General Notes

- The pictures depicted in this document are intended to represent a preliminary high level site design for the suggested IntelliSite LPR and Surveillance solutions for the City of Everman, TX.
- The outlined illustrations below were created to show approximate installation locations for the intended purpose of visual aid and internal hardware quantities.
- The A.I., PTZ Surveillance and Fixed ALPR will be utilizing IntelliSite's UIG edge device. The processing of all data is done locally at each device and will then provide the meta-data using BroadSky LTE connectivity back to the EPIC IO DeepInsights platform to be analyzed and stored. In addition to this, the customer may provide their own server *(per IntelliSite operating specification)* in order to retain the information captured and requested for a minimum of 40 days.
- A site walk may need to be conducted prior to installation to confirm final placement of hardware along with any additional infrastructure needs and/or requirements. This will be outlined in the Scope of Work document (S.O.W) which will be created and submitted once the design portion of the project has been approved.
- For questions regarding hardware and software compliance and setup, please reach out to the Pre-Sales Engineer at the contact listed above.
