Mayor and City Council Work Session

Wednesday, September 4, 2024

6:00 PM

Agenda

IN-PERSON

Watch the meeting on Laurel TV streaming live in your web browser at https://laureltv.org/watch-live or locally Laurel TV can be found on Comcast Channel 996 (HD), 71 (SD) or Verizon FiOS Channel 12.

1. Call to Order - James Kole, President
2. Van Dusen Road Roadway Improvement Project-Department of Public Works with a Presentation by Century Engineering
3. Ordinance No. 2029- An Ordinance Amending the General Operating Budget and Capital Improvement Program of the Mayor and City Council of Laurel, Maryland, for Fiscal Year July 1, 2024 through June 30, 2025 and to Provide an Effective Date
4. Bid Recommendation- Fourth and Fifth Street Roadway Improvements- Department of Public Works
5. Bid Recommendation- Compton Avenue Alley Improvements- Department of Public Works
6. Bid Recommendation- Virginia Manor Court Street Improvements- Department of Public Works
7. Purchase Requisition- Rehrig Vision Service Verification Hardware/Software- Environmental Programs
8. Bid Recommendation- Back-up Generator Replacement Project Phase I- Department of Community Resources and Emergency Management
9. Adjournment

CITY OF LAUREL
ROADWAY IMPROVEMENTCONCEPT STUDY
[DRAFT]

VAN DUSEN ROAD IMPROVEMENTS

(CONTEE ROAD TO OLD SANDY SPRING ROAD)

November 26, 2023

Prepared by:

CENTURY ENGINEERING
A Kleinfelder Company

Prepared for:

City of Laurel DPW

CITY OF LAUREL MARYLAND
MAYOR AND CITY COUNCIL OF LAUREL

TABLE OF CONTENTS

LIST OF FIGURES

LIST OF TABLES

1.0 INTRODUCTION

Century Engineering, LLC, A Kleinfelder Company (Century) was tasked by the City of Laurel Department of Public Works (City) to prepare this pedestrian and vehicular traffic safety improvement Concept Study (Study) along the Van Dusen Road corridor, from Contee Road to Old Sandy Spring Road (approximately 1.6 miles) in Laurel, Maryland. The scope of the Study included assessments of pedestrian/bicycle facilities (ramps, crosswalks, sidewalks, Hiker-Biker Trails), Bus Stop locations, traffic signal operations, and Drainage/Stormwater Management (SWM) requirements, along with a determination of Utility, Right-of-Way (ROW), and environmental impacts. An *Order-of-Magnitude (OOM) Cost Estimate* was prepared for all the recommended improvements. The overall Study goal was to better define the scope of work for the Final Design and construction of the safety and operational improvements along the Van Dusen Road Study corridor. Preparation of this Roadway Improvement Concept Study, and the design and construction of the improvements will use American Rescue Plan Act (ARPA) 2023 funding.

2.0 STUDY CORRIDOR LOCATION AND DESCRIPTION

2.1 Study Corridor

The Van Dusen Road Study corridor includes 1.6 miles (approx.) of roadway, from the southern limit at Contee Road to the northern limit at Old Sandy Spring Road (see *Figure 1*). It runs in a north-south direction and has a posted speed limit of 30 MPH. The corridor's typical cross section is a combination of open-section roadway and closed-section roadway, with the vehicular travel lanes conveying 2-lanes of traffic up to 6-lanes of traffic across multiple segments. There are also pedestrian and bicycle facilities throughout the corridor; these are described further in this report.

2.2 Corridor Main Segments

The segment of Van Dusen Road **between Contee Road and Cherry Lane is classified as a Major Collector** with the typical roadway section varying between 2-lanes and 4-lanes for vehicular traffic. It has a 1,035 ft. flush median just south of the Cherry Lane intersection, which separates a single lane of traffic in each direction. A Hiker-Biker trail runs along the east side of the roadway, which also has curb and gutter and storm drain inlets (closed-section) for the entire segment length. The west side of the segment is primarily an open-section roadway with 10 ft. shoulder from 520 ft. north of Contee Road to 110 ft. south of the intersection at UMD Laurel Medical Center; and from 220 ft. north of the UMD Laurel Medical Center intersection to 325 ft. south of the intersection at Olive Branch Way/Killbarron Drive. The segment contains four (4) signalized intersections at Contee Road, UMD Laurel Medical Center, Olive Branch Way/Killbarron Drive, and Cherry Lane.

Between Cherry Lane and MD 198 (Sandy Spring Road), Van Dusen Road is classified as a Minor Arterial with a typical roadway section varying between 2-lanes and 6-lanes for vehicular traffic. Sidewalk runs along the east side of the roadway, which also has curb and gutter and storm drain inlets (closed-section) for the entire segment length. The west side of the segment is primarily an open-section roadway from the Laurel Oaks Lane southern ingress/egress to MD 198, with shoulder widths varying from 0 ft. – 11 ft. There is some guardrail, however, not all sections without shoulder have guardrails. There are three (3) signalized intersections – excluding the Cherry Lane intersection – at South Arbory Lane, Arbory Court, and MD 198.

The segment of Van Dusen Road **between MD 198 and Old Sandy Spring Road is classified as a Major Collector** with a typical roadway section of 6-lanes, i.e., 2-lanes northbound and 4-lanes southbound, separated by a raised median up to 35 ft.-wide, having plantings (trees and shrubs). This segment is a closed-section roadway with sidewalk running along the east side of the roadway. There is no storm drain inlet within the segment.

3.0 CORRIDOR FIELD REVIEW

This section of the Study, along with *Section 4.0* and *Section 5.0* present the findings of preliminary field reviews of the Van Dusen Road corridor, with a focus on Traffic Control Devices (TCD), pedestrian and bicycle facilities, drainage facilities, and potential environments impacts. *Appendix A* contains aerial imagery plans of the existing Van Dusen Road corridor that depict the existing signing and pavement markings and the condition (compliant/non-compliant) of pedestrian/bicycle, Bus Stop, and roadside facilities within the Study limits.

3.1 Van Dusen Road

Signing and Pavement Markings

The following are some general observations of the condition and application of the signing and pavement markings along the corridor. Additional descriptions of specific locations and their associated deficiencies are provided in *Section 6.2*.

- The signing and pavement markings for multiple turn bays along Van Dusen Road do not meet guidance provided in the Federal Manual on Uniform Traffic Control Devices (MUTCD) and the Maryland Supplement to the MUTCD (MDMUTCD).
- The Van Dusen Road through lanes for multiple locations drop or widen with little guidance. This does not meet driver expectation.
- Most of the signing along Van Dusen Road does not meet requirements of the MDMUTCD.

Pedestrian and Bicycle Facilities

- 4 ft. sidewalk next to utility or light poles:
  - Along northbound Van Dusen Road from Cherry Lane to Arbory Court
  - Along both sides of Old Sandy Spring Road.
- 10 ft. Hiker-Biker trail along northbound Van Dusen Road from Contee Road to Cherry Lane.
- ADA compliant 5 ft. – 8 ft. wide sidewalks from Arbory Court to Old Sandy Spring Road.
- Along southbound of Van Dusen Road at Duniho Nigh Community Park, there are no sidewalks from Laurel Oaks Lane or South Arbory Lane, which are the two nearest streets to the community park.
- Thirty-seven (37) non-complaint pedestrian ramps. Five (5) are non-compliant due to detectable warning surfaces issues including the Laurel Park Drive pedestrian ramp detectable warning surface do not extend through the width of the ramp; and Church of Jesus Christ Latter-Day Saints and Laurel Park Shopping Center ADA ramps have detectable warning surfaces on an unsignalized or unnamed roadway.
- Two (2) ADA ramps are missing from the west leg of Van Dusen Road at Old Sandy Spring Road. There is an existing crosswalk on this leg.

Bus Stops

- Seven (7) non-compliant bus stops due to missing pedestrian bus pads. There are four (4) bus stops along southbound Van Dusen Road and three (3) bus stops along northbound Van Dusen Road. The four (4) southbound Van Dusen Road bus stops are currently placed along existing drainage ditches with non-compliant/no handrails.
- One (1) non-compliant existing pedestrian bus pad.
- One (1) complaint bus pad along southbound of Van Dusen Road at the UMD Laurel Medical Center entrance; however, the sidewalk in front of it is 4 ft. wide.

Handrails

- Four (4) non-compliant handrails due to insufficient height requirements. These are located along the back of inlets.

Traffic Barriers

- All the existing traffic barrier within the project limits is non-complaint including the wooden railing behind the Hiker-Biker trail between Kilbarron Drive and Cherry Lane.
- The wooden railing is too short to protect pedestrian/bikers from a steep drop-off behind the Hiker-Biker trail.

Drainage Facilities

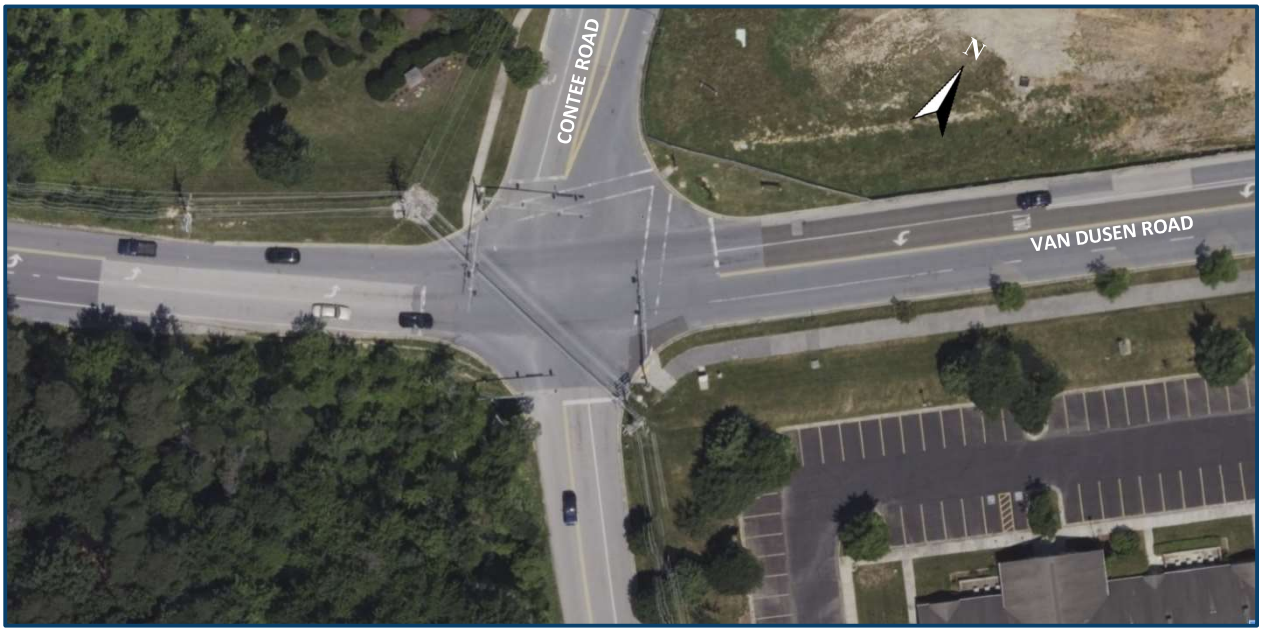
- Century was able to visually assess the condition of most drainage structures. Some structures could not be opened due to traffic and/or fixed covers. Generally, all drainage structures appeared to be in good condition, with a few exceptions listed below.
- Roadside swales along the corridor were visually assessed. Generally, swales appeared to be stable and functioning as designed, with few exceptions listed below.
- Storm drain outfalls were visually assessed and observed to be in stable condition.

4.0 INTERSECTION FIELD REVIEWS

4.1 Contee Road (Signalized)

At this location, Van Dusen Road is a closed-section Major Collector roadway that runs in a north-south direction with a 30 MPH posted speed limit. South of the intersection (and the project limits) the posted speed limit increases to 35 MPH. Northbound and southbound have one (1) left-turn and one (1) through/right-turn lane. The east leg of Contee Road is classified as a Major Collector roadway and the west leg is a Local roadway. Contee Road runs in an east-west direction with a 35 MPH posted speed limit. West of the intersection the posted speed limit decreases to 30 MPH. Eastbound and westbound have one (1) through/left and one (1) right turn lane. Sidewalk runs along both sides of the west leg and along the west side of the north leg. A Hiker-Biker trail begins in the southeast quadrant and runs along east side Van Dusen Road. There are marked crosswalks on the north and west legs of the intersection. No issues were observed for traffic barriers and drainage facilities at this intersection. An image of the intersection is shown in *Figure 2.*

Figure 2
VAN DUSEN ROAD AT CONTEE ROAD



Source: Bing Maps®

<u>Traffic Signal</u>

- Southbound Van Dusen Road exclusive/permissive left-turn and through signal indications were activated concurrently during every signal phase, even when there were no left-turning vehicles.
- Accessible Pedestrian Signal (APS)/Countdown Pedestrian Signal (CPS) are ono-compliant.
- Durations of the pedestrian clearance phases appear to be insufficient. They were observed at 16 seconds on the north leg and 18 seconds on the west leg. They should be 23/24 seconds.
- The signal appears to have been installed more than seventeen (17) years ago. Need to confirm the signal has routine operational and structural inspections.

Signing and Pavement Markings

- Southbound Van Dusen Road left-lane drops does not appear to be necessary.
- The eastbound and westbound Contee Road right turn bays have signing and/or pavement markings for a right lane drop.
- The north and west leg crosswalks are marked with 12 in. transverse pavement markings.

Pedestrian and Bicycle Facilities

- All pedestrian ramps at this location are non-compliant due to 4 ft. ramp widths.
- The pedestrian bus pad along southbound Van Dusen Road is non-compliant due to slope.
- The bus stop along northbound Van Dusen Road is non-compliant due to no bus pad connection from the Hiker-Biker trail to Van Dusen Road.
- The north leg has 5 ft. sidewalk along southbound Van Dusen Road and an approximately 10 ft. Hiker-Biker trail along northbound Van Dusen Road.
- Also, the south leg has a goat path along northbound Van Dusen Road.

4.2 UMD Laurel Medical Center (Signalized)

At this location, Van Dusen Road is a closed section Major Collector that runs in a north-south direction with a 30 MPH posted speed limit. Northbound has one (1) left/through and one (1) through lane. Southbound has one (1) right-turn and one (1) through lane. The UMD Laurel Medical Center access runs in an east-west direction. Eastbound has one (1) left and one (1) right turn lane. Sidewalk runs along the west side of Van Dusen Road from the UMD Medical Center to the bus stop. There is a marked crosswalk on the south leg that connects this sidewalk to the Hiker-Biker trail that runs along the east side of Van Dusen Road. No issues were observed for traffic barriers and drainage facilities at this intersection. An image of the intersection is shown in *Figure 3*.

Figure 3
VAN DUSEN ROAD AT UMD LAUREL MEDICAL CENTER

Source: Bing Maps®

Traffic Signal

- Pedestrian signals and pushbuttons are not APS/CPS-compliant.
- The signal appears to have been installed more than twenty-eight (28) years ago.
- Need to confirm the signal has routine operational and structural inspections.

Signing and Pavement Markings

- The south leg crosswalk is marked with 12 in. transverse pavement markings and additional 12 in. diagonal hatching.
- The diagonal hatching is angled the wrong way.
- The UMD Laurel Medical Center access pavement markings are faded so it is no longer visible.

Pedestrian and Bicycle Facilities

- The pedestrian ramp within the southwest corner of the intersection at the UMD Laurel Medical Center is non-compliant due to a 4 ft. width.
- The bus stop at the southwest corner is compliant but the sidewalk is 4 ft. wide.
- There is an approximate 10 ft. Hiker-Biker trail along northbound Van Dusen Road.
- Additionally, the handrail at the inlet along northbound Van Dusen Road is non-compliant due to insufficient height requirements.

4.3 Olive Branch Way / Killbarron Drive (Signalized)

At this location, Van Dusen Road is a closed section Major Collector that runs in a north-south direction, with a 30 MPH posted speed limit. Northbound and southbound have one (1) left-turn, one (1) through and one (1) right-turn lane. Olive Branch Way and Killbarron Drive are classified as Local roadways that run in an east-west direction with a 25 MPH posted speed limit. Eastbound and westbound have one (1) left-turn and one (1) through/right-turn lane. Sidewalk runs along both sides of Olive Branch Way/Killbarron Drive, and a Hiker-Biker trail runs along the east side Van Dusen Road. There are marked crosswalks on all four (4) legs of the intersection. An image of the intersection is shown in *Figure 4*.

Figure 4
VAN DUSEN ROAD AT OLIVE BRANCH WAY/KILLBARRON DRIVE

Source: Bing Maps

Traffic Signal

- The northbound Van Dusen Road exclusive/permissive left turn phase was not operating correctly. The left turn phase would come up at multiple times during the through phase, when no vehicles were present. In addition, a resident commented that the southbound exclusive/permissive left turn phase is extremely short and only allows for one to two vehicles. This happens at all times of the day. A different resident commented that there is a lot of red light running at the intersection and was concerned about safety. The red-light-running was observed many times during the field observations.
- The pedestrian pushbuttons in the northeast and southwest quadrants were broken and not APS/CPS compliant. The duration of the pedestrian clearance phases appears to be insufficient. They were observed at 16 seconds but should be 20 seconds.
- The signal appears to have been installed more than eighteen (18) years ago. Need to confirm the signal has routine operational and structural inspections.

Signing and Pavement Markings

- The east and west leg crosswalks are marked with 12 in. transverse pavement markings.
- The north and south leg crosswalks are marked with 12 in. transverse pavement markings with additional 12 in. longitudinal lines.

Pedestrian and Bicycle Facilities

- All pedestrian ramps at this location are non-compliant. The pedestrian ramps along the east leg of the intersection are missing detectable warning surfaces; all the other ramps are non-compliant due to 4 ft. width and slope requirements.
- There are non-compliant bus stops in the northwest and southeast corners without pedestrian bus pads.
- The sidewalks along Olive Branch Way are approximately 4 ft. wide.
- The Hiker-Biker trail along northbound of Van Dusen Road is approximately 10 ft. wide and has overhanging tree branches.

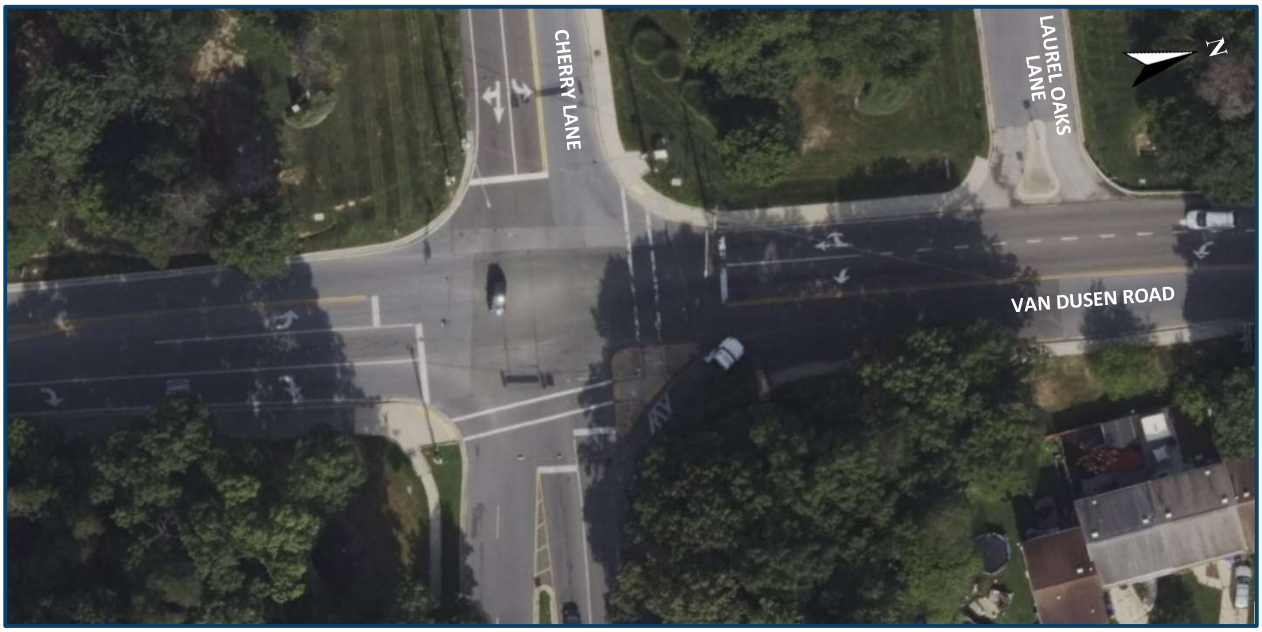
Drainage Facilities

- A roadside swale conveys runoff from the adjacent property from the south towards the intersection. A low spot in topography was observed at the southwest quadrant of the intersection. It is likely during high intensity storm events that runoff will pond at this low spot and spill into the roadway. Runoff will continue to flow north, across the Olive Branch Way intersection towards the next downstream inlet located approximately 260 ft. north of the intersection. Ruoff from these high intensity storm events are likely excessive with the potential to create an adverse safety condition for drivers.

4.4 Cherry Lane (Signalized)

At this location, Van Dusen Road is a closed section Minor Arterial on the north leg and a Major Collector on the south leg. It runs in a north-south direction with a 30 MPH posted speed limit. Northbound has one (1) left-turn, one (1) through and one (1) right-turn lane. Southbound has one (1) left-turn and one (1) through/right-turn lane. Additionally, southbound (south of the intersection) is monitored with a speed enforcement camera. Cherry Lane is a closed section Minor Arterial on the east leg and a Local roadway on the west leg that runs in an east-west direction with a 30 MPH posted speed limit. Eastbound has one (1) left-turn and one (1) through/right-turn lane. Westbound has one (1) left-turn, one (1) through and one (1) right-turn lanes. Sidewalk runs along the north and the south sides of the intersection. A Hiker-Biker trail begins in the southeast quadrant. There are marked crosswalks on the north and east legs of the intersection. No issues were observed with the drainage facilities at this intersection. An image of the intersection is shown in *Figure 5*.

Figure 5
VAN DUSEN ROAD AT CHERRY LANE



Source: Bing Maps ®

Traffic Signal

- The pedestrian pushbuttons are not APS/CPS compliant.
- The durations of the pedestrian clearance phases are insufficient. They were observed at 12 seconds and should be 15 seconds.
- The signal appears to have been installed more than eighteen (18) years ago. Confirm the signal has routine operational and structural inspections.

Signing and Pavement Markings

- The north and east leg crosswalks are marked with 12 in. transverse pavement markings.
- The east leg channelized right turn pedestrian crossing is diagonally hatched.
- Many school children use the crosswalks. All of them used the pushbuttons.
- There are no school crossing or standard school zone signs.
- The pavement markings and signing for the westbound Cherry Lane right and left lane drops are not correct.
- The MD 198 and I-95 trailblazer assemblies along Cherry Lane are not correct.

Pedestrian and Bicycle Facilities

- All pedestrian ramps in the concrete island at Cherry Lane are ADA-compliant, including the ramp in the northeast corner of Van Dusen Road and Cherry Lane.
- The northeast ADA ramp is adjacent to a 4 ft. sidewalk that transitions to 5 ft. just for the ramp.
- The southeast ADA ramp has a detectable warning surface that is too long and there is no connecting ramp in the southwest corner.
- The sidewalk in the northeast corner is 4 ft. wide, the northwest sidewalk along Van Dusen Road is 5 ft. wide, and the Hiker-Biker trail along the southeast leg of Van Dusen Road is approximately 10 ft. wide.
- There is an ADA ramp at Laurel Oaks Lane that leads to a raised island without pedestrian cut-through access.

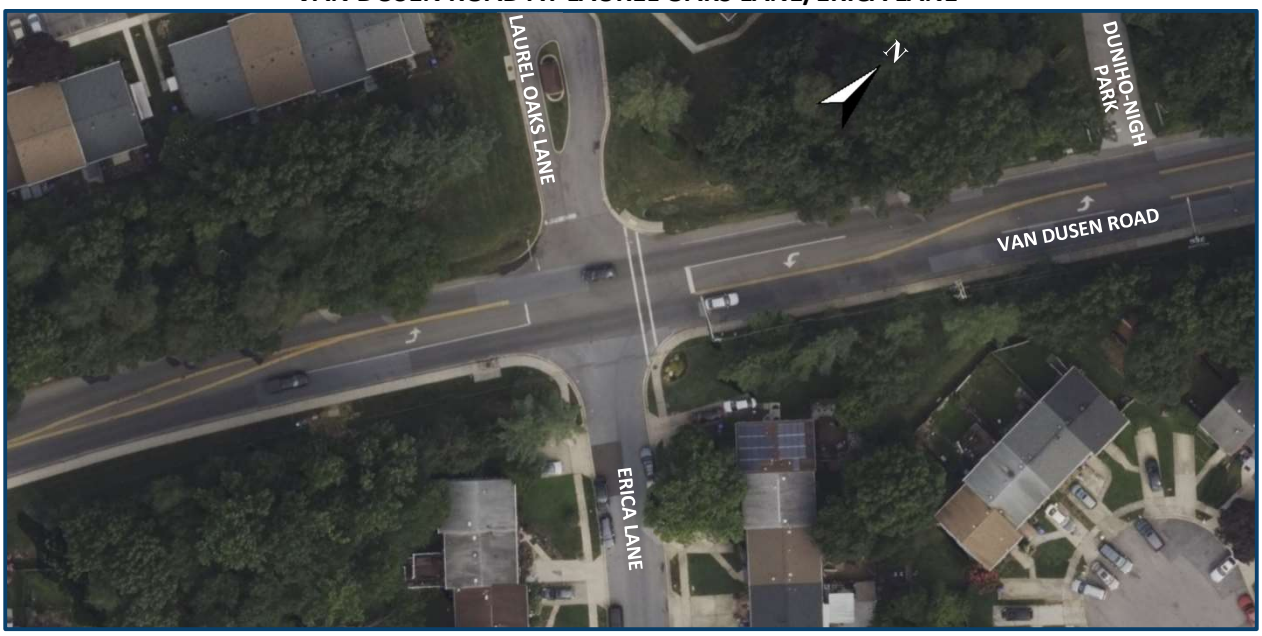
Traffic Barriers

- Traffic barrier at this location is non-compliant due to insufficient height requirements.

4.5 Laurel Oaks Lane / Erica Lane (Unsignalized)

At this location, Van Dusen Road is an open and closed section Minor Arterial that runs in a north-south direction with a 30 MPH posted speed limit. Northbound and southbound have one (1) left-turn and one (1) through/right-turn lane. Laurel Oaks Lane and Erica Lane are classified as Local roadways that runs in an east-west direction with a 25 MPH posted speed limit. Both have one (1) left/through/right turn lane. Sidewalk runs along both sides of Erica Lane and the east side Van Dusen Road. There is a marked unsignalized crosswalk on the north leg. An image of the intersection is shown in *Figure 6*.

Figure 6
VAN DUSEN ROAD AT LAUREL OAKS LANE/ERICA LANE



Source: Bing Maps®

Signing and Pavement Markings

- Northbound and southbound Van Dusen Road are uncontrolled but there are stop lines in the northbound and southbound left turn bays.
- The north leg crosswalk is marked with 12 in. transverse pavement markings.
- There is no stop line for westbound Erica Lane.

Pedestrian and Bicycle Facilities

- There is a school bus stop in the northwest quadrant that served 10-15 students.
- All pedestrian ramps are non-compliant in this location due to 4 ft. ramp widths and the adjacent 4 ft. sidewalk.
- There is a bus stop sign at the north leg but there is no bus pad.
- The bus stop in the south leg is compliant but the sidewalk is 4 ft. wide.
- There is no crosswalk across Erica Lane connecting the ADA ramps.

Drainage Facilities

- The 24 in. concrete culvert located under Laurel Oaks Lane was observed to be clogged with sediment.

4.6 South Arbory Lane (Signalized)

At this location, Van Dusen Road is an open and closed section Minor Arterial that runs in a north-south direction with a 30 MPH posted speed limit. Northbound has one (1) left-turn and one (1) through/right-turn lane. Southbound has one (1) left-turn and one (1) through/right-turn lane. Additionally, southbound (north of the intersection) is monitored with a speed enforcement camera. S. Arbory Lane is classified as a Local roadway that runs in an east-direction. Eastbound has one (1) left/through/right turn lane. The east leg is an entrance only for the Leo E. Wilson Community Park. Sidewalk runs along the north and east side of the intersection and is connected with a marked crosswalk on the north leg. No isues were observed with drainage facilities at this location. An image of the intersection is shown in *Figure 7*.

Figure 7
VAN DUSEN ROAD AT SOUTH ARBORY LANE

Source: Bing Maps®

Traffic Signal

- The presence detection for the northbound Van Dusen Road left turn lane is not working properly. The exclusive/permissive left turn phase came up multiple times during the through phase when no vehicles were in the left turn lane. This causes southbound Van Dusen Road through vehicles to stop and queue unnecessarily.
- The pedestrian pushbuttons are not APS/CPS compliant.
- The signal appears to have been installed more than thirty-three (33) years ago. Need to confirm that the signal undergoes routine operational and structural inspections.

Signing and Pavement Markings

- The north leg crosswalk is marked with 12 in. transverse pavement markings.

Pedestrian and Bicycle Facilities

- All pedestrian ramps at this location are non-complaint. Both pedestrian ramps along the east leg are non-complaint due to slope and adjoining 4 ft. sidewalk on both sides.
- There is no crosswalk connecting the east leg of the intersection.
- The north leg pedestrian ramp is non-complaint due to 4 ft. sidewalk width requirements.
- There is a bus stop sign in the northwest corner but no bus pad.

Traffic Barriers

- The traffic barrier along southbound Van Dusen Road is non-compliant due to insufficient height requirements.

4.7 Arbory Court (Signalized)

At this location, Van Dusen Road is an open and closed section Minor Arterial that runs in a north-south direction with a 30 MPH posted speed limit. Northbound has one (1) left-turn and one (1) through lane. Southbound has one (1) right-turn and one (1) through lane. Arbory Court is classified as a Local roadway that runs in an east direction. Eastbound has one (1) left/through/right turn lane. Sidewalk runs along the north and east side of the intersection and is connected with a marked crosswalk on the north leg. An image of the intersection is shown in *Figure 8*.

Figure 8
VAN DUSEN ROAD AT ARBORY COURT

Source: Bing Maps®

Traffic Signal

- The presence detection for the northbound Van Dusen Road left turn lane is not working properly.
- The exclusive/permissive left turn activates when no vehicles are present in the left turn lane. This causes the southbound Van Dusen Road through vehicles to stop and queue unnecessarily.
- Also, the presence detection for eastbound Arbory Court is not working properly. A resident commented that a vehicle at the stop line does not always send a call. This delay causes some drivers to run the red light or turn right and turn around.
- The pedestrian pushbuttons are not APS/CPS compliant.
- The walk phase (16 seconds) and pedestrian clearance phase (7 seconds) are reversed.
- The signal appears to have been installed more than 24 years ago. Confirm the signal has routine operational and structural inspections.

Signing and Pavement Markings

- The pavement markings and signing for the southbound Van Dusen Road lane-drops are not correct.
- The north leg crosswalk is marked with 12 in. transverse pavement markings.

Pedestrian and Bicycle Facilities

- Both pedestrian ramps at this intersection are non-compliant. The ramp in the northwest corner does not have a detectable warning surface and the ramp in the northeast corner does not meet slope requirements.
- The 8 ft. sidewalk along northbound Van Dusen Road transitions into a 4 ft. non-compliant sidewalk.

Traffic Barriers

- The traffic barrier along southbound of Van Dusen is not the proper height.

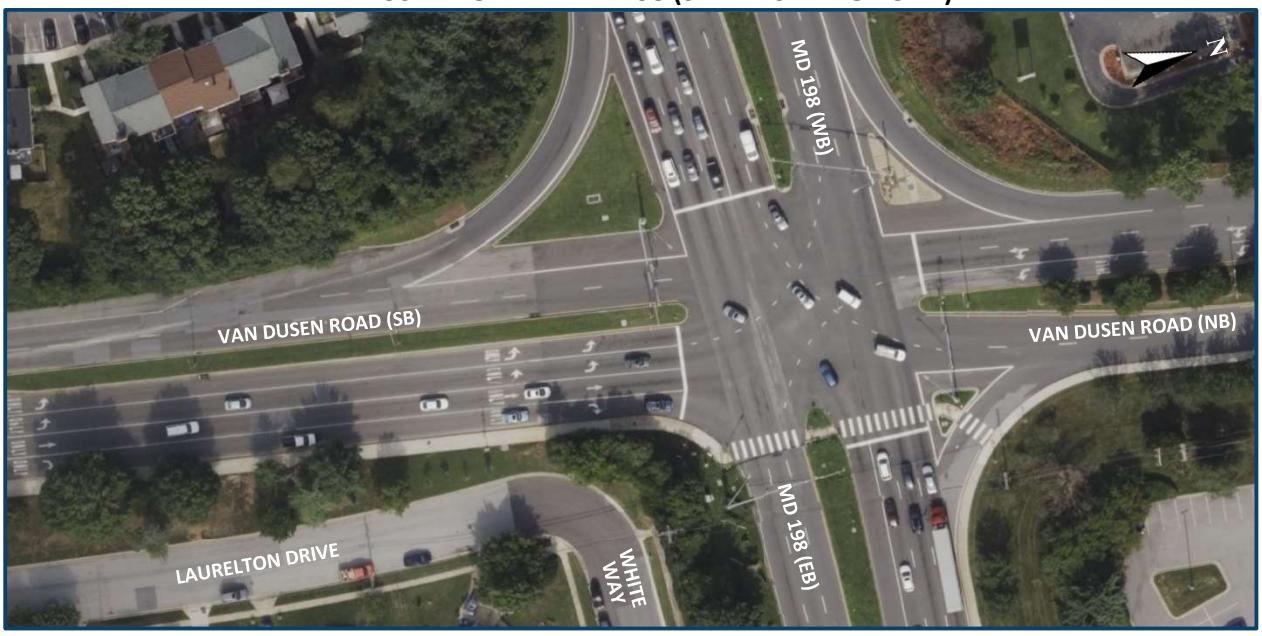
Drainage Facilities

- The 18 in. concrete culvert located under Arbory Court was observed to be clogged with sediment.

4.8 MD 198 (Signalized)

At this location, Van Dusen Road is a divided, closed section Major Collector on the north leg and a Minor Arterial on the south leg. It runs in a north-south direction with a 30 MPH posted speed limit. Northbound has two (2) left-turn, one (1) through and one (1) right-turn lane. Southbound has one (1) left-turn, one (1) through/left, one (1) through, and one (1) channelized right-turn lane. MD 198 is classified as a Principal Arterial-Other roadway that runs in an east-west direction with a 35 MPH posted speed limit. Eastbound has two (2) left-turn lanes, three (3) through lanes and one (1) channelized right-turn lane. Westbound has one (1) left-turn lane, two (2) through lanes and one (1) through/right-turn lane. A sidewalk runs along the east side of the intersection and is connected with a marked crosswalks on the east leg. No traffic signal equipment issues, nor drainage facility issues were observed at this location. An image of the intersection is shown in *Figure 9*.

Figure 9
VAN DUSEN ROAD AT MD 198 (SANDY SPRING ROAD)



Source: Bing Maps®

Signing and Pavement Markings

- The ONLY pavement markings are not necessary in the northbound and southbound Van Dusen Road left turn bay or the northbound right turn bay.
- There are no advanced trailblazer assemblies for MD 198 along southbound Van Dusen Road.
- The northbound Van Dusen Road pavement markings are incorrect.
- The advanced signing along northbound Van Dusen Road is in poor condition and incorrect.
- The W6-1 divided highway sign in the south leg median nose and the southbound W4-2R sign, south of MD 198 are not correct.

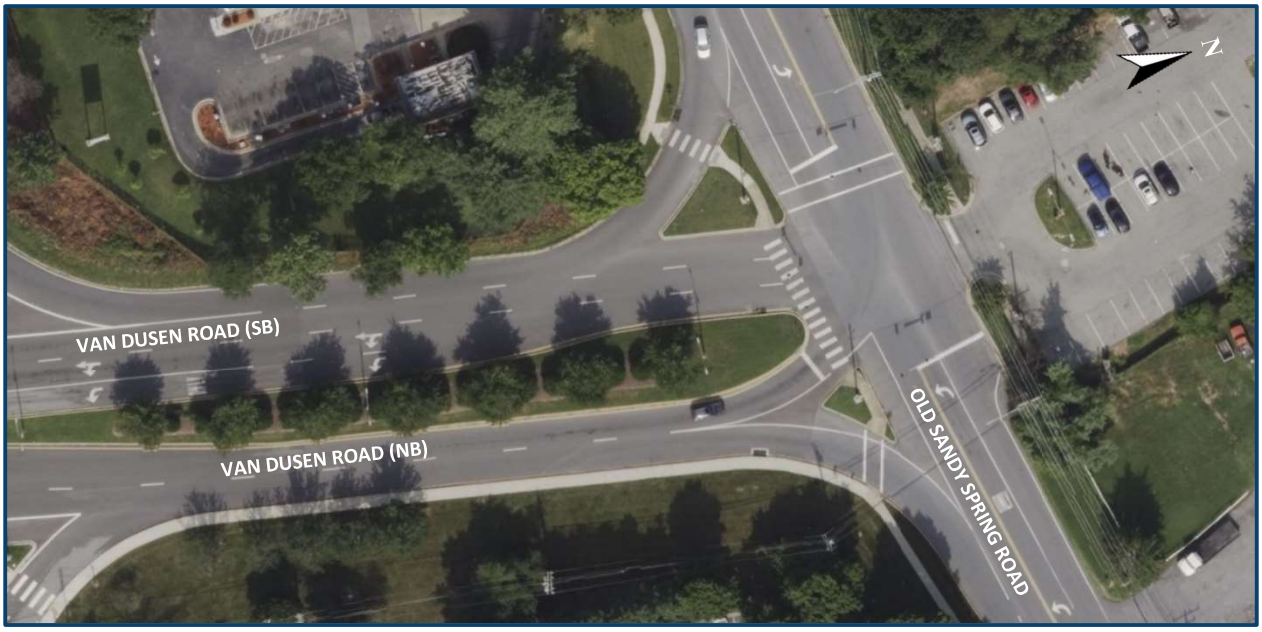
Pedestrian and Bicycle Facilities

- All ramps and sidewalk at this intersection are compliant.
- The sidewalk along northbound of Van Dusen Road is 8 ft. wide.

4.9 Old Sandy Spring Road (Signalized)

At this location, Van Dusen Road is a divided, closed section Major Collector that runs in a north-south direction with a 30 MPH posted speed limit. Northbound has one (1) combined through/left-turn and one (1) channelized right-turn lane. Southbound (Laurel Park and Ride) has one (1) left/through/right lane. Old Sandy Spring Road is classified as a Major Collector on the east leg and a Local roadway on the west leg. It runs in an east-west direction with a 25 MPH posted speed limit. Eastbound has one (1) left-turn, one (1) through and one (1) channelized right-turn lane. Westbound has one (1) left-turn and one (1) through/right-turn lane. Sidewalk runs along both roadways with marked crosswalks on the south and west legs. No issues were observed with the drainage facilities at this location. An image of the intersection is shown in *Figure 10*.

Figure 10
VAN DUSEN ROAD AT OLD SANDY SPRING ROAD



Source: Bing Maps®

Traffic Signal

- Vehicles making a left turn from northbound Van Dusen Road did not yield to pedestrians in the crosswalk during the walk phase.
- The pedestrian signals and pushbuttons are not APS/CPS compliant.
- The signal appears to have been installed more than thirty-two (32) years ago. Need to confirm that the signal has routine operational and structural inspections.

Signing and Pavement Markings

- The west leg and north leg channelized right turn crosswalks are marked with 12 in. transverse pavement markings.
- The existing high visibility continental crosswalk on the south leg does not align with vehicle wheel paths.
- The 5 in. solid white, arrow and ONLY pavement markings for the eastbound and westbound left turn bays are incorrect.
- The location of the north leg stop line encourages vehicles to block the sidewalk path.
- The R4-7a sign in the south leg median nose and yield signs are in poor condition.
- The pedestrian and down arrow signs for the channelized crossings are fluorescent yellow green.

Pedestrian and Bicycle Facilities

- There is an existing crosswalk across the west leg of this intersection but there are no ADA ramps for pedestrians to cross.
- All but one (1) pedestrian ramp is non-compliant due to slope requirements.
- The sidewalk in-front of the Laurel Park and Ride is 4 ft. wide and the sidewalk along northbound Van Dusen Road is 5 ft. wide.

5.0 ENVIRONMENTAL REVIEW

A desktop analysis and visual field investigation were performed by Century on October 11 and 12, 2023 to identify any natural resources, including wetlands, waterways, floodplains, forest, and specimen trees within 50 ft. of Van Dusen Road along the project corridor.

5.1 Wetlands and Waters of the U.S.

The field investigation identified five (5) nontidal wetlands, four (4) perennial waterways, two (2) intermittent waterways, and one 100-year floodplain. The northern most perennial channel is located between Arbory Court and S. Arbory Lane and is culverted under Van Dusen Road, flowing in a southeasterly direction. This perennial stream channel receives flow from one (1) intermittent stream channel beginning at a culvert under Arbory Court flowing south. South of S. Arbory Lane and north of the access drive for tennis courts, one (1) perennial stream channel is culverted eastward under Van Dusen Road. This perennial stream channel receives flow from one (1) intermittent stream channel flowing north from a head cut, west of VanDusen Road. In addition, a palustrine forested (PFO) wetland was identified on the upstream left bank of the perennial stream. Crows Branch is a perennial stream located between the north and south ends of Laurel Oaks Lane and has a culverted flow eastward under Van Dusen Road, the upstream end of this culvert was not found and is assumed to be beyond the road right of way, based on desktop mapping. Bear Branch is the final perennial channel within the study area and is located south of Cherry Lane and north of Olive Branch Way. Bear Branch enters the study area from the west as a two-channel system and is culverted under Van Dusen Road, flowing to the east. Two (2) nontidal wetlands were identified south of Bear Branch on the western side of Van Dusen Road, the northern most wetland was classified as a palustrine emergent (PEM) wetland and southern wetland was classified as a palustrine scrub-shrub and forested (PSS/PFO) wetland. One (1) nontidal wetland was identified north of Bear Branch on the western side of Van Dusen Road and was classified as a PEM wetland. The final wetland identified was located north of Bear Branch on the eastern side of Van Dusen Road, this wetland was classified as PEM within the right of way and extend east transitioning into a PFO wetland. Additionally, there is a Federal Emergency Management Administration (FEMA) mapped 100-year floodplain along Bear Branch.

5.2 Specimen Trees and Potential Forest Stands

The desktop analysis and visual field investigation identified one (1) specimen tree and eight (8) adjacent forested areas.

One (1) 36.1” southern red oak (*Quercus falcata*) specimen tree was located on the east side of Van Dusen Road, south of Erica Lane. Three (3) forested areas were identified on the northern portion of the study corridor along the west side of Van Dusen Road between Cherry Lane and Arbory Court. In addition, one (1) additional forested area was identified on the northern portion of the study corridor, along the east side of Van Dusen Road, between Alan Drive and Carissa Lane. On the central portion of the study corridor, one (1) forested area was identified on the west side of Van Dusen Road along Bear Branch and two (2) forested areas on the east side of Van Dusen Road along Bear Branch. The last area of forest identified is located on the southern portion of the study corridor, east of Laurel Regional Hospital and west of Van Dusen Road.

6.0 DATA COLLECTION AND CONDITIONS ASSESSMENT

6.1 Traffic Data Collection

Five (5) of the traffic counts were obtained from previous City of Laurel traffic studies. Three (3) locations, Van Dusen Road at Arbory Court, Van Dusen Road at S. Arbory Lane and Van Dusen Road at the UMD Laurel Medical Center required AM/PM peak hour counts. These counts were performed by Century under clear weather conditions, and with a dry roadway surface. *Appendix B* contains the detailed traffic count summaries.

The existing traffic signal timing data was provided by the City of Laurel and the Maryland State Highway Administration (SHA). Six (6) of the Van Dusen Road traffic signals are maintained and operated for the City of Laurel by Econolite and run a single timing plan. These timing plans had to be modified based on observed field operations. MD 198 (Sandy Spring Road) is a SHA signal and Contee Road is Prince George's County signal. The signal timing plan for Contee was not provided so it was developed from field observations. The signal timing sheets, and AM/PM *Synchro* model files were provided by SHA for MD 198. *Appendix C* includes the signal timing data and *Appendix D* includes the *Synchro/SimTraffic* reports.

The GIS topography (impervious areas and buildings) and ROW were obtained from the Prince George's County GIS website. The aerial used is the 6 in. imagery provided by SHA. The physical features such as utility poles and electrical boxes were obtained by a combination of the aerial and field verification. The existing signs were obtained from a review of *Google®* aerial imagery and through field verification. The as-built traffic signal plans for the eight (8) signals along Van Dusen Road were provide by the City of Laurel and are included in *Appendix E.*

6.2 Signing and Pavement Marking Deficiencies

The existing signing and pavement markings throughout the corridor do not meet the current MDMUTCD requirements, nor satisfy driver expectation. For example:

- The 5 in. white, ARROW and ONLY pavement markings are incorrectly installed in many of the Van Dusen Road turn bays. ONLYs should be reserved for through lane drops. Upgrade the corridor based on the guidance in the MDMUTCD Section 3B.20.
- Through lane configuration do not meet driver expectations.
  - Southbound Van Dusen Road north of Contee Road is one lane and signed/ marked as a left lane drop. This makes through traffic merge right to stay on Van Dusen Road.
  - Northbound Van Dusen Road at UMD Laurel Medical Center does not have a dedicated left turn lane. There are 98 AM and 24 PM left turns that through traffic must bypass.
  - Southbound Van Dusen Road right lane drops into Arbory Court. There are eighteen (18) right-turns and AM and fifty-two (52) right-turn during the AM and PM Peak Periods, respectively. Also, most of the southbound traffic is directed into the right lane south of MD 198. There are 187 AM and 197 PM trips from the southbound Van Dusen Road through/left turn lane and 438 AM and 758 PM from eastbound MD 198 right turn lane.
  - Northbound Van Dusen Road south of MD 198 widens from one lane to four lanes with minimal guidance.

- Existing signing size, color and design do not meet current MDMUTCD guidance. For example:
  - R3-7, Right Lane Must Turn Right and the Left Lane Must Turn Left signs are not used appropriately along Van Dusen Road. These signs should be reserved for through lane drops. Upgrade the corridor based on the guidance in the MDMUTCD Section 2B.19, paragraph 04c.

- The existing signs below, which are installed along Van Dusen Road.

……should be updated to the MDMUTCD Standard signs shown below:

R8-7(1)

W11-1
(with W16-1P plaque)

R10-6

When the traffic control devices do not meet driver expectations, they can cause confusion and aggressive driving. Both are undesirable. Therefore, we recommend upgrading the signing and pavement markings along the corridor.

6.3 Traffic Signal Equipment and Operational Deficiencies

Our assessments focused on pedestrian and vehicular safety and operations. We applied guidelines from the MUTCD, the MDMUTCD, and District of Columbia Department of Transportation (DDOT) Guidelines on Vertical Traffic Calming Implementation, and the ITE/FHWA *Traffic Calming ePrimer* to determine if the basic traffic controls were being appropriately applied to each location; to consider enhanced measures, where warranted by engineering judgement; and to develop recommendations for safety improvements based on unique site conditions and best practices.

The field observations identified four (4) intersections with (Van Dusen Road (Contee Road, Olive Branch Way/Killbarron Drive, S. Arbory Lane, and Arbory Court) operating with signal equipment malfunctions.

<u>Contee Road</u>

a. The presence detection for the southbound Van Dusen Road protected/permissive left-turn phase is not working properly. The left-turn phase comes up when no vehicles are in the left-turn lane, creating unnecessary northbound delay and queuing.
b. The pedestrian pushbuttons are not APS/CPS compliant. Additionally, the duration of the pedestrian clearance phases appears to be insufficient. The were observed at 16 seconds on the north leg and 18 seconds on the west leg.

<u>Olive Branch Way/Killbarron Drive</u>

a. The presence detection for the northbound Van Dusen Road protected/permissive left-turn phase is not working properly. The left-turn phase comes up when no vehicles are in the left-turn lane,

creating unnecessary southbound delay and queuing. In addition, a resident commented that the southbound exclusive/permissive left turn phase is extremely short and only allows for one to two vehicles. Another resident commented that there is a lot of red light running at the intersection and was concerned about safety. The red light running was observed many times during field observations.

b. The pedestrian pushbuttons in the northeast and southwest quadrants were broken and not APS/CPS compliant. Additionally, the durations of the pedestrian clearance phases appear to be insufficient. They were observed at 16 seconds.

South Arbory Lane

a. The presence detection for the northbound Van Dusen Road protected/permissive left-turn phase is not working properly. The left-turn phase comes up when no vehicles are in the left-turn lane, creating unnecessary southbound delay and queuing.

Arbory Court

a. The pedestrian pushbuttons are not APS/CPS compliant.
b. The presence detection for the northbound Van Dusen Road protected/permissive left-turn phase is not working properly. The left-turn phase comes up when no vehicles are in the left-turn lane, creating unnecessary southbound delay and queuing.
c. The pedestrian pushbuttons are not APS/CPS compliant. Additionally, the walk phase (16 seconds) and pedestrian clearance phase (7 seconds) are reversed.
d. The presence detection for eastbound Arbory Court is not working properly. A resident commented that a vehicle's presence at the stop line does not always send a call causing drivers to run the red light or turn right and turn around.

6.4 Stormwater Management Deficiencies/Impacts

A low spot in topography was observed at the southwest quadrant of the Van Dusen Road and Olive Branch Way/Killbarron Drive intersection. During heavy rainfall events, runoff may pond at this location and spill into the roadway, with the potential to create an unsafe condition for motorists. Drainage computations may be required to demonstrate the existing storm drain system has the capacity to convey the additional runoff. In addition, Utility test pits may be necessary at a later design phase of the project to identify and avoid utility impacts.

6.5 Environmental Resources (Impacts/Permit Requirements)

Should the limit of disturbance encompass or impact wetlands, 25 ft. wetland buffers, perennial/ intermittent waterways, or the 100-year floodplain, a Joint Permit Application may be required to receive authorization from the Maryland Department of the Environmental (MDE) and the United States Army Corps of Engineers (USACE). In addition, if tree clearing or trimming is to occur in State road ROW, a Maryland Department of Natural resources Roadside Tree Permit will be required to account for and mitigate tree impacts.

7.0 TRAFFIC SIGNAL ANALYSIS

The Van Dusen Road signalized intersections Levels of Service (LOS), Delay and queue for each turn bay were analyzed in Synchro/SimTraffic (*Synchro*) software. The turning movement counts were grown to 2024 to represent "Baseline" conditions and the analysis assumed the signal issues listed above were addressed. The LOS grades were assigned based upon guidance from the 6th edition of the Highway Capacity Manual (HCM) shown in *Table 1*.

Table 1
LEVEL OF SERVICE (LOS) THRESHOLDS

SIGNALIZED INTERSECTIONS Average Delay (sec/veh)	LEVEL OF SERVICE (LOS)
≥ 10	**A**
> 10 – 20	**B**
> 20 – 35	**C**
> 35 – 55	**D**
> 55 – 80	**E**
Demand Exceeds Capacity **OR** Delay > 80	**F**

2024 Baseline Analysis (All Intersections)

The Old Sandy Spring Road traffic volumes were significantly lower than the MD 198 volumes. Since there are no traffic generators between these intersections the Old Sandy Spring Road traffic volumes were balanced with the higher MD 198 intersection volumes to analyze a worst-case scenario. This resulted in the Old Sandy Spring Road eastbound right turn and westbound left turn bays exceeding their storage capacity. Note, the Old Sandy Spring Road storage bay issues were not witnessed during the field observation. The eastbound MD 198 left turn bays exceed their storage capacity during the PM peak hour with the existing 2024 volumes. However, all Van Dusen Road turn bay storage was sufficient to contain the modeled 95th Percentile Queue, shown in *Appendix D*. Also, all study intersections operate at acceptable LOS D or better. The Baseline LOS and Delay results are summarized in *Table 2*.

Table 2
2024 (BASELINE) INTERSECTION LEVEL OF SERVICE (LOS)

INTERSECTION (w/ VAN DUSEN ROAD)	WEEKDAY AM PEAK HOUR		WEEKDAY PM PEAK HOUR	
	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)
Contee Road	B	10.5 s	B	13.9 s
UMD Laurel Medical Center	A	4.3 s	A	7.1 s
Olive Branch Way / Killbarron Drive	A	5.9 s	A	6.1s
Cherry Lane	C	21.2 s	C	22.1 s
S. Arbory Lane	A	5.6 s	A	4.7 s
Arbory Court	A	9.0 s	A	8.9 s
MD 198 (Sandy Spring Road)	D	37.1 s	D	41.5 s
Old Sandy Spring Road	A	9.7 s	B	11.0 s

MD 198 Intersection Lane-use Reconfiguration

Century analyzed removing the southbound Van Dusen Road right lane drop at Arbory Court. This alternative proposes to reduce southbound Van Dusen Road to one (1) through-lane at MD 198. Currently the southbound Van Dusen Road lane configuration on the approach to MD 198 is one (1) left-turn lane, one (1) shared through/left lane, one (1) through lane, and one (1) channelized right-turn lane. This alternative proposes modifying this configuration to two (2) left-turn lanes, one (1) through-lane, and one (1) channelized right-turn lane. This would result in one (1) southbound lane along Van Dusen Road between Arbory Court and MD 198 and facilitate more efficient traffic flow for vehicles merging onto southbound Van Dusen Road from eastbound MD 198. To analyze this alternative, southbound Van Dusen Road between MD 198 and Arbory Court was modeled to show an acceleration lane for eastbound MD 198 right-turns and a deceleration lane for Arbory Court right-turns. With this alternative, the impacted signalized intersections would continue to operate at an acceptable LOS D or better, with sufficient turn bay storage along Van Dusen Road. The LOS and Delay for this Alternative are summarized in *Table 3*. The 95th Percentile Queue results are shown in *Appendix D*.

Table 3
MD 198 INTERSECTION LANE-USE RECONFIGURATION
ALTERNATIVE – TWO (2) SB LEFT-TURN LANES

INTERSECTION (w/ VAN DUSEN ROAD)	**MD 198 EXISTING LANE-USE (WEEKDAY AM | PM PH)**				**MD 198 ALT. LANE-USE (WEEKDAY AM | PM PH)**			
	LOS		Delay (sec/veh)		LOS		Delay (sec/veh)	
S. Arbory Lane	A	A	5.6 s	4.7 s	A	A	5.7 s	4.4 s
Arbory Court	A	A	9.0 s	8.9 s	A	A	9.0 s	7.5 s
MD 198 (Sandy Spring Road)	***D***	***D***	***37.1 s***	***41.5 s***	***D***	***D***	***36.4 s***	***46.2 s***
Old Sandy Spring Road	A	B	9.7 s /	11.0 s	B	B	10.1 s	12.3 s

8.0 PROPOSED IMPROVEMENTS

8.1 General Traffic Calming/Safety Considerations

The following are some general considerations that were considered/applied when assessing the corridor to determine the application of appropriate operations and safety improvements:

- Raised medians narrow the roadway, provide physical barrier between opposing traffic, and create a closed section feel along the roadway segment. Additionally, they produce an opportunity for green space. This feature could be installed along median section is currently unused pavement, such as near the Bear Branch damn.
- Converting a shoulder to sidewalk narrows the roadway and discourage aggressive driving will creating a dedicated place for pedestrian to walk.
- Raised Crosswalks were considered along Van Dusen Road. Based on DDOT guidelines (see *Appendix F*), Raised Crosswalks can be considered along Local roadways with mostly residential land uses and an Average Daily Traffic (ADT) less than 5,000 veh/day. In special cases they can be considered along Collector roadways with ADTs up to 7,500 veh/day. They are not ideal along roadways with transit routes, fire stations and/or hospitals. This section of Van Dusen Road is classified as a Major Collector and Minor Arterial and maintains an ADT above 12,000 veh/day. Additionally, the UMD Laurel Medical Center and Laurel Volunteer Fire Department access Van Dusen Road. Therefore, we do not recommend raised crosswalks at this time.

The following subsections describe the Van Dusen Road proposed corridor-wide improvements, as well as specific improvements recommended on each Concept Plan sheet. Concept Plans showing the general scope/area of these improvements are included in *Appendix G*.

8.2 Corridor-wide Improvements

- Correct the current signal malfunctions along Van Dusen Road at Contee Road, Olive Branch Way/Killbarron Drive, S. Arbory Lane, and Arbory Court.
- All signals should be routinely inspected. This would include operational reviews every three (3) years and structural inspections every three (3) years. This will address the issues indicated in *Section 7.0, Traffic Signal Analysis*, and minimize future signal timing and operations issues.
- Prepare Signing and Pavement Marking plans to upgrade the TCDs throughout the corridor to meet MDMUTCD guidance, including upgrading all crosswalks to High Visibility Continental Crosswalks. This section of Van Dusen has inconsistent crosswalk pavement markings. Upgrading the crossings to High Visibility Continental Crosswalks will provide a consistent feel and added visibility to alert drivers to where pedestrians are crossing. In addition, they should be installed to avoid vehicle wheel paths which reduces maintenance. These improvements will address the items indicated in *Section 6.2*. This would include upgrading all crosswalks to High Visibility Continental Crosswalks to improve visibility.
- It is anticipated stormwater management will need to be provided at five (5) Points of Investigation (POI). The City is amenable to using permeable pavement for sidewalks to treat stormwater management requirements where feasible.
- Prepare Roadway Design Plans to install the improvements listed below and shown in *Appendix G*. This would include cleaning all accessible drainage structures and storm drains along the corridor.

8.3 TCD Improvements (by Concept Plan Sheets)

Drawing PS-01 (Contee Road Intersection)

- Reconstruct/add ramps at all locations at this intersection due to the revised crosswalks in the north and east legs, additional ramps at the northwest and southeast corners are being proposed. Due to the existing goat path along northbound Van Dusen Road south of Contee Road, install sidewalk from the City limits to Contee Road and roadway widening in order to connect the existing bike lane to the Hiker-Biker trail. The pedestrian bus pad located along southbound Van Dusen Road is being reconstructed due to slope requirements. Additionally, install a pedestrian bus pad connection from the shared use path to northbound Van Dusen Road.
- Upgrade the Van Dusen Road at Contee Road signal to include APS/CPS. Evaluate the pedestrian clearance intervals and correct the southbound exclusive/permissive left turn phasing issues.
- The eastbound and westbound Contee Road right lane drops do not meet MDMUTCD guidance. Upgrade the Contee Road lane-drops signing and pavement markings.

Drawing PS-01 to PS-03

- Remove the southbound Van Dusen Road left lane drop and remark as shown in the Concept Plans.
- The existing inlet at STA 108+00 RT was observed to be completed clogged with sediment. In addition to cleaning out the structure and storm drain system, it is recommended to trim the existing ditch from the existing endwall at STA 109+75 RT to approximately STA 111+50 RT to provide positive drainage and prevent storm drain clogging in the future.

Drawing PS-02

- Remove the detectable warning surfaces at the ramps along northbound Van Dusen Road at the church entrance since this is not a signalized intersection or named roadway.

Drawing PS-03

- Recommend tree trimming along the shared use path.

Drawing PS-04 (Laurel Park Drive)

- Both handrails on this sheet are proposed due to insufficient height requirements.
- The west ramp at Laurel Park Drive is proposed due to slope requirements. The east ramp at Laurel Park Drive is proposed due to extending the detectable warning surface the entire width of the ramp.
- Remove the south leg crosswalk walk since it does not lead to any pedestrian facilities.
- The existing open-back curb opening inlet at STA 116+40 RT is damaged. Replace structure in kind.

Drawing PS-04 to PS-05

- Install Two-Way Left-Turn Lane (TWLTL) between Laurel Park Drive and UMD Laurel Medical Center as shown in the Concept Plans.
- Refresh the pavement markings on the UMD Laurel Medical Center along the intersection approach.

Drawing PS-05 (UMD Laurel Medical Center)

- Install a 5 ft. sidewalk along southbound Van Dusen Road, leading to the UMD Laurel Medical Center entrance.
- The handrail on this sheet is proposed due to insufficient height requirements.
- Remove the detectable warning surfaces at the ramps along northbound Van Dusen Road at the Laurel Park Shopping Center entrance since this is not a signalized intersection or named roadway.
- Upgrade pedestrian signals and pushbuttons to APS/CPS.

Drawing PS-06

- Replace the handrail due to insufficient height requirements.

Drawing PS-07 to 08 (Olive Branch Way/Killbarron Drive)

- Reconstruct all pedestrian ramps on this sheet to meet ADA requirements.
- We are also proposing a pedestrian bus pad connection from the shared use path to northbound Van Dusen Road and to extend the sidewalk and add a pedestrian bus pad at the bus stop at Olive Branch Way.
- Repair the Van Dusen Road at Olive Branch Way/Killbarron Drive pedestrian signal pushbuttons, upgrade to APS/CPS, and evaluate the pedestrian clearance intervals.
- Correct the northbound and southbound left turn phase issues and evaluate the signal timing.

Drawing PS-09 to PS-11 (Proposed Median)

- Replace all traffic barrier on these sheets due to insufficient height requirements. Replace the wooden railing with traffic barrier due to the steep drop-off along northbound Van Dusen Road.
- Install a raised median within the painted median from STA 139+05 to STA 145+20. This will prevent vehicles from making a left turn into the entrance at STA 140+75 LT to access drainage structures. The proposed raised median will end prior to the Laurel Volunteer Fire Department entrance, allowing vehicles to turn left into the entrance.

Drawing PS-11 to PS-12 (Cherry Lane)

- Reconstruct the pedestrian ramps in the northwest and southeast corners of the intersection to meet ADA requirements.
- Upgrade all traffic barrier due to height requirements. The bus stop at STA 147+00 LT is along a ditch with no existing sidewalk or pedestrian bus pad, therefore, relocate the Bus Stop to STA 150+05 LT where there is existing sidewalk.
- Reconstruct the ramp on the south side of Laurel Oaks Lane to sidewalk and add additional 5 ft. sidewalk to connect with the sidewalk behind the parking lot with a ramp leading to the parking lot. This additional ramp will have a fire hydrant impact.
- Upgrade the traffic signal at Cherry Lane to include APS/CPS and evaluate the pedestrian clearance intervals.
- Install School Zone signing (including school crossings at the intersection).
- Upgrade the trailblazer assembly signing along Cherry Lane to properly direct traffic to MD 198 and I-95. The westbound Cherry Lane right and left lane drops do not meet MDMUTCD guidance; consider upgrading the Cherry Lane signing and pavement markings.

Drawing PS-12 to PS-17 (Eastside Sidewalk)

- Install 5 ft. sidewalk along northbound Van Dusen Road from STA 149+75 RT to STA 174+50 RT. This 1 ft. sidewalk widening will have pedestal pole, electrical box, light pole, handbox, pedestrian push button, and wooden fence impacts. Due to the headwall located at approximately STA 174+20 RT, we are proposing traffic barrier that will have headwall, ditch, and wooden fence impacts.
- Replace and extend all traffic barrier due to insufficient height and length-of-need requirements.

Drawing PS-14

- Reconstruct pedestrian ramps on this sheet to meet ADA requirements. The north leg crosswalk will be moved slightly north to minimize the crossing distance, the stop lines for the northbound and southbound left turn bays will be removed, and a stop line will be added to westbound Erica Lane.
- Add a pedestrian bus pad at the Bus Stop at Laurel Oaks Lane.
- The crosswalk signing will be upgraded, including school bus stop ahead signs.

Drawing PS-14 to PS-16 (Eastside Sidewalk)

- Install 5 ft. sidewalk and curb and gutter along southbound Van Dusen Road from STA 160+60 LT to STA 167+00 LT utilizing the 4 ft. shoulder to avoid the existing ditch. The headwalls along both sides of the Duniho-Nigh Community Park entrance warrants traffic barrier that will impact the headwall and handbox.

Drawing PS-15 to PS-16 (S. Arbory Lane)

- Install a raised median within the footprint of the existing flush median north and south of S. Arbory Lane.
- Reconstruct all pedestrian ramps to meet ADA requirements.
- Install a pedestrian bus pad for the existing bus stops at STA 167+85 LT and STA 170+20 RT. The pedestrian bus pad at STA 170+20 RT will require a backer-curb and handrail due to a steep slope.
- Upgrade the Van Dusen Road at S Arbory Lane signal to include APS/CPS.
- Repair the northbound exclusive/permissive left turn presence detection so this phase only comes up when a vehicle is present.

Drawing PS-17 (Arbory Court)

- Reconstruct all pedestrian ramps to meet ADA requirements.
- Upgrade the Van Dusen Road at Arbory Court signal to include APS/CPS and evaluate the pedestrian clearance intervals. Repair the northbound exclusive/ permissive left turn presence detection so this phase only comes up when a vehicle is present. Also repair the eastbound Arbory Court presence detection so it does detect a vehicle on Arbory Court.
- Trim existing ditch from approximately STA 172+00 LT to STA 173+60 LT (at downstream end of culvert under Arbory Court.

Drawing PS-17 to PS-19 (Arbory Court to MD 198)

- Remove the southbound Van Dusen Road right lane drop at Arbory Court by reconfiguring the southbound Van Dusen Road lane configuration north of MD 198. This will require coordination with SHA.
- Modify southbound Van Dusen Road to one through lane from MD 198 to Arbory Court as shown in the Concept Plans. The MD 198 at Van Dusen Road signal modification will require coordination with SHA, see *Section 7.0* for the analysis results.
- Install a raised median within the footprint of the existing flush median north of S. Arbory Lane from STA 174+40 to STA 179+00.
- Modify northbound Van Dusen Road south of MD 198 as shown in the Concept Plans.
- Recommend installing advance trailblazer assembly signs for MD 198.

Drawing PS-20 (Old Sandy Spring Road)

- Widen both islands towards Old Sandy Spring Road to shorten the west leg crosswalk, better channelize right-turns, and discourage aggressive driving.
- Upgrade the sidewalk in front of the Laurel Park and Ride to 5 ft. Install two (2) ramps along the west leg to connect to the existing crosswalk. Reconstruct all pedestrian ramps to be to meet ADA requirements except for 1 ramp located at approximately STA 187+90 LT. The ramp reconstruction at approximately STA 187+60 LT will impact a manhole. The ramp reconstruction at the east island will potentially impact the traffic signal.
- Upgrade the Van Dusen Road at Old Sandy Spring Road signal to include APS/CPS and a Leading Pedestrian Interval (LPI) on the west leg pedestrian signal.

- Relocate the existing stop line on the north leg so stopped vehicles will not block the pedestrian crossing. Upgrade signing within the intersection.
- The eastbound and westbound Old Sandy Spring Road left lane drops do not meet MDMUTCD guidance. Consider upgrading the lane drops signing and pavement markings.

8.4 Stormwater Management Improvements (by Stationing)

The project will comprise of 14 separate Points of Investigation (POIs) and Lines of Investigations (LOIs) where runoff from the project site will leave City right-of-way. Runoff from some of these POIs/LOIs leave the ROW at different locations along the project corridor, but ultimately combine at the same location as other POIs/LOIs downstream of the project site. These POIs/LOIs are indicated with a letter in addition to a POI/LOI number. For example, runoff from POI 6A and LOI 6B will leave the right-of way at different locations but ultimate converge just beyond the ROW.

It is anticipated stormwater management will need to be provided at POIs 1, 4, 5A, 6A and 7A. The City is amenable to using permeable pavement for sidewalks to treat stormwater management requirements where feasible. The permeable pavement proposed on this project will utilize Prince George's County detail and design specifications, meeting all State and County requirements. From the USDA Natural Resources Conservation Services Web Soil Survey, the project area consists of soils within the Hydrologic Soil Groups C and D. Due to the low infiltration rates typically associated with Type D soil, permeable pavement is not a suitable stormwater management practice and will not be proposed on Type D soil. Where permeable pavement is proposed, underdrains will be provided which will either tie into existing drainage structures or outfall into an existing swale.

Throughout the project, impervious area is proposed to be reconstructed and restored to its original function. In is anticipated these reconstructed impervious areas will qualify for an MDE 3.3.A stormwater management waiver and no stormwater management will need to be provided for these areas.

There are some locations where runoff will shift from one drainage area to another from existing to proposed conditions due to the widening of sidewalk (LOI 5A to POI 5, LOI 6A to POI 6, and LOI 7A to POI 7). With the proposed removal of existing impervious area and the installation of permeable pavement, the Runoff Curve Number and peak discharges may decrease in proposed conditions, therefore not requiring quantity stormwater management measures for these POIs. Further analysis will be required at a later design stage to confirm.

<u>POI 1 (STA 101+40 RT) Contee Road</u>

A proposed 5 ft. wide sidewalk, widening of the roadway to accommodate a bike lane, and a proposed pedestrian ramp will introduce approximately 0.02 acres of new imperious area within the drainage area to POI 1. There is limited opportunity to provide the required stormwater management for this POI without impacted the wooded area adjacent to the roadway. Soil information from the USDA Web Soil Survey indicates the drainage area within the project site consists entirely of Type D hydraulic soil, making permeable pavement an unsuitable stormwater management option at this location. **Alternative stormwater management opportunities will be discussed with the City of Laurel after the initial concept submission, such as providing a stormwater management practice currently outside of the project limits**.

<u>Drawing PS-07 (STA 129+80 LT) Olive Branch Way/Killbarron Drive</u>

A low spot in topography was observed at the southwest quadrant of the Van Dusen Road and Olive Branch Way/Killbarron Drive intersection. During heavy rainfall events, runoff may pond at this location and spill into the roadway, with the potential to create an unsafe condition for motorists. **Recommend**

installing a yard inlet at his low spot and connecting to the existing curb opening inlet at STA 129+80 LT with a 15 in. diameter concrete pipe. Utility test pits may be necessary at a later design phase of the project to identify and avoid utility impacts. Drainage computations may be required to demonstrate the existing storm drain system has the capacity to convey the additional runoff.

POI 4 (STA 138+50 RT) 750 ft. North of Olive Branch Way/Killbarron Drive

POI 4 proposes to introduce approximately 0.01 areas of new impervious area and remove approximately 0.08 acres of existing impervious area (existing asphalt median is proposed to be replaced with a grass median). Due to the net decrease in imperious area, **no stormwater management practices are required at this POI**.

POI 5A (STA 153+65 RT) 400 ft. North of Cherry Lane

POI 5A proposes to introduce approximately 0.03 areas of new impervious area. An approximate 260 ft. long section of **permeable pavement is proposed to be used for the sidewalk** from STA 150+30 to 152+90 RT to provide the required stormwater management treatment at this POI.

Recommend **trimming existing ditch** from approximately STA 158+50 LT to STA 160+00 LT (at upstream end of culvert under Laurel Oaks Lane) and from STA 160+30 LT (downstream end of culvert) to STA 162+80 LT.

POI 6A (STA 164+45 RT) 250 ft. South of S. Arbory Lane

POI 6A proposes to introduce approximately 0.08 areas of new impervious area and remove approximately 0.02 acres of existing impervious area (existing asphalt median is proposed to be replaced with a grass median). An approximate 295 ft. and 195 ft. section of **permeable pavement is proposed to be used for the sidewalk** from STA 157+10 to STA 160+05 RT and STA 160+80 to STA 162+75 RT, respectively to provide the required stormwater management treatment at this POI.

POI 7A (STA 169+60 RT) 250 ft. North of S. Arbory Lane

POI 7A proposes to introduce approximately 0.03 areas of new impervious area and remove approximately 0.08 acres of existing impervious area (existing asphalt median is proposed to be replaced with a grass median). Due to the net decrease in imperious area, **no stormwater management practices are required at this POI**.

9.0 RECOMMENDATIONS

Based on the TCD, Stormwater Management, and Environmental assessments performed for this Study; the traffic signal operations analysis performed using Synchro/SimTraffic microsimulation software; and the proposed potential improvements described in *Section 6.0* of this report, Century recommends the maintenance and design activities as a part of a corridor-wide improvement project.

1. Correct the current traffic signal operational malfunctions along Van Dusen Road at Contee Road, Olive Branch Way/Killbarron Drive, S. Arbory Lane, and Arbory Court.
2. Routine inspection and maintenance of all traffic signals. This would include a review of signal operations and structural inspections of the signal infrastructure every three (3) years.
3. Prepare Traffic Signal, Signing and Pavement Markings, and Intersection Lighting plans to upgrade TCDs throughout the corridor to meet the MDMUTCD guidance. This would include upgrading all APS/CPS infrastructure at signalized intersections, upgrading crosswalks to High Visibility Continental Crosswalks, and upgrading intersection lighting to LED luminaires.
4. Clean out all accessible drainage structures and storm drain pipes along the corridor.
5. Prepare Final Roadway Design Plans to install the improvements shown in *Appendix G*.

The OOM Cost Estimate for implementing the improvements recommended in this Study is $4.2M. The cost breakdown by construction Category Code is provided in *Appendix H*.

PROJECT DESCRIPTION

I. GENERAL

This project involves the installation of a new traffic control signal at the intersection of Van Dusen Road and Contee Road in Prince George's County, Maryland. Van Dusen Road is considered to run in an east/west direction.

II. INTERSECTION OPERATION

The intersection will operate in a NEMA six (6) phase, full traffic actuated mode. There will be an exclusive/permissive left turn phase for both the east and westbound movements of Van Dusen Road. The Van Dusen Road through movements will operate concurrently with an actuated pedestrian phase across the north leg of the intersection. The Contee Road through movements will operate concurrently with an actuated pedestrian phase across the east leg of the intersection.

An eight phase full traffic actuated, solid state digital controller with intersection monitor, video camera equipment and harness battery back up housed in a base mounted cabinet are to be installed at this location.

III. SPECIAL NOTES

1) All traffic signal equipment shall be located in anticipation of future roadway widening.

2) Maintenance of the traffic will be handled by the contractor utilizing the following standard plates for traffic control: 104.00, 104.00-30, 104.38-02, 104.30-02, 104.40-02, 104.43-02.

3) The Signal Contractor shall be required to contact the County signal shop (Mr. Stan Wasilewski, (301) 499-8579) at least 72 hours in advance of any on site construction.

4) Materials to be furnished and installed by the contractor shall require catalog cuts submitted to the County for approval prior to purchasing.

5) All signal heads, luminaires, and cameras location/placement shall be verified or changed as necessary by the signal shop inspector.

EQUIPMENT LIST

Equipment to be furnished and/or installed by the Contractor.
All equipment in this list shall have catalog cuts submitted for approval prior to installation.

Quantity	EA Units	MD Specification Section	Description
1	EA	818	27 ft. steel mast arm pole with a 38 ft. mast arm

Traffic Signal Plan

PROJECT DESCRIPTION

I. GENERAL

This project involves the installation of a new traffic control signal at the intersection of Van Dusen Road and Olive Branch Way/Killbarron Drive in the City of Laurel, Maryland. Van Dusen Road is maintained by the State Highway Administration (SHA) and runs in a north-south direction.

II. INTERSECTION OPERATION

The intersection is to operate as a NEMA two phase full traffic actuated mode. There will be no pedestrian movements left turn phases for both the north and southbound movements of Van Dusen Road. The Van Dusen Road through movements will operate concurrently. The Olive Branch Way/Killbarron Drive through movements will operate concurrently.

An aerial phase, full traffic actuated, solid state digital controller with volume/density and harness, battery back up, and 24 hour tamper-proof mounted loop delay output loop detector amplifiers housed in a base mounted cabinet are to be installed at this location.

EQUIPMENT LIST

Equipment to be furnished and/or installed by the Contractor.
All equipment in the list mentioned hereby was submitted to the City of Laurel for approval prior to ordering or installation.

CONSTRUCTION DETAILS
A. Install 6 ft. x 30 ft. quadrupole type loop detector encased in ¼ in. flexible tubing (3-6-3 winding)
B. Remove existing 3-section signal head, install 5-section signal heads and sign on existing mast arm, and street name sign
C. Install in liquid-tight, flexible, non-metallic conduit (detector wire sleeve)
D. Use existing handhole
E. Use existing conduit
F. Use existing pole mounted cabinet and controller
GENERAL NOTES:
1. This plan reflects only those underground utilities that were apparent at the time of this location being casuilt. A detailed review was not undertaken and this plan should not be construed as representing all underground utilities in the area.
2. Any modification to this subject signal should be preceded by a thorough identification of all existing utilities.
3. Install proposed loop detector 1 ft. behind stop line.
4. Unless otherwise noted all existing equipment will be used.

PROJECT DESCRIPTION

THIS PROJECT INVOLVES THE MODIFICATION OF THE EXISTING TRAFFIC SIGNAL AT THE INTERSECTION OF VAN DUSEN ROAD AND SOUTH ARBORY LANE IN PRINCE GEORGE'S COUNTY. VAN DUSEN ROAD IS ASSUMED TO RUN IN A NORTH-SOUTH DIRECTION.

CONTROLLER OPERATION

THE EXISTING EIGHT-PHASE, FULLY ACTUATED NEMA CONTROLLER HOUSED IN A BASE MOUNTED CABINET WILL BE USED. THE INTERSECTION OPERATION WILL BE CHANGED TO PROVIDE AN EXCLUSIVE-PERMISSIVE LEFT TURN PHASE FOR NORTHBOUND VAN DUSEN ROAD.

EQUIPMENT LIST

• ITEM NO.	QUANTITY	DESCRIPTION

PROJECT DESCRIPTION

THIS PROJECT INVOLVES THE MODIFICATION OF THE EXISTING TRAFFIC SIGNAL AT THE INTERSECTION OF VAN DUSEN ROAD AND ARBORY COURT IN PRINCE GEORGE'S COUNTY. VAN DUSEN ROAD IS ASSUMED TO RUN IN A NORTH-SOUTH DIRECTION.

CONTROLLER OPERATION

THE EXISTING EIGHT-PHASE, FULLY ACTUATED NEMA CONTROLLER HOUSED IN A POLE MOUNTED CABINET WILL BE USED. THE INTERSECTION OPERATION WILL BE CHANGED TO PROVIDE AN EXCLUSIVE-PERMISSIVE LEFT TURN PHASE FOR NORTHBOUND VAN DUSEN ROAD.

EQUIPMENT LIST

* ITEM NO.	QUANTITY	DESCRIPTION
8021	125 LF	FURNISH AND INSTALL SAW CUT FOR SIGNAL LOOP DETECTOR
8023	10 LF	FURNISH AND INSTALL 1 IN. LIQUID TIGHT FLEXIBLE NON-METALLIC CONDUIT FOR DETECTOR SLEEVE
8040	425 LF	FURNISH AND INSTALL LOOP WIRE ENCASED IN ¼ IN. FLEXIBLE TUBING (NO. 14 A.W.G.)

GENERAL NOTES

1. ALL UNDERGROUND AND OVERHEAD UTILITIES SHOWN ON THESE PLANS ARE SCHEMATIC ONLY AND MAY NOT BE COMPLETE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING MISS UTILITY PRIOR TO CONSTRUCTION SO THAT ALL UTILITIES MAY BE LOCATED IN THE FIELD. IF THE CONTRACTOR PERCEIVES THAT A CONFLICT BETWEEN UTILITIES AND TRAFFIC SIGNAL EQUIPMENT WILL OCCUR, THE CONTRACTOR SHALL NOTIFY THE PROJECT ENGINEER IMMEDIATELY SO THE CONFLICT MAY BE RESOLVED.
2. GROUNDING OF THE PROPOSED EQUIPMENT MUST BE DONE IN ACCORDANCE WITH SHA REQUIREMENTS.

PHASING NOTES:
1) PHASES ASSOCIATED BY A SOLID LINE WILL NOT OPERATE CONCURRENTLY
2) PHASES ASSOCIATED BY A DASHED LINE MAY OPERATE CONCURRENTLY

CONSTRUCTION DETAILS

A. INSTALL VIDEO DETECTION CAMERA ON EXISTING SIGNAL POLE.
B. INSTALL VIDEO DETECTION CAMERA ON 15' CAMERA ARM ON EXISTING SIGNAL POLE. USE STANDARD MD 818.2C.
C. USE EXISTING CONDUIT.
D. USE EXISTING HANDHOLE.
E. USE EXISTING CONTROLLER CABINET.
F. DISCONNECT AND ABANDON EXISTING LOOP DETECTORS.
G. REMOVE EXISTING HANDHOLE. CAP AND ABANDON EXISTING CONDUIT.

GENERAL NOTES

1. VIDEO CAMERA LOCATION / ALIGNING SHALL BE COORDINATED WITH THE SHA ENGINEER.
2. ALL EXISTING TRAFFIC SIGNAL EQUIPMENT REMOVED SHALL BECOME THE PROPERTY OF THE SIGNAL CONTRACTOR UPON COMPLETION OF THE SIGNAL MODIFICATIONS.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVING THE UNUSED CABLES FROM EXISTING HANDHOLES.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING SIGNAL OPERATION DURING THE COMPLETE CONSTRUCTION PERIOD.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR TERMINATING ALL SIGNAL CABLES TO THE APPROPRIATE TERMINALS AND PROPERLY LABELING EACH CABLE.
6. ALL MODIFICATIONS TO THE CONTROLLER CABINET WILL BE DONE BY THE SHA SIGNAL OPERATIONS.

PROJECT DESCRIPTION

GENERAL

THIS PROJECT INVOLVES THE MODIFICATION OF THE EXISTING TRAFFIC CONTROL SIGNAL AT THE INTERSECTION OF MD 198 AND VAN DUSEN ROAD IN PRINCE GEORGE'S COUNTY. EXISTING LOOP DETECTION ON THE SIDE STREETS AND MAIN LINE LEFT TURNS ARE TO BE REPLACED WITH VIDEO DETECTION EQUIPMENT AND RELATED ZONES. LOOP DETECTION ON MD 198 MAIN LINES IS TO REMAIN.

MD 198 IS ASSUMED TO RUN IN AN EAST-WEST DIRECTION.

INTERSECTION OPERATION

THE INTERSECTION CURRENTLY OPERATES IN A SIX PHASE FULLY-ACTUATED MODE WITH EXCLUSIVE LEFT TURN PHASES FOR E.B. AND W.B. MD 198 AND SPLIT SIDE STREET PHASING. AN ALTERNATE PEDESTRIAN PHASE EXISTS ACROSS THE EAST LEG OF MD 198 AND PRE-EMPTION PHASING FOR ALL APPROACHES.

DDOT Guidelines on Vertical Traffic Calming Implementation

INTRODUCTION

The purpose of this memo is to detail the criteria used to evaluate implementation of vertical traffic calming infrastructure on roadways within the District. Vertical traffic calming devices including speed humps, speed tables, and raised crosswalks are typically used to maintain travel speeds at or below the posted speed limit. These devices are most widely applied along local and collector neighborhood/residential streets but may be applied to certain minor arterials in unique circumstances, per these guidelines. Vertical traffic calming devices shall not be placed on roads classified as Principal Arterials or higher. **The criteria detailed in this document supersedes all previous DDOT guidance on vertical traffic calming, including *DDOT Speed Hump Request Procedures and Engineering Guidelines* (2010) and *DDOT Traffic Calming Assessment Application* (2012). The criteria and applicability for other non-vertical traffic calming remains unchanged.**

Generally, vertical traffic calming devices can result in both positive and negative impacts to the transportation network. Implementation of these devices can help maintain travel speeds at or below the posted speed limit and help manage aggressive driving behavior. The United States Federal Highway Administration's (FHWA) Traffic Calming ePrimer states that "*speed effects of a single or series of speed humps are greater than for any other traffic calming measure with the exception of route diversions that eliminate a particular traffic movement.*" However, in some cases they can increase emergency response time, and may lead to an increase in noise or physical vibration in cases where trucks and transit vehicles are frequent. Another common concern with vertical traffic calming is the potential for traffic diversion to adjacent streets. However, FHWA's Traffic Calming ePrimer states "*As single installation, there is little traffic diversion from the street; as part of a series, typical volume reductions of 20 percent observed*." Given the benefits identified by FHWA, and the relatively minor and manageable drawbacks, speed humps and similar vertical traffic calming measures shall be the preferred method for speed-related neighborhood traffic calming in the District, when feasible.

Implementation of vertical traffic calming is considered following a Traffic Safety Investigation (TSI) request from a resident. Any requests for vertical traffic calming that are received outside of the TSI process will be denied with instructions for the requester to resubmit the request via the TSI process. When considering vertical traffic calming requests, DDOT reviews whether certain eligibility and feasibility criteria are met for the roadway in question. Satisfaction of all these criteria indicates that a street is eligible for speed hump installation. Following a determination of eligibility, a set of design criteria is provided that shall be followed for all vertical traffic calming installations. Exceptions to these eligibility and feasibility criteria require written approval of Traffic Safety Branch Manager prior to installation. DDOT may also consider vertical traffic calming as part of other on-going projects with or without a corresponding TSI.

ELIGBILITY CRITERIA

The following criteria must be met for a street to be eligible for vertical traffic calming installation.

Roadway Classification, Traffic Volume and Speed

Local Roads

Speed humps and/or raised crosswalks may be installed on streets classified as local roads with predominantly residential land uses, provided that all other eligibility and design criteria are met. While DDOT may choose to collect traffic data on a case-by-case basis, it is not a requirement for implementation of vertical traffic calming devices on local roads.

Collector Roads

Installation of speed tables and/or raised crosswalks on collectors with ADT (Average Daily Traffic) less than 5,000 vehicles per day can be considered following the collection of volume and speed data. Speed data should be evaluated in the context of Vision Zero based on the known dangers of increased travel speeds on safety, and particularly the safety of vulnerable users as the risk of fatality or serious injury increases exponentially with vehicle travel speed. Engineering judgement shall govern the final decision in all cases.

Installation of raised crosswalks can be considered on collectors with ADT between 5,000 and 7,500 vehicles per day in unique circumstances following an engineering assessment. Vertical traffic calming devices shall not be installed on collectors with ADT higher than 7,500 vehicles per day.

Other Classifications

In general, for speed management on minor arterials or roads with higher classifications, alternative countermeasures such as Automated Traffic Enforcement (ATE), Driver Feedback Signs (DFB), flashing speed limit signs, as well as corridor-level treatments including road diet projects are preferred and should be considered before vertical traffic calming. Additional proven traffic control devices to specifically address pedestrian crossing safety issues on arterial that can be considered include but are not limited to flashing pedestrian signs, Rectangular Rapid Flashing Beacons (RRFB), and depending on deployment criteria and availability of funding and resources, High-Intensity Activated CrossWalK (HAWK).

Vertical traffic calming devices shall not be placed on roads classified as minor arterials with ADT higher than 7,500 vehicles per day or on higher classification roads. Speed tables and/or raised crosswalks may be considered on minor arterials with ADT lower than 5,000 vehicles per day, following an engineering assessment. Additionally, installation of raised crosswalks can be considered on minor arterials with ADT between 5,000 and 7,500 vehicles per day in unique circumstances following an engineering assessment with special considerations given to proximity to schools and higher concentration of vulnerable road users at uncontrolled crossings along these arterials.

The functional classification of streets in the District can be found in the 2016 Functional Classification Map:

https://ddot.dc.gov/sites/default/files/dc/sites/ddot/publication/attachments/FunctionalClass_2016.pdf

The approximate ADT of streets in the District can be found in the 2018 Traffic Volume Map:

https://ddot.dc.gov/sites/default/files/dc/sites/ddot/publication/attachments/TrafficVolumes_2018.pdf

Roadway Grade

Vertical traffic calming shall not be installed on roadways where the grade exceeds eight percent (8%). Roadway grade can be determined by field survey when collecting existing site conditions or can be estimated using Google Earth. If grades measured using Google Earth are within one percent (1%) of this threshold, a field survey using an inclinometer shall be performed to confirm the roadway grade.

Roadway Speed Limit

Vertical traffic calming shall not be installed on roads where the posted speed limit is greater than 30 miles per hour. Where no speed limit is posted and on all local roads, the default speed limit is assumed to be 20 miles per hour.

Emergency Access Route

Vertical traffic calming shall not be installed on any roadway that serves as a primary route for emergency vehicles, such as the main approaches to hospitals or fire stations.

Truck or Transit Route

Speed humps shall not be installed on streets that are designated as transit or truck routes. Consideration should be given to installation of speed tables and/or raised crosswalks if vertical traffic calming is desired on such roadways, if heavy vehicle (i.e., trucks and buses) percentage does not exceed 5%. Determination of heavy vehicle percentage along higher-volume collectors should be made based on vehicle classification counts.

A map of WMATA transit routes can be found here:
https://www.wmata.com/schedules/maps/upload/WEB_WMA_MAG_DC_21x34_210305.pdf

A map of DDOT-designated truck routes can be found here:
https://ddot.dc.gov/sites/default/files/dc/sites/ddot/service_content/attachments/DC%20Truck%20Map%20Brochure_12.10.20_web.pdf

DESIGN CRITERIA

If a street is found to be eligible for vertical traffic calming installation, the following design specifications should be used to determine the exact location of vertical traffic calming devices in the field.

- Devices shall be placed in locations where drivers have adequate sight distance to see vertical deflection on the roadway surface, preferably from a distance of at least 250 feet on uninterrupted segments of road for drivers traveling at the design speed;
- Placement of devices must avoid conflicts with other transportation and utility infrastructure;
- Devices should be located near a streetlight to ensure nighttime illumination;
- Devices shall be installed at least 200 feet apart but not greater than 500 feet apart on road segments bounded by two intersections;
- Devices shall be placed at least 5 feet from a driveway, and 20 feet from an alley;
- Devices should be placed at least 150' from STOP or YIELD-controlled intersection approaches. However, where other constraints exist (e.g., short block spacing or presence of driveways) a distance of at least 100' may be used provided that proper spacing and placement of warning signs can be maintained;
- Devices should be placed at least 250’ from a traffic signal (shorter spacing may be considered on a case-by-case basis);
- Devices should NOT be installed on horizontal or vertical curves if avoidable. If placement on a curve is unavoidable, advanced warning signs and markings shall be designed to provide satisfactory notice to drivers;
- Devices shall NOT be installed in the path of a pedestrian crossing or curb ramp, unless the device installed is a raised crosswalk;
- Devices shall NOT be installed over manholes or water valves;
- Devices shall NOT be installed adjacent to fire hydrants;
- Devices installed near drainage inlets should be installed on the downslope side of the inlet as to not impact drainage flow; and
- Devices may be installed on concrete roadways using either asphalt or concrete construction.

If it is determined during design that one or more of the above criteria would be violated, the Traffic Safety Branch Manager shall make a final determination on whether it is still feasible and safe to install vertical traffic calming devices and where the devices shall be installed. Locations of vertical traffic calming devices proposed under a Safe Routes to School assessment shall comply with all design criteria.

Raised Crosswalks

Additional design criteria are required for the installation of raised crosswalks, as outlined below. Raised crosswalks installed at an intersection shall require a full engineering design plan that is designed by a licensed professional engineer.

- Raised Crosswalks, including their flares or pitch, should not be installed in conflict with water, sewer, gas, telecom, Pepco, or DDOT-owned signal/streetlight manholes;
- Raised Crosswalks shall not be installed such that the flares extend into any conflicting travel lanes when installed at intersections;

- Raised Crosswalks shall not be installed at intersections such that any relocation of the stop bar that may be required to install the raised crosswalk violates minimum intersection sight distances. Raised crosswalks are most preferred at uncontrolled and/or midblock crossings, where vehicular traffic flow is not controlled by a traffic control device such as a stop sign or a traffic light;
- Raised Crosswalks shall not be installed if proper alignment of ADA ramps with the proposed crosswalk cannot be maintained; and
- Raised Crosswalks shall not be installed such that they will impact drainage flow.

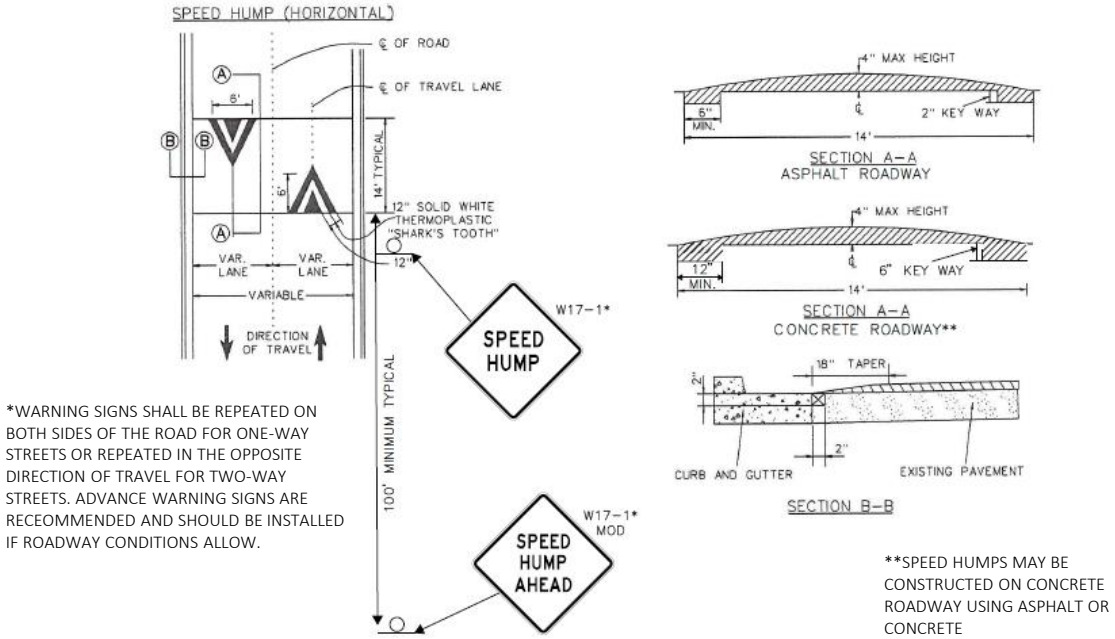
EXCEPTIONS

Any exceptions to the guidelines outlined in this document shall require written approval from the Traffic Safety Branch Manager of the Traffic Engineering and Safety Division.

DESIGN STANDARDS

Design specifications for vertical traffic calming devices and the associated warning signs, as installed by DDOT, are provided in the following sections.

Speed Hump Design Specifications

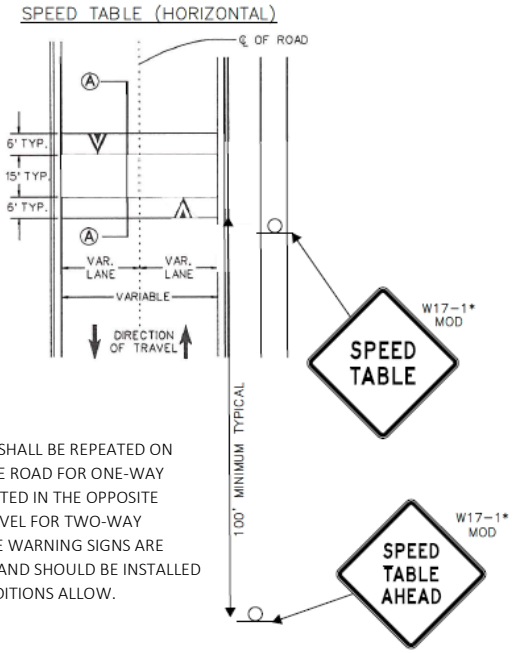


*WARNING SIGNS SHALL BE REPEATED ON BOTH SIDES OF THE ROAD FOR ONE-WAY STREETS OR REPEATED IN THE OPPOSITE DIRECTION OF TRAVEL FOR TWO-WAY STREETS. ADVANCE WARNING SIGNS ARE RECEOMMENDED AND SHOULD BE INSTALLED IF ROADWAY CONDITIONS ALLOW.

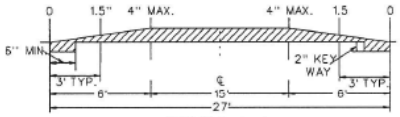
**SPEED HUMPS MAY BE CONSTRUCTED ON CONCRETE ROADWAY USING ASPHALT OR CONCRETE

NOTES:
TYPICALLY, A SPEED HUMP IS 14 FEET LONG BUT CAN BE BETWEEN 10 FEET AND 14 FEET IN LENGTH, AND HIEGHT CAN BE BETWEEN 3 INCHES AND 4 INCHES. TYPICAL HEIGHT IS 4 INCHES.

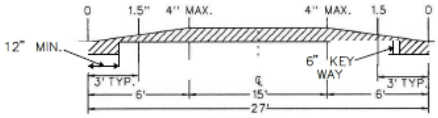
Speed Table Design Specifications



*WARNING SIGNS SHALL BE REPEATED ON BOTH SIDES OF THE ROAD FOR ONE-WAY STREETS OR REPEATED IN THE OPPOSITE DIRECTION OF TRAVEL FOR TWO-WAY STREETS. ADVANCE WARNING SIGNS ARE RECEOMMENDED AND SHOULD BE INSTALLED IF ROADWAY CONDITIONS ALLOW.



SECTION A–A
ASPHALT ROADWAY



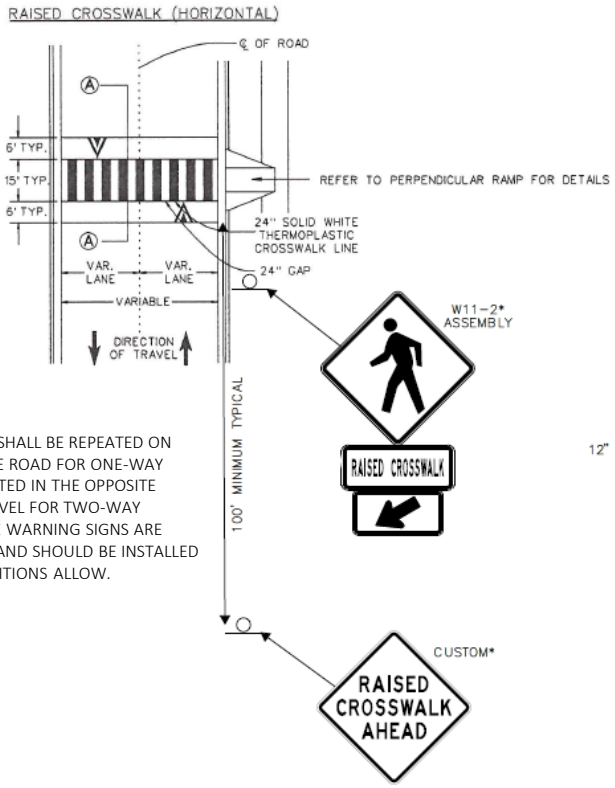
SECTION A–A
CONCRETE ROADWAY**

**SPEED TABLES MAY BE CONSTRUCTED ON CONCRETE ROADWAY USING ASPHALT OR CONCRETE

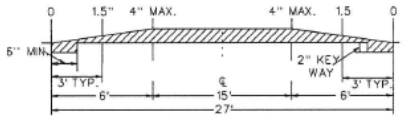
NOTES:

TYPICALLY, A SPEED TABLE IS 27 FEET LONG BUT CAN BE BETWEEN 22 FEET AND 27FEET IN LENGTH. HIEGHT CAN BE BETWEEN 3 INCHES AND 4 INCHES. TYPICAL HEIGHT IS 4 INCHES.

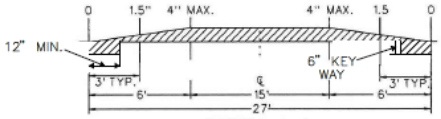
Raised Crosswalk Design Specifications



*WARNING SIGNS SHALL BE REPEATED ON BOTH SIDES OF THE ROAD FOR ONE-WAY STREETS OR REPEATED IN THE OPPOSITE DIRECTION OF TRAVEL FOR TWO-WAY STREETS. ADVANCE WARNING SIGNS ARE RECEOMMENDED AND SHOULD BE INSTALLED IF ROADWAYCONDITIONS ALLOW.



SECTION A–A
ASPHALT ROADWAY



SECTION A–A
CONCRETE ROADWAY**

**RAISED CROSSWALKS MAY BE CONSTRUCTED ON CONCRETE ROADWAY USING ASPHALT OR CONCRETE

NOTES:

1. THE WIDTH FOR RAISED CROSSWALKS WILL BE 22 FEET FOR LOCAL ROADS AND 27 FEET FOR COLLECTOR ROADS. HIEGHT CAN BE BETWEEN 3 INCHES AND 4 INCHES. TYPICAL HEIGHT IS 4 INCHES.
2. IF INSTALLATION OF PERPENDICULAR RAMP IS NOT FEASIBLE THEN REFER TO OTHER RAMP DETAILS.

CITY OF LAUREL, MARYLAND

ORDINANCE NO. 2029

AN ORDINANCE AMENDING THE GENERAL OPERATING BUDGET AND CAPITAL IMPROVEMENT PROGRAM OF THE MAYOR AND CITY COUNCIL OF LAUREL, MARYLAND, FOR THE FISCAL YEAR JULY 1, 2024 THROUGH JUNE 30, 2025 AND TO PROVIDE AN EFFECTIVE DATE

Sponsored by the City Council President at the request of the Administration.

WHEREAS, the FY2025 General Operating Budget and Capital Improvement Program (CIP) was adopted on May 28, 2024 through Ordinance No. 2026, and

WHEREAS, there are savings realized in certain CIP projects which are proposed to be allocated to other projects, and

WHEREAS, the Mayor and City Council of Laurel, Maryland are required to amend the FY2025 General Operating Budget and CIP to reflect these changes.

NOW, THEREFORE, BE IT ENACTED AND ORDAINED, by the Mayor and City Council of Laurel, Maryland that the General Operating Budget and CIP for the Fiscal Year July 1, 2024 through June 30, 2025 is hereby amended.

MEMORANDUM

To: Mayor Keith R. Sydnor
Council President James Kole
Laurel City Councilmembers

Thru: Joanne Hall Barr, Deputy City Administrator JHB
From: Tim Miller, Director of Public Works
Subject: Bid Recommendation - 4th and 5th Street Improvements

The Department of Public Works is requesting approval for Construction Project LA 24-004, 4th and 5th Street Improvements.

Project Scope

This project includes the milling and overlay, repair of concrete sidewalk, pedestrian ramps, concrete curbing, and striping and roadway signage of 4th Street from Main Street to Montgomery Street and 5th Street from Main Street to Gorman Avenue in the City of Laurel, Maryland.

Bid Results

At a sealed bid opening at 10:00 AM, on July 31, 2024, the City received a total of six (6) bids for this project. The bids received ranging from lowest to highest are as follows as were read aloud:

1.	E & R Services	$191,269.25
2.	Ross Contracting	$226,274.00
3.	Espina Paving, Inc.	$237,865.25
4.	American Asphalt Paving Co.	$241,868.75
5.	ECM Corp.	$281,105.00
6.	Vino Construction, LLC	$373,786.59

Funding

Funding for this project is provided in the Adopted FY2025 CIP, 4th Street Improvement Project and 5th Street Improvement Project.

Recommendation

It is recommended that the contract for this project be awarded to E & R Services, Inc. a Minority Business Enterprise (MBE), Disadvantaged Business Enterprise (DBE), and Small Business Enterprise (SBE), from Lanham, MD, 20706, for their bid of $191,269.25, with an additional contingency of $18,730.75, for a total of $210,000.00. E & R Services, Inc. has previously completed projects for the city.

Should you have any questions or desire further information, please contact Timothy Miller, Director at 301-725-0088, extension 3206.

August 19, 2024

MEMORANDUM

TO: Mayor Keith R. Sydnor
Council President James Kole
Laurel City Councilmembers

THRU: Joanne Hall Barr, Deputy City Administrator JHB

FROM: Michele Blair, Sustainability Manager MB

SUBJ: Purchase – Rehrig Vision Service Verification Hardware/Software

As part of the City's commitment to long-term sustainability, the Mayor and City Council passed Ordinance No. 2010, which established the organics composting program and defined compliance of collection and provided an effective date.

Education and Outreach as well as compliance is based on accurate reporting of collections and areas of compliance that need to be addressed. The Rehrig Vision Service Verification Hardware and Software is an addition to the existing Vision Inventory Software and will enable the City to gather data on city-wide collections, provide the collection crews with a means to safely and effectively report such issues, accurately manage the City's assets (trash/recycling and composting carts) and enable the Sustainability Division to provide focused educational information to residents.

Background:

The vendor for this purchase is Rehrig Pacific Company, under **Omina/US Communities contract pricing (Contract #00254)**. Rehrig Pacific is a sole source vendor for the vision-based service verification platform supporting the current inventory system used by the City – Vision Software. The hardware can be mounted on multiple vehicles to accommodate new vehicles or vehicles that are out of service as necessary.

Specifications:

One-time cost $99,300.00

a. Vision RFID Reader – quantity 8 units for all trash/recycling and composting vehicles. Verifies location and type of collection using the built-in RFID tags on the collection carts.
b. Observation Panel Kit – quantity 8 for all trash/recycling and composting vehicles. Allows the driver to report issues and flags them for staff review.
c. RFID Reader Camera – quantity 8 – allows for picture of the address and allows staff to customize outreach and education.

Software cost for 8 trucks -- $14,400/year.

a. Web-based collection data tracking, service verification reporting, live vehicle location, truck and route details in map center.

Funding:

Funding for this purchase is provided in the Adopted FY2025 CIP - Environmental Programs Project.

Recommendation:

It is recommended that the City approve one-time purchase of the Rehrig Vision Service Verification Hardware ($99,300) and provide for one year of the software costs ($14,400) for a total purchase of $113,700.

Should you have any questions or desire further information, please contact Michele Blair at 301-725-5300 extension 2203.

FROM: Christina L. Cornwell, CPM, CEM
Director/Emergency Manager

SUBJ: Subaward Agreement for Hazard Mitigation Grant

The Department of Community Resources and Emergency Management (CREM) is requesting approval of a subaward agreement between the City of Laurel and the Maryland Department of Emergency Management (MDEM) regarding a reimbursable hazard mitigation grant for emergency back-up generators.

Background:

The emergency back-up generator project will consist of replacing aging diesel-powered generators with high efficiency state-of-the-art natural gas-powered generators at five (5) critical facilities.

8103 Sandy Spring Road • Laurel, Maryland 20707 (301) 725-5300 x2232
http://www.cityoflaurel.org • ccornwell@laurel.md.us

This project will be completed in two (2) phases. Phase 1 will consist of an electrical assessment and coordination with Baltimore Gas and Electric on any required gas service upgrades. Phase 2 is slated for the construction and installation of the generators.

Funding:

Funding for this project has been approved in the FY2025 Capital Improvement Projects (CIP) – Hazard Mitigation Project. The Federal Emergency Management Agency (FEMA) has approved phase 1 of this project at $245,399.25. This grant is a 90% Federal share and 10% non-Federal share. Therefore, the City's cost share for phase 1 of the project is $25,831.50.

	Federal Share	Non- Federal Share	Total Share
Project Costs	$232,483.50(90%)	$25,831.50(10%)	$258,315.00
Subrecipient Management Costs	$12,915.75(100%)	$0.00 (0 %)	$12,915.75
Total	$245,399.25	$25,831.50	$271,230.75

Recommendation:

It is recommended that the City Council and Mayor approve this subaward to proceed with phase 1 of the back-up generator project.

Should you have any questions, please contact Christina Cornwell at 301-725-5300 x2232 or ccornwell@laurel.md.us.
