterways. Polluted runoff had the potential to degrade water quality, harm aquatic and riparian habitat, and affect downstream water supplies. Additional development under the GPU could have contributed to increased pollutant loads and placed added stress on the existing drainage system. However, stormwater quality was regulated under the NPDES Program, which established limits for point source discharges and required best management practices for nonpoint source discharges to reduce pollutants in urban runoff to the maximum extent practicable.

The EIR determined that projects within the GPU Planning Area would continue to be required to comply with NPDES permit requirements, ensuring that site runoff would not become a pollutant source to local or regional waterways. However, Policy 7.1 (Pollution Prevention), Policy 7.2 (Development Impacts), Policy 10.9 (Preservation of Natural Land Features), and Policy 13.12 (Active Recreational Areas) of the Sustainability + Natural Environment Element, together with Policy 4.5 (New Development) of the Infrastructure + Public Services Element, address drainage-related impacts through measures that protect water quality, minimize impacts to natural drainage systems and significant land features, and require development to incorporate stormwater treatment, maintain adequate drainage infrastructure, and reduce pollutant discharges. With these regulatory protections and GPU policies in place, the EIR concluded that potential impacts related to stormwater runoff and water quality would have been less than significant.

The City of Coachella is a Permittee of the Whitewater River Watershed Municipal Separate Storm Sewer System (MS4) permit area. Within the City limits, MS4 facilities include a system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) designed for collecting and conveying stormwater. Storm drain facilities can be public or private. Examples of public facilities include pipes, gutters, channels, and basins occurring within the public right-of-way and/or maintained by a public agency. Private facilities are distinguished by being maintained separately

210 *Id.*, at 4.7-24.

by a private entity. As discussed previously, the project site is absent of any private or public storm drain infrastructure.

The traditional land development process generally results in the conversion of pervious ground surface (pre-development condition) into a setting with a higher impervious cover, occurring through the introduction of buildings, streets, and hardscape (post-development condition). This conversion generally leads to an increase in post-construction runoff volumes and rates compared to the pre-development condition.

As a standard requirement under the City of Coachella's engineering standards, the project is required to include retention facilities sized to contain stormwater volume resulting from the controlling 100-year storm event. This retention capacity is provided by a surface basin with adequate freeboard to accept and contain the entire volume resulting from the worst-case storm event during the life of the project, as confirmed in the project hydrology report and preliminary WQMP. This approach meets the City's local engineering requirements. The project's engineering plans and retention capacity will be subject to standard City review and approval. Therefore, by complying with the local retention requirements that take into account the existing facilities, the project will prevent a runoff discharge condition into stormwater capable of contributing to or exceeding the MS4 capacity. Less than significant impacts are anticipated.

The project would be consistent with the analysis within the GPU EIR, and it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

iv) **Less than Significant Impacts**. The GPU EIR determined that impacts associated with this threshold would be less than significant.[211] The EIR found that 100 year floods, which had a 1-percent annual probability of occurring, could have significantly increased water volumes within designated flood hazard areas and placed substantial stress on existing drainage systems. Development located within these areas would have been exposed to flood risks, including damage to structures, habitat, and natural environments. Within the Planning Area, flood hazards were primarily associated with the Whitewater River, its tributaries, mountain drainage, and intense summer monsoons. Although the GPU did not propose housing within the riverbanks, portions of the Planning Area west of the Coachella Canal were located within 100-year and 500-year flood zones. Existing channelization along the Whitewater River was engineered to convey flows exceeding the 100-year event, reducing the likelihood of major flooding impacts.

The EIR determined that federal and local regulations, including FEMA floodplain management requirements and Riverside County Ordinance 458, ensured that any development within a floodplain would be subject to strict design and permitting standards to minimize flood risk.212 Projects unable to meet these requirements would not have been permitted to build within the flood hazard area. The GPU also included policies promoting open space uses in floodplains, retrofitting of frequently flooded structures, and emergency planning to reduce exposure to flood hazards. Considering existing infrastructure, regulatory protections, and GPU policies, the EIR concluded that potential impacts related to flooding would have been less than significant.

Mudflow potential occurs mainly in the eastern portion of the Planning Area, where little development is set to occur as this land is primarily reserved for open space and very low development. However, with the regulatory framework proposed by the CGPU, projects seeking permits would not be allowed to develop unless CGPU criteria have been met and projects are shown to have little potential to impacts from mudflows. Policy strategies include siting potential hazards and infrastructure needs, monitoring slope failures, learning from past geologic hazards, and planning for emergency response and preparedness. With these safety measures, the potential harm from mudflow inundation can be reduced to ensure safety to structures and people within the Planning Area. The potential for mudflows and seiches within the Planning Area is possible, however the impacts of such events would be minimal due to the designated land use preserves, CGPU policies, and minor water level rise

211 *Id.*, at 4.7-29.
212 *Id.*, at 4.7-33.

from any potential seiches. Impacts from inundation by seiches, tsunami, or mudflow under the CGPU are considered less than significant.

As previously discussed, the project is absent of any mapped natural drainage courses or designated FEMA zones with flood flow concerns. The proposed development is not situated in an area where flood flows could be impeded, redirected, or increased as a result of project implementation. The site's proposed storm drain system will meet the local MS4 and City requirements by including the properly sized retention facilities. Therefore, less than significant impacts are anticipated.

The project would be consistent with the analysis within the GPU EIR and it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

d) **No Impact**. The GPU EIR determined there would be no impacts relative to this threshold.[213] The EIR found that failure of levees or dams could have resulted in sudden inundation of water, mud, or debris, creating both immediate and long-term impacts on structures, infrastructure, and natural environments. Within the Planning Area, flood protection was provided primarily by the channelized and leveed portions of the Whitewater River and by the East Side Dike, which directed mudflows away from developed areas and toward the Coachella Valley Stormwater Channel. Although these facilities were engineered to withstand flows exceeding those associated with a 100 year flood, structural failure from seismic activity or other causes could have exposed nearby housing, infrastructure, and habitat to flooding or mudslides. Floodplain areas, where such risks were greatest, were subject to federal and local regulations requiring strict design and construction standards.

The EIR determined that FEMA floodplain management requirements, Riverside County Ordinance 458, and the permitting process administered by the Coachella Valley Water District and local agencies ensured that development within flood hazard areas would not proceed unless it met engineering and safety criteria intended to minimize risks from levee or dam failure.214 The GPU also included policies requiring monitoring of at-risk areas, emergency preparedness planning, and careful review of development proposals near flood-prone or mudflow-susceptible areas. Because projects that did not meet regulatory and GPU requirements would not have been permitted, and because existing infrastructure and policies reduced exposure to inundation hazards, the EIR concluded that impacts related to levee or dam failure would have been less than significant.

FIRMs serve as the basis for identifying potential flood hazards. According to FIRM panel 06065C2262H, effective March 6, 2018, the entire Subject Property is located within Zone X, which is categorized as an area of minimal flood hazard. The project is not located near any coastal areas and therefore is not prone to tsunami hazards.

A seiche is primarily defined by free or standing wave oscillations on the surface of water, the causes of which may be wind, atmospheric changes, or seismic activity. Although the project is not located in any mapped seiche zones, such as those associated with large bodies of water, the proposed development will include artificial lagoons and a lake for various uses. The proposed water features have been designed with the necessary freeboard and setbacks to protect on-site structures. This design approach provides resilience against potential seiche-induced wave action resulting from significant seismic or atmospheric events. As a result, any water surface oscillations generated by such events are expected to be effectively contained, preventing off-site releases or inundation-related impacts. Moreover, the project's storm drain system is designed to properly capture the site's urban runoff to prevent any risk of uncontrolled pollutant discharge. Being a proposed residential development, the project site will not host the storage of pollutants, petroleum products, or other hazardous materials in conditions which would be deemed a risk of release in an inundation condition. Therefore, no impacts are anticipated.

213 *Id.*, at 4.7-34.
214 *Id.*, at 4.7-33.

Therefore, the project would be consistent with the analysis within the GPU EIR, and it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

e) **Less than Significant Impacts**. The GPU EIR determined that impacts associated with this threshold would be less than significant.215 The EIR found that development and increased human activity under the GPU had the potential to degrade water quality within the Planning Area through runoff pollution, contamination, or insufficient groundwater replenishment. Because water is a critical resource for sustaining the community, any decline in potable water quality or degradation of local waterways could have resulted in long-term or irreversible impacts. Water quality within the Planning Area is regulated by the Coachella Valley Water District in coordination with the SWRCB and the Colorado River Basin Regional Water Quality Control Board. In addition, activities that could discharge to waters of the United States are subject to Clean Water Act Section 401 certification, enforced by the U.S. Army Corps of Engineers, ensuring that projects that could not meet water quality standards would not be permitted.

Although development under the GPU could have increased pollutant loads from urban activity, the EIR determined that the existing regulatory framework, combined with GPU policies in the Sustainability + Natural Environment and Safety elements, would ensure compliance with federal, state, and local water quality requirements. These policies required new development to incorporate design features that reduced pollutant discharges, managed stormwater effectively, and protected surface and groundwater resources. Based on these regulations and supporting GPU policies, the EIR concluded that potential impacts on water quality would have been less than significant.

As discussed previously, the project proponent is required to implement a project-specific WQMP to comply with the most current standards of the *Whitewater River Region Water Quality Management Plan for Urban Runoff*, *Whitewater River Watershed MS4 Permit*, and the City of Coachella's Water Quality Control regulations outlined in the Code of Ordinances (Chapter 13.16). The WQMP will incorporate grading, hydrology, and other plans to document the site design, source controls, and treatment controls with a required operation and maintenance program to comply with the hierarchy water quality objectives. Moreover, the project's storm drain system will ensure that urban runoff is adequately retained on-site. Combined with the required water conservation practices, the project is expected to contribute to the groundwater sustainability efforts implemented for the Coachella Valley region. Less than significant impacts are anticipated.

The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

Conclusion:

With regards to the issue area of Hydrology and Water Quality, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project-specific hydrology, water quality, and water supply analyses determined that the Project would comply with applicable federal, State, regional, and local regulations governing water quality, stormwater management, groundwater resources, and flood protection. Compliance with the Construction General Permit, preparation and implementation of a SWPPP and WQMP, City engineering requirements, and implementation of appropriately sized on-site stormwater retention facilities would ensure that impacts related to water quality, groundwater resources, drainage, erosion, flooding, and stormwater management remain less than significant.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR evaluated impacts associated with water quality standards, waste discharge requirements, groundwater supply and recharge, drainage patterns, erosion, stormwater runoff, flooding, flood hazards, and consistency with applicable water quality management programs. The Program EIR concluded that compliance with existing regulatory requirements and implementation of General Plan policies protecting water quality, groundwater resources, and

215 *Id.*, at 4.7-26.

stormwater management would reduce these impacts to less-than-significant levels.

3. No substantial new information has been identified which results in an impact more severe than anticipated by the City of Coachella General Plan 2035 Program EIR. Project-specific analyses demonstrate that adequate water supplies are available to serve the Project, stormwater runoff would be fully contained within on-site retention facilities designed in accordance with City standards, and the Project would comply with applicable Clean Water Act, NPDES, MS4 Permit, Water Quality Control Plan, and groundwater management requirements. The Project's hydrology, drainage, and water quality characteristics are consistent with the assumptions and conclusions evaluated in the Program EIR.

4. No mitigation measures were identified in the GPU EIR for hydrology and water quality impacts. Compliance with applicable federal and State water quality regulations, including the Clean Water Act, Porter-Cologne Water Quality Control Act, NPDES permitting requirements, Whitewater River Watershed MS4 Permit requirements, City of Coachella Municipal Code Chapters 13.16 and 15.56, applicable City engineering standards, and General Plan policies related to water quality protection, groundwater recharge, stormwater management, pollutant control, drainage design, and flood protection would ensure that potential impacts related to water quality, groundwater resources, drainage patterns, stormwater runoff, erosion, flooding, and water quality management plans remain less than significant.

11. LAND USE AND PLANNING - Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☐	☒

Sources: City of Coachella 2035 General Plan Update, 2015; Coachella General Plan Update Environmental Impact Report, 2015; Coachella Municipal Code.

a) **No Impact.** The GPU EIR concluded this impact to be less than significant.[216] Under GPU, development would continue to occur in the western portion of the Planning Area, where density and development are most prominent and extend eastward into current agricultural and open space areas. Though the Planning Area will experience a great amount of growth throughout the GPU timeline, development will grow around the existing built environment as an extension of the established City and aim to enhance the existing developed community both socially and physically without dividing communities. This is ensured by the implementation of GPU policies that guide development through 2035, and emphasize community character and an active, connected community.[217] The GPU Policies include the redevelopment of existing retail into neighborhood centers (Land Use Element Policy 6.6), improved perceived and actual safety in Coachella (Community Health Element Policy 4.3), and encourage urban beautification through landscaping (Community Health Element Policy 4.7). No mitigation measures are required.

The 87-acre project site is characterized by agricultural land and supports dilapidated agricultural structures and an abandoned residential structure. Avenue 52 delineates the project's northern boundary; Van Buren Street delineates the project's eastern boundary; Calhoun Street delineates the project's western boundary; and agricultural land within the unincorporated Community of Vista Santa Rosa delineates the project's southern boundary. The project site is owned by a single entity. The properties to the north, south, east, and west of the project are also owned by entities separate from the project. Therefore, the project site is not anticipated to physically divide an established community. No impacts are anticipated.

As stated above, the GPU EIR determined impacts related to division of an established community to be less than significant. As the project would have a less-than-significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create a new impact, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact.** The GPU EIR concluded that impacts would be less than significant because the GPU would be consistent with, and supplement, adopted plans and regulations governing land use and development in the Planning Area.[218] No mitigation is required. The GPU is a policy document and outlines a number of development strategies, land use plans, and regulations to guide the growth of the City through 2035.

216 City of Coachella, GPU Draft EIR, Land Use + Planning, at 4.8-9 (2015).
217 *Ibid.*
218 *Id.*, at 4.8-13.

The GPU outlines a land use program that focuses on the form and character of the built environment. The land use approach of the GPU is structured to provide flexibility to respond to changing market and demographic conditions as well as provide the community with certainty of place type for the different areas of the community. Moreover, the land use designations in the GPU describe the intent of the designation, allowed land uses, development intensity, network and connectivity, street design, parks and open space, and urban form guidelines, to ensure development consistent with the vision of the GPU, with enough variation to manage economic and changes in the community's development direction.[219]

According to the Coachella General Plan Land Use Designations Map,[220] the project site is located within the Regional Retail District land use designation. According to the Coachella GPU, Regional Retail District provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats.[221] These include regional shopping centers, mixed designation centers or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities with residential uses supporting the retail environment.

The project site is primarily surrounded by agricultural properties and scattered residential properties. The table below shows the surrounding land uses and designations.

Table XI-1 Existing Uses and Land Use Designations

Direction	Existing Uses	Land Use Designations
North	Vacant, Agriculture, and Residential	Regional Retail District
East	Residential and Agriculture	Regional Retail District and General Neighborhood
South	Vacant, Agricultural, and Residential	Unincorporated Community of Vista Santa Rosa: Agriculture and Estate Density Residential
West	Agriculture	Unincorporated Community of Vista Santa Rosa: Agriculture

Per the GPU, commercial use (which include commercial and services, general office, and mixed commercial and industrial) occupies approximately 244 acres of the City.[222] This makes up approximately 5 percent of the total area within the City, while vacant land occupies approximately 53 percent. Agricultural land uses occupy 33 percent of the City's area, being the second largest land use classification in the City. Transportation, communications and utilities are the third largest land use, covering approximately 6 percent of the City. As distinguished in the Project Description provided earlier in this document, and as graphically portrayed in the site exhibits, the site of the proposed project is currently characterized primarily by agricultural land.

General Plan Land Use and Zoning Designations

Future development of the project site and all lands within the City of Coachella are subject to land use and other development related goals and policies contained in the recently adopted Coachella GPU, and the codified regulations, standards and other criteria provided in the CMC. The current GPU Land Use designation for the project site is Regional Retail District. Districts are areas of the City that are more single use and automobile-oriented. The Districts include large format retail and commercial areas, industrial areas, and resorts. These areas are critical to the overall economic prosperity of the City but have a lower level of design regulation and pedestrian-orientation than other areas of the City (Coachella General Plan pg. 04-4). Regional Retail Districts provide opportunities for a wide range of shopping and entertainment in a variety of urban and suburban

219 City of Coachella, GPU Draft EIR: Project Description, at 3.0-8 (2015).
220 City of Coachella, General Plan 2035 – Land Use Designations Map, available at https://www.coachella.org/home/showpublisheddocument/8259/637592601028770000 (last visited Nov. 24, 2025).
221 City of Coachella, General Plan 2035: Land Use + Community Character, at 37 (2015).
222 City of Coachella, GPU Draft EIR: Project Description, tbl. 3.0-1: Existing Land Use Designations at 3.0-15.

formats. These include regional shopping centers, mixed destination centers, or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment. Regional Retail Districts allow for 10 to 15 du/ac, and floor area ratio (FAR) 0.35 to 2.0.

The zone in which the project site lies is Regional Commercial (RC), as designated by the City of Coachella. RC zones are intended to encourage a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed designation centers or similar uses. The uses allowed in this zone will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City.

For planning purposes, the City of Coachella is divided into 17 unique subareas, and every parcel in the City is located in one of these areas. The purpose of the subareas is to define an overall vision and specific policy direction that supplements the General Plan Designations and the citywide goals and policies. The project is located in Subarea 3, Van Buren Corridor, which is predominantly single-family, retail, schools, and vacant land. The vision for this subarea is to be a major sub-regional retail designation that will provide a wide variety of goods and services for Coachella residents, as well as neighboring communities.

The project proposes the development of a resort residential community on approximately 87 acres south of Avenue 52 and west of Van Buren Street. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/ac), which is consistent with the General Plan residential density range of 10 to 15 dwelling units per acre.[223] The private sector also includes complimentary resort features including water amenities, club amenities, health and wellness spaces, sports and recreational amenities, additional areas for events and restaurants, roadways, and open space on the remainder of the site. The public sector of the site is situated on approximately six acres in the northwest corner of the site and will consist of a beach club area, restaurant, sports bar, back-of-house area, and parking garage. The public sector uses have a combined FAR of approximately 0.65, which is consistent with the Regional Retail standard of 0.35 to 2.0.[224] The project is consistent with the existing land use and zoning designations. The public sector uses will require a future City-approved CUP and Entertainment permit, which will be sought once the plans and details for these uses are further defined during project implementation.

A tentative tract map is being prepared to illustrate the lots proposed for the multiple uses for the proposed project. Additionally, the project is required to go through Architectural Review to provide flexibility in the placement and interrelationship of the proposed structures and uses; to provide for the implementation of sound site plan design concepts while maintaining the overall intensity of land use and density of population; to review the site plan of those uses which are not intrinsically objectionable to the predominant use category of the district, but which have inherent characteristics which, if not properly handled, have potentials for becoming detrimental to the health, safety, or general welfare of the public, or to neighboring land uses; to determine whether or not a proposed development will properly comply with the architectural guidelines of the city and the provisions and development standards required by this chapter or as prescribed by the planning director, or other authorized agent; to improve the quality of development and to provide a mechanism whereby the city can insure well-designed development (CMC Section 17.72.010).

Overall, the project will comply with the land use policies provided by the City of Coachella to ensure impacts are less than significant.

223 City of Coachella, General Plan 2035: Land Use + Community Character, Tabel 4-1: General Plan Designations Summary, at 4-56 (2015).
224 Ibid.

Finally, as described throughout this environmental document, all other impacts not requiring mitigation would be less than significant or would have no impact. Therefore, the project would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and impacts would be less than significant. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

c) **Less than significant impact.** The GPU EIR concluded this impact to be less than significant.[225] The GPU EIR states the Planning Area is within the jurisdiction of the Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP), which is in place to protect sensitive species within Coachella Valley include migratory birds, and native flora, and protects land within the Mecca Hills, and overlaps with the City of Coachella's Sphere of Influence. Under the GPU land use designations, this land is set aside for open space preservation and is not planned for development. The GPU EIR has addressed the biological resources of the Planning Area and the goals of the CVMSHCP.[226] The 87-acre project site is characterized by agricultural land and support structures as well as an abandoned residential property. The project site is located within the Regional Retail District land use designation. According to the Coachella GPU, Regional Retail District provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats.[227] The site is not designated for open space and is not located in an area protected by the CVMSHCP. Therefore, the project will not result in new impacts as no impacts are anticipated. The project would not create new impacts and there is no new substantial information that was not covered in the GPU EIR.

Conclusion:

With regards to the issue area of Land Use and Planning, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not physically divide and established community, or conflict with a land use plan or applicable habitat conservation plan.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR. The EIR adequately addressed the potential for land use and planning related to buildout of the City.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. Compliance with GPU Policies 6.6 of the Land Use Element, and Policies 4.3 and 4.7 in the Community Health Element, as well as consistency with the GPU land use designation, Zoning code, and CVMSHCP, ensures that potential impacts would remain less than significant.

225 City of Coachella, GPU Draft EIR, Land Use + Planning, at 4.8-20 (2015).
226 City of Coachella, GPU DEIR, at 4.8-20 (2015).

12. MINERAL RESOURCES -- Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☐	☒

Sources: The City of Coachella 2035 General Plan; The City of Coachella 2035 General Plan Environmental Impact Report, 2015; Surface Mining and Reclamation Act.

a) **Less than Significant Impact**. The GPU EIR determined impacts would be less than significant.[228] Land within City boundaries is classified as MRZ 1, areas where available geological information indicates that little likelihood exists for presence of significant mineral resources. Subarea 17 of the Planning Aea contains portions zoned MRZ 2a (PCC), where geologic data indicate that significant measured or indicated mineral resources are present. It is in the MRZ 2a (PCC) area that 2 permitted mining operations occur. The proposed project exists within the MRZ 1 classification area and therefore no impacts to available or known mineral resources are anticipated. This conclusion is consistent with the GPU EIR analysis. The project would be consistent with the GPU EIR because it would not create new impacts, and there is no new information of substantial importance than that covered in the GPU EIR.

b) **Less than Significant Impact**. The GPU EIR determined that impacts would be less than significant.[229] As stated above, the GPU EIR concluded that land within city boundaries is classified as MRZ 1, areas where available geological information indicates that little likelihood exists for presence of significant mineral resources. Subarea 17 of the Planning Area contains portions zoned MRZ 2a (PCC), where geologic data indicate that significant measured or indicated mineral resources are present. It is in the MRZ 2a (PCC) area that 2 permitted mining operations occur.[230] The proposed project exists within the MRZ 1 classification area and therefore no impacts to available or known mineral resources are anticipated. This conclusion is consistent with the GPU EIR analysis. The project would not create new impacts and there is no new information of substantial importance than that covered in the GPU EIR.

Conclusion:

With regards to the issue area of Mineral Resources, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the potential impact to mineral resources.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR.
4. No mitigation measures are required within the GPU EIR for mineral resources. The project specific

impacts would be less than significant.

13. NOISE -- Would the project result in:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Result in exposure of persons to noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☐	☒
c) Result in a substantial temporary or periodic increase in ambient noise levels above levels existing without the project?	☐	☐	☐	☐	☒
d) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☐	☒
e) For a project located within the vicinity of a private airstrip would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☐	☒

Sources: Coachella General Plan, 2015; Coachella General Plan Environmental Impact Report, 2015; Coachella Municipal Code; Federal Transit Administration; Noise Analysis, Urban Crossroads, Inc. 2025 (Appendix H); Traffic Impact Analysis, Fehr and Peers, 2025 (Appendix I).

a/c) **Less than Significant Impact.** The GPU EIR concluded that this impact would result in less than significant levels.[231] Various goals and policies of the proposed GPU, such as Noise Element Policies 1.2 and 3.2, listed below, would assist noise-reduction strategies, while also ensuring that future development would not expose noise-sensitive receptors to noise levels in excess of the City's standards.

1.2 **Noise Analysis and Mitigation.** Require projects involving new development or modifications to existing development to implement mitigation measures, where necessary, to reduce noise levels to at least the normally compatible range. Mitigation measures should focus on architectural features and building design and construction, rather than site design features such as excessive setbacks, berms and sound walls, to maintain compatibility with adjacent and surrounding uses.

3.2 **Traffic Calming.** Where roadway noise exceeds the normally compatible range, consider the implementation of traffic calming measures such as reduced speed limits or roadway design features to reduce noise levels through reduced vehicle speeds and/or diversion of vehicle traffic.

Noise is simply defined as "unwanted sound."[232] When interfering with normal activities, causing physical harm, or causing adverse effects on health, sound becomes unwanted. Noise is measured on a logarithmic scale of pressure level known as a decibel ("dB"). An A-weighted decibel ("dBA") is an expression of the relative loudness of sounds in air as perceived by the human ear. In the A-weighted system, the decibel values of sounds

231 City of Coachella, GPU Draft EIR, Noise, at 4.10-16 (2015).
232 U.S. Env'tl. Prot. Agency, *Clean Air Act Title IV - Noise Pollution*, https://www.epa.gov/clean-air-act-overview/clean-air-act-title-iv-noise-pollution (last updated July 18, 2025).

at low frequencies are reduced compared with unweighted decibels, in which no correction is made for audio frequency.[233] Excessive noise or prolonged exposure to noise can contribute to temporary and permanent impairments, such as hearing loss, fatigue, stress, sleep deprivation, anxiety, and annoyance. Although noise has been accepted as a necessary by-product of urban development, it can become an environmental hazard. A variety of components of the urban environment generate noise; these include construction equipment and activities, motor vehicles, air traffic, mechanical equipment, household appliances, and other sources.

The State of California requires each city and county to adopt Noise Elements as a part of their General Plan.[234] In addition to the 12 Land Use Categories included in the Noise Element, there are four Community Noise Equivalent Level's (CNEL) used to interpret the compatibility of the 12 Land Use Categories. Zone A (Green) – Clearly Compatible, Zone B (Yellow) – Normally Compatible, Zone C (Orange) – Normally Incompatible, Zone D (Red) Clearly Incompatible.[235] The four zones of compatibility are dependent on the Land Use Categories.[236]

According to the Coachella General Plan Noise Element, the predominant noise source in the City is motor vehicles.[237] High volume roadways in the City are Highway 111, State Route 86, and Harrison Street, which generate vehicle noise along these roadways. Other major sources of noise in Coachella include the railway that runs through Coachella along the east side of Highway 111 and factories, processing, and distribution facilities. Other, less significant noise sources in Coachella include aircraft overflights, air conditioning units and other mechanical equipment on buildings, landscaping equipment, and human speech. None of these sources significantly contribute to overall noise levels when compared to traffic noise.

The General Plan states that noise levels are generally low in agricultural and rural areas and higher in more urbanized areas.[238] Noise in eastern Coachella Valley is generally related to linear sources, or "noise corridors," such as roadways and railroads, or to aircraft. Within the General Plan Area, principal noise corridors are major roadways such as Highway 111 and Highway 86/86s; Southern Pacific Railroad; Harrison Street and Polk Street to the west and east, respectively, and the Jacqueline Cochran Regional Airport. Other sources of vehicular noise include the local streets in the General Plan Area. Transportation noise is concentrated along these roadways and can vary with the volume of traffic, the vehicular speed, the vehicular mix and the roadway cross-section. The project is not situated in proximity to these roadways. Avenue 52, Van Buren Street, and Calhoun Street delineates the project's northern, eastern, and western boundaries, respectively.

In Coachella, Interior and Exterior Noise Standards are between 45 (interior) and 65 (exterior) for Residential, as well as between 45 and 65 dB for Commercial, Industrial and Institutional. Various sources are used to calculate noise level in the City. As part of the development of the Noise Element of the General Plan, noise level measurements were collected at 11 different locations throughout the City. Noise measurements were not taken along the roadway segments adjacent to the project boundaries. The closest noise measurement was taken Harrison Street, one mile east of the project, and one mile northeast of the project. Existing noise measurements at these locations were 68.6 dBA and 68.1 dBA, respectively. The noise measurement collected on Avenue 52 and Shady Lane, approximately 1.50 miles east of the project, was 62.7 dBA.

Future noise throughout the City was provided in Table 4 of the Noise Technical Appendix.[239] The only roadway segment adjacent to the project measured included Van Buren Street from Avenue 52 to Avenue 54. This segment will have a noise level of 74.2 dBA. Avenue 52 from Van Buren Street to Harrison Street (east of the project) is projected to have a noise level of 72.5 dBA.

Project-Specific Noise Analysis

A project-specific Noise Analysis[240] was prepared by Urban Crossroads, Inc. (Urban Crossroads) in September 2025 to determine the noise impacts associated with the development of the proposed project (Appendix H). The Noise Analysis evaluates the future exterior noise environment, potential off-site traffic impacts, the project-related long-term stationary-source operational noise, and project-related short-term construction noise and vibration impacts. The Noise Analysis utilized the following significance criteria matrix to determine whether the project would result in noise impacts (see following table).

Table XIII-1 Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	Noise-Sensitive[1]	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
		If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
Off-Site Traffic	Non-Noise-Sensitive[2]	If ambient is > 70 dBA CNEL	≥ 3 dBA CNEL Project increase	
On-Site	Noise Sensitive	Exterior Noise Level Criteria	See Exhibit 3-1	
		Interior Noise Level Standard[3]	45 dBA CNEL	
Operational	Noise-Sensitive	Residential Exterior Noise Level[4]	55 dBA Leq	45 dBA Leq
		If ambient is < 60 dBA Leq[1]	≥ 5 dBA Leq Project increase	
		If ambient is 60 - 65 dBA Leq[1]	≥ 3 dBA Leq Project increase	
		If ambient is > 65 dBA Leq[1]	≥ 1.5 dBA Leq Project increase	
Construction	Noise-Sensitive	Noise Level Threshold[5]	80 dBA L_{eq}	
		Exterior Noise Level Increase[6]	20 dBA L_{eq}	
		Vibration Level Threshold[7]	0.30 PPV (in/sec)

Existing Noise Level Measurements

To assess the existing noise level environment, 24-hour noise level measurements were taken at five locations in the project area. The receiver locations were selected to describe and document the existing noise environment within the project area. To fully describe the existing noise conditions, long-term noise level measurements were collected by Urban Crossroads on Friday, July 25, 2025. By collecting individual hourly noise level measurements, it is possible to describe the equivalent daytime and nighttime hourly noise levels. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. All noise meters and microphones were equipped with a windscreen during all measurements.

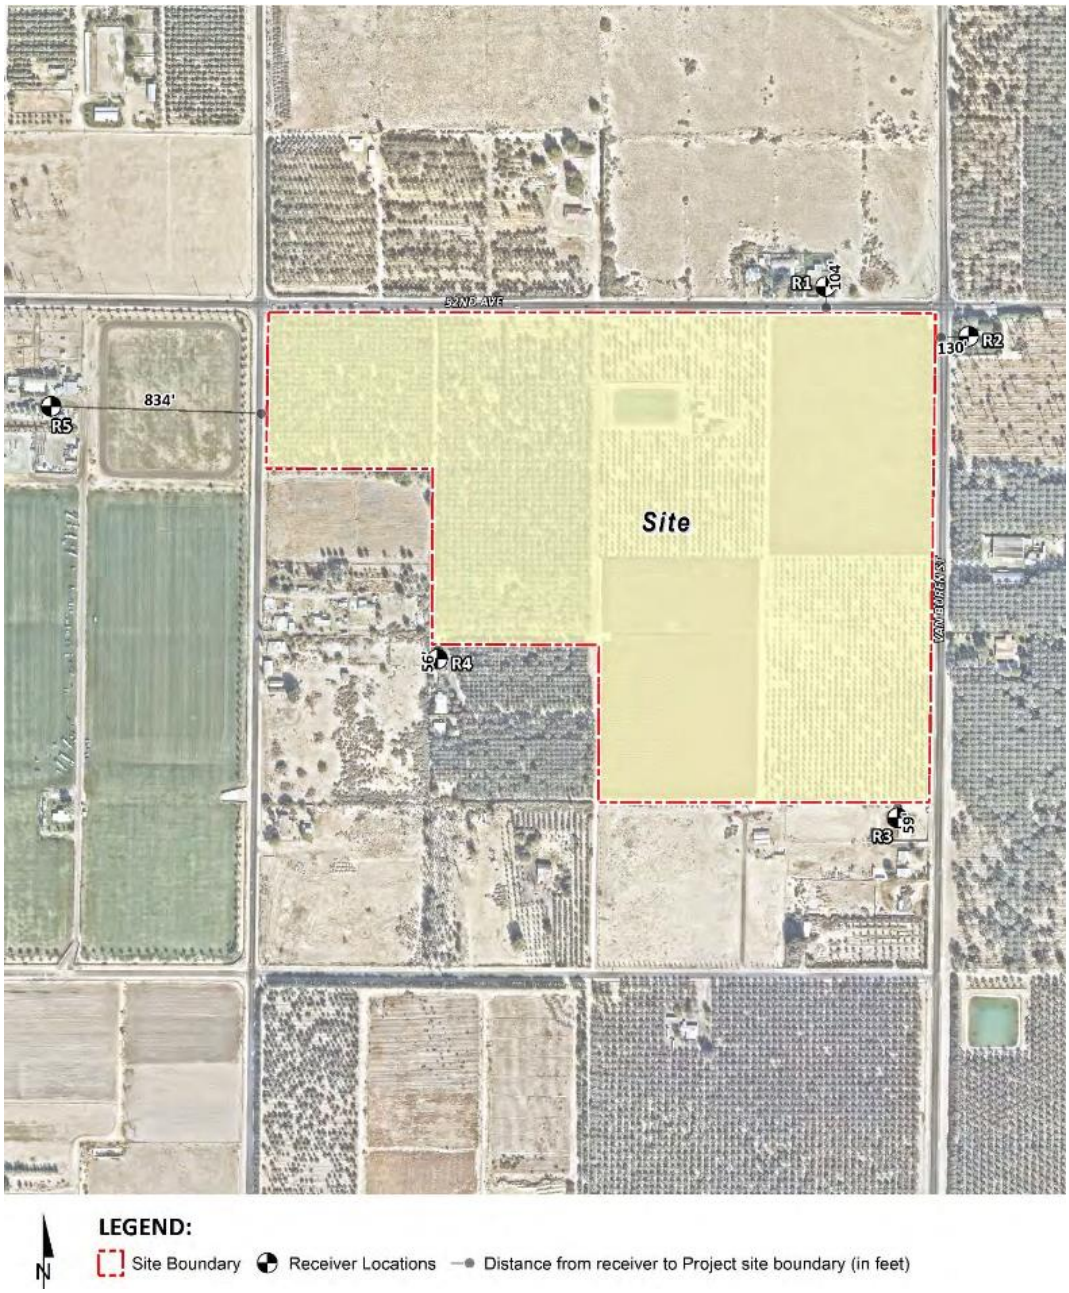
The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing equivalent hourly noise levels surrounding the project site. The measurement locations were selected in compliance with Caltrans and Federal Transit Administration ("FTA") guidance. Collecting noise level measurements at the nearby sensitive receiver locations allows a comparison of the before and after project noise levels and is necessary to assess potential noise increase due to the project's contribution to ambient noise levels, pursuant to CEQA. The exhibit below illustrates the noise measurement locations.

240 Noise and Vibration Analysis, Urban Crossroads, Inc., September 2025 (Appendix G).

Exhibit XIII-1 Noise Measurement Locations

The table below indicates the noise measurement locations and the daytime (7:00 am to 10:00 pm) and nighttime (10:00 pm to 7:00 am) noise levels, focusing on the equivalent or the hourly energy average sound level (Leq) to describe the existing ambient conditions. The Leq represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. The daytime and nighttime equivalent noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number.

Table XIII-2 Ambient Noise Level Measurements



Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located north of the site near the residence at 83876 52nd Ave.	66.2	60.5
L2	Located east of the site near the residence at 84045 52nd Ave.	67.5	61.8
L3	Located south of the site near the residence at 52815 Van Buren St.	66.4	59.1
L4	Located south of the site near the residence at 52480 Calhoun St.	56.4	49.2
L5	Located west of the site near the residence at 83465 52nd Ave.	61.4	52.5

[1] See Exhibit 5-1 for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Receiver Locations

Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. To assess the potential for long-term operational and short-term construction noise impacts, five receiver locations in the vicinity of the project site were identified. The analysis measured distances from the outermost boundary of the active construction area to the nearest noise-sensitive use location, such as building facades or outdoor use areas (e.g., backyards), where individuals are reasonably expected to spend extended periods of time. The receiver locations were selected consistent with the Federal Highway Administration (FHWA), Caltrans and FTA guidelines.

Exhibit XIII-2 Receiver Locations

The proposed project is located on approximately 87 acres south of Avenue 52, west of Van Buren Street, and east of Calhoun Street. The project site currently operates as agricultural land, with date palm groves and vineyards and a vacant residential structure. The site is surrounded by agricultural properties, scattered residential, and vacant lots. The project proposes to develop a residential and resort community with various amenities, including two lagoons and a lake feature. The following discussion analyzes the project's potential short- and long-term noise impacts generated by construction and operation of the project.

Construction

Construction of the project site is expected to generate short-term noise increases compared to the existing levels. A temporary incremental increase in noise levels along local roadways is expected to occur during the transport of workers and equipment to and from the site. Noise increases will also be generated by the actual on-site construction activities. Equipment used during the construction phases would generate both steady state and episodic noise that would be heard both on and off the project site.

The FTA's *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction.[241] Each stage has a specific equipment mix, depending on the work to be completed during the stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

Project-related construction noise was predicted using reference construction equipment noise levels from the FHWA published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. According to the EPA, FTA, and FHWA, the overall construction noise level is governed primarily by the noisiest pieces of equipment. The quieter pieces do not affect the overall level, but they do reduce the magnitude of the fluctuations in the noise level. Therefore, a rough estimate of the noise level need to only include the noisiest pieces of equipment expected at the site. The table below shows the combined noise levels for the loudest construction activities expected for each stage, consistent with FHWA and FTA guidance for detailed construction noise assessment, assuming all equipment operates simultaneously.

Table XIII-3 Construction Reference Noise Levels

Construction Stage	Reference Construction Equipmnet[1]	Reference Noise Level @ 50 Feet (dBA L_{eq})	Composite Reference Noise Level (dBA L_{eq})	Reference Power Level (dBA L_w)
Site Preparation	Tractor	80.0	82.9	114.5
	Front End Loader	75.0		
	Dozer	78.0		
Grading	Tractor	80.0	84.2	115.9
	Grader	81.0		
	Compactor (ground)	76.0		
Building Construction	Crane	73.0	82.1	113.7
	Generator	78.0		
	Gradall	79.0		
Paving	Paver	74.0	77.8	109.5
	Dump Truck	72.0		
	Roller	73.0		
Architectural Coating	Man Lift	68.0	76.2	107.8
	Compressor (air)	74.0		
	Generator (<25kVA)	70.0		

[1] FHWA Road Construction Noise Model.

Construction projects involve various stages, and activities frequently shift from one location to another. For example, during site preparation and grading, noise-generating activities may concentrate in an area for a short period to remove an obstruction, while the majority of the grading involves the equipment moving back and forth in a predictable pattern throughout the site; building construction and foundation work generally concentrate near the building footprint, while paving generally involves a predictable pattern of movement

241 FTA Transit Noise and Vibration Impact Assessment Manual, at 172 (2018), available at https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf.

throughout the site. Therefore, construction activities are best evaluated as multiple moving point sources within the construction area since the speed and power of the equipment varies, and the equipment constantly changes position in terms of its distance and direction relative to the receivers. The noise analysis evaluates construction noise under worst-case operating conditions consistent with regulatory guidance. Specifically, overall construction noise is governed by the loudest equipment types, rather than all equipment equally; assumes that the loudest pieces of equipment are operating simultaneously, representing peak activity conditions; and assumes that multiple crews may operate concurrently, resulting in combined noise levels equivalent to more than a dozen (e.g., 12+) of the loudest heavy construction equipment types operating at once. This approach effectively captures the potential for overlapping operations during peak construction periods, therefore, modeling worst-case simultaneous equipment operation.

Using the reference construction equipment noise levels and the CadnaA (Computer Aided Noise Abatement) noise prediction model, calculations of the project construction noise level impacts by phase at the nearby sensitive receiver locations were completed. Construction impacts are based on the loudest activity and the highest noise level calculated at each receiver location. The highest construction noise levels are expected to range from 54.6 to 63.6 dBA Leq at the nearby receiver locations (see table below).

Table XIII-4 Construction Equipment Noise Level Summary

Receiver Location[1]	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	61.9	63.2	61.1	56.8	55.1	63.2
R2	60.2	61.5	59.4	55.1	53.4	61.5
R3	62.3	63.6	61.5	57.2	55.5	63.6
R4	62.0	63.3	61.2	56.9	55.2	63.3
R5	53.3	54.6	52.5	48.2	46.5	54.6

[1] Construction noise source and receiver locations are shown in Exhibit 9-1.
[2] Construction noise level calculations based on distance from the project site boundaries (construction activity area) to nearby receiver locations. CadnaA construction noise model inputs are included in Appendix 9.1.

To evaluate whether the project will generate potentially significant short-term noise levels at the nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA Leq is used as a reasonable threshold to assess the daytime construction noise level impacts. The noise analysis determined that project construction noise would not exceed the reasonable daytime 80 dBA Leq significance threshold at any receiver location (see table below). Therefore, the noise impacts due to project construction noise are considered less than significant.

Table XIII-5 Construction Noise Level Compliance

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	55.1	80	No
R2	53.4	80	No
R3	55.5	80	No
R4	55.2	80	No
R5	46.5	80	No

[1] Construction noise source and receiver locations are shown in Exhibit 9-1.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations, as shown in Table 9-2.
[3] Construction noise level thresholds as shown in Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

Moreover, the project construction activities will contribute to noise level increases ranging from 0.1 to 2.5 dBA Leq during the daytime hours at the nearest receiver locations. The unmitigated construction noise analysis

shows the nearest receiver locations will not exceed the 20 dBA Leq noise level increase significance threshold during project construction activities (see table below). Therefore, temporary project-related construction noise level increases will result in a less than significant impact.

Table XIII-6 Daytime Construction Noise Level Increases

Receiver Location[1]	Typical Project Construction Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria[7]	Increase Criteria Exceeded?
R1	55.1	L1	66.2	66.5	0.3	20	No
R2	53.4	L2	67.5	67.7	0.2	20	No
R3	55.5	L3	66.4	66.7	0.3	20	No
R4	55.2	L4	56.4	58.9	2.5	20	No
R5	46.5	L5	61.4	61.5	0.1	20	No

[1] Construction noise source and receiver locations are shown in Exhibit 9-1.
[2] Typical Project daytime construction noise levels as shown in Table 9-3.
[3] Reference noise level measurement locations as shown in Exhibit 5-A.
[4] Observed daytime ambient noise levels as shown in Table 5-1.
[5] Represents the combined ambient conditions plus the Project construction activities.
[6] The noise level increase expected with the addition of the proposed Project construction activities.
[7] Caltrans Traffic Noise Analysis Protocol.

Finally, as a standard requirement, the project is expected to abide by the CMC regulations on construction hours, which limit activities to the less sensitive times of the day. The restriction on hours of construction would keep any such construction activities exceeding 72 VdB at the nearest sensitive receptor from significantly interfering with people's sleep. Section 7.04.070 of the CMC specifically exempts noise sources associated with construction, erection, demolition, alteration, repair, addition to or improvement of any building, structure, road or improvement to realty, provided that such activities take place during daytime hours, as follows:

October 1st through April 30th

Monday – Friday: 6:00 a.m. to 5:30 p.m.
Saturday: 8:00 a.m. to 5:00 p.m.
Sunday: 8:00 a.m. to 5:00 p.m.
Holidays: 8:00 a.m. to 5:00 p.m.

May 1st through September 30th

Monday – Friday: 5:00 a.m. to 7:00 p.m.
Saturday: 8:00 a.m. to 5:00 p.m.
Sunday: 8:00 a.m. to 5:00 p.m.
Holidays: 8:00 a.m. to 5:00 p.m.

To maintain normal noise levels during construction and vehicle movement on/off the project site, the project will abide by the construction hours established by the City to avoid high noise levels. Less than significant impacts are anticipated.

Operation

Operation of the project will include a mix of residential, resort, and recreational uses. Residential units will consist of single family residential dwellings, while resort units will consist of condo hotel units and suites. The resort component will also consist of restaurants, bars, clubs, and event spaces. Recreational amenities include a 9.4-acre Hotel Lagoon, 2.5-acre lake, 0.4-acre Beach Club Lagoon, fitness and spa buildings, various sports courts (pickleball, tennis, basketball, etc.), and a children's play area. Project-related operational noise sources

will include the operation of the residential, resort and recreational uses, grounds maintenance equipment, heating, ventilation and air conditioning (HVAC) units, and vehicular traffic accessing the site. The vehicle mix will be comparable with existing vehicles on surrounding roads.

To estimate the project operational noise impacts, reference noise level measurements were collected from similar types of activities or equipment to represent the noise levels expected with the development of the project. The reference activities and noise level measurements are discussed as follows:

Individual Air Conditioning Units: To assess the noise levels created by the air conditioning units, reference noise levels were taken from equipment specifications for a 2- to 5-ton residential packaged air conditioning unit (Carrier 50VR-A). At a uniform reference distance of 50 feet, the units would generate a reference noise level of 44.4 dBA Leq. The air conditioning units were modeled 3 feet above ground level, operating 45 minutes per hour during the daytime and nighttime, which represents the typical maximum operating time for properly sized AC systems.

Commercial Air Conditioning Units: The noise level measurements describe a single mechanical rooftop air conditioning unit. The reference noise level represents a Lennox SCA120 Series 10-ton model packaged air conditioning unit. At the uniform reference distance of 50 feet, the reference noise level is 59.2 dBA Leq. The air conditioning units were modeled 5 feet above the ground level, operating 45 minutes per hour during the daytime and nighttime, which represents the typical maximum operating time for properly sized AC systems.

Basketball/Volleyball Activity: To describe the noise levels associated with tennis court activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 52.1 dBA L50 for basketball and volleyball court activity. The basketball and volleyball court activity noise levels include eight people playing basketball, the sound of the ball hitting the ground, gates closing, and background park noise sources including people talking. Noise associated with basketball and volleyball court activities is expected to occur for the entire hour (60 minutes).

Outdoor Activity: To describe the outdoor common area, courtyards, and activity areas, a reference noise level was found by modeling an outdoor event with 500 people present, averaging 66 dBA Leq over the outdoor area. At 50 feet, the reference noise level is 59.9 dBA Leq at a noise source height of 5 feet. The reference noise level measurement includes music and speaking. Outdoor common area activities are limited to daytime hours only.

Children's Play Area Activity: To describe the noise levels associated with children's play area activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 57.8 dBA L50 for children's play area activity. The children's play area activity noise levels include children playing on swing sets and play structures with background park noise sources, such as parents talking on phones and with other parents. Noise associated with children's play area activities is expected to occur for the entire hour (60 minutes).

Pool/Spa Activity: To describe the noise levels associated with pool and spa activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 63.0 dBA L50 for pool and spa activity. The pool activity noise levels include kids playing, running, screaming, splashing, playing with a ball, and parents talking. Noise associated with pool and spa activities is expected to occur for the entire hour (60 minutes).

Pickleball Court Activity: To describe the noise levels associated with pickleball court activities, Urban Crossroads collected a reference noise measurement. The measured reference noise level at the uniform 50-foot reference distance is 64.8 dBA L50 for pickleball court activity. Pickleball court activity noise levels include the constant talk of the players, the "pop" sound of rackets hitting pickle balls, metal gates closing, and background park noise sources, including people talking. Noise associated with pickleball court activities is expected to occur for the entire hour (60 minutes).

Tennis Court Activity: To describe the noise levels associated with the tennis court activities, Urban Crossroads, collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 49.6 dBA L50 for tennis court activity. The tennis court activity noise levels include an instructor and student playing tennis, the instructor giving constant verbal feedback, the sound of rackets hitting tennis balls, metal tennis court gates closing, and background park noise sources, including people talking. Noise associated with tennis court activities is expected to occur for the entire hour (60 minutes).

To fully describe the exterior operational noise levels from the project, Urban Crossroads developed a noise prediction model using the CadnaA computer program. CadnaA calculates the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of the noise level at each receiver and the partial noise level contributions by noise source.

Using the reference noise levels to represent the project operations that include ground mounted air conditioning units, Urban Crossroads calculated the operational source noise levels that are expected to be generated at the project site and the project-related noise level increases that would be experienced at each of the sensitive receiver locations. The table below shows the project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 44.4 to 49.9 dBA Leq.

Table XIII-7 Daytime Project Operational Noise Levels

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5
Residential Air Conditioning Units	44.5	42.4	41.8	41.7	38.4
Commercial Air Conditioning Unit	35.1	38.8	20.9	19.2	15.0
Basketball/Volleyball Activities	43.9	41.8	40.4	42.9	39.7
Outdoor Activity Area	41.0	34.4	21.0	20.1	16.0
Children's Play Area	42.9	41.2	40.9	43.1	40.5
Pool/Spa Activities	39.6	43.5	29.6	27.2	22.5
Total (All Noise Sources)	49.9	48.9	46.0	47.4	44.4

[1] See Exhibit 8-1 for the noise source locations. CadnaA noise model calculations are included in Appendix 8.2.

Project operational noise levels during the nighttime hours of 10:00 p.m. and 7:00 a.m. are indicated in the table below. The nighttime hourly noise levels at the existing off-site receiver locations are expected to range from 16.5 to 39.2 dBA Leq. The differences between the daytime and nighttime noise levels are largely related to the estimated duration of noise activity.

Table XIII-8 Nighttime Project Operational Noise Levels

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5
Residential Air Conditioning Units	43.6	41.4	40.8	40.7	37.5
Commercial Air Conditioning Unit	0.0	0.0	0.0	0.0	0.0
Basketball/Volleyball Activities	0.0	0.0	0.0	0.0	0.0
Outdoor Activity Area	0.0	0.0	0.0	0.0	0.0
Children's Play Area	0.0	0.0	0.0	0.0	0.0
Pool/Spa Activities	0.0	0.0	0.0	0.0	0.0
Total (All Noise Sources)	43.6	41.4	40.8	40.7	37.5

[1] See Exhibit 8-1 for the noise source locations. CadnaA noise model calculations are included in Appendix 8.2.

Project Operational Noise Level Compliance

To demonstrate compliance with local noise regulations, the unmitigated project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Coachella exterior noise level standards at nearby receiver locations. The table below shows that the mitigated operational noise levels associated with the project will not exceed the City of Coachella daytime and nighttime exterior noise level standards at the existing nearby noise-sensitive receiver locations. Therefore, the mitigated operational noise impacts are considered less than significant at the nearby noise-sensitive receiver locations.

Table XIII-9 Operational Noise Level Compliance

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	49.9	43.6	50.0	45.0	No	No
R2	48.9	41.4	50.0	45.0	No	No
R3	46.0	40.8	50.0	45.0	No	No

[2] Proposed Project unmitigated operational noise levels as shown on Tables 8-2 and 8-3.
[3] Exterior noise level standards, as shown in Table 4-1.
[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

Project Operational Noise Level Increases

To describe the project operational noise level increases, the project operational noise levels are combined with the existing ambient noise level measurements for the nearby receiver locations that may be potentially impacted by project operational noise sources. Noise levels that would be experienced at receiver locations when project-source noise is added to the daytime and nighttime ambient conditions are presented in the tables below.

Table XIII-10 Daytime Project Operational Noise Level Increases

Receiver Location[1]	Total Project Operational Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria[7]	Increase Criteria Exceeded?
R1	49.9	L1	66.2	66.3	0.1	1.5	No
R2	48.9	L2	67.5	67.6	0.1	1.5	No
R3	46.0	L3	66.4	66.4	0.0	1.5	No

R5	37.5	L5	52.5	52.6	0.1	5.0	No

[1] See Exhibit 7-1 for the receiver locations.
[2] Total Project nighttime operational noise levels as shown in Table 8-3.
[3] Reference noise level measurement locations as shown in Exhibit 5-A.
[4] Observed daytime ambient noise levels as shown in Table 5-1.
[5] Represents the combined ambient conditions plus the Project activities.
[6] The noise level increase expected with the addition of the proposed Project activities.
[7] Significance increase criteria as shown in Table 4-1.

As indicated in the tables above, the project will generate daytime operation noise increases ranging from 0.0 to 0.7 dBA Leq and nighttime operational noise level increases ranging from 0.0 to 2.4 dBA Leq at the nearest receiver locations. Project-related operational noise level increases would not exceed the operational noise level increase significance criteria (see Table XIII-1). Therefore, project-related operational noise level increases at the sensitive receiver locations will be less than significant.

Off-Site Transportation Noise Analysis
The project is anticipated to generate 2,144 weekday trips per day. The project would access Calhoun Street, Van Buren Street, and Avenue 52. Approximately 30 percent of the traffic is expected on Van Buren Street and Avenue 52, with the remaining 40 percent using Calhoun Street. Based on the City of Coachella traffic counts on these roads: Calhoun Street has an average daily traffic (ADT) volume of 3,893, Van Buren Street has an ADT volume of 3,799, and Avenue 52 has an ADT volume of 8,316. To generate a 3 dBA increase in traffic noise would generally require a substantial increase in truck traffic relative to the overall mix of vehicles, or a doubling of traffic volumes. The project would not result in the generation of substantial truck trips, and the increase in daily traffic volumes is not expected to generate a perceptible noise level increase (i.e., less than 3 dBA CNEL) at sensitive land uses along affected roadways. Therefore, due to the low traffic volumes generated by the project, the off-site traffic noise levels generated by the project are considered less than significant.

Overall, impacts will be less than significant.

As previously discussed, the GPU EIR determined impacts to be less than significant. As the proposed project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts, increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact.** The GPU EIR concluded that vibration impacts will be less than significant.[242] Groundborne vibration can be described as perceptible rumbling, movement, shaking or rattling of structures and items within a structure. Groundborne vibration can generate a heightened disturbance in residential areas. These vibrations can disturb residential structures and household items while creating difficulty for residential activities such as reading or other tasks. Although groundborne vibration is sometimes perceptible in an outdoor environment, it does not result in the degree of disturbance that is experienced inside a building. Groundborne vibration can be measured in terms of amplitude and frequency or vibration decibels (VdB).

242 City of Coachella, GPU Draft EIR, Noise, at 4.10-20 (2015).

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized in the table below. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and building damage using the following vibration assessment methods defined by Caltrans.

Table XIII-12 Vibration Source Levels for Construction Equipment

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089
Vibratory Roller	0.210

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Project vibration impacts were estimated using the vibration source level of construction equipment provided in the table above and the construction vibration assessment methodology published by the FTA. At distances ranging from 3 to 207 feet from project construction activities, construction vibration velocity levels are estimated to range from less than 0.01 to 5.05 PPV in/sec (see table below). Based on the maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical project construction vibration levels will not exceed the vibration thresholds at any receivers. Therefore, the project-related vibration impacts are considered less than significant during typical construction activities at the project site.

Table XIII-13 Project Construction Vibration Levels

Location[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]						Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jack-hammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level		
R1	104'	0.00	0.00	0.01	0.01	0.02	0.02	0.30	No
R2	130'	0.00	0.00	0.01	0.01	0.02	0.02	0.30	No
R3	59'	0.00	0.01	0.02	0.02	0.06	0.06	0.30	No
R4	56'	0.00	0.01	0.02	0.03	0.06	0.06	0.30	No
R5	834'	0.00	0.00	0.00	0.00	0.00	0.00	0.30	No

[4] Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, Table 19, p. 38.
[5] Does the peak vibration exceed the acceptable vibration thresholds?
"PPV" = Peak Particle Velocity

It should be noted that vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur only during the times that heavy construction equipment is operating adjacent to the project site perimeter. Moreover, construction at the project site will be restricted to the daytime hours, consistent with City of Coachella requirements, eliminating potential vibration impacts during the sensitive evening and nighttime hours.

After construction, the nature of the proposed residential property would not typically involve activities expected to generate excessive vibration or groundborne noise. All activities within the project will be required to adhere to the City's Noise Ordinance. Less than significant impacts are anticipated.

Overall, the project would be consistent with the analysis within the GPU EIR because it would not increase impacts identified within the GPU EIR.

d/e) **Less than Significant Impact.** The GPU EIR concluded that this impact would be less than significant.[243] The project is located approximately 2.8 miles from the Jacqueline Cochran Regional Airport and is located outside of the 70, 65 and 60 CNEL noise contours associated with this facility. Furthermore, the Jacqueline Cochran Regional Airport Land Use Plan does not identify the project as being located within its planning area. Less than significant impacts are expected.

As previously discussed, the GPU EIR determined impacts to be less than significant. As the proposed project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Noise, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not result in substantial increased noise and groundborne vibration, or impact an airport.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR. The GPU EIR adequately addressed the potential for noise impacts related to buildout of the City.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR. The project-specific Noise Analysis conducted by Urban Crossroads, Inc. is consistent with the findings and assumptions of the EIR.
4. No mitigation measures are required within the GPU EIR. Compliance with GPU Policies 1.2 and 3.2, as well as Section 7.04.070 of the CMC and the City's Noise Ordinance ensures that potential impacts to noise would remain less than significant.

243 *Id.*, at 4.10-22 (2015).

Sources: Coachella 2035 General Plan Update, 2015; Coachella General Plan Update Environmental Impact Report, 2015; Department of Finance, E-5 Population and Housing Estimates for Cities, Counties, and the State, 2020-2025.

a) **Less than Significant Impact.** The GPU EIR determined impacts would be less than significant.[244] The GPU EIR stated that growth under the GPU would more than double the Planning Area population at the time the GPU EIR was written. Based on the 2025 California Department of Finance population and housing estimates, the City of Coachella's current total population is approximately 44,384 with an average household size of 4.19 persons per household (pph).[245] The GPU EIR analyzed future growth in Chapter 4.13, *Population and Housing*.[246] Figure 4.13-2 in the EIR forecasts a population of 135,000 by year 2035.[247] The current population is approximately 33 percent of the projected 2035 population of 135,000. The GPU EIR states that the GPU has been prepared to respond to the growth demand projected for Coachella as described by Southern California Association of Governments (SCAG) and the Riverside County Center for Demographic Research. Per the GPU EIR, the City has enough undeveloped land to accommodate generations of growth and has long anticipated growing into a mid-sized City.[248] Additionally, the GPU provided goals and policies that assist development within the City to account for the projected population and employment growth. Goal 1 in the GPU's Land Use and Community Character Element focuses on development regulations that reinforce the City's desire to grow from a small town to a medium sized city in a sustainable and orderly manner.[249] Policies that support this goal establish the orderly growth of the City related to the City limits, annexation areas, sphere of influence, planning area, subareas, general plan land use designations, and specific plans (Policies 1.1 to 1.6).[250] Goal 2 focuses on the successful transformation of Coachella from a small town into a medium-sized, full-service City that is a major economic center for the Coachella Valley.[251] Policies 2.1 through 2.18 support Goal 2 by outlining guiding principles for population and employment growth, the City's character and identity, urban design as identity, natural context, high-quality construction and architecture, architectural diversity, climate-appropriate design, growth and development evaluation, infill development, contiguous development plan, new growth, high priority development areas, growth expansion areas, reserve development areas, steep slopes, range of uses, parks and open space, and open space conservation.[252] The GPU EIR concluded that buildout of the GPU would induce growth relative to economic expansion, population growth, precedent setting action, and encroachment into open space. However, comprehensive programs for growth management provided in the

GPU minimize inappropriate development patterns and environmental impacts.[253]

The project proposes the development of 162 residential units and 240 condo hotel units, for a total of 402 units. The project also proposes various water amenities, including a 9.4-acre Hotel Lagoon, 2.5-acre lake, and 0.4-acre Beach Club Lagoon. Additional amenities include restaurants, a hotel lounge, pool bar, beach bar, fitness and spa area, sport court (i.e., tennis, pickleball, padel, basketball), and event spaces. At buildout, the project will include various amenity spaces and 402 units.

The project proponent determined that the residential units and condo hotel units would function as short-term, long-term, or time-share properties. With this, it is expected that the project will have an annual population of 2,050. The 2,050 population is an average of the projected residents and guests at the site throughout the year. See Table XIV-1, below. Guests of the project would include hotel guests as well as guests of short-term rental properties.

Table XIV-1 Combined Weekday and Weekend Daily Annualized Population

Program Area	Visitor Type	Average Population
Private	Residents	950
Public	Guests	1,100
Project Total		**2,050**

The addition of 2,050 people in the City could increase the current population by approximately 4.6 percent, to 46,434 people, which is still below the projected 2035 population forecast of 135,000. Although the project would contribute to growth within the City of Coachella, significant growth to population, housing, and employment is already anticipated in the City's GPU and GPU EIR. Although the project does include residential units and resort cottages, the project proponent has determined that a majority of these units would be used as second homes, timeshares, short term rentals, and long-term rental properties.

The project is located within the Regional Retail District land use designation, as established in the City of Coachella General Plan. Regional Retail Districts allow 10 to 15 dwelling units per acre. The project site is approximately 87 acres, therefore, up to 1,290 dwelling units are allowed within the project site, potentially resulting in 5,455 people.

In addition, this projected increase is a conservative figure because it assumes that the project's future residents will not be current residents of Coachella. However, it is anticipated that some of the project's residents will be existing residents from within the City and/or from neighboring incorporated and unincorporated areas. Additionally, the hotel guests will not lead to permanent residents of the project.

In 2017, 9.4 percent of jobs in the City of Coachella were in the leisure (hospitality) sector, and 8.1 percent were in the retail sector.[254] As previously stated, the project is located within the City's Regional Retail District land use designation. Regional Retail Districts are intended to provide opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers, or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment. The nature of the Regional Retail District will require the need for employees, and employee growth has been analyzed in the General Plan.

253 City of Coachella, GPU Draft EIR: Population and Housing, at 4.13-12.
254 Southern California Association of Governments, *Profile of the City of Coachella, Local Profiles Report 2019*, at 27–28 (May 2019), https://sustain.scag.ca.gov/sites/default/files/2024-05/coachella_localprofile.pdf.

The project's proposed hotel, commercial, and amenity uses will generate an average of 330 employees. See Table XIV-2, below. The project will not result in unplanned employment, and jobs created at the project will be absorbed by new and existing residents of the City and surrounding jurisdictions.

Table XIV-2 Combined Weekday and Weekend Daily Annualized Employees

Program Area	Visitor Type	Average Employee
Private	Employees	210
Public	Employees	120
Project Total		**330**

The proposed project lies adjacent to the existing paved roadways Avenue 52 (north), Van Buren Street (east), and Calhoun Street (west). Extensions of these roadways are not proposed as part of project implementation. However, according to the GPU, Avenue 52, along the project frontage, is designated as a primary arterial with bicycle facility; Van Buren Street along the project frontage is a major arterial with bicycle facility; and Calhoun Street along the project frontage is designated as a collector with bicycle facility.[255] The proposed project shall build out the street frontages consistent with the City's circulation standards in order to accommodate residents, guests, and staff, and future buildout of the General Plan. These rights-of-way will not indirectly induce unplanned population growth because the roadways currently exist and buildout of Avenue 52, Van Buren Street, and Calhoun Street are projected in the City's General Plan circulation system.

Currently, the project site is not served by public water or sewer facilities. Therefore, the project will connect to existing water and sewer mains. Existing water mains occur on Van Buren Street, approximately 0.26 miles north of the project, and Avenue 52, approximately 0.26 miles east of the project. The project will connect to these mains and extend 12-inch public lines 0.26 miles south from the existing Van Buren Street main, and 0.26 miles west from the existing Avenue 52 main. The project will extend a total of approximately 2,760 feet of 12-inch public water lines to the project. Public 12-inch water lines will occur within the public beach and resort main streets. Public 8-inch water lines will occur throughout the project within the residential areas.

Existing sewer lines exist at the Avenue 52 and Van Buren Street intersection, the Fredrick Street and Avenue 53 intersection, and Avenue 64. The project will connect to the existing 12-inch sewer main at the Avenue 52 and Van Buren Street intersection and extend approximately 174 feet of 12-inch public sewer lines to the project. The proposed public sewer line will connect to a private sewer forcemain, which will connect to private 8-inch sewer mains throughout the site.

The project site is connected to existing electrical facilities in the area. Overhead power lines occur north of the project (along Avenue 52), east of the project (along Van Buren Street), and west of the project (along Calhoun Street).

The project is not anticipated to result in an indirect growth inducing impact because the proposed water and sewer lines will result in projected buildout of this area of Coachella. Therefore, approval and development of this project is not expected to significantly increase growth in the City. Less than significant impacts are expected.

As previously discussed, the GPU EIR determined impacts from population growth to be less than significant. As the proposed project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increased impacts, and there is no new information of substantial importance than identified within the GPU EIR.

255 City of Coachella, Mobility Element of the General Plan, Figure 5-1, at 5-7 (2015), https://www.coachella.org/home/showpublisheddocument/8415/637818911636900000.

b) **Less than Significant Impact.** The GPU EIR concluded this impact to be less than significant because the GPU does not propose displacing existing housing or people.[256] No mitigation is required. The site once existed as an agricultural field, but agricultural production has now stopped. A residential home is located on the project site; however, the residence has been abandoned and is a dilapidated state. Due to the residence's dilapidated state, it does not currently provide housing. Therefore, removal of the residence would not displace a substantial number of existing people or housing, necessitating the construction of replacement housing elsewhere. Less than significant impacts are anticipated.

The GPU EIR determined impacts from displacement of housing to be less than significant. As the proposed project would have a less than significant impact for the reasons detailed above, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Population and Housing, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified. The project would not induce substantial growth or would displace people or housing.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR. The EIR adequately addressed growth related to the buildout of the City.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. The project specific impacts would be less than significant.

256 City of Coachella, GPU Draft EIR, Population and Housing, at 4.13-12.

15. PUBLIC SERVICES –	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	☐	☐	☐	☐	☒

Sources: Coachella 2035 General Plan, 2015; Coachella General Plan Environmental Impact Report, 2015; City of Coachella Website.

a) **Less than Significant Impact**. Impacts related to fire protection were determined to be less than significant by the GPU EIR.[257] The City of Coachella contracts with Riverside County Fire Department (RCFD) for a full range of fire protection services provided 24-hours a day, 7-days a week. The RCFD is staffed with a combination of County and State of California Department of Forestry & Fire Protection employees. They currently operate 106 fire stations that serve approximately two million residents, over 7,000 square miles of Riverside County.[258] The City of Coachella has one fire station, Battalion 6, Coachella Fire Station No. 79, located at 1377 6th Street and approximately 1.5 driving miles, a four-minute drive, northeast of the site. According to the Coachella GPU EIR, Fire Station No. 79 is staffed by 18 full-time personnel, 10 volunteer firefighters, and 10 explorer cadets. Six firefighters are always on duty.[259] The Station is equipped with two Type 1 fire engines which includes a staff of three persons per engine per day. It is the goal of the RCFD fire service to have the first engine company arrive on the scene within five minutes 90 percent of the time. Response times to emergency calls within the City average approximately four minutes or less 80% of the time. Other nearby stations include Indio Fire Station No. 86 (approximately 6 minutes north), and La Quinta Fire Station No. 70 (approximately 6 minutes west).

The project would be consistent with the existing land use designation for the site. Therefore, the anticipated population growth at the site has been accounted for and is consistent with the analysis in the GPU EIR, which found impacts to fire protective services to be less than significant. The proposed project would be consistent with planning projections for future fire protection facilities within the city. Furthermore, the project would be required to pay development impact fees (DIFs) that would contribute the project's fair share towards the funding of future fire protection facilities. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of

257 City of Coachella, 2035 GPU Draft EIR, Public Services, at 4.15-35.
258 Riverside County Fire Dep't, *Emergency Command Center (ECC)*, https://rvcfire.org/our-departments/operational-support/ecc (last visited Nov. 24, 2025).
259 City of Coachella, 2035 GPU Draft EIR, Public Services, at 4.15-2.

substantial importance than identified within the GPU EIR.

b) **Less than Significant Impact**. The GPU EIR determined that impacts related to Law Enforcement were anticipated to be less than significant.[260] Law enforcement services are provided to the City of Coachella through a contractual agreement with Riverside County Sheriff's Department. The Sheriff's department provides 24-hour municipal police services associated with a City police department. The Sheriff's station is located at 86-625 Airport Boulevard in Thermal, approximately 4.8 driving miles southeast of the subject property. Per the City's 2035 General Plan EIR, the Coachella Police Department has 36 sworn officers and two non-sworn personnel, for a total of 38 positions.[261] Twenty-four of these positions are dedicated to the patrol division with the remaining deputies dedicated to special assignments such as the Community Action Team, a School Resources Officer, and Gang and Narcotics Enforcement. The Coachella Police Department divides the City into three beats. The Patrol Division of the department covers an area of 30 square miles.

The project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for future police protection facilities within the city. Furthermore, the project would be required to pay DIFs that would contribute the project's fair share towards the funding of future police protection facilities. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of substantial importance than identified within the GPU EIR.

c) **Less than Significant Impact**. The GPU EIR determined that impacts associated with Schools were anticipated to be less than significant.[262] proposed project lies within the Coachella Valley Unified School District. Although the project does include residential units and condos, the project proponent has determined that a majority of these units would be used as second homes, timeshares, short term rentals, and long-term rental properties. This determination reduces the likelihood that all or most of these units would create new students for the local school district. In addition, the project would be required to follow the Coachella Valley Unified School District (CVUSD) statutory school facility fees on new residential and commercial/industrial construction. The project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for future schools within the city. Therefore, the project would not result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, and impacts would be less than significant.

The project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for future school facilities within the city. Furthermore, the project would be required to pay CVUSD statutory school facility fees that would contribute the project's fair share towards the funding of future school facilities. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than that identified within the GPU EIR.

d) **Less than Significant Impact**. The GPU EIR determined that impacts to Parks would be less than significant.[263] The Coachella Valley Recreation and Park District (CVRPD) provide park and recreational services to the City. Per the City of Coachella website, there are eight public parks located within the City of Coachella. The GPU EIR proposed policies that address reductions in potential environmental impacts to park facilities from the buildout of the General Plan. These include Policies 2.13, 2.17, 2.18, 3.6, 4.7, 5.16, 8.2, 8.4, and 9.5 of the Land Use and Community Charter, Policies 8.1 and 8.5 of the Community Health and Wellness Element, Policies 2.8, 2.9, 3.7, 3.8, and 13.1 through 13.25 of the Sustainability + Natural Environment Element, Policy 3.6 of

260 *Id.*, at 4.15-38.
261 *Id.*, at 4.15-8.
262 *Id.*, at 4.15-40.
263 *Id.*, at 4.15-43.

the Safety Element, and Policies 1.8 and 2.17 of the Infrastructure + Public Services Element.[264]

The proposed project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for impacts to park facilities within the city. The project would be required to pay DIFs to contribute to the project's fair share funding of future facilities. Therefore, the project would not result in substantial adverse physical impacts associated with the provision of new or physically altered public facilities, and impacts would be less than significant.

The project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for future park and recreational services within the city. Furthermore, the project would be required to pay DIFs that would contribute the project's fair share towards the funding of future park and recreational services. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of substantial importance than identified within the GPU EIR.

e) **Less than Significant Impact**. The GPU EIR determined that impacts to Medical and Healthcare Facilities would be less than significant.[265] Demand for medical facilities will increase as population increases, and this additional development within the Planning Area may result in environmental impacts. The GPU accommodates future development of medical facilities within several land uses and outlines policies to promote sustainable design practices, improve street connectivity, and efficient development. These policies include Policies 8.1, 8.2, and 14.1 of the Land Use and Community Charter, Policies 1.1, 1.2, 1.6, 2.3, 2.6, 2.7, 2.11, 2.14, 3.1, 3.7, and 3.8 of the Sustainability + Natural Environment Element, Policies 9.4, 9.9, 9.10, and 9.11 of the Community Health + Wellness Element, and Policy 8.3 of the Mobility Element.[266]

The Proposed Project would be consistent with the existing land use designation for the site and therefore would accommodate anticipated population growth and would be consistent with planning projections for future facilities within the City. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Public Services, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed impacts to public services.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR..
4. No mitigation measures are required within the GPU EIR for public services. Compliance with the above listed General Plan policies ensures that potential impacts to public services would remain less than significant.

264 City of Coachella, 2035 GPU Draft EIR, Public Services, at 4.15-44.
265 *Id.*, at 4.15-49.
266 *Id.*, at 4.15-49.

16. RECREATION –	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☐	☒

Sources: Coachella 2035 General Plan, 2015; Coachella General Plan Environmental Impact Report, 2015; City of Coachella Website.

a-b) **Less than Significant Impact.** The GPU EIR did not specifically analyze Recreation. Impacts to recreation were analyzed within Section 15, Public Services, of the GPU. Impacts to Parks were anticipated to be less than significant by the GPU EIR.[267] As previously stated, the GPU EIR proposed policies that address reductions in potential environmental impacts to park facilities from the buildout of the General Plan. These include Policies 2.13, 2.17, 2.18, 3.6, 4.7, 5.16, 8.2, 8.4, and 9.5 of the Land Use and Community Charter, Policies 8.1 and 8.5 of the Community Health and Wellness Element, Policies 2.8, 2.9, 3.7, 3.8, and 13.1 through 13.25 of the Sustainability + Natural Environment Element, Policy 3.6 of the Safety Element, and Policies 1.8 and 2.17 of the Infrastructure + Public Services Element.

The proposed project would include the development of residential units and condo hotel units. The residential and condo components of the proposed project will primarily operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models. This will significantly reduce any use of regional parks or recreational facilities. The project also proposes the development of various water amenities, including a 9.4-acre Hotel Lagoon, 2.5-acre lake, and 0.4-acre Beach Club Lagoon. The Beach Club Lagoon will be open to the public for use, providing the community with additional recreational space. Additional amenities include restaurants, a hotel lounge, pool bar, beach bar, fitness and spa area, sport courts (i.e., tennis, pickleball, padel, basketball), and event spaces. The private recreational amenities will provide residents with on-site recreation options. This will reduce impacts on regional recreational facilities because residents will be inclined to utilize the facilities on-site. At buildout, the project will include approximately 279,000 square feet of amenity spaces. The impact to existing recreation facilities associated with the project is not expected be substantial due to the amenities, both public and private, provided on the project site and its consistency with land use designations. The anticipated population growth and subsequent impact on recreational facilities associated with the project has been accounted for in the GPU EIR. Therefore, less than significant impacts are anticipated. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Recreation, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed n the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the potential impacts

267 City of Coachella, 2035 GPU Draft EIR, Public Services, at 4.15-43.

to recreation.

3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR..

4. No mitigation measures are required within the GPU EIR for recreation. Compliance with General Plan Policies 2.13, 2.17, 2.18, 3.6, 4.7, 5.16, 8.2, 8.4, and 9.5 of the Land Use and Community Charter, Policies 8.1 and 8.5 of the Community Health and Wellness Element, Policies 2.8, 2.9, 3.7, 3.8, and 13.1 through 13.25 of the Sustainability + Natural Environment Element, Policy 3.6 of the Safety Element, and Policies 1.8 and 2.17 of the Infrastructure + Public Services Element ensures that potential impacts to public services would remain less than significant.

17. TRANSPORTATION – Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? Would the project conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☐	☐	☐	☐	☒
b) Conflict with the Riverside County Transportation Commission (RCTC) Congestion Management Program (CMP), including, but not limited to Level of Service standards and travel demand measures, or other standards established by the RCTC for designated roads or highways?	☐	☐	☐	☐	☒
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) or impede emergency vehicle access?	☐	☐	☐	☐	☒
e) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☐	☐	☐	☐	☒

a) Sources: Coachella 2035 General Plan, 2015; Coachella General Plan Environmental Impact Report, 2015; Cova Transportation Analysis Report, Fehr and Peers, November 2025 (Appendix I). **Significant and Unavoidable Impacts.** The 2015 GPU EIR concluded that regional roadways are projected to face significant and unavoidable congestion due to the GPU and overall growth in the Coachella Valley.[268] These impacts stem from both the City's proposed General Plan land uses and development occurring outside Coachella, as these regional facilities serve broader travel demands. As a result, full mitigation is not feasible for impacted regional roadways.

268 City of Coachella, 2035 GPU Draft EIR, Traffic, at 4.9-33.

Future conditions also show I-10 operating at LOS E/F and SR-86 South at LOS F, creating substantial congestion within the Planning Area. Because the necessary mitigation measures fall outside the City of Coachella's jurisdiction, these regional impacts remain significant and unavoidable.

Impacts to City (local) roadways are anticipated to be less than significant with mitigation. Mitigation consists of payment of DIFs to be used for the physical improvements identified in the GPU EIR.[269]

The proposed project is located on approximately 87 acres at the southwest corner of Van Buren Street and Avenue 52 in the City of Coachella. The western boundary of the property is formed by Calhoun Street. Primary access to the proposed project, as well as emergency access to the site will be provided on Van Buren Street, Avenue 52 and Calhoun Street. Existing on-street bike lanes are located on Van Buren Street. No sidewalks are found in the vicinity.

The project is located within the Regional Retail District land use designation, as established in the City of Coachella GPU. Regional Retail Districts allow 10 to 15 dwelling units per acre and a commercial FAR of 0.35 to 2.0.

Project Summary

The project proposes to develop a mixed used development with both private and public components. The two primary sectors are described as follows:

- **Private Sector**: Includes 162 single family recreational home dwelling units and 240 condo-hotel recreational home units, both of which would operate under fractional ownership, timeshare, second home, and short term and long-term rental models. These land uses will be complemented by significant on-site resort amenities (i.e. dining, entertainment, recreation).

- **Public Sector**: Includes a beach club, restaurant, and an event tent. These subareas are expected to operate with a typical weekday capacity of 500 persons and a weekend capacity of 1,500. The public sector components will generally be operated between 11:00 AM and 2:00 PM, with the highest level of activity occurring in the evening between 7:00 PM and 8:00 PM, and on weekends.

The proposed project is designed so that the combined resort features of dwelling units, dining, amenities, outdoor/recreational spaces, and entertainment, create a self-contained destination. The project expects to include high internal trip capture, with most guests staying onsite for lodging, recreation, dining, and entertainment. The public facing restaurants, beach club, and event spaces are largely anticipated to serve onsite guests.

Private sector access will be provided by an entry/exit driveway on Avenue 52 and a driveway on Van Buren Street. Public sector access points are aligned perpendicular to Calhoun Street and Avenue 52. There is an additional right in/right out entrance for back of house staff on Van Buren Street.

The Transportation Analysis Report (TA) (Appendix I) was prepared to provide an overview of Project characteristics, such as trip generation, distribution and assignment that explains how Project traffic will interact with the surrounding transportation network. Additionally, the TA includes a VMT screening assessment for informational purposes.

Intersection operations analysis was based on the procedures contained in the Transportation Research Board (TRB) *Highway Capacity Manual* (HCM), 7th Edition.[270] This methodology is considered the state of the practice methodology for evaluating intersection operations. The traffic modeling and signal timing optimization software package Synchro (Version 12) was utilized to analyze signalized intersections. The level

269 *Id*., at 4.9-29.
270 Transportation Research Board, *Highway Capacity Manual, 7th Edition: A Guide for Multimodal Mobility Analysis* (Nat'l Acad. of Scis., Eng'g & Med. ed., 2022).

of service and capacity analysis performed by Synchro takes into consideration optimization of signalized intersections within a network. Unsignalized intersections are also evaluated using methodology described in the HCM. The LOS rating is based on the weighted average control delay expressed in seconds per vehicle.

The following parameters are consistent with the *County of Riverside Transportation Analysis Guidelines for Level of Service & Vehicle Miles Traveled* (2020)[271] and HCM for use in the LOS analysis:

- Measured Peak Hour Factors (PHF) were utilized in the Existing (2025) and Opening Year (2030) Scenarios.
- Signal timing information for study intersections 6, 8, 9, 10, 11, and 12 were provided by the City of Coachella. Signal timing information for study intersections 13 and 14 were provided by Caltrans. These signal timings were used for the Existing (2025) and Opening Year (2030) Plus Project Scenarios.
- A standard heavy vehicle factor of 2% was used for all analysis scenarios.

Traffic counts were collected in May 2025 during morning peak period (7:00 to 9:00 AM) and evening peak period (4:00 PM to 6:00 PM) at the study intersections. Counts were collected during fair weather, while school was in session, and during a typical (non-holiday) weekday.

A Big Data source, Streetlight, was reviewed to compare May travel patterns against Spring travel patterns in the City to verify that peak season travel was accurately accounted for. Streetlight data indicated that March 2025 traffic volumes were approximately 15% higher than those observed in May 2025. Streetlight traffic volumes data were collected within the immediate Census Block Groups to the project site – extending about 5 miles in all directions. A cumulative average of all block groups showed a 15% decline between March and May. Traffic counts were thus adjusted to scale collected May 2025 traffic counts to the peak seasonal volumes of March by a factor of 15%.

The potential impacts to traffic and circulation were evaluated for each of the following conditions:

- Existing (2025) Conditions
  - Existing (2025) traffic volumes, lane geometries and traffic signal timing.
- Opening Year (2030) Plus Project Conditions
  - Existing (2025) traffic volumes.
  - Opening Year (2030) volumes (ambient growth rate of 2% per year)
  - Project Traffic
- Opening Year (2030) Plus Project Plus Cumulative Project Conditions
  - Opening Year Volumes (2030)
  - Project Traffic
  - Cumulative Projects within a 5-mile radius of the project.

Based on the City-approved scoping agreement, the study area consists of the following 14 study intersections:

1. West Driveway 1 / Calhoun Street
2. West Driveway 2/ Calhoun Street
3. Calhoun Street/Avenue 52
4. North Driveway 1/Avenue 52
5. North Driveway 2/Avenue 52
6. Van Buren Street/Avenue 52
7. East Driveway/Van Buren Street

14. SR-86 NB Ramps/Dillon Road

Future Traffic Conditions

Trip generation estimates for the private sector components were sourced from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (12th Edition, 2025) land use codes. The intended land use characteristics (ownership and use) were considered to apply the ITE land use code with the most representative overlap. The estate lots, zero lot line lots, bungalow lots, VIP suites and the condo hotel units will be a majority (>75%) fractional ownership second homes that will be used for short-term and long-term rental, ITE code 260 "Recreational Homes" was applied. The condo hotel units may be sold as individual, one-bedroom units or up to four-bedroom; and area expected to operate like recreational home ITE characterized units.

Trip generations for the public sector (beach club and restaurant) used the most comparable ITE land use code that represented the best matched time of day distribution for the planned components; calculations were based on seats to match the developer's weekday and weekend peak person capacity assumptions. The event tent was calculated using assumptions, which similarly derived from the peak capacity.

The project is positioned to achieve significant internal capture (33%) of trips between the onsite uses with the expectation that a majority of onsite guests will stay on the property once they arrive. Many of guests' daily needs would be accommodated by the resort lodging, recreation, dining, and entertainment options without leaving the property. A significant share of the public facing restaurant, beach club, and event space are anticipated to be used by onsite guests.

The ITE *Trip Generation Manual* (12th Edition, 2025) trip generation rates were queried to determine trip generation for the proposed project.[272]

Table XVII-1 Project Trip Generation Rates[1] Weekday

Project Trip Distribution and Assignment

The project trip distribution reflects the likely approach and departure routes to the project site. Trip geographic distribution would be as follows: 60% north, 5% south, 10% east, and 25% west. Access to the project site will be provided from Calhoun Street, Avenue 52, and Van Buren Street. Project trips would utilize Van Buren Street or Calhoun Street to access the project, with most trips travelling to/from I-10 via Dillon Road. There are six total project driveways: two along Calhoun Street (one full access and one right in right out only), one full access driveway along Avenue 52, one full access driveway along Van Burent Street and a right in/right out access for back of house. Calhoun Street would represent 40%, Avenue 52 30% and Van Buren Street 30% of entry/exit trip percentages for the project.

Opening Year (2030) Plus Project Traffic Conditions

Opening Year (2030) intersection operations were evaluated using the HCM methodology. Opening year lane configurations and intersection control types changed as documented in the TA including adjacent roadway improvements and as summarized below:

- The project will implement an additional lane in the direction adjacent to the project on the north and west side,
- The project will implement two lanes in the direction adjacent to the project on the east side of the project, and
- Additional lanes were added based off SCAG RTP.

Table XVII-3 below illustrates that under the Plus Project (2030) Conditions, all but two intersections are expected to operate at LOS D or better. The two intersections are:

3. Calhoun Street and Avenue 52
6. Van Buren Street and Avenue 52.

Table XVII-3 Intersection Analysis for Opening Year (2030) Plus Project Traffic Conditions

ID - Study Intersection	Traffic Control[1]	AM Peak Hour		PM Peak Hour	
		Delay[2]	LOS	Delay[2]	LOS
1. West Driveway 1/Calhoun Street	SSSC[1]	1	A	1	A
2. West Driveway 2/Calhoun Street	SSSC	1	A	1	A
3. Calhoun Street/Avenue 52	AWSC[1]	**95**	**F**	**156**	**F**
4. North Driveway 1/Avenue 52	SSSC	1	A	1	A
5. North Driveway 2/Avenue 52	SSSC	1	A	1	A
6. Van Buren Street/Avenue 52	Signal[1]	**56**	**E**	34	C
7. East Driveway/Van Buren Street	SSSC	1	A	1	A

14. SR-86 NB Ramps/Dillon Road	Signal	22	C	16	B

1. Signal = Traffic Signal; AWSC = All Way Stop Control; SSSC = Side Street Stop Control
2. Deficient intersection operations are noted in bold text (below LOS D)
3. Delay estimates above 250 seconds are out of bounds of the Syncro software

Opening Year 2030 Cumulative Projects

The City identified a list of Cumulative projects within a five-mile radius of the proposed project to be analyzed with the Plus Project conditions at opening (2030). The intersection analysis identified five intersections that would be deficient at the 2030 scenario.

- Calhoun Street and Avenue 52 (Intersection 3)
- Van Buren Street and Avenue 52 (Intersection 6)
- Van Buren Street and Avenue 48 (Intersection 11)
- Dillon Road and Avenue 48 (Intersection 12)
- SR-86 and Southbound Ramps and Dillion Road (Intersection 13)

The TIA identified improvements to bring the operationally deficient intersections to acceptable levels (LOS D or better), which will require a traffic signal, traffic signal timing updates, and/or converting a turn lane to a shared turn lane through. The Project's fair share contribution toward these improvements was also identified. The five intersections, intersection improvements and fair share contributions are discussed subsequently.

Opening Year (2030) Improvements

Feasible measures were identified to improve intersection operations at deficient intersections to an acceptable LOS (LOS D or better).

Calhoun Street and Avenue 52 (Intersection 3) – This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. A traffic signal is warranted and recommended at Calhoun and Avenue 52 to improve operations. Signal warrant analyses for project driveways (Intersections 1 and 2, 4 and 5, and 7) indicate that signals are not warranted. Detailed signal warrant analysis are provided in Appendix G of the TA.

Van Buren Street and Avenue 52 (Intersection 6) – This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing splits and increasing cycle lengths would improve to acceptable conditions. Communication with Coachella Valley Sync is not needed because intersection 6 is uncoordinated.

Van Buren Street and Avenue 48 (Intersection 11) – This intersection is expected to operate at LOS E during PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, convert southbound right lane to a shared southbound right through.

Dillon Road and Avenue 48 (Intersection 12) – This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing the traffic signal timing would improve to acceptable conditions.

SR-86 and Southbound Ramps and Dillion Road (Intersection 13) – This intersection is expected to operate at LOS E during PM peak hour in Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing the traffic signal timing would improve to acceptable conditions.

The project will be required to pay a fair share of contribution towards the improvements at the five intersections recommended above. Fair Share calculations were performed for the deficient intersections and are as follows:

- Calhoun Street and Avenue 52 (Intersection 3) – 18.6%
- Van Buren Street and Avenue 52 (Intersection 6) – 23.1%
- Van Buren Street and Avenue 48 (Intersection 11) – 13.2%
- Dillon Road and Avenue 48 (Intersection 12) – 8.9%
- SR-86 and Southbound Ramps and Dillion Road (Intersection 13) – 7.0%

Table XVII-4 below illustrates that at the Opening Year (2030) Plus Project and Cumulative Projects and proposed improvements, all intersections are expected to operate at LOS D or better.

Table XVII-4 Intersection Analysis for Opening Year (2030) Plus Project and Cumulative Projects with Improvements

ID - Study Intersection	Traffic Control[1]	AM Peak Hour		PM Peak Hour	
		Delay[2]	LOS	Delay[2]	LOS
1. West Driveway 1/Calhoun Street	SSSC[1]	1	A	1	A
2. West Driveway 2/Calhoun Street	SSSC	1	A	1	A
3. Calhoun Street/Avenue 52	AWSC[1]	34	C	28	C
4. North Driveway 1/Avenue 52	SSSC	1	A	1	A
5. North Driveway 2/Avenue 52	SSSC	1	A	1	A
6. Van Buren Street/Avenue 52	Signal[1]	55	D	45	D

2. Deficient intersection operations are noted in bold text (below LOS D)Delay estimates above 250 seconds are out of bounds of the Syncro software

LOS Conclusion

The analysis prepared traffic forecasts for the following scenarios and evaluated operations at study intersections. The following results were identified:

• Existing (2025) Conditions, **one intersection operates at D or worse**
• Opening Year (2030) Plus Project, **two intersections operate at D or worse**
• Opening Year (2030) Plus Project Plus Cumulative, **five intersections operate at D or worse**

Improvements for the five impacted intersections were identified in the TIA to bring all intersections to acceptable LOS. The project's fair share contribution to these improvements was calculated. Following implementation of project improvements, payment of Fair Share Contributions and DIFs. The proposed project is not expected to have a significant adverse impact on the area transportation network relative to LOS.

The project would be consistent with the GPU land use designation; therefore, the project would not induce substantial unplanned population growth in the area as development of the site was accounted for within the GPU. Additionally, the project would not generate additional vehicle trips that were not accounted for in the GPU EIR. The project will be required to pay DIFs. Therefore, the project would be consistent with the analysis in the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than that identified within the GPU EIR.

Program, Plan, Ordinance, and Policy Review

The GPU includes policies related to circulation; an impact is considered significant if the project conflicts with an adopted policy within the Mobility Element (ME) of the General Plan. Policies applicable to the Project include:

ME-1.5 Require that the City consider improvements to add roadway capacity only after considering improvements to other modes of travel.

- The improvements identified in Chapter 6 do not include roadway widenings that would increase capacity. Instead, signal timing adjustments are recommended to improve traffic flow and intersection operations.

ME-2.3 Periodically review and update designated truck routes to ensure efficiency and limit negative impacts on residential areas and other sensitive land uses.

- The project is not expected to generate heavy vehicle trips to or from the site.

ME-3.4 Require that all development or redevelopment projects provide pedestrian connections to the external pedestrian network.

- The project includes construction of new sidewalks along the project frontage on Calhoun Street, Avenue 53, and 52nd Avenue, improving pedestrian connectivity.

ME-4.1 Require that the City provide additional bicycle facilities along all roadways in the City which are built or reconstructed in the City except in those instances in which there is insufficient right-of-way or other physical limitations.

- The project proposes construction of bicycle facilities along the project frontage on Calhoun Street, Avenue 53, and 52nd Avenue.

ME-5.4 Encourage new large residential or commercial developments to locate on existing and planned transit routes.

- The project site is currently not served or planned to be served by any public transit services. The City will continue to monitor development patterns and transit demand and will adjust service as needed to support travel options.

ME-6.1 Require that new development pay for its fair share of construction costs for new and/or upgraded transportation infrastructure needed to accommodate this development.

- Chapter 6 outlines required intersection improvements and the project's fair share contribution. The project will also widen its adjacent roadway frontage consistent with the City's General Plan buildout.

ME-8.3 Prioritize connections between the City's bicycle and pedestrian network to regional facilities such as the CV Link and other regional trail facilities.

- The project includes construction of bicycle facilities that enhance connectivity and contribute to the City's overall regional bicycle and pedestrian network.

Congestion Management Plan Transportation Uniform Mitigation Fee Program

The County Congestion Management Plan (CMP) establishes a minimum standard of LOS E for designated regional roadways. The Transportation Uniform Mitigation Fee (TUMF) program identifies network backbone and local roadways that are needed to accommodate growth. The regional program ensures that developments

pay their fair share and that funding is in place for the construction of facilities needed to maintain an acceptable level of service for the transportation system. The TUMF is a regional mitigation fee program and is imposed and implemented in every jurisdiction in Riverside County. The Project will be required to pay TUMF.

The project proponent will be required to contribute DIFs and participate in the TUMF program and pay a fair share contribution to five study area roadways. Following the payment of required fees such as TUMF and DIF and fair share contribution, less than significand impacts are anticipated relative to the CMP.

The proposed project will not conflict with adopted program plans, ordinances, or policies regarding the circulation system, including public transit, roadway, bicycle, or pedestrian facilities. Less than significant impacts are anticipated. Therefore, the project would be consistent with the analysis in the GPU PEIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than that identified within the GPU EIR.

Vehicle Miles Travelled (VMT)

The current recommended metric in the CEQA guidelines for transportation impacts is VMT per capita per SB 743. The legislative intent of SB 743 is to balance the needs of congestion management with statewide goals for infill development, promotion of public health through active transportation and reduction of GHG emissions. This discussion is presented for informational purposes.

VMT is a measure of the amount of travel for all vehicles in a geographic region over a given period of time, typically a one-year period. The analysis of VMT (SB743) attributable to a project in CEQA went into full effect statewide on July 1, 2020. According to the Governor's Office of Planning and Research (OPR) proposed CEQA Guideline implementing SB 743, projects that decrease vehicle miles traveled in a project area compared to existing conditions should be considered to have a less than significant transportation impact. The California Air Pollution Control Officers Association (CAPCOA) publishes a resource for Local Government to assess emission reductions from greenhouse gas mitigation measures. The CAPCOA report[274] recognizes that land use planning provides the best opportunity to influence GHG emissions through a reduction in overall VMT.

According to the National Center for Sustainable Transportation, a number of cities, regions, and states across the United States have begun to deemphasize vehicle delay metrics such as LOS. In their place, policymakers are considering alternative transportation impact metrics that more closely approximate the true environmental impacts of driving. VMT is one metric that is increasingly being utilized.

Goals for reducing GHGs have been the primary motivation for the shift to VMT measures. Reductions in VMT produce many other potential benefits such as reductions in other air pollutant emissions, water pollution, wildlife mortality, and traffic congestion, as well as improvements in safety and health and savings in public and private costs.

As described throughout the EIR, and in accordance with State legislation, the GPU and CAP include policies and measures aimed at improving sustainability, including minimizing VMT and reducing GHG emissions. These policies included Neighborhood Site Enhancements: GP policies and actions include focusing on pedestrian safety, improving the connections between neighborhoods and commercial areas for pedestrians and cyclists, and providing traffic calming measures. Examples of these GP policies include M 1.1, M 1.2, M 1.5, M 2.1, M 2.2, M 3.1, M 3.2, and M 3.3. Other policies address Transit Service. Providing access to transit for City residents and employees can reduce automotive use. There are currently five Sunline Transit Bus Routes that provide access to the City. As part of this measure, the City would coordinate with Sunline Transit to increase transit service throughout the City. Examples of these policies include M 5.1, M 5.2, M 5.3, M 5.4, M 5.5, M 5.7 and M 8.1

274 CAPCOA, Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, Fehr and Peers, February 14, 2022, available at https://www.caleemod.com/handbook/full_handbook.html

The proposed multimodal circulation network within the City would reduce dependence on fossil fuel energy sources by reducing VMT per capita in the City and promote development of Complete Streets. Specifically, the GPU provides a mix of land uses and supports a compact, transit-oriented development pattern consistent with state and regional planning goals.

Methodology

The City of Coachella utilizes the December 2020 County of Riverside Transportation Analysis Guidelines (County's TA Guidelines). The County's TA Guidelines set forth screening criteria under which Projects are not required to submit detailed VMT analysis. This guidance for determination of non-significant VMT impact is primarily intended to avoid unnecessary analysis and findings that would be inconsistent with the intent of SB 743. VMT screening criteria for development projects include the following:

- **Transit Priority Area (TPA)**: Presumed less than significant VMT impact for projects located in TPAs (1/2 mile of a rapid transit station or high-frequency bus route).
- **Low VMT Area Screening:** Presumed less than significant VMT impact for projects located in low VMT generated model traffic analysis zones (TAZs). These TAZs generate total daily VMT/SP that is less than the City baseline level.
- **Project Type Screening:** Local serving retail projects (per OPR's Technical Advisory less than 50,000 square feet), local essential services (i.e. day care, Police, Medical), small projects (i.e. DU <110 Units, general office less than 165 thousand square feet (TSF), parks) and affordable housing projects are assumed to have a less than significant VMT impact.

Project Screening

- The proposed project is not located in a TPA, within ½ mile of a rapid transit station or high frequency bus route. These services are currently not available in the Coachella Valley.
- The proposed project is not located in a low VMT generated model TAZ.
- The proposed project does not include local serving retail or local essential services, nor is it considered a small project or an affordable housing project.

The proposed project does not satisfy any of the screening criteria. Therefore, to determine if the project would result in a significant transportation impact relative to VMT, a full VMT modeling and forecasting assessment was completed.

VMT Analysis

VMT forecasts were prepared using the Riverside County Travel Demand Model (RIVCOM) version 4.0.1. Given the seasonal fluctuations in tourism in the Coachella region, and the increased weekend programming at the public facing elements of the project, an average daily service population (SP) was calculated to represent the project in the typical weekday model. This figure serves as a midpoint between the lowest and highest levels of employment and guest population that is reflective of the annualized demand.

The trip generation model was evaluated to confirm that employment categories—such as retail, arts and entertainment, and other services—appropriately reflect the nature of the Project. The model produced trip estimates approximately 50 percent higher than the project's own forecast, largely due to an underestimation of the internal capture expected. To maintain a conservative approach, no modifications were made to the model's forecasts. As noted in Table XVII-5, the projected total Annualized averages were estimated to be 2,050 Resident Guests and Guests and 330 Employees.

Table XVII-5 Project Service Population (SP)

Program Area	Visitor Type	Annualized Average	
		Population	Employment
Private	Resident Guests	950	-
	Employees	-	210

Public	Employees	-	120
	Guests	1,100	-
	Project Total	**2,050**	**330**

Source: Fehr & Peers, 2025

VMT estimates were prepared under the following conditions:

- No Project (2045)
- Cumulative (2045) Plus Project

The No Project conditions model runs were utilized to calculate the project-generated threshold of significance, and the county-wide boundary VMT without the project, and the city-wide boundary VMT without the project. The Plus Project conditions model runs were used to determine project related VMT.

County Estimates

Table XVII-6 presents the project VMT findings compared to the county-wide thresholds. The Cumulative (2025) Plus Project scenarios, including the Project VMT per SP, the project VMT Boundary per SP and the total net regional change would each be below the County Average.

Table XVII-6 County-wide and Project VMT Estimates

Scenario	Project	County-wide Cumulative No Project (Threshold)	Delta	Threshold Exceeded
OD VMT per Employee	22.64	28.41	(5.78)	No
Boundary VMT	80,751,251	80,760,223	(8,972)	No
Boundary VMT / SP	17.78	17.79	(0.01)	No
Total Net Regional VMT Change[275]			(1,906)	No

City Estimates

Table XVII-7 presents the project VMT findings compared to the city-wide thresholds. The Cumulative (2025) Plus Project scenarios, including the project VMT per SP, the Project VMT Boundary per SP and the total net regional change would each be below the City Average.

Table XVII-7 City-wide and Project VMT Estimates

Scenario	Project	City-wide Cumulative No Project (Threshold)	Delta	Threshold Exceeded
OD VMT per Employee	22.64	28.41	(5.78)	No
Boundary VMT	80,751,251	80,760,223	(8,972)	No
Boundary VMT / SP	17.78	17.79	(0.01)	No
Total Net Regional VMT Change[276]	--	--	(1,906)	No

Conclusions

Since the project-level VMT estimates for the project would be below the established significance thresholds for both the county-wide no project and city-wide cumulative no project, the project is expected to result in less than significant impacts relative to VMT.

The project is consistent with the GPU and will not conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all

275 RIVCOM, 2025.
276 Ibid.

modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit. The project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is not new information of substantial importance than identified within the GPU EIR.

b) **Significant and Unavoidable Impact**. The GPU EIR concluded that similar to City roadways, growth in the City would create additional vehicular trips that will travel on regional roadways such as I-10 and SR 86 South. These facilities are with the jurisdiction of the Riverside County CMP, which is responsible for monitoring their operations. The incremental vehicular traffic associated with the buildout of the General Plan could create additional congestion on these CMP roadways. As mentioned previously, City policies cannot fully mitigate regional impacts as development outside of the city contributes to increase traffic volumes on these facilities impacts to these regional facilities are expected to be significant and unavoidable (Page 4.9-33).

Congestion Management Plan

The CMP requires a LOS E or better for regional roadways.[277] As noted previously the generation, distribution, and management of project traffic is not expected to conflict with the CMP; no CMP roadways were identified in the vicinity of the project. The project and background traffic will not exceed City level of service standards or travel demand measures, or other standards established by the City or Riverside County Transportation Commission (RCTC) for designated roads or highways.

The TUMF program identifies network backbone and local roadways that are needed to accommodate growth. The regional program was put into place to ensure that developments pay their fair share and that funding is in place for the construction of facilities needed to maintain an acceptable level of service for the transportation system. As mentioned previously, the TUMF is a regional mitigation fee program implemented in every jurisdiction in Riverside County. The Project will be required to pay TUMF.

The project is consistent with the analysis in the GPU EIR because it would not generate additional vehicle trips that were not accounted for in the GPU EIR. The project will be required to pay DIF and TUMF. Therefore, proposed project would not conflict with the RCTC CMP, including but not limited to level of service standards and travel demand measures, or other standards established by the RCTC for designated roads or highways.

The project would be consistent with the analysis in the GPU EIR because it would not create new impacts orincrease impacts, and there is no new information of substantial importance than that identified within the GPU EIR.

c) **Less than Significant Impact.** The GPU EIR concluded that impacts to air traffic patterns would be less than significant.[278] The GPU was determined to not have any direct or indirect impact upon any existing air facilities. The GPU fully incorporated the Airport Land Use Plan, which limits any impacts which might occur. See Section 9 Hazards and Hazardous materials for further discussion.

The project would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location, that results in substantial safety risks, and impacts would be less than significant. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts orincrease impacts, and there is not new information of substantial importance than identified within the GPU EIR.

d) **Less than Significant Impact.** The GPU EIR concluded that the impacts relative to increasing hazards due to design features or incompatible uses or impeding of emergency vehicle access would be less than significant.[279]

277 Riverside County Transportation Commission, *Riverside County Congestion Management Program*, at 4-1 (2011).
278 City of Coachella, 2035 GPU Draft EIR, Traffic, at 4.9-34.
279 *Id*., at 4.9-34

The project would construct adjacent improvements to Avenue 52, Van Buren Street, and Calhoun Street. These roadway improvements would be designed and constructed consistent with all applicable *City of Coachella Infrastructure Development Standards*[280] as well as Fire Department roadway requirements. Private sector access will be provided by an entry/exit driveway on Avenue 52 and a driveway on Van Buren Street. Public sector access points are aligned perpendicular to Calhoun Street and Avenue 52. These driveways will be designed to incorporate proper stacking, sight distance and intersection control (e.g. left turn pockets) features.

Prior to construction, both the Fire Department and Police Department will review the project site plan to ensure safety measures are addressed, including emergency access. The project is not anticipated to result in inadequate emergency access.

Freeway Off-Ramp Queueing Assessment

Storage capacity for all SR-86 northbound and southbound off-ramps in the study area were evaluated using HCM 7th Edition methodologies. Existing storage capacities were compared against 95th percentile queue estimates prepared using the Synchro 12 software.

The following two intersections were included in the off-ramp queuing analysis for the Opening (2030) scenarios:

- 13. SR-86 SB Ramps and Dillion Road
- 14. SR-86 NB Ramps and Dillion Road

No movements are forecasted to exceed existing storage capacity under Opening Year (2030) Plus Project and Cumulative Projects. The queuing analysis summary in Table 6.2 presents results for one scenario Opening Year with Project and Cumulative Projects only. This scenario has higher traffic volumes than Opening Year with Project which queues are not reported since lower traffic volumes typically result in shorter queues. Detailed queuing worksheets are provided in Appendix F of the TA.

The project's pedestrian access points will be located with adequate visibility, and project-generated traffic will be consistent with existing traffic in the area. No offsite roadway improvements are proposed as part of the project.

A Traffic Control Plan may be required as a condition of approval to be implemented throughout all construction activities. This plan will work to reduce potential impacts that may arise due to conflicts with construction traffic. Impacts will be less than significant.

The project is consistent with the existing land use designation and will provide an internal circulation system without sharp curves or dangerous intersections that is subject to review and approval by the City Traffic Engineer and the Fire Department during standard City review processes. Therefore, the project would not substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses, and impacts would be less than significant. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

e) **Less than Significant Impact.** The GPU concluded impacts associated with non-motorized transportation including public transit, bicycle, or pedestrian facilities would be less than significant.[281]

Public Transit

280 City of Coachella Infrastructure Development Standards, February 22, 2008, available at https://www.coachella.org/home/showpublisheddocument/1392/635176274076400000.
281 City of Coachella, 2035 GPU Draft EIR, Traffic, at 4.9-35.

SunLine buses are wheelchair accessible and include bicycle racks accommodating two or three bicycles. The potential use of local bus services by future project residents is not expected to conflict with or substantially increase the demand for this transit service. Project implementation is not anticipated to interfere with the existing service or performance at bus stop facilities. Less than significant impacts are anticipated.

If future demand warrants, expansion of available services may be appropriate. Transit services are monitored by both the City and SunLine. Additional services are periodically considered in response to the anticipated increase in use.

The use of local bus services by project users is not expected to conflict with or substantially increase the demand for this transit service. Project implementation is not anticipated to interfere with the existing service or performance at bus stop facilities. The proposed project would not impact pedestrian or bicycle mobility. Therefore, the project would be consistent with the analysis in the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than that identified within the GPU EIR.

Bicycle Facilities:

- Class I – Bike Path or Bike Trail: Class I facilities are bicycle trails or paths that are off-street and separated from automobiles. They are a minimum of eight feet in width for two-way travel and include bike lane signage and designated street crossings where needed.

- Class II – Bike Lane: Class II Bike Lanes can be either located next to a curb or parking lane. If located next to a curb, a minimum width of five feet is recommended. They are designated for the use of bicycles and include signage and lane lines and pavement markings.

- Class III – Bike Routes: This is a street for shared use by motor vehicles and bicyclists. While bicyclists have no exclusive use or priority, signage – both by the side of the street and stenciled on the roadway surface – alerts motorists to bicyclists sharing the roadway space and denotes that the street is an official bike route.

- Class IV – Separated Bikeway: Class IV bicycle facilities, sometimes called cycle tracks or separated bikeways, provide a right-of-way designated exclusively for bicycle travel adjacent to a roadway and are protected from vehicular traffic via separations (e.g., grade separation, flexible posts, inflexible physical barriers, on-street parking).

Class II Buffered Bike Lanes are located on Van Buren Street in the Project vicinity. Avenue 50 and Avenue 48 have existing Class II Bike Lanes, and portions of Avenue 52 (east of Van Buren Street). Otherwise, all other roadways within the project vicinity have either no bicycle facilities or have a narrow striped shoulder. There are no Class I, Class III, or Class IV facilities located in the project vicinity.

The City of Coachella updated their Active Transportation Plan in 2020, which proposes the following planned bicycle facilities near the study area:

- Class II Bike Lane along Dillon Road

- Class II Bike Lane on Calhoun Street between 50th Avenue and city limits

Existing on-street bike lanes are located on Van Buren Street. The proposed project is not anticipated to impact existing facilities. Less than significant impacts are expected.

Pedestrian Facilities: The project site is in an area with some developed pedestrian network to the north. All local roads adjacent to the project that act as borders do not have sidewalks. Some study intersections provide marked crosswalks, along Avenue 50 and Avenue 48. No sidewalks are found in the vicinity of the project.

The project's pedestrian access points will be located with adequate visibility, and project-generated traffic will be consistent with existing traffic in the area. No offsite roadway improvements are proposed as part of the project.

The project is consistent with the GPU and would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities, and impacts would be less than significant. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Transportation, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. The project specific impacts would be less than significant.

18. UTILITIES AND SERVICE SYSTEMS – Would the project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered facilities, need for new or physically altered facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service or to meet performance objectives for Natural Gas, Electricity, or Telecommunication?	☐	☐	☐	☐	☒
b. Would the project result in wasteful energy consumption?	☐	☐	☐	☐	☒
c. Would the project be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☐	☐	☐	☒
d. Would the project comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☐	☒
e. Will the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	☐	☐	☐	☐	☒
f. Will the proposed project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted).	☐	☐	☐	☐	☒
g. Would the project require or result in the construction of new water treatment or collection facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☐	☒
h. Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☐	☐	☒

i. Would the project require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☐	☒
j. Would the project require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☐	☒

Sources: The City of Coachella 2035 General Plan, 2015; City of Coachella 2015 Sewer System Master Plan, 2015; Coachella Valley Regional Urban Water Management Plan, 2015; Riverside County Countywide Integrated Waste Management Plan, 1996; Countywide Integrated Waste Management Plan Five Year Review Report, 2023; Coachella Water Authority Water Master Plan, 2017; California Department of Finance Population and Housing Estimates, 2025

a) **Less than Significant Impact**. Development of the General Plan would result in incremental development with concurrent utility infrastructure. The GPU EIR determined impacts would be less than significant.[282] Though the construction of natural gas, electricity, and telecommunication infrastructure has the potential to cause negative environmental impacts on the Planning Area, strategies and policies outlined in the Infrastructure + Public Services Element present approaches to reduce environmental impacts. Furthermore, all future infrastructure projects will be required to undergo project-level environmental review to evaluate potential impacts and identify mitigation measures as necessary. The GPU Policies are as follows: [283]

6.1 Private utilities. Work with private and quasi-public utilities to ensure the adequate provision of energy and telecommunications service that meets the needs of the community

6.2 Range of access. Work with service providers to ensure access to and availability of a wide range of state-of-the-art telecommunication systems and services for households, businesses, institutions and public agencies throughout the city.

6.3 Expanding service. Work with utility companies to retrofit areas that are not served by current telecommunication technologies and shall provide strategic long-range planning of telecommunication facilities for newly developing areas, as feasible.

6.4 Innovation. Encourage local industries, higher educational institutions and other entities to support innovation in the design and implementation of state-of-the-art telecommunication technologies and facilities.

6.5 Co-location of facilities. Encourage compatible co-location of telecommunication facilities and work with utility companies to provide opportunities for siting telecommunications facilities on City-owned property and public right-of-ways.

6.6 Smart communities. Establish requirements for the installation of state-of-the-art internal

282 City of Coachella, 2035 GPU Draft EIR, Public Utilities, at 4.14-9.
283 City of Coachella, General Plan 2035: Infrastructure & Public Services, at 09-8 (Apr. 22, 2015).

telecommunications technologies in new large-scale planned communities, office and commercial developments (e.g., wiring of all new housing and businesses).

6.7 High-voltage lines. Coordinate with the electrical utilities on the location of future high voltage corridors and the effects produced by high voltage electrical facilities in power corridors and electrical substations.

6.8 Utility line undergrounding. Require undergrounding of all new publicly owned utility lines, encourage undergrounding of all privately owned utility lines in new developments and work with electricity and telecommunications providers to underground existing overhead lines.

6.9 Utility siting standards. Coordinate with the appropriate utility purveyors to develop local standards for the location and design of natural gas, electrical and telecommunications facilities where such improvements are visible along street frontages.

6.10 Transmission corridors. Encourage the shared use of major transmission corridors and other appropriate measures as a means of preserving the aesthetic resources of the City and to lessen the visual impact of such development. The City shall work with the appropriate agencies in developing these corridors for recreational use.

The project exists within the service area of SoCal Gas for natural gas services, although all residential buildings will be fully electrified, eliminating the use of natural gas for a portion of the project.

As discussed in Section 6: Energy, the proposed project has received a will-serve letter from IID for electricity service that is conditioned on an additional electric substation and distribution facilities being constructed in the general project area. The project has designated a potential on-site location for a substation as a contingency measure but based on current electrical infrastructure planning in the area, it is expected that the new substation will be constructed off-site in the area with new distribution conduits (if required) to be constructed in existing public road rights-of-way to serve the project. The project will contribute financially to a fair share contribution for a regional substation. The future IID substation is expected to serve multiple projects in the area, both within and outside the City of Coachella, and as an independent project, it will be subject to its own environmental review under CEQA once the substation project and location have been determined. The project would also incorporate solar generation and battery storage systems to help offset electricity demand from the regional grid. These systems would reduce reliance on off-site energy sources and support overall energy efficiency. In the future, the project may consider implementing a microgrid or geothermal system to further offset demand on the grid; however, these features are not part of the current project proposal and are not evaluated as a component of the project at this time.

The project exists within the service area of Frontier for telecommunication. All connections of these utilities are located adjacent to the project's boundary, with the exception of the proposed future IID substation. The environmental impacts associated with the construction or relocation of natural gas, electric power, or telecommunication facilities is anticipated to be less than significant.

The GPU EIR found impacts to natural gas, electricity, and telecommunication facilities to be less than significant. For the above reasons, the project would have less than significant impacts and is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

b) **Less than Significant Impact**. The GPU EIR determined that impacts would be less than significant.[284] Energy is further discussed in Section 6 (Energy) of this analysis. However, the proposed project has received a will-serve letter from IID and is expected to contribute towards a new area substation and distribution conduits (if required) to provide electrical power to the project site. The project would also incorporate solar generation and

284 City of Coachella, 2035 GPU Draft EIR, Public Utilities, at 4.14-12.

battery storage systems to help offset electricity demand from the regional grid. As previously discussed in Section 6, the proposed photovoltaic systems will provide 50 percent of electricity for single-family homes, condos and townhomes, movie theaters, and restaurants. These systems would reduce reliance on off-site energy sources and support overall energy efficiency. In the future, the project may consider implementing a microgrid or geothermal system to further offset demand on the grid; however, these features are not part of the current project proposal and are not evaluated as a component of the project at this time. Electrical improvements will take place within the boundaries of the project and will not result in significant environmental impacts.

As discussed in Section 6, the GPU EIR found impacts to energy to be less than significant. The project would have less than significant impacts and is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

c-d) **Less than Significant Impact**. The GPU EIR determined impacts to be less than significant.[285] The GPU states that regulatory measures, such as AB 939 and SB 1374, are anticipated to slow the filling of landfills and extend the timeline for reaching capacity. AB 939 emphasized conservation of natural resources through reduction, recycling, and reuse of solid waste. SB 1374 outlines reporting policies to the California Integrated Waste Management Board (CIWMB) and requires a 50 to 75 percent diversion of construction and demolition waste materials to landfills. Policies outlined within the Infrastructure and Public Services element of the GPU will ensure that projects meet solid waste requirements.

Solid waste disposal and recycling services for the City of Coachella is provided by Burrtec. Solid waste and recycling collected from the proposed project will be hauled to the Coachella Valley Transfer Station, which has a 1,100 tons per day capacity.[286] Waste from this transfer station is then sent to a permitted landfill or recycling facility outside of the Coachella Valley. These include Badlands Sanitary Landfill, El Sobrante Sanitary Landfill, and Lamb Canyon Sanitary Landfill. Cal-Recycle data indicates the Badlands Sanitary Landfill has 4,900,000 cubic yards of remaining capacity, the El Sobrante Landfill has a remaining capacity of 121,083,583 tons of solid waste, and Lamb Canyon Sanitary Landfill has a remaining solid waste capacity of 14,540,000 cubic yards.[287]

As previously discussed, approximately 87 acres will be developed with a mixed-use residential development. The estimates for solid waste generation can be seen in Table XVIII-1.

Table XVIII-1 Solid Waste Generation[288]

Land Use	Rate	Unit	Solid Waste (pounds per day)	Solid Waste (tons per day)
Single Family	7.8lbs/unit/day	165 units	1,287	0.64
Hotel	2lbs/room/day	244 units	488	0.24
Commercial	13lbs/1000 sq.ft./day	256,000 sq.ft.	3,328	1.66
Total				**2.54**

Source: CalRecycle. Estimated Solid Waste Generation available at https://www2.calrecycle.ca.gov/wastecharacterization/general/rates

The project would generate an average of approximately 2.54 tons of solid waste per day. This estimate does not account for any required solid waste reductions. The projects proposed solid waste generation is 0.2% of the Coachella Valley Transfer station's daily receival allotment of 1,100 tons per day. The project would be served by a landfill with sufficient capacity to meet the demands of solid waste generated by the project.

285 City of Coachella, 2035 GPU Draft EIR, Public Utilities, at 4.14-14 and 4.14-16.
286 *Id.*, at 4.14-5
287 CalRecycle SWIS Facility/Site Search (2025), https://www2.calrecycle.ca.gov/SolidWaste/Site/Search.
288 The Solid Waste Generation analysis was prepared using an earlier project description with 409 units. The currently proposed Project includes 402 units, representing a reduction in development intensity relative to the analyzed scenario.

The project will comply with all applicable solid waste statutes and guidelines. Policies for solid waste reduction are outlined in the Infrastructure and Solid Waste Element of the GPU. Furthermore, all development is required to comply with the mandatory commercial and multi-family recycling requirements of Assembly Bill 341 (AB 341).[289] Less than significant impacts are expected relative to applicable solid waste statutes and regulations.

The GPU EIR found impacts to landfill capacity and solid waste regulations to be less than significant. For the reasons stated above, the project was determined to be consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

e-f) **Less than Significant Impact**. The GPU EIR determined that impacts would be less than significant.[290] According to the GPU, the City of Coachella is supplied water by the Coachella Water Authority (CWA) in cooperation with the Coachella Valley Water District (CVWD). The water demands associated with the GPU have been accounted for as part of the CVWD regional water supply planning efforts, specifically within the 2020 Coachella Valley Regional Urban Water Management Plan (RUWMP), which is heavily reliant on land use and population projections within the City and its sphere of influence. The GPU EIR indicates that the City of Coachella has adequate water supplies to meet demands during normal, single-dry, and multiple-dry years throughout the 20-year planning period based on growth projections under the current adopted general plan.

The existing land use designation for the Proposed Project is Regional Retail District, characterized by regional shopping centers, mixed destination centers or similar uses, providing commercial opportunities, with residential uses. The Proposed Project is consistent with the existing land use designation and is anticipating a development intensity equal to what was accounted for in the GPU EIR, meaning that impacts to water supply will be equivalent at the project site to what was previously anticipated and analyzed in the GPU EIR. The project proposes a mixed-use development, consisting of a total of 402 units on approximately 28 acres (14.4 du/acre), which is consistent with the General Plan residential density range of 10–15 dwelling units per acre. Furthermore, within the RUWMP, the 2025 population within the City of Coachella was estimated to be 66,478. The current population of the City is 44,050 persons (2025 Department of Finance Population and Housing Estimates) which is below the RUWMP population estimates. The proposed project has anticipated that a majority of residential units would operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models, and would therefore significantly reduce any impacts to water supply when compared to impacts typically associated with permanent residency. It is estimated that the project will have an annualized average population of 950 residential guests and 1,100 public guests, for a projected total of 2,050 guests. At full buildout, the project would not cause a substantial increase to the City's population estimates projected in the City's General Plan and RUWMP.

Pursuant to SB 610 and SB 221, any future "projects" within the City or its SOI that are defined within Water Code section 10912 will require the preparation of a Water Supply Assessment (WSA). A WSA has been prepared for the project and is undergoing CWA review and approval. The proposed development will implement water conservation measures to reduce impacts to public water supplies. Water fixtures within residential and commercial buildings will be low-flow, with a 30% reduction in water use for toilets, showerheads, and faucets.

According to the WSA and RUWMP, the project will account for 1.2 percent of the projected water demand of CWA through the year 2045. As previously discussed, the RUWMP indicates that Coachella has adequate water supplies to meet demands during normal, single-dry, and multiple-dry years throughout the 20-year planning, indicating adequate water supply for the project. The City's Landscape Development Guidelines, including drought-tolerant landscape materials and efficient irrigation systems, will be implemented. Water installation and connection fees in place at the time of development will be collected by CWA. In addition, the proposed development will also be required to pay the CVWD Replenishment Assessment Charge (RAC) through CWA. The RAC supports CVWD's groundwater replenishment program and covers a portion of the costs of replenishing the aquifer, including the cost of importing water for that purpose. Less than significant impacts

289 *See* CALRecylce, Mandatory Commercial Recycling, https://calrecycle.ca.gov/Recycle/Commercial.
290 City of Coachella, 2035 GPU Draft EIR, Water Supply and Wastewater, at 4.16-75.

to available groundwater and water supplies are expected.

The GPU EIR found impacts to water supply to be less than significant and due to consistency with the City's land use designation and preparation of a WSA, the proposed project is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

g) **Less than Significant Impact**. The GPU EIR determined that impacts were anticipated to be less than significant.[291] Water facilities serving the City are planned and managed through regional planning efforts by the City and the Coachella Valley Water District. Existing and planned facilities are expected to provide sufficient capacity to meet projected water demand associated with buildout of the City and its sphere of influence. Future development will continue to rely on the regional groundwater basin, supplemented by imported and recycled water supplies and supported by ongoing recharge and conservation programs. With implementation of the existing and planned water supply facilities and management programs, sufficient infrastructure is expected to be available to serve projected growth under normal and dry-year conditions.

The City of Coachella is currently supplied water by the CWA. CWA provides over 8,000 municipal water service connections and over 2,128 million gallons ("MG") of water to customers in their service area. The current water supply source is groundwater from the Indio Sub-basin and is drawn from CWA owned and operated wells. CWA's existing water system consists of different pressure zones, groundwater wells, storage reservoirs, booster pumping stations, and distribution facilities. Groundwater is pumped from six wells within the City's distribution system. The total capacity of active wells is approximately 11,400 gallons per minute (gpm). CWA has three storage reservoirs within the City, with a total reservoir capacity of approximately 10.5 MG. CWA's distribution system network consists of approximately 120 miles of pipeline, which ranges from 4-inches to 36-inches in diameter.

The residential and commercial components of the project are anticipated to utilize domestic water supplied by CWA and the 9.4-acre Hotel Lagoon will be supplied by a private, on-site well. Presently, an existing well occurs on-site, located adjacent to the existing irrigation pond. The existing well does not possess the infrastructure to supply the Hotel Lagoon and will be capped in accordance with County of Riverside Department of Environmental Health standards. The location of the new well-site will be determined in the final site design, but it will occur adjacent to the Lagoon. Well capping, placement, and permitting will be done in accordance with the County of Riverside Department of Environmental Health. Once a location is determined for the new well, a Registered Well Driller will be contracted to prepare the application for submittal to the Department of Environmental Health. Application approval by the County of Riverside will ensure that impacts to groundwater quantity and quality are not significant.

For domestic water supply, the project would connect to existing 12-inch water mains along Avenue 52 and Van Buren Street, northeast of the project. A 12-inch public water main is proposed to encompass the site along Calhoun Street, Avenue 52, and Van Buren Street in order to reach the existing water main. An 8-inch water main will be constructed internally to connect the project to the proposed 12-inch main. The project would connect to an existing 12-inch sewer main along Avenue 52. As previously mentioned, the project will comply with the existing water management program in place, such as adherence to the City's Landscape Development Guidelines. The infrastructure and design components for the project will be consistent with CWA requirements pertaining to landscaping and irrigation, domestic water systems, stormwater facilities, and general development. Requirements include utilizing water efficient irrigation and drought tolerant plants, adhering to standardized pipeline sizes and design standards, and stormwater facility compliance. The project will be reviewed by CWA and City staff to assure compliance with all current and applicable requirements. The proposed development will be expected to implement water conservation measures to reduce impacts to public water supplies. As previously discussed, water fixtures within residential and commercial buildings will be low-flow, with a 30% reduction in water use for toilets, showerheads, and faucets. Additionally, water installation and connection fees in place at the time of development will be collected by CWA.

291 *Id.*, at 4.16-85.

The GPU EIR found impacts to water facilities to be less than significant and due to proximity to existing infrastructure, the proposed project is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

h-i) **Less than Significant Impact**. The GPU states that the City's existing wastewater treatment facilities currently provide a capacity of approximately 4.5 MGD, which is insufficient to meet projected long-term demand associated with population growth under the GPU.[292] To support the anticipated population growth, wastewater treatment capacity may need to increase, potentially requiring expansion of existing facilities or construction of new treatment plants. Development of additional wastewater infrastructure could result in environmental impact. However, the site development impacts caused by the construction of additional wastewater infrastructure are very similar to those of any land development effort and fall within the broad, programmatic analysis of the development of the City under the GPU analyzed in the EIR. Future wastewater facility expansions would undergo project-level environmental review to evaluate potential impacts and identify mitigation measures as necessary.

The City of Coachella is currently served by the Coachella Sanitary District (CSD) for wastewater treatment. In 2010, the City upgraded the capacity of the Avenue 54 Wastewater Treatment Plant (WWTP) to 4.5 MGD, with a current average daily discharge of approximately 2.7 MGD. According to Table 4-4 Land Use Type with Model Flow Load Field of the City's 2015 Sewer System Master Plan, the current land use designation for the project site (general commercial) has an estimated unit flow rate of 600 gpd/acre.[293] Excluding proposed open space and proposed street acreage, the project is anticipated to have 55.5 acres of facilities with the capacity to generate wastewater. Considering the estimated flow rate of 600 gpd/acre, the proposed project is estimated to generate wastewater at a rate of 0.33 MGD, which represents approximately 7% of the WWTP's treatment capacity of 4.5 MGD. However, the proposed project has anticipated that a majority of residential units will operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models, and would therefore significantly reduce rates of wastewater production when compared to impacts typically associated with permanent residency.

The proposed project would connect to the existing 12-inch sewer mains at the intersection of Avenue 52 and Van Buren Street, the intersection of Fredrick Street and Avenue 53, and Avenue 64. The project will connect to the existing 12-inch sewer main at the Avenue 52 and Van Buren Street intersection and extend approximately 174 feet of 12-inch public sewer lines to the project. The proposed public sewer line will connect to a private sewer forcemain, which will connect to private 8-inch sewer mains throughout the site. The project will be required to undergo review by CSD and City staff to ensure wastewater capacity and compliance with the current wastewater treatment requirements. Additionally, sewer installation and connection fees in place at the time of development will be collected by the City. No new or expanded treatment facilities are expected as a result of project implementation, nor is the project expected to exceed wastewater capacity. Therefore, less than significant impacts to wastewater facilities are expected.

The GPU EIR found impacts to wastewater facilities to be less than significant and due to proximity to existing infrastructure and the required payment of installation and connection fees, the proposed project is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

j) **Less than Significant Impact**. The GPU requires the city to properly manage stormwater facilities, coordinate stormwater facilities with CVWD, and requires the implementation of adequate infrastructure with new development. Based on these conditions, the impact of the GPU build-out on stormwater facilities is considered less than significant. The project's proposed stormwater facilities are within the project's current footprint. The proposed onsite storm drain system includes the 2.5-acre irrigation pond, which has been preliminarily sized to provide enough storage for the 100-year controlling storm event. The project does not require any off-site storm

292 *Id.*, at 4.16-92.
293 City of Coachella 2015 Sewer System Master Plan, 2015

water facilities or expansion of existing facilities, and impacts would be less than significant.

The GPU EIR found impacts to stormwater facilities to be less than significant[294] and due to the utilization of on-site retention, the proposed project is consistent with the analysis of the GPU EIR. The project does not create new impacts or increase impacts, and no new information is of substantial importance.

Conclusion:

With regards to the issue area of Utilities and Service Systems, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed in the City of Coachella General Plan 2035 Program EIR. The Program EIR adequately addressed the potential impacts to utility and service systems.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the City of Coachella General Plan 2035 Program EIR.
4. No mitigation measures are required within the GPU EIR for utility and service systems. Compliance with above listed General Plan policies ensures that potential impacts to utility and service systems would remain less than significant.

294 City of Coachella, 2035 GPU Draft EIR, Water Supply and Wastewater, at 4.16-94.

19. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project:	Project Peculiar Impact that is not Substantially Mitigated by Uniformly Applied Policies	Significant Impact not Analyzed as Significant in the GP EIR	Potentially Significant Offsite or Cumulative Impact not Discussed in the GP EIR	Adverse Impact More Severe based on Substantial New Information	No New Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water resources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff post-fire slope instability, or drainage changes?	☐	☐	☐	☐	☒

Sources: The City of Coachella 2035 General Plan, 2015; Cal Fire Fire Hazard Severity Zones Map, 2025; CALFIRE Fire Hazard Severity Zone Maps; Coachella Local Hazard Mitigation Plan, 2022.

The GPU EIR did not specifically address Wildfires. The topic of wildfire was analyzed within the GPU EIR within Section 4.8 Hazards and Hazardous Materials. The guidelines for determining significance stated that the proposed GPU would have a significant impact if it would expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands. In 2019, the issue of Wildfire was separated into its own section within Appendix G of the CEQA Guidelines to incorporate the four threshold questions above. The GPU EIR addressed wildfire in their analysis; however, it was not called out as a separate environmental topic. This section was not included in the original GPU EIR and is provided here for informational purposes.

According to Coachella's Local Hazard Mitigation Plan, fires are considered a medium mitigation priority that would result in negligible damages/injuries with a 1 percent to 10 percent likelihood.[295]

a-d) **Less than Significant Impact.** The project site currently includes agricultural fields, with date palm groves and grape vineyards. The date palm grove is still in operation; however, the grape vineyards have been abandoned. The project site is surrounded to the north, east, and west by existing, paved rights-of-way, Avenue 52, Van Buren Street, and Calhoun Street (respectively). Existing agricultural lands and residential properties are located south of the project.

295 City of Coachella, Coachella Local Hazard Mitigation Plan (2022), https://www.coachella.org/home/showpublisheddocument/10470/638816255571400000.

According to Cal Fire's Fire and Resource Assessment Program the proposed project site is not located within a Moderate, High, or Very High Fire Hazard Severity Zone.[296] As a result, the project is not expected to impair an adopted emergency response plan or emergency evacuation plan. No impacts are anticipated.

Wildfire risk is related to a number of parameters, including fuel loading (vegetation), fire weather (winds, temperatures, humidity levels and fuel moisture contents), and topography (degree of slope). Steep slopes contribute to fire hazards by intensifying the effects of wind and make fire suppression difficult. Fuels such as grass are highly flammable because they have a high surface area to mass ratio and require less heat to reach the ignition point. The project site is not expected to expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

The project provides development of infrastructure (water, sewer, and storm drainage). The proposed improvements would allow for decrease fire risk relative to existing conditions. The project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. As a result, the project is not expected to require the installation or maintenance of associated infrastructure that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.

The project site will connect to an existing network of city streets. The project proposes connections to Van Buren Street, Calhoun Street, and Avenue 52, as well as improvements to the street frontages (including curb and gutter). The proposed improvements would allow for greater emergency access relative to the existing conditions. Landslides include rockfalls, deep slope failure, and shallow slope failure. Factors such as the geological conditions, drainage, slope, vegetation, and others affect the potential for landslides. One of the most common causes of landslides is construction activity that is associated with road building. The project site is relatively flat; therefore, the potential for a landslide in the project site is essentially non-existent. As a result, the project is not expected to expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes and no impact is expected to result from the project.

No impact is expected to result from the project. Overall, less than significant impacts are anticipated. Therefore, the project would be consistent with the analysis within the GPU EIR because it would not create new impacts or increase impacts, and there is no new information of substantial importance than identified within the GPU EIR.

Conclusion:

With regards to the issue area of Wildfire, the following findings can be made:

1. No peculiar impacts to the project or its site have been identified.
2. There are no potentially significant off-site and/or cumulative impacts which were not discussed by the GPU EIR.
3. No substantial new information has been identified which results in an impact which is more severe than anticipated by the GPU EIR.
4. No mitigation measures are required within the GPU EIR. The project specific impacts would be less than significant.

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this COVA Air Quality Impact Analysis (AQIA) are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the CEQA Guidelines (CEQA Guidelines) (1). Table ES-1 shows the findings of significance for each potential air quality impact under CEQA before and after any required mitigation measures (MM) described below.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	*Less Than Significant*	*n/a*
Localized Construction Emissions	3.6	*Less Than Significant*	*n/a*
Regional Operational Emissions	3.5	*Less Than Significant*	*n/a*
Localized Operational Emissions	3.6	*Less Than Significant*	*n/a*
CO "Hot Spot" Analysis	3.7	*Less Than Significant*	*n/a*
Air Quality Management Plan	3.8	*Less Than Significant*	*n/a*
Sensitive Receptors	3.9	*Less Than Significant*	*n/a*
Odors	3.10	*Less Than Significant*	*n/a*
Cumulative Impacts	3.11	*Less Than Significant*	*n/a*

ES.2 REGULATORY REQUIREMENTS

There are numerous requirements that development projects must comply with by law, and that were put in place by federal, State, and local regulatory agencies for the improvement of air quality. Any operation or activity that might cause the emission of any smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution, which can cause damage to human health, vegetation, or other forms of property, or can cause excessive soiling on any other parcel shall conform to the requirements of the South Coast Air Quality Management District (SCAQMD). SCAQMD Rules that are currently applicable to this Project are described below.

SCAQMD Rule 402

A person shall not discharge from any source whatsoever such quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any such persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule do not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

SCAQMD Rule 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities.

SCAQMD Rule 1113

This rule serves to limit the volatile organic compound (VOC) content of architectural coatings used on projects in the SCAQMD. This rule applies to any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects.

SCAQMD Rule 1301

This rule is intended to provide that pre-construction review requirements to ensure that new or relocated facilities do not interfere with progress in attainment of the National Ambient Air Quality Standards (NAAQS), while future economic growth within the SCAQMD is not unnecessarily restricted. The specific air quality goal is to achieve no net increases from new or modified permitted sources of nonattainment air contaminants or their precursors. Rule 1301 also limits emission increases of ammonia, and Ozone Depleting Compounds (ODCs) from new, modified or relocated facilities by requiring the use of Best Available Control Technology (BACT).

SCAQMD Rule 1401

A person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any 1 hour that is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the United States (U.S.) Bureau of Mines.

1 INTRODUCTION

This report presents the results of the AQIA prepared by Urban Crossroads, Inc., for the proposed COVA Project (Project). The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD.

1.1 SITE LOCATION

The Project is located at the southwest corner of the Van Buren Street and Avenue 52 intersection in the City of Coachella. The Project is surrounded by agricultural uses to the north, east, south, and west, as shown in Exhibit 1-A.

1.2 PROJECT DESCRIPTION

The proposed Project consists of 409 units: 165 two-story single-family residences (SFR) and 244 condo hotel units. The development includes a crystal lagoon, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas and kids play spaces. A preliminary site plan for the Project is shown in Exhibit 1-B.

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 ATMOSPHERIC SETTING

The Specific Plan site is located within Salton Sea Air Basin (SSAB) within the jurisdiction of the SCAQMD. The SSAB is aligned in a north-west-southwest orientation stretching from Banning Pass to the Mexican border. The regional climate, as well as the temperature, wind, humidity, precipitation, and amount of sunshine significantly influence the air quality in the SSAB.

The climate of the Coachella Valley is a continental, desert-type climate, with hot summers, mild winters, and very little annual rainfall. Precipitation is less than six inches annually and occurs mostly in the winter months from active frontal systems and in the late summer months from thunderstorms. Almost all of the annual rainfall comes from the fringes of mid-latitude storms from late November to early April with summers often being completely dry. Temperatures exceed 100 degrees Fahrenheit (°F), on the average, for four months each year, with daily highs near 110 °F during July and August. Summer nights are cooler with minimum temperatures in the mid-70s. During the winter season, daytime highs are quite mild, but the dry air is conducive to nocturnal radiational cooling, with early morning lows around 40 °F.

The Coachella Valley and adjacent areas are exposed to frequent gusty winds. The flat terrain of the valley and strong temperature differentials, created by intense solar heating, produce moderate winds and deep thermal convection. Wind speeds exceeding 31 miles per hour (mph) occur most frequently in April and May. On an annual basis, strong winds (greater than 31 mph) are observed 0.6 percent of the time and speeds of less than 6.8 mph account for more than one-half of the observed winds. Prevailing winds are from the northwest through southwest, with secondary flows from the southeast. The strongest and most persistent winds typically occur immediately to the east of Banning Pass, which is noted as a wind power generation resource area. Aside from this locale, the wind conditions in the remainder of the Coachella Valley are geographically distinct. Stronger winds tend to occur closer to the foothills. Less frequently, widespread gusty winds occur over all areas of the Valley.

Portions of the SSAB experience surface inversions almost every day of the year. Inversions in the SSAB are attributed to strong surface heating, but are usually broken, allowing pollutants to disperse more easily. Weak surface inversions are caused by cooling of air in contact with the cold surface of the earth at night. In the valleys and low-lying areas, this condition is intensified by the addition of cold air flowing downslope from the hills and pooling on the valley floor. In addition, inversions in the SSAB caused by the presence of the Pacific high-pressure cell can cause the air mass aloft to sink. As the air descends, compressional heating warms the air to a temperature higher than the air below. This subsidence inversion can act as a nearly impenetrable lid to the vertical mixing of pollutants. These inversions can persist for one or more days, causing air stagnation and the buildup of pollutants. Subsidence inversions are common from November through June and are relatively absent from July through October.

Within the Project area, there is a natural sand migration process, called "blowsand," that has direct and indirect effects on air quality. Blowsand produces particulate matter (PM_{10}) in two ways: (1) by

direct particle erosion and fragmentation as natural PM_{10}, and (2) by secondary effects, as sand deposits on road surfaces.

Also, where water has already receded around the Salton Sea, the surface areas contain a salty mix of sediments that can change from a hardened salt crust to a fluffy soft layer of dust depending upon the season. Exposed sediments could elevate PM_{10} levels throughout the region. Almost 120,000 acres of Salton Sea lakebed could be exposed as inflows to the Sea decrease in future years. Local communities may be affected by 60,000 potentially dust-blowing acres, which will cause PM_{10} levels to rise.

2.2 AIR POLLUTANTS

2.2.1 Criteria Pollutants

Air quality regulations were first promulgated with the Federal Clean Air Act (CAA) of 1970. Air quality is defined by ambient air concentrations of seven "criteria air pollutants," which are a group of common air pollutants identified by the United States Environmental Protection Agency (U.S. EPA) to be of concern with respect to the health and welfare of the general public. Federal and State governments regulate criteria air pollutants by using ambient standards based on criteria regarding the health and/or environmental effects of each pollutant. The seven "criteria" air pollutants defined by the U.S. EPA are: (1) CO; (2) sulfur dioxide (SO_2); (3) nitrogen dioxide (NO_2); (4) ozone (O_3); (5) respirable particulate matter with a diameter of 10 microns or less (PM_{10}), (6) fine particulate matter with a diameter of 2.5 microns or less ($PM_{2.5}$), and (7) lead (Pb). Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (2).

TABLE 2-1: CRITERIA POLLUTANTS (1 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
CO	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone (O_3), motor vehicles operating at slow speeds are the primary source of CO in the SSAB. The highest ambient CO	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen (O_2) supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with O_2 transport and competing with O_2 to combine with

TABLE 2-1: CRITERIA POLLUTANTS (2 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
CO (Continued)	concentrations are generally found near congested transportation corridors and intersections.		hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for O_2 supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (O_2 deficiency) as seen at high altitudes.
SO_2	SO_2 is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms sulfates (SO_4). Collectively, these pollutants are referred to as sulfur oxides (SO_X).	Coal or oil burning power plants and industries, refineries, diesel engines	A few minutes of exposure to low levels of SO_2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, an increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO_2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO_2. Animal studies suggest that despite SO_2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract.

TABLE 2-1: CRITERIA POLLUTANTS (3 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
SO_2 (Continued)			Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO_2 levels. In these studies, efforts to separate the effects of SO_2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.
NO_2	NO_2 is a key component of NO_X, which also includes nitric oxide (NO) and nitrous oxide (N_2O). NO_X compounds are primarily produced during combustion processes when nitrogen (N_2) reacts with oxygen (O_2). Both NO and NO_2 serve as precursors in the formation of O_3 and $PM_{2.5}$, making their monitoring crucial for air quality assessments. NO_2, being the more abundant form of NO_X in the atmosphere, has a relatively short lifespan of one to seven days, which enhances its significance as a major air pollutant. As a criteria air pollutant, NO_2 poses various health risks, including respiratory issues and increased vulnerability to infections. It also absorbs blue light, imparting a brownish-red hue to the atmosphere and contributing to reduced visibility and smog formation.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO_2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups.

TABLE 2-1: CRITERIA POLLUTANTS (4 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
NO_2 (Continued)	Given that NO emissions largely convert to NO_2, the examination of NO_X emissions becomes essential when assessing potential air quality impacts. The concentrations of NO_2 are closely related to traffic density, often resulting in higher exposure levels for commuters in heavy traffic compared to what regional monitoring stations may indicate.		In animals, exposure to levels of NO_2 is considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of O_3 exposure increases when animals are exposed to a combination of O_3 and NO_2.
O_3	O_3 is a highly reactive and unstable gas that is formed when VOCs and NO_X, both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. O_3 concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.	Formed when ROGs and NO_X react in the presence of sunlight. ROG sources include any source that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.	Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for O_3 effects. Short-term exposure (lasting for a few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated O_3 levels are associated with increased school absences. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who

TABLE 2-1: CRITERIA POLLUTANTS (5 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
O_3 (Continued)			participate in multiple outdoor sports and reside in communities with high O_3 levels. O_3 exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes O_3 may be more toxic than exposure to O_3 alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.
Particulate Matter	PM_{10}: A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduced visibility (haze) which is caused by the scattering of light and consequently the significant reduction of air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM_{10} is considered a criteria air pollutant. $PM_{2.5}$: A similar air pollutant to PM_{10} consisting of tiny solid or liquid particles which are 2.5	Sources of PM_{10} include road dust, windblown dust and construction. Also formed from other pollutants (acid rain, NO_X, SO_X, organics). Incomplete combustion of any fuel. $PM_{2.5}$ comes from fuel combustion in motor vehicles, equipment, and industrial sources, residential and agricultural burning.	A consistent correlation between elevated ambient fine particulate matter (PM_{10} and $PM_{2.5}$) levels and an increase in mortality rates, respiratory infections, number and severity of asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in

TABLE 2-1: CRITERIA POLLUTANTS (6 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
Particulate Matter (Continued)	microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include SO_4 formed from SO_2 release from power plants and industrial facilities and nitrates that are formed from NO_X release from power plants, automobiles, and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. $PM_{2.5}$ is a criteria air pollutant.	Also formed from reaction of other pollutants (acid rain, NO_X, SO_X, organics).	lifespan, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$.
Pb	Pb is a heavy metal that is highly persistent in the environment and is considered a criteria pollutant. In the past, the primary source of Pb in the air was emissions from vehicles burning leaded gasoline. The major sources of Pb emissions are ore and metals processing, particularly Pb smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the Project does not include operational activities such as	Metal smelters, resource recovery, leaded gasoline, deterioration of Pb paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure. Pb poisoning can cause anemia, lethargy, seizures, and death; although it

TABLE 2-1: CRITERIA POLLUTANTS (7 OF 7)

Criteria Pollutant	Description	Sources	Health Effects
Pb (Continued)	metal processing or Pb acid battery manufacturing. As such, the Project is not anticipated to generate a quantifiable amount of Pb emissions.		appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.

2.2.2 Additional Pollutants

The SCAQMD's primary focus is to achieve the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) for criteria pollutants. However, it also has a broader mandate to control emissions of air contaminants and safeguard public health. As a result, SCAQMD regulates additional pollutants beyond criteria pollutants, including reactive organic gases (ROGs), VOCs, and odors. Additional pollutants, their typical sources, and health effects are identified below (2).

TABLE 2-2: ADDITIONAL POLLUTANTS (1 OF 2)

Pollutant	Description	Sources	Health Effects
VOC	VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also	Organic chemicals are widely used as ingredients in household products. Paints, varnishes, and wax all contain organic solvents, as do many cleaning, disinfecting,	Breathing VOCs can irritate the eyes, nose, and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health effects, though many have several.

TABLE 2-2: ADDITIONAL POLLUTANTS (2 OF 2)

Pollutant	Description	Sources	Health Effects
VOC (Continued)	known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not form O_3 to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and ROG (see below) are used interchangeably.	cosmetic, degreasing and hobby products. Fuels are made up of organic chemicals. All of these products can release organic compounds while you are using them, and, to some degree, when they are stored.	
ROG	Similar to VOC, ROGs are also precursors in forming O_3 and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and NO_X react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms ROG and VOC (see previous) are used interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.

2.5 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. NAAQS and CAAQS currently in effect are shown in Table 2-3 (3).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on July 16, 2024, and are presented in Table 2-3. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, PM_{10}, and $PM_{2.5}$ are not to be exceeded. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the state assigns attainment status. Attainment status for a pollutant means that the SCAQMD meets the standards set by the EPA or the California EPA (CalEPA). Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, a State Implementation Plan (SIP) is drafted by CARB. The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (4).

TABLE 2-3: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

California Air Resources Board (7/16/24)

TABLE 2-3: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On February 7, 2024, the national annual PM2.5 primary standard was lowered from 12.0 $\mu g/m^3$ to 9.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15.0 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.
Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (7/16/24)**

2.6 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for seven of the most common air pollutants: CO, Pb, O_3, PM_{10}, $PM_{2.5}$, NO_2, and SO_2 which are known as criteria pollutants. The SCAQMD monitors levels of various criteria pollutants at 35 permanent monitoring stations and 2 single-pollutant source Pb air monitoring sites throughout the air district (5). On January 25, 2024, CARB adopted the proposed 2023 amendments to the state and national area designations. See Table 2-4 for attainment designations for the SSAB (6). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SSAB.

TABLE 2-4: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SSAB

Criteria Pollutant	State Designation	Federal Designation
O_3 - 1-hour standard	Nonattainment	--
O_3 - 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Nonattainment
$PM_{2.5}$	Attainment	Unclassified/Attainment
CO	Attainment	Unclassified/Attainment
NO_2	Attainment	Unclassified/Attainment
SO_2	Attainment	Unclassified/Attainment
PB[1]	Attainment	Unclassified/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the SSAB
"-" = no standard.

2.7 LOCAL AIR QUALITY

The SCAQMD has designated general forecast areas and air monitoring areas (referred to as Source Receptor Areas [SRA]) throughout the district in order to inform Southern California residents about the air quality conditions. The Project site is located within the Coachella Valley (SRA 30) area.

The primary air quality monitoring station relative to the Project site is the Coachella Valley 2[1] monitoring station, situated approximately 2.78 miles northwest of the Project site. This station provides data for O_3, PM_{10}, and $PM_{2.5}$ for the years 2021-2022. However, the data for O_3 (for the years 2023-2024), CO, NO_2, PM_{10} (for the years 2023-2024), and $PM_{2.5}$ (for the years 2023-2024) are not available from this station. To supplement these gaps, the next nearest monitoring stations have been identified.

- The Coachella 1 station, located approximately 23.09 miles northwest of the Project site, provides data for CO (2022-2024), NO2 (2022-2024), O3 (2023), and PM2.5 (2023)
- The Coachella 3 station, located approximately 10.28 miles southwest, reports PM_{10} (2023)
- The Coachella 4 station, located approximately 3.76 miles north of the Project site, provides data for O_3 (2024), PM_{10} (2024), and $PM_{2.5}$ (2024)

[1] The Coachella Valley 2 station closed some time in 2024 with operations moved to Coachella Valley 4.

Together, these nearby stations provide a comprehensive dataset to evaluate ambient air quality conditions in the vicinity of the Project site, ensuring an accurate assessment of local pollutant levels in the absence of complete data from the primary Coachella Valley 2 station.

The most recent three (3) years of data available is shown in Table 2-5 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Project site. Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ for 2022 through 2024 was obtained from the SCAQMD Air Quality Data Tables (7). Additionally, data for SO_2 has been omitted as attainment is regularly met in the SSAB and few monitoring stations measure SO_2 concentrations.

TABLE 2-5: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2022-2024

Pollutant	Standard	Year		
		2022	2023	2024
O_3				
Maximum Federal 1-Hour Concentration (ppm)		0.072	0.116	0.098
Maximum Federal 8-Hour Concentration (ppm)		0.069	0.093	0.080
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	0	10	2
Number of Days Exceeding State/Federal 8-Hour Standard	> 0.070 ppm	0	39	31
CO				
Maximum Federal 1-Hour Concentration	> 35 ppm	1.1	0.9	3.4
Maximum Federal 8-Hour Concentration	> 20 ppm	0.5	0.8	1.1
NO_2				
Maximum Federal 1-Hour Concentration	> 0.100 ppm	0.038	0.035	0.037
Annual Federal Standard Design Value		0.006	0.006	0.006
PM_{10}				
Maximum Federal 24-Hour Concentration (µg/m³)	> 150 µg/m³	160	306	143
Annual Federal Arithmetic Mean (µg/m³)		36.6	44.0	43.5
Number of Days Exceeding Federal 24-Hour Standard	> 150 µg/m³	1	5	0
Number of Days Exceeding State 24-Hour Standard	> 50 µg/m³	11	93	93
$PM_{2.5}$				
Maximum Federal 24-Hour Concentration (µg/m³)	> 35 µg/m³	21.3	26.2	33.5
Annual Federal Arithmetic Mean (µg/m³)	> 12 µg/m³	13.92	5.86	8.83
Number of Days Exceeding Federal 24-Hour Standard	> 35 µg/m³	0	0	0

ppm = Parts Per Million
µg/m³ = Microgram per Cubic Meter
Source: Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ was obtained from SCAQMD Air Quality Data Tables.

2.8 REGULATORY BACKGROUND

2.8.1 Federal Regulations

The EPA is responsible for setting and enforcing the NAAQS for O_3, CO, NO_X, SO_2, PM_{10}, and Pb (8). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB. The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (9). The CAA also mandates that states submit and implement SIPs for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (10) (11). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 2-4 (previously presented) provides the NAAQS within the SSAB. Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

2.8.2 California Regulations

CARB

CARB, which became part of CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SSAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (12) (8). Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use an alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

Title 24 Energy Efficiency Standards and California Green Building Standards

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission.

The 2022 California Title 24 Energy Standards became effective on January 1, 2023, with updates for the 2025 standards set to take effect on January 1, 2026. As the Project is expected to be completed in 2030, it will need to comply with the Title 24 Energy Standards in effect at that time, which may include further updates beyond the 2025 version.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2025 California Green Building Code Standards that go into effect on January 1, 2026. The Project would be required to comply with the applicable standards in place at the time plan check submittals are made.

2.8.3 Regional Regulations

Air Quality Management Plan

Currently, the NAAQS and CAAQS are exceeded in most parts of the SSAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards (13). The Coachella Valley PM_{10} State Implementation Plan (CVSIP) establishes additional controls needed to demonstrate expeditious attainment of the PM_{10} standards in the Coachella Valley, located in the SSAB. This area which is under SCAQMD's jurisdiction has been designated as a serious non-attainment area for PM_{10}. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution

control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.8.

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

This study quantifies air quality emissions generated by construction and operation of the Project and addresses whether the Project conflicts with implementation of the SCAQMD's AQMP and Lead Agency planning regulations. The analysis of Project-generated air emissions determines whether the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the SSAB is in non-attainment under an applicable NAAQS and CAAQS. Additionally, the Project has been evaluated to determine whether the Project would expose sensitive receptors to substantial pollutant concentrations and the impacts of odors. The significance of these potential impacts is described in the following sections.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the *CEQA Guidelines* (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The SCAQMD has developed regional and localized significance thresholds for criteria pollutants, as summarized at Table 3-1 and Table 3-2 (14). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2023) provide daily emissions thresholds to determine regional construction and operational air quality impacts. Additionally, SCAQMD has published localized thresholds for construction and operations based on applicable ambient air quality standards to determine if a project would have localized impact.

TABLE 3-1: REGIONAL EMISSIONS SIGNIFICANCE THRESHOLDS

Pollutant	Construction	Operations
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Pb	3 lbs/day	3 lbs/day

lbs/day = Pounds Per Day; ppm = Parts Per Million; $\mu g/m^3$ = Micrograms Per Cubic Meter

TABLE 4-2: LOCALIZED EMISSIONS SIGNIFICANCE THRESHOLDS

Pollutant	Construction	Operations
NO_X	0.18 ppm	0.18 ppm
CO (1-hour average)	20 ppm	20 ppm
CO (8-hour average)	9 ppm	9 ppm
PM_{10}	10.4 µg/m^3	2.5 µg/m^3
$PM_{2.5}$	10.4 µg/m^3	2.5 µg/m^3

3.3 MODELS EMPLOYED TO ANALYZE AIR QUALITY

3.3.1 CalEEMod

Land uses such as the Project affect air quality through construction-source and operational-source emissions. The California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released CalEEMod 2022 in May 2022. CalEEMod periodically releases updates, as such the latest version available at the time of this report has been utilized in this analysis. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (15). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendix 3.1.

3.4 CONSTRUCTION EMISSIONS

3.4.1 Construction Activities

Construction activities associated with the construction of the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction-related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

Demolition Activities

Based on recent aerial imagery, the Project site contains approximately three existing structures. The combined estimated building footprint of these structures is approximately 6,143 square feet. These existing structures will require demolition and off-site removal as part of the proposed Project construction activities.

Site Preparation and Grading Activities

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions." Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. This analysis assumes that earthwork activities are expected to balance on site and no import or export of soils would be required.

Building Construction, Paving, and Architectural Coating Activities

Building construction and paving emissions are primarily associated with exhaust emissions from on-site equipment and vehicular trips to the site by construction workers and vendor trips. Architectural coating emissions include worker trips as well, but the primary pollutant emission of concern during this phase is ROG/VOC. CalEEMod default emission rates include the effects of Rule 1113 to limit ROG/VOC emissions. To present a reasonable worst-case scenario, the building construction, paving, and architectural coating activities are modeled as overlapping phases.

Off-Site Utility and Infrastructure Improvements

In addition, to support the Project development, there will be paving for off-site improvements associated with roadway construction and utility installation for the Project. It is expected that the off-site construction activities would not take place at one location for the entire duration of construction. Impacts associated with these activities are not expected to exceed the emissions identified for Project-related construction activities since the off-site construction areas would have physical constraints on the amount of daily activity that could occur. The physical constraints would limit the amount of construction equipment that could be used, and any off-site and utility infrastructure construction would not use equipment totals that would exceed the equipment totals in Table 3-3. As such, no impacts beyond what has already been identified in this report are expected to occur.

3.4.2 Construction Duration

For purposes of analysis, construction will begin August 2026 and would last through December 2030. The construction schedule utilized in the analysis, shown in Table 4-3, represents a "conservative" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.[2] The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per the *CEQA Guidelines* (1).

[2] As shown in the CalEEMod User's Guide Version 2022, Appendix G "Table G-11. Statewide Average Annual Offroad Equipment Emission Factors" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3-2: CONSTRUCTION DURATION

Construction Activity	Start Date	End Date	Days
Demolition	08/03/2026	11/13/2026	75
Site Preparation	11/14/2026	01/15/2027	45
Grading	01/16/2027	06/25/2027	115
Building Construction	06/26/2027	12/06/2030	900
Paving	07/06/2030	12/06/2030	110
Architectural Coating	3/19/2029	12/06/2030	450

3.4.3 Construction Equipment

Consistent with industry standards and typical construction practices, each piece of equipment listed in Table 3-3 is assumed to operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the City code.

TABLE 3-3: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Construction Activity	Equipment[1]	Quantity	Hours
Demolition	Concrete/Industrial Saws	1	8
	Excavators	4	8
	Rubber Tired Dozers	3	8
Site Preparation	Rubber Tired Dozers	4	8
	Crawler Tractors	5	8
Grading	Excavators	3	8
	Graders	1	8
	Rubber Tired Dozers	1	8
	Scrapers	3	8
	Crawler Tractors	3	8
Building Construction	Cranes	2	8
	Forklifts	5	8
	Generator Sets	2	8
	Tractors/Loaders/Backhoes	5	8
	Welders	2	8
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

[1] In order to account for fugitive dust emissions, Crawler Tractors were used in lieu of Tractors/Loaders/Backhoes.

3.4.4 On-Road Trips

Construction generates on-road vehicle emissions from vehicle usage for workers, vendors, and haul trucks commuting to and from the site. The number of worker, vendor, and hauling trips per phase is presented below in Table 3-4. Worker trips are based on CalEEMod defaults. It should be noted that for vendor trips, specifically, CalEEMod only assigns vendor trips to the Building Construction phase. Vendor trips would likely occur during all phases of construction. As such, the CalEEMod defaults for vendor trips have been adjusted based on a ratio of the total vendor trips to the number of days of each subphase of activity.

TABLE 3-4: CONSTRUCTION TRIP ASSUMPTIONS

Construction Activity	Worker Trips	Vendor Trips	Hauling Trips
Demolition	20	7	1
Site Preparation	23	4	0
Grading	28	10	0
Building Construction	361	74	0
Paving	15	0	0
Architectural Coating	72	0	0

3.4.5 Construction Emissions Summary

CalEEMod calculates maximum daily emissions for summer and winter periods. As such, the estimated maximum daily construction emissions without mitigation for both summer and winter periods are summarized in Table 3-5. Detailed unmitigated construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction would not exceed criteria pollutant thresholds established by the SCAQMD.

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions are expected from the following primary sources:

- Mobile Source Emissions;
- Area Source Emissions; and
- Energy Source Emissions.

3.5.1 Mobile Source Emissions

The Project related operational air quality emissions derive primarily from vehicle trips generated by the Project, including employee and visitor/attendee trips associated with the proposed use. Trip characteristics available from the *COVA Traffic Impact Analysis* were utilized in this analysis (16).

Fugitive Dust Related to Vehicular Travel

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of brake and tire wear particulates. The emissions estimate for travel on paved roads was calculated using CalEEMod.

3.5.2 Area Source Emissions

Architectural Coatings

Over a period of time the buildings that are part of this Project would require maintenance and would therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings. The emissions associated with architectural coatings were calculated using CalEEMod.

Consumer Products

Consumer products include, but are not limited to, detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic

compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that on October 9, 2021, Governor Gavin Newsom signed AB 1346. The bill aims to ban the sale of new gasoline-powered equipment under 25 gross horsepower (known as small off-road engines [SOREs]) by January 1, 2024, which is now in effect. However, for purposes of analysis, the emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod, and do not incorporate the emissions reductions that would be realized from implementation of AB 1346.

3.5.3 Energy Source Emissions

Combustion Emissions Associated with Electricity and Natural Gas

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SSAB, criteria pollutant emissions from offsite generation of electricity are excluded from the evaluation of significance. Natural gas and electricity usage associated with the Project were calculated by CalEEMod using default parameters.

3.5.4 Operational Emissions Summary

Operational activities for summer and winter scenarios are presented in Table 3-6. Detailed operation model outputs for the Project are presented in Appendix 3.1. As shown in Table 3-6, the Project would not exceed the numerical thresholds of significance established by the SCAQMD for emissions of any criteria pollutant. As such, operational impacts would be considered less-than-significant.

3.6 LOCALIZED AIR QUALITY IMPACTS

3.6.1 Background on LST Development

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology). The SCAQMD has established that localized impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4.[3] LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the *LST Methodology* (17).

3.6.2 Emissions Considered

Based on SCAQMD's *LST Methodology*, emissions for concern during construction activities are on-site NO_X, CO, $PM_{2.5}$, and PM_{10}. The *LST Methodology* clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs (18)." As such, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

[3] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

3.6.3 Dispersion Modeling

In order to estimate localized pollutant concentrations resulting from Project construction, the SCAQMD-approved American Meteorological Society/EPA Regulatory Model (AERMOD) dispersion model was utilized. The modeling approach utilized is discussed as follows.

3.6.4 Sources

It should be noted that in order to model worst-case conditions, the highest daily peak on-site emissions resulting from overlapping construction activity were modeled. A ground level release height and a 1 meter (approximately 3.28 feet) initial vertical dimension (sigma z) were utilized for fugitive dust emissions of PM_{10} and $PM_{2.5}$ consistent with SCAQMD's LST guidance. In order to account for equipment exhaust emissions from NO_2, CO, PM_{10}, and $PM_{2.5}$ a release height of 5.0 meters was utilized consistent with SCAQMD's LST guidance.

3.6.5 Meteorological Data and Model Options

In order to account for meteorological conditions at the Project site, meteorological data from the SCAQMD's Desert Hot Springs Airport monitoring station was utilized, as this is the nearest station to the Project site for which meteorological data is available. Additionally, a receptor height of 2 meters and regulatory default options were utilized consistent with SCAQMD's LST guidance.

3.6.6 Receptors

As previously stated, LSTs represent the maximum emissions from a project that would not cause or contribute to an exceedance of the most stringent applicable NAAQS and CAAQS at the nearest residence or sensitive receptor. Receptor locations are off-site locations where individuals may be exposed to emissions from Project activities. Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use to the Project site where an individual could remain for 24 hours has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Per the *LST Methodology*, commercial and industrial facilities are not included in the definition of sensitive receptor because employees and patrons do not typically remain onsite for a full 24 hours but are typically on-site for 8 hours or less. However, *LST Methodology* explicitly states that "*LSTs based on shorter averaging periods, such as the NO_2 and CO LSTs, could also be applied to receptors such as industrial or commercial facilities since it is reasonable to assume that a worker at these sites could be present for periods of one to eight hours* (18)." Therefore, any adjacent land use where an individual could remain for 1 or 8 hours, that is located at a closer distance to the Project site than the receptor used for PM_{10} and $PM_{2.5}$ analysis, must be considered to determine construction and operational LST air impacts for emissions of NO_2 and CO since these pollutants have an averaging time of 1 and 8 hours.

Receptors in the Project study area are described below and shown in Exhibit 3-A. Localized air quality impacts were evaluated at sensitive receptor land uses nearest the Project site. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site.

R1: Location R1 represents the existing residence at 83890 52nd Avenue, approximately 104 feet north of the Project site. Receptor R1 is placed at the building façade facing the Project site.

R2: Location R2 represents the existing residence at 84045 52nd Venue, approximately 130 feet east of the Project site Receptor R2 is placed in the private outdoor living area (backyard) facing the Project site.

R3: Location R3 represents the existing residence at 52815 Van Buren Street, approximately 59 feet south of the Project site. Receptor R3 is placed in the private outdoor living area (backyard) facing the Project site.

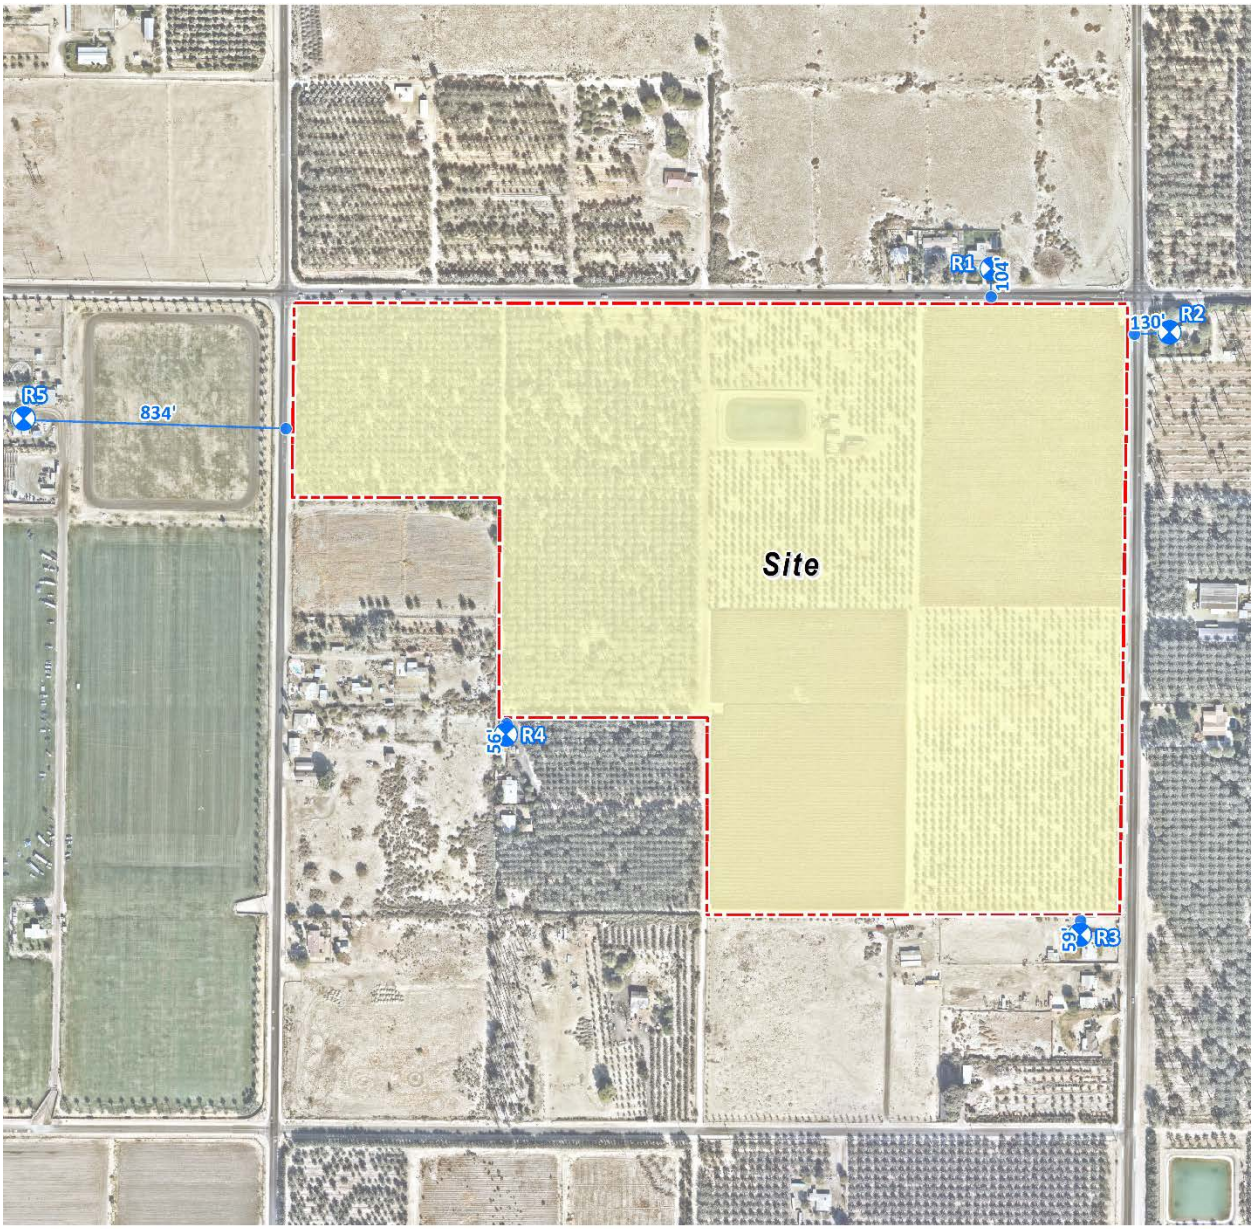
R4: Location R4 represents the existing residence, approximately 56 feet southwest of the Project site. Receptor R4 is placed at the building façade facing the Project site.

R5: Location R5 represents the existing residence at 53465 52nd Avenue, approximately 834 feet west of the Project site. Receptor R6 is placed at the building façade facing the Project site.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining a Project's impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time).

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assumed that an individual could be present at these sites for periods of one to 8 hours.

3.6.7 Construction-Source Localized Emissions



Emissions during the peak construction activity will not exceed the SCAQMD's localized significance thresholds at the maximally exposed receptor location, as illustrated in Table 3-7. All other modeled locations in the study area would experience lower concentrations, resulting in a reduced impact. As such, the Project's localized impacts during construction activity would be less than significant.

TABLE 3-7: CONSTRUCTION LOCALIZED SIGNIFICANCE SUMMARY

Peak Construction	CO		NO_2	PM_{10}	$PM_{2.5}$
	Averaging Time				
	1-Hour	8-Hours	1-Hour	24-Hours	24-Hours
Peak Day Localized Emissions	0.02	0.01	0.02	1.81	0.99
Background Concentration [A]	1.10	0.80	0.038		
Total Concentration	1.12	0.81	0.05	1.81	0.99
SCAQMD Localized Significance Threshold	20	9	0.18	10.4	10.4
Threshold Exceeded?	NO	NO	NO	NO	NO

[A] Highest concentration from the last three years of available data.
Notes: PM_{10} and $PM_{2.5}$ concentrations are expressed in µg/m³. All others are expressed in ppm.
Based on SCAQMD's LST Methodology, background concentrations are considered only for CO and NO_2.

EXHIBIT 3-A: RECEPTOR LOCATIONS

3.6.8 Operational-Source Localized Emissions

As previously stated, the total development of the Project is to consist of 165 two-story SFR and 244 condo hotel units. The development includes a crystal lagoon, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas and kids play spaces.

According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed Project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed.

3.7 CO "Hot Spot" Analysis

A CO hotspot is defined as a localized concentration of carbon monoxide exceeding the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm. At the time the most recent CEQA Air Quality Handbook (1993) was published by SCAQMD, the air basin was designated as non-attainment, requiring projects to perform hotspot analyses to ensure they did not worsen the existing conditions. Over the last two decades, background CO concentrations have been significantly reduced due to regulatory controls on tailpipe emissions, which have culminated in the air basin achieving attainment status for CO.

The 2003 AQMP's findings underscore that CO hotspots are highly unlikely due to the reduced background concentrations and the effectiveness of California's air quality management strategies. The substantial reduction in CO levels from the vehicle fleet and the state's attainment status for CO further diminish the need for detailed microscale hotspot analyses, reinforcing that existing monitoring and regulatory frameworks adequately address potential air quality concerns.

In 2003, the SCAQMD as part of its AQMP development process, prepared modeling to determine the potential for CO Hotspots at the four busiest intersections in the air basin. As summarized in the 2003 AQMP, even at one of the busiest intersections at that time, only 0.7 ppm of CO is attributable to vehicular traffic and the remaining 7.7 ppm were due to ambient background conditions. As shown on Table 2-5 in this report, the background 1-hour and 8-hour concentrations are well below the applicable AAQS. The 2003 AQMP's findings underscore that CO hotspots are highly unlikely due to the reduced background concentrations and the effectiveness of California's air quality management strategies. The substantial reduction in CO levels from the vehicle fleet and the state's attainment status for CO further diminish the need for detailed microscale hotspot analyses, reinforcing that existing monitoring and regulatory frameworks adequately address potential air quality concerns.

As such, Project-related traffic at any intersections in the vicinity of the Project would not cause or contribute to a CO hotspot since the background concentrations are low and any contribution from Project traffic would be negligible.

3.8 AQMP

The Project site is located within the SSAB and is subject to SCAQMD's 2022 AQMP and the 2003 Coachella Valley PM_{10} SIP. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions

of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SSAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In December 2022, the SCAQMD released the *Final 2022 AQMP* (*2022 AQMP*). The *2022 AQMP* continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (19). Similar to the 2016 AQMP, the *2022 AQMP* incorporates scientific and technological information and planning assumptions, including the *2020-2045 RTP/SCS*, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements (20). The Project's consistency with the AQMP will be determined using the *2022 AQMP* as discussed below.

SCAG adopted the 2020-*2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the federal metropolitan planning organization (MPO) requirements under the Sustainable communities and Climate Protection Act. It should be noted that although the 2024-2050 RTP was released after approval of the 2022 AQMP, the 2022 AQMP is reliant in part upon the general plan land use designations.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the *1993 CEQA Handbook* (21). These indicators are discussed below:

3.8.1 Consistency Criterion No. 1

Potential to result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refer to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

Construction Impacts – Consistency Criterion 1

As evaluated, the Project's localized and regional construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

Operational Impacts – Consistency Criterion 1

As evaluated, the Project's localized and regional operation-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

3.8.2 Consistency Criterion No. 2

Potential to exceed the assumptions in the AQMP based on the years of Project build-out phase.

The *2022 AQMP* demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Coachella General Plan is considered to be consistent with the AQMP.

Construction Impacts – Consistency Criterion 2

Peak day emissions generated by construction activities are largely independent of land use assignments but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

Operational Impacts – Consistency Criterion 2

The proposed Project consists of 409 units: 165 two-story SFR and 244 condo hotel units, a crystal lagoon, and other residential amenities including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas and kids play spaces. These uses are consistent with the City of Coachella General Plan designates the Project site as "Regional Retail District" land uses and "Regional Commercial" zoning uses.

The Regional Retail District designation provides opportunities for a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this designation will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. The primary purpose of the District is to provide for commercial opportunities, with residential uses supporting the retail environment.

The Regional Commercial zoning designation is intended to provide for and encourage a wide range of shopping and entertainment in a variety of urban and suburban formats. These include regional shopping centers, mixed destination centers or similar uses. The uses allowed in this zone will cater to regional clientele and provide a unique amenity to all residents of the Coachella Valley and an important revenue source for the City. Implementing the Regional Retail land use designation in the

General Plan, the primary purpose of the zone is to provide for commercial opportunities, with residential uses supporting the retail environment.

In conclusion, the proposed is consistent with the City's development intensities allowed under the existing designations. Further, the Project on an individual basis does not have an impact and as such, the proposed Project would not conflict with the goals and objectives of the AQMP. Furthermore, the Project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP Consistency Conclusion

Project would not have the potential to result in or cause NAAQS or CAAQS violations. The Project would not exceed the regional or localized construction and operational thresholds, and the Project's development intensity is consistent with the development intensities allowed within the General Plan as previously stated. As such, the Project is therefore considered to be consistent with the AQMP.

3.9 Potential Impacts to Sensitive Receptors

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project would not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project would not exceed the SCAQMD localized significance thresholds during operational activity. Further Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

3.9.1 Friant Ranch Case

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, the California Supreme Court held that an Environmental Impact Report's (EIR) air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided.

Most local agencies, including the City of Coachella, lack the data to do their own assessment of potential health impacts from criteria air pollutant emissions, as would be required to establish customized, locally-specific thresholds of significance based on potential health impacts from an individual development project. The use of national or "generic" data to fill the gap of missing local data would not yield accurate results because such data does not capture local air patterns, local background conditions, or local population characteristics, all of which play a role in how a population experiences air pollution. Because it is impracticable to accurately isolate the exact cause of a human disease (for example, the role a particular air pollutant plays compared to the role of other allergens and genetics in causing asthma), existing scientific tools cannot accurately estimate health impacts of the Project's air emissions without undue speculation. Instead, readers are

directed to the Project's air quality impact analysis above, which provides extensive information concerning the quantifiable and non-quantifiable health risks related to the Project's construction and long-term operation.

Notwithstanding, this AQIA does evaluate the proposed Project's localized impact to air quality for emissions of CO, NO_X, PM_{10}, and $PM_{2.5}$ by comparing the proposed Project's on-site emissions to the SCAQMD's applicable LST thresholds. The LST analysis above determined that the Project would not result in emissions exceeding SCAQMD's LSTs. Therefore, the proposed Project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NO_X, PM_{10}, and $PM_{2.5}$.

As the Project's emissions would comply with federal, state, and local air quality standards, the proposed Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level and would not provide a reliable indicator of health effects if modeled.

3.10 Odors

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors and other emissions (such as those leading to odors) associated with construction and operations activities of the proposed Project would be less than significant and no mitigation is required (22).

3.11 Cumulative Impacts

As previously shown in Table 2-4, the CAAQS designates the Project site as nonattainment for O_3 PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site as nonattainment for O_3 and $PM_{2.5}$. The SCAQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (23). In this report the SCAQMD clearly states (Page D-3):

> *"…the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which SSAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Conversely, project-level construction and operational emissions that exceed SCAQMD thresholds would be considered cumulatively considerable. SCAQMD's thresholds of significance for project-specific direct and cumulatively-considerable impacts have clearly been successful, as application of these thresholds has led to significant air quality improvements throughout the SSAB.

Construction-Source Emission Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a Project-specific and cumulative basis.

Operational-Source Emission Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operation-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, the proposed Project operation-source emissions would be considered less than significant on a project-specific and cumulative basis.

5 CERTIFICATION

The contents of this air study report represent an accurate depiction of the environmental impacts associated with the proposed COVA Project. The information contained in this air quality impact assessment report is based on the best available data at the time of preparation. If you have any questions, please contact me directly at hqureshi@urbanxroads.com.

Education

Master of Science in Environmental Studies
California State University, Fullerton • May, 2010
Bachelor of Arts in Environmental Analysis and Design
University of California, Irvine • June, 2006

Professional Affiliations

AEP – Association of Environmental Professionals
AWMA – Air and Waste Management Association
ASTM – American Society for Testing and Materials

Professional Certifications

Planned Communities and Urban Infill – Urban Land Institute • June, 2011
Indoor Air Quality and Industrial Hygiene – EMSL Analytical • April, 2008
Principles of Ambient Air Monitoring – CARB • August, 2007
AB2588 Regulatory Standards – Trinity Consultants • November, 2006
Air Dispersion Modeling – Lakes Environmental • June, 2006

- - - - - - - - - - - - - - - - - - -

** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE  =  F
     * Model Uses NO WET DEPLETION. WETDPLT  =  F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for    36 Source(s),
       for Total of    1 Urban Area(s):
  Urban Population =   2492442.0 ;  Urban Roughness Length =  1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: CO

**Model Calculates  2 Short Term Average(s) of:   1-HR   8-HR

**This Run Includes:     36 Source(s);       1 Source Group(s); and      22 Receptor(s)

               with:      0 POINT(s), including
                          0 POINTCAP(s) and      0 POINTHOR(s)
                and:     36 VOLUME source(s)
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date:  22112

**Output Options Selected:
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
         Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and
                                                                Missing Hours

**Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   -36.04 ;  Decay Coef.
=    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;  Emission
                  Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =      3.5 MB of RAM.
