** Model Options Selected:
     * Model Uses Regulatory DEFAULT Options
     * Model Is Setup For Calculation of Average CONCentration Values.
     * NO GAS DEPOSITION Data Provided.
     * NO PARTICLE DEPOSITION Data Provided.
     * Model Uses NO DRY DEPLETION. DDPLETE  =  F
     * Model Uses NO WET DEPLETION. WETDPLT  =  F
     * Stack-tip Downwash.
     * Model Accounts for ELEVated Terrain Effects.
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses URBAN Dispersion Algorithm for the SBL for    37 Source(s),
       for Total of    1 Urban Area(s):
  Urban Population =   2492442.0 ;  Urban Roughness Length =  1.000 m
     * Urban Roughness Length of 1.0 Meter Used.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Accepts FLAGPOLE Receptor . Heights.
     * The User Specified a Pollutant Type of: PM_2.5

**Model Calculates  1 Short Term Average(s) of:  24-HR

**This Run Includes:     37 Source(s);       1 Source Group(s); and      22 Receptor(s)

               with:      0 POINT(s), including
                          0 POINTCAP(s) and      0 POINTHOR(s)
                and:     36 VOLUME source(s)
                and:      1 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date:  22112
```

**Output Options Selected:
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = -36.04 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.6 MB of RAM.

**Input Runstream File:
aermod.inp

**Output Print File:
aermod.out

**Detailed Error/Message File: 16552-02 Const PM25.err
**File for Summary of Results: 16552-02 Const PM25.sum

744     ** Model Options Selected:
745          * Model Uses Regulatory DEFAULT Options
746          * Model Is Setup For Calculation of Average CONCentration Values.
747          * NO GAS DEPOSITION Data Provided.
748          * NO PARTICLE DEPOSITION Data Provided.
749          * Model Uses NO DRY DEPLETION. DDPLETE  =  F
750          * Model Uses NO WET DEPLETION. WETDPLT  =  F
751          * Stack-tip Downwash.
752          * Model Accounts for ELEVated Terrain Effects.
753          * Use Calms Processing Routine.
754          * Use Missing Data Processing Routine.
755          * No Exponential Decay.
756          * Model Uses URBAN Dispersion Algorithm for the SBL for    37 Source(s),
757            for Total of    1 Urban Area(s):
758       Urban Population =   2492442.0 ;  Urban Roughness Length =  1.000 m
759          * Urban Roughness Length of 1.0 Meter Used.
760          * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
761          * CCVR_Sub - Meteorological data includes CCVR substitutions
762          * TEMP_Sub - Meteorological data includes TEMP substitutions
763          * Model Accepts FLAGPOLE Receptor . Heights.
764          * The User Specified a Pollutant Type of: PM_10
765
766     **Model Calculates  1 Short Term Average(s) of:  24-HR
767
768     **This Run Includes:     37 Source(s);       1 Source Group(s); and      22 Receptor(s)
769
770                    with:      0 POINT(s), including
771                               0 POINTCAP(s) and      0 POINTHOR(s)
772                     and:     36 VOLUME source(s)
773                     and:      1 AREA type source(s)
774                     and:      0 LINE source(s)
775                     and:      0 RLINE/RLINEXT source(s)
776                     and:      0 OPENPIT source(s)
777                     and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
778                     and:      0 SWPOINT source(s)
779
780
781     **Model Set To Continue RUNning After the Setup Testing.
782
783     **The AERMET Input Meteorological Data Version Date:  22112
```

**Output Options Selected:
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = -36.04 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.6 MB of RAM.

**Input Runstream File:
aermod.inp

**Output Print File:
aermod.out

Item 2.

COVA Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2026) - Unmitigated

3.2. Demolition (2026) - Mitigated

3.3. Site Preparation (2026) - Unmitigated

1765

3.4. Site Preparation (2026) - Mitigated

3.5. Site Preparation (2027) - Unmitigated

3.6. Site Preparation (2027) - Mitigated

3.7. Grading (2027) - Unmitigated

3.8. Grading (2027) - Mitigated

3.9. Building Construction (2027) - Unmitigated

3.10. Building Construction (2027) - Mitigated

3.11. Building Construction (2028) - Unmitigated

3.12. Building Construction (2028) - Mitigated

3.13. Building Construction (2029) - Unmitigated

3.14. Building Construction (2029) - Mitigated

3.15. Building Construction (2030) - Unmitigated

3.16. Building Construction (2030) - Mitigated

3.17. Paving (2030) - Unmitigated

3.18. Paving (2030) - Mitigated

3.19. Architectural Coating (2029) - Unmitigated

3.20. Architectural Coating (2029) - Mitigated

3.21. Architectural Coating (2030) - Unmitigated

3.22. Architectural Coating (2030) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

1768

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	COVA
Construction Start Date	8/3/2026
Operational Year	2030
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	7.60
Location	33.668924537913895, -116.20280185678254
County	Riverside-Salton Sea
City	Coachella
Air District	South Coast AQMD
Air Basin	Salton Sea
TAZ	5662
EDFZ	19
Electric Utility	Imperial Irrigation District
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	165	Dwelling Unit	53.6	321,750	1,932,621	—	533	—

1773

Item 2.

Condo/Townhouse	244	Dwelling Unit	15.3	258,640	0.00	—	788	—
Movie Theater (No Matinee)	278	1000sqft	6.38	277,804	0.00	—	—	Beach Club
Quality Restaurant	22.0	1000sqft	0.50	21,977	0.00	—	—	—
User Defined Recreational	8.93	User Defined Unit	0.20	0.00	0.00	—	—	—
Parking Lot	696	Space	6.26	0.00	0.00	—	—	—
Recreational Swimming Pool	536	1000sqft	12.3	0.00	0.00	—	—	—
Other Asphalt Surfaces	1.00	1000sqft	0.02	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Energy	E-10-B	Establish Onsite Renewable Energy Systems: Solar Power
Water	W-4	Require Low-Flow Water Fixtures
Water	W-5	Design Water-Efficient Landscapes
Waste	S-1/S-2	Implement Waste Reduction Plan

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	19.5	18.8	37.2	67.4	0.09	1.66	6.49	7.28	1.53	1.55	2.66	—	14,630	14,630	0.38	0.54	20.7	14,819

1774

Daily, Winter (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

1824

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	8/3/2026	11/13/2026	5.00	75.0	—
Site Preparation	Site Preparation	11/14/2026	1/15/2027	5.00	45.0	—
Grading	Grading	1/16/2027	6/25/2027	5.00	115	—
Building Construction	Building Construction	6/26/2027	12/6/2030	5.00	900	—
Paving	Paving	7/6/2030	12/6/2030	5.00	110	—
Architectural Coating	Architectural Coating	3/19/2029	12/6/2030	5.00	450	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Concrete/Industrial Saws	Diesel	Average	1.00	8.00	33.0	0.73
Demolition	Excavators	Diesel	Average	4.00	8.00	36.0	0.38
Demolition	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Rubber Tired Dozers	Diesel	Average	4.00	8.00	367	0.40
Site Preparation	Crawler Tractors	Diesel	Average	5.00	8.00	87.0	0.43

1859

Grading	Excavators	Diesel	Average	3.00	8.00	36.0	0.38
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Grading	Scrapers	Diesel	Average	3.00	8.00	423	0.48
Grading	Crawler Tractors	Diesel	Average	3.00	8.00	87.0	0.43
Building Construction	Cranes	Diesel	Average	2.00	8.00	367	0.29
Building Construction	Forklifts	Diesel	Average	5.00	8.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	2.00	8.00	14.0	0.74
Building Construction	Tractors/Loaders/Backhoes	Diesel	Average	5.00	8.00	84.0	0.37
Building Construction	Welders	Diesel	Average	2.00	8.00	46.0	0.45
Paving	Pavers	Diesel	Average	2.00	8.00	81.0	0.42
Paving	Paving Equipment	Diesel	Average	2.00	8.00	89.0	0.36
Paving	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Architectural Coating	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Concrete/Industrial Saws	Diesel	Average	1.00	8.00	33.0	0.73
Demolition	Excavators	Diesel	Average	4.00	8.00	36.0	0.38
Demolition	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Rubber Tired Dozers	Diesel	Average	4.00	8.00	367	0.40
Site Preparation	Crawler Tractors	Diesel	Average	5.00	8.00	87.0	0.43
Grading	Excavators	Diesel	Average	3.00	8.00	36.0	0.38
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Grading	Scrapers	Diesel	Average	3.00	8.00	423	0.48
Grading	Crawler Tractors	Diesel	Average	3.00	8.00	87.0	0.43

1860

Building Construction	Cranes	Diesel	Average	2.00	8.00	367	0.29
Building Construction	Forklifts	Diesel	Average	5.00	8.00	82.0	0.20

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

1863

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	1,175,290	391,763	449,672	149,891	16,432

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	6,143	—
Site Preparation	—	—	203	0.00	—
Grading	—	—	633	0.00	—
Paving	0.00	0.00	0.00	0.00	8.11

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Single Family Housing	1.82	0%
Condo/Townhouse	—	0%
Movie Theater (No Matinee)	0.00	0%
Quality Restaurant	0.00	0%
User Defined Recreational	0.00	0%
Parking Lot	6.26	100%
Recreational Swimming Pool	0.00	0%

1864

Other Asphalt Surfaces	0.02	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	457	0.03	< 0.005
2027	0.00	457	0.03	< 0.005
2028	0.00	457	0.03	< 0.005
2029	0.00	457	0.03	< 0.005
2030	0.00	457	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Total all Land Uses	1,887	1,887	1,887	688,755	33,272	33,272	33,272	12,144,280

5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Total all Land Uses	1,887	1,887	1,887	688,755	33,272	33,272	33,272	12,144,280

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Single Family Housing	—

1865

Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	165
No Fireplaces	0
Conventional Wood Stoves	0

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.5	annual days of extreme heat
Extreme Precipitation	0.05	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.14	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

1875

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	8.11
AQ-DPM	43.5
Drinking Water	72.0
Lead Risk Housing	4.10
Pesticides	72.9
Toxic Releases	2.83
Traffic	9.28
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	0.00
Haz Waste Facilities/Generators	35.6
Impaired Water Bodies	0.00
Solid Waste	0.00

1876

Sensitive Population	—
Asthma	26.8
Cardio-vascular	32.6
Low Birth Weights	4.36
Socioeconomic Factor Indicators	—
Education	30.4
Housing	42.8
Linguistic	86.9
Poverty	40.8
Unemployment	64.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	52.34184525
Employed	12.04927499
Median HI	41.75542153
Education	—
Bachelor's or higher	59.05299628
High school enrollment	100
Preschool enrollment	1.873476197
Transportation	—
Auto Access	43.30809701
Active commuting	33.32477865
Social	—
2-parent households	17.11792634
Voting	54.07416913

1877

Neighborhood	—
Alcohol availability	91.45386886
Park access	2.194276915
Retail density	9.790837931
Supermarket access	15.98870781
Tree canopy	8.661619402
Housing	—
Homeownership	66.77787758
Housing habitability	81.5603747
Low-inc homeowner severe housing cost burden	21.18567946
Low-inc renter severe housing cost burden	92.91672013
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	50.93032208
Arthritis	1.8
Asthma ER Admissions	72.2
High Blood Pressure	3.3
Cancer (excluding skin)	2.7
Asthma	55.1
Coronary Heart Disease	2.7
Chronic Obstructive Pulmonary Disease	14.4
Diagnosed Diabetes	19.9
Life Expectancy at Birth	80.0
Cognitively Disabled	85.7
Physically Disabled	10.0
Heart Attack ER Admissions	73.8
Mental Health Not Good	68.6
Chronic Kidney Disease	5.2

1878

Obesity	37.0
Pedestrian Injuries	19.6
Physical Health Not Good	38.5
Stroke	13.0
Health Risk Behaviors	—
Binge Drinking	87.0
Current Smoker	74.7
No Leisure Time for Physical Activity	49.0
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	90.2
Elderly	5.0
English Speaking	66.0
Foreign-born	19.1
Outdoor Workers	12.2
Climate Change Adaptive Capacity	—
Impervious Surface Cover	84.6

Traffic Access	23.0
Other Indices	—
Hardship	50.2
Other Decision Support	—
2016 Voting	78.2

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	21.0

1879

Healthy Places Index Score for Project Location (b)	31.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Total area is 81.14 acres
Construction: Construction Phases	Construction schedule based on a 2030 opening year
Construction: Off-Road Equipment	Crawler Tractors used in lieu of Tractors/Loaders/Backhoes
Construction: Trips and VMT	Vendor trips adjusted based on CalEEMod defaults for Building Construction and number of days during Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic analysis
Operations: Hearths	Rule 445
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively. Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.
Operations: Fleet Mix	Adjusted Fleet Mix

1880

Operations: Energy Use	No natural gas for residential

Subject: Phase I Environmental Site Assessment
Proposed Mixed-Use Development
APN's 780-040-001, 003, 780-060-001 & 002
SWC 52nd Avenue & Van Buren Street
Coachella, California

In accordance with your request, Sladden Engineering has completed this Phase I Environmental Site Assessment of the subject property identified by the County of Riverside as APNs 780-040-001, 003, 780-060-001 & 002 located on southwest corner of 52nd Avenue and Van Buren Street in the City of Coachella California (Figure 1 & Figure 2).

This report was prepared to stand as a whole and no part should be excerpted or used in exclusion of any other part. The activities conducted have been in accordance with our proposal dated November 7, 2023. This report completes our Phase I scope of services as outlined in our agreement. We appreciate this opportunity to be of service. If you have any questions regarding this report or the information contained herein, please contact the undersigned at your convenience.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Respectfully Submitted,
Sladden Engineering

Appendix D Phase I Environmental Site Assessment Questionnaire

1.0 INTRODUCTION

This Phase I *environmental site assessment* has been conducted at the request of Mrs. Isabel Ronda with Relevant Living.

1.1 Purpose

This report presents the findings of the Phase I Environmental Site Assessment (ESA) conducted for the property identified by the County of Riverside as APNs 780-040-001, 003, 780-060-001 & 002 located on southwest corner of 52nd Avenue and Van Buren Street in the City of Coachella California. The approximate location of the site is indicated on the Site Location Map, Figure 1 and Site Photograph Figure 2.

The intent of this investigation was to evaluate areas of potential environmental concern that may be present as a result of past hazardous materials use, handling or storage on or near the properties with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and *petroleum products* for a parcel of *commercial real estate*. This ESA is also intended to permit the *user* to satisfy one of the requirements to qualify for the *landowner liability protection* (LLP) that is, the practice that constitutes "all appropriate inquiry" (AAI) defined at 40 Code of Federal Regulations Part 312.

1.2 Detailed Scope-of-Services

The scope of Phase I ESA work performed herein conforms with American Society for Testing and Materials (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and has consisted of a records review, site reconnaissance, interviews, and the preparation of this report. An evaluation of *business environmental risks* and testing of building materials, air, or groundwater is beyond the scope of this report. For reference, the italicized terms presented herein are consistent with those defined in ASTM Standard E1527-13, Section 3, Terminology.

Included in this report are a Site Location Map (Figure 1) and Site Photograph (Figure 2). Photographs of the property (Appendix A) document the general site features and conditions as observed during site visit on May 23, 2024. For regulatory and agency database information, Environmental Data Resources, Inc. (EDR) was retained. A copy of their report is attached as Appendix B. Relevant and readily available historical records are provided in Appendix C as reference.

There are no *Special Contractual Conditions* between *user* and *environmental professional* for this assessment.

1.3 Significant Assumptions

This environmental assessment and report meet the December 30, 2013, ASTM Standard E1527-13. As specified under this standard, certain responsibilities lie with the *user* of the assessment. The *user* is generally the purchaser, owner, lender, property manager, or potential tenant. Under the ASTM standard, it is the responsibility of the *user* to engage a title company or title professional to undertake a review of *Environmental Liens or Activity and Use Limitations (AULs)* with regard to the property and provide this information to the *environmental professional* preparing the assessment. Additionally, the *user* must make the professional aware of any specialized knowledge or experience that is material to *Recognized Environmental Conditions* in connection with the property. Where and when provided, information provided in this regard is presented in the records review section of this report.

"*Recognized Environmental Conditions*" are defined by ASTM as follows: "The presence or likely presence of any Hazardous Substances or Petroleum Products on a Property under conditions that indicate an existing release, a past release, or a material threat of a release of any Hazardous Substances or Petroleum Products into structures on the Property or into the ground, groundwater, or surface water of the Property. The term includes Hazardous Substances or Petroleum Products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

Indoor air quality is specifically listed as a non-scope consideration under Section 13.1.5.7 of ASTM Standard E1527-13. However, *Environmental Professionals* cannot eliminate vapor migration screening from the ASTM Standard E1527-13 Phase I ESA scope of work as this would result in the Phase I ESA being non-AAI compliant. ASTM has released ASTM Standard E2600-10 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The Guidance is directed at identifying the likelihood for migrating vapors to encroach onto a target property creating a Vapor Encroachment Condition (VEC). The potential findings of the ASTM Standard E2600-10 screening are the following:

1) A VEC exists or is likely to exist; or,

2) A VEC can be ruled out because it does not exist or is not likely to exist.

ASTM Standard E2600-10 is a two-Tier process. Tier 1 focuses on known or suspected contaminated properties identified during the Phase I ESA within an Area of Concern (AOC) about the target property. For volatile and semi-volatile organic compounds (VOCs and SVOCs), such as dry-cleaning chemicals and industrial solvents, the AOC is defined as 1/3 mile. For petroleum hydrocarbon chemicals such as gasoline the AOC is defined as 1/10 mile. The AOC can be shortened in the down- and cross-gradient directions if the groundwater flow direction is known.

Tier 2 focuses on contaminant plumes from contaminated properties identified within the AOC and their proximity (critical distance) to the target property. The critical distance is 100 feet for VOCs and 30 feet for petroleum hydrocarbons.

2.0 SITE DESCRIPTION

A description and general property information is summarized in this section.

2.1 Location and Legal Description

Latitude (North)	33.668402 - 33° 40′ 6.25″
Longitude (West)	116.202506 - 116° 12′ 9.02″
Elevation (mean sea level)	51 feet below sea level
Riverside County Assessor Parcel Number	APNs 780-040-001, 003, 780-060-001 & 002
Property Size	~ 85.76 Acres

The site is located on southwest corner of 52nd Avenue and Van Buren Street in the City of Coachella California. Figures 1 & 2 show the location of the property relative to the general site vicinity.

2.2 Geology & Hydrogeology

The property is located in the Coachella Valley area of Riverside County, California. The Coachella Valley is part of the tectonically active Salton Trough. The Salton Trough is a closed, internally draining basin bounded in its northerly portion by the San Jacinto and Santa Rosa Mountains to the southwest, the San Bernardino Mountains to the northwest, and the Little San Bernardino Mountains to the northeast. These mountain ranges are composed of granitic and metamorphic rocks that also form the basement complex of the Coachella Valley. Overlying the basement complex, the valley is filled with a series of unconsolidated and semi-consolidated continental clastic materials eroded from the surrounding mountain ranges, lacustrine deposits of ancient Lake Cahuilla, and wind-blown sand deposited in the active blow sand areas.

The northwest-southeast trending San Andreas fault zone dominates the geology of the Coachella Valley. The Banning, Mission Creek, and Garnet Hill faults (which are part of the San Andreas fault system), divide the Coachella Valley into four distinct hydrogeologic subbasins, as the faults are generally impermeable to groundwater flow. Groundwater characteristics in the vicinity of the subject site are governed by the features of the Whitewater River subbasin, which is bound by the Garnet Hill fault to the northwest, and the San Jacinto and Santa Rosa Mountains to the west and south. Groundwater in the Whitewater River subbasin generally flows in a southeasterly direction from the main recharge area near San Gorgonio Pass towards the Salton Sea. Average transmissivity (a measure of groundwater flow rate) of the main aquifer in the subject vicinity is relatively high, averaging 300,000 gallons per columnar foot per day. Average water storage capacity within the main aquifer is eighteen percent (USDA, 1980). Depth to groundwater in the general site vicinity is expected to be in excess of 50 feet below existing ground surface.

The EDR report provides a physical setting source addendum (GeoCheck). The property is located at an elevation of approximately 51 feet below sea level. The topography increases in elevation to the west and north. The EDR report searched for site-specific hydro-geologic information maintained by EDR within a 1.25-mile radius from the property; however, no specific information was found. Near surface soil in the general area is described as fine sandy loam and fine sand that consist of moderately well drained sediments.

The EDR report also searched for public water systems and water wells known to the United States Geological Survey (USGS) and State of California within a one-mile radius of the property. Nine (9) wells were found within 1 mile of the subject site. Groundwater elevations within the site vicinity were not reported.

3.0 USER PROVIDED INFORMATION

A due diligence executive summary was provided by thew client. A previous Phase 1 report stated one 750 gallon above ground storage tank and one 10,000 above ground storage tank will need to be removed in accordance with regulatory guidelines. Existing wells will need to be removed/destroyed in accordance with regulatory guidelines.

A previous Phase 2 indicated concentrations of DDE & DDT concentrations above regulatory levels in the vicinity of the existing metal shed and the vicinity of the residence on site. The summary recommended additional soil sampling to assess the source and limits of the chemicals of concern. In addition, the Phase 2 report recommended additional water testing within the onsite well if the well will be planned for future use.

The *user* has no knowledge, or information, of *Environmental Liens or Activity and Use Limitations (AULs)* relating to the property.

4.0 RECORDS REVIEW

This section covers agency records and readily available and public documents from standard sources.

4.1 Regulatory Records

To identify reported areas of possible environmental impairment on or within a 1.0-mile radius of the *property,* an "Environmental Database Report" was obtained from EDR (Appendix B). This report includes information from the following agencies:

The search distances used are indicated in the attached EDR report (Appendix B). **The target property was not listed in any databases searched by EDR.** Generally, the sites reported within the EDR were listed as "No Further Action or Inactive". Generally, the sites listed within EDR databases should not pose a significant environmental impact on the subject property.

There are four (4) sites listed as unmapped (orphan list) sites presented in the EDR report. The sites should not pose an environmental concern in the absence of known or documented issues.

4.2 Sanborn Fire Insurance Maps

The subject site is an unmapped property.

4.3 Aerial Photographs

To identify past uses that may have had an environmental impact on the property or surrounding areas, a collection of historical aerial photographs was reviewed. Photographs from 1949, 1953, 1959, 1965, 1972, 1984, 1996, 2002, 2006, 2009, 2012, 2016 and 2020 were readily available for review (copies are included in Appendix C for reference). The following summaries are interpretive and are valid only for the dates flown.

1949- Generally, the subject property and site vicinity appear to be used as farmland. Structures are visible near the southwest corner of the subject site (USDA, 1949).

1953- The property appears to be utilized for agricultural usage. Structures are visible near the southwest corner, middle and northwest corner of the subject site. Numerous agricultural plots are visible within the site vicinity (USDA, 1953).

1959- Generally, the property and site vicinity appear mostly unchanged from the previous photograph (USDA, 1959).

1965- A new structure is visible near the central portion of the subject site. Generally, the site's vicinity appears mostly unchanged from the previous photograph (USGS, 1965).

1972- Generally, the property and site vicinity appear mostly unchanged from the previous photograph (USDA, 1972).

1984- Structures are missing from the central and southwestern section of the subject site. The central portion of the property appears to be used for agricultural use. Various new structures are visible within the site vicinity (USDA, 1984).

1996- New date orchards are visible on the subject site. The property still appears to be used as farmland (USGS/DOQQ, 1996).

2002- Generally, the property and site vicinity appear mostly unchanged from the previous photograph (USGS/DOQQ, 2002).

2006- Generally, the property and site vicinity appear mostly unchanged from the previous photograph (USDA/NAIP, 2006).

2009- Generally, the property and site vicinity appear mostly unchanged from the previous photograph (USDA/NAIP, 2009).

2012- An irrigation pond is visible to the immediate west of the existing structure located on the subject property. Generally, the site vicinity appears mostly unchanged from the previous photograph (USDA/NAIP, 2012).

2016- Generally, the subject property and site vicinity appear mostly unchanged from the previous photograph (USDA/NAIP, 2016).

2020- Generally, the subject property and site vicinity appear mostly unchanged from the previous photograph (USDA/NAIP, 2020).

4.4 Topographic Maps

Sladden Engineering retained EDR to provide historical topographic maps prepared by the USGS for the site vicinity. Historical topographic maps were available for the years 1904, 1941, 1943, 1947, 1956, 1972, 1975, 2012, 2015, 2018 and 2021. The EDR Historical Topographic Map Report is included in Appendix C.

1904 - The subject property is mapped as undeveloped desert land. A north to south trending roadway is mapped to the west of the property. Augustine Indian reservation is mapped to the southeast of the property.

1941 - The subject property remains mapped as undeveloped land. Structures are mapped throughout the site vicinity. Calhoun Street and 52th Avenue are mapped to the west and north, respectively.

1943- The subject property and surrounding area appear mostly unchanged from the previous map.

1947- The subject property and surrounding area appear mostly unchanged from the previous map.

1956- A portion of the subject property is mapped as agricultural land. An irrigation pond is visible on the property. Agricultural property is mapped throughout the site vicinity.

1972- The property appears undeveloped with the exception of an irrigation pond. Agricultural property is mapped throughout the site vicinity.

1975 - A structure is located on the property. Portions of the property appear to be utilized for agricultural use. Structures and agricultural property are scattered throughout the site vicinity.

2012- The property appears undeveloped. Structures are absent from this map. New roadways are mapped within the site vicinity.

2015 - The subject property appears undeveloped. Generally, the site's vicinity appears unchanged from the previous map.

2018- The subject property and surrounding area appear mostly unchanged from the previous map.

2021- The subject property and surrounding area appear mostly unchanged from the previous map.

4.5 City Directory Image Report

Sladden retained EDR to provide a historical city directory search for the property and nearby properties. The city directories identify individuals and businesses by street address. EDR obtained information from city and telephone directories from 1971 to 2020. The EDR City Directory Image Report is included in Appendix C.

4.6 Title Records

Title records were not provided by the client and therefore were not reviewed as a part of this assessment.

5.0 SITE RECONNAISSANCE

The property was visited by Mr. James Minor on May 31, 2024 to observe the general site conditions and adjacent land use relative to this assessment and photodocument general findings. The following observations were made:

The subject property is located on the southwest corner of 52nd Avenue and Van Buren Street in the City of Coachella, California. The property is formally identified by the County of Riverside as APNs 780-040-001, 003, 780-060-001 & 002 and occupies a total area of approximately 85.76 acres. At the time of our investigation, the property was used for date palm tree and grape farming. Drip type irrigation lines were observed along the rows of grapes and date palm trees. Two (2) dilapidated structures along with some trash/debris piles were observed within the central portion on the property. A fenced irrigation pond and pump station were observed adjacent to the structures. CVWD standpipes were observed near the northern side of the property. Various dirt roads transect the subject site. The site is generally level throughout and near the elevation of the adjacent properties and streets. The site is bounded by 52nd Avenue on the north, by Van Buren Street on the east, by Calhoun Street on the west and on the south by existing agricultural property.

The following utilities are available and will likely service the general area.

Potable Water Supply – Coachella Valley Water District
Sewage Disposal System – Coachella Valley Water District
Electricity – Edison
Natural Gas – The Gas Company
Telephone – Frontier

6.0 INTERVIEWS

Interviews with the Owners and Local Government Officials are summarized below.

The Riverside County Department of Environmental Health (RCDEH) and the Regional Water Quality Control Board, Colorado River Region (RWQCB) is the local environmental oversight agencies responsible for site contamination or activities relating to hazardous substances and hazardous waste sites. Because the property was not listed on any of the environmental agency databases reviewed, agency would not be expected to have information regarding the presence or absence of adverse or negative environmental conditions at the site. Past interviews with staff from these agencies confirm they do not have unpublished information relating to adverse or negative environmental conditions at sites not listed in environmental databases and lack of a physical address.

Based on a completed Phase 1 Environmental Site Assessment Questionnaire completed by Mr. Grant King (property manager), the property is currently used for agricultural purposes and is currently vacant. Mr. King stated that previous environmental assessments revealed that the surface soil is contaminated with detected levels of dichloro-diphenyl-trichloroethane (DDT) and dichloro-diphenyl- ethylene (DDE) chemicals. He stated that an onsite well tested positive for coliform and atypical hydrocarbons. In addition, he indicated that previous fuel/chemical storage tanks were located onsite, but these tanks have been removed offsite.

The supplied Phase 1 Environmental Site Assessment Questionnaire is attached to this report within Appendix D.

7.0 FINDINGS / OPINION / CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard E-1527-13 for the site identified as APN's APNs 780-040-001, 003, 780-060-001 & 002. Any exceptions to, or deletions from, this practice are described in Section 8 of this report. This assessment has revealed evidence of a Recognized Environmental Condition in connection with the subject property.

Based on the previous and ongoing farming/agricultural use of the subject property along with the previous environmental reports identifying the presence of DDE, DDT and other hydrocarbons, we recommend that a Phase 2 shallow soil sampling laboratory testing program be performed. The purpose of the phase 2 environmental investigation is to assess the potential presence of residual pesticide/herbicide and hydrocarbon contaminants within the surface soil.

ASTM Standard E1527-13 includes a requirement to address the potential presence of methane or other subsurface gases. Because there are no landfills, dumps, buried organic debris or other methane sources in the site vicinity and no underground petroleum storage tanks on the site, it is our opinion that the potential for methane or other subsurface gases impacting the subject site is "negligible".

8.0 DEVIATIONS

Historical aerial photographs, maps, and other records pre-dating 1904 were not readily available and reasonably ascertainable through standard historical sources and therefore not reviewed as part of this Phase I ESA.

A 50-year chain-of-title review could help identify *environmental liens or activity use limitations (AULs)*. This report, if provided by the *user*, will be reviewed and this report amended in the event *environmental liens or AULs* are identified during the search.

9.0 ADDITIONAL SERVICES

Non-scope considerations listed in ASTM E1527-13 Sections 12.9 and 13 are not part of this report. These optional assessments cover such issues as: business environmental risks, asbestos, radon, lead-based paint, lead in drinking water, etc.

10.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experienced to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

/s/
James W. Minor III
Senior Geologist

/s/
Brett L Anderson
Principal Engineer

11.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Summary qualifications of the individuals who conducted this Phase I ESA and prepared this report are presented below. Their *curriculum vitae* detailing relevant experience are available on request.

James Minor is a California Registered Professional Geologist with over 10 years of experience in geotechnical and environmental consulting. James has performed dozens of Phase 1 Environmental Site Assessments and Geotechnical Investigations throughout Southern California.

Brett Anderson is a California Registered Civil Engineer with over 30 years of experience in civil and environmental engineering. Brett holds a master's degree in geotechnical engineering and has been involved with the preparation of hundreds of Phase I ESAs throughout Southern California.

13.0 LIMITATION AND EXCEPTIONS / USER RELIANCE

This assessment applies to the subject property identified by the County of Riverside as APN's 780-040-001, 003, 780-060-001 & 002 located on southwest corner of 52nd Avenue and Van Buren Street in the City of Coachella California. The conclusions and recommendations rendered in this report are opinions based on readily available and reasonably ascertainable information obtained to date within the scope of work authorized by the client. Use of or reliance on the information and opinions contained in this letter by other parties without consulting this office is at the parties own risk.

It should be noted that any level of assessment cannot ascertain that a property is completely free of chemical or toxic substances; therefore, Sladden Engineering cannot offer the certification of a "clean" property. We believe the scope of work performed has been appropriate to allow an owner, prospective buyer, or seller to make an informed business decision.

The results contained in this report are based upon the information acquired during our assessment. It is possible that variations could exist beyond or between points explored during the course of the investigation. Also, changes in conditions found could occur at some time in the future due to contaminant migration, variations in rainfall, temperature, and/or other factors not apparent at the time of the field investigation.

The services performed by Sladden Engineering have been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in this region. No other warranty is expressed or implied.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there is 1 ENVIROSTOR site within approximately 1.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 01/22/2024 has revealed that there is 1 SCH site within approximately 0.5 miles of the target property.

AUGUSTINE RESERVATIO		S 1/2 - 1 (0.613 mi.)	0	9

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/03/2023 has revealed that there are 3 FINDS sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/28/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ARMTEC DEFENSE PRODU		WSW 1/4 - 1/2 (0.456 mi.)	17	25

HWTS: DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

A review of the HWTS list, as provided by EDR, and dated 01/26/2024 has revealed that there are 6 HWTS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2023 has revealed that there are 2 HAZNET sites within approximately 0.25 miles of the target property.

NPDES: A listing of NPDES permits, including stormwater.

A review of the NPDES list, as provided by EDR, and dated 02/05/2024 has revealed that there is 1 NPDES site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CALHOUN AND 52ND ST	CALHOUN AND 52ND STR	WNW 0 - 1/8 (0.008 mi.)	B4	11

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 12/06/2023 has revealed that there is 1 Notify 65 site within approximately 1.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
STORE #330	85-101 AVENUE 52	E 1 - 2 (1.082 mi.)	18	26

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/16/2024 has revealed that there are 2 CERS sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 02/29/2024
Date Data Arrived at EDR: 03/01/2024
Date Made Active in Reports: 03/27/2024
Number of Days to Update: 26

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/29/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Next Scheduled EDR Contact: 07/15/2024
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

RELEVANT LIVING
SWC 52 AVENUE & VAN BUREN STREET
COACHELLA, CA 92236

TARGET PROPERTY COORDINATES

Latitude (North):	33.668402 - 33° 40' 6.25''
Longitude (West):	116.202506 - 116° 12' 9.02''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	573934.4
UTM Y (Meters):	3725482.0
Elevation:	51 ft. below sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50004965 INDIO, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

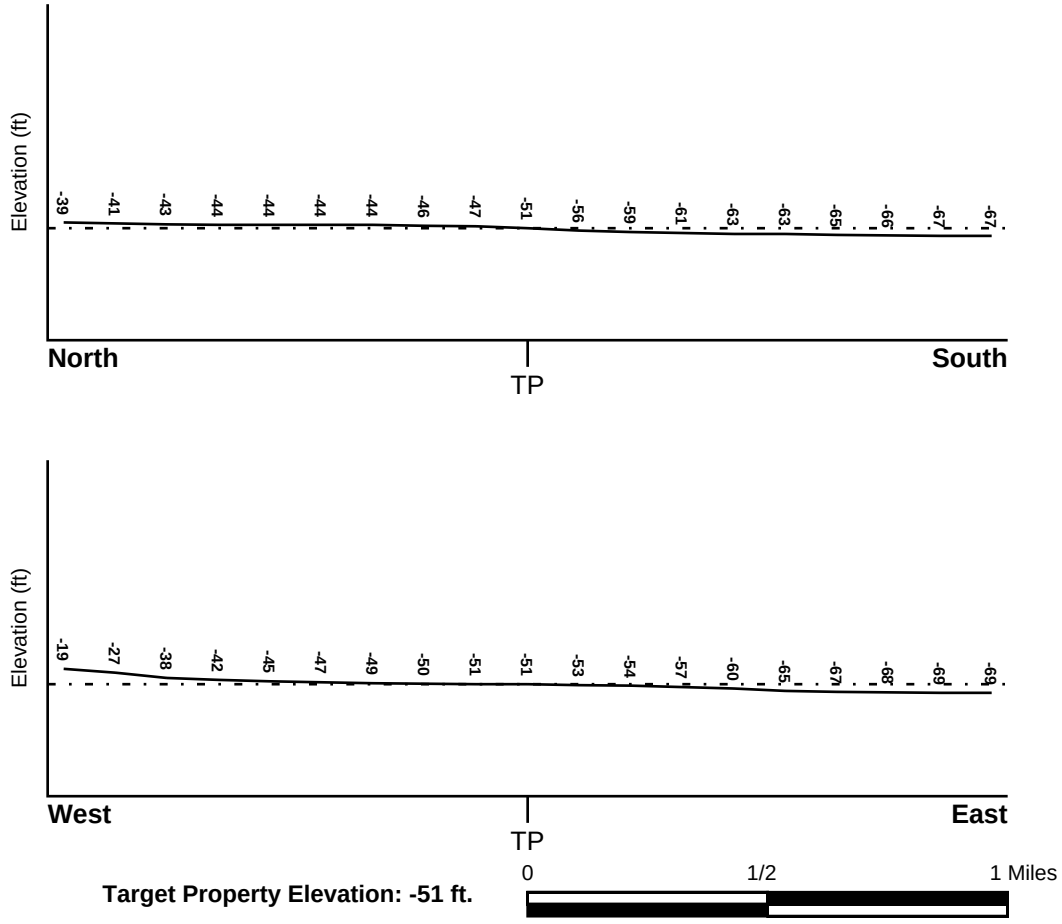
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: -51 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C2262G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C2261G	FEMA FIRM Flood data

06065C2264G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
INDIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Gilman

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 122 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	7 inches	59 inches	stratified loamy sand to silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Coachella

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 122 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	11 inches	59 inches	stratified sand to loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: Indio

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Proterra Consulting Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Proterra Consulting Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# PT-SL24-04

Project: PT-SL24-04

Coordinates:

Latitude:	33.668402 33° 40' 6" North
Longitude:	-116.202506 -116° 12' 9" West

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

APPENDIX D

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Client:	Relevant Partners
Project:	The Ranch at Coachella
Site Address:	52nd Ave and Van Buren, Coachella
Person Interviewed:	Grant King
Employer:	
Position / Title:	Managing Partner
Term:	
Date of Interview:	
Interviewer:	

- What is the current use of the property? Agricultural
- When was the property first developed? The site is currently vacant
- Has the property been used for an industrial purpose in the past? ☐ Yes ☒ No

  If yes, what? _____
- Have any of the following operations ever existed on the property? ☒ NONE

☐ Automotive services
☒ Chemical/petroleum processing
☒ Electrical utility servicing
☐ Equipment servicing
☐ Fuel dispensing
☐ Hazardous materials storage, use, or handling
☐ Hazardous waste handling
☐ Heavy equipment storage
☐ Manufacturing (industrial/commercial)
☐ Paint blending or mixing
☐ Retail or commercial sales (except consumer products)

- Describe the prior uses and owners of the property (include approximate dates).

Agricultural Uses- Owner: Gordon Chuchian- For the past 30 years

Unknown previous owners

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

- Describe the current uses and owners of the adjoining properties?

North:	Agriculutral and Residential, unknown owner
South:	Agricultural
East:	Agricultural and Residentail, unknown owner
West:	Agricultural

- Describe the prior uses and owners of the adjoining properties?

North:	
South:	
East:	
West:	

- Have any of the following items ever been stored or used on the property? *(Substances stored on site in containers routinely sold to the public are usually not a concern.)*

Automotive or industrial batteries. ☐ Yes ☒ No

Any chemicals contained in drums, sacks, or 5-gallon pails. ☐ Yes ☒ No

If yes, describe. _____

If yes, is a chemical inventory listing if available? ☐ Yes ☐ No (If yes, obtain a copy.)

- Are there currently or have there ever been any ASTs or USTs on the property? ☒ Yes ☐ No

If yes, provide additional information.

Qty	Contents	AST or UST	Gallons	Construction Materials	Install. Date	(A)ctive (I)nactive (R)emoved	Notes
	Gasoline						
	Diesel						
	Fuel Oil						
	Hydraulic Oil						
	Used Oil						
	Water						

Based on the DD Summary Report received by the seller, one 750 gallon aboveground tank and one 10,000 gallon aboveground storage tank are present on the site. Both need removal.

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

If yes, provide additional information.

- ☒ Cleanup required
- ☐ Cleanup performed
- ☐ GW contamination remaining
- ☐ Soil contamination remaining
- ☐ State approval of closure
- ☐ Tank and piping did not leak
- ☐ Under further investigation
- ☐ Other actions? (specify)

- Has there ever been any of the following air emission sources on site? ☒ NONE

- ☐ Boilers
- ☐ Fuel-fired units
- ☐ Hazardous air pollutants
- ☐ Incinerators
- ☐ Lead gas fumes
- ☐ Lead paint
- ☐ Solvent cleaners
- ☐ Solvent storage drums or tanks
- ☐ Solvent/VOC processing
- ☐ Spray booths
- ☐ Vapor degreasers
- ☐ Other (specify) _____

If yes, explain. _____

If yes, were the emissions federal- or state-permitted? ☐ Yes ☐ No

Explain. _____

- Has there ever been any of the following wastewater discharge sources or receivers on site? ☐ NONE UNKNOWN

- ☐ Boiler blowdown
- ☐ Holding ponds/tanks
- ☐ Leaching fields
- ☐ Well fields
- ☐ On-site treatment
- ☐ Process waste water
- ☐ Public sewer systems
- ☐ Septic system
- ☐ Other _____

If yes, explain. _____

If yes, were the discharges federal- or state-permitted? _____

Explain. _____

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

- Have any agricultural chemicals been used at the property on a regular basis? ☒ Yes ☐ No

  If yes, describe. For agricultural purposes

- Has the current owner ever had a solid waste disposal permit? ☐ Yes ☐ No UNKNOWN

  If yes, what waste streams? _____

- Have any of the following been dumped above ground, buried, and/or burned on the property? ☒ NONE

  ☐ Hazardous substances _____ ☐ Unidentified waste materials _____

  ☐ Petroleum products_____ ☐ Any other waste materials _____

  ☐ Tires _____ _____

- Have contaminated or hazardous wastes ever been generated or disposed on the property, or transported to or from the property? ☐ Yes ☒ No

  If yes, what waste type and average monthly quantity (or total generated the previous year)?

  ☐ Ignitable (flammable) _____ ☐ Contaminated water_____

  ☐ Corrosive (acids / caustics)_____ ☐ Petroleum _____

  ☐ Solvents _____ ☐ Other _____

  ☐ Contaminated soil_____

  If yes, describe the process that generated the wastes (cleaning, spills, manufacturing by-products, obsolete or defective inventory) _____

  If yes, which generator status that applies?

  ☐ LQG (> 2,200 lb. or 300 gal/mo) ☐ One-time generator

  ☐ SQG (200 - 2,200 lb. or 25 - 300 gal/mo) ☐ Other _____

  ☐ Conditionally exempt (<200 lb. or 25 gal/mo)

  List the site's EPA Identification Number _____

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

- Has there ever been any of the following non-compliance complaints, notices, violations, or citations? ☐ NONE UNKNOWN

☐ City or local environmental agency administrative or judicial orders
☐ County environmental agency administrative or judicial orders
☐ State environmental agency administrative or judicial orders
☐ EPA administrative orders
☐ Fire department
☐ Other (note below)

- Have personnel from any federal, state, or local agency ever visited the facility? ☐ Yes ☐ No UNKNOWN

If yes, who and why? _____

- Are there any environmental liens encumbering the property? ☐ Yes ☐ No UNKNOWN

If yes, describe. _____

- Have any on-site releases of substances ever impacted the property? ☒ Yes ☐ No

If yes, describe. Yes, soil contamination with DDE and DDT mentioned in the previous environmental assessments

- Have any releases from adjoining properties ever impacted the property? ☐ Yes ☐ No UNKNOWN

If yes, describe. _____

- Were any prior environmental assessments of the site ever completed? ☒ Yes ☐ No

If yes, describe. Phase I and Phase II Environmental Assessments

- Do any of the following records exist that document the environmental status of the site? ☐ NONE

☐ Administrative notice of violation or noncompliance
☐ Air sampling investigation report
☒ Asbestos survey report
☐ CERCLA notice of potentially responsible party
☐ Emergency spill notification or response form

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

- ☒ Environmental site assessment report
- ☐ Environmental audit or survey report
- ☒ Groundwater sampling or investigation report
- ☐ Hazardous waste activity notification form
- ☐ PCB annual report
- ☐ Pollution control permits or registration form
- ☐ RCRA hazardous waste biannual/annual report
- ☐ RCRA hazardous waste manifest
- ☐ SARA Title III filings (Emergency Planning and Community Right-to-Know Act)
- ☒ Soil sampling/investigation report
- ☐ UST closure report
- ☐ UST notification/registration form
- ☐ Land usage permit or restriction form
- ☐ Other (specify) _____

If yes, describe. _____

- Has there ever been any environmental cleanup of the property? ☐ NONE UNKNOWN

If yes, regulated under which of the following regulations/programs?

- ☐ CAA (VOCs, ACM, SO_2, CO, Pb, O_3)
- ☐ CWA (on-site WWTP, WW discharges)
- ☐ CERCLA / Superfund
- ☐ Hazardous materials spills
- ☐ RCRA (USTs, haz waste areas)
- ☐ SDWA (Pb, pesticides)
- ☐ State law or criminal liability (third party contamination suit)
- ☐ TSCA (PCBs)
- ☐ Voluntary cleanup (contaminated soil, water, air, structures)
- ☐ Other (specify below)

_____

- Has any e□uipment on the property been tested for PCBs? ☐ Yes ☐ No UNKNOWN

If yes, what results?_____

- Have there been any known PCBs on the property? ☐ Yes ☐ No UNKNOWN

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

If yes, in what equipment?

☐ Capacitor
☐ Cable / switch
☐ Circuit breaker
☐ Transformer
☐ Light ballast
☐ Heat exchanger
☐ Voltage regulator
☐ Hydraulic system
☐ Other (specify)

- Have any of the following PCB-related activities occurred in association with the property? ☐ NONE UNKNOWN

☐ Annual inventory reporting
☐ Decontamination of e□uipment
☐ Inspection report
☐ Treatment on-site
☐ Disposal off-site
☐ Release notification or response
☐ Other (specify)

- Has there been any known illnesses or deaths of current or former site personnel, customers, or surrounding populations due to any of the following? ☐ NONE UNKNOWN

☐ Air emissions
☐ Indoor air □uality
☐ Asbestos
☐ Contaminated soil
☐ Groundwater
☐ Drinking water
☐ Chemical exposure
☐ Other (specify)

If yes, explain. _____

- Has any site leveling or fill material imported from off-site been used on the property?
☐ Yes ☐ No UNKNOWN

If yes, what was the source? _____

If yes, where was the fill used? _____

- Is the site served by a public water supply? ☒ Yes ☐ No

- Are there any private water wells on the property? ☒ Yes ☐ No

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

If yes, have the wells ever been tested? ☒ Yes ☐ No

Results. The agricultural well tested positive for coliform and an atypical hydrocarbon based on the DD summary received from Seller

- Are any floor drains present on the property? ☐ Yes ☐ No UNKNOWN

If yes, do floor drains empty directly into a ☐ sanitary sewer or ☐ storm sewer?

Explain. _____

If yes, is there any pre-treatment prior to discharge? ☐ Yes ☐ No

Explain. _____

If yes and connected to a storm sewer, what is the location of the outfall?

_____

- What utilities serve the property?

Electric. Unknown

Gas. There is a 4" gas main located on Calhoun Street based on DD summary

Telephone. Verizon based on DD

Water. A 12" waterline based on DD Report and IRR Line from site assesment

Sanitary. Unknown

Other. _____

- Are there any designated wetlands on the property or areas which may be considered wetlands? ☐ Yes ☐ No UNKNOWN

If yes, describe. _____

- Have there ever been any pits, ponds, or lagoons on the property? ☐ Yes ☐ No UNKNOWN

If yes, describe. _____

- Has there been any known ACMs or UF materials on site? ☒ Yes ☐ No

If yes, explain. the presence of asbestos materials requiring abatement before demolition is mentioned

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

- Have any surveys been conducted, which may have involved materials sampling or indoor air sampling, to determine if ACMs or UF materials exist on site?

  ☐ Yes ☐ No

  If yes, explain. _____

- Have any of the following other ACM- / UF-related activities occurred on site?

  ☐ NONE

  ☐ ACM/UF abatement contracting

  ☐ ACM/UF processing or manufacturing

  ☐ ACM/UF sale or distribution

  ☐ Other (specify)

  _____

- Has there ever been any known radon on site? ☐ Yes ☐ No UNKNOWN

  If yes, explain. _____

- Has there ever been any known radioactive materials manufacturing, processing, or handling activities on site or adjacent to the site? ☐ Yes ☐ No UNKNOWN

  If yes, explain. _____

- Are there currently any CFCs on site? ☐ Yes ☐ No UNKNOWN

  If yes, explain. _____

Kimley»Horn

November 21, 2024

Ms. Isabel Ronda
Relevant Group
6417 Selma Avenue, 2nd Floor
Los Angeles, Ca 90028

Re: Limited Phase II Environmental Site Assessment (ESA) Ranch Project being an approximately 86-acre property, on the Southwest Corner of Avenue 52 and Van Buren Street in Coachella, California.

Dear Ms. Ronda:

Kimley-Horn and Associates, Inc. ("Kimley-Horn" or "Consultant") is pleased to submit this Limited Phase II ESA to Relevant Group ("Client") for the Ranch Project as defined by Assessor Parcel Numbers (APN's) 780-040-001, 780-040-003, 780-060-002, and 780-060-001 herein referenced as the Subject Property. The Subject Property consists of approximately 86-acre on the Southwest corner of Avenue 52 and Van Buren Street in Coachella, CA, California.

The intent of this limited Phase II (ESA) on the Subject Property is to determine the absence/presence of hazardous and petroleum materials in concentrations of concern.

1.0 Background:

1.1 An ASTM E-1527-13 Phase I ESA was completed for the Ranch Project by Sladden Engineering in June 2024. Based on the recommendations of the Phase I ESA, Kimley-Horn's proposed a Limited Phase II ESA to address the Recognized Environmental Concern (REC) identified within the Phase I ESA, which included the following:

REC 1: "Previous and ongoing farming/agricultural use of the subject property along with the previous environmental reports identify the presence of DDE, DDT and other hydrocarbon, we recommend that a Phase 2 shallow soil sampling laboratory testing program be performed."

1.2 Additionally, a historical memorandum dated June 26, 2008, indicated a Phase I ESA and Phase II ESA were completed by Moore Twinning in 2008 with results indicating the following:

- ***Summary 1***: "*General areas of the site were assessed for environmental persistent chemicals (OCPs and arsenic). The results revealed detectable concentrations of DDE and DDT in the near surface soil and attenuated with depth to two deep below ground surface (bgs). However, the environmental concerns associated with these are low and are below regulatory threshold".*

Kimley»Horn

- ***Summary 2:*** *"However, near the existing metal shed and in the vicinity of the residence of the site the results from the soil sample indicated concentrations of the OCPs, DDE & DDT, which exceed the regulatory levels. {any soils on the site with high concentration will need to be removed offsite as a hazardous material}"*

Kimely-Horn was not able to discern which regulatory threshold the above-mentioned results were compared to and note that changes in thresholds have occurred since 2008 for the low detections of OCPs.

2.0 Scope Rationale:

2.1 To address the REC identified within the Sladden Phase I ESA and Summary 1 from the Moore Twinning Phase IIs, Kimely-Horn completed soil sampling within the active agricultural fields following DTSC and CalEPA's *Interim Guidance for Sampling Agricultural Properties (Interim Guidance)*.

2.2 Based on Section 3.3 of the *Interim Guidance* where two crops were grown on the site, only discrete samples from within the same crop area may be composited. Since both date palms and grapes have been grown on the property, two distinct site areas were sampled following the *Interim Guidance* defined as Area 1 and Area 2. Areas 1 and 2 are defined by the agricultural field sampling within Sections 3.0 and 4.0 below and depicted in **Figure 1, Subject Property Plan and Boring Location Map.**

- Area 1 is defined as the date grove (TBX) borings within the approximately 50-acre date grove.

- Area 2 is defined as the grape vines (GPX) boring within the approximately 26-acre grape vineyard.

2.3 To address Summary 2 and potential exceedances of DDE and DDT, which were reported in 2008, Kimley-Horn completed three soil samples (RX). Laboratory sampling procedures are described in Section III, Soil Sampling Investigation.

3.0 Soil Sampling Investigation

3.1 Agricultural Field Sampling: The *Interim Guidance* assumes a relatively even distribution of chemicals across an agricultural field of a property, and recommends compositing discrete samples to allow for increased sampling coverage for the Subject Property. Composite surface samples are made up of a maximum of four discrete surface samples from adjacent sampling locations. Analysis of the composite samples is determined by the following Sections of the *Interim Guidance*:

- Section 3.1.1 states "Based on data from former agricultural properties over the past seven years, the only pesticide class requiring analyses at agricultural properties are OCPs"

Kimley»Horn

- Section 3.1.2 states "Based on data from former agricultural properties, the only heavy metal required for routine analyses for these properties is arsenic"

3.2 Area 1: Only July 6, 2024, a total of 64 discrete soil samples were completed based on gridded sampling plan to a depth of 1-foot below ground surface (bgs). The borings were completed using a hand auger and samples were collected from 0.5-1.0-feet bgs with similar volume. The 64 discrete samples were composited into 16 samples as describe in Section 3.4. The location of the discrete and composited samples is illustrated in **Figure 1, Subject Property Plan and Boring Location Map.**

3.3 Area 2: Additionally on July 6, 2024, a total of 36 discrete soil samples were completed based on gridded sampling plan to a depth of 1-foot bgs. The borings were completed using a hand auger and samples were collected from 0.5-1.0-feet bgs with similar volume. The 36 discrete samples were composited into 9 samples as describe in Section 3.4.

3.4 Upon completion of the four discrete samples within one grid area, the samples were homogenized and one discrete sample collected and placed within a laboratory provided container. Additionally, one sample was completed for arsenic analysis co-located with one of the discrete pesticide samples based on the sampling events described in Section 3.2 and 3.3.

3.5 The soil samples were placed in a cooler and delivered to a state-certified laboratory under chain-of-custody protocol.

3.6 Residential Sampling: Only July 6, 2024, a total of three (3) discrete soil samples were completed to a depth of 1-foot below ground surface (bgs). The borings were completed using a hand auger and samples were collected from 0.5-1.0-feet bgs with similar volume. Samples for total petroleum hydrocarbon (TPH) analyses were collected using Terra Core® samplers. Soil for additional analyses were collected in laboratory supplied jars from the sampler. Locations are defined below:

- One sample was completed in the vicinity of a metal shed; however, it is unknown if the same shed identified within the 2008 analysis (R1)
- One sample adjacent to onsite well and fertilizer tote (R2).
- One sample was completed south of the residential structure (R3).

3.7 The location of the discrete samples surrounding the residence is illustrated in **Figure 1, Subject Property Plan and Boring Location Map.**

3.8 Based on the results discussed in Section 4 – Soil Sampling Results, exceedances were identified within two of the three samples. Kimley-Horn remobilized on September 6, 2024, to complete samples surrounding the initial boring to a depth of 3-feet bgs. **Figure 2, R2 Step-out Sampling Locations and Results** and **Figure 3, R3 Step-out Sampling Locations and Results** depicts where the step out locations were completed surrounding the soil borings. Details pertaining to the results are reported in Section 4- Soil Sampling Results.

Kimley»Horn

4.0 Laboratory Analysis

4.1 Agricultural Field Sampling Analysis: The soil samples completed within the agricultural fields were analyzed for the following:

- California Title 22 metals by EPA Method 6010 analyzed by arsenic only.
- Pesticides by EPA Method 8081.

4.2 Residential Sampling Analysis: Samples near the residential structures were analyzed for the following:

- Pesticides by EPA Method 8081.
- California Title 22 metals by EPA Method 6010 analyzed by arsenic only.
- Total petroleum hydrocarbons as gasoline range organics (TPH-GRO), diesel range organics (TPH-DRO), and oil range organics (TPH-ORO) by EPA Method 8015.

The above analytical parameter list is consistent with the constituents of concern potentially present at the site based on the past operations identified during completion of the Phase I ESA.

5.0 Soil Sampling Results

5.1 Field Observations: No staining, odors were observed in the samples that would indicate the presence of contaminants.

5.2 Laboratory Results: The analytical results for soil are summarized in Tables 1, 2, 3 and 4. The laboratory analysis reports are included in Attachment A. Key results from the July 2024 sampling are summarized below.

Sample ID	Maximum Detection (mg/kg)								
	4,4'-DDD	4,4'-DDE	4,4'-DDT	Chlordane	Dieldrin	Arsenic	TPH-G [5]	TPH-D [5]	TPH-ORO [5]
TB [1]	0.00069	0.066	0.0021	0.049	0.0010	2.9	--	--	--
	TB1-1	*TB12-1*	*TB16-1*	*TB1-1*	*TB1-1*	*TB8-1*	--	--	--
GB [2]	ND	0.110	0.0170	ND	ND	4.30	--	--	--
	--	*GB7-1*	*GB7-1*	--	--	*GB5-1*	--	--	--

	R3-1	*R2-1*	*R1-1*	--	*R3-1*	*R1-1*	--	*R2-1*	*R2-1*
SFRWQCB ESL [3] (mg/kg)	**2.7**	**1.83**	**1.89**	**0.48**	**0.037**	**11 [4]**	**430**	**255**	**12,000**

(1) TB - Borings completed within Date Groves. Only crop included was young and mature date palms.
(2) GB - Borings completed within the Grape Vineyard. Only crop included was differing varietals of grapes.
(3) Screening limit is the San Francisco Regional Water Quality Control Board (SFRWQCB) Environmental Screening Level (ESL) for direct exposure to human health assuming a residential risk scenario.
(4) The SFRWQCB ESL for arsenic for residential exposure scenario is 0.067 mg/kg, 0.31 mg/kg for commercial/industrial, and 2.03 mg/kg for construction work scenario; however, the screening level listed is the regional background concentration of arsenic (Duverge, 2011), accepted by the SFRWQCB.
(5) Total Petroleum Hydrocarbons - Gasoline Range inclusive of C4-C12 (TPH-G); - Diesel Range inclusive of C12-C22 (TPH-D); and Oil Range inclusive of C23-C32 (TPH-O).

5.2.1 No exceedances of pesticides or arsenic were identified in Area 1 or Area 2 of the agricultural field sampling.

Kimley»Horn

5.2.2 No exceedances of pesticides, arsenic or TPH were identified in the residential soil sampling except for the following described in Section 5.2.3 and 5.2.4.

5.2.3 One exceedance of 4,4-DDE was detected in sample R2-1 adjacent to the water well and fertilizer storage area in the July 6, 2024, sampling event with the detection of 2.40 mg/kg. Three step-out borings were completed on September 6, 2024, as depicted in **Figure 2, R2-Step-out Sampling Locations and Results.** Additionally, a confirmation sample was completed at 1-ft and 2-ft bgs at the original location, which were below a residential standard. Each step-out sample was below the residential screening level.

5.2.4 One exceedance of Dieldrin was detected in sample R3-1 adjacent to the former residence from the July 6, 2024, sampling event with the detection of 0.096 mg/kg. Four step-out and a replicate from the initial borings were completed on September 6, 2024, surrounding the original boring to a depth of 3-feet bgs. See **Figure 3, R3-Step-out Sampling Locations and Results** with the following results:

- Initial boring:
  - R3-1: 0.096 mg/kg
  - R3B-1: 0.039 mg/kg
  - R3B-2: 0.016 mg/kg
- Step outs:
  - North
    - R3N-1: 0.091 mg/kg
    - R3N-2: 0.016 mg/kg
  - South
    - R3S-1: 0.026 mg/kg
  - East
    - R3E-1: 0.10 mg/kg
    - R3E-2: 0.073 mg/kg
    - R3E-3: 0.042 mg/kg
  - West
    - R3W-1: 0.042 mg/kg
    - R3W-2: 0.0075 mg/kg

6.0 Conclusions

6.1 Agricultural Field Sampling: The laboratory analytical results do not indicate evidence for significant release(s) associated with the historical agricultural operations conducted at the Subject Property based on the REC identified within the Sladden Phase I ESA. The detected levels of pesticides are below the California Regional Water Quality Control Board (RWQCB)-San Francisco Region Environmental Screening Levels (ESLs) for residential soil and for the protection of soil and groundwater and would not likely trigger actions if reported to a regulatory agency.

6.2 Agricultural Field Sampling: Arsenic was detected at concentrations that exceed the ESLs for residential soil; however, the concentrations of arsenic reported in the soil samples collected during this investigation are below the typical Southern California background level of

Kimley»Horn

11 mg/kg per California Department of Toxic Substances Control (DTSC), Human and Ecological Risk Office (Hero).

6.3 Residential Sampling: Areas around the former residential structure indicate exceedances above residential screening level for 4,4-DDE at the R2 location and dieldrin at the R3 location. As the properties intent is for residential development, these *de minims* areas should be isolated or removed prior to mass grading. The summary within this report identifies the extents for isolation and removal based on depth and visually described within Figures 3 and 4. If the property is planned for commercial development versus residential, the detections of 4,4-DDE is below the 8.27 mg/kg screening level and dieldrin is below the 1.6 mg/kg screening level.

6.4 Please note that the results and conclusions in this report are based on, and limited to, the soil the limited soil investigation and the laboratory analyses that were completed.

6.5 Should you have any questions about these results, or wish to conduct additional investigations, please contact us at cassie.bretschger@kimely-horn.com or jennifer.steen@kimely-horn.com.

Sincerely,

Cassie Bretscher, M.S., ENV-SP

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A02	The difference between duplicate readings is less than the quantitation limit.
A10	Detection and quantitation limits were raised due to matrix interference.
A52	Chromatogram not typical of diesel.
A57	Chromatogram not typical of motor oil.
Q02	Matrix spike precision is not within the control limits.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S09	The surrogate recovery for this compound was not within the control limits.

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A02	The difference between duplicate readings is less than the quantitation limit.
A10	Detection and quantitation limits were raised due to matrix interference.
A52	Chromatogram not typical of diesel.
A57	Chromatogram not typical of motor oil.
Q01	Sample precision is not within the control limits.
Q02	Matrix spike precision is not within the control limits.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S09	The surrogate recovery for this compound was not within the control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and identify any necessary noise mitigation measures for the COVA development (Project) in the City of Coachella. The Project consists of 276 units and other residential amenities. This noise study has been prepared to satisfy applicable City of Coachella noise standards and significance criteria based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

The results of this Noise and Vibration Analysis are summarized below based on the significance criteria in Section 4 of this report, consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise	6	Less Than Significant	-
Operational Noise	8	Less Than Significant	-
Construction Noise	9	Less Than Significant	-
Construction Vibration	9	Less Than Significant	-

This page was intentionally left blank.

1 INTRODUCTION

This Noise and Vibration Analysis has been completed to determine the noise impacts associated with the development of the proposed COVA ("Project"). This noise and vibration analysis briefly describes the Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for noise analysis, evaluates the future exterior noise environment, potential off-site traffic impacts, the Project-related long-term stationary-source operational noise, and Project-related short-term construction noise and vibration impacts.

1.1 SITE LOCATION

The Project is located at the southwest corner of the Van Buren Street and Avenue 52 intersection in the City of Coachella. The Project is surrounded by agricultural uses to the north, east, south, and west, as shown in Exhibit 1-1.

1.2 PROJECT DESCRIPTION

The proposed Project consists of 276 units: 76 two-story single-family residences (SFR) with 4 to 6 bedrooms, 100 stacked flat units at three stories with 3 to 4 bedrooms, and 100 hotel casitas and cottages for short-term accommodations. The development includes a crystal lagoon and other residential amenities, including restaurants, a beach club, event space, pop-up shops, outdoor amphitheater, pools, recreation areas, and kids' play spaces. A preliminary site plan for the Project is shown in Exhibit 1-2.

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies that are audible to the human ear. Exhibit 2-1 presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-1: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 1,000 feet, which can cause serious discomfort. (3) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous noise levels. The most used metric is the equivalent level (Leq). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time-varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level, is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA Leq sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA Leq sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise-sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Coachella relies on the 24-hour CNEL level to assess land use compatibility with transportation-related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 Geometric Spreading

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 Ground Absorption

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed.

When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 Atmospheric Effects

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (2)

2.3.4 Shielding

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of-sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

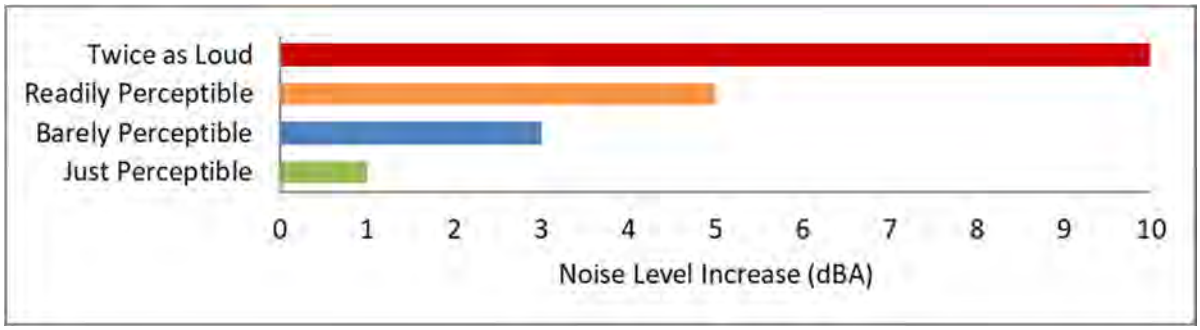
2.4 Noise Control

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 Noise Barrier Attenuation

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 Land Use Compatibility With Noise



Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 Community Response to Noise

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-2. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

Exhibit 2-2: Noise Level Increase Perception

2.8 Vibration

Per the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual*, vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations

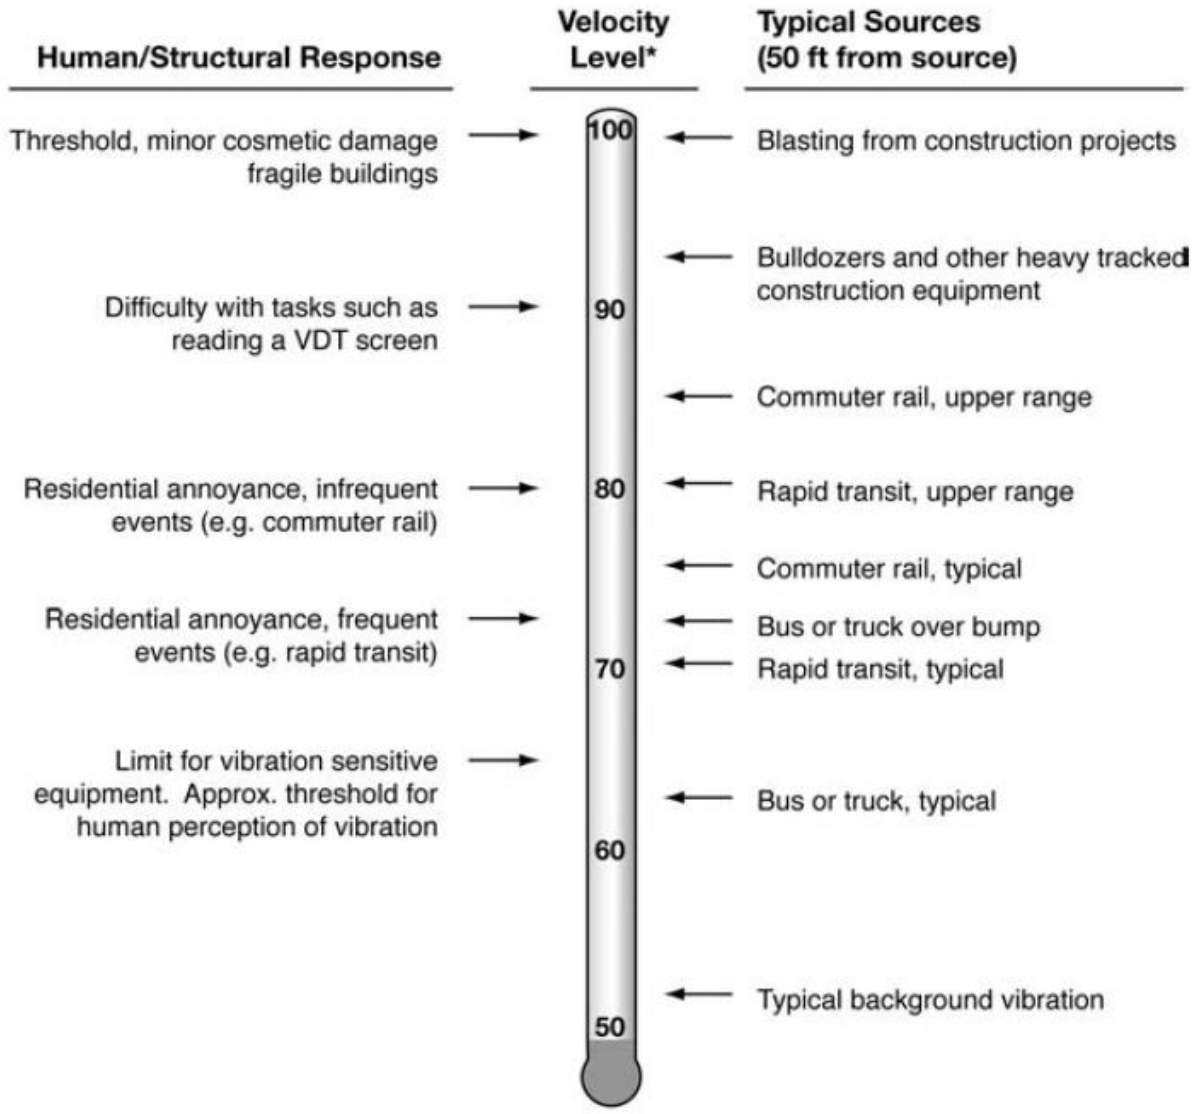
include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

Additionally, in contrast to airborne noise, ground-borne vibration outdoors is not a common environmental problem, and annoyance from ground-borne vibration is almost exclusively an indoor phenomenon (8). Therefore, the effects of vibrations should only be evaluated at a structure, and the effects of the building structure on the vibration should be considered. Wood-frame buildings, such as typical residential structures, are more easily excited by ground vibration than heavier buildings. In contrast, large masonry buildings with spread footings have a low response to ground vibration (8). In general, the heavier a building is, the lower the response will be to the incident vibration energy. However, all structures reduce vibration levels due to the coupling of the building to the soil.

There are several methods used to quantify vibration levels. Peak Particle Velocity (PPV) is defined as the maximum instantaneous peak of a vibration signal and is most commonly used to evaluate the impact of vibration on buildings (9) (8). However, PPV is not always suitable for assessing human response (e.g., annoyance), as the human body does not respond instantly to vibration signals. Instead, it responds to the average amplitude, more accurately represented by the Root Mean Square (RMS) value of the vibration (8).

RMS is defined as the square root of the average of the squared signal amplitude and is commonly used to evaluate human exposure to vibration. RMS and PPV are mathematically related—RMS is typically about 70% of the PPV for certain waveforms (10) (11). However, deriving RMS from PPV requires knowing the full waveform or making assumptions (e.g., sinusoidal or steady-state signals). Without this information, converting PPV to RMS introduces uncertainty and provides limited insight, especially in cases involving transient or impact vibrations (12).

This distinction is important because human annoyance to vibration is often triggered by abrupt, intermittent events, rather than sustained energy levels. Construction-related vibrations are typically impulsive and broadband, in contrast to the continuous, tonal vibrations associated with transit systems. The FTA's RMS-based criteria were developed with train activity in mind and are not well-suited for construction vibration, where perception is driven by factors like suddenness, impact, and repetition (8).



In essence, RMS tends to average out short-duration, high-intensity events—the very events that people find most disturbing. Therefore, for construction activities, PPV-based thresholds, such as those recommended by Caltrans, are more appropriate for assessing potential human annoyance and structural impact (11).

While not universally accepted, vibration decibel notation (VdB) is another RMS-based vibration notation developed and used by the FTA in their guidance manual to describe vibration levels and provide a background of common vibration levels and set vibration limits (8). Decibel notation (VdB) serves to reduce the range of numbers used to describe vibration levels and is used in this report to describe vibration levels.

As stated in the FTA guidance manual, the background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between

barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-3: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared according to guidelines adopted by the Governor's Office of Planning and Research. (13) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 STATE OF CALIFORNIA BUILDING STANDARDS CODE

The State of California's Green Building Standards Code contains mandatory measures for non-residential building construction in Section 5.507 on Environmental Comfort. (14) These noise standards are applied to new construction in California to control interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where a general plan or airport plan provides contours that show exterior noise levels exceed 65 dBA CNEL, such as within a noise level contour of an airport, freeway, or railroad; or if contours are unavailable, buildings exposed to a noise level of 65 dBA $L_{eq\text{-}1\text{-}hr}$ during any hour of operation; shall be constructed to provide an interior noise level environment attributable to exterior sources that does not exceed an hourly equivalent level of 50 dBA L_{eq} in occupied areas during any hour of operation.

3.3 CITY OF COACHELLA GENERAL PLAN NOISE ELEMENT

The City of Coachella has adopted a Noise Element of the General Plan as *a tool for local planners to use in achieving and maintaining land uses that are compatible with environmental noise levels*. (15) The Noise Element identifies noise goals and policies to protect City of Coachella residents from excessive noise. The goals of the Noise Element are as follows:

Goal 1 Land Use Planning and Design. A community where noise compatibility between differing types of land uses is ensured through land use planning and design strategies.

Goal 2 Stationary Source Noise. A community where excessive noise from stationary sources is minimized.

Goal 3 Mobile Source Noise. A community where excessive noise from mobile sources is minimized.

To ensure noise-sensitive land uses are protected from high levels of noise (Goal 1), Exhibit 3-1 identifies exterior noise level guidelines for new developments impacted by transportation noise sources such as arterial roads, freeways, airports, and railroads. In addition, Table 1 of the Noise Technical Appendix provides an exterior noise level standard of 65 dBA CNEL and an interior noise level standard of 45 dBA CNEL for new residential developments impacted by transportation noise. The Noise Element also requires the analysis of new developments, as necessary, to identify mitigation measures to reduce noise levels to those found in Exhibit 3-1.

The noise criteria identified in the City of Coachella Noise Element are guidelines to evaluate the land use compatibility of transportation-related noise. The compatibility criteria, shown on Exhibit 3-A, provide the City with a planning tool to gauge the compatibility of land uses relative to existing and future exterior noise levels.

Exhibit 3-A provides guidelines to evaluate the acceptability of the transportation-related noise level impacts. These guidelines are based on the Governor's Office of Planning and Research and are used to assess the long-term traffic noise impacts on land uses. According to the land use compatibility guidelines of the General Plan, the utility/institutional land use of the Project is considered *clearly compatible* with exterior noise levels approaching 70 dBA CNEL. For comparison, noise-sensitive residential land uses are considered *clearly compatible* with exterior noise levels of 60 dBA CNEL. (15)

3.3 Operational Noise Standards

To analyze noise impacts originating from a designated fixed location or private property, such as the Project, operational source noise is typically evaluated against standards established under a City's Municipal Code. For noise-sensitive residential properties, the City of Coachella Municipal Code, Section 7.04.030 (A), identifies exterior operational noise level limits for the daytime (6:00 a.m. to 10:00 p.m.) hours of 55 dBA Leq and 45 dBA Leq during the nighttime (10:00 p.m. to 6:00 a.m.) hours. The City of Coachella Municipal Code noise level standards are shown in Table 3-1 and provided in Appendix 3.1.

Table 3-1: Operational Noise Standards

Jurisdiction	Land Use	Time Period	Exterior Noise Level Standards (dBA L_{eq})[2]
Coachella[1]	Residential	Daytime (6:00 a.m. to 10:00 p.m.)	55
		Nighttime (10:00 p.m. to 6:00 a.m.)	45

[1] Source: City of Coachella Municipal Code, Section 7.04.030 (A).
[2] Leq represents a steady state sound level containing the same total energy as a time-varying signal over a given sample period.

EXHIBIT 3-1: LAND USE/NOISE COMPATIBILITY MATRIX

LAND USE CATEGORIES		CNEL						
CATEGORIES	USES	55	60	65	70	75	80	
RESIDENTIAL	Single Family, Duplex, Multiple Family							
RESIDENTIAL	Mobile Homes

AGRICULTURE	Agriculture							

INTERPRETATION

ZONE A (GREEN) CLEARLY COMPATIBLE	Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal construction, without any special noise insulation requirements.
ZONE B (YELLOW) NORMALLY COMPATIBLE	New construction or development should be undertaken only after an analysis of the noise reduction requirements is made and needed noise insulation features included in the design are determined. Conventional construction, with closed windows and fresh air supply systems or air conditioning will normally suffice.
ZONE C (ORANGE) NORMALLY INCOMPATIBLE	New construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
ZONE D (RED) CLEARLY INCOMPATIBLE	New construction or development should generally not be undertaken.

* Construction of new residential uses will not be allowed within the 65 dBA CNEL contour for airport noise.

Source: City of Coachella General Plan Noise Element, Figure 10-1.

3.4 CONSTRUCTION NOISE STANDARDS

To control noise impacts associated with the construction of the Project, the City has established limits to the hours of operation. Section 7.04.070 of the City's Municipal Code, provided in Appendix 3.1, indicates that construction activities shall be limited from October 1st through April 30th, Monday to Friday, between the hours of 6:00 a.m. and 5:30 p.m., and between 8:00 a.m. and 5:00 p.m. on Saturdays, Sundays, and holidays. From May 1st through September 30th, construction is limited to between 5:00 a.m. and 7:00 p.m. Monday to Friday, and between 8:00 a.m. and 5:00 p.m. on

Saturdays, Sundays, and holidays. (16) However, neither the City of Coachella Neither the General Plan nor the Municipal Code establishes numeric maximum acceptable construction source noise levels at potentially affected receivers. Therefore, a numerical construction threshold based on the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* is used for analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise-sensitive residential land use (17 p. 179).

3.5 Construction Vibration Standards

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures, and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment, such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration (17).

To analyze vibration impacts associated with the Project, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code if such standards exist. The City of Coachella does not identify specific construction vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (11 p. 38) Table 19, vibration damage is used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise-sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec).

3.6 Aircraft Noise

The County of Riverside is responsible for the management and development of the Airport Land Use Compatibility Plan (ALUCP) for each public use and military airport in Riverside County. Each ALUCP identifies land use and noise level compatibility due to operations at airports, as well as forecasted noise level contours based on future operations at each airport. These noise level contours and land use compatibility noise levels are used in determining whether a proposed land use is consistent with forecasted noise levels. The ALUCP for the Project site is the Jacqueline Cochran Regional Airport (JCRA) ALUCP. Exhibits 3-2 and 3-3 present the JCRA Compatibility Zones and the JCRA Compatibility Criteria, respectively. The Project is located beyond Zone E as shown on Exhibit 3-2

EXHIBIT 3-2: JCRA COMPATIBILITY ZONES

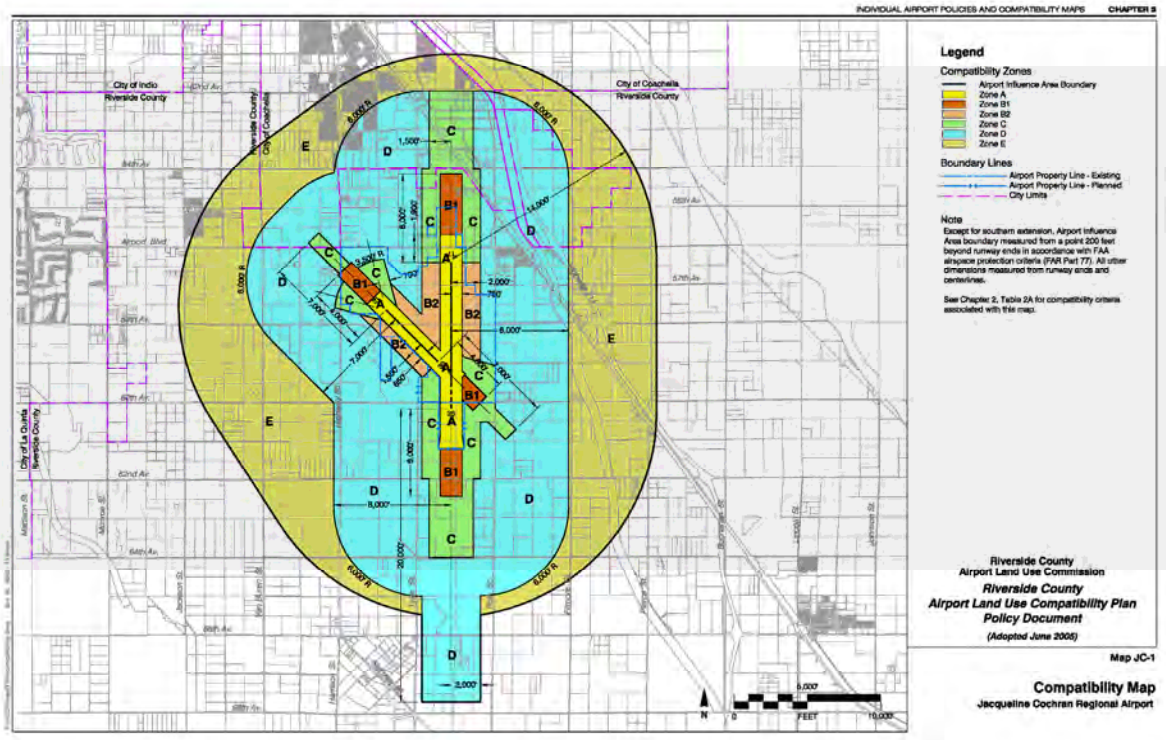

EXHIBIT 3-3: JCRA COMPATIBILITY CRITERIA

CITY OF COACHELLA: GENERAL PLAN (1998), AND ZONING CODES

Residential Land Use

- *Compatibility Zone D*
  - Residential land use designations with densities ranging from 5.1 to 8.0 dwelling units per acre north of the airport [C1] potentially conflict with the high- and- low options for *Zone D*
- *Compatibility Zone E*
  - No inconsistencies noted

Other Policies

- *General Plan*
  - The Circulation Element "encourages implementation of the *Thermal Airport Master Plan* as it relates to safety, land use, and noise."
  - No acknowledgment of ALUC coordination
  - The General Plan should be amended to incorporate the current *ALUC Compatibility Plan* with respect to Jacqueline Cochran Regional Airport
  - Noise policy conditionally allows residential development up to 70 dB CNEL conflicts with *Compatibility Plan* limit of 60 dB CNEL
- Zoning Codes
  - Airport height limit zoning not established

Non-Residential Land Use

- *Compatibility Zone C*
  - Potential Conflict: *Zone C* intensity limits (75 people/acre) apply to area designated as Light Industrial/Warehousing north of airport [C2]
- *Compatibility Zone D*
  - Potential Conflict: *Zone D* intensity limits (100 people/acre) apply to areas designated as Light Industrial/Warehousing and Low-Intensity Commercial/Office northwest and northeast of airport [C3]
- *Compatibility Zone E*
  - No inconsistencies noted

Note: This is an initial land use consistency review prepared for the purpose of identifying areas where a conflict exists or potentially exists with ALUC compatibility zone criteria. This review is based upon available general plan documents and does not take into account existing land use. When a conflict between the general plan and compatibility criteria exists, it is not deemed inconsistent when the general plan is merely representing existing development. A more comprehensive analysis is necessary at the time a general plan land modification is presented to the ALUC for review.

Exhibit JC–10, continued

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes that there is no single noise increase that renders the noise impact significant. (18) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called ambient environment.

4.1.1 Noise Sensitive Receivers (Substantial Permanent Noise Level Increase)

The Federal Interagency Committee on Noise (FICON) (19) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}). In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will typically be judged.

As previously stated, the approach used in this noise study recognizes that there is no single noise increase that renders a noise impact significant, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (18) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, a readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA. Per the FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA barely perceptible noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise

louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance.

The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or readily perceptible, 3 dBA or barely perceptible, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance are consistent with guidance provided by both the Federal Highway Administration (4 p. 9) and Caltrans (20 p. 2_48).

4.1.2 Non-Transportation Noise (Substantial Permanent Noise Level Increase)

The FICON criteria are also used to determine if Project-related stationary source (operational) noise level increases are significant at off-site receiver locations. For non-transportation noise source activities, a substantial permanent noise level increase consists of increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA, depending on the underlying ambient noise levels.

4.1.3 Construction Noise (Substantial Temporary Noise Level Increase)

To control the noise-generating construction activities, the temporary noise level increases over the existing ambient conditions must be considered under CEQA Significance Threshold A. Although noise ordinances vary across jurisdictions, many cities and counties in California, including Los Angeles, San Diego, and San Francisco, set construction noise limits between 75 and 80 dBA L_{eq} and typically restrict construction activities to the daytime hours. In contrast, everyday noise regulations are more stringent because they apply to continuous, long-term noise sources that can significantly impact the quality of life. As a result, many jurisdictions establish daytime residential noise limits around 55 dBA L_{eq}. This suggests that a reasonable 20 dBA increase over the daytime noise limit can be tolerated without significant adverse effects. This is also illustrated in the adoption of many CEQA documents statewide that use an 80 dBA L_{eq} limit for assessing construction impacts while using everyday noise level limits of local noise ordinances in assessing on-site operational impacts.

Therefore, if the Project-related construction noise levels generate a temporary noise level increase over the existing daytime ambient noise levels more than 20 dBA L_{eq} then the Project construction noise increases will be considered a *significant* impact.

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.4, the vibration impacts originating from the construction of the Project, vibration-generating activities are appropriately evaluated using standards established by the Caltrans *Transportation and Construction Vibration Guidance Manual*, Table 19. The Caltrans' vibration thresholds for building damage are used in this noise study to assess potential operational and temporary construction-related impacts at adjacent building locations. A maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec) is used to describe the nearest residential buildings adjacent to the Project site.

4.3 CEQA Guidelines Not Further Analyzed (Threshold C)

CEQA Noise Threshold C applies when there are nearby public and private airports and/or airstrips and focuses on land use compatibility of the Project to nearby airports and airstrips. The closest major airport is the San Gabriel Valley Airport (SGVA), located 1.5 miles northeast of the Project site. As shown in section 3, the Project site is beyond the 65 dBA CNEL noise level contour and would not be exposed to excessive noise levels from airport operations. Therefore, impacts are considered less than significant, and no further noise analysis is conducted in relation to Appendix G to the CEQA Guidelines, Noise Threshold C.

4.4 Significance Criteria Summary

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

Table 4-1: Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	Noise-Sensitive[1]	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
		If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
Off-Site Traffic	Non-Noise-Sensitive[2]	If ambient is > 70 dBA CNEL	≥ 3 dBA CNEL Project increase	
On-Site	Noise Sensitive	Exterior Noise Level Criteria	See Exhibit 3-1	
		Interior Noise Level Standard[3]	45 dBA CNEL	
Operational	Noise-Sensitive	Residential Exterior Noise Level[4]	55 dBA Leq	45 dBA Leq
		If ambient is < 60 dBA Leq[1]	≥ 5 dBA Leq Project increase	
		If ambient is 60 - 65 dBA Leq[1]	≥ 3 dBA Leq Project increase	
		If ambient is > 65 dBA Leq[1]	≥ 1.5 dBA Leq Project increase	
Construction	Noise-Sensitive	Noise Level Threshold[5]	80 dBA L_{eq}	
		Exterior Noise Level Increase[6]	20 dBA L_{eq}	
		Vibration Level Threshold[7]	0.30 PPV (in/sec)

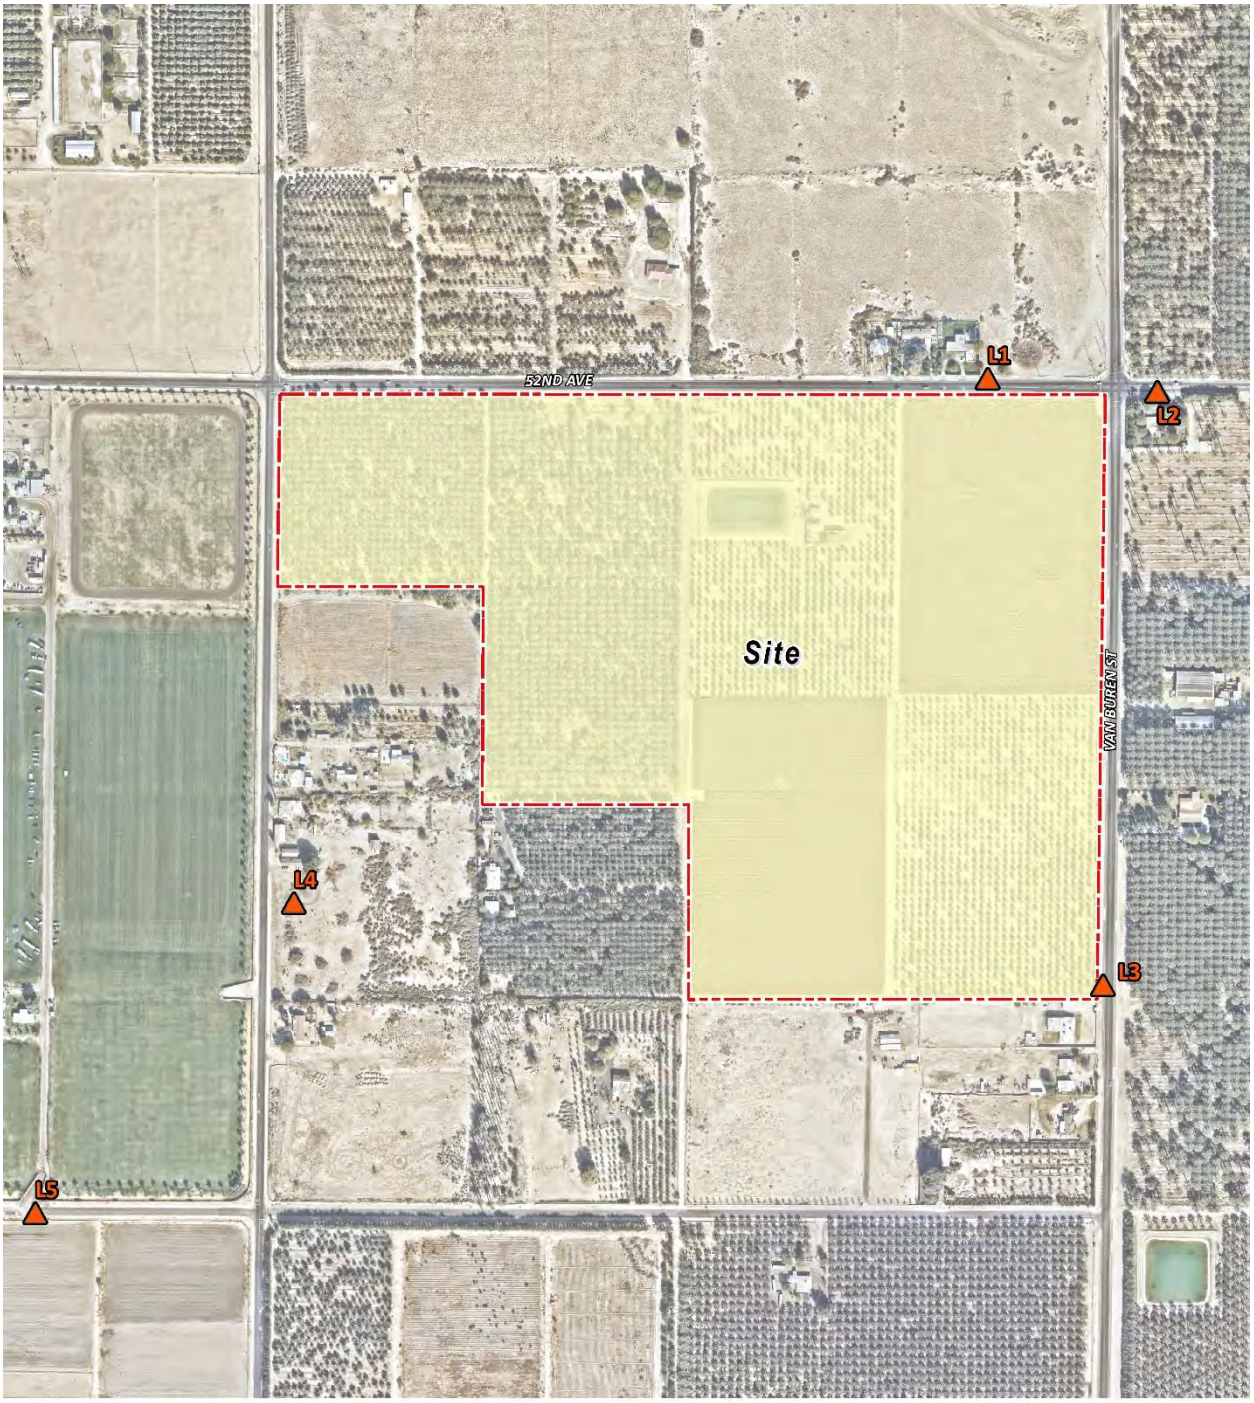
5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at five locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-1 provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, long-term noise level measurements were collected by Urban Crossroads, Inc. on Friday, July 25, 2025. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA



To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the equivalent daytime and nighttime hourly noise levels. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (21)

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing equivalent hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines, which indicate that sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources. (2) Further, FTA guidance states, that it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community. (8)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence because each receiver measurement represents a group of buildings that share acoustical equivalence. (8) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts.

EXHIBIT 5-1: NOISE MEASUREMENT LOCATIONS

Collecting noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before-and-after Project noise levels and is necessary to assess potential noise increase due to the Project's contribution to ambient noise levels. This approach is necessary to calculate the temporary or permanent increase in ambient noise levels as required by the CEQA Guidelines Environmental Checklist.

5.3 Noise Measurement Results

The noise measurements presented below focus on the equivalent or the hourly energy average sound levels (Leq) to describe the existing ambient conditions. Table 5-1 provides the (energy average) noise levels used to describe the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location. The equivalent sound level (Leq) represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. The daytime and nighttime equivalent noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number.

Table 5-1: Ambient Noise Level Measurements

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located north of the site near the residence at 83876 52nd Ave.	66.2	60.5
L2	Located east of the site near the residence at 84045 52nd Ave.	67.5	61.8
L3	Located south of the site near the residence at 52815 Van Buren St.	66.4	59.1
L4	Located south of the site near the residence at 52480 Calhoun St.	56.4	49.2
L5	Located west of the site near the residence at 83465 52nd Ave.	61.4	52.5

[1] See Exhibit 5-1 for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the equivalent noise levels used to describe the daytime and nighttime ambient conditions for each of the measurements. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum, L1, L2, L5, L8, L25, L50, L90, L95, and L99 percentile noise levels observed during the daytime and nighttime periods.

6 OFF-SITE TRANSPORTATION NOISE ANALYSIS

The Project is anticipated to generate a maximum of 2,144 weekday trips per day. The Project would access Calhoun Street, Van Buren Street, and Avenue 52. Approximately 30 percent of the traffic is expected on Van Buren Street and Avenue 52, with the remaining 40 percent using Calhoun Street. Based on the City of Coachella traffic counts on these roads: Calhoun Street has an average daily traffic (ADT) volume of 3,893, Van Buren Street has an ADT volume of 3,799, and Avenue 52 has an ADT volume of 8,316. To generate a 3 dBA increase in traffic noise would generally require a substantial increase in truck traffic relative to the overall mix of vehicles, or a doubling of traffic volumes. The Project would not result in the generation of substantial truck trips, and the increase in daily traffic volumes is not expected to generate a perceptible noise level increase (i.e., less than 3 dBA CNEL) at sensitive land uses along affected roadways. Therefore, due to the low traffic volumes generated by the Project, the off-site traffic noise levels generated by the Project are considered *less than significant*.

This page was intentionally left blank.

7 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following receiver locations, as shown in Exhibit 7-1, were identified as representative locations for analysis. The selection of receiver locations is based on FHWA guidelines and is consistent with additional guidance provided by Caltrans and the FTA, as previously described in Section 5.2. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, outpatient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, five receiver locations in the vicinity of the Project site were identified. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the Project boundary to each receiver location.

R1: Location R1 represents the existing residence at 83890 52nd Avenue, approximately 104 feet north of the Project site. Receiver R1 is placed at the building façade facing the Project site. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.

R2: Location R2 represents the existing residence at 84045 52nd Avenue, approximately 130 feet east of the Project site. Receiver R2 is placed in the private outdoor living area (backyard) facing the Project site.. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.

R3: Location R3 represents the existing residence at 52815 Van Buren Street, approximately 59 feet south of the Project site. Receiver R3 is placed in the private outdoor living area (backyard) facing the Project site. A 24-hour noise measurement was taken near this location, L2, to describe the existing ambient noise environment.

R4: Location R4 represents the existing residence, approximately 56 feet southwest of the Project site. Receiver R4 is placed at the building façade facing the Project site. A 24-hour noise measurement was taken near this location, L3, to describe the existing ambient noise environment.

R5: Location R6 represents the existing residence at 53465 52nd Avenue, approximately 834 feet west of the Project site. Receiver R6 is placed at the building façade facing the Project site. A 24-hour noise measurement was taken near this location, L6, to describe the existing ambient noise environment.

EXHIBIT 7-1: RECEIVER LOCATIONS

8 OPERATIONAL NOISE ANALYSIS

This section analyzes the potential operational noise impacts at the nearby receiver locations, identified in Section 7, resulting from the Project's operation. Exhibit 8-1 identifies the noise source locations used to assess the equivalent L_{eq} operational noise levels

8.1 OPERATIONAL NOISE SOURCES

This operational noise analysis is intended to describe noise level impacts associated with the expected typical residential activities at the Project site. The operational noise sources of concern would be the ground mounted air conditioning units associated with each dwelling unit are evaluated against standards established in the City of Coachella Municipal Code, Section 7.04.070, and the relative increase in noise levels at each existing sensitive receiver.

8.2 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities or equipment to represent the noise levels expected with the development of the Project. This section provides a detailed description of the reference noise level measurements shown in Table 8-1 used to estimate the Project operational noise impacts.

8.2.1 Air Conditioning Units

Individual Units

To assess the noise levels created by the air conditioning units, reference noise levels were taken from equipment specifications for a 2- to 5-ton residential packaged air conditioning unit (Carrier 50VR-A). The manufacturer's specifications are included in Appendix 8.1. At a uniform reference distance of 50 feet, the units would generate a reference noise level of 44.4 dBA L_{eq}. The air conditioning units were modeled 3 feet above the ground level, operating 45 minutes per hour during the daytime and nighttime, which represents the typical maximum operating time for properly sized AC systems.

Commercial Units

The noise level measurements describe a single mechanical rooftop air conditioning unit. The reference noise level represents a Lennox SCA120 series 10-ton model packaged air conditioning unit. At the uniform reference distance of 50 feet, the reference noise level is 59.2 dBA Leq. The air conditioning units were modeled 5 feet above the ground level, operating 45 minutes per hour during the daytime and nighttime, which represents the typical maximum operating time for properly sized AC systems.

EXHIBIT 8-1: OPERATIONAL NOISE SOURCE LOCATIONS

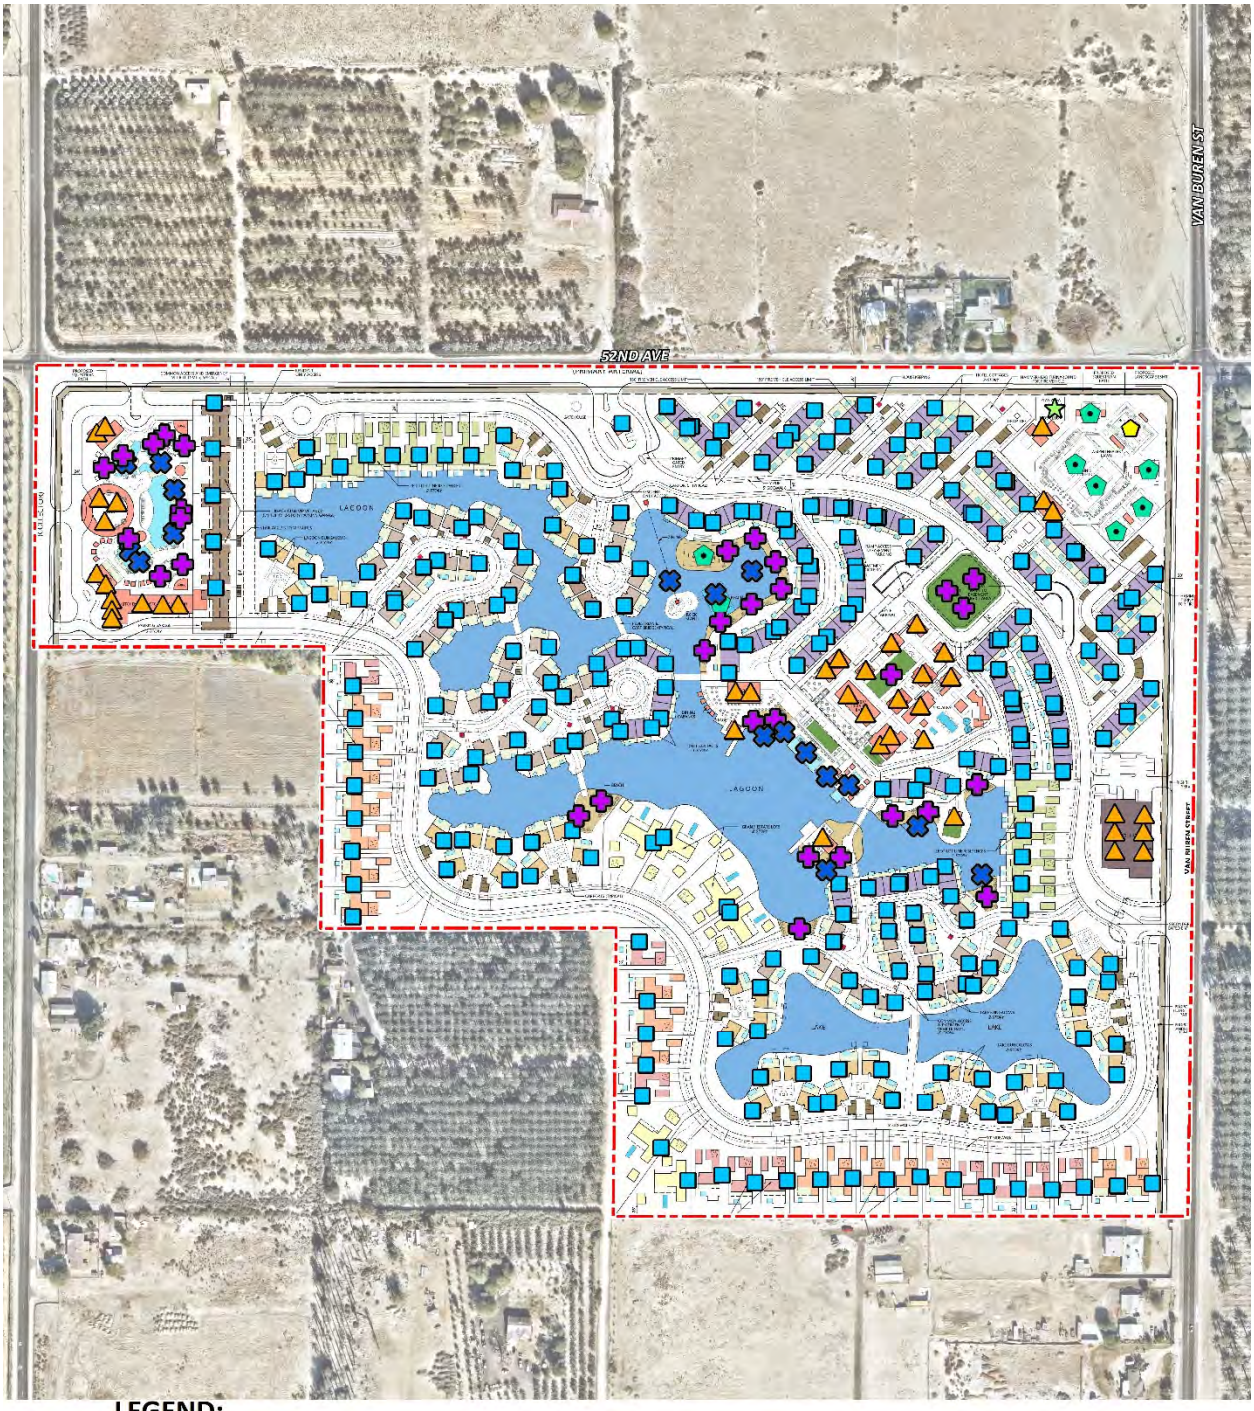


TABLE 10-1: REFERENCE NOISE LEVEL MEASUREMENTS

Reference Noise Source	Noise Source Height (Feet)	Min./ Hour[1]		Reference Noise Level (dBA L_{eq}) @ 50 Feet	Sound Power Level (dBA)[2]
		Day	Night		
Residential Air Conditioning Units	3'	45	30	44.4	76.0
Commercial Air Conditioning Unit	5'	45	30	57.3	88.9
Basketball/Volleyball Activities	5'	60	0	52.1	83.7
Outdoor Activity Area	6'	60	0	59.9	91.5
Children's Play Area	5'	60	0	57.8	89.4
Pool/Spa Activities	5'	60	0	63.0	94.6
Pickleball Court Activities	5'	60	0	64.8	96.4
Tennis Court Activities	5'	60	0	55.4	87.0

[1] Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

[2] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source. Numbers may vary due to size differences between point and area noise sources.

8.2.2 Basketball/Volleyball Activity

To describe the noise levels associated with tennis court activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 52.1 dBA L_{50} for basketball and volleyball court activity. The basketball and volleyball court activity noise levels include eight people playing basketball, the sound of the ball hitting the ground, gates closing, and background park noise sources including people talking. Noise associated with basketball and volleyball court activities is expected to occur for the entire hour (60 minutes).

8.2.3 Outdoor Activity

To describe the outdoor common area, courtyards, and activity areas, a reference noise level was found by modeling an outdoor event with 500 people present, averaging 66 dBA L_{eq} over the outdoor area. At 50 feet, the reference noise level is 59.9 dBA L_{eq} at a noise source height of 5 feet. The reference noise level measurement includes music and speaking. Outdoor common area activities are limited to daytime hours only.

8.2.4 Children's Play Area Activity

To describe the noise levels associated with children's play area activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 57.8 dBA L_{50} for children's play area activity. The children's play area activity noise levels include children playing on swing sets and play structures with background park noise sources, such as parents talking on phones and with other parents. Noise associated with children's play area activities is expected to occur for the entire hour (60 minutes).

8.2.5 Pool/Spa Activity

To describe the noise levels associated with pool and spa activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 63.0 dBA L_{50} for pool and spa activity. The pool activity noise levels include kids playing, running, screaming, splashing, playing with a ball, and parents talking. Noise associated with pool and spa activities is expected to occur for the entire hour (60 minutes).

8.2.6 Pickleball Court Activity

To describe the noise levels associated with pickleball court activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 64.8 dBA L_{50} for pickleball court activity. Pickleball court activity noise levels include the constant talk of the players, the "pop" sound of rackets hitting pickle balls, metal gates closing, and background park noise sources, including people talking. Noise associated with pickleball court activities is expected to occur for the entire hour (60 minutes).

8.2.7 Tennis Court Activity

To describe the noise levels associated with tennis court activities, Urban Crossroads collected a reference noise level measurement. The measured reference noise level at the uniform 50-foot reference distance is 49.6 dBA L_{50} for tennis court activity. The tennis court activity noise levels include an instructor and student playing tennis, the instructor giving constant verbal feedback, the sound of rackets hitting tennis balls, metal tennis court gates closing, and background park noise sources, including people talking. Noise associated with tennis court activities is expected to occur for the entire hour (60 minutes).

8.3 CadnaA Noise Prediction Model

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels. Using the ISO 9613-2 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of the noise level at each receiver and the partial noise level contributions by noise source.

Consistent with the ISO 9613-2 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources. While sound pressure levels (e.g., Leq) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (Lw) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment. The operational noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was

used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 8.2 includes the detailed noise dBA L_{eq} model inputs used to estimate the Project operational noise levels presented in this section.

8.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the Project operations that include ground mounted air conditioning units, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 8-2 shows the Project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 44.4 to 49.9 dBA L_{eq}.

TABLE 10-2: DAYTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5
Residential Air Conditioning Units	44.5	42.4	41.8	41.7	38.4
Commercial Air Conditioning Unit	35.1	38.8	20.9	19.2	15.0
Basketball/Volleyball Activities	43.9	41.8	40.4	42.9	39.7
Outdoor Activity Area	41.0	34.4	21.0	20.1	16.0
Children's Play Area	42.9	41.2	40.9	43.1	40.5
Pool/Spa Activities	39.6	43.5	29.6	27.2	22.5
Total (All Noise Sources)	49.9	48.9	46.0	47.4	44.4

[1] See Exhibit 8-1 for the noise source locations. CadnaA noise model calculations are included in Appendix 8.2.

Table 8-3 shows the Project operational noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the existing off-site receiver locations are expected to range from 16.5 to 39.2 dBA Leq. The differences between the daytime and nighttime noise levels are largely related to the estimated duration of noise activity, as outlined in Table 8-1. Appendix 8.2 includes the detailed noise model inputs.

TABLE 10-3: NIGHTTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)				
	R1	R2	R3	R4	R5
Residential Air Conditioning Units	43.6	41.4	40.8	40.7	37.5

Children's Play Area	0.0	0.0	0.0	0.0	0.0
Pool/Spa Activities	0.0	0.0	0.0	0.0	0.0
Total (All Noise Sources)	43.6	41.4	40.8	40.7	37.5

[1] See Exhibit 8-1 for the noise source locations. CadnaA noise model calculations are included in Appendix 8.2.

8.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the unmitigated Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Coachella exterior noise level standards at nearby receiver locations. Table 8-4 shows that the mitigated operational noise levels associated with the Project will not exceed the City of Coachella daytime and nighttime exterior noise level standards at the existing nearby noise-sensitive receiver locations. Therefore, the mitigated operational noise impacts are considered *less than significant* at the nearby noise-sensitive receiver locations.

TABLE 8-4: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	49.9	43.6	50.0	45.0	No	No
R2	48.9	41.4	50.0	45.0	No	No
R3	46.0	40.8	50.0	45.0	No	No
R4	47.4	40.7	50.0	45.0	No	No
R5	44.4	37.5	50.0	45.0	No	No

[2] Proposed Project unmitigated operational noise levels as shown on Tables 8-2 and 8-3.
[3] Exterior noise level standards, as shown in Table 4-1.
[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

8.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise level measurements for the nearby receiver locations that may be potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases over the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented in Tables 8-5 and 8-6, respectively. As indicated in Table 8-5, the Project will generate daytime operational noise increases ranging from 0.0 to 0.7 dBA L_{eq} at the nearest receiver locations. Table 8-6 shows that the Project will generate nighttime operational noise level increases ranging from 0.0 to 2.4 dBA L_{eq} at the nearest receiver locations. Project-related operational noise level increases would not exceed the operational noise level increase significance criteria presented in Table 4-1. Therefore, Project-

related operational noise level increases at the sensitive receiver locations will be *less than significant.*

9 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 9-1 shows the on-site construction noise source activity in relation to the nearest sensitive receiver locations previously described in Section 7. According to Section 7.04.070 of the Municipal Code, between October 1st and April 30th, construction, erection, demolition, alteration, repair, addition to or improvement of any building, structure, road, or improvement to realty is prohibited Monday through Friday, 6:00 a.m. to 5:30 p.m., Saturday, 8:00 a.m. to 5:00 p.m., Sunday, 8:00 a.m. to 5:00 p.m., and on Holidays, 8:00 a.m. to 5:00 p.m. Also, construction, erection, demolition, alteration, repair, addition to or improvement of any building, structure, road, or improvement to realty is prohibited between May 1st and September 30th, Monday through Friday: 5:00 a.m. to 7:00 p.m., Saturday: 8:00 a.m. to 5:00 p.m., Sunday: 8:00 a.m. to 5:00 p.m., and Holidays: 8:00 a.m. to 5:00 p.m. (22)

9.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

9.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (23) The RCNM equipment database provides a comprehensive list of the noise-generating characteristics of specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation. According to the EPA, FTA, and FHWA, the overall construction noise level is governed primarily by the noisiest pieces of equipment. The quieter pieces do not affect the overall level, but they do reduce the magnitude of the fluctuations in the noise level. Therefore, a rough estimate of the noise level need only include the noisiest pieces of equipment expected at the site. (24) (8) (25) Consistent with FHWA and FTA guidance for detailed construction noise assessment, Table 9-1 presents the combined noise levels for the loudest construction activities expected for each stage, assuming all equipment operates simultaneously.

EXHIBIT 9-1: CONSTRUCTION NOISE SOURCE LOCATIONS

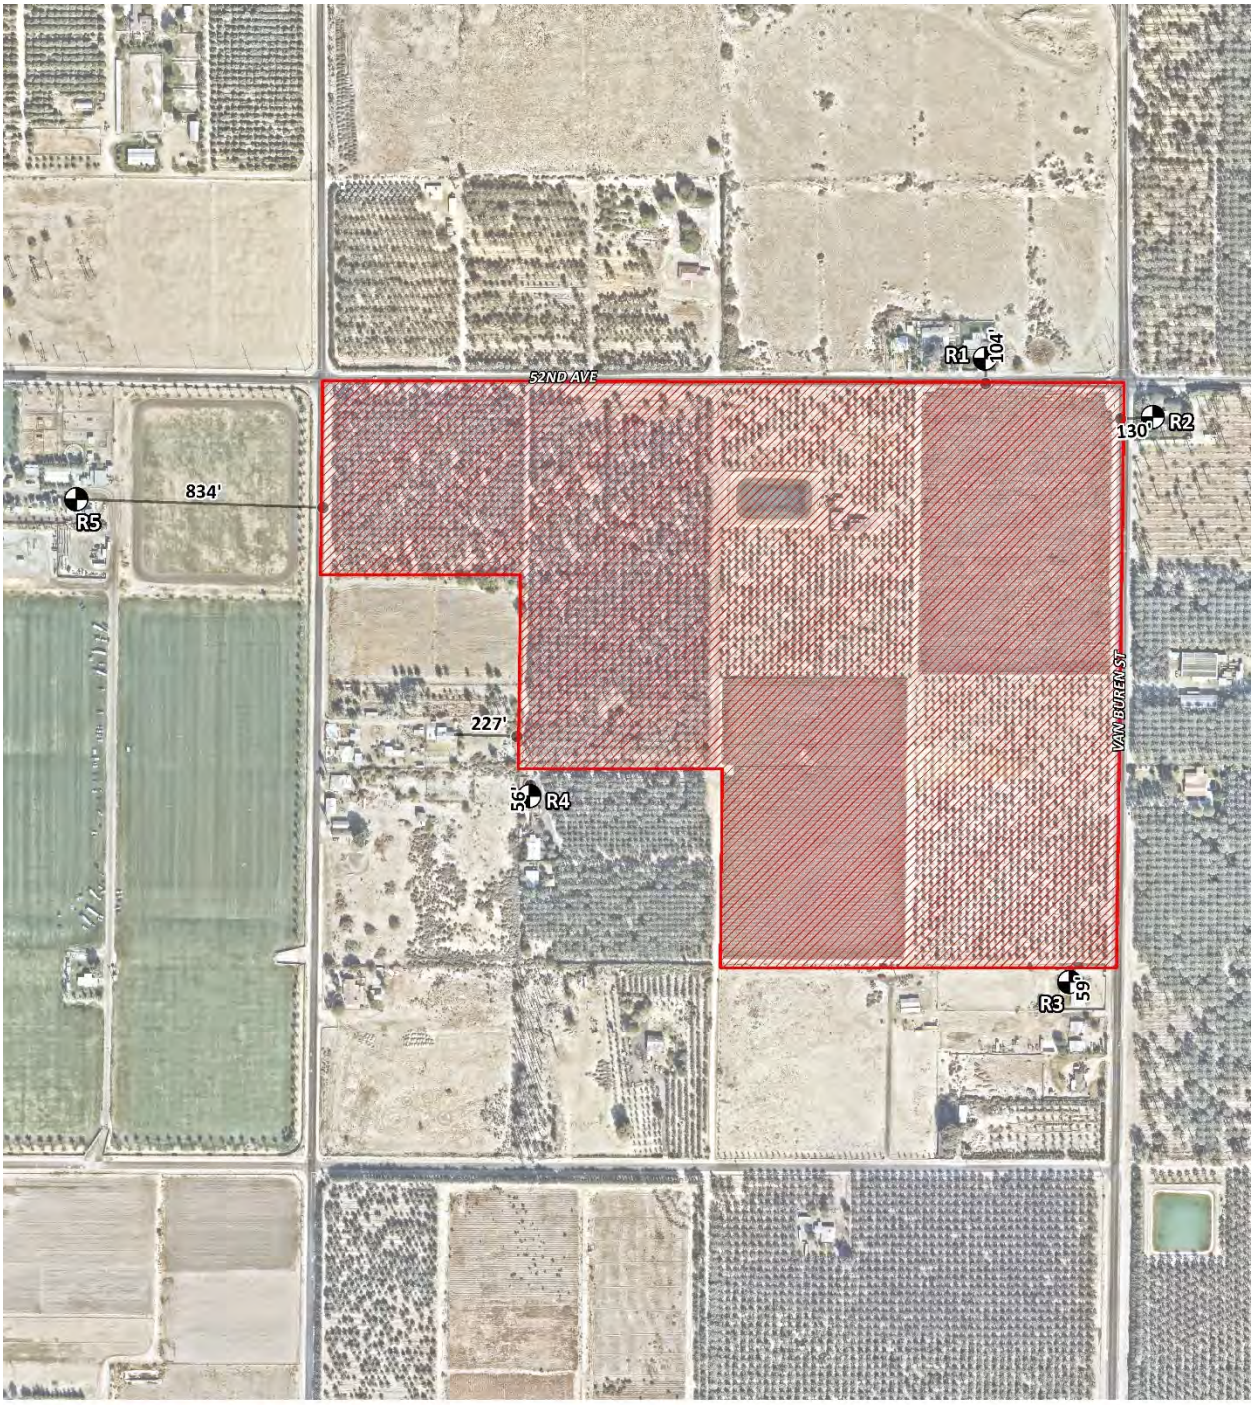

TABLE 9-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Equipmnet[1]	Reference Noise Level @ 50 Feet (dBA L_{eq})	Composite Reference Noise Level (dBA L_{eq})	Reference Power Level (dBA L_w)
Site Preparation	Tractor	80.0	82.9	114.5
	Front End Loader	75.0		
	Dozer	78.0		
Grading	Tractor	80.0	84.2	115.9
	Grader	81.0		
	Compactor (ground)	76.0		
Building Construction	Crane	73.0	82.1	113.7
	Generator	78.0		
	Gradall	79.0		
Paving	Paver	74.0	77.8	109.5
	Dump Truck	72.0		
	Roller	73.0		
Architectural Coating	Man Lift	68.0	76.2	107.8
	Compressor (air)	74.0		
	Generator (<25kVA)	70.0		

[1] FHWA Road Construction Noise Model.

9.3 CONSTRUCTION NOISE ANALYSIS

Construction projects involve various stages, and activities frequently shift from one location to another. For example, during site preparation and grading, noise-generating activities may concentrate in an area for a short period to remove an obstruction, while the majority of the grading involves the equipment moving back and forth in a predictable pattern throughout the site; building construction and foundation work generally concentrate near the building footprint, while paving generally involves a predictable pattern of movement throughout the site. Therefore, construction activities are best evaluated as multiple moving point sources within the construction area since the speed and power of the equipment vary, and the equipment constantly changes position in terms of its distance and direction relative to the receivers. (8) (26) Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts by phase at the nearby sensitive receiver locations were completed. To account for the dynamic nature of construction activities, the CadnaA construction noise analysis evaluates the noise source activities as multiple moving point sources, or construction crews, within the limits of construction. Construction impacts are based on the loudest activity and the highest noise level calculated at each receiver location. As shown in Table 9-2, the highest construction noise levels are expected to range from 54.6 to 63.6 dBA L_{eq} at the nearby receiver locations. Appendix 9.1 includes the detailed CadnaA construction noise model inputs.

TABLE 9-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	61.9	63.2	61.1	56.8	55.1	63.2
R2	60.2	61.5	59.4	55.1	53.4	61.5
R3	62.3	63.6	61.5	57.2	55.5	63.6
R4	62.0	63.3	61.2	56.9	55.2	63.3
R5	53.3	54.6	52.5	48.2	46.5	54.6

[1] Construction noise source and receiver locations are shown in Exhibit 9-1.
[2] Construction noise level calculations based on distance from the project site boundaries (construction activity area) to nearby receiver locations. CadnaA construction noise model inputs are included in Appendix 9.1.

9.4 PROJECT SITE CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at the nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will not exceed the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities at any receiver shown in Exhibit 7-1. Therefore, the noise impacts due to Project construction noise are considered *less than significant*.

TABLE 9-3: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	55.1	80	No
R2	53.4	80	No
R3	55.5	80	No
R4	55.2	80	No
R5	46.5	80	No

[3] Construction noise level thresholds as shown in Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

9.5 TEMPORARY CONSTRUCTION NOISE LEVEL INCREASES

To describe the temporary Project construction noise level contributions to the existing ambient noise environment, the Project construction noise levels were combined with the existing ambient noise level measurements at the nearest off-site receiver locations. The difference between the combined Project-construction and ambient noise levels is used to describe the construction noise level contributions. Temporary noise level increases that would be experienced at sensitive receiver

locations when Project construction-source noise is added to the ambient daytime conditions are presented in Table 9-4. A temporary noise level increase of 20 dBA is considered a *significant* impact based on the substantial noise level increase criteria, which is used to assess the Project-construction noise level increases.

As indicated in Table 9-4, the Project construction will contribute to noise level increases ranging from 0.1 to 2.5 dBA L_{eq} during the daytime hours at the nearest receiver locations. The unmitigated construction noise analysis shows that the nearest receiver locations will not exceed the 20 dBA L_{eq} noise level increase significance threshold during Project construction activities. The temporary construction noise level increase analysis shows that the noise impacts due to the Project construction noise are considered *less than significant*.

TABLE 9-4: DAYTIME CONSTRUCTION NOISE LEVEL INCREASES

Receiver Location[1]	Typical Project Construction Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria[7]	Increase Criteria Exceeded?
R1	55.1	L1	66.2	66.5	0.3	20	No
R2	53.4	L2	67.5	67.7	0.2	20	No
R3	55.5	L3	66.4	66.7	0.3	20	No
R4	55.2	L4	56.4	58.9	2.5	20	No
R5	46.5	L5	61.4	61.5	0.1	20	No

[6] The noise level increase expected with the addition of the proposed Project construction activities.
[7] Caltrans Traffic Noise Analysis Protocol.

9.6 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized in Table 9-5. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and building damage using the following vibration assessment methods defined by Caltrans. To describe the vibration impacts, Caltrans provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

TABLE 9-5: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089
Vibratory Roller	0.210

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Using the vibration source level of construction equipment provided in Table 9-5 and the construction vibration assessment methodology published by the FTA, it is possible to estimate the Project vibration impacts. Table 9-6 presents the expected Project-related vibration levels at the nearby receiver locations. At distances ranging from 3 to 207 feet from Project construction activities, construction vibration velocity levels are estimated to range from less than 0.01 to 5.05 PPV in/sec. Based on the maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical Project construction vibration levels will not exceed the vibration thresholds at any receivers. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site.

It should be noted that vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period, but will occur only during the times that heavy construction equipment is operating adjacent to the Project site perimeter. Moreover, construction at the Project site will be restricted to the daytime hours, consistent with City of Coachella requirements, eliminating potential vibration impacts during the sensitive evening and nighttime hours.

TABLE 9-6: PROJECT CONSTRUCTION VIBRATION LEVELS

Location[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]						Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jack-hammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level		
R1	104'	0.00	0.00	0.01	0.01	0.02	0.02	0.30	No
R2	130'	0.00	0.00	0.01	0.01	0.02	0.02	0.30	No
R3	59'	0.00	0.01	0.02	0.02	0.06	0.06	0.30	No
R4	56'	0.00	0.01	0.02	0.03	0.06	0.06	0.30	No
R5	834'	0.00	0.00	0.00	0.00	0.00	0.00	0.30	No

Title 7 - NOISE CONTROL

Chapters:

Chapter 7.04 - NOISE CONTROL

Sections:

Footnotes:
*--- (**1**) ---*
***Editor's note—** Ord. No. 1022, adopted Nov. 17, 2010, amended ch. 7.04 in its entirety to read as herein set out. Former ch. 7.04 pertained to similar subject matter, consisted of §§ 7.04.010—7.04.140, and derived from Ord. 940.*

7.24.010 - Purpose.

The city council finds and declares that:

A. Inadequately controlled noise presents a growing danger to the health and welfare of the residents of the city of Coachella;

B. The making and creation of excessive, unnecessary or unusually loud noises within the limits of the city of Coachella is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

C. The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the city of Coachella;

D. Every person is entitled to an environment in which the noise is not detrimental to his life, health, or enjoyment of property; and

E. The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the city of Coachella.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.020 - Definitions.

[As used in this chapter, the following terms have the meanings given:]

"A-weighted sound level" means the sound pressure level in decibels as measured on a sound level meter using the A-weighting network. The level to read is designated db(A) or dBA.

"Ambient noise level" means the all-encompassing noise level associated with a given environment, being a composite of sounds from all sources, excluding the alleged offensive noise, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

"Amplified music" means instrumental and/or vocal music amplified through electronic means.

"Average sound level" means a sound level typical of the sound levels at a certain place during a given period of time; also, means an equivalent continuous sound level.

"Commercial establishments" includes, but is not limited to, any nightclub, restaurant, sports bar, industrial, retail or business establishment or combination thereof.

"Construction equipment" means any tools, machinery or equipment used in connection with construction operations, including all types of "special construction" equipment as defined in the pertinent sections of the California Vehicle Code when used in the construction process on any construction site, home improvement site or property maintenance site, regardless of whether such site be located on-highway or off-highway.

"Cumulative period" means an additive period of time composed of individual time segments which may be continuous or interrupted.

"Decibel" means a unit measure of sound level noise.

"Disturbance" means any disturbance of the peace as defined by California Penal Code Section 415 or as otherwise defined herein.

"Disturbing, excessive or offensive noise" means any sound or noise from any source in excess of the sound level or noise level set forth in Section 7.04.030.

"Emergency machinery," "vehicle" or "work" means any machinery, vehicle or work used, employed or performed in an effort to protect, provide or restore safe conditions in the community or for the citizenry, or work by private or public utilities when restoring utility service.

"Fixed noise source" means a stationary device which creates sounds which are fixed or motionless including, but not limited to, industrial and commercial machinery and equipment, pumps, fans, compressors, generators, air conditioners and refrigeration equipment.

"Gathering" means any convergence of five or more persons.

"Impact noise" means the noise produced by the collision of one mass in motion with a second mass which may be either in motion or in rest.

"Noise level" means the same as "sound level." The terms may be used interchangeably herein.

"Peace officer" means a duly appointed officer of the city, as defined in California Penal Code, Sectio 830, et seq.

"Person" means a person, firm, association, copartnership, joint venture, corporation or any entity, public or private in nature.

"Portable powered blower" means any mechanically powered device, regardless of the source of power, which is not stationary, and used for the purpose of blowing leaves, dirt or other debris off sidewalks, lawns or other surfaces.

"Premises" means any real property or location at which a gathering may be held.

"Sound level" (noise level) in decibels is the quantity measured using the frequency weighting of A of a sound level meter as defined herein.

"Sound level meter" means an instrument meeting American National Standard Institute's Standard SL. 4-1974 for type 1 or type 2 sound level meters or an instrument and the associated recording and analyzing equipment which will provide equivalent data.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.030 - Sound level limits as related to fixed noise sources.

A. Regardless of whether an objective measurement by sound level meter is involved, it shall be unlawful for any person to make, continue, or cause to be made or continued, within the city limits any disturbing excessive or offensive noise or vibration which causes discomfort or annoyance to any reasonable person of normal sensitivity residing in the area or that is plainly audible at a distance greater than fifty (50) feet from the sources point for any purpose. The following ten-minute average sound level limits, unless otherwise specifically indicated, shall apply as indicated in the following table as it relates to a fixed noise source or leaf blowers pursuant to Section 7.04.075.

Zone	Time	Applicable Ten-Minute Average Decibel Limit (A-weighted)
Residential—All zones	6:00 a.m. to 10:00 p.m. 10:00 p.m. to 6:00 a.m.	55 45
Commercial—All zones	6:00 a.m. to 10:00 p.m. 10:00 p.m. to 6:00 a.m.	65 55

B. If the measured ambient noise level exceeds the applicable limit as noted in the table in subsection (A) of this section, the allowable average sound level shall be the ambient noise level. The ambient noise level shall be measured when the alleged noise violation sources are not

operating.

C. The sound level limit between two zoning districts shall be measured at the higher allowable district.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.040 - Prohibited noise generally.

A. It is unlawful for any person or property owner within the city of Coachella to make, cause, or continue to make or cause, loud, excessive, impulsive or intrusive sound or noise that annoys or disturbs persons of ordinary sensibilities.

B. The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, include, but are not limited to, the following:

1. The level of the noise;
2. The level and intensity of the background (ambient) noise, if any;
3. The proximity of the noise to residential or commercial sleeping areas;
4. The nature, density and zoning of the area within which the noise emanates;
5. The density of inhabitation of the area within which the noise emanates;
6. The time of day and night the noise occurs;
7. The duration of the noise;
8. Whether the nature of the noise is natural or unnatural;
9. Whether the noise is constant, recurrent or intermittent; and
10. Whether the noise is produced by a commercial or noncommercial activity.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.050 - Disturbing, excessive, offensive noises—Declaration of certain acts constituting.

The following activities, are declared to be deemed disturbing, excessive or offensive noises and any of the following shall constitute prima facie evidence of a violation:

A. Horns, Signaling Devices, Muffler Systems, Car Alarms, Etc. Unnecessary use or operation of horns, signaling devices, uncontrolled muffler noises, car alarms on vehicles of all types, including motorcycles, and other equipment.

1. The operation of any such sound production or reproduction device, radio receiving set, musical instrument, drum, phonograph, television set, machine, loudspeaker and sound amplifier or similar machine or device in such a manner as to be plainly audible at a distance of fifty (50) feet or more from the building, structure or vehicle in which located, or from the source point.

2. The operation of any sound amplifier, which is part of, or connected to, any radio, stereo receiver, compact disc player, cassette tape player, or other similar device when operated in such a manner as to be plainly audible at a distance of fifty (50) feet from the source point or when operated in such a manner as to cause a person to be aware of vibration at a distance of fifty (50) feet or more from the source point.

B. Uses Restricted. The use, operation, or permitting to be played, used or operated, any sound production or reproduction device, radio receiving set, musical instrument, drums, phonograph, television set, loudspeakers and sound amplifiers or other machine or device for the producing or reproducing of sound in such a manner as to disturb the peace, quiet, and comfort of any reasonable person of normal sensitiveness.

C. Prima Facie Violations. Any of the following shall constitute evidence of a prima facie violation of this section:

1. The operation of any such sound production or reproduction device, radio receiving set, musical instrument, drum, phonograph, television set, machine, loudspeaker and sound amplifier or similar machine or device in such a manner as to be plainly audible at a distance of fifty (50) feet from the building, structure or vehicle in which located, or from the source point.

2. The operation of any sound amplifier, which is part of, or connected to, any radio, stereo receiver, compact disc player, cassette tape player, or other similar device when operated in such a manner as to be plainly audible at a distance of fifty (50) feet from the source point or when operated in such a manner as to cause a person to be aware of vibration at a distance of fifty (50) feet from the source point.

D. Enforcement of Prima Facie Violations. Any peace office, as defined in California Penal Code, Sections 830, et seq., and/or the city manager or his or her designees, who are authorized to enforce the provisions of this chapter and who encounters evidence of a prima facie violation of this section whereby the component(s) amplifying or transmitting the sound in such a manner as to disturb the peace, quiet, or comfort of any reasonable person of normal sensitivity in any area of the city shall be empowered to issue a citation and/or to confiscate and impound as evidence, any or all of the components amplifying or transmitting the sound.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.060 - Special provisions—Exemptions.

The following activities shall be exempted from the provisions of this chapter:

A. School bands, school athletic and school entertainment events;

B. Outdoor gatherings, public dances, shows and sporting and entertainment events; provided, the events are authorized by the city;

C. Activities conducted in public parks and public playgrounds;

D. Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle or work;

E. All mechanical devices, apparatus or equipment which are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions;

F. Mobile noise sounds associated with agricultural operations provided such operations do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturdays, or at any time on Sunday or a federal holiday;

G. Mobile noise sources associated with agricultural pest control through pesticide application;

H. Carillon chimes between the hours of 8:00 a.m. to 7:00 p.m.;

I. For noise sources associated with property maintenance, refer to Section 7.04.075, "property maintenance activities";

J. For noise sources associated with construction activities, refer to Section 7.04.070, "construction activities"; and

K. The provisions of this regulation shall not preclude the construction, operation, maintenance and repairs of equipment, apparatus or facilities of park and recreation departments, public work projects or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the California Public Utilities Commission.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.070 - Construction activities.

No person shall perform, nor shall any person be employed, nor shall any person cause any other person to be employed to work for which a building permit is required by the city in any work of construction, erection, demolition, alteration, repair, addition to or improvement of any building, structure, road or improvement to realty except between the hours as set forth as follows:

October 1st through April 30th

Monday—Friday: 6:00 a.m. to 5:30 p.m.

Saturday: 8:00 a.m. to 5:00 p.m.

Sunday: 8:00 a.m. to 5:00 p.m.

Holidays: 8:00 a.m. to 5:00 p.m.

May 1st through September 30th

Monday—Friday: 5:00 a.m. to 7:00 p.m.

Saturday: 8:00 a.m. to 5:00 p.m.

Sunday: 8:00 a.m. to 5:00 p.m.

Holidays: 8:00 a.m. to 5:00 p.m.

Emergency work and/or unusual conditions may cause work to be permitted with the consent of the city manager, or his or her designee, upon recommendation of the building director or the city engineer.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.075 - Property maintenance activities.

A. Noise sources associated with property maintenance activity and all portable blowers, lawnmowers, edgers or similar devices shall be prohibited except during the following hours:

October 1st through April 30th

Monday—Sunday: 9:00 a.m. to 5:30 p.m.

Holidays: Not allowed.

May 1st through September 30th

Monday—Friday: 8:00 a.m. to 5:30 p.m.

Saturday and Sunday: 9:00 a.m. to 5:30 p.m.

Holidays: Not allowed.

Notwithstanding the hours of permitted operations, such equipment that constitutes a public nuisance may be abated as otherwise provided in this Code.

B. No person shall willfully make or continue, or willfully cause to be made or continued, any noise from any portable powered blower at a level which exceeds seventy (70) decibels dBA measured at the midpoint of a wall area twenty (20) feet long and ten (10) feet high and at the horizontal distance fifty (50) feet away from the midpoint of the wall, or not more than seventy-six (76) decibels dBA at a horizontal distance of twenty-four (24) feet using a sound level meter.

C. No portable powered blower shall be operated in a manner which will permit dirt, dust, debris, leaves, grass clippings, cuttings, or trimmings from trees or shrubs to be blown or deposited onto neighboring property or public right-of-way. All waste shall be removed and disposed of in a sanitary manner by the use or property occupant.

D. Leaf blowers shall not be operated within a horizontal distance of ten (10) feet of any operable window, door, or mechanical air intake opening or duct.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.080 - Schools, hospitals and churches—Special provisions.

It is unlawful for any person to create any noise which causes the noise level at any school, hospital or church while the same is in use, to exceed the noise limits, as specified in subsection (A) of Section 7.04.030, prescribed for the assigned noise zone in which the school, hospital or church is located, or which noise level unreasonably disturbs or annoys patients in the hospital.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.090 - Air conditioning, refrigeration and pool equipment.

The noise standards enumerated in Section 7.04.030 shall be increased by eight dBA when the alleged offensive noise source is an air conditioning or refrigeration system or associated equipment which was installed prior to the effective date of the ordinance codified in this chapter. Installation of new equipment must be certified to be within the provisions of this chapter. Installation of new equipment must be certified to be within the provisions of this chapter for night and day operation noise level.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.100 - Noise level measurement.

A. The location selected for measuring exterior noise levels between residential properties shall be at the property line of the affected residential property. Affected residential property shall be the address from which the complaint was received. Interior noise measurement shall be made within the affected residential unit. The measurement shall be made at a point at least four feet from the wall, ceiling or floor nearest the noise source.

The location selected for measuring exterior noise levels between nonresidential properties shall be at the property line of the affected property.

B. The location selected for measuring exterior noise levels between two zoning districts shall be at the boundary of the two districts.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.110 - Interference with authorized personnel is prohibited.

No person shall interfere with, oppose or resist any authorized person charged with enforcement of this chapter while such person is engaged in the performance of his duty.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.120 - Pre-existing noise source—Time extension.

Those commercial and/or industrial noise sources in existence prior to the date of adoption of the ordinance codified in this chapter, which noise sources are an integral part of a building, structure or similar fixed and permanent installation if in compliance with local zoning structures, shall be granted a three-year period from the date of adoption with which to comply with the provisions of the chapter. If, at the end of the three-year period, it can be shown that compliance with the provisions herein constitutes a hardship in terms of technical and economic feasibility, the time to comply may be extended on an annual basis until such time as compliance may be affected.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.130 - Violation—Infractions.

Any person violating any of the provisions of this chapter shall be deemed guilty of an infraction.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.140 - Continuing or subsequent violations—Misdemeanor.

Any person having been convicted of a violation of any provisions of this chapter who thereafter commits a violation of the same provisions of this chapter shall be guilty of a misdemeanor.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

7.04.150 - Severability.

If any provision of this chapter is held to be unconstitutional or otherwise invalid by any court of competent jurisdiction, the remaining provisions of this chapter shall not be invalidated.

(Ord. No. 1022, § 1, 11-17-10; Ord. No. 1024, 11-17-10)

Chapter 7.05 - MULTIPLE RESPONSES TO LOUD OR UNRULY PARTIES, GATHERINGS OR OTHER SIMILAR EVENTS

7.05.010 - Declaration of findings and policy.

It is hereby found and declared that:

A. Due to inadequate supervision, some large gatherings of people, such as parties, frequently become loud and unruly to the point that they constitute a threat to the peace, health, safety, or general welfare of the public as a result of conduct such as one or more of the following:

excessive noise, excessive traffic, obstruction of public streets or crowds who have spilled over into pu streets, public drunkenness, the service of alcohol to minors, fights, disturbances of the peace, and litter.

B. The city of Coachella is required to make multiple responses to such unruly gatherings in order to restore and maintain the peace and protect public safety. Such gatherings are a burden on scarce city resources and can result in police responses to regular and emergency calls being delayed and police protection to the rest of the city being reduced.

C. In order to discourage the occurrence of repeated loud and unruly gatherings, the persons responsible for the public nuisance created by these gatherings should be fined.

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

7.05.020 - Loud or unruly gatherings—Public nuisance.

It shall be unlawful and a public nuisance to conduct a gathering of ten (10) or more persons on any private property in a manner which constitutes a substantial disturbance of the quiet enjoyment of private or public property in a significant segment of a neighborhood, as a result of conduct constituting a violation of law. Illustrative of such unlawful conduct is excessive noise or traffic, obstruction of public streets by crowds or vehicles, public drunkenness, the service of alcohol to minors, fights, disturbances of the peace, litter. A gathering constituting a public nuisance may be abated by the city by all reasonable means including, but not limited to, an order requiring the gathering to be disbanded and citation and/or arrest of any law violators under any applicable local laws and state statutes.

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

7.05.030 - Notice of unruly gatherings—Posting, mail.

A. When the city intervenes at a gathering which constitutes a public nuisance under this chapter, the premises at which such nuisance occurred shall be posted with a notice substantially in the form attached hereto as Exhibit "A" stating that a public nuisance under this chapter was caused by a gathering at the premises, the date and time of the police intervention, and that any subsequent or second police intervention with respect to a nuisance under this chapter at said premises, including a second intervention that same day or night, within sixty (60) days of the first intervention, shall result in the joint and several liability of any guests causing the public nuisance, persons who are residents or in control of the property at which the public nuisance occurred, persons who sponsored the gathering constituting the public nuisance, and owners of the premises as more fully set forth in Sections 7.05.040—7.05.060, below. The residents and persons in control of such property, and the sponsors of the event, shall be responsible for ensuring that such notice is not removed or defaced and shall be liable for a civil penalty of one hundred dollars ($100.00) in addition to any other penalties which may be due under this chapter, if such notice is removed or defaced, provided, however, that the residents of the premises or sponsor

of the event, if present, shall be consulted as to the location in which such notice is posted in order to achieve both the security of the notice and its prominent display. The notice shall remain posted for the entire 60-day period.

B. Notice of the police intervention shall also be mailed to any property owner at the address shown on the city's property tax assessment records and shall advise the property owner that any subsequent gathering resulting in a public nuisance within sixty (60) days on the same premises necessitating city intervention shall result in liability of the property owner for all penalties associated with such intervention as more particularly set forth below.

EXHIBIT A

IMPORTANT NOTICE REGARDING

PUBLIC NUISANCE

NOTICE IS HEREBY GIVEN THAT, pursuant to Coachella Municipal Code (CMC) Chapter 7.05, on:

Date: _____, 20___, at _____ a.m./p.m.

The Coachella Police Department found that a gathering, at the below-listed premises caused a public nuisance as defined by CMC Chapter 7.05 (e.g., disturbance of the peace, threat to public safety, etc.):

Address: _____, Coachella, California.

WARNING

IF THE POLICE RESPOND TO ANOTHER DISTURBANCE CONSTITUTING A NUISANCE (AS DEFINED BY CMC CHAPTER 7.05) AT THE ABOVE PREMISES WITHIN 60 DAYS OF THIS NOTICE, INCLUDING BUT NOT LIMITED TO A DISTURBANCE LATER TODAY OR TONIGHT, A SUBSEQUENT RESPONSE FEE WILL BE IMPOSED UPON:

1. ALL GUESTS CAUSING THE NUISANCE;
2. ALL SPONSORS OF THE GATHERING;
3. ALL RESIDENTS OF THE PREMISES;
4. ALL PERSONS IN CONTROL OF THE PREMISES; AND
5. ALL OWNERS OF THE PREMISES THAT RESIDE ON OR ADJACENT TO THE PREMISES, OR ARE PRESENT AT THE PREMISES WHEN THIS NOTICE IS FIRST POSTED.

Property owners who do not reside on or adjacent to the above premises, and who are not present when this Notice is first posted, are also jointly and severally liable for said fee, if the next disturbance occurs after two weeks after this Notice is mailed to said owner.

THIS NOTICE MUST REMAIN POSTED ON THE PREMISES FOR 60 DAYS

$100 FINE FOR UNAUTHORIZED REMOVAL OF THIS NOTICE

_____

(Name and Signature of the Officer Issuing This Notice)

_____

(Officer's Phone Number)

Date: _____

Case Number: _____

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

7.05.040 - Persons liable for subsequent response to a gathering constituting a public nuisance.

If the city is required to intervene as to a gathering constituting a public nuisance on the same premises more than once in any 60-day period, including a second intervention during the same day or night as the first intervention, the following persons shall be jointly and severally liable for civil penalties as set forth in Section 7.05.050, below, in addition to liability for any injuries to city personnel or damage to city property.

A. The person or persons who own the premises where the gathering constituting a public nuisance took place if any of the following are the case:
   (1) Said owner resides on or adjacent to the premises;
   (2) Said owner was present when the notice described in Exhibit "A" was first posted; or
   (3) The notice described in Exhibit "A" was mailed to said owner and fourteen (14) days have elapsed since the date of said mailing.

For purposes of this subsection, where a gathering takes place within the confines of a single unit in a building owned by a housing cooperative, the owner of the property shall be deemed to be the owner of the single unit and not the members of the housing cooperative in general. Where the gathering took place in the common area of a building owned by a housing cooperative, only the members of the cooperative owning units in the building where the gathering took place shall be deemed the owners of the property for purposes of this subsection. Other members of the housing cooperative may still be liable if they fall within the categories of person made liable by Section 7.05.040, subsections (B), (C), or (D), below.

B. The person or persons residing on or otherwise in control of the property where such gathering took place.
C. The person or persons who organized or sponsored such gathering.
D.

All persons attending such gathering who engaged in any activity resulting in the public nuisance.

E. Nothing in this section shall be construed to impose liability on the resident or owners of the premises or sponsor of the gathering, for the conduct of persons who are present without the express or implied consent of the resident or sponsor, as long as the resident and sponsor have taken all steps reasonably necessary to exclude such uninvited participants from the premises. Where an invited guest engages in conduct which the sponsor or resident could not reasonably foresee and the conduct is an isolated instance of a guest at the event violating the law which the sponsor is unable to reasonably control without the intervention of the police, the unlawful conduct of the individual guest shall not be attributable to the sponsor, owner, or resident for the purposes of determining whether the event constitutes a public nuisance under this section.

F. There shall be no liability for civil penalties under this chapter for a subsequent intervention during the same day or night as the prior intervention, unless a reasonable time has been provided to abate the public nuisance, taking into account the size of the gathering, the time of day, and other relevant factors.

G. There shall be no liability for civil penalties under this chapter for a second response during the same day or night as the first response when a person who would otherwise be liable under subsection (A) seeks assistance from the police department to abate a public nuisance under this chapter, and the person cooperates fully with the police while taking reasonable action to abate the public nuisance.

H. If the city is required to intervene at a gathering constituting a public nuisance on the same premises more than once in any 60-day period, excluding a second intervention during the same day or night as the first intervention, the 60-day period shall be extended by another sixty (60) days from the date of the second intervention.

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

7.05.050 - Recovery of subsequent response fee.

A. After given proper notice pursuant to Section 7.05.030 and a reasonable opportunity to abate a gathering constituting a public nuisance, a subsequent response fee shall be assessed against all persons liable for the city's intervention. The subsequent response fee shall include:

1. The actual cost to the city of law enforcement services incurred as a result of a subsequent response;
2. The actual cost of any medical treatment required by a police officer for injuries sustained during a subsequent response; and
3. The cost of repairing or replacing any city equipment or property damaged or destroyed during a subsequent response.

B. Except as provided in subsection (A) of this section, the subsequent response fee shall not ex one thousand dollars ($1,000.00) for any subsequent response.

C. The remedies set forth in this chapter shall be in addition to any other penalties imposed by law for particular violations of law committed during the course of an event which is a public nuisance under this chapter, provided however, that if the only violation of law which constituted the public nuisance under this chapter is excessive noise, the remedies provided under this chapter shall be exclusive of any other remedies provided by law to the city for such excessive noise.

D. The city shall bill all persons liable for subsequent response fees by mail by sending a letter in substantially the form attached hereto as Exhibit "B." Payment of the fees shall be due within thirty (30) days of the date the bill is deposited in the mail. If full payment is not received within the required time for payment, the bill will be delinquent, and all persons liable for the fees shall be charged interest at the maximum legal rate from the date the payment period expires and a further civil penalty in the amount of one hundred dollars ($100.00).

EXHIBIT B

Date:

To:

Dear:

The City of Coachella was required to abate the public nuisance caused by a gathering of 10 or more persons at (location of property), which substantially disrupted the quiet enjoyment of property in a significant segment of the adjacent neighborhood. This is the (second/third/fourth, etc.) such public nuisance at this property within the last 60 days, and thus, a fee of _____ is imposed on you. If you fail to remit this fine to the City of Coachella by (30 days from the date of this notification) you will be liable for an additional $100 penalty, plus interest. The payment should be remitted to the address listed below. Your liability is based on the fact that you were:

[ ] An owner of the property to whom was sent prior notice of a public nuisance at the property within the previous 60 days; and/or

[ ] An owner of the property who resided on or adjacent to the property when the public nuisance took place; and/or

[ ] An owner of the property who was present when a Notice of a public nuisance was first posted at the property; and/or

[ ] A person who resided on or was otherwise in control of the property when the public nuisance took place there; and/or

[ ] A person who organized or sponsored the event that created the public nuisance at such property; and/or

[ ] A person who attended the event constituting the public nuisance at such property and engaged in the conduct which resulted in the public nuisance.

If you believe that you are not liable you may defend this claim in the civil action which the City of Coachella will file against you upon your failure to remit the fee. You should be aware, however, that if you fail to prevail in that action you will be liable for the additional penalty of $100 and interest on the total fee.

Sincerely yours,

(Name, title, address and phone number of signatory)

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

7.05.060 - Collection of delinquent costs for a subsequent city response.

The penalties assessed as a result of a subsequent city response to a loud or unruly gathering shall constitute a debt of all persons liable for the penalties in favor of the city and may be collected in any manner authorized by law and are recoverable in a civil action filed by the city in a court of competent jurisdiction. The remedies provided by this chapter are in addition to all other civil and criminal remedies available to the city with respect to the unlawful conduct constituting the public nuisance which gave rise to the need for the city response under this chapter.

(Ord. No. 1023, § 1, 11-17-10; Ord. No. 1025, 11-17-10)

50VR–A
Performance™ 15 SEER 2–Stage Packaged Heat Pump System with Puron® (R–410A) Refrigerant
Single and Three Phase
2 to 5 Nominal Tons (Sizes 24–60)

Carrier
turn to the experts

Product Data

A09033

Fig. 1 - Unit 50VR-A

Single-Packaged Products with Energy-Saving Features and Puron® refrigerant.

- 15.0-15.5 SEER / 12.0-12.5 EER at 95°F (35°C) OD
- Factory-Installed TXV
- Multi-speed ECM Blower Motor - Standard
- Sound levels as low as 71dBA
- Two Stages of Cooling/Heating
- Dehumidification Feature

FEATURES/BENEFITS

One-piece heat pump unit with optional electric heater, low sound levels, easy installation, low maintenance, and dependable performance.

Puron Environmentally Sound Refrigerant is Carrier's unique refrigerant designed to help protect the environment. Puron is an HFC refrigerant which does not contain chlorine that can harm the ozone layer. Puron refrigerant is in service in millions of systems proving highly reliable, environmentally sound performance.

Easy Installation

Factory-assembled package is a compact, fully self-contained, electric cooling unit that is prewired, pre-piped, and pre-charged for minimum installation expense. These units are available in a variety of standard cooling sizes with voltage options to meet residential and light commercial requirements. Units are lightweight and install easily on a rooftop or at ground level. The high tech composite base eliminates rust problems associated with ground level applications.

Innovative Unit Base Design

On the inside a high-tech composite material will not rust and incorporates a sloped drain pan which improves drainage and helps inhibit mold, algae and bacterial growth. On the outside metal base rails provide added stability as well as easier handling and rigging.

Convertible duct configuration

Unit is designed for use in either downflow or horizontal applications. Each unit is converted from horizontal to downflow and includes horizontal duct covers. Downflow operation is provided in the field to allow vertical ductwork connections. The basepan seals on the bottom openings to ensure a positive seal in the vertical airflow mode.

Efficient operation High-efficiency design offers SEER (Seasonal Energy Efficiency Ratios) of up to 15.5 and HSPF of 8.5. (See page 4.)

Durable, dependable components

Scroll Compressors have 2 stages of cooling/heating and are designed for high efficiency. Each compressor is hermetically sealed against contamination to help promote longer life and dependable operation. Each compressor also has vibration isolation to provide quieter operation. All compressors have internal high pressure and overcurrent protection.

Multi-speed ECM Blower Motor is standard on all 50VR-A.

Direct-drive PSC (Permanent Split Capacitor) condenser-fan motors are designed to help reduce energy consumption and provide for cooing operation down to 40°F (4.4°C) outdoor temperature. Motormaster® II low ambient kit is available as a field-installed accessory.

Thermostatic Expansion Valve - A hard shutoff, balance port TXV maintains a constant superheat at the evaporator exit (cooling cycle) resulting in higher overall system efficiency.

Refrigerant system is designed to provide dependability. Liquid filter driers are used to promote clean, unrestricted operation. Each unit leaves the factory with a full refrigerant charge. Refrigerant service connections make checking operating pressures easier.

High and Low Pressure Switches provide added reliability for the compressor.

Indoor and Outdoor coils are computer-designed for optimum heat transfer and efficiency. The indoor coil is fabricated from copper tube and aluminum fins and is located inside the unit for protection against damage. The outdoor coil is internally mounted on the top tier of the unit.

Low sound ratings ensure a quiet indoor and outdoor environment with sound ratings as low as 71dBA. (See Page 4.)

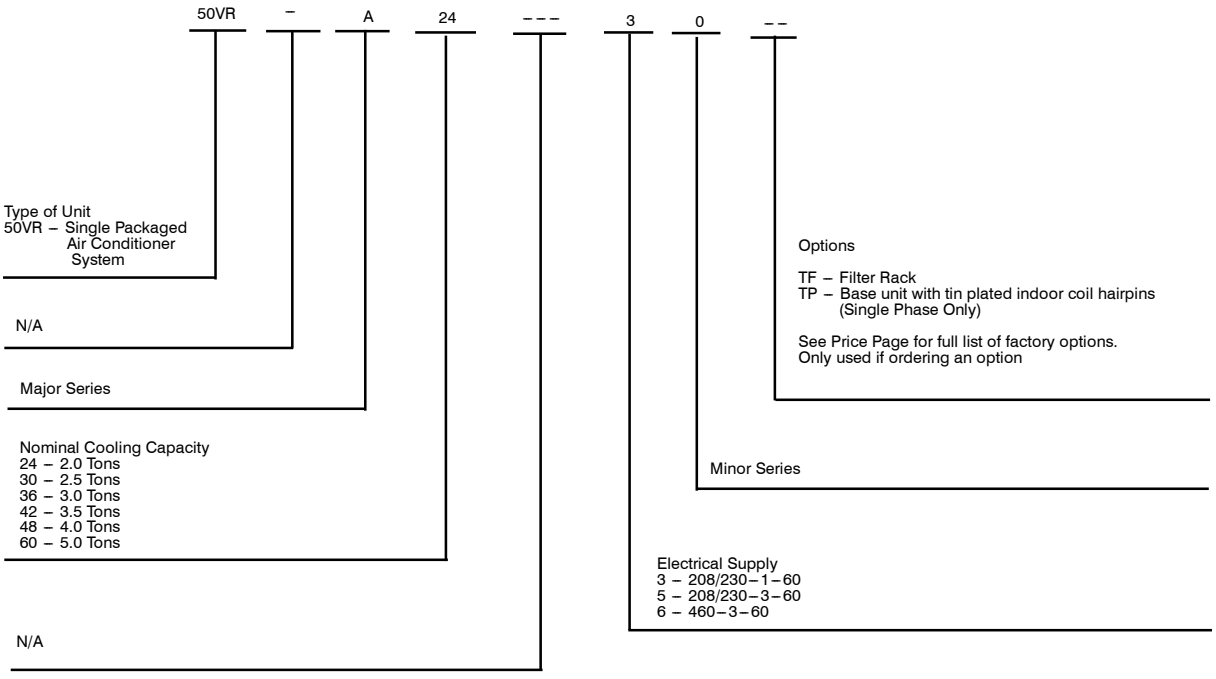
Easy to service cabinets provide easy 3 panel accessibility to serviceable components during maintenance and installation. The basepan with integrated drain pan provides easy ground level installation with a mounting pad. A nesting feature ensures a positive basepan to roof curb seal when the unit is roof mounted. A convenient 3/4-in. (19.05 mm) wide perimeter flange makes frame mounting on a rooftop easy.

Dehumidification Feature

This unit has independent fan speeds for low stage cooling and high stage cooling. In addition, 208/230 VAC models have the field-selectable capability to run an enhanced dehumidification ('DHUM') speed on high stage cooling (as low as 320CFM per ton). Coupled with the improved dehumidification associated with low stage cooling, the DHUM speed allows for a complete dehumidification solution independent of cooling stage. The dehumidification control must open the control circuit on humidity rise above the dehumidification set point.

NOTE: The enhanced dehumidification feature on high stage cooling does not support use of an economizer.

Standard horizontal metal duct covers with insulation come with the unit and cover the horizontal duct openings. These can be left in place if the units are converted to downflow.



Cabinets are constructed of heavyduty, phosphated, zinc-coated prepainted steel capable of withstanding 500 hours in salt spray. Interior surfaces of the evaporator/electric heater compartment are insulated with foil-faced insulation, which keeps the conditioned air from being affected by the outdoor ambient temperature and provides improved indoor air quality. (Conforms to American Society of Heating, Refrigeration and Air Conditioning Engineers No. 62P.) The sloped drain pan minimizes standing water in the drain. An external drain is provided.

Short-Cycling protection for the compressor is incorporated into our defrost control board ensuring a five minute delay (+/-2 minutes) before restarting compressor after shutdown for any reason.

OPTIONS AND ACCESSORIES

ITEM	DESCRIPTION	FACTORY INSTALLED OPTION	FIELD INSTALLED ACCESSORY
Coil Options	Base unit with tin plated indoor coil hairpins	X	
Compressor Start Kit	Compressor Start Kit assists compressor start–up by providing additional starting torque on sing phase units only.		X
Corporate Thermostats	Thermostats provide control for the system heating and cooling functions.		X
Crankcase Heater	Crankcase Heater provides anti–floodback protection for low–load cooling applications.		X*
Economizer	Vertical Economizer with Jade Honeywell W7220 Controller, Honeywell communicating actuator, and dry bulb sensor. (Contact MicroMetl Customer Service at 1–800–662–4822 to order.)		X
	Horizontal Economizer with Jade Honeywell W7220 Controller, Honeywell communicating actuator, and dry bulb sensor. (Contact MicroMetl Customer Service at 1–800–662–4822 to order.)		X
Electric Heaters	Electric Heat Supplement		X
Filter Rack	Filter Rack features easy installation, serviceability, and high–filtering performance for vertical applications. Includes 1–in. filter.	X	X
Flat Roof Curbs	Flat Roof Curbs in both 11–in (279 mm) and 14–in. (356 mm) sizes are available for roof mounted applications.		X
Low Ambient Kit	Low Ambient Kit (Motormaster II Control) allows the use of mechanical cooling down to outdoor temperatures as low as 0°F (–18° C) when properly installed.		X
Manual Outside Air Damper	Manual Outside Air Damper includes hood and filter rack with adjustable damper blade for up to 25% outdoor air.		X
Square–to–Round Duct Transition Kit	Square–to–Round Duct Transition Kit enable 24–48 size units to be fitted to 14 in (356 mm). round ductwork.		X
Time Guard II	Automatically prevents the compressor from restarting for at least 4 minutes and 45 seconds after shutdown of the compressor. Not required when a corporate programmable thermostat is applied or with a RTU–MP control.		X
Dual Point Electric Heaters	Allows you to power the electric heater and unit contactor separately by having two individual field power supply circuits connected respectively.		X

*Refer to Price Page for application detail.

	CPRFCURB013A00	14 (356)								

* Part Numbers CPRCURB010A00 and CPRCURB011A00 can be used on both small and large basepan units. The cross supports must be located based on whether the unit is a small basepan or a large basepan.

NOTES:

1. Roof curb must be set up for unit being installed.
2. Seal strip must be applied, as required, to unit being installed.
3. Roof curb is made of 16–gauge steel.
4. Attach ductwork to curb (flanges of duct rest on curb).
5. Insulated panels: 1–in. (25.4 mm) thick fiberglass 1 lb. density.

SELECTION PROCEDURE (WITH EXAMPLE)

1. Determine cooling and heating requirements at design conditions:

Given:

Required Cooling Capacity (TC) . . . . . 34,000 Btuh
Sensible Heat Capacity (SHC) . . . . . 24,000 Btuh
Required Heating Capacity . . . . . 12,500 Btuh
Condenser Entering Air Temperature . . . . . 95°F(35°C)
Indoor–Air Temperature . . . . . 80°F (26°C) edb
67°F (19°C) ewb
Evaporator Air Quantity . . . . . 1200 CFM
External Static Pressure . . . . . 0.20 IN. W.C.
Electrical Characteristics 230–1–60

2. Select unit based on required cooling capacity.

Enter Net Cooling Capacities table at condenser entering temperature of 95°F (35°C), indoor air entering at 1200 cfm and 67°F (19°C) ewb (entering wet bulb). The unit will provide a total capacity of 34,200 Btuh and a SHC of 24,500 Btuh.

3. Select electric heat.

The required heating capacity is 15,000 Btuh.

Determine additional electric heat capacity in kW.

$$\frac{15{,}000 \text{ Btuh}}{3{,}414 \text{ Btuh/kW}} = 4.4\text{kW of heat required}$$

Enter the electric Heater Packages table for 208/240, single–ph 50VR–A36 unit. The 5 kW heater at 240v most closely satisfies the heating required. To calculate kW at the 208v, multiply the heater kW by multiplication factor 0.75 found in the Wattage Multiplication Factors table.

5 kW x 0.75 = 3.75 kW

3.75 kW x 3414 = 12802.50 Btuh

4. Determine fan speed and power requirements at design conditions.

Before entering the air delivery tables, calculate the total static pressure required. From the given example, the Wet Coil Pressure Drop Table, and the Filter Pressure Drop Table:

External Static Pressure	0.200 IN. W.C.
Filter	0.000 IN. W.C.
Wet Coil Pressure Drop	0.130 IN. W.C.
Total Static Pressure	0.330 IN. W.C.

Enter the table for Wet Coil Air Delivery—horizontal discharge, 230. At 0.33 IN. W.C. ESP (external static pressure) and medium speed, the fan will deliver 1293 cfm. Adjusting for 208v, the motor delivers 114 cfm (deduct 10%).

5. Select unit that corresponds to power source available.

The Electrical Data Table shows that the unit is designed to operate at 208–1–60.

COVA Transportation Analysis Report

Prepared for:
City of Coachella
Relevant Partners

Submitted:
November 2025

Table of Contents

Executive Summary **1**
Project Description 1
CEQA Transportation Impact Analysis 1
Level of Service (LOS) Analysis 2

1. Introduction **3**
1.1 Project Description 3
1.2 CEQA Transportation Impact Analysis 2
1.2.1 Analysis Scenarios 2
1.3 Level of Service (LOS) Analysis 2
1.3.1 Study Area 2
1.3.2 Analysis Scenarios 3
1.4 Report Organization 5

2. Analysis Methodology **6**
2.1 Intersection Analysis 6
2.2 LOS Standards 7
2.3 Travel Demand Modeling 8
2.5 Transportation Impact Analysis Methodology 9

3. Existing Year (2025) Conditions **10**
3.1 Existing Roadway Facilities 10

Executive Summary

Fehr & Peers has completed a transportation analysis for the proposed COVA development (Project) in Coachella, California. This study presents the Level of Service (LOS) and Vehicle Miles Traveled (VMT) analysis consistent with the *County of Riverside's Transportation Analysis Guidelines for Level of Service & Vehicle Miles Traveled* (December 2020)[1]. This study is consistent with the requirements of Senate Bill 743 (SB 743), the California Governor's Office of Land Use and Climate Innovation's *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018).

Project Description

The Project is an 85-acre mixed-use development (proposed rezoning from regional commercial) in the City of Coachella bounded by Avenue 52 to the north, Van Buren Street to the east, Calhoun Street to the west, and generally Avenue 53 to the south. The Project will feature two primary components:

- **Private Sector**: Includes 165 single-family recreational home dwelling units and 244 condo-hotel recreational home units, both operating under fractional ownership, timeshare, second home, and short-term and long-term rental models. These accommodations will be complemented by significant on-site resort amenities (i.e. dining, entertainment, recreational).
- **Public Sector**: Includes a beach club, restaurant, and an event tent. These sub-areas are expected to operate with a typical weekday capacity of 500 persons and a weekend capacity of 1,500. The public sector components will generally be operational between 11:00 AM and 2:00 AM, with the highest level of activity occurring in the evening between 7:00 PM and 8:00 PM, and on weekends.

The Project's unique resort features—dwelling units, dining, amenities, outdoor/recreational spaces, and entertainment—create a self-contained destination. This will provide substantial local options for Coachella and regional appeal for the Coachella Valley, drawing visitors already in the area for vacations or events. COVA expects high internal trip capture, with most guests staying onsite for lodging, recreation, dining, and entertainment. A significant portion of public-facing restaurants, beach club, and event spaces will serve onsite guests.

CEQA Transportation Impact Analysis

CEQA Guidelines Section §15064.3 requires Vehicle Miles of Travel (VMT) analysis for land use projects. A full VMT assessment was performed since the Project did not qualify for any of the screening criteria outlined in the County Guidelines.

The Project was run in RIVCOM and the net regional change in total VMT within the City and County boundaries is forecast to decrease, resulting in a **less-than-significant transportation impact**. The Project commute VMT per employee was also reviewed and resulted in a decrease.

[1] County of Riverside TIA Guidelines (2020)

The CEQA Transportation Impact Study also evaluated the Project's consistency with established programs, plans, ordinances, and policies and potential for creating geometric design hazards or hindering emergency access.

Level of Service (LOS) Analysis

Fehr & Peers evaluated the Project's effects on the transportation system in the following Level of Service (LOS) Analysis (Analysis) consistent with procedures outlined by the County's Guidelines.

The LOS analysis prepared traffic forecasts for the following scenarios, and evaluated operations of study intersections:

- Existing (2025) Conditions, one intersection operates at D or worse
- Opening Year (2030) Plus Project, two intersections operate at D or worse
- Opening Year (2030) Plus Project Plus Cumulative, five intersections operate at D or worse

The Study identified improvements to bring the operationally deficient intersection to acceptable levels (LOS D or better), which will require a traffic signal, traffic signal timing updates, and converting a turn lane to a shared turn lane through. The Project's fair share contribution towards these improvements was also identified.

1. Introduction

Fehr & Peers completed a transportation assessment for the proposed COVA development (Project) in the City of Coachella, California [Pre-App (23-06)]. This report presents the methodology, analysis, and findings of the Transportation Impact Assessment (TIA) prepared for the Project. The analysis comprises of a California Environmental Quality Act (CEQA) Vehicle Miles Traveled (VMT) assessment and a local transportation Level of Service (LOS) assessment. The purpose of this assessment is to evaluate potential CEQA transportation impacts and assess changes to the local transportation system with the Project.

This chapter outlines the project description, geographic scope of the transportation impact analysis, and analysis scenarios. This assessment is consistent with the requirements outlined in *County of Riverside Transportation Analysis Guidelines for Level of Service & Vehicle Miles Traveled (2020).* The scoping agreement was approved by the City on May 5th, 2025 (see **Appendix A** – *Scoping Agreement for Transportation LOS Analysis*).

1.1 Project Description

The Project is an 85-acre mixed-use development in the City of Coachella bounded by Avenue 52 to the north, Van Buren Street to the east, Calhoun Street to the west, and generally Avenue 53, which is located to the south of the site. The Project proposes rezoning of the site from existing regional commercial (R-C) to Planned Unit Development.

The Project will feature two primary components – a private sector and public sector.

- **Private Sector**: Includes 165 single-family recreational home dwelling units comprised of estate lots, zero lot line lots, bungalow lots, and VIP suites; 244 condo-hotel recreational home units, which will operate like the single-family lots. These units will all operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models. These accommodations will be complemented by on-site resort amenities (i.e. recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant), which can be used by guests/owners of this sector.
- **Public Sector**: Includes a 10 TSF[2] beach club, 6 TSF restaurant, and a 7 TSF event tent. These sub-areas are anticipated to operate with an assumed typical weekday capacity of 500 persons [100 person beach club, 200 person restaurant, and 200 person event tent] and an assumed weekend capacity of 1,500 [1,000 person beach club, 200 person restaurant, and 300 person event tent]; other special events with higher capacity would be rare and may require additional traffic control. The public sector components will generally be operational between 11:00 AM and 2:00 AM, with the highest level of activity occurring in the evening between 7:00 PM and 8:00 PM, and on weekends.

The resort characteristics of the Project are unique, designed to function as an internal destination with resort home dwelling units, dining experiences, on-site resort amenities, outdoor and recreational spaces, and entertainment areas. This is projected to result in significant locally serving

[2] TSF: Thousand Square Feet

options for the City of Coachella and regionally for the Coachella Valley, attracting those already in the area vacationing or visiting for local events.

The Project would be affected by typical seasonality trends observed within the Coachella Valley, and further confirmed through market research conducted by the Developer (**Table 1.1**). Time of year use distribution will be concentrated between mid-February through May, with the lowest demand generally occurring mid-July through the end of September, and the first half of December.

COVA is positioned to achieve significant internal capture of trips between the onsite uses with the expectation that a majority of onsite guests will stay on the property once they arrive. Many of guest daily needs would be accommodated by the resort lodging, recreation, dining, and entertainment options without leaving the property. A significant share of the public facing restaurant, beach club and event space are anticipated to be used by onsite guests.

Access to and from the Project will be provided via five proposed driveways along Calhoun Street (2), Avenue 52 (2), and Van Burent Street (1). The Project includes three full access driveways on Calhoun Street (1), Avenue 52 (1), and Van Buren Street (1). In addition, Calhoun Street will have a right in, right out driveway and Avenue 52 will have a right out exit only driveway. Public sector access is available exclusively off Calhoun Street; private sector access can be made via Avenue 52 or Van Buren Street, as well as through the Calhoun Street driveway. **Figure 1.1** shows the proposed site plan.

1.2 CEQA Transportation Impact Analysis

According to current CEQA guidelines and the County's VMT Analysis Guidelines, a project's transportation impact is considered significant if the associated change to the transportation system with the project will:

A. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit roadway, bicycle, and pedestrian facilities.

B. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b).

C. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

D. Result in inadequate emergency access.

1.2.1 Analysis Scenarios

As part of the CEQA VMT assessment, Fehr & Peers analyzed the following scenarios described below:

- Project Level Assessment – Compares daily total Origin-Destination (OD) VMT generated by the Project per service population to the No Project (2045) City and County average total VMT per service population
    - Cumulative (2025) No Project Conditions (Threshold)
    - Cumulative (2045) Plus Project Conditions
- Cumulative Level Assessment – Analyzes the Project's effect on total VMT per service population at the City and County level; calculates the net regional change in VMT between the threshold and Plus Project Conditions.
    - Cumulative (2025) No Project Conditions (Threshold)
    - Cumulative (2045) Plus Project Conditions

1.3 Level of Service (LOS) Analysis

The LOS analysis identifies improvements at study intersections to maintain acceptable intersection operations. LOS is a qualitative description of traffic flow from a vehicle driver's perspective based on factors such as speed, travel time, delay, and freedom to maneuver. The Highway Capacity Manual 7th Edition (HCM) identifies six levels of service ranging from LOS A (free-flow conditions) to LOS F (over capacity conditions). The City of Coachella utilizes a "LOS D or better" minimum standard for intersection operations.

1.3.1 Study Area

The study area was selected based on trip generation and distribution estimates, and consists of intersections where more than 50 peak hour trips are likely to be added as a result of the Project.

Figure 1.2 shows the study area. Fehr & Peers evaluated operations at the following 14 study intersections:

1. West Driveway 1 and Calhoun Street
2. West Driveway 2 and Calhoun Street
3. Calhoun Street and Avenue 52
4. North Driveway 1 and Avenue 52
5. North Driveway 2 and Avenue 52
6. Van Buren Street and 52nd Avenue
7. East Driveway and Van Buren Street
8. Calhoun Street and Avenue 50
9. Van Buren Street and Avenue 50
10. Calhoun Street and Avenue 48
11. Van Buren Street and Avenue 48
12. Dillon Road and Avenue 48
13. SR-86 SB Ramps and Dillon Road
14. SR-86 NB Ramps and Dillon Road

1.3.2 Analysis Scenarios

Fehr & Peers studied the AM and PM peak hour LOS at the identified study intersections for the following scenarios:

- Existing (2025) Conditions: Existing (2025) traffic volumes, lane geometries, and traffic signal timing.
- Opening Year (2030) Plus Project Conditions: Background traffic volumes during the Project's opening year with traffic volumes generated by the Project. The opening year volumes were developed by applying an ambient growth rate of two percent to the Existing (2025) traffic volumes.
- Opening Year (2030) Plus Project Plus Cumulative Projects Conditions: Opening Year Plus Project traffic volumes plus traffic generated by cumulative projects within a five-mile radius of the Project.

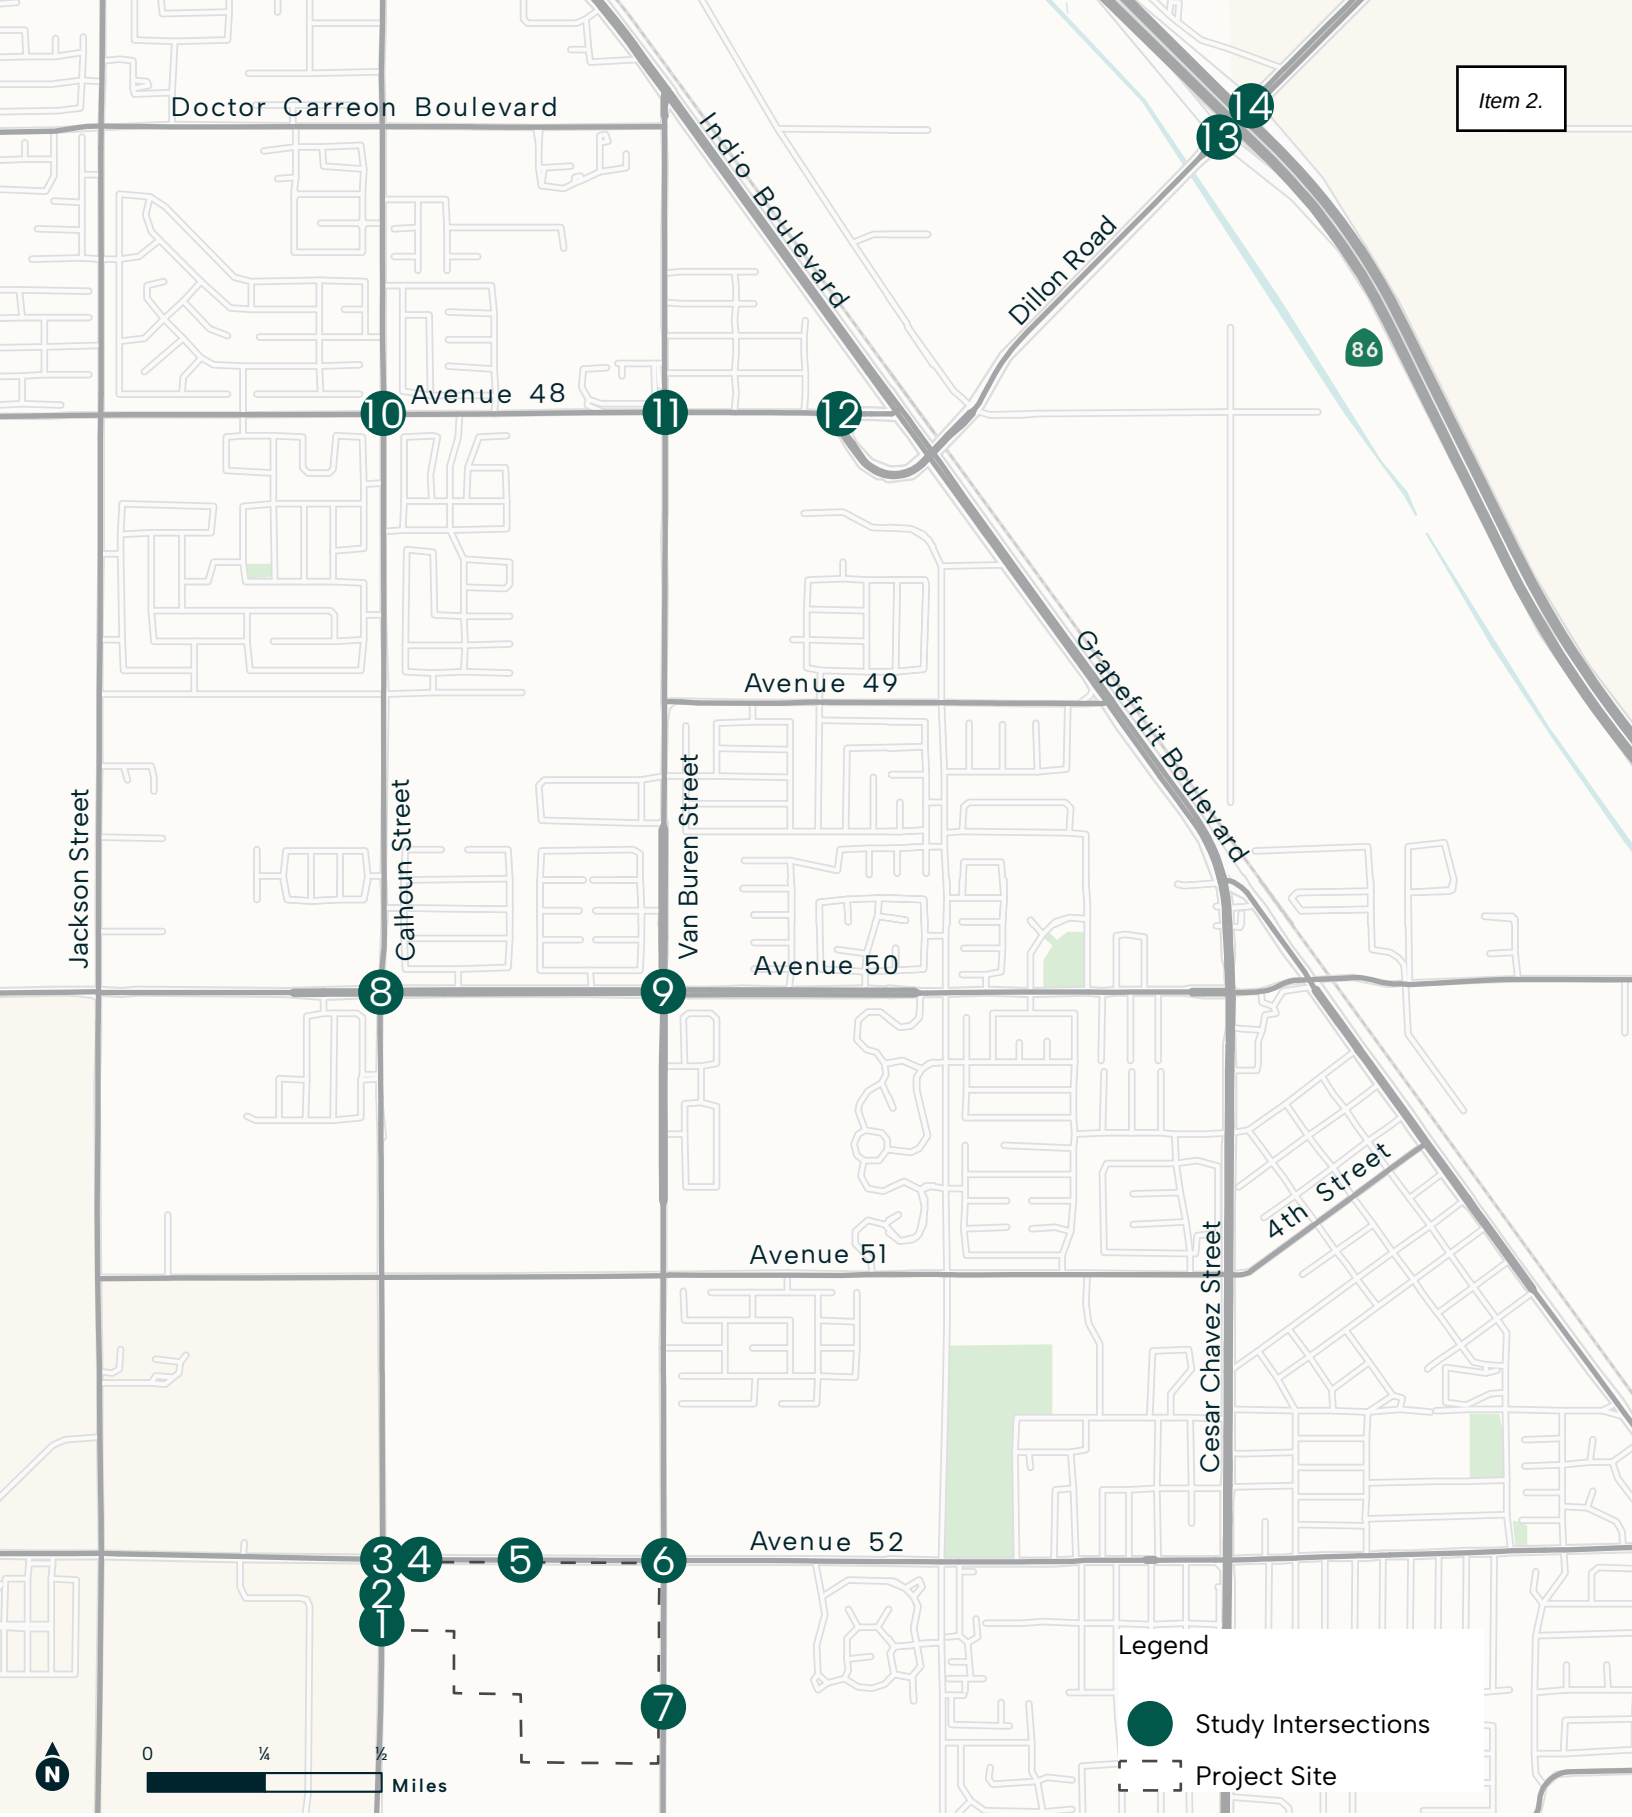

FIGURE 1.2

Study Area

1.4 Report Organization

The remainder of this report is organized into the following chapters:

- **Chapter 2 – Analysis Methodology** describes the methods and assumptions used to complete the local transportation study which are consistent with the County's guidelines.
- **Chapter 3 – Existing Year (2025) Conditions** describes the transportation system in the Project vicinity, including the surrounding roadway network, AM and PM peak period intersection turning movement volumes and intersection LOS, and existing bicycle, pedestrian, and transit facilities.
- **Chapter 4 – Project Characteristics** presents relevant Project information including Project trip generation, distribution, and assignment.
- **Chapter 5 – CEQA Transportation Study** evaluates the Project's potential impact on transportation according to CEQA. This includes a full VMT assessment and evaluation of the CEQA Appendix G checklist items.
- **Chapter 6 – Local Transportation Study** evaluates the Project's potential effects on the surrounding roadway network including intersection operations and intersection queueing. Improvements and the Project's fair share contribution towards improvements at deficient locations are identified.

2. Analysis Methodology

The analysis methodologies and assumptions used to evaluate the Project are described below and consistent with the scoping memorandum that was approved by the City of Coachella on May 5, 2025, included as **Appendix A**.

2.1 Intersection Analysis

Intersection operating conditions were evaluated using the Transportation Research Board (TRB) *Highway Capacity Manual* (HCM) *7th Edition* methodology, which is considered the state-of-the practice methodology for evaluating intersection operations.

The HCM 7th Edition methodology for signalized and all-way stop-controlled intersections estimates the average control delay for vehicles at intersections. For side-street stop-controlled intersections, The HCM 7th Edition methodology estimates the worst-case approach delay.

After the quantitative delay estimates are complete, the methodology assigns a qualitative letter grade that represents the operations of the intersection. These grades range from level of service (LOS) A (minimal delay) to LOS F (excessive congestion). LOS E represents at-capacity operations. Descriptions of the LOS letter grades for signalized and unsignalized intersections are provided in **Table 2.1**.

Fehr & Peers used the Synchro 12 software to facilitate the HCM calculations intersections. The following parameters are consistent with the County's Guidelines (*County of Riverside Transportation Analysis Guidelines for Level of Service & Vehicle Miles Traveled* (2020)) and HCM for use in the LOS analysis:

- Measured Peak Hour Factors (PHF) were utilized in the Existing (2025) and Opening Year (2030) scenarios.
- Signal timing information for study intersections 6, 8, 9, 10, 11, and 12 were provided by the City of Coachella. Signal timing information for study intersections 13 and 14 were provided by Caltrans. These signal timings were used for the Existing (2025) and Opening Year (2030) Plus Project scenarios.
- A standard heavy vehicle factor of 2% was used for all analysis scenarios.

Table 2.1 Intersection Level of Service (LOS) Grades

Level of Service	Description	Signalized Delay (Seconds)	Unsignalized Delay (Seconds)
A	Operations with very low delay occurring with favorable progression and/or short cycle length	≤ 10.0	≤ 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths	> 10.0 to 20.0	> 10.0 to 15.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear	> 20.0 to 35.0	> 15.0 to 25.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable	> 35.0 to 55.0	> 25.0 to 35.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences	> 55.0 to 80.0	> 35.0 to 50.0
F	Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths	> 80.0	> 50.0

Source: Highway Capacity Manual 7th Edition (Transportation Research Board, 2022).

2.2 LOS Standards

Based on the relevant guidelines, the following performance criteria were used to determine deficiencies at study intersections:

- **City of Coachella** – The City of Coachella utilizes a LOS od "D or better" as its minimum standard for intersection operations.
- **Caltrans** – Caltrans no longer defines acceptable LOS standards with their latest adoption of the Vehicle Miles Traveled-Focused Transportation Impact Study Guide (TISG), May 2020. This study assumes the LOS D minimum acceptable standard at the Caltrans study intersections, SR-86 and Dillion Road.

2.3 Travel Demand Modeling

VMT forecasts were prepared using the Riverside County Travel Demand Model (RIVCOM). The latest version of RIVCOM (version 4.0.1) was released in February 2024 and is considered the best tool available for VMT estimation in Riverside County. RIVCOM has a 2018 base year and 2045 cumulative year, with land uses and roadway networks consistent with the *2020 Southern California Association of Governments Regional Transportation Plan and Sustainable Communities Strategy* (2024 SCAG RTP/SCS).

The RIVCOM 2045 model was updated to include all pending and approved development projects within a five-mile radius of the Project site; a list of these projects was provided as part of the Scoping Agreement approval and is included in **Appendix B**. No roadway network changes were made to the model.

The Project was assigned to a mix of employment categories shown in **Table 2.2**. The Project's employment was updated to reflect both traditional on-site employees (hospitality, food service, maintenance, and operations staff) and the Project's unique customer base (as detailed in the Project Description). The customer population is represented through visitor-based trip generation inputs that reflect the recreational and hospitality nature of the Project, with average daily customer projections provided in **Table 2.3**. This approach ensures that the model inputs align with the expected travel behavior of the site, where guests often stay multiple days, utilize on site amenities, and generate trips distinct from a typical residential development.

Due to the seasonal nature of tourist activity in the Coachella region, along with the heavier weekend programming at the public facing elements of the Project, an average daily population was derived to represent in the typical weekday model. This represents a midpoint between minimum and maximum employment and guest population that is reflective of the annualized demand.

Table 2.2 Average Daily Employment Categories for the Project

Total Employment	Retail	Arts and Entertainment	Other Services
330	31%	66%	3%

Notes:
1. Retail includes convenience, clothing, and other retail trade.
2. Arts and Entertainment includes traveler accommodation, food services, and drinking places
3. Other services includes can include on-site professional management or concierge services

Table 2.3 Average Daily Customer Projections for the Project

Private On-site Guests	Public Guests
950	1,100

2.5 Transportation Impact Analysis Methodology

The County's Guidelines establish VMT impact thresholds for typical projects that do not screen from VMT assessment. These guidelines specify that a land use project will have a significant impact if:

- **Residential** land use VMT per capita exceeds the county-wide averages, or
- **Office** land uses employee VMT per employee exceeds county-wide averages, or
- **Retail** land uses there is a net change in total VMT.

Two other VMT thresholds of significance – "**Other Employment**" and "**Other Customer**" – are provided for all other service and goods providers that are not included in the basic office/retail categories. Given the unique resort characteristics of the Project, which most resemble the retail and/or other customer land use type, the VMT analysis used the net regional change metric (Boundary Method VMT), consistent with the County Guidelines for retail uses, rather than a household or employee only per capita comparison. This metric accounts for the regional impacts of visitor travel patterns, which are more appropriate for land use that will serve as a destination for visitors to the Coachella Valley. Given the significant onsite guest component, this Project is not like a typical retail/customer project and the threshold of significance should utilize a per service population (residents and employees) and/or per employee metric based on employees to best reflect the Project's operations.

Net change on VMT from the Project was measured within multiple regional areas to compare the traffic redistribution with the Project. The Boundary Method is utilized to measure the project's net change in total VMT. The Boundary Method is the sum of all weekday VMT on a roadway network within a designated boundary. Boundary Method VMT estimates VMT by multiplying the number of trips on each roadway segment by the length of that segment. This approach includes all trips, including those trips that do not begin or end in the designated boundary. This is the only VMT method that captures the effect of cut-through and/or displaced traffic. The two boundaries chosen to measure the net change in total VMT are the Coachella City Limits and the Riverside County Limits.

Consistent with the City approval/recommendation for retail and other customer-oriented land uses, the analysis also evaluated customer trips separately from employee trips. The County Guidelines recommend that the total Project VMT impact is therefore evaluated as the sum of the regional VMT delta for customers and the regional VMT delta for employees, calculated using the County's recommended formula:

$$\Delta = E \times (VMT_E - VMT_T)$$

Where:

- **Δ** = Change in VMT relative to threshold
- **E** = Number of employees
- **VMT_E** = Estimated VMT per employee for the project
- **VMT_T** = Threshold VMT per employee

This approach ensures the analysis aligns with the Project's actual operations and provides a fair, context-sensitive assessment of its transportation effects.

3. Existing Year (2025) Conditions

This chapter summarizes the Existing Year (2025) Conditions of the roadway, transit, bicycle, and pedestrian networks within the Project study area and documents existing traffic volumes and intersection operations.

3.1 Existing Roadway Facilities

3.1.1 Regional Roadways

Regional roadways in the Project vicinity include:

- **Interstate 10 Freeway (I-10)**: I-10 is an east/west interstate highway located north of the Project site. Near the Project study area, I-10 is generally a four- or six-lane facility. Access to I-10 near the Project study area is provided via Dillon Road.
- **State Route 86 (SR-86)**: SR-86 is an east/west state highway that extends from Coachella at the northernmost end to Borrego Springs at the southernmost end. SR-86 is located to the east of the Project site and is generally four lanes. Access to SR-86 near the Project study area is provided via Dillon Road.

3.1.2 Local Roadways

Local roadways in the Project vicinity include:

- **Van Buren Street**: Classified as a major north/south arterial in the City's General Plan, connecting Coachella to Indio and communities to the south. It provides access to residential, agricultural, and commercial uses and is provides access to the Project site to the east.
- **Calhoun Street**: A north/south collector as classified in the City's General Plan. It provides connectivity between neighborhoods, agricultural lands, and east–west avenues such as 50th Avenue and 52nd Avenue. Calhoun Street provides access to the Project's western side.
- **52nd Avenue**: Classified as an east/west as a Primary Arterial to the west of Van Buren Street and Major Arterial to the east in the City's General Plan. It serves local circulation and access to agricultural and residential areas. It connects to Van Buren Street and Calhoun Street and provides access to the northern side of the Project.

3.2 Bicycle Facilities

Bicycle facilities are typically classified as follows:

- **Class I – Bike Path or Bike Trail**: Class I facilities are bicycle trails or paths that are off-street and separated from automobiles. They are a minimum of eight feet in width for two-way travel and include bike lane signage and designated street crossings where needed. A Class I Bike Path may parallel a roadway (within the parkway) or may be a separate right-of-way that meanders through a neighborhood or along a flood control channel or utility right-of-way.

- **Class II – Bike Lane**: Class II Bike Lanes can be either located next to a curb or parking lane. If located next to a curb, a minimum width of five feet is recommended. However, a Bike Lane adjacent to a parking lane can be four feet in width. Bike Lanes are designated for the use of bicycles and include bike lane signage, special lane lines, and pavement markings.
- **Class III – Bike Routes**: This is a street for shared use by motor vehicles and bicyclists. While bicyclists have no exclusive use or priority, signage – both by the side of the street and stenciled on the roadway surface – alerts motorists to bicyclists sharing the roadway space and denotes that the street is an official bike route.
- **Class IV – Separated Bikeway**: Class IV bicycle facilities, sometimes called cycle tracks or separated bikeways, provide a right-of-way designated exclusively for bicycle travel adjacent to a roadway and are protected from vehicular traffic via separations (e.g. grade separation, flexible posts, inflexible physical barriers, on-street parking).

3.2.1 Existing Bicycle Facilities

Class II Buffered Bike Lanes are located on Van Buren Street in the Project vicinity. Avenue 50 and Avenue 48 have existing Class II Bike Lanes, and portions of Avenue 52 (east of Van Buren Street). Otherwise, all other roadways within the Project vicinity have either no bicycle facilities or have a narrow striped shoulder. There are no Class I, Class III, or Class IV facilities located in the Project vicinity.

3.2.2 Planned Bicycle Facilities

The City of Coachella updated their Active Transportation Plan in 2020, which proposes the following planned bicycle facilities near the study area:

- Class II Bike Lane along Dillon Road
- Class II Bike Lane on Calhoun Street between 50th Avenue and city limits

3.3 Pedestrian Facilities

The Project site is in an area with some developed pedestrian network to the north. All local roads in the Project that act as borders do not have sidewalks. Some study intersections provide marked crosswalks, along Avenue 50 and Avenue 48.

3.4 Transit Facilities

Bus Transit

Local transit service in the Project vicinity is provided with SunLine Transit system, which provides a fixed route and microtransit service. Routes 6, 8, and 11 provide stops near study intersection. The nearest bus stop is one mile from the Project site, which serves Route 8 and runs Monday to Friday (approximately 1 hour frequency).

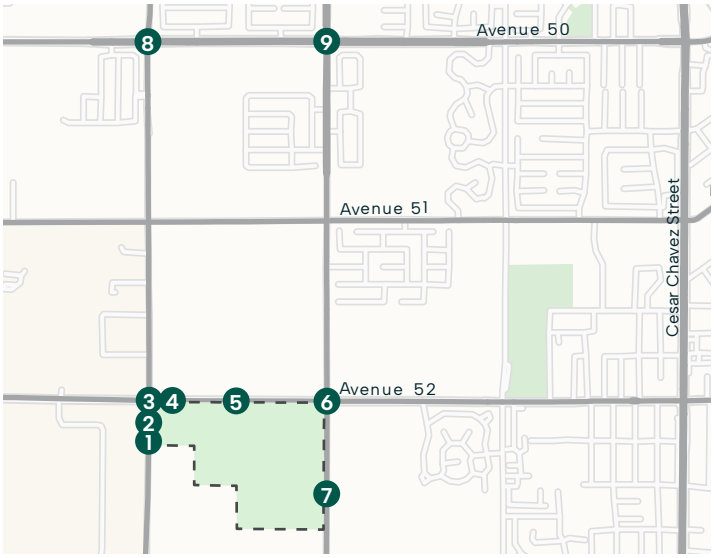
3.5 Existing Year (2025) Traffic Volumes

3.5.1 Data Collection

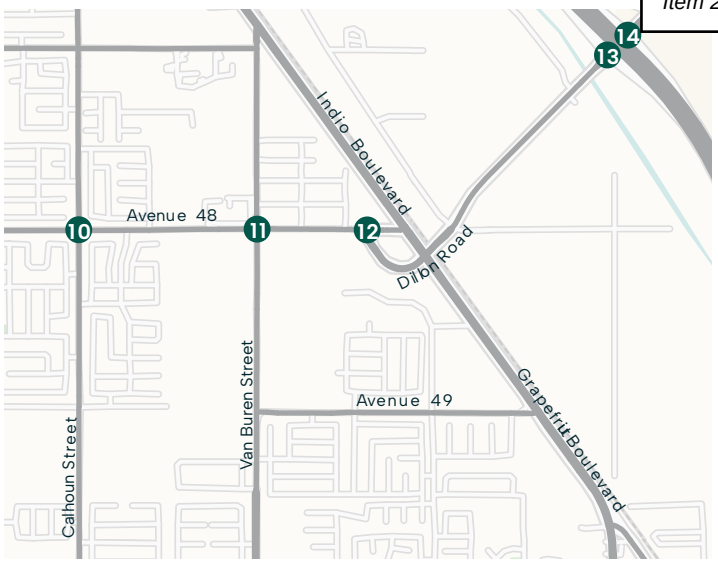
Traffic counts were collected in May 2025 during morning peak period (7:00 to 9:00 AM) and evening peak period (4:00 PM to 6:00 PM) at the study intersections. Counts were collected during fair weather, while school was in session, and during a typical (non-holiday) weekday.

A Big Data source, Streetlight, was reviewed to compare May travel patterns against Spring travel patterns in the City to verify that peak season travel was accurately accounted for. Streetlight data indicated that March 2025 traffic volumes were approximately 15% higher than those observed in May 2025. Streetlight traffic volumes data were collected within the immediate Census Block Groups to the project site – extending about 5 miles in all directions. A cumulative average of all block groups showed a 15% decline between March and May. Traffic counts were thus adjusted to scale collected May 2025 traffic counts to the peak seasonal volumes of March by a factor of 15%.

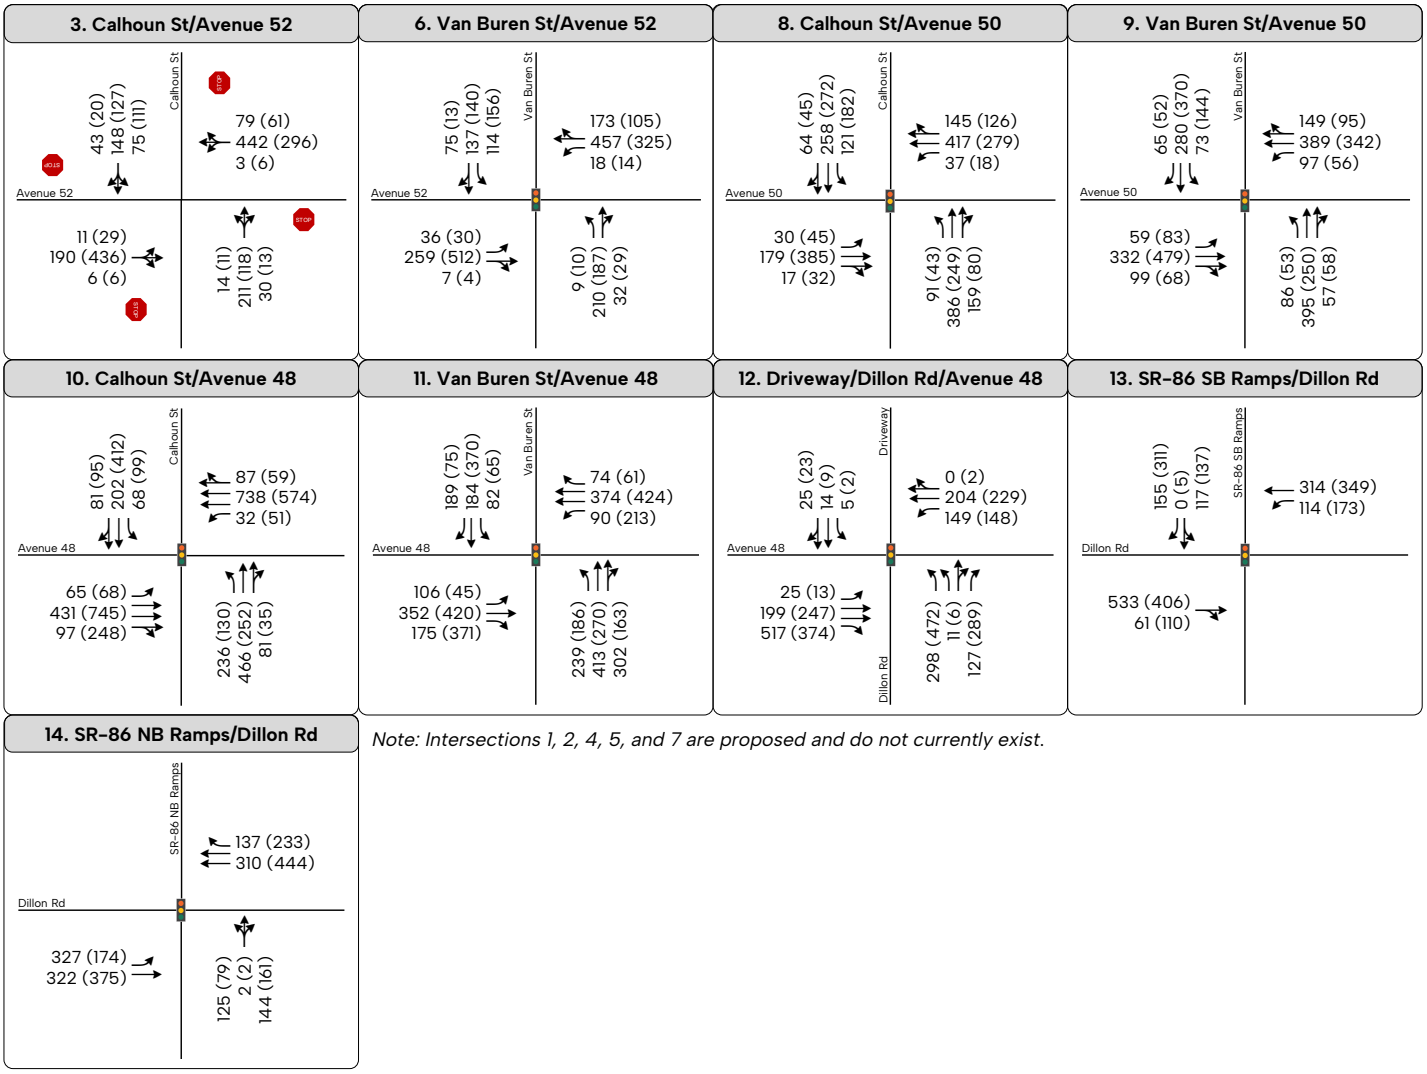
The existing conditions peak hour turning movement counts are provided in **Appendix C**. Existing (2025) peak hour traffic volumes with the 15% adjustment[3] are provided in **Figure 3.1** along with existing lane configurations and traffic control.



Fehr & Peers collected the following information during a field visit to the study area on May 5, 2025:



- Lane configurations
- Signal phasing
- Land uses in the study area
- Existing pedestrian and bicycle facilities
- On-street parking conditions
- Transit service



Fehr & Peers requested and reviewed the following information from the City of Coachella, surrounding jurisdictions, and Caltrans:

- Traffic signal timing information at all signalized intersections
- All pending and approved development projects within a five-mile radius of the Project (see **Appendix B**).

[3] Traffic counts were increased with approval (May 5, 2025 – 123-13.55 PC #1) and as outline in the Project Scoping Agreement, p. 6

Note: Intersections 1, 2, 4, 5, and 7 are proposed and do not currently exist.

FIGURE 3.1

Peak Hour Traffic Volumes and Lane Configurations – Existing (2025)

3.6 Existing Year (2025) Intersections Operations

Existing lane configurations, signal timing, and traffic volumes were used to evaluate operations at the study intersections under peak hour conditions. The LOS results are summarized in **Table 3.1** and detailed LOS worksheets are provided in **Appendix C**. All intersections operate at LOS D or better under Existing Year (2025) conditions except Calhoun Street and 52nd Avenue.

Table 3.1 Existing Year (2025) Intersection Levels of Service

4. Project Characteristics

This chapter provides an overview of the Project components and the Project's trip generation, distribution, and assignment characteristics for evaluation of the Project's effect on the surrounding roadway network. Traffic associated with the Project was estimated using a three-step process:

1. **Trip Generation** – The *amount* of vehicle traffic entering/exiting the project site was estimated.
2. **Trip Distribution** – The *direction* trips would use to approach and depart the site was projected.
3. **Trip Assignment** – Trips were then *assigned* to specific roadway segments and intersection turning movements.

4.1 Project Trip Generation

Trip generation refers to the process of estimating the amount of vehicle traffic that would enter and exit a project. Estimates for the proposed Project were calculated for the weekday peak (one-hour) periods during the morning (AM) and evening (PM) commute when traffic volumes on the adjacent streets are typically the highest. Fehr & Peers used the *Trip Generation Manual, 12th Edition* (Institute of Transportation Engineers [ITE], 2025) to obtain trip rates for calculating the number of trips that the Project would generate on a typical weekday operations; weekend rates are for information purposes. The unique characteristics of the Project were taken into account to accurately represent the private and public sector components' travel behavior.

4.1.1 Private Sector Land Use Codes

Trip generation estimates for the private sector components were sourced from the ITE 12th edition land use codes. The intended land use characteristics (ownership and use) were considered to apply the ITE land use code with the most representative overlap. The estate lots, zero lot line lots, bungalow lots, VIP suites and the condo hotel units will be a majority (>75%) fractional ownership second homes that will be used for short-term and long-term rental, ITE code 260 "Recreational Homes" was applied. The condo hotel units may be sold as individual, one-bedroom units or up to four-bedroom; and area expected to operate like recreational home ITE characterized units. Overall, these ITE code selections are further supported by the seasonality of the proposed site discussed in the Project Description.

4.1.2 Public Sector Land Use Codes

Trip generations for the public sector (beach club and restaurant) used the most comparable ITE land use code that represented the best matched time of day distribution for the planned components; calculations were based on seats to match the developer's weekday and weekend peak person capacity assumptions. The event tent was calculated using assumptions, which similarly derived from the peak capacity – detailed below.

- ITE code 445 "Movie Theatre" was applied to the beach club. The beach club will not open sooner than 11:00 AM, similar to a movie theatre, with a majority of the trips arriving in close duration to each other. Both the movie theatre and the beach club are entertainment uses open all day and night, where people come and stay for a few hours, and arrival and departure times are spread out throughout the day with multiple rounds of event/movie turn over.
- ITE Code 931 "Fine Dining Restaurant" was applied to the restaurant to match the time-of-day distribution, guest stay duration, and turnover assumption (lunch service and dinner service).
- The event tent will operate with a 200-person and 300-person peak capacity assumption for the weekday and weekend, respectively. ITE code 445 was applied for the daily, AM and PM trip rate to be conservatively high. AM trips are nominal and characteristics of employee / maintenance / delivery trips, since the event barn would not open sooner than 11:00 AM for guests. The PM trips were factored to match comparable event trip generation counts for a concert "event arrival peak – 7:00 PM to 8:00 PM" (77% in and 23% out) from data collected at the Acrisure Arena in Palm Desert in 2023[4] (included as **Appendix H**).

4.1.3 Internal Capture

The Project is positioned to achieve significant internal capture (33%) of trips between the onsite uses with the expectation that a majority of onsite guests will stay on the property once they arrive. Many of guest daily needs would be accommodated by the resort lodging, recreation, dining, and entertainment options without leaving the property. A significant share of the public facing restaurant, beach club and event space are anticipated to be used by onsite guests. The same amount of internal trips from the private area to the public area for the weekday scenario was applied to the weekend scenario.

4.1.4 Trip Generation Estimates

Table 4.1 identifies the trip generation rates for the Project and **Table 4.2** shows the associated daily and peak hour project trip generation.

Source: Trip Generation Manual 12th Edition (Institute of Transportation Engineers, 2025).

4.2 Project Trip Distribution

The Project trip distribution reflects the likely approach and departure routes to the Project site. Trip geographic distribution would be as follows: 60% north, 5% south, 10% east, and 25% west. Access to the Project site will be provided exclusively from Calhoun Street, Avenue 52, and Van Buren Street. Project trips would utilize Van Buren Street or Calhoun Street to access the Project, with most trips

travelling to/from I-10 via Dillon Road. There are five total Project driveways: two along Calhoun Street (one full access and one right in right out only), one full access driveway along Avenue 52, and one full access driveway along Van Burent Street. Calhoun Street would represent 40%, Avenue 52 30% and Van Burent Street 30% of entry/exit trip percentages for the Project. The Project trip distribution (**Figure 4.1**) was approved by the City on 5/52025.

4.3 Project Trip Assignment

Project trip assignment refers to the specific route and roadway segments vehicles would take to access and leave the Project. Using the trip distribution percentages, Project trips were assigned to the roadway network as presented in **Figure 4.2**.

5. CEQA Transportation Study

Based on the definitions and determining factors outlined in the CEQA Appendix G Environmental Checklist Form, the Project would have a significant impact on the environment if the Project would:

A. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit roadway, bicycle, and pedestrian facilities.

B. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b).

C. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

D. Result in inadequate emergency access.

5.1 Program, Plan, Ordinance, and Policy Review

The *City of Coachella General Plan* (2015) includes policies related to circulation; an impact is considered significant if the project conflicts with an adopted policy within the Mobility Element (ME) of the General Plan. Policies applicable to the Project include:

- **ME-1.5** Require that the City consider improvements to add roadway capacity only after considering improvements to other modes of travel.
    - The improvements identified in Chapter 6 do not include roadway widenings that would increase capacity. Instead, signal timing adjustments are recommended to improve traffic flow and intersection operations.
- **ME-2.3** Periodically review and update designated truck routes to ensure efficiency and limit negative impacts on residential areas and other sensitive land uses.
    - The Project is not expected to generate heavy vehicle trips to or from the site.
- **ME-3.4** Require that all development or redevelopment projects provide pedestrian connections to the external pedestrian network.
    - The Project includes construction of new sidewalks along the project frontage on Calhoun Street, Avenue 53, and 52nd Avenue, improving pedestrian connectivity.
- **ME-4.1** Require that the City provide additional bicycle facilities along all roadways in the City which are built or reconstructed in the City except in those instances in which there is insufficient right-of-way or other physical limitations.
    - The Project proposes construction of bicycle facilities along the project frontage on Calhoun Street, Avenue 53, and 52nd Avenue.
- **ME-5.4** Encourage new large residential or commercial developments to locate on existing and planned transit routes.

  - The Project site is currently not served or planned to be served by any public transit services. The City will continue to monitor development patterns and transit demand and will adjust service as needed to support travel options.

- **ME-6.1** Require that new development pay for its fair share of construction costs for new and/or upgraded transportation infrastructure needed to accommodate this development.
  - Chapter 6 outlines required intersection improvements and the Project's fair share contribution. The Project will also widen its adjacent roadway frontage consistent with the City's General Plan buildout.
- **ME-8.3** Prioritize connections between the City's bicycle and pedestrian network to regional facilities such as the CV Link and other regional trail facilities.
  - The Project includes construction of bicycle facilities that enhance connectivity and contribute to the City's overall regional bicycle and pedestrian network.

Based on the above assessment, the Project's impact on existing programs, plans, ordinances, and policies is **less-than-significant.**

5.2 Vehicle Miles Traveled Assessment

CEQA Guidelines Section §15064.3 requires Vehicle Miles of Travel (VMT) analysis for land use projects. The analysis is consistent with the *County of Riverside's Transportation Analysis Guidelines for Level of Service & Vehicle Miles Traveled* (December 2020)[5].

5.2.1 Screening Criteria

The County's Guidelines identify screening criteria which land use projects can apply when evaluating transportation impacts. VMT impacts for a project will be presumed less than significant if any one of the screening criteria outlined in **Table 5.1** are met. The proposed Project does not satisfy any of the screening criteria. Therefore, a full VMT modeling and forecasting assessment was completed to determine if the Project would result in a significant transportation impact related to VMT.

[5] County of Riverside TIA Guidelines (2020)

Table 5.1 VMT Screening Criteria Assessment

Screening Criterion	Description	Satisfied by Project
Transit Priority Area (TPA) screening	Presumed less than significant VMT impact for projects located in TPAs (1/2 mile of a rapid transit station or high-frequency bus route).	No
Low VMT area screening	Presumed less than significant VMT impact for projects located in low VMT generated model traffic analysis zones (TAZs). These TAZs generate total daily VMT/SP that is less than the City baseline level.	No
Project type screening	Local serving retail projects (per OPR's Technical Advisory less than 50,000 square feet), local essential services (i.e. day care, Police, Medical), small projects (i.e. DU <110 units, general office less than 165 TSF, parks), and affordable housing projects are presumed to have a less than significant VMT impact.	No

Source: County of Riverside – CEQA Assessment and VMT Analysis, 2020.

5.2.2 Traffic Modeling Socio-Economic Data

Due to the seasonal nature of tourist activity in the Coachella region, along with the heavier weekend programming at the public facing elements of the Project, an average daily service population (SP) was derived to represent in the typical weekday model. This represents a midpoint between minimum and maximum employment and guest population that is reflective of the annualized demand.

Table 5.2 represents the Project SP, which was derived by annualizing weekday and weekend daily averages derived from the approved Project trip generation and regionally sensitive inputs. Inputs included an average annual demand rate (65.2%) for the Coachella region (based on Project market research validated with Streetlight data), total public and private area employee facility square footage and respective ratios for square foot per employee to calculate the total operating employee counts, private area total hotel condo room count and respective employee per room ratios to total the operating employee count for the sub-area, and a public area turnover rate for guests.

Model trip generation was reviewed to verify that the retail, arts and entertainment and other services employment categories would accurately represent the project. The model generates trips by approximately 50% more than the Project's trip generation forecast, generally underestimating the internal capture anticipated by the project. No adjustments were applied to the model forecasts in order to provide a conservative assessment.

Table 5.2 Project Service Population

Program Area	Visitor Type	Annualized Average	
		Population	Employment
Private	Resident Guests	950	-
	Employees	-	210
Public	Employees	-	120
	Guests	1,100	-
	Project Total	**2,050**	**330**

Source: Fehr & Peers, 2025.

5.2.3 VMT Analysis

Analysis Scenarios

VMT estimates were prepared under the Cumulative (2045) No Project Conditions and under the Cumulative (2045) Plus Project Conditions. The No Project Condition model runs were used to determine the project-generated threshold of significance and the county-wide boundary VMT without the Project and the city-wide boundary VMT without the Project. The Plus Project Conditions model runs were used to determine VMT associated with the Project.

VMT Results

Project VMT findings compared to the county-wide thresholds are presented in **Table 5.3**. Under the Cumulative (2045) Plus Project scenarios, the Project VMT per service population (SP), the Project Boundary VMT, the Boundary VMT per SP, and the total net regional change would be below the County average.

Table 5.3 County-wide and Project VMT Estimates

Scenario	Project	County-wide Cumulative No Project (Threshold)	Delta	Threshold Exceeded
OD VMT per Employee	22.64	28.41	(5.78)	No
Boundary VMT	80,751,251	80,760,223	(8,972)	No
Boundary VMT / SP	17.78	17.79	(0.01)	No
Total Net Regional VMT Change[1]			(1,906)	No

Source: RIVCOM, 2025.

Project VMT findings compared to the city-wide thresholds are presented in **Table 5.4**. Under the Cumulative (2045) Plus Project scenarios, the Project VMT per service population (SP), the Project

Boundary VMT, the Boundary VMT per SP, and the total net regional change would be below the City average.

Table 5.4 City-wide and Project VMT Estimates

Scenario	Project	City-wide Cumulative No Project (Threshold)	Delta	Threshold Exceeded
OD VMT per Employee	22.64	29.12	(6.48)	No
Boundary VMT	1,753,964	1,754,359	(395)	No
Boundary VMT / SP	11.07	11.10	(0.03)	No
Total Net Regional VMT Change[1]			(2,139)	No

Source: RIVCOM, 2025.

Since the Project-level VMT estimates for the Project would be below the established significance thresholds (county-wide cumulative no project and city-wide cumulative no project), the Project would result in **less-than-significant** transportation impact related to VMT.

5.3 Geometric Design Features

Vehicular access to the private sector of the site will be provided by an entry/exit driveway on Avenue 52 and the driveway on Van Buren Street. On-site vehicle circulation is provided by a network of internal roadways. The public sector of the project has access points that are aligned perpendicular to Calhoun Street and Avenue 52. There are no obstructions that would limit sight distance from the Project access point. The roadways internal to the Project site would be constructed per City standards.

The Project does not propose any substandard design features, therefore the Project's impact to geometric design hazards would be **less-than-significant**.

5.4 Emergency Access

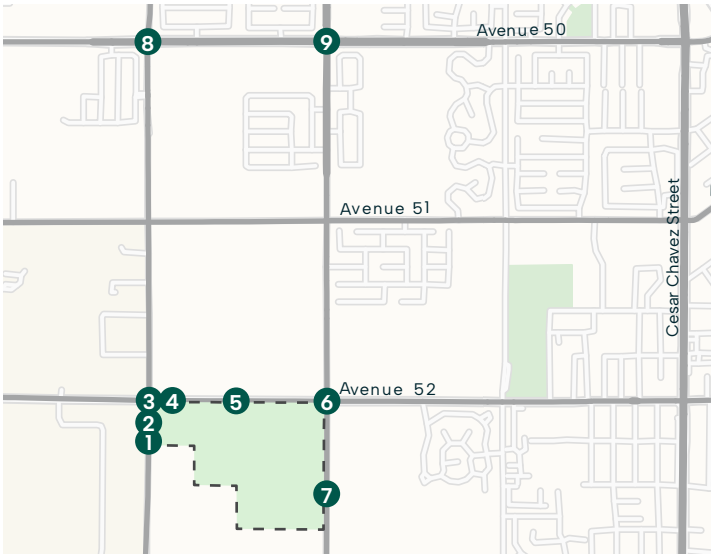
Factors such as the number of access points, roadway width, and proximity to fire stations determine whether a project provides enough emergency access. The fire station most likely to serve the site is Riverside County Fire Department – Coachella fire Station 79, located at 1377 6th Street approximately 1.5 miles from the project site. Emergency vehicles could utilize any of the three Project access points at Avenue 52 or Van Buren Street or the emergency access point from the west side of the project site via Calhoun Street. If one entrance is blocked, emergency personnel could access the site from the other entrance point. Internal roadways are designed to accommodate emergency vehicles.

The Project will make roadway improvements that will reduce intersection delay during peak hours even with increased traffic volumes and is not expected to increase emergency response times for adjacent neighborhoods.

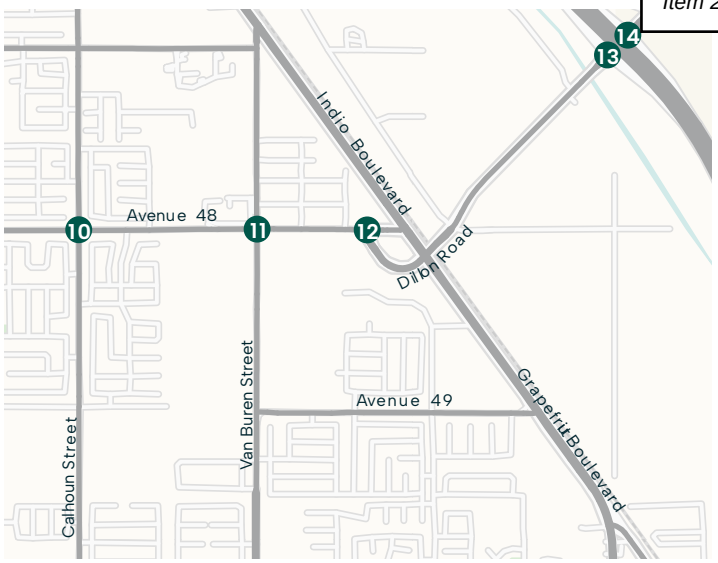
The Project's impact on emergency access would be **less-than-significant**.

6. Local Transportation Study

This section presents the transportation operations analysis consistent with the County's Guidelines. The operational analysis is intended to assess the potential effect of the Project on the surrounding roadway network. For the study, maintaining LOS D or better as a standard for intersection operations.



6.1 Opening Year (2030) Conditions



This section presents intersection operations under Opening Year (2030) Plus Project and Plus Project and Cumulative Project conditions. Improvements are identified for deficient intersections.

6.1.1 Traffic Volume Development

Consistent with the County's Guidelines, an annual ambient growth rate was applied to existing traffic counts to forecast 2030 traffic volumes. An annual ambient growth rate of 2% was agreed upon in the scoping form (**Appendix A**). Pending and approved development (cumulative) projects within a five-mile radius of the Project site that could influence travel in the study area were collected and assessed. Fehr & Peers coordinated with the City of Coachella to obtain a list of development projects for use in the TIA. The list is documented in **Appendix B**. All relevant projects provided were assumed to be in operation by 2030. *Trip Generation, 12th Edition* rates were applied to each project that was anticipated to affect peak hour intersection operations. The trip generation estimates for these projects are provided in **Appendix B**. The trips were assigned to the study area based on professional judgement and knowledge of the land uses and their typical peak hour travel patterns.

Project trips from **Figure 4.2** were added to Opening Year forecast to develop Opening Year (2030) Plus Project. Intersection turning movement forecasts for Opening Year (2030) Plus Project are presented in **Figure 6.1**. Cumulative project trips were then added to develop Opening Year (2030) Plus Project and Cumulative Projects intersection turning movement forecasts, as presented in **Figure 6.2**.

6.1.2 Opening Year (2030) Intersection Operations

Opening Year (2030) intersection operations were evaluated using the HCM methodology detailed in Section 2.1. Opening year lane configurations and intersection control types changed as documented in **Appendix D** and as summarized below:

- The Project will implement an additional lane in the direction adjacent to the Project on the north and west side
- The Project will implement two lanes in the direction adjacent to the project on the east side of the project
- Additional lanes were added based off Southern California Association of Governments' (SCAG) Regional Transportation Plan (RTP).

Traffic signal timings, peak hour factors and heavy vehicle percentages were left unchanged from existing conditions.

Intersection operations under Opening Year (2030) Plus Project and Plus Project and Cumulative Projects conditions are presented in **Table 6.1**. Intersection LOS calculation worksheets are provided in **Appendix E**.

Under the Plus Project scenario, the following intersections are forecasted to operate deficiently (below LOS D):

- Intersection 3: Calhoun Street and Avenue 52
- Intersection 6: Van Buren Street and Avenue 52

Under the Plus Projects and Cumulative Projects scenario the following intersections are forecasted to operate deficiently (below LOS D):

- Intersection 3: Calhoun Street and Avenue 52
- Intersection 6: Van Buren Street and Avenue 52
- Intersection 11: Van Buren Street and Avenue 48
- Intersection 12: Dillon Road and Avenue 48
- Intersection 13: SR-86 SB Ramps and Dillon Road PM Peak Hour

All other study intersections would operate at acceptable service levels of LOS D or better.

Table 6.1. Opening Year (2030) Intersection Levels of Service

3. Deficient intersection operations are noted in bold text (below LOS D).
4. Delay estimates are above 250 seconds are out of the bounds of the Syncro software

Source: Fehr & Peers, 2025.

6.1.2.1 Freeway Off-Ramp Queueing Assessment

Storage capacity for all SR-86 northbound and southbound off-ramps in the study area were evaluated using HCM 7th Edition methodologies. Existing storage capacities were compared against 95th percentile queue estimates prepared using the Synchro 12 software.

The following two intersections were included in the off-ramp queuing analysis for the Opening (2030) scenarios:

- 13. SR-86 SB Ramps and Dillion Road
- 14. SR-86 NB Ramps and Dillion Road

No movements are forecasted to exceed existing storage capacity under Opening Year (2030) Plus Project and Cumulative Projects. The queuing analysis summary in **Table 6.2** presents results for one scenario Opening Year with Project and Cumulative Projects only. This scenario has higher traffic volumes than Opening Year with Project which queues are not reported since lower traffic volumes typically result in shorter queues. Detailed queuing worksheets are provided in **Appendix F**.

Table 6.2 SR-86 Off-Ramp 95th Percentile Queues

Intersection		Movement	Storage Length (ft)	Peak Hour	Opening Year (2030) Plus Project and Cumulative Projects
13	SR-86 SB Ramps and Dillion Road	SBT	1,325	AM	325
				PM	450
		SBR	1,325	AM	100
				PM	375
14	SR-86 NB Ramps and Dillion Road	NBLTR	1,475	AM	325
				PM	425

Notes:
1. Queue results are reported in feet per lane and rounded up to the nearest 25-feet interval.

Source: Fehr & Peers, 2025.

6.1.3 Opening Year (2030) Improvements

Feasible measures were identified to improve intersection operations at deficient intersections to an acceptable LOS (LOS D or better).

- **Calhoun Street and Avenue 52 (Intersection 3) –** This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. A traffic signal is warranted and recommended at Calhoun and Avenue 52 to improve operations. Signal warrant analyses for project driveways (Intersections 1 and 2, 4 and 5, and 7) indicate that signals are not warranted. Detailed signal warrant analysis are provided in **Appendix G**.

- **Van Buren Street and Avenue 52 (Intersection 6) –** This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing splits and increasing cycle lengths would improve to acceptable conditions. Communication with Coachella Valley Sync is not needed because intersection 6 is uncoordinated.
- **Van Buren Street and Avenue 48 (Intersection 11) –** This intersection is expected to operate at LOS E during PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, convert southbound right lane to a shared southbound right through.
- **Dillon Road and Avenue 48 (Intersection 12) –** This intersection is expected to operate at LOS E and F during AM and PM peak hour under Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing the traffic signal timing would improve to acceptable conditions.
- **SR-86 and Southbound Ramps and Dillion Road (Intersection 13)** – This intersection is expected to operate at LOS E during PM peak hour in Opening Year (2030) Plus Project and Cumulative Projects. To improve intersection operations, optimizing the traffic signal timing would improve to acceptable conditions.

Table 6.3 compares intersection operations without and with improvements under improvements.

Table 6.3 Opening Year (2030) with Improvements Levels of Service

Intersection	Peak Hour	Opening Year (2030) Plus Project		Opening Year (2030) Plus Project and Cumulative Projects		Opening Year (2030) Plus Project w/ Improvement		Opening Year (2030) Plus Project and Cumulative w/ Improvement		Fair Share %

Project Improvement Fair Share

The calculated Project fair share contribution towards these improvements is based on the formula outlined in the County's Guidelines:

$$\text{Project Fair Share (P)} = [T(p) \div (T(t) - T(e))]*100$$

Independent variables and associated values for this calculation are shown in **Table 6.4**, formula is assumed to be traffic volumes at individual intersections. Total traffic volumes are from Opening Year plus Project and Existing Traffic are from collected counts.

Table 6.4 Opening Year (2030) Project Fair Share Calculations

Variable	Description	Intersection 3 Values	Intersection 6 Values	Intersection 11 Values	Intersection 12 Values	Intersection 13 Values
T(p)	Project Traffic	95	151	140	127	127
T(t)	Total Traffic[1]	1,745	2,178	3,723	3,240	3,298
T(e)	Existing Traffic	1,234	1,525	2,663	1,814	1,491

Note: Traffic values are the sum of all turning movements.
1. Total Traffic Volumes are forecast volumes for the Opening Year Plus Project Plus Cumulative Projects (2030) Peak PM scenario.

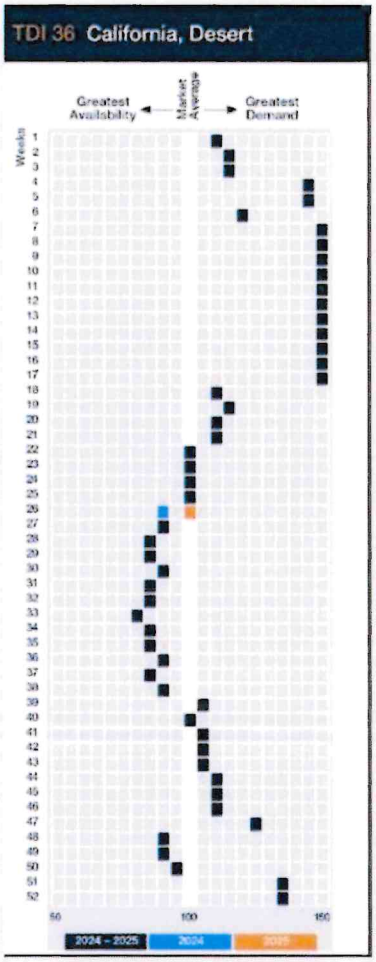
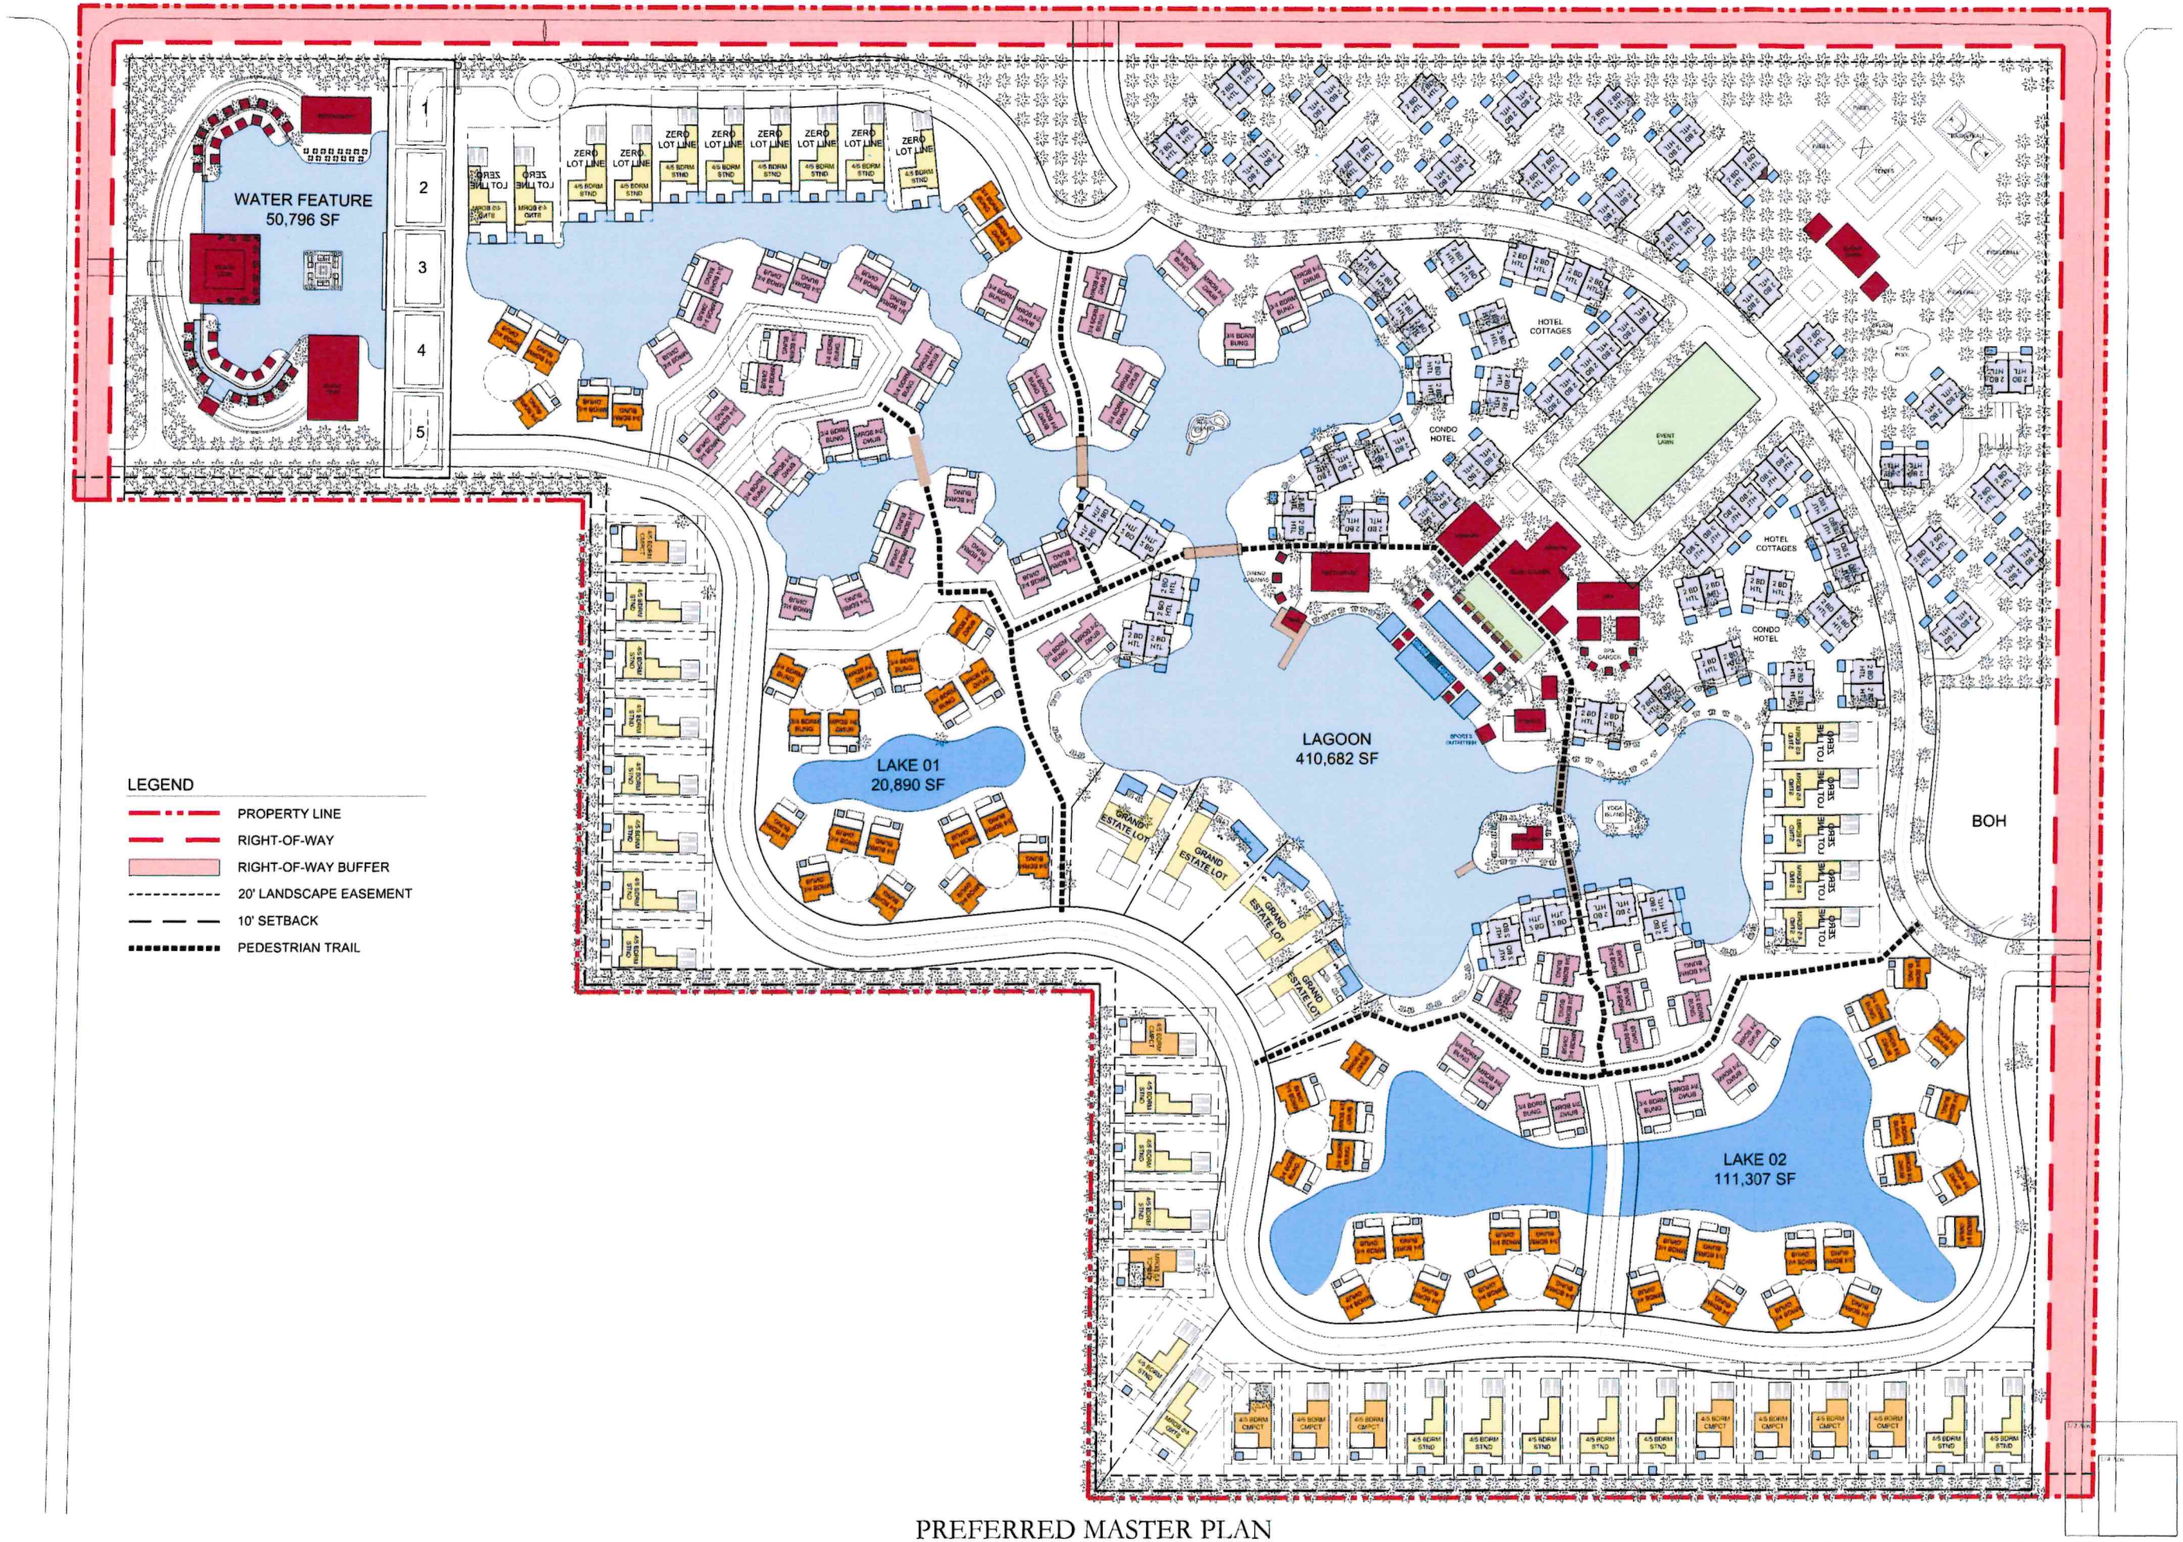
Project Description

The project site is located within the City of Coachella, bound by Avenue 52 in the north, Van Buren Street in the east, Avenue 53 in the south, and Calhoun Street in the west. The site is directly accessible via all but Avenue 53, which is located in the Unincorporated area of the County of Riverside.

There are two distinct sectors of the 85-acre site plan – a private sector and a public sector. Circulation access can be made to the public sector off Calhoun Street; private sector access can be made via Avenue 52 and Van Buren Street, as well as through the Calhoun Street public sector access point.



The **private sector** includes single family residential units comprised of estate lots, zero lot line lots, bungalow lots, and VIP suites, as well as condo hotel units (which will operate like the single family lots), and resort amenities that can be used by guests/owners of this sector. The estate lots, zero lot line lots, bungalow lots, VIP suites, and condo hotels will operate with a majority of fractional ownership and a minority of full ownership. These residential components and the condo hotel units will be used as second homes, timeshare, short term rental, and long-term rental properties, all of which are affected by the seasonality of the desert community. Time of year use distribution will be concentrated between mid-February through May, with the lowest demand generally occurring mid-July through the end of September, and the first half of December (***Figure 1*** below).



The **public sector** is comprised of three primary components, which affect trip generation – a beach club, an event tent, and a restaurant. These components would operate with an assumed typical weekday capacity of 500 persons [100 persons – beach club, 200 persons – restaurant, and 200 persons – event tent] and an assumed weekend capacity of 1,500 [1,000 persons – beach club, 200 persons – restaurant, and 300 persons – event tent]; other special events with higher capacity would be rare and would require additional traffic control. The public sector components will generally be operational between 11:00 AM and 2:00 AM, with expected event arrival peaks to be between 7:00 PM and 8:00 PM.

The resort characteristics of the proposed site plan results in most guest/owners arriving on site and staying on site for an extended duration, where they will have access to on-site amenities, including the public sector area. It is anticipated that a large portion of guests at the public facilities would be on-site guests, resulting in approximately 33% internal capture between the public and private uses (weekday). For example, the event barn (public sector) could host corporate events, where guests would stay on-site in the private sector. The same weekday trip internal capture totals were applied to the weekend trip generation to ensure an appropriate internalization discount relative to the total private area units. Thus, the same amount of internal trips from the private area to the public area for the weekday scenario was applied to the weekend scenario.

Study Intersection Count Collection

For study intersections where trip distributions justify the intersection to be studied, traffic counts will be collected in May of 2025. Based on the seasonality of the desert community that the project site is within, counts would ideally be collected by the end of March. Should counts be collected in May, a comparison of historical ADT data from March 2024 and May 2024 (Big Data sources as noted below) will be used as a factor to scale collected May traffic counts to the appropriate peak levels (March).

Preliminary data were collected within the immediate Census Block Groups to the project site – extending about 5 miles in all directions (***Figure 2***). An average March Block Group to May Block Group comparison showed a 13% decline in volumes between the study months. A cumulative average of all block groups showed a 15% decline between March and May. Traffic counts can be appropriately factored to scale May counts to the normalized peak volumes of March by roughly ~15%.

Figure 2 – Big Data (Streetlight) Block Group Study Area

March Total	May Total
239,959	204,867
	15%

March showed cumulative proximal area volume that is 15% higher

March 2024 compared to May 2024 showed an average block group difference of 13%

THE RANCH AT COACHELLA

Attachment 04

Trip Generation Methodology

Trip generation estimates for the **private sector** components were sourced from the ITE 11th edition land use codes[1]. The intended land use characteristics (ownership and use) were considered to apply the ITE land use code with the most representative overlap. The estate lots, zero lot line lots, bungalow lots, VIP suites and the condo hotel units will be a majority (>75%) fractional ownership second homes that will be used for short-term and long-term rental, ITE code 260 "Recreational Homes" was applied. The condo hotel units may be sold as individual, one-bedroom units or up to four-bedroom; and area expected to operate like recreational home ITE characterized units. Overall, these ITE code selections are further supported by the seasonality of the proposed site, as described in **Attachment 01 – *Figure 1***.

Trip generations for the **public sector** (beach club and restaurant) used the most comparable ITE land use code that represented the best matched time of day distribution for the planned components; calculations were based on seats to match the developer's weekday and weekend peak person capacity assumptions. The event tent was calculated using assumptions, which similarly derived from the peak capacity – detailed below.

ITE code 445 "Movie Theatre" was applied to the beach club. The beach club will not open sooner than 11:00 AM, similar to a movie theatre, with a majority of the trips arriving in close duration to each other. Both the movie theatre and the beach club are entertainment uses open all day and night, where people come and stay for a few hours, and arrival and departure times are spread out throughout the day with multiple rounds of event/movie turn over.

ITE Code 931 "Fine Dining Restaurant" was applied to the restaurant to match the time-of-day distribution, guest stay duration, and turnover assumption (lunch service and dinner service).

The event tent will operate with a 200-person and 300-person peak capacity assumption for the weekday and weekend, respectively. ITE code 445 was applied for the daily, AM and PM trip rate to be conservatively high. AM trips are nominal and characteristics of employee / maintenance / delivery trips, since the event barn would not open sooner than 11:00 AM for guests. The PM trips were factored to match comparable event trip generation counts for a concert "event arrival peak – 7:00 PM to 8:00 PM" (77% in and 23% out)[2].

As detailed in **Attachment 01**, it is anticipated that a portion of the guests in the public facilities will stay on-site and an internal capture reduction was applied to the public uses. The same amount of internal trips from the private area to the public area for the weekday scenario was applied to the weekend scenario.

ITE Land Use code cover page description used in trip generation calculations are attached below.

trip gen

Include as reference w/ TIA Submittal

Land Use: 931
Fine Dining Restaurant

Description

A fine dining restaurant is a full-service eating establishment with a typical duration of stay of at least 1 hour. A fine dining restaurant generally does not serve breakfast; some do not serve lunch; all serve dinner. This type of restaurant often requests and sometimes requires a reservation and is generally not part of a chain. A patron commonly waits to be seated, is served by wait staff, orders from a menu and pays after the meal. Some of the study sites have lounge or bar facilities (serving alcoholic beverages), but meal service is the primary draw to the restaurant. Fast casual restaurant (Land Use 930) and high-turnover (sit-down) restaurant (Land Use 932) are related uses.

Additional Data

If the fine dining restaurant has outdoor seating, its area is not included in the overall gross floor area. For a restaurant that has significant outdoor seating, the number of seats may be more reliable than GFA as an independent variable on which to establish a trip generation rate.

The sites were surveyed in the 1980s, the 1990s, and the 2010s in Alberta (CAN), California, Colorado, Florida, Indiana, Kentucky, New Jersey, and Utah.

Source Numbers

126, 260, 291, 301, 338, 339, 368, 437, 440, 976, 1053

Land Use: 260
Recreational Homes

Description

A recreational home is either (1) a second home used by its owner periodically for recreation or (2) rented on a seasonal basis. Some sites in the database are located within a resort that contains local services and complete recreational facilities. Timeshare (Land Use 265) is a related land use.

Additional Data

A large number of internal trips are made for recreational purposes in resort communities containing recreational homes.

The sites were surveyed in the 1980s, the 2000s, and the 2010s in California, New York, and Oregon.

Source Numbers

187, 901, 968, 1046

Land Use: 445
Movie Theater

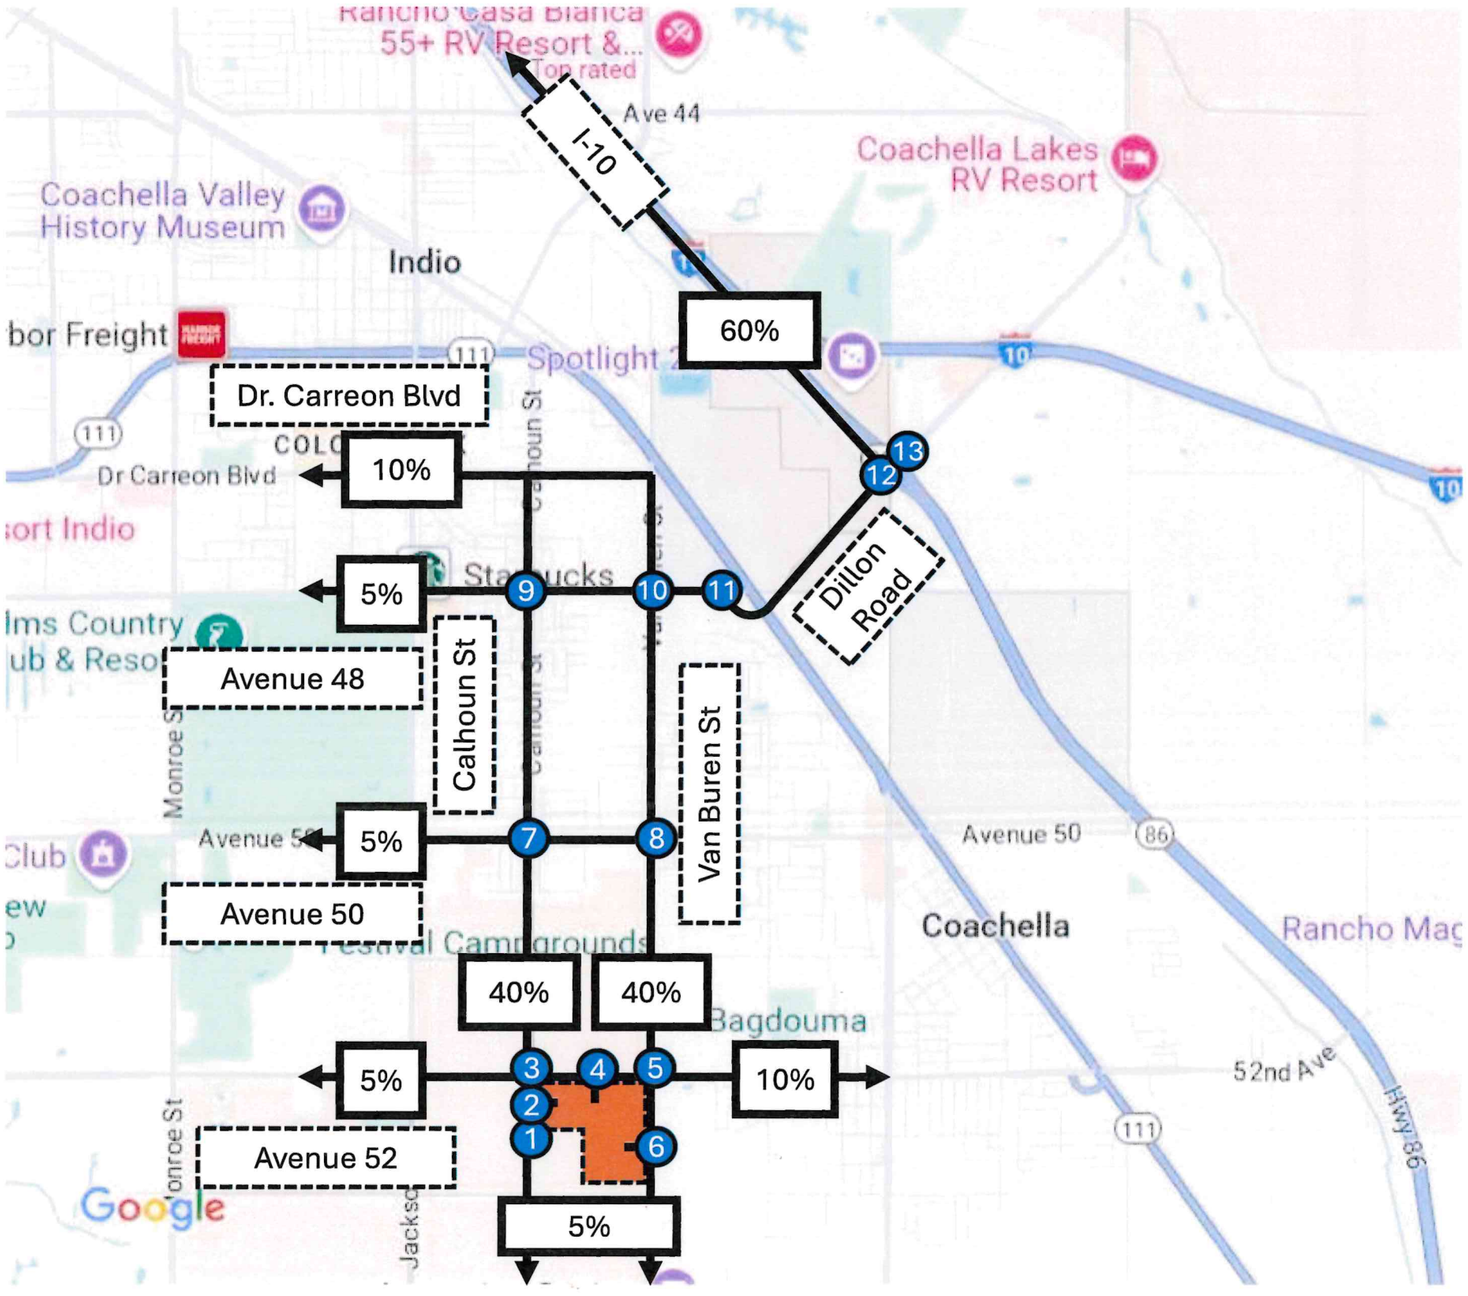
Description

A movie theater is a place where movies are screened for public entertainment. A theater includes a lobby, refreshment area, and audience seating for each movie screen. Amenities such as reclining seats, tiered stadium seating, and assigned seating are sometimes offered. A theater can be stand-alone or part of a larger retail complex.

Additional Data

Caution should be used when applying these data, as the peaking characteristics for this land use can have a significant impact on trip generation rates. Peaking at movie theaters typically occur in time periods shorter than an hour. The start and end times for a movie theater may be staggered to reduce peak surging impacts.

For 25 sites with data for both number of movie screens and number of seats, the average number of seats per movie screen was 236 (with values ranging between 150 and 336). The database includes two exceptions, both theaters with three movie screens and with an average of 740 seats per movie screen.



The peak hour of the generator for movie theaters occurred on Friday and Saturday evenings between 6:00 p.m. and 10:00 p.m.

The sites were surveyed in the 1980s, 1990s, the 2000s, and the 2010s in California, Connecticut, Georgia, Hawaii, Maryland, New York, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Texas, Virginia, and Wisconsin.

Source Numbers

213, 215, 241, 283, 387, 397, 418, 433, 440, 443, 450, 451, 452, 453, 455, 456, 457, 458, 459, 513, 544, 618, 959

Figure 4: Project Trip Distribution

2. West Driveway 2 and Calhoun Street
3. Calhoun Street and Avenue 52
4. North Driveway and Avenue 52
5. Van Buren Street and Avenue 52
6. East Driveway and Van Buren Street
7. Calhoun Street and Avenue 50
8. Van Buren Street and Avenue 50
9. Calhoun Street and Avenue 48
10. Van Buren Street and Avenue 48
11. Dillon Road and Avenue 48
12. SR-86 SB Ramps and Dillon Road
13. SR-86 NB Ramps and Dillon Road

(#) = Study Intersection [%] = Trip Distribution

= Project Site [ ] = Street Name

The Project site features four entry/exit driveways. The West Driveways will provide public access to the Beach Club. Given this knowledge, 40% of trips are anticipated to use the West Driveways and the remaining 60% would evenly use the North and East Driveways.

Appendix B: Pending and Approved Development Projects

Project ID	Name of Project	CASE ID	Type	Jurisdiction	Address	Description	Approved?	Status / Opening Year	Additional Comments	Include In Analysis?
1	**Bellissima by Pulte**	Architectural Review No. 21-15	Single-family residential	Coachella	East of Frederick Street between Avenue 53 and 54; Tentative Tract Map 31978	111 single-family residences ranging in size from 1,342 sq. ft. to 2,467 sq. ft. and included 1 and 2 story residences	Admin Approval on 4/5/22	Under Construction		Yes
2	**Mariposa Pointe – D.R. Horton**	Architectural Review No. 21-09	Single-family residential	Coachella	SEC of Calhoun Street and 50th Avenue; Tract 32074	1 and 2-story single family residences with attached garages on the 155 vacant lots within Tract 32074 with Spanish, Tuscan and Italianate architectural design. Plan 1 - 1,898 sq. ft. (4 bed, 3 bath and 2-bay garage) Plan 2 – 2,239 sq. ft. (4 bed, 3 bath and 2-bay garage) 2-story Plan 3 - 2,435 sq. ft. (4 bedr, 3.5 bath and 2-bay garage) 2-story	Admin Approval 1/5/22	Under Construction		Yes
3	**Pyramid Ranch**		Single-family residential	Coachella	West of Van Buren Street, South of Avenue 50, North of Avenue 51 (APN #'s 779-280-002 and 779-320-001)	204 Single-Family residential lots; 39 Acres	City Council Approved 10/30/23	Under Construction	Pyramid Ranch	Coachella, California Homes	Pulte	Yes
4	**Tripoli Mixed-Use Project**	Change of Zone (CZ) 22-01 Conditional Use Permit (CUP) 351 Architectural Review (AR) 22-04	Mixed-Use (multi-family & retail)	Coachella	Northeast Corner of Cesar Chavez Street and Bagdad Avenue	108 Apartment units and 2 retail units with Building A 3-stories and Building B 4-stories; 2.83 acres	Planning Commission approved 4/20/22, City Council Approved 5/11/22	Under Construction		Yes
5	**Villa Verde Apartments**	AR No. 19-06, CZ 19-01	Multi-family residential	Coachella	84-824 Calle Verde	152-unit Apartment Community with one to three bedroom dwellings (27 freestanding buildings) at 84-824 Calle Verde. The developments consist of 1, 2 and 3-bedroom apartment units, including: Property management and resident service office, Community room, Laundry facilities, Common open spaces spread over five patio areas; 9.4 acres	Approved Administrative Review 2/20/20	Will begin construction by: 12/2025 Completion slated for: Fall 2027		Yes
6	**Vista Del Agua**	TTM 38145 (related cases - SP 14-01, GPA 14-01, CZ 14-01, EA14-04, TPM 36872) SCH No. 2015031003	Single-family residential w/ commercial, neighborhood center & park	Coachella	East of Tyler Street, north of Avenue 48, and west of Polk Street, on the south side of the I-10 Freeway and Vista Del Sur. APN 603-150-005, -007, -009, -010 & -011	TTM38145 is to subdivide 42.92 acres into 204 single family lots TTM 38146 is to divide 46.92 acres into 254 single-family lots (APN: 603-150-009, 010 & -011) The "Vista Del Agua" project is a proposed master-planned community to be developed on 275.38 acres of vacant land located east of Tyler Street, north of Avenue 48, and west of Polk Street, on the south side of the I-10 Freeway and Vista Del Sur. The project will include a variety of residential neighborhoods with up to 1,640 total dwelling units, plus 17.57 acres of General Commercial use, 8.27 acres of Neighborhood Center with Residential Overlay, and a 13.82 park site. The proposed roadway network includes a new public street to connect Vista Del Sur to Avenue 48, and Polk Street to Avenue 47.	Planning Commission approved 5/13/20	Under review		Yes
7	**Coachella Gateway**	CUP 254 (Modification), AR 24-02 Coachella Gateway	Commercial Project (multi-tenant) w/ drive-thru restaurant	Coachella	48151 Grapefruit Blvd. Southwest corner of Grapefruit Boulevard and Avenue 48	A 4,605 SF multi-tenant commercial building that will include a drive-thru restaurant and two other tenants; 4.85 acres	Planning Commission Approved 7/7/24	Under review		Yes
8	**Coachella Vineyards/Hotel Ozara**	AR No. 16-03 (Modification), CUP 266, TTM 37040, EA 16-01	Commercial Project (RV Subdivision/Resort)	Coachella	Northeast Corner of Vista Del Norte and Tyler Street	The project is for a RV Subdivision/Resort that includes 188 lots for Recreational Vehicles, 100 unit two bedroom townhomes, and an 11-story 200-room hotel and associated facilities. The project includes an 8-story parking structure and a retail plaza that includes 4 retail buildings; 48 acres	Original Approval – 9/26/2018 Modification Planning Commission Approved – 2/29/24	Under Construction- Phase 1 Operational as of 9/2024	ITEM-Attachment-001-3f3afa5d9def4eacab00e679c3450e75.pdf	Yes
9	**Fountainhead Plaza**	CUP 346, 347, AR 21-12 (related to CUP 321, 322, AR 20-03 and TPM 37940)	Commercial Project (Retail Center/ Shopping Center)	Coachella	Northeast corner of 1st Street and Cesar Chavez Street	New 20,422 sq. ft. Aldi supermarket, 2,600 sq. ft. Panda Express and 2,050 sq. ft. Starbucks on 8.25 acres at the NEC of 1st Street and Cesar Chavez Street	City Council Approved 1/26/2022	Under Construction		Yes
10	**HOTN/Sinsemilla Dispensary & Pub Project**	CUP 299, CUP 300, CZ 18-03	Commercial Project (Cannabis)	Coachella	1694 6th Street	1,839 sq. ft. retail cannabis dispensary and 1,432 sq. ft. bar/pub; .11 ares	Planning Commission Approved 3/20/19 CC Approved 5/8/19	Under Construction		Yes
11	**JJWR Industrial Development**	TPM 38218, AR 21-07, CUP 354	Commercial Project (Industrial warehouses and offices w/ RV storage)	Coachella	53-457 and 53-459 Enterprise Way	Construction of two 25,750 sq. ft. industrial building to create up to 32 warehouse condos and 8 office condos of which some will accommodate RV storage; 3.29 acres	PC Approved 5/18/22, CC Approved 6/8/22	Under review		Yes
12	**Roots Café**	CUP No. 374, AR No. 23-16	Commercial Project (Cannabis)	Coachella	45800 Dillon Road	Construction of a 1,750 sq. ft. retail cannabis business within an existing building located in the R-C (Regional Commercial) zone; 1.27 acres	Planning Commission Approved 7/3/2024	Under review		Yes
13	**Sun Community Credit Union**	AR 24-07, CUP 381	Commercial Project (Bank)	Coachella	NEC of Cesar Chavez St and Valley Rd	4,130 sq. ft. commercial bank; 1.97 acres	Planning Commission Approved 7/3/24	Under Construction Completion slated for: Early 2026		Yes
14	**Pueblo Cannabis**	CUP 336, CZ 20-08	Commercial Project (Cannabis)	Coachella	85-591 Grapefruit Blvd	A 1500 sq. ft. retail cannabis dispensary in an existing building on .30 acres of land in the CG-RC zone	Planning Commission Approved 5/26/21, City Council Approved 6/9/21 – CZ Time Extension for CUP Approved by PC 6/15/22	Under Construction Completion slated for: Spring 2026		Yes
15	**West Coast Self Storage**		Commercial	Indio	NEC OF DR CARREON BLVD AND CALHOUN ST, INDIO, CA 92201; A. P. N. 612-130-008	The proposed project is for the construction of a self-storage facility within an approximate 62,000 squarefoot building along with 72 parking stalls.	Approved	Under review		Yes
16	**Riverside County Office of Education**	SCH No. 2024010419	Commercial (Zone M)	Indio	South of Dr. Carreon Blvd., east of Calhoun St., and north of Quail Ave	The proposed project, Riverside County Office of Education Facilities Expansion, is proposing the development of a 33,000-square-foot Riverside County of Education Facilities Expansion Project for a new conference center, offices, warehouse storage, and parking lot.	Approved	Under Construction		Yes
17	**JFM Villas**	SCH No. 2025051381	Residential (High)	Indio	SWC of Dr. Carreon Blvd. and Van Buren Street	Tentative Parcel Map No. 38805 to subdivide 34.43-acres into two new parcels measuring 2.58 acres and 5.52 acres and a 25.87-acre remainder. The purpose of the map is to support the development of an additional 150 residential units, including 100 multi-family units and 50 senior housing units, within the density limits established in the Specific Plan.	Approved	Expected to begin construction by Spring 2025	Proposed zoning change to Fred Young SP	Yes
18	**Sierra Blanca**		Single-family residential	La Quinta	South of Avenue 54 and north of Mountain View Lane, between Monroe St and Ardennas Dr.	34 single family home units	Approved	Under Construction	Sierra Blanca Development	Yes

19	**Bravo Estates**	Site development permit 2024-0001? Resolution No. 2025-002	Single-family residential	La Quinta	Northwest corner of Madison Street and Avenue 52; APN: 777-470-001 through -014	A proposal to develop 14 one-story single-family homes. The site is 8.4 acres and zoned Very Low Density Residential, which allows up to 2 units per acre. The project includes a development agreement to allow for year-round short-term vacation rentals. Access to the project is off Madison Street.	Approved 1/21/25	Under review		Yes
20	**East of Monroe Residential**	TR36902, TR36902E01	Single-family residential	Riverside County	South of Avenue 55, east of Monroe St.	SCHEDULE A SUBDIVISION TO DIVIDE 40 GROSS ACRES INTO 80 SINGLE FAMILY RESIDENTIAL LOTS WITH LOT SIZES RANGING FROM APPROXIMATELY 10,000 SQ. FT. TO 39,700 SQ. FT. INCLUDING PRIVATE STREETS ALONG WITH OPEN SPACE RETENTION BASIN AND PERIMETER BUFFERS. 1ST EOT FOR TR36902 EXTENDING THE EXPIRATION DATE 3 YEARS TO 6/9/2026.	Approved 5/23/2023	Under review		Yes
21	**Quick-Crete Products Facility**	PPT250012	Commercial	Riverside County	South of Avenue 54, west of Shady Ln.	PLOT PLAN FOR A QUICK-CRETE PRODUCTS FACILITY (RELOCATING FROM A FACILITY IN NORCO, CALIFORNIA) FOR THE CREATION OF CONCRETE BENCHES, CONTAINERS, AND TABLES WITHIN A 100,000 SQ. FT. BUILDING. WITH 3 BUILDINGS (TOTALING 2,800 SQ. FT. FOR SECURITY/CARETAKER, CUSTOMER EXPERIENCE & ADMINISTRATION), A CONCRETE BATCH PLANT, A 55,000 SQ. FT. PRODUCT & SCULPTURE GARDEN, A 75,000 SQ. FT. OUTDOOR STORAGE AREA FOR FINISHED PRODUCT, A 70,000 SQ. FT. AREA FOR MOLD STORAGE, A 190,000 SQ. FT. AREA FOR WATER DETENTION/FUTURE EXPANSION, AND 135 PARKING SPACES. (CVE: 24001)	Approved 2/21/2025	Under review		Yes
22	**Townhomes**	PPT240006	Multi-Family Residential	Riverside County	South of Avenue 54, east of Jackson st.	THE PROPOSED PROJECT INCLUDES DEVELOPMENT OF 158 NEW TOWNHOUSE (MULTI-FAMILY) UNITS ON APPROXIMATELY 18.22 DEVELOPABLE ACRES.	Approved 5/15/2024	Under review		Yes

AimTD LLC

TURNING MOVEMENT COUNTS

Appendix D: Roadway and Access Assumptions

COVA Roadway and Intersection / Driveway Access Assumptions

Roadway Assumptions

The below roadway assumptions are based on the SCAG RTP/SCS and associated Financially Constrained Projects[1] approved in 2024. The most current roadway buildout designations (SCAG RTP/SCS 2024) are listed as the assumption for the Project analysis. This ensures the Project is consistent with the City's current roadway project funding schedule, which is consistent with SCAG's financially constrained project roadway funding schedule.

Roadways that are immediately adjacent to the Project include Avenue 52, Van Buren Street, and Calhoun Street. It is assumed that half of the roadway's full right-of-way (ROW) that is adjacent to the Project will be built out to the ultimate ROW width by the Project (listed below as "Immediately Adjacent Project Roadways"). The widening of the other half of the road is assumed to not occur in the Project analysis. *Note: Opening Year Plus Project and Cumulative Projects roadway assumptions remain the same as Opening Year Plus Project.*

Immediately Adjacent Project Roadways

- Van Buren Street (52nd Avenue to South City Limit)
    - Existing two-lane undivided with buffered bike lane
    - RTP planned road widening from 2 to 4 lanes (3A01CV087, 2030); project feature will be assumed in assessments
    - Opening Year with Project (2030) – half width widening built as project feature.
        - Three travel lanes on west side (SB), raised median lane, bike lane, and sidewalk
        - One travel lane on east side (NB)
- Calhoun Street (Avenue 52 to Southmost City line)
    - Existing two-lane undivided w/out bike lane
    - No RTP coverage on this segment
    - Opening Year with Project (2030) – half width widening built as a project feature
        - Two travel lanes on east side (NB), center median lane, bike lane, and sidewalk
        - One travel lane on west side (SB)
- Avenue 52 (Calhoun Street to Van Buren Street)
    - Existing two-lane undivided w/out bike lane
    - RTP planned road widening from 2 to 6 lanes (3A01CV014, 2035); RTP buildout (2035) is beyond Opening Year 2030, **thus project feature will only be assumed in assessments**
    - Opening Year with Project (2030) – half width widening built to as a project feature:
        - Two travel lanes on the south side (EB), raised center median, bike lane, and sidewalk
        - One travel lane on north side (WB)

[1] SCAG RTP/SCS 2024 Fiscally Constrained Projects, City of Coachella, P. 275, Table 2.

Peripheral Project Study Roadways

- Van Burent Street (Avenue 52 to North City Limit)
  - Existing two-lane undivided with a bike lane on the east side
  - **RTP planned road widening from 2 to 6 lanes (3A07036 and 3A07037, 2030); RTP buildout assumed in assessments**
  - Opening Year with Project – built to RTP full ROW, not developer obligated
- Avenue 52 (Van Buren Street to Fredrick Street)
  - Existing one and two lanes in each direction undivided with bike lanes
  - RTP planned road widening from 2 to 6 lanes (3A01CV014, 2035); RTP buildout year (2035) is beyond Opening Year (2030), **thus no changes will be assumed in assessments**
- Avenue 52 (Fredrick Street to Harrison Street)
  - Existing four-lanes undivided with bike lanes
  - RTP planned road widening from 4 to 6 lanes (3A01CV015A, 2035); RTP buildout year (2035) is beyond Opening Year (2030), **thus no changes will be assumed in assessments**
- Avenue 52 (Harrison Street to Hwy 111)
  - Existing one lane in each direction with bike sharrows; and two lanes in each direction divided
  - RTP planned road widening from 2 to 6 lanes (3A01CV015B, 2035); RTP buildout year (2035) is beyond Opening Year (2030), **thus no changes will be assumed in assessments**
- Dillon Road
  - Existing two-lane undivided w/out bike lane
  - **RTP planned road widening from 2 to 6 lanes from Cabezon Road to SR-86 interchange (3160028, 2027); RTP buildout assumed in assessments for segment mentions.**
  - Opening Year with Project – built to RTP full ROW, not developer obligated
- Avenue 50
  - Existing four-lane divided with bike lanes
  - **RTP planned road widening from Van Buren St to Harrison St to 6 lanes (3A01CV005, 2024); RTP buildout will not be assumed in assessments for segment mentions because not enough right of away. Recent re-pavement maintained 4 lanes with bike lanes.**
  - Opening Year with Project – will assume existing conditions
- Avenue 48
  - Existing four- to six-lane undivided with bike lanes
  - Planned Major Arterial (4 lanes, divided) with enhanced bike facilities
  - **RTP Planned road widening from 2 to 5 lanes from Van Buren St to W of Highway 111 (3A07108, 2024); RTP buildout assumed in assessments for segment mention**
  - Opening Year with Project – will assumed 2 lanes westbound and 3 lanes eastbound, not developer obligated

Intersection and Driveway Access Assumptions

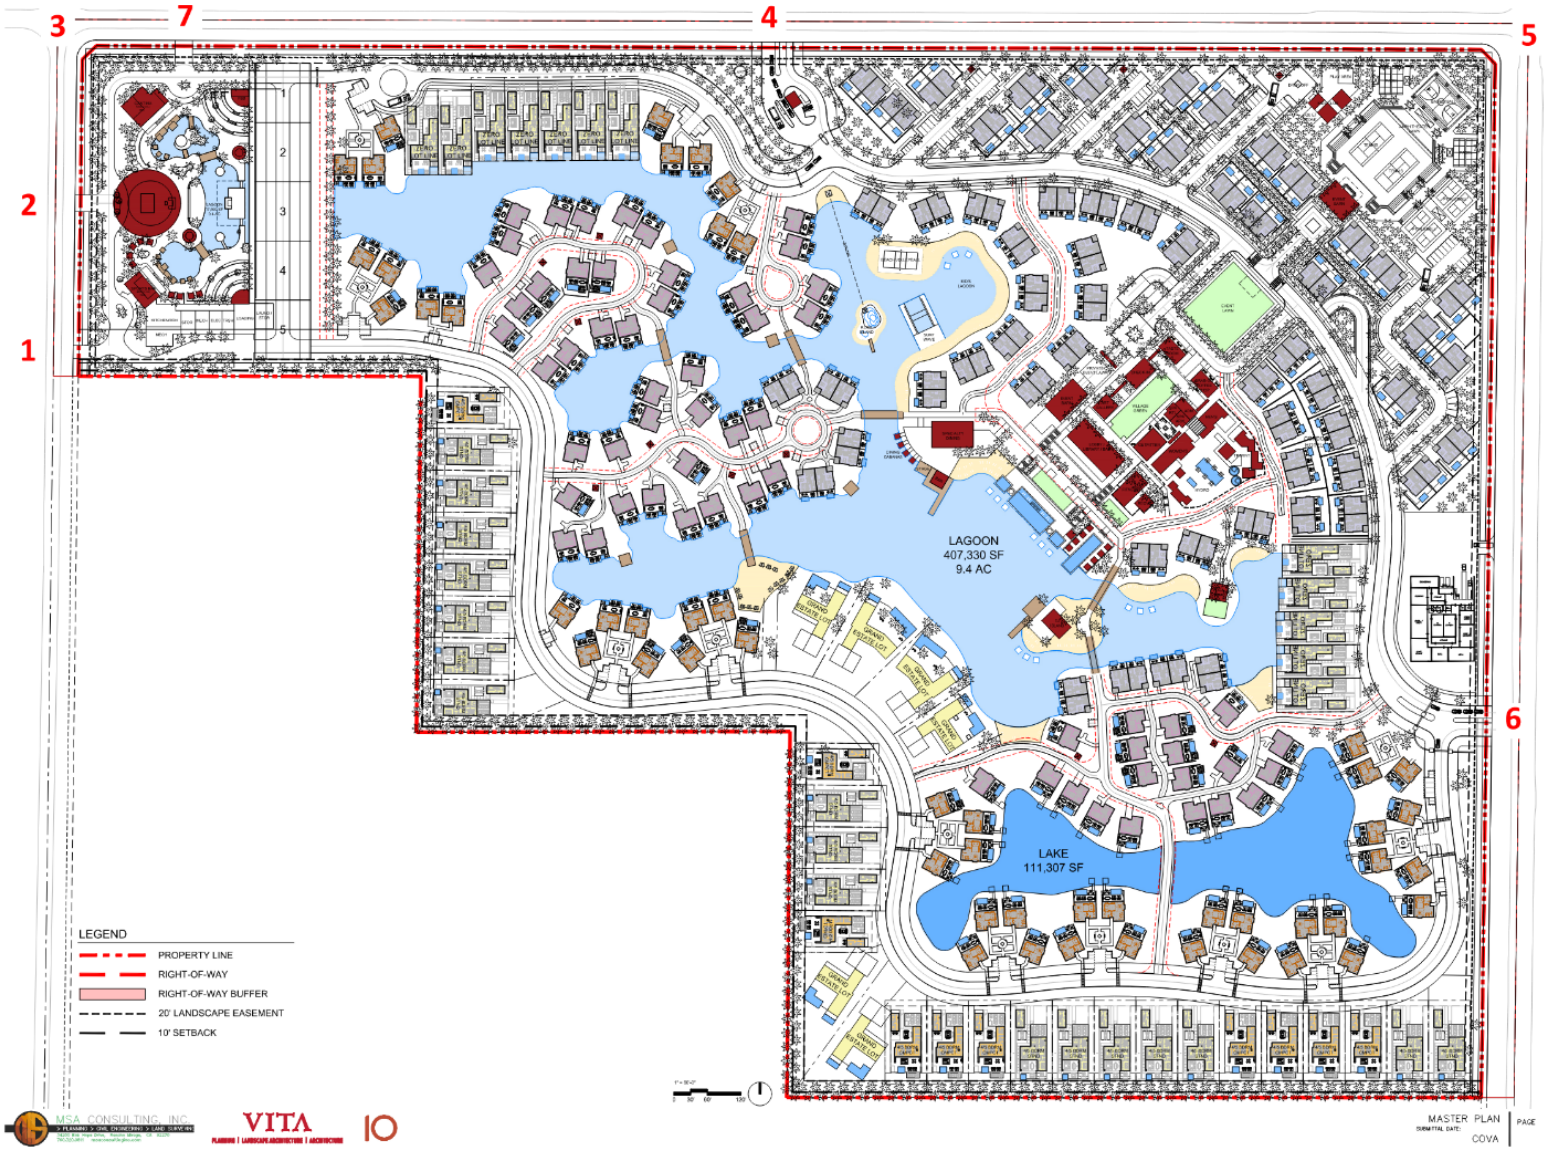
Intersection / driveway access characteristics are related to the Project site plan shown in **Figure 1**, and input received from the Client.

Public Access Driveways / Intersections

Public guests may utilize the listed intersections / driveways to access the public sector of the Project, but may not access the private sector from these access points.

- Intersection / Driveway #1
  - Full movement, side street stop control.
- Intersection / Driveway #2
  - Typical Right-In / Right-Out operation.
- Intersection / Driveway #7
  - Typical Right-Out, exit only operation.

Private Access Driveways / Intersections



Private guests will use intersections / driveways #4 and #6 to enter the property. The private guests will have access to the parking garage at the Public Beach Club through the streets that pass through that garage, but it will be key card access. No Public Access will be allowable to the resort property through these roads.

- Intersection / Driveway #4
  - Full movement, side street stop control.
- Intersection / Driveway #6
  - Full movement, side street stop control.

Adjacent Intersections Only (Not Driveways)

- Intersection #3
  - Existing All-Way Stop Controlled.
  - Assumed Opening Year with Project and Opening Year with Project and Cumulative Projects will be the same as existing conditions.
- Intersection #5
  - Existing signalized intersection.
  - Assumed Opening Year with Project and Opening Year with Project and Cumulative Projects will be the same as existing conditions.

Appendix H: Classic Club Specific Plan Arena Trip Generation Memorandum

FEHR PEERS

Memorandum

Date: December 22, 2023

To: Eva Covarrubias, County of Riverside

From: Paul Herrmann, T.E.
Marsha Phillips

Subject: Classic Club Specific Plan Arena Trip Generation Memorandum

OC23-0962

Fehr & Peers has completed a trip generation assessment in support of the proposed Classic Club Specific Plan Amendment (Project) located in located in Western Coachella Valley within an unincorporated portion of Riverside County, California. This assessment evaluates previous trip generation estimates for the arena as compared to empirically collected data after the opening of the Acrisure Arena (Arena).

The remainder of this memorandum outlines the Project Description, Analysis Description, Data Collection, Trip Generation, Trip Generation Comparison, Classic Club Specific Plan Trip Generation and Next Steps.

Project Description

The Classic Club Specific Plan Area is located north of I-10 and east of the Cook Street interchange. This existing Specific Plan Area is bounded by Cook Street to the west and Varner Road to the south, which provides access directly to the site. The Project is a proposed amendment to the NorthStar Specific Plan, originally approved in 2006 and amended in 2021. The 2021 amendment reconfigured the Planning Areas to allow the addition of a new Planning Area to allow the development of the Arena. This amendment reduced the size of the Business Park Planning Area to accommodate the Arena. An Addendum to the 2006 Specific Plan EIR was prepared for this amendment (2021 Addendum),

The Arena, which opened in December 2022, is 260 KSF Event Center with a 35 KSF training facility for the Coachella Valley Firebirds, an American Hockey League (AHL) team. The Arena

hosts AHL games with a capacity of 9,918 patrons and other events, including concerts, with a maximum capacity of 11,000 patrons.

The Berger Foundation Iceplex, which contains the training center ice sheet is open about nine months of the year (closed in the three summer months between June and August). It is used about 50% of the time by the AHL team for practice. When not in use by the AHL team, the training ice rink is available as a community ice facility on non-event days (approximately 135 days a year). It is open 7 days a week and for 6 to 8 hours per day, with typically 20 to 40 people using it per hour. It is used for public skating sessions, skate/hockey lessons, or hockey leagues.

Analysis Scenarios

The Arena events vary in size, vary in type of event, with events scheduled approximately 180 days out of the year. Project trip counts for a hockey game and a concert were taken in April 2023 to develop custom Arena trip generation rates to compare against the assumptions in traffic study (2021 Traffic Study) prepared for the Arena incorporated into the 2021 Addendum. The following scenarios were analyzed in the 2021 Traffic Study:

- Typical Hockey Game: Represents a typical (average) attendance of 7,500 patrons for a hockey game.
- Sellout Hockey Game: Represents a sellout (maximum) attendance of 9,918 patrons for a hockey game.
- Typical Concert: Represents a typical (average) attendance of 7,500 patrons for a concert or event.
- Sellout Concert: Represents a sellout (maximum) attendance of 11,000 patrons for a concert or an event.

Data Collection

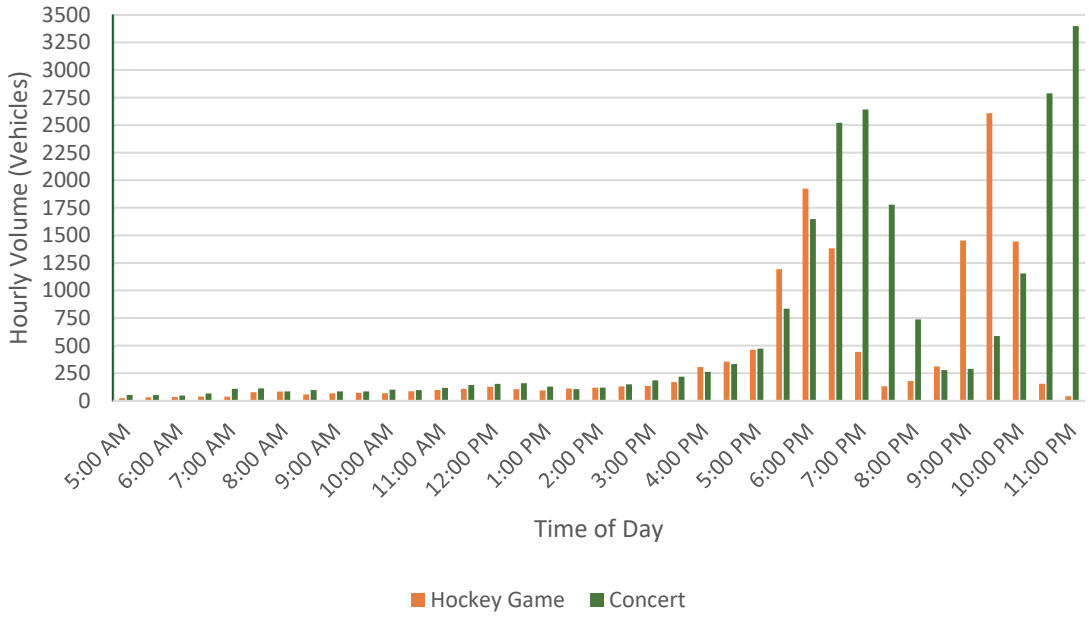
Twenty-four hour driveway counts were collected on April 4, 2023 (during a hockey game) and April 5, 2023 (during a concert) at the arena parking lot. The parking lot for the Arena also provides parking for the Berger Foundation Iceplex, (Iceplex) which was operational during the days when the data was collected. The Iceplex is open from as early as 6:15 AM for figure skating with skating lessons and open public skating sessions continuing throughout the day. **Table 1** and **Table 2** show the counts on the day of a hockey game and a concert, respectively, by the peak arrival and departure time for the events and the peak AM and PM time.

Table 1: Hockey Game Trip Counts

Peak Hour	Time	Trips	In	Out
Daily	24 Hours from Midnight to Midnight	7,133	3,544	3,589
AM Peak	7:45 AM to 8:45 AM	86	57	29
PM Peak	5:00 PM to 6:00 PM	462	398	64
Event Arrival Peak	6:00 PM to 7:00 PM	1,924	1,816	108
Event Departure Peak	9:00 PM to 10:00 PM	2,609	92	2,517

Note: Data was collected on Wednesday April 5th, 2023, on the day of a Coachella Firebirds AHL Game with 6,558 attendees.
Source: Fehr & Peers, 2023.

Table 2: Concert Trip Counts



Peak Hour	Time	Trips	In	Out
Daily	24 Hours from Midnight to Midnight	11,811	6,021	5,790
AM Peak	7:30 AM to 8:30 AM	112	90	22
PM Peak	5:00 PM to 6:00 PM	472	364	108
Event Arrival Peak	7:00 PM to 8:00 PM	2,751	2,251	500
Event Departure Peak	11:00 PM to 12:00 PM	3,482	308	3,174

Note: Data was collected on Thursday April 6th, 2023, on the day of a John Mayer Concert with 9,077 attendees.
Source: Fehr & Peers, 2023.

The trip generation pattern for a hockey game and a concert exhibit a similar trend during peak hours. **Figure 1** shows the differences between the trip counts on the day of a hockey game compared to a concert. The observed counts during the AM peak hours can be attributed to the early lessons held during that time at the ice rink. It is observed that trips arrive and depart earlier for a hockey game as compared to a concert, as most hockey games commence between 5:00 PM and 7:00 PM, while a concert usually starts between 7:00 PM and 8:30 PM, and generally

attendees arrive to see the start of a sporting event while they may show up later to a concert for only the headline performance.

Figure 1: Arena Houly Volumes

Source: Fehr & Peers, 2023.

Trip Generation Analysis

Trip generation refers to the process of estimating the amount of vehicular traffic a project would add to the surrounding roadway system. Estimates for the Project were created for the daily condition and for the peak one-hour period during the morning and evening commutes when traffic volumes on the adjacent streets are typically the highest. Custom public ice skating, hockey game, and concert trip generation rates were developed from the traffic counts collected and are described in more detail below.

Public Skating Rink and General Arena Operations Trip Generation

The morning peak hour and much of the daily trips on site are not tied to event attendance as the public ice skating is unrelated to the evening event, and general operational activities occur regularly at the arena, such as maintenance, deliveries and arena office use. A trip generation rate was developed based on the average of the two days of data collection. During the overlap of public ice skating and event arrival time traffic, the hourly average was estimated and extended through the rink's closing time to separate the public skating rink from the event traffic.

Table 3: Typical Arena (Non-Event Related) Generation Estimates

Source	Daily	AM Total Trips	AM In	AM Out	PM Total	PM In	PM Out
Driveway Counts Average	2,626	100	74	26	90	45	45

Source: Fehr & Peers, 2023.

Hockey Game Trip Generation

Table 4 summarizes the trip generation rates used to estimate trip generations for a hockey game, which are summarized in **Table 5** using the total arena trip generation by patron for daily and PM peak hour. These trips are in addition to the typical arena (non-event related) trip estimates.

Table 4: Hockey Game Trip Generation Rates

Source	Unit	Daily Trip Rate	AM Total Rate	AM In	AM Out	PM Total Rate	PM In	PM Out
Driveway Counts	Per Attendee	0.687	0.000	0.000	0.000	0.057	0.054	0.003

Source: Fehr & Peers, 2023.

Table 5: Hockey Game Trip Generation Estimates

Number of Attendees	Daily Trips	AM Total Trips	AM In	AM Out	PM Total	PM In	PM Out

NorthStar Specific Plan EIR Trip Generation Assumptions

The previous EIR trip generation is shown in **Table 8**, which was completed in January 2021. The trip generation of the amended plan will be compared to the trip generation of the original plan.

Table 8: Trip Generation Assumptions

Event Type	Attendance Level	Number of Events	Daily	AM	PM	Arrival Peak	Departure Peak
Concert Sellout	11,000	23	9,384	0	906	3,166	4,199
Concert Average	7,500	22	6,398	0	618	2,160	2,862
Hockey Sellout	9,918	5	8,550	0	822	2,874	3,824
Hockey Average	7,500	41	6,492	0	622	2,175	2,902
Non-Event (Ice Rink)	-	-	760	6	86	86	0

Source: Riverside County Arena Project Transportation Analysis Report (The Mobility Group, January 2021)

Trip Generation Comparison

Table 9 shows a comparison of the previous EIR trip generation and the current trip generation using trip counts from a sellout hockey game and sellout concert with the public skating rink and typical arena operations included.

As compared to the estimates prepared in the EIR, the driveway counts indicate less PM peak hour, and a greater amount of daily and AM trips than estimated in the 2021 Traffic Study. We believe this is attributed to several factors:

- Traffic from typical daily operations at the arena for event set up, standard maintenance and typical daily operations is greater than accounted for in the 2021 Traffic Study
- Public use of the Iceplex is greater than assumed in the 2021 Traffic Study, with more use in the mornings for lessons and throughout the day assumed in the 2021 Traffic Study.
- The events occur later in the evening which results in people arriving later than assumed in the 2021 Traffic Study
- The average vehicle occupancy is higher for the hockey games than the concerts, resulting in less vehicle trips per attendee for hockey game and more vehicle trips per attendee for concerts.

Table 9: Amended Specific Plan Trip Generation Comparison for a Hockey Game

Source	Daily	AM Total	PM Total
Sellout Hockey Game			
Arena Traffic Counts	9,442	100	652
2021 Traffic Study Estimate	9,310	6	908
Net Difference	**132**	**94**	**(256)**
Sellout Concert			
Arena Traffic Counts	13,757	100	553
2021 Traffic Study Estimate	10,144	6	992
Net Difference	**3,613**	**94**	**(439)**

Classic Club Specific Plan Trip Generation

Attachment A provides an updated Classic Club Specific Plan trip generation estimate for a weekday, Saturday and Sunday with a sellout concert and **Attachment B** provides an update with an average concert.

Next Steps

Following confirmation of the latest trip generation updates, Fehr & Peers will submit an updated scoping memo on the Project's behalf to determine requirements of the transportation study.

SEWER DESIGN NOTE

MULTIPLE GRAVITY SEWER ALIGNMENTS WERE ANALYZED; OPTION #1 IS DETERMINED TO BE THE MOST FEASIBLE SOLUTION:
A PRIVATE GRAVITY SEWER SYSTEM WILL BE INSTALLED WITHIN THE COVA PROJECT LIMITS, CONVEYING FLOWS TO A PRIVATE LIFT STATION LOCATED AT THE SOUTHEAST CORNER OF THE SITE.
THE LIFT STATION WILL CONVEY FLOWS VIA A PRIVATE SEWER FORCEMAIN TO THE EXISTING PUBLIC SANITARY SEWER AT THE INTERSECTION OF 52ND AVENUE AND VAN BUREN STREET.

PROJECT DESCRIPTION & LOCATION

The proposed project site, identified as Tentative Tract Map 39330, comprises approximately 81.2 acres located on the south side of Avenue 52 between Calhoun Street and Van Buren Street, in the City of Coachella. The site is located in a portion of Section 12, Township 6 South, Range 7 East, SBM, and is assigned Assessor's Parcel Numbers 780-040-001, -003, 780-060-001 and -002. A vicinity map obtained from the Riverside TLMA website is included as Appendix A.

EXISTING SITE CONDITIONS

Flood Rate Map

The proposed area is covered by the unpublished FIRM Panel Number 06065C2262H, effective March 6, 2018, which indicates the subject property lies within Zone X, defined *as "Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. Insurance purchase is not required in these areas.*" Refer to the attached NFIP Flood Insurance Rate Map in Appendix B.

Existing Topography

The property is an existing date orchard and grape vinery with associated buildings and irrigation pond. The site is bounded to the north by Avenue 52, to the west by Calhoun Street, to the east by Van Buren Street, and to the south by various agricultural uses and/or single-family homes. Groundwater was encountered at a depth of approximately 35 feet below existing ground surface. The site is generally flat and slopes to the southeast. See the Existing Conditions Exhibit in Appendix H.

PROPOSED FLOOD CONTROL REQUIREMENTS

The purpose of this report is to provide preliminary retention basin analyses for the subject property. The drainage requirements for this project fall under the jurisdiction of the City of Coachella. Storm flows are conveyed through the site via street flow to localized low points where they will be conveyed via underground storm drain lines to the irrigation ponds.

HYDROLOGY ANALYSIS DESIGN CRITERIA

Storm runoff volumes for the 100-year event were obtained utilizing the Synthetic Unit Hydrograph as described in the *RCFC&WCD Hydrology Manual*. The hydrologic data used for the calculations are as follows:

Hydrologic Soil Group

The existing soil is categorized primarily as hydrologic soil group 'B', with a small finger of soil group 'A', for the subject property, as shown per the attached National Cooperative Soil Survey exhibits in Appendix C.

Soil Group 'A' is defined by RCFCD as – "soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission."

Soil Group 'B' is defined by RCFCD as – "soils having moderate infiltration rates when thoroughly wetted and consisting chiefly of moderately deep to deep, moderately well to well drained soils with moderately fine to moderately coarse textures. These soils have a moderate rate of water transmission".

Antecedent Moisture Condition

AMC II – Moderate runoff potential, an intermediate condition. Per RCFC & WCD Hydrology Manual (Dated: April, 1978): "For the purposes of design hydrology using District methods, AMC II should normally be assumed for both the 10 year and 100 year frequency storm".

Land Use Classifications and Runoff Index Numbers

Runoff Index Numbers were obtained from RCFCD Plates E6.1, E6.2 and E6.3 are summarized below:

Condominiums (Soil Group A)	32
Condominiums (Soil Group B)	56
Paving/Hardscape (Soil Group B)	56

Percent of Impervious Cover (RCFCD Plate E-6.3):	
Impervious Areas (Buildings, Pavement, Hardscape)	100%
Open Space (Landscaping & Retention Basins)	10%

Low Loss Rates:	85%

Precipitation Frequency Estimates

Precipitation depths were obtained from NOAA Atlas 14:

100 Year – 1 Hour Precipitation:	1.30	inches
100 Year – 3 Hour Precipitation:	2.08	inches
100 Year - 6 Hour Precipitation	2.75	inches
100 Year – 24 Hour Precipitation	4.38	inches

See Appendix D for the NOAA Atlas 14 Point Precipitation Frequency Estimates and respective RCFCD Plates.

Site Infiltration

A percolation testing was performed by Sladden Engineering, in accordance with Table 1 Infiltration Basin Option 2 of *Appendix A of Riverside County – Low Impact Development BMP Design Handbook*, more specifically in accordance with *Section 2.3 Shallow Percolation Test Method*. Eight percolation tests were performed with a range of 3 to 6.67 inches/hour. Per the City of Coachella design criteria for drywells, "The maximum percolation rate shall be 1" per hour, or half of the engineered percolation test, up to a maximum of 5" per hour", giving an infiltration rate of 1.5 inches/hour based on the lowest infiltration rate. Refer to Appendix E for an excerpt from the geotechnical report.

The irrigation ponds located in the southern part of the project will also be utilized as retention basins. Since the ponds will be lined, only the ground above the pond's nominal water surface elevation will allow infiltration. As such, the 1.5 inches/hour infiltration rate was prorated based on the percentage of the surface area around the pond that allows infiltration versus the total surface area of the ponds/retention basins. An infiltration rate of 0.86 inches/hour was used in the analysis.

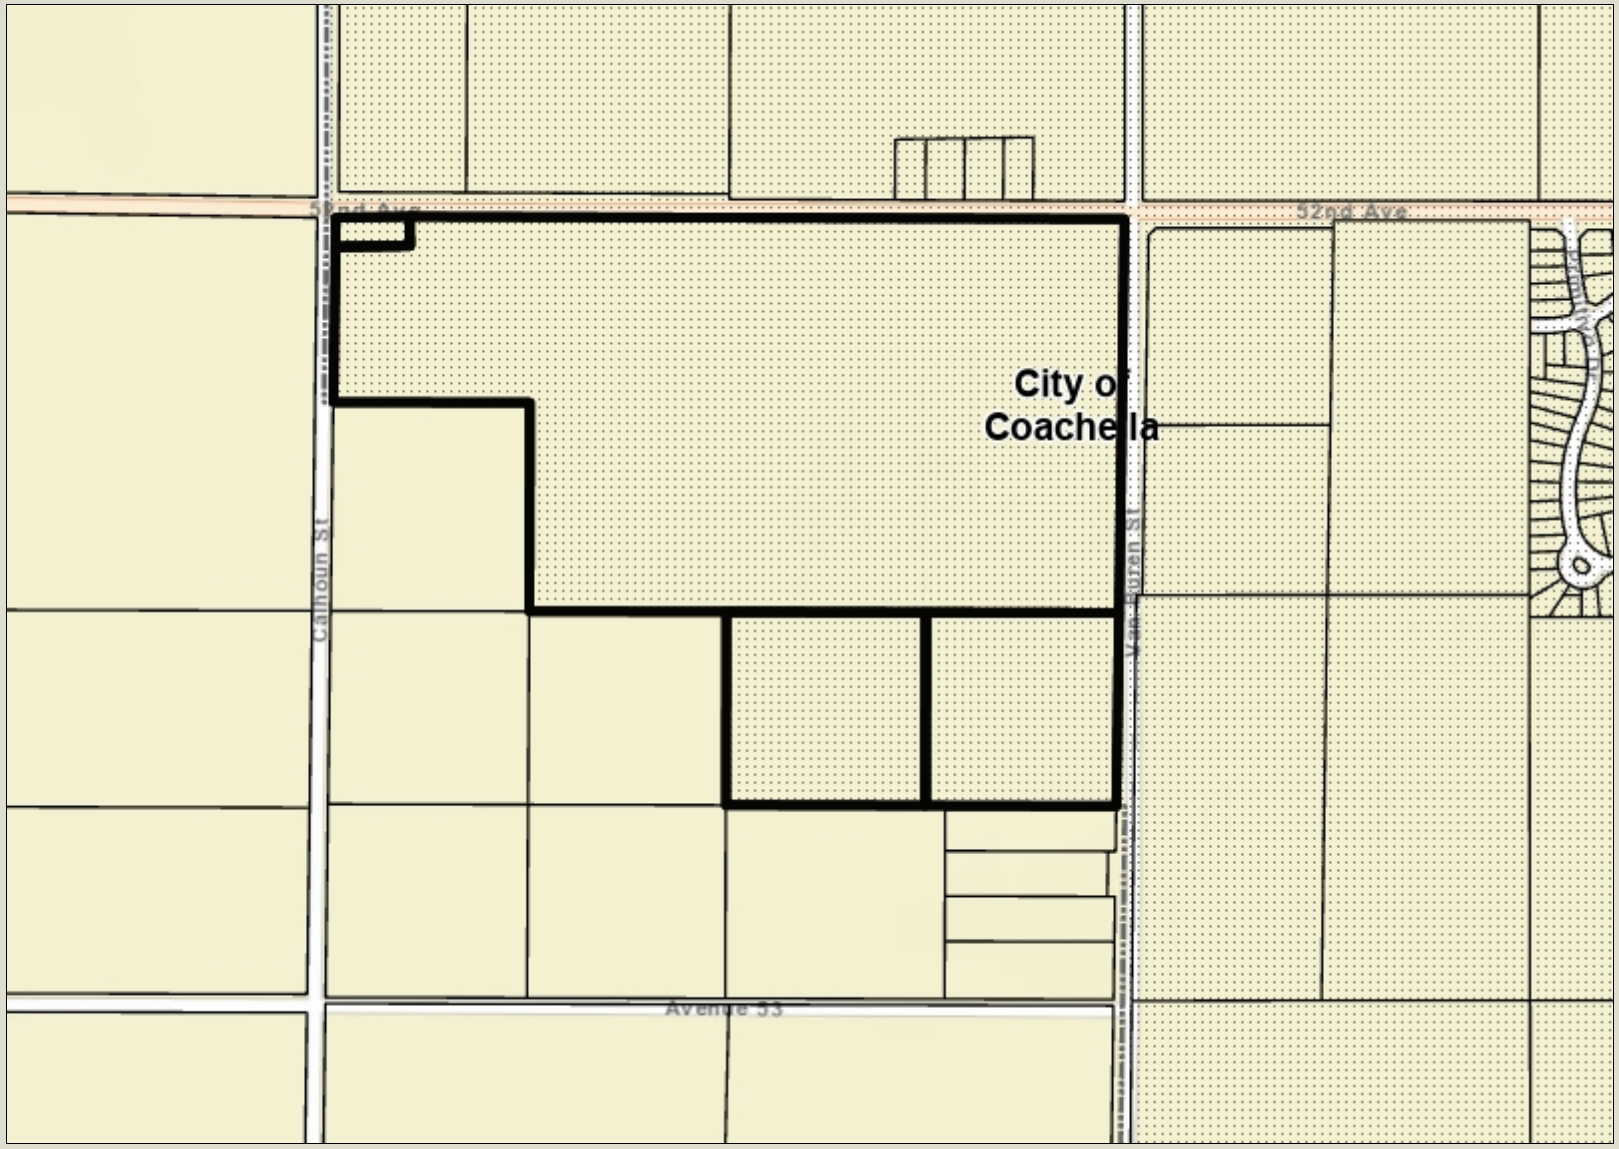
SUMMARY of SYNTHETIC UNIT (SHORTCUT METHOD) ANALYSES

The proposed retention basins for the associated drainage areas were sized to retain the 100-year controlling storm event flood volumes and were analyzed utilizing the RCFCD Synthetic Unit (Shortcut Method). Per the manual, for areas of less than 100 – 200 acres, and lag times less than 7 – 8 minutes, the shortcut method is applicable. This method assumes that in a small watershed, response time to effective rainfall is very short. Therefore, runoff rates for a given period of time can be assumed to be directly proportional to effective rain. This method yields only approximate results (on the conservative side) and should be used only for watersheds meeting the criteria noted above.

It should be noted that the peak flow for the 1-hour storm is not necessarily representative for peak flow. Per RCFCD, peak discharges from the 3-hour storm should normally compare well with rational peaks.

The synthetic unit worksheet is included in Appendix F and is summarized on the Preliminary Synthetic Unit Hydrology Exhibit in Appendix J.

PRELIMINARY WQMP ANALYSES



Preliminary design volume and flow for BMP measures were based on Worksheets 1 and 2 from the Riverside County – Whitewater River Region Water Quality Management Plan. Impervious area for the drainage sub-areas are derived from the preliminary land uses. The worksheet is included as Appendix G.

RESULTS AND CONCLUSIONS

As the above narrative and appendices confirm, the proposed retention basins are sufficiently sized to contain the flood volume from the controlling 100-year storm, therefore, meeting the hydrologic requirements established by the City of Coachella. During the final design process, a more detailed hydrology and hydraulics report will be submitted to the City for approval.

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance / Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS

- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/23/2025 at 6:44 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community i FIRM panel number, and FIRM effective date. Map unmapped and unmodernized areas cannot be us regulatory purposes.

DEFINITIONS OF FEMA FLOOD ZONE DESIGNATIONS

Moderate to Low Risk Areas

In communities that participate in the NFIP, flood insurance is available to all property owners and renters in these zones:

ZONE	DESCRIPTION
X (Shaded)	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. Insurance purchase is not required in these zones.
X	Areas determined to be outside the 0.2% annual chance floodplain.

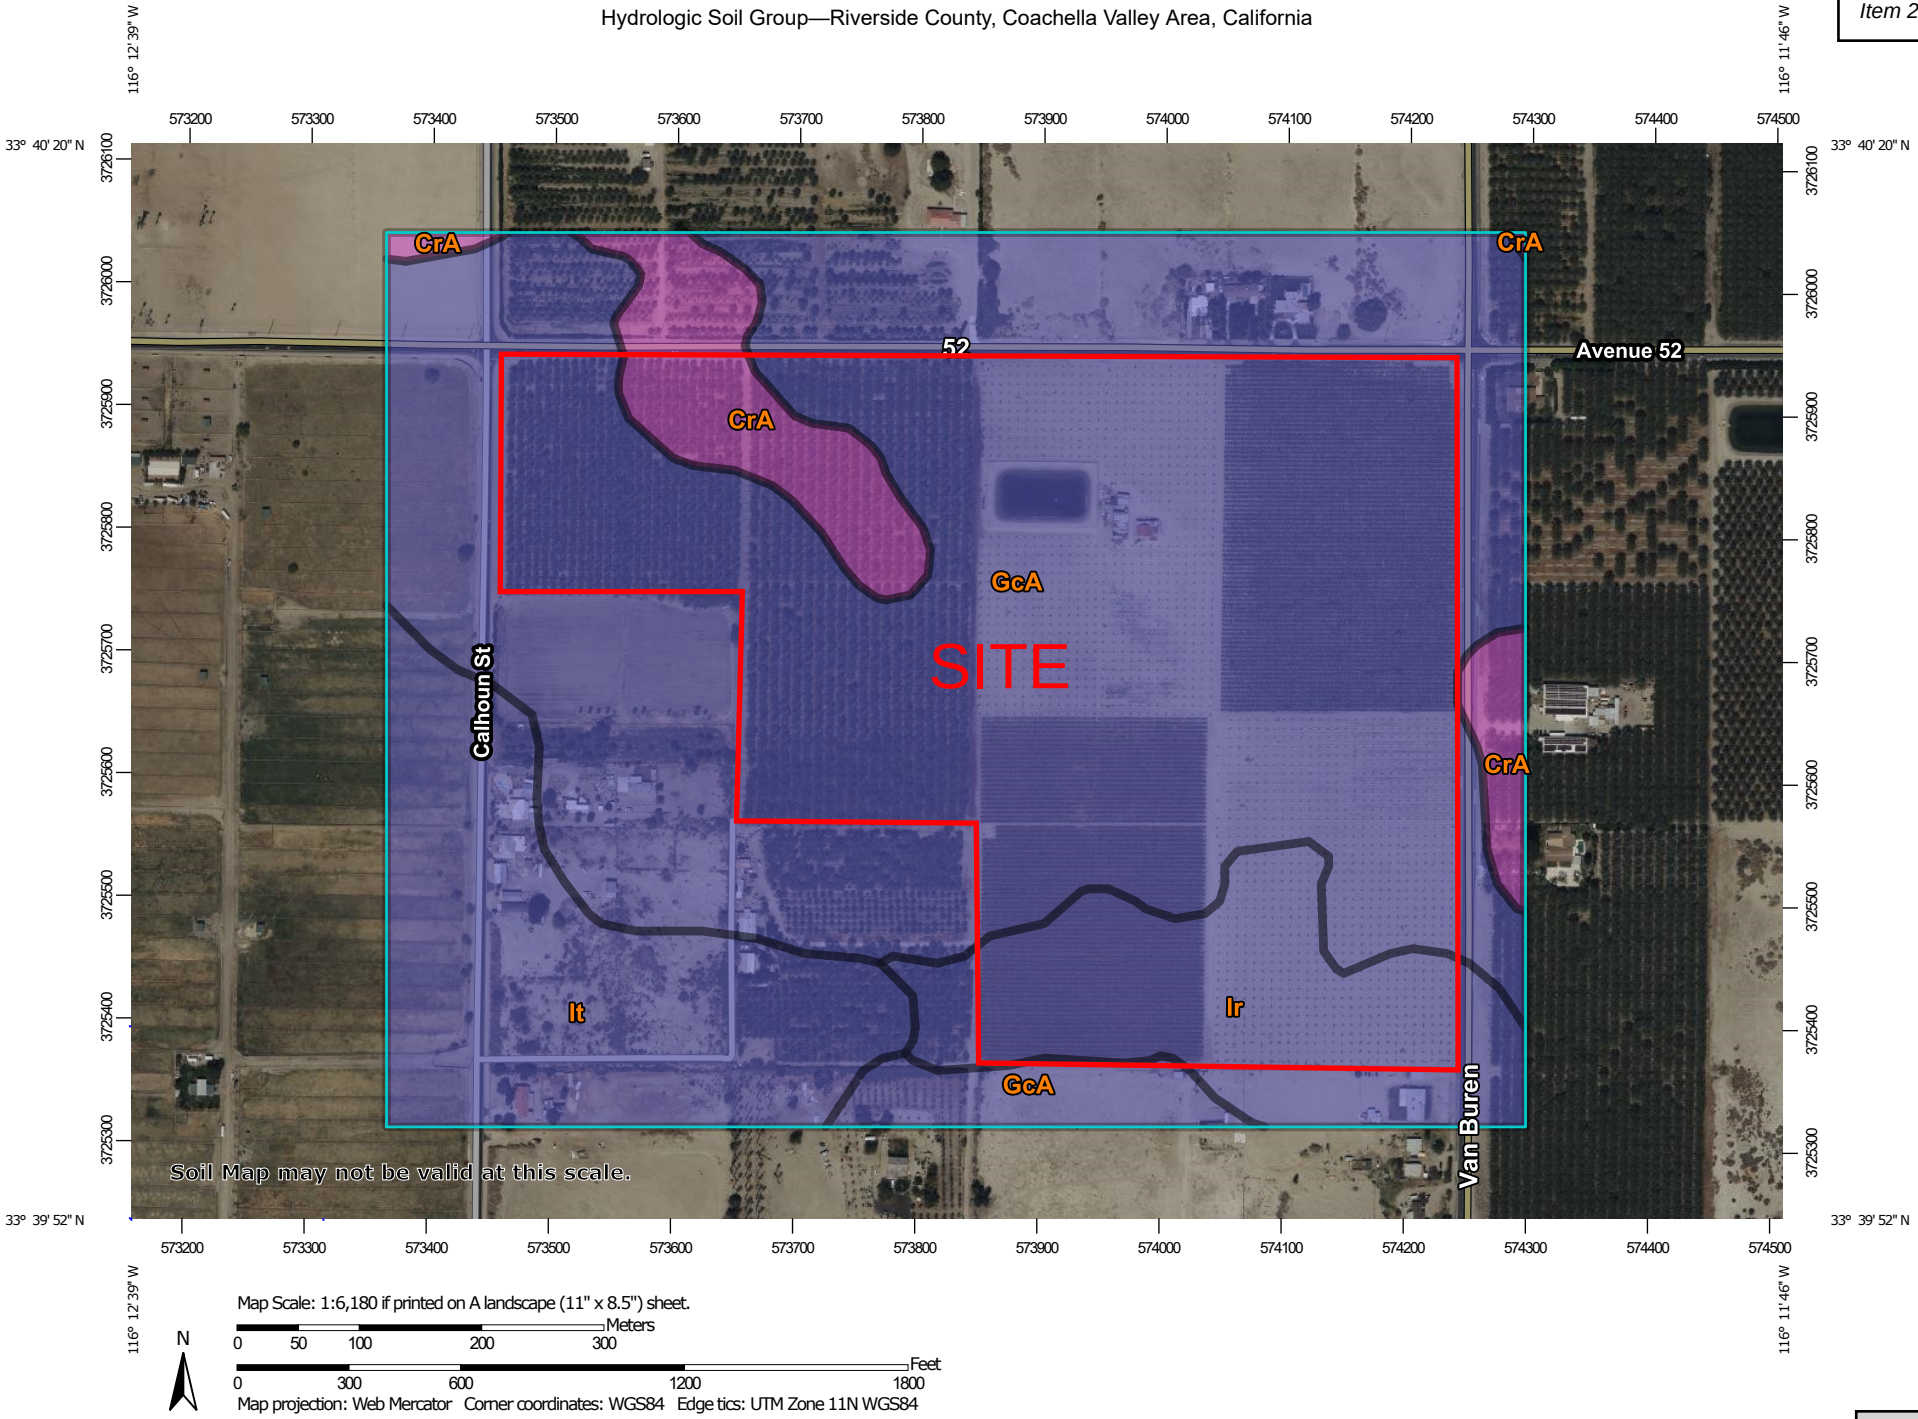
High Risk Areas

In communities that participate in the NFIP, mandatory flood insurance purchase requirements apply to all of these zones:

ZONE	DESCRIPTION
A	Areas with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage. Because detailed analyses are not performed for such areas; no depths or base flood elevations are shown within these zones.
AE	Areas with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage. In most instances, base flood elevations derived from detailed analyses are shown at selected intervals within these zones.
AH	Areas with a 1% annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones.
AO	River or stream flood hazard areas, and areas with a 1% or greater chance of shallow flooding each year, usually in the form of sheet flow, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Average flood depths derived from detailed analyses are shown within these zones. For areas of alluvial fan flooding, velocities are also determined.
AR	Areas with a temporarily increased flood risk due to the building or restoration of a flood control system (such as a levee or a dam). Mandatory flood insurance purchase requirements will apply, but rates will not exceed the rates for unnumbered A zones if the structure is built or restored in compliance with Zone AR floodplain management regulations.
A99	Areas with a 1% annual chance of flooding that will be protected by a Federal flood control system where construction has reached specified legal requirements. No depths or base flood elevations are shown within these zones.

High Risk – Coastal Areas

In communities that participate in the NFIP, mandatory flood insurance purchase requirements apply to all of these zones:



ZONE	DESCRIPTION
V	Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 26% chance of flooding over the life of a 30-year mortgage. No base flood elevations are shown within these zones.
VE	Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones.

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Areas with possible but undetermined flood hazards. No flood hazard analysis has been conducted. Flood insurance rates are commensurate with the uncertainty of the flood risk.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Riverside County, Coachella Valley Area, California
Survey Area Data: Version 17, Sep 10, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 15, 2022—May 28, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
CrA	Coachella fine sand, wet, 0 to 2 percent slopes	A	10.4	6.2%
GcA	Gilman fine sandy loam, wet, 0 to 2 percent slopes	B	118.2	70.0%
Ir	Indio fine sandy loam, wet	B	17.4	10.3%
It	Indio very fine sandy loam, wet	B	22.7	13.5%
Totals for Area of Interest			**168.7**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

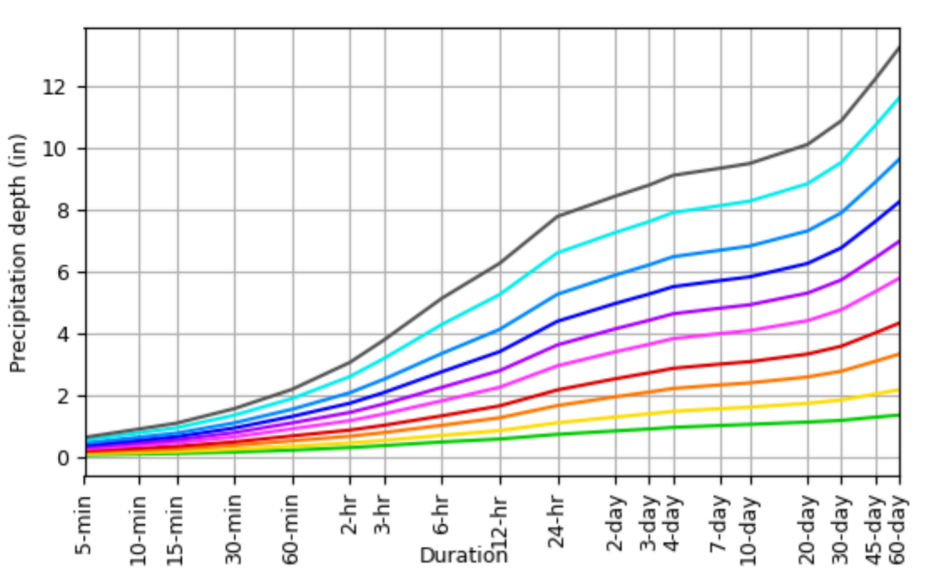
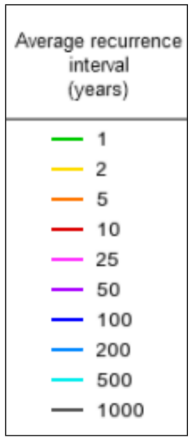
[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).



Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.



Please refer to NOAA Atlas 14 document for more information.

Subject: Percolation/Infiltration Testing for Stormwater Management

Ref: Geotechnical Investigation report, Proposed "The Ranch at Coachella" Mixed-Use Development, APNs 780-040-001, 003 & 780-060-001 & 002 Coachella, California, Project No. 544-24159, Report No. 24-07-358.

In accordance with your request, we have performed percolation testing on the subject site to evaluate the infiltration potential of the near-surface soil to assist in stormwater management system design. It is our understanding that on-site stormwater retention including infiltration is planned for the proposed project.

Percolation testing has been performed within 8 shallow test holes excavated on the site. Testing was performed at a depth of approximately 4 and 6 feet below the existing ground surface. The approximate locations of the test holes are presented on the attached Test Location Photograph (Figure 3). Proposed testing locations were provided to Sladden Engineering by MSA Consulting, Inc. However, final locations were adjusted based on encountered field conditions and by on site tenant's request.

Testing was performed by placing water within the test bores and recording the drop in the water surface with time. Testing was performed in general accordance with Section 2.3 of Riverside County – Low Impact Development BMP Design Handbook for percolation testing. Test results are summarized in the following table.

PERCOLATION/INFILTRATION TEST RESULTS

Test No.	Depth (Ft)	USCS	Percolation Rate (in/hr)	Infiltration Rate (in/hr)
P-1	6.00	SM	24.00	3.00
P-2	6.00	SM	27.50	3.64
P-3	4.00	SM	40.00	6.67
P-4	6.00	SM	40.00	6.67

P-5	6.00	SM	32.50	4.68
P-6	4.00	SM	40.00	6.67
P-7	4.00	SM	40.00	6.67
P-8	4.00	SM	40.00	6.67

The percolation rates determined represent the ultimate field rates that do not include a safety factor. The corresponding infiltration rates were calculated using the Porchet Method. An appropriate safety factor should be incorporated into stormwater retention/infiltration system design.

If you have any questions regarding this memo, please contact the undersigned.

BORING LOGS
STORMWATER TESTING DATA SHEETS

Sladden Engineering

BORE LOG

Equipment:	MOBILE B-61	Date Drilled:	9/26/2024
Elevation:	-50 FT MSL	Boring No:	P-1

Sample	Blow Counts	Bulk Sample	Expansion Index	% Minus #200	% Moisture	Density, pcf	Depth (Feet)	Graphic Lithology	Description
							2		Silty Sand (SM); grayish brown, moist, fine-to coarse-grained, micaceous, with trace of clay.
							4		
							6		
							8		Terminated at ~ 6 ft bgs. No Bedrock Encountered. No Groundwater or Seepage Encountered. Borehole Cased with Perforated Pipe for Percolation Testing.

					SUM	81.14	SUM	0.1960			0.3439

VARIABLE LOSS RATE CURVE (24-HOUR STORM ONLY)

Fm= 0.097987833

C= 0.00181

$F_t=C(24-(T/60))^{1.55}+F_m$ = 0.00181 (24-(T/60))^1.55 + 0.10 in/hr

CONSTANT LOSS RATE (3 & 6 HOUR STORMS) = **0.1960**

LOW LOSS RATE = **0.8500**

Where:

T=Time in minutes. To get an average value for each unit time period, Use T=1/2 the unit time for the first time period, T=1 1/2 unit time for the second period, etc.

NOTE: Low loss rates established per RCFC/2322 (Dated: May-30-95)
For 10 Year Storms or Less
Undeveloped Condition: Low Loss = 90%
Developed Condition: Low Loss = 0.9 - (0.8 * %impervious)
Basin Site: Low Loss = 10%
For 100 Year Storm - Low Loss should be between 80% & 90% of the Rainfall Rate

EFFECTIVE RAIN & FLOOD VOLUMES SUMMARY

EFFECTIVE RAIN	1.50 in
FLOOD VOLUME	10.13 acft
FLOOD VOLUME	441,160 cu-ft
REQUIRED STORAGE	9.75 acft
REQUIRED STORAGE	424,813 cu-ft
MAX WSEL	439.30 ft
PEAK FLOW RATE	151.42 cfs
TOTAL BASIN LOSSES	16,394 cu-ft
AVERAGE PERCOLATION RATE	91.08 cf/min

Riverside County Whitewater River Region WQMP Worksheets

Whitewater Watershed

BMP Design Volume, V_{BMP} & Design Flow Rate, Q_{BMP} (Rev. 06-2014)

Legend: Required Entries / Calculated Cells

Company Name	MSA Consulting, Inc	Date	December 10, 2025
Designed By	SAW	County/City Case No.	
Company Project Number/Name	COVA - MSA Job No. 2811		
Drainage Area Number/Name	Site		

Enter the Area Tributary to this Feature (A_{TRIB}) — A_{TRIB} = 81.140 acres

Determine the Impervious Area Ratio

Determine the Impervious Area Within A_{TRIB} (A_{IMP}) — A_{IMP} = 56.410 acres

Calculate the Impervious Area Ratio (I_F)

$I_F = A_{IMP}/A_{TRIB}$ — I_F = 0.70

Calculate the Composite Runoff Coefficient, C for the BMP Tributary Area

Use the following equation based on the WEF/ASCE Method

$C_{BMP} = 0.858I_f^3 - 0.78I_f^2 + 0.774I_f + 0.04$ — C_{BMP} = 0.49

Determine Design Storage Volume, V_{BMP}

Calculate V_U, the 80% Unit Storage Volume $V_U = 0.40 \times C_{BMP}$ — V_U = 0.20 (in*ac)/ac

Calculate the design storage volume of the BMP, V_{BMP}

$$V_{BMP}\ (ft^3) = \frac{V_U\ (in\text{-}ac/ac) \times A_T\ (ac) \times 43{,}560\ (ft^2/ac)}{12(in/ft)}$$

V_{BMP} = 57,660 ft^3

BMP Design Flow Rate, Q_{BMP}

$Q_{BMP} = C_{BMP} \times I \times A_{TRIB}$ — Q_{BMP} = 7.94 ft^3/s

I = Design Rainfall Intensity, 0.2 in/hr

OWNER'S CERTIFICATION

This project-specific Preliminary Water Quality Management Plan has been prepared for:

Relevant Coachella Owner, LLC by MSA Consulting, Inc. for the project known as **COVA - Tentative Tract Map 39330** in the **City of Coachella, CA.**

This WQMP is intended to comply with the requirements of Coachella for a portion of **APNs 780-040-001, 780-040-003, 780-060-001, and 780-060-002** which includes the requirement for the preparation and implementation of a project-specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity.

The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under the City of Coachella (Coachella Code of Ordinances, Chapter 13.16, Water Quality Control).

If the undersigned transfers its interest in the subject property/project, the undersigned shall notify the successor in interest of its responsibility to implement this WQMP.

"I, the undersigned, certify under penalty of law that I am the owner of the property that is the subject of this WQMP, and that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

I. Project Description

Project Owner: Relevant Coachella Owner, LLC
6417 Selma Avenue
Hollywood, CA 90028
Telephone: (310) 270-6222

WQMP Preparer: Under the Direct Supervision of Julian A. De La Torre
MSA Consulting, Inc.
34200 Bob Hope Drive
Rancho Mirage, CA 92270
Telephone: (760) 323-7893
Fax No.: (760) 323-7893

Project Site Address:	**SEC of Avenue 52 and Van Buren Street Coachella, CA 92236**
Planning Area:	**Van Buren Corridor General Plan Subarea**
Community Name:	**Coachella**
Development Name:	**COVA - Tentative Tract Map 39330**
APN Number(s):	**780-040-001, 780-040-003, 780-060-001, 780-060-002**
Latitude & Longitude:	**33.6686, -116.2023**
Receiving Water:	**Coachella Valley Stormwater Channel**
Hydrologic Area:	**81.14 Acres**

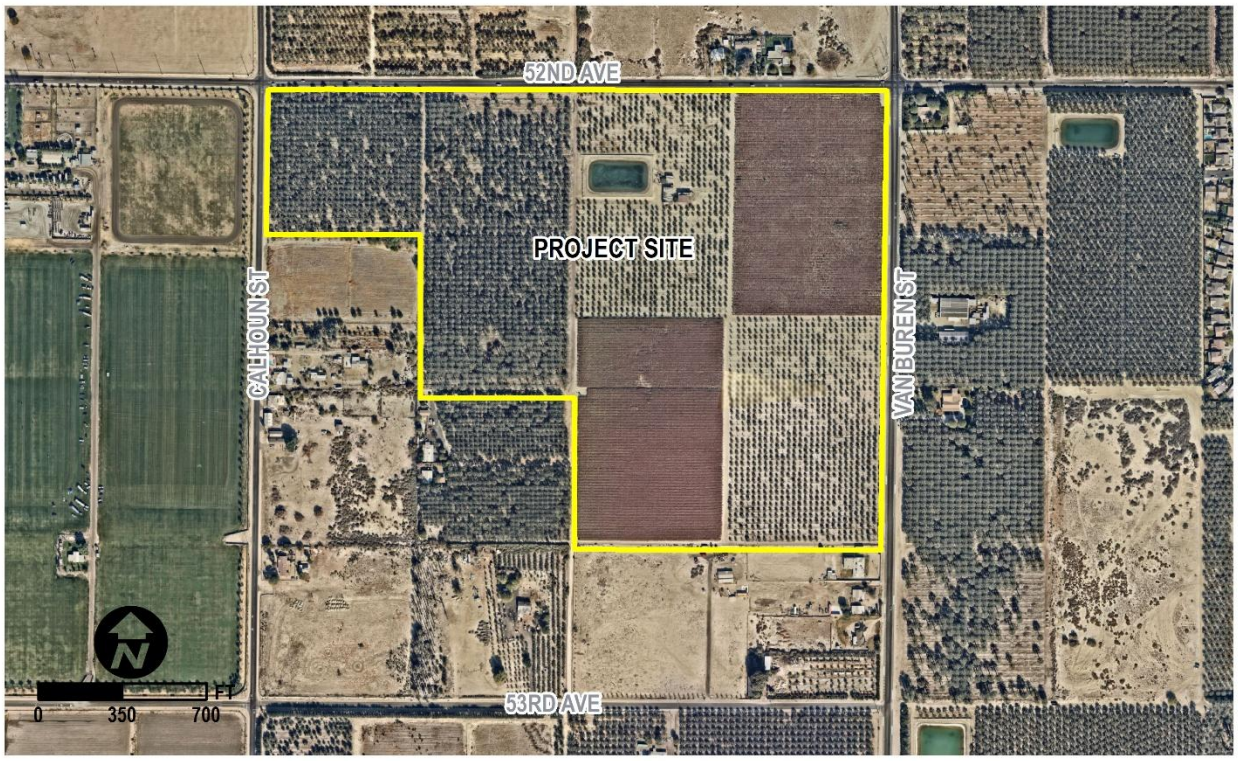
Standard Industrial Classification (SIC) Code(s):

- 7011: Hotels
- Not applicable to the residential development

Formation of Home Owners' Association (HOA)
or Property Owners Association (POA): Y ☒ N ☐

Additional Permits/Approvals required for the Project:

AGENCY	Permit required
State Department of Fish and Wildlife, Fish and Game Code §1602 Streambed Alteration Agreement	Y ☐ N☒
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Certification	Y ☐ N☒
US Army Corps of Engineers, CWA Section 404 permit	Y ☐ N☒
US Fish and Wildlife, Endangered Species Act Section 7 biological opinion	Y ☐ N☒
Statewide Construction General Permit Coverage	Y ☒ N☐
Statewide Industrial General Permit Coverage	Y ☐ N☒
Other: City of Coachella Grading Permit City of Coachella Building Permit	 Y ☒ N☐ Y ☒ N☐



- The project will not divert or obstruct the natural flow or change the bed, channel, or bank of any stream, river or lake. Therefore, a State Department of Fish and Game, 1601 Streambed Alteration Agreement is not required.
- The project will not result in discharge into navigable waters; therefore, a Clean Water Act Section 401 Water Quality Certification permit is not required.
- The project will not result in the discharge of dredged or fill materials into the waters of the United States, including wetlands. A Clean Water Act Section 404 Permit is not required for this project.
- The project site is not recognized as a habitat of an endangered species nor does it form part of a Conservation Area under the Coachella Valley Multiple Species Habitat Conservation Plan. A U.S. Fish and Wildlife, Endangered Species Act Section 7 biological opinion is not required for this project.
- The project is not industrial in nature. Therefore, coverage under the General Permit for Storm Water Discharges Associated with Industrial Activities is not required. This project will obtain coverage under the State Water Board NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities.

Existing Conditions and Proposed Development:

This Project-Specific Preliminary WQMP applies to the master-plan scope of COVA - Tentative Tract Map 39330. The site is located south of 52nd Avenue; east of Calhoun Street; and west of Van Buren Street in the City of Coachella, County of Riverside, California. The project site is characterized by agricultural uses and the presence of accessory structures. Other than maintained agricultural drainage and irrigation reservoir facilities, the site does include natural drainage courses, such as those associated with streams, rivers, or washes.

The scope of this project involves a master-planned destination resort and residential community with 162 residential dwelling units and 240-key condominium hotel units. Associated amenities include water recreation, well and fitness facilities, dining, and hospitality. The scope, content, and level of detail of this Preliminary WQMP is based on the master-plan development plans and preliminary engineering prepared for entitlement approvals. Future conditions of approval and engineering plans will be incorporated into the Final WQMP to provide additional design detail.

Figure 1 – Project Location and Existing Conditions

Proposed Storm Drain Improvements

Based on the preliminary grading and hydrology design, the project has a single hydrologic (tributary) area of 81.14 acres, encompassing the entire development. The Final WQMP will identify applicable delineation of sub-drainage management areas, as determined by final engineering and hydrology design. Stormwater runoff volume resulting from the controlling 100-year storm event will be conveyed southerly along surface and piped flows to the retention facility, where the available freeboard will adequately contain the flows.

The proposed method of stormwater retention will involve two designated irrigation ponds with approximately 5.0 to 5.5 feet of available freeboard in relation to the normal irrigation water

surface elevation. The provided freeboard has been sized to accommodate the full stormwater volume generated across the project site. Storm drain inlets connected to this retention facility may be equipped with screening methods to filter out potential trash, organic debris, and other solids. Alternatively, the storm drain outlets may also be configured to allow for adequate screening prior to discharge into the retention area. Such details and information will be provided in the Final WQMP based on final (precise) grading, hydrology, and associated improvement plans.

The drainage management area identification, acreages, primary land uses, impervious cover, VBMP quantities, retention basin sizes, retention basin design depths, basin dewatering times, and provided storage are summarized in Table A. Final quantities and design details will be provided in the Final WQMP, resulting from plan review and conditions of approval.

Table A - Summary of Drainage Management Areas and Retention Capacities

Drainage Area ID	Tributary Area (In Acres)	Impervious Area (In Acres)	WQMP V_{BMP} (In Cubic Feet)	Provided Retention Capacity (In Cubic Feet)	Method of Retention
Site	81.14	56.410 (70%)	57,660	447,365	Retention Pond Freeboard
Total	**81.14**	**56.410 (70%)**	**57,660**	**447,365**	See Above
Source: Preliminary Hydrology Report for COVA, TTM 39330					

As summarized in Table A and consistent with the preliminary hydrology report, each hydrologic drainage management area of the project will include a respective retention basin system capacity to retain the controlling stormwater volume to meet the City of Coachella's hydrologic requirements, while also accounting for the smaller V_{BMP} quantities. The provided retention capacity will ensure that the project does not result in a routine stormwater discharge into any off-site facility.

Location of Activities:

The project does not have a specific area where heightened activities would warrant additional site design, source control or treatment measures other than the proposed retention facilities for the respective drainage areas.

Waste Generation:

The proposed project is expected to generate a variety of solid waste according to land use and facility type. The project's waste will be collected and managed by Burrtec Waste Industries on a typical schedule.

Materials Storage and Delivery Areas:

The proposed project is expected to generate non-hazardous solid waste typical of most residential and resort land uses. The project's waste will be collected and managed by Burrtec Waste Industries on a typical schedule. Pollution prevention, waste reduction, and recycling practices will be implemented on-site. The Final WQMP will identify the final location, configuration and details of these facilities based on final engineering design.

Appendix A will include complete copy of the final Conditions of Approval.

Appendix B of this project-specific WQMP includes:

a. A Vicinity Map identifying the project site and surrounding planning areas in sufficient detail; and

b. A Site Plan for the project. The Site Plan included as part of Appendix B depicts the following project features:

- Location and identification of all structural BMPs, including Source Control, LID/Site Design and Treatment Control BMPs. **To be provided in Final WQMP based on final engineering design, as applicable.**
- Landscaped areas. **To be provided in Final WQMP based on final engineering design. Current preliminary hydrology calculations account for pervious cover.**
- Paved areas and intended uses (i.e., parking, outdoor work area, outdoor material storage area, sidewalks, patios, tennis courts, etc.). **To be provided in Final WQMP based on final engineering design, as applicable. Current preliminary hydrology calculations account for impervious/pervious cover.**
- Number and type of structures and intended uses (i.e., buildings, tenant spaces, dwelling units, community facilities such as pools, recreation facilities, tot lots, etc.).
- Infrastructure (i.e., streets, storm drains, etc.) that will revert to public agency ownership and operation.
- Location of existing and proposed public and private storm drainage facilities (i.e., storm drains, channels, basins, etc.), including catch basins and other inlets/outlet structures. Existing and proposed drainage facilities should be clearly differentiated. **To be provided in Final WQMP based on final engineering design, as applicable.**
- Location(s) of Receiving Waters to which the project directly or indirectly discharges.
- Location of points where onsite (or tributary offsite) flows exit the property/project site. **To be provided in Final WQMP based on final engineering design, as applicable.**
- Delineation of proposed drainage area boundaries, including tributary offsite areas, for each location where flows exit the project site and existing site (where existing site flows are required to be addressed). Each tributary area should be clearly denoted.
- Pre- and post-project topography.

Appendix I is a one-page form that summarizes pertinent information relative to this project-specific WQMP.

II. Site Characterization

Existing/Proposed General Plan: Regional Retail District

Existing/Proposed Zoning: Regional Commercial (R-C)

Current Property Use:	Agricultural
Proposed Property Use:	Residential and Hospitality
Availability of Soils Report:	Y ☒ N ☐
Phase 1 Site Assessment:	Y ☒ N ☐

Receiving Waters for Urban Runoff from Site

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use Designated Receiving Waters
Coachella Valley Stormwater Channel	Ammonia, DDT (Dichlorodiphenyltrichloroethane), Dieldrin, Disulfoton, Indicator Bacteria, Oxygen, Dissolved, PCBs (Polychlorinated biphenyls), Toxaphene, Toxicity	FRSH, REC I *c*, REC II *c*, WARM, WILD, RARE *d*	Approximately 2 miles

The preceding table is based on the **2020-2022 Integrated Report (Clean Water Act Section 303(d) List/305(b) Report.**

Abbreviations:
I – Intermittent Beneficial Use
FRSH – Freshwater Replenishment
REC I – Water Contact Recreation
REC II – Non-Contact Water Recreation
WARM – Warm Freshwater Habitat
WILD – Wildlife Habitat
RARE – Preservation of Rare, Threatened, or Endangered Species
MUN – Municipal & Domestic Supply
AGR – Agricultural Supply
GWR – Groundwater Recharge
AQUA – Acuaculture
COLD – Cold Freshwater Habitat
POW – Hydropower Generation

a. Although it is not encouraged, children play in the water infrequently on the wildlife reserve
b. Section of perennial flow from approximately Indio to the Salton Sea.
c. Unauthorized use.
d. Rare, endangered, or threatened wildlife exists in or utilizes some of this waterway.

III. Pollutants of Concern

Table 1. Pollutant of Concern Summary

Pollutant Category	Potential for Project	Causing Receiving Water Impairment
Bacteria/Virus (Pathogens)	Yes	Yes (Pathogens)
Heavy Metals	No	No
Nutrients	Yes	No
Toxic Organic Compounds	No	Yes
Sediment/Turbidity	Yes	No
Trash & Debris	Yes	No
Oil & Grease	Yes	No

Based on the 2020-2022 Integrated Report (Clean Water Act Section 303(d) List/305(b) Report, the Coachella Valley Stormwater Channel is impaired by **Ammonia, DDT (Dichlorodiphenyltrichloroethane), Dieldrin, Disulfoton, Indicator Bacteria, Oxygen, Dissolved, PCBs (Polychlorinated biphenyls), Toxaphene, Toxicity**

- The proposed new residential and hospitality development is not expected to be a source of DDT contamination because the use of this substance (synthetic organic compound) has been banned since 1972; therefore, it will not be handled or form part of the proposed development.
- The proposed new residential and hospitality development is not expected to be a source of Dieldrin contamination because the use of this substance (synthetic organic compound) was related to agricultural operations (found in pesticides for crops) and it has been illegal since 1987; therefore, it will not be handled or form part of the proposed development.
- The proposed new residential and hospitality development is not expected to be a source of polychlorinated biphenyls (PCBs) because manufacturing this substance (synthetic organic compound) stopped in 1977 and its application was banned in 1979; therefore, it will not be handled or form part of the proposed development.
- The proposed new residential and hospitality development is not expected to be a source of toxaphene because the use of this substance (synthetic organic compound) has been illegal since 1990; therefore, it will not be handled or form part of the proposed development.
- The proposed new residential and hospitality development is not expected to be a source of Nitrogen, ammonia (Total Ammonia).
- The project has the potential to generate small amounts of pathogens (bacteria/virus). These pollutants are generally associated with various human activities, but pathogens are also present in natural environments. Moreover, pathogens can be associated with wild and domesticated animal waste. Source control measures to address this potential pollutant are discussed in the subsequent sections of this report.
- The project is not expected to generate or discharge toxicants, such as toxic metals and synthetic organic compounds that would result in detrimental physiological responses in human, plant, animal, or indigenous aquatic life in the receiving waters.

Table 1 (*Potential Pollutants Generated by Land Use Type*) of the *Riverside County Whitewater River Region Stormwater Quality Best Management Practice Design Handbook for Low Impact Development* identifies eight (8) land use categories with their corresponding potential pollutants that may be generated.

Type of Development (Land Use)	Sediment/ Turbidity	Nutrients	Toxic Organic Compounds	Trash & Debris	Bacteria & Viruses (*Also: Pathogens*)	Oil & Grease	Heavy Metals
Detached Residential Development	P	P	N	P	P	P	N
Attached Residential Development	P	P	N	P	P	P(2)	N
Restaurants (Resort)	N	N	N	P	P	P	N
Parking Lots	P	P(1)	P(4)	P	P	P	P

Abbreviations:

P = Potential **N** = Not potential

Notes:

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected.
(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected.
(3) A potential Pollutant if land use involves food or animal waste products.
(4) Specifically, petroleum hydrocarbons.
(5) Specifically, solvents; however, this Pollutant is not expected at commercial office or commercial retail sites, unless said retail is vehicle related.
(6) A potential Pollutant if the project includes outdoor storage or metal roofs; otherwise not expected.

Pollutants of Concern: Based on the comparison of potential project pollutants with the pollutant categories causing receiving water impairments, the pollutants of concern include **bacteria/virus**. The project's proposed storm drain improvements are designed to intercept and retain the locally required stormwater volume. Therefore, the project will not produce runoff or pollutants that could affect off-site or downstream resources, such as the proximate receiving waters.

IV. Hydrologic Conditions of Concern

Local Jurisdiction Requires On-Site Retention of Urban Runoff:

Yes ☒ The project will be required to retain urban runoff onsite in conformance with local ordinance (See Table 6 of the WQMP Guidance document, "Local Land use Authorities Requiring Onsite Retention of Stormwater"). This section does not need to be completed; however, retention facility design details and sizing calculations must be included in Appendix F.

The project is obligated to meet the City of Coachella's hydrologic requirements by demonstrating that stormwater runoff from the developed condition can be adequately conveyed and retained on-site. In accordance with the hydrology report, the project's retention facilities have been sized to adequately contain the required stormwater volume for hydrology and water quality purposes for the on-site areas. Therefore, the project will not result in changes to the hydrologic regime that will permanently impact downstream channels, receiving waters, or habitat integrity. No Hydrologic Conditions of Concern are expected to result from the project.

No ☐ This section must be completed.

This Project meets the following condition:

☐ **Condition A**: 1) Runoff from the Project is discharged directly to a publicly-owned, operated and maintained MS4 or engineered and maintained channel, 2) the discharge is in full compliance with local land use authority requirements for connections and discharges to the MS4 (including both quality and quantity requirements), 3) the discharge would not significantly impact stream habitat in proximate Receiving Waters, **and** 4) the discharge is authorized by the local land use authority.

☐ **Condition B**: The project disturbs less than 1 acre and is not part of a larger common plan of development that exceeds 1 acre of disturbance. The disturbed area calculation must include all disturbances associated with larger plans of development.

☐ **Condition C**: The project's runoff flow rate, volume, velocity and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour and 10-year 24-hour rainfall events. This condition can be achieved by, where applicable, complying with the local land use authority's on-site retention ordinance, or minimizing impervious area on a site and incorporating other Site-Design BMP concepts and LID/Site Design BMPs that assure non-exceedance of pre-development conditions. This condition must be substantiated by hydrologic modeling methods acceptable to the local land use authority.

☐ **None:** Refer to Section 3.4 of the Whitewater River Region WQMP Guidance document for additional requirements.

Supporting engineering studies, calculations, and reports are included in Appendix C.

	2 year – 24 hour		10 year – 24 hour	
	Precondition	**Post-condition**	**Precondition**	**Post-condition**
Discharge (cfs)				
Velocity (fps)				
Volume (cubic feet)				
Duration (minutes)				

V. Best Management Practices

This project implements Best Management Practices (BMPs) to address the Pollutants of Concern that may potentially be generated from the use of the project site. These BMPs have been selected and implemented to comply with Section 3.5 of the WQMP Guidance document, and consist of Site Design BMP concepts, Source Control, LID/Site Design and, if/where necessary, Treatment Control BMPs as described herein.

V.1 Site Design BMP Concepts, LID/Site Design and Treatment Control BMPs

Local Jurisdiction Requires On-Site Retention of Urban Runoff:

Yes ☒ The project will be required to retain Urban Runoff onsite in conformance with local ordinance (See Table 6 of the WQMP Guidance document, "Local Land use Authorities Requiring Onsite Retention of Stormwater). **The LID/Site Design measurable goal has thus been met (100%), and Sections V.1.A and V.1.B do not need to be completed**; however, retention facility design details and sizing calculations must be included in Appendix F, and '100%' should be entered into Column 3 of Table 6 below.

The project is obligated to meet the City of Coachella's hydrologic requirements by demonstrating that stormwater runoff from the developed condition can be adequately conveyed and retained on-site. In accordance with the hydrology report, the project's retention facilities have been sized to adequately contain the required stormwater volume for hydrology and water quality purposes for the on-site areas. Therefore, the project will not result in changes to the hydrologic regime that will permanently impact downstream channels, receiving waters, or habitat integrity. No Hydrologic Conditions of Concern are expected to result from the project.

No ☐ Section V.1 must be completed.

This section of the Project-Specific WQMP documents the LID/Site Design BMPs and, if/where necessary, the Treatment Control BMPs that will be implemented on the project to meet the requirements detailed within Section 3.5.1 of the WQMP Guidance document. Section 3.5.1 includes requirements to implement Site Design Concepts and BMPs, and includes requirements to address Pollutants of Concern with BMPs. Further, sub-section 3.5.1.1 specifically requires that Pollutants of Concern be addressed with LID/Site Design BMPs to the extent feasible.

LID/Site Design BMPs are those BMPs listed within Table 2 below which promote retention and/or feature a natural treatment mechanism; off-site and regionally-based BMPs are also LID/Site Design BMPs, and therefore count towards the measurable goal, if they fit these criteria. This project incorporates LID/Site Design BMPs to fully address the Treatment Control BMP requirement where and to the extent feasible. If and where it has been acceptably demonstrated to the local land use authority that it is infeasible to fully meet this requirement with LID/Site Design BMPs, Section V.1.B (below) includes a description of the conventional Treatment Control BMPs that will be substituted to meet the same requirements. In addressing Pollutants of Concern, BMPs are selected using Table 2 below.

Table 2. BMP Selection Matrix Based Upon Pollutant of Concern Removal Efficiency (1)

(Sources: Riverside County Flood Control & Water Conservation District Design Handbook for Low Impact Development Best Management Practices, dated September 2011, the Orange County Technical Guidance Document for Water Quality Management Plans, dated May 19, 2011, and the Caltrans Treatment BMP Technology Report, dated April 2010 and April 2008)

Pollutant of Concern	Landscape Swale[2, 3]	Landscape Strip[2, 3]	Biofiltration (with underdrain)[2, 3]	Extended Detention Basin[2]	Sand Filter Basin[2]	Infiltration Basin[2]	Infiltration Trench[2]	Permeable Pavement[2]	Bioretention (w/o underdrain)[2, 3]	Other BMPs Including Proprietary BMPs[4, 6]

Nutrients	L/M	L/M	M	L/M	L/M	H	H	H	H	
Toxic Organic Compounds	M/H	M/H	M/H	L	L/M	H	H	H	H	
Trash & Debris	L	L	H	H	H	H	H	L	H	
Bacteria & Viruses (also: Pathogens)	L	M	H	L	M	H	H	H	H	
Oil & Grease	M	M	H	M	H	H	H	H	H	
Heavy Metals	M	M/H	M/H	L/M	M	H	H	H	H	

Abbreviations:

L: Low removal efficiency M: Medium removal efficiency H: High removal efficiency

Notes:

(1) Periodic performance assessment and updating of the guidance provided by this table may be necessary.

(2) Expected performance when designed in accordance with the most current edition of the document, "Riverside County, Whitewater River Region Stormwater Quality Best Management Practice Design Handbook".

(3) Performance dependent upon design which includes implementation of thick vegetative cover. Local water conservation and/or landscaping requirements should be considered; approval is based on the discretion of the local land use authority.

(4) Includes proprietary stormwater treatment devices as listed in the CASQA Stormwater Best Management Practices Handbooks, other stormwater treatment BMPs not specifically listed in this WQMP (including proprietary filters, hydrodynamic separators, inserts, etc.), or newly developed/emerging stormwater treatment technologies.

(5) Expected performance should be based on evaluation of unit processes provided by BMP and available testing data. Approval is based on the discretion of the local land use authority.

(6) When used for primary treatment as opposed to pre-treatment, requires site-specific approval by the local land use authority.

V.1.A Site Design BMP Concepts and LID/Site Design BMPs

Note: This section is not applicable Due to conformance with local retention ordinance per Section 3.5.1.2 of Whitewater River Region WQMP Guidance Document.

This section documents the Site Design BMP concepts and LID/Site Design BMPs that will be implemented on this project to comply with the requirements detailed in Section 3.5.1 of the WQMP Guidance document.

- Table 3 herein documents the implementation of the Site Design BMP Concepts described in sub-sections 3.5.1.3 and 3.5.1.4.
- Table 4 herein documents the extent to which this project has implemented the LID/Site Design goals described in sub-section 3.5.1.1.

Table 3. Implementation of Site Design BMP Concepts

Note: Completion of this sub-section is not required since the project retains urban runoff on-site in conformance with the local ordinances.

Design Concept	Technique	Specific BMP	Included			Brief Reason for BMPs Indicated as No or N/A
			Yes	No	N/A	
Site Design BMP Concept 1	**Minimize Urban Runoff, Minimize Impervious Footprint, and Conserve Natural Areas (See WQMP Section 3.5.1.3)**	Conserve natural areas by concentrating or clustering development on the least environmentally sensitive portions of a site while leaving the remaining land in a natural, undisturbed condition.	☐	☐	☒	The project is not located in an environmentally sensitive area.
		Conserve natural areas by incorporating the goals of the Multi-Species Habitat Conservation Plan or other natural resource plans.	☐	☐	☒	The project site is not located in an environmentally sensitive area of the Coachella Valley MSHCP.
		Preserve natural drainage features and natural depressional storage areas on the site.	☐	☐	☒	The project does not have naturally occurring storage areas.
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	☐	☐	☒	The project site doesn't have canopy coverage that can be preserved. The project's landscape design will follow local water efficiency and drought tolerant requirements.
		Use natural drainage systems.	☐	☒	☐	The site does not involve using any natural drainage systems.
		Where applicable, incorporate Self-Treating Areas	☐	☒	☐	Not proposed.
		Where applicable, incorporate Self-Retaining Areas	☒	☐	☐	Self-retaining areas will occur where applicable in the form of a retention facilities.
		Increase the building floor to area ratio (i.e., number of stories above or below ground).	☐	☐	☒	Lot coverage will follow the local development standards.
		Construct streets, sidewalks and parking lot aisles to minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised.	☐	☐	☒	Widths of sidewalks and streets are designed per City standards.
		Reduce widths of streets where off-street parking is available.	☐	☐	☒	Street widths will follow the local development standards.
		Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.	☒	☐	☐	Landscaping improvements are proposed to reduce impervious surfaces.
		Other comparable and equally effective Site Design BMP concept(s) as approved by the local land use authority (Note: Additional narrative required to describe BMP and how it addresses site design concept).	☐	☒	☐	No other Site Design BMP concepts are proposed.

Table 3. Site Design BMP Concepts (continued)

Note: Completion of this sub-section is not required since the project retains urban runoff on-site in conformance with the local ordinances.

Design Concept	Technique	Specific BMP	Included			Brief Reason for Each BMP Indicated as No or N/A
			Yes	No	N/A	
Site Design BMP Concept 2	**Minimize Directly Connected Impervious Area** **(See WQMP Section 3.5.1.4)**	Design residential and commercial sites to contain and infiltrate roof runoff, or direct roof runoff to landscaped swales or buffer areas.	☐	☐	☐	All roof runoff and other impervious runoff will be conveyed indirectly to the designated retention facilities.
		Drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.	☒	☐	☐	
		Incorporate landscaped buffer areas between sidewalks and streets.	☐	☒	☐	Not proposed in approved site plan.
		Use natural or landscaped drainage swales in lieu of underground piping or imperviously lined swales.	☐	☒	☐	The project will primarily rely on imperviously lined conveyances (piped and surface)
		Where soil conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration.	☐	☒	☐	Not proposed
		Maximize the permeable area by constructing walkways, trails, patios, overflow parking, alleys, driveways, low-traffic streets, and other low-traffic areas with open-jointed paving materials or permeable surfaces such as pervious concrete, porous asphalt, unit pavers, and granular materials.	☐	☒	☐	As designed, there are currently no proposed open-jointed paving materials or other permeable surfaces (except for landscaped areas and retention facilities) that would help maximize permeable areas.
		Use one or more of the following:				
		Rural swale system: street sheet flows to landscaped swale or gravel shoulder, curbs used at street corners, and culverts used under driveways and street crossings.	☐	☒	☐	This form of improvements is not proposed.
		Urban curb/swale system: street slopes to curb; periodic swale inlets drain to landscaped swale or biofilter.	☐	☒	☐	This form of improvements is not proposed.
		Dual drainage system: first flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder; high flows connect directly to MS4s.	☐	☒	☐	Storm runoff from the site will be conveyed to the on-site retention facilities.
		Other comparable and equally effective Site Design BMP concept(s) as approved by the local land use authority (Note: Additional narrative required to describe BMP and how it addresses site design concept).	☐	☐	☐	None are proposed.
		Use one or more of the following for design of driveways and private residential parking areas:				
		Design driveways with shared access, flared (single lane at street), or wheel strips (paving only under the tires).	☐	☒	☐	Not proposed.
		Uncovered temporary or guest parking on residential lots paved with a permeable surface, or designed to drain into landscaping.	☐	☒	☐	Not proposed

Table 3. Site Design BMP Concepts (continued)

Note: Completion of this sub-section is not required since the project retains urban runoff on-site in conformance with the local ordinances.

Design Concept	Technique	Specific BMP	Included: Yes	Included: No	Included: N/A	Brief Reason for Each BMP Indicated as No or N/A
Site Design BMP Concept 2 (cont'd)	**Minimize Directly Connected Impervious Area (See WQMP Section 3.5.1.4)**	Other comparable and equally effective Site Design BMP concept(s) as approved by the local land use authority (Note: Additional narrative required to describe BMP and how it addresses site design concept).	☐	☒	☐	Not proposed.
		Use one or more of the following for design of parking areas:				
		Where landscaping is proposed in parking areas, incorporate parking area landscaping into the drainage design.	☐	☐	☒	The entire project, including parking areas, will be incorporated into the drainage design.
		Overflow parking (parking stalls provided in excess of the Permittee's minimum parking requirements) may be constructed with permeable pavement.	☐	☒	☐	No additional comparable or equally effective BMPs are proposed under Site Design Concept 2. Landscaping improvements are proposed to help minimize directly connected impervious areas.
		Other comparable and equally effective Site Design BMP (or BMPs) as approved by the local land use authority (Note: Additional narrative required describing BMP and how it addresses site design concept).	☐	☒	☐	Not proposed.

Project Site Design BMP Concepts:

Note: This section is not applicable Due to conformance with local retention ordinance per Section 3.5.1.2 of Whitewater River Region WQMP Guidance Document.

Alternative Project Site Design BMP Concepts:

Not Applicable

Table 4. LID/Site Design BMPs Meeting the LID/Site Design Measurable Goal

(1) DRAINAGE SUB-AREA ID OR NO.	(2) LID/SITE DESIGN BMP TYPE* (See Table 2)	(3) POTENTIAL POLLUTANTS OF CONCERN WITHIN DRAINAGE SUB-AREA (Refer to Table 1)	(4) POTENTIAL POLLUTANTS WITHIN SUB-AREA CAUSING RECEIVING WATER IMPAIRMENTS (Refer to Table 1)	(5) EFFECTIVENESS OF LID/SITE DESIGN BMP AT ADDRESSING IDENTIFIED POTENTIAL POLLUTANTS (U, L, M, H/M, H; see Table 2)	(6) BMP MEETS WHICH DESIGN CRITERIA? (Identify as V_{BMP} OR Q_{BMP})	(7) TOTAL AREA WITHIN DRAINAGE SUB-AREA (Nearest 0.1 acre)
1A	Retention BMP	Bacteria/virus	Bacteria/virus	H	**VBMP = 57,660 CU-FT Provided Capacity: 447,365 CU-FT**	81.14 AC.
TOTAL PROJECT AREA TREATED WITH LID/SITE DESIGN BMPs (NEAREST 0.1 ACRE)						**81.14 AC.**

*** LID/Site Design BMPs listed in this table are those that completely address the 'Treatment Control BMP requirement' for their drainage sub-area.** ***Conformance with the local retention requirements will be satisfied by conveying project runoff into the proposed on-site retention facilities.***

Justification of infeasibility for sub-areas not addressed with LID/Site Design BMPs

Not applicable.

V.1.B TREATMENT CONTROL BMPS

Conventional Treatment Control BMPs shall be implemented to address the project's Pollutants of Concern as required in WQMP Section 3.5.1 where, and to the extent that, Section V.1.A has demonstrated that it is infeasible to meet these requirements through implementation of LID/Site Design BMPs.

☒ The LID/Site Design BMPs described in Section V.1.A of this project-specific WQMP completely address the 'Treatment Control BMP requirement' for the entire project site (and where applicable, entire existing site) as required in Section 3.5.1.1 of the WQMP Guidance document. Supporting documentation for the sizing of these LID/Site Design BMPs is included in Appendix F. ***Section V.1.B does not need to be completed**.

☐ The LID/Site Design BMPs described in Section V.1.A of this project-specific WQMP do **NOT** completely address the 'Treatment Control BMP requirement' for the entire project site (or where applicable, entire existing site) as required in Section 3.5.1.1 of the WQMP. ***Section V.1.B must be completed.**

The Treatment Control BMPs identified in this section are selected, sized and implemented to treat the design criteria of V_{BMP} and/or Q_{BMP} for all project (and if required, existing site) drainage sub-areas which were not fully addressed using LID/Site Design BMPs. Supporting documentation for the sizing of these Treatment Control BMPs is included in Appendix F.

Table 5: Treatment Control BMP Summary

(1) DRAINAGE SUB-AREA ID OR NO.	(2) TREATMENT CONTROL BMP TYPE* (See Table 2)	(3) POTENTIAL POLLUTANTS OF CONCERN WITHIN DRAINAGE SUB-AREA (Refer to Table 1)	(4) POTENTIAL POLLUTANTS WITHIN SUB-AREA CAUSING RECEIVING WATER IMPAIRMENTS (Refer to Table 1)	(5) EFFECTIVENESS OF TREATMENT CONTROL BMP AT ADDRESSING IDENTIFIED POTENTIAL POLLUTANTS (U, L, M, H/M, H; see Table 2)	(6) BMP MEETS WHICH DESIGN CRITERIA? (Identify as V_{BMP} OR Q_{BMP})	(7) TOTAL AREA WITHIN DRAINAGE SUB-AREA (Nearest 0.1 acre)
N/A	N/A	N/A	N/A	N/A	N/A	N/A
	TOTAL PROJECT AREA TREATED WITH TREATMENT CONTROL BMPs (NEAREST 0.1 ACRE)					N/A

Note: Conformance with the local retention requirements will be satisfied by conveying project runoff into the proposed on-site retention facilities.

V.1.C MEASURABLE GOAL SUMMARY

This section documents the extent to which this project has met the measurable goal described in WQMP Section 3.5.1.1 of addressing 100% of the project's 'Treatment Control BMP requirement' with LID/Site Design BMPs. Projects required to retain Urban Runoff onsite in conformance with local ordinance are considered to have met the measurable goal; for these instances, '100%' is entered into Column 3 of the Table.

Table 6: Measurable Goal Summary

(1) **Total Area Treated with LID/Site Design BMPs** **(Last row of Table 4)**	(2) **Total Area Treated with Treatment Control BMPs** **(Last row of Table 5)**	(3) **% of Treatment Control BMP Requirement addressed with LID/Site Design BMPs**
81.14	**N/A** *Due to conformance with local retention ordinance per Section 3.5.1.2 of Whitewater River Region WQMP Guidance Document.*	**100**

Note: Conformance with the local retention requirements will be satisfied by conveying project runoff into the proposed on-site retention facilities.

V.2 SOURCE CONTROL BMPS

This section identifies and describes the Source Control BMPs applicable and implemented on this project.

Table 7. Source Control BMPs

BMP Name	Check One		If not applicable, state brief reason
	Included	Not Applicable	
Non-Structural Source Control BMPs			
Education for Property Owners, Operators, Tenants, Occupants, or Employees	☒	☐	
Activity Restrictions	☒	☐	
Irrigation System and Landscape Maintenance	☒	☐	
Common Area Litter Control	☒	☐	
Street Sweeping Private Streets and Parking Lots	☒	☐

Fueling Areas	☐	☒	Not part of project.
Air/Water Supply Area Drainage	☐	☒	Not part of project.
Trash Storage Areas	☐	☒	Not part of project.
Loading Docks	☐	☒	Not part of project.
Maintenance Bays	☐	☒	Not part of project.
Vehicle and Equipment Wash Areas	☐	☒	Not part of project.
Outdoor Material Storage Areas	☐	☒	Not part of project.
Outdoor Work Areas or Processing Areas	☐	☒	Not part of project.
Provide Wash Water Controls for Food Preparation Areas	☐	☒	Not part of project.

*Details demonstrating proper design must be included in Appendix F.

Non-Structural Source Control BMPs

Education Program:

Residents and maintenance staff should be informed on topics related to stormwater pollution and prevention through various means, which can include the distribution of printed materials or public posting of rules or activity restrictions. Staff may also be referred to the education materials in Appendix D of this WQMP or to the Riverside County Watershed Protection web site at the following link:

https://www.rcwatershed.org/

Activity Restrictions:

Activity restrictions should prohibit littering, dumping of waste or non-stormwater discharge into storm drain system, hosing of debris or non-stormwater materials into storm drain system, or causing nuisance non-stormwater flows into storm drain system. Improper handling of categorized hazardous materials is often prohibited under federal law. Additional activity restrictions may be established in the CC&Rs for the residential communities to be provided in the Final WQMP.

Irrigation System and Landscape Maintenance:

The irrigation and landscape maintenance will help increase the effectiveness of these systems and minimize the amount of runoff that enters the storm drain system. Erosion and the conveyance of pesticides/fertilizers in runoff should also be prevented through proper routine maintenance. Routine irrigation system and landscape maintenance will also serve as a vector control measure due to the minimization of nuisance water runoff and stagnation.

Common Area Litter Control:

Common area litter control should be implemented to reduce pollution in runoff. Routine monitoring should be performed in the landscaped areas, trash receptacles, in common areas, and along the project edges. Any observed accumulated trash, vegetation debris or improper disposal should be addressed promptly by the designated staff. Common area litter control measures can be coordinated and improved by the landscaping maintenance is currently taking place on-site. No trash should be allowed to be stored at the base of the containers. Pick-up intervals should be determined so that the containers are not overfilled. Additional information to be provided in the Final WQMP.

Paved Area Sweeping and Cleaning:

Paved area sweeping and/or cleaning is recommended on-site to prevent sediment, litter and other debris from being washed by runoff into the on-site storm drain system and facilities. Paved area sweeping should be performed during dry weather if possible and the frequency should be flexible to accommodate climate conditions and areas of concern. All collected debris should be transported to an appropriate disposal facility. Additional information to be provided in the Final WQMP.

Structural Source Control BMPs

The project will incorporate measures to discourage illegal dumping in the proposed private storm drain system.

- MS4 Stenciling:

At each storm drain inlet, a stencil or fixed sign (including medallions) should contain a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. The legibility of markers and signs should be maintained throughout the life of the project.

- Rules and Regulations:

  The residential management should establish and implement rules that prohibit improper non-stormwater discharge into the storm drain system. This measure may also be considered non-structural and form part of the activity restrictions associated with the site's standard operating procedures.

Landscape and Irrigation System Design:

The site's structural source control BMP involves an efficient landscape irrigation design consistent with the local ordinances. The system will include native or drought-tolerant plants and mechanisms to minimize excess irrigation and nuisance water into the stormwater conveyance system while working to reduce soil amendments and irrigation frequency. The system should also minimize the conveyance of landscape related chemicals, including pesticides. Additional information to be provided in the Final WQMP.

Trash Receptacles in Common Areas:

Trash containers shall be leak proof and have attached covers or lids.

Storm Drain System Facilities:

Catch basins and storm drainage facilities on-site should be inspected, cleaned, and maintained routinely. Maintenance staff should take prompt action to correct or repair malfunctioning facilities.

Protection of Slopes and Channels:

Landscaping improvements will help stabilize the proposed landscaped areas and prevent erosion. These areas will be subject to routine maintenance to address potential instances of soil erosion. Basin slopes should be visually inspected on a quarterly basis and after major rainfall events. Physical obstructions caused by vegetation debris or littering should be cleared to ensure that the slopes continue to function as designed. Any material collected (e.g. landscape debris or trash) should be properly handled and disposed of. Additional information to be provided in the Final WQMP.

Building and Grounds Maintenance (CASQA SC-41): (Property management/operator)

A series of maintenance practices can be implemented to prevent or reduce the discharge of potential pollutants into the storm drain system resulting from building and grounds maintenance activities. The BMP implementation will be achieved with the following guidelines under SC-41: washing and cleaning up with as little water as possible; following good landscape management practices; preventing and cleaning up spills immediately; keeping debris from entering the storm drains; and properly maintaining the stormwater collection system. Additional information to be provided in the Final WQMP.

Appendix D includes copies of the educational materials (described in Section 3.5.2.1 of the WQMP Guidance document) that will be used in implementing this project-specific WQMP.

V.3 EQUIVALENT TREATMENT CONTROL BMP ALTERNATIVES

Not applicable.

V.4 REGIONALLY-BASED BMPS

Not Applicable

VI. Operation and Maintenance Responsibility for BMPs

Appendix G of this project-specific WQMP includes copies of CC&Rs, Covenant and Agreements, BMP Maintenance Agreement and/or other mechanisms used to ensure the ongoing operation, maintenance, funding, transfer and implementation of the project-specific WQMP requirements.

TABLE 8 -OPERATIONS AND MAINTENANCE

BMP Requiring Maintenance	Party Responsibility	Recommended Inspection and Maintenance Frequency	Recommended Self-Inspection and Record Keeping	Implementation Period	Recommended O & M Activities and Process
Landscaped Areas	Property Owner, Operator, Hired Management, Home Owner's Association	At least twice monthly or according to a maintenance schedule.	Quarterly summaries of inspection and maintenance activities should be appended to the WQMP.	Post-Construction	(See following page for
Irrigation System	Property Owner, Operator, Hired Management, Home Owner's Association	At least twice monthly or according to a maintenance schedule.		Post-Construction	(See following page)
Trash Receptacles and Common Area Litter Control	Property Owner, Operator, Hired Management, Home Owner's Association	Based on trash pick-up intervals and according to a maintenance schedule.		Post-Construction	(See following page)
Paved Area Sweeping	Property Owner, Operator, Hired Management, Home Owner's Association	Based on HOA Maintenance Schedule to be Determined		Post-Construction	(See following page)
Storm Drain System	Property Owner, Operator, Hired Management, Home Owner's Association	Quarterly and after storm events or according to a maintenance schedule		Post-Construction	(See following page)
Retention Facilities	Property Owner, Operator, Hired Management, Home Owner's Association	Quarterly and after storm events or according to an established maintenance schedule		Post-Construction	(See following page)

*Note: "Storm events" refer to precipitation events producing 0.5 inches of rain or greater within a 48-hour period. The occurrence of these events may be confirmed against the local rain event summaries published in the National Weather Service or National Oceanic and Atmospheric Administration web site (www.noaa.gov). The recommended inspection, maintenance, and recordkeeping practices in this WQMP may be addressed by a formal schedule, operations manual, and other standard operating procedures which may be developed for this site.

Note: The following maintenance recommendations, including the responsible parties, inspection intervals, and maintenance intervals, are not intended to be exhaustive in nature and should not serve as the sole source of on-site operating procedures. Where applicable, refer to the equipment manufacturer's recommendations, other relevant maintenance recommendations, and the *Declaration of Covenants,*

Conditions and Restrictions, Reservation of Easements that apply to this site. Additional information to be provided in the Final WQMP.

Description of Maintenance Requirements:

Landscaped Areas: All trimming, pruning, and removal of fallen organic material from plants, shrubs, and trees should be collected per an established landscape maintenance plan for proper disposal in green waste collection facilities. Mechanical equipment or associated materials temporarily staged during maintenance activities should be placed away from storm water drainage facilities, including inlets and conveyances. Where applicable, collected waste resulting from the maintenance activities should be promptly transported to the designated disposal containers or locations. In conjunction with the routine activities, maintenance staff should visually inspect for indicators of improper watering levels so that adequate adjustments can be made.

Irrigation Systems: Water conservation practices should be upheld at all times per the approved irrigation plans and established practices. Monitoring of the irrigation system should be performed as necessary to ensure that appropriate watering levels are maintained and to verify that no piping or irrigation heads are leaking. Any debris, sediment, mineral and grit deposits should be removed from the irrigation system at regular intervals to provide consistent watering levels. The irrigation and landscape maintenance will help increase the effectiveness of these systems and minimize the amount of runoff that enters the storm drain system. Erosion and the conveyance of pesticides/fertilizers in runoff will also be reduced through routine maintenance.

Trash Management and Common Area Litter Control: Common area litter control should be implemented to reduce pollution in runoff. Routine monitoring should be performed in the landscaped areas, trash receptacles, in common areas, and along the project edges. Any observed accumulated trash, vegetation debris or improper disposal should be addressed promptly by the designated staff. Common area litter control measures can be coordinated and improved by the landscaping maintenance is currently taking place on-site. No trash should be allowed to be stored at the base of the containers. Pick-up intervals should be determined so that the containers are not overfilled.

Storm Drain System: Storm water conveyance systems, including inlets, swales, outlets, cleanouts, manholes and pipelines within the project should be inspected quarterly and after each major storm event or according to a maintenance schedule. All parts of the system should be periodically cleaned to ensure that the system works properly during any storm event. Any waste collected from the cleaning activities should be collected and handled for proper disposal.

Paved Area Sweeping and Cleaning

Paved area sweeping is recommended to prevent sediment, litter and other debris from being washed by runoff into the on-site storm drain system. Paved area sweeping should be performed during dry weather if possible and the frequency should be flexible to accommodate climate conditions and areas of concern. Street sweeping equipment must be operated only by trained personnel based on the manufacturer's specifications. Street sweeping equipment should be properly maintained off-site by the operator. Debris should be collected for proper handling and disposal.

Retention Facilities: WQMP Operation and maintenance should consider and prioritize the maintenance procedures established for the proper operation of the irrigation pond. Irrigation pond maintenance may supersede the general operation and maintenance guidelines provided herein.

Retention facilities should be visually inspected on a quarterly basis or according to a landscaping maintenance schedule. Physical obstructions caused by vegetation debris or littering should be promptly cleared to ensure that the facility continues to function as designed. Any material collected (e.g. landscape debris or trash) should be properly handled and disposed of. Retention facility outlets must be inspected for signs of erosion or obstruction.

Before annual storm seasons and following rainfall events producing precipitation of 0.5 inches or more:

- Maintain landscaping and irrigation system as needed.
- Remove debris and litter from the entire irrigation pond and retention freeboard to minimize clogging and improve aesthetics.
- Inspect for obvious problems and repair as needed. Address odor, insects, and overgrowth issues.
- Check for erosion and sediment laden areas in the basin shoreline. Repair as needed.
- Re-stabilize the basin slopes as needed.

Perform the following inspection procedures within 72 hours after a rainfall event producing precipitation of 0.5 inches or greater:

- Examine the tributary inlet for blockage, the embankment and spillway integrity, as well as damage to any structural element.
- Check for erosion, slumping and overgrowth. Repair as needed.
- Check basin depth for sediment build up and reduced total capacity.
- No algae formation should be visible.

Record Keeping: A copy of this project-specific WQMP should be maintained on-site or remotely by the project owner or operator (Home Owner's Association). Records of maintenance shall be appended to this WQMP.

VII. Funding

The funding source for operation and maintenance of each BMP identified in the Project Specific Water Quality Management Plan shall be the responsibility Relevant Coachella Owner, LLC. The owner recognizes that a source of funding is required to support the on-going operation and maintenance of BMPs, and that funding will continue for the life of the project.

By certifying the final project specific WQMP, the Project applicant is certifying that the funding responsibilities have been addressed and will be transferred to future owners. One example of how to adhere to the requirement to transfer operation and maintenance responsibilities is to record the project specific WQMP against the title to the property.

Safer Alternative Products SC-35

Description

Promote the use of less harmful products and products that contain little or no TMDL pollutants. Alternatives exist for most product classes including chemical fertilizers, pesticides, cleaning solutions, janitorial chemicals, automotive and paint products, and consumables (batteries, fluorescent lamps).

Approach

Pattern a new program after the many established programs around the state and country. Integrate this best management practice as much as possible with existing programs at your facility.

Develop a comprehensive program based on:

- The "Precautionary Principle," which is an alternative to the "Risk Assessment" model that says it's acceptable to use a potentially harmful product until physical evidence of its harmful effects are established and deemed too costly from an environmental or public health perspective. For instance, a risk assessment approach might say it's acceptable to use a pesticide until there is direct proof of an environmental impact. The Precautionary Principle approach is used to evaluate whether a given product is safe, whether it is really necessary, and whether alternative products would perform just as well.
- Environmentally Preferable Purchasing Program to minimize the purchase of products containing hazardous ingredients used in the facility's custodial services, fleet maintenance, and facility maintenance in favor of using alternate products that pose less risk to employees and to the environment.
- Integrated Pest Management (IPM) or Less-Toxic Pesticide Program, which uses a pest management approach that minimizes the use of toxic chemicals and gets rid of pests by methods that pose a lower risk to employees, the public, and the environment.
- Energy Efficiency Program including no-cost and low-cost energy conservation and efficiency actions that can reduce both energy consumption and electricity bills, along with long-term energy efficiency investments.

Consider the following mechanisms for developing and implementing a comprehensive program:

- Policies

Objectives

- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	
Nutrients	✓
Trash	
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

CASQA California Stormwater Quality Association

SC-35 Safer Alternative Products

- Procedures
  - Standard operating procedures (SOPs)
  - Purchasing guidelines and procedures
  - Bid packages (services and supplies)
- Materials
  - Preferred or approved product and supplier lists
  - Product and supplier evaluation criteria
  - Training sessions and manuals
  - Fact sheets for employees

Implement this BMP in conjunction with the Vehicle and Equipment Management fact sheets (SC20 – SC22) and SC41, Building and Grounds Maintenance.

Training

- Employees who handle potentially harmful materials in the use of safer alternatives.
- Purchasing departments should be encouraged to procure less hazardous materials and products that contain little or no harmful substances or TMDL pollutants.

Regulations

This BMP has no regulatory requirements. Existing regulations already encourage facilities to reduce the use of hazardous materials through incentives such as reduced:

- Specialized equipment storage and handling requirements,
- Storm water runoff sampling requirements,
- Training and licensing requirements, and
- Record keeping and reporting requirements.

Equipment

- There are no major equipment requirements to this BMP.

Limitations

- Alternative products may not be available, suitable, or effective in every case.

Requirements

Cost Considerations

- The primary cost is for staff time to: 1) develop new policies and procedures and 2) educate purchasing departments and employees who handle potentially harmful materials about the availability, procurement, and use of safer alternatives.

Safer Alternative Products SC-35

- Some alternative products may be slightly more expensive than conventional products.

Supplemental Information

Employees and contractors / service providers can both be educated about safer alternatives by using information developed by a number of organizations including the references and resources listed below.

The following discussion provides some general information on safer alternatives. More specific information on particular hazardous materials and the available alternatives may be found in the references and resources listed below.

- Automotive products – Less toxic alternatives are not available for many automotive products, especially engine fluids. But there are alternatives to grease lubricants, car polishes, degreasers, and windshield washer solution. Rerefined motor oil is also available.
- Vehicle/Trailer lubrication – Fifth wheel bearings on trucks require routine lubrication. Adhesive lubricants are available to replace typical chassis grease.
- Cleaners – Vegetables-based or citrus-based soaps are available to replace petroleum-based soaps/detergents.
- Paint products – Water-based paints, wood preservatives, stains, and finishes are available.
- Pesticides – Specific alternative products or methods exist to control most insects, fungi, and weeds.
- Chemical Fertilizers – Compost and soil amendments are natural alternatives.
- Consumables – Manufacturers have either reduced or are in the process of reducing the amount of heavy metals in consumables such as batteries and fluorescent lamps. All fluorescent lamps contain mercury, however low-mercury containing lamps are now available from most hardware and lighting stores. Fluorescent lamps are also more energy efficient than the average incandescent lamp.
- Janitorial chemicals – Even biodegradable soap can harm fish and wildlife before it biodegrades. Biodegradable does not mean non-toxic. Safer products and procedures are available for floor stripping and cleaning, as well as carpet, glass, metal, and restroom cleaning and disinfecting.

Examples

There are a number of business and trade associations, and communities with effective programs. Some of the more prominent are listed below in the references and resources section.

References and Resources

Note: Many of these references provide alternative products for materials that typically are used inside and disposed to the sanitary sewer as well as alternatives to products that usually end up in the storm drain.

Building & Grounds Maintenance SC-41

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Switch to non-toxic chemicals for maintenance to the maximum extent possible.
- ☐ Choose cleaning agents that can be recycled.
- ☐ Encourage proper lawn management and landscaping, including use of native vegetation.
- ☐ Encourage use of Integrated Pest Management techniques for pest control.
- ☐ Encourage proper onsite recycling of yard trimmings.
- ☐ Recycle residual paints, solvents, lumber, and other material as much as possible.

Objectives
■ *Cover*

Building & Grounds Maintenance SC-41

- Clean work areas at the end of each work shift using dry cleaning methods such as sweeping and vacuuming.

Good Housekeeping

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.

- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.

- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.

- Use mulch or other erosion control measures on exposed soils. See also SC-40, Contaminated and Erodible Areas, for more information.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.

- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.

- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and

Building & Grounds Maintenance SC-41

solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Building & Grounds Maintenance SC-41

Spill Response and Prevention Procedures

- ☐ Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- ☐ Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- ☐ Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- ☐ Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- ☐ Clean up spills immediately.

Material Handling and Waste Management

- ☐ Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- ☐ Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- ☐ Dispose of empty pesticide containers according to the instructions on the container label.
- ☐ Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- ☐ Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Employee Training Program

- ☐ Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- ☐ Train employees and contractors in proper techniques for spill containment and cleanup.
- ☐ Be sure the frequency of training takes into account the complexity of the operations and the needs of individual staff.

Quality Assurance and Record Keeping

- ☐ Keep accurate logs that document maintenance activities performed and minimum BMP measures implemented.
- ☐ Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- ☐ Establish procedures to complete logs and file them in the central office.

Building & Grounds Maintenance SC-41

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Additional capital costs are not anticipated for building and grounds maintenance. Implementation of the minimum BMPs described above should be conducted as part of regular site operations.

Maintenance

- Maintenance activities for the BMPs described above will be minimal, and no additional cost is anticipated.

Supplemental Information

Fire Sprinkler Line Flushing

Site fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Road and Street Maintenance SC-70

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	
Trash	☑
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Description

Streets, roads, and highways are significant sources of pollutants in stormwater discharges, and operation and maintenance (O&M) practices, if not conducted properly, can contribute to the problem. Stormwater pollution from roadway and bridge maintenance should be addressed on a site-specific basis. Use of the procedures outlined below, that address street sweeping and repair, bridge and structure maintenance, and unpaved roads will reduce pollutants in stormwater.

Approach

Pollution Prevention

- Use the least toxic materials available (e.g. water based paints, gels or sprays for graffiti removal)
- Recycle paint and other materials whenever possible.
- Enlist the help of citizens to keep yard waste, used oil, and other wastes out of the gutter.

Suggested Protocols

Street Sweeping and Cleaning

- Maintain a consistent sweeping schedule. Provide minimum monthly sweeping of curbed streets.
- Perform street cleaning during dry weather if possible.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SC-70 Road and Street Maintenance

- Avoid wet cleaning or flushing of street, and utilize dry methods where possible.
- Consider increasing sweeping frequency based on factors such as traffic volume, land use, field observations of sediment and trash accumulation, proximity to water courses, etc. For example:
  - Increase the sweeping frequency for streets with high pollutant loadings, especially in high traffic and industrial areas.
  - Increase the sweeping frequency just before the wet season to remove sediments accumulated during the summer.
  - Increase the sweeping frequency for streets in special problem areas such as special events, high litter or erosion zones.
- Maintain cleaning equipment in good working condition and purchase replacement equipment as needed. Old sweepers should be replaced with new technologically advanced sweepers (preferably regenerative air sweepers) that maximize pollutant removal.
- Operate sweepers at manufacturer requested optimal speed levels to increase effectiveness.
- To increase sweeping effectiveness consider the following:
  - Institute a parking policy to restrict parking in problematic areas during periods of street sweeping.
  - Post permanent street sweeping signs in problematic areas; use temporary signs if installation of permanent signs is not possible.
  - Develop and distribute flyers notifying residents of street sweeping schedules.
- Regularly inspect vehicles and equipment for leaks, and repair immediately.
- If available use vacuum or regenerative air sweepers in the high sediment and trash areas (typically industrial/commercial).
- Keep accurate logs of the number of curb-miles swept and the amount of waste collected.
- Dispose of street sweeping debris and dirt at a landfill.
- Do not store swept material along the side of the street or near a storm drain inlet.
- Keep debris storage to a minimum during the wet season or make sure debris piles are contained (e.g. by berming the area) or covered (e.g. with tarps or permanent covers).

Street Repair and Maintenance

Pavement marking

- Schedule pavement marking activities for dry weather.

- Develop paint handling procedures for proper use, storage, and disposal of paints.
- Transfer and load paint and hot thermoplastic away from storm drain inlets.
- Provide drop cloths and drip pans in paint mixing areas.
- Properly maintain application equipment.
- Street sweep thermoplastic grindings. Yellow thermoplastic grindings may require special handling as they may contain lead.
- Paints containing lead or tributyltin are considered a hazardous waste and must be disposed of properly.
- Use water based paints whenever possible. If using water based paints, clean the application equipment in a sink that is connected to the sanitary sewer.
- Properly store leftover paints if they are to be kept for the next job, or dispose of properly.

Concrete installation and repair

- Schedule asphalt and concrete activities for dry weather.
- Take measures to protect any nearby storm drain inlets and adjacent watercourses, prior to breaking up asphalt or concrete (e.g. place san bags around inlets or work areas).
- Limit the amount of fresh concrete or cement mortar mixed, mix only what is needed for the job.
- Store concrete materials under cover, away from drainage areas. Secure bags of cement after they are open. Be sure to keep wind-blown cement powder away from streets, gutters, storm drains, rainfall, and runoff.
- Return leftover materials to the transit mixer. Dispose of small amounts of hardened excess concrete, grout, and mortar in the trash.
- Do not wash sweepings from exposed aggregate concrete into the street or storm drain. Collect and return sweepings to aggregate base stockpile, or dispose in the trash.
- When making saw cuts in pavement, use as little water as possible and perform during dry weather. Cover each storm drain inlet completely with filter fabric or plastic during the sawing operation and contain the slurry by placing straw bales, sandbags, or gravel dams around the inlets. After the liquid drains or evaporates, shovel or vacuum the slurry residue from the pavement or gutter and remove from site. Alternatively, a small onsite vacuum may be used to pick up the slurry as this will prohibit slurry from reaching storm drain inlets.
- Wash concrete trucks off site or in designated areas on site designed to preclude discharge of wash water to drainage system.

SC-70 Road and Street Maintenance

Patching, resurfacing, and surface sealing

- Schedule patching, resurfacing and surface sealing for dry weather.
- Stockpile materials away from streets, gutter areas, storm drain inlets or watercourses. During wet weather, cover stockpiles with plastic tarps or berm around them if necessary to prevent transport of materials in runoff.
- Pre-heat, transfer or load hot bituminous material away from drainage systems or watercourses.
- Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and maintenance holes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from covered maintenance holes and storm drain inlets when the job is complete.
- Prevent excess material from exposed aggregate concrete or similar treatments from entering streets or storm drain inlets. Designate an area for clean up and proper disposal of excess materials.
- Use only as much water as necessary for dust control, to avoid runoff.
- Sweep, never hose down streets to clean up tracked dirt. Use a street sweeper or vacuum truck. Do not dump vacuumed liquid in storm drains.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

Equipment cleaning maintenance and storage

- Inspect equipment daily and repair any leaks. Place drip pans or absorbent materials under heavy equipment when not in use.
- Perform major equipment repairs at the corporation yard, when practical.
- If refueling or repairing vehicles and equipment must be done onsite, use a location away from storm drain inlets and watercourses.
- Clean equipment including sprayers, sprayer paint supply lines, patch and paving equipment, and mud jacking equipment at the end of each day. Clean in a sink or other area (e.g. vehicle wash area) that is connected to the sanitary sewer.

Bridge and Structure Maintenance

Paint and Paint Removal

- Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.
- Do not transfer or load paint near storm drain inlets or watercourses.

- Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint container.
- Plug nearby storm drain inlets prior to starting painting where there is significant risk of a spill reaching storm drains. Remove plugs when job is completed.
- If sand blasting is used to remove paint, cover nearby storm drain inlets prior to starting work.
- Perform work on a maintenance traveler or platform, or use suspended netting or tarps to capture paint, rust, paint removing agents, or other materials, to prevent discharge of materials to surface waters if the bridge crosses a watercourse. If sanding, use a sander with a vacuum filter bag.
- Capture all clean-up water, and dispose of properly.
- Recycle paint when possible (e.g. paint may be used for graffiti removal activities). Dispose of unused paint at an appropriate household hazardous waste facility.

Graffiti Removal

- Schedule graffiti removal activities for dry weather.
- Protect nearby storm drain inlets prior to removing graffiti from walls, signs, sidewalks, or other structures needing graffiti abatement. Clean up afterwards by sweeping or vacuuming thoroughly, and/or by using absorbent and properly disposing of the absorbent.
- When graffiti is removed by painting over, implement the procedures under Painting and Paint Removal above.
- Direct runoff from sand blasting and high pressure washing (with no cleaning agents) into a landscaped or dirt area. If such an area is not available, filter runoff through an appropriate filtering device (e.g. filter fabric) to keep sand, particles, and debris out of storm drains.
- If a graffiti abatement method generates wash water containing a cleaning compound (such as high pressure washing with a cleaning compound), plug nearby storm drains and vacuum/pump wash water to the sanitary sewer.
- Consider using a waterless and non-toxic chemical cleaning method for graffiti removal (e.g. gels or spray compounds).

Repair Work

- Prevent concrete, steel, wood, metal parts, tools, or other work materials from entering storm drains or watercourses.
- Thoroughly clean up the job site when the repair work is completed.
- When cleaning guardrails or fences follow the appropriate surface cleaning methods (depending on the type of surface) outlined in SC-71 Plaza & Sidewalk Cleaning fact sheet.

SC-70 Road and Street Maintenance

- If painting is conducted, follow the painting and paint removal procedures above.
- If graffiti removal is conducted, follow the graffiti removal procedures above.
- If construction takes place, see the Construction Activity BMP Handbook.
- Recycle materials whenever possible.

Unpaved Roads and Trails

- Stabilize exposed soil areas to prevent soil from eroding during rain events. This is particularly important on steep slopes.
- For roadside areas with exposed soils, the most cost-effective choice is to vegetate the area, preferably with a mulch or binder that will hold the soils in place while the vegetation is establishing. Native vegetation should be used if possible.
- If vegetation cannot be established immediately, apply temporary erosion control mats/blankets; a comma straw, or gravel as appropriate.
- If sediment is already eroded and mobilized in roadside areas, temporary controls should be installed. These may include: sediment control fences, fabric-covered triangular dikes, gravel-filled burlap bags, biobags, or hay bales staked in place.

Non-Stormwater Discharges

Field crews should be aware of non-stormwater discharges as part of their ongoing street maintenance efforts.

- Refer to SC-10 Non-Stormwater Discharges
- Identify location, time and estimated quantity of discharges.
- Notify appropriate personnel.

Training

- Train employees regarding proper street sweeping operation and street repair and maintenance.
- Instruct employees and subcontractors to ensure that measures to reduce the stormwater impacts of roadway/bridge maintenance are being followed.
- Require engineering staff and/or consulting A/E firms to address stormwater quality in new bridge designs or existing bridge retrofits.
- Use a training log or similar method to document training.
- Train employees on proper spill containment and clean up, and in identifying non-stormwater discharges.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Keep your Spill Prevention Control and countermeasure (SPCC) plan up-to-date, and implement accordingly.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Densely populated areas or heavily used streets may require parking regulations to clear streets for cleaning.
- No currently available conventional sweeper is effective at removing oil and grease. Mechanical sweepers are not effective at removing finer sediments.
- Limitations may arise in the location of new bridges. The availability and cost of land and other economic and political factors may dictate where the placement of a new bridge will occur. Better design of the bridge to control runoff is required if it is being placed near sensitive waters.

Requirements

Costs

- The maintenance of local roads and bridges is already a consideration of most community public works or transportation departments. Therefore, the cost of pollutant reducing management practices will involve the training and equipment required to implement these new practices.
- The largest expenditures for street sweeping programs are in staffing and equipment. The capital cost for a conventional street sweeper is between $60,000 and $120,000. Newer technologies might have prices approaching $180,000. The average useful life of a conventional sweeper is about four years, and programs must budget for equipment replacement. Sweeping frequencies will determine equipment life, so programs that sweep more often should expect to have a higher cost of replacement.
- A street sweeping program may require the following.
  - Sweeper operators, maintenance, supervisory, and administrative personnel are required.
  - Traffic control officers may be required to enforce parking restrictions.
  - Skillful design of cleaning routes is required for program to be productive.
  - Arrangements must be made for disposal of collected wastes.

SC-70 Road and Street Maintenance

- If investing in newer technologies, training for operators must be included in operation and maintenance budgets. Costs for public education are small, and mostly deal with the need to obey parking restrictions and litter control. Parking tickets are an effective reminder to obey parking rules, as well as being a source of revenue.

Maintenance

- Not applicable

Supplemental Information

Further Detail of the BMP

Street sweeping

There are advantages and disadvantages to the two common types of sweepers. The best choice depends on your specific conditions. Many communities find it useful to have a compliment of both types in their fleet.

Mechanical Broom Sweepers - More effective at picking up large debris and cleaning wet streets. Less costly to purchase and operate. Create more airborne dust.

Vacuum Sweepers - More effective at removing fine particles and associated heavy metals. Ineffective at cleaning wet streets. Noisier than mechanical broom sweepers which may restrict areas or times of operation. May require an advance vehicle to remove large debris.

Street Flushers - Not affected by biggest interference to cleaning, parked cars. May remove finer sediments, moving them toward the gutter and stormwater inlets. For this reason, flushing fell out of favor and is now used primarily after sweeping. Flushing may be effective for combined sewer systems. Presently street flushing is not allowed under most NPDES permits.

Cross-Media Transfer of Pollutants

The California Air Resources Board (ARB) has established state ambient air quality standards including a standard for respirable particulate matter (less than or equal to 10 microns in diameter, symbolized as PM10). In the effort to sweep up finer sediments to remove attached heavy metals, municipalities should be aware that fine dust, that cannot be captured by the sweeping equipment and becomes airborne, could lead to issues of worker and public safety.

Bridges

Bridges that carry vehicular traffic generate some of the more direct discharges of runoff to surface waters. Bridge scupper drains cause a direct discharge of stormwater into receiving waters and have been shown to carry relatively high concentrations of pollutants. Bridge maintenance also generates wastes that may be either directly deposited to the water below or carried to the receiving water by stormwater. The following steps will help reduce the stormwater impacts of bridge maintenance:

- Site new bridges so that significant adverse impacts to wetlands, sensitive areas, critical habitat, and riparian vegetation are minimized.

- Design new bridges to avoid the use of scupper drains and route runoff to land for treatment control. Existing scupper drains should be cleaned on a regular basis to avoid sediment/debris accumulation.
- Reduce the discharge of pollutants to surface waters during maintenance by using suspended traps, vacuums, or booms in the water to capture paint, rust, and paint removing agents. Many of these wastes may be hazardous. Properly dispose of this waste by referring to CA21 (Hazardous Waste Management) in the Construction Handbook.
- Train employees and subcontractors to reduce the discharge of wastes during bridge maintenance.

De-icing

- Do not over-apply deicing salt and sand, and routinely calibrate spreaders.
- Near reservoirs, restrict the application of deicing salt and redirect any runoff away from reservoirs.
- Consider using alternative deicing agents (less toxic, biodegradable, etc.).

Landscape Maintenance SC-75

Objectives

- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	
Bacteria	
Oil and Grease	
Organics	
Oxygen Demanding	☑

Description

Landscape maintenance activities include vegetation removal; herbicide and insecticide application; fertilizer application; watering; and other gardening and lawn care practices. Vegetation control typically involves a combination of chemical (herbicide) application and mechanical methods. All of these maintenance practices have the potential to contribute pollutants to the storm drain system. The major objectives of this BMP are to minimize the discharge of pesticides, herbicides and fertilizers to the storm drain system and receiving waters; prevent the disposal of landscape waste into the storm drain system by collecting and properly disposing of clippings and cuttings, and educating employees and the public.

Approach

Pollution Prevention

- Implement an integrated pest management (IPM) program. IPM is a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools.
- Choose low water using flowers, trees, shrubs, and groundcover.
- Consider alternative landscaping techniques such as naturescaping and xeriscaping.
- Conduct appropriate maintenance (i.e. properly timed fertilizing, weeding, pest control, and pruning) to help preserve the landscapes water efficiency.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SC-73 Landscape Maintenance

- Consider grass cycling (grass cycling is the natural recycling of grass by leaving the clippings on the lawn when mowing. Grass clippings decompose quickly and release valuable nutrients back into the lawn).

Suggested Protocols

Mowing, Trimming, and Weeding

- Whenever possible use mechanical methods of vegetation removal (e.g mowing with tractor-type or push mowers, hand cutting with gas or electric powered weed trimmers) rather than applying herbicides. Use hand weeding where practical.
- Avoid loosening the soil when conducting mechanical or manual weed control, this could lead to erosion. Use mulch or other erosion control measures when soils are exposed.
- Performing mowing at optimal times. Mowing should not be performed if significant rain events are predicted.
- Mulching mowers may be recommended for certain flat areas. Other techniques may be employed to minimize mowing such as selective vegetative planting using low maintenance grasses and shrubs.
- Collect lawn and garden clippings, pruning waste, tree trimmings, and weeds. Chip if necessary, and compost or dispose of at a landfill (see waste management section of this fact sheet).
- Place temporarily stockpiled material away from watercourses, and berm or cover stockpiles to prevent material releases to storm drains.

Planting

- Determine existing native vegetation features (location, species, size, function, importance) and consider the feasibility of protecting them. Consider elements such as their effect on drainage and erosion, hardiness, maintenance requirements, and possible conflicts between preserving vegetation and the resulting maintenance needs.
- Retain and/or plant selected native vegetation whose features are determined to be beneficial, where feasible. Native vegetation usually requires less maintenance (e.g., irrigation, fertilizer) than planting new vegetation.
- Consider using low water use groundcovers when planting or replanting.

Waste Management

- Compost leaves, sticks, or other collected vegetation or dispose of at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Reduce the use of high nitrogen fertilizers that produce excess growth requiring more frequent mowing or trimming.

- Avoid landscape wastes in and around storm drain inlets by either using bagging equipment or by manually picking up the material.

Irrigation

- Where practical, use automatic timers to minimize runoff.
- Use popup sprinkler heads in areas with a lot of activity or where there is a chance the pipes may be broken. Consider the use of mechanisms that reduce water flow to sprinkler heads if broken.
- Ensure that there is no runoff from the landscaped area(s) if re-claimed water is used for irrigation.
- If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.
- Irrigate slowly or pulse irrigate to prevent runoff and then only irrigate as much as is needed.
- Apply water at rates that do not exceed the infiltration rate of the soil.

Fertilizer and Pesticide Management

- Utilize a comprehensive management system that incorporates integrated pest management (IPM) techniques. There are many methods and types of IPM, including the following:
  - Mulching can be used to prevent weeds where turf is absent, fencing installed to keep rodents out, and netting used to keep birds and insects away from leaves and fruit.
  - Visible insects can be removed by hand (with gloves or tweezers) and placed in soapy water or vegetable oil. Alternatively, insects can be sprayed off the plant with water or in some cases vacuumed off of larger plants.
  - Store-bought traps, such as species-specific, pheromone-based traps or colored sticky cards, can be used.
  - Slugs can be trapped in small cups filled with beer that are set in the ground so the slugs can get in easily.
  - In cases where microscopic parasites, such as bacteria and fungi, are causing damage to plants, the affected plant material can be removed and disposed of (pruning equipment should be disinfected with bleach to prevent spreading the disease organism).
  - Small mammals and birds can be excluded using fences, netting, tree trunk guards.
  - Beneficial organisms, such as bats, birds, green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seed head weevils, and spiders that prey on detrimental pest species can be promoted.
- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.

SC-73 Landscape Maintenance

- Use pesticides only if there is an actual pest problem (not on a regular preventative schedule).
- Do not use pesticides if rain is expected. Apply pesticides only when wind speeds are low (less than 5 mph).
- Do not mix or prepare pesticides for application near storm drains.
- Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the pest.
- Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Calibrate fertilizer and pesticide application equipment to avoid excessive application.
- Periodically test soils for determining proper fertilizer use.
- Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Purchase only the amount of pesticide that you can reasonably use in a given time period (month or year depending on the product).
- Triple rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Dispose of empty pesticide containers according to the instructions on the container label.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering, and repair leaks in the irrigation system as soon as they are observed.
- Inspect pesticide/fertilizer equipment and transportation vehicles daily.

Training

- Educate and train employees on use of pesticides and in pesticide application techniques to prevent pollution. Pesticide application must be under the supervision of a California qualified pesticide applicator.
- Train/encourage municipal maintenance crews to use IPM techniques for managing public green areas.
- Annually train employees within departments responsible for pesticide application on the appropriate portions of the agency's IPM Policy, SOPs, and BMPs, and the latest IPM techniques.

- Employees who are not authorized and trained to apply pesticides should be periodically (at least annually) informed that they cannot use over-the-counter pesticides in or around the workplace.
- Use a training log or similar method to document training.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup
- Have spill cleanup materials readily available and in a know in location
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- The Federal Pesticide, Fungicide, and Rodenticide Act and California Title 3, Division 6, Pesticides and Pest Control Operations place strict controls over pesticide application and handling and specify training, annual refresher, and testing requirements. The regulations generally cover: a list of approved pesticides and selected uses, updated regularly; general application information; equipment use and maintenance procedures; and record keeping. The California Department of Pesticide Regulations and the County Agricultural Commission coordinate and maintain the licensing and certification programs. All public agency employees who apply pesticides and herbicides in "agricultural use" areas such as parks, golf courses, rights-of-way and recreation areas should be properly certified in accordance with state regulations. Contracts for landscape maintenance should include similar requirements.
- All employees who handle pesticides should be familiar with the most recent material safety data sheet (MSDS) files.
- Municipalities do not have the authority to regulate the use of pesticides by school districts, however the California Healthy Schools Act of 2000 (AB 2260) has imposed requirements on California school districts regarding pesticide use in schools. Posting of notification prior to the application of pesticides is now required, and IPM is stated as the preferred approach to pest management in schools.

Requirements

Costs

Additional training of municipal employees will be required to address IPM techniques and BMPs. IPM methods will likely increase labor cost for pest control which may be offset by lower chemical costs.

Maintenance

Not applicable

SC-73 Landscape Maintenance

Supplemental Information

Further Detail of the BMP

Waste Management

Composting is one of the better disposal alternatives if locally available. Most municipalities either have or are planning yard waste composting facilities as a means of reducing the amount of waste going to the landfill. Lawn clippings from municipal maintenance programs as well as private sources would probably be compatible with most composting facilities

Contractors and Other Pesticide Users

Municipal agencies should develop and implement a process to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM Policy adopted by the agency. Specifically, municipalities should require contractors to follow the agency's IPM policy, SOPs, and BMPs; provide evidence to the agency of having received training on current IPM techniques when feasible; provide documentation of pesticide use on agency property to the agency in a timely manner.

Drainage System Maintenance SC-74

Photo Credit: Geoff Brosseau

Objectives

- Contain
- Educate
- Reduce/Minimize

Description

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff that may contain certain pollutants. Maintaining catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis will remove pollutants, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	☑
Oil and Grease	☑
Organics	☑
Oxygen Demanding	☑

Approach

Suggested Protocols

Catch Basins/Inlet Structures

- Municipal staff should regularly inspect facilities to ensure the following:
  - Immediate repair of any deterioration threatening structural integrity.
  - Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.
  - Stenciling of catch basins and inlets (see SC-75 Waste Handling and Disposal).
- Clean catch basins, storm drain inlets, and other conveyance structures in high pollutant load areas just before the wet season to remove sediments and debris accumulated during the summer.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SC-74 Drainage System Maintenance

- Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Clean and repair as needed.
- Keep accurate logs of the number of catch basins cleaned.
- Record the amount of waste collected.
- Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- Dewater the wastes with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed of. Do not dewater near a storm drain or stream.
- Except for small communities with relatively few catch basins that may be cleaned manually, most municipalities will require mechanical cleaners such as eductors, vacuums, or bucket loaders.

Storm Drain Conveyance System

- Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- Collect flushed effluent and pump to the sanitary sewer for treatment.

Pump Stations

- Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- Do not allow discharge from cleaning a storm drain pump station or other facility to reach the storm drain system.
- Conduct quarterly routine maintenance at each pump station.
- Inspect, clean, and repair as necessary all outlet structures prior to the wet season.
- Sample collected sediments to determine if landfill disposal is possible, or illegal discharges in the watershed are occurring.

Open Channel

- Consider modification of storm channel characteristics to improve channel hydraulics, to increase pollutant removals, and to enhance channel/creek aesthetic and habitat value.
- Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural (emphasis added) state of any river, stream, or lake in California, must enter into a steam or Lake Alteration Agreement with the Department of Fish and Game. The developer-applicant should also contact local governments (city, county, special districts), other state agencies

(SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Federal Corps of Engineers and USFWS

Illicit Connections and Discharges

- During routine maintenance of conveyance system and drainage structures field staff should look for evidence of illegal discharges or illicit connections:
  - Is there evidence of spills such as paints, discoloring, etc.
  - Are there any odors associated with the drainage system
  - Record locations of apparent illegal discharges/illicit connections
  - Track flows back to potential dischargers and conduct aboveground inspections. This can be done through visual inspection of up gradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
  - Once the origin of flow is established, require illicit discharger to eliminate the discharge.
- Stencil storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

Illegal Dumping

- Regularly inspect and clean up hot spots and other storm drainage areas where illegal dumping and disposal occurs.
- Establish a system for tracking incidents. The system should be designed to identify the following:
  - Illegal dumping hot spots
  - Types and quantities (in some cases) of wastes
  - Patterns in time of occurrence (time of day/night, month, or year)
  - Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills)
  - Responsible parties
- Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.
- Refer to fact sheet SC-10 Non-Stormwater Discharges.

SC-74 Drainage System Maintenance

- The State Department of Fish and Game has a hotline for reporting violations called Cal TIP (1-800-952-5400). The phone number may be used to report any violation of a Fish and Game code (illegal dumping, poaching, etc.).
- The California Department of Toxic Substances Control's Waste Alert Hotline, 1-800-69TOXIC, can be used to report hazardous waste violations.

Training

- Train crews in proper maintenance activities, including record keeping and disposal.
- Only properly trained individuals are allowed to handle hazardous materials/wastes.
- Train municipal employees from all departments (public works, utilities, street cleaning, parks and recreation, industrial waste inspection, hazardous waste inspection, sewer maintenance) to recognize and report illegal dumping.
- Train municipal employees and educate businesses, contractors, and the general public in proper and consistent methods for disposal.
- Train municipal staff regarding non-stormwater discharges (See SC-10 Non-Stormwater Discharges).

Spill Response and Prevention

- Refer to SC-11, Prevention, Control & Cleanup
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Cleanup activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.
- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, liquid/sediment disposal, and disposal of flushed effluent to sanitary sewer may be prohibited in some areas.
- Regulations may include adoption of substantial penalties for illegal dumping and disposal.
- Municipal codes should include sections prohibiting the discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the storm drain system.
- Private property access rights may be needed to track illegal discharges up gradient.

- Requirements of municipal ordinance authority for suspected source verification testing for illicit connections necessary for guaranteed rights of entry.

Requirements

Costs

- An aggressive catch basin cleaning program could require a significant capital and O&M budget. A careful study of cleaning effectiveness should be undertaken before increased cleaning is implemented. Catch basin cleaning costs are less expensive if vacuum street sweepers are available; cleaning catch basins manually can cost approximately twice as much as cleaning the basins with a vacuum attached to a sweeper.

- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary. Encouraging reporting of illicit discharges by employees can offset costs by saving expense on inspectors and directing resources more efficiently. Some programs have used funds available from "environmental fees" or special assessment districts to fund their illicit connection elimination programs.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.

- Identifying illicit discharges requires teams of at least two people (volunteers can be used), plus administrative personnel, depending on the complexity of the storm sewer system.

- Arrangements must be made for proper disposal of collected wastes.

- Requires technical staff to detect and investigate illegal dumping violations, and to coordinate public education.

Supplemental Information

Further Detail of the BMP

Storm Drain flushing

Sanitary sewer flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in sanitary sewer systems. The same principles that make sanitary sewer flushing effective can be used to flush storm drains. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as to an open channel, to another point where flushing will be initiated, or over to the sanitary sewer and on to the treatment facilities, thus preventing re-suspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. The deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to

SC-74 Drainage System Maintenance

cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce the impacts of stormwater pollution, a second inflatable device, placed well downstream, may be used to re-collect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to re-collect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75 percent for organics and 55-65 percent for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used or that fire hydrant line flushing coincide with storm drain flushing.

Flow Management

Flow management has been one of the principal motivations for designing urban stream corridors in the past. Such needs may or may not be compatible with the stormwater quality goals in the stream corridor.

Downstream flood peaks can be suppressed by reducing through flow velocity. This can be accomplished by reducing gradient with grade control structures or increasing roughness with boulders, dense vegetation, or complex banks forms. Reducing velocity correspondingly increases flood height, so all such measures have a natural association with floodplain open space. Flood elevations laterally adjacent to the stream can be lowered by increasing through flow velocity.

However, increasing velocity increases flooding downstream and inherently conflicts with channel stability and human safety. Where topography permits, another way to lower flood elevation is to lower the level of the floodway with drop structures into a large but subtly excavated bowl where flood flows we allowed to spread out.

Stream Corridor Planning

Urban streams receive and convey stormwater flows from developed or developing watersheds. Planning of stream corridors thus interacts with urban stormwater management programs. If local programs are intended to control or protect downstream environments by managing flows delivered to the channels, then it is logical that such programs should be supplemented by management of the materials, forms, and uses of the downstream riparian corridor. Any proposal for steam alteration or management should be investigated for its potential flow and stability effects on upstream, downstream, and laterally adjacent areas. The timing and rate of flow from various tributaries can combine in complex ways to alter flood hazards. Each section of channel is unique, influenced by its own distribution of roughness elements, management activities, and stream responses.

Drainage System Maintenance SC-74

Flexibility to adapt to stream features and behaviors as they evolve must be included in stream reclamation planning. The amenity and ecology of streams may be enhanced through the landscape design options of 1) corridor reservation, 2) bank treatment, 3) geomorphic restoration, and 4) grade control.

Corridor reservation - Reserving stream corridors and valleys to accommodate natural stream meandering, aggradation, degradation, and over bank flows allows streams to find their own form and generate less ongoing erosion. In California, open stream corridors in recent urban developments have produced recreational open space, irrigation of streamside plantings, and the aesthetic amenity of flowing water.

Bank treatment - The use of armoring, vegetative cover, and flow deflection may be used to influence a channel's form, stability, and biotic habitat. To prevent bank erosion, armoring can be done with rigid construction materials, such as concrete, masonry, wood planks and logs, riprap, and gabions. Concrete linings have been criticized because of their lack of provision of biotic habitat. In contrast, riprap and gabions make relatively porous and flexible linings. Boulders, placed in the bed reduce velocity and erosive power.

Riparian vegetation can stabilize the banks of streams that are at or near a condition of equilibrium. Binding networks of roots increase bank shear strength. During flood flows, resilient vegetation is forced into erosion-inhibiting mats. The roughness of vegetation leads to lower velocity, further reducing erosive effects. Structural flow deflection can protect banks from erosion or alter fish habitat. By concentrating flow, a deflector causes a pool to be scoured in the bed.

Geomorphic restoration – Restoration refers to alteration of disturbed streams so their form and behavior emulate those of undisturbed streams. Natural meanders are retained, with grading to gentle slopes on the inside of curves to allow point bars and riffle-pool sequences to develop. Trees are retained to provide scenic quality, biotic productivity, and roots for bank stabilization, supplemented by plantings where necessary.

A restorative approach can be successful where the stream is already approaching equilibrium. However, if upstream urbanization continues new flow regimes will be generated that could disrupt the equilibrium of the treated system.

Grade Control - A grade control structure is a level shelf of a permanent material, such as stone, masonry, or concrete, over which stream water flows. A grade control structure is called a sill, weir, or drop structure, depending on the relation of its invert elevation to upstream and downstream channels.

A sill is installed at the preexisting channel bed elevation to prevent upstream migration of nick points. It establishes a firm base level below which the upstream channel can not erode.

A weir or check dam is installed with invert above the preexisting bed elevation. A weir raises the local base level of the stream and causes aggradation upstream. The gradient, velocity, and erosive potential of the stream channel are reduced. A drop structure lowers the downstream invert below its preexisting elevation, reducing downstream gradient and velocity. Weirs and drop structure control erosion by dissipating energy and reducing slope velocity.

SC-74 Drainage System Maintenance

When carefully applied, grade control structures can be highly versatile in establishing human and environmental benefits in stabilized channels. To be successful, application of grade control structures should be guided by analysis of the stream system both upstream and downstream from the area to he reclaimed.

Examples

The California Department of Water Resources began the Urban Stream Restoration Program in 1985. The program provides grant funds to municipalities and community groups to implement stream restoration projects. The projects reduce damages from streambank aid watershed instability arid floods while restoring streams' aesthetic, recreational, and fish and wildlife values.

In Buena Vista Park, upper floodway slopes are gentle and grassed to achieve continuity of usable park land across the channel of small boulders at the base of the slopes.

The San Diego River is a large, vegetative lined channel, which was planted in a variety of species to support riparian wildlife while stabilizing the steep banks of the floodway.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SD-12 Efficient Irrigation

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Subject: Percolation/Infiltration Testing for Stormwater Management

Ref: Geotechnical Investigation report, Proposed "The Ranch at Coachella" Mixed-Use Development, APNs 780-040-001, 003 & 780-060-001 & 002 Coachella, California, Project No. 544-24159, Report No. 24-07-358.

In accordance with your request, we have performed percolation testing on the subject site to evaluate the infiltration potential of the near-surface soil to assist in stormwater management system design. It is our understanding that on-site stormwater retention including infiltration is planned for the proposed project.

Percolation testing has been performed within 8 shallow test holes excavated on the site. Testing was performed at a depth of approximately 4 and 6 feet below the existing ground surface. The approximate locations of the test holes are presented on the attached Test Location Photograph (Figure 3). Proposed testing locations were provided to Sladden Engineering by MSA Consulting, Inc. However, final locations were adjusted based on encountered field conditions and by on site tenant's request.

Testing was performed by placing water within the test bores and recording the drop in the water surface with time. Testing was performed in general accordance with Section 2.3 of Riverside County – Low Impact Development BMP Design Handbook for percolation testing. Test results are summarized in the following table.

PERCOLATION/INFILTRATION TEST RESULTS

Test No.	Depth (Ft)	USCS	Percolation Rate (in/hr)	Infiltration Rate (in/hr)
P-1	6.00	SM	24.00	3.00
P-2	6.00	SM	27.50	3.64
P-3	4.00	SM	40.00	6.67
P-4	6.00	SM	40.00	6.67

P-5	6.00	SM	32.50	4.68
P-6	4.00	SM	40.00	6.67
P-7	4.00	SM	40.00	6.67
P-8	4.00	SM	40.00	6.67

The percolation rates determined represent the ultimate field rates that do not include a safety factor. The corresponding infiltration rates were calculated using the Porchet Method. An appropriate safety factor should be incorporated into stormwater retention/infiltration system design.

If you have any questions regarding this memo, please contact the undersigned.

BORE LOG

Equipment:	MOBILE B-61	Date Drilled:	9/26/2024
Elevation:	-50 FT MSL	Boring No:	P-4

Sample	Blow Counts	Bulk Sample	Expansion Index	% Minus #200	% Moisture	Density, pcf	Depth (Feet)	Graphic Lithology	Description
							2		Silty Sand (SM); grayish brown, slightly moist, fine-to coarse-grained, micaceous.
							4		
							6		
							8		Terminated at ~ 6 ft bgs. No Bedrock Encountered. No Groundwater or Seepage Encountered. Borehole Cased with Perforated Pipe for Percolation Testing.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Riverside County, Coachella Valley Area, California
Survey Area Data: Version 17, Sep 10, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 15, 2022—May 28, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
CrA	Coachella fine sand, wet, 0 to 2 percent slopes	A	10.4	6.2%
GcA	Gilman fine sandy loam, wet, 0 to 2 percent slopes	B	118.2	70.0%
Ir	Indio fine sandy loam, wet	B	17.4	10.3%
It	Indio very fine sandy loam, wet	B	22.7	13.5%
Totals for Area of Interest			**168.7**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

SUMMARY HYDROLOGY REPORT

Whitewater Watershed

BMP Design Volume, V_{BMP} & Design Flow Rate, Q_{BMP} (Rev. 06-2014)

Legend: Required Entries / Calculated Cells

Company Name	MSA Consulting, Inc	Date	December 10, 2025
Designed By	SAW	County/City Case No.	
Company Project Number/Name	COVA - MSA Job No. 2811		
Drainage Area Number/Name	Site		

Enter the Area Tributary to this Feature (A_{TRIB}) — A_{TRIB} = 81.140 acres

Determine the Impervious Area Ratio

Determine the Impervious Area Within A_{TRIB} (A_{IMP}) — A_{IMP} = 56.410 acres

Calculate the Impervious Area Ratio (I_F)

$I_F = A_{IMP}/A_{TRIB}$ — I_F = 0.70

Calculate the Composite Runoff Coefficient, C for the BMP Tributary Area

Use the following equation based on the WEF/ASCE Method

$C_{BMP} = 0.858I_f^3 - 0.78I_f^2 + 0.774I_f + 0.04$ — C_{BMP} = 0.49

Determine Design Storage Volume, V_{BMP}

Calculate V_U, the 80% Unit Storage Volume $V_U = 0.40 \times C_{BMP}$ — V_U = 0.20 (in*ac)/ac

Calculate the design storage volume of the BMP, V_{BMP}

$$V_{BMP}\ (ft^3) = \frac{V_U\ (in\text{-}ac/ac) \times A_T\ (ac) \times 43{,}560\ (ft^2/ac)}{12(in/ft)}$$

V_{BMP} = 57,660 ft^3

BMP Design Flow Rate, Q_{BMP}

$Q_{BMP} = C_{BMP} \times I \times A_{TRIB}$ — Q_{BMP} = 7.94 ft^3/s

I = Design Rainfall Intensity, 0.2 in/hr

VARIABLE LOSS RATE CURVE (24-HOUR STORM ONLY)

Fm= 0.097987833

C= 0.00181

$F_t=C(24-(T/60))^{1.55}+F_m$ = 0.00181 (24-(T/60))^1.55 + 0.10 in/hr

CONSTANT LOSS RATE (3 & 6 HOUR STORMS) = **0.1960**

LOW LOSS RATE = **0.8500**

Where:

T=Time in minutes. To get an average value for each unit time period, Use T=1/2 the unit time for the first time period, T=1 1/2 unit time for the second period, etc.

NOTE: Low loss rates established per RCFC/2322 (Dated: May-30-95)
For 10 Year Storms or Less
Undeveloped Condition: Low Loss = 90%
Developed Condition: Low Loss = 0.9 - (0.8 * %impervious)
Basin Site: Low Loss = 10%
For 100 Year Storm - Low Loss should be between 80% & 90% of the Rainfall Rate

1 Summary and Requirements

The environmental review of the Cova (Project) is being prepared in compliance with the California Environmental Quality Act (CEQA) process. The City of Coachella is the Lead Agency for the planning and environmental review of the proposed Project. The City of Coachella has identified the Coachella Water Authority (CWA) as the Public Water System (PWS) that will supply water for the proposed Project and has requested that CWA assist in preparing a Water Supply Assessment (WSA) as part of the environmental review for the Project.

The Project is located on the southwestern corner Avenue 52 and Van Buren Street in the City of Coachella, Riverside County. The Applicant is proposing a mixed-use development on the 87-acre site. The project will feature two primary components: a private sector and public sector. The private sector will consist of up to 165 single-family residential units comprised of estate lots, zero lot line lots, bungalow lots, and VIP suites; and 244 condo hotel recreational home units, which will operate similar to the single-family lots. These units will operate under fractional ownership, timeshare, second homes, and/or short-term and long-term rental models. These accommodations will be complemented by on-site resort amenities (i.e., recreational courts, spa/pool, lagoon and water features, bar and entertainment, library, restaurant), which will be used by guests/owners of this sector.

This WSA determined that the total projected water demand for the Project is 225.96 AFY. This WSA demonstrates that sufficient water supplies exist, or will exist based on current water planning assumptions, to meet the projected demands of the Project, in addition to current and future projected water demands within CWA's service area in normal, single-dry, and multiple-dry years over a 20-year projection. This WSA will be reviewed every five years, or in the event that the water planning assumptions have changed, until the Project begins construction to ensure it remains accurate and no significant changes to either the Project or available water supply has occurred. Consistent with the provisions of SB 610, neither this WSA nor its approval shall be construed to create a right or entitlement to water service or any specific level of water service, and shall not impose, expand, or limit any duty concerning the obligation of CWA to provide certain service to its existing customers or to any future potential customers.

This WSA does not constitute an agreement to provide water service to the Project, and does not entitle the Project, Project Applicant, or any other person or entity to any right, priority or allocation in any supply, capacity, or facility. To receive water service, the Project will be subject to an agreement with CWA, together with any and all applicable fees, charges, plans and specifications, conditions, and any and all other applicable CWA requirements in place and as amended from time to time. Nor does anything in this WSA prevent or otherwise interfere with CWA's discretionary authority to declare a water shortage emergency in accordance with the Water Code.

1.1 Regulatory Requirements

This WSA provides an assessment of the availability of sufficient water supplies during normal, single-dry, and multiple-dry years over a 20-year projection to meet the projected demands of the Project, in addition to existing and planned future water demands of CWA, as required by Senate Bill (SB) 610 and SB 1262. This WSA also includes identification of existing water supply entitlements, water rights, water service contracts, or agreements relevant to the identified water supply for the Project and quantities of water received in prior years pursuant to those entitlements, rights, contracts, and agreements.

This WSA has been prepared in compliance with the requirements under SB 610 and SB 1262 by MSA Consulting Inc. in consultation with CWA and the City of Coachella. This WSA does not relieve the Project from complying with all applicable state, county, city, and local ordinances or regulations, including the Model Water Efficient Landscape Ordinance (MWELO) and indoor water use performance standards provided in the California Water Code (CWC). This WSA will be reviewed every five years, or in the event that the water planning assumptions have changed, until the Project begins construction, to ensure it remains accurate and no significant changes to either the Project or available water supply has occurred. The Project applicant shall notify CWA when construction of the project begins.

1.1.1 Senate Bill 610

On January 1, 2002, Senate Bill 610 (SB 610) was enacted and codified in CWC Section 10910 et seq., requiring the preparation of a Water Supply Assessment (WSA) for certain new development projects. As stated in SB 610, the purpose of a WSA is to determine whether the PWS's "total projected water supplies available during normal, single-dry, and multiple-dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the PWS's existing and planned future uses, including agricultural and manufacturing uses."

CWC Section 10912 defines a "project" as any of the following:

- A proposed residential development of more than 500 dwelling units;
- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space;
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space;
- A proposed hotel or motel, or both, having more than 500 rooms;
- A proposed industrial, manufacturing, or processing plant, or industrial park, planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor space;
- A mixed-use project that includes one or more of the projects specified in this subdivision; or

- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project (about 250 acre-feet per year).

The intent of SB 610 is to improve the link between information on water supply availability and certain land-use decisions made by cities and counties.

1.1.2 Senate Bill 1262

On January 1, 2017, Senate Bill 1262 (SB 1262) was enacted and amended CWC Section 10910, requiring that information regarding the Sustainable Groundwater Management Act (SGMA) be included in a WSA if the water supply for a proposed project includes groundwater from a basin that is not adjudicated and was designated medium- or high-priority by the California Department of Water Resources (DWR).

1.2 Water Management Planning Documents

CWA has prepared long-term planning documents to project future was use and manage the water supplies within its service area. These planning documents can be used for compliance with SB 610 and SB 1262 and are discussed in further detail in the following sections.

1.2.1 Urban Water Management Planning Act

The Urban Water Management Planning Act (UWMPA) was established by Assembly Bill 797 (AB 797) on September 21, 1983, and passage of this law recognized that water is a limited resource and that efficient water use and conservation would be actively pursued throughout the State. The UWMPA requires that municipal water suppliers providing either directly or indirectly to more than 3,000 customers or supplying more the 3,000 acre-feet per year (AFY), prepare and adopt an Urban Water Management Plan (UWMP) every five years which defines their current and future water use, source of supply, source reliability, and existing conservation measures.

1.2.1.1 Urban Water Management Plan

CWA is required to prepare a UWMP every five years in response to the requirements of the UWMP Act and Water Conservation Act of 2009 (SBx7-7). CWA prepared and adopted its 2010 and 2015 UWMP to document CWA's projected water demands and plans for delivering water supplies to its water service area during normal, single-dry, and multiple-dry years over a 20-year projection.

The six urban water suppliers in the Coachella Valley (CWA), Coachella Valley Water District (CVWD), Desert Water Agency (DWA), Indio Water Authority (IWA), Mission Springs Water District (MSWD), and Myoma Dunes Mutual Water Company) collaboratively prepared the 2020 Coachella Valley Regional UWMP, including regional and individual agency content and other necessary elements as set forth in DWR's 2020 UWMP Guidebook. The 2025 Coachella Valley Regional UWMP was finalized on June 26, 2026.

1.2.2 Sustainable Groundwater Management Act

In September 2014, Governor Brown signed three bills into law: Assembly Bill 1739, Senate Bill 1319, and Senate Bill 1168, which became collectively known as the SGMA, creating a framework for sustainable, local groundwater management for the first time in California history. DWR evaluated and prioritized the 515 groundwater basins identified in Bulletin 118, and 94 of these groundwater basins were designated as high- or medium-priority basins, as of December 2019, requiring them to be sustainably managed within 20 years. SGMA required local authorities to form local Groundwater Sustainability Agencies (GSAs) by June 30, 2017, to evaluate conditions in their local groundwater basins and adopt locally-based Groundwater Sustainability Plans (GSPs), or Alternatives to a GSP (Alternative Plans), tailored to their regional economic and environmental needs.

As defined by DWR, the subbasins of the Coachella Valley Groundwater Basin are the Indio, Mission Creek, San Gorgonio Pass, and Desert Hot Springs Subbasins. CWA service area overlies the Indio Subbasin; therefore, the Project is located within the Indio Subbasin. The Indio Subbasin has been designated medium-priority by DWR and is subject to the requirements of SGMA. Basin prioritization is based on a variety of factors such as population, number of wells, and other information determined to be relevant by DWR.

1.2.2.1 Alternative Plan for the Indio Subbasin

Twenty years before the adoption of SGMA, CVWD began the development of the initial water management plan for the Coachella Valley in 1994 after recognizing the need to sustainably manage the Coachella Valley Groundwater Basin. The original planning document is the 2002 Coachella Valley Water Management Plan (CVWMP). The 2002 CVWMP was updated in 2010 and adopted in 2012.

CWA, CVWD, DWA, and IWA, are the Indio Subbasin GSAs designated by DWR for their respective service areas. On December 29, 2016, CWA, CVWD, DWA, and IWA collaboratively submitted the 2010 CVWMP Update as an Alternative Plan for the Indio Subbasin, with an associated Bridge Document and supporting documents, to DWR for review and evaluation. On July 17, 2019, DWR determined that the Alternative Plan for the Indio Subbasin satisfies the objectives of SGMA and notified the Indio Subbasin GSAs that the Alternative Plan was approved, and that they would be required to submit an assessment and update of the Alternative Plan pursuant to the SGMA by January 1, 2022, and every five years thereafter. The 2022 Alternative Plan Update for the Indio Subbasin was submitted to DWR on December 29, 2021. On June 27, 2024, DWR approved the 2022 Alternative Plan Update for the Indio Subbasin finding that it continues to satisfy the objectives of SGMA.

On February 1, 2018, DWR notified all GSAs who submitted Alternative Plans that they would be required to submit annual reports pursuant to SGMA by April 1, 2018, and every year thereafter.

CWA, CVWD, DWA, and IWA have collaboratively prepared and submitted the Indio Subbasin Annual Reports for Water Years 2016-2017 through 2023-2024.

1.2.3 Groundwater Replenishment

Colorado River water has been a major source of supply for the Coachella Valley since 1949 with the completion of the Coachella Canal. The Coachella Canal (Canal) is a branch of the All-American Canal that brings Colorado River water into the Imperial and Coachella Valleys. The Canal originates at Drop 1 on the All-American Canal and extends approximately 122 miles, terminating in CVWD's Lake Cahuilla. This water is used for agricultural, golf courses, and landscape irrigation purposes, as well as groundwater replenishment. The Colorado River is managed and operated in accordance with the Law of the River, the collection of interstate compacts, federal and state legislation, various agreements and contracts, an international treaty, a U.S. Supreme Court decree, and federal administrative actions that govern the rights to use of Colorado River water within the seven Colorado River Basin states.

State Water Code (SWC) 31630-31639 provides CVWD with the authority to levy and collect water Replenishment Assessment Charges (RACs) to implement groundwater replenishment programs (GRPs) within its jurisdictional boundary. Groundwater replenishment is necessary to mitigate overdraft of the groundwater basin and associated undesirable results. The jurisdictional areas that benefit from the GRPs, and where CVWD levies replenishment assessments on groundwater production, are termed Areas of Benefit (AOBs). There are three AOBs within CVWD's boundary: the Mission Creek Subbasin AOB, the West Whitewater River Subbasin AOB, and the East Whitewater River Subbasin AOB. The GRP for the West Whitewater River Subbasin AOB was formed in 1976, the GRP for the Mission Creek Subbasin AOB was formed in 2003, and the GRP for the East Whitewater River Subbasin AOB was formed in 2004. To recover the cost of the GRP, a RAC is applied to all non-exempt groundwater production. These RACs are calculated and managed separately by each agency for each of the AOBs. The Project is located within the East Whitewater River Subbasin AOB.

1.2.3.1 Annual Engineer's Reports

CVWD is required to prepare and present to its Board of Directors annually an Engineer's Report on Water Supply and Replenishment Assessment on the conditions of the groundwater supplies and recommend RACs to be levied upon groundwater production greater than 25 AFY within each AOB in accordance with SWC 31630-31639. The Engineer's Report must include the following information: a summary of the conditions of groundwater supplies; the need for replenishment; a description of the replenishment programs, including the source and amount of replenishment waters, the costs associated with the GRP, the areas directly and indirectly benefited by the GRP, and the amount of groundwater produced in each area during the prior year; and a recommendation for the RAC to be levied on each AOB. The 2026-2027 Engineer's Report on Water Supply and Replenishment Assessment was prepared and presented to CVWD's Board of Directors on April 28, 2026.

The significance of CVWD's Annual Engineers Report extends to CWA, as CWA is obligated to pay RACs to guarantee water availability to its service population. These RACs help ensure that the Coachella Valley Groundwater Basin is properly managed.

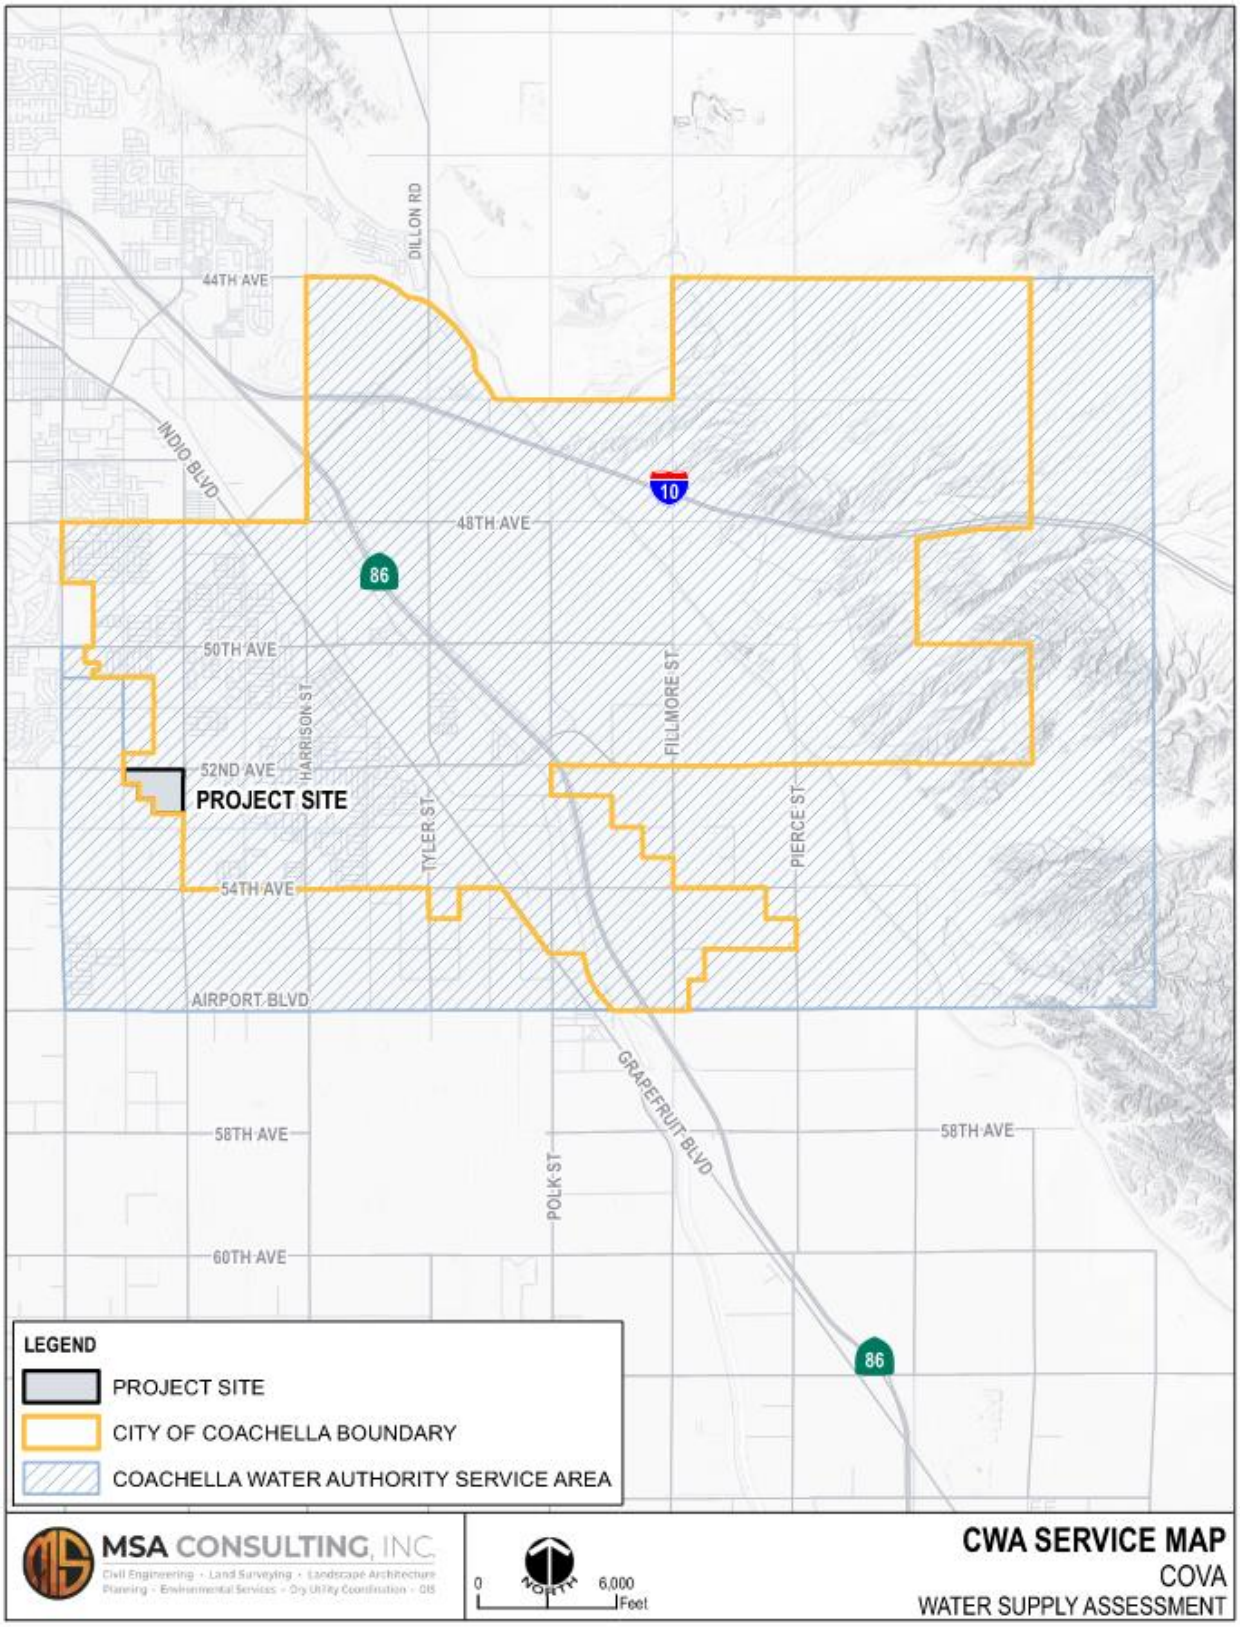
2 Public Water System

The City of Coachella is the Lead Agency for the planning and environmental review of the proposed COVA Project (Project). The City of Coachella has identified the Coachella Water Authority (CWA) as the Public Water System (PWS) that will supply water for the proposed Project and has requested that CWA assist in preparing a Water Supply Assessment (WSA) as part of the environmental review for the Project.

2.1 Coachella Water Authority

The City of Coachella provides domestic water delivery, wastewater collection and reclamation, and local drainage control. In addition, the City manages the Coachella Sanitary District that operates a 4.5 MGD secondary treatment wastewater facility.

The Coachella Water Authority (CWA) was established in 1957 and is administered and managed by the Utilities General Manager under direct supervision of the City Manager. CWA's existing water system consists of different pressure zones, groundwater wells, storage reservoirs, booster pumping stations, and distribution facilities. The current water system is divided into two pressure zones, the Low Zone and the 150 Zone. The Low Zone Area is generally south of 48th Avenue, bounded by Van Buren on the west, the Coachella Valley Storm Channel on the east, and 54th Avenue on the south. The Low Zone provides water service to the majority of the City and as the City continues to grow, the Low Zone will extend further east. The 150 Zone service area is generally north of 48th Avenue and supplies primarily commercial and light industrial users along the Interstate 10 freeway corridor.



There are currently six wells within the City's distribution system. The total pumping capacity of active wells is approximately 11,400 gallons per minute (gpm) or 16.5 million gallons per day (MGD). There are three storage reservoirs within the City, the 1.5-million-gallon (MG) Dillion Road Reservoir, the 3.6 MG Mecca Reservoir, and the 5.4 MG Well 18 Reservoir. CWA has a total reservoir storage capacity of approximately 10.5 MG; of which approximately 1.5 MG lies within the 150 Zone.

CWA operates two booster pumping stations, the Mecca Reservoir booster pump station (Well 12 Booster) and the Well 18 Reservoir booster pump station (Well 18 Booster). The Well 12 Booster supplies the Low Zone and takes suction from the Mecca Reservoir, and the Well 18 Booster supplies both the 150 Zone and Low Zone and takes suction from the Well 18 Reservoir. CWA's distribution system network consists of approximately 120 miles of pipeline. It is estimated that a majority of pipes in the City's water distribution system network were installed between the year 1940 and year 1990. The older pipes reside in the southerly section of the lower zone, and the newer pipes are in the northerly section.

CWA's current water supply source is groundwater from the Indio Subbasin produced from CWA owned and operated wells. While CWA is responsible for the water supply for its residents, the City pays RACs to CVWD to ensure necessary groundwater management and replenishment is achieved for the East White Water River Subbasin AOB.

Agricultural areas are not served by CWA's water system and rely on Coachella Canal water and privately owned and operated wells. As undeveloped and agricultural lands are developed into residential or other land uses, they will be served by CWA and become part of CWA's service area. For the purpose of developing baselines and targets, CWA delineated the existing water service area based on the existing distribution system as shown in **Figure 2-1**.

Figure 2-1: Coachella Water Authority Service Map

2.2 Coachella Valley Hydrology

The bulk of natural groundwater replenishment comes from runoff from the adjacent mountains. The climate in the Coachella Valley is characterized by low humidity, high summer temperatures, and mild dry winters. Average annual precipitation varies from 3 to 6 inches of rain on the Coachella Valley floor to more than 30 inches in the surrounding mountains. Most of the precipitation occurs between December and February, except for summer thundershowers. Prevailing winds in the area are usually gentle but occasionally increase to velocities as high as 30 miles per hour or more. Mid-summer temperatures commonly exceed 100 degrees Fahrenheit (°F), frequently reach 110 °F, and periodically reach or exceed 120 °F, and the average winter temperature is approximately 60 °F as shown in **Table 2-1** and **Table 2-2**. Data from the climate station in Indio represents climate in the CWA service area.

3 Public Water System – Existing Supply and Demand

Currently, all CWA's urban potable water uses are supplied using groundwater from the East Whitewater River Subbasin, which is continually replenished by CVWD. As defined by the SWC, CWA is a producer who files a sworn statement with the district setting forth the total quantity of water production in acre-feet which is subject to the Replenishment Assessment Charge (RAC). The RAC partially funds CVWD's groundwater replenishment program. There are three separate RACs based on geography because of the varying costs and benefits of the replenishment program for each geography. CWA pays RACs to ensure that the East Whitewater River Subbasin is replenished. To replenish the East Whitewater River Subbasin, CVWD receives imported water from the Colorado River.

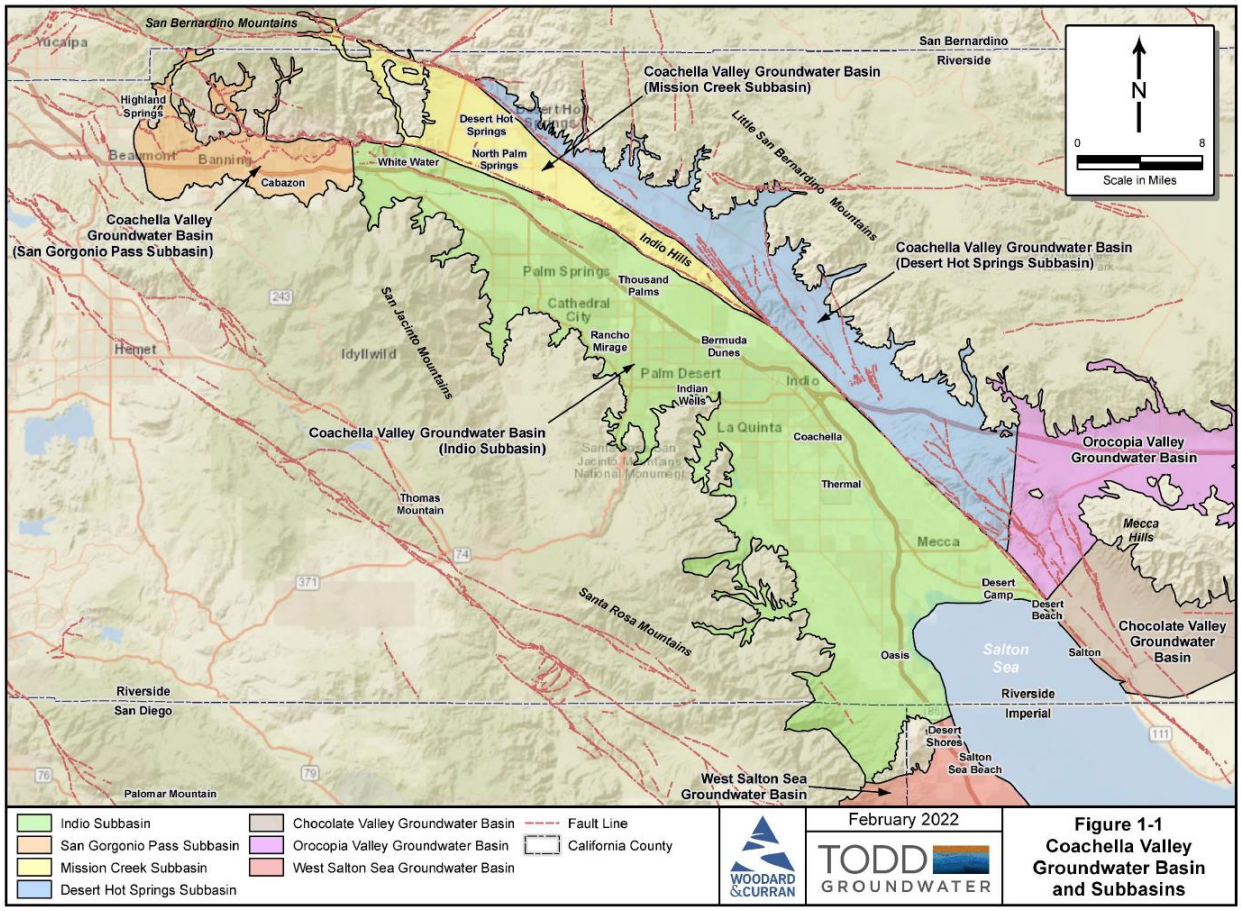
3.1 Groundwater

Groundwater is the principal source of potable supply in the Coachella Valley and CWA obtains water from the East Whitewater River Subbasin of the Coachella Valley Groundwater Basin. CVWD has statutory authority to replenish local groundwater supplies and collect RACs necessary to support a groundwater replenishment program as provided in the County Water District Law (California Water Code section 30000, et seq.) and as a GSA under the SGMA. CWA pays the RAC to ensure the East Whitewater River Subbasin Area of Benefit is properly managed.

3.1.1 Coachella Valley Groundwater Basin

The Coachella Valley Groundwater Basin is bounded on the north and east by the San Bernardino and Little San Bernardino Mountains, on the south and west by the Santa Rosa and San Jacinto Mountains, and on the south by the Salton Sea. At the west end of the San Gorgonio Pass, between Beaumont and Banning, the basin boundary is defined by a surface drainage divide separating the Coachella Valley Groundwater Basin from the Beaumont Groundwater Basin of the Upper Santa Ana Drainage Area.

The southern boundary is formed primarily by the watershed of the Mecca Hills and by the northwest shoreline of the Salton Sea running between the Santa Rosa Mountains and Mortmar. Between the Salton Sea and Travertine Rock, at the base of the Santa Rosa Mountains, the southern boundary crosses the Riverside County Line into Imperial and San Diego Counties.



Although there is interflow of groundwater throughout the Coachella Valley Groundwater Basin, fault barriers, constrictions in the basin profile, and areas of low permeability limit and control movement of groundwater. Based on these factors, the Coachella Valley Groundwater Basin has been divided into subbasins and subareas as described by DWR in 1964 and 2003, and by the United States Geological Survey (USGS) in 1974.

3.1.1.1 Coachella Valley Groundwater Basin – Subbasins

As shown on **Figure 3-1,** the subbasins of the Coachella Valley Groundwater Basin are the Indio, Mission Creek, San Gorgonio Pass, and Desert Hot Springs Subbasins. The subbasins are defined without regard to water quantity or quality. They delineate areas underlain by formations which readily yield stored groundwater through water wells and offer natural reservoirs for the regulation of water supplies.

The boundaries between subbasins within the Coachella Valley Groundwater Basin are generally defined by faults that impede the lateral movement of groundwater. Minor subareas have also been delineated based on one or more of the following geologic or hydrologic characteristics: types of water-bearing formations, water quality, areas of confined groundwater, forebay areas, groundwater divides, and surface drainage divides.

Figure 3-1: Coachella Valley Groundwater Basin and Subbasins

Source: Indio Subbasin Annual Report for Water Year 2020-2021

The following is a list of the subbasins in the Coachella Valley Groundwater Basin as designated by DWR in Bulletin 118:

- Indio Subbasin (Subbasin 7-21.01)
- Mission Creek Subbasin (Subbasin 7-21.02)
- San Gorgonio Pass Subbasin (Subbasin 7-21.03)
- Desert Hot Springs Subbasin (Subbasin 7-21.04)

DWR designated the Indio, Mission Creek, and San Gorgonio Pass Subbasins as medium-priority, and the Desert Hot Springs Subbasin as very low priority. None of the subbasins are adjudicated or in a state of overdraft.

In 1964, DWR estimated that the subbasins in the Coachella Valley Groundwater Basin contained approximately 39,200,000 acre-feet (AF) of water in the first 1,000 feet below the groundwater surface. The capacities of the subbasins are shown in **Table 3-1**.

Table 3-1: Groundwater Storage in the Coachella Valley Groundwater Basin

Subbasin/Subarea	Storage (AF) [1]
Indio Subbasin	
Palm Springs Subarea	4,600,000
Thousand Palms Subarea	1,800,000
Oasis Subarea	3,000,000
Garnet Hill Subarea	1,000,000
Thermal Subarea	19,400,000
Indio Subbasin Subtotal	**29,800,000**
Mission Creek Subbasin	2,600,000
San Gorgonio Subbasin	2,700,000
Desert Hot Springs Subbasin	4,100,000
Total	**39,200,000**

[1] First 1,000 feet below ground surface. (DWR, 1964)

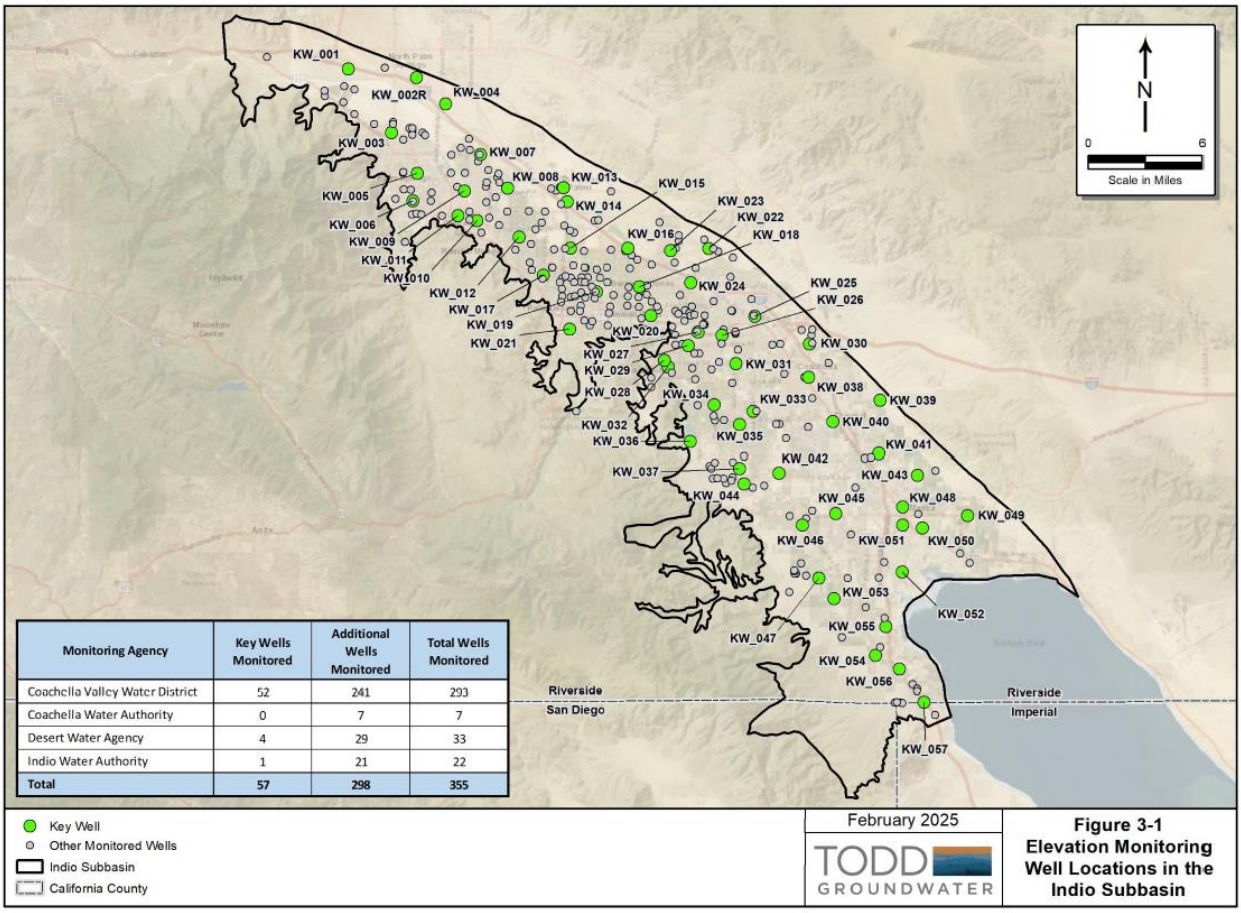
3.1.2 Groundwater Demand

Groundwater is the principal source of potable supply in the Coachella Valley and CWA obtains groundwater from the Indio Subbasin of the Coachella Valley Groundwater Basin, which is continually replenished by CVWD. CWA's groundwater demand in the Coachella Valley Groundwater Basin for 2016 through 2020 is shown in **Table 3-2**.

Table 3-2: CWA Groundwater Demand in the Coachella Valley Groundwater Basin

Groundwater Production (AF)	2020	2021	2022	2023	2024	2025
Indio Subbasin	7,216	7,523	7,207	7,190	7,851	7,782

Source: 2025 Coachella Valley Regional Urban Water Management Plan Final Draft



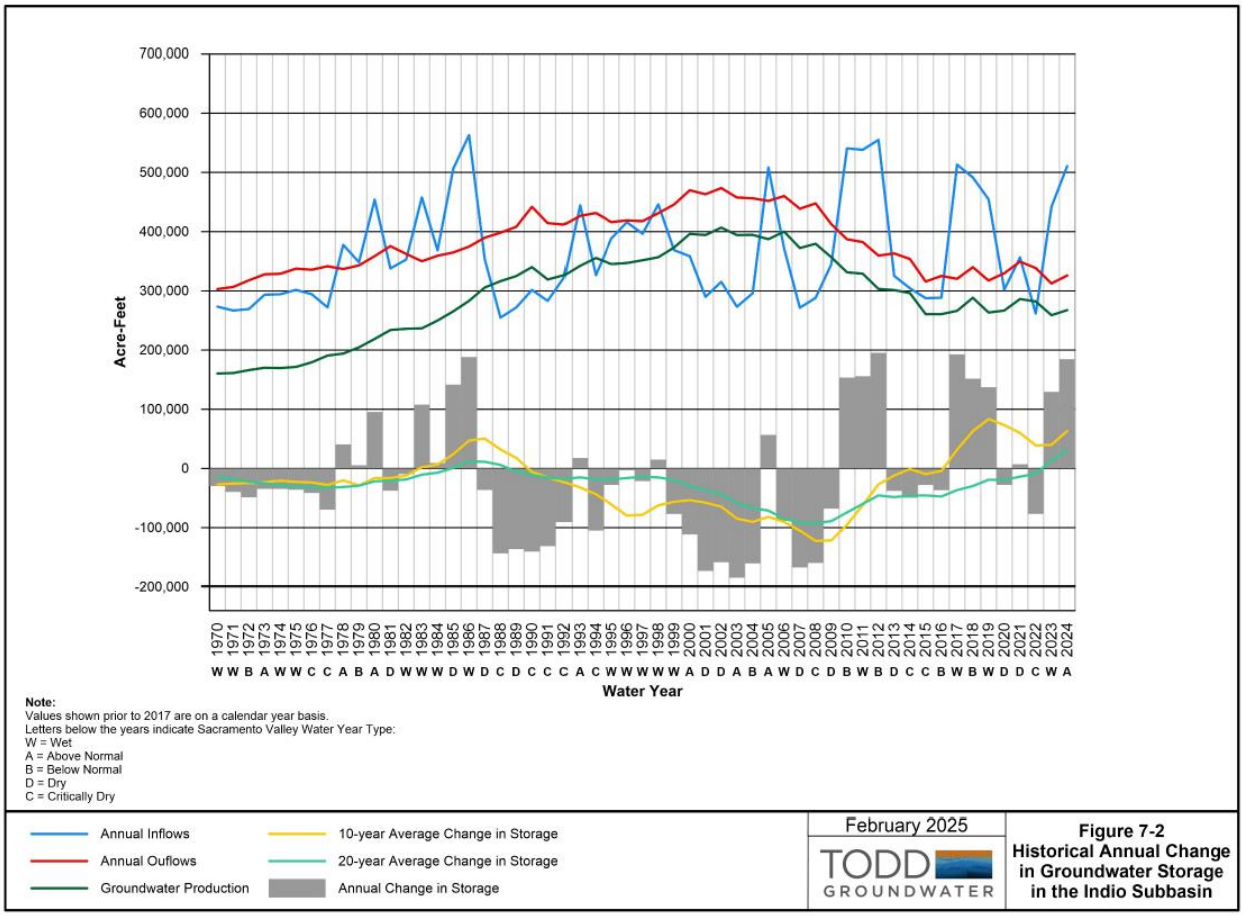
3.1.3 Groundwater Sustainability

Long-term sustainability is typically assessed based on changes in groundwater storage over a period on the order of ten to twenty years that includes wet and dry periods.

3.1.3.1 Indio Subbasin

The 2022 Indio Subbasin Alternative Plan Update identified 57 Key Wells across the subbasin to represent local groundwater levels, shown in **Figure 3-2**. The plan set metrics to demonstrate sustainability, including a Minimum Threshold (MT) at each Key Well. MTs are numeric values used to define undesirable results under SGMA. In WY 2023-2024, water levels in all 57 Key Wells remained above their respective MTs. This confirms that the significant undesirable results of chronic lowering of groundwater levels, depletion of groundwater storage, and potential subsidence are not occurring in the Indio Subbasin.

Figure 3-2: Water Level Monitoring Wells in the Indio Subbasin



Source: Indio Subbasin Annual Report for Water Year 2023-2024

Figure 3-3 shows the historical annual change in groundwater storage from 1970 through Water Year (WY) 2023-2024 in the Indio Subbasin. The figure also shows annual inflows, outflows, groundwater production, and 10-year and 20-year running-average change in groundwater storage. During periods of high artificial recharge, the change in storage tends to be positive. In dry years or periods of high groundwater pumping, the change in storage can be negative.

As shown in **Figure 3-3**, annual inflows to the Indio Subbasin are highly variable with years of high inflows corresponding to wet years when State Water Project (SWP) delivery volumes were greater. Higher inflows in the mid-1980s occurred when the Metropolitan Water District of Southern California (MWD) commenced large-scale advanced water deliveries to the Indio Subbasin. After an extended period of decline, both the 10-year and 20-year running-average change in storage have shown positive trends since 2009, and the 10-year running-average has been positive since 2009. The 10-year and 20-year running-averages have been positive since 2017 and 2023 respectively. Thomas E. Levy Groundwater Replenishment Facility (GRF) that services CWA does not receive SWP water; however, it is important to understand what deliverables occur for the whole Indio Subbasin.

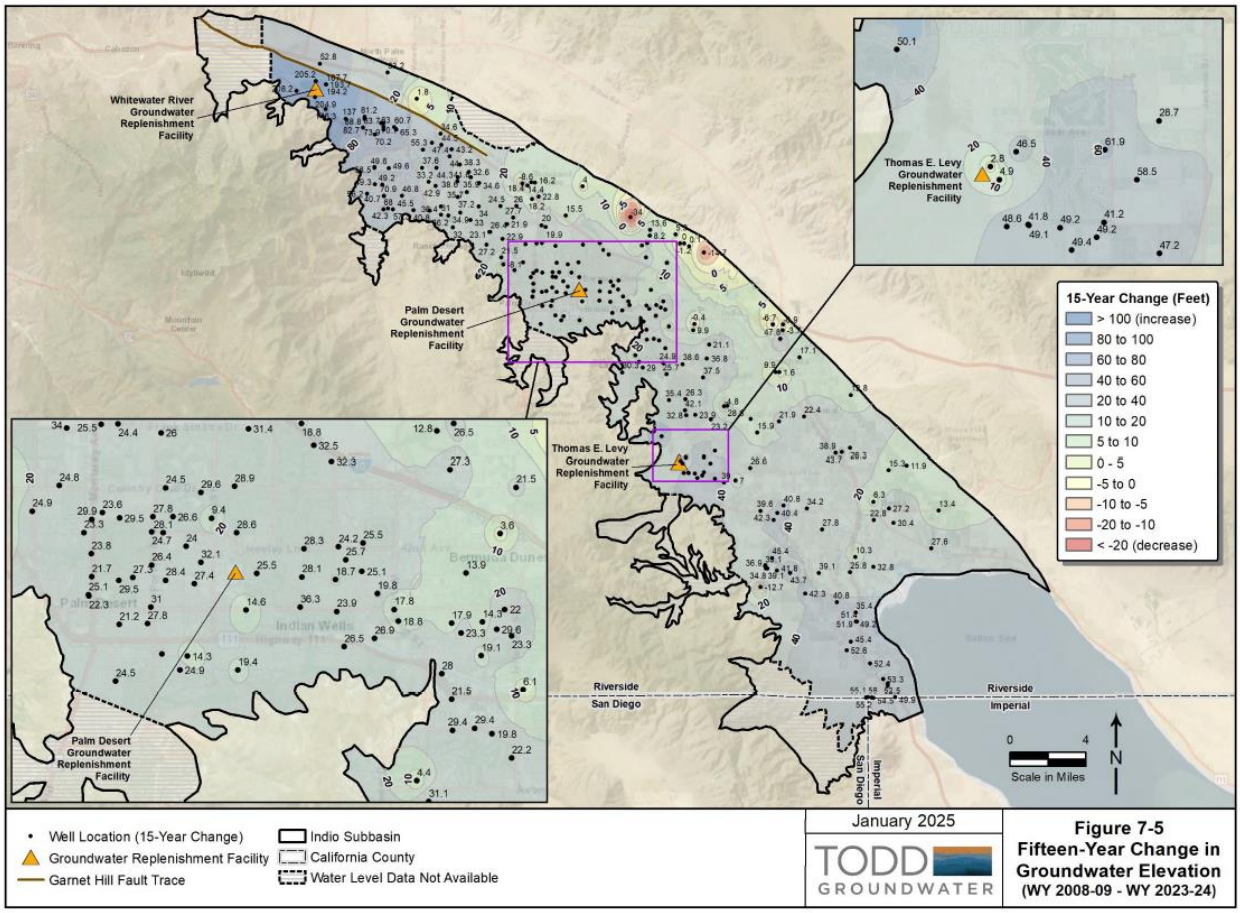


Figure 3-3: Historical Annual Change in Groundwater Storage in the Indio Subbasin

Source: Indio Subbasin Annual Report for Water Year 2023-2024

As shown in **Figure 3-4**, groundwater levels have increased significantly in the Indio Subbasin from WY 2008-2009 to WY 2023-2024. The Indio Subbasin Annual Report uses 2009 water levels as a metric of sustainability because historical low groundwater levels occurred in the years around 2009 throughout most of the Indio Subbasin. The Indio Subbasin shows a long-term positive trend in sustainability resulting from implementation of the Indio Subbasin Alternative Plan.

Figure 3-4: Change in Groundwater Elevation, WY 2009-2024 (Indio Subbasin)

Source: Indio Subbasin Annual Report for Water Year 2023-2024

CWA, CVWD, DWA, and IWA represent the GSA responsible for sustainably managing the Indio Subbasin in compliance with the SGMA. The GSAs have continued efforts to advance the project management actions (PMAs) to maintain the Indio Subbasin in sustainable conditions, able to meet Plan Area water demands, and groundwater levels and quality that avoid undesirable results. With continued implementation of these PMAs, the GSAs are anticipated to meet their water management goals and comply effectively with SGMA. PMAs regarding CWA and its service population discussed in the Indio Subbasin 2023-2024 Annual Report include outreach and costumer programs, costumer rebates, grant funding, and developing a Water Shortage Contingency Plan (WSCP). Water shortage contingency planning is further discussed below in **Section 3.7 - Water Shortage Contingency Planning.**

3.2 Imported Water

CWA's current water supply source is groundwater from the Indio Subbasin produced from CWA owned and operated wells. There are currently six wells within the City's distribution system. The East Whitewater River Subbasin is regionally managed by CWA, CVWD, and IWA. CVWD has statutory authority to replenish local groundwater supplies and collect assessments necessary to

support a groundwater replenishment program as provided in the Country Water District Law. CWA pays RACs according to groundwater use to ensure that the East Whitewater River Subbasin is replenished.

CVWD has two sources of imported water available: Colorado River water delivered via the Coachella Canal and SWP water exchanged for Colorado River water delivered through the Colorado River Aqueduct. These imported water sources are used to recharge the groundwater basin and as an alternative to meet non-potable demands from irrigation of agriculture, golf, and urban uses that would have otherwise been met by pumping groundwater. The source of replenishment water for Thomas E. Levy is Colorado River water via the Coachella Canal and does not include SWP water. CWA receives benefits from the Thomas E. Levy GRF; therefore, CWA pays RACs to ensure the eastern portion (East Whitewater River Subbasin) of the Indio Subbasin receives enough water from the Colorado River to replenish water needed to service CWA customers.

3.2.1 Colorado River Water

Colorado River water has been a significant water supply source for the Indio Subbasin since the Coachella Canal was completed in 1949. CVWD is the only agency in the Indio Subbasin that receives Colorado River water allocations. The Colorado River is managed and operated in accordance with the Law of the River, a collection of interstate compacts, federal and state legislation, various agreements and contracts, an international treaty, a U.S. Supreme Court decree, and federal administrative actions that govern the rights to use Colorado River water within the seven Colorado River Basin states. The 1922 Colorado River Compact apportioned the waters of the Colorado River Basin between the Upper Colorado River Basin (i.e., Colorado, Wyoming, Utah, and New Mexico) and the Lower Basin (i.e., Nevada, Arizona, and California). The 1922 Colorado River Compact allocates 15 million AFY of Colorado River water as follows: 7.5 million AFY to the Upper Basin and 7.5 million AFY to the Lower Basin, plus up to 1 million AFY of surplus supplies. The Lower Basin's water was further apportioned among the three Lower Basin states by the 1928 Boulder Canyon Project Act and the 1931 Boulder Canyon Project Agreement, typically called the 1931 Seven Party Agreement, which allocates California's apportionment of Colorado River water among Palo Verde Irrigation District, Imperial Irrigation District (IID), CVWD, Metropolitan Water District of Southern California (MWD), City of Los Angeles, City of San Diego, and County of San Diego. The 1964 U.S. Supreme Court decree in Arizona v. California established Arizona's basic annual apportionment at 2.8 million AFY, California's at 4.4 million AFY, and Nevada's at 0.3 million AFY. Mexico is entitled to 1.5 million AFY of the Colorado River under the 1944 United States-Mexico Treaty for Utilization of Waters of the Colorado and Tijuana Rivers and of the Rio Grande. However, this treaty did not specify a required quality for water entering Mexico. In 1973, the United States and Mexico signed Minute No. 242 of the International Boundary and Water Commission requiring certain water quality standards for water entering Mexico. California's Colorado River supply is protected by the 1968 Colorado River Basin Project Act, which provides that in years of insufficient supply on the main

stem of the Colorado River, supplies to the Central Arizona Project shall be reduced to zero before California will be reduced below 4.4 million AF in any year. This assures full supplies to the Coachella Valley, except in periods of extreme drought.

The Coachella Canal is a branch of the All-American Canal that brings Colorado River water into the Imperial and Coachella Valleys. Under the 1931 Seven Party Agreement, CVWD receives 330,000 AFY of Priority 3A Colorado River water diverted from the All-American Canal at the Imperial Dam. The Coachella Canal originates at Drop 1 on the All-American Canal and extends approximately 123 miles, terminating in CVWD's Lake Cahuilla. The service area for Colorado River water delivery under CVWD's contract with the U.S. Bureau of Reclamation (USBR) is defined as Improvement District No. 1 (ID-1), which encompasses 136,400 acres covering most of the East Valley and a portion of the West Valley north of Interstate 10. Under the 1931 Seven Party Agreement, CVWD has water rights to Colorado River water as part of the first 3.85 million AFY allocated to California. CVWD is in the third priority position along with IID.

In 2003, CVWD, IID, and MWD successfully negotiated the 2003 Quantification Settlement Agreement (2003 QSA), which quantifies Colorado River allocations through 2077 and supports the transfer of water between agencies. Under the 2003 QSA, CVWD has a base entitlement of 330,000 AFY. CVWD negotiated water transfer agreements with MWD and IID that increased CVWD supplies by an additional 123,000 AFY. CVWD's net QSA supply will increase to 424,000 AFY by 2026 and remain at that level until 2047, decreasing to 421,000 AFY until 2077, when the agreement terminates. As of 2021, CVWD's available Colorado River water diversions at Imperial Dam under the QSA were 399,000 AFY. This includes the base entitlement of 330,000 AFY, the MWD/IID Transfer of 20,000 AFY, IID/CVWD First Transfer of 50,000 AFY, and IID/CVWD Second Transfer of 28,000 AFY. CVWD's QSA diversions also deducts the -26,000 AFY transferred to San Diego County Water Authority (SDCWA) as part of the Coachella Canal Lining Project and the -3,000 AFY transfer to Indian Present Perfected Rights. Additionally, under the 2003 QSA, MWD transferred 35,000 AFY of its State Water Project (SWP) Table A Amount to CVWD. This SWP water is exchanged for Colorado River water and can be delivered at Imperial Dam for delivery via the Coachella Canal to the eastern portion of the Indio Subbasin or at Lake Havasu for delivery via the Colorado River Aqueduct to the western portion of the Indio Subbasin at the Whitewater River Groundwater Replenishment Facility (WWR-GRF). The 2019 Second Amendment guaranteed delivery of the 35,000 AFY from 2019 to 2026, for a total of 280,000 AFY of water to the WWR-GRF during that timeframe. MWD can deliver the water through CVWD's Whitewater Service Connections (for recharge at WWR-GRF) or via the Advance Delivery account.

The MWD/IID Transfer originated in a 1989 agreement with MWD to receive 20,000 AF of its Colorado River supply. The 2019 Amended and Restated Agreement for Exchange and Advance Delivery of Water defined the exchange and delivery terms between MWD, CVWD, and DWA. The 2019 Second Amendment to Delivery and Exchange Agreement reduced CVWD's annual delivery of the MWD/IID Transfer to 15,000 AFY, for a total of 105,000 AF, if taken at the Whitewater Service Connections (for recharge at WWR-GRF) between 2020 and 2026. For those

seven years, MWD keeps the remaining 5,000 AFY, after which CVWD's allocation increases back up to 20,000 AFY. CVWD's total allocations under the QSA, including MWD's transfer of 35,000 AFY and the MWD/IID Transfer, will increase from 424,000 AFY in 2020 to 459,000 AFY by 2026 and remain at that level for the remainder of the 75-year term of the QSA. **Table 3-3** lists total Colorado River entitlements under existing agreements.

Table 3-3: CVWD Colorado River Entitlements (AFY)

Diversion	2020	2025	2030	2035	2040	2045
Base Entitlement	330,000	330,000	330,000	330,000	330,000	330,000
1988 MWD/IID Approval Agreement	20,000	20,000	20,000	20,000	20,000	20,000
IID/CVWD First Transfer	50,000	50,000	50,000	50,000	50,000	50,000

Source: 2022 Alternative Plan Update for the Indio Subbasin

[1] The Second IID/CVWD Transfer began in 2018 with 13,000 AF of water. This amount increases annually by 5,000 AFY for a total of 53,000 AFY in 2026.

[2] The 35,000 AFY MWD/CVWD SWP Transfer may be delivered at either Imperial Dam or Whitewater River and is not subject to SWP or Colorado River reliability.

[3] Accounts for -5,000 AFY reduction in MWD/IID Approval Agreement deliveries from 2020-2026 per the 2019 Amendments with MWD.

The Colorado River deliveries to CVWD at the Imperial Dam/Coachella Canal from 2017 through 2021 are shown in **Table 3-4.**

Table 3-4: Colorado River Deliveries to CVWD at the Imperial Dam/Coachella Canal

Diversions (AF)	2018	2019	2020[1]	2021[1]	2022[1]	2023[1]	2024[1]

3.3 Surface Water

CWA does not currently use, nor does it have plans to use, any local surface water for its urban potable drinking water supply. Local runoff is collected and utilized for the purpose of recharging groundwater.

3.3.1 River/Stream Diversion

Precipitation that falls in the San Jacinto, Santa Rosa, and Little San Bernardino Mountains is the primary source of natural recharge in the Indio Subbasin with only minor recharge from precipitation in the Little San Bernardino Mountains. Mountain-front recharge includes subsurface inflow from canyons and surface runoff from minor tributaries along the mountain fronts. The Whitewater River is the major stream channel contributing recharge with additional infiltration along other channels such as Snow and Falls Creeks in the upper valley and several smaller streams in the lower portion of the valley that only flow during wet years. The annual volume of natural recharge varies significantly as the annual volume of precipitation varies widely. The 50-year hydrologic period from 1970 to 2019 had an annual average watershed runoff of 52,506 AFY, with approximately 43,300 AFY in natural infiltration. Runoff during the 25-year period from 1995 to 2019 was below average, with 39,196 AFY in watershed runoff and 29,200 AFY in natural infiltration. During normal and wet years, mountain front recharge from these streams and smaller watersheds percolate into the Subbasin as additional subsurface flow.

3.3.2 Stormwater Capture

The Coachella Valley drainage area is approximately 65 percent mountainous and 35 percent typical desert valley with alluvial fan topography buffering the valley floor from the steep mountain slopes. The mean annual precipitation ranges from 30 inches or more in the San Bernardino Mountains to less than 3 inches at the Salton Sea. Three types of storms produce precipitation in the drainage area: general winter storms, general thunderstorms, and local thunderstorms. Longer duration, lower intensity rainfall events tend to have higher recharge rates, but runoff from flash flooding can result from all three types of storms. Otherwise, there is little to no flow in most of the streams in the drainage area.

Large-scale stormwater capture is not expected to yield sufficient water to be worth the investment as a single purpose project. Small-scale stormwater retention systems located in

areas of suitable geology to allow percolation could capture small intensity storms as well as street runoff. The potential yield of these systems is not known at this time, but stormwater capture should be considered in conjunction with projects that construct stormwater and flood control facilities.

3.4 Wastewater and Recycled Water

Wastewater that has been highly treated and disinfected can be reused for landscape irrigation and other purposes. Recycled wastewater has historically been used for irrigation of golf courses and municipal landscaping in the Coachella Valley since as early as the 1960s. As growth occurs in the eastern Coachella Valley, the supply of recycled water is expected to increase, creating an additional opportunity to maximize local water supply.

The City of Coachella manages the Coachella Sanitary District that operates a 4.5 MGD secondary treatment wastewater facility. In addition, the City also plans to develop a recycled water system in the future and is currently participating in a recycled water feasibility study spearheaded by the Coachella Valley Regional Water Management Group (CVRWMG) as part of the Coachella Valley Integrated Regional Water Management (IRWM) Plan. The Coachella Water Reclamation Facility has a 4.5 MGD capacity and current average daily discharge of 2.9 MGD. The plant is a full secondary treatment facility with oxidation ditches for denitrification. Waste activated sludge is sent to drying beds for dewatering and then hauled away to landfill for alternate daily cover material.

In addition to the wastewater percolation that occurs at wastewater treatment ponds, some inflow occurs from septic tank/leach field systems that are used to treat and percolate wastewater. These are grouped with return flows because they are individually small and distributed across rural portions of the Indio Subbasin and a few urban areas without access to sewer systems. There are also some septic systems in areas with access to sewer services that have not connected.

3.5 Conservation

Water conservation, and the reduced groundwater production associated with water conservation, benefits the groundwater basin and is an important element of the Alternative Plans and the 2025 Regional Coachella Valley UWMP.

The City of Coachella has a prohibition for wasting water in Municipal Code Section 13.03.044 which states it is unlawful for any person to willfully or neglectfully waste water in any manner whatsoever. Additionally, the City has mandatory prohibitions on water wasting that they enforce during a water shortage. These prohibitions include voluntary and mandatory provisions, audits, and fines that can be imposed. CWA also implements comprehensive water conservation practices such as tiered water rates, turf rebate programs, outreach, and education.

The City's Utilities Director serves the City as its water conservation coordinator along with the staff Environmental/Regulatory Program Manager. They work closely with agencies in the region,

particularly through the CVRWMG and CV Watercounts, to implement and provide successful execution of water conservation programs in the City. The City continues to investigate Federal, State, and local funding to develop new programs throughout its service area.

3.6 Landscape Ordinance

The City of Coachella abides by the Model Water Efficient Landscape Ordinance (MWELO) developed by the California Department of Water Resources (DWR). DWR worked with local agencies, water suppliers, landscape industry groups and public interested parties to prepare the current (2025) updated MWELO. The ordinance encourages limited use of turf areas and reduces landscape irrigation consumption by mandating high efficiency irrigation systems and low water use landscaping. The City conducts plan checking for compliance with the landscape ordinance prior to the construction of new and/or rehabilitated landscape sites.

3.7 Water Shortage Contingency Planning

The RUWMP participating agencies have elected to use the six standard shortage levels included in guidance documents prepared by DWR. The six standard water shortage levels correspond to progressively increasing estimated shortage conditions (up to 10-, 20-, 30-, 40-, 50- percent, and greater than 50-percent shortage compared to the normal reliability condition). These levels are identified in **Table 3-6**.

Table 3-6: Urban Water Shortage Contingency Plan Levels

Shortage Level	Percent Shortage Range	Description	Narrative Summary of Shortage Response Actions
1	Up to 10%	Normal water supplies	Mandatory prohibitions defined by the State, ongoing rebate programs
2	Up to 20%	Slightly limited water supplies	Outdoor water use restrictions on time of day, increased water waste patrols
3	Up to 30%	Moderately limited water supplies	Outdoor water use restrictions on days per week, restrictions on filling swimming pools
4	Up to 40%	Limited water supplies	Limits on new landscaping, expanded public information campaign
5	Up to 50%	Significantly limited water supplies	Limits on watering of parks or school grounds
6	Greater than 50%	Severe shortage or catastrophic incident	No potable water use for outdoor purposes

Source: 2025 Coachella Water Authority Water Shortage Contingency Plan

These supply reductions could be the result of a variety of potential causes including natural forces, system component failure or interruption, regulatory actions, contamination, or any combination of factors. CWA may need to activate shortage levels across its entire service area or within certain areas that are impacted by an event. The levels involve voluntary and mandatory conservation measures and restrictions, depending on the causes, severity, and anticipated

duration of the water supply shortage. The locally appropriate shortage response actions that would be taken at each level to address the resulting gap between supplies and demands.

4 Public Water System – Projected Supply and Demand

Coachella Water Authority (CWA) projects that water use for the City will generally increase at a similar rate to that of the projected population increase within the City and its sphere of influence (SOI). For long-range planning, CWA continues to evaluate opportunities for transfers, exchanges, and other purchases of imported water to increase supply reliability.

CVWD and DWA collaborate to replenish the groundwater aquifer with imported water, creating a stored supply that can be used for emergencies or longer-term shortages. The RUWMP participating agencies continue to implement water conservation measures and increase use of recycled water usage to reduce groundwater demand.

4.1 Projected Urban Demand and Supply

The following table from the 2025 Coachella Valley Regional UWMP provides the CWA's future water demand projections by water use sector over the next 20+ years. Potable water demand projections for the CWA service area are summarized in **Table 4-1**.

Table 4-1: CWA Projected Demands for Water

Use Type	Additional Description	Projected Water Use (AFY)				
		2030	2035	2040	2045	2050
Single Family	Potable	4,938	5,790	6,696	7,613	8,531
Multi-Family	Potable	791	892	1,001	1,115	1,229
Commercial / Industrial / Institutional	Potable	1.055	1.214	1.332	1.451	1.570
Landscape	Potable	1,250	1,508	1,808	2,108	2,400
Other	Potable	83	83	83	83	83
Losses	Potable	435	512	602	693	783
Total		**8,552**	**9,999**	**11,522**	**13,063**	**14,604**

Source: 2025 Coachella Valley Regional UWMP

4.2 Normal, Single-Dry, Multiple-Dry Year Comparison

The following tables from the 2025 Regional UWMP provide CWA's projected water supplies and demands in a normal year, single-dry year, and multiple-dry years. During normal years, CWA will be able to meet current and future urban water demand needs projected in the 2025 Regional UWMP as shown in **Table 4-2**.

Table 4-2: Normal Year Supply and Demand Comparison

	2030	2035	2040	2045	2050
Supply Totals (AFY)	8,552	9,999	11,522	13,063	14,604
Demand Totals (AFY)	8,552	9,999	11,522	13,063	14,604
Difference	**0**	**0**	**0**	**0**	**0**

Source: 2025 Regional Urban Water Management Plan

Note: CWA and the other Regional UWMP agencies collaborate on groundwater management plans for long-term sustainability. During a normal year, single-dry year, or five-dry year period, the agencies could produce additional groundwater if demands exceeded the estimates shown here.

During single-dry years, CWA will be able to meet current and future urban water demand needs as shown in **Table 4-3**. Water supplies during the single-dry year are 100 percent reliable. CVWD's groundwater replenishment program replenishes the basin to increase groundwater storage during wet years and that supply is available for use during dry years which benefits all water districts using groundwater, including CWA. Thus, the supply and demand comparison for the single-dry year is the same as the normal year.

Table 4-3: Single-Dry Year Supply and Demand Comparison

	2030	2035	2040	2045	2050
Supply Totals (AFY)	9,447	11,045	12,729	14,431	16,133
Use Totals (AFY)	9,447	11,045	12,729	14,431	16,133
Difference	**0**	**0**	**0**	**0**	**0**

Source: 2025 Regional Urban Water Management Plan

Note: CWA and the other Regional UWMP agencies collaborate on groundwater management plans for long-term sustainability. During a normal year, single-dry year, or five-dry year period, the agencies could produce additional groundwater if demands exceeded the estimates shown here.

During multiple-dry years, CWA will be able to meet current and future urban water demand needs as shown in **Table 4-4**. Similar to the single-dry year, the multiple-dry year water supply reliability is 100 percent. Thus, the supply and demand comparison for the multiple-dry years is the same as the normal year. CWA and the other Regional UWMP agencies collaborate on groundwater management plans for long-term sustainability. During a normal year, single-dry year, or five-dry year period, the agencies could produce additional groundwater if demands exceeded the estimates shown here.

Table 4-4: Multiple-Dry Years Supply and Demand Comparison

		2030	2035	2040	2045	2050
First Year	Supply Totals (AFY)	8,809	10,298	11,868	13,455	15,042
	Demand Totals (AFY)	8,809	10,298	11,868	13,455	15,042
	Difference	**0**	**0**	**0**	**0**	**0**
Second Year	Supply Totals (AFY)	8,980	10,498	12,099	13,717	15,334

	Difference	**0**	**0**	**0**	**0**	**0**
Third Year	Supply Totals (AFY)	9,151	10,698	12,329	13,978	15,626
	Demand Totals (AFY)	9,151	10,698	12,329	13,978	15,626
	Difference	**0**	**0**	**0**	**0**	**0**
Fourth Year	Supply Totals (AFY)	9,322	10,898	12,560	14,239	15,918
	Demand Totals (AFY)	9,322	10,898	12,560	14,239	15,918
	Difference	**0**	**0**	**0**	**0**	**0**
Fifth Year	Supply Totals (AFY)	9,493	11,098	12,790	14,500	16,211
	Demand Totals (AFY)	9,493	11,098	12,790	14,500	16,211

	Difference	0	0	0	0	0

Source: 2025 Regional Urban Water Management Plan

Note: The RUWMP participating agencies collaborate on groundwater management plans for long-term sustainability. During a normal year, single-dry year, or five-dry year period, the agencies could produce additional groundwater if demands exceeded the estimates shown here. Conversely, any water use reduction as a result of WSCP implementation will result in reduced groundwater production and groundwater will remain in storage for future use.

5 Project Description

The COVA Project (Project) is located in the southwestern portion of the incorporated limits of the City of Coachella, in Riverside County as shown in **Figure 5-1: Project Regional Location Map**. The Project will be accessible from the northern frontage along Avenue 52, the eastern frontage along Van Buren Street, and the western frontage along Calhoun Street. The Project is bounded by agricultural properties to the south. The vicinity map is shown in **Figure 5-2: Project Vicinity Map**. The Project proposes to develop approximately 87 acres of agricultural land in the Coachella Valley to include the development of a mixed-use community, as shown below in **Figure 5-3: Project Site Plan** and **Table 5-1: Project Land Use Summary**. These accommodations will be complemented by on-site resort amenities (i.e., recreation center, courts, spa/pool, beaches, bar and entertainment, library, restaurant), which will be used by guests/owners of this sector. The public sector will consist of a beach club, restaurant, and event tent.

6 Project Water Demands

The COVA Project (Project) proposes to develop approximately 86 acres of agricultural land in the Coachella Valley to include 165 single-family residential units, 244 condo hotel recreational home units, and 278,784 square feet (sf) of commercial amenities (30,461-sf analyzed for water use). The Project also proposes 12.3 acres of water amenities, including a 9.4-acre hotel lagoon, a 2.5-acre irrigation lake, and 0.4-acre beach club lagoon. Additionally, the project will have open space areas.

The Project proposes a 287,640 square feet (sf) Condo Hotel, 32,640-sf of Beach Club Suites, and a total of 277,804-sf amenity facilities. However, only 18,444-sf of Club Amenities and 12,017-sf of Public Amenities were determined to impact water demand, resulting in a total of 30,461-sf of amenity facilities being analyzed.

6.1 Projected Indoor Residential Water Demand

The Project proposes residential uses, so the indoor residential water usage for this Water Supply Assessment (WSA) is 30.84 AFY. The proposed residential uses include 165 single family units, consisting of six-bedroom units, four- and five-bedroom units, and three- and four-bedroom units.

Table 6-1: Projected Indoor Residential Water Demand

Planning Area	Land Area (Acres)	Estimated Dwelling Units (EDUs)	Estimated Occupants per Home[1]	Gallons per Day per Occupant[2]	Water Demand (gpd)	Water Demand (AFY)[3]
Single Family Residential	21.23	165	3.55	47	27,530.25	30.84
Total	**21.23**	**165**			**27,530.25**	**30.84**

[1] Fehr and Peers population estimates.

[2] CA Indoor Water Use Performed Standards.

[3] One AFY = 892.742 gallons per day; Conversion used above.

6.2 Projected Indoor Commercial and Industrial Water Demand

The projected indoor commercial and industrial unit usage for this WSA are based on the American Water Works Association Research Foundations (AWWARF's) Commercial and Industrial End Uses of Water.

The Project proposes a 287,640 square feet (sf) Condo Hotel, 32,640-sf of Beach Club Suites, and 277,804-sf of total amenities. However, only 18,444-sf of Club Amenities and 12,017-sf of Public Amenities were found to impact overall water demand, for a total of 30,461-sf of amenity space analyzed. The combined total of commercial space analyzed, including the Condo Hotel, Beach Club Suites, and applicable amenities, was 350,346-sf. The Project does not propose industrial uses. The projected indoor commercial water demand for the Project totals 26.57 AFY as shown in **Table 6-2**.

Table 6-2: Projected Indoor Commercial Water Demand

Planning Area	Indoor Area (ft^2)	Water Demand Factor [1] (gal/sf/year)	Water Demand (gpd)	Water Demand [2] (AFY)
Condo Hotel / Beach Club VIP Suites	319,885	162	108.30	0.12
Club Amenity Spaces (Food)	12,960	331	11,752.77	13.16
Club Amenity Spaces (Retail)	5,484	64	961.58	1.08
Public Beach Club/Restaurants	12,017	331	10,897.61	12.21
Total	**350,346**		**23,720.25**	**26.57**

[1] AWWARF Commercial and Industrial End Uses of Water, 2000.

[2] One AFY = 892.742 gallons per day; Conversion used above.

6.3 Projected Outdoor Irrigation Water Demand

The projected outdoor irrigation water usage is based on the Maximum Applied Water Allowance (MAWA) equation from Appendix D of Coachella Valley Water District's (CVWD's) Landscape Ordinance No. 1302.5, which meets the water conservation goals of the California Department of Water Resources (DWR) Model Efficient Landscape Ordinance (MWELO). The projected outdoor irrigation water demand is 99.32 AFY as shown in **Table 6-3** below.

Table 6-3: Projected Outdoor Irrigation Water Demand

Planning Area	Landscaped Area (ft^2)	ETo (in/yr) [1]	ETAF [2]	Conversion Factor (gal/ft^2) [3]	Water Demand (gpd)	Water Demand (AFY)
Single Family Residential						
Single Family Residential	323,672.58	76.46	0.45	0.62	18,916.97	21.19
Commercial						
Condo Hotel / Beach Club VIP Suites	87,120.00	76.46	0.45	0.62	5,091.71	5.70

[4] Commercial Open Space exhibits grove, dense landscaping

6.4 Projected Outdoor Water Features Demand

The Project proposes 12.3 acres of water features, consisting of a 9.4-acre hotel lagoon, a 2.5-acre irrigation lake, and 0.4-acre beach club lagoon. The projected outdoor water features demand for the Project is 69.23 AFY, as shown in **Table 6-4** below.

Table 6-4: Projected Outdoor Recreation Water Demand

Planning Area	Water Feature Area (ft^2)	ETo (in/yr) [1]	Plant Factor [2]	Conversion Factor (gal/ft^2) [3]	Water Demand (gpd)	Water Demand (AFY)
Hotel Lagoon	409,464	76.46	1	0.62	53,180.06	59.57
Irrigation and Stormwater Lake	108,900	76.46	0.45	0.62	6,364.64	7.13

6.5 Projected Total Water Demand

The total projected water demand for the Project is 225.96 AFY as shown in **Table 6-5** below.

Table 6-5: Projected Total Water Demand

Planning Area	Land Area (Acres)	Indoor Residential Demand (AFY)	Indoor Commercial and Industrial Demand (AFY)	Outdoor Irrigation Demand (AFY)	Outdoor Recreation Demand (AFY)	Total Water Demand (AFY)
Single Family Residential						
Single Family Residential	21.23	30.84	0	21.19	0	52.03

Total	**81.25**	**30.84**	**26.57**	**99.32**	**69.23**	**225.96**

6.6 Projected Water Sources

The Project is anticipated to utilize the CWA Domestic System to provide water to a majority of the project. A private, on-site well will be utilized for the hotel lagoon. A breakdown of water sources can be seen in **Table 6-6.**

Table 6-6: Projected Water Sources

Planning Area	Land Area (Acres)	Water Source
Residential Single Family		
6 Bedroom – Grand Estate	3.09	CWA Domestic System
4-5 Bedroom – Estate	11.46	CWA Domestic System
3-4 Bedroom – Bungalow	6.68	CWA Domestic System

6.7 Conservation Measures

The following section describes the water conservation measures to be implemented by the proposed Project.

6.7.1 Project Specific Water Conservation Measures

Project developers will be required to implement the following measures in order to assure the most efficient use of water resources and to meet and maintain the most recent UWMP goals throughout the life of the Project:

1. In addition to following DWR's MWELO, to the greatest extent practicable, native plant materials and other drought-tolerant plants shall be used in all non-turf areas of Project landscaping. Large expanses of lawn and other water-intensive landscaped areas shall be kept to the minimum necessary and consistent with the functional and aesthetic needs of the Project, while providing soil stability to resist erosion.

2. In the event recycled water becomes available to the Project, the potential use of tertiary treated water will be reviewed to determine feasibility of its use for on-site landscaped areas to reduce the use of groundwater for irrigation.

3. The installation and maintenance of efficient on-site irrigation systems will minimize runoff and evaporation and maximize effective watering of plant roots. Drip irrigation

and moisture detectors will be used to the greatest extent practicable to increase irrigation efficiency.

4. The use of low-flush toilets and water-conserving faucets shall be required in conformance with Section 17921.3 of the Health and Safety Code, Title 20, California Code of Regulations Section 1601(b), and applicable sections of Title 24 of the State Code.

7 Assessment – Availability of Sufficient Supplies

7.1 Water Supply Assessment

Based on the analysis in this Water Supply Assessment (WSA), the projected total water demand for the COVA (Project) will be 225.96 acre-feet per year (AFY). CWA's long-term water management planning ensures that adequate water supplies are available to meet existing and future water needs within its service area. CWA's urban water demand for 2025 was 7,782 Acre Feet (AF). The water demand presented for 2025 was obtained from the 2025 Regional UWMP document. Additionally, CWA's projected urban water demand for 2045 is 13,063 AF.

This Project's water demand of 225.96 AFY accounts for approximately 4.28 percent of the total planned increase in demand of 5,281 AF from 2025 to 2045.

This WSA provides an assessment of the availability of sufficient water supplies during normal, single-dry, and multiple-dry years over a 20-year projection to meet the projected demands of the Project, in addition to existing and planned future water demands of CVWD, as required by Senate Bill (SB) 610 and SB 1262. This WSA also includes identification of existing water supply entitlements, water rights, water service contracts, and agreements relevant to the identified water supply for the Project and quantities of water received in prior years pursuant to those entitlements, rights, contracts, and agreements.

This WSA has been prepared in compliance with the requirements of SB 610 and SB 1262 by MSA Consulting Inc. in consultation with CWA and the City of Coachella. This WSA does not relieve the Project from complying with all applicable state, county, city, and local ordinances or regulations including the Department of Water Resources (DWR) Model Water Efficient Landscape Ordinance (MWELO), and indoor water use performance standards provided in the California Water Code now or in the future.

Consistent with the provisions of SB 610, neither this WSA nor its approval shall be construed to create a right or entitlement to water service or any specific level of water service, and shall not impose, expand, or limit any duty concerning the obligation of CVWD to provide certain service to its existing customers or to any future potential customers.

This WSA does not constitute an agreement to provide water service to the Project, and does not entitle the Project, Project applicant, or any other person or entity to any right, priority, or allocation in any supply, capacity, or facility. To receive water service, the Project will be subject

to an agreement with CVWD, together with any and all applicable fees, charges, plans and specifications, conditions, and any and all other applicable CVWD requirements in place and as amended from time to time. Nor does anything in this WSA prevent or otherwise interfere with CVWD's discretionary authority to declare a water shortage emergency in accordance with the Water Code.

This WSA will be reviewed every five years, or in the event that the water planning assumptions have changed, until the Project begins construction to ensure it remains accurate and no significant changes to either the Project or available water supply has occurred. The Project applicant shall notify CVWD when construction of the Project begins.

7.2 Requirement for Written Verification of Water Supply Availability

Government Code §66473.7 requires that a Written Verification of Water Supply (WV) be prepared in connection with the approval of a development agreement or tentative map that includes a subdivision. A subdivision is defined as a proposed residential development of more than 500 units, except that for a water agency with fewer than 5,000 service connections, a subdivision includes a residential development project that would account for an increase of 10 percent or more in the number of the agency's existing service connections. The COVA Project proposes 409 residential units, consisting of 165 single family resort residential units and 244 hotel units. It also includes a variety of public and private Water Amenities and Open Space. The entirety of the project was anticipated to include water use comparable to at least 500 residential uses.

This WSA is not a WV. If the City of Coachella determines that the Project or any planning area meets the definition of a subdivision and therefore requires preparation of a WV, a WV shall be prepared by CWA in compliance with the requirements of SB 221. This WSA may be used to support the WV. Depending on circumstances including but not limited to new water efficiency regulations or changes in water supply availability, CWA may recommend preparation of an updated supply and demand assessment to support the WV.

STREET GENERAL NOTES

1. ALL STREETS IN TRACT MAP NO. 39330 ARE PRIVATE.
2. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE CITY-APPROVED STREET PLAN, THE STANDARD DRAWINGS AND SPECIFICATIONS OF THE CITY OF COACHELLA, THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AND THE CALTRANS STANDARD PLANS AND SPECIFICATIONS (WHEN APPLICABLE).
3. ALL FIRE ACCESS ROADS WITHIN TRACT MAP NO. 39330 ARE DESIGNED TO COMPLY WITH THE AGENCIES NOTED ABOVE. THE CITY OF COACHELLA STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, AND CALTRANS STANDARD PLANS AND SPECIFICATIONS ARE DESIGNED TO BE H-20 RATED (DESIGNED TO MAINTAIN THE IMPOSED LOADS OF FIRE APPARATUS OF 80,000 LBS)

SITE FIRE FLOW AND HYDRANT REQUIREMENTS

ZONE 1 BEACH CLUB: BLDG SIZE 118,020 SF = 1,875 GPM FOR 2 HOUR DURATION AT 20 PSI (BASED ON CA FIRE APPENDIX B AND ORD. 787, TYPE 1.)

ZONE 2 HOTEL: BLDG SIZE 183,345 SF = 2,250 GPM FOR 2 HOUR DURATION AT 20 PSI (BASED ON CA FIRE APPENDIX B AND ORD. 787, TYPE 1.)

ZONE 3 RESIDENTIAL: MAXIMUM BLDG SIZE 8,665 SF MAX. = 1,250 GPM FOR 1.0 HR DURATION AT 20 PSI (BASED ON CA FIRE APPENDIX B AND ORD. 787, TYPE V-B.)

FIRE HYDRANT SPACING: BASED ON CA FIRE APPENDIX C, FIRE-FLOW REQUIREMENT OF 2,250 , AVERAGE SPACING BETWEEN HYDRANTS = 450 FEET.
