Violation Description: Failure to complete and electronically submit hazardous material

DOLLAR RENT A CAR (Continued) **S101594618**

inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 09/13/2018. Your chemical inventory is incomplete. Please make the following amendments: Change the chemical and common name from 'nitrogen' to 'liquid nitrogen'; change the physical state from 'gas' to 'liquid'; add the appropriate Federal Hazard Categories in accordance with your chemical Safety Data Sheet (e.g. 'gas under pressure', 'simple asphyxiant'); change the storage container from 'steel drum' to 'above ground tank'; change the storage pressure from 'ambient' to 'above ambient'; change the storage temperature from 'ambient' to 'cryogenic'.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-14-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: A physical walk through and paperwork hazardous materials business plan (HMBP) inspection was performed on this date. Ashley Ryder was present during the inspection. The following observations were noted: Electronic submittal was submitted on FrontCounter on 10/5/2017 and was approved by our agency. The following HMBP reportable chemical was verified: Liquid Nitrogen - 6 x 61 gallon dewars Operator stated that they own the property but she would verify. If the business doesn't own the property, then use the property owner notification letter template provided to create and send the letter to your property owner. Keep a copy of this letter in your compliance folder. Emergency Response training is performed and documented annually. A copy of the HMBP was available for use. The following emergency response equipment was available for use: Emergency eyewash, fire extinguishers, first aid kit, oxygen deficiency alarm, and safety gloves. Permit fees [Truncated]

Eval Notes: On-site to conduct a routine hazardous waste inspection. Facility is a retail store that generates hazardous waste in the form of non-saleable (damaged, returned, off-spec of otherwise discarded) merchandise. Hazardous waste is stored in an area of the warehouse designated ESIM (environmentally sensitive item management) with the following observed at time of inspection: -State-regulated toxics (STOU): 11 x small plastic tote bins -Flammable, aerosols, toxic (FL): 3 x small plastic toe bins -Hazardous waste oxidizers (O): 1 x small plastic tote bin -Corrosive bases (CB): 1 x small plastic tote bin -Corrosive acids (CA): 1 x small plastic tote bin -Universal Waste (Batteries): 1 x small plastic tote bin Non-saleable merchandise is collected from storefront and is placed in a sort bin(s) in the ESIM area. Each day staff utilizes a "smart sort" system (scanner linked to

TARGET T0322 (Continued) **S102428789**

an external database) to sort hazardous waste by hazard classification. Additionally, all waste [Truncated]

Local Case Number:	06S2W20E01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	The Site is a former Unocal-branded service station, which was located at the northeast corner at the intersection of North San Antonio Road and Sherwood Avenue in Los Altos, California. Original (first generation) Site features included a station building, two 10,000-gallon gasoline underground storage tanks (USTs) located near the northwest corner of the Site, and two product dispenser islands. In 1985, the two 10,000-gallon gasoline USTs (second generation) were installed in the southwest corner of the Site. The station building, USTs (second generation), and dispenser islands were removed in 1992, and the Site remains a vacant lot except for a consists primarily of commercial and residential properties. Soil vapor extraction with air sparge were used to remediate the site.

SYMTRON CORP MOUNTAIN VIEW DIV (Continued) **1000420286**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 06/29/2001
Comments: Completed RIFS. The results did not indicate a groundwater contamination source on the property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/10/1995
Comments: Completed RA. Approximately 1.5 cubic yards of soil was excavated and disposed off-site. The building was steam cleaned. In addition, 3 cubic yards of ground concrete was disposed off-site as part of the removal of the concrete sump and clarifer.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 11/13/1992
Comments: Approved PEA. Shallow soil samples showed copper as high as 7,900 ppm and lead as high as 2,000 ppm. Other metal contaminants were also found in soil along with tetrachloroethylene as high as 940 ppm, and 1,1,1-TCA as high as 440 ppm. Although Symtron is located in an area known to have have groundwater problems, no groundwater investigation was conducted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/24/1991
Comments: Completed Site Screening. Copper,lead and volatile organics have been detected in the soil. Site referred to DTSC by Mountain View Fire Department. 2227 Mora Drive address housed Symtron's hazardous materials storage area where acids, bases, oxidizers, & flammable liquids, as well as copper animated plates, were kept. 2235 Mora housed offices, photo darkroom, wet and dry quality control labs, and process operations. 2245 Mora operations included copper etching and black oxide operations & clean rooms used for Symtron's dry process. Symtron operated an onsite waste water treatment plant. Treated waste water and effluent went directly to the Mountain View sewer via an inground sump which served as a final clarifier. Closure sampling was conducted in March 1991 and included soil concrete chip, and wipe samples. Copper was detected as high as 7,900 ppm and 1,600 ppm in soil and concrete chip samples respectively. Lead was detected as high as 1,000 ppm in soil. Volatile organic compounds (VOCs) all tested below 1 ppm.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 09/27/2012
Comments: Presents results of soil samples collected from this site, and soil and soil gas results from adjacent sites. This work not conducted under DTSC oversight.

Completed Area Name: PROJECT WIDE

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource

SYMTRON CORP MOUNTAIN VIEW DIV (Continued) **1000420286**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type:	Cleanup Program Site
Case Worker:	MD
Local Agency:	Not reported
RB Case Number:	43S0426
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	This site is a small shopping center. A dry cleaner formerly occupied one of the tenant spaces. There was a release of tetrachloroethene (PCE), a solvent used in dry cleaning, to soil and groundwater. Only low levels of PCE were found in soil. Elevated levels of PCE were found in groundwater and a groundwater extraction and treatment system was installed and operated to cleanup groundwater. The extraction and treatment system was shut down when it was no longer significantly reducing PCE levels in groundwater.

Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 43s1033
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Board s NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage.

PLESSEY INC. NPDES (Continued) **S106916856**

Including this case in Geotracker helps staff to receive and review required NPDES reports. The Water Board issued a Notice of Termination for this facility on November 3, 2009.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Plessey, Inc.
Project Revenue Source Addr:	325 Westchester Avenue
Project Revenue Source City,St,Zip:	White Plains, NY 10604
Project Revenue Source Desc:	DHS has issued a remedial action order and Plessey has stipulated to comply with this order. DHS has budgeted $50,000 for oversight and monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead relatedto the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.
Site Description:	From about the mid-1960s to 1981, Plessey manufactured electronic components. Chemical processes used included plating and etching. Wastewater was drained to underground storage tanks where material or waste was neutralized and stored prior to disposal.
Hazardous Waste Desc:	Wastes include perchloroethylene (PCE), trichloroethylene (TCE), chromic acid and xylene.
Threat To Public Health & Env:	Depth of the shallowest aquifer is about 32 feet. Ground water contamination and its potential impact on drinking water supplies is the primary concern.
Site Activity Status:	Plessey Micro Sciences, Inc., retained a contractor and completed a preliminary investigation in June, 1987. Result of the investigation indicated ground water contamination by perchloroethylene, trichloroethylene and methylene chloride. A Phase II RI report was submitted September, 1988. It appears that further investigation will be required before the FS and RAP can be Started.

Alternate Address:	2274 MORA DRIVE
Alternate City,St,Zip:	MOUNTAIN VIEW, CA 94040
Background Info:	Plessey Micro Sciences began electronic component manufacturing operations at the site in the mid-1960s. Four underground storage tanks were initially installed to collect contaminated rinse water. The collection system was used for xylene reclamation and acid neutralization. In January 1981, Plessey ceased operations and vacated the Site.
Comments Date:	10191995
Comments:	Approved Design. The remedial enhancement design for expanding
Comments Date:	10191995
Comments:	the soil and groundwater remediation system was approved. The
Comments Date:	10191995
Comments:	UV/peroxide unit of the groundwater remediation system was
Comments Date:	10191995
Comments:	replaced with an air stripper.
Comments Date:	10242002
Comments:	Completed Remedial Action. Ten dual-phase (vapor and

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: CANCELLATION OF CONTRACT No.: 14-T3967

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Responsible Agency Review
Completed Date: 12/08/2016
Comments: The project consists of DTSC approval of the Remedial Action Plan Amendment for Plessey Micro Science prior to residential development. The proposed cleanup actions include soil excavation, groundwater injection, and institutional controls. DTSC prepared a Statement of Findings concluding that the project will not result in significant and unavoidable effects to the environment; therefore, DTSC approved the Notice of Determination. DTSC filed the approved Notice of Determination with the California Office of Planning and Research on 12/8/16.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract

Completed Date: 03/07/2017
Comments: Post-HARP for site visit on 3/6/17

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/09/2017
Comments: Excavation at the proposed public park area within the Plessey Micro Science site is now complete and based on the data, no restrictions on soil handling will be required in the proposed public park.

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 11/29/2016
Comments: Work Order 001 for Contract 16-T4229 authorizes ERRG to prepare a remedial implementation workplan, conduct fieldwork, prepare a completion report, and submit a letter report following each of the four groundwater monitoring events.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 01/12/2017
Comments: DTSC understands that that the waste generated during the cleanup activities are not considered a listed waste (either non-specific source or specific source) at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/23/2017
Comments: Once the excavation work is complete, all known contaminated soils will have been removed. Therefore, because there will be no known soil contamination remaining onsite, DTSC will not require a Site Management Plan to establish protocols for construction activities and long-term maintenance at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 03/06/2017
Comments: Signed by supervisor and branch chief prior to field visit. The HARP is effective from 3/6/17 through 3/5/18.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 02/08/2017
Comments: Since a cleanup to a residential land use standard at Plessey Micro Science, including a portion of the proposed public park area, is more conservative than a recreational land use standard, the site will also be suitable to be developed as a public park.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 02/08/2018
Comments: The RFF's term is from 2/1/18 through 12/31/2020.

Completed Area Name: PROJECT WIDE

Completed Document Type: State/Federal Funded Site Contract
Completed Date: 02/28/2018
Comments: The term of Contract 17-T4411 is from 3/1/18 through 12/31/2020.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 06/19/2018
Comments: DTSC issued the Stop Work Order for Contract 16-T4229 because (a) all works under this contract were completed and (b) the contract will expire on June 30, 2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 03/06/2018
Comments: DTSC issued a Work Order for ERRG to conduct tasks as described in Contract 17-T4411.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 07/11/2019
Comments: The Work Order Amendment specifies the following changes: Deletion of Task 4 Post Injection Groundwater Monitoring Event 4 as described in Work Order 001 issued on March 6, 2018. Addition of the new Tasks 5 and 6. Authorization for Contractor to access and use the funding from the contingency line item of $10,965.47 as specified in the Work Order 001 issued on March 6, 2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/14/2015
Comments: Based on the results of the December 2014 monitoring event, the following actions are recommended: 1. Continue groundwater monitoring at a reduced schedule (e.g., semiannually) to monitor VOC concentrations over time; 2. Conduct additional in situ injections (3DMe or an alternative) in those areas where total VOC concentrations are greater than 500 μg/L; and 3. Following removal of the buildings (2274 2294 Mora Drive), proceed with VOC source area investigation and delineation in soil beneath the site and conduct excavation and removal, followed by additional treatment (3DMe or an alternative).

Completed Area Name: PROJECT WIDE

Completed Document Type: Work Notice
Completed Date: 02/04/2015
Comments: March 2015 GW monitoring

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/25/2017
Comments: The Work Notice was mailed to addresses on the project mailing list informing groundwater monitoring activity at off-site wells located on and adjacent to Towne Circle and on Ortega Avenue in the City of Mountain View.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Date: 05/05/2015
Comments: Shallow soil sampling will be conducted upon demolition of buildings at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan Amendment
Completed Date: 12/08/2016
Comments: Cleanup actions as proposed in the Remedial Action Plan Amendment include excavation of an estimated 1,800 cubic yards of soil contaminated with metals and VOCs at depths up to 12 feet below ground surface for off-site disposal at permitted facilities, injection of chemical to enhance reductive dechlorination in groundwater at targeted areas, and establishment of a land use covenant to restrict groundwater usage and to require vapor intrusion mitigation systems for new buildings if necessary based on future data. Field activities are anticipated to be completed in four weeks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/29/2016
Comments: This investigation was conducted to collect shallow soil samples for laboratory analysis to delineate the extent of VOCs and metals, including hexavalent chromium, in shallow soil in preparation for site redevelopment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/15/2015
Comments: Based on the results of the March 2015 monitoring event, the following actions are recommended: 1. Continue groundwater monitoring at a reduced schedule (e.g., semiannually) to monitor VOC concentrations over time, 2. Conduct additional in-situ injections (3DMe or an alternative) in those areas where total VOC concentrations are greater than 500 μg/L, and 3. Following removal of the buildings (2274 2294 Mora Drive), proceed with VOC source area investigation and delineation in soil beneath the site and conduct excavation and removal, followed by additional treatment (3DMe or an alternative).

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Date: 12/20/2016
Comments: The Remedial Implementation Workplan describes the field activities for excavation of contaminated soil and in-situ groundwater treatment injections at the former Plessey Micro System site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 12/16/2016
Comments: DTSC published a display advertisement on the December 16, 2016 Mountain View Voice (page 3) announcing the approval of the Remedial Action Plan Amendment for cleanup activities at the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 01/30/2017
Comments: DTSC issued a Work Notice informing the public that the following cleanup activities will begin on 1/30/17 at the site: Excavation on the Plessey Site of an estimated 1,800 cubic yards of soil contaminated with metals and volatile organic compounds at varying depths to 12 feet below ground surface for off-site disposal at permitted facilities, Injection of Hydrogen Release Compound, a food grade substance, to enhance reductive dechlorination in groundwater at targeted areas both on the Plessey Site and along Towne Circle, and Establishment of a land use covenant to restrict groundwater usage and to require vapor intrusion mitigation systems for new buildings if necessary based on future data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 01/12/2017
Comments: DTSC has completed the review of the "Health and Safety Plan, Excavation and In‐Site Groundwater Treatment" for the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 05/31/2017
Comments: The Vapor Intrusion Mitigation Plan describes the design and installation of a sub-slab passive venting system coupled with a vapor barrier/gas membrane system beneath every new building within the Mora-Ortega Parcel encompassing approximately 5.15 acres.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/29/2017
Comments: ERRG conducted groundwater monitoring at off-site wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/14/2017

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Comments: ERRG conducted a groundwater monitoring event in August 2017 at 17 groundwater monitoring wells adjacent to the Plessey Micro Science site. This is the first sampling event following in-situ injections at the Plessey site in April and May 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/22/2019
Comments: The Groundwater Monitoring Summary documents the analytical results for groundwater samples collected in October 2018 in 14 groundwater monitoring wells at and adjacent to the Plessey Micro Science project area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 05/22/2018
Comments: The Completion Report summarizes the following remediation activities conducted at the site: 1. Excavation and off-site disposal of soil contaminated with hexavalent chromium, cobalt, nickel, and volatile organic compounds (VOCs); and 2. In-situ treatment of VOC-contaminated groundwater to reduce chemical concentrations. These activities were performed pursuant to the January 2017 DTSC-approved "Remedial Implementation Workplan".

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 04/20/2018
Comments: The Work Plan proposes soil gas sampling at an approximately 5.2‐acre residential development area located east of the Mora Drive and Ortega Avenue intersection in Mountain View, California. DTSC is overseeing environmental investigation and cleanup of a 1.0‐acre parcel, identified as the Plessey Micro Science site, within the 5.2‐acre residential development area. Since the Work Plan proposes several soil gas sampling locations within the Plessey Micro Science site, DTSC commented on the Work Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 08/09/2018
Comments: The Work Plan proposes installation of five groundwater monitoring wells at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 05/18/2018
Comments: The Work Plan proposes groundwater sampling at nine locations, four of which (i.e., EGW-1, EGW-2, EGW-3, and EGW-4) are located within the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Date: 05/23/2018
Comments: The report presents soil gas sampling results at 40 temporary soil gas wells, 20 wells installed at 5 feet below ground surface (bgs) and 20 wells installed at 10 feet bgs, at the 5.2-acre residential development area. Four nested wells (i.e., SV-3, SV-5, SV-8, and SV-9) are located within the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/03/2018
Comments: The Groundwater Sampling Report documents groundwater investigation conducted on 5/8/18 at nine temporary borings within the approximately 5.2-acre Mora Drive project area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/17/2018
Comments: The Soil Vapor Sampling Summary Report presents soil gas sampling results from five temporary soil vapor monitoring wells within the approximate boundaries of excavations PL-A, PL-B, PL-E, PL-I and PL-J. These wells were installed to a depth of 10 feet below ground surface.

Completed Area Name: PROJECT WIDE

Completed Date: 09/12/1996
Comments: Approved design for horizontal extraction wells to enhance the existing remedial system. The design was not implemented due to access issues.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/16/1993
Comments: Completed RA. Grondwater extraction at Well T-6 by the existing remedial system was stopped due to detection of dense non-aqueous phase liquid (DNAPL) of trichloroethylene. The DNAPL was pumped and collected in a baker tank and treated onsite.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 06/24/1993
Comments: Completed RA. Soil vapor extraction/treatment and groundwater extraction/treatment system constructed with three goundwater extraction wells, and 34 soil vapor extraction and 25 air inlet wells were installed. Soil vapor was was treated using carbon absorption. Groundwater was treated using ultra violet ligh/hydrogen peroxide. The units were constructed inside the building at 2296 Mora Drive and include a volatile organic compound and water separator unit, a UV/peroxide unit, and a liquid carbon absorption unit. Treated water is discharged to the sanitary sewer under permit from the City of Mountain View or to the storm drain under a permit from the Regional Water Quality Control Board.

Completed Document Type: CEQA - Responsible Agency Review
Completed Date: 12/08/2016
Comments: The project consists of DTSC approval of the Remedial Action Plan Amendment for Plessey Micro Science prior to residential development. The proposed cleanup actions include soil excavation, groundwater injection, and institutional controls. DTSC prepared a Statement of Findings concluding that the project will not result in significant and unavoidable effects to the environment; therefore, DTSC approved the Notice of Determination. DTSC filed the approved Notice of Determination with the California Office of Planning and Research on 12/8/16.

Completed Document Type: Correspondence
Completed Date: 05/09/2017
Comments: Excavation at the proposed public park area within the Plessey Micro Science site is now complete and based on the data, no restrictions on soil handling will be required in the proposed public park.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 11/29/2016
Comments: Work Order 001 for Contract 16-T4229 authorizes ERRG to prepare a

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

remedial implementation workplan, conduct fieldwork, prepare a completion report, and submit a letter report following each of the four groundwater monitoring events.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 01/12/2017
Comments: DTSC understands that that the waste generated during the cleanup activities are not considered a listed waste (either non-specific source or specific source) at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/23/2017
Comments: Once the excavation work is complete, all known contaminated soils will have been removed. Therefore, because there will be no known soil contamination remaining onsite, DTSC will not require a Site Management Plan to establish protocols for construction activities and long-term maintenance at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 03/06/2017
Comments: Signed by supervisor and branch chief prior to field visit. The HARP is effective from 3/6/17 through 3/5/18.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 02/08/2017
Comments: Since a cleanup to a residential land use standard at Plessey Micro Science, including a portion of the proposed public park area, is more conservative than a recreational land use standard, the site will also be suitable to be developed as a public park.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 02/08/2018
Comments: The RFF's term is from 2/1/18 through 12/31/2020.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 03/06/2018
Comments: DTSC issued a Work Order for ERRG to conduct tasks as described in Contract 17-T4411.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 07/11/2019
Comments: The Work Order Amendment specifies the following changes: Deletion of Task 4 Post Injection Groundwater Monitoring Event 4 as described in Work Order 001 issued on March 6, 2018. Addition of the new Tasks 5 and 6. Authorization for Contractor to access and use the funding from the contingency line item of $10,965.47 as specified in the Work Order 001 issued on March 6, 2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/14/2015
Comments: Based on the results of the December 2014 monitoring event, the following actions are recommended: 1. Continue groundwater monitoring at a reduced schedule (e.g., semiannually) to monitor VOC concentrations over time; 2. Conduct additional in situ injections (3DMe or an alternative) in those areas where total VOC concentrations are greater than 500 μg/L; and 3. Following removal of the buildings (2274 2294 Mora Drive), proceed with VOC source area investigation and delineation in soil beneath the site and conduct excavation and removal, followed by additional treatment (3DMe or an alternative).

Completed Document Type: Remedial Investigation Workplan
Completed Date: 05/05/2015
Comments: Shallow soil sampling will be conducted upon demolition of buildings at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Document Type: Remedial Action Plan Amendment
Completed Date: 12/08/2016
Comments: Cleanup actions as proposed in the Remedial Action Plan Amendment include excavation of an estimated 1,800 cubic yards of soil contaminated with metals and VOCs at depths up to 12 feet below ground surface for off-site disposal at permitted facilities, injection of chemical to enhance reductive dechlorination in groundwater at targeted areas, and establishment of a land use covenant to restrict groundwater usage and to require vapor intrusion mitigation systems for new buildings if necessary based on future data. Field activities are anticipated to be completed in four weeks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/29/2016
Comments: This investigation was conducted to collect shallow soil samples for laboratory analysis to delineate the extent of VOCs and metals, including hexavalent chromium, in shallow soil in preparation for site redevelopment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/15/2015
Comments: Based on the results of the March 2015 monitoring event, the following actions are recommended: 1. Continue groundwater monitoring at a reduced schedule (e.g., semiannually) to monitor VOC concentrations over time, 2. Conduct additional in-situ injections (3DMe or an alternative) in those areas where total VOC concentrations are greater than 500 μg/L, and 3. Following removal of the buildings (2274 2294 Mora Drive), proceed with VOC source area investigation and delineation in soil beneath the site and conduct excavation and removal, followed by additional treatment (3DMe or an alternative).

Completed Date: 12/20/2016
Comments: The Remedial Implementation Workplan describes the field activities for excavation of contaminated soil and in-situ groundwater treatment injections at the former Plessey Micro System site.

Completed Area Name: PROJECT WIDE

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 12/16/2016
Comments: DTSC published a display advertisement on the December 16, 2016 Mountain View Voice (page 3) announcing the approval of the Remedial Action Plan Amendment for cleanup activities at the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 01/30/2017
Comments: DTSC issued a Work Notice informing the public that the following cleanup activities will begin on 1/30/17 at the site: Excavation on the Plessey Site of an estimated 1,800 cubic yards of soil contaminated with metals and volatile organic compounds at varying depths to 12 feet below ground surface for off-site disposal at permitted facilities, Injection of Hydrogen Release Compound, a food grade substance, to enhance reductive dechlorination in groundwater at targeted areas both on the Plessey Site and along Towne Circle, and Establishment of a land use covenant to restrict groundwater usage and to require vapor intrusion mitigation systems for new buildings if necessary based on future data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 01/12/2017
Comments: DTSC has completed the review of the "Health and Safety Plan, Excavation and In‐Site Groundwater Treatment" for the Plessey Micro Science site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 05/31/2017
Comments: The Vapor Intrusion Mitigation Plan describes the design and installation of a sub-slab passive venting system coupled with a vapor barrier/gas membrane system beneath every new building within the Mora-Ortega Parcel encompassing approximately 5.15 acres.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/29/2017
Comments: ERRG conducted groundwater monitoring at off-site wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/14/2017
Comments: ERRG conducted a groundwater monitoring event in August 2017 at 17 groundwater monitoring wells adjacent to the Plessey Micro Science site. This is the first sampling event following in-situ injections at the Plessey site in April and May 2017.

Completed Area Name: PROJECT WIDE

DTSC FORMER PLESSEY MICROSCIENCE SITE (Continued) **S103981838**

Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/22/2019
Comments: The Groundwater Monitoring Summary documents the analytical results for groundwater samples collected in October 2018 in 14 groundwater monitoring wells at and adjacent to the Plessey Micro Science project area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 05/22/2018
Comments: The Completion Report summarizes the following remediation activities conducted at the site: 1. Excavation and off-site disposal of soil contaminated with hexavalent chromium, cobalt, nickel, and volatile organic compounds (VOCs); and 2. In-situ treatment of VOC-contaminated groundwater to reduce chemical concentrations. These activities were performed pursuant to the January 2017 DTSC-approved "Remedial Implementation Workplan".

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 04/20/2018
Comments: The Work Plan proposes soil gas sampling at an approximately 5.2‐acre residential development area located east of the Mora Drive and Ortega Avenue intersection in Mountain View, California. DTSC is overseeing environmental investigation and cleanup of a 1.0‐acre parcel, identified as the Plessey Micro Science site, within the 5.2‐acre residential development area. Since the Work Plan proposes several soil gas sampling locations within the Plessey Micro Science site, DTSC commented on the Work Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 08/09/2018
Comments: The Work Plan proposes installation of five groundwater monitoring wells at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 05/18/2018
Comments: The Work Plan proposes groundwater sampling at nine locations, four of which (i.e., EGW-1, EGW-2, EGW-3, and EGW-4) are located within the Plessey Micro Science site.

Completed Document Type: Technical Report
Completed Date: 05/23/2018
Comments: The report presents soil gas sampling results at 40 temporary soil gas wells, 20 wells installed at 5 feet below ground surface (bgs) and 20 wells installed at 10 feet bgs, at the 5.2-acre residential development area. Four nested wells (i.e., SV-3, SV-5, SV-8, and SV-9) are located within the Plessey Micro Science site.

Completed Date: 08/24/2006
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 01/12/2000
Comments: Approved Design. The remedial enhancement plan to address full plume containment and/or groundwater remediation was approved. Four wells will be installed further downgradient at the northern boundary of the TRW/Vidar site. The extraction wells will be connected to the existing treatment system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 10/13/1999
Comments: Approved Remedial Design for source control remedial enhancement to address soil and groundwater contamination near the source areas. Ten dual-phase vertical extraction wells will be installed within the Site near the former underground tank locations. The extraction wells will be connected to the existing treatment system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/24/2002
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/24/2002
Comments: Completed Remedial Action. Ten dual-phase (vapor and groundwater) extraction wells behind the onsite buildings, and four extraction wells downgradient at the northern boundary of the adjacent TRW/Vidar Site (77 Ortega Drive) were installed. The new extraction wells were connected to the existing treatment system at the Site.

Completed Document Type: Design/Implementation Workplan
Completed Date: 09/12/1996
Comments: Approved design for horizontal extraction wells to enhance the existing remedial system. The design was not implemented due to access issues.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/16/1993
Comments: Completed RA. Grondwater extraction at Well T-6 by the existing remedial system was stopped due to detection of dense non-aqueous phase liquid (DNAPL) of trichloroethylene. The DNAPL was pumped and collected in a baker tank and treated onsite.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 06/24/1993
Comments: Completed RA. Soil vapor extraction/treatment and groundwater extraction/treatment system constructed with three goundwater extraction wells, and 34 soil vapor extraction and 25 air inlet wells were installed. Soil vapor was was treated using carbon absorption. Groundwater was treated using ultra violet ligh/hydrogen peroxide. The units were constructed inside the building at 2296 Mora Drive and include a volatile organic compound and water separator unit, a UV/peroxide unit, and a liquid carbon absorption unit. Treated water is discharged to the sanitary sewer under permit from the City of Mountain View or to the storm drain under a permit from the Regional Water Quality Control Board.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 12/01/1985
Comments: Completed PA. In January 1982, samples were collected from standing water in two of the tanks and the results detected perchloroethylene (PCE), chromium, and xylene. Investigations were conducted to delineate the lateral extent of the soil and groundwater contamination originating from releases at the tanks. Trichloroethylene (TCE), PCE, dichlorethylene (DCE), benzene, toluene, xylene and ethylbenzene were detected in the groundwater. These chemicals and chromium were also detected in the soils near the tanks.

Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 01/28/2010
Comments: Water Production Statement - the prior meter reading (July 1, FQ1-501) was 2266 cu ft (100 multiplier) and last reading was 5589. (No flow to storm drain, or FQI-500). So, 5589-2266 x 100 = 332,100 to convert to acre feet, divide by 43560 = 7.63 acre feet X $520/acre feet = $3966.85

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 06/30/2010
Comments: Work order to continue operation & maintenance of GW remedy.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Standard Voluntary Agreement
Completed Date:	05/19/2017
Comments:	The Voluntary Cleanup Agreement establishes DTSC's role and the project proponent's responsibility in the oversight activity identified in the scope of work, which includes the review of a site management plan.
Completed Area Name:	PROJECT WIDE

MORA DRIVE (Continued) **S120714345**

Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 06/19/2018
Comments: DTSC and Lennar executed the Voluntary Cleanup Agreement, Docket No. HSA-FY17/18-136, for overseeing activities performed at the project site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 08/02/2019
Comments: DTSC executed and recorded the Land Use Covenant and Agreement, Environmental Restrictions (LUC), Santa Clara County Series Number 24246045, for the Mora Drive project, also known as the Estancia residential development, comprising of approximately 4.53 acres. In general, the LUC prohibits Building any structures intended for human occupancy without an engineered vapor intrusion mitigation system approved by DTSC; Construction of any groundwater well without prior DTSC written approval; Extraction, utilization, or consumption of groundwater without prior DTSC written approval; Conducting activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, the groundwater monitoring wells without prior DTSC written approval; Conducting activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, any vapor intrusion mitigation systems as it pertains to each building on the property without prior DTSC written approval; and Conducting any sub-slab construction work or modification of vapor barriers and sub-slab venting systems associated with vapor intrusion mitigation systems installed at the property without prior DTSC written approval.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Responsible Agency Review
Completed Date: 06/28/2019
Comments: DTSC approved a Removal Action Workplan (RAW) for the site on June 8, 2019. The RAW requires (a) installation of vapor intrusion mitigation systems (VIMS) beneath all new building foundations and (b) execution of a land use covenant to restrict extraction of groundwater or installation of wells without DTSC s approval and construction of any building without installation of the DTSC-approved VIMS. In accordance with CEQA, DTSC approved the Notice of Determination in support of DTSC s discretionary decision on the RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 09/24/2019
Comments: DTSC issued the Removal Action Certification for Building 1 attesting that Lennar (a) had implemented the removal action by installing a passive sub-slab venting system at Building 1 in accordance with the Removal Action Workplan and Vapor Intrusion Mitigation Plan, (b) had performed ambient air, indoor air, and sub-slab gas sampling events for Building 1 consistent with the Operation and Maintenance Plan, and (c) had implemented the required institutional control remedy for the site.

MORA DRIVE (Continued) **S120714345**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 08/02/2019
Comments: DTSC executed an Operation and Maintenance Agreement with Lennar for (a) implementation of the DTSC-approved Vapor Intrusion Mitigation Plan dated 6/28/19, (b) operation and maintenance of the installed vapor intrusion mitigation system as specified in the DTSC-approved Operation and Maintenance Plan dated 6/28/19, and (c) reimbursement of DTSC oversight costs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 07/03/2019
Comments: On May 14, 2019, DTSC started the 30‐day public comment period requesting comments on the draft RAW. During the public comment period DTSC received comments via emails and a comment letter. DTSC prepared the Responsiveness Summary responding to public comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 10/22/2019
Comments: The cost estimate projects hours to be incurred (by staff classification) for planned oversight activities in fiscal year 2019/2020, which starts July 1, 2019 and ends June 30, 2020, and identifies the personnel labor rates.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 11/21/2019
Comments: DTSC issued the Removal Action Certification for Buildings 19, 20, and 21 attesting that Lennar (a) had implemented the removal action by installing passive sub-slab venting systems at Buildings 19, 20, and 21 in accordance with the Removal Action Workplan and Vapor Intrusion Mitigation Plan, (b) had performed ambient air, indoor air, and sub-slab gas sampling events for the subject buildings consistent with the Operation and Maintenance Plan, and (c) had implemented the required institutional control remedy for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

MORA DRIVE (Continued) **S120714345**

Completed Document Type: Application
Completed Date: 04/27/2017
Comments: Application for a Voluntary Cleanup Agreement requesting DTSC to provide review and approval of a Site Management Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 05/19/2017
Comments: The Site Management Plan (SMP) establishes general protocols for handling soil, soil vapor, and groundwater during utility line removal, soil excavation, and future construction at the Mora Drive site. The SMP includes the Health and Safety Plan as Appendix A and a separate SMP for the future city park as Appendix B.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement Termination Notification
Completed Date: 09/19/2017
Comments: The Voluntary Cleanup Agreement s (VCA) scope of work specifies that DTSC review and provide comments on the Site Management Plan. Since DTSC completed the Site Management Plan review process, the VCA s scope of work is fulfilled. DTSC notified Lennar that the VCA will be terminated on October 19, 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 07/03/2019
Comments: Lennar had prepared the Vapor Intrusion Mitigation Plan (VIMP) dated May 28, 2017 and DTSC approved such plan on May 31, 2017. The 2019 VIMP updates certain design elements and supersedes the 2017 VIMP. The VIMP describes the design and installation of a vapor intrusion mitigation system beneath every new building within the 5.2-acre Mora Drive project area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 06/28/2019
Comments: DTSC approved a Removal Action Workplan (RAW) for the site on June 8, 2019. The RAW requires (a) installation of vapor intrusion mitigation systems (VIMS) beneath all new building foundations and (b) execution of a land use covenant to restrict extraction of groundwater or installing of wells without DTSC s approval and construction of any building without installation of the DTSC-approved VIMS. In accordance with CEQA, DTSC approved the Notice of Determination in support of DTSC s discretionary decision on the RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 05/10/2019
Comments: DTSC mailed the Community Update on 5/10/2019 to approximately 550 addresses on the project's mailing list announcing the 30-day public comment period for the Removal Action Workplan to begin on 5/14/2019.

SHELL SERVICE STATION (Continued) **1000288537**

on the northwest corner at the intersection of North Rengstorff and Central Expressway. The station facilities consist of a small kiosk, a car wash, three fuel dispenser islands and four underground storage tanks (USTs). Remediation has been conducted since 1991 to address contamination associated with leaking USTs. Remediation activities included excavation of 1,800 cubic yards of soil, soil vapor extraction, and groundwater extraction. Case closure was previously issued by the County of Santa Clara DEH on April 11, 2005, and fifteen of the twenty existing monitoring wells were destroyed. Remaining wells were maintained by Shell as part of an ongoing groundwater assessment program. The case was re-opened in August 2006 and groundwater extraction resumed until June 2008.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 45044
Site Name: LOS ALTOS HIGH SCHOOL
Violation Date: 5/16/2016
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Haz Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 05/23/2016. Copies of receipts for pick up of used oil and antifreeze not provided at time of inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 45044
Site Name: LOS ALTOS HIGH SCHOOL
Violation Date: 5/23/2019
Citation: HSC 6.5 25200.3.1 (c) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.3.1 (c)
Violation Description: Failure to treat laboratory hazardous waste according to all of the following requirements: 1) treated in containers and follow published procedures, 2) at a location as close as practical, and within 10 days, 3) single batch quantity limit to be 5 gallons or 18 kg, 4) waste from a single procedure or from the same laboratory process, 5) performed by trained personnel, 6) training records are maintained for

LOS ALTOS HS (Continued) **1000101636**

3 years, 7) waste and residuals are managed according to applicable requirements, and 8) records are made available for inspection.

Violation Notes: Returned to compliance on 06/04/2019. Chemistry teacher stated that various acid and base materials were mixed to neutralize them. Neutralization of smaller quantities of acid wastes is held for longer than 10 days after generation, and is not conducted by a person with training records demonstrating that they have awareness of the process. ALL CONDITIONS BELOW MUST BE MET FOR TREATMENT OF WASTE (NEUTRALIZATION OF WASTES < pH OF 2 OR >12.5)
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 45044
Site Name: LOS ALTOS HIGH SCHOOL
Violation Date: 5/16/2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Submitted inventory does not properly account for the correct chemical name of "oxidizer". Submittal notes chemical compound as bleach and at 600 gallons. Actual chemical storage is 60 liters of liquid Carbon dioxide. Also noted storage of 16 x 5 gallon containers of latex paint in pool maintenance room that are not disclosed on inventory. Please also amend reporting of LPG from cubic feet to gallons (purchased and stored as a liquid). Noted 63 gallons onsite.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 45044
Site Name: LOS ALTOS HIGH SCHOOL
Violation Date: 5/23/2019
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 06/04/2019. Robotics lab had various metal (aluminum) cuttings and turnings on the floor. Many aluminum alloys contain hazardous levels of metals. PLEASE ENSURE THAT METAL SCRAPS ARE SWEPT FROM THE FLOOR AND CONTAINERIZED FOR MANAGEMENT AS SCRAP METAL. Behind robotics, observed a containment structure which previously held drums of used oil in which the containment tray had residual used oil, and which was open to the environment and rain.

LOS ALTOS HS (Continued) **1000101636**

	12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 06/04/2019. Site disposes of ethidium bromide gels and media in test tubes contaminated with ethidium bromide as medical waste. PLEASE DEMONSTRATE HOW THE ETHIDIUM BROMIDE MEDIA CONTAINS LESS THAN 0.4% ETHIDIUM BROMIDE BY WEIGHT OR BEGIN MANAGING AS HAZARDOUS WASTE. Site disposes of fetal pigs with preservative as medical (biohaz) waste. Please explain why the specimens either meet the definition of "biohazardous waste" (according to Health and Safety Code 117690) or how they are not hazardous waste and how excess solutions in the shipping bags is managed. IF NEITHER OF THE PREVIOUS CONDITIONS CAN BE MET, BEGIN MANAGING AS HAZARDOUS WASTE. Observed a 3 gallon blue poly carboy in the robotics lab containing a unknown liquid. IDENTIFY THE LIQUID AND MANAGE ACCORDINGLY.

Eval Notes: ID number CAD981693864, active as of date of inspection Inspection took place on 5/22, report delivered electronically on 5/23. Inspection was jointly conducted for compliance and as check for green business program eligibility. Areas of school inspected included: robotics lab (former auto repair), science common area (shared bio, biochem, chemistry), art, photography, food prep/cafeteria, grounds maintenance shed, theatre and pool room. -- auto repair ceased at this school, replaced by robotics lab. Art is acrylic and water color paint and drawing only; no ceramics or metal working; grounds maintenance equipment is now serviced offsite by third party. Observed various excess chemistries (both developer and "hypo cheaner") which instructor noted is not slated for use and should be disposed of. Also had two bottles (part A and B) or cyanotype solutions that were deemed to be non-usable (contains ammonium di-chromate at 1.25%/12,500 ppm; regulatory level for chrome is 5 [Truncated]

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-16-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection is both routine compliance inspection as well as follow up to green business review request. The following areas were visisted/inspected: auto tech, science, photography, art, theater, kitchen, tractor/grounds Noted box of materials in auto tech indicated as having been removed from shelf, needing to be sorted to determine if usable. STRONGLY RECOMMEND SORTING AND STORING AS SOON AS POSSIBLE. Noted various aerosol cans on grounds and in trashcans (removed, see below). STRONGLY RECOMMEND HAVING ONE BUCKET OR BOX DESIGNATED FOR AEROSOL CAN PLACEMENT BY STUDENTS, WITH TEACHER RESPONSIBLE FOR SORTING AND MANAGEMENT FROM THAT POINT FORWARD. DID DISCUSS MANAGEMENT OF AEROSOLS WITH AUTO AND ART TEACHERS-- MUST BE COMPLETELY EMPTY BEFORE RECYCLING OR PUNCTURING. IF NOT, MANAGE AS UNIVERSAL WASTE. Generator copies of manifests are being sent to the State by contractor, noted with check mark on service agreement sheet. OBSERVATION- NOTED ONLY SHIPMENT OF ACID AND [Truncated]

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site has been proposed for listing on the NPL. It is expected that the RP will remediate this site with oversight by EPA. DHS will perform a limited role of oversight and monitoring of the remedial activities at this site. DHS has budgeted $50,000 for oversight and monitoring costs. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project.
Site Description:	The Jasco Chemical Corporation has formulated chemical products at this 2.05-acre site in Mountain View since 1976. The site is bordered on the northeast by the Central Expressway and Southern Pacific Railroad, and on the remaining sides by residential units. The facility handles and stores numerous chemicals onsite in underground tanks and 55 gallon drums.
Hazardous Waste Desc:	The contaminants detected in the soil and ground water onsite include trichloroethane (TCA), dichloroethane (DCA), dichloroethylene (DCE), phenol and methylene chloride (MCL).
Threat To Public Health & Env:	Within a 3-mile radius of the site there are approximately 199,000 people who depend on ground water as a source of drinking water. Contaminants have migrated at least 10 feet beyond the property boundary, as evidenced by the detection of DCA and TCA in an offsite well. Mountain View wells #17 and #10 are located within 1,500 feet and 3,100 feet of the site, respectively.
Site Activity Status:	Investigations at the site were initiated in 1984. Both soil and ground water contamination has been detected onsite. Discharges of surface runoff from the rear of the facility appear to be a major source of contaminants. Up to 11,000 parts per million (ppm) paint thinner was detected in soil samples taken near a runoff outfall. Jasco Chemical has been extracting contaminated ground water from one well since February, 1987.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

Northwest Map:	5640620 PALO ALTO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

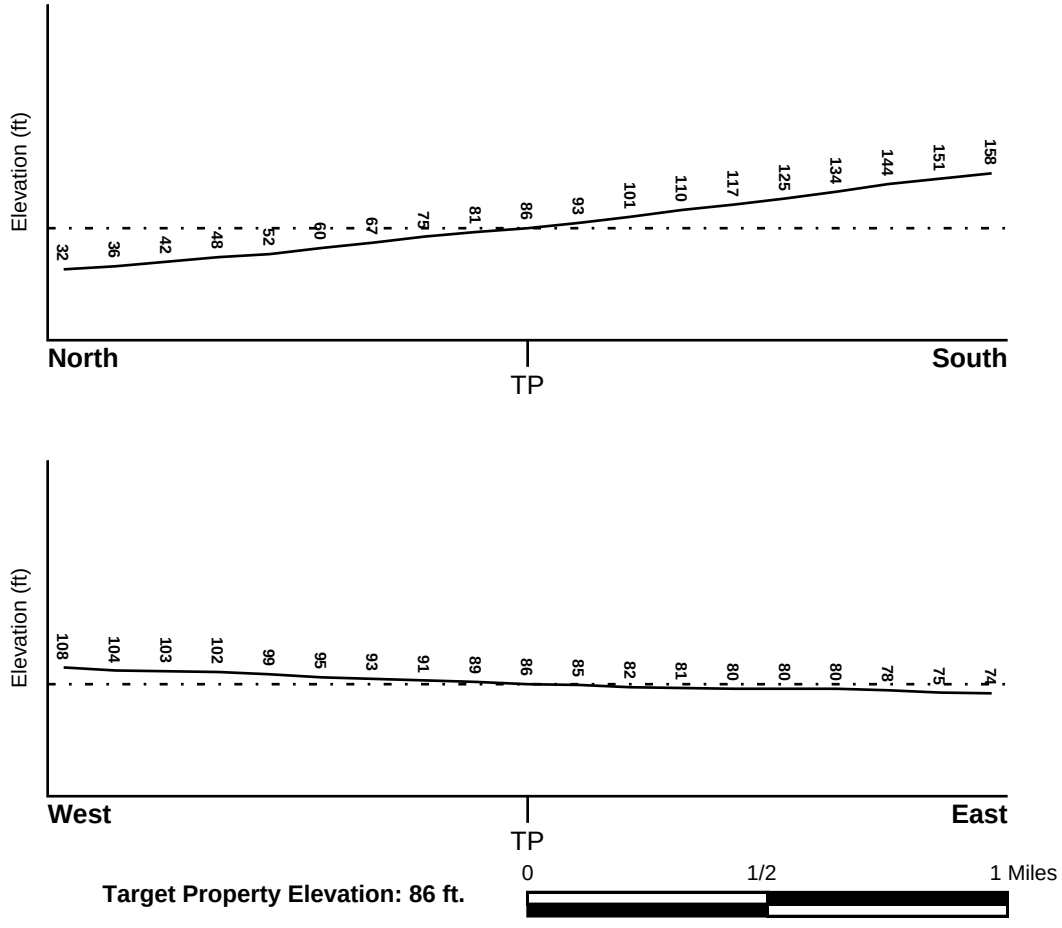
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0038H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06085C0036H	FEMA FIRM Flood data
06085C0037H	FEMA FIRM Flood data
06085C0039H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles SSW
Site Name:	Hillview Maintenance Yard
Site EPA ID Number:	CAD982400202
Groundwater Flow Direction:	NE ON A REGIONAL BASIS, WITH LOCAL FLOW CONDITIONS INFLUENCED BY PUMPING.
Inferred Depth to Water:	100 feet to 120 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifers under the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
5	1/4 - 1/2 Mile NE	NE
1G	1/4 - 1/2 Mile NE	NE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: A review of the NPL list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Northwest Map:	5640620 PALO ALTO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

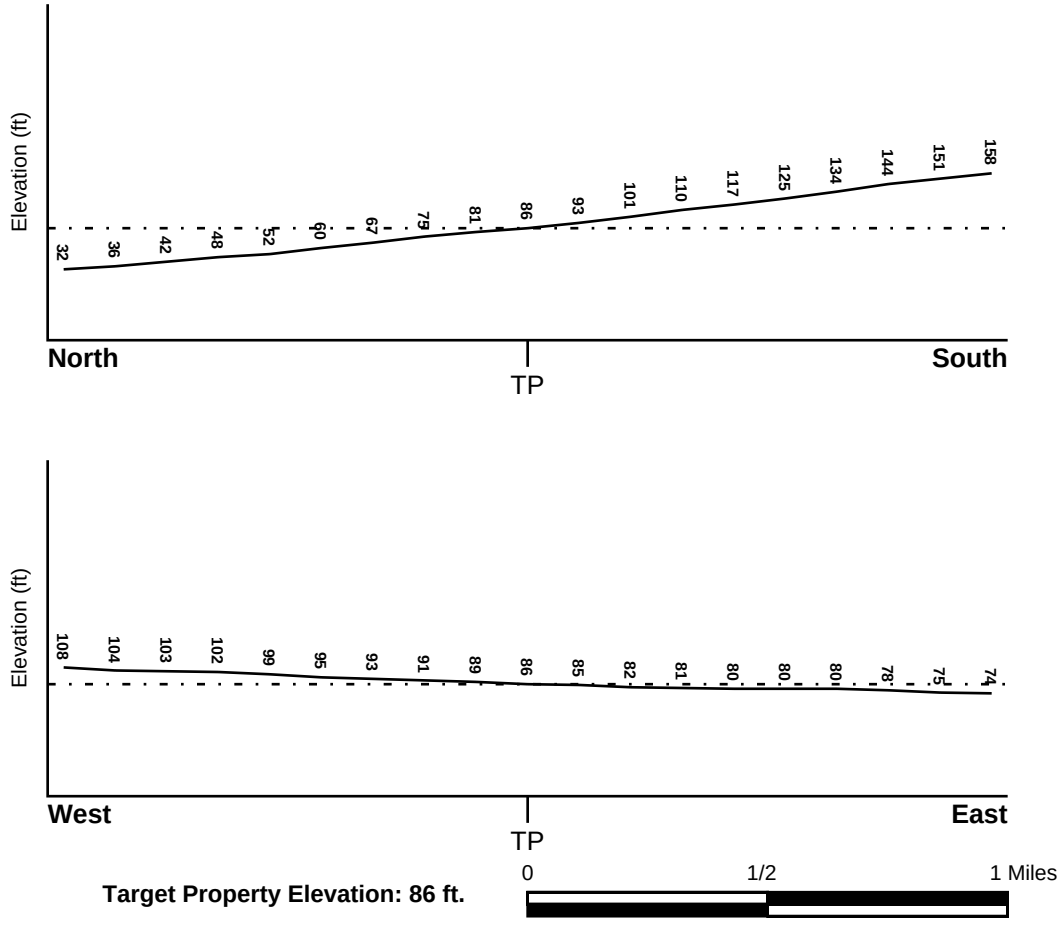
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0038H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles SSW
Site Name:	Hillview Maintenance Yard
Site EPA ID Number:	CAD982400202
Groundwater Flow Direction:	NE ON A REGIONAL BASIS, WITH LOCAL FLOW CONDITIONS INFLUENCED BY PUMPING.
Inferred Depth to Water:	100 feet to 120 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifers under the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
5	1/4 - 1/2 Mile NE	NE
1G	1/4 - 1/2 Mile NE	NE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 2A2E-4E26-9A90

PO # NA

Project 402649015

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 2A2E-4E26-9A90

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Ninyo & Moore (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Contact: Randy Wheeler

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Appendix F:

VAPOR ENCROACHMENT SCREENING MATRIX

Phase I ESA Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there any known or suspect contaminated properties in the primary area of concern within the corresponding search radii (including the site)?

☐ Yes ☒ No — If ***No***, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If ***Yes***, then:

(2) Chemicals of Concern Test: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

☐ Yes ☒ No — If ***No***, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If ***Yes***, then:

(3) Critical Distance Test*: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

☐ Yes ☒ No — (3a) Is information related to the contaminated(s) plume available (i.e. isoconcentration maps, site drawings, etc.)?
(3b) If ***No***, then a VEC cannot be ruled out; check ***Yes*** in #4 below indicating it is likely a VEC exists. If ***Yes***, then:

☐ Yes ☒ No — (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If ***Yes***, then check ***Yes*** in #4 below indicating it is likely a VEC exists.

☐ Yes ☒ No — (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If ***Yes***, then check ***Yes*** in #4 below indicating it is likely a VEC exists.

*If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

☐ Yes ☒ No — If ***No***, then the VEC screening is complete and no further investigation is recommended at this time. If ***Yes***, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-10.

[1] Based on guidance presented in the ASTM E 2600-10 Standard.

APPENDIX E
INTERVIEW DOCUMENTATION

PIERS ENVIRONMENTAL SERVICES

ENVIRONMENTAL QUESTIONAIRE / DISCLOSURE STATEMENT AND PROPERTY OBSERVATION FORM

SUBJECT SITE ADDRESS: 330 Distel Circle, Los Altos, CA

PERSON INTERVIEWED: Donal Manning

TITLE: PIERS PM **DATE:** 8/19/21

If you indicate an affirmative response (YES) to any of the below listed questions, please attach a separate sheet with details explaining the issue.

QUESTION	USER / OR KEY SITE MANAGER	OWNER	TENANT	PM OBSERVED
1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
2. Are you aware of any AULs, (Activity and Land Use Limitations), such as, engineering controls, land use restrictions or institutional controls that are in place at the site and/ or have been filed or recorded in a registry under federal, tribal, state or local law?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
3. Do you have any specialized knowledge, specific information and/or direct experience in relation to hazardous chemicals (types, quantities, processes, disposal techniques) used at the property or nearby properties?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
4. Does the price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO

QUESTION	USER / OR KEY SITE MANAGER	OWNER	TENANT	PM OBSERVED
5. Are you aware of any known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: Do you know the past uses of the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
5A. Do you know the specific chemicals that are present or once were present at the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
5B. Do you know of spills or other chemicals releases that have taken place on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
5C. Do you know of any environmental cleanups that have taken place on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
5D. Do you know of any environmental violations in connection with the Property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
6. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
7. Is the property or any adjoining property currently used for an industrial use?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
7A) Did you observe evidence or do you have any prior knowledge that the property or adjoining property has been used for an industrial use in the past?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
8. Is the property or adjoining property currently or previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard, landfill, waste treatment, storage, disposal, processing, or recycling facility?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO

QUESTION	USER / OR KEY SITE MANAGER	OWNER	TENANT	PM OBSERVED
9. Are there currently or were there previously any discarded auto or industrial batteries, or other chemicals > 5 gal in volume or 50 gallons in the aggregate on site?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
10. Did you observe evidence or do you have prior knowledge that fill dirt has been brought onto the property that originated from a contaminated site or that is of an unknown origin?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
11. Are there currently or were there previously any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
12. Is there currently, or was there previously any stained soil located on the Property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
13. Are there currently or were there previously any registered or unregistered storage tanks (above or underground) located on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
14. Are there currently or were there previously any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
15. Is there currently or was there previously evidence of leaks, spills or staining by substances other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO

QUESTION	USER / OR KEY SITE MANAGER	OWNER	TENANT	PM OBSERVED
16. If the property is served by a private well or non-public water system, do you have any knowledge that contaminants have been identified in the well or system that exceed allowable limits ?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
17.Do you know of any past, threatened, pending, violations of environmental laws, lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
18. Have you been informed of the current or past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO
19. Do you have any knowledge of any environmental assessment of the property or facility that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☐ NO	☐ YES ☒ NO

APPENDIX F
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL(S)

DONAL MANNING
SENIOR PROJECT MANAGER
ENVIRONMENTAL PROFESSIONAL

Mr. Manning serves as a PIERS Chief Executive Officer (CEO) and Senior Project Manager providing our clients and projects with outstanding expertise and reporting experience with Phase I Environmental Site Assessments, Phase II Subsurface Investigations, and remedial project oversight.

Mr. Manning joined PIERS in 2015 with a strong documented record of managing complex environmental remediation and geologic assessment projects. Prior to joining PIERS, Mr. Manning worked managed another environmental consulting firms since 2003. Mr. Manning has managed and assisted in performing Phase I and Phase II site investigations for city and county agencies, large corporations, lending institutions, real estate professionals and developers.

AS CEO, Mr. Manning is a key player in PIERS decision-making on complex projects and offers our clients superior knowledge on a vast array of environmental issues.

KAY PANNELL

SENIOR PROJECT MANAGER
REGISTERED ENVIRONMENTAL PROFESSIONAL #5800
REGISTERED ENVIRONMENTAL PROPERTY ASSESSOR #100002
M.S. GEOBIOLOGY

Ms. Pannell has successfully served PIERS since 2002. She brings over 26 years of experience in all aspects of environmental consulting, including Phase I Environmental Site Assessments, Phase II Subsurface Investigations, Phase III Remedial Project Oversight, Remedial Investigation/Feasibility Studies, Superfund Site Clean-up and Case Closure. Ms. Pannell's extensive experience in the industry has given her comprehensive knowledge of environmental regulations, laws, and remedial applications technology, which she applies on a daily basis at PIERS.

Ms. Pannell brings to PIERS an extraordinary depth and breadth of experience, including work in soil and groundwater sampling and analysis, underground storage tank removal and remediation, lead and asbestos abatement, chemical lab packing, industrial landfill investigation and remediation, radioactive waste removal, unexploded ordinance disposal, and wetland characterizations. Ms. Pannell's clients have included the U.S. Navy, the U.S. Army Corps of Engineers, various oil companies, and private sector individuals. Her projects have ranged from investigations of a single site underground fuel tank leak, to the technical coordination for a Superfund site, to conducting scientific research on regional geologic conditions affecting a major military installation.

Ms. Pannell's previous position as a Project Manager and technical coordinator for a nation-wide environmental consulting firm gave her the opportunity to work on the Navy CLEAN contract for naval base closures. The projects included water production well closure, radioactive waste removal at an industrial landfill, napalm-contaminated soil removal, lead-contaminated soil removal, groundwater contaminate plume characterizations, and a scientific research study of wetlands. Later, as a Quality Control Manager at another nation-wide environmental consulting firm, she expanded her expertise with U.S. Army Corps of Engineers contracts that included unexploded ordinance disposal, lead and asbestos abatement, industrial landfill remediation and closure, lead (bullet) removal from soil, and leaking underground storage tank removals.

Ms. Pannell's exemplary project management skills come from years of experience in cost estimation, proposal and technical writing, scheduling, client and agency negotiations, subcontractor and vendor oversight, quality control management, and employee supervision. Ms. Pannell's strong skills in data analysis and interpretation, diverse experience in project management, academic expertise, excellent communication skills, and outstanding rapport with environmental regulatory agencies make her an invaluable member of the PIERS team. Clients can depend upon Ms. Pannell's integrity, efficiency, knowledge, and commitment to excellence on any project.

330 DISTEL CIRCLE
NOISE AND VIBRATION ASSESSMENT

Los Altos, California

May 10, 2022

Prepared for:

Natalie Noyes

I&R Job No.: 21-178

INTRODUCTION

The construction of a residential complex is proposed at 330 Distel Circle, in the city of Los Altos, California. The project would consist of 90 apartment units within a five-story building located on a 0.87 acre site. The project would demolish the existing 12,120 square foot office building and associated surface parking and landscaping in order to construct a new, five-story apartment building totaling approximately 114,970 square feet. The apartment building would include 90, 100 percent affordable studio, one-, two-, and three-bedroom apartment units situated around a central courtyard on top of podium parking. The ground floor would contain the residential lobby, utility, trash, and maintenance rooms, bike storage, car parking (including mechanized parking stalls) and loading stalls. Apartments would be located on floors 2 – 5. The five-story building would have a maximum building height of 64 feet.

The project is bordered by Distel Circle and commercial offices to the east, a parking lot and commercial offices to the south, a school to the west, and a fast-food restaurant to the north. Single-family residential units are nearby to the southwest of the project site.

This report evaluates the project's potential to result in significant noise and vibration impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; 2) the General Plan Consistency Section discusses noise and land use compatibility utilizing policies in the City's General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts, provides a discussion of each project impact, and presents mitigation measures, where necessary, to provide a compatible project in relation to adjacent noise sources and land uses.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (*frequency*) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more

intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA).* This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise descriptor* is called L_{eq}. The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level* (*CNEL*) is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The *Day/Night Average Sound Level* (*DNL* or L_{dn}) is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA L_{dn}. Typically, the highest steady traffic noise level during the daytime is about equal to the L_{dn} and nighttime levels are 10 dB lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12 to 17 dB with open windows. With standard construction and closed windows in good condition, the noise attenuation factor is around 20 dB for an older structure and 25 dB for a newer dwelling. Sleep and speech interference is therefore of concern when exterior noise levels are about 57 to 62 dBA L_{dn} with open windows and 65 to 70 dBA L_{dn} if the windows are closed. Levels of 55 to 60 dBA are common along collector streets and secondary arterials, while 65 to 70 dBA is a typical value for a primary/major arterial. Levels of 75 to 80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to

achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, those facing major roadways and freeways typically need special glass windows.

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e. g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, DNL or L_{dn}	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 2 Typical Noise Levels in the Environment

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110 dBA	Rock band
Jet fly-over at 1,000 feet		
	100 dBA	
Gas lawn mower at 3 feet		
	90 dBA	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower, 100 feet	70 dBA	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60 dBA	
		Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime		
	30 dBA	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20 dBA	
		Broadcast/recording studio
	10 dBA	
	0 dBA

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from “Historic and some old buildings” to “Modern industrial/commercial buildings”. Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential structures
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures

Regulatory Background

The State of California and the City of Los Altos have established regulatory criteria that are applicable in this assessment. The State CEQA Guidelines, Appendix G, are used to assess the potential significance of impacts pursuant to local General Plan policies, Municipal Code standards, or the applicable standards of other agencies. A summary of the applicable regulatory criteria is provided below.

State CEQA Guidelines. The California Environmental Quality Act (CEQA) contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

(b) Generation of excessive groundborne vibration or groundborne noise levels;

(c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

Checklist items (a) and (b) are applicable to the proposed project. The project is not located within two miles of a public airport or in the vicinity of a private airstrip and would not expose people

residing or working in the project area to excessive aircraft noise levels; therefore, item (c) is not carried further in this analysis.

2019 California Building Code, Title 24, Part 2. The current version of the California Building Code (CBC) requires interior noise levels in multi-family residential units attributable to exterior environmental noise sources to be limited to a level not exceeding 45 dBA L_{dn}/CNEL in any habitable room.

City of Los Altos General Plan. The Natural Environment & Hazards Element of the City of Los Altos' General Plan contains the following Noise and Land Use Compatibility Standards policies that are applicable to the Project.

Policy 7.2: Enforce the following maximum acceptable noise levels for new construction of various noise-sensitive uses in an existing noise environment.

- 60 dBA CNEL is the maximum acceptable outdoor noise exposure level for single-family residential areas.

- 65 dBA CNEL is the maximum acceptable outdoor noise exposure level for multiple-family residential areas.

- 70 dBA CNEL is the maximum acceptable outdoor noise exposure level for schools (public and private), libraries, churches, hospitals, nursing homes, parks, commercial, and recreation areas. Excepted from these standards are golf courses, stables, water recreation, and cemeteries.

Policy 7.3: Work to achieve indoor noise levels not exceeding 45 dBA CNEL in the event that outdoor acceptable noise exposure levels cannot be achieved by various noise attenuation mitigation measures.

Policy 7.5: Require reasonable mitigation measures to reduce noise levels to those determined to be acceptable in the event that significant increased noise levels will result from an improvement to the circulation system.

Policy 7.9: Minimize stationary noise sources and noise emanating from construction activities.

City of Los Altos Municipal Code. Chapter 6.16 Noise Control of the City's Municipal Code establishes noise level limits applicable to the project as follows:

<u>6.16.050 Exterior noise limits.</u>
A. Maximum permissible sound levels by receiving land use.

1. The noise standards for the various categories of land use identified by the noise control office as presented in Table 4 of this section, unless otherwise specifically indicated, shall apply to all such property within a designated zone.
2. No person shall operate, or cause to be operated, any source of sound at any location within the city, or allow the creation of any noise on property owned, leased, occupied, or otherwise

controlled by such person, which causes the noise level, when measured on any other property, either incorporated or unincorporated, to exceed:

a. The noise standard for that land use as specified in Table 4 for a cumulative period of more than thirty (30) minutes in any hour (L_{50}); or
b. The noise standard plus five dB for a cumulative period of more than fifteen (15) minutes in any hour(L_{25}); or
c. The noise standard plus ten (10) dB for a cumulative period of more than five (5) minutes in any hour(L_{08}); or
d. The noise standard plus fifteen (15) dB for a cumulative period of more than one minute in any hour (L_{02}); or
e. The noise standard plus twenty (20) dB or the maximum measured ambient for any period of time (L_{max});.

3. If the measured ambient level exceeds that permissible within any of the first four noise limit categories above, the allowable noise exposure standard shall be increased in five dB increments in each category as appropriate to encompass or reflect such ambient noise level. In the event the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.
4. If the noise measurement occurs on a property adjacent to a zone boundary, the noise level limit applicable to the lower noise zone, plus five dB, shall apply.
5. If possible, the ambient noise shall be measured at a consistent location on the property with the alleged offending noise source inoperative. If for any reason the alleged offending noise source cannot be shut down, the ambient noise shall be estimated by performing a measurement in the same general source at least ten (10) dB below the ambient in order that only the ambient level be measured. If the difference between the ambient and the noise source is five to ten (10) dB, then the level of the ambient itself can be reasonably determined by subtracting a one decibel correction to account for the contribution of the source.

B. Corrections for character of sound. In the event the alleged offensive noise contains a steady, audible tone, such as a whine, screech, or hum, or contains music or speech conveying informational content, the standard limits set forth in Table 4 shall be reduced by five dB.

TABLE 4: Exterior Noise Limits, L_{50}

Receiving Land Use Category	**Time Period**	**L_{50} Noise Level (dBA)***
All R1 Zoning Districts	10:00 p.m. -- 7:00 a.m.	45
	7:00 a.m. -- 10:00 p.m.	55
All R3 and PCF Zoning Districts	10:00 p.m. -- 7:00 a.m.	50
	7:00 a.m. -- 10:00 p.m.	55
All OA Zoning Districts	10:00 p.m. -- 7:00 a.m.	55
	7:00 a.m. -- 10:00 p.m.	60
All C Zoning Districts	10:00 p.m. -- 7:00 a.m.	60
	7:00 a.m.--10:00 p.m.	65

* Levels not to be exceeded more than 30 minutes in any hour, L_{50}

6.16.070 Prohibited acts.

A. Noise disturbances prohibited. No person shall unnecessarily make or continue, or cause to be made or continued, any noise disturbance.

B. Specific prohibitions. The following acts, and the causing or permitting thereof, are declared to be in violation of this chapter:

6. Construction and demolition.

a.

i. Single-family zoning districts. Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work on weekdays before 7:00 a.m. and after 5:30 p.m. and on Saturdays before 9:00 a.m. or after 3:00 p.m. or any time on Sundays or the city observed holidays of New Year's Day, Memorial Day, Independence Day, Labor Day, Veterans' Day, Thanksgiving Day and Christmas Day, such that the sound therefrom creates a noise disturbance across a residential or commercial real property line, except for emergency work of public utilities or by special exception. This section shall apply to operations on residentially zoned property only. This section shall not apply to the use of lawn or garden tools;

ii. All other zoning districts (excluding single-family districts). Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work on weekdays before 7:00 a.m. and after 7:00 p.m. and Saturdays before 9:00 a.m. or after 6:00 p.m. or any time on Sundays or the city observed holidays of New Year's Day, Memorial Day, Independence Day, Labor Day, Veterans' Day, Thanksgiving Day and Christmas Day, such that the sound there from creates a noise disturbance across a residential or commercial real property line, except for emergency work of public service utilities or by special exception. This section shall apply to operations on properties other than residentially zoned property. This section shall not apply to the use of lawn or garden tools;

b. Where technically and economically feasible, construction activities shall be conducted in such a manner that the maximum noise levels at affected properties will not exceed those listed in the following schedules (Table 5):

i: Mobile equipment. Maximum noise levels for the nonscheduled, intermittent, short-term operation (less than ten (10) days) of mobile equipment:

ii: Stationary equipment. Maximum noise levels for the respectively scheduled and relatively long-term operation (periods of ten (10) days or more) of stationary equipment:

TABLE 5: Maximum Noise Levels for the nonscheduled, Intermittent, and Short–Term Operations (Less than ten (10) days) for Mobile and Stationary Equipment

	All R1 Zoning Districts	All PCF and R3 Zoning Districts	All OA and C Zoning Districts
Daily, except Sundays and legal holidays 7:00 a.m. & 7:00 p.m.	75 dBA	80 dBA	85 dBA
Daily, 7:00 p.m. & 7:00 a.m. and all day Sundays and legal holidays	50 dBA	55 dBA	60 dBA

c. Deliveries, start-up and closing down. The construction times above shall apply to deliveries of materials and equipment, and arrival of workers, start-up and closing down and departure activities on a job site.

12. Air-conditioning or air-handling equipment. Operating or permitting the operation of any air-conditioning or air-handling equipment in such a manner as to exceed any of the following sound levels without a variance (Table 6):

TABLE 6: Air-Conditioning or Air-Handling Equipment Operational Sound Levels

Measurement Location	Residentially zoned properties, dB(A)
Any point on a neighboring property line, five feet above grade level, no closer than three feet from any wall	50
Center of a neighboring patio, five feet above grade level, no closer than three feet from any wall	45
Outside the neighboring living area window nearest the equipment location, not more than three feet from the window opening, but at least three feet from any other surface	45

Existing Noise Environment

Figure 1 shows the project site, vicinity, and noise measurement locations. As shown on this figure, commercial land uses along Distel Circle exist to the east and south. Further south and southwest, there are single-family residences. Commercial office buildings exist northwest of the site. A noise monitoring survey was performed to quantify and characterize ambient noise levels at the site and in the project vicinity between Tuesday, March 22, 2022 and Thursday, March 24, 2022. The monitoring survey included two long-term noise measurements (LT-1 and LT-2) and three short-term noise measurements (ST-1, ST-2, and ST-3). The noise environment at the site results primarily from vehicular traffic along El Camino Real. Vehicular traffic along Distel Circle, occasional aircraft, and intermittent autos in the parking lots also contribute to the noise environment.

Long-term noise measurement LT-1 was made near the northeast corner of the site, approximately 40 feet northwest of the Distel Circle centerline, and approximately 265 feet southwest of the El Camino Real centerline. This location was selected to quantify noise levels at the proposed building façade generated by traffic along El Camino Real and Distel Circle. Hourly average noise levels at this location ranged from 56 to 65 dBA L_{eq} during the day and from 47 to 60 dBA L_{eq} at night. The CNEL between Tuesday and Thursday averaged 62 dBA. The daily trends in noise levels at LT-1 for all measured days are shown in Figures 2-4.

Long-term noise measurement LT-2 was made in the southwest corner of the site, approximately 170 feet west of the Distel Circle centerline, and approximately 470 feet southwest of the El Camino Real centerline. This location was selected to quantify noise levels at the rear of the proposed building, and near adjacent residential and commercial land uses. Hourly average noise levels at this location ranged from 46 to 59 dBA L_{eq} during the day and from 43 to 58 dBA L_{eq} at night. The CNEL between Tuesday and Thursday averaged 55 dBA. The daily trends in noise levels at LT-2 for all measured days are shown in Figures 5-7.

Short-term noise measurement ST-1 was made on Thursday, March 24, 2022 over a ten-minute period starting at 10:40 a.m. ST-1 was made at the southeastern corner of the site. This location was selected to quantify the ambient noise levels at the proposed façade of the building furthest from El Camino Real. The 10-minute average noise level measured at this location was 54 dBA L_{eq}.

Short-term noise measurement ST-2 was made on Thursday, March 24, 2022 over a ten-minute period starting at 11:10 a.m. ST-2 was made at the northwestern corner of the site. This location was selected to quantify the ambient noise levels at the corner of the proposed building closest to El Camino Real and nearby commercial uses. The 10-minute average noise level measured at this location was 54 dBA L_{eq}.

Short-term noise measurement ST-3 was made on Thursday, March 24, 2022 over a ten-minute period starting at 12:00 p.m. ST-3 was made south of the site near the rear yards of single-family residential land uses. The 10-minute average noise level measured at this location was 50 dBA L_{eq}.

Short-term noise measurement data is summarized in Table 7.

GENERAL PLAN CONSISTENCY ANALYSIS

The exposure of the proposed project to excessive levels of noise and vibration is not considered under CEQA. This section addresses the Noise and Land Use Compatibility of the project to determine consistency with the policies set forth in the City's General Plan.

Noise and Land Use Compatibility

The applicable Los Altos General Plan policies were presented in detail in the Regulatory Background section and are summarized below for the proposed project:

- The City's Noise Element establishes 65 dBA CNEL as the maximum acceptable outdoor noise exposure level for multiple-family residential areas.

- The City's standard for interior noise levels in residences is 45 dBA CNEL.

Future Exterior Noise at Outdoor Use Areas

The future noise environment at the project site would continue to result from vehicular traffic along El Camino Real. The average daily traffic (ADT) on El Camino Real was based on AM and PM peak-hour existing and future (cumulative plus project plus project) traffic volumes for the nearby roadway provided by the project's traffic consultant.[1] Future traffic noise levels are calculated to increase by less than 0.2 dBA CNEL. The northern end of the building (nearest to El Camino Real) is located about 260 feet from the centerline of the roadway. The measured noise level at this location (represented by measurement LT-1), approximately 10 feet above the ground, was 62 dBA CNEL, and represents the noise exposure at the ground level and second floors of the proposed five story building. Buildings located between the project site and El Camino Real to the north, east, and west partially block the line of sight to the traffic reducing the noise from the roadway.

The front of the proposed building would face Distel Circle. The primary outdoor use area is a courtyard located on the second story of the rear side of the building, enclosed by four residential levels on the north, east, and south sides. The acoustical shielding provided by the building would reduce the noise level in the courtyard to 55 dBA CNEL or less in the common outdoor use area. There are balconies shown on the side and rear facades of the building and the facades facing the courtyard. The noise level on the balconies directly facing El Camino Real would range from about 62 dBA CNEL on the second floor to about 67 dBA CNEL on the fourth and fifth floors. Noise levels on all other balconies would be substantially below 65 dBA CNEL given the distances from the roadway and shielding provided the building itself. These are not common use areas. It is generally recognized that noise guidelines are not applied to private balconies, given that it is not possible to mitigate the noise, and the balcony is a worthwhile benefit even if it is considered noisy. The design for the project results in compatible noise levels in the primary outdoor use area and at most of the balconies consistent with the General Plan.

1 Email correspondence with Nick Towstopiat, Assistant Project Manager, David J. Powers & Associates, Inc., April 13, 2022. Attachment: *330 Distel Circle Volume Spreadsheet - AirQuality.xlsx.*

Future Interior Noise Environment

The City of Los Altos, through policies in the General Plan and Building Code, requires that interior noise levels resulting from exterior sources of environmental noise, such as traffic, be maintained at 45 dBA CNEL or less inside new residences. The interior noise level depends on the noise level incident on the exterior of the building and the exterior-to-interior noise reduction provided by the building. As discussed above, the exterior noise exposure of the building facades would range from 67 dBA CNEL on the upper floors of the façade that would face El Camino Real to less than 55 dBA CNEL on the façade facing away from El Camino Real.

Interior noise levels would vary depending upon the design of the buildings (relative window area to wall area) and the selected construction materials and methods. Standard residential construction provides approximately 15 dBA of exterior-to-interior noise reduction, assuming the windows are partially open for ventilation. Standard construction with the windows closed provides approximately 20 to 25 dBA of noise reduction in interior spaces. Where exterior noise levels range from 60 to 65 dBA CNEL, the inclusion of adequate forced-air mechanical ventilation is often the method selected to reduce interior noise levels to acceptable levels by allowing for closing the windows to control noise. In noise environments of 65 to 70 dBA CNEL, a combination of forced-air mechanical ventilation and sound-rated windows and doors is often required to meet the interior noise level limit.

For consistency with the General Plan and Building Code, the following Conditions of Approval are recommended for consideration by the City:

- Provide a suitable form of forced-air mechanical ventilation, as determined by the local building official, for all residential units so that windows can be closed at the discretion of the occupants to control environmental noise.

- During final project design, after building elements have been designed and specified, a detailed acoustical design review shall be prepared and submitted to the City confirming that the design would result in interior noise levels at or below 45 dBA CNEL in all habitable rooms in the residential units.

NOISE IMPACTS AND MITIGATION MEASURES

This section describes the significance criteria used to evaluate project impacts under CEQA, provides a discussion of each project impact, and presents mitigation measures, where necessary, to provide a compatible project in relation to adjacent land uses.

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise and vibration resulting from the project:

1. **Temporary or Permanent Noise Increases in Excess of Established Standards.** A significant impact would be identified if project construction or operations would result in a substantial temporary or permanent increase in ambient noise levels at sensitive receivers

in excess of the local noise standards contained in the Los Altos General Plan or Municipal Code, as follows:

- Operational Noise in Excess of Standards. A significant noise impact would be identified if the project would expose persons to or generate noise levels that would exceed applicable noise standards presented in the General Plan or Municipal Code. The City of Los Altos limits sound levels generated by air-conditioning or air-handling equipment to 50 dBA at residential property lines and 45 dBA at residential patios and building façades. Other operational noise sources are subject limits to the levels specified in Table 4.

- Permanent Noise Increase. A significant impact would be identified if traffic or school activity noise generated by the project would substantially increase noise levels at sensitive receivers in the vicinity. A substantial increase would occur if: a) the noise level increase is 5 dBA CNEL or greater, with a future noise level of less than 60 dBA CNEL, or b) the noise level increase is 3 dBA CNEL or greater, with a future noise level of 60 dBA CNEL or greater.

- Temporary Noise Increase. A significant temporary noise impact would be identified if construction would occur outside of the hours specified in the Municipal Code or if construction noise levels would exceed the City's construction noise limits at adjacent noise sensitive land uses. Construction occurring during allowable hours is limited to 75 dBA in single-family residential areas, 80 dBA in multi-family residential areas, and 85 dBA in commercial areas.

2. **Generation of Excessive Groundborne Vibration.** A significant impact would be identified if the construction of the project would generate excessive vibration levels. Groundborne vibration levels exceeding 0.3 in/sec PPV would be considered excessive as such levels would have the potential to result in cosmetic damage to buildings.

Impact 1: **Temporary or Permanent Noise Increases in Excess of Established Standards.** Project traffic would not result in a substantial permanent noise level increase at existing noise-sensitive land uses in the project vicinity. However, existing noise-sensitive land uses could be exposed to operational and construction noise levels in excess of the applicable noise thresholds. **This is a potentially significant impact.**

Permanent Noise Increases from On-Site Operational Noise

The City of Los Altos limits sound levels generated by air-conditioning or air-handling equipment to 50 dBA at residential property lines and 45 dBA at residential patios and building façades. The descriptor for the noise limit is not specified. For consistency with the provisions of the code, a reasonable interpretation of this standard would identify the criteria as an hourly average L_{eq}. Other operational noise sources are regulated by limits specified in Table 4.

Parking

Vehicle access to the project site would be provided by one driveway on Distel Circle, which would lead to the ground-level podium parking garage containing a total of 90 vehicle parking

spaces. The parking garage would include surface parking spaces and mechanical parking stalls that allow for the stacking of parked cars. These mechanical lift parking stalls provide multiple parking spaces per stall by stacking two cars vertically, and in some cases, with a third car stacked in a pit area below grade.

Noise measurements of a similar parking lift system were made in Redwood City, California by Illingworth & Rodkin, Inc. on September 6, 2018. The noise measurements recorded the sounds produced by a CityLift two level, 13 car mechanical lift, and these data were used to estimate noise levels produced by the proposed parking lift system. The lift equipment installed at the Redwood City parking facility was within an enclosed concrete structure and noise measurements were made at two locations inside the building facing the car stacker. The results of these measurements indicated that the average sound level for an operational cycle was 63 to 66 dBA L_{eq} with a maximum instantaneous noise level of 74 to 76 dBA L_{max} occurring when the upper lift came to rest at the lower position.

The nearest single-family residence to the southwest would be exposed to the highest operational noise levels produced by the mechanical lifts as the noise would leave the building through the open metal screens proposed to aid in the ventilation of the parking area. Based on the noise data collected during the operation of similar mechanical lifts, the nearest single-family residential receptor to the southwest would be exposed to average sound levels of 39 dBA L_{eq} assuming up to 20-minutes of mechanical lift noise per hour, and maximum sound levels up to 54 dBA L_{max}. These noise levels would be audible, but would not exceed the City of Los Altos standards for average or maximum noise level events.

Noise associated with on-site circulation and parking for the townhomes would be similar to levels generated by use of the current parking lot and below noise levels generated by vehicular traffic traveling along El Camino Real and those specified in Table 4. This is a **less-than-significant** impact.

Mechanical Equipment

The proposed project would include mechanical equipment such as heating, ventilation, and air conditioning systems (HVAC). Based on the project plans, dated March 2, 2022, solar panels and air conditioning equipment (air-cooled condensing units) would be located on the southwestern side of the rooftop, about 120 feet from the nearest residential land use to the southwest. Typical residential air-cooled condensing units generate noise levels ranging from 50 to 60 dBA at 50 feet from the equipment, depending on the equipment selected. Noise from the rooftop equipment located is calculated to generate noise levels of up to 39 to 49 dBA L_{eq} at the closest residential property line and nearest residential building. The projected noise levels are calculated to be below the property line limit but could exceed the limit at the nearest residential building façade by up to 4 dBA. This is a **potentially significant** impact.

Mitigation Measure 1a: The following mitigation measures would reduce this impact to a less-than-significant level.

Prior to the issuance of building permits, air conditioning or air handling equipment shall be selected and/or designed to reduce noise levels on adjacent residences to meet the City's

requirements. A qualified acoustical consultant shall be retained by the project applicant to review the selected equipment to determine it would comply with the City's 45 dBA L_{eq} residential noise limit at the nearest residential building. Noise reduction measures, if required, would include but are not limited to selection of quieter equipment and/or installation of noise barriers such as roof screens.

Permanent Noise Increases from Project Traffic

Neither the City of Los Altos nor the State of California define the traffic noise level increase that is considered substantial. A significant impact would typically be identified if project generated traffic were to result in a permanent noise level increase of 3 dBA CNEL or greater in a residential area where the resulting noise environment would exceed or continue to exceed 60 dBA CNEL or result in a permanent noise increase of 5 dBA CNEL or greater in a residential area where the resulting in a noise environment would continue to be 60 dBA CNEL or less. For reference, a 3 dBA CNEL noise increase would be expected if the project would double existing traffic volumes along a roadway.

As discussed previously, a review of the project's trip traffic information indicates that there will be an increase in cumulative traffic plus project generated traffic noise of less than 0.2 dBA CNEL. This is a **less-than-significant** impact.

Overall Operational Noise

The overall increase in noise levels attributable to the project would result primarily from vehicles in the parking garage and mechanical equipment noise sources. Operational noise levels from the parking lifts are calculated to reach 46 dBA CNEL, and operational noise levels from the mechanical equipment are assumed to be maintained at 45 dBA CNEL or less. The overall project generated noise level would be 49 dBA CNEL. When added to the existing CNEL measured as part of the noise survey (53 dBA CNEL), the noise environment at the nearest sensitive receptor is calculated to increase by up to 1 dBA CNEL. The increase in the CNEL noise level would not be detectable and would remain below the 5 dBA CNEL threshold that defines a substantial permanent noise increase. This is a **less-than-significant** impact.

Temporary Noise Increases from Project Construction

Chapter 6.16.070 of the City's Municipal Code establishes allowable hours of construction within residentially zoned properties between 7:00 a.m. and 5:30 p.m. Monday through Friday and between 9:00 a.m. and 3:00 p.m. on Saturdays. Construction in all other zoning districts (excluding single-family districts) is permissible between 7:00 a.m. and 7:00 p.m. Monday through Friday and 9:00 a.m. and 6:00 p.m. on Saturdays. Construction activities are not permitted on Sundays or the City observed holidays of New Year's Day, Memorial Day, Independence Day, Labor Day, Veterans' Day, Thanksgiving Day and Christmas Day. In addition, where technically and economically feasible, maximum noise levels from construction activities should not exceed those listed in Tables 3 and 4 in Chapter 6.16.070 of the City's Municipal Code.

The City also provides recommended maximum noise level limits for construction activities occurring over a period of less than 10 days but does not provide limits for longer duration construction. This analysis applies the noise limits to project construction, given that construction would occur for a period greater than 10 days. Construction occurring during allowable hours is limited to 75 dBA in single-family residential areas, 80 dBA in multi-family residential areas, and 85 dBA in commercial areas. This code is not explicit in terms of the acoustical descriptor associated with the noise level limit. A reasonable interpretation of this standard would identify the criteria as an hourly average L_{eq}.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), if the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time.

Construction activities would include demolition, excavation, site preparation, grading, building construction, paving, and architectural coating. During each stage of construction, there would be a different mix of equipment operating, and noise levels would vary by stage and vary within stages, based on the amount of equipment in operation and the location at which the equipment is operating. The hauling of excavated materials and construction materials would generate truck trips on local roadways as well.

Typical construction noise levels at a distance of 50 feet are shown in Tables 8 and 9. Table 8 shows the average noise level ranges, by construction phase and Table 9 shows the maximum noise level ranges for different construction equipment. As shown in Tables 8 and 9, construction activities generate considerable amounts of noise, especially during demolition and earth-moving activities when heavy equipment is used. Hourly average noise levels generated by construction are about 65 to 88 dBA L_{eq} for residential buildings, measured at a distance of 50 feet from the center of a busy construction site, as shown in Table 8. The typical range of maximum instantaneous noise levels for construction equipment used at this site would be 77 to 90 dBA L_{max} at a distance of 50 feet, as shown in Table 9. Construction-generated noise levels drop off at a rate of about 6 dBA per doubling of the distance between the source and receptor. Shielding by buildings or terrain often result in lower construction noise levels at distant receptors.

Equipment expected to be used in each construction phase are summarized in Table 10, along with the quantity of each type of equipment, the reference noise level at 50 feet assuming the operation of the two loudest pieces of construction equipment, and the estimated noise levels at the nearest property lines projected from the center of the construction activity by phase. Federal Highway Administration’s (FHWA’s) Roadway Construction Noise Model (RCNM) was used to calculate the hourly average noise levels for each phase of construction, assuming the two loudest pieces of equipment would operate simultaneously, as recommend by the FTA for construction noise evaluations. This construction noise model includes representative sound levels for the most common types of construction equipment and the approximate usage factors of such equipment that were developed based on an extensive database of information gathered during the construction of the Central Artery/Tunnel Project in Boston, Massachusetts (CA/T Project or "Big

Dig"). The usage factors represent the percentage of time that the equipment would be operating at full power.

Project construction would occur within about 60 feet of the adjoining residential property to the southwest and commercial properties to the north and northeast. Construction would occur approximately 170 feet from the commercial building to the southwest and about 350 feet from the motel located across El Camino Real. Construction noise levels would be anticipated to exceed the single-family residential limit of 75 dBA when there is heavy construction activity within about 140 feet of the residential property to the southwest, and would not exceed the commercial limit of 85 dBA.

*Denotes two loudest pieces of construction equipment per phase

Construction would comply with City of Los Altos' Municipal Code specified hours of construction, but would be anticipated to exceed the construction noise limits during some periods of construction when heavy construction is located immediately adjacent to receptors. This is a **potentially significant** temporary impact.

Mitigation Measure 1b: Modification, placement, and operation of construction equipment are possible means for minimizing the impact of construction noise on existing sensitive receptors. Construction equipment should be well-maintained and used judiciously to be as quiet as possible. Additionally, construction activities for the proposed project should include the following best management practices to reduce noise from construction activities near sensitive land uses:

- Construction activities shall be limited to the hours between 7:00 a.m. and 5:30 p.m., Monday through Friday, and on Saturdays between 9:00 a.m. and 3:00 p.m., in accordance with the City's Municipal Code. Construction is prohibited on Sundays and holidays unless permission is granted with a development permit or other planning approval.

- Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.

- Unnecessary idling of internal combustion engines should be strictly prohibited.

- Locate stationary noise-generating equipment, such as air compressors or portable power generators, as far as possible from sensitive receptors. If they must be located near receptors, adequate muffling (with enclosures where feasible and appropriate) shall be used reduce noise levels at the adjacent sensitive receptors. Any enclosure openings or venting shall face away from sensitive receptors.

- Utilize "quiet" air compressors and other stationary noise sources where technology exists.

- A temporary noise barrier shall be erected along the northeast and southeast property lines of the residence at 311 Marich Way. The barrier should be designed to achieve a minimum 9-dBA of noise reduction for ground level activities and 5-dBA of noise reduction from upper level activities in order to reduce construction noise levels in the rear yard to 75 dBA L_{eq} or less.

- Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the project site.

- The contractor shall prepare a detailed construction plan identifying the schedule for major noise-generating construction activities. The construction plan shall identify a procedure for coordination with adjacent residential land uses so that construction activities can be scheduled to minimize noise disturbance.

- Designate a "disturbance coordinator" who would be responsible for responding to any complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaint (e.g., bad muffler, etc.) and will require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the

disturbance coordinator at the construction site and include in it the notice sent to neighbors regarding the construction schedule.

Implementation of the above best management practices would reduce construction noise levels emanating from the site, limit construction hours, and minimize disruption and annoyance. With the implementation of these measures and recognizing that noise generated by construction activities would occur over a temporary period, the impact would be **less-than-significant**.

Impact 2 **Exposure to Excessive Groundborne Vibration due to Construction.** Construction-related vibration levels would not exceed 0.3 in/sec PPV at the nearest structures. **This is a less-than-significant impact.**

The City of Los Altos does not specify a construction vibration limit. For structural damage, the California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, 0.3 in/sec PPV for buildings that are found to be structurally sound but where structural damage is a major concern, and a conservative limit of 0.25 in/sec PPV for historic and some old buildings (see Table 3). The 0.3 in/sec PPV vibration limit would be applicable to properties in the vicinity of the project site.

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g., jackhammers, hoe rams) are used. Construction activities would include demolition, site preparation, grading and excavation, trenching and foundation, building (exterior), interior/ architectural coating and paving. Pile driving is not anticipated for construction of the building foundation.

Table 11 presents typical vibration levels from construction equipment at 25 feet. Jackhammers typically generate vibration levels of 0.035 in/sec PPV and drilling typically generates vibration levels of 0.09 in/sec PPV at 25 feet. Vibration levels would vary depending on soil conditions, construction methods, and equipment used. Table 11 also presents construction vibration levels calculated at the location of the nearest building about 50 feet away from the property site boundary. Vibration levels are highest close to the source, and then attenuate with increasing distance at the rate $(D_{ref}/D)^{1.1}$, where D is the distance from the source in feet and D_{ref} is the reference distance of 25 feet.

TABLE 11 Vibration Levels for Construction Equipment

Equipment		PPV at 25 ft. (in/sec)	PPV at 50 ft. (in/sec)
Clam shovel drop		0.202	0.094
Hydromill (slurry wall)	in soil	0.002	0.001
	in rock	0.004	0.002
Vibratory Roller		0.210	0.099
Hoe Ram		0.089	0.004
Large bulldozer		0.089	0.004
Caisson drilling		0.089	0.004
Loaded trucks		0.076	0.036
Jackhammer		0.035	0.016
Small bulldozer		0.003	0.001

Source: Transit Noise and Vibration Impact Assessment Manual, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, September 2018, as modified by Illingworth & Rodkin, Inc., May 2022.

As indicated in Table 10, construction-related vibration levels would not exceed 0.3 in/sec PPV at the nearest structures. This is a less-than-significant impact.

Mitigation Measure 2: None required.

Executive Summary

This study was conducted for the purpose of identifying the potential transportation impacts related to the proposed affordable housing development located at 330 Distel Circle in Los Altos, California. The project site is currently occupied by 12,120 square feet of office uses. The project proposes to replace the existing office building on site with a 90-unit, five-story affordable housing development. Vehicular access to the project site would be provided via a driveway to a parking garage located along Distel Circle.

The potential impacts of the project were evaluated in accordance with the standards set forth by the City of Los Altos' Draft Vehicle Miles Travelled (VMT) Policy and Interim VMT Policy. The local transportation analysis supplements the VMT analysis by identifying potential adverse operational effects that may arise due to the new development, as well as evaluating the effects of the new development on site access, circulation, and other safety-related elements in the proximate area of the project. Potential impacts to pedestrians, bicycles, and transit were also considered.

Based on trip generation rates recommended by the Institute of Transportation Engineers (ITE), it is estimated that the proposed project would generate 296 net new daily trips, with 14 net new trips (-7 inbound and 21 outbound) during the AM peak hour and 24 net new trips (21 inbound and 3 outbound) during the PM peak hour. Trip credits were taken for the existing uses on site and proximity to a major bus stop.

Vehicular Miles Travelled (VMT) Analysis

The Los Altos' Draft VMT Policy establishes screening criteria for developments that are expected to cause a less-than-significant transportation impact under CEQA and are not required to prepare further VMT analysis. According to the Draft VMT Policy, since the project proposes 100 percent affordable housing, it would meet the City's screening criteria and would be presumed to have a less-than-significant transportation impact on VMT and would be screened out from further VMT analysis. Because the Draft VMT Policy has not yet been formally adopted, the project's potential impact on VMT were evaluated according to the City's Interim VMT Policy.

The City's Interim VMT Policy sets a threshold of significance for residential VMT per capita at 15 percent below the regional average of 13.95 VMT per capita (or 11.86). Per the Santa Clara County map based VMT evaluation tool, the project site is located within an area with a residential VMT per capita of 9.51 without the project, which is below the threshold set forth in the interim policy. Therefore, the project would also be screened out from further analysis using the threshold of significance in the Interim VMT Policy.

Local Transportation Analysis

The results of the intersection level of service analysis under existing conditions, near-term conditions, and cumulative conditions, with and without the project, are summarized in Table ES-1. The results determined that the addition of project trips would not adversely affect traffic operations at the signalized study intersections because these trips would not increase the average delay at the intersection by more than four seconds.

The unsignalized intersections of San Antonio Road and Jordan Avenue and Distel Circle and El Camino Real operate at an unacceptable level of service during at least one peak hour under all study scenarios, without and with the project. Therefore, a signal warrant check was conducted for the intersections based on the peak-hour traffic warrant. The analysis shows that the signal warrant is not met at either of these intersections.

This report also makes the following conclusions and recommendations for the project:

- On-street parking should be prohibited approximately 40 feet to the south and 35 feet to the north of the project driveway. This would provide adequate sight distance for exiting drivers at the driveway to see the oncoming traffic along Distel Circle. The project driveway should also be free and clear of any obstructions such as shrubs or other landscape features to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on Distel Circle.
- The site plan does not provide the height of the pit for the three-level mechanical stacker. Minimum 7 feet deep parking pits should be provided to accommodate the height of a design vehicle.
- The applicant should work with the City and Mission Trail Waste Systems to design a plan for waste collection service.

Table ES-1
Intersection Level of Service Summary

Introduction

This report presents the results of the Transportation Analysis (TA) conducted for the proposed affordable housing development located at 330 Distel Circle in Los Altos, California (see Figure 1). The project site is currently occupied by 12,120 square feet of office uses. The project proposes to replace the existing office building on site with a 90-unit, five-story affordable housing development. Vehicular access to the project site would be provided via a driveway to a parking garage located along Distel Circle (see Figure 2).

CEQA Transportation Analysis Scope and Methodology

Senate Bill 743 (SB 743) requires local jurisdictions to use Vehicle Miles Traveled (VMT) instead of Level of Service (LOS) to analyze transportation impacts under the California Environmental Quality Act (CEQA). The City of Los Altos is in the process of developing a new citywide VMT Policy to comply with State law and provide established and consistent criteria for analyzing transportation impacts of development projects and long-range plans. The City of Los Altos' Draft VMT Policy establishes procedures for determining project impacts on VMT based on project description, characteristics, and/or location. The City's VMT methodology also includes screening criteria that are used to identify types, characteristics, and/or locations of projects that would not exceed the CEQA thresholds of significance. If a project or a component of a mixed-use project meets the screening criteria, it is then presumed that the project or the component would result in a less-than-significant VMT impact and a VMT analysis is not required. For a project that does not meet the screening criteria, a project's VMT impact is determined by comparing the project VMT to the appropriate thresholds of significance based on the type of development. For residential developments, the threshold of significance set forth in the Draft VMT Policy is 15 percent below the citywide average daily VMT per capita.

However, since the City has not yet formally adopted the Draft VMT Policy, the project has also been analyzed according to the City's interim VMT policy. The Interim VMT Policy sets a threshold of significance for residential VMT per capita at 15 percent below the regional average of 13.95 VMT per capita (or 11.86). Any project that does not have at least a 15 percent reduction would need to mitigate its impacts to less than significant based on this threshold.

Local Transportation Analysis Scope

The local transportation analysis supplements the VMT analysis by identifying potential adverse operational effects that may arise due to the new development, as well as evaluating the effects of the new development on site access, circulation, and other safety-related elements in the proximate area of the project.

The effects of the project were evaluated in accordance with the standards set forth by the City of Los Altos and the Santa Clara Valley Transportation Authority (VTA).

The local transportation analysis includes an analysis of AM and PM peak hour traffic conditions for 10 signalized intersections and 4 unsignalized intersections in the vicinity of the project site. Since the project is expected to generate fewer than 100 net PM peak hour trips, a CMP roadway segment analysis is not required. An analysis of site access, on-site circulation, and transit, bicycle, and pedestrian access is also included.

Study Intersections

1. El Camino Real and Los Altos Avenue
2. El Camino Real and Del Medio Avenue
3. El Camino Real and San Antonio Avenue (CMP)
4. El Camino Real and Showers Drive
5. El Camino Real and Jordan Avenue
6. El Camino Real and Ortega Avenue
7. El Camino Real and Distel Drive
8. El Camino Real and Rengstorff Avenue (CMP)
9. N. San Antonio Road and W. Portola Avenue
10. N. San Antonio Road and Jordan Avenue (unsignalized)
11. N. San Antonio Road and Almond Avenue
12. El Camino Real and Distel Circle (unsignalized)
13. Marich Way and Distel Drive (unsignalized)
14. Distel Circle and Distel Drive (unsignalized)

Traffic conditions at the study intersections were analyzed for both the weekday AM and PM peak hours of adjacent street traffic. The AM peak hour typically occurs between 7:00 AM and 9:00 AM and the PM peak hour typically occurs between 4:00 PM and 6:00 PM on a regular weekday. These are the peak commute hours during which most traffic congestion occurs on the roadways.

Traffic conditions were evaluated for the following scenarios:

Scenario 1: *Existing Conditions.* Existing traffic volumes at study intersections were based on pre-pandemic traffic counts conducted in 2018 and 2019 and new counts collected in 2021 where pre-pandemic counts were not available. New counts were factored by comparing new counts to available pre-pandemic counts.

Scenario 2: *Existing plus Project Conditions.* Existing traffic volumes with the project were estimated by adding to existing traffic volumes the additional traffic generated by the project. Existing plus project conditions were evaluated relative to existing conditions in order to determine the effects the project would have on the existing roadway network.

Scenario 3: *Near-term Conditions.* Near-term traffic volumes were estimated by adding to existing traffic volumes the projected volumes from approved but not yet constructed projects that would generate trips at the study intersections.

Scenario 4: *Near-term plus Project Conditions.* Near-term traffic volumes with the project were estimated by adding to near-term traffic volumes the additional traffic generated by the project. Near-term plus project conditions were evaluated relative to near-term conditions.

Scenario 5: *Cumulative (2040) Conditions.* Cumulative traffic volumes were estimated by applying a one percent annual growth factor to existing traffic volumes and adding the projected volumes from approved and pending (proposed but not yet approved) projects that would generate trips at the study intersections.

Scenario 6: *Cumulative (2040) Plus Project Conditions.* Cumulative traffic volumes with the project were estimated by adding to cumulative traffic volumes the additional traffic generated by the project. Cumulative plus project conditions were evaluated relative to cumulative conditions.

Methodology

This section presents the methods used to determine the traffic conditions for each scenario described above. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards.

Data Requirements

The data required for the analysis were obtained from new traffic counts, driveway counts, traffic studies for nearby projects, and field observations. The following data were collected from these sources:

- existing peak-hour intersection turning-movement volumes
- lane configurations
- intersection signal timing and phasing
- trips for nearby approved and pending developments

Level of Service Standards and Analysis Methodologies

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The various analysis methods are described below.

Signalized Intersections

The City of Los Altos utilizes PTV VISTRO software and the *Highway Capacity Manual (HCM), 6th Edition* methodology to evaluate intersection operations. The HCM method evaluates signalized intersection operations on the basis of average control delay time for all vehicles at the intersection. Control delay is the amount of delay that is attributed to the particular traffic control device at the intersection, and includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The correlation between average delay and level of service is shown in Table 1. In the City of Los Altos, the level of service standard for signalized intersections is LOS D. The level of service standard for CMP signalized intersections is LOS E or better.

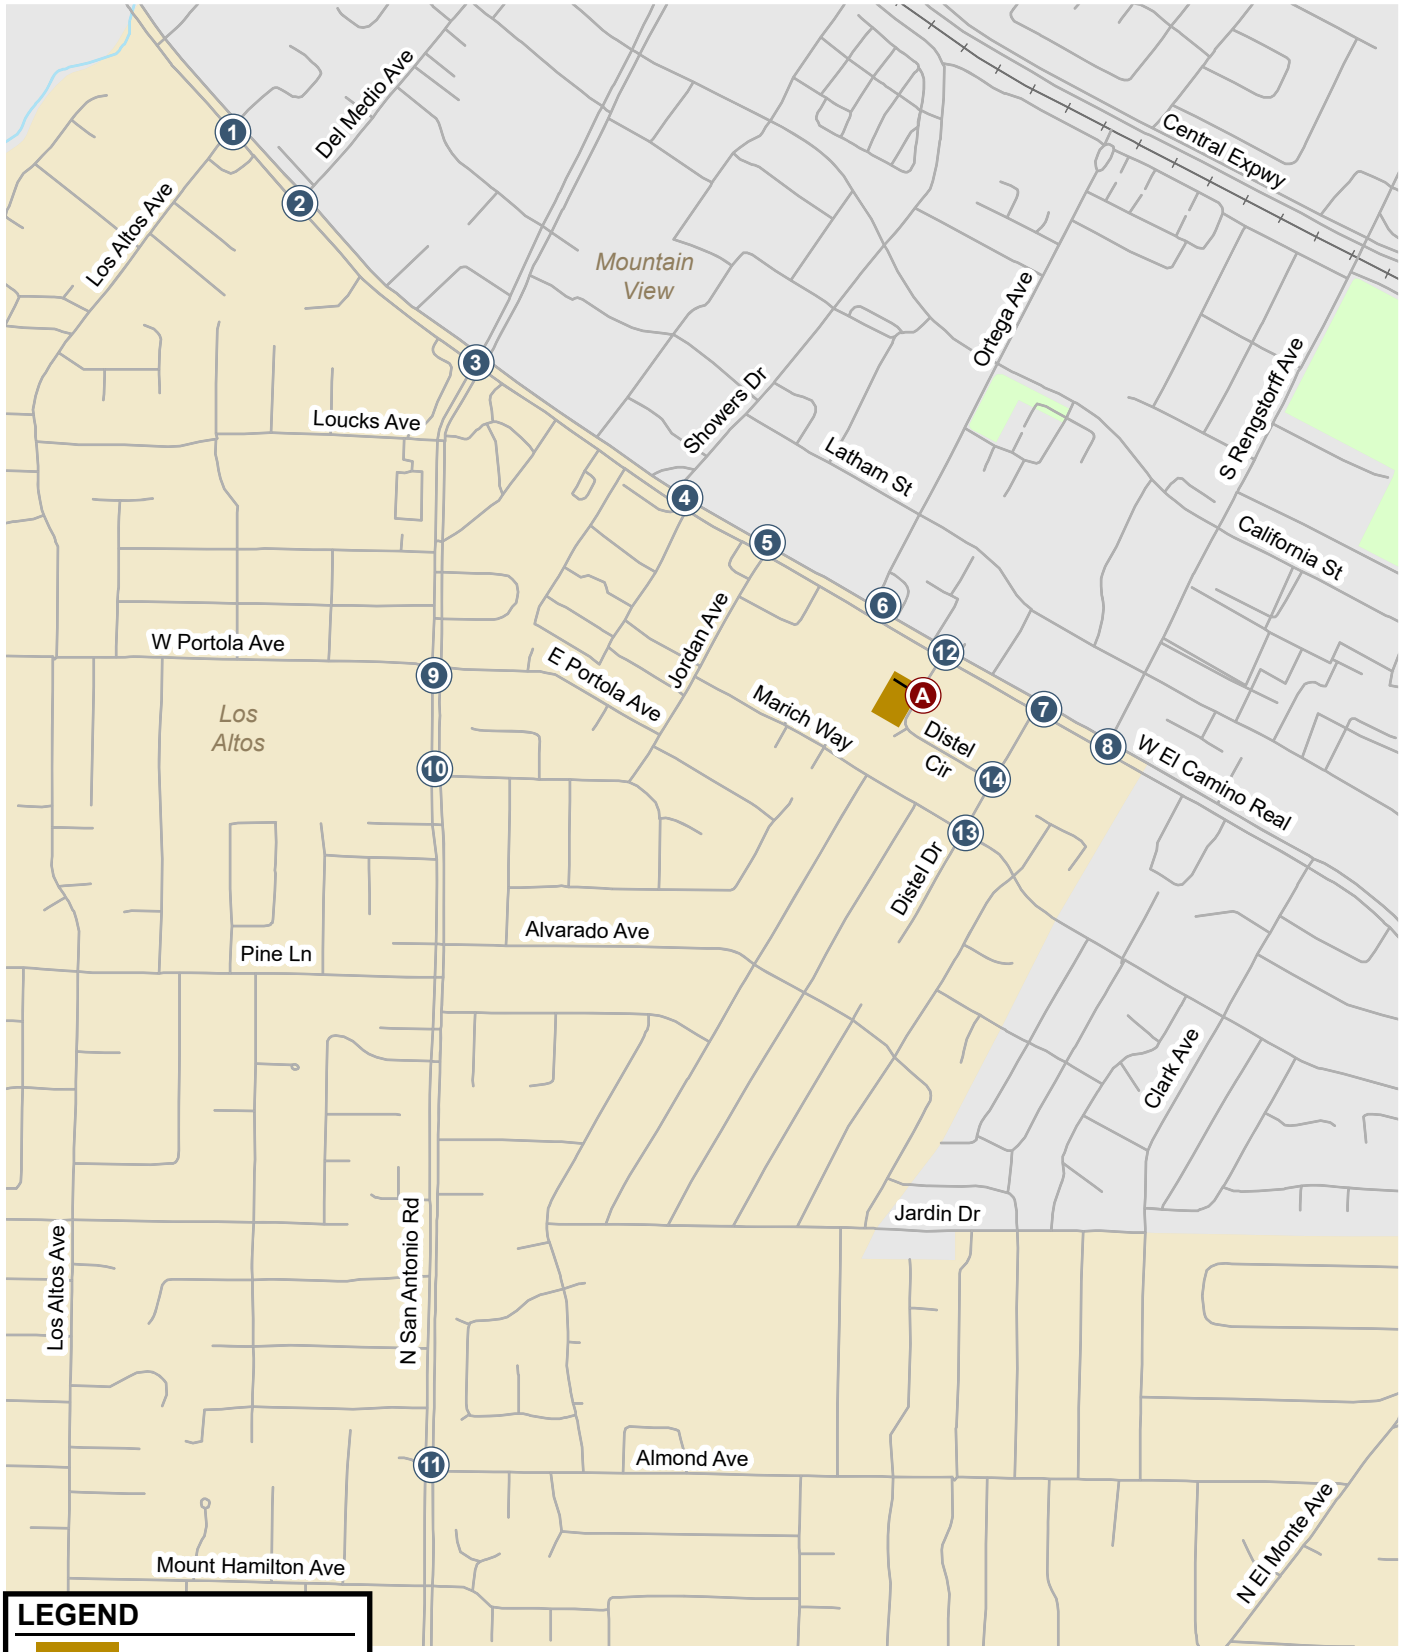

Figure 1
Site Location and Study Intersections

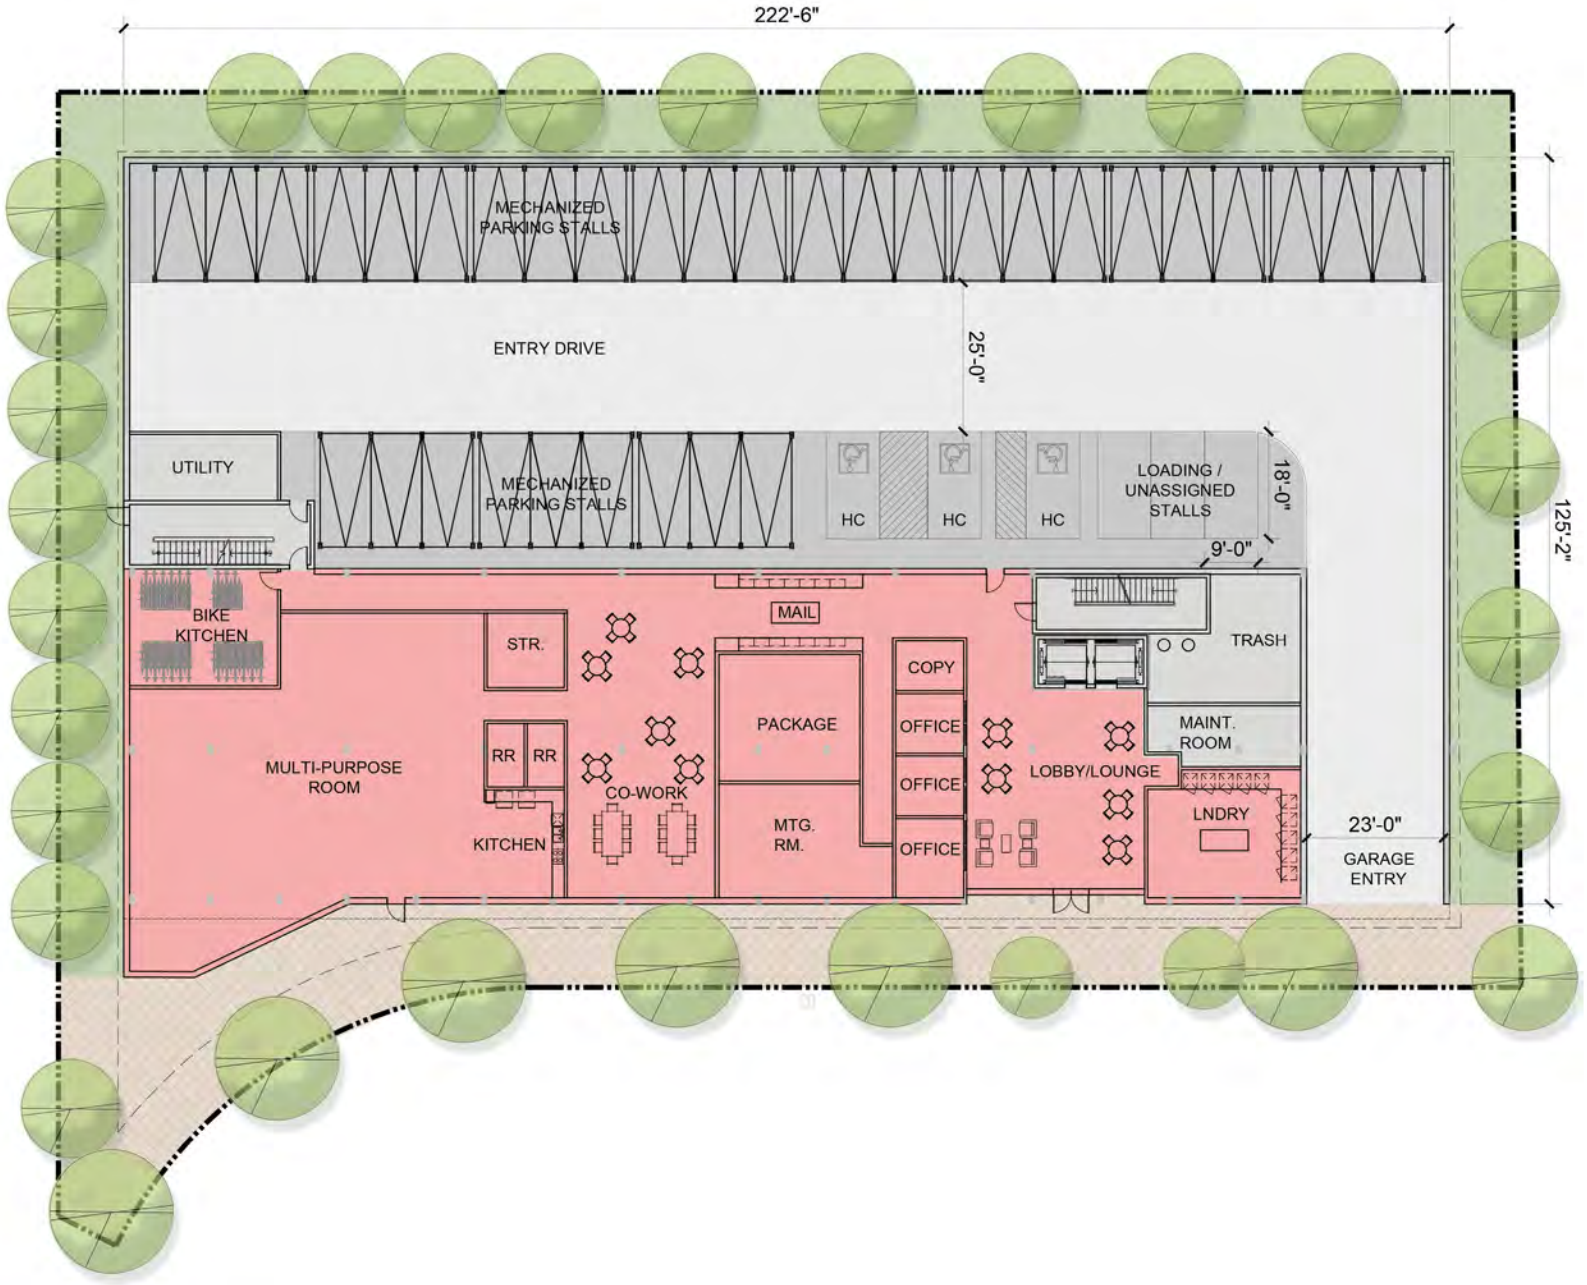

Figure 2
Site Plan

Not to Scale

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B	Operations characterized by good signal progression and/or short cycle lengths. More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	10.1 to 20.0
C	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though some vehicles may still pass through the intersection without stopping.	20.1 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes of such delay levels.	greater than 80.0

Source: Transportation Research Board, *Highway Capacity Manual, 6th Edition*, p.10-16.

Unsignalized Intersections

Level of service analysis at unsignalized intersections is generally used to determine the need for modification in the type of intersection control (i.e., all-way stop or signalization). As part of the evaluation, traffic volumes, delays and traffic signal warrants are evaluated to determine if the existing intersection control is appropriate.

For unsignalized intersections, level of service depends on the average delay experienced by vehicles on the stop-controlled approaches. Thus, for all-way stop controlled intersections, level of service is determined by the average delay for all movements through the intersection. For side street stop-controlled intersections (two-way or T-intersections), operations are defined by the average control delay experienced by vehicles entering the intersection from the stop-controlled approaches on minor streets or from left-turn approaches on major streets. For two-way or T-intersections, the level of service is reported based on the average delay for the worst approach. The level of service definitions for unsignalized intersections is shown in Table 2. The City of Los Altos does not have an adopted level of service standard for

unsignalized intersections. For the purpose of this study, the minimum acceptable level of service for unsignalized intersections is LOS D.

Table 2
Unsignalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Delay Per Vehicle (Sec.)
A	Little or no traffic delay	10.0 or less
B	Short traffic delays	10.1 to 15.0
C	Average traffic delays	15.1 to 25.0
D	Long traffic delays	25.1 to 35.0
E	Very long traffic delays	35.1 to 50.0
F	Extreme traffic delays	greater than 50.0

Adverse Operational Effects on Nearby Intersections

For this analysis, the criteria used to determine an adverse effect on signalized intersections are based on City of Los Altos Level of Service standards. Adverse effects to the unsignalized study intersections were identified based on engineering judgment.

City of Los Altos Signalized Intersections

According to City of Los Altos level of service standard, a development is said to create an adverse operational effect on traffic conditions at a signalized intersection if for either peak hour, either of the following conditions occurs:

1. The level of service at the intersection drops below its respective level of service standard (LOS D or better for local intersections) when project traffic is added, or
2. An intersection that operates below its level of service standard under no-project conditions experiences an increase in critical-movement delay of four or more seconds, and the volume-to-capacity ratio (v/c) is increased by one percent (0.01) or more when project traffic is added.

An adverse operational effect at a signalized intersection is said to be satisfactorily mitigated when measures are implemented that would restore intersection operations back to background (without the project) conditions or better.

CMP Signalized Intersections

The definition of an adverse operational effect at a CMP intersection is the same as for the City of Los Altos, except that the CMP standard for acceptable level of service at a CMP intersection is LOS E or better. An adverse operational impact by CMP standards is said to be satisfactorily mitigated when measures are implemented that would restore intersection conditions to background conditions or better.

Unsignalized Intersections

The City of Los Altos has not established criteria to define an adverse operational effect for unsignalized intersections. Unlike signalized intersections, which typically represent constraint points for the roadway network, unsignalized intersections rarely limit the potential capacity of a roadway. The determination of appropriate improvements to unsignalized intersections typically includes a qualitative and quantitative analysis of movement delay, movement traffic volumes, intersection safety, and need for signalization. For this reason, adverse effects and the associated improvements to unsignalized intersections are frequently determined on the basis of professional judgment.

Report Organization

This report is divided into four chapters. Chapter 2 describes the existing roadway network, transit services, and pedestrian facilities. Chapter 3 presents a discussion of Vehicle Miles Traveled. Chapter 4 describes intersection operations and includes the analysis of other transportation issues including site access, on-site circulation, and pedestrian, bicycle, and transit facilities.

Existing Conditions

This chapter describes the existing conditions for transportation facilities in the vicinity of the site, including the roadway network, transit service, and pedestrian and bicycle facilities.

Existing Roadway Network

Regional access to the project is provided via State Route 82 (SR 82). Local access to the project site is provided via San Antonio Road, Rengstorff Avenue, Distel Drive, and Distel Circle. These facilities are described below.

SR 82, also known as El Camino Real, is a north-south arterial that extends from Daly City in the north to San Jose in the South. For the purpose of this study, El Camino Real is considered an east-west roadway. In the project vicinity, El Camino Real is six lanes wide, has landscaped medians with left-turn pockets at intersections, sidewalks on both sides of the street, and parking allowed on either side of the road in some locations. The speed limit on El Camino Real is 35 mph. It provides access to the project site via Distel Circle.

San Antonio Road is a north-south arterial that extends northward from Foothill Expressway to US 101. In the project vicinity, it is four lanes wide and has landscaped medians with left-turn pockets at intersections and bike lanes and sidewalks on both sides of the street. The speed limit on San Antonio Road is 35 mph.

Distel Drive is a north-south local street that extends southward from El Camino Real and ends in a cul de sac south of Marich Way. In the project vicinity, it is two lanes wide and parking is allowed on both sides of the street. North of Distel Circle, Distel Drive has sidewalks on both sides of the street. Between Distel Circle and Marich Way, there is a sidewalk on only the west side of the street. There are no sidewalks south of Marich Way.

Rengstorff Avenue is a north-south arterial that extends northward from El Camino Real to Charleston Road. In the project vicinity, it is four lanes wide, has a left turning lanes at intersections, has a landscaped median, sidewalks on both sides of the street, and is a bike route. Parking is allowed along the street. The speed limit on Rengstorff Avenue is 35 mph.

Distel Circle is an L-shaped local street connecting El Camino Real to Distel Drive. It is two lanes wide and has sidewalks on both sides of the street. It provides direct access to the project site.

Existing Pedestrian and Bicycle Facilites

Existing Pedestrian Facilites

Pedestrian facilities consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections. In the vicinity of the project site, continuous sidewalks exist along Distel Circle, Distel Drive north of Distel Circle, El Camino Real, Los Altos Avenue, San Antonio Road, Del Medio Avenue, Showers Drive, Jordan Avenue, Ortega Avenue, Rengstorff Avenue, and Almond Avenue. Continuous sidewalks are not present along some of the local residential streets like Portola Avenue and Marich Way. Crosswalks with pedestrian signal heads are present at the signalized intersections within the vicinity of the project site.

At the intersection of El Camino Real and Distel Circle, the City has installed a hybrid beacon signal head allowing pedestrians to safely cross El Camino Real. This pedestrian hybrid beacon signal (also known as the High intensity Activated Crosswalk or HAWK) is a pedestrian-activated warning device located on mast arms over a pedestrian crossing. The beacon head consists of two red lenses above a single yellow lens. The beacon head is “dark” until a pedestrian wants to cross the street. The pedestrian pushes a button to activate the beacon. After displaying brief flashing and steady yellow intervals, the device displays a steady red light for drivers on El Camino Real and a “WALK” sign to pedestrians, allowing them to cross while traffic is stopped. After the pedestrian phase ends, the “WALK” sign changes to a flashing orange hand to notify pedestrians that their clearance time is ending. The hybrid beacon displays alternating flashing red lights to drivers while pedestrians finish their crossings before once again going dark at the conclusion of the cycle. Without a pedestrian call, these beacon signals heads are dark, and El Camino Real is uncontrolled. Therefore, this intersection is analyzed as side-street stop controlled.

Existing Bicycle Facilites

Bicycle facilities in the vicinity of the project site include bike paths, protected bike lanes, bike lanes, and bike routes. Bike paths (Class I facilities) separate pedestrians and bicyclists from motor vehicle traffic; however, pedestrians and bicyclists may have to share the path with other active transportation users. Protected bike lanes (Class IV facilities) are for the exclusive use of bicycles and include a vertical or grade separation between the bikeway and motor vehicle traffic. Bike lanes (Class II facilities) are lanes on roadways designated for use by bicycles with special lane markings, pavement legends, and signage. Bike routes (Class III facilities) are roadways shared between bicycles and vehicles. Bike routes are often designated for use by bicycles with “sharrow” pavement markings and signage. The existing bicycle facilities within the study area are described below and are shown on Figure 3. While most streets in the project area lack bicycle facilities, they have slow traffic speeds and are conducive to bicycling.

Class I bike paths in the project area include a connection between Delphi Circle and Panchita Way and a connection between Los Altos Avenue and Arastradero Road.

Class IV protected bike lanes in the project area include:

- Almond Avenue between San Antonio Road and Alicia Way

Class II bike lanes in the project area include:

- Almond Avenue between Alicia Way and El Monte Avenue
- San Antonio Road between Foothill Expressway and El Camino Real
- California Street between Del Medio Avenue and Castro Street
- Central Expressway between San Antonio Road and Moffett Boulevard

- Rengstorff Avenue between El Camino Real and Middlefield Road
- Showers Drive between El Camino Real and Central Expressway
- Jardin Drive between Valencia Drive and Alicia Way
- El Monte Avenue between Springer Road and O'Keefe Lane

Class III bike routes in the project area include

- Los Altos Avenue between Edith Avenue and El Camino Real

Existing Transit Service

Existing transit services (as of December 2021) in the study area are provided by the VTA and Mountain View and are shown on Figure 4. The project site is primarily served by four VTA bus routes (21, 22, 522, and 40), two Mountain View Community Shuttles (Gray Route and Red Route), and two Mountain View Go Shuttles (Mvgo C and D). The nearest bus stops to the project site are located near the intersection of El Camino Real and Distel Circle, approximately 300 feet from the project site and are serviced by Bus Route 22 and the Mvgo shuttles.

Route 21 provides service between the Palo Alto Transit Center and the Santa Clara Transit Center. Near the project site, it provides service along San Antonio Road, Showers Drive and California Street. On weekdays, it provides service between 5:37 AM and 8:49 PM with headways of approximately 30 minutes.

Route 22/522 provides service between the Palo Alto Transit Center and the Eastridge Transit Center via El Camino Real. Near the project site, it provides service along El Camino Real, with a bus stop located approximately 300 feet from the project site. On weekdays, it provides service between 4:25 AM and 3:01 AM with headways of approximately 10-15 minutes. Rapid 522 follows the same path as Route 22 but with limited stops. The closest bus stop to the project site serviced by Rapid 522 is located at the intersection of El Camino Real and Showers Drive at a distance of approximately 0.5 miles. It provides service every 10 to 20 minutes between 5:22 AM and 11:11 PM on weekdays.

Route 40 provides service between Foothill College and the Mountain View Transit Center via San Antonio Road, Rengstorff Avenue, and Shoreline Drive. Near the project site, it provides service along San Antonio Road, El Camino Real, Showers Drive, California Street, and Rengstorff Avenue with a bus stop located at the intersection of Showers Drive and El Camino Real, approximately 0.4 miles from the project site. On weekdays, it provides service between 6:25 AM and 10:28 PM with headways of approximately 30 minutes.

Mountain View Community Shuttle is a free shuttle service with two routes (Gray – Clockwise, Red – Counterclockwise) operated by the Mountain View Transportation Management Association in partnership with the City of Mountain View and funded by Google. It provides service to the Mountain View Downtown Transit Center, Whisman and Middlefield Roads, Rengstorff Park, and the Senior Center, and forms a loop around the City of Mountain View. Bus stops are located near the intersection of California Street and Rengstorff Avenue, approximately 0.5 miles from the project site. Service on weekdays is provided between 10:00 AM and 5:55 PM with approximately 30-minute headways.

Mountain View Go (Mvgo) service is a free shuttle service operated by the Mountain View Transportation Management Association. Routes C and D provide service in the project area with bus stops along El Camino Real near the intersection of Distel Circle, approximately 300 feet from the project site. The routes provide service to the Mountain View Transit Center via San Antonio Road, El Camino Real, Shoreline Boulevard, Charleston Road, and Garcia Avenue. Route C operates in the morning between 6:35 AM and 9:52 AM with headways of approximately 15 minutes and in the evening between 3:32 PM and 7:56 PM with headways of approximately 60 minutes. Route D operates in the

morning between 6:40 AM and 10:05 AM with headways of approximately 40 minutes and in the evening between 2:49 PM and 8:03 PM with headways of approximately 45 minutes.

CEQA Analysis

Senate Bill 743 (SB 743) was signed in 2013 and requires that, for land use projects, vehicle miles traveled (VMT) per capita, employee, or net VMT are to be used as metrics for transportation analysis. SB 743 requires lead agencies to implement its guidelines, requiring them to select a VMT methodology, choose significance thresholds, and determine feasible mitigation measures. VMT should be reduced to minimize the transportation impact a development has on a community. The goal of SB 743 is to encourage development that reduces VMT. SB 743 required VMT to be used as the metric for transportation analysis by July 2020.

The City of Los Altos is in the process of developing a new citywide VMT policy to comply with State law and provide established and consistent criteria for analyzing transportation impacts of development projects and long-range plans. The Draft Los Altos VMT Policy contains the following screening criteria for developments that are expected to cause a less-than-significant transportation impact under CEQA and are not required to prepare further VMT analysis:

- Small Project Screening: Any development that would generate fewer than 50 daily vehicle trips shall be presumed to have a less-than-significant transportation impact.
- Map-Based Screening: Residential and employment land use projects located in areas of low VMT, defined as exhibiting VMT that is 15 percent or more below the existing citywide average VMT, shall be presumed to have a less-than-significant transportation impact. Citywide average VMT per capita or per employee baseline values are obtained from VTA and may be amended periodically to reflect the best available data and most relevant base year.
- Local-Serving Retail Screening: Retail commercial projects comprised of stores of up to 60,000 gross square feet shall be presumed to have a less-than-significant transportation impact.
- Local-Serving Public Facilities Screening: Local-serving public facilities (publicly owned or controlled) shall be presumed to have a less than significant VMT impact. For schools, only public neighborhood elementary schools shall be presumed to be a local-serving use and satisfy this screening criterion. Other examples of projects that may be screened out by this criterion include a branch library, community or senior center, and a fire station.
- Affordable Housing Screening: Projects with 100 percent affordable housing shall be presumed to have a less-than-significant transportation impact on VMT.
- Screening based on Existing Use: Redevelopment projects that replace existing VMT-generating uses and result in a net decrease in total VMT shall be presumed to cause a less than significant impact. For redevelopment projects that result in a net increase in total VMT, the screening criteria for each land use will be based on the size of the proposed development without any credit for the existing use.

- Transportation Project Screening: Transportation projects that reduce or do not increase VMT shall be presumed to have a less than significant VMT impact. Examples include transportation projects that enhance pedestrian, bike, or transit infrastructure, and transportation projects that maintain current infrastructure, without adding new automobile capacity.

Since the project proposes 100 percent affordable housing, it would be presumed to have a less-than-significant transportation impact on VMT per the Draft VMT Policy and would be screened out from further VMT analysis.

However, since the Draft VMT Policy has not yet been formally adopted by the City, the department has implemented an interim administrative policy for identifying VMT impacts of development projects. The Interim VMT Policy sets a threshold of significance for residential VMT per capita at 15 percent below the regional average of 13.95 VMT per capita (or 11.86). Any project that does not have at least a 15 percent reduction would need to mitigate its impacts to less than significant based on this threshold.

Per the Santa Clara County map based VMT evaluation tool, the project site is located within an area with a residential VMT per capita of 9.51 without the project, which is below the threshold set forth in the Interim VMT Policy (see Appendix A). Although the Interim VMT Policy uses the regional average as the basis, it should be noted that the project also would comply with the residential VMT threshold set forth in the Draft VMT Policy, which is 15 percent below the citywide average residential VMT per capita of 12.22(or 10.39). Therefore, the project would also be screened out from further analysis using the threshold of significance in the Interim VMT Policy.

Local Transportation Analysis

This chapter contains the local transportation analysis including a description of the method by which project traffic is estimated, intersection operations, any adverse effects on study intersections caused by the project, site access, on-site circulation, effects on bicycle, pedestrian, and transit facilities, and parking. The LTA supplements the CEQA VMT analysis and identifies transportation operational issues that may arise due to a development project.

Project Description

The project site is currently occupied by 12,120 square feet of office uses. The project proposes to replace the existing office building on site with a 90-unit, five-story affordable housing development. Vehicular access to the project site would be provided via a driveway to a parking garage located along Distel Circle.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear were estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic traveling to and from the proposed residential development was estimated for the AM and PM peak hours. As part of the project trip distribution, the directions to and from which the project trips would travel were estimated. In the project trip assignment, the project trips were assigned to specific streets and intersections. These procedures are described below.

Trip Generation

Through empirical research, data have been collected that indicate the amount of traffic that can be expected to be generated by many types of land uses. The standard trip generation rates can be applied to predict the future traffic increases that would result from a new development.

Project trip generation was estimated by applying to the proposed project size the appropriate trip generation rates obtained from the ITE *Trip Generation Manual, 11th Edition* (2021). The average trip generation rates for Affordable Housing-Income Limits (ITE Land Use 223) were applied to the project. ITE defines Affordable Housing-Income Limits as multifamily housing that is rented at below market rate to households that include at least one employed member and eligibility is a function of limited household income.

Since the project would replace the existing 12,120 square-foot office building on site, trip credits were taken for the existing use. Trip generation for the office use was estimated using average trip generation rates for General Office Building (ITE Land Use 710).

The project site is also located within 2000-feet of a bus stop served by VTA Route 22 with headways of approximately 10-15 minutes and Mountain View Go shuttle Routes C and D with headways of approximately 15 and 45 minutes, respectively, during the peak hours (detail in Chapter 2). VTA defines a major bus stop as a stop where six or more buses per hour from the same or different routes stop during the peak period and allows for a trip credit of 2 percent for housing and employment uses. This trip credit was applied to the proposed project and existing use trip estimates.

The project will be required to implement a Travel Demand Management (TDM) Plan intended to services, incentives, facilities, and actions that reduce single–occupant vehicle (SOV) trips to help relieve traffic congestion, parking demand, greenhouse gas emissions, and air pollution problems. The purpose of TDM is to foster a better pedestrian/bicycle environment, support transit, and make it easier and more appealing for residents and visitors to use alternatives to driving or driving alone. To be conservative, this analysis does not assume any reductions in vehicle trips due to TDM measures.

Net Project Trips

Table 3 shows the trip generation estimates. After accounting for trip credits, the project is estimated to generate 296 net new daily trips, with 14 net new trips (-7 inbound and 21 outbound) during the AM peak hour and 24 net new trips (21 inbound and 3 outbound) during the PM peak hour.

Table 3
Project Trip Generation Estimates

Land Use	ITE Land Use Code	Reduction %	Size	Daily Rate	Daily Trip	AM Peak Hour Rate	AM Peak Hour Trip In	AM Peak Hour Trip Out	AM Peak Hour Trip Total	PM Peak Hour Rate	PM Peak Hour Trip In	PM Peak Hour Trip Out	PM Peak Hour Trip Total

Trip Distribution and Trip Assignment

The trip distribution pattern for the project was estimated based on existing travel patterns on the surrounding roadway system and the locations of complementary land uses. The peak-hour trips generated by the existing and proposed uses were assigned to the roadway system based on the directions of approach and departure, the roadway network connections, and the location of the project driveway. The trips generated by the existing use were subtracted from the roadway network prior to assigning project trips. Figure 5 shows the trip distribution pattern for the project site. Figure 6 shows the trip assignment.

Existing Intersection Operations

Existing Intersection Lane Configurations and Traffic Volumes

The existing lane configurations at the study intersections were determined by observations in the field and are shown on Figure 7.

Existing traffic volumes at study intersections were based on pre-pandemic traffic counts conducted in 2018 and 2019 and new counts collected in 2021 where pre-pandemic counts were not available. Due to regional shelter-in-place orders during the COVID-19 pandemic, the 2021 traffic counts do not represent typical traffic conditions. These counts were factored by comparing new counts to available pre-pandemic counts. The factor was derived based on 2019 counts at two intersections (El Camino Real/Distel Drive and El Camino Real/Distel Circle) and new counts conducted at these intersections. Compared to the 2019 counts, the new 2021 counts were 41 percent lower during the AM peak hour, and the PM peak hour counts were 32 percent lower. These percentages were used to adjust the 2021 intersection counts to reflect pre-COVID conditions. The adjusted existing peak-hour intersection volumes are shown on Figure 8. Intersection turning-movement counts conducted for this analysis are presented in Appendix B. The volume summary sheets with the adjusted existing counts are presented in Appendix C.

Existing Intersection Levels of Service

Table 4 shows that all signalized study intersections operate at an acceptable level of service during both AM and PM peak hours. The intersection levels of service calculation sheets are included in Appendix D.

The unsignalized intersections of San Antonio Road and Jordan Avenue and Distel Circle and El Camino Real operate at an unacceptable level of service during at least one peak hour. Therefore, a signal warrant check (*MUTCD 2010 Edition, Part 4, Warrant 3*) was conducted for the intersections based on the peak-hour traffic warrant. The analysis shows that the signal warrant is not met at either of these intersections. The signal warrant calculation sheets can be found in Appendix E.

TWSC - Two Way Stop Control

[1] Average delay is reported for signalized and worst movement delay is reported for stop-controlled intersections.

Bold indicates substandard level of service

Existing Plus Project Intersection Operations

Existing Plus Project Intersection Lane Configurations and Traffic Volumes

The intersection lane configurations under existing plus project conditions are assumed to be the same as under existing conditions. Project trips, as represented in the above project trip assignment, were added to existing traffic volumes to obtain existing plus project traffic volumes. The existing plus project traffic volumes are shown on Figure 9.

Existing Plus Project Level of Service Analysis

Table 5 shows that all signalized study intersections would continue to operate at an acceptable level of service during both AM and PM peak hours. Since the project would add trips to existing low-delay movements, there would be a decrease in overall average delay at some intersections. The intersection level of service calculation sheets are included in Appendix D.

Since the unsignalized intersections of San Antonio Road and Jordan Avenue, and Distel Circle and El Camino Real would operate at an unacceptable level of service under existing plus project conditions, a signal warrant check (*MUTCD 2010 Edition, Part 4, Warrant 3*) was conducted for the intersections based on the peak-hour traffic warrant. The analysis shows that the signal warrant would not be met with the project for either of these intersections. The signal warrant calculation sheets can be found in Appendix E.

Typically, when facing high delays at a stop-controlled approach, vehicles will reroute to a signalized intersection, if possible, to avoid waiting for an acceptable gap in traffic on a busy major street. Vehicles facing delay while turning from the stop-controlled Distel Circle approach onto El Camino Real could instead access El Camino Real using the signalized intersection at Distel Drive. Likewise, vehicles facing delay while turning from the stop-controlled Jordan Avenue approach onto San Antonio Road could instead access San Antonio Road using the signalized intersection at Portola Avenue. Both signalized intersections operate at acceptable levels of service during both the AM and PM peak hours. Thus, because the unsignalized study intersections are not expected to meet the signal warrants and because there are alternate routes that vehicles can use to avoid lengthy delays on stop-controlled approaches, signalization is not recommended at these unsignalized intersections.

Future Roadway Network

The roadway network under near-term, near-term plus project, cumulative, and cumulative plus project conditions would be the same as the existing roadway network because: 1) there are no approved projects in the area that would alter the existing roadway network, and 2) the project would not alter the existing roadway network.

Future Traffic Volumes

Near-Term Traffic Volumes

Near-term traffic volumes for the study intersections were estimated by adding to existing traffic volumes the trips generated by nearby approved but not yet completed or occupied projects. A list of approved developments was obtained from the websites of the Cities of Los Altos and Mountain View. Nearby approved projects that are expected to generate a significant number of vehicle trips at one or more study intersections include the following:

- 4856 El Camino Real (Los Altos) – 50 condominium units
- 5150 El Camino Real (Los Altos) – 172 condominium units and 24 townhomes
- 4898 El Camino Real (Los Altos) – 21 condominium units
- 2580 and 2590 California Street/201 San Antonio Circle (Mountain View) – 632 residential units and 20,000 square feet of commercial space
- 1720 Villa Street (Mountain View) – 226 apartment units
- 2300 West El Camino Real (Mountain View) – 153-room hotel
- 570 South Rengstorff Avenue (Mountain View) – 85 rowhouses
- 1919 – 1933 Gamel Way and 574 Escuela Avenue (Mountain View) – 121 condominium units

Trip generation estimates for the approved projects were based on their respective traffic study, if available. For projects that did not require a traffic study (due to their small size), trips were estimated based on ITE trip rates. The estimated trips from the approved projects were distributed and assigned throughout the study area based on the trip distribution assumptions present in the traffic studies or based on knowledge of the study area.

Near-term plus project conditions were derived by adding to near-term traffic volumes the traffic generated by the proposed project. The peak hour intersection traffic volumes under near-term as well as near-term plus project conditions are shown on Figure 10 and Figure 11, respectively. A tabular summary of traffic volumes at each study intersection is contained in Appendix C.

Cumulative (2040) Traffic Volumes

Cumulative (2040) traffic volumes for the study intersections were estimated by applying a one percent annual growth factor to existing traffic volumes and adding the projected volumes from approved (listed above) and pending (proposed but not yet approved) projects that would generate trips at the study intersections.

A list of pending developments was obtained from the websites of the Cities of Los Altos and Mountain View. Nearby pending projects that are expected to generate a significant number of vehicle trips at one or more study intersections include the following:

- 4350 El Camino Real (Los Altos) – 47 condominium units
- 4896 El Camino Real (Los Altos) – 45,082 square feet of office and 4 condominium units
- 590 Castro Street (Mountain View) – 106,000 square feet of office space

- 365 – 405 San Antonio Road and 2585 – 2595 California Street (Mountain View) – 182,352 square feet of commercial space
- City Lot 12 (Mountain View) – 120 affordable rental housing units and 2,300 square feet of ground floor commercial space
- 334 San Antonio Road (Mountain View) – 62 condominium units and 2,003 square feet of ground floor retail space

Trip generation estimates for the pending projects were based on their respective traffic study, if available. For projects that did not require a traffic study (due to their small size) or have a complete traffic study, trips were estimated based on ITE trip rates. The estimated trips from the pending projects were distributed and assigned throughout the study area based on the trip distribution assumptions present in the traffic studies or based on knowledge of the study area.

Cumulative plus project conditions were derived by adding to cumulative traffic volumes the traffic generated by the proposed project. The peak hour intersection traffic volumes under cumulative as well as cumulative plus project conditions are shown on Figure 12 and Figure 13, respectively. A tabular summary of traffic volumes at each study intersection is contained in Appendix C.

Future Intersection Levels of Service

Near-term Intersection Levels of Service

Table 6 shows that most study intersections would operate at an acceptable level of service during both AM and PM peak hours. The signalized intersection of Showers Drive and El Camino Real would operate at an unacceptable level of service during the PM peak hour. Two unsignalized study intersections (Distel Circle and El Camino Real, and San Antonio Road and Jordan Avenue) also are expected to continue to operate at a poor level of service.

The intersection level of service calculation sheets are included in Appendix D.

A signal warrant check (MUTCD 2010 Edition, Part 4, Warrant 3) was conducted for the unsignalized intersections that would operate unacceptably during at least one peak hour based on the peak-hour traffic warrant. The analysis shows that the signal warrant would not be met for either of these intersections. The signal warrant calculation sheets can be found in Appendix E.

Near-term Plus Project Intersection Levels of Service

The results of the intersection level of service analysis under near term plus project conditions are summarized in Table 6. Since the project would add trips to low-delay movements, there would be a decrease in overall average delay at some intersections.

The signalized intersection of Showers Drive and El Camino Real is expected to operate at an unacceptable level of service during the PM peak hour. The addition of project trips would not adversely affect traffic operations at the intersection because these trips would not increase the average delay at the intersection by more than four seconds.

The intersection levels of service calculation sheets are included in Appendix E.

Two unsignalized study intersections (Distel Circle and El Camino Real, and San Antonio Road and Jordan Avenue) also would continue to operate at a poor level of service under near-term plus project conditions. A signal warrant check (MUTCD 2010 Edition, Part 4, Warrant 3) based on the peak-hour traffic warrant was conducted for the unsignalized intersections that would operate unacceptably during at least one peak hour. The analysis shows that the signal warrant would not be met for either of these intersections under near-term plus project conditions. The signal warrant calculation sheets can be found in Appendix E.

Vehicles facing delay at Distel Circle and El Camino Real could instead access El Camino Real using the signalized intersection at Distel Drive and vehicles facing delay at Jordan Avenue and San Antonio Road could instead access San Antonio Road using the signalized intersection at Portola Avenue. Both signalized intersections would operate at acceptable level of service during both AM and PM peak hours under near-term plus project conditions. Thus, signalization is not recommended at these unsignalized intersections.

Bold indicates substandard level of service

Cumulative (2040) Intersection Levels of Service

The results of the intersection level of service analysis under cumulative conditions are summarized in Table 7. The following intersections are expected to operate unacceptably during at least one peak hour.

- Del Medio and El Camino Real (signalized) (PM peak hour)
- San Antonio Road and El Camino Real (signalized) (PM peak hour)
- Showers Drive and El Camino Real (signalized) (both peak hours)
- Ortega Avenue and El Camino Real (signalized) (AM peak hour)
- San Antonio Road & Jordan Avenue (unsignalized) (both peak hours)
- Distel Circle and El Camino Real (unsignalized) (both peak hours)

The intersection level of service calculation sheets are included in Appendix D.

A signal warrant check (MUTCD 2010 Edition, Part 4, Warrant 3) was conducted for the unsignalized intersections expected to operate unacceptably during at least one peak hour based on the peak-hour traffic warrant. The analysis shows that the signal warrant would not be met for any unsignalized study intersections. The signal warrant calculation sheets can be found in Appendix E.

Cumulative (2040) Plus Project Intersection Levels of Service

The results of the intersection level of service analysis under cumulative plus project conditions are summarized in Table 7. Since the project would add trips to low-delay movements, there would be a decrease in overall average delay at some intersections. The project would not cause an adverse effect at the study intersections during either peak hour as compared to cumulative conditions. The intersection level of service calculation sheets are included in Appendix D.

A signal warrant check (MUTCD 2010 Edition, Part 4, Warrant 3) based on the peak-hour traffic warrant was conducted for the unsignalized intersections expected to operate unacceptably during at least one peak hour. The analysis shows that the signal warrant would not be met for any unsignalized study intersections. The signal warrant calculation sheets can be found in Appendix E.

Vehicles facing delay at Distel Circle and El Camino Real could instead access El Camino Real using the signalized intersection at Distel Drive and vehicles facing delay at Jordan Avenue and San Antonio Road could instead access San Antonio Road using the signalized intersection at Portola Avenue. Both signalized intersections would operate at acceptable level of service during both AM and PM peak hours under cumulative plus project conditions. Thus, signalization is not recommended at these unsignalized study intersections.

Queuing Analysis

For selected high-demand movements at the study intersections, the estimated maximum vehicle queues were compared to the existing or planned storage capacity. The queuing analysis is used to determine the appropriate storage lengths for the high-demand turn lanes where the proposed project would add a substantial number of trips to these movements. Vehicle queues were estimated using Vistro.

The basis of the analysis is as follows: (1) Vistro is used to estimate the 95th percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement.

The 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur at 95 percent of the signal cycles. Or, a queue length longer than the 95th percentile queue would only occur on 5 percent of the signal cycles (about 3 cycles during the peak hour for a signal with a 60-second cycle length). Therefore, turn storage pocket designs based on the 95th percentile queue length would ensure that storage space would be exceeded only 5 percent of the time. The 95th percentile queue length is also known as the “design queue length”. Vehicle queuing for the peak hours was evaluated for the following turn movements:

- Westbound left-turn from El Camino Real onto Distel Circle
- Westbound left-turn from El Camino Real onto Distel Drive

Because vehicle queuing is considered an operational issue not subject to CEQA significance thresholds, the queuing analysis was conducted for existing and near-term conditions without and with the proposed project and not under cumulative conditions. The queuing analysis at each of the selected locations is discussed further below and summarized in Table 8.

Westbound Left Turn from El Camino Real onto Distel Circle

Under all scenarios, the westbound left-turn queue is projected to be less than the available storage capacity during the AM and PM peak hours.

Westbound Left Turn from El Camino Real onto Distel Drive

The queuing analysis indicates that during the AM peak hour, the 95th percentile vehicle queue for the westbound left-turn movement under existing conditions and near-term conditions exceeds the left-turn storage by one vehicle. The proposed residential use is expected to generate fewer inbound trips during the AM peak hour than the existing office building, resulting in a small decrease in the traffic volume at this movement. Therefore, because the project would not contribute to the existing queue storage deficiency during the AM peak hour, it would not be required to construct or fund any improvements at this intersection. The storage length is expected to be sufficient for the westbound left-turn movement under all scenarios during the PM peak hour.

[3] Assumes 25 feet per vehicle queued.

Site Access and Circulation

The site access and on-site circulation evaluation is based on the October 18, 2021 site plan prepared by ktgy Architecture + Planning. Site access was evaluated to determine the adequacy of the site's driveway with regard to the following: traffic volume, delays, vehicle queues, geometric design, and sight distance. On-site vehicular circulation was reviewed in accordance with generally accepted traffic engineering standards and transportation planning principles. The site plan for the project is shown on Figure 2.

Site Access

The site would be accessed by a two-way driveway leading to a parking garage. The site plan shows the driveway to be approximately 23 feet in width, which is an adequate width for a two-way driveway in accordance with the City of Los Altos Municipal Code (14.74.200).

Driveway Operations

The total traffic volume estimated to use the driveway is 32 trips (9 inbound and 23 outbound) in the AM peak hour and 41 trips (24 inbound and 17 outbound) in the PM peak hour (see Table 3). This is equivalent to one new trip every two minutes in the AM peak hour and one new trip every one to two minutes in the PM peak hour. Since the gross project trips at the driveway are minimal, the driveway is expected to operate acceptably during both peak hours under project conditions.

Sight Distance

The proposed driveway location was evaluated to determine if the sight distance at the driveway would be adequate. The project driveway should be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on adjacent roadways. Any landscaping and signage should be located in such a way as to ensure an unobstructed view for drivers entering and exiting the site. Adequate sight distance reduces the likelihood of a collision at driveways and provides drivers with the ability to locate sufficient gaps in traffic to exit a driveway. Sight distance of a driveway is evaluated based on the stopping sight distance recommended by Caltrans for a given design speed.

The speed limit along Distel Circle near the project site is 25 mph. The Caltrans recommended stopping sight distance at this speed is 150 feet. This means that a driver must be able to see 150 feet down Distel Circle to locate a sufficient gap to turn out of the driveway. Distel Circle has a 90-degree bend approximately 160 feet south of the project driveway, bending east to connect to Distel Drive. The roadway curve will discourage vehicles from exceeding the speed limit in this section of Distel Circle and is far enough away from the project driveway such that it will not interfere with the required sight distance. However, on-street parking is currently permitted on both sides of the driveway, which could restrict the sight distance for traffic exiting the project site.

Recommendation: It is recommended that on-street parking be prohibited approximately 40 feet to the south and 35 feet to the north of the project driveway. This would provide adequate sight distance for exiting drivers at the driveway to see the oncoming traffic along Distel Circle. The project driveway should also be free and clear of any obstructions such as shrubs or other landscape features to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on Distel Circle.

On-Site Circulation

On-site vehicle circulation was evaluated for the at-grade parking garage. The driveway would provide access to 33 90-degree two to three level mechanical stacker parking stalls as well as 7 surface parking spaces. The dimensions of the parking spaces would be a minimum of 9 feet wide and 18 feet

deep, meeting the City's required dimensions for 90-degree parking spaces. The drive aisle that provides access to the parking spaces is approximately 25 feet in width, which meets the City's standard.

The project proposes to provide 83 mechanical stacker parking spaces split between 33 two and three level stalls in the form of a mechanical lift system. There are a net total of 68 spaces in 24 3-level stalls along the west edge of the site and 15 spaces in 9 2-level stalls in the center of the site. Hexagon checked the turning paths for passenger vehicles to maneuver in and out of the various parking spaces, using an AASHTO passenger vehicle as the design vehicle. Figure 14 shows the turning maneuvers. The design vehicle would need to make multi-point turns to turn around completely to back into the parking space at the end of the garage. It is recommended that larger cars use the parking spaces towards the front of the garage instead of the back of the garage.

The height of the garage would be 14 feet. Based on the height of a large SUV, which is typically approximately 6.3 feet, the garage would be able to accommodate 2 SUVs on the two-level mechanical stacker.

Recommendation: The site plan does not provide the height of the pit for the three-level mechanical stacker. Minimum 7 feet deep parking pits should be provided to accommodate the height of a design vehicle.

Bicycle Storage

The bicycle storage room is located on the ground floor on the west side of the project site. Bicyclists could access the bicycle storage room via the garage or through the lobby/lounge.

Trash Enclosure

The site plan shows a trash room near the garage entry. Currently, the site plan does not show an access or egress point from the trash room.

Recommendation: The applicant should work with the City and Mission Trail Waste Systems to design a plan for waste collection service.

Pedestrian, Bicycle, and Transit Analysis

Pedestrian and Bicycle Access

Pedestrian facilities in the study area consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections (see Chapter 2 for details). Currently, the sidewalk in front of the project site is five feet wide. The project proposes to provide a new 14-foot wide sidewalk with curb and gutter replacement. The project frontage is also designed to be pedestrian friendly with landscaping and streetlighting. There is no need for new curb ramps or crosswalks along the project frontage.

The existing sidewalks and crosswalks provide adequate access to transit and nearby points of interest including restaurants and stores along El Camino Real.

There are some bicycle facilities in the immediate vicinity of the project site (see Chapter 2 for details). The project would not remove any bicycle facilities, nor would it conflict with any adopted plans or policies for new bicycle facilities.

School Access

The Los Altos Complete Streets Master Plan identifies future transportation improvements that aim to prioritize walking, biking, and other travel modes. The master plan includes an update to the Bicycle and Pedestrian Transportation Plan and identifies bicycle and pedestrian facility improvements in the project's vicinity that would benefit future residents. Additionally, these improvements would also contribute to the Safe Routes to School Plan, which encourages students and parents to walk and bike to school.

Public schools that will serve the residents of the proposed development are Almond Elementary School, Egan Junior High School, and Los Altos High School. The City has released draft Walk n Roll maps for each school that services the Los Altos community. The Walk n Roll maps designate pedestrian and bicycle-friendly routes that students and parents can use to walk and bike to school. The project site is located near Distel Drive and Marich Way, which are both identified in numerous Walk n Roll maps. Walk n Roll maps for Almond Elementary School, Egan Junior High School, and Los Altos High School are included in Appendix F.

Almond Elementary School – Suggested walking and bicycling routes identified on the Walk n Roll Map for Almond Elementary School between the project site and the school are Distel Drive, Marich Way, Casita Way, Alicia Way, Jardin Drive, Solana Drive, Verano Avenue, and Clark Avenue. Sidewalks are absent along both sides of all these streets, except Jardin Drive, which has a sidewalk along one side of the street. Furthermore, none of these streets have any existing bicycle facilities except Jardin Avenue, which has a bike lane between Valencia Drive and Avalon Drive. The Los Altos Complete Streets Plan proposes a sidewalk/walkway along Alicia Way as well as bicycle routes along Distel Drive, Marich Way, Casita Way, Alicia Way and Solana Drive.

Egan Junior High School – Suggested walking and bicycling routes identified on the Walk n Roll Map for Egan Junior School between the project site and the school are Distel Drive, Marich Way, Jordan Avenue, and Portola Avenue. Sidewalks are absent along both sides of all these streets, except Portola Avenue, which has a sidewalk along one side of the street. Furthermore, none of these streets have any existing bicycle facilities. The Los Altos Complete Streets Plan proposes a sidewalk/walkway along Jordan Avenue between Marich Way and Portola Avenue, major maintenance and enhancement along Portola Avenue, and bicycle routes along Distel Drive, Marich Way, Jordan Avenue, and Portola Avenue.

Los Altos High School – Suggested walking and bicycling routes identified on the Walk n Roll Map for Los Altos High School between the project site and the school are Distel Drive, Marich Way, Panchita

Way, and Casita Way. Sidewalks are absent along both sides of all these streets. Furthermore, none of these streets have any existing bicycle facilities. The Los Altos Complete Streets Plan proposes bicycle routes along Distel Drive, Marich Way, Panchita Way, and Casita Way.

Transit Service

The site is well-served by bus transit as described in Chapter 2. There are two VTA bus lines (22 and 522) that serve the immediate project area and two Mountain View Go shuttles (Route C and D). The bus stops closest to the project site area at the El Camino Real/Distel Circle intersection that serves the VTA route 22 bus line and Mountain View Go C and D shuttles. The bus stop is shaded with a bench. The City of Mountain View's El Camino Real Streetscape Plan proposes to implement 'Bus Bulb' treatments at this bus stop. The 'Bus Bulb' treatment is proposed where the existing curb-to-curb distance and travel lane configuration provides sufficient space to allow for the curb and sidewalk to be extended or 'bulbed-out' by three feet. This allows the bus to pull over and merge into the bike lane, without entirely exiting the travel lane, which then allows the bus to merge back into the travel lane more easily. The additional walkway width that the bulb provides allows pedestrians to utilize a consistent eight-foot minimum walkway width despite the presence of additional VTA stop amenities as well as transit users waiting for the bus. Cyclists would need to stop behind buses that have pulled over, or merge into traffic to bypass or 'leapfrog over' the bus.

The project is expected to generate a small increase in transit demand, which could be accommodated by the available capacity of the bus service.

Parking Analysis

Vehicular Parking

Per state law, the proposed project is not subject to a minimum number of parking spaces. This parking analysis is conducted at the request of the city to determine whether on-street parking spaces are adequate, and whether shared parking agreements with adjacent properties would be feasible.

Parking Demand

Through empirical research, data have been collected that indicate the amount of parking demand that can be expected to be generated by many types of land uses. Parking demand rates from the Institute of Transportation Engineers (ITE) *Parking Generation Manual, 5th Edition* can be applied to predict the future parking demand resulting from a new development. The average peak parking demand rates for Affordable Housing (ITE Land Use 223) were applied to the project.

Based on the peak parking demand rates, it is estimated that 89 parking spaces are needed for the proposed project (see Table 9).

Table 9
Parking Demand for Project

Land Use	Size	Rate	Peak Parking Demand (Spaces)
Affordable Housing[1]			
Weekday (DU)	90 DU	0.99	89

Source: ITE Parking Generation Manual, 5th Edition
Notes:
[1] Rate of spaces per dwelling unit (DU) for Affordable Housing (Land Use Code 223).

The project proposes to provide 90 parking spaces on-site. Based on the estimated peak parking demand of 89 spaces, the parking provided on-site would be adequate.

Parking Supply

Parking occupancy counts were conducted in the vicinity of the proposed project to determine the supply and existing demand of on-street parking and nearby parking lots. The following areas (see Figure 15) were counted at 10:00 AM, 1:00 PM, and 12:00 AM on November 4, 2021.

Area 1: Entire Length of Distel Circle, west/south side

Area 2: Entire Length of Distel Circle, east/north side

Area 3: Palo Alto Medical Foundation Parking Lot (370 Distel Circle)

Area 4: Parking Lot at 325 Distel Circle

Area 5: Parking Area at 325 Distel Circle

The results of the parking occupancy counts are presented in Appendix G. Table 10 summarizes the peak parking demand of on-street parking spaces and nearby parking lots. Based on peak parking demand of the on-street parking, 87 surplus parking spaces are available on-street and at nearby parking lots during the day while over 200 spaces are available at night when residential parking demand is highest. Thus, there would be ample available parking along Distel Circle and withing the nearby surface parking lots to accommodate any overflow parking in excess of the on-site parking provided.

Table 10
Parking Supply

Area	No. of Spaces[1]	Occupied Spaces		
		10:00 AM	1:00 PM	12:00 AM
1	37	23	24	4
2	39	21	21	2
3	90	62	33	0
4	37	17	13	0
5	11	4	4	0
Total	**214**	**127**	**95**	**6**

Notes:
[1] Estimated number of spaces based on observations and counts of provided number of spaces.

Bicycle Parking

The Valley Transportation Authority (VTA) provides guidelines for bike parking in its publication Bike Technical Guidelines. Class I spaces are defined as spaces that protect the entire bike and its components from theft, such as in a secure designated room or a bike locker. Class II spaces provide an opportunity to secure at least one wheel and the frame using a lock, such as bike racks. For multi-family dwelling units, VTA recommends one Class I space per three dwelling units and one Class II space per 15 dwelling units. For the proposed project, this would equate to 30 Class I spaces and 6 Class II spaces. The project proposes 45 Class I spaces in the parking garage but does not propose any Class II spaces.

Recommendation: The project should add at least 6 Class II bicycle spaces.

Very Low Income:	0 %
Low Income:	0 %

Parking:

Motor Vehicle Parking:

Bicycle Parking:

Proximity to Transit Screening

Inside a transit priority area? Yes (Pass)

Residential Vehicle Miles Traveled (VMT) Screening Results

Land Use Type 1:	Residential
VMT Metric 1:	Home-based VMT per Capita
VMT Baseline Description 1:	Bay Area Regional Average
VMT Baseline Value 1:	13.95
VMT Threshold Description 1 / Threshold Value 1:	-15% / 11.86
Land Use 1 has been Pre-Screened by the Local Jurisdiction:	N/A

	Without Project	With Project & Tier 1-3 VMT Reductions	With Project & All VMT Reductions
Project Generated Vehicle Miles Traveled (VMT) Rate	9.51		
Low VMT Screening Analysis	Yes (Pass)

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	San Antonio Rd. @ Portola Ave.	Signalized	HCM 6th Edition	SB Left	0.675	19.5	B
2	San Antonio Rd. @ Almond Ave.	Signalized	HCM 6th Edition	SB Left	0.646	18.8	B
25	El Camino Real @ Cesano Ct. / Los Altos Ave.	Signalized	HCM 6th Edition	SEB Left	0.496	20.9	C
26	El Camino Real @ San Antonio Rd.	Signalized	HCM 6th Edition	NWB Left	0.643	62.6	E
28	El Camino Real @ Jordan Ave.	Signalized	HCM 6th Edition	SEB Left	0.460	19.0	B
29	El Camino Real @ Distel Cir.	Two-way stop	HCM 6th Edition	SWB Left	0.040	152.3	F
30	El Camino Real @ Distel Dr.	Signalized	HCM 6th Edition	SEB Left	0.520	28.2	C
31	El Camino Real @ Rengstorff Ave.	Signalized	HCM 6th Edition	NEB Right	0.511	50.2	D
45	El Camino Real @ Del Medio Ave.	Signalized	HCM 6th Edition	NEB Right	0.357	43.8	D
51	El Camino Real @ Showers Dr.	Signalized	HCM 6th Edition	NEB Left	0.446	49.7	D
113	El Camino Real @ Ortega Ave	Signalized	HCM 6th Edition	NWB Left	0.481	47.0	D
115	Distel Drive @ Distel Circle	Two-way stop	HCM 6th Edition	SEB Left	0.052	13.4	B
116	Distel Drive @ Marich Way	Two-way stop	HCM 6th Edition	SWB Thru	0.007	18.4	C
128	San Antonio @ Jordan	Two-way stop	HCM 6th Edition	WB Left	0.812	164.7	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection 45: El Camino Real @ Del Medio Ave.

Control Type:	Signalized	Delay (sec / veh):	43.8
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.358

Intersection Setup

Name	Driveway			Del Medio Av.			El Camino Real			El Camino Real		
Approach	Northeastbound			Southwestbound			Northwestbound			Southeastbound		
Lane Configuration												
Turning Movement	Left	Thru	Right	Left	Thru	Right	Left	Thru	Right	Left	Thru	Right
Lane Width [ft]	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00
No. of Lanes in Entry Pocket	0	0	0	0	0	1	1	0	0	1	0	0
