SPECIAL MEETING OF THE TOWN COUNCIL AGENDA
AUGUST 11, 2026
TOWN COUNCIL CHAMBERS, 110 EAST MAIN STREET, LOS GATOS, CA 95030
5:00 PM

Rob Moore, Mayor
Maria Ristow, Vice Mayor
Mary Badame, Council Member
Matthew Hudes, Council Member
Rob Rennie, Council Member

IMPORTANT NOTICE

This is a hybrid meeting and will be held in-person at the Town Council Chambers at 110 E. Main Street and virtually through Zoom Webinar (log-in information provided below). You may watch the Council meeting without providing public comment on Comcast cable channel 15 or at www.LosGatosCA.gov/TownYouTube. Members of the public may provide public comments for agenda items in-person or virtually by following the instructions listed at the end of the agenda.

To watch and participate via Zoom, please go to:

https://losgatosca-gov.zoom.us/j/86730363468?pwd=pfKQoh92JnbwOYwFvZqIdSSWpjxYoK.1

Enter Passcode: 577971

CALL MEETING TO ORDER

ROLL CALL

VERBAL COMMUNICATIONS *(Members of the public are welcome to address the Town Council only on matters listed on the agenda. Town resources may not be used to facilitate audio or visual presentations. Each speaker is limited to no more than three (3) minutes or such time as authorized by the Mayor.)*

PUBLIC HEARINGS *(Presentations during the Public Hearings portion of the agenda by appellants and applicants, including any expert or consultant assisting with the presentation, shall be limited to a total of no more than five (5) minutes for all speakers. Appellants and applicants shall be provided no more than three (3) minutes to rebut at the end of the public hearing. Visual presentations that require the use of staff resources shall be limited to appellants and applicants. Members of the public testifying at public hearings shall be limited to no more than three (3) minutes, or such time as authorized by the Mayor.)*

1. **Consider a Recommendation by the Planning Commission to Approve the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB330) on Vacant Property Zoned RC. Located at 178 Twin Oaks Drive. APN 532-16-006. Architecture and Site Applications S-24-023 through -032 and S-24-059, Subdivision Application M-24-013, and Mitigated**

Negative Declaration Application ND-25-001. An Initial Study and Recirculated Mitigated Negative Declaration Have Been Prepared. Property Owner/Applicant: Larry Dodge. Project Planner: Erin Walters.

RECOMMENDATION: Staff recommends that the Town Council consider the Planning Commission's recommendation and adopt the draft Resolution to approve the subdivision of one lot into twelve lots with a vesting tentative map, construction of a new single-family residence on each lot, site work requiring a Grading Permit, and removal of large protected trees under Senate Bill 330 (SB330) on vacant property zoned RC located at 178 Twin Oaks Drive.

ADJOURNMENT *(Council policy is to adjourn no later than midnight unless a majority of Council votes for an extension of time.)*

ADA NOTICE - In compliance with the Americans with Disabilities Act, if you require special assistance to participate in this meeting, please contact the Clerk's Office at (408) 354-6834. Please notify the Clerk's Office at least two (2) business days prior to the meeting so that reasonable arrangements can be made to ensure accessibility in compliance with 28 CFR §35.102-35.104 and related provisions.

NOTICE REGARDING SUPPLEMENTAL MATERIALS - Materials related to an item on this agenda submitted to the Town Council after initial distribution of the agenda packets are available for public inspection in the Clerk's Office at Town Hall, 110 E. Main Street, Los Gatos and on the Town's website at www.losgatosca.gov. Town Council agendas and related materials can be viewed online at https://losgatos-ca.municodemeetings.com/.

HOW TO PARTICIPATE

Members of the public may provide public comments for agenda items in-person or virtually through the Zoom Webinar by following the instructions listed below.

The public is welcome to provide oral comments in real-time during the meeting in three ways:

Zoom Webinar (Online): To participate from a PC, Mac, iPad, iPhone or Android device. Please use this URL to join: https://losgatosca-gov.zoom.us/j/86730363468?pwd=pfKQoh92JnbwOYwFvZqIdSSWpjxYoK.1
Passcode: **577971**. You can also type in **867 3036 3468** in the "Join a Meeting" page on the Zoom website at www.zoom.us and use passcode **577971**. When the Mayor announces the item for which you wish to speak, click the "raise hand" feature in Zoom.

Telephone: To participate by phone please dial 1 (408) 961-3927 or 1 (855) 758-1310 for US Toll-free and use Meeting ID: **867 3036 3468**. When the Mayor announces the item for which you wish to speak, press *9 on your telephone keypad to raise your hand.

In-Person: Please complete a "speaker's card" located on the back of the chamber benches and submit it to the Town Clerk before the meeting or when the Mayor announces the item for which you wish to speak.

NOTES: Comments will be limited to three (3) minutes or less at the Mayor's discretion. If you are unable to participate in real-time, you may email to Clerk@losgatosca.gov the subject line "Public Comment Item #__ " (insert the item number relevant to your comment).

Deadlines to submit written comments are:

-3:00 p.m. the business day before the Council meeting for inclusion in an addendum.

-11:00 a.m. the day of the Council meeting for inclusion in a desk item.

Page 3

TOWN OF LOS GATOS
COUNCIL AGENDA REPORT

MEETING DATE: 08/11/2026
ITEM NO: 1

DATE: August 6, 2026

TO: Mayor and Town Council

FROM: Chris Constantin, Town Manager

SUBJECT: **Consider a Recommendation by the Planning Commission to Approve the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB330) on Vacant Property Zoned RC. Located at 178 Twin Oaks Drive. APN 532-16-006. Architecture and Site Applications S-24-023 through -032 and S-24-059, Subdivision Application M-24-013, and Mitigated Negative Declaration Application ND-25-001. An Initial Study and Recirculated Mitigated Negative Declaration Have Been Prepared. Property Owner/Applicant: Larry Dodge. Project Planner: Erin Walters.**

RECOMMENDATION: Staff recommends that the Town Council consider the Planning Commission's recommendation and adopt the draft Resolution to approve the subdivision of one lot into twelve lots with a vesting tentative map, construction of a new single-family residence on each lot, site work requiring a Grading Permit, and removal of large protected trees under Senate Bill 330 (SB330) on vacant property zoned RC located at 178 Twin Oaks Drive.

FISCAL IMPACT:

Approving the Architecture and Site, Subdivision, and Mitigated Negative Declaration applications does not impact the Town's budget.

STRATEGIC PRIORITY:

The proposed project aligns with the adopted Core Goal of Community Character and the Strategic Priority to preserve the Town's small-town charm and provide a range of housing

PREPARED BY: Erin M. Walters
Senior Planner

Reviewed by: Town Manager, Assistant Town Manager, Town Attorney, and Community Development Director

opportunities, while diligently maintaining and implementing the Housing Element.

BACKGROUND:

Project Site

The subject hillside property is approximately 17.55 acres of vacant land that takes access from Twin Oaks Drive (Exhibit 4 of Attachment 2). The hillside project site contains scattered oak woodlands and a small portion of East Ross Creek crossing the site's farthest southwestern corner through a buried culvert. The site is surrounded by low density or hillside residential properties on all sides, with a partially shared property line with Hillbrook School to the north. The property generally sits east of Twin Oaks Drive, north of Brooke Acres Drive, and southwest of Cerro Vista Court and Cerro Vista Drive. The property has a General Plan designation of Agriculture and is zoned RC, or Resource Conservation.

Project Summary

The applicant proposes to subdivide the site into twelve lots ranging from 0.10 to 5.48 acres (Sheet 2.0 of Exhibit 15 of Attachment 2). The western slope would be developed with 11 two-story single-family residences (eight market-rate and three below-market-rate units), while the eastern portion would remain undeveloped. One additional two-story residence is proposed on the northeastern slope (Lot 10). Access would be provided by a new private cul-de-sac from Twin Oaks Drive, an EVAE connection to Brooke Acres Drive, and a separate driveway from Cerra Vista Court for Lot 10. Three of the 12 units (25 percent) would be designated as low-income Below Market Price (BMP) units, exceeding the minimum affordability requirement under the Builder's Remedy provisions (Lots 1, 11 and 12).

Full discussion and analysis of the project is provided in the December 17, 2025, and June 11, 2026, Planning Commission Staff Reports (Attachments 2 and 7). The proposed development plans are included in Exhibits 15 through 27 of Attachment 2, Exhibit 35 (Open Space Easements and Future Trail Easements), and Exhibit 36 (Lots 5 and 6 Vegetation Buffer) found in Attachment 7.

State Housing Laws

The applicant is utilizing the provisions of Senate Bill 330 (SB 330), State Density Bonus Law (SDBL), and the Builder's Remedy. The project qualifies as a Builder's Remedy project, and the applicant has invoked the provisions of the Builder's Remedy with this project. As a result, the planning application is subject to the requirements of the state Housing Accountability Act (HAA). These statutory frameworks are discussed in detail in the December 17, 2025, and June 11, 2026, Planning Commission Staff Reports, included as Attachments 2 and 7.

Planning Commission

On December 17, 2025, the Planning Commission considered the project (Attachments 2 through 5), received public testimony, and continued the item to a date uncertain to allow the applicant and staff additional time to respond to questions raised at the meeting which are included in the December 17, 2025, Planning Commission Verbatim Minutes (Attachment 6) and discussed in the June 11, 2026, Planning Commission staff report (Attachments 7-9).

On June 11, 2026, the Planning Commission received additional information and public testimony and voted 4-1 to recommend that the Town Council approve the project, subject to the modified Conditions of Approval as included in Attachment 12 and incorporated into Exhibit A of Attachment 1. The June 11, 2026, Planning Commission Verbatim Minutes are provided in Attachment 10. Additional details regarding the Planning Commission's review, discussion, and recommendation are provided below.

DISCUSSION:

A. Planning Commission:

On June 11, 2026, the Planning Commission received additional information and public testimony regarding the project (Attachments 7-9). The June 11, 2026, Planning Commission Verbatim Minutes are included as Attachment 10.

The Planning Commission discussed the recirculated Initial Study/Mitigated Negative Declaration (IS/MND), including the newly identified ephemeral drainage feature on Lot 5, the proposed biological mitigation measures, and whether the project's environmental impacts could be mitigated to a less-than-significant level. The Commission also discussed the timing of regulatory agency permits and the implementation and monitoring of mitigation measures. A summary of the environmental review is provided later in this report.

The Commission considered project revisions made since the hearing on December 17, 2025, including enhanced vegetation screening, proposed private open space and public trail easements, drainage improvements, and the applicant's responses to previous Commissioner questions.

During deliberations, the Planning Commission discussed modifications to the Conditions of Approval, including expansion of the proposed public trail easement; addition of a public pedestrian and bicycle access gate; specific plant selection and enhanced landscape screening; establishment of a Maintenance Association and Private Road Maintenance Agreement; enhanced maintenance requirements for on-site stormwater treatment facilities; and additional construction management requirements for construction vehicles and equipment.

Following deliberation, the Planning Commission voted 4-1 to recommend that the Town Council adopt the recirculated IS/MND and approve the project, subject to the modified Conditions of Approval as included in Attachment 12 and incorporated into Exhibit A of Attachment 1.

B. Requested Incentives, Waivers, and Exceptions:

The project includes deviations from the Town's development standards requested pursuant to the SDBL and the Builder's Remedy. The applicant's justification for these deviations is provided in Exhibit 5 of Attachment 2.

The applicant is requesting three incentives under SDBL, where state law would allow up to five.

Requested Incentives	
Not Installing Story Poles and Netting per the Visibility Analysis requirements of the Hillside Development Standards and Guidelines	Project wide
Not Providing Sidewalks	Project wide
Not Constructing Trails	Project wide

The applicant is requesting 58 waivers, where the project qualifies for unlimited waivers under SDBL.

Requested Waivers	
Reduced Lot Area	Lots 11 and 12
Reduced Setbacks	Lots 1, 3, 6, 11, and 12
Exceeding the Maximum Gross Floor Area	Lots 2,3,4,7,8,9,10, and 12
Building Outside the Least Restrictive Development Area (LRDA)	Lots 3,6, and 7
Exceeding Maximum Building Height	All Lots
Exceeding Maximum Graded Cut and Fill Depths	All Lots
Swimming Pools on Slopes greater than 30 percent	Lots 7 and 8
Reduced Guest Parking	All Lots
Location of BMP Units	Project wide
Comparable Bed/Bath Size of BMP Units	Project wide

The application meets the definition of a Builder’s Remedy project and is invoking the following exceptions to Town standards pursuant to Builder’s Remedy on the following page:

Requested Exceptions through Builder's Remedy	
General Plan Designation	Project wide
Zoning Designation	Project wide
Density	Project wide

Staff notes that, pursuant to the HAA and the Builder's Remedy provisions applicable to this project, objective development standards may not be applied in a manner that would render a housing development project infeasible unless the project would result in a specific adverse impact on public health or safety and there is no feasible method to mitigate or avoid that impact. The HAA defines "feasible" as capable of being accomplished successfully within a reasonable period of time, taking into account economic, environmental, social, and technological factors.

The legal framework for Senate Bill 330; HAA; SDBL; Builder's Remedy; and the applicant's requests for incentives, waivers, and exceptions are described in the December 17, 2025, Planning Commission staff report (Attachment 2).

ENVIRONMENTAL REVIEW:

The project's IS/MND was circulated by the Town for public review from September 19, 2025, through October 8, 2025. Following the public review period, Raney Planning and Management, Inc. prepared responses to comments, and the project was considered by the Planning Commission on December 17, 2025.

In response to public comments and input at the December 17, 2025, Planning Commission hearing, Live Oak Associates, Inc. (LOA), the Town's Consulting Biologists, conducted an additional on-site field investigation of the ephemeral feature located on the project site on February 12, 2026, after a storm event when water was flowing in the on-site ephemeral feature. This follow-up assessment resulted in the determination that the northerly limits of the ephemeral feature extend into the proposed internal driveway and Lot 5 development footprint. As a result, consistent with CEQA Guidelines Section 15073.5, the IS/MND was revised and recirculated to identify a new potentially significant impact related to having a substantial adverse effect on aquatic features, and included new mitigation measures under question IV-b and IV-c to reduce the newly identified impact to a less-than-significant level (Mitigation Measures IV-10 and -11).

A Recirculated IS/MND was circulated for a 30-day public review from April 17, 2026, through May 18, 2026 (Exhibit 38 of Attachment 7).

Under CEQA Guidelines Sections 15073 and 15074, the Town is required to consider all comments received on the IS/MND; however, written responses are not required for a Mitigated Negative Declaration. At the Town's request, Raney Planning and Management, Inc,

the Town's environmental consultant, prepared written responses to comments received during the public review period as found in (Exhibit 40 of Attachment 7).
The Recirculated IS/MND concluded that the project will not have a significant impact on the environment with adoption of the Recirculated MND and Revised MMRP to mitigate potential impacts to a less-than- significant level.

On June 11, 2026, the Planning Commission Desk Item included an Errata for the project's Recirculated IS/MND, which strengthens the previously included performance standards of Mitigation Measure IV-10 (Exhibit 46 of Attachment 9). Recirculation of the IS/MND was not required.

Each of the 21 mitigation measures identified in the Recirculated MND (III-1, IV-1, IV-2, IV-3, IV-4, IV-5, IV-6, IV-7, IV-8, IV-9, IV-10, IV-11, IV-12, V-1, V-2, V11-1, X-1, X111-1, X111-2, XVII-1, and XVIII-1) and the revised measure IV-10 identified in the June 11, 2026, Errata are included in the Revised Recirculated MMRP (Attachment 11) and Revised Conditions of Approval (Exhibit A of Attachment 1).

PUBLIC COMMENTS:

Consistent with the Town's Height Pole, Flagging, Netting, and Signage Policy, project signs were installed on the site along Twin Oaks Drive and Cerro Vista Court. Additionally, notice cards for the Town Council meeting were mailed to all property owners and residents within 1,000 feet, a legal advertisement was published in the newspaper, and meeting agendas were posted at Town Hall and the Library.

Visual simulations were completed by the Town's consultant and posted to the Town's website by September 1, 2025 (Attachment 2, Exhibit 10).

Staff conducted outreach through the following online communication channels to publicize the availability of the visual simulations, the public review of the IS/MND, the Recirculated IS/MND, and the public hearings:

- The Town's website home page, What's New;
- The Town's Facebook page;
- The Town's Twitter account;
- The Town's Instagram account; and
- The Town's NextDoor page.

Public comments received before the December 17, 2025, and June 11, 2026, Planning Commission hearings were included in the corresponding Staff Reports, Addenda, and Desk Item Reports (Attachments 2 through 7).

Public Comments received between 11:01 a.m., Thursday, June 11, 2026, and 3:00 pm, Thursday, August 6, 2026, are included as Attachment 13.

CONCLUSION:

The applicant is requesting approval for the subdivision of one lot into 12 lots with a Vesting Tentative map, construction of a new single-family residence on each lot, site work requiring a grading permit, and removal of large protected trees under SB 330 on a vacant property zoned RC, located at 178 Twin Oaks Drive.

As detailed above and in the December 17, 2025, and June 11, 2026, Planning Commission staff reports, the application was submitted and is being processed under SB 330. The applicant seeks approval for the proposed residential project utilizing both SDBL (CA Gov.Code § 65915) and the Builder's Remedy provisions under the HAA [CA Gov. Code § 65589.5 (d)(5)].

The deviations from the Town's standards included in the project are requested through both SDBL and Builder's Remedy for which the applicant has provided justification (Exhibit 5 of Attachment 2). The proposed development plans are included in Exhibits 15 through 27 of Attachment 2, Exhibit 35 (Open Space Easements and Future Trail Easements); and Exhibit 36 (Lots 5 and 6 Vegetation Buffer) found in Attachment 7.

On June 11, 2026, the Planning Commission forwarded a recommendation of approval to the Town Council with modified Conditions of Approval.

RECOMMENDATION:

Staff recommends that the Town Council adopt the draft Resolution included as Attachment 1 to make the required findings and approve the Architecture and Site applications, Subdivision application, and Mitigated Negative Declaration application subject to the conditions of approval (Attachment 1, Exhibit A).

ALTERNATIVES:

Alternatively, the Council can:

1. Approve the applications with additional and/or modified conditions;
2. Continue the matter with specific direction; or
3. Deny the applications and make the required findings for denial.

COORDINATION:

This report was coordinated with the offices of the Town Manager and Town Attorney.

ATTACHMENTS:

1. Draft Resolution making the required findings and approving the applications subject to the Conditions of Approval (included as Exhibit A)
2. December 17, 2025, Planning Commission Staff Report, with Exhibits 1-27
3. December 15, 2025, Planning Commission Addendum, with Exhibit 28
4. December 16, 2025, Planning Commission Addendum 2 Report, with Exhibits 29 and 30
5. December 17, 2025, Planning Commission Desk Item, with Exhibit 31
6. December 17, 2025, Planning Commission Verbatim Minutes
7. June 11, 2026, Planning Commission Staff Report, with Exhibits 32 through 43
8. June 9, 2026, Planning Commission Addendum, with Exhibits 44 and 45
9. June 11, 2026, Planning Commission Desk Item, with Exhibit 46
10. June 11, 2026, Planning Commission Verbatim Minutes
11. Revised Recirculated Mitigation Monitoring and Reporting Program, July 2026
12. Modified Conditions of Approval – Redlined
13. Public Comments received between 11:01 a.m., Thursday, June 11, 2026, and 3:00 pm, Thursday, August 6, 2026

Draft Resolution to be modified by Town Council deliberations and direction.

DRAFT RESOLUTION 2026-

RESOLUTION OF THE TOWN COUNCIL OF THE TOWN OF LOS GATOS APPROVING THE SUBDIVISION OF ONE LOT INTO TWELVE LOTS WITH A VESTING TENATIVE MAP, CONSTRUCTION OF A NEW SINGLE-FAMILY RESIDENCE ON EACH LOT, SITE WORK REQUIRING A GRADING PERMIT, AND REMOVAL OF LARGE PROTECTED TREES UNDER SENATE BILL 330 (SB330) ON VACANT PROPERTY ZONED RC.

PROPERTY LOCATION: 178 TWIN OAKS DRIVE
APN: 532-16-006
ARCHITECTURE AND SITE APPLICATIONS: S-24-023 THROUGH -032 AND S-24-059
SUBDIVISION APPLICATION: M-24-013
MITIGATED NEGATIVE DECLARATION APPLICATION: ND-25-001
PROPERTY OWNER/APPLICANT: LARRY DODGE

WHEREAS, the applicant, Larry Dodge, proposes subdivision of one lot into 12 lots with a Vesting Tentative map, construction of a new single-family residence on each lot (Lots 1-12), site work requiring a Grading Permit, and removal of large protected trees under Senate Bill 330 (SB330) on a vacant property;

WHEREAS, the project includes Architecture and Site Applications (S-24-023 through -032 and S-24-059), Subdivision Application (M-24-013), and Mitigated Negative Declaration Application (ND-25-001); and

WHEREAS, on December 17, 2025, the Planning Commission held a public hearing and received testimony from the applicant and all interested persons who wished to testify or submit documents. The Planning Commission considered all testimony and materials submitted, including the packet of materials contained in the Planning Commission Agenda Report for their meeting on December 17, 2025, along with any and all subsequent reports and materials prepared concerning this application, and continued the item to a date uncertain to allow the applicant and staff additional time to respond to questions raised at the December 17, 2025 meeting;

WHEREAS, on June 11, 2026, the Planning Commission held a public hearing and received testimony from the applicant and all interested persons who wished to testify or submit documents. The Planning Commission considered all testimony and materials submitted, including the packet of materials contained in the Planning Commission Agenda Report for their meeting on June 11, 2026, along with any and all subsequent reports and materials prepared concerning this application, and forwarded a recommendation of approval to the Town Council with modified Conditions of Approval; and

WHEREAS, this matter was scheduled to come before the Town Council for a special public hearing on June 23, 2026, and was regularly noticed in conformance with state and Town law; however, the hearing was cancelled due to lack of quorum; and

WHEREAS, this matter was rescheduled and came before the Town Council for a special public hearing on August 11, 2026, and was regularly noticed in conformance with state and Town law; and

WHEREAS, on August 11, 2026, the Town Council held a special public hearing and received testimony from the applicant and all interested persons who wished to testify or submit documents. The Town Council considered all testimony and materials submitted, including the record of the Planning Commission proceedings and the packet of materials contained in the Council Agenda Report for their meetings on December 17, 2025, and June 11, 2026, along with any and all subsequent reports and materials prepared concerning this application; and

WHEREAS, the Town Council was able to make the findings required to approve the Architecture and Site, Subdivision, and Mitigated Negative Declaration applications.

NOW, THEREFORE, BE IT RESOLVED that the Town Council of the Town of Los Gatos does the following:

1. The following findings are made by the Town Council of the Town of Los Gatos. The facts and evidence that support these findings are contained and explained in the record of proceedings for the proposed project, including, without limitation, the Initial Study, Mitigated Declaration, and the staff reports for the Planning Commission and Town Council hearings.

   (A) Finding required for the California Environmental Quality Act (CEQA):

   A Recirculated Initial Study and Mitigated Negative Declaration were prepared for this project, determining that this project will not have a significant impact on the environment with adoption of the Recirculated Mitigated Negative Declaration and Mitigation Monitoring Reporting Program to mitigate potential impacts to a less than significant level. Each of the mitigation measures identified in the Recirculated Mitigated Negative Declaration are included in the Conditions of Approval attached hereto as Exhibit A.

   (B) Finding required for consistency with the Town's Applicable General Plan:

   The proposed project is consistent with the General Plan, subject to the approval of the incentives/concessions and waivers requested pursuant to the State Density Bonus Law and granting the requested exceptions to the maximum allowable density pursuant to the Builder's Remedy provisions of the Housing

Accountability Act [CA Gov. Code Section 65589.5 (d)]. Pursuant to Senate Bill 330, the General Plan applicable to the proposed project consists of the 2020 General Plan Land Use and Community Design Elements and the remainder of the 2040 General Plan, excluding those two Elements, as they existed on the date the applicant submitted its SB 330 preliminary application.

The applicable General Plan Land Use Element designates the project site as Agriculture. The site is zoned RC (Resource Conservation Zone).

The RC zoning district purpose and intent is to enhance the quality of life in the Town through the protection of open space, special land forms, scenic areas, watershed, wildlife and vegetation; to restrict access to and within these certain designated areas; to restrict the intensity of activity and development; to limit residential density; to reduce fire hazards in the hillside areas which are under Williamson Act contract with the Town; and to provide for open space in the form of parks, playgrounds, and other community facilities.

Although the proposed single-family residential development exceeds the density permitted by the General Plan and zoning regulations, the project qualifies for consideration under the Builder's Remedy provisions of the Housing Accountability Act. With approval of the requested exceptions to the General Plan land use designation, zoning regulations, and maximum allowable density, the project advances the Housing Element's housing objectives and is therefore consistent with the General Plan and its applicable elements. The property is not subject to a Williamson Act contract.

(C) Findings required to deny a Subdivision application:

As required by Section 66474 (a) through (g) of the State Subdivision Map Act, the map shall not be denied if any of the findings listed in that Section are made. **None of the findings could be made to deny the application with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d).**

Instead, the Town Council makes the following affirmative findings:

- That the proposed map is consistent with all elements of the General Plan, with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d), because the property's zoning permits residential use.
- That the design and improvement of the proposed subdivision is consistent with all Town standards that can be applied in conformance with the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d).

- That the site is physically suitable for the type of development, because the site allows residential use based on its General Plan designation, zoning, and physical characteristics through granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d). The property is designated Agriculture in the General Plan and is zoned RC, which permits residential use. Its location is surrounded by a residential neighborhood supporting infill development, and the proposed project is designed to respond to site constraints such as topography, access, drainage, and adjacent uses. With the implementation of required site design, landscaping, drainage, and accessibility standards, the site can accommodate the proposed residential development in a manner consistent with applicable Town policies and State housing law through granting incentives, and waivers requested pursuant to the State Density Bonus Law and granting the requested exceptions to the maximum allowable density pursuant to the Builder's Remedy provisions of the Housing Accountability Act [CA Gov. Code Section 65589.5 (d)].
- That the site is physically suitable for the proposed density of development, with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d), because the proposed project is designed to respond to site constraints such as topography, access, drainage, and adjacent uses.
- That the design of the subdivision and the proposed improvements are not likely to cause substantial environmental damage nor substantially and avoidably injure fish or wildlife or their habitat with implementation of the Recirculated Mitigation Monitoring and Reporting Program and the Conditions of Approval.
- That the design of the subdivision and type of improvements is not likely to cause serious public health problems.
- That the design of the subdivision and the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

(D) <u>Findings required for Subdivision Map Findings for the Board of Forestry and Fire Protection</u>:

For tentative or parcel maps approved in state responsibility areas (SRA) or very high fire hazard severity zones (VH), the following findings are required to be made to the State Board of Forestry and Fire Protection (14 CCR Section 1266.02):

(1) A finding supported by substantial evidence in the record that the subdivision is consistent with:

DRAFT

a. Regulations adopted by the State Board of Forestry and Fire Protection pursuant to Sections 4290 and 4291 of the Public Resources Code. The Town's contracted fire service provider, the Santa Clara County Fire Department, reviewed and approved the project subject to compliance with California Public Resources Code Sections 4290 and 4291. The Fire Department approved the applicant's Alternative Means and Methods Request (AMMR) for a roadway segment less than 20 feet wide serving proposed Lot 10 and a future residence, consistent with 14 CCR Section 1270.06 and subject to mitigation measures found in the Conditions of Approval.
or
b. Consistent with local ordinances certified by the State Board of Forestry and Fire Protection as meeting or exceeding the state regulations.

(2) A finding supported by substantial evidence in the record that structural fire protection and suppression services will be available for the subdivision through any of the following entities:
a. A county, city, special district, political subdivision of the state, or another entity organized solely to provide fire protection services that is monitored and funded by a county or other public entity. The Town of Los Gatos contracts with the Santa Clara County Fire Department to provide fire protection and emergency response services within the Town.
b. The Department of Forestry and Fire Protection by contract entered into pursuant to Section 4133, 4142, or 4144 of the Public Resources Code.

(E) Findings required for compliance with the Zoning Regulations:

The project meets the objective standards of Chapter 29 of the Town Code (Zoning Regulations), with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

(F) Findings required for compliance with the Town of Los Gatos Hillside Development Standards and Guidelines:

The project meets the Town of Los Gatos Hillside Development Standards and Guidelines with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

(G) Findings required for compliance with the Town of Los Gatos Hillside Specific Plan:

The project meets the Town of Los Gatos Hillside Specific Plan with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

(H) Findings required for granting concession and waivers pursuant to State Density Bonus Law:

(1) Concession(s) or incentive(s): CA Gov. Code § 65915 (d): The Town shall grant concession(s) or incentive(s) requested by the applicant unless the Town makes a written finding, based upon substantial evidence, of any of the following:
   (a) The concession or incentive does not result in identifiable and actual cost reductions, consistent with subdivision (k), to provide for affordable housing costs, as defined in Section 50052.5 of the Health and Safety Code, or for rents for the targeted units to be set as specified in subdivision (c).
   (b) The concession or incentive would have a specific, adverse impact, as defined in paragraph (2) of subdivision (d) of Section 65589.5, upon public health and safety or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific, adverse impact without rendering the development unaffordable to low-income and moderate-income households.
   (c) The concession or incentive would be contrary to state or federal law.

(2) Waivers: CA Gov. Code § 65915 (e):
The Town shall grant waivers to the Town's development standards requested by the applicant unless the Town makes a written finding, based upon substantial evidence, that the development standard for which the waiver is requested would not physically preclude the construction of the development at the densities and with the concession permitted through Density Bonus Law.

(3) The Town Council finds that none of the bases for denial of the requested incentives/concessions and waivers are present.

(I) Findings required to deny a project under the State Builder's Remedy Law:

As required by the Housing Accountability Act, CA Gov. Code Section 65589.5 (d), a qualifying housing development project invoking the Builder's Remedy shall

DRAFT

not be denied by the Town, or condition approval in a manner that renders the housing development project infeasible, including through the use of design review standards, unless it makes written findings, based on the preponderance of the evidence in the record, as to one of the following:
None of the findings could be made to deny the application.

(1) The Town did not have a certified sixth cycle Housing Element by January 31, 2023.
(2) The housing development project would not have a specific, adverse impact on the public health or safety.
(3) The denial of the housing development project or imposition of conditions is not required in order to comply with specific state or federal law.
(4) The housing development project is not proposed on land zoned for agriculture or resource preservation that is surrounded on at least two sides by land being used for agricultural or resource preservation purposes, or which does not have adequate water or wastewater facilities to serve the project.
(5) On the date the application for the housing development project was deemed complete, the Town had not adopted a revised Housing Element that was in substantial compliance with CA Gov. Code Section 65589.5 (d) of the Housing Accountability Act, and the housing development project was inconsistent with both the Town's Zoning Ordinance and General Plan Land Use Designation.

(J) Considerations required in review of Architecture and Site applications:

As required by Section 29.20.150 of the Town Code, the applicable considerations in review of an Architecture and Site application were all made in reviewing this project and the Town Council makes the following required determinations:

(1) The project's Transportation Analysis evaluates transportation impacts using Vehicle Miles Traveled (VMT), consistent with CEQA Guidelines Section 15064.3, Senate Bill 743, and the Town's VMT significance thresholds adopted by Resolution 2020-045. The analysis found the proposed 12 single-family residences slightly exceed the Total Project-Generated VMT significance threshold, requiring a 2.83 percent VMT reduction to achieve a less-than-significant impact. The project does not exceed the Town's Boundary VMT threshold. To mitigate the impact, the project will construct sidewalks along the north side of Blossom Hill Road between Regent Drive and Union Avenue and along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road. These improvements are consistent with the Town's 2020 Bicycle and Pedestrian Master Plan, achieve the required VMT reduction, and reduce the transportation impact to a less-than-

significant level. The mitigation measures are incorporated into the project's Conditions of Approval.

(2) The project includes a comprehensive approach to site planning, landscaping, architecture, and infrastructure designed to ensure compatibility with surrounding development and compliance with Town standards with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d).

(3) The landscape plan incorporates drought-tolerant, climate-appropriate plantings, including trees, shrubs, and groundcover, to enhance visual quality, provide year-round interest, and screen parking, utilities, and service areas. Tree replacement plantings are provided in accordance with Town requirements.

(4) The site layout is designed to respond to site conditions and adjacent residential uses, with building placement and orientation intended to reduce massing impacts, protect privacy, support solar access, and provide functional open space with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code Section 65589.5 (d).

(5) Stormwater drainage improvements are incorporated to manage runoff, reduce peak flows, and prevent adverse impacts to neighboring properties in compliance with applicable standards.

(6) The architectural design uses coordinated materials, colors, and articulated building forms to ensure compatibility with the surrounding neighborhood.

(7) Site lighting and furnishings are designed to support safety and usability while minimizing visual impacts and reinforcing a cohesive residential character. The project will comply with all applicable accessibility requirements under Title 24 and Town standards.

(8) No hazardous waste facilities are proposed.

2. The Town Council of the Town of Los Gatos approves Architecture and Site Applications (S-24-023 through -032 and S-24-059), Subdivision Application (M-24-013), and Mitigation Negative Declaration Application (ND-25-001) for subdivision of one lot into 12 lots with a Vesting Tentative Map, construction of a new single-family residence on each lot (Lots 1-12), site work requiring a Grading Permit, and removal of large protected trees under Senate Bill 330 (SB330) on vacant property zoned RC located at 178 Twin Oaks Drive subject to the attached Conditions of Approval included as (Exhibit A) and the development plans (Attachment 2, Exhibits 15 through 27) and (Attachment 7, Exhibits 35 and 36).

3. The decision constitutes a final administrative decision pursuant to Code of Civil Procedure section 1094.6 as adopted by section 1.10.085 of the Town Code of the

DRAFT

Town of Los Gatos. Any application for judicial relief from this decision must be sought within the time limits and pursuant to the procedures established by Code of Civil Procedure section 1094.6, or such shorter time as required by state and federal Law.

DRAFT

PASSED AND ADOPTED at a special meeting of the Town Council of the Town of Los Gatos, California, held on the 11th of August 2026, by the following vote:

DRAFT

TOWN COUNCIL – *August 11, 2026 – Draft*
CONDITIONS OF APPROVAL

178 Twin Oaks Drive, Lots 1 -12
Vesting Tentative Map Application M-24-013
Architecture and Site Applications S-24-023 through S-24-033 and S-24-059
Mitigated Negative Declaration ND-25-001

Consider a Request for Approval for the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB 330) on a Vacant Property Zoned RC. APN 532-16-006. A Recirculated Initial Study and Mitigated Negative Declaration Have Been Prepared.

Property Owner/Applicant: Larry Dodge
Project Planner: Erin Walters

TO THE SATISFACTION OF THE DIRECTOR OF COMMUNITY DEVELOPMENT:

Planning Division

APPLICABLE TO ALL LOTS

1. APPROVAL: This project is vested to the ordinances, policies, and standards in effect on December 19, 2023, and these conditions of approval conform to those ordinances, policies, and standards. This application shall be completed in accordance with all of the conditions of approval and in substantial compliance with the approved plans. Any changes or modifications to the approved plans shall be approved by the Community Development Director, Development Review Committee, or the Planning Commission depending on the scope of the changes.
2. EXPIRATION: The approval will expire two years from the approval date pursuant to Section 29.20.320 of the Town Code, unless the approval has been vested, pursuant to Section 29.20.335 of the Town Code.
3. COVENANTS, CONDITIONS, AND RESTRICTIONS (CC&R): CC&Rs must be approved by the Town and recorded with the County prior to recording of the map.
4. MASTER DEVELOPER: This project shall be developed and constructed by a single Master Developer responsible for the coordinated implementation of all site improvements, infrastructure, and building construction. Individual lots within the approved subdivision or development area shall not be sold, transferred, or otherwise conveyed to separate entities or individuals for the purpose of independent development, construction, or sale prior to completion of the project as a whole. Prior to recordation of any Final Map or issuance of any Building Permits, the applicant shall provide documentation to the Community Development Director demonstrating that a single Master Developer is responsible for construction and delivery of the project. Prior to issuance of any Certificates of Occupancy, the Town shall verify compliance with this condition. This condition shall be printed as a note on the Final Map.

5. BELOW MARKET PRICE (BMP) UNITS: The developer shall provide three (3) BMP units (low income) for sale to be sold at a price that is affordable to the target household low-income range, as required by the Town's applicable BMP Program Guidelines and the applicable BMP Resolution. A deed restriction shall be recorded prior to the issuance of any Building Permits for residential units, stating that the BMP unit must be sold and maintained as a below market price unit pursuant to the Town's BMP Ordinance and Guidelines.
6. AFFORDABLE HOUSING AGREEMENT: Prior to issuance of Building Permits for residential units, the developer shall enter into an Affordable Housing Agreement with the Town for provision of the required BMP units and to facilitate their sale pursuant to the BMP Program Guidelines and BMP Resolution in place at the time of Building Permit issuance.
7. PHASING OF THE CONSTRUCTION OF BMP UNITS: The Certificate of Occupancy for the first market rate unit shall not be issued until all three required BMP units have been constructed and Certificates of Occupancy for each BMP unit have been secured.
8. OPEN SPACE EASEMENTS: The Final Map submitted for recordation with the County Recorder shall include open space easements on Lots 1, 4, 5, 6, 8, 9, 10, 11 and 12 to protect unique natural features, habitats, and movement corridors on the property, as shown in the Development Plans and Exhibit 35 of the June 11, 2026, Planning Commission staff report. Easements lying in, on, over, under and along those certain strips of land designated and delineated as "O.S.E." (Open Space Easement). No activity or use shall be conducted in said open space easement which is not compatible with maintaining and preserving the natural or scenic character of the land. The open space easement shall be maintained by the property owner. Said easements shall be kept open and free from buildings and structures of any kind except public service structures, irrigation systems, and appurtenances thereto, lawful fences and all lawful roof overhangs.
9. PUBLIC TRAIL EASEMENTS: The Final Map submitted for recordation with the County Recorder shall include public trail easements on Lots 1, 4, 5, 6, 8,9,10, 11 and 12 as shown in the Development Plans and Exhibit 35 of the June 11, 2026, Planning Commission staff report.
    a. The applicant shall extend a 20-foot public trail easement along the northern boundary of Lot 10 and connect to the driveway of Lot 10.
    b. The applicant shall make a good faith effort with the adjacent property owner to obtain the appropriate trail easement to have the public trail cross the small section of private property located at 15955 Cerro Vista Court/APN 537-30-010 and connect to Cerro Vista Court.
    c. A public bike and pedestrian easement shall be shown on the final map from the end of Brook Acres Drive, through the project's EVAE and through the project's private road to Twin Oaks Drive.
10. PUBLIC PEDESTRIAN AND BIKE ACCESS GATE: The applicant shall provide a public pedestrian and bike access gate at the end of Brook Acres Drive as approved by the Town Engineer and the Santa Clara County Fire Department prior to issuance of Building Permits or Grading Permits.
11. PUBLIC ART: The applicant shall comply with the requirements of Chapter 25, Article VII of the Town Code. The payment of the Los Gatos Public Art Fund in-lieu fee must be

made prior to the issuance of any Building Permit for the development project.

12. TREE REMOVAL PERMIT: A Tree Removal Permit shall be obtained for any trees to be removed, prior to the issuance of Building and/or Grading Permits. Per Town Code Section 26.20.010 and Chapter 29, Article 1, Division 2, the developer shall obtain a tree removal permit prior to the removal of protected trees on private or Town property. The project developer shall abide by any tree replacement ratios and/or in-lieu payments, tree protection measures, and best management practices required by the tree removal permit and/or within an updated arborist report.
13. REPLACEMENT TREES: New trees shall be planted to mitigate the loss of trees being removed. The number of trees and size of replacement trees shall be determined using the canopy replacement table in the Town Code and pursuant to the Hillside Development Standards and Guidelines, Appendix A
14. EXISTING TREES: All existing trees shown on the plan and trees required to remain or to be planted are specific subjects of approval of this plan and must remain on the site.
15. ARBORIST REQUIREMENTS: Prior to issuance of Building and/or Grading Permits, the developer shall implement, at their cost, all recommendations identified in the Arborist's report for the project, on file in the Community Development Department. These recommendations must be incorporated in the Building Permit plans and completed prior to issuance of a Building Permit where applicable and shall remain through all phases of construction.
16. TREE FENCING: Prior to issuance of Building and/or Grading Permits, protective tree fencing and other protection measures consistent with Section 29.10.1005 of the Town Code shall be placed as shown on the Tree Protection Plan of the approved plans prior to issuance of demolition and Building Permits and shall remain through all phases of construction. Include a tree protection plan with the construction plans.
17. TREE STAKING: Prior to final inspection, all newly planted trees shall be double staked using rubber tree ties.
18. LANDSCAPING: The final landscape plan shall comply with the Hillside Development Standards and Guidelines criteria for planting (ornamental planting shall be confined to areas within 30 feet of the house, inclusive of decks, patios and driveway). Prior to issuance of the Certificate of Occupancy, landscaping must be installed and completed.
19. LANDSCAPE PLAN: The final landscaping plans shall include the landscape plans and planting list found in Exhibit 36 of Attachment 7 of the August 11, 2026, Town Council Report. All planting shall conform with the Hillside Development Standards and Guidelines and the plant species listed in Exhibit 36 of Attachment 7 of the August 11, 2026, Town Council Report.
20. LANDSCAPE SCREENING: The applicant shall work with the adjacent neighbors to develop a landscape plan to address screening between the properties, and work with staff to select the appropriate trees and shrubs prior to issuance of a Building Permit.
21. WATER EFFICIENCY LANDSCAPE ORDINANCE: The final landscape plan, including landscape and irrigation plans and calculations, shall meet the Town of Los Gatos Water Conservation Ordinance or the State Water Efficient Landscape Ordinance, whichever is more restrictive. The final landscape plan shall be reviewed by the Town's consultant prior to issuance of Building Permits. A review fee based on the current fee schedule adopted by the Town Council is required when working landscape and irrigation plans

are submitted for review.

22. PROJECT IDENTIFICATION SIGNAGE: Project identification signage on the project site shall be removed within 30 days of final action on the applications.
23. EXTERIOR COLOR: The exterior colors of the house shall not exceed an average light reflectivity value of 30 and shall blend with the natural vegetation.
24. LRV DEED RESTRICTION: Prior to the issuance of a Building Permit, a deed restriction shall be recorded by the applicant with the Santa Clara County Recorder's Office that requires all exterior colors to be maintained in conformance with the Hillside Development Standards and Guidelines.
25. PROPERTY FENCE: All new fencing shall comply with Town Code Section 29.40.0315 at Building Permit stage, unless an exception is granted by the Community Development Director.
26. OUTDOOR LIGHTING: Exterior lighting shall be kept to a minimum, and shall be down directed fixtures that will not reflect or encroach onto adjacent properties. No flood lights shall be used unless it can be demonstrated that they are needed for safety or security. The lighting plan shall be reviewed during building plan check.
27. TOWN INDEMNITY: Applicants are notified that Town Code Section 1.10.115 requires that any applicant who receives a permit or entitlement ("the Project") from the Town shall defend (with counsel approved by Town), indemnify, and hold harmless the Town, its agents, officers, and employees from and against any claim, action, or proceeding (including without limitation any appeal or petition for review thereof) against the Town or its agents, officers or employees related to an approval of the Project, including without limitation any related application, permit, certification, condition, environmental determination, other approval, compliance or failure to comply with applicable laws and regulations, and/or processing methods ("Challenge"). Town may (but is not obligated to) defend such Challenge as Town, in its sole discretion, determines appropriate, all at applicant's sole cost and expense.

    Applicant shall bear any and all losses, damages, injuries, liabilities, costs and expenses (including, without limitation, staff time and in-house attorney's fees on a fully-loaded basis, attorney's fees for outside legal counsel, expert witness fees, court costs, and other litigation expenses) arising out of or related to any Challenge ("Costs"), whether incurred by Applicant, Town, or awarded to any third party, and shall pay to the Town upon demand any Costs incurred by the Town. No modification of the Project, any application, permit certification, condition, environmental determination, other approval, change in applicable laws and regulations, or change in such Challenge as Town, in its sole discretion, determines appropriate, all the applicant's sole cost and expense. No modification of the Project, any application, permit certification, condition, environmental determination, other approval, change in applicable laws and regulations, or change in processing methods shall alter the applicant's indemnity obligation.
28. COMPLIANCE MEMORANDUM: A memorandum shall be prepared and submitted with the building plans detailing how the Conditions of Approval will be addressed.

ENVIRONMENTAL REVIEW MITIGATION MEASURE CONDITIONS APPLICABLE TO ALL LOTS *

29. *AIR QUALITY - III-1: The project applicant shall show on Improvement Plans via notation that the project contractor shall restrict the construction of the off-site sidewalk improvements along the north side of Blossom Hill Road between Regent Drive and Union Avenue and along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road from occurring simultaneously with the on-site construction of the proposed project. Alternatively, if simultaneous construction of the on-site and off-site components of the proposed project cannot be avoided, prior to the initiation of ground disturbance associated with the off-site sidewalk improvements, the project applicant shall show on project improvement plans via notation the following requirements:
    - The contractor shall ensure that all construction equipment greater than 50 horsepower to be used in the construction of the off-site sidewalk improvements, including owned, leased, and subcontractor vehicles, shall be Tier 4 final off-road construction equipment. In addition, all off-road equipment operating at the off-site construction site must be maintained in proper working condition according to manufacturer's specifications.
    - Idling shall be limited to five minutes or less in accordance with the In-Use Off-Road Diesel Vehicle Regulation as required by CARB. Clear signage regarding idling restrictions shall be placed at the entrances to the construction site.
    - Portable equipment over 50 horsepower must have either a valid BAAQMD Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.

    Conformance with the foregoing requirements shall be confirmed through review and approval of plans by the Town of Los Gatos Parks and Public Works Department.
30. *BIOLOGICAL RESOURCES IV- 1, CALIFORNIA RED-LEGGED FROG: Within 48 hours prior to any ground disturbing activities or vegetation clearing within 50 feet of Ross Creek, a pre-construction survey for California red-legged frog shall be conducted by a qualified biologist. Survey results shall be submitted to the Town of Los Gatos Community Development Department.
31. *BIOLOGICAL RESOURCES IV- 2- CALIFORNIA RED-LEGGED FROG: If California red-legged frog is encountered, activities shall cease until the animal moves out of any proposed work area on its own or is relocated by a permitted qualified biologist. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
32. *BIOLOGICAL RESOURCES IV- 3, CALIFORNIA RED-LEGGED FROG: During construction activities, fiber netting such as silt fence or similar material shall be used for erosion control where appropriate throughout the project site and within 50 feet of Ross Creek to ensure that California red-legged frog does not get trapped. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
33. *BIOLOGICAL RESOURCES IV-4, WHITE-TAILED KITE AND OTHER NESTING RAPTORS AND MIGRATORY BIRDS: If tree removal or ground disturbing activities are scheduled to commence during the nesting season (February 1st through August 31st), a pre-construction nesting bird survey shall be conducted by a qualified biologist within seven

days prior to such activities to identify possible nesting activity. Survey results shall be submitted to the Town of Los Gatos Community Development Department. If active nests are not found, further mitigation is not required. If one or more active nests are found, a construction-free buffer of suitable dimensions shall be established around any active raptor or migratory bird nest for the duration of the project, or until the qualified biologist has determined that the chicks have fledged and are foraging independently from their parents. The buffer shall be identified on the ground with flagging or fencing. The buffer distance shall be determined by the on-site qualified biologist based on the species, level of disturbance activity, location of the nest, and the topography between the nest and the construction activity; the construction-free buffer shall consist of a minimum starting distance of 250 feet for raptors and 25 feet for other birds. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

34. *BIOLOGICAL RESOURCES IV-5, PALLID BAT AND TOWNSEND'S BIG EARED BAT: Prior to the commencement of construction activities, a qualified biologist shall conduct a bat habitat assessment of all potential roosting habitat features, including trees within the proposed impact footprint within the project vicinity. The habitat assessment shall identify all potentially suitable roosting habitat and may be conducted up to one year prior to the start of construction. The results of the assessment shall be submitted to the Town of Los Gatos Community Development Department.

35. *BIOLOGICAL RESOURCES IV-6, PALLID BAT AND TOWNSEND'S BIG-EARED BAT: If potential roosting habitat is identified (cavities in trees or potential roosts within structures) within the areas proposed for impact, the biologist shall survey the potential roosting habitat during the active season (generally April through October or from January through March on days with temperatures in excess of 50 degrees Fahrenheit) within seven days prior to the start of construction activities to determine the presence of roosting bats. The surveys are recommended to be conducted utilizing methods that are considered acceptable by CDFW and bat experts. Methods may include evening emergence surveys, acoustic surveys, inspecting potential roosting habitat with fiberoptic cameras, or a combination thereof. If a non-breeding bat colony is discovered, the individuals shall be humanely evicted via two-step removal under the direction of a qualified biologist to ensure that harm or take would not occur to any bats as a result of tree removal. Two-step removal can only occur during March 1 to April 15 and September 1 to October 15 to avoid harm to maternity and overwintering colonies. If a maternity colony is detected, then a qualified biologist shall determine an appropriate size for a construction-free buffer to be established around the tree and remain in place until the qualified biologist has determined that the nursery is inactive. Tree removal shall preferably be done between March 1 and April 15 or August 15 and October 15 to avoid interfering with an active nursery. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

36. *BIOLOGICAL RESOURCES IV-7, SAN FRANCISCO DUSKY-FOOTED WOODRAT: A qualified biologist shall conduct a pre-construction survey for San Francisco dusky-footed woodrat nests between 30 and 14 days prior to the onset of construction activities. The survey shall encompass all construction zones within the woodland habitat and developed areas, and surrounding lands within 25 feet. Results of the assessment shall be submitted to the

Town of Los Gatos Community Development Department. Identified nests shall be avoided, where possible, and buffered by a minimum of 20 feet. If avoidance is not possible, the nest(s) shall be manually deconstructed by a qualified biologist when helpless young are not present, typically during the non-breeding season (October through January). If the qualified biologist has determined that young may be present during the nest deconstruction, a suitable buffer of a minimum of 20 feet shall be established around the nest until a qualified biologist determines that the young are independent enough to successfully move from the deconstructed nest. Approximate age of the juveniles shall be recorded when observed and appropriate time shall be extrapolated out to when they would be independent from their parents; then the deconstruction can continue after the biologist confirms that the young are not present in the nest at the time. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

37. *BIOLOGICAL RESOURCES IV-8, AMERICAN BADGER: During the course of the pre-construction surveys for other species, a qualified biologist shall also determine the presence or absence of badgers prior to the start of construction. If badgers are found to be absent, other mitigations for the protection of badgers shall not be warranted. If an active badger den is identified during pre-construction surveys within or immediately adjacent to an area subject to construction, a construction-free buffer of up to 300 feet shall be established around the den. Once a qualified biologist has determined that the badger has vacated the burrow, the burrow can be collapsed or excavated, and ground disturbance can proceed. Should the burrow be determined to be a natal or reproductive den, and because badgers are known to use multiple burrows in a breeding burrow complex, a biological monitor shall be present on-site during construction activities in the vicinity of the burrows to ensure the buffer is adequate to avoid direct impacts to individuals or natal/reproductive den abandonment. The monitor shall be present until the qualified biologist has determined that young are of an independent age and construction activities would not harm individual badgers. Additionally, all workers shall attend a “tailgate” training that includes a description of the species, a brief summary of the species’ biology, and minimization measures and instructions on what to do if an American badger is observed. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

38. * BIOLOGICAL RESOURCES IV-9, BURROWING OWL: A qualified biologist shall conduct a preconstruction survey for burrowing owl following the 2012 CDFW Guidelines, or the most recent guidelines, which includes two surveys, one within 14 days prior to the start of construction and the second within 24 hours prior to the start of construction. If a lapse in project-related work of 15 calendar days or longer occurs, an additional survey shall be required prior to reinitiation. A written summary of the survey results shall be submitted to the Town of Los Gatos Community Development Department before any construction permits are issued. If burrowing owls or active burrows/refugia are not found, then further mitigation measures are not necessary. Identified burrowing owls shall be avoided and active burrowing owl burrows shall be avoided with a 250-foot non-disturbance buffer until the burrow is abandoned. The project biologist shall conduct a weekly check-in to confirm the buffer is still intact and confirm the current activity of that burrow. Proof

of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

39. *BIOLOGICAL RESOURCES IV-10, WATER QUALITY CONTROL BOARD (SFRWQCB) AND CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE (CDFW): Prior to initiation of any ground disturbance activities, the project applicant shall submit to the San Francisco Bay Regional Water Quality Board (SFRWQCB) an application for Clean Water Act Section 401 Water Quality Certification and/or Waste Discharge Requirements for Projects Involving Discharge of Dredged and/or Fill Material to Waters of the State. The project proponent shall be responsible for conducting all project activities in accordance with the permit provisions outlined in the applicable SFRWQCB permit, which may include but not necessarily be limited to the following minimization and compensation measures.

    a. MINIMIZATION: Because full avoidance is not possible, actions shall be taken to minimize impacts to the ephemeral stream (e.g., potentially waters of the State and under jurisdiction of both RWQCB and CDFW). Measures taken during construction activities shall include placing construction fencing around the ephemeral stream to be preserved to ensure that construction activities do not inadvertently impact these areas.
    b. COMPENSATION: The proposed project would impact some small areas of the ephemeral stream. Therefore, the project shall replace the lost habitat value resulting from this impact through the creation, restoration, and/or enhancement of habitat at one or more appropriate locations near the impacted areas at a minimum of a 1:1 replacement-to-loss ratio as well as reseeding or replanting of vegetation in temporarily disturbed areas. The final mitigation amounts will be based on actual impacts to be determined during the design phase. If impacts are lessened, then the amount of mitigation should be appropriately reduced. It is anticipated that all compensation measures can be accommodated on-site within the existing ephemeral stream, including removal of the existing culvert in the upper area of the stream and creation of new incised channel segments. In consultation with and as approved by the SFRWQCB an on-site habitat mitigation and monitoring plan (HMMP) shall be developed in order to create, restore, and/or enhance the ephemeral stream with habitat functions and values greater than or equal to those existing in the impact zone. At a minimum, the HMMP shall include, unless otherwise specified by the SFRWQCB:
        - The location of all enhancement and/or restoration activities. The created/restored ephemeral channels shall be monitored for five years between the months of April through July during the mitigation monitoring years, and after any storm greater or equal to the 10-year rainfall event, as defined by Valley Water. The performance criterion for the stability and function of the ephemeral stream channels is that the bed and banks of the created channels shall be stable with no observed excessive erosion or deposition of sediment, or signs of instability;
        - Planting and irrigation specifications;
        - Site maintenance and management requirements (weeding of invasive species, providing for supplemental water, repair of water delivery systems, etc.;

- Vegetation Monitoring for five years between April and July, with the goal of ensuring the created/restored channels are adequately vegetated to stabilize surface soils and to ensure harmful invasive species are not dominating this area. The absolute cover of herbaceous vegetative cover shall reach a minimum of 70% by Year 5. Highly invasive weeds (Cal-IPC 2026) and other potentially damaging plants in the channel creation areas shall be at a minimum of less than 20% in Year 5; and Adaptive management procedures, which could include replanting or restoration areas following annual monitoring surveys; channel stabilization measures; etc.

Written verification of the 401 Water Quality Certification or Waste Discharge Requirements shall be provided to the Town of Los Gatos Community Development Department, prior to initiation of any ground disturbance activities.

40. *BIOLOGICAL RESOURCES IV-11: The CDFW maintains jurisdiction over the bed and bank of the bed, channel, and banks of any river, stream, or lake (Fish and Game Code Section 1602) and impacts to such areas may require a Lake or Streambed Alteration Agreement (LSAA). Prior to initiating construction activities, the project shall notify CDFW of the intentions of the project to determine if an LSAA is required. If required, mitigation may include restoration or enhancement of resources on-site as specified in Mitigation Measure IV-10. Written verification of Section 1600 LSAA or, if a LSSA is not required, written correspondence from CDFW to this effect, shall be provided to the Town of Los Gatos Community Development Department, prior to initiation of any ground disturbance activities.

41. * BIOLOGICAL RESOURCES IV-12: Prior to the start of construction activities, the applicant shall comply with the Town of Los Gatos Tree Protection Ordinance, and a tree removal permit shall be obtained from the Town for the removal of any on-site trees that qualify as a protected tree. If the trees proposed for removal are found to be in good condition, and the tree removal permit is granted primarily for the convenience of the applicant, then the full cost and responsibility of such removal shall be borne by the applicant, including planting of replacement trees. According to the Tree Mitigation and Protection Plan prepared for the proposed project, the project would not meet the required on-site tree replacement requirement; thus, the project applicant shall pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code. The above noted requirements shall be completed to the satisfaction of the Town of Los Gatos Planning Division.

42. *CULTURAL RESOURCES V-1: If historic, archaeological, or paleontological resources are encountered during subsurface excavation activities, all construction activities within a 100-foot radius of the resource shall cease until a qualified archaeologist determines whether the resource requires further study. The Town shall require that the applicant include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. Any previously undiscovered resources found during construction shall be recorded on appropriate California Department of Parks and Recreation forms and evaluated for significance in terms of California Environmental Quality Act (CEQA) criteria by a qualified archaeologist. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. If the resource is

determined to be significant under CEQA, the Town and a qualified archaeologist shall determine whether preservation in place is feasible. Such preservation in place is the preferred mitigation. If such preservation is infeasible, the qualified archaeologist shall prepare and implement a research design and archaeological data recovery plan for the resource. The archaeologists shall also conduct appropriate technical analyses, prepare a comprehensive written report and file the report with the appropriate information center (California Historical Resources Information System), and provide for the permanent curation of the recovered materials.

43. *CULTURAL RESOURCES V-2: If human remains, or remains that are potentially human, are found during construction, all work shall be halted immediately within 100 feet, and a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Santa Clara County Coroner (pursuant to Section 7050.5 of the State Health and Safety Code). The provisions of Section 7050.5 of the California Health and Safety Code, Section 5097.98 of the California Public Resources Code, and Assembly Bill (AB) 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (Section 5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or MLD must rebury the remains where they will not be further disturbed (Section 5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agency, through consultation as appropriate, determines that the treatment measures have been completed to the Town's satisfaction.

44. *GEOLOGY AND SOILS VII-1: Prior to approval of any grading or improvement plans for the project, a licensed engineer shall review the plans to ensure the engineering recommendations set forth in the site-specific Geotechnical and Geologic Hazard Investigation prepared for the proposed project by Cornerstone Earth Group are adequately incorporated, including all relevant CBSC standards, to the satisfaction of the Town's Engineer. All grading and improvement plans shall be reviewed and approved by the Town of Los Gatos Community Development Department and the Town's Engineer.

45. *HYDROLOGY AND WATER QUALITY X-1: Prior to any ground-disturbing activities, the project applicant shall prepare and submit a final erosion and sediment control plan for review and approval by the Town of Los Gatos Engineering Division of the Parks and Public Works Department. A Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) shall be submitted to the San Francisco Bay Regional Water Quality Control Board. A maximum of two weeks is allowed between clearing of an area and stabilizing/building on an area if grading is allowed during the rainy season. Prior to any ground disturbance, the on-site aquatic features (i.e. the ephemeral

drainage/drainage swale and Ross Creek) shall be flagged by a qualified biologist with highly visible flagging tape, or similar, to clearly demarcate the limits of the aquatic features, and interim erosion control measures shall be installed around the aquatic features, at a minimum. Interim erosion control method shall include, but are not limited to: silt fences, fiber rolls (with locations and details), erosion control blankets, Town standard seeding specification, filter berms, check dams, retention basins, etc. The project contractor shall provide erosion control measures as needed to protect downstream water quality during winter months. The grading, drainage, erosion control plan and SWPPP shall be prepared in compliance with applicable measures contained in the amended provisions C.3 and C.14 of the most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). Monitoring for erosion and sediment control is required and shall be performed by the Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) as required by the Construction General Permit. Stormwater samples are required for all discharge locations and projects may not exceed limits set forth by the Construction General Permit Numeric Action Levels and/or Numeric Effluent Levels. A Rain Event Action Plan (REAP) shall be developed 48 hours prior to any likely precipitation event, defined by a 50 percent or greater probability as determined by the National Oceanic and Atmospheric Administration (NOAA), and/or whenever rain is imminent. The QSD or QSP must print and save records of the precipitation forecast for the project location area from (https://www.cpc.ncep.noaa.gov/), which shall accompany monitoring reports and sampling test data. A rain gauge is required on-site. The Town of Los Gatos Parks and Public Works Department and the Building Department shall conduct periodic NPDES inspections of the site throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

46. *NOISE XIII-1: For any construction proposed within 25 feet of a noise-sensitive receptor, the proposed project shall implement construction equipment staging areas to create distance between construction-related noise sources and noise-sensitive receptors; use electric tools; use mobile construction equipment with smart back-up alarms; and implement additional noise attenuation techniques during the clearing, earth moving, grading, and foundation/conditioning phases of construction, such as temporary sound barriers between the construction site and the sensitive receptors. The foregoing requirements shall be included in the grading plan to the satisfaction of the Town's Engineer and shall be submitted for review and approval to the Town of Los Gatos Community Development Department.

47. *NOISE XIII-2: Any compaction required within 26 feet of existing structures adjacent to the off-site improvement areas shall be accomplished by using static drum rollers, rather than vibratory compactors/rollers, which use weight instead of vibrations to achieve soil compaction. As an alternative, preconstruction crack documentation and construction vibration monitoring could be conducted to ensure that construction vibrations do not cause damage to any adjacent structures. The above requirements shall be included by way of notation on any future improvement plans approved for the off-site improvements to the satisfaction of the Town of Los Gatos Community Development Department.

48. *TRANSPORTATION XVII-1: Concurrent with submittal of final project improvement plans, the project applicant shall also submit to the Town of Los Gatos, Parks and Public Works Departement for review and approval off-site improvement plans showing the construction of new sidewalks at the following intersections:
    - Along the north side of Blossom Hill Road between Regent Drive and Union Avenue; and
    - Along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road.

    The improvement plans shall demonstrate, to the satisfaction of the Town Engineer, that the off-site sidewalk improvements would comply with all applicable design parameters and requirements set forth by the Town of Los Gatos. The off-site improvements shall be constructed prior to the issuance of any certificate of occupancy for the project.

APPLICABLE TO LOT 3

49. TREE PROTECTION: Prior to issuance of a grading or Building Permit, the grading and retaining wall plans shall be revised to ensure no work occurs within the dripline of Trees #569 and #566. The revised plans shall be reviewed and approved by the Town's Consulting Arborist, at the applicant's expense, prior to permit issuance.

APPLICABLE TO LOTS 7 AND 8

50. SWIMMING POOL: Prior to the issuance of a Building Permit, the proposed pool location shall be modified to ensure that the pool is located on a slope less than 30 percent, consistent with the Hillside Development Standards and Guidelines.

Building Division

APPLICABLE TO ALL LOTS

51. PERMITS REQUIRED:
    a. A Building Permit is required for the construction of each new single-family residence and attached garage.
    b. Additional Building Permits will be required for retaining walls supporting a surcharge that are not part of a building foundation.
    c. A separate Building Permit will be required for each swimming pool.
    d. A separate Building Permit will be required for the PV System and must be finalized prior to the issuance of the Certificate of Occupancy.
52. APPLICABLE CODES: The current codes, as amended and adopted by the Town of Los Gatos as of January 1, 2023, are the 2022 California Building Standards Code, California Code of Regulations Title 24, Parts 1-12. Building Permit applications received after December 19, 2025, will be subject to the 2025 California Building Standards Code, California Code of Regulations Title 24, Parts 1-12.
53. CONDITIONS OF APPROVAL: The Conditions of Approval must be included on plan sheets within the construction plans. A Compliance Memorandum shall be prepared and submitted with the Building Permit application detailing how the Conditions of Approval will be addressed.

54. BUILDING AND SUITE NUMBERS: Submit requests for new building addresses to the Building Division before submitting the Building Permit application.
55. SIZE OF PLANS: Minimum size 24” x 36”, maximum size 30” x 42”.
56. SOILS REPORT: A Soils Report, prepared to the satisfaction of the Building Official, containing foundation and retaining wall design recommendations, shall be submitted with the Building Permit Application. This report shall be prepared by a licensed Civil Engineer specializing in soils mechanics.
57. FOUNDATION INSPECTIONS: A pad certificate, prepared by a licensed civil engineer or land surveyor, shall be submitted to the project Building Inspector at the time of the foundation inspection. This certificate shall certify compliance with the recommendations specified in the Soils Report and confirm that the building pad elevations and on-site retaining wall locations and elevations have been prepared in accordance with the approved plans. Horizontal and vertical controls shall be set and certified by a licensed surveyor or registered Civil Engineer for the following items:
    a. Building pad elevation
    b. Finish floor elevation
    c. Foundation corner locations
    d. Retaining wall(s) locations and elevations
58. TITLE 24 ENERGY COMPLIANCE: All required California Title 24 Energy Compliance Forms must be directly printed onto a plan sheet.
59. TOWN RESIDENTIAL ACCESSIBILITY STANDARDS: New residential units shall be designed with adaptability features for single-family residences per Town Resolution 1994-61:
    a. Wood backing (2” x 8” minimum) shall be provided in all bathroom walls, at water closets, showers, and bathtubs, located 34 inches from the floor to the center of the backing, suitable for the installation of grab bars if needed in the future.
    b. All passage doors shall be at least 32-inch-wide doors on the accessible floor level.
    c. The primary entrance door shall be a 36-inch-wide door including a 5’x 5’ level landing, no more than 1 inch out of plane with the immediate interior floor level and with an 18-inch clearance at interior strike edge.
    d. A door buzzer, bell or chime shall be hard wired at the primary entrance.
60. BACKWATER VALVE: As required by Town Ordinance 6.40.020, provide details for any required sanitary sewer backwater valve on the plans and provide its location. The Town of Los Gatos Ordinance and West Valley Sanitation District (WVSD) requires backwater valves on drainage piping serving fixtures that have flood level rims less than 12 inches above the elevation of the next upstream manhole.
61. HAZARDOUS FIRE ZONE: All projects in the Town of Los Gatos require Class A roof assemblies.
62. WILDLAND-URBAN INTERFACE: This project is in a Wildland-Urban Interface High Fire Area and must comply with the relevant Wildland-Urban fire protection regulations in effect at the time of permit submittal.
63. SPECIAL INSPECTIONS: When a special inspection is required by CBC Section 1704, the Architect or Engineer of Record shall prepare an inspection program that shall be submitted to the Building Official for approval prior to issuance of the Building Permit.

The Town Special Inspection form must be completely filled out and signed by all requested parties prior to permit issuance. Special Inspection forms are available online at www.losgatosca.gov/building.

64. CONSTRUCTION BEST MANAGEMENT PRACTICES (BMPs): The Town standard West Valley Clean Water Authority Nonpoint Source Pollution Control Program Sheet (page size same as submitted drawings) shall be part of the plan submittal. The specification sheet is available online at www.losgatosca.gov/building.
65. APPROVALS REQUIRED: The project requires the following departments and agencies' approval before issuing a Building Permit:
    a. Community Development – Planning Division: (408) 354-6874
    b. Engineering/Parks and Public Works Department: (408) 399-5771
    c. Santa Clara County Fire Department: (408) 378-4010
    d. West Valley Sanitation District: (408) 378-2407
    e. Local School District: The Town will forward the paperwork to the appropriate school district(s) for processing. A copy of the paid receipt is required prior to permit issuance.

TO THE SATISFACTION OF THE DIRECTOR OF PARKS AND PUBLIC WORKS:
Engineering Division

APPLICABLE TO ALL LOTS

THE FOLLOWING CONDITIONS SHALL BE ADDRESSED OR NOTED ON THE CONSTRUCTION PLANS SUBMITTED FOR ANY BUILDING OR GRADING PERMIT, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

66. PAYMENT OF PARKS AND PUBLIC WORKS ("PPW") ENGINEERING PLAN CHECK FEE AND INSPECTION FEE: At the time of the first construction submittal, the Applicant shall submit to the Town Engineer for approval a detailed construction project cost estimate prepared and stamped by the Applicant's civil engineer. The cost estimate shall break out on-site and off-site improvements separately. This cost estimate will be used to determine the Engineering Plan Check Fee. A final construction cost estimate shall be provided once the project plans are approved. This cost estimate will be used to determine the Engineering Inspection Fee. The Engineering Inspection Fee must be paid prior to the issuance of any construction related permit.
67. THIRD-PARTY PLAN CHECK FEE AND INSPECTION FEE (Special projects only): The Town will procure a third-party engineering firm to perform Plan Review and Inspection Services. Applicant shall provide an initial deposit for consultant plan review and inspection services, plus a 20 percent deposit for staff time to process the project. This deposit and fee are required at the time of the project Building Permit submittal. Once this deposit is received, the Town will select the consultant and initiate the plan review process. The Applicant's deposit will be charged on a time and materials basis. A supplemental deposit will be required if the remaining deposit is expected to be exhausted prior to completion of the work. Permitted work will not be allowed to continue without available funds to complete the required inspection services. Third-party engineering services will be required for the duration of the construction and

project closeout phases.

68. STORM DRAINAGE FEE: The Applicant shall pay Storm Drainage Fees in accordance with the Town's Adopted Schedule of Fees and Charges in effect at the date of Housing Crisis Act of 2019 (SB330) application for the future construction of drainage facilities serving new buildings, improvements, or structures to be constructed which substantially impair the perviousness of the surface of land. The estimated fee based on the fiscal year 2023-2024 fee schedule and various lot acreages are as follows:
    a. Lot 1 – 0.5 acres - $2,435.50.
    b. Lot 2 – 0.79 acres - $3,848.09.
    c. Lot 3 – 0.55 acres - $2,679.05.
    d. Lot 4 – 0.59 acres - $2,873.89.
    e. Lot 5 – 0.85 acres - $4,140.35.
    f. Lot 6 – 0.78 acres - $3,799.38.
    g. Lot 7 – 1.18 acres - $4,871.00.
    h. Lot 8 – 4.9 acres - $4,871.00.
    i. Lot 9 – 1.7 acres - $4,871.00.
    j. Lot 10 – 5.48 acres - $4,871.00.
    k. Lot 11 – 0.11 acres - $535.81.
    l. Lot 12 – 0.11 acres -$535.81.
69. TRAFFIC IMPACT FEES: The Owner shall pay the project's proportional share of transportation improvements needed to serve cumulative development within the Town of Los Gatos. The fee amount will be based upon the fee schedule in place at the time of the Housing Crisis Act of 2019 (SB 330) application, in accordance with the law. The fiscal year 2023-2024 Comprehensive Fee Schedule amount for new average daily trip generated is $1,104.00. The new average daily trips generated shall be obtained from the Institute of Transportation Engineers most current trip generation data released at the time the fee is paid. The fee shall be paid before issuance of any certificate of occupancy, including any temporary certificates that may be issued.
70. CONSTRUCTION ACTIVITIES MITIGATION FEE (ORDINANCE 2189): Per the Town's Comprehensive Fee Schedule, the project is subject to the Town's Construction Activities Mitigation Fee based on the square footage of new buildings. The fee is $1.43 per square foot of new residential and non-residential building area. The fee shall be calculated based on the square footage total for all units shown on the construction plans to the approval of the Town Engineer. Payment of this fee shall be paid prior to issuance of the first Building Permit.
71. PERMITS REQUIRED BY OTHER AGENCIES: The Applicant shall obtain all applicable permits from federal, state, and local agencies as required to construct the proposed improvements. The Applicant is hereby informed that permits may be required by one (1) or more of the following: Army Corps of Engineers, Fish and Wildlife (1603), The Bay Area Joint Aquatic Resources Permit Application (JARPA), Regional Water Quality Control Board, Santa Clara County Roads and Airports, Valley Water, or Habitat Permit. If the project is within the jurisdiction of any of these agencies, verification of permit or waiver of permit must be given to PPW prior to issuance of any required Town permits. If the Town is required to be a party to the permit application and a fee is required, the Applicant shall reimburse the Town for its cost. A copy of these permits shall be

provided to the satisfaction of the Town Engineer prior to the issuance of the first Building Permit.

72. GRADING PERMIT: A Grading Permit is required for all site grading and drainage work that is outside the perimeter of a building, retaining wall footing, or other structure authorized by a valid Building Permit. The Applicant must submit a Grading Permit application after the appeal period of the entitlement approval process has passed. The Grading Permit application shall include detailed grading plans and associated required materials. Plan check fees are based on the scope of onsite work. Prior to approval of the Grading Permit, the Applicant shall pay all fees due and provide faithful performance and payment securities for the performance of the work described and delineated on the approved grading plan, final erosion and sedimentation control plan, and interim erosion and sedimentation control plan (if required), in an amount to be set by the Town Engineer (but not to exceed one hundred (100) percent) of the approved estimated cost of the grading and erosion and sedimentation control measures. The form of security shall be one or a combination of the following to be determined by the Town Engineer and subject to the approval of the Town Attorney: (1) Bond or bonds issued by one or more duly authorized corporate sureties on a form approved by the Town; (2) Deposit with the Town, money, or negotiable bonds of the kind approved for securing deposits of public monies; or (3) other instrument of credit from one or more financial institutions subject to regulation by the State or Federal Government wherein such financial institution pledges funds are on deposit and guaranteed for payment. The Grading Permit shall be issued prior to the issuance of the Building Permit unless otherwise allowed by the Town Engineer. The permit shall be limited to work shown on the grading plans approved by the Town Engineer. In granting a permit, the Town Engineer may impose any condition deemed necessary to protect the health, safety, and welfare of the public, to prevent the creation of a nuisance or hazard to public or private property, and to assure proper completion of the grading including but not limited to: (1) Mitigation of adverse environmental impacts; (2) Improvement of any existing grading or correction of any existing grading violation to comply with Town Code; (3) Requirements for fencing or other protection of grading which would otherwise be hazardous; (4) Requirements for dust, erosion, sediment, and noise control, hours of operation and season of work, weather conditions, sequence of work, access roads, and haul routes; (5) Requirements for safeguarding watercourses from excessive deposition of sediment or debris in quantities exceeding natural levels; (6) Assurance that the land area in which grading is proposed and for which habitable structures are proposed is not subject to hazards of land slippage or significant settlement or erosion and that the hazards of seismic activity or flooding can be eliminated or adequately reduced; (7) Temporary and permanent landscape plans.

73. PUBLIC IMPROVEMENTS: Prior to the approval of any permits or final map, whichever comes first, the Applicant/Owner must complete construction of public improvements listed in these conditions. Prior to any work being done in the Town's right-of-way, the Applicant must submit Public Improvement Plans for review and approval. All public improvements shall be made in accordance to the Town’s latest adopted Standard Plans, Standard Specifications, and Engineering Design Standards and constructed prior to final map approval unless otherwise noted below. The Applicant is required to

confirm the location of existing utility lines by potholing. Prior to any potholing, Applicant shall submit an Encroachment Permit application with a pothole plan for Town review and approval. The Applicant shall provide the pothole results to the Town Engineer prior to final design. All existing public utilities shall be protected in place and, if necessary, relocated as approved by the Town Engineer. No private facilities are permitted within the Town right-of-way or within any easement unless otherwise approved by the Town Engineer. The Applicant shall have Public Improvement Plans prepared, stamped, and signed by a California licensed civil engineer.
Once the Public Improvement Plans have been approved, the Applicant shall submit an application for an Encroachment Permit. The Encroachment Permit requires the Applicant to post the required bonds and insurance and provide a one (1) year warranty for all work to be done in the Town's right-of-way or Town easement. New concrete shall be free of stamps, logos, names, graffiti, etc. Any new concrete installed that is damaged shall be removed and replaced at the Contractor's sole expense. Prior to issuance of the encroachment permit, the Applicant shall submit a temporary traffic control plan ("TTCP") inclusive of all modes of travel for any lane or sidewalk closures. Special provisions such as limitations on working hours, protective enclosures, or other means to facilitate public access in a safe manner may be required. The TTCP shall comply with the State of California Manual of Uniform Traffic Control Devices ("MUTCD") and standard construction practices. The project engineer shall notify the Town Engineer in writing of any proposed changes. Any proposed changes to the approved plans shall be subject to the approval of the Town. The Applicant shall not commence any work deviating from the approved plans until such deviations are approved. Any approved and constructed changes shall be incorporated into the final "as-built" plans. Right-of-way/Public improvements shall include, at a minimum, the following items:

a. BLOSSOM HILL ROAD: The Applicant shall install sidewalk along the north side of Blossom Hill Road between Regent Drive and Union Avenue.
b. FISHER AVENUE: The Applicant shall install sidewalk along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road.
c. DRIVEWAY APPROACH(ES): The Applicant shall install three (3) Town Standard driveway approaches as shown on the approved plans. The new driveway approaches shall be constructed per the Town Standard Drawing.
d. CERRO VISTA COURT: Due to construction activities, new utility cuts along the project frontage, and the anticipated project's truck traffic, the Applicant shall grind and provide a 2.5" overlay along the full width of Cerro Vista Court from Cerro Vista Drive to the driveway at Lot 10 frontage. Prior to overlay, any base failure repair or required dig-outs identified by the PPW Inspector shall be completed. The Town Engineer shall approve the roadway repair prior to the release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.
e. TWIN OAKS DRIVE: Due to construction activities, new utility cuts along the project frontage, and the anticipated project's truck traffic, the Applicant shall grind and provide a 2.5" overlay along the full width of Twin Oaks Drive from Longmeadow Drive to the project entrance. frontage. Prior to overlay, any base

failure repair or required dig-outs identified by the PPW Inspector shall be completed. The Town Engineer shall approve the roadway repair prior to the release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.

74. TREE REMOVAL PERMIT: The Applicant shall apply and obtain a Tree Removal Permit from the Parks and Public Works Department for the removal of existing trees on-site or in the public right-of-way prior to the issuance of a Building Permit or demolition Building Permit, whichever is issued first. Tree removals shall be consistent with the arborist report and approved entitlement plans.
75. NEIGHBORING RUNOFF: Revise the proposed grading to ensure that the proposed improvements do not divert runoff to the detriment of adjacent properties.
76. PHASED PERMITS: The Applicant may, with the approval of the Town Engineer, phase the permits to expedite the construction process. If this is done, each phase of the work will require a separate and complete set of plans to be submitted, reviewed, and approved prior to the issuance of the said permit. Overlapping of permits may occur, if approved by the Town Engineer. No work on the next phase of construction, in advance of the permitted work, may occur. No "at risk" work will be permitted. Only the below phased permitted work will be allowed:
    a. Clearing-Grubbing/Rough Grading
    b. Fine Grading
    c. Underground Utilities
    d. Site Improvements
    e. Off-Site Improvements
    f. Plans shall be submitted, reviewed, and approved by the Town Engineer prior to the commencement of work.
77. CONSTRUCTION PHASE PLAN SUBMITTAL REQUIREMENTS: The Grading Permit Plans and Public Improvement Plans (together referred to as "Improvement Plans") shall be submitted as a set to Parks and Public Works Department along with a title report dated no older than 30 days from the date the Improvement Plans are submitted. The Improvement Plans shall be submitted at the same time as the Building Plans are submitted to the Building Department. All improvements shall be designed and constructed in accordance with Federal law, State law, Los Gatos Town Code, and the Los Gatos Standard Specifications and Details.
    a. Construction drawings shall comply with Section 1 (Construction Plan Requirements) of the Town's Engineering Design Standards, which are available for download from the Town's website. The Improvement Plans shall include:
    b. A cover sheet with at least the proposed development vicinity map showing nearby and adjacent major streets and landmarks, property address, APN, scope of work, project manager and property owner, a "Table of Responsibilities" summarizing ownership, access rights, and maintenance responsibilities for each facility (streets, utilities, parks, landscaping, etc.), a sheet index including a sequential numeric page number for each sheet (i.e. "Sheet 1 of 54"), the lot size, required and proposed lot setbacks by type, proposed floor areas by type for each building, average slope, proposed maximum height, and required and proposed parking count and type.

c. The Approved Conditions of Approval printed within the plan set starting on the second sheet of the plan set.

d. An Existing Site Plan showing existing topography, bearing and distance information for all rights-of-way, easements, and boundaries, any existing easements proposed to be quit-claimed, existing hardscape, existing above ground utility features, and existing structures. The Improvement Plans shall identify the vertical elevation datum, date of survey, and surveyor responsible for the data presented.

e. A Proposed Site Plan showing proposed topography, boundaries, proposed and existing to remain easements, hardscape, above ground utility features (hydrants, transformers, control cabinets, communication nodes, etc.), and structures. Include top and bottom elevations of every inflection point of each wall. Show proposed public right-of-way improvements. Distinguish proposed linework from existing linework using heavier line type for proposed.

f. A Grading and Drainage Plan clearly showing existing onsite and adjacent topography using labeled contour lines, drainage direction arrows with slope value, and break lines. Proposed and existing to remain hardscape elevations must be provided in detail including slope arrows.

g. A Utility Plan showing appropriate line types and labels to identify the different types of utilities and pipe sizes. Utility boxes, hydrants, backflow preventers, water meters, sanitary sewer cleanouts, etc. shall be located on private property unless otherwise approved by the Town Engineer.

h. A Photometric Lighting Plan analyzing the full-width of the adjacent right-of-way. The plan shall show the average maintained horizontal illumination in foot-candles and the average to minimum uniformity ratio. Lighting shall be in compliance with the Town's Standard Specification section 2.38.

i. A Traffic Signal Plan (as applicable) shall include a conduit schedule, conduit plan, pole locations, streetlights, intersection striping, power connection and meter locations, and as directed.

j. A Landscaping Plan for the project site and the full width of the public rights-of-way adjacent to the project. The plans shall clearly identify public and private utilities and points of demarcation between the two.

k. A Composite Plan showing civil, landscape, electrical, and joint trench locations combined on one drawing to identify potential conflicts between disciplines. The Composite Plan shall include the size, location, and details of all trenches, locations of building utility service stubs and meters, and placements or arrangements of junction structures as a part of the Improvement Plan submittals for the project. Show preferred and alternative locations for all utility vaults and boxes if project has not obtained PG&E approval. A licensed Civil or Electrical Engineer shall sign the composite drawings and/or utility improvement plans. (All dry utilities shall be placed underground). A note shall be placed on the joint trench composite plans which states that the plan agrees with Town Codes and Standards and that no underground utility conflict exists.

l. General Notes found in the Town of Los Gatos General Guidelines.

m. A statement in the general notes indicating the need to obtain a Caltrans Oversized/Overweight Vehicles Transportation Permit if oversized or overweight vehicles are expected to be used.

n. A statement that all utility boxes in vehicular pathways shall be traffic-rated.

78. STANDARD PLAN COMPLIANCE: The project shall comply with the Town's Standard Plans to the approval of the Town Engineer. Street improvements, all street sections, the design of all off-site storm drainage facilities shall be in accordance with the most current Town Standard Specifications and Standard Plans approved by the Town Engineer. Improvements deemed necessary by the Town Engineer shall be shown on the Improvement Plans.

79. EXISTING FACILITY PROTECTION AND REPAIR: All existing public utilities shall be either protected in place, relocated, or repaired. The Applicant shall repair or replace all existing improvements not designated for removal, and all new improvements that are damaged during construction or removed because of the Applicant's operations. This includes sidewalk, curb and gutter, streetlights, valley gutters, curb ramps, and any other existing improvements in the area that are not intended to be removed and replaced. The Applicant shall request a walk-through with the PPW construction Inspector before the start of construction to verify existing conditions. Said repairs shall be completed prior to issuance of the first certificate of occupancy of the project.

80. UNDERGROUND UTILITIES: All new services to the development shall be placed underground in accordance with the various utility regulations. Transformers and switch gear cabinets within designated Underground Districts shall be placed underground unless otherwise approved by the Town Engineer. Underground utility plans must be submitted to the Town and approved by the Town Engineer prior to installation.

81. UTILITY RESPONSIBILITIES: The Applicant is responsible for the maintenance of existing stormwater drainage facilities, including piped and open channel stormwater conveyances in private areas. The Applicant is responsible for all expenses necessary to connect to the various utility providers. Currently, the public storm sewer system is owned and maintained by the Town of Los Gatos, the water system in Los Gatos is owned and maintained by San José Water Company, and the sanitary sewer system in Los Gatos is owned and maintained by West Valley Sanitation District. Any alterations of the approved utilities listed must be approved by the Town prior to any construction.

82. UTILITY COMPANY COORDINATION: The Applicant shall negotiate any necessary right-of-way or easements with the various utility companies in the area, subject to the review and approval by the Town Engineer and the utility companies. Prior to the approval of the site plan for construction, the Applicant shall submit "Will Serve" letters from PG&E, San José Water, West Valley Sanitation District, West Valley Collections and Recycling, and AT&T (or the current "Carrier of Last Resort") with a statement indicating either a list of improvements necessary to serve the project or a statement that the existing network is sufficient to accommodate the project. Coordination of the stormwater conveyance system will be addressed during the Grading Permit review.

83. PREPARATION OF ELECTRICAL PLANS: All street lighting and traffic signal electrical plans shall be prepared by a California registered professional engineer experienced in preparing these types of plans. The Applicant shall submit a necessary stamped and signed Traffic Signal Plan with the Improvement Plans.

84. EXTERIOR SITE LIGHTING STANDARDS: The Applicant shall submit a photometric plan for on-site lighting showing lighting levels in compliance with the Town Standard Specifications section 2.38. The plan shall show the minimum maintained horizontal illumination in foot-candles and the uniformity ratio for all areas. This lighting standard is applicable to all parking lots, driveways, circulation areas, aisles, passageways, recesses, and accessible grounds contiguous to all buildings. Private, interior courtyards not accessible to the public are not required to meet this standard. The lighting system shall be so designed as to limit light spill beyond property lines and to shield the light source from view from off site. The photometric plan shall be approved by the Town Engineer and shall be addressed on the construction plans submitted for the first Building Permit. Any subsequent Building Permits that include any site lighting shall also meet these requirements.
85. STORM DRAINAGE STUDY: The Applicant shall submit a Storm Drainage Study for the proposed development stormwater conveyance system evaluating pre- and post-development peak discharge rates for the theoretical 2-year, 10-year, and 100-year (50-percent, 10-percent, and 1-percent annual chance) storm events including supporting hydraulic calculations for proposed pipe network. The study must address sizing and design details for the stormwater treatment systems proposed with the development. The study shall include an evaluation of the project site drainage including topography, natural drainage patterns, and existing man-made diversions (structures, raised pads, fences, etc.). If the study indicates that the theoretical water surface elevation or hydraulic grade line of the proposed development during a 10 percent annual chance storm event is above ground level at any point, the Applicant shall construct and dedicate to the Town new downstream storm drainage facilities necessary to achieve a connection point water depth no more than 80 percent full during the projected 10 percent annual chance storm event. The study must evaluate the 1 percent annual chance storm event base flood elevation. The finished floor elevations of all structures shall be constructed to be reasonably safe from flooding per Town Code Section 29.90.080(1)(c), which is typically done by constructing finished floors at 1-foot above base flood elevation. The Applicant shall submit the study for review and approval by the Town Engineer prior to the issuance of the first Building Permit.
86. STORMWATER MANAGEMENT PLAN: The Applicant shall develop a Storm Water Management Plan (“SWMP”) that complies with the California Water Board regulations and delineates site design measures, source control measures, low-impact-development (LID) treatment measures, hydromodification management measures, and construction site controls as appropriate. The Plan must indicate erosion protection measures for the inlet structures (e.g., pipe outlets, pump dissipator pipes, and/or bubblers). For the Bay Area Hydrologic Modification (“BAHM”) analysis, the Applicant must provide pump operations and intended routing during various runoff conditions (i.e., treatment runoff vs. Hydrologic Modification controls) and the rationale for the pump size selected relative to the treatment flow rate. The Applicant shall update the BAHM analysis to conform to project conditions to the satisfaction of the Town Engineer and include a summary of the changes made to the BAHM analysis since the entitlement plan review for review by the C3 consultant. The Applicant must select and indicate bioretention

area plants capable of withstanding and surviving the higher design ponding conditions. If pumps are proposed, the Applicant must:

a. Provide pump discharge rates that receiving bioretention areas are capable of treating, to avoid consistently overwhelming the bioretention areas.
b. The Applicant must include an alarm system that will notify the owner or operator of a pump failure.
c. If off-site improvements modify the quantities of regulated and unregulated off-site impervious area, the Applicant must update Section 2, item "d" and Section 8 of the C.3 Data Form to reflect those changes.

87. DEVELOPER STORM WATER QUALITY RESPONSIBILITY: The Applicant is responsible for ensuring that all contractors including subcontractors are aware of all stormwater quality measures and implement such measures. The Applicant shall perform all construction activities in accordance with approved Improvement Plans, Los Gatos Town Code Chapter 12 – Grading, Erosion and Sediment Control, and the National Pollutant Discharge Elimination System (NPDES) General Permit. Failure to comply with these rules and regulations will result in the issuance of correction notices, citations, or a project stop order.
88. SITE DRAINAGE: Rainwater leaders shall be discharged to splash blocks. No through curb drains will be allowed. Any storm drains (public or private) directly connected to public storm system shall be stenciled/signed with appropriate "NO DUMPING - Flows to Bay" NPDES required language using methods approved by the Town Engineer on all storm inlets surrounding and within the project parcel. Furthermore, storm drains shall be designed to serve exclusively stormwater. Dual-purpose storm drains that switch to sanitary sewer are not permitted in the Town of Los Gatos. No improvements shall obstruct or divert runoff to the detriment of an adjacent, downstream or down slope property.
89. OFF-SITE DRAINAGE: The Applicant shall not alter any existing drainage patterns without an approved Grading Permit.
90. CLEAN, INSPECT, AND REPAIR STORM LINE: If the project will connect to the public storm drainage system, the Applicant is required to evaluate the conditions of the existing storm lines along the project frontage by videotaping and providing the result to the Town Engineer. The Applicant shall clean and inspect (via remote TV camera) the storm line from the manhole upstream to the manhole downstream of the project area. The video inspection shall be done by a professional video inspection company and be completed prior to Building Permit issuance. The video of the inspection shall be reviewed with PPW and if any cracked, broken, or otherwise compromised integrity is found, the areas of the line along the project frontage shall be repaired by the Applicant at the applicant's expense. The Applicant shall include the required repairs on the Improvement Plans submitted. All necessary repairs to the storm line shall be completed and approved prior to the project connecting to the storm drainage system.
91. GRADING AND DRAINAGE WINTER MORATORIUM: All grading activity shall comply with the Municipal Regional Stormwater Permit and Chapter 12 of the Town Code. There shall be no earthwork disturbance or grading activities between October 15th and April 15th of each year unless approved by the Town Engineer. In order to be considered for approval, the Applicant must submit a Winterization Erosion Control Plan certified by a

California certified QSD to the Town Engineer for review and approval. If grading is allowed during the rainy season, a maximum of two (2) weeks is allowed between clearing of an area and stabilizing/building on the exposed area. The submission of a certified plan does not guarantee approval. Any approved and executed plan must be kept on-site while the project is in construction.

92. SWPPP AND EROSION CONTROL: The Applicant shall prepare and submit a comprehensive stormwater pollution prevention plan (SWPPP) inclusive of interim and final erosion control plans to the Town Engineer for review and approval. The interim erosion control plan(s) shall include measures carried out during construction before final landscaping is installed. Multiple phases of interim erosion control plans may be necessary depending on the complexity of the project. Interim erosion control best management practices may include silt fences, fiber rolls, erosion control blankets, Town approved seeding mixtures, filter berms, check dams, retention basins, etc. The Applicant shall ensure a Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) monitors erosion and sediment control as required by the Construction General Permit. The Applicant must take measures to ensure continuous compliance with the Construction General Permit, and shall install, maintain, and modify the erosion control measures as needed to continuously protect downstream water quality. In the event an emergency modification is deemed necessary, the Applicant is to implement necessary measures to protect downstream waterways immediately and then submit the changes made within 24-hours to the Town Engineer for review and approval. The Applicant shall provide the Town Engineer with the assigned Notice of Intent (NOI) permit number received after filing a Notice of Intent under the Construction Stormwater General Permit. The erosion control plans and SWPPP shall comply with applicable measures contained in the most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). All tests submitted to the regional board must also be submitted to the Town Engineer. Any fees or penalties assessed against the Town in response to the Applicant's failure to comply with the Permit must be paid by the Applicant. The Applicant must permit Town staff onsite to conduct periodic NPDES inspections throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

93. SITE TRIANGLE AND TRAFFIC VIEW AREA: Fencing, landscaping, and permanent structures shall not visually obstruct line of sight between three-feet and 7.5-feet in height if located within the driveway view area, traffic view area, or corner sight triangle. The driveway and intersection site triangles are represented on Town Standard Drawing ST-231. The traffic view area and corner sight triangle are shown on Town Standard Drawing ST-232. This includes all above ground obstructions including utility structures, for example electric transformers. The various clearance lines shall be shown on the site plan to demonstrate compliance.

94. GEOTECHNICAL REVIEW: Prior to Building Permit issuance, the Applicant's Geotechnical Engineer shall submit a design level geotechnical report. The report will require a peer review by the Town's geological and geotechnical consultant. A deposit and fee for the peer review will be required per the Town's current fee schedule, unless there are any remaining deposit funds from the entitlement phase. The Town will route the design

level geotechnical report to the Town's peer review consultant once the report is submitted and deposit and fee are available. Once approved, the geotechnical engineer shall review the grading and drainage plan and proposed pavement and foundation design to verify that the design is in accordance with their recommendations. The Applicant's Geotechnical Engineer's approval shall be conveyed to the Town either by letter or by signing and stamping the plans. All grading operations and soil compaction activities shall be per the approved project's design level geotechnical report. The Applicant shall add this condition to the general notes on the grading plan.

95. GEOTECHNICAL ENGINEER OBSERVATION: All grading activities shall be conducted under the observation of, and tested by, a licensed geotechnical engineer. A report shall be filed with the Town of Los Gatos for each phase of construction stating that all grading activities were performed in conformance with the requirements of the project's design level geotechnical report. The Applicant shall submit a Final Geotechnical Construction Observation and Testing Summary in an "as-built" letter/report prepared and submitted to the Town prior to issuance of the certificate of occupancy. The Applicant shall add this condition to the general notes on the grading plan.
96. FLOODPLAIN MANAGEMENT: The Applicant shall submit to the Town Engineer a letter stamped and signed by the Engineer in Charge stating that: 1) all requirements of Chapter 29, Article 9 of the Town Code have been satisfied; 2) all other required state and federal permits have been obtained; 3) the site is reasonably safe—a state where hazards and conditions leading to harm are controlled, and a person can expect an environment to be free from dangers that a reasonable person would anticipate—from flooding; and 4) the proposed development does not adversely affect the carrying capacity of areas where base flood elevations have been determined but a floodway has not been designated. For purposes of this article, "adversely affects" means that the cumulative effect of the proposed development when combined with all other existing and anticipated development will increase the water surface elevation of the base flood more than one (1) foot at any point. If the site is filled above the base flood elevation, the lowest pad and floor elevations shall be certified by a California registered professional engineer or land surveyor and provided to the Town Engineer.
97. PRECONSTRUCTION MEETING: After the issuance of any Grading or Encroachment permit and before the commencement of any on or off-site work, the Applicant shall request a pre-construction meeting with the PPW Inspector to discuss the project conditions of approval, working hours, site maintenance, and other construction matters. At that meeting, the Applicant shall submit a letter acknowledging that:
    a. They have read and understand these project Conditions of Approval;
    b. They will require that all project sub-contractors read and understand these project Conditions of Approval; and
    c. They ensure a copy of these project Conditions of Approval will be posted on-site at all times during construction.
98. FLOOR DRAINS: All floor drains shall be plumbed to connect to the sanitary sewer system only. Site design must facilitate drainage away from building floor drains.
99. GARBAGE/RECYCLE STORAGE AND SERVICE: The Applicant shall provide adequate area for the purposes of storing garbage, composting and recycling collection containers for

scheduled servicing by the Town's solid waste collection provider. The collection containers shall not be placed in the right-of-way except during the period of time necessary to allow removal of the waste. brought to the service area on the day of service and returned to the storage enclosure by the property owner that same day. The containers are not to be in public view or in the public right-of-way prior to or beyond the scheduled service times. A letter from West Valley Collection and Recycling confirming serviceability and site accessibility shall be provided to the Town Engineer for approval prior to the approval of an occupancy permit.

100. OVERHEAD UTILITY CLEARANCE: For projects that have overhead utility lines on-site that travel over new buildings, the Applicant shall obtain a letter from the utility company indicating that there is adequate overhead clearance from the utility to the proposed building. The letter shall be submitted with the first set of improvement plans submitted. The plans shall show the existing utility pole, any necessary proposed pole protection (including overhead clearance warning identification), and shall be confirmed satisfactory with the utility company. The letter shall be for the approval of the Town Engineer.
101. SITE LANDSCAPING COORDINATION: The Applicant shall coordinate the overall site landscaping and the stormwater treatment area landscaping. Stormwater treatment areas should be identified on the site first, and then site landscaping to make sure the correct plant material is identified for each area. Some site landscaping plant material may not be suitable in stormwater treatment areas due to the nature of the facility. Sanitary sewer facilities cannot be aligned through stormwater treatment facilities.

THE FOLLOWING CONDITIONS SHALL BE MET PRIOR TO THE APPROVAL OF THE FINAL MAP OR PARCEL MAP, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

102. TEMPORARY CONSTRUCTION EASEMENT: Prior to the issuance of a Grading or Building Permit, it shall be the sole responsibility of the project to obtain any and all proposed or required easements and/or permissions necessary to perform any work on neighboring private property herein proposed. Proof of agreement/approval is required prior to the issuance of any Permit.
103. SUBDIVISION (FINAL) MAP: The Applicant shall have a subdivision map, prepared by a person authorized to practice land surveying in California, delineating all parcels created or deleted and all changes in lot lines in conformance with the Los Gatos Town Code and the Subdivision Map Act. Existing buildings shall be demolished prior to the recordation of the map if they will conflict with any newly created lot line. The Town Council must approve all Final Maps. The Town Council meeting will be scheduled after the Final Map, Public Improvement Plans, Stormwater Treatment Facilities Maintenance Agreement, Landscape Maintenance Agreement, Subdivision Improvement Agreement (if applicable) and constructed improvements (onsite and offsite) are approved by the Town Engineer. The Final Subdivision Map shall be approved by PPW and recorded by the County Recorder's Office prior to first Building Permit review of any market rate lots. In lieu of the Town Clerk's Office coordinating the recordation of the Final Map(s) with the County, the Applicant may submit a map guarantee by the Applicant's title company for the release of the signed Final Map to the title company for recordation. Prior to the

Town's release of the Final Map, the Town Engineer may require the Applicant to submit to the Town an electronic copy of the map in the AutoCAD Version being used by the Town at the time of recordation. It is the Applicant's responsibility to check with their title company and the County Recorder's Office to determine the time necessary to have the map recorded after Town approval.

104. SUBDIVISION IMPROVEMENT AGREEMENT ("SIA") – If any required subdivision or public improvements is not completed to the satisfaction of the Town Engineer before the final map is recorded or filed, the subdivider shall, prior to the approval by the Town Council of the final map and if permitted by Town Engineer, enter as a contractor into an agreement with the Town per Town Code Section 24.40.020, Gov. Code Section 66462(a), and shall arrange to provide Payment and Performance bonds each for 100 percent of the cost of subdivision and public infrastructure improvements to be constructed. These improvements shall include, but not be limited to, roadway construction, sidewalk, curb and gutter, storm lines, street lights, utilities and signal equipment. Town Standard insurance shall be provided per the terms of the agreement. The agreement will be forwarded to the Town Council for approval with project Final Map. The SIA shall be approved by the Town Council prior to the Final Map approval.
105. MONUMENTS: The applicant shall arrange for the engineer to have all monuments set per recorded map. A certificate letter by the Surveyor or Engineer stating the monuments are set per plan shall be provided to the Town Engineer prior to occupancy.
106. IMPROVEMENTS AND CONDITIONS: Pursuant to Gov. Code § 66499.30 No person shall sell, lease, or finance any parcel or parcels of real property or commence construction of any building for sale, lease or financing thereon, except for model homes, or allow occupancy thereof, for which a final map is required by this division or local ordinance, until the final map thereof in full compliance with this division and any local ordinance has been filed for record by the recorder of the county in which any portion of the subdivision is located
107. COVENANTS, CONDITIONS, AND RESTRICTIONS (CC&R): The Applicant shall prepare and submit project Covenants, Conditions and Restrictions (CC&R) for the project. The CC&Rs shall be submitted with the project map for review and approval of the Town Engineer, the Town Attorney, and the Planning Manager. The CC&Rs shall include relevant project Conditions of Approval, include a Maintenance Association and Roadway Maintenance Agreement and shall include language that restricts the Maintenance Association from making changes to the CC&Rs without first obtaining approval from the Town. References to the Stormwater Treatment Facilities Maintenance Agreement obligations shall be incorporated. The CC&Rs shall be reviewed and approved prior to the Town Council approval of the Final Map.
108. PRIVATE ROAD MAINTENANCE AGREEMENT: Prior to the issuance of any Building Permits or the filing of a Final Map the applicant shall record a legally enforceable Private Road Maintenance Agreement. The Agreement must be reviewed and approved by the Town Engineer and Town Attorney. It must explicitly state that all property owners benefiting from the private road share equitably in the perpetual maintenance, repair, and liability of the roadway, based on the proportional use of the roadway. The recorded document shall run with the land and bind all future successors.

109. PLAN DEFICIENCIES: Prior to final map approval, Applicant shall remedy existing plan inconsistencies and deficiencies remaining in entitlement plans.
110. C.3. REVIEW: Owner/Applicant shall complete C.3. Stormwater Review with Town Stormwater Consultant. Outstanding comments must be addressed prior to final map approval.

THE FOLLOWING CONDITIONS SHALL BE MET PRIOR TO RELEASE OF UTILITIES, FINAL INSPECTION, OR ISSUANCE OF A CERTIFICATE OF OCCUPANCY, WHICHEVER OCCURS FIRST, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

111. ELEVATION CERTIFICATE: An elevation certificate per FEMA requirements must be completed by a Land Surveyor or Civil Engineer. The elevation certificate shall be submitted and approved by the Town Engineer prior to issuance of the first building certificate of occupancy.
112. RECORD DRAWINGS: The Applicant shall submit a scanned PDF set of stamped record drawings and construction specifications for all off-site improvements to the Department of Parks and Public Works. All underground facilities shall be shown on the record drawings as constructed in the field. The Applicant shall also provide the Town with an electronic copy of the record drawings in the AutoCAD Version being used by the Town at the time of completion of the work. The Applicant shall also submit an AutoCAD drawing file of all consultants composite basemap linework showing all public improvements and utility layouts. This condition shall be met prior to the release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.
113. RESTORATION OF PUBLIC IMPROVEMENTS: The Applicant shall repair or replace all existing improvements not designated for removal that are damaged or removed during construction. Improvements such as, but not limited to curbs, gutters, sidewalks, driveways, signs, streetlights, pavements, raised pavement markers, thermoplastic pavement markings, etc., shall be repaired or replaced to a condition equal to or better than the original condition. Any new concrete shall be free of stamps, logos, names, graffiti, etc. Existing improvements to be repaired or replaced shall be at the direction of the PPW Inspector and shall comply with all Title 24 Disabled Access provisions. The restoration of all improvements identified by the PPW Inspector shall be completed before the issuance of a certificate of occupancy. The Applicant shall request a walk-through with the PPW Inspector before the start of construction to verify existing conditions.
114. STORMWATER TREATMENT FACILITIES MAINTENANCE AGREEMENT: The Applicant shall execute and record a Stormwater Treatment Facilities Maintenance Agreement to ensure perpetual maintenance of the regulated project's treatment facilities. The agreement shall outline the operation and maintenance (O&M) plan for the permanent storm water treatment facilities. The Town-Standard Stormwater BMP Operation and Maintenance Agreement will be provided by PPW upon request. The agreement shall be executed prior to occupancy of the first building and include the following:
    a. The property owner shall operate and maintain all on-site stormwater treatment facilities in good condition and promptly repair/replace any malfunctioning

components, this includes but is not limited to the maintenance and repair responsibility of culverts, bioswales, catch basins, and stormwater infrastructure on site.

b. The property owner shall inspect the stormwater treatment facilities at least twice per year and submit an inspection report to PPW at PPW_Stormwater@losgatosca.gov no later than October 1st for the Fall report, and no later than March 15th of the following year for the Winter report. Written records shall be kept of all inspections and shall include, at minimum, the following information:
   i. Site address;
   ii. Date and time of inspection;
   iii. Name of the person conducting the inspection;
   iv. List of stormwater facilities inspected;
   v. Condition of each stormwater facility inspected;
   vi. Description of any needed maintenance or repairs; and
   vii. As applicable, the need for site re-inspection.

c. The property owner shall not make any design changes to the system without the Town's approval.

d. The property owner(s) shall develop a maintenance and replacement schedule for the stormwater treatment facilities that describes maintenance frequency and responsibility. This maintenance schedule shall be included with the approved Stormwater Treatment Facilities Maintenance Agreement.

e. The property owner(s) shall reimburse the Town for the cost of site inspections required under the Municipal Regional Permit.

f. The property owner(s) shall authorize Town Staff to perform maintenance and/or repair work and to recover the costs from the property owner in the event that maintenance or repair is neglected, or the stormwater management facility becomes a danger to public health or safety.

115. STORMWATER MANAGEMENT FACILITIES INSPECTION: Prior to final inspection, the Applicant must facilitate the testing of all stormwater facilities by a certified QSP or QSD to confirm the facilities are meeting the minimum design infiltration rate. All tests shall be made at on 20 foot x 20 foot grid pattern over the surface of the completed stormwater facility unless otherwise approved by the Town Engineer. All soil and infiltration properties for all stormwater facilities shall be evaluated by the geotechnical engineer. Percolation tests (using Double Ring Infiltrometer Testing) at horizontal and vertical (at the depth of the stormwater facility) shall be conducted for each stormwater facility. A 50 percent safety factor shall be applied to the calculated percolation test and shall be used as the basis for design (the design percolation rate). The geotechnical report shall include a section designated for stormwater design, including percolation results and design parameters. Sequence of construction for all stormwater facilities(bioswales, detention/ retention basins, drain rock, etc.) shall be done toward final phases of project to prevent silting of the stormwater treatment facilities.

THE FOLLOWING CONDITIONS SHALL BE COMPLIED WITH AT ALL TIMES DURING THE CONSTRUCTION PHASE OF THE PROJECT, OR IF ANOTHER DEADLINE IS SPECIFIED IN A

CONDITION, AT THAT TIME

116. PROJECT CONSTRUCTION SETUP: All storage and office trailers will be kept off the public right-of-way.
117. PUBLIC WORKS CONSTRUCTION NOTICE: The contractor shall notify the PPW Inspector at least ten (10) working days prior to the start of any construction work. At that time, the Contractor shall provide an initial project construction schedule and a 24-hour emergency telephone number list.
118. PROJECT CONSTRUCTION SCHEDULE: The contractor shall submit the project schedule in a static PDF 11”x17” format and Microsoft Project, or an approved equal. The Contractor shall identify the scheduled critical path for the installation of improvements to the approval of the Town Engineer. The schedule shall be updated monthly and submitted to the PPW Inspector in the same formats as the original.
119. PROJECT CONSTRUCTION HANDOUT: The Contractor shall provide to the Town Engineer an approved construction information handout for the purpose of responding to questions the Town receives regarding the project construction.
120. PROJECT CONSTRUCTION SUPERVISION: The Contractor shall always provide a qualified supervisor on the job site during construction.
121. PUBLIC WORKS CONSTRUCTION INSPECTION: All work shown on the Improvement Plans shall be inspected to the approval of the Town Engineer. Uninspected work shall be removed as deemed appropriate by the Town Engineer.
122. PROJECT CONSTRUCTION HOURS: Construction activities related to the issuance of any PPW permit shall comply with Town Code Section 16.20.035 which restricts construction to weekdays between 8:00 a.m. and 6:00 p.m. and Saturday 9:00 a.m. to 4:00 p.m. No work shall be done on Sundays or on Town Holidays unless otherwise approved by the Town Engineer. Please note that no work shall be allowed to take place within the Town right-of-way after 5:00 p.m. Monday through Friday. In addition, no work being done under an Encroachment Permit may be performed on the weekend unless prior approvals have been granted by the Town Engineer. The Town Engineer may apply additional construction period restrictions, as necessary, to accommodate standard commute traffic along arterial roadways and along school commute routes. Onsite project signage must state the project construction hours. The permitted construction hours may be modified if the Town Engineer finds that the following criteria is met:
    a. Permitting extended hours of construction will decrease the total time needed to complete the project without an unreasonable impact to the neighborhood.
    b. Permitting extended hours of construction is required to accommodate a construction requirement such as a large concrete pour or major road closure. Such a need would be presented by the project's design engineer and require approval of the Town Engineer.
    c. An emergency situation exists where the construction work is necessary to correct an unsafe or dangerous condition resulting in obvious and eminent peril to public health and safety. If such a condition exists, the Town may waive any of the remaining requirements outlined below.
    d. The exemption will not conflict with any other condition of approval required by the Town to mitigate significant environmental impacts.

e. The contractor or property owner will notify residential and commercial occupants of adjacent properties of the modified construction work hours. This notification must be provided three days prior to the start of the extended construction activity.

f. The approved hours of construction activity will be posted at the construction site in a place and manner that can be easily viewed by any interested member of the public.

g. The Town Engineer may revoke the extended work hours at any time if the contractor or owner of the property fails to abide by the conditions of extended work hours or if it is determined that the peace, comfort, and tranquility of the occupants of adjacent residential or commercial properties are impaired because of the location and nature of the construction.

h. The waiver application must be submitted to the PPW Inspector ten (10) working days prior to the requested date of waiver.

123. PROJECT CONSTRUCTION BEST MANAGEMENT PRACTICES: All construction activities shall conform to the latest requirements of the CASQA Stormwater Best Management Practices Handbooks for Construction Activities and New Development and Redevelopment, the Town's grading and erosion control ordinances, the project specific temporary erosion control plan, and other generally accepted engineering practices for erosion control as required by the Town Engineer when undertaking construction activities.

124. PROJECT CONSTRUCTION EXCAVATION: The following provisions to control traffic congestion, noise, and dust shall be followed during site excavation, grading, and construction:

a. All construction vehicles should be properly maintained and equipped with exhaust mufflers that meet State standards.

b. Travel speeds on unpaved roads shall be limited to fifteen (15) miles per hour.

c. Blowing dust shall be reduced by timing construction activities so that paving and building construction begin as soon as possible after completion of grading, and by landscaping disturbed soils as soon as possible.

d. Water trucks shall be present and in use at the construction site. All portions of the site subject to blowing dust shall be watered as often as deemed necessary by the Town, or a minimum of three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites in order to ensure proper control of blowing dust for the duration of the project.

e. Watering on public streets and wash down of dirt and debris into storm drain systems is prohibited. Streets will be cleaned by street sweepers or by hand as often as deemed necessary by the PPW Inspector, or at least once a day. Watering associated with on-site construction activity shall take place between the hours of 8 a.m. and 5 p.m. and shall include at least one late-afternoon watering to minimize the effects of blowing dust. Recycled water shall be used for construction watering to manage dust control where possible, as determined by the Town Engineer. Where recycled water is not available potable water shall

be used. All potable construction water from fire hydrants shall be coordinated with the San José Water Company.

f. All public streets soiled or littered due to this construction activity shall be cleaned and swept on a daily basis during the workweek to the satisfaction of the Construction Inspector.

g. Construction grading activity shall be discontinued in wind conditions in excess of 25 miles per hour, or that in the opinion of the PPW Inspector cause excessive neighborhood dust problems.

h. Site dirt shall not be tracked into the public right-of-way and shall be cleaned immediately if tracked into the public right-of-way. Mud, silt, concrete and other construction debris shall not be washed into the Town's storm drains.

i. Construction activities shall be scheduled so that paving and foundation placement begin immediately upon completion of grading operation.

j. All aggregate materials transported to and from the site shall be covered in accordance with Section 23114 of the California Vehicle Code during transit to and from the site.

k. Prior to issuance of any permit, the Applicant shall submit any applicable pedestrian or traffic detour plans to the satisfaction of the Town Engineer for any lane or sidewalk closures. The temporary traffic control plan shall be prepared by a licensed professional engineer with experience in preparing such plans and in accordance with the requirements of the latest edition of the California Manual on Uniform Traffic Control Devices (MUTCD) and standard construction practices. The Traffic Control Plan shall be approved prior to the commencement of any work within the public right-of-way.

l. During construction, the Applicant shall make accessible any or all public and private utilities within the area impacted by construction, as directed by the Town Engineer.

m. The minimum soils sampling and testing frequency shall conform to Chapter 8 of the Caltrans Construction Manual. The Applicant shall require the soils engineer submit to daily testing and sampling reports to the Town Engineer.

n. No trucks can sit and idle on Twin Oaks Drive or Cerro Vista Court.

o. The developer is responsible to create a space on-site for all trucks, equipment, personnel trucks, and materials.

125. MATERIAL HAULING ROUTE AND PERMIT: For material delivery vehicles equal to, or larger than two-axle, six-tire single unit truck size as defined by FHWA Standards, the Applicant shall submit a truck hauling route that conforms to Town of Los Gatos Standards for approval. Note that the Town requires a Haul Permit be issued for any hauling activities. The Applicant shall require contractors to prohibit trucks from using "compression release engine brakes" on residential streets. A letter from the Applicant confirming the intention to use the designated haul route shall be submitted to the Town Engineer for review and approval prior to the issuance of any Town permits. All material hauling activities including but not limited to, adherence to the approved route, hours of operation, staging of materials, dust control and street maintenance shall be the responsibility of the Applicant. Hauling of soil on- or off-site shall not occur during the morning or evening peak periods (between 7:00 a.m. and 9:00 a.m. and

between 4:00 p.m. and 6:00 p.m.), and at other times as specified by the Town Engineer. The Applicant must provide an approved method of cleaning tires and trimming loads on site. All material hauling activities shall be done in accordance with applicable Town ordinances and conditions of approval.

126. PROJECT CLOSE-OUT: Prior to requesting a Final Inspection, the Applicant shall submit to the Town Engineer a letter indicating that all project conditions have been met, and all improvements are complete. All work must be completed to the satisfaction of the Planning Director and Town Engineer prior to the first occupancy. All public improvements, including the complete installation of all improvements relative to streets, fencing, storm drainage, underground utilities, etc., shall be completed and attested to by the Town Engineer before approval of occupancy of any unit. Where facilities of other agencies are involved, including those for water and sanitary sewer services, such installation shall be verified as having been completed and accepted by those agencies. In addition, the Applicant shall submit an itemized final quantities list of all public improvements constructed on-site and within the public right-of-way. The final quantities list shall be prepared by the project engineer and be to the approval of the Town Engineer. The final quantities list shall be broken out into on-site and off-site improvements based on the format provided by the Town. Until such time as all required improvements are fully completed and accepted by Town, the Applicant shall be responsible for the care, maintenance, and any damage to such improvements. Town shall not, nor shall any officer or employee thereof, be liable or responsible for any accident, loss or damage, regardless of cause, happening or occurring to the work or improvements required for this project prior to the completion and acceptance of the work or Improvements. All such risks shall be the responsibility of and are hereby assumed by the Applicant.
127. DOWNTOWN HOLIDAY CONSTRUCTION MORATORIUM: Due to concerns for business impacts during the holiday season (defined as starting the Monday of Thanksgiving week through January 1), there shall be no construction activities in the Downtown area within the right-of-way which would create lane closures, eliminate parking, create pedestrian detours, or other activities that may create a major disturbance as determined by the Town Engineer.
128. CONSTRUCTION WORKER PARKING: The Applicant shall provide a Construction Parking Plan that minimizes the effect of construction worker parking in the neighborhood and shall include an estimate of the number of workers that will be present on the site during the various phases of construction and indicate where sufficient off-street parking will be utilized and identify any locations for off-site material deliveries. Said plan shall be approved by the Town Engineer prior to issuance of Town permits and shall be complied with at all times during construction. Failure to enforce the parking plan may result in suspension of the Town permits. No vehicle having a manufacturer's rated gross vehicle weight exceeding ten thousand (10,000) pounds shall be allowed to park on the portion of a street which abuts property in a residential zone without prior approval from the Town Engineer (§15.40.070).
129. SITE WATER DISCHARGE: In accordance with the Town Code, Prohibition of Illegal Discharges (Los Gatos Town Code Section 22.30.015), the Town Engineer may approve in coordination West Valley Sanitation District the discharge of uncontaminated

pumped ground waters to the sanitary sewer only when such source is deemed unacceptable by State and Federal authorities for discharge to surface waters of the United States, whether pretreated or untreated, and for which no reasonable alternative method of disposal is available. Following the verification of the applicable local, state and/or federal approvals, a Discharge Plan will be approved and monitored by the Town Engineer.

130. ACCESS EASEMENT: Owner/Applicant is responsible for securing easements necessary for access to Lot 10 and/or utility connection prior to Building Permit review.
131. SUBDIVISION STREET NAMES: Applicant to obtain Town Council approval for any proposed street name not present on Town approved street names list.

THE FOLLOWING CONDITIONS SHALL BE COMPLIED WITH AT ALL TIMES THAT THE USE PERMITTED BY THIS ENTITLEMENT OCCUPIES THE PREMISES

132. POST CONSTRUCTION BEST MANAGEMENT PRACTICES (BMP): Post construction storm water pollution prevention requirements shall include:
    a. The Applicant shall be charged the cost of abatement for issues associated with, but not limited to, inspection of the private stormwater facilities, emergency maintenance needed to protect public health or watercourses, and facility replacement or repair if the treatment facility is no longer able to meet performance standards or has deteriorated. Any abatement activity performed on the Applicant's property by Town staff will be charged to the Applicant at the Town's adopted fully-loaded hourly rates.
    b. Maintenance of the storm drain inlets "No Dumping – Drains to Bay" plaques to alert the public to the destination of storm water and to prevent direct discharge of pollutants into the storm drain. Template ordering information is available at www.flowstobay.org.
    c. All process equipment, oils, fuels, solvents, coolants, fertilizers, pesticides, and similar chemical products, as well as petroleum based wastes, tallow, and grease planned for storage outdoors shall be stored in covered containers at all times.
    d. All public outdoor spaces and trails shall include installation and upkeep of dog waste stations.
    e. Garbage and recycling receptacles and bins shall be designed and maintained with permanent covers to prevent exposure of trash to rain. Trash enclosure drains shall be connected to the sanitary sewer system.
    f. It is the responsibility of the property owner(s)/homeowners association to implement a plan for street sweeping of paved private roads and cleaning of all storm drain inlets.

TO THE SATISFACTION OF THE SANTA CLARA COUNTY FIRE DEPARTMENT:

APPLICABLE TO ALL LOTS

133. Review of this Developmental proposal is limited to acceptability of site access, water supply and may include specific additional requirements as they pertain to fire

department operations, and shall not be construed as a substitute for formal plan review to determine compliance with adopted model codes. Prior to performing any work, the applicant shall make application to, and receive from, the Building Department all applicable construction permits.

134. NOTE: The subject property is located within the Very High Fire Hazard Severity Zone (VHFHSZ) of the Local Responsibility Area (LRA). Pursuant to California Public Resources Code (PRC) 4290, the California Board of Forestry and Fire Protection is required to "…adopt regulations implementing minimum fire safety standards related to defensible space" applicable to "the perimeters and access to all residential, commercial, and industrial building construction." In 2018, the Legislature passed and the Governor signed SB 901 (Dodd), which expanded the applicability of the regulations promulgated under PRC 4290 to land in the Local Responsibility Area (LRA) Very High Fire Hazard Severity Zone. All comments below that result from PRC 4290 are identified by **. Where a conflict exists between local and 4290 requirements, the more stringent requirement shall apply. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.08.
135. SUBDIVISION MAP FINDINGS REPORT: For tentative or parcel maps approved in Very High Fire Hazard Severity Zones (VHFHSZ), the approving body is required to make and submit two findings to the State Board of Forestry and Fire Protection (Board) within 30 days of map approval. CCR, Title 14, Sec. 1266.02. Provide copies of the two finds reports made to the State Board of Forestry and Fire Protection.
136. **WIDTH: (As Noted on Sheet 7.0) (a) All roads shall be constructed to provide a minimum of two ten (10) foot traffic lanes, not including shoulder and striping. These traffic lanes shall provide for two-way traffic flow to support emergency vehicle and civilian egress, unless other standards are provided in this article or additional requirements are mandated by local jurisdictions or local subdivision requirements. Vertical clearances shall conform to the requirements in California Vehicle Code section 35250. (b) All one-way roads shall be constructed to provide a minimum of one twelve (12) foot traffic lane, not including shoulders. The local jurisdiction may approve one-way roads. (1) All one-way roads shall, at both ends, connect to a road with two traffic lanes providing for travel in different directions, and shall provide access to an area currently zoned for no more than ten (10) residential units. (2) In no case shall a one-way road exceed 2,640 feet in length. A turnout shall be placed and constructed at approximately the midpoint of each one-way road. (c) All driveways shall be constructed to provide a minimum of one (1) ten (10) foot traffic lane, fourteen (14) feet unobstructed horizontal clearance, and unobstructed vertical clearance of thirteen feet, six inches (13' 6"). California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2 Articles 1-5, § 1273.01.
137. **ROAD SURFACES: (As Noted on Sheet 7.0) (a) Roads shall be designed and maintained to support the imposed load of fire apparatus weighing at least 75,000 pounds and provide an aggregate base. (b) Driveways and road and driveway structures shall be designed and maintained to support at least 40,000 pounds. (c) Project proponent shall provide engineering specifications to support design, if requested by the local authority having jurisdiction. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.02.

138. **GATE ENTRANCES: (a) Gate entrances shall be at least two (2) feet wider than the width of the traffic lane(s) serving that gate and a minimum width of fourteen (14) feet unobstructed horizontal clearance and unobstructed vertical clearance of thirteen feet, six inches (13' 6”). (b) All gates providing access from a road to a driveway shall be located at least thirty (30) feet from the roadway and shall open to allow a vehicle to stop without obstructing traffic on that road. (c) Where a one-way road with a single traffic lane provides access to a gated entrance, a forty (40) foot turning radius shall be used. (d) Security gates shall not be installed without approval. Where security gates are installed, they shall have an approved means of emergency operation. Approval shall be by the local authority having jurisdiction. The security gates and the emergency operation shall be maintained operational at all times. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.09. Gate on EAE shall meet the requirement.
139. FIRE HYDRANT SYSTEMS REQUIRED: (As Noted on Sheet 7.0) Where a portion of the facility or building hereafter constructed or moved into or within the jurisdiction is more than 400 feet from a hydrant on a fire apparatus access road, as measured by an approved route around the exterior of the facility or building, onsite fire hydrants and mains shall be provided where required by the fire code official. Exception: For Group R-3 and Group U occupancies, equipped throughout with an approved automatic sprinkler system installed in accordance with Section 903.3.1.1, 903.3.1.2 or 903.3.1.3, the distance requirement shall be not more than 600 feet. [CFC, Section 507.5.1]
140. FIRE DEPARTMENT (ENGINE) ROADWAY TURNAROUND REQUIRED: (As noted on sheet 7.0) Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with an approved area for turning around fire apparatus. Provide an approved fire department engine driveway turnaround with a minimum radius of 50 feet outside and 30 feet inside. Maximum grade in any direction shall be 5%. Installations shall conform with Fire Department Standard Details and Specifications D-1. [CFC Section 503.2.5].
141. FIRE APPARATUS (ENGINE) ACCESS ROADWAY REQUIRED: (As noted on sheet 7.0): Provide an access roadway with a paved all-weather surface, a minimum unobstructed width of 20 feet, vertical clearance of 13 feet 6 inches, minimum circulating turning radius of 50 feet outside and 30 feet inside, and a maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet A-1. CFC Sec. 503.
142. FIRE APPARATUS (ENGINE) ACCESS DRIVEWAY REQUIRED: (As noted on sheet 7.0) An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches, minimum turning radius of 40 feet outside, and maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1.
143. WATER SUPPLY REQUIREMENTS: Potable water supplies shall be protected from contamination caused by fire protection water supplies. It is the responsibility of the applicant and any contractors and subcontractors to contact the water purveyor supplying the site of such project, and to comply with the requirements of that

purveyor. Such requirements shall be incorporated into the design of any water-based fire protection systems, and/or fire suppression water supply systems or storage containers that may be physically connected in any manner to an appliance capable of causing contamination of the potable water supply of the purveyor of record. Final approval of the system(s) under consideration will not be granted by this office until compliance with the requirements of the water purveyor of record are documented by that purveyor as having been met by the applicant(s). 2019 CFC Sec. 903.3.5 and Health and Safety Code 13114.7.

144. ADDRESS IDENTIFICATION: New and existing buildings shall have approved address numbers, building numbers or approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property. These numbers shall contrast with their background. Where required by the fire code official, address numbers shall be provided in additional approved locations to facilitate emergency response. Address numbers shall be Arabic numbers or alphabetical letters. Numbers shall be a minimum of 6 inches high with a minimum stroke width of 0.5 inch (12.7 mm). Where access is by means of a private road and the building cannot be viewed from the public way, a monument, pole or other sign or means shall be used to identify the structure. Address numbers shall be maintained. CFC Sec. 505.1.
145. CONSTRUCTION SITE FIRE SAFETY: All construction sites must comply with applicable provisions of the CFC Chapter 33 and our Standard Detail and Specification S1-7. Provide appropriate notations on subsequent plan submittals, as appropriate to the project. CFC Chp. 33.
146. WILDLAND-URBAN INTERFACE: This project is located within the designated Wildland-Urban Interface Fire Area. The building construction shall comply with the provisions of California Building Code (CBC) Chapter 7A. Note that vegetation clearance shall be in compliance with CBC Section 701A.3.2.4 prior to project final approval. Check with the Planning Department for related landscape plan requirements.
147. EMERGENCY GATE/ACCESS GATE REQUIREMENTS: Gate installations shall conform with Fire Department Standard Details and Specification G-1 and, when open shall not obstruct any portion of the required width for emergency access roadways or driveways. Locks, if provided, shall be fire department approved prior to installation. Gates across the emergency access roadways shall be equipped with an approved access devices. If the gates are operated electrically, an approved Knox key switch shall be installed; if they are operated manually, then an approved Knox padlock shall be installed. Gate on EAE shall meet the requirement.
148. This review shall not be construed to be an approval of a violation of the provisions of the California Fire Code or of other laws or regulations of the jurisdiction. A permit presuming to give authority to violate or cancel the provisions of the fire code or other such laws or regulations shall not be valid. Any addition to or alteration of approved construction documents shall be approved in advance. [CFC, Ch.1, 105.3.6].

APPLICABLE TO LOT 1

149. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with

the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

150. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 1) is 500 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 2

151. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
152. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
153. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 2) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 3

154. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with

the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

155. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
156. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 3) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 4

157. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
158. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

159. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 4) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 5

160. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
161. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
162. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 5) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 6

163. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California

Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

164. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
165. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 6) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 7

166. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
167. FIRE APPARATUS (ENGINE) ACCESS DRIVEWAY REQUIRED: An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches, minimum turning radius of 20 feet inside and 40 feet outside, and a maximum slope of 15%. The angle of approach to a driveway shall be designed and constructed with a maximum 5% slope for a minimum of 20ft. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1. **During Building Permit, provide a stamped civil engineer letter to justify the traction of the driveway to support 75,000 lbs.**
168. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

169. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 7) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 8

170. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
171. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
172. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 7) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 9

173. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California

Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

174. FIRE APPARATUS (ENGINE)ACCESS DRIVEWAY REQUIRED: An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches, minimum turning radius of 20 feet inside and 40 feet outside, and a maximum slope of 15%. The angle of approach to a driveway shall be designed and constructed with a maximum 5% slope for a minimum of 20ft. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1. **During Building Permit, provide a stamped civil engineer letter to justify the traction of the driveway to support 75,000 lbs.**

175. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

176. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 9) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 10

177. **TURNAROUND (LOT 10 Only): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(e) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

178. FIRE DEPARTMENT (ENGINE) DRIVEWAY TURNAROUND REQUIRED: (As noted on sheet A1.1) An approved fire apparatus turnaround is required for all dead-end access roads and driveways in excess of 150 feet. [Ref: CFC 503.2.5]. All turnarounds shall have a maximum slope of 5% in any direction. Placement of any architectural feature within a turnaround is not permitted. All turnarounds shall be provided an approved metal, all weather sign or other approved notices or markings that shall include the words "NO PARKING – FIRE DEPARTMENT TURNAROUND". Turnarounds located on parcels shall be provided with a sign at the entrance to the parcel that shall include the words "FIRE

DEPARTMENT TURNAROUND ON SITE". Installations shall conform to Fire Department Standard Details and Specifications sheet D-1.

179. **WIDTH: (Approved PRC 4290 request of exception shown on Sheet 7.3) (a) All roads shall be constructed to provide a minimum of two ten (10) foot traffic lanes, not including shoulder and striping. These traffic lanes shall provide for two-way traffic flow to support emergency vehicle and civilian egress, unless other standards are provided in this article or additional requirements are mandated by local jurisdictions or local subdivision requirements. Vertical clearances shall conform to the requirements in California Vehicle Code section 35250. (b) All one-way roads shall be constructed to provide a minimum of one twelve (12) foot traffic lane, not including shoulders. The local jurisdiction may approve one-way roads. (1) All one-way roads shall, at both ends, connect to a road with two traffic lanes providing for travel in different directions, and shall provide access to an area currently zoned for no more than ten (10) residential units. (2) In no case shall a one-way road exceed 2,640 feet in length. A turnout shall be placed and constructed at approximately the midpoint of each one-way road. (c) All driveways shall be constructed to provide a minimum of one (1) ten (10) foot traffic lane, fourteen (14) feet unobstructed horizontal clearance, and unobstructed vertical clearance of thirteen feet, six inches (13' 6”). California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter Articles 1-5, § 1273.01.

180. MODIFIED FIRE SPRINKLERS REQUIRED (Lot 10 Only): (Per Approved PRC 4290 request of exception shown on sheet 7.3) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

181. FIRE APPARATUS (ENGINE)ACCESS ROADWAY REQUIRED: (Approved PRC 4290 request of exception shown on sheet 7.3) Provide an access roadway with a paved all weather surface, a minimum unobstructed width of 20 feet, vertical clearance of 13 feet 6 inches, minimum circulating turning radius of 50 feet outside and 30 feet inside, and a maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet A-1. CFC Sec. 503.

182. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 10) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3] **Fire flow appears not to meet requirement for VB construction. Per applicant to mitigate fire flow requirement, VA construction will be proposed for the entire structure. During Building Permit phase, show on coversheet that VA construction type will be used as part of this planning approval condition.**

APPLICABLE TO LOT 11

183. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead,

the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

184. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

185. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 11) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

APPLICABLE TO LOT 12

186. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

187. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

188. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 12) is 500 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3].

S:\COUNCIL REPORTS\2026\08-11-26 Special\178 Twin Oaks Drive\Exhibit A.docx

TOWN OF LOS GATOS
PLANNING COMMISSION
REPORT

MEETING DATE: 12/17/2025

ITEM NO: 1

DATE: December 12, 2025

TO: Planning Commission

FROM: Joel Paulson, Community Development Director

SUBJECT: Consider a Request for Approval for the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB 330) on Vacant Property Zoned RC. **Located at 178 Twin Oaks Drive.** APN 532-16-006. Architecture and Site Applications S-24-023 through -032 and S-24-059, Vesting Tentative Map Application M-24-013, and Mitigated Negative Declaration Application ND-25-001. An Initial Study and Mitigated Negative Declaration Have Been Prepared. Property Owner/Applicant: Larry Dodge. Project Planner: Erin Walters.

RECOMMENDATION:

Consider a request for approval for the subdivision of one lot into twelve lots with a Vesting Tentative Map, construction of a new single-family residence on each lot, site work requiring a grading permit, and removal of large protected trees under Senate Bill 330 (SB 330) on a vacant property zoned RC, located at 178 Twin Oaks Drive.

PROJECT DATA:

General Plan Designation:	Agriculture
Zoning Designation:	RC, Resource Conservation Zone
Applicable Plans & Standards:	General Plan; Hillside Development Standards and Guidelines, and Hillside Specific Plan
Parcel Size:	17.55 acres

PREPARED BY: Erin M. Walters
Senior Planner

Reviewed by: Planning Manager, Community Development Director, Town Attorney

Surrounding Area:

	Existing Land Use	General Plan	Zoning
North	Residential/School	Hillside Residential	HR-1
South	Residential	Hillside Residential	HR-1 and HR-2-1/2
East	Residential	Hillside Residential	HR-1
West	Residential	Single-Family Residential	R-1:10 and R:1:12

CEQA:

In accordance with the California Environmental Quality Act (CEQA), an Initial Study and Mitigated Negative Declaration (MND), Response to Comments, and MND Errata Sheet have been prepared for this project (Exhibit 1, 13 and 14). It has been determined that this project will not have a significant impact on the environment with adoption of the MND and Mitigation Monitoring and Reporting Program (MMRP) in Exhibit 12, to mitigate potential impacts to a less than significant level.

FINDINGS:

- As required by CEQA for adopting the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program;
- As required that the project is consistent with the General Plan with the incentives and waivers requested pursuant to State Density Bonus Law and granting of the requested exceptions to the maximum allowed density pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d);
- As required by Section 66474 of the Subdivision Map Act with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d);
- As required for tentative or parcel maps approved in state responsibility areas (SRA) or very high fire hazard severity zones (VH), findings are required to be made to the State Board of Forestry and Fire Protection pursuant to 14 CCR Section 1266.02;
- The project meets the objective standards of Chapter 29 of the Town Code (Zoning Regulations) with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d);
- The project meets the objective standards of the Town of Los Gatos Hillside Development Standards and Guidelines with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability

Act, CA Gov. Code § 65589.5 (d);

- The project meets the objective standards of the Town of Los Gatos Hillside Specific Plan with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d);
- As required by State Density Bonus Law for granting a concession or an incentive pursuant to CA Gov. Code § 65915 (d) and for granting waivers pursuant to CA Gov. Code § 65915 (a)(2); and
- As required by the Builder's Remedy provision of the Housing Accountability Act for granting exceptions pursuant to CA Gov. Code § 65589.5 (d).

CONSIDERATIONS:

- As required by Section 29.20.150 of the Town Code for granting approval of an Architecture and Site application.

ACTION:

The application includes a Vesting Tentative Map, requiring approval by the Town Council, pursuant to Town Code Section 29.10.020. The Planning Commission will provide a recommendation to the Town Council who will render the final decision on the proposal.

BACKGROUND:

A. Project Site

The subject hillside property is approximately 17.55 acres of vacant land that takes access from Twin Oaks Drive (Exhibit 4). The hillside project site contains scattered oak woodlands, and a small portion of East Ross Creek crosses the project's farthest southwestern corner through a buried culvert. The site is surrounded by low density or hillside residential properties on all sides, with a partially shared property line with Hillbrook School to the north. The property generally sits east of Twin Oaks Drive, north of Brooke Acres Drive, and southwest of Cerro Vista Court and Cerro Vista Drive. The property has a General Plan designation of Agriculture and is zoned RC, or Resource Conservation.

The property was enrolled in a Williamson Act agricultural preserve contract established in 1975. Following the owner's April 28, 2015, notice of non-renewal, the standard 10-year non-renewal period commenced. The contract has since expired, and the property is no longer subject to an active Williamson Act contract.

The Preliminary Application under SB 330 was deemed submitted on December 19, 2023, establishing the vesting date for the application. Therefore, the applicant vested to the

Town's development standards that were in effect on December 19, 2023. On June 13, 2024, the applicant submitted a formal application, within 180-days of the established vesting date as required by state law. Through the Town's technical review process, the application was deemed complete on February 5, 2025, within the timelines prescribed by state law.

The applicant seeks approval for the proposed residential project utilizing both the State Density Bonus Law (SDBL) (CA Gov. Code § 65915) and the Builder's Remedy provisions under the Housing Accountability Act (HAA) [CA Gov. Code § 65589.5 (d)(5)].

The application includes a Vesting Tentative Map, requiring approval by the Town Council, pursuant to Town Code Section 29.10.020. The applicant seeks a recommendation on the development proposal from the Planning Commission to the Town Council, who will render the final decision on the project.

PROJECT DESCRIPTION:

A. Location and Surrounding Neighborhood

The subject hillside property is approximately 17.55 acres of vacant land that takes access from Twin Oaks Drive (Exhibit 4). The site is surrounded by low-density or hillside residential single-family properties on all sides, with a partially shared property line with Hillbrook School to the north. The property generally sits east of Twin Oaks Drive, north of Brooke Acres Drive, and southwest of Cerro Vista Court and Cerro Vista Drive.

B. Project Summary

The applicant proposes to subdivide the site into twelve lots ranging from 0.10 to 5.48 acres (Sheet 2.0 of Exhibit 15). The western slope would be developed with 11 two-story single-family residences (eight market-rate and three below-market-rate units), while the eastern portion would remain undeveloped. One additional two-story residence is proposed on the northeastern slope (Lot 10). Access would be provided by a new private cul-de-sac from Twin Oaks Drive, an EVA connection to Brooke Acres Drive, and a separate driveway from Cerra Vista Court for Lot 10. Three of the 12 units (25 percent) would be designated as low-

income Below Market Price (BMP) units, exceeding the minimum affordability requirement under the Builder's Remedy provisions (Lots 1, 11 and 12).

The applicant submitted a Project Description Letter and Letter of Justification (Exhibit 5) discussing the project. Proposed development plans are included in Exhibits 15 through 27.

C. Zoning Compliance

The project site's underlying zoning is RC (Resource Conservation). However, the Housing Accountability Act provides that, if a Builder's Remedy project is proposed in a General Plan land use designation or zoning district that would not permit the density and unit type proposed by the applicant, the local agency is required to use a General Plan designation and zoning classification that would allow the density and unit count proposed by the applicant. (Gov. Code Section 65589.5(f)(6)(A).) Here, because the applicant is utilizing Builder's Remedy and not the underlying zoning, the Town has applied the Low Density Residential General Plan land use designation and R-1:10 zoning standards to the project and may only require the project to comply with the objective standards that would have applied in the Low Density Residential General Plan land use designation and R-1:10 zoning district. The R-1:10 zone supports the density proposed by the applicant and is consistent with the existing R-1:10 zoning of the properties located to the west of the subject site.

In addition to one concession requested through SDBL, the applicant requests a number of waivers to Town standards through SDBL. The requested concession and waivers are discussed below. As described above, the Builder's Remedy provision of the HAA specifically prohibits a local agency from relying on inconsistency with zoning and general plan standards as a basis for denial of a qualifying housing development project, and there is no limit on the amount of exceptions requested as a part of a Builder's Remedy project.

As noted in the Project Description and Letter of Justification (Exhibit 5), there are exceptions to Town Code requirements requested with this application, including not meeting minimum lot size, exceeding the maximum gross floor area, exceeding the maximum building height, and not meeting the minimum required setbacks. Details on the Town Code requirements, requested exceptions, and justification are provided in Exhibit 5.

APPLICABLE LAWS

A. Senate Bill 330

The Housing Crisis Act of 2019, or Senate Bill 330 (SB 330), became effective on January 1, 2020, and will remain in effect until it sunsets on January 1, 2030. SB 330 provides an expedited review process for housing development projects and offers greater certainty for applicants by allowing an optional vesting opportunity through the Preliminary Application process. Submittal of a Preliminary Application allows an applicant to provide a specific subset of information on the proposed housing development ahead of providing the full amount of information required by the Town for a housing development application. Once the Preliminary Application is "deemed submitted" and payment of the permit processing fee is made, a vesting date is established, freezing the applicable fees and development standards that apply to the project while the applicant assembles the rest of the materials

necessary for a full application submittal. Eligible projects are exempt from discretionary review and must be consistent with objective zoning and design standards. The statute requires that a final decision be made in no more than five public hearings, including appeals. The SB 330 Preliminary Application for this project achieved a vesting date of December 19, 2023.

B. Housing Accountability Act

The HAA is codified at CA Gov. Code § 65589.5. Per Section 65589.5, a local agency can impose objective development standards so long as those standards meet the following criteria:

1) Are appropriate to, and consistent with, meeting the local agency's share of its Regional Housing Needs Allocation;
2) Are applied to facilitate and accommodate development at the density permitted on the site and proposed by the applicant;
3) Meet the definition of "objective" in that they involve no personal or subjective judgment by a public official and are uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the applicant and the public official.

In addition, no objective standard can be applied if it will render the project "infeasible" (unless the project will have a specific adverse impact on public health or safety and there is no feasible method to mitigate or avoid the impact.) The statute defines "feasible" as capable of being accomplished successfully within a reasonable period, considering economic, environmental, social, and technological factors.

A local agency may not deny, reduce the density of, or make infeasible housing development projects that are affordable to low- or moderate-income households and are consistent with local objective development standards.

In order for a development to qualify for the protections under the HAA it must meet the definition of a "housing development project." Furthermore, for a project to qualify for the affordable housing protections, it must also meet the definition of "Housing for very low-, low-, or moderate-income households."

1) What is an eligible housing development project?

Pursuant to CA Gov. Code § 65589.5 (h)(2), a "housing development project" is a use consisting of residential units only, mixed-use developments consisting of residential and non-residential uses with at least two-thirds of the square footage designated for residential use, or transitional or supportive housing. Because the term "units" is plural,

a development must consist of more than one unit to qualify under the HAA. The development can consist of attached or detached units and may occupy more than one parcel, so long as the development is included in the same development application.

Pursuant to CA Gov. Code § 65589.5 (h)(3), "a housing development affordable to lower- or moderate- income households" means a project that provides either of the following:

- At least 20 percent of the total units shall be sold or rented to lower income households. Lower-income households are those persons and families whose income does not exceed that specified by Health and Safety Code § 50079.5, which is 80 percent of area median income; or
- 100 percent of the units shall be sold or rented to persons and families of moderate income, or persons and families of middle income. Moderate-income households are those persons and families whose incomes are 80 percent to 120 percent of area median income (Health and Safety Code, § 50093.). Middle-income households are those persons and families whose income does not exceed 150 percent of area median income [CA Gov. Code § 65008 subd. (c)].

In addition, the rent or sales prices of the affordable housing that is provided cannot exceed the following:

- For lower-income units, the monthly housing cost does not exceed 30 percent of 60 percent of area median income with adjustments for household size made in accordance with the adjustment factors on which the lower income-eligibility limits are based; or
- For moderate-income units, the monthly housing cost does not exceed 30 percent of 100 percent of area median income with adjustments for household size made in

accordance with the adjustment factors on which the moderate-income eligibility limits are based.

2) <u>What are Objective Development Standards?</u>

Pursuant to CA Gov. Code § 65589.5 (f), local agencies are not prohibited from requiring a housing development project to comply with objective, quantifiable, written development standards, conditions, and policies that were in effect at the time of project vesting. Those standards, conditions, and policies must meet the following criteria:

- Be appropriate to, and consistent with, meeting the local agency's share of its Regional Housing Needs Allocation;

- Be applied to facilitate and accommodate development at the density permitted on the site and proposed by the development; and
- Meet the definition of "objective." Objective standards are those that involve no personal or subjective judgment by a public official and are uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant and the public official.

3) HAA Provisions Addressing Disapproval of Housing Development Projects

Pursuant to Government Code Section 65589.5, the HAA limits, but does not prohibit a local agency from disapproving a housing development project. The HAA defines "disapproval" to include the following:

- A vote to disapprove a housing development project application.
- Failure to comply with statutory deadlines for a decision, including, but not limited to:
  - 90 days after certification of an environmental impact report pursuant to the California Environmental Quality Act ("CEQA");
  - 60 days from the date of adoption of a negative declaration pursuant to CEQA; or
  - 60 days from a determination by the local agency that the project is exempt from CEQA.

The foregoing is a non-exhaustive list of the local agency actions that constitute "disapproval" of a housing development project under the HAA.

4) Ability to Impose Development Conditions

The HAA does not prohibit a local agency from imposing conditions of approval on housing development projects. However, the HAA limits the application of conditions that lower the residential density of the project and, for housing affordable to low- and moderate-income households, would render the project economically infeasible or would have a substantial adverse effect on the viability of the proposed housing, unless specific findings are made and supported by a preponderance of evidence in the record. The "preponderance of the evidence" standard requires that local agencies weigh the evidence and conclude that the evidence on one side outweighs the evidence on the other side (i.e. 51 percent to 49 percent).

5) Determination of Consistency with Applicable Standards is Based on "Reasonable Person" Standard

In most cases, courts will uphold an agency's determination if there is "substantial evidence" to support that determination. "Substantial evidence" means that there is reasonable, adequate evidence in the administrative record to support of the agency's findings. However, when a project is subject to the HAA, a housing development project will be deemed consistent with local standards if there is substantial evidence that could allow a "reasonable person" to conclude that it is consistent.

6) Application of State Density Bonus Law

The use of a density bonus pursuant to state density bonus law does not constitute a valid basis on which to find a proposed housing development project is inconsistent with local standards. Here, with the use of incentives, concessions, and waivers that are available pursuant to state density bonus law, the project is consistent with Town standards. However, in order to be eligible for these incentives, concessions, and waivers, the applicant must "seek and agree" to build affordable housing.

7) Denial of a Housing Project that is Consistent with Local Standards

When a proposed housing development complies with applicable local standards, but the local agency proposes to disapprove the project or to impose a condition that the project be developed at a lower density, the local agency shall adopt written findings supported by a preponderance of the evidence that both of the following conditions exist:

- The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density; and
- There is no feasible method to satisfactorily mitigate or avoid the adverse impact, other than the disapproval of the housing project or the approval of the project upon the condition that it be developed at a lower density. "Feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors.

8) Denial or Conditioning of Affordable Housing Affordable to Low- and Moderate-Income Households

The HAA specifies findings that local agencies must make if they wish to deny a housing development project that provides housing affordable to low-or moderate-income households, or condition such a project so as to render it infeasible or have a substantial adverse effect on the viability or affordability of the project. These findings are in addition to the findings described above. Under the version of the HAA that was in effect at the time that the Preliminary Application for this project was submitted, the

local agency must make one of the following specific findings based upon a preponderance of the evidence:

- The local government has an adopted Housing Element and has met its share of the RHNA in all income categories proposed in the housing development project.
- The housing development project would have a specific, adverse impact upon public health or safety and there is no feasible method to mitigate or avoid the impact without rendering the project unaffordable or financially infeasible.
- Denial of the housing project or the imposition of conditions is required to comply with specific state or federal law, and there is no feasible method to comply without rendering the project unaffordable to low- and moderate-income households.
- The housing development project is proposed on land zoned for agriculture or resource preservation that is either 1) surrounded on two sides by land being used for agriculture or resource preservation; or 2) does not have adequate water or wastewater facilities to serve the housing development project.
- The housing development project meets both of the following conditions:
    - Is inconsistent with both the zoning ordinance and general plan land use designation as specified in any element of the general plan as it existed on the date the application was deemed complete. This finding cannot be used when the project is inconsistent with one, but is consistent with the other; and
    - The local government has an adopted Housing Element in substantial compliance with state housing element law. This finding cannot be used when:
        - The project is proposed for a site identified as suitable or available for very low-, low-, or moderate-income households within the Housing Element and the project is consistent with the specified density identified in the Housing Element; or
        - The local agency has failed to identify sufficient adequate sites in its inventory to accommodate its RHNA, and the project is proposed on a site identified in any Element of its General Plan for residential use or in a commercial zone where residential uses are permitted or conditionally permitted.

In September 2024, the California State Legislature passed, and the Governor signed into law, Assembly Bill 1893 (AB 1893), which went into effect on January 1, 2025. AB 1893 made revisions to the findings in subsection (d) of Government Code Section 65589.5. However, the applicant for this project has not chosen to invoke the provisions of AB 1893. Therefore, the findings enumerated above are the ones that remain relevant to this project.

9) Violations of the HAA

If a plaintiff alleges an HAA violation and prevails, the court must issue an order compelling compliance with the HAA in 60 days. The court may also issue an order directing the local agency to approve the project. If the plaintiff prevails, the court awards attorney fees and costs to the plaintiff. If the local agency fails to comply with the order, the court must impose a minimum fine of $10,000 per housing unit.

C. State Density Bonus Law ("SDBL") - Explanation of Concessions/Incentives and Waivers

The applicant is seeking to use SDBL, which is codified at Government Code Sections 65915 through 65918.

The intent of SDBL is to encourage builders and local governments to include low- and moderate-income housing units in proposed developments. Under the statutes, the local authority must grant a density bonus or other specified incentives or concessions to a developer who "seeks and agrees" to build affordable housing.

Concessions and Incentives

So long as the required percentage of affordable housing is provided, a developer may opt to request "concessions and incentives" without seeking the density bonus. A local agency may decline to grant the concessions or incentives only under certain limited circumstances set forth in CA Gov. Code § 65915 (d). Those circumstances are:

1) The concession or incentive does not result in identifiable and actual cost reductions to provide for affordable housing;
2) The concession or incentive would result in a "specific adverse impact . . . upon public health and safety or the physical environment or on any real property that is listed in the California Register of Historical Resources," which cannot be feasibly mitigated without rendering the development unaffordable to low-income and moderate-income households; or
3) The concession or incentive would be contrary to state or federal law [CA Gov. Code § 65915 (d)(1)(A)-(C)].

Concessions and incentives include the following:

1) Reduction in site development standards;
2) Modifications of zoning or architectural design requirements that exceed state standards;

3) Approval of mixed-use zoning in conjunction with the project if commercial, office, industrial, or other land uses will reduce the cost of, and are compatible with the development; and
4) Any other regulatory incentive or concession proposed by either party that results in "identifiable and actual cost reductions to provide for affordable housing costs" or to provide for affordable rents [CA Gov. Code 65915 (k)].

Under the SDBL, three incentives or concessions are permitted for projects that include at least 25 percent of the total units for lower income households and pursuant to AB 1893, a Builder's Remedy project that is also a density bonus project qualifies for two additional incentives or concessions. This applicant is proposing a project with 25 percent of the residential units affordable for lower income households and this is a Builder's Remedy project, therefore the project is entitled to a total of five incentives or concessions.

The applicant is seeking four incentives, as described below:

Requested Incentives	
Not Installing Story Poles and Netting per the Visibility Analysis requirements of the Hillside Development Standards and Guidelines	Project wide
Not Providing Sidewalks	Project wide
Not Providing Trails	Project wide
Not Providing Open Space Easements	Project wide

The applicant states that this will result in a cost reduction. Therefore, eliminating this development standard will result in cost savings to help provide the level of affordability proposed.

<u>Waivers of Development Standards</u>

Applicants are eligible for unlimited waivers of development standards when they "seek and agree" to construct affordable housing. This applicant is requesting waivers from the Town's development standards. A local agency may not apply any development standard that will have the effect of physically precluding the construction of a development "as proposed" so long as it meets the criteria for density bonuses set forth in CA Gov. Code § 65915 (b).

The applicant is requesting 58 waivers, including the following:

Requested Waivers	
Reduced Lot Area	Lots 11 and 12
Reduced Setbacks	Lots 1, 3, 6, 11, and 12
Exceeding the Maximum Gross Floor Area	Lots 4 and 12 Lots 2,3,7,8,9, and 10
Building Outside the Least Restrictive Development Area (LRDA)	Lots 3,6, and 7
Exceeding Maximum Building Height	All Lots
Exceeding Maximum Graded Cut and Fill Depths	All Lots
Swimming Pools on Slopes greater than 30 percent	Lots 7 and 8
Reduced Guest Parking	All Lots
Location of BMP	Project wide
Comparable Bed/Bath Size of BMPs	Project wide

The waivers are described in greater detail in the sections that follow.

D. Housing Accountability Act - Builder's Remedy

The California Legislature adopted the Housing Accountability Act (HAA) to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects" [CA Gov. Code § 65589.5 (a)(2)(K)]. It is the policy of the state that the HAA "be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing" [Gov. Code § 65589.5 (a)(2)(L)]. The "Builder's Remedy" provision of the HAA specifically prohibits a local agency from relying on inconsistency with zoning and general plan standards as a basis for denial of a qualifying housing development project unless the agency has adopted a sixth cycle housing element in substantial compliance with state law by January 31, 2023. The Town's sixth cycle housing element was certified by the California Department of Housing and Community Development (HCD) on July 10, 2024. The Preliminary Application for this project achieved a vesting date of December 19, 2023, prior to certification of the Town's Housing Element. Therefore, the project qualifies as a Builder's Remedy project and the applicant has invoked the provisions of Builder's Remedy with this proposed project.

The applicant is invoking the following through Builder's Remedy:

Requested Exceptions through Builder's Remedy	
General Plan Designation	Project wide
Zoning Designation	Project wide
Density	Project wide

The applicant seeks to invoke the Builder's Remedy provisions, thereby permitting the project to move forward despite non-conformance with the existing General Plan designation, zoning regulations, and established density thresholds, as discussed in greater detail in the sections that follow.

DISCUSSION:

A. General Plan and Zoning Consistency

The proposed twelve-lot single-family residential subdivision is not consistent with the site's current General Plan land use designation of Agriculture. The Agriculture designation does not permit the type or intensity of residential development proposed. Additionally, the proposed twelve-lot single-family residential subdivision is not consistent with the site's current zoning designation of RC, or Resource Conservation. Residential development in the RC zone is limited to s single-family dwelling, provide that there is not more than one (1) principal residential structure on a lot.

The project is being processed under the Builder's Remedy provisions of the HAA. Under these provisions, local agencies are prohibited from denying a qualifying housing development project solely on the basis of inconsistency with zoning or General Plan standards. Additionally, the HAA does not establish a limit on the number or extent of exceptions that may be requested for a qualifying Builder's Remedy project. However, because the applicant is utilizing Builder's Remedy and not the underlying zoning, the Town has applied the R-1:10 zoning standards to the project.

B. Hillside Overlay Zone and Hillside Specific Plan

The site is located within the Hillside Overlay Zone and is subject to the objective standards of the Town's Hillside Development Standards and Guidelines (HDS&G). Approximately 10.40 acres of the 17.55-acre project site are located in Sub-Area 2 (Shannon-Kennedy Roads) of the Town's Hillside Specific Plan (Sheet 2.2 of Exhibit 12).

C. Subdivision and Site Design

The applicant requests approval of a Vesting Tentative Map to subdivide the project site into 12 residential hillside lots ranging in size from approximately 0.10 acres to 5.48 acres (Sheet 2 of Exhibit 15). The eastern portion of the site would remain undeveloped to preserve existing topography and natural features, while the western slope would be developed with eleven two-story single-family residences. A two-story single-family residence is proposed on the northeastern slope of the hillside (Lot 10) (Exhibit 25).

Lot Size

Under the Town's applied R-1:10 zone, pursuant to Zoning Code Section 29.40.395, the minimum lot area is 10,000 square feet. The proposed gross lot size for each lot is provided in the table below.

Proposed Lot Sizes		
	Min. Lot Size s.f. per Applied R-1:10 Zone	**Gross Lot Size s.f.**
Lot 1 (BMP)	10,000	21,659
Lot 2	10,000	34,485
Lot 3	10,000	23,931
Lot 4	10,000	25,686
Lot 5	10,000	36,842
Lot 6	10,000	33,979
Lot 7	10,000	51,367
Lot 8	10,000	213,486
Lot 9	10,000	74,265
Lot 10	10,000	238,899
Lot 11 (BMP)	10,000	4,785
Lot 12 (BMP)	10,000	4,785

The proposed Lots 11 and 12, do not meet the 10,000-square foot minimum lot size for the R-1:10 zone pursuant to Town Code. The applicant requests relief from the minimum lot size standard through a waiver under the SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Access and Circulation

Primary access to the subdivision would be provided by a 24-foot-wide private street with a cul-de-sac connecting to Twin Oaks Drive and linking to the internal roadway system serving the development. The cul-de-sac would follow the slope transition between the western portion of the site and the steeper eastern hillside. A 20-foot-wide Emergency Vehicle Access (EVA) would extend south from the site to Brooke Acres Drive, providing secondary emergency access consistent with Fire Department standards (Sheet 2 of Exhibit 15). A separate private driveway extending from Cerro Vista Court would provide individual access to Lot 10.

Sidewalks

The proposed subdivision does not provide sidewalks, a walkway, or a path with the proposed private cul-de-sac street.

Pursuant to Town Code Sections 24.50.065 and 29.10.06712, sidewalks shall be constructed on all streets and highways within a subdivision; except, that in land being subdivided into lots twenty thousand (20,000) square feet or more in size, sidewalks may be omitted. In hillside subdivisions, a walkway or path shall be constructed on one (1) side of the street or highway, subject to the approval of the Town Engineer and the advisory agency.

The applicant has requested an incentive under SDBL (CA Gov. Code § 65915) to waive the requirement. The applicant must demonstrate that the requested incentive provides a specific benefit to the project and results in measurable cost savings or facilitates development of affordable units. Additional justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Trails

The proposed subdivision does not provide trail easement dedication or the construction of trails as required by the HDS&G, Chapter VII. Subdivisions and Planned Development Projects, E. Development Standards and Guidelines, 5. Trails. Standard a, and the Hillside Specific Plan, Chapter 4.0, Open Space, Section 4. Implementation, 6. Trails. The project site is located in the County and Los Gatos Trails Plan.

The applicant has requested an incentive under SDBL (CA Gov. Code § 65915) to waive the requirement. The applicant must demonstrate that the requested incentive provides a specific benefit to the project and results in measurable cost savings or facilitates development of affordable units. Additional justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Open Space Easement

The proposed subdivision does not provide open space easements as required by the 2040 General Plan and the Hillside Specific Plan.

Pursuant to the Open Space, Parks, and Recreation Element of the 2040 General Plan, OSPR- 2.3, Hillside Open Space Dedication: In all hillside subdivisions, the dedication of open space in fee or as an easement shall be required to protect unique natural features, habitats, and movement corridors.

Pursuant to the Hillside Specific Plan, Chapter 4.0, Open Space, Policies 4.3, 1. Open Space Easements: Open space easements shall be required by the deciding body for hillside subdivisions in accordance with the topographical, ecological, aesthetic, and other conditions pertinent to the making of such easements.

Pursuant to the Hillside Specific Plan, Chapter 4.0, Open Space, Section 4.4 Implementation, 1. Open Space Easements: Open space easement policies shall be implemented for each subdivision or Planned Development application to protect creeks, ridgelines, stands of trees, scenic views, hazardous areas, and to provide for trails.

The applicant has requested an incentive under SDBL (CA Gov. Code § 65915) to waive the requirement. The applicant must demonstrate that the requested incentive provides a specific benefit to the project and results in measurable cost savings or facilitates development of affordable units. Additional justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Staff is unable to make the findings necessary to grant the incentive, as providing open space easements on the proposed properties would not result in a specific project benefit, measurable cost savings, or facilitate the development of affordable units. A Condition of Approval has been included for Lots 2, 7, 8, 9, and 10 requiring that, prior to recordation of the vesting map, open space easements shall be established to protect unique natural features, habitats, and movement corridors on the property (Exhibit 3).

D. Architecture and Site Analysis

The project proposes the construction of twelve two-story single-family residences on twelve individual lots. Lots 1, 11, and 12 are BMP units and the remaining residences are market-rate units (Exhibits 16 through 27). The unit types include three, five, and six bedrooms with multiple-floor plans. A Project Description Letter and Letter of Justification discussing the project are included as Exhibit 5. The residences range in size from 1,614 square feet to 6,156 square feet. The BMP units propose two-car garages, and the market rate units propose a three-car garage. The table on the following page summarizes the

proposed floor area; maximum allowable floor area for the residence and garage per the applied R-1:10 zone and Hillside Overlay Area; total number of bedrooms and bathrooms; and floor plan type.

Floor Area									
	Gross Lot Size s.f.	**Average Slope %**	**Net Lot Size s.f.**	**Max FAR Residence s.f.**	**Proposed Residence s.f.**	**Max FAR Garage s.f.**	**Proposed Garage s.f.**	**Bed/Bath**	**Plan Type**
Lot 1*	21,659	6.25	21,659	4,700	1,614	1,157	467	3/2½	D
Lot 2	34,485	4.24	34,485	6,000	**6,574**	400	653	5/5½	B
Lot 3	23,931	15.22	19,039	4,531	**6,574**	1,156	653	5/5½	B
Lot 4	25,686	13.13	21,509	4,689	**5,593**	1,157	694	6/6½	A
Lot 5	36,842	8.2	36,842	6,000	5,593	400	694	6/6½	A
Lot 6	33,979	14.98	27,196	6,000	5,593	400	694	6/6½	A
Lot 7	51,367	25.72	27,142	6,000	**6,156**	400	775	5/5 and 2 half baths	C
Lot 8	213,486	33.84	85,394	6,000	**6,156**	400	775	5/5 and 2 half baths	C
Lot 9	74,265	21.40	48,866	6,000	**6,156**	400	775	5/5 and 2 half baths	C
Lot 10	238,899	29.36	100,146	6,000	**6,156**	400	775	5/5 and 2 half baths	C
Lot 11*	4,785	8.21	4,785	1,694	1,614	400	**467**	3/2½	D
Lot 12*	4,959	11.18	4,346	1,569	**1,614**	400	**467**	3/2½	D

** BMP Units*

The proposed project would exceed the maximum allowed Floor Area Ratio (FAR) for residences on Lots 2, 3, 4, 7, 8, 9, 10, and 12 per the applied R-1:10 zoning standards. Pursuant to Town Code Section 29.40.075 for lots less than 30,000 square feet, Lots 4 and

12 exceed the maximum allowable FAR. Pursuant to the HDS&G, Chapter IV. Development Intensity, A. Maximum Allowable Development, Lots 2, 3, 7, 8, 9, and 10 exceed the maximum allowable FAR. Lots 1, 5, and 6 would meet the maximum allowable FAR.

The applicant requests to exceed the maximum allowable FAR through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

E. Building Design

The project proposes four different building models. The proposed two-story BMP homes located on Lots 1, 11, and 12 are modest in scale and designed in a traditional architectural style consistent with the surrounding neighborhood. All three BMP homes, Building Type D, are similar in scale and appearance (Sheet A2.1 of Exhibits 16, 26, and 27).

The proposed two-story market-rate homes on Lots 2 and 3 are located along the southern edge of the existing neighborhood. These two-story homes have smaller footprints compared to the homes on Lots 4 through 10 and have articulated massing with varied roof forms. The two homes, Building Type B, are similar in scale and appearance (Sheets A2.1 and A2.2 of Exhibits 17 and 18).

The proposed two-story market-rate homes on Lots 4, 5, and 6 are adjacent to the R-1:10 zoned residential properties to the west. These homes are primarily one story with a limited second-story element. Colors and materials reflect natural tones consistent with the California Ranch and Mediterranean styles in the neighborhood. The three homes, Building Type A, are similar in scale and appearance (Sheets A2.1 and A2.2 of Exhibits 19, 20, and 21).

The proposed two-story market-rate homes on Lots 7 and 10 are sited on slopes of approximately 20 percent, the homes are sited on terraced graded pads that follow the existing contours and avoid ridgelines, major trees, and natural features. A riparian corridor with an ephemeral drainage and swale separate Lots 8 and 9. Building forms and rooflines parallel the hillside, with stone bases and darker natural materials that blend with the hillside and meet the requirements of the HDS&G color and light reflectivity value (LRV) requirements. The four homes, Building Type C and D, are similar in scale and appearance (Sheets A2.1 and A2.2 Exhibits 22, 23, 24, and 25).

Exterior materials of the homes include weathered and stained cedar vertical siding, sand stucco with stone veneer accents, concrete flat tile roof, painted metal railings, fiberglass windows, and metal garage doors. A condition of approval has been included in Exhibit 3 requiring each home to record a Deed Restriction regarding meeting the HDS&G LRV and color requirements.

Review by the Town's Consulting Architect is typically required for Architecture and Site applications. For this application, it should be noted that the feedback provided by the Consulting Architect is subjective in nature and should not be used as the basis for a decision since the Town's review is limited to objective standards only, pursuant to SB 330 and Builder's Remedy.

The Town's Consulting Architect reviewed the proposed project and provided feedback and recommendations for each of the twelve homes (Exhibit 6). The applicant submitted a letter responding to these recommendations and summarizing design changes that were made (Exhibit 7).

F. Height

Pursuant to Town Code, building height is measured from the natural or finished grade, whichever is lower and creates a lower profile. The project proposes the addition of fill to create building pads which increases the overall height of the buildings per Town Code. The proposed two-story building heights for the single-family homes range from 27 feet, four-inches to 40 feet, 10-inches. The maximum allowable building height for residences located within the Hillside Overlay Zone is of 18 feet if the building is visible per the HDS&G or 25 feet the building is not visible. See Visibility discussion below. The proposed building heights are summarized in the table on the following page.

Building Height	
	Proposed Height
Lot 1*	27 ft. – 7 in.
Lot 2	32 ft. – 6 in.
Lot 3	38 ft. – 0 in.
Lot 4	37 ft. – 3 in.
Lot 5	40 ft. – 10 in.
Lot 6	33 ft. – 10 in.
Lot 7	27 ft. – 6 in.
Lot 8	27 ft. – 6 in.
Lot 9	27 ft. – 6 in.
Lot 10	27 ft. – 6 in.
Lot 11*	27 ft. – 8 in.
Lot 12*	27 ft. – 4 in.

** BMP Units*

All twelve of the two-story homes exceed the maximum allowable building height of 25 feet pursuant to the HDS&G, E. Building Height, Standards 1 and 2.

The applicant requests to exceed the maximum allowable height through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project as proposed. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [Government Code § 65589.5 (d)(5)]. Additional information and

justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

G. Visibility Analysis

The HDS&G require that residential projects located within the Hillside Overlay Zone prepare a Visibility Analysis to determine whether a residence is visible from any of the Town's established viewing areas. A residence is considered visible if 24.5 percent or more of an elevation can be seen from any of the established viewing areas. Section B. of Chapter II of the HDS&G outlines the required methodology, including the use of story poles and netting to conduct the analysis. The applicant submitted an informal visibility analysis (Sheet G6 of Exhibit 15) concluding that the proposed homes would not be visible, allowing a maximum building height of 25 feet. However, the applicant's analysis did not follow the HDS&G methodology, as story poles and netting were not installed.

The applicant has requested an incentive under SDBL (CA Gov. Code § 65915) to waive the requirement. The applicant must demonstrate that the requested incentive provides a specific benefit to the project and results in measurable cost savings or facilitates development of affordable units. Additional justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

H. Lot Coverage

Pursuant to Town Code Section 29.10.415, the maximum building coverage on a lot in the R-1 or single-family residential zone, including any type of accessory building, is 40 percent. All twelve lots comply with the lot coverage requirements of the R-1:10 zone.

I. Setbacks

Pursuant to Town Code Section 29.40.405, the minimum front yard setback is 25 feet, the minimum side yard setback is 10 feet, and the minimum rear yard setback is 20 feet for the R-1:10 zone. The proposed setbacks are summarized on the following page.

Proposed Setbacks					
	Applicant Applied Zone	**Front (Min. 25 ft.)**	**Side (Min. 10 ft.)**	**Side (Min. 10 ft.)**	**Rear (Min. 20 ft.)**
Lot 1*	R-1:10	37.21	**5**	122	39.4
Lot 2	R-1:10	46.2	100	25.9	23.8
Lot 3	R-1:10	39.36	**8.48**	54.8	44.1
Lot 4	R-1:10	36.57	15	33.4	41.7
Lot 5	R-1:10	32.33	56.75	26.7	32.7
Lot 6	R-1:10	40.42	29.17	41.6	**19.8**
Lot 7	R-1:10	113.09	123.19	38.92	96.18
Lot 8	R-1:10	99.18	47.7	36.25	400
Lot 9	R-1:10	70.66	20.2	79.5	118.7
Lot 10	R-1:10	77.92	32.04	345.6	116.4
Lot 11*	R-1:10	52.24	**5**	**5**	39.7
Lot 12*	R-1:10	56.27	**5**	**5**	44.6

** BMP Units*

All twelve lots meet the front setback requirement; however, Lots 1, 3, 11, and 12 do not meet the side setback requirement, and Lot 6 does not meet the rear setback requirement. The applicant requests to exceed the minimum setback requirements through a waiver under the State Density Bonus Law (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

J. Parking

The proposed project complies with the Town Code Section 29.10.150 (c)(1) by providing two parking spaces per single family residence. However, the project does not comply with the Hillside Specific Plan, Chapter 3.0, Circulation, Section 3.4 Implementation, Item 15, which requires not less than four additional on-site guest parking spaces where roadways are not designated to permit parking. The proposed parking is summarized on the following page.

Proposed Parking Spaces				
	Garage	**Guest**	**Total Provided**	**Total Required**
Lot 1*	2	0	2	6
Lot 2	2	2	4	6
Lot 3	2	2	4	6
Lot 4	2	1 (garage)	3	6
Lot 5	2	1 (garage)	3	6
Lot 6	2	2	4	6
Lot 7	2	2	4	6
Lot 8	2	2	4	6
Lot 9	2	2	4	6
Lot 10	2	0	2	6
Lot 11*	2	0	2	6
Lot 12*	2	0	2	6

** BMP Units*

All twelve lots do not meet the Hillside Specific Plan requirement for on-site guest parking. The applicant requests relief from the guest parking requirements through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request is provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

K. Least Restrictive Development Area (LRDA)

Each development application subject to the HDS&G shall be accompanied by a constraints analysis when it is deemed necessary by the Town to identify the most appropriate area or areas on the lot for locating buildings given the existing constraints of the lot. When all constrained areas have been identified and mapped, the remaining area(s) will be designated as the LRDA. These are the areas most appropriate for development, including topography, with emphasis on slopes over 30 percent. Pursuant to the HDS&G, Chapter II, Constraints Analysis and Site Selection, A. Prior to Selecting a Building Site, Standard 1. Constraints Analysis, the buildings proposed on Lots 3, 6, 7, and 9 are located on slopes over 30 percent, outside of the LRDA.

The applicant requests to build outside the LRDA requirement through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that

the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

L. Swimming Pools

The swimming pools proposed on Lots 7 and 8 are located on slopes greater than 30 percent, which is prohibited per the HDS&G. The HDS&G, Chapter VI. Site Elements, Pools, Standard 3 states, "due to topographic constraints, not every lot will be able to accommodate a pool or sport court. Swimming pools and sport courts are prohibited on slopes greater than 30 percent."

The applicant requests relief from this requirement through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Staff is unable to make the findings to grant the waiver as the location of the pools would not physically preclude the construction of the project. A Condition of Approval has been included for Lots 7 and 8 requiring that, prior to issuance of a building permit, the proposed location of the swimming pools be modified to ensure that the pool locations are located on slopes less than 30 percent (Exhibit 3).

M. Grading and Drainage

The project proposes 10,878 cubic yards (CY) of soil to be exported and 21,082 CY to be imported to construct the twelve house pads, private cul-de-sac road, private driveways, Emergency Vehicle Access Road (EVA), and associated landscaping.

Maximum Graded Cut and Fill

The proposed subdivision improvements and each of the 12 lot improvements exceed the maximum allowable graded cut and/or fill depth standard of the HDS&G, Chapter III. Site Planning, A. Grading, Standards 1. The maximum graded cut and fill tables are located grading sheets of each plan set (Sheet 3.0 of Exhibit 16 through 27). The applicant requests relief from the maximum graded cut and fill requirements through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA

Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

Drainage

A majority of the proposed lots would function as individual drainage management areas (DMAs) (Sheet 5.0 of Exhibits 16-27). Lots 1, 11, and 12 would combine into one DMA, while the undeveloped area and roadways would form additional DMAs. Stormwater runoff from each DMA would be directed to an associated bioretention area for treatment. Lots 1 through 4 and Lots 7 through 10 have individual bioretention areas and Lots 5 and 6 have shared bioretention areas. Biorientation basins would be sized and designed to meet the Town's C.3 Stormwater Standards, and internal roadways would use pervious pavement to promote infiltration. Treated stormwater would be discharged to the existing 27- and 36-inch storm drains located north and west of the site.

N. Fire Access

The subject parcel is located in the High Fire Hazard Zone per the adopted June 2025 Fire Hazard Severity Zones Map. However, the project was vested per SB 330 prior to the adoption of the June 2025 Fire Hazard Severity Zones Map. The site was previously located in the Very High Fire Hazard Severity Zones (VHFHSZ) of the Local Responsibility Area (LRA) and is therefore subject to the July 1, 2021, California Public Resource Code 4290 (PRC 4290) requirements. PRC 4290 requirements require modifications to the width of existing roads, existing road surfaces, fire truck turnarounds, and the lengths of dead-end roads. An Alternative Materials, Methods of Construction, or Modification of Code (AMMR) was approved by the Santa Clara County Fire Department (SCCFD) for Lot 10 to meet the PRC 4290 requirements to mitigate deficiencies of the required 20-foot roadway width on a 10-foot in length segment of roadway on Cerro Vista Drive. In order to mitigate the noncompliant roadway width, the approved AMMR requires an upgraded sprinkler system for the proposed residence at Lot 10. The recommended Conditions of Approval (Exhibit 3) include roadway and other improvements for fire safety that will be required as a result of this coordination with the SCCFD.

O. Tree Impacts

The project site is composed of a mixed oak woodland, portions of which would be impacted by the proposed development. To determine whether trees proposed for removal qualify for protection under the Town's Tree Protection Ordinance, an Arborist Report was prepared by the applicant's arborist, McClintock Landscape Horticultural Services (Exhibit 8). Through the site tree survey, the Arborist Report identified 673 on-site trees measuring four inches or greater in diameter at breast height (DBH), representing 26 species. Of these, 630 trees were determined to be protected under the Town's Tree Protection Ordinance.

The Tree Mitigation and Protection Plan prepared for the proposed project denotes a total of 223 protected trees to be removed, which includes 12 large protected trees.

To comply with the Town's tree replacement requirements, a total of 551 replacement trees would need to be planted on-site. The schematic planting plan proposes planting 85 replacement trees, which does not satisfy the on-site replacement requirements (Sheet T-1 of Exhibit 15). The applicant has the option to request in-lieu payment for any required replacement trees that cannot be accommodated on site.

The applicant submitted an arborist report for peer review by the Town's Consulting Arborist. Following the review, the revised arborist report from the applicant was confirmed to meet the Town's requirements by the Consulting Arborist (Exhibit 9). If the project is approved, tree protection measures would be implemented prior to construction and maintained for the duration of construction activity. Arborist recommendations for tree protection, as well as compliance with the Town's Tree Protection Ordinance, are included in the Conditions of Approval (Exhibit 3).

P. Public Health and Safety Standards

During the Town's review process, the Town's Planning, Building, and Parks and Public Works staff, as well as the Santa Clara County Fire Department, reviewed the application for compliance with applicable objective standards. Although exceptions pursuant to Builder's Remedy and SDBL incentives and waivers are requested for some of the design and density standards, the proposed application was reviewed and deemed consistent with applicable public health and safety standards with the inclusion of the recommended conditions of approval in Exhibit 3, if approved by the Town Council.
As a part of the Initial Study and MND prepared for this application (Exhibit 1), the project was reviewed for CEQA compliance on a number of required topics, including the following which are related to public health and safety: Air Quality; Geology and Soils; Greenhouse Gas Emissions; Hazards and Hazardous Materials; Hydrology and Water Quality; Noise; Public Services; Transportation, including review on whether the project would result in inadequate emergency access; Utilities and Service Systems; and Wildfire. As described in the CEQA Determination section of this report below, it was determined that the project would not result in a significant impact in any of the categories either as proposed or with the inclusion of mitigation measures. Each of these mitigation measures are included in the Conditions of Approval in Exhibit 3.

Specifically for transportation, a Transportation Assessment was prepared by TJKM Transportation Consultants (Exhibit 1, Appendix H) for the proposed project. As noted in the memorandum, the assessment replaces LOS with Vehicle Miles Traveled (VMT) as the metric for conducting transportation analyses pursuant to CEQA and establishing the thresholds of significance to comply with Senate Bill 743 (Resolution 2020-045). Consistent

with State CEQA Guidelines Section 15064.3, the Town of Los Gatos has adopted the following thresholds of significance to guide in determining when a land use project will have a significant transportation impact. First, Total Project Generated VMT, where a significant impact would occur if the total VMT per service population for the project would exceed a level of 11.3 percent below the total VMT per service population for the Town of Los Gatos baseline conditions. Second, Project's Effect on VMT/Boundary VMT, where a significant impact would occur if the project increases the total (boundary) County-wide VMT by 6.5 percent compared to baseline conditions.

Using the VTA Model and based on the inputs of 12 single-family dwelling units and a population of 31, the VMT with project is slightly over the threshold. As a result, the project would need to mitigate roughly 2.83 percent of its VMT to be considered insignificant. To achieve this, the following mitigation measures were selected:

Measure 1: Construct sidewalk along the north side of Blossom Hill Road between Regent Drive and Union Avenue.
Measure 2: Construct sidewalk along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road.

These measures are consistent with the Town's 2020 Bicycle and Pedestrian Master Plan and are expected to achieve the required VMT reduction of 2.83 percent and reduce the project's VMT impact to a less-than-significant level. This mitigation measure is included in the Conditions of Approval in Exhibit 3.

Q. Density

The site's underlying RC zoning allows a maximum density of one dwelling unit per 20 acres (0.05 du/acre), while the proposed project would provide 12 units, or approximately 0.68 du/acre. The applicant has invoked the Builder's Remedy and does not intend to rezone the site; therefore, the Town has applied R-1:10 standards. The General Plan Land Use designation corresponding to the R-1:10 zoning is Low-Density Residential (0–5 du/acre), which would allow the site to accommodate up to 87 units.

R. Below Market Price (BMP) Units

The proposed project proposes a total of 12 units, three of which would be designated as affordable units (25 percent). The BMP units will be restricted to those low-income households whose income is above 50 percent, but no greater than 80 percent, of the median area income. Conditions of Approval are included in Exhibit 3 pertaining to the construction phasing, provision, and sale of the BMP units.

BMP Size and Location

Pursuant to Section III. A. of the Town's BMP Program Guidelines, A. Size of Units, BMP units should be provided proportionately in the same unit type mix (number of bedrooms) as the market rate units. The three proposed BMP units are three bedroom units whereas the proposed market rate units range in bedroom count from four to six bedrooms.

Pursuant to Section III. B. of the Town's BMP Program Guidelines, BMP units shall be dispersed throughout the development, to the extent feasible, in all buildings, on each floor, and in each project phase. A concentration of BMP units in one location is not desirable and will not be allowed. The proposed site plan illustrates the location of the three BMP units on the project site (Sheet 2.0 of Exhibit 15). The BMP units, located on Lots 1, 11, and 12, are grouped together and share a private driveway and turnaround area, rather than being distributed throughout the subdivision.

The applicant requests relief from the BMP location and size requirements through a waiver under SDBL (CA Gov. Code § 65915), which allows modifications of development standards that would otherwise physically preclude construction of the project. The applicant further asserts that the project may utilize an exception under the Builder's Remedy provisions of the HAA [CA Gov. Code § 65589.5 (d)(5)]. Additional information and justification for this request are provided in the applicant's Project Description and Letter of Justification (Exhibit 5).

S. No Net Loss Law

Pursuant to CA Gov. Code § 65863 (No Net Loss Law), the Town must maintain adequate capacity in the Housing Element to accommodate its remaining unmet Regional Housing Needs Assessment (RHNA) by each income category at all times throughout the entire planning period. To comply with the No Net Loss Law, as the Town makes decisions regarding zoning and land use, or development occurs, the Town must assess its ability to accommodate new housing within the remaining capacity of the Housing Element. If the Town approves a development of a parcel identified in the Housing Element with fewer units than anticipated, the Town must either make findings that the remaining capacity of the Housing Element is sufficient to accommodate the remaining unmet RHNA by each income level, or identify and make available sufficient sites to accommodate the remaining unmet RHNA for each income category. The Town may not disapprove a housing project on the basis that approval of the development would trigger the identification or zoning of additional adequate sites to accommodate the remaining RHNA.

The subject property was not identified in the Sites Inventory of the Housing Element, and therefore, the findings related to the Not Net Loss are not applicable for this project. However, the proposed housing units would count towards fulfilling the Town's RHNA

requirements. The Town is not required to identify additional sites to accommodate the remaining RHNA as a result of this project.

T. CEQA Determination

An Initial Study was prepared for the project, which included a number of project-level technical studies, including: Air Quality and Greenhouse Gas Modeling; Biological Evaluation; Arborist Report; Geotechnical and Geologic Hazard Investigation; and Vehicle Miles Traveled (VMT) Technical Memorandum (Exhibit 1). All technical reports were peer reviewed by the Town or prepared by the Town's consultants. The Initial Study concluded that the project will not have a significant impact on the environment with adoption of the MND and MMRP to mitigate potential impacts to a less than significant level.

Each of the 18 mitigation measures identified in the MND and Errata Sheet (III-1, IV-1, IV-2, IV-3, IV-4, IV-5, IV-6, IV-7, IV-8, IV-9, IV-10, V-1, V-2, V11-1, X-1, X111-1, X111-2, and XVII-1) are included in the MMRP (Exhibit 12) and as Conditions of Approval in Exhibit 3.

The CEQA mandated 20-day public review period began on September 19, 2025, and ended on October 9, 2025. Exhibit 13 includes responses to comments received during the public review period.

An Errata Sheet is included in Exhibit 14 that includes revisions to the IS/MND. The revisions to the IS/MND reflected in the Errata do not affect the adequacy of the previous environmental analysis contained in the Surrey Farms Estates Subdivision Project IS/MND. Because the changes presented in the Errata would not result in any new significant impacts or increase in impact significance from what was identified in the IS/MND, recirculation of the Surrey Farms Estates Subdivision Project IS/MND is not required.

PUBLIC COMMENTS:

Project identification signage was installed on the Twin Oaks Drive, Brooke Acres Drive, and Cerro Vista Court frontages by September 17, 2024, consistent with Town policy. Visual simulations were completed by the Town's consultant and posted to the Town's website by September 1, 2025 (Exhibit 10). Written notice was sent to property owners and tenants within 1,000 feet of the subject property and notice of public hearing signage was installed on the street frontages by November 21, 2025, in anticipation of the December 17, 2025, Planning Commission hearing.

Staff conducted outreach through the following media and social media resources, for the availability of the visual simulations; public review of the Initial Study and MND; and notice of the public hearing:

- The Town's website home page, What's New;
- The Town's Facebook page;
- The Town's Twitter account;
- The Town's Instagram account; and
- The Town's NextDoor page.

Public comments received by 11:00 a.m., Friday, December 12, 2025, are included as Exhibit 11. Public comments included concerns regarding drainage, flooding, groundwater saturation, grading, traffic, impacts on wildlife, removal of trees, loss of views, privacy, fire safety, building height, size of homes, and construction impacts.

CONCLUSION:

A. Summary

The applicant is requesting approval for the subdivision of one lot into 12 lots with a Vesting Tentative map, construction of a new single-family residence on each lot, site work requiring a grading permit, and removal of large protected trees under SB 330 on a vacant property zoned RC, located at 178 Twin Oaks Drive.

As detailed above, the application was submitted and is being processed under SB 330. The applicant seeks approval for the proposed residential project utilizing both SDBL (CA Gov. Code § 65915) and the Builder's Remedy provisions under the HAA [CA Gov. Code § 65589.5 (d)(5)]. The project qualifies for three incentives and unlimited waivers under SDBL. The application meets the definition of a Builder's Remedy project and the applicant has requested a number of exceptions to Town standards pursuant to Builder's Remedy. The deviations from the Town's standards included in the project are requested through both SDBL and Builder's Remedy for which the applicant has provided justification (Exhibit 5).

B. Recommendation

Staff recommends that the Planning Commission consider the request and, if merit is found with the proposed project, forward a recommendation that the Town Council approve the Architecture and Site applications, Subdivision, and Mitigated Negative Declaration applications by taking the following actions:

1. Adopt the Mitigated Negative Declaration (ND-25-001) and Mitigation Monitoring and Reporting Program (Exhibit 12) and make the finding that the project, with adoption of the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, will not have a significant effect on the environment per CEQA;
2. Make the finding that the project is consistent with the General Plan with the incentives, and waivers requested pursuant to State Density Bonus Law and granting of the

requested exceptions to the maximum allowed density pursuant to the Builder's Remedy provision of the Housing Accountability Act (Exhibit 2);

3. Make the finding that the proposed project complies with Section 66474 of the State Subdivision Map Act with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act and make affirmative findings to approve the subdivision (Exhibit 2);
4. As required for tentative or parcel maps approved in state responsibility areas (SRA) or very high fire hazard severity zones (VH), findings are required to be made to the State Board of Forestry and Fire Protection (Board) pursuant to 14 CCR Section 1266.02 (Exhibit 2);
5. Make the finding that the project meets the objective standards of Chapter 29 of the Town Code (Zoning Regulations) with the incentives and waivers requested pursuant to State Density Bonus Law and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act (Exhibit 2);
6. Make the finding that the project in compliance with the Hillside Development Standards and Guidelines with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act (Exhibit 2);
7. Make the finding that the project in compliance with the Hillside Specific Plan with the incentives and waivers requested pursuant to State Density Bonus Law and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act (Exhibit 2);
8. Make the affirmative findings as required by State Density Bonus Law for granting an incentive pursuant to California Government Code Section 65915 (d) and for granting waivers pursuant to California Government Code Section 65915 (a)(2) (Exhibit 2);
9. Make the finding that, as required by California Government Code Section 65589.5 (d) of the California Housing Accountability Act, none of the findings for denial of a Builder's Remedy project can be made (Exhibit 2);
10. Make the considerations as required by Section 29.20.150 of the Town Code for granting approval of an Architecture and Site application (Exhibit 2); and
11. Approve Architecture and Site Applications S-24-023 through S-24-033 and S-24-059, Subdivision Application M-24-023, and Mitigated Negative Declaration Application ND-25-001 with the recommended conditions contained in Exhibit 3 and the development plans in Exhibits 15 through 27.

C. Alternatives

Alternatively, the Planning Commission can:

1. Continue the matter to a date certain with specific direction; or
2. Approve the applications with additional and/or modified conditions; or
3. Deny the applications.

PLANNING COMMISSION – *December 17, 2025*
REQUIRED FINDINGS AND CONSIDERATIONS FOR:

178 Twin Oaks Drive
Architecture and Site Applications S-24-023 through -032 and S-24-059
Vesting Tentative Map Application M-24-013
Mitigated Negative Declaration ND-25-001

Consider a Request for Approval for the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB 330) on a Vacant Property Zoned RC. APN 532-16-006. An Initial Study and Mitigated Negative Declaration Have Been Prepared.

Property Owner/Applicant: Larry Dodge
Project Planner: Erin Walters

FINDINGS

Required finding for CEQA:

- An Initial Study and Mitigated Negative Declaration have been prepared for this project. It has been determined that this project will not have a significant impact on the environment with adoption of the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program to mitigate potential impacts to a less than significant level.

Required finding for consistency with the Town's General Plan:

- That the proposed project is consistent with the General Plan with the incentives, and waivers requested pursuant to State Density Bonus Law and granting of the requested exceptions to the maximum allowed density pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

Required findings to deny a Subdivision application:

- As required by Section 66474 of the State Subdivision Map Act the map shall be denied if any of the following findings are made: **None of the findings could be made to deny the application with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).**

  Instead, the Town Council makes the following affirmative findings:

  a. That the proposed map is consistent with all elements of the General Plan with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision

of the Housing Accountability Act, California Government Code Section 65589.5(d).

b. That the design and improvement of the proposed subdivision is consistent with all elements of the General Plan with granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).
c. That the site is physically suitable for the type of development.
d. That the site is physically suitable for the proposed density of development.
e. That the design of the subdivision and the proposed improvements are not likely to cause substantial environmental damage nor substantially and avoidably injure fish or wildlife or their habitat with implementation of the Mitigation Monitoring and Reporting Program and the Conditions of Approval.
f. That the design of the subdivision and type of improvements is not likely to cause serious public health problems.
g. That the design of the subdivision and the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.

Required Subdivision Map Findings for the Board of Forestry and Fire Protection:

- For tentative or parcel maps approved in state responsibility areas (SRA) or very high fire hazard severity zones (VH), the following findings are required to be made to the State Board of Forestry and Fire Protection (14 CCR Section 1266.02):
  1. A finding supported by substantial evidence in the record that the subdivision is consistent with:
     a. Regulations adopted by the State Board of Forestry and Fire Protection pursuant to Sections 4290 and 4291 of the Public Resources Code, or
     b. Consistent with local ordinances certified by the State Board of Forestry and Fire Protection as meeting or exceeding the state regulations.
  2. A finding supported by substantial evidence in the record that structural fire protection and suppression services will be available for the subdivision through any of the following entities:
     a. A county, city, special district, political subdivision of the state, or another entity organized solely to provide fire protection services that is monitored and funded by a county or tother public entity.
     b. The Department of Forestry and Fire Protection by contract entered into pursuant to Section 4133, 4142, or 4144 of the Public Resources Code.

Required compliance with the Zoning Regulations:

- The project meets the objective standards of Chapter 29 of the Town Code (Zoning Regulations) with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

Required compliance with the Town of Los Gatos Hillside Development Standards and Guidelines:

- The project meets the Town of Los Gatos Hillside Development Standards and Guidelines with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

Required compliance with the Town of Los Gatos Hillside Specific Plan:

- The project meets the Town of Los Gatos Hillside Specific Plan with the incentives and waivers requested pursuant to State Density Bonus Law (CA Gov. Code § 65915) and granting of the requested exceptions to Town standards pursuant to the Builder's Remedy provision of the Housing Accountability Act, CA Gov. Code § 65589.5 (d).

Required for granting concession and waivers pursuant through State Density Bonus Law:

Concession(s) or incentive(s)

- CA Government Code § 65915:
  (d) The Town shall grant concession(s) or incentive(s) requested by the applicant unless the Town makes a written finding, based upon substantial evidence, of any of the following:
    (A) The concession or incentive does not result in identifiable and actual cost reductions, consistent with subdivision (k), to provide for affordable housing costs, as defined in Section 50052.5 of the Health and Safety Code, or for rents for the targeted units to be set as specified in subdivision (c).
    (B) The concession or incentive would have a specific, adverse impact, as defined in paragraph (2) of subdivision (d) of Section 65589.5, upon public health and safety or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific, adverse impact without rendering the development unaffordable to low-income and moderate-income households.
    (C) The concession or incentive would be contrary to state or federal law.

Waivers

- CA Government Code § 65915 (a)(2):
  The Town shall grant waivers to the Town's development standards requested by the applicant unless the Town makes a written finding, based upon substantial evidence, that the development standard for which the waiver is requested would not physically preclude the construction of the development at the densities and with the concession permitted through Density Bonus Law.

Required findings to deny a project under State Builder's Remedy Law:

As required by CA Government Code § 65589.5 (d) of the California Housing Accountability Act, a

qualifying housing development project invoking Builder's Remedy shall not be denied by the Town, or condition approval in a manner that renders the housing development project infeasible, including through the use of design review standards, unless it makes written findings, based on the preponderance of the evidence in the record, as to one of the following: **None of the findings could be made to deny the application.**

1. The Town did not have a certified sixth cycle Housing Element by January 31, 2023.
2. The housing development project would not have a specific, adverse impact on the public health or safety.
3. The denial of the housing development project or imposition of conditions is not required in order to comply with specific state or federal law.
4. The housing development project is not proposed on land zoned for agriculture or resource preservation that is surrounded on at least two sides by land being used for agricultural or resource preservation purposes, or which does not have adequate water or wastewater facilities to serve the project.
5. On the date the application for the housing development project was deemed complete, the Town had not adopted a revised housing element that was in substantial compliance with California Government Code Section 65589.5(d) of the California Housing Accountability Act, and the housing development project was inconsistent with both the Town's Zoning Ordinance and General Plan Land Use Designation.

CONSIDERATIONS

Required considerations in review of Architecture and Site applications:

- As required by Section 29.20.150 of the Town Code, the applicable considerations in review of an Architecture and Site application were all made in reviewing this project.

PLANNING COMMISSION – *December 17, 2025 – Draft*
CONDITIONS OF APPROVAL

178 Twin Oaks Drive, Lots 1 -12
Vesting Tentative Map Application M-24-013
Architecture and Site Applications S-24-023 through S-24-033 and S-24-059
Mitigated Negative Declaration ND-25-001

Consider a Request for Approval for the Subdivision of One Lot into Twelve Lots with a Vesting Tentative Map, Construction of a New Single-Family Residence on Each Lot, Site Work Requiring a Grading Permit, and Removal of Large Protected Trees Under Senate Bill 330 (SB 330) on a Vacant Property Zoned RC. APN 532-16-006. An Initial Study and Mitigated Negative Declaration Have Been Prepared.

Property Owner/Applicant: Larry Dodge
Project Planner: Erin Walters

TO THE SATISFACTION OF THE DIRECTOR OF COMMUNITY DEVELOPMENT:

Planning Division

APPLICABLE TO ALL LOTS

1. APPROVAL: This project is vested to the ordinances, policies, and standards in effect on December 19, 2023, and these conditions of approval conform to those ordinances, policies, and standards. This application shall be completed in accordance with all of the conditions of approval and in substantial compliance with the approved plans. Any changes or modifications to the approved plans shall be approved by the Community Development Director, Development Review Committee, or the Planning Commission depending on the scope of the changes.
2. EXPIRATION: The approval will expire two years from the approval date pursuant to Section 29.20.320 of the Town Code, unless the approval has been vested, pursuant to 29.20.335.
3. COVENANTS, CONDITIONS, AND RESTRICTIONS (CC&R): CC&Rs must be approved by the Town and recorded with the County prior to recording of map.
4. MASTER DEVELOPER: This project shall be developed and constructed by a single Master Developer responsible for the coordinated implementation of all site improvements, infrastructure, and building construction. Individual lots within the approved subdivision or development area shall not be sold, transferred, or otherwise conveyed to separate entities or individuals for the purpose of independent development, construction, or sale prior to completion of the project as a whole. Prior to recordation of any Final Map or issuance of any building permits, the applicant shall provide documentation to the Community Development Director demonstrating that a single Master Developer is responsible for construction and delivery of the project. Prior to issuance of any Certificates of Occupancy, the Town shall verify compliance with this condition. This condition shall be printed as a note on the Final Map.

5. BELOW MARKET PRICE (BMP) UNITS: The developer shall provide three (3) BMP units (low income) for sale to be sold at a price that is affordable to the target household low-income range, as required by the Town's applicable BMP Program Guidelines and the applicable BMP Resolution. A deed restriction shall be recorded prior to the issuance of any building permits for residential units, stating that the BMP unit must be sold and maintained as a below market price unit pursuant to the Town's BMP Ordinance and Guidelines.
6. AFFORDABLE HOUSING AGREEMENT: Prior to issuance of building permits for residential units, the developer shall enter into an Affordable Housing Agreement with the Town for provision of the required BMP units and to facilitate their sale pursuant to the BMP Program Guidelines and BMP Resolution in place at the time of building permit issuance.
7. PHASING OF THE CONSTRUCTION OF BMP UNITS: The Certificate of Occupancy for the first market rate unit shall not be issued until all three required BMP units have been constructed and Certificates of Occupancy for each BMP unit have been secured.
8. OPEN SPACE EASEMENTS: The Final Map submitted for recordation with the County Recorder shall include open space easements on Lots 2, 7, 8, 9, and 10 to protect unique natural features, habitats, and movement corridors on the property. Easements lying in, on, over, under and along those certain strips of land designated and delineated as "O.S.E." (Open Space Easement). No activity or use shall be conducted in said open space easement which is not compatible with maintaining and preserving the natural or scenic character of the land. The open space easement shall be maintained by the property owner. Said easements shall be kept open and free from buildings and structures of any kind except public service structures, irrigation systems, and appurtenances thereto, lawful fences and all lawful roof overhangs.
9. PUBLIC ART: The applicant shall comply with the requirements of Chapter 25, Article VII of the Town Code. The payment of the Los Gatos Public Art Fund in-lieu fee must be made prior to the issuance of any building permit for the development project.
10. TREE REMOVAL PERMIT: A Tree Removal Permit shall be obtained for any trees to be removed, prior to the issuance of Building and/or Grading Permits. Per Town Code Section 26.20.010 and Chapter 29, Article 1, Division 2, the developer shall obtain a tree removal permit prior to the removal of protected trees on private or Town property. The project developer shall abide by any tree replacement ratios and/or in-lieu payments, tree protection measures, and best management practices required by the tree removal permit and/or within an updated arborist report.
11. REPLACEMENT TREES: New trees shall be planted to mitigate the loss of trees being removed. The number of trees and size of replacement trees shall be determined using the canopy replacement table in the Town Code.
12. EXISTING TREES: All existing trees shown on the plan and trees required to remain or to be planted are specific subjects of approval of this plan and must remain on the site.
13. ARBORIST REQUIREMENTS: Prior to issuance of Building and/or Grading Permits, the developer shall implement, at their cost, all recommendations identified in the Arborist's report for the project, on file in the Community Development Department. These recommendations must be incorporated in the Building Permit plans and completed prior to issuance of a building permit where applicable and shall remain through all phases of construction.

14. TREE FENCING: Prior to issuance of Building and/or Grading Permits, protective tree fencing and other protection measures consistent with Section 29.10.1005 of the Town Code shall be placed as shown on the Tree Protection Plan of the approved plans prior to issuance of demolition and building permits and shall remain through all phases of construction. Include a tree protection plan with the construction plans.
15. TREE STAKING: Prior to final inspection, all newly planted trees shall be double staked using rubber tree ties.
16. LANDSCAPING: The final landscape plan shall comply with the Hillside Development Standards and Guidelines criteria for planting (ornamental planting shall be confined to areas within 30 feet of the house, inclusive of decks, patios and driveway). Prior to issuance of the Certificate of Occupancy, landscaping must be installed and completed.
17. WATER EFFICIENCY LANDSCAPE ORDINANCE: The final landscape plan, including landscape and irrigation plans and calculations, shall meet the Town of Los Gatos Water Conservation Ordinance or the State Water Efficient Landscape Ordinance, whichever is more restrictive. The final landscape plan shall be reviewed by the Town's consultant prior to issuance of building permits. A review fee based on the current fee schedule adopted by the Town Council is required when working landscape and irrigation plans are submitted for review.
18. PROJECT IDENTIFICATION SIGNAGE: Project identification signage on the project site shall be removed within 30 days of final action on the applications.
19. EXTERIOR COLOR: The exterior colors of the house shall not exceed an average light reflectivity value of 30 and shall blend with the natural vegetation.
20. LRV DEED RESTRICTION: Prior to the issuance of a building permit, a deed restriction shall be recorded by the applicant with the Santa Clara County Recorder's Office that requires all exterior colors to be maintained in conformance with the Hillside Development Standards and Guidelines.
21. PROPERTY FENCE: All new fencing shall comply with Town Code Section 29.40.0315 at building permit stage, unless an exception is granted by the Community Development Director.
22. OUTDOOR LIGHTING: Exterior lighting shall be kept to a minimum, and shall be down directed fixtures that will not reflect or encroach onto adjacent properties. No flood lights shall be used unless it can be demonstrated that they are needed for safety or security. The lighting plan shall be reviewed during building plan check.
21. TOWN INDEMNITY: Applicants are notified that Town Code Section 1.10.115 requires that any applicant who receives a permit or entitlement ("the Project") from the Town shall defend (with counsel approved by Town), indemnify, and hold harmless the Town, its agents, officers, and employees from and against any claim, action, or proceeding (including without limitation any appeal or petition for review thereof) against the Town or its agents, officers or employees related to an approval of the Project, including without limitation any related application, permit, certification, condition, environmental determination, other approval, compliance or failure to comply with applicable laws and regulations, and/or processing methods ("Challenge"). Town may (but is not obligated to) defend such Challenge as Town, in its sole discretion, determines appropriate, all at applicant's sole cost and expense.

Applicant shall bear any and all losses, damages, injuries, liabilities, costs and expenses (including, without limitation, staff time and in-house attorney's fees on a fully-loaded basis, attorney's fees for outside legal counsel, expert witness fees, court costs, and other litigation expenses) arising out of or related to any Challenge ("Costs"), whether incurred by Applicant, Town, or awarded to any third party, and shall pay to the Town upon demand any Costs incurred by the Town. No modification of the Project, any application, permit certification, condition, environmental determination, other approval, change in applicable laws and regulations, or change in such Challenge as Town, in its sole discretion, determines appropriate, all the applicant's sole cost and expense. No modification of the Project, any application, permit certification, condition, environmental determination, other approval, change in applicable laws and regulations, or change in processing methods shall alter the applicant's indemnity obligation.

22. COMPLIANCE MEMORANDUM: A memorandum shall be prepared and submitted with the building plans detailing how the Conditions of Approval will be addressed.

ENVIRONMENTAL REVIEW MITIGATION MEASURE CONDITIONS APPLICABLE TO ALL LOTS *

23. *AIR QUALITY - III-1: The project applicant shall show on Improvement Plans via notation that the project contractor shall restrict the construction of the off-site sidewalk improvements along the north side of Blossom Hill Road between Regent Drive and Union Avenue and along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road from occurring simultaneously with the on-site construction of the proposed project. Alternatively, if simultaneous construction of the on-site and off-site components of the proposed project cannot be avoided, prior to the initiation of ground disturbance associated with the off-site sidewalk improvements, the project applicant shall show on project improvement plans via notation the following requirements:
    - The contractor shall ensure that all construction equipment greater than 50 horsepower to be used in the construction of the off-site sidewalk improvements, including owned, leased, and subcontractor vehicles, shall be Tier 4 final off-road construction equipment. In addition, all off-road equipment operating at the off-site construction site must be maintained in proper working condition according to manufacturer's specifications.
    - Idling shall be limited to five minutes or less in accordance with the In-Use Off-Road Diesel Vehicle Regulation as required by CARB. Clear signage regarding idling restrictions shall be placed at the entrances to the construction site.
    - Portable equipment over 50 horsepower must have either a valid BAAQMD Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.
    - Conformance with the foregoing requirements shall be confirmed through review and approval of plans by the Town of Los Gatos Community Development Department. Road Diesel Vehicle Regulation as required by CARB. Clear signage regarding idling restrictions shall be placed at the entrances to the construction site.

- Portable equipment over 50 horsepower must have either a valid BAAQMD Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.

Conformance with the foregoing requirements shall be confirmed through review and approval of plans by the Town of Los Gatos Parks and Public Works Department.

24. *BIOLOGICAL RESOURCES IV- 1, CALIFORNIA RED-LEGGED FROG: Within 48 hours prior to any ground disturbing activities or vegetation clearing within 50 feet of Ross Creek, a pre-construction survey for California red-legged frog shall be conducted by a qualified biologist. Survey results shall be submitted to the Town of Los Gatos Community Development Department.
25. *BIOLOGICAL RESOURCES IV- 2- CALIFORNIA RED-LEGGED FROG: If California red-legged frog is encountered, activities shall cease until the animal moves out of any proposed work area on its own or is relocated by a permitted qualified biologist. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
26. *BIOLOGICAL RESOURCES IV- 3, CALIFORNIA RED-LEGGED FROG: During construction activities, fiber netting such as silt fence or similar material shall be used for erosion control where appropriate throughout the project site and within 50 feet of Ross Creek to ensure that California red-legged frog does not get trapped. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
27. *BIOLOGICAL RESOURCES IV-4, WHITE-TAILED KITE AND OTHER NESTING RAPTORS AND MIGRATORY BIRDS: If tree removal or ground disturbing activities are scheduled to commence during the nesting season (February 1st through August 31st), a pre-construction nesting bird survey shall be conducted by a qualified biologist within seven days prior to such activities to identify possible nesting activity. Survey results shall be submitted to the Town of Los Gatos Community Development Department. If active nests are not found further mitigation is not required. If one or more active nests are found, a construction-free buffer of suitable dimensions shall be established around any active raptor or migratory bird nest for the duration of the project, or until the qualified biologist has determined that the chicks have fledged and are foraging independently from their parents. The buffer shall be identified on the ground with flagging or fencing. The buffer distance shall be determined by the on-site qualified biologist based on the species, level of disturbance activity, location of the nest, and the topography between the nest and the construction activity; the construction-free buffer shall consist of a minimum starting distance of 250 feet for raptors and 25 feet for other birds. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
28. *BIOLOGICAL RESOURCES IV-5, PALLID BAT AND TOWNSEND'S BIG EARED BAT: Prior to the commencement of construction activities, a qualified biologist shall conduct a bat habitat assessment of all potential roosting habitat features, including trees within the proposed impact footprint within the project vicinity. The habitat assessment shall identify all potentially suitable roosting habitat and may be conducted up to one year prior to the start of construction. The results of the assessment shall be submitted to the Town of Los Gatos Community Development Department.

29. *BIOLOGICAL RESOURCES IV-6, PALLID BAT AND TOWNSEND'S BIG-EARED BAT: If potential roosting habitat is identified (cavities in trees or potential roosts within structures) within the areas proposed for impact, the biologist shall survey the potential roosting habitat during the active season (generally April through October or from January through March on days with temperatures in excess of 50 degrees Fahrenheit) within seven days prior to the start of construction activities to determine the presence of roosting bats. The surveys are recommended to be conducted utilizing methods that are considered acceptable by CDFW and bat experts. Methods may include evening emergence surveys, acoustic surveys, inspecting potential roosting habitat with fiberoptic cameras, or a combination thereof. If a non-breeding bat colony is discovered, the individuals shall be humanely evicted via two-step removal under the direction of a qualified biologist to ensure that harm or take would not occur to any bats as a result of tree removal. Two-step removal can only occur during March 1 to April 15 and September 1 to October 15 to avoid harm to maternity and overwintering colonies. If a maternity colony is detected, then a qualified biologist shall determine an appropriate size for a construction-free buffer to be established around the tree and remain in place until the qualified biologist has determined that the nursery is inactive. Tree removal shall preferably be done between March 1 and April 15 or August 15 and October 15 to avoid interfering with an active nursery. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
30. *BIOLOGICAL RESOURCES IV-7, SAN FRANCISCO DUSKY-FOOTED WOODRAT: A qualified biologist shall conduct a pre-construction survey for San Francisco dusky-footed woodrat nests between 30 and 14 days prior to the onset of construction activities. The survey shall encompass all construction zones within the woodland habitat and developed areas, and surrounding lands within 25 feet. Results of the assessment shall be submitted to the Town of Los Gatos Community Development Department.

    Identified nests shall be avoided, where possible, and buffered by a minimum of 20 feet. If avoidance is not possible, the nest(s) shall be manually deconstructed by a qualified biologist when helpless young are not present, typically during the non-breeding season (October through January). If is the qualified biologist has determined that young may be present during the nest deconstruction, a suitable buffer of a minimum of 20 feet shall be established around the nest until a qualified biologist determines that the young are independent enough to successfully move from the deconstructed nest. Approximate age of the juveniles shall be recorded when observed and appropriate time shall be extrapolated out to when they would be independent from their parents; then the deconstruction can continue after the biologist confirms that the young are not present in the nest at the time. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.
31. *BIOLOGICAL RESOURCES IV-8, AMERICAN BADGER: During the course of the pre-construction surveys for other species, a qualified biologist shall also determine the presence or absence of badgers prior to the start of construction. If badgers are found to be absent, other mitigations for the protection of badgers shall not be warranted. If an active badger den is identified during pre-construction surveys within or immediately adjacent to an area subject to construction, a construction-free buffer of up to 300 feet shall be established around the den. Once a qualified biologist has determined that

badger has vacated the burrow, the burrow can be collapsed or excavated, and ground disturbance can proceed. Should the burrow be determined to be a natal or reproductive den, and because badgers are known to use multiple burrows in a breeding burrow complex, a biological monitor shall be present on-site during construction activities in the vicinity of the burrows to ensure the buffer is adequate to avoid direct impacts to individuals or natal/reproductive den abandonment. The monitor shall be present until is the qualified biologist has determined that young are of an independent age and construction activities would not harm individual badgers. Additionally, all workers shall attend a "tailgate" training that includes a description of the species, a brief summary of the species' biology, and minimization measures and instructions on what to do if American badger is observed. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

32. * BIOLOGICAL RESOURCES IV-9, BURROWING OWL: A qualified biologist shall conduct a preconstruction survey for burrowing owl following the 2012 CDFW Guidelines, or the most recent guidelines, which includes two surveys, one within 14 days prior to the start of construction and the second within 24 hours prior to the start of construction. If a lapse in project-related work of 15 calendar days or longer occurs, an additional survey shall be required prior to reinitiation. A written summary of the survey results shall be submitted to the Town of Los Gatos Community Development Department before any construction permits are issued. If burrowing owls or active burrows/refugia are not found, then further mitigation measures are not necessary. Identified burrowing owls shall be avoided and active burrowing owl burrows shall be avoided with a 250-foot non-disturbance buffer until the burrow is abandoned. The project biologist shall conduct a weekly check-in to confirm the buffer is still intact and confirm the current activity of that burrow. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.

33. * BIOLOGICAL RESOURCES IV-10: Prior to the start of construction activities, the applicant shall comply with the Town of Los Gatos Tree Protection Ordinance, and a tree removal permit shall be obtained from the Town for the removal of any on-site trees that qualify as a protected tree. If the trees proposed for removal are found to be in good condition, and the tree removal permit is granted primarily for the convenience of the applicant, then the full cost and responsibility of such removal shall be borne by the applicant, including planting of replacement trees. According to the Tree Mitigation and Protection Plan prepared for the proposed project, the project would not meet the required on-site tree replacement requirement; thus, the project applicant shall pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code. The above noted requirements shall be completed to the satisfaction of the Town of Los Gatos Planning Division.

34. *CULTURAL RESOURCES V-1: If historic, archaeological, or paleontological resources are encountered during subsurface excavation activities, all construction activities within a 100-foot radius of the resource shall cease until a qualified archaeologist determines whether the resource requires further study. The Town shall require that the applicant include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. Any previously undiscovered resources found during construction shall be recorded on appropriate California Department of Parks and

Recreation forms and evaluated for significance in terms of California Environmental Quality Act (CEQA) criteria by a qualified archaeologist. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. If the resource is determined to be significant under CEQA, the Town and a qualified archaeologist shall determine whether preservation in place is feasible. Such preservation in place is the preferred mitigation. If such preservation is infeasible, the qualified archaeologist shall prepare and implement a research design and archaeological data recovery plan for the resource. The archaeologists shall also conduct appropriate technical analyses, prepare a comprehensive written report and file the report with the appropriate information center (California Historical Resources Information System), and provide for the permanent curation of the recovered materials.

35. *CULTURAL RESOURCES V-2: If human remains, or remains that are potentially human, are found during construction, all work shall be halted immediately within 100 feet, and a professional archeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance. The archaeologist shall notify the Santa Clara County Coroner (pursuant to Section 7050.5 of the State Health and Safety Code). The provisions of Section 7050.5 of the California Health and Safety Code, Section 5097.98 of the California Public Resources Code, and Assembly Bill (AB) 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, then the Coroner will notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (Section 5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or MLD must rebury the remains where they will not be further disturbed (Section 5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agency, through consultation as appropriate, determines that the treatment measures have been completed to the Town's satisfaction.

36. *GEOLOGY AND SOILS VII-1: Prior to approval of any grading or improvement plans for the project, a licensed engineer shall review the plans to ensure the engineering recommendations set forth in the site-specific Geotechnical and Geologic Hazard Investigation prepared for the proposed project by Cornerstone Earth Group are adequately incorporated, including all relevant CBSC standards, to the satisfaction of the Town's Engineer. All grading and improvement plans shall be reviewed and approved by the Town of Los Gatos Community Development Department and the Town's Engineer.

37. *HYDROLOGY AND WATER QUALITY X-1: Prior to any ground-disturbing activities, the project applicant shall prepare and submit a final erosion and sediment control plan for review and approval by the Town of Los Gatos Engineering Division of the Parks and Public Works Department. A Notice of Intent (NOI) and Storm Water Pollution

Prevention Plan (SWPPP) shall be submitted to the San Francisco Bay Regional Water Quality Control Board. A maximum of two weeks is allowed between clearing of an area and stabilizing/building on an area if grading is allowed during the rainy season. Prior to any ground disturbance, the on-site aquatic features (i.e. the ephemeral drainage/drainage swale and Ross Creek) shall be flagged by a qualified biologist with highly visible flagging tape, or similar, to clearly demarcate the limits of the aquatic features, and interim erosion control measures shall be installed around the aquatic features, at a minimum. Interim erosion control method shall include, but are not limited to: silt fences, fiber rolls (with locations and details), erosion control blankets, Town standard seeding specification, filter berms, check dams, retention basins, etc. The project contractor shall provide erosion control measures as needed to protect downstream water quality during winter months. The grading, drainage, erosion control plan and SWPPP shall be prepared in compliance with applicable measures contained in the amended provisions C.3 and C.14 of most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). Monitoring for erosion and sediment control is required and shall be performed by the Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) as required by the Construction General Permit. Stormwater samples are required for all discharge locations and projects may not exceed limits set forth by the Construction General Permit Numeric Action Levels and/or Numeric Effluent Levels. A Rain Event Action Plan (REAP) shall be developed 48 hours prior to any likely precipitation event, defined by a 50 percent or greater probability as determined by the National Oceanic and Atmospheric Administration (NOAA), and/or whenever rain is imminent. The QSD or QSP must print and save records of the precipitation forecast for the project location area from (https://www.cpc.ncep.noaa.gov/) which shall accompany monitoring reports and sampling test data. A rain gauge is required on-site. The Town of Los Gatos Parks and Public Works Department and the Building Department shall conduct periodic NPDES inspections of the site throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

38. *NOISE XIII-1: For any construction proposed within 25 feet of a noise-sensitive receptor, the proposed project shall implement construction equipment staging areas to create distance between construction-related noise sources and noise-sensitive receptors; use electric tools; use mobile construction equipment with smart back-up alarms; and implement additional noise attenuation techniques during the clearing, earth moving, grading, and foundation/conditioning phases of construction, such as temporary sound barriers between the construction site and the sensitive receptors. The foregoing requirements shall be included in the grading plan to the satisfaction of the Town's Engineer and shall be submitted for review and approval to the Town of Los Gatos Community Development Department.

39. *NOISE XIII-2: Any compaction required within 26 feet of existing structures adjacent to the off-site improvement areas shall be accomplished by using static drum rollers, rather than vibratory compactors/rollers, which use weight instead of vibrations to achieve soil compaction. As an alternative, preconstruction crack documentation and construction vibration monitoring could be conducted to ensure that construction

vibrations do not cause damage to any adjacent structures. The above requirements shall be included by way of notation on any future improvement plans approved for the off-site improvements to the satisfaction of the Town of Los Gatos Community Development Department.

40. *TRANSPORTATION XVII-1: Concurrent with submittal of final project improvement plans, the project applicant shall also submit to the Town of Los Gatos, Parks and Public Works Departement for review and approval off-site improvement plans showing the construction of new sidewalks at the following intersections:
    - Along the north side of Blossom Hill Road between Regent Drive and Union Avenue; and
    - Along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road.

    The improvement plans shall demonstrate, to the satisfaction of the Town Engineer, that the off-site sidewalk improvements would comply with all applicable design parameters and requirements set forth by the Town of Los Gatos. The off-site improvements shall be constructed prior to the issuance of any certificate of occupancy for the project.

APPLICABLE TO LOT 3

41. TREE PROTECTION: Prior to issuance of a grading or building permit, the grading and retaining wall plans shall be revised to ensure no work occurs within the dripline of Trees #569 and #566. The revised plans shall be reviewed and approved by the Town's Consulting Arborist, at the applicant's expense, prior to permit issuance.

APPLICABLE TO LOTS 7 AND 8

42. SWIMMING POOL: Prior to the issuance of a building permit, the proposed pool location shall be modified to ensure that the pool is located on a slope less than 30 percent, consistent with the Hillside Development Standards and Guidelines.

Building Division

APPLICABLE TO ALL LOTS

43. PERMITS REQUIRED:
    a. A Building Permit is required for the construction of each new single-family residence and attached garage.
    b. Additional Building Permits will be required for retaining walls supporting a surcharge that are not part of a building foundation.
    c. A separate Building Permit will be required for each swimming pool.
    d. A separate Building Permit will be required for the PV System and must be finalized prior to the issuance of the Certificate of Occupancy.
44. APPLICABLE CODES: The current codes, as amended and adopted by the Town of Los Gatos as of January 1, 2023, are the 2022 California Building Standards Code, California Code of Regulations Title 24, Parts 1-12. Building Permit applications received after December 19, 2025, will be subject to the 2025 California Building Standards Code, California Code of Regulations Title 24, Parts 1-12.

45. CONDITIONS OF APPROVAL: The Conditions of Approval must be included on plan sheets within the construction plans. A Compliance Memorandum shall be prepared and submitted with the building permit application detailing how the Conditions of Approval will be addressed.
46. BUILDING AND SUITE NUMBERS: Submit requests for new building addresses to the Building Division before submitting the building permit application.
47. SIZE OF PLANS: Minimum size 24" x 36", maximum size 30" x 42".
48. SOILS REPORT: A Soils Report, prepared to the satisfaction of the Building Official, containing foundation and retaining wall design recommendations, shall be submitted with the Building Permit Application. This report shall be prepared by a licensed Civil Engineer specializing in soils mechanics.
49. FOUNDATION INSPECTIONS: A pad certificate, prepared by a licensed civil engineer or land surveyor, shall be submitted to the project Building Inspector at the time of the foundation inspection. This certificate shall certify compliance with the recommendations specified in the Soils Report and confirm that the building pad elevations and on-site retaining wall locations and elevations have been prepared in accordance with the approved plans. Horizontal and vertical controls shall be set and certified by a licensed surveyor or registered Civil Engineer for the following items:
    a. Building pad elevation
    b. Finish floor elevation
    c. Foundation corner locations
    d. Retaining wall(s) locations and elevations
50. TITLE 24 ENERGY COMPLIANCE: All required California Title 24 Energy Compliance Forms must be directly printed onto a plan sheet.
51. TOWN RESIDENTIAL ACCESSIBILITY STANDARDS: New residential units shall be designed with adaptability features for single-family residences per Town Resolution 1994-61:
    a. Wood backing (2" x 8" minimum) shall be provided in all bathroom walls, at water closets, showers, and bathtubs, located 34 inches from the floor to the center of the backing, suitable for the installation of grab bars if needed in the future.
    b. All passage doors shall be at least 32-inch-wide doors on the accessible floor level.
    c. The primary entrance door shall be a 36-inch-wide door including a 5'x 5' level landing, no more than 1 inch out of plane with the immediate interior floor level and with an 18-inch clearance at interior strike edge.
    d. A door buzzer, bell or chime shall be hard wired at primary entrance.
52. BACKWATER VALVE: As required by Town Ordinance 6.40.020, provide details for any required sanitary sewer backwater valve on the plans and provide its location. The Town of Los Gatos Ordinance and West Valley Sanitation District (WVSD) requires backwater valves on drainage piping serving fixtures that have flood level rims less than 12 inches above the elevation of the next upstream manhole.
53. HAZARDOUS FIRE ZONE: All projects in the Town of Los Gatos require Class A roof assemblies.

54. WILDLAND-URBAN INTERFACE: This project is in a Wildland-Urban Interface High Fire Area and must comply with the relevant Wildland-Urban fire protection regulations in effect at the time of permit submittal.
55. SPECIAL INSPECTIONS: When a special inspection is required by CBC Section 1704, the Architect or Engineer of Record shall prepare an inspection program that shall be submitted to the Building Official for approval prior to issuance of the Building Permit. The Town Special Inspection form must be completely filled out and signed by all requested parties prior to permit issuance. Special Inspection forms are available online at www.losgatosca.gov/building.
56. CONSTRUCTION BEST MANAGEMENT PRACTICES (BMPs): The Town standard West Valley Clean Water Authority Nonpoint Source Pollution Control Program Sheet (page size same as submitted drawings) shall be part of the plan submittal. The specification sheet is available online at www.losgatosca.gov/building.
57. APPROVALS REQUIRED: The project requires the following departments and agencies' approval before issuing a building permit:
    a. Community Development – Planning Division: (408) 354-6874
    b. Engineering/Parks a Public Works Department: (408) 399-5771
    c. Santa Clara County Fire Department: (408) 378-4010
    d. West Valley Sanitation District: (408) 378-2407
    e. Local School District: The Town will forward the paperwork to the appropriate school district(s) for processing. A copy of the paid receipt is required prior to permit issuance.

TO THE SATISFACTION OF THE DIRECTOR OF PARKS AND PUBLIC WORKS:
Engineering Division

APPLICABLE TO ALL LOTS

THE FOLLOWING CONDITIONS SHALL BE ADDRESSED OR NOTED ON THE CONSTRUCTION PLANS SUBMITTED FOR ANY BUILDING OR GRADING PERMIT, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

58. PAYMENT OF PARKS AND PUBLIC WORKS (“PPW”) ENGINEERING PLAN CHECK FEE AND INSPECTION FEE: At the time of the first construction submittal, the Applicant shall submit to the Town Engineer for approval a detailed construction project cost estimate prepared and stamped by the Applicant’s civil engineer. The cost estimate shall break out on-site and off-site improvements separately. This cost estimate will be used to determine the Engineering Plan Check Fee. A final construction cost estimate shall be provided once the project plans are approved. This cost estimate will be used to determine the Engineering Inspection Fee. The Engineering Inspection Fee must be paid prior to the issuance of any construction related permit.
59. THIRD-PARTY PLAN CHECK FEE AND INSPECTION FEE (Special projects only): The Town will procure a third-party engineering firm to perform Plan Review and Inspection Services. Applicant shall provide an initial deposit of for consultant plan review and inspection services, plus a 20 percent deposit for staff time to process the project. This deposit and fee are required at the time of the project building permit submittal. Once

this deposit is received, the Town will select the consultant and initiate the plan review process. The Applicant's deposit will be charged on a time and materials basis. A supplemental deposit will be required if the remaining deposit is expected to be exhausted prior to completion of the work. Permitted work will not be allowed to continue without available funds to complete the required inspection services. Third-party engineering services will be required for the duration of the construction and project closeout phases.

60. STORM DRAINAGE FEE: The Applicant shall pay Storm Drainage Fees in accordance with the Town's Adopted Schedule of Fees and Charges in effect at the date of Housing Crisis Act of 2019 (SB330) application for the future construction of drainage facilities serving new buildings, improvements, or structures to be constructed which substantially impair the perviousness of the surface of land. The estimated fee based on the fiscal year 2023-2024 fee schedule and various lot acreages are as follows:
    a. Lot 1 – 0.5 acres - $2,435.50.
    b. Lot 2 – 0.79 acres - $3,848.09.
    c. Lot 3 – 0.55 acres - $2,679.05.
    d. Lot 4 – 0.59 acres - $2,873.89.
    e. Lot 5 – 0.85 acres - $4,140.35.
    f. Lot 6 – 0.78 acres - $3,799.38.
    g. Lot 7 – 1.18 acres - $4,871.00.
    h. Lot 8 – 4.9 acres - $4,871.00.
    i. Lot 9 – 1.7 acres - $4,871.00.
    j. Lot 10 – 5.48 acres - $4,871.00.
    k. Lot 11 – 0.11 acres - $535.81.
    l. Lot 12 – 0.11 acres -$535.81.
61. TRAFFIC IMPACT FEES: The Owner shall pay the project's proportional share of transportation improvements needed to serve cumulative development within the Town of Los Gatos. The fee amount will be based upon the fee schedule in place at the time of the Housing Crisis Act of 2019 (SB 330) application, in accordance with the law. The fiscal year 2023-2024 Comprehensive Fee Schedule amount for new average daily trip generated is $1,104.00. The new average daily trips generated shall be obtained from the Institute of Transportation Engineers most current trip generation data released at the time the fee is paid. The fee shall be paid before issuance of any certificate of occupancy, including any temporary certificates that may be issued.
62. CONSTRUCTION ACTIVITIES MITIGATION FEE (ORDINANCE 2189): Per the Town's Comprehensive Fee Schedule, the project is subject to the Town's Construction Activities Mitigation Fee based on the square footage of new buildings. The fee is $1.43 per square foot of new residential and non-residential building area. The fee shall be calculated based on the square footage total for all units shown on the construction plans to the approval of the Town Engineer. Payment of this fee shall pe paid prior to issuance of the first building permit.
63. PERMITS REQUIRED BY OTHER AGENCIES: The Applicant shall obtain all applicable permits from federal, state, and local agencies as required to construct the proposed improvements. The Applicant is hereby informed that permits may be required by one (1) or more of the following: Army Corps of Engineers, Fish and Wildlife (1603), The Bay

Area Joint Aquatic Resources Permit Application (JARPA), Regional Water Quality Control Board, Santa Clara County Roads and Airports, Valley Water, or Habitat Permit. If the project is within jurisdiction of any of these agencies, verification of permit or waiver of permit must be given to PPW prior to issuance of any required Town permits. If the Town is required to be a party to the permit application and a fee is required, the Applicant shall reimburse the Town for its cost. A copy of these permits shall be provided to the satisfaction of the Town Engineer prior to the issuance of the first building permit.

64. GRADING PERMIT: A grading permit is required for all site grading and drainage work that is outside the perimeter of a building, retaining wall footing, or other structure authorized by a valid building permit. The Applicant must submit a grading permit application after the appeal period of the entitlement approval process has passed. The grading permit application shall include detailed grading plans and associated required materials. Plan check fees are based on the scope of onsite work. Prior to approval of the grading permit, the Applicant shall pay all fees due and provide faithful performance and payment securities for the performance of the work described and delineated on the approved grading plan, final erosion and sedimentation control plan, and interim erosion and sedimentation control plan (if required), in an amount to be set by the Town Engineer (but not to exceed one hundred (100) percent) of the approved estimated cost of the grading and erosion and sedimentation control measures. The form of security shall be one or a combination of the following to be determined by the Town Engineer and subject to the approval of the Town Attorney: (1) Bond or bonds issued by one or more duly authorized corporate sureties on a form approved by the Town; (2) Deposit with the Town, money, or negotiable bonds of the kind approved for securing deposits of public monies; or (3) other instrument of credit from one or more financial institutions subject to regulation by the State or Federal Government wherein such financial institution pledges funds are on deposit and guaranteed for payment. The grading permit shall be issued prior to the issuance of the building permit unless otherwise allowed by the Town Engineer. The permit shall be limited to work shown on the grading plans approved by the Town Engineer. In granting a permit, the Town Engineer may impose any condition deemed necessary to protect the health, safety, and welfare of the public, to prevent the creation of a nuisance or hazard to public or private property, and to assure proper completion of the grading including but not limited to: (1) Mitigation of adverse environmental impacts; (2) Improvement of any existing grading or correction of any existing grading violation to comply with Town Code; (3) Requirements for fencing or other protection of grading which would otherwise be hazardous; (4) Requirements for dust, erosion, sediment, and noise control, hours of operation and season of work, weather conditions, sequence of work, access roads, and haul routes; (5) Requirements for safeguarding watercourses from excessive deposition of sediment or debris in quantities exceeding natural levels; (6) Assurance that the land area in which grading is proposed and for which habitable structures are proposed is not subject to hazards of land slippage or significant settlement or erosion and that the hazards of seismic activity or flooding can be eliminated or adequately reduced; (7) Temporary and permanent landscape plans.

65. PUBLIC IMPROVEMENTS: Prior to the approval of any permits or final map, whichever

comes first, the Applicant/Owner must complete construction of public improvements listed in these conditions. Prior to any work being done in the Town's right-of-way, the Applicant must submit Public Improvement Plans for review and approval. All public improvements shall be made in accordance to the Town's latest adopted Standard Plans, Standard Specifications, and Engineering Design Standards and constructed prior to final map approval unless otherwise noted below. The Applicant is required to confirm the location of existing utility lines by potholing. Prior to any potholing, Applicant shall submit an Encroachment Permit application with a pothole plan for Town review and approval. The Applicant shall provide the pothole results to the Town Engineer prior to final design. All existing public utilities shall be protected in place and, if necessary, relocated as approved by the Town Engineer. No private facilities are permitted within the Town right-of-way or within any easement unless otherwise approved by the Town Engineer. The Applicant shall have Public Improvement Plans prepared, stamped, and signed by a California licensed civil engineer.

Once the Public Improvement Plans have been approved, the Applicant shall submit an application for an Encroachment Permit. The Encroachment Permit requires the Applicant to post the required bonds and insurance and provide a one (1) year warranty for all work to be done in the Town's right-of-way or Town easement. New concrete shall be free of stamps, logos, names, graffiti, etc. Any new concrete installed that is damaged shall be removed and replaced at the Contractor's sole expense. Prior to issuance of the encroachment permit, the Applicant shall submit a temporary traffic control plan ("TTCP") inclusive of all modes of travel for any lane or sidewalk closures. Special provisions such as limitations on working hours, protective enclosures, or other means to facilitate public access in a safe manner may be required. The TTCP shall comply with the State of California Manual of Uniform Traffic Control Devices ("MUTCD") and standard construction practices. The project engineer shall notify the Town Engineer in writing of any proposed changes. Any proposed changes to the approved plans shall be subject to the approval of the Town. The Applicant shall not commence any work deviating from the approved plans until such deviations are approved. Any approved and constructed changes shall be incorporated into the final "as-built" plans. Right-of-way/Public improvements shall include, at a minimum, the following items:

a. BLOSSOM HILL ROAD: The Applicant shall install sidewalk along the north side of Blossom Hill Road between Regent Drive and Union Avenue.
b. FISHER AVENUE: The Applicant shall install sidewalk along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road.
c. DRIVEWAY APPROACH(ES): The Applicant shall install three (3) Town Standard driveway approaches as shown on the approved plans. The new driveway approaches shall be constructed per the Town Standard Drawing.
d. CERRO VISTA COURT: Due to construction activities, new utility cuts along the project frontage, and the anticipated project's truck traffic, the Applicant shall grind and provide a 2.5" overlay along the full width of Cerro Vista Court from Cerro Vista Drive to the driveway at Lot 10 frontage. Prior to overlay, any base failure repair or required dig-outs identified by the PPW Inspector shall be completed. The Town Engineer shall approve the roadway repair prior to the

release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.

e. TWIN OAKS DRIVE: Due to construction activities, new utility cuts along the project frontage, and the anticipated project's truck traffic, the Applicant shall grind and provide a 2.5" overlay along the full width of Cerro Vista Court from Cerro Vista Drive to the driveway at Lot 10. frontage. Prior to overlay, any base failure repair or required dig-outs identified by the PPW Inspector shall be completed. The Town Engineer shall approve the roadway repair prior to the release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.

66. TREE REMOVAL PERMIT: The Applicant shall apply and obtain a Tree Removal Permit from the Parks and Public Works Department for the removal of existing trees on-site or in the public right-of-way prior to the issuance of a building permit or demolition building permit, whichever is issued first. Tree removals shall be consistent with the arborist report and approved entitlement plans.

67. NEIGHBORING RUNOFF: Revise the proposed grading to ensure that the proposed improvements do not divert runoff to the detriment of adjacent properties.

68. PHASED PERMITS: The Applicant may, with the approval of the Town Engineer, phase the permits to expedite the construction process. If this is done, each phase of the work will require a separate and complete set of plans to be submitted, reviewed, and approved prior to the issuance of the said permit. Overlapping of permits may occur, if approved by the Town Engineer. No work on the next phase of construction, in advance of the permitted work, may occur. No "at risk" work will be permitted. Only the below phased permitted work will be allowed:
    a. Clearing-Grubbing/Rough Grading
    b. Fine Grading
    c. Underground Utilities
    d. Site Improvements
    e. Off-Site Improvements
    f. Plans shall be submitted, reviewed, and approved by the Town Engineer prior to the commencement of work.

69. CONSTRUCTION PHASE PLAN SUBMITTAL REQUIREMENTS: The Grading Permit Plans and Public Improvement Plans (together referred to as "Improvement Plans") shall be submitted as a set to Parks and Public Works Department along with a title report dated no older than 30 days from the date the Improvement Plans are submitted. The Improvement Plans shall be submitted at the same time as the Building Plans are submitted to the Building Department. All improvements shall be designed and constructed in accordance with Federal law, State law, Los Gatos Town Code, and the Los Gatos Standard Specifications and Details.
    a. Construction drawings shall comply with Section 1 (Construction Plan Requirements) of the Town's Engineering Design Standards, which are available for download from the Town's website. The Improvement Plans shall include:
    b. A cover sheet with at least the proposed development vicinity map showing nearby and adjacent major streets and landmarks, property address, APN, scope of work, project manager and property owner, a "Table of Responsibilities"

summarizing ownership, access rights, and maintenance responsibilities for each facility (streets, utilities, parks, landscaping, etc.), a sheet index including a sequential numeric page number for each sheet (i.e. “Sheet 1 of 54”), the lot size, required and proposed lot setbacks by type, proposed floor areas by type for each building, average slope, proposed maximum height, and required and proposed parking count and type.

c. The Approved Conditions of Approval printed within the plan set starting on the second sheet of the plan set.

d. An Existing Site Plan showing existing topography, bearing and distance information for all rights-of-way, easements, and boundaries, any existing easements proposed to be quit-claimed, existing hardscape, existing above ground utility features, and existing structures. The Improvement Plans shall identify the vertical elevation datum, date of survey, and surveyor responsible for the data presented.

e. A Proposed Site Plan showing proposed topography, boundaries, proposed and existing to remain easements, hardscape, above ground utility features (hydrants, transformers, control cabinets, communication nodes, etc.), and structures. Include top and bottom elevations of every inflection point of each wall. Show proposed public right-of-way improvements. Distinguish proposed linework from existing linework using heavier line type for proposed.

f. A Grading and Drainage Plan clearly showing existing onsite and adjacent topography using labeled contour lines, drainage direction arrows with slope value, and break lines. Proposed and existing to remain hardscape elevations must be provided in detail including slope arrows.

g. A Utility Plan showing appropriate line types and labels to identify the different types of utilities and pipe sizes. Utility boxes, hydrants, backflow preventers, water meters, sanitary sewer cleanouts, etc. shall be located on private property unless otherwise approved by the Town Engineer.

h. A Photometric Lighting Plan analyzing the full-width of the adjacent right-of-way. The plan shall show the average maintained horizontal illumination in foot-candles and the average to minimum uniformity ratio. Lighting shall be in compliance with the Town’s Standard Specification section 2.38.

i. A Traffic Signal Plan (as applicable) shall include a conduit schedule, conduit plan, pole locations, streetlights, intersection striping, power connection and meter locations, and as directed.

j. A Landscaping Plan for the project site and the full width of the public rights-of-way adjacent to the project. The plans shall clearly identify public and private utilities and points of demarcation between the two.

k. A Composite Plan showing civil, landscape, electrical, and joint trench locations combined on one drawing to identify potential conflicts between disciplines. The Composite Plan shall include the size, location, and details of all trenches, locations of building utility service stubs and meters, and placements or arrangements of junction structures as a part of the Improvement Plan submittals for the project. Show preferred and alternative locations for all utility vaults and boxes if project has not obtained PG&E approval. A licensed Civil or

Electrical Engineer shall sign the composite drawings and/or utility improvement plans. (All dry utilities shall be placed underground). A note shall be placed on the joint trench composite plans which states that the plan agrees with Town Codes and Standards and that no underground utility conflict exists.

l. General Notes found in the Town of Los Gatos General Guidelines.

m. A statement in the general notes indicating the need to obtain a Caltrans Oversized/Overweight Vehicles Transportation Permit if oversized or overweight vehicles are expected to be used.

n. A statement that all utility boxes in vehicular pathways shall be traffic-rated.

70. STANDARD PLAN COMPLIANCE: The project shall comply with the Town's Standard Plans to the approval of the Town Engineer. Street improvements, all street sections, the design of all off-site storm drainage facilities shall be in accordance with most current Town Standard Specifications and Standard Plans approved by the Town Engineer. Improvements deemed necessary by the Town Engineer shall be shown on the Improvement Plans.

71. EXISTING FACILITY PROTECTION AND REPAIR: All existing public utilities shall be either protected in place, relocated, or repaired. The Applicant shall repair or replace all existing improvements not designated for removal, and all new improvements that are damaged during construction or removed because of the Applicant's operations. This includes sidewalk, curb and gutter, streetlights, valley gutters, curb ramps, and any other existing improvements in the area that are not intended to be removed and replaced. The Applicant shall request a walk-through with the PPW construction Inspector before the start of construction to verify existing conditions. Said repairs shall be completed prior to issuance of the first certificate of occupancy of the project.

72. UNDERGROUND UTILITIES: All new services to the development shall be placed underground in accordance with the various utility regulations. Transformers and switch gear cabinets within designated Underground Districts shall be placed underground unless otherwise approved by the Town Engineer. Underground utility plans must be submitted to the Town and approved by the Town Engineer prior to installation.

73. UTILITY RESPONSIBILITIES: The Applicant is responsible for the maintenance of existing stormwater drainage facilities, including piped and open channel stormwater conveyances in private areas. The Applicant is responsible for all expenses necessary to connect to the various utility providers. Currently, the public storm sewer system is owned and maintained by the Town of Los Gatos, the water system in Los Gatos is owned and maintained by San José Water Company, and the sanitary sewer system in Los Gatos is owned and maintained by West Valley Sanitation District. Any alterations of the approved utilities listed must be approved by the Town prior to any construction.

74. UTILITY COMPANY COORDINATION: The Applicant shall negotiate any necessary right-of-way or easements with the various utility companies in the area, subject to the review and approval by the Town Engineer and the utility companies. Prior to the approval of the site plan for construction, the Applicant shall submit "Will Serve" letters from PG&E, San José Water, West Valley Sanitation District, West Valley Collections and Recycling, and AT&T (or the current "Carrier of Last Resort") with a statement indicating either a list of improvements necessary to serve the project or a statement that the

existing network is sufficient to accommodate the project. Coordination of the stormwater conveyance system will be addressed during the Grading Permit review.

75. PREPARATION OF ELECTRICAL PLANS: All street lighting and traffic signal electrical plans shall be prepared by a California registered professional engineer experienced in preparing these types of plans. The Applicant shall submit necessary stamped and signed Traffic Signal Plan with the Improvement Plans.
76. EXTERIOR SITE LIGHTING STANDARDS: The Applicant shall submit a photometric plan for on-site lighting showing lighting levels in compliance with the Town Standard Specifications section 2.38. The plan shall show the minimum maintained horizontal illumination in foot-candles and the uniformity ratio for all areas. This lighting standard is applicable to all parking lots, driveways, circulation areas, aisles, passageways, recesses, and accessible grounds contiguous to all buildings. Private, interior courtyards not accessible to the public are not required to meet this standard. The lighting system shall be so designed as to limit light spill beyond property lines and to shield the light source from view from off site. The photometric plan shall be approved by the Town Engineer and shall be addressed on the construction plans submitted for the first building permit. Any subsequent building permits that include any site lighting shall also meet these requirements.
77. STORM DRAINAGE STUDY: The Applicant shall submit a Storm Drainage Study for the proposed development stormwater conveyance system evaluating pre- and post-development peak discharge rates for the theoretical 2-year, 10-year, and 100-year (50-percent, 10-percent, and 1-percent annual chance) storm events including supporting hydraulic calculations for proposed pipe network. The study must address sizing and design details for the stormwater treatment systems proposed with the development. The study shall include an evaluation of the project site drainage including topography, natural drainage patterns, and existing man-made diversions (structures, raised pads, fences, etc.). If the study indicates that the theoretical water surface elevation or hydraulic grade line of the proposed development during a 10 percent annual chance storm event is above ground level at any point, the Applicant shall construct and dedicate to the Town new downstream storm drainage facilities necessary to achieve a connection point water depth no more than 80 percent full during the projected 10 percent annual chance storm event. The study must evaluate the 1 percent annual chance storm event base flood elevation. The finish floor elevations of all structures shall be constructed to be reasonable safe from flooding per Town Code Section 29.90.080(1)(c.) which is typically done by constructing finished floors at 1-foot above base flood elevation. The Applicant shall submit the study for review and approval by the Town Engineer prior to the issuance of the first building permit.
78. STORMWATER MANAGEMENT PLAN: The Applicant shall develop a Storm Water Management Plan (“SWMP”) that complies with the California Water Board regulations and delineates site design measures, source control measures, low-impact-development (LID) treatment measures, hydromodification management measures, and construction site controls as appropriate. The Plan must indicate erosion protection measures for the inlet structures (e.g., pipe outlets, pump dissipator pipes, and/or bubblers). For the Bay Area Hydrologic Modification (“BAHM”) analysis, the Applicant must provide pump operations and intended routing during various runoff conditions (i.e., treatment runoff

vs. Hydrologic Modification controls) and the rationale for the pump size selected relative to the treatment flow rate. The Applicant shall update the BAHM analysis to conform to project conditions to the satisfaction of the Town Engineer and include a summary of the changes made to the BAHM analysis since the entitlement plan review for review by the C3 consultant. The Applicant must select and indicate bioretention area plants capable of withstanding and surviving the higher design ponding conditions. If pumps are proposed, the Applicant must:

a. Provide pump discharge rates that receiving bioretention areas are capable of treating, to avoid consistently overwhelming the bioretention areas.
b. The Applicant must include an alarm system that will notify the owner or operator of a pump failure.
c. If off-site improvements modify the quantities of regulated and unregulated off-site impervious area, the Applicant must update Section 2, item "d" and Section 8 of the C.3 Data Form to reflect those changes.

79. DEVELOPER STORM WATER QUALITY RESPONSIBILITY: The Applicant is responsible for ensuring that all contractors including subcontractors are aware of all stormwater quality measures and implement such measures. The Applicant shall perform all construction activities in accordance with approved Improvement Plans, Los Gatos Town Code Chapter 12 – Grading, Erosion and Sediment Control, and the National Pollutant Discharge Elimination System (NPDES) General Permit. Failure to comply with these rules and regulations will result in the issuance of correction notices, citations, or a project stop order.
80. SITE DRAINAGE: Rainwater leaders shall be discharged to splash blocks. No through curb drains will be allowed. Any storm drains (public or private) directly connected to public storm system shall be stenciled/signed with appropriate "NO DUMPING - Flows to Bay" NPDES required language using methods approved by the Town Engineer on all storm inlets surrounding and within the project parcel. Furthermore, storm drains shall be designed to serve exclusively stormwater. Dual-purpose storm drains that switch to sanitary sewer are not permitted in the Town of Los Gatos. No improvements shall obstruct or divert runoff to the detriment of an adjacent, downstream or down slope property.
81. OFF-SITE DRAINAGE: The Applicant shall not alter any existing drainage patterns without an approved Grading Permit.
82. CLEAN, INSPECT, AND REPAIR STORM LINE: If the project will connect to the public storm drainage system, the Applicant is required to evaluate the conditions of the existing storm lines along the project frontage by videotaping and providing the result to the Town Engineer. The Applicant shall clean and inspect (via remote TV camera) the storm line from the manhole upstream to the manhole downstream of the project area. The video inspection shall be done by a professional video inspection company and be completed prior to building permit issuance. The video of the inspection shall be reviewed with PPW and any cracked, broken, or otherwise compromised integrity is found, the areas of the line along the project frontage shall be repaired by the Applicant at the applicant's expense. The Applicant shall include the required repairs on the Improvement Plans submitted. All necessary repairs to the storm line shall be completed and approved prior to the project connecting to the storm drainage system.

83. GRADING AND DRAINAGE WINTER MORATORIUM: All grading activity shall comply with the Municipal Regional Stormwater Permit and Chapter 12 of the Town Code. There shall be no earthwork disturbance or grading activities between October 15th and April 15th of each year unless approved by the Town Engineer. In order to be considered for approval, the Applicant must submit a Winterization Erosion Control Plan certified by a California certified QSD to the Town Engineer for review and approval. If grading is allowed during the rainy season, a maximum of two (2) weeks is allowed between clearing of an area and stabilizing/building on the exposed area. The submission of a certified plan does not guarantee approval. Any approved and executed plan must be kept on-site while the project is in construction.

84. SWPPP AND EROSION CONTROL: The Applicant shall prepare and submit a comprehensive stormwater pollution prevention plan (SWPPP) inclusive of interim and final erosion control plans to the Town Engineer for review and approval. The interim erosion control plan(s) shall include measures carried out during construction before final landscaping is installed. Multiple phases of interim erosion control plans may be necessary depending on the complexity of the project. Interim erosion control best management practices may include silt fences, fiber rolls, erosion control blankets, Town approved seeding mixtures, filter berms, check dams, retention basins, etc. The Applicant shall ensure a Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) monitors erosion and sediment control as required by the Construction General Permit. The Applicant must take measures to ensure continuous compliance with the Construction General Permit, and shall install, maintain, and modify the erosion control measures as needed to continuously protect downstream water quality. In the event an emergency modification is deemed necessary, the Applicant is to implement necessary measures to protect downstream waterways immediately and then submit the changes made within 24-hours to the Town Engineer for review and approval. The Applicant shall provide the Town Engineer the assigned Notice of Intent (NOI) permit number received after filing a Notice of Intent under the Construction Stormwater General Permit. The erosion control plans and SWPPP shall comply with applicable measures contained in the most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). All test submitted to the regional board must also be submitted to the Town Engineer. Any fees or penalties assessed against the Town in response to the Applicant's failure to comply with the Permit must be paid by the Applicant. The Applicant must permit Town staff onsite to conduct periodic NPDES inspections throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

85. SITE TRIANGLE AND TRAFFIC VIEW AREA: Fencing, landscaping, and permanent structures shall not visually obstruct line of sight between three-feet and 7.5-feet in height if located within the driveway view area, traffic view area, or corner sight triangle. The driveway and intersection site triangles are represented on Town Standard Drawing ST-231. The traffic view area and corner sight triangle are shown on Town Standard Drawing ST-232. This includes all above ground obstructions including utility structures, for example electric transformers. The various clearance lines shall be shown on the site plan to demonstrate compliance.

86. GEOTECHNICAL REVIEW: Prior to building permit issuance, the Applicant's Geotechnical Engineer shall submit a design level geotechnical report. The report will require a peer review by the Town's geological and geotechnical consultant. A deposit and fee for the peer review will be required per the Town's current fee schedule, unless there are any remaining deposit funds from the entitlement phase. The Town will route the design level geotechnical report to the Town's peer review consultant once the report is submitted and deposit and fee are available. Once approved, the geotechnical engineer shall review the grading and drainage plan and proposed pavement and foundation design to verify that the design is in accordance with their recommendations. The Applicant's Geotechnical Engineer's approval shall be conveyed to the Town either by letter or by signing and stamping the plans. All grading operations and soil compaction activities shall be per the approved project's design level geotechnical report. The Applicant shall add this condition to the general notes on the grading plan.
87. GEOTECHNICAL ENGINEER OBSERVATION: All grading activities shall be conducted under the observation of, and tested by, a licensed geotechnical engineer. A report shall be filed with the Town of Los Gatos for each phase of construction stating that all grading activities were performed in conformance with the requirements of the project's design level geotechnical report. The Applicant shall submit a Final Geotechnical Construction Observation and Testing Summary in an "as-built" letter/report prepared and submitted to the Town prior to issuance of the certificate of occupancy. The Applicant shall add this condition to the general notes on the grading plan.
88. FLOODPLAIN MANAGEMENT: The Applicant shall submit to the Town Engineer a letter stamped and signed by the Engineer in Charge stating that: 1) all requirements of Chapter 29, Article 9 of the Town Code have been satisfied; 2) all other required state and federal permits have been obtained; 3) the site is reasonably safe—a state where hazards and conditions leading to harm are controlled, and a person can expect an environment to be free from dangers that a reasonable person would anticipate—from flooding; and 4) the proposed development does not adversely affect the carrying capacity of areas where base flood elevations have been determined but a floodway has not been designated. For purposes of this article, "adversely affects" means that the cumulative effect of the proposed development when combined with all other existing and anticipated development will increase the water surface elevation of the base flood more than one (1) foot at any point. If the site is filled above the base flood elevation, the lowest pad and floor elevations shall be certified by a California registered professional engineer or land surveyor and provided to the Town Engineer.
89. PRECONSTRUCTION MEETING: After the issuance of any Grading or Encroachment permit and before the commencement of any on or off-site work, the Applicant shall request a pre-construction meeting with the PPW Inspector to discuss the project conditions of approval, working hours, site maintenance, and other construction matters. At that meeting, the Applicant shall submit a letter acknowledging that:
    a. They have read and understand these project Conditions of Approval;
    b. They will require that all project sub-contractors read and understand these project Conditions of Approval; and

c. They ensure a copy of these project Conditions of Approval will be posted on-site at all times during construction.

90. FLOOR DRAINS: All floor drains shall be plumbed to connect to the sanitary sewer system only. Site design must facilitate drainage away from building floor drains.

91. GARBAGE/RECYCLE STORAGE AND SERVICE: The Applicant shall provide adequate area for the purposes of storing garbage, composting and recycling collection containers for scheduled servicing by the Town's solid waste collection provider. The collection containers shall not be placed in the right-of-way except during the period of time necessary to allow removal of the waste. brought to the service area on the day of service and returned to the storage enclosure by the property owner that same day. The containers are not to be in public view or in the public right-of-way prior to or beyond the scheduled service times. A letter from West Valley Collection and Recycling confirming serviceability and site accessibility shall be provided to the Town Engineer for approval prior to the approval of an occupancy permit.

92. OVERHEAD UTILITY CLEARANCE: For projects that have overhead utility lines on-site that travel over new buildings, the Applicant shall obtain a letter from the utility company indicating that there is adequate overhead clearance from the utility to the proposed building. The letter shall be submitted with the first set of improvement plans submitted. The plans shall show the existing utility pole, any necessary proposed pole protection (including overhead clearance warning identification), and shall be confirmed satisfactory with the utility company. The letter shall be to the approval of the Town Engineer.

93. SITE LANDSCAPING COORDINATION: The Applicant shall coordinate the overall site landscaping and the stormwater treatment area landscaping. Stormwater treatment areas should be identified on the site first, and then site landscaping to make sure the correct plant material is identified for each area. Some site landscaping plant material may not be suitable in stormwater treatment areas due to the nature of the facility. Sanitary sewer facilities cannot be aligned through stormwater treatment facilities.

THE FOLLOWING CONDITIONS SHALL BE MET PRIOR TO THE APPROVAL OF THE FINAL MAP OR PARCEL MAP, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

94. TEMPORARY CONSTRUCTION EASEMENT: Prior to the issuance of a grading or building permit, it shall be the sole responsibility of the project to obtain any and all proposed or required easements and/or permissions necessary to perform any work on neighboring private property herein proposed. Proof of agreement/approval is required prior to the issuance of any Permit.

95. SUBDIVISION (FINAL) MAP: The Applicant shall have a subdivision map, prepared by a person authorized to practice land surveying in California, delineating all parcels created or deleted and all changes in lot lines in conformance with the Los Gatos Town Code and the Subdivision Map Act. Existing buildings shall be demolished prior to the recordation of the map if they will conflict with any newly created lot line. The Town Council must approve all Final Maps. The Town Council meeting will be scheduled after the Final Map, Public Improvement Plans, Stormwater Treatment Facilities Maintenance Agreement, Landscape Maintenance Agreement, Subdivision Improvement Agreement (if

applicable) and constructed improvements (onsite and offsite) are approved by the Town Engineer. The Final Subdivision Map shall be approved by PPW and recorded by the County Recorder's Office prior to first building permit review of any market rate lots. In lieu of the Town Clerk's Office coordinating the recordation of the Final Map(s) with the County, the Applicant may submit a map guarantee by the Applicant's title company for the release of the signed Final Map to the title company for recordation. Prior to the Town's release of the Final Map, the Town Engineer may require the Applicant to submit to the Town an electronic copy of the map in the AutoCAD Version being used by the Town at the time of recordation. It is the Applicant's responsibility to check with their title company and the County Recorder's Office to determine the time necessary to have the map recorded after Town approval.

96. SUBDIVISION IMPROVEMENT AGREEMENT ("SIA") – If any required subdivision or public improvements is not completed to the satisfaction of the Town Engineer before the final map is recorded or filed, the subdivider shall, prior to the approval by the Town Council of the final map and if permitted by Town Engineer, enter as a contractor into an agreement with the Town per Town Code Section 24.40.020, Gov. Code Section 66462(a), and shall arrange to provide Payment and Performance bonds each for 100 percent of the cost of subdivision and public infrastructure improvements to be constructed. These improvements shall include, but not be limited to, roadway construction, sidewalk, curb and gutter, storm lines, street lights, utilities and signal equipment. Town Standard insurance shall be provided per the terms of the agreement. The agreement will be forwarded to the Town Council for approval with project Final Map. The SIA shall be approved by the Town Council prior to Final Map approval.
97. MONUMENTS: The applicant shall arrange for the engineer to have all monuments set per recorded map. A certificate letter by the Surveyor or Engineer stating the monuments are set per plan shall be provided to the Town Engineer prior to occupancy.
98. IMPROVEMENTS AND CONDITIONS: Pursuant to Gov. Code § 66499.30 No person shall sell, lease, or finance any parcel or parcels of real property or commence construction of any building for sale, lease or financing thereon, except for model homes, or allow occupancy thereof, for which a final map is required by this division or local ordinance, until the final map thereof in full compliance with this division and any local ordinance has been filed for record by the recorder of the county in which any portion of the subdivision is located
99. COVENANTS, CONDITIONS, AND RESTRICTIONS (CC&R): The Applicant shall prepare and submit project Covenants, Conditions and Restrictions (CC&R) for the project. The CC&Rs shall be submitted with the project map for review and approval of the Town Engineer, the Town Attorney, and the Planning Manager. The CC&Rs shall include relevant project Conditions of Approval and shall include language that restricts the Homeowner's Association from making changes to the CC&Rs without first obtaining approval from the Town. References to the Stormwater Treatment Facilities Maintenance Agreement obligations shall be incorporated. The CC&Rs shall be reviewed and approved prior to the Town Council approval of the Final map.
100. PLAN DEFICIENCIES: Prior to final map approval, Applicant shall remedy existing plan inconsistencies and deficiencies remaining in entitlement plans.

101. C.3. REVIEW: Owner/Applicant shall complete C.3. Stormwater Review with Town Stormwater Consultant. Outstanding comments must be addressed prior to final map approval.

THE FOLLOWING CONDITIONS SHALL BE MET PRIOR TO RELEASE OF UTILITIES, FINAL INSPECTION, OR ISSUANCE OF A CERTIFICATE OF OCCUPANCY, WHICHEVER OCCURS FIRST, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME.

102. ELEVATION CERTIFICATE: An elevation certificate per FEMA requirements must be completed by a Land Surveyor or Civil Engineer. The elevation certificate shall be submitted and approved by the Town Engineer prior to issuance of the first building certificate of occupancy.
103. RECORD DRAWINGS: The Applicant shall submit a scanned PDF set of stamped record drawings and construction specifications for all off-site improvements to the Department of Parks and Public Works. All underground facilities shall be shown on the record drawings as constructed in the field. The Applicant shall also provide the Town with an electronic copy of the record drawings in the AutoCAD Version being used by the Town at the time of completion of the work. The Applicant shall also submit an AutoCAD drawing file of all consultants composite basemap linework showing all public improvements and utility layouts. This condition shall be met prior to the release of utilities, final inspection, or issuance of a certificate of occupancy, whichever occurs first.
104. RESTORATION OF PUBLIC IMPROVEMENTS: The Applicant shall repair or replace all existing improvements not designated for removal that are damaged or removed during construction. Improvements such as, but not limited to curbs, gutters, sidewalks, driveways, signs, streetlights, pavements, raised pavement markers, thermoplastic pavement markings, etc., shall be repaired or replaced to a condition equal to or better than the original condition. Any new concrete shall be free of stamps, logos, names, graffiti, etc. Existing improvement to be repaired or replaced shall be at the direction of the PPW Inspector and shall comply with all Title 24 Disabled Access provisions. The restoration of all improvements identified by the PPW Inspector shall be completed before the issuance of a certificate of occupancy. The Applicant shall request a walk-through with the PPW Inspector before the start of construction to verify existing conditions.
105. STORMWATER TREATMENT FACILITIES MAINTENANCE AGREEMENT: The Applicant shall execute and record a Stormwater Treatment Facilities Maintenance Agreement to ensure perpetual maintenance of the regulated project's treatment facilities. The agreement shall outline the operation and maintenance (O&M) plan for the permanent storm water treatment facilities. The Town-Standard Stormwater BMP Operation and Maintenance Agreement will be provided by PPW upon request. The agreement shall be executed prior to occupancy of the first building and include the following:
    a. The property owner shall operate and maintain all on-site stormwater treatment facilities in good condition and promptly repair/replace any malfunctioning components.

b. The property owner shall inspect the stormwater treatment facilities at least twice per year and submit an inspection report to PPW at PPW_Stormwater@losgatosca.gov no later than October 1st for the Fall report, and no later than March 15th of the following year for the Winter report. Written records shall be kept of all inspections and shall include, at minimum, the following information:
   i. Site address;
   ii. Date and time of inspection;
   iii. Name of the person conducting the inspection;
   iv. List of stormwater facilities inspected;
   v. Condition of each stormwater facility inspected;
   vi. Description of any needed maintenance or repairs; and
   vii. As applicable, the need for site re-inspection.

c. The property owner shall not make any design changes to the system with the Town's approval.

d. The property owner(s) shall develop a maintenance and replacement schedule for the stormwater treatment facilities that describes maintenance frequency and responsibility. This maintenance schedule shall be included with the approved Stormwater Treatment Facilities Maintenance Agreement.

e. The property owner(s) shall reimburse the Town for the cost of site inspections required under the Municipal Regional Permit.

f. The property owner(s) shall authorize Town Staff to perform maintenance and/or repair work and to recover the costs from the property owner in the event that maintenance or repair is neglected, or the stormwater management facility becomes a danger to public health or safety.

106. STORMWATER MANAGEMENT FACILITIES INSPECTION: Prior to final inspection, the Applicant must facilitate the testing of all stormwater facilities by a certified QSP or QSD to confirm the facilities are meeting the minimum design infiltration rate. All tests shall be made at on 20 foot x 20 foot grid pattern over the surface of the completed stormwater facility unless otherwise approved by the Town Engineer. All soil and infiltration properties for all stormwater facilities shall be evaluated by the geotechnical engineer. Percolation tests (using Double Ring Infiltrometer Testing) at horizontal and vertical (at the depth of the stormwater facility) shall be conducted for each stormwater facility. A 50 percent safety factor shall be applied to the calculated percolation test and shall be used as the basis for design (the design percolation rate). The geotechnical report shall include a section designated for stormwater design, including percolation results and design parameters. Sequence of construction for all stormwater facilities(bioswales, detention/ retention basins, drain rock, etc.) shall be done toward final phases of project to prevent silting of the stormwater treatment facilities.

THE FOLLOWING CONDITIONS SHALL BE COMPLIED WITH AT ALL TIMES DURING THE CONSTRUCTION PHASE OF THE PROJECT, OR IF ANOTHER DEADLINE IS SPECIFIED IN A CONDITION, AT THAT TIME

107. PROJECT CONSTRUCTION SETUP: All storage and office trailers will be kept off the public right-of-way.
108. PUBLIC WORKS CONSTRUCTION NOTICE: The contractor shall notify the PPW Inspector at least ten (10) working days prior to the start of any construction work. At that time, the Contractor shall provide an initial project construction schedule and a 24-hour emergency telephone number list.
109. PROJECT CONSTRUCTION SCHEDULE: The contractor shall submit the project schedule in a static PDF 11”x17” format and Microsoft Project, or an approved equal. The Contractor shall identify the scheduled critical path for the installation of improvements to the approval of the Town Engineer. The schedule shall be updated monthly and submitted to the PPW Inspector in the same formats as the original.
110. PROJECT CONSTRUCTION HANDOUT: The Contractor shall provide to the Town Engineer an approved construction information handout for the purpose of responding to questions the Town receives regarding the project construction.
111. PROJECT CONSTRUCTION SUPERVISION: The Contractor shall always provide a qualified supervisor on the job site during construction.
112. PUBLIC WORKS CONSTRUCTION INSPECTION: All work shown on the Improvement Plans shall be inspected to the approval of the Town Engineer. Uninspected work shall be removed as deemed appropriate by the Town Engineer.
113. PROJECT CONSTRUCTION HOURS: Construction activities related to the issuance of any PPW permit shall comply with Town Code Section 16.20.035 which restricts construction to the weekday between 8:00 a.m. and 6:00 p.m. and Saturday 9:00 a.m. to 4:00 p.m. No work shall be done on Sundays or on Town Holidays unless otherwise approved by the Town Engineer. Please note that no work shall be allowed to take place within the Town right-of-way after 5:00 p.m. Monday through Friday. In addition, no work being done under Encroachment Permit may be performed on the weekend unless prior approvals have been granted by the Town Engineer. The Town Engineer may apply additional construction period restrictions, as necessary, to accommodate standard commute traffic along arterial roadways and along school commute routes. Onsite project signage must state the project construction hours. The permitted construction hours may be modified if the Town Engineer finds that the following criteria is met:
    a. Permitting extended hours of construction will decrease the total time needed to complete the project without an unreasonable impact to the neighborhood.
    b. Permitting extended hours of construction is required to accommodate a construction requirement such as a large concrete pour or major road closure. Such a need would be presented by the project's design engineer and require approval of the Town Engineer.
    c. An emergency situation exists where the construction work is necessary to correct an unsafe or dangerous condition resulting in obvious and eminent peril to public health and safety. If such a condition exists, the Town may waive any of the remaining requirements outlined below.
    d. The exemption will not conflict with any other condition of approval required by the Town to mitigate significant environmental impacts.
    e. The contractor or property owner will notify residential and commercial occupants of adjacent properties of the modified construction work hours. This

notification must be provided three days prior to the start of the extended construction activity.

f. The approved hours of construction activity will be posted at the construction site in a place and manner that can be easily viewed by any interested member of the public.

g. The Town Engineer may revoke the extended work hours at any time if the contractor or owner of the property fails to abide by the conditions of extended work hours or if it is determined that the peace, comfort, and tranquility of the occupants of adjacent residential or commercial properties are impaired because of the location and nature of the construction.

h. The waiver application must be submitted to the PPW Inspector ten (10) working days prior to the requested date of waiver.

114. PROJECT CONSTRUCTION BEST MANAGEMENT PRACTICES: All construction activities shall conform to the latest requirements of the CASQA Stormwater Best Management Practices Handbooks for Construction Activities and New Development and Redevelopment, the Town's grading and erosion control ordinances, the project specific temporary erosion control plan, and other generally accepted engineering practices for erosion control as required by the Town Engineer when undertaking construction activities.

115. PROJECT CONSTRUCTION EXCAVATION: The following provisions to control traffic congestion, noise, and dust shall be followed during site excavation, grading, and construction:

a. All construction vehicles should be properly maintained and equipped with exhaust mufflers that meet State standards.

b. Travel speeds on unpaved roads shall be limited to fifteen (15) miles per hour.

c. Blowing dust shall be reduced by timing construction activities so that paving and building construction begin as soon as possible after completion of grading, and by landscaping disturbed soils as soon as possible.

d. Water trucks shall be present and in use at the construction site. All portions of the site subject to blowing dust shall be watered as often as deemed necessary by the Town, or a minimum of three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites in order to ensure proper control of blowing dust for the duration of the project.

e. Watering on public streets and wash down of dirt and debris into storm drain systems is prohibited. Streets will be cleaned by street sweepers or by hand as often as deemed necessary by the PPW Inspector, or at least once a day. Watering associated with on-site construction activity shall take place between the hours of 8 a.m. and 5 p.m. and shall include at least one late-afternoon watering to minimize the effects of blowing dust. Recycled water shall be used for construction watering to manage dust control where possible, as determined by the Town Engineer. Where recycled water is not available potable water shall be used. All potable construction water from fire hydrants shall be coordinated with the San José Water Company.

f. All public streets soiled or littered due to this construction activity shall be cleaned and swept on a daily basis during the workweek to the satisfaction of the Construction Inspector.

g. Construction grading activity shall be discontinued in wind conditions in excess of 25 miles per hour, or that in the opinion of the PPW Inspector cause excessive neighborhood dust problems.

h. Site dirt shall not be tracked into the public right-of-way and shall be cleaned immediately if tracked into the public right-of-way. Mud, silt, concrete and other construction debris shall not be washed into the Town's storm drains.

i. Construction activities shall be scheduled so that paving and foundation placement begin immediately upon completion of grading operation.

j. All aggregate materials transported to and from the site shall be covered in accordance with Section 23114 of the California Vehicle Code during transit to and from the site.

k. Prior to issuance of any permit, the Applicant shall submit any applicable pedestrian or traffic detour plans to the satisfaction of the Town Engineer for any lane or sidewalk closures. The temporary traffic control plan shall be prepared by a licensed professional engineer with experience in preparing such plans and in accordance with the requirements of the latest edition of the California Manual on Uniform Traffic Control Devices (MUTCD) and standard construction practices. The Traffic Control Plan shall be approved prior to the commencement of any work within the public right-of-way.

l. During construction, the Applicant shall make accessible any or all public and private utilities within the area impacted by construction, as directed by the Town Engineer.

m. The minimum soils sampling and testing frequency shall conform to Chapter 8 of the Caltrans Construction Manual. The Applicant shall require the soils engineer submit to daily testing and sampling reports to the Town Engineer.

116. MATERIAL HAULING ROUTE AND PERMIT: For material delivery vehicles equal to, or larger than two-axle, six-tire single unit truck size as defined by FHWA Standards, the Applicant shall submit a truck hauling route that conforms to Town of Los Gatos Standards for approval. Note that the Town requires a Haul Permit be issued for any hauling activities. The Applicant shall require contractors to prohibit trucks from using "compression release engine brakes" on residential streets. A letter from the Applicant confirming the intention to use the designated haul route shall be submitted to the Town Engineer for review and approval prior to the issuance of any Town permits. All material hauling activities including but not limited to, adherence to the approved route, hours of operation, staging of materials, dust control and street maintenance shall be the responsibility of the Applicant. Hauling of soil on- or off-site shall not occur during the morning or evening peak periods (between 7:00 a.m. and 9:00 a.m. and between 4:00 p.m. and 6:00 p.m.), and at other times as specified by the Town Engineer. The Applicant must provide an approved method of cleaning tires and trimming loads on site. All material hauling activities shall be done in accordance with applicable Town ordinances and conditions of approval.

117. PROJECT CLOSE-OUT: Prior to requesting a Final Inspection, the Applicant shall submit to the Town Engineer a letter indicating that all project conditions have been met, and all improvements are complete. All work must be completed to the satisfaction of the Planning Director and Town Engineer prior to the first occupancy. All public improvements, including the complete installation of all improvements relative to streets, fencing, storm drainage, underground utilities, etc., shall be completed and attested to by the Town Engineer before approval of occupancy of any unit. Where facilities of other agencies are involved, including those for water and sanitary sewer services, such installation shall be verified as having been completed and accepted by those agencies. In addition, the Applicant shall submit an itemized final quantities list of all public improvements constructed on-site and within the public right-of-way. The final quantities list shall be prepared by the project engineer and be to the approval of the Town Engineer. The final quantities list shall be broken out into on-site and off-site improvements based on the format provided by the Town. Until such time as all required improvements are fully completed and accepted by Town, the Applicant shall be responsible for the care, maintenance, and any damage to such improvements. Town shall not, nor shall any officer or employee thereof, be liable or responsible for any accident, loss or damage, regardless of cause, happening or occurring to the work or improvements required for this project prior to the completion and acceptance of the work or Improvements. All such risks shall be the responsibility of and are hereby assumed by the Applicant.
118. DOWNTOWN HOLIDAY CONSTRUCTION MORATORIUM: Due to concerns for business impacts during the holiday season (defined as starting the Monday of Thanksgiving week through January 1), there shall be no construction activities in the Downtown area within the right-of-way which would create lane closures, eliminate parking, create pedestrian detours, or other activities that may create a major disturbance as determined by the Town Engineer.
119. CONSTRUCTION WORKER PARKING: The Applicant shall provide a Construction Parking Plan that minimizes the effect of construction worker parking in the neighborhood and shall include an estimate of the number of workers that will be present on the site during the various phases of construction and indicate where sufficient off-street parking will be utilized and identify any locations for off-site material deliveries. Said plan shall be approved by the Town Engineer prior to issuance of Town permits and shall be complied with at all times during construction. Failure to enforce the parking plan may result in suspension of the Town permits. No vehicle having a manufacturer's rated gross vehicle weight exceeding ten thousand (10,000) pounds shall be allowed to park on the portion of a street which abuts property in a residential zone without prior approval from the Town Engineer (§15.40.070).
120. SITE WATER DISCHARGE: In accordance with the Town Code, Prohibition of Illegal Discharges (Los Gatos Town Code Section 22.30.015), the Town Engineer may approve in coordination West Valley Sanitation District the discharge of uncontaminated pumped ground waters to the sanitary sewer only when such source is deemed unacceptable by State and Federal authorities for discharge to surface waters of the United States, whether pretreated or untreated, and for which no reasonable alternative method of disposal is available. Following the verification of the applicable

local, state and/or federal approvals, a Discharge Plan will be approved and monitored by the Town Engineer.

121. ACCESS EASEMENT: Owner/Applicant is responsible for securing easements necessary for access to Lot 10 and/or utility connection prior to building permit review.

122. SUBDIVISION STREET NAMES: Applicant to obtain Town Council approval for any proposed street name not present on Town approved street names list.

THE FOLLOWING CONDITIONS SHALL BE COMPLIED WITH AT ALL TIMES THAT THE USE PERMITTED BY THIS ENTITLEMENT OCCUPIES THE PREMISES

123. POST CONSTRUCTION BEST MANAGEMENT PRACTICES (BMP): Post construction storm water pollution prevention requirements shall include:
    a. The Applicant shall be charged the cost of abatement for issues associated with, but not limited to, inspection of the private stormwater facilities, emergency maintenance needed to protect public health or watercourses, and facility replacement or repair if the treatment facility is no longer able to meet performance standards or has deteriorated. Any abatement activity performed on the Applicant's property by Town staff will be charged to the Applicant at the Town's adopted fully-loaded hourly rates.
    b. Maintenance of the storm drain inlets "No Dumping – Drains to Bay" plaques to alert the public to the destination of storm water and to prevent direct discharge of pollutants into the storm drain. Template ordering information is available at www.flowstobay.org.
    c. All process equipment, oils, fuels, solvents, coolants, fertilizers, pesticides, and similar chemical products, as well as petroleum based wastes, tallow, and grease planned for storage outdoors shall be stored in covered containers at all times.
    d. All public outdoor spaces and trails shall include installation and upkeep of dog waste stations.
    e. Garbage and recycling receptacles and bins shall be designed and maintained with permanent covers to prevent exposure of trash to rain. Trash enclosure drains shall be connected to the sanitary sewer system.
    f. It is the responsibility of the property owner(s)/homeowners association to implement a plan for street sweeping of paved private roads and cleaning of all storm drain inlets.

TO THE SATISFACTION OF THE SANTA CLARA COUNTY FIRE DEPARTMENT:

APPLICABLE TO ALL LOTS

124. Review of this Developmental proposal is limited to acceptability of site access, water supply and may include specific additional requirements as they pertain to fire department operations, and shall not be construed as a substitute for formal plan review to determine compliance with adopted model codes. Prior to performing any work, the applicant shall make application to, and receive from, the Building Department all applicable construction permits.

125. NOTE: The subject property is located within the Very High Fire Hazard Severity Zone (VHFHSZ) of the Local Responsibility Area (LRA). Pursuant to California Public Resources Code (PRC) 4290, the California Board of Forestry and Fire Protection is required to "…adopt regulations implementing minimum fire safety standards related to defensible space" applicable to "the perimeters and access to all residential, commercial, and industrial building construction." In 2018, the Legislature passed and the Governor signed SB 901 (Dodd), which expanded the applicability of the regulations promulgated under PRC 4290 to land in the Local Responsibility Area (LRA) Very High Fire Hazard Severity Zone. All comments below that result from PRC 4290 are identified by **. Where a conflict exists between local and 4290 requirements, the more stringent requirement shall apply. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.08.
126. SUBDIVISION MAP FINDINGS REPORT: For tentative or parcel maps approved in Very High Fire Hazard Severity Zones (VHFHSZ), the approving body is required to make and submit two findings to the State Board of Forestry and Fire Protection (Board) within 30 days of map approval. CCR, Title 14, Sec. 1266.02. Provide copies of the two finds reports made to the State Board of Forestry and Fire Protection.
127. **WIDTH: (As Noted on Sheet 7.0) (a) All roads shall be constructed to provide a minimum of two ten (10) foot traffic lanes, not including shoulder and striping. These traffic lanes shall provide for two-way traffic flow to support emergency vehicle and civilian egress, unless other standards are provided in this article or additional requirements are mandated by local jurisdictions or local subdivision requirements. Vertical clearances shall conform to the requirements in California Vehicle Code section 35250. (b) All one-way roads shall be constructed to provide a minimum of one twelve (12) foot traffic lane, not including shoulders. The local jurisdiction may approve one-way roads. (1) All one-way roads shall, at both ends, connect to a road with two traffic lanes providing for travel in different directions, and shall provide access to an area currently zoned for no more than ten (10) residential units. (2) In no case shall a one-way road exceed 2,640 feet in length. A turnout shall be placed and constructed at approximately the midpoint of each one-way road. (c) All driveways shall be constructed to provide a minimum of one (1) ten (10) foot traffic lane, fourteen (14) feet unobstructed horizontal clearance, and unobstructed vertical clearance of thirteen feet, six inches (13' 6"). California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2 Articles 1-5, § 1273.01.
128. **ROAD SURFACES: (As Noted on Sheet 7.0) (a) Roads shall be designed and maintained to support the imposed load of fire apparatus weighing at least 75,000 pounds and provide an aggregate base. (b) Driveways and road and driveway structures shall be designed and maintained to support at least 40,000 pounds. (c) Project proponent shall provide engineering specifications to support design, if requested by the local authority having jurisdiction. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.02.
129. **GATE ENTRANCES: (a) Gate entrances shall be at least two (2) feet wider than the width of the traffic lane(s) serving that gate and a minimum width of fourteen (14) feet unobstructed horizontal clearance and unobstructed vertical clearance of thirteen feet, six inches (13' 6"). (b) All gates providing access from a road to a driveway shall be

located at least thirty (30) feet from the roadway and shall open to allow a vehicle to stop without obstructing traffic on that road. (c) Where a one-way road with a single traffic lane provides access to a gated entrance, a forty (40) foot turning radius shall be used. (d) Security gates shall not be installed without approval. Where security gates are installed, they shall have an approved means of emergency operation. Approval shall be by the local authority having jurisdiction. The security gates and the emergency operation shall be maintained operational at all times. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.09. Gate on EAE shall meet the requirement.

130. FIRE HYDRANT SYSTEMS REQUIRED: (As Noted on Sheet 7.0) Where a portion of the facility or building hereafter constructed or moved into or within the jurisdiction is more than 400 feet from a hydrant on a fire apparatus access road, as measured by an approved route around the exterior of the facility or building, onsite fire hydrants and mains shall be provided where required by the fire code official. Exception: For Group R-3 and Group U occupancies, equipped throughout with an approved automatic sprinkler system installed in accordance with Section 903.3.1.1, 903.3.1.2 or 903.3.1.3, the distance requirement shall be not more than 600 feet. [CFC, Section 507.5.1]
131. FIRE DEPARTMENT (ENGINE) ROADWAY TURNAROUND REQUIRED: (As noted on sheet 7.0) Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with an approved area for turning around fire apparatus. Provide an approved fire department engine driveway turnaround with a minimum radius of 50 feet outside and 30 feet inside. Maximum grade in any direction shall be 5%. Installations shall conform with Fire Department Standard Details and Specifications D-1. [CFC Section 503.2.5].
132. FIRE APPARATUS (ENGINE) ACCESS ROADWAY REQUIRED: (As noted on sheet 7.0): Provide an access roadway with a paved all-weather surface, a minimum unobstructed width of 20 feet, vertical clearance of 13 feet 6 inches, minimum circulating turning radius of 50 feet outside and 30 feet inside, and a maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet A-1. CFC Sec. 503.
133. FIRE APPARATUS (ENGINE) ACCESS DRIVEWAY REQUIRED: (As noted on sheet 7.0) An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches, minimum turning radius of 40 feet outside, and maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1.
134. WATER SUPPLY REQUIREMENTS: Potable water supplies shall be protected from contamination caused by fire protection water supplies. It is the responsibility of the applicant and any contractors and subcontractors to contact the water purveyor supplying the site of such project, and to comply with the requirements of that purveyor. Such requirements shall be incorporated into the design of any water-based fire protection systems, and/or fire suppression water supply systems or storage containers that may be physically connected in any manner to an appliance capable of causing contamination of the potable water supply of the purveyor of record. Final

approval of the system(s) under consideration will not be granted by this office until compliance with the requirements of the water purveyor of record are documented by that purveyor as having been met by the applicant(s). 2019 CFC Sec. 903.3.5 and Health and Safety Code 13114.7.

135. ADDRESS IDENTIFICATION: New and existing buildings shall have approved address numbers, building numbers or approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property. These numbers shall contrast with their background. Where required by the fire code official, address numbers shall be provided in additional approved locations to facilitate emergency response. Address numbers shall be Arabic numbers or alphabetical letters. Numbers shall be a minimum of 6 inches high with a minimum stroke width of 0.5 inch (12.7 mm). Where access is by means of a private road and the building cannot be viewed from the public way, a monument, pole or other sign or means shall be used to identify the structure. Address numbers shall be maintained. CFC Sec. 505.1.
136. CONSTRUCTION SITE FIRE SAFETY: All construction sites must comply with applicable provisions of the CFC Chapter 33 and our Standard Detail and Specification S1-7. Provide appropriate notations on subsequent plan submittals, as appropriate to the project. CFC Chp. 33.
137. WILDLAND-URBAN INTERFACE: This project is located within the designated Wildland-Urban Interface Fire Area. The building construction shall comply with the provisions of California Building Code (CBC) Chapter 7A. Note that vegetation clearance shall be in compliance with CBC Section 701A.3.2.4 prior to project final approval. Check with the Planning Department for related landscape plan requirements.
138. EMERGENCY GATE/ACCESS GATE REQUIREMENTS: Gate installations shall conform with Fire Department Standard Details and Specification G-1 and, when open shall not obstruct any portion of the required width for emergency access roadways or driveways. Locks, if provided, shall be fire department approved prior to installation. Gates across the emergency access roadways shall be equipped with an approved access devices. If the gates are operated electrically, an approved Knox key switch shall be installed; if they are operated manually, then an approved Knox padlock shall be installed. Gate on EAE shall meet the requirement.
139. This review shall not be construed to be an approval of a violation of the provisions of the California Fire Code or of other laws or regulations of the jurisdiction. A permit presuming to give authority to violate or cancel the provisions of the fire code or other such laws or regulations shall not be valid. Any addition to or alteration of approved construction documents shall be approved in advance. [CFC, Ch.1, 105.3.6]

APPLICABLE TO LOT 1

140. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be

provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

141. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 1) is 500 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 2

142. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
143. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
144. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 2) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 3

145. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be

provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

146. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
147. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 3) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 4

148. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
149. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
150. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 4) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 5

151. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
152. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
153. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 5) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 6

154. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
155. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For

the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

156. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 6) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 7

157. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
158. FIRE APPARATUS (ENGINE) ACCESS DRIVEWAY REQUIRED: An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches, minimum turning radius of 20 feet inside and 40 feet outside, and a maximum slope of 15%. The angle of approach to a driveway shall be designed and constructed with a maximum 5% slope for a minimum of 20ft. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1. **During building permit, provide a stamped civil engineer letter to justify the traction of the driveway to support 75,000 lbs.**
159. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
160. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 7) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 8

161. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
162. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
163. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 7) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 9

164. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
165. FIRE APPARATUS (ENGINE)ACCESS DRIVEWAY REQUIRED: An access driveway shall be provided having an all-weather surface of either asphalt, concrete or other engineered surface capable of supporting 75,000 pounds and approved by a civil engineer. It shall have a minimum unobstructed width of 12 feet, vertical clearance of 13 feet 6 inches,

minimum turning radius of 20 feet inside and 40 feet outside, and a maximum slope of 15%. The angle of approach to a driveway shall be designed and constructed with a maximum 5% slope for a minimum of 20ft. Installations shall conform to Fire Department Standard Details and Specifications sheet D-1. **During building permit, provide a stamped civil engineer letter to justify the traction of the driveway to support 75,000 lbs.**

166. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
167. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 9) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 10

168. **TURNAROUND (LOT 10 Only): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(e) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
169. FIRE DEPARTMENT (ENGINE) DRIVEWAY TURNAROUND REQUIRED: (As noted on sheet A1.1) An approved fire apparatus turnaround is required for all dead-end access roads and driveways in excess of 150 feet. [Ref: CFC 503.2.5]. All turnarounds shall have a maximum slope of 5% in any direction. Placement of any architectural feature within a turnaround is not permitted. All turnarounds shall be provided an approved metal, all weather sign or other approved notices or markings that shall include the words "NO PARKING – FIRE DEPARTMENT TURNAROUND". Turnarounds located on parcels shall be provided with a sign at the entrance to the parcel that shall include the words "FIRE DEPARTMENT TURNAROUND ON SITE". Installations shall conform to Fire Department Standard Details and Specifications sheet D-1.
170. **WIDTH: (Approved PRC 4290 request of exception shown on Sheet 7.3) (a) All roads shall be constructed to provide a minimum of two ten (10) foot traffic lanes, not including shoulder and striping. These traffic lanes shall provide for two-way traffic flow to support emergency vehicle and civilian egress, unless other standards are provided in

this article or additional requirements are mandated by local jurisdictions or local subdivision requirements. Vertical clearances shall conform to the requirements in California Vehicle Code section 35250. (b) All one-way roads shall be constructed to provide a minimum of one twelve (12) foot traffic lane, not including shoulders. The local jurisdiction may approve one-way roads. (1) All one-way roads shall, at both ends, connect to a road with two traffic lanes providing for travel in different directions, and shall provide access to an area currently zoned for no more than ten (10) residential units. (2) In no case shall a one-way road exceed 2,640 feet in length. A turnout shall be placed and constructed at approximately the midpoint of each one-way road. (c) All driveways shall be constructed to provide a minimum of one (1) ten (10) foot traffic lane, fourteen (14) feet unobstructed horizontal clearance, and unobstructed vertical clearance of thirteen feet, six inches (13' 6”). California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter Articles 1-5, § 1273.01.

171. MODIFIED FIRE SPRINKLERS REQUIRED (Lot 10 Only): (Per Approved PRC 4290 request of exception shown on sheet 7.3) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.

172. FIRE APPARATUS (ENGINE)ACCESS ROADWAY REQUIRED: (Approved PRC 4290 request of exception shown on sheet 7.3) Provide an access roadway with a paved all weather surface, a minimum unobstructed width of 20 feet, vertical clearance of 13 feet 6 inches, minimum circulating turning radius of 50 feet outside and 30 feet inside, and a maximum slope of 15%. Installations shall conform to Fire Department Standard Details and Specifications sheet A-1. CFC Sec. 503.

173. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 10) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3] **Fire flow appears not to meet requirement for VB construction. Per applicant to mitigate fire flow requirement, VA construction will be proposed for the entire structure. During building permit phase, show on coversheet that VA construction type will be used as part of this planning approval condition.**

APPLICABLE TO LOT 11

174. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the “T” shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned

five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.

175. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
176. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 11) is 1125 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

APPLICABLE TO LOT 12

177. ** TURNAROUND (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) (a) Turnarounds are required on driveways and dead-end roads. (b) The minimum turning radius for a turnaround shall be forty (40) feet, not including parking, in accordance with the figures in 14 CCR §§ 1273.05(e) and 1273.05(f). If a hammerhead/T is used instead, the top of the "T" shall be a minimum of sixty (60) feet in length.(c) Driveways exceeding 150 feet in length, but less than 800 feet in length, shall provide a turnout near the midpoint of the driveway. Where the driveway exceeds 800 feet, turnouts shall be provided no more than 400 feet apart. (d) A turnaround shall be provided on driveways over 300 feet in length and shall be within fifty (50) feet of the building.(d) Each dead-end road shall have a turnaround constructed at its terminus. Where parcels are zoned five (5) acres or larger, turnarounds shall be provided at a maximum of 1,320 foot intervals.(e) Figure A. Turnarounds on roads with two ten-foot traffic lanes. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2, Articles 1-5, § 1273.05.
178. FIRE SPRINKLERS REQUIRED (Lot 1 to Lot 9, Lot 11 and 12): (As noted on sheet 7.0) Approved automatic sprinkler systems in new and existing buildings and structures shall be provided in the locations described in this Section or in Sections 903.2.1 through 903.2.12 whichever is the more restrictive and Sections 903.2.14 through 903.2.21. For the purposes of this section, firewalls and fire barriers used to separate building areas shall be constructed in accordance with the California Building Code and shall be without openings or penetrations.
179. REQUIRED FIRE FLOW: The minimum required fireflow for this project **(Lot 12) is 500 Gallons Per Minute (GPM)** at 20 psi residual pressure. This fireflow assumes installation of automatic fire sprinklers per CFC [903.3.1.3]

ewalters@LosGatosCA.gov

RE: Development Applications at 178 Twin Oaks Drive (APN 532-16-006) in the Town of Los Gatos
Architecture and Site Applications S-24-023 through 034
Subdivision Application M-24-013

Dear Erin:

This letter serves as the final revised Project Description and Letter of Justification for the Surrey Farms project in conjunction with the resubmittal and in accordance with comments received from the various Town departments.

The proposed project consists of a new subdivision with a private road accessing 12 total units with 9 single family homes and 3 detached row house units on a portion of an existing approximately 17.9-acre parcel ("Project") on Twin Oaks Drive in the Town. The property is currently zoned as Resource Conservation and was previously subject to a Williamson Act contract which has terminated as of January 2025. This is a SB330 project subject to the robust protections of the Housing Accountability Act and the Builder's Remedy and there are no zoning or land use changes proposed. The project proposes grading and tree removal to accommodate the development. The homes will range in size from +/- 5,775 SF to +/- 6,170 SF and the townhomes will be +/- 1,630 SF.

Of the Project's 12 units, 9 will be market-rate and 3 (25%) will be affordable to lower-income households at the "low" income designated level. The project exceeds the Town of Los Gatos Below Market Price program as established by Ordinance 2313 as the project is only required to provide for 10% of the units to be designated as affordable for projects between 5 units to 20 units. The project provides for 25% affordable designated units for 3 of the 12 total units. These units will be for sale at the "low" income affordability level. The only deviation from the Below Market Price Housing Program and Guidelines, as established by Resolution 2020-040, is section III A regarding unit size. While these units are smaller in size and different in design, they provide for a well-balanced integration of affordability into this neighborhood in a first-class manner.

Please note that we are attempting to comply with the various development standard documents and guidelines the Town would ordinarily apply to the project, however, we remind the Town that pursuant to the Builder's Remedy the Project is not required to comply with the general plan land use or zoning standards referenced in these guidelines and checklists. That said, we have designed the Project in such a way so that it harmonizes with the Town's development standards as much as possible and is a seamless integration into the surrounding neighborhoods.

Pursuant to the request of Town Staff, this project has been divided into twelve individual applications, one per lot. As such, the totality of the requested deviations from existing development standards appears high. However, individually each housing site has strived to comply with the standards that would exist in what would be the appropriate zoning for each site as

much as possible. Since the property is not being rezoned, we have done our best to project what would be appropriate zoning and development standards and adhere to them as much as possible to deliver a harmonious extension of the existing Surrey Farms neighborhood. Of the 12 lots, only 4 lots,(7, 8, 9, & 10) would likely have been zoned HR if a zone change were pursued. The balance of the lots would likely have been R-1. Please keep this in mind when reviewing the development standards and deviations we have applied to each lot in the lot matrices. Included in this submittal are twelve matrices, one for each lot, that detail deviations from the aforementioned development standard documents as well as designations in both the matrix and the individual comment response letters where incentives, concessions, or waivers are being requested.

To briefly summarize, the project is requesting four incentives under State Density Bonus Law, the Builder's Remedy, and pursuant to Gov. Code 65589.5(h)(6)(C). The project wide incentives we have implemented are electing not to erect story poles as required by the Town's Story Pole and Netting Policy, not including sidewalks as required by the Hillside Design requirements, not including open space as required by Open Space, Parks, and Recreation Element of the 2040 General Plan and the Hillside Specific Plan, and not including a public trail as required by the Hillside Design requirements. Those elements would drastically exceed the project budget and preclude its development at the proposed density. We also believe our design to be very harmonious with the surrounding neighborhoods without those elements and specifically sidewalks would be out of place. Across the 12 lots we have enumerated 153 waivers from the development standards as outlined in the matrices provided. There are at most 16 waivers requested and as few as 9 on any given lot. Many of the waivers are the same, just applied to each of the lots so there is redundancy. With regards to the specific Town comments regarding grading, home orientation, architectural design & massing, open space easements, trails, on-site parking requirements, etc. that are generally found in the Hillside Design Guidelines & Standards, any deviations from these are detailed in the matrices, and otherwise are justified under the aforementioned protections under State Housing law in order to make the project feasible. Please refer to the letter from Travis Brooks at Miller Star Regalia outlining these protections and referencing the applicable legal provisions that cover these items in question.

The following sections further characterize the intent of the development to deliver a first-class neighborhood as originally envisioned by Bob Dodge decades ago.

BACKGROUND

In the early 1950s, Bob Dodge put together the Surrey Farms neighborhood development. The first phases were developed and exist today. In 1956, he hired a civil engineer to begin the planning of a final phase and laid out 14 lots on the land where we propose today's neighborhood (this project). Bob decided to pursue other opportunities and the land was put into the Williamson Act until its termination in January of 2025. Bob's children (Tom, Linda, and Larry) are excited to finally finish the remaining phase of a decades long first-class neighborhood development that has served the Los Gatos community well. The Dodge family are truly generational stakeholders in the community. They could have pursued hundreds of units at the property and abused current state housing laws, but instead chose to deliver a tasteful luxury home neighborhood in keeping with their father's original vision and out of respect for the existing neighborhood.

NEIGHBORHOOD LOTTING PLAN AND ROADWAY DESIGN

This latest iteration of the project has a single private road extending from Twin Oaks drive into the project culminating in a cul-de-sac. Emergency access is provided by a connection to Brooke Acres Drive. Lot 10 is a single lot accessed from Cerro Vista Court. The project took the roadway design into consideration from many neighborhood comments received in connection with the 2018 project that objected to a through connection from Cerro Vista Court to Twin Oaks Drive as it would create impacts to neighbors by headlights shining directly into existing homes in the evening as cars drove downhill from Cerro Vista to Twin Oaks. As such, we have designed most home sites to be on the lower area of the property to avoid headlight impacts and preserve the upper hillside views. The previous layout had 4 homes planned for the upper hillside where we now have only a single lot, Lot 10. Lots 7, 8, 9, & 10 have large back yards extending into the hillsides preserving them with an open space look. The private road does not propose sidewalks or street lighting. Street lighting poses similar objections as to previously described. In order to maintain a rural and luxury feel, the lots have been deisgined to minimize unnecessary impervious features such as sidelwaks and to maintain a harmonious look with similar hillside neighborhoods. The inclusion of sidelwaks would not only feel out of place but also be to costly and preclude development of the project at the proposed density, Therefore, an exception under builder's remedy, waiver, or incentive under state density bonus law is the justification in addition to the aforementioned design reasoning.

ARCHTIECTURE

Surrey Farms is a subdivision of 17.55 acres of land which includes sloped hillside towards the east and flatter portions of land at the toe of the slope towards the west (+/- 3 acres of <10% slope) and adjacent to R-1:10 residential neighborhood. The proposed neighborhood is served by a cul-de-sac road which aligns with the slope transition between the flatter western areas of the site and the eastern hillside.

Lots 1, 2 and 3 are adjacent to residential neighborhoods towards the south and are screened from view with substantial trees and vegetation. They are located adjacent to a drainage easement at the lower elevations of the overall site. Their footprints are more compact, and they are designed as two-story homes whose primary massing is broken down with several secondary roof forms.

Lots 4,5 and 6 are adjacent to residential development west of the site which is zoned R1:10 and the proposed homes on those lots are mostly one-story massing with a very limited second floor over one wing of the house and less than 20% of its overall footprint. The materials and colors palettes for these homes are carefully chosen to blend with the natural environment and be consistent with the 'California Ranch' and "Mediterranean' styles that are prevalent in the neighborhood.

The proposed 'hillside' homes on Lots 7-10 are generally on slopes of +/-20%, and the homes are placed on 'terraced pads' approximately 40' wide stepping with the hillside and oriented parallel to the contours. This minimizes the impact on the hillside and allows the homes to fit into the topography. The homesites are placed away from exiting ridgelines, trees and natural features, a riparian corridor exists between lots 7 and 8. The design of the hillside homes terrace with the slope and have primary roof forms that parallel the contours. Stone is integrated into the lower level of the home providing a base that blends with the hill. Colors and materials were carefully chosen to be

darker in tone and more natural patinas that blend with the surrounding natural landscape. Where retaining walls are necessary they will be stepped according to the principles outlined in the Los Gatos Hillside Development Standards and Guidelines.

UTILITES AND WATER TREATMENT

The subdivision is designed with a private road and all utilities have been confirmed with capacity to extend to each lot. The lots will collectively own the private street with each lot containing a portion of the street thereon. CC&Rs have been established providing governance and a maintenance agreement for the street and stormwater treatment areas. The treatment areas are generally located within a lot or shared across two lots.

ENVIRONMENTAL SENSITIVITY

An Environmental Impact Report was prepared for this project in 2018. Although the EIR was never certified, the information was utilized and updated for the 2025 Initial Study/Mitigated Negative Declaration that has been prepared for the proposed project. The project has been designed to not impact the ephemeral swale present in the middle of the site and also avoids any impacts to Ross Creek. All other categories have been evaluated and where necessary mitigations have been identified. The site has been designed with care and is a harmonious extension of the Surrey Farms neighborhood with very low density and little impact to the existing property.

AFFORDABLE HOUSING

Not only will the project deliver new homes for the market, but three of the homes are designated affordable and will be some of the first newly delivered affordable product available in Los Gatos in years. This furthers the Town's goal of delivering affordable housing in conformance with the Housing Element and General Plan. The homes have been designed in a very tasteful way to fit beautifully in the neighborhood and provide an option for ownership supported by the Town's affordable housing policies.

We thank Town Staff and the consultant team for their diligent and careful work to help refine the project as proposed today. We look forward to answering any and all questions and provide details at the Public Hearings to help enable the swift approval of the project, as revived and submitted in December of 2023 and deemed complete in March 2025.

Thank you,

Jim Foley

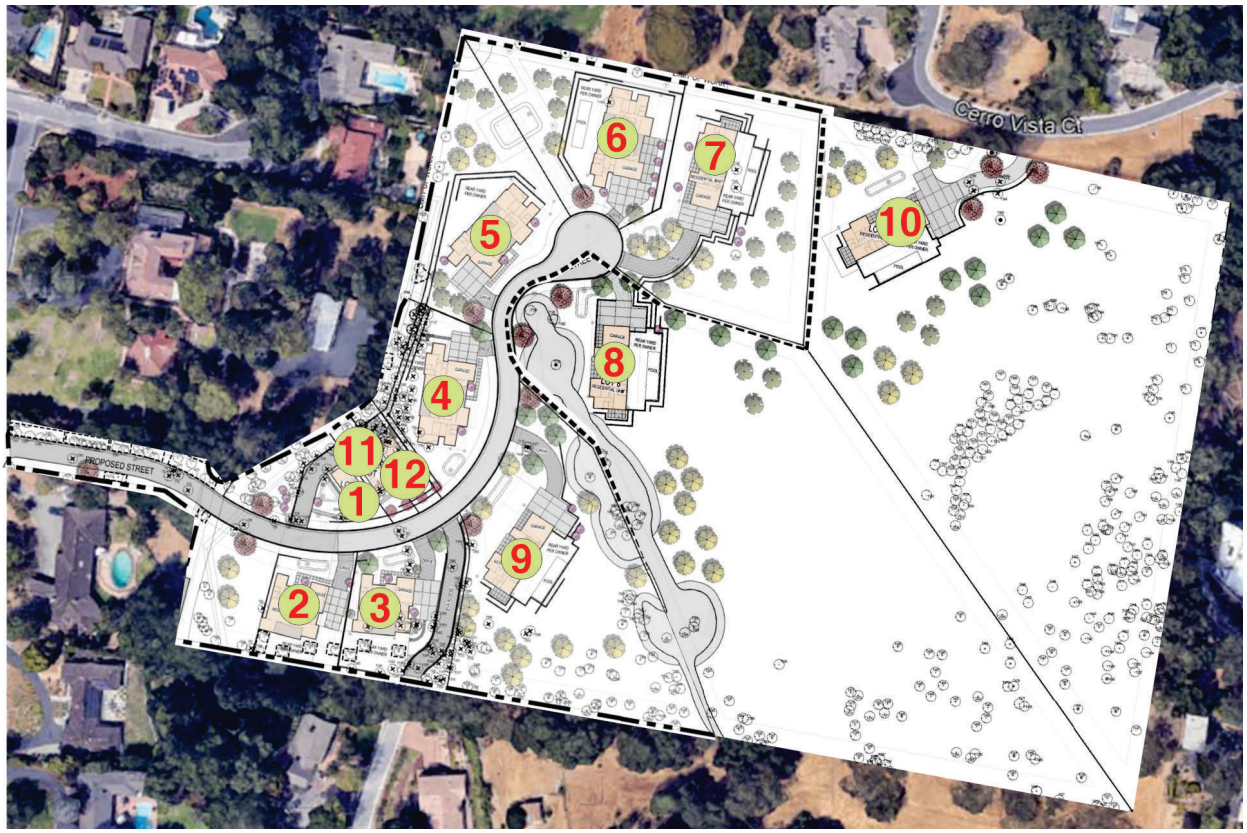
RE: 178 Twin Oaks Drive | LOT 1



Dear Erin:
I reviewed the drawings, and evaluated the site context. My comments and recommendations are as follows:

NEIGHBORHOOD CONTEXT
The site is located in a new proposed subdivision on a large 17.9 acre currently vacant parcel adjacent to traditional neighborhoods of mostly one story homes. Lot 1 is one of twelve proposed lots. Photographs of the site and its surrounding context are shown on the following page.

6729 FAIRFIELD DRIVE
SANTA ROSA, CA 95409

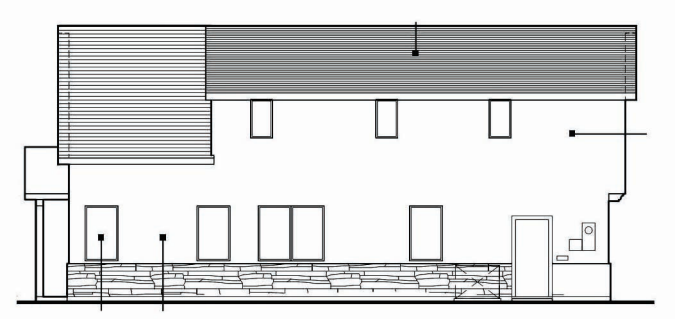
PROPOSED PROJECT



PROPOSED FRONT ELEVATION

PROPOSED REAR ELEVATION

PROPOSED LEFT SIDE ELEVATION

PROPOSED RIGHT SIDE ELEVATION

PROJECT WIDE ISSUES

There are three issues that occur over the project site as a whole that staff may wish to discuss further with the applicant.

1. **Floor Plans and Facades**

   The are four groupings of adjacent homes with the same floor plan layouts and facade designs. On a limited basis, some variation is provided with reversed floor plans and materials but largely the homes have little variation which goes against prior town emphasis on variety and individual home identity. Groupings include:

   - Lots 1, 11 and 12
   - Lots 2 and 3
   - Lots 4, 5, and 6
   - Lots 7, 8, 9 and 10

2. **Colors**

   There is very limited variation in the proposed color palettes for the homes overall and within the four clusters which would produce a neighborhood quite different than most in Los Gatos which have greater variety and Sense of individual homes rather than a subdivision.

3. **Two Story Downhill Facades**

   The majority of proposed homes would be developed on flat pads carved out of the sloping site topography which may not be consistent with the towns Hillside Development Standards and Guidelines. Mitigation measures include a limited facade height of 25 feet on the downhill facades and the inclusion of some downhill facade balconies to break up the two story facades. Staff should review this issue in the context of past hillside properties policies and decisions.

Lot 6			
Lot 7			
Lot 8			
Lot 9			
Lot 10			
Lot 11			
Lot 12			

ISSUES AND CONCERNS

The proposed house is modest in size and designed in a tradition architectural style. There are only a few issues where the design would not be consistent with the town's Residential Design Guidelines.

1. **Roof Slopes**

   There are three different roof slopes which would not be consistent with Residential Design Guideline 3.5.1.

   3.5.1 Unify roof pitches

   - *Utilize the same slope for all primary roofs.*
   - *Roof slopes for porches may be lower than the primary roof slope, depending on the architectural style.*
   - *Dormer roof slopes may sometimes be steeper than the primary roof slope, depending on the architectural style.*

2. **Stone Base**

   Omitting the stone base under the porch would not be consistent with Residential Design Guideline 3.2.2.

   3.2.2 Design for architectural integrity

   - *Carry wall materials, window types and architectural details around all sides of the house. Avoid side and rear elevations that are markedly different from the front elevation.*

3 **Window Sash**

   Slim profile fiberglass windows would not be consistent with Residential Design Guideline 3.7.3.

   3.7.3 match window materials to the architectural style and to the surrounding neighborhood

   - *Wood windows are common in Los Gatos. Wood is still the desired choice for styles that traditionally used wood. However, today there are some window materials, such as vinyl clad wood windows that are not noticeably different from wood at a short distance. They may be used if their visual appearance matches wood.*
   - *Generally, avoid metal windows. They may be considered acceptable for a Modern Style house, but would be strongly discouraged for all other styles*

   (Note: While proposed windows are not metal, the slim profile will resemble metal windows.)

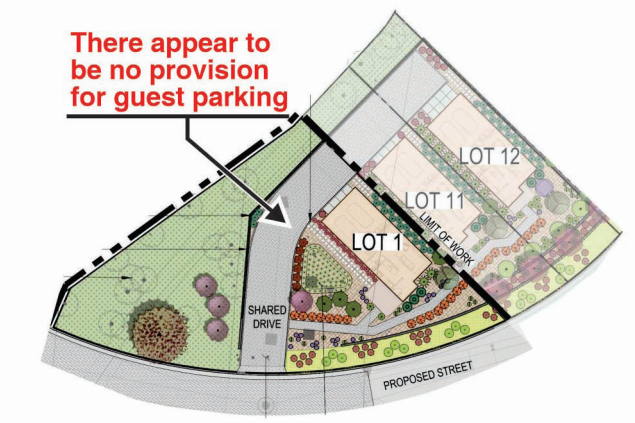
4. Window Trim

Windows without trim would not be consistent with Residential Design Guideline 3.7.4..

3.7.4 Design the windows with attention to matching the traditional details of the architectural style

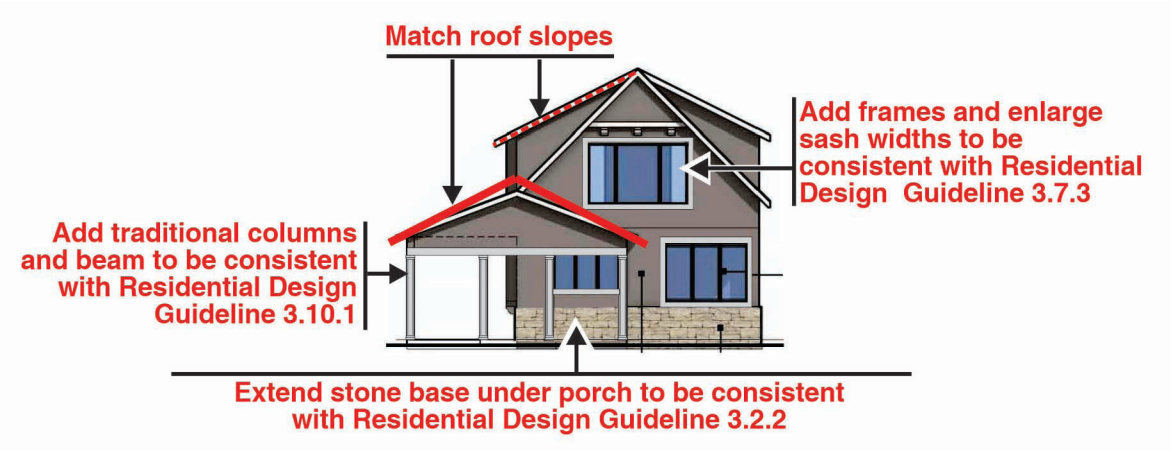
- *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
- *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
- *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*

5. Porch Details



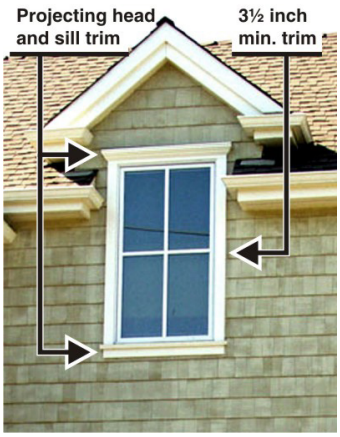
The porch columns and interface with the wall above would not be consistent with Residential Design Guideline 3.10.1.

3.10.1 Porches and Entries



- *Select columns that are traditional to the architectural style of the house. Take care in selecting columns with an appropriate width to height ratio for the style. Except for a very few styles, the columns should have appropriate caps and bases with proportions typical of the style.*
- *Provide a well proportioned beam between the column caps and the roof. Size and detail the beam so that it looks like a convincing structural member. It should be visible both from inside and outside of the porch. ...*

6. Guest Parking



There does not appear to be any provision for guest parking on site or on street.

RECOMMENDATIONS

1. Reduce the variation in roof slopes from three to two.
2. Extend the stone base under the porch.
3. Select a window with materials and sash width similar to traditional residential windows seen throughout Los Gatos - one example is shown below.
4. Provide trim around all windows and doors - see Los Gatos example below.

5. Add porch beam and refine columns to be consistent with Residential Design Guideline 3.10.1.
6. Ask applicant what provisions are being made for guest parking.

Erin, please let me know if you have questions or if I missed any important issues.

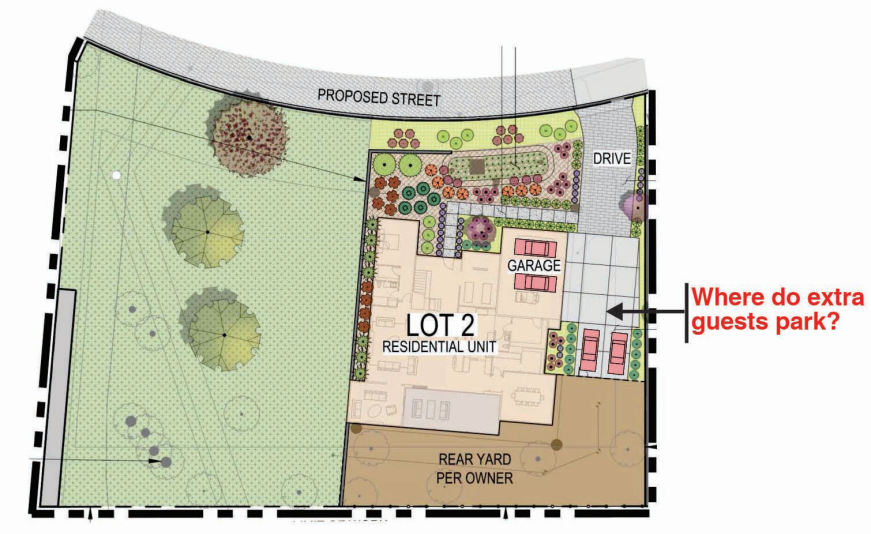
3.7.4 Design the windows with attention to matching the traditional details of the architectural style

- *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
- *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
- *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*

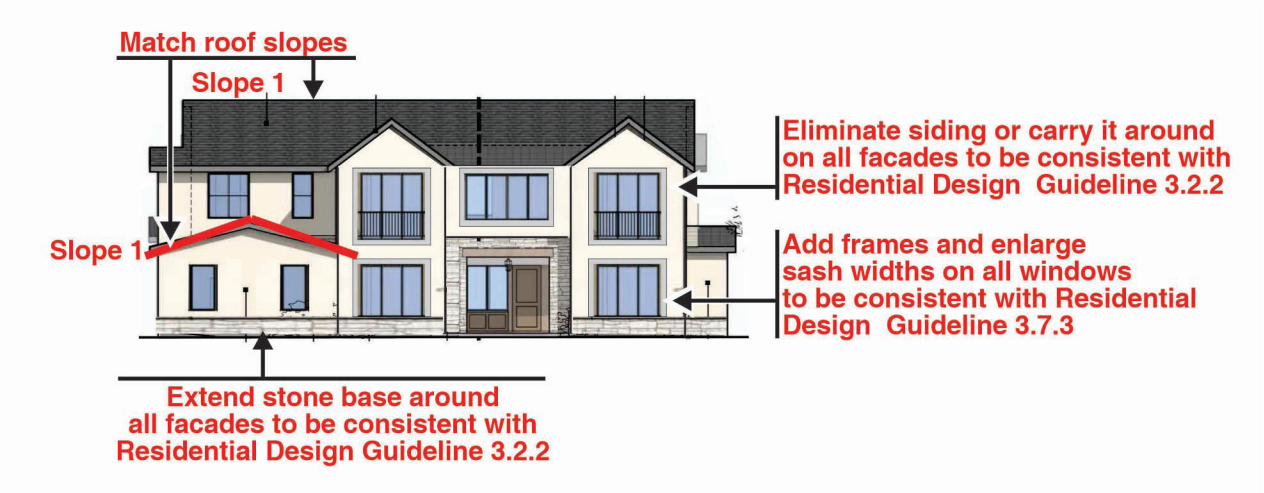
5. Entry



The rectangular entry form would not be consistent with the architectural style and Residential Design Guidelines 3.6.2 and 3.6.3.

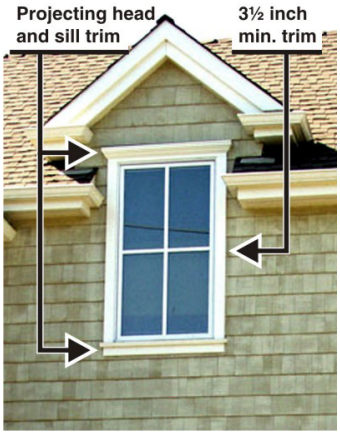
3.6.2 Design home entries with sensitivity to the architectural style

3.6.3 Design entries with sensitivity to the surrounding neighborhood



6. Guest Parking

There appears to be limited off street parking for more than two cars and no on street parking is shown.



CANNON DESIGN GROUP 6729 FAIRFIELD DRIVE SANTA ROSA, CA 95409

RECOMMENDATIONS

1. Reduce the variation in roof slopes from three to two.
2. Extend the stone base continuously around all four facades or eliminate the base.
3. Select a window with materials and sash width similar to traditional residential windows seen throughout Los Gatos - one example is shown below.

4. Provide trim around all windows and doors - see Los Gatos example below.
5. Eliminate the proposed siding or carry it more consistently around all facades.
6. While the proposed entry type is not normally associated with the proposed architectural style, its recession on the front facade would not be jarring and I would not recommend changing it.
7. Ask applicant what provisions are being made for guest parking beyond the two on site spaces shown.

   (e.g., Thanksgiving or other holidays and events)

Erin, please let me know if you have questions or if I missed any important issues.

They may be used if their visual appearance matches wood.*
- *Generally, avoid metal windows. They may be considered acceptable for a Modern Style house, but would be strongly discouraged for all other styles*

(Note: While proposed windows are not metal, the slim profile will resemble metal windows.)

4. Window Trim

Windows without trim would not be consistent with Residential Design Guideline 3.7.4.

3.7.4 Design the windows with attention to matching the traditional details of the architectural style

- *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
- *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
- *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*

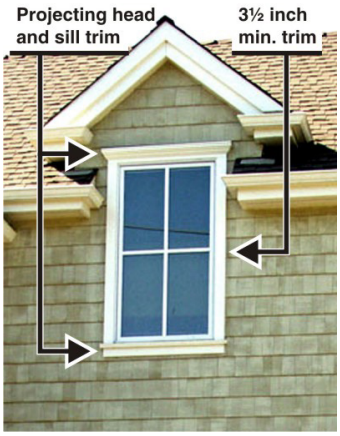
5. Guest Parking

There appears to be limited off street parking for more than two cars and no on street parking is shown.



CANNON DESIGN GROUP 6729 FAIRFIELD DRIVE SANTA ROSA, CA 95409

RECOMMENDATIONS

1. Reduce the variation in roof slopes from three to two.
2. Select a window with materials and sash width similar to traditional residential windows seen throughout Los Gatos - one example is shown below.
3. Provide trim around all windows and doors - see Los Gatos example below.

4. Ask applicant what provisions are being made for guest parking beyond the two on site spaces shown. (e.g., Thanksgiving or other holidays and events)

Erin, please let me know if you have questions or if I missed any important issues.

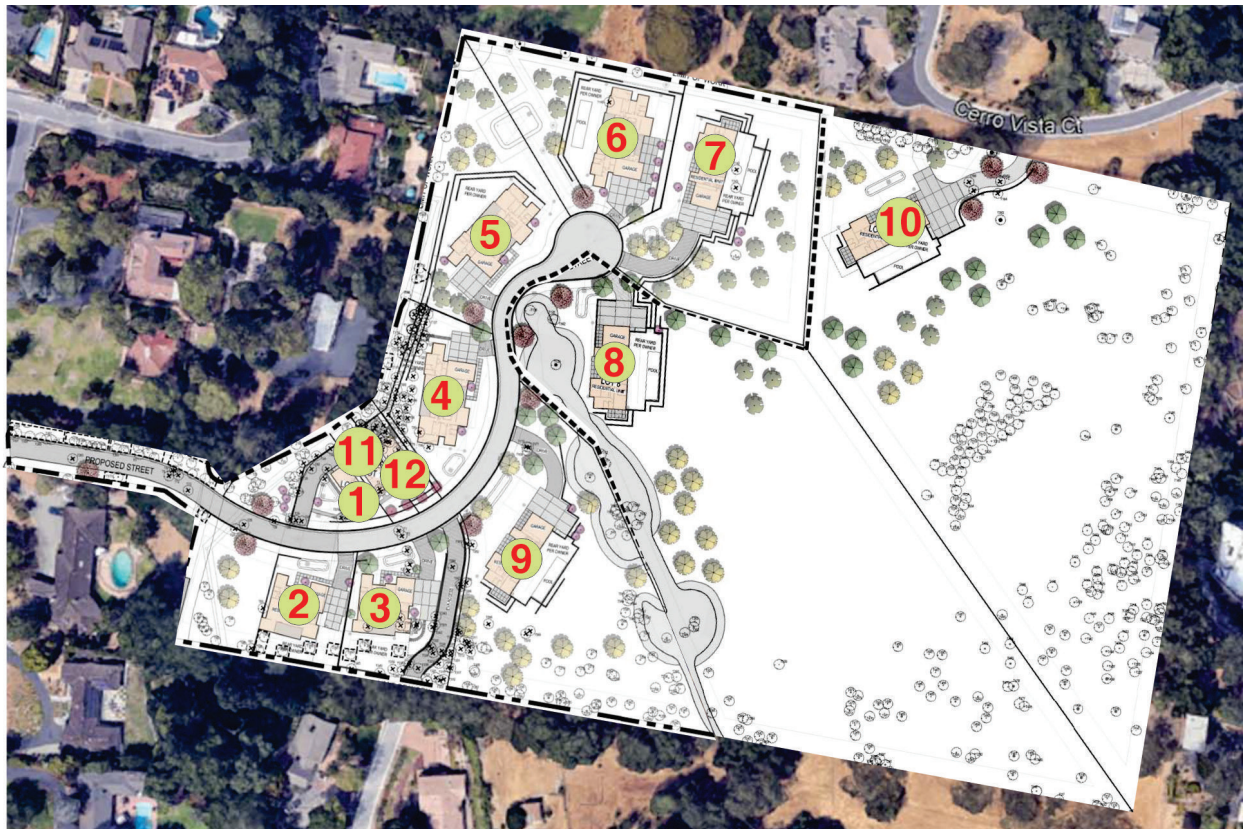
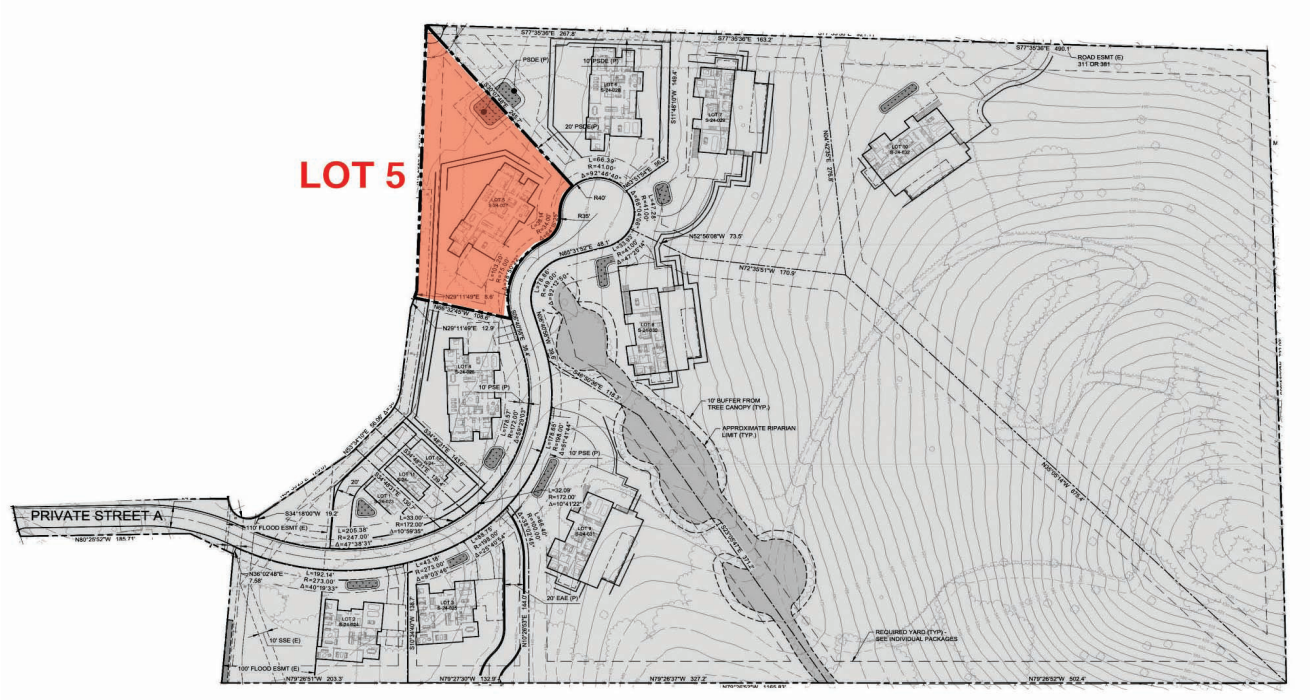
RE: 178 Twin Oaks Drive | LOT 5



Dear Erin:
I reviewed the drawings, and evaluated the site context. My comments and recommendations are as follows:

NEIGHBORHOOD CONTEXT
The site is located in a new proposed subdivision on a large 17.9 acre currently vacant parcel adjacent to traditional neighborhoods of mostly one story homes. Lot 5 is one of twelve proposed lots. Photographs of the site and its surrounding context are shown on the following page.



6729 FAIRFIELD DRIVE
SANTA ROSA, CA 95409

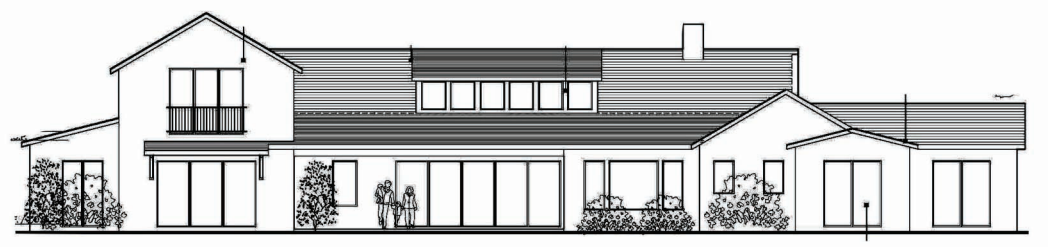
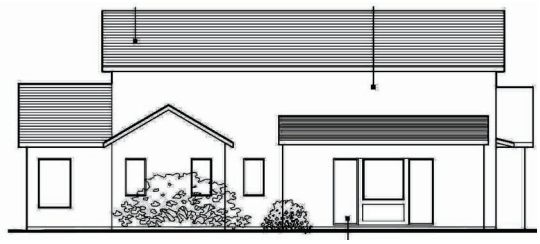
CONTEXT



STREETSCAPE CONTEXT

PROPOSED PROJECT

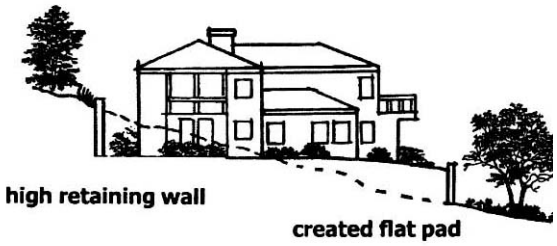


PROPOSED FRONT ELEVATION

PROPOSED REAR ELEVATION

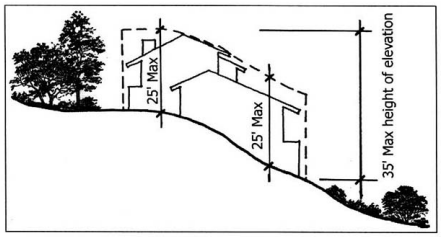
PROPOSED LEFT SIDE ELEVATION

PROPOSED RIGHT SIDE ELEVATION



PROJECT WIDE ISSUES

There are three issues that occur over the project site as a whole that staff may wish to discuss further with the applicant.



1. **Floor Plans and Facades**
   The are four groupings of adjacent homes with the same floor plan layouts and facade designs. On a limited basis, some variation is provided with reversed floor plans and materials but largely the homes have little variation which goes against prior town emphasis on variety and individual home identity. Groupings include:
   - Lots 1, 11 and 12
   - Lots 2 and 3
   - Lots 4, 5, and 6
   - Lots 7, 8, 9 and 10
2. **Colors**
   There is very limited variation in the proposed color palettes for the homes overall and within the four clusters which would produce a neighborhood quite different than most in Los Gatos which have greater variety and Sense of individual homes rather than a subdivision.
3. **Two Story Downhill Facades**
   The majority of proposed homes would be developed on flat pads carved out of the sloping site topography which may not be consistent with the towns Hillside Development Standards and Guidelines. Mitigation measures include a limited facade height of 25 feet on the downhill facades and the inclusion of some downhill facade balconies to break up the two story facades. Staff should review this issue in the context of past hillside properties policies and decisions.

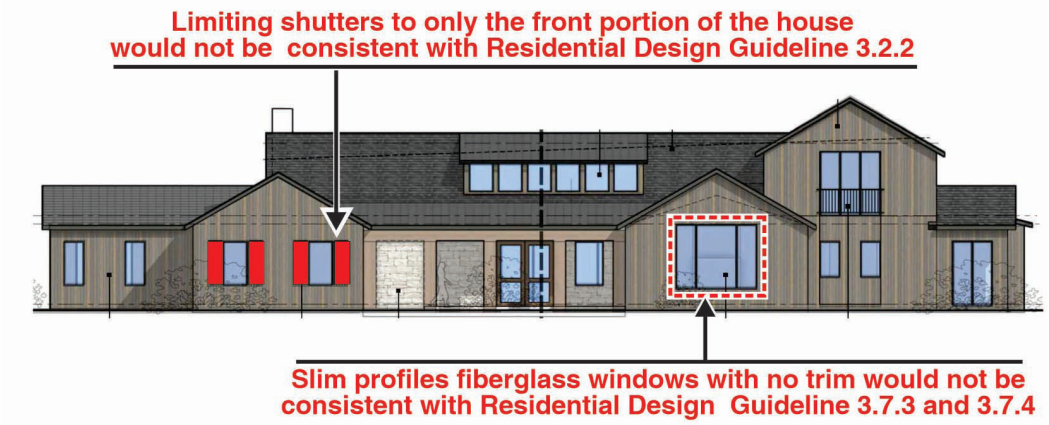
Lot 10			
Lot 11			
Lot 12			

ISSUES AND CONCERNS

The proposed house is designed in a tradition architectural style. There are only a few issues where the design would not be consistent with the town's Residential Design Guidelines.

1. Roof Slopes

There are three different roof slopes which would not be consistent with Residential Design Guideline



3.5.1.

3.5.1 Unify roof pitches

- *Utilize the same slope for all primary roofs.*
- *Roof slopes for porches may be lower than the primary roof slope, depending on the architectural style.*
- *Dormer roof slopes may sometimes be steeper than the primary roof slope, depending on the architectural style.*

2. Facade Integrity

Limiting the location of the stone base and shutters would not be consistent with Residential Design Guideline 3.2.2.

3.2.2 Design for architectural integrity

- *Carry wall materials, window types and architectural details around all sides of the house. Avoid side and rear elevations that are markedly different from the front elevation.*

3. Window Sash

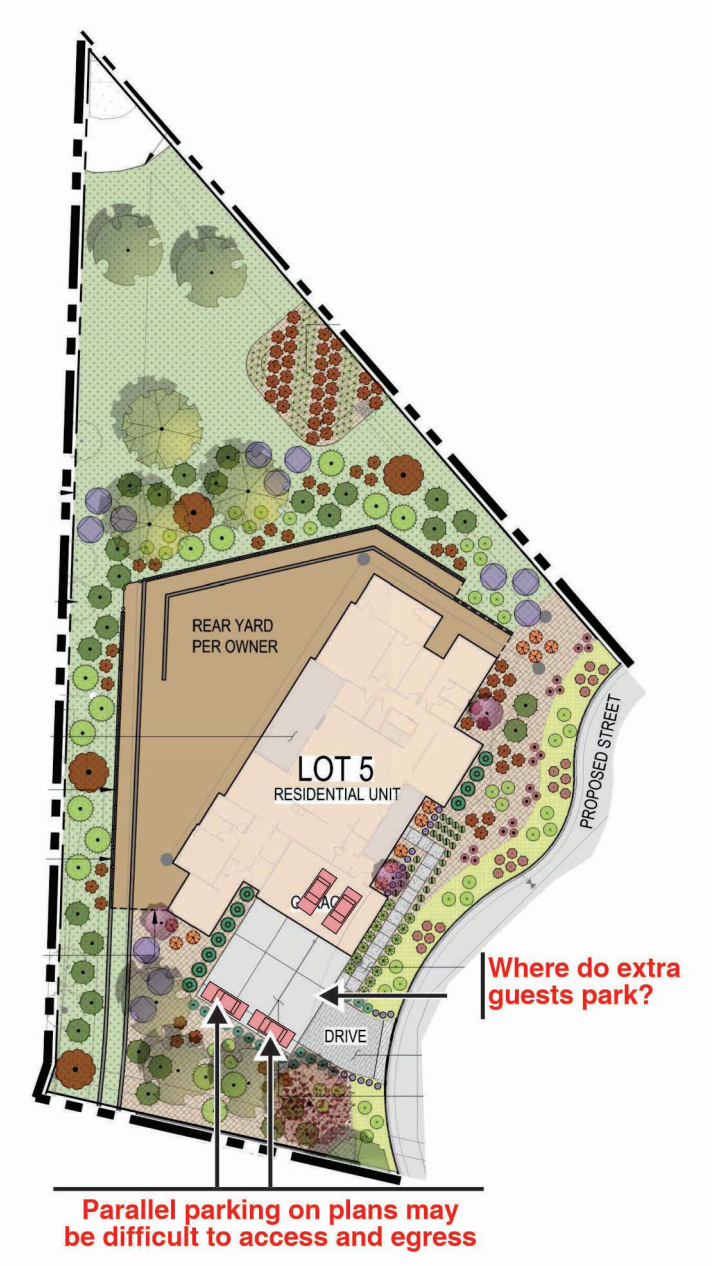
Slim profile fiberglass windows would not be consistent with Residential Design Guideline 3.7.3.

3.7.3 match window materials to the architectural style and to the surrounding neighborhood

- *Wood windows are common in Los Gatos. Wood is still the desired choice for styles that traditionally used wood. However, today there are some window materials, such as vinyl clad wood windows that are not noticeably different from wood at a short distance. They may be used if their visual appearance matches wood.*
- *Generally, avoid metal windows. They may be considered acceptable for a Modern Style house, but would be strongly discouraged for all other styles*

(Note: While proposed windows are not metal, the slim profile will resemble metal windows.)

4. Window Trim



Windows without trim would not be consistent with Residential Design Guideline 3.7.4.

3.7.4 Design the windows with attention to matching the traditional details of the architectural style

- *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
- *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
- *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*

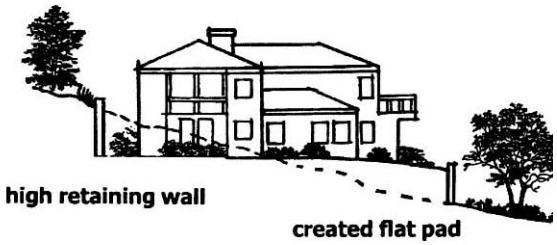
PROPOSED REAR ELEVATION

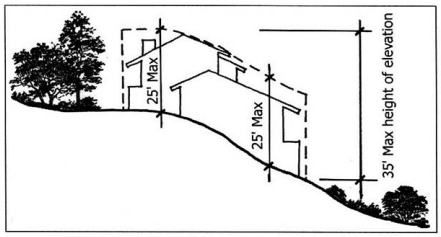
PROPOSED LEFT SIDE ELEVATION

PROPOSED RIGHT SIDE ELEVATION



PROJECT WIDE ISSUES

There are three issues that occur over the project site as a whole that staff may wish to discuss further with the applicant.



1. **Floor Plans and Facades**
   The are four groupings of adjacent homes with the same floor plan layouts and facade designs. On a limited basis, some variation is provided with reversed floor plans and materials but largely the homes have little variation which goes against prior town emphasis on variety and individual home identity. Groupings include:
   - Lots 1, 11 and 12
   - Lots 2 and 3
   - Lots 4, 5, and 6
   - Lots 7, 8, 9 and 10
2. **Colors**
   There is very limited variation in the proposed color palettes for the homes overall and within the four clusters which would produce a neighborhood quite different than most in Los Gatos which have greater variety and Sense of individual homes rather than a subdivision.
3. **Two Story Downhill Facades**
   The majority of proposed homes would be developed on flat pads carved out of the sloping site topography which may not be consistent with the towns Hillside Development Standards and Guidelines. Mitigation measures include a limited facade height of 25 feet on the downhill facades and the inclusion of some downhill facade balconies to break up the two story facades. Staff should review this issue in the context of past hillside properties policies and decisions.

CANNON DESIGN GROUP 6729 FAIRFIELD DRIVE SANTA ROSA, CA 95409

ISSUES AND CONCERNS

The proposed house is designed in a tradition architectural style. There are only a few issues where the design would not be consistent with the town's Residential Design Guidelines.

1. **Window Sash**

   Slim profile fiberglass windows would not be consistent with Residential Design Guideline 3.7.3.

   3.7.3 match window materials to the architectural style and to the surrounding neighborhood

   - *Wood windows are common in Los Gatos. Wood is still the desired choice for styles that traditionally used wood. However, today there are some window materials, such as vinyl clad wood windows that are not noticeably different from wood at a short distance. They may be used if their visual appearance matches wood.*
   - *Generally, avoid metal windows. They may be considered acceptable for a Modern Style house, but would be strongly discouraged for all other styles*

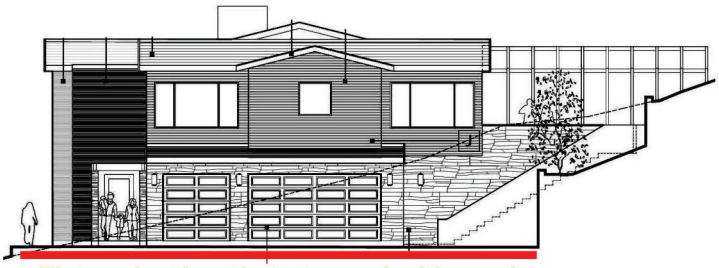
   (Note: While proposed windows are not metal, the slim profile will resemble metal windows.)

2. **Window Trim**

   Windows without trim would not be consistent with Residential Design Guideline 3.7.4.

   3.7.4 Design the windows with attention to matching the traditional details of the architectural style

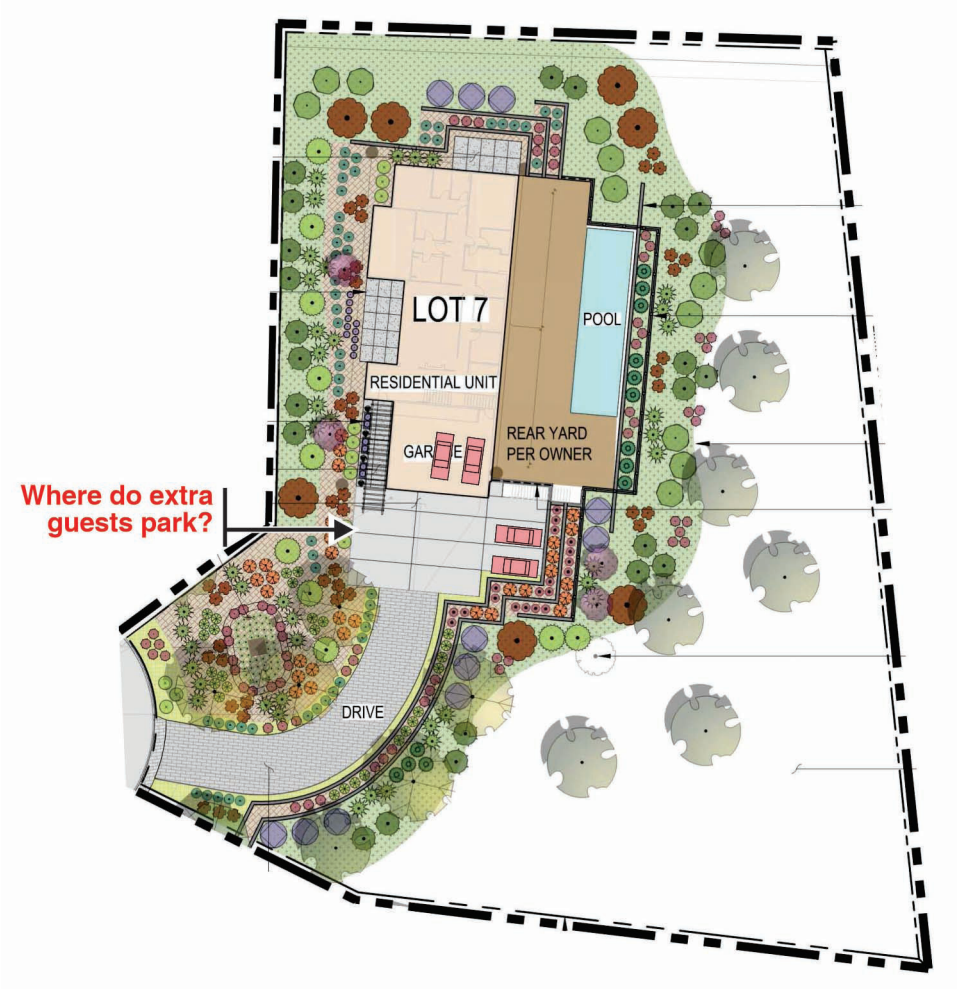
   - *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
   - *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
   - *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*



3. **Proposed Facade Materials And Colors**

   The drawings are difficult to understand.

4. Site Grading



The building site is flat pad grades rather than stepping with the natural grade which would not be consistent with the town's Hillside Development Standards and Guidelines.

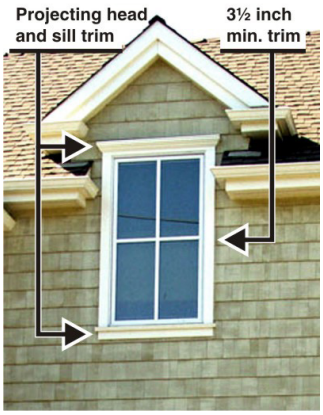
5. Guest Parking



There appears to be limited off street parking for more than two cars and no on street parking is shown.

CANNON DESIGN GROUP 6729 FAIRFIELD DRIVE SANTA ROSA, CA 95409

RECOMMENDATIONS

1. Select a window with materials and sash width similar to traditional residential windows seen throughout Los Gatos - one example is shown below.
2. Provide trim around all windows and doors - see Los Gatos example below.

3. Clarify the indented materials and colors
4. Discuss the grading inconsistency with the town's Hillside Development Standards=S and Guidelines.

5. Ask applicant what provisions are being made for guest parking beyond the two on site spaces show (e.g., Thanksgiving or other holidays and events)

Erin, please let me know if you have questions or if I missed any important issues.

ISSUES AND CONCERNS

The proposed house is modest in size and designed in a tradition architectural style. There are only a few issues where the design would not be consistent with the town's Residential Design Guidelines.

1. **Roof Slopes**

   There are three different roof slopes which would not be consistent with Residential Design Guideline 3.5.1.

   3.5.1 Unify roof pitches

   - *Utilize the same slope for all primary roofs.*
   - *Roof slopes for porches may be lower than the primary roof slope, depending on the architectural style.*
   - *Dormer roof slopes may sometimes be steeper than the primary roof slope, depending on the architectural style.*

2. **Stone Base**

   Omitting the stone base under the porch would not be consistent with Residential Design Guideline 3.2.2.

   3.2.2 Design for architectural integrity

   - *Carry wall materials, window types and architectural details around all sides of the house. Avoid side and rear elevations that are markedly different from the front elevation.*

3 **Window Sash**

   Slim profile fiberglass windows would not be consistent with Residential Design Guideline 3.7.3.

   3.7.3 match window materials to the architectural style and to the surrounding neighborhood

   - *Wood windows are common in Los Gatos. Wood is still the desired choice for styles that traditionally used wood. However, today there are some window materials, such as vinyl clad wood windows that are not noticeably different from wood at a short distance. They may be used if their visual appearance matches wood.*
   - *Generally, avoid metal windows. They may be considered acceptable for a Modern Style house, but would be strongly discouraged for all other styles*

   (Note: While proposed windows are not metal, the slim profile will resemble metal windows.)

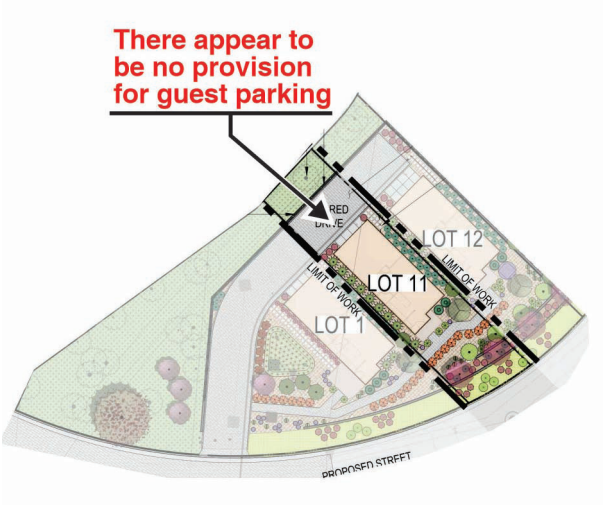
4. Window Trim

Windows without trim would not be consistent with Residential Design Guideline 3.7.4..

3.7.4 Design the windows with attention to matching the traditional details of the architectural style

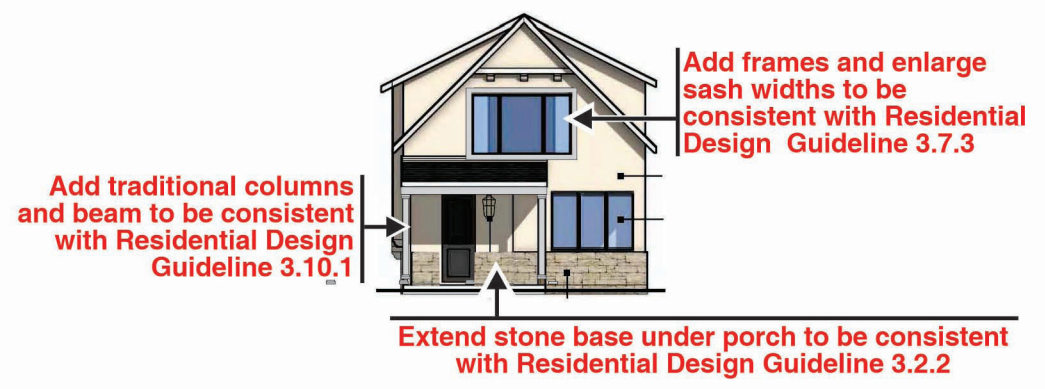
- *Most architectural styles - except Mission, Spanish Eclectic or Modern - should have wood trim around the windows. The trim width should be matched to the style, but in general, should not be less than 3 1/2 inches wide. Head trim depth should be equal to or wider than the jamb casing, but not less than one-sixth of the opening width.*
- *Projecting window sills and heads are strongly encouraged unless the architectural style would not normally have those features.*
- *Wood trim is also encouraged on stucco houses unless the window frames are recessed at least 6 inches from the outside face of the wall. The use of stucco covered foam trim is strongly discouraged.*

5. Porch Details



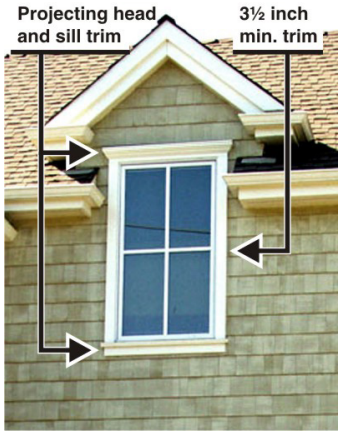
The porch columns and interface with the wall above would not be consistent with Residential Design Guideline 3.10.1.

3.10.1 Porches and Entries



- *Select columns that are traditional to the architectural style of the house. Take care in selecting columns with an appropriate width to height ratio for the style. Except for a very few styles, the columns should have appropriate caps and bases with proportions typical of the style.*
- *Provide a well proportioned beam between the column caps and the roof. Size and detail the beam so that it looks like a convincing structural member. It should be visible both from inside and outside of the porch. ...*

6. Guest Parking



There does not appear to be any provision for guest parking on site or on street.

RECOMMENDATIONS

1. Extend the stone base under the porch.
2. Select a window with materials and sash width similar to traditional residential windows seen throughout Los Gatos - one example is shown below.
3. Provide trim around all windows and doors - see Los Gatos example below.

4. Add porch beam and refine columns to be consistent with Residential Design Guideline 3.10.1.
5. Ask applicant what provisions are being made for guest parking.

Erin, please let me know if you have questions or if I missed any important issues.

c/o Erin Walters, Senior Planner

RESPONSE TO COMMENTS – Cannon Design Group Review

Dear Erin:

Please see our response to the Cannon Design Group Review.

The Cannon Design Group (CDG) review has been reviewed, and we reviewed the following issues that they raised across the 12 proposed lots:

Cannon Design Group comments are in red.

Roof Pitch

There are three different roof slopes which would not be consistent with Residential Design Guideline 3.5.1.

We are using multiple roof pitches on multiple designs, CDG recommends only two, but we provide the following explanation for the design.

Plan Type D (Lots 1,11,12)

This elevation has three different roof pitches. The two primary roof pitches are designed to diminish the massing of the two story home towards the front as you can see in the side elevation. The porch roof pitch on Lot 1 design is designed to meet the eave of the steeper upper story pitch and have a porch footprint that provides for a substantial covered entry area. Lots 11 and 12 are the same on the primary pitches and have shed roof pitches over the entry porch that are lower pitch in order to be under second floor lower eave.

Plan Type B (Lots 2,3)

This elevation type also has three different roof pitches. The two primary roof pitches are designed to diminish the massing of the two story home, the main ridge roof lower pitch only faces towards the side the side and therefore the two front facing gables are steeper pitched but not seen next to the lower pitch. The proportion of the front facing gable we think looks proportionally better as a steeper pitch. The lower pitch over the garage and rear additions are lower pitch so as to not block upper story window sills.

Plan Type C (Lots 4,5,6)

This elevation type also has three different roof pitches. The two primary roof pitches are designed to diminish the massing of the two story home. This design is primarily a one story home and has two pitches based on the higher vaulted roof over the great room and the lower pitch roof over the second story and the rear and front porch elements.

The lowest pitch roof is used for 'appendages' such as the garage. The lower pitch for these secondary elements reinforces the hierarchy of the massing.

Plan Type Variety

Please see explanation at end of comment letter which explains how the different plan types are tailored to their position within the site. While there is repetition of types adjacent each other, we have provided variety by mirroring plan types and providing variations on the color and material palette (while staying within a common theme). Lots 7,8,9,10 are all substantially distances from each other and separated by landscape features.

Window Sash

Slim profile fiberglass windows would not be consistent with Residential Design Guideline 3.7.3.

We are proposing fiberglass windows for the standard windows in all plan types, and believe that the flexibility in finish options and design is sufficient to complement the architecture of the surrounding area and is consistent with the spirit of the guidelines.

Window Trim

Windows without trim would not be consistent with Residential Design Guideline 3.7.4.

When the material is stucco, we have opted to not have trim around the windows or rounded stucco that dies in window frame, or have minimalist stucco mold, which is a common trim detail for stucco. It is not common to California style Mediterranean architecture to have 4" exterior window trim.

When the material is wood siding, we also have opted for a minimalist look, which we believe looks appropriate in this setting. We think more traditional trim details are typical in the more traditional old smaller lot developments (craftsman, Victorian, etc) but these are large lots where the dominant context is the natural landscape. Also, our architectural character is for a contemporary interpretation of traditional styles, and having minimalist trim designs is part of that.

Exterior Materials – Stone Base, Shutters

Limiting the location of the stone base and shutters would not be consistent with Residential Design Guideline 3.2.2.

We are generally using stone as a complementary material on all elevations. This is used either as a 'water table' design to blend the base with the landscape or it is used as an accent material on the porch/entry feature. We don't agree that using it extensively on all elevations (side and front) would look better. We are using shutters on some of the garages because some of those windows should be features but may also need to be covered to screen inside.

Color Schemes

There is very limited variation in the proposed color palettes for the homes overall and within the four clusters which would produce a neighborhood quite different than most in Los Gatos which have greater variety and Sense of individual homes rather than a subdivision.

We would be open to using more color schemes as a condition of approval, but prefer a consistent theme of colors that are consistent with the architectural design style, the LRV considerations, and appropriateness with the architectural character. Also, because our new development is a 'culdesac' new neighborhood not part of the surrounding neighborhood streets, we don't think blending into the existing design of homes on Twin Oaks or other blocks is as relevant in our proposed neighborhood.

Two Story Downhill Facades

The majority of proposed homes would be developed on flat pads carved out of the sloping site topography which may not be consistent with the towns Hillside Development Standards and Guidelines. Mitigation measures include a limited facade height of 25 feet on the downhill facades and the inclusion of some downhill facade balconies to break up the two story facades. Staff should review this issue in the

context of past hillside properties policies and decisions.

See description at end of letter for how we designed plan types in response to topography. Lots 1,2,3,4,5,6,11,12 are designed as flat pads. These lots are on existing slopes less than 15%. The steeper lots (lots 7,8,9,10) have been designed as 'terraced pads' in order to fit into the steeper topography better (20-25%), our plans show that. We are also following the HSDG requirements for 35' maximum height limit. None of our designs violate the 35' max height limit.

We are also including for reference a description of the architectural and 'masterplan' vision:

Surrey Farms is a subdivision of 17.55 acres of land which includes sloped hillside towards the east and flatter portions of land at the toe of the slope towards the west (+/- 3 acres of <10% slope) and adjacent to R-1:10 residential neighborhood. The proposed neighborhood is served by a cul-de-sac road which aligns with the slope transition between the flatter western areas of the site and the eastern hillside.

Lots 2 and 3 are along the southern entry to the site and adjacent residential neighborhoods towards the south. They are located adjacent to a drainage easement at the lower elevations of the overall site. Their footprints are more compact than lots 4-10, and they are designed as two-story homes whose primary massing is broken down with several secondary roof forms.

Lots 1, 11 and 12 are also near the entry to the site and are proposed as affordable housing as further outlined in the application. They are adjacent existing residential properties to the north and west and are screened with existing trees to remain from off-site residences. They are designed as two story homes with garages facing the rear and accessed off a common driveway. The front of the homes facing the main private road have entry porches facing the road and feature a steeper roof pitch which scales the massing down towards the front of the home.

Lots 4,5 and 6 are adjacent residential development west of the site which is zoned R1:10 and the proposed homes on those lots are mostly one-story massing with a very limited second floor over one wing of the house and less than 20% of its overall footprint. The materials and colors palettes for these homes are carefully chosen to blend with the natural environment and be consistent with the 'California Ranch' and "mediterranean' styles that are prevalent in the neighborhood.

The proposed 'hillside' homes on Lots 7-10 are on slopes of +/-20%, and the homes are placed on 'terraced pads' approximately 40' wide stepping with the hillside and oriented parallel to the contours. This minimizes the impact on the hillside and allows the homes to fit into the topography. The homesites are placed away from exiting ridgelines, trees and natural features, a riparian corridor exists between lots 7 and 8. The design of the hillside homes terrace with the slope and have primary roof forms that parallel the contours. Stone is integrated into the lower level of the home providing a base that blends with the hill. Colors and materials were carefully chosen to be darker in tone and more natural patinas that blend with the surrounding natural landscape. Where retaining walls are necessary, they will be stepped according to the principles outlined in the Los Gatos Hillside Development Standards and Guidelines.

Best regards,

Chris Hall, Partner

INTRODUCTION AND OVERVIEW

McClintock Landscape Horticultural Services was engaged by Mr. Shawn Taylor, HMH Landscape Architect, HMH Engineers, located at 1570 Oakland Road, San Jose, CA 95131, to develop a Certified Arborist Report serving as a Tree Preservation Plan for the Surrey Farms project, Project #4185.10, in Los Gatos, CA 95032, APN: 532-16-006. This Arborist Report outlines the current observable health and structural conditions of the trees from a visual assessment conducted at ground level. It includes details on tree species, photographs, diameter at breast height (DBH), health ratings, structural evaluations, height, and canopy spread in both the North-South (N/S) and East-West (E/W) directions. Each tree is identified with a metal numbered tag, and their locations are marked on a diagrammatic site map. The inventory assesses the estimated construction impact tolerance, tree protection zone (TPZ), and critical root zone (CRZ) distances, along with general observations for 677 tree locations within the proposed work area at the aforementioned site. Please note that tree appraisals are not included in this report and will be conducted by others.

The health and structure ratings, along with the overall calculated condition derived from these assessments, reflect the state of the trees during the data collection period, approximately from November 15 to December 15, 2024. This time of year can present challenges for leaf and foliage assessment.

All tree inspections were carried out by a Certified Arborist accredited by the International Society of Arboriculture to accurately evaluate the tree conditions at this time.

The work zone's terrain is primarily characterized as foothills, bordered by developed properties along the project's perimeters.

This document serves as a tree preservation plan and condition assessment report; however, it does not include foundation, grading, planting plans, or soil reports at the time of its creation. Additionally, this report does NOT encompass tree appraisals, nor does it provide real estate appraisals or assumptions beyond those explicitly stated. All trees were visually inspected from the ground, utilizing a steel diameter tape or equivalent when feasible to measure the DBH at 54 inches above grade, along with visual estimates and laser measurements to assess tree canopy height and width in both the North-South (N/S) and East-West (E/W) orientations. Soil and tissue laboratory analyses were not conducted, and root collars were examined visually without any excavations performed.
*Note: Grading and Planting Plans were reviewed as of June 1, 2025. All reviewed plans appear typical and appropriate. However, the Project Arborist should be present during excavation activities within tree protection zones to ensure proper procedures are followed.

*Note: July 23, 2025 Trees that have been added to the removal list due to Easement Conflict are #163, 167, 170, 171, 172, 530, 531, & 566. September 11, 2025 addressed 3. Comment: Dead Trees marked for retention: 4. Comment: Number Count Summary:

METHODOLOGY

Our tree survey work is a deliberate and systematic methodology for cataloging trees on-site as per Town of Los Gatos Sec. 29.10.1000

1. Identify each tree species.
2. Number each tree with a metal tag and its approximate location on a diagrammatic map. It's not always possible to place a physical tag due to inaccessible uses such as impassable brush, poison oak, and private property. In cases of non-access, tags were placed on a fence close to the tree as practical.
3. Measure each trunk circumference at 54" above grade also known as DBH, Diameter Breast Height.
4. Tissue or laboratory analysis was **not** performed while assessing these trees.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

5. General observations from the ground were used to estimate both health and structure.
6. Combined Health and Structure ratings calculated with the Construction Impact Rating, formulate the viability of the tree to be retained and protected based on a retention rating of HIGH/MODERATE/LOW from the arborist's perspective.

MUNICIPAL CODE GOVERNING TREES

In accordance with the Town of Los Gatos ("The Town") Sec. 29.10.1000 on TREE PRESERVATION and established industry standards, the following guidelines are set forth for tree protection during construction. Protected trees designated for preservation must be safeguarded throughout the construction process using the methods outlined below.

The definition of protected trees is provided in The Town of Los Gatos Sec. 29.10.0950, which details the scope of protected trees. As recommended in Sec. 29.10.1005 regarding the protection of trees during construction, the Town advises that the canopy drip-line serves as the tree protection zone. This zone is primarily intended to protect the roots while also preventing damage to the canopy. Given the presence of numerous trees in close proximity, their canopies may not be centered due to phototropism, leading to offset canopies or drip lines relative to the tree stems.

In this tree protection plan, I propose establishing a Critical Root Zone (CRZ) at six times the Diameter at Breast Height (DBH) to protect the critical root zone, which encompasses the soil area surrounding a tree that contains the minimum volume of roots necessary for the tree's structural stability and health. It is essential to allow the closest possible access to the trees while avoiding damage to the structural roots. Although there are no universally accepted methods for calculating the CRZ, this guideline is recommended. Furthermore, I suggest implementing a Tree Protection Zone (TPZ) at fifteen times the DBH. This area should be managed under the oversight of a certified Arborist or the Town Arborist. Currently, the plan includes only Type 1 tree protection fencing to delineate boundaries, effectively integrating the canopy drip line with the proposed Tree Protection Zone (TPZ). This strategy offers a practical and effective solution for ensuring the approved protection of trees within this development.

Sec. 29.10.0960. - Scope of protected trees.

This division shall apply to every property owner and to every person, corporation, partnership, sole proprietorship or other entity responsible for removing, maintaining or protecting a tree. The trees protected by this division are:

(1)

All trees which have a twelve-inch or greater diameter (thirty-seven and one-half-inch circumference) of any trunk or in the case of multi-trunk trees, a total of eighteen inches or greater diameter (fifty-six and one-half-inch circumference) of the sum of all trunks, where such trees are located on developed residential property.

(2)

All trees which have an eight-inch or greater diameter (twenty-five-inch circumference) of any trunk or in the case of multi-trunk trees, a total of eight inches or greater diameter (twenty-five-inch circumference) of the sum of all trunks, where such trees are located on developed Hillside residential property.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

Sec. 29.10.0960. - Scope of protected trees. (continued)

(3)

All trees of the following species which have an eight-inch or greater diameter (twenty-five-inch circumference) located on developed residential property:

a. Blue Oak (Quercus douglasii);
b. Black Oak (Quercus kelloggii);
c. California Buckeye (Aesculus californica);
d. Pacific Madrone (Arbutus menziesii).

(4)

All trees which have a four-inch or greater diameter (twelve and one half-inch circumference) of any trunk, when removal relates to any review for which zoning approval or subdivision approval is required.

(5)

Any tree that existed at the time of a zoning approval or subdivision approval and was a specific subject of such approval or otherwise covered by subsection (6) of this section (e.g., landscape or site plans).

(6)

Any tree that was required by the Town to be planted or retained by the terms and conditions of a development application, building permit or subdivision approval in all zoning districts, tree removal permit or code enforcement action.

(7)

All trees, which have a four-inch or greater diameter (twelve and one half-inch circumference) of any trunk and are located on property other than developed residential property.

(8)

All publicly owned trees growing on Town lands, public places or in a public right-of-way easement, which have a four-inch or greater diameter (twelve and one-half-inch circumference) of any trunk.

(9)

A protected tree shall also include a stand of trees, the nature of which makes each dependent upon the other for the survival of the stand.

(10)

The following trees shall also be considered protected trees and shall be subject to the pruning permit requirements set forth in section 29.10.0982 and the public noticing procedures set forth in section 20.10.0994:

a. Heritage trees;
b. Large protected trees.

Sec. 29.10.1005. - Protection of trees during construction.

(a) Protective tree fencing shall specify the following:

(1)

Size and materials. Six (6) foot high chain link fencing, mounted on two-inch diameter galvanized iron posts, shall be driven into the ground to a depth of at least two (2) feet at no more than ten-foot spacing. For paving area that will not be demolished and when stipulated in a tree preservation plan, posts may be supported by a concrete base.

(2)

Area type to be fenced. Type I: Enclosure with chain link fencing of either the entire dripline area or at the tree protection zone (TPZ), when specified by a certified or consulting arborist. Type II: Enclosure for street trees located in a planter strip: chain link fence around the entire planter strip to the outer branches. Type III: Protection for a tree located in a small planter cutout only (such as downtown): orange plastic fencing shall be wrapped around the trunk from the ground to the first branch with two-inch wooden boards bound securely on the outside. Caution shall be used to avoid damaging any bark or branches.

(3)

Duration of Type I, II, III fencing. Fencing shall be erected before demolition, grading or construction permits are issued and remain in place until the work is completed. Contractor shall first obtain the approval of the project arborist on record prior to removing a tree protection fence.

(4)

Warning sign. Each tree fence shall have prominently displayed an eight and one-half-inch by eleven-inch sign stating: "Warning—Tree Protection Zone—This fence shall not be removed and is subject to penalty according to Town Code 29.10.1025."

(b)

All persons, shall comply with the following precautions:

(1)

Prior to the commencement of construction, install the fence at the dripline, or tree protection zone (TPZ) when specified in an approved arborist report, around any tree and/or vegetation to be retained which could be affected by the construction and prohibit any storage of construction materials or other materials, equipment cleaning, or parking of vehicles within the TPZ. The dripline shall not be altered in any way so as to increase the encroachment of the construction.

(2)

Prohibit all construction activities within the TPZ, including but not limited to: excavation, grading, drainage and leveling within the dripline of the tree unless approved by the Director.

Sec. 29.10.1005. - Protection of trees during construction. (Continued)

(3)
Prohibit disposal or depositing of oil, gasoline, chemicals or other harmful materials within the dripline of or in drainage channels, swales or areas that may lead to the dripline of a protected tree.

(4)
Prohibit the attachment of wires, signs or ropes to any protected tree.

(5)
Design utility services and irrigation lines to be located outside of the dripline when feasible.

(6)
Retain the services of a certified or consulting arborist who shall serve as the project arborist for periodic monitoring of the project site and the health of those trees to be preserved. The project arborist shall be present whenever activities occur which may pose a potential threat to the health of the trees to be preserved and shall document all site visits.

(7)
The Director and project arborist shall be notified of any damage that occurs to a protected tree during construction so that proper treatment may be administered.

Sec. 29.10.1010. - Pruning and maintenance.

Tree pruning must not be done in a manner that is detrimental to the tree. Any action undertaken which intentionally or recklessly causes or tends to cause injury, death, or disfigurement to a tree is considered to be detrimental. Examples of actions which are detrimental to trees may include excessive cutting, poisoning, burning, over-watering, relocating, or transplanting a tree.

All tree pruning shall be in accordance with the current version of the International Society of Arboriculture Best Management Practices-Tree Pruning and ANSI A300-Part 1 Tree, Shrub and Other Woody Plant Management-Standard Practices, (Pruning) and any special conditions as determined by the Director. For developments, which require a tree preservation report, a certified or consulting arborist shall be in reasonable charge of all activities involving protected trees, including pruning, cabling and any other work if specified.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

Sec. 29.10.1010. - Pruning and maintenance. (continued)

(1)
Any public utility installing or maintaining any overhead wires or underground pipes or conduits in the vicinity of a protected tree shall obtain written permission from the Director before performing any work, including pruning, which may cause injury to a protected tree (e.g. cable TV/fiber optic trenching, gas, water, sewer trench, etc.).
(2)
Pruning for clearance of utility lines and energized conductors shall be performed in compliance with the current version of the American National Standards Institute (ANSI) A300 (Part 1)-Pruning, Section 5.9 Utility Pruning. Using spikes or gaffs when pruning, except where no other alternative is available, is prohibited.
(3)
No person shall prune, trim, cut off, or perform any work, on a single occasion or cumulatively, over a three-year period, affecting twenty-five percent or more of the crown of any protected tree without first obtaining a permit pursuant to this division except for pollarding of fruitless mulberry trees (Morus alba) or other species approved by the Town Arborist. Applications for a pruning permit shall include photographs indicating where pruning is proposed.
(4)
No person shall remove any Heritage tree or large protected tree branch or root through pruning or other method greater than four (4) inches in diameter (twelve and one-half (12.5) inches in circumference) without first obtaining a permit pursuant to this division.

SUMMARY OF FINDINGS

From November 22 to December 14, 2024, Michael Gladden, ISA Certified Arborist #WE-2205A of McClintock Landscape Horticultural Services, conducted a tree inventory of 673 trees measuring 4 inches or greater in diameter at breast height (DBH) on the site of Surrey Farms, Project #4185.10, located in Los Gatos, CA 95032. The majority of these trees are volunteer species found in the undeveloped areas of the site, with a few appearing to have been planted some time ago. The proposed site improvement areas are surrounded by residential development. Trees excluded from this report include #5, #198, #201, and #469, which were deemed too small (less than 4 inches in DBH) or unnecessary for inclusion.

The tree inventory includes details for each tree measuring 4” inches or greater in DBH, such as identification number, botanical name, diameter at 54 inches above grade, and whether the tree is exempt, protected, or classified as large protected size. Additionally, it assesses preservation suitability as High, Moderate, or Low for retention rating, along with evaluations of health, structure, and species tolerance to construction impacts, accompanied by general notes.

The inventory encompasses 26 species, totaling 673 individual trees over 4” inches in diameter at 54 inches above grade. Among these, 69 trees have a Low retention rating (10%), 227 trees are rated Moderate (34%), and the remaining 365 trees are classified with a High retention rating (54%). There were 22 Protected species, 4 Exempt species, 51 trees listed as Off Site, 37 trees are Exempt, 4 spaces are listed as “not used”, 5 Snag trees that are dead and can not be identified, 7 stumps are recorded, and 32 Dead trees are recorded.

561 "Protected" trees, 69 "Large Protected" trees, and 43 "Exempt" trees.
There are 244 trees to be removed and 371 trees to be retained.
211 "Protected" and 12 "Large Protected" trees recommended for removal.

Total trees required to meet mitigation requirements on-site 439 - 24” box and 161 – 36”-inch box.
Total Proposed trees on-site (Not including street trees) 40 - 24” box and 45 – 36”-inch box.
Remaining number of trees not being mitigated for 399 - 24” box and 116 – 36”-inch box.

To the best of my knowledge, no Heritage trees were identified. A Heritage tree is defined as a tree or group of trees designated by the Town Council, based on the recommendation of the Historic Preservation Commission, that possesses exceptional aesthetic, biological, cultural, or historic value and is expected to continue contributing to the community.

Some trees tagged in the inventory were cut down and left on site, which is a common practice among PG&E crews, with the stumps located under power lines.

Discing has previously been used to create a fire break, and the path of this fire break runs through the site. While this technique may be effective for wildfire management, it has caused irreparable damage to the trees. This impact could pose issues in the future when targets or assets are placed within the vicinity of these trees.

TREE COUNT

BOTANICAL NAME	COMMON NAME	COUNT	% of Tree Inv		TREE SUMMARY
Aesculus californica	California Buckeye	2	0.3%	Protected	26 Species of trees were identified
Calocedrus decurrens	Incense Cedar	53	7.9%	Protected	22 Protected Species
Cupressus macrocarpa	Monterey Cypress	1	0.1%	Protected	4 Exempt Species
Eucalyptus globulus	Blue Gum	1	0.1%	Protected	51 trees are listed as “Off Site”.
Heteromeles arbutifolia	Toyon	1	0.1%	Protected	37 trees are “Exempt”.
Juglans hindsii	California Black Walnut	1	0.1%	Protected	4 spaces are labeled "not used”
Juglans regia	English Walnut	1	0.1%	Exempt	5 "Snag" Dead tree that can not be identifiable
Juniperus chinensis	Chinese Juniper	1	0.1%	Protected	7 “stumps” are recorded.
Ligustrum japonicum	Japanese Privet	1	0.1%	Protected	32 ”Dead” trees are recorded.
Magnolia grandiflora	Southern Magnolia	1	0.1%	Protected	561 "Protected" Trees
Not Used	4 spaces	0	0.0%	N/A	69 "Large Protected" Trees
Olea europaea	Olive	24	3.6%	Exempt	43 "Exempt" Tree
Phoenix dactylifera	Date Palm	1	0.1%	Protected	244 trees to be removed

LEGEND OF ABBREVIATIONS

BBS	- Bark Beetle Strike	**EP**	- Environmental Impact	**PTA**	- Poor Tree Architecture
CBL	- Cable Installed	**FB**	- Fire blight	**PTS**	- Poor Tree Structure
CDL	- Co-Dominant Leaders	**FC**	- Fungal Conk	**RDC**	- Reduce
CGC	- Crowded Growing Conditions	**FRP**	- Future Root Problems	**RI**	- Root Impact
CHL	- Chlorotic	**GR**	- Girdling Root	**RMV**	- Remove Tree
CNK	- Canker	**IBK**	- Imbedded Bark	**RTB**	- Red Turpentine Beetle
CRK	- Crack	**IN**	- Install New Tree	**SC**	- Soil Compaction
CRP	- Current Root Problems	**ITP**	- Inventory Tag Present (from others)	**SD**	- Severe Decline
CRS	- Crown Restoration	**LIA**	- Liability Exposure	**SDR**	- Severed Roots
CST	- City Street Tree	**LN**	- Leaning Tree	**SJS**	- San Jose Scale
DBR	- Damaged Buttress Roots	**LT**	- Lion's Tailed	**SOD**	- Sites of Decay
DC	- Decay	**MCH**	- Mulch	**SR**	- Surface Roots
DD	- Dead	**MD**	- Mower Damage to stem an/or roots	**SRD**	- Surface Root Damage
DL	- Dead Limbs	**ML**	- Multiple Leaders	**STD**	- Stem Damage
DS	- Drought Stress	**NC**	- New Concrete	**STR**	- Structure
DW	- Dead Wood	**NIT**	- Newly Installed Tree	**VD**	- Vehicle Damage
EC	- Expansion Cracks	**PH**	- Previously Headed	**VW**	- Verticillium Wilt
EI	- Excessive Irrigation	**PLF**	- Previous Limb Failure	**WBU**	- Weak Branch Union
ELW	- Excessive Limb Weight	**PPT**	- Poor Pruning Technique	**WC**	- Weak Crotch
EF	- Entomosporium Fungus causing the spots				

DBH "DBH" is defined as the measurement of the diameter of a tree trunk measured at breast height (4.5 feet or 54"-inches from ground).

CRZ Critical Root Zone "CRZ" is 6 times radially the diameter of the DBH. Damage to roots or cutting roots within this area is more likely to compromise stability. This area shall not be entered in to by anyone without Project Arborist approval.

TPZ Tree Protection Zone "TPZ" is 15 times radially the diameter of the DBH.This area shall be the primary tree protection zone for each tree that has roots or canopy in the work zone.

Unassigned This is an indication that there was no observation made on the trees health or structure

Health		**Structure**		**Construction Impact Rating**	
5	Healthy, vigorous tree, reasonably free of disease and pests.	**5**	Best structure and form typical of the species.	**P**	Poor ability to withstand construction impact
				M	Moderate ability to withstand construction
				G	impact Good ability to withstand construction
4	Tree with slight decline in vigor, small amount of twig dieback.	**4**	Minor structural defects that could be corrected.	**P-G**	Poor-Good ability to withstand construction impact
				M-G	Moderate-Good ability to withstand construction impact
3	Moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color.	**3**	Moderate structural defects that may or that might be mitigated with care.	**P-M**	Poor- Moderate ability to withstand construction impact
2	In decline, epicormic growth, extensive dieback of medium to large branches.	**2**	Significant structural defects that cannot be abated.		
1	Dead or severe decline, dieback scaffold branches and or trunk, mostly epicormic growth.	**1**	Structural defects that cannot be abated or dead.		

Arborist Report Tree Preservation Plan

Shawn Taylor, HMH Landscape Architect

Surrey Farms, Project #4185.10

PRESERVATION ASSESMENT

Preservation Assessments evaluate a tree's viability for retention based on combined ratings for Health (biological condition), Structure (stability and integrity), and Species Tolerance to Construction Impact (ability to withstand construction-related stress). These scores are averaged to guide decisions, aligning with arborist recommendations and local tree protection ordinances.

Tree Overall Rating	Design considerations	Health description	Structure description	Count	% of Inventory	Retention Ratring
4 to 5	Worthy of preservation, condition warrants long-term preservation.	Healthy, vigorous tree, reasonably free of disease and pests. Tree with slight decline in vigor, small amount of twig dieback.	Best structure and form typical of the species or minor structural defects that could be corrected.	**365**	**54%**	**HIGH**
3 to 3.9	Possibly worthy of preserve with addressing some current conditions where possible. Not worthy of extensive project redesign to retain. Addressing curent conditions through maintenance is recommended. Remove due to conflict with construction, most trees not a viable candidate for transplant.	Moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color.	Moderate structural defects that may or that might be mitigated with care.	**227**	**34%**	**MODERATE**
1 to 2.9	Remove due to existing condition, or remove due to conflict with construction; not a viable candidate for transplant.	In decline, epicormic growth, extensive dieback of medium to large branches. Dead or severe decline, dieback scaffold branches and or trunk, mostly epicormic growth.	Significant structural defects that cannot be abated. Structural defects that cannot be abated or dead.	**69**	**10%**	**LOW**
			Trees that are not rated due to condition.	**16**	**2%**	**N/A**
			Total	**677**	**100%**

RECOMMENDED ACTIONS

The contractor should have a copy of this report on-site at all times of operation for the referral.
Specific tree recommendations are listed in the Summary Findings and the Inventory pages.

ADDITIONAL TREE PROTECTION SPECIFICATIONS

1. A 6" layer of coarse mulch or woodchips is to be placed beneath the dripline (TPZ Tree Protection Zone) of the protected trees. Mulch is to be kept 12" from the trunk.

2. A protective barrier of 6' chain link fencing shall be installed around the dripline (TPZ) of the protected tree(s). The fencing can be moved within the dripline (TPZ) if authorized by the Project Arborist or City Arborist but not closer than 2' from the trunk of any tree. Fence posts shall be 1.5" in diameter and are to be driven 2' into the ground. The distance between posts shall not be more than 10'. This enclosed area is the Tree Protection Zone (TPZ). Tree Protection Fencing will be placed at the edge of the TPZ and no fencing shall be closer than the Critical Root Zone (CRZ). All Tree Protection Zones (TPZ) and Critical Root Zones (CRZ) distances are listed for each tree on the inventory.

3. Where trees have been established in a landscape and established near hardscapes, such as parking lot surfaces, walkways, and sidewalks. Tree protection fencing may be placed on the hardscape or just inside the hardscape as long as no wood parts are damaged. No fencing will be allowed within the CRZ listed distance. In areas where minimal protection is required orange plastic fencing mounted on "T" Bar placed at the perimeter of the TPZ will be required. At any time should the focus of work change the tree protection requirements will be reassessed and changed to be the most effective.

4. Tree protection fencing will not be allowed to damage the tree canopy or any of its parts.

5. Movable barriers of chain link fencing secured to cement blocks can be substituted for "fixed" fencing if the Project Arborist and City Arborist agree that the fencing will have to be moved to accommodate certain phases of construction. The builder may not move the fence without authorization from the Project Arborist or City Arborist.

6. Where the ***Town or Project Arborist*** has determined that tree protection fencing will interfere with the safety of work crews, Tree Wrap may be used as an alternative form of tree protection but. Wooden slats at least one inch thick is to be bound securely, edge-to-edge, around the trunk. A single layer or more of orange plastic construction fencing is to be wrapped and secured around the outside of the wooden slats. Major scaffold limbs may require protection as determined by the City Arborist or Project Arborist. Straw waddle may also be used as a trunk wrap by coiling the waddle around the trunk up to a minimum height of six feet from grade. A single layer or more of orange plastic construction fencing is to be wrapped and secured around the straw waddle.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

ADDITIONAL TREE PROTECTION SPECIFICATIONS – Continued.

7. Avoid the following conditions. DO NOT:

a. Allow run off of spillage of damaging materials into the area below any tree canopy.
b. Store materials, stockpile soil, or park or drive vehicles within the TPZ.
c. Cut, break, skin, or bruise roots, branches, or trunks without first obtaining authorization from the Project/Town Arborist.
d. Allow fires or high heat under and adjacent to trees.
e. Discharge exhaust into the foliage.
f. Secure cable, chain, or rope to trees or shrubs.
g. Trench, dig, or otherwise excavate within the dripline or TPZ of the tree(s) without first obtaining authorization from the Project or Town Arborist.
h. Apply soil sterilants under pavement near existing trees.

8. Only excavation by hand or compressed air shall be allowed within the dripline (TPZ) of trees. Machine trenching shall not be allowed.

9. Avoid injury to tree roots. When a ditching machine, which is being used outside of the dripline (TPZ) of trees, encounters roots smaller than 2", the wall of the trench adjacent to the trees shall be hand-trimmed, making clear, clean cuts through the roots. All damaged, torn and cut roots shall be given a clean cut to remove ragged edges, which promote decay. Trenches shall be filled within 24 hours, but where this is not possible, the side of the trench adjacent to the trees shall be kept shaded with four layers of dampened, untreated burlap, wetted as frequently as necessary to keep the burlap wet. Roots 2" or larger, when encountered, shall be reported immediately to the Project Arborist, who will decide whether the Contractor may cut the root as mentioned above or shall excavate by hand or with compressed air under the root. The root is to be protected with a dampened burlap.

10. Route pipes outside of the area that is 10 times the diameter of a protected tree to avoid conflict with roots.

11. Where it is not possible to reroute pipes or trenches, the contractor shall bore beneath the dripline (TPZ) of the tree. The boring shall take place not less than 3' below the surface of the soil to avoid encountering "feeder" roots.

12. Trees that have been identified in the arborist's report as being in poor health and/or posing a health or safety risk, may be removed or pruned by more than one-third, subject to the approval of the required permit by the Sec. 29.10.0950 Town of Los Gatos. Pruning of existing limbs and roots shall only occur under the direction of the Town/Project Certified Arborist.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

ADDITIONAL TREE PROTECTION SPECIFICATIONS – Continued.

13. Any damage due to construction activities shall be reported to the Project Arborist or Town Arborist within six hours so that remedial action can be taken.

14. Violation of any of the above provisions may result in sanctions or other disciplinary action.

MONTHLY INSPECTIONS

It is required that the site arborists provide periodic inspections during construction. Four-week intervals would be sufficient to access and monitor the effectiveness of the Tree Protection Plan and to provide recommendations for any additional care or treatment. An ISA Certified Arborist or ASCA Registered Consulting Arborist shall be retained as the Project Arborist to monitor the tree protection specifications. The Project Arborist shall be responsible for the preservation of the designated trees. Should the builder fail to follow the tree protection specifications, it shall be the responsibility of the Project Arborist to report the matter to the Town Arborist as an issue of non-compliance.

Trenching, Excavation and Equipment Use

Trenching, excavation or boring activity within the TPZ is restricted to the following activities, conditions, and requirements if approved by the Town or Project Arborist. Mitigating measures shall include prior notification to and direct supervision by the project arborist. Aftercare of trees that have had major roots (roots over 2”-inches in diameter) will be focused on rehydrating the tree and increasing nutrient uptake, wound sealing and the retention of photosynthetic tissue for the subsequent 5 seasons. During this period, each tree will be assessed separately.

Notification. The contractor shall notify the project arborist a minimum of 24 hours in advance of the activity in the TPZ.

Root Severance. Roots that are encountered shall be cut to sound wood and repaired. Roots LESS than 1”-inch in diameter may be severed without arborist supervision and staged at the tree for inspection by the arborist. Roots 1- inches and greater must remain injury-free.

Excavation. Any approved excavation, demolition or extraction of material shall be performed with equipment sitting outside the TPZ. Methods permitted are by hand digging; hydraulic or pneumatic air excavation technology. Avoid excavation within the TPZ during hot, dry weather. Low pressure (less than 100 PSI), hydro excavation is highly recommended in the tree protection zone (TPZ). Root preservation is the main focus of the TPZ.

If excavation or trenching for drainage, utilities, irrigation lines, etc., is required it is the duty of the contractor to tunnel under any roots 2-inches in diameter and greater.

Before excavation for foundation/footings/walls, grading or trenching within the TPZ, roots shall first be severed cleanly 1- foot outside the TPZ and to the depth of the future excavation. The trench must then be hand dug and roots pruned with a sharp saw, Sawzall, narrow trencher with sharp blades or other approved root pruning equipment.

Heavy Equipment. Use of backhoes, steel tread tractors or any heavy vehicles within the TPZ is prohibited unless approved by the Town Arborist. If allowed, a protective root buffer is required. The protective buffer shall consist of a base course of tree chips spread over the root area to a minimum of 6-inch depth, layered by 3/4-inch quarry gravel to stabilize 3/4-inch plywood on top. This buffer within the TPZ shall be maintained throughout the entire construction process.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

ADDITIONAL TREE PROTECTION SPECIFICATIONS - Continued

Structural design. If an injurious activity or interference with roots greater than 2-inches will occur within the TPZ, plans shall specify a design of special foundation, footing, walls, concrete slab or pavement designs subject to Town Arborist approval. Discontinuous foundations such as concrete pier and structural grade beam must maintain natural grade (not to exceed a 4-inch cut), to minimize root loss and allow the tree to use the existing soil.

Alternative Base Course Materials

I'm recommending Cornell University CU-Structural Soil, Lyngso Essential Soil custom mixed with 1.5"-inch aggregate or equal for base rock substitute in the tree protection zone (TPZ) of all trees on areas requiring compaction. I believe that this will improve the growing conditions and help the trees to recover from this impact of construction. The desired compaction capabilities can be reached by adjusting the organic portions of the mix.

Irrigation

I suggest that irrigation be kept at the seasonal and species-specific rates that are established in the region. In circumstances where a tree has been or will be impacted by construction, the hydration levels in the tree should be proactively adjusted by months before the trees need. Soil analysis and laboratory recommendations should be implemented and trees continually monitored.

In establishing landscape irrigation amounts the Model Water Efficient Landscape Ordinance (MWELO) recommendations will be the guidelines for water use. In natural native settings, automated inline drip emitter irrigation will be established and maintained until the effects on construction development are no detectable. Inline emitter drip line will be placed to the outer 2/3rds of the Tree Protection Zone (TPZ) away from the stem or trunk.

Michael Gladden, ISA Certified Arborist #WE-2205A, McClintock Landscape Horticultural Services, 1821 South Bascom Ave., #243, Campbell, CA 95008 mcclintocklandscape@gmail.com

GENERAL RECOMMENDATIONS

PROJECT ARBORIST

An ASCA/ISA Certified Arborist should be assigned to frequently inspect construction activities (a minimum of once per month is suggested) and continually provide findings and recommendations to sustain a reasonable assurance of tree survivability throughout the project.
Addition information and recommendations are available from McClintock Landscape Horticultural Services.

CONCLUDING REMARKS

All services recommended in this report should be performed under the supervision of an ASCA/ISA Certified Arborist per the standards established by the International Society of Arboriculture.

ASSUMPTIONS AND LIMITING CONDITIONS

1. All descriptions provided to the appraiser/consultant are assumed correct, and ownership/title are considered good and marketable. No responsibility is assumed for legal matters or title quality.
2. It is assumed the property complies with all applicable codes, ordinances, and regulations.
3. Information has been sourced from reliable channels and verified when possible. The appraiser/consultant cannot guarantee the accuracy of third-party data.
4. The appraiser/consultant is not required to testify or attend court unless prior arrangements and additional fees are agreed upon.
5. Loss or removal of any part of this report invalidates the entire appraisal.
6. Possession of this report does not imply publication or use rights without written consent from the appraiser/consultant.
7. This report and its contents are for the client's use only, and cannot be publicly shared or used for marketing without written approval.
8. The appraiser's/consultant's fee is independent of the final value or recommendations provided.
9. Visual aids (sketches, photos, etc.) are not to scale and should not be construed as engineering data.
10. This report follows accepted methods and standards from the International Society of Arboriculture.
11. The appraiser/consultant is not responsible for structural defects in trees not inspected by climbing or root collar excavation.

While trees vary in their responses to damage, previous experience indicates that any living organism works diligently to survive.
I believe the above information is accurate and best describes the likely outcome. As an ISA Certified Arborist practicing in the State of California, I state that the enclosed information is true and correct to the best of my ability.

Sincerely,

Michael Gladden

IMAGE 2.15-1
Tree Protection Fence at the Dripline

IMAGE 2.15-2
Tree Protection Fence at the Dripline

- **Type I Tree Protection**

The fences shall enclose the entire area under the **canopy dripline or TPZ** of the tree(s) to be saved throughout the life of the project, or until final improvement work within the area is required, typically near the end of the project (*see Images 2.15-1 and 2.15-2*). Parking Areas: If the fencing must be located on paving or sidewalk that will not be demolished, the posts may be supported by an appropriate grade level concrete base.

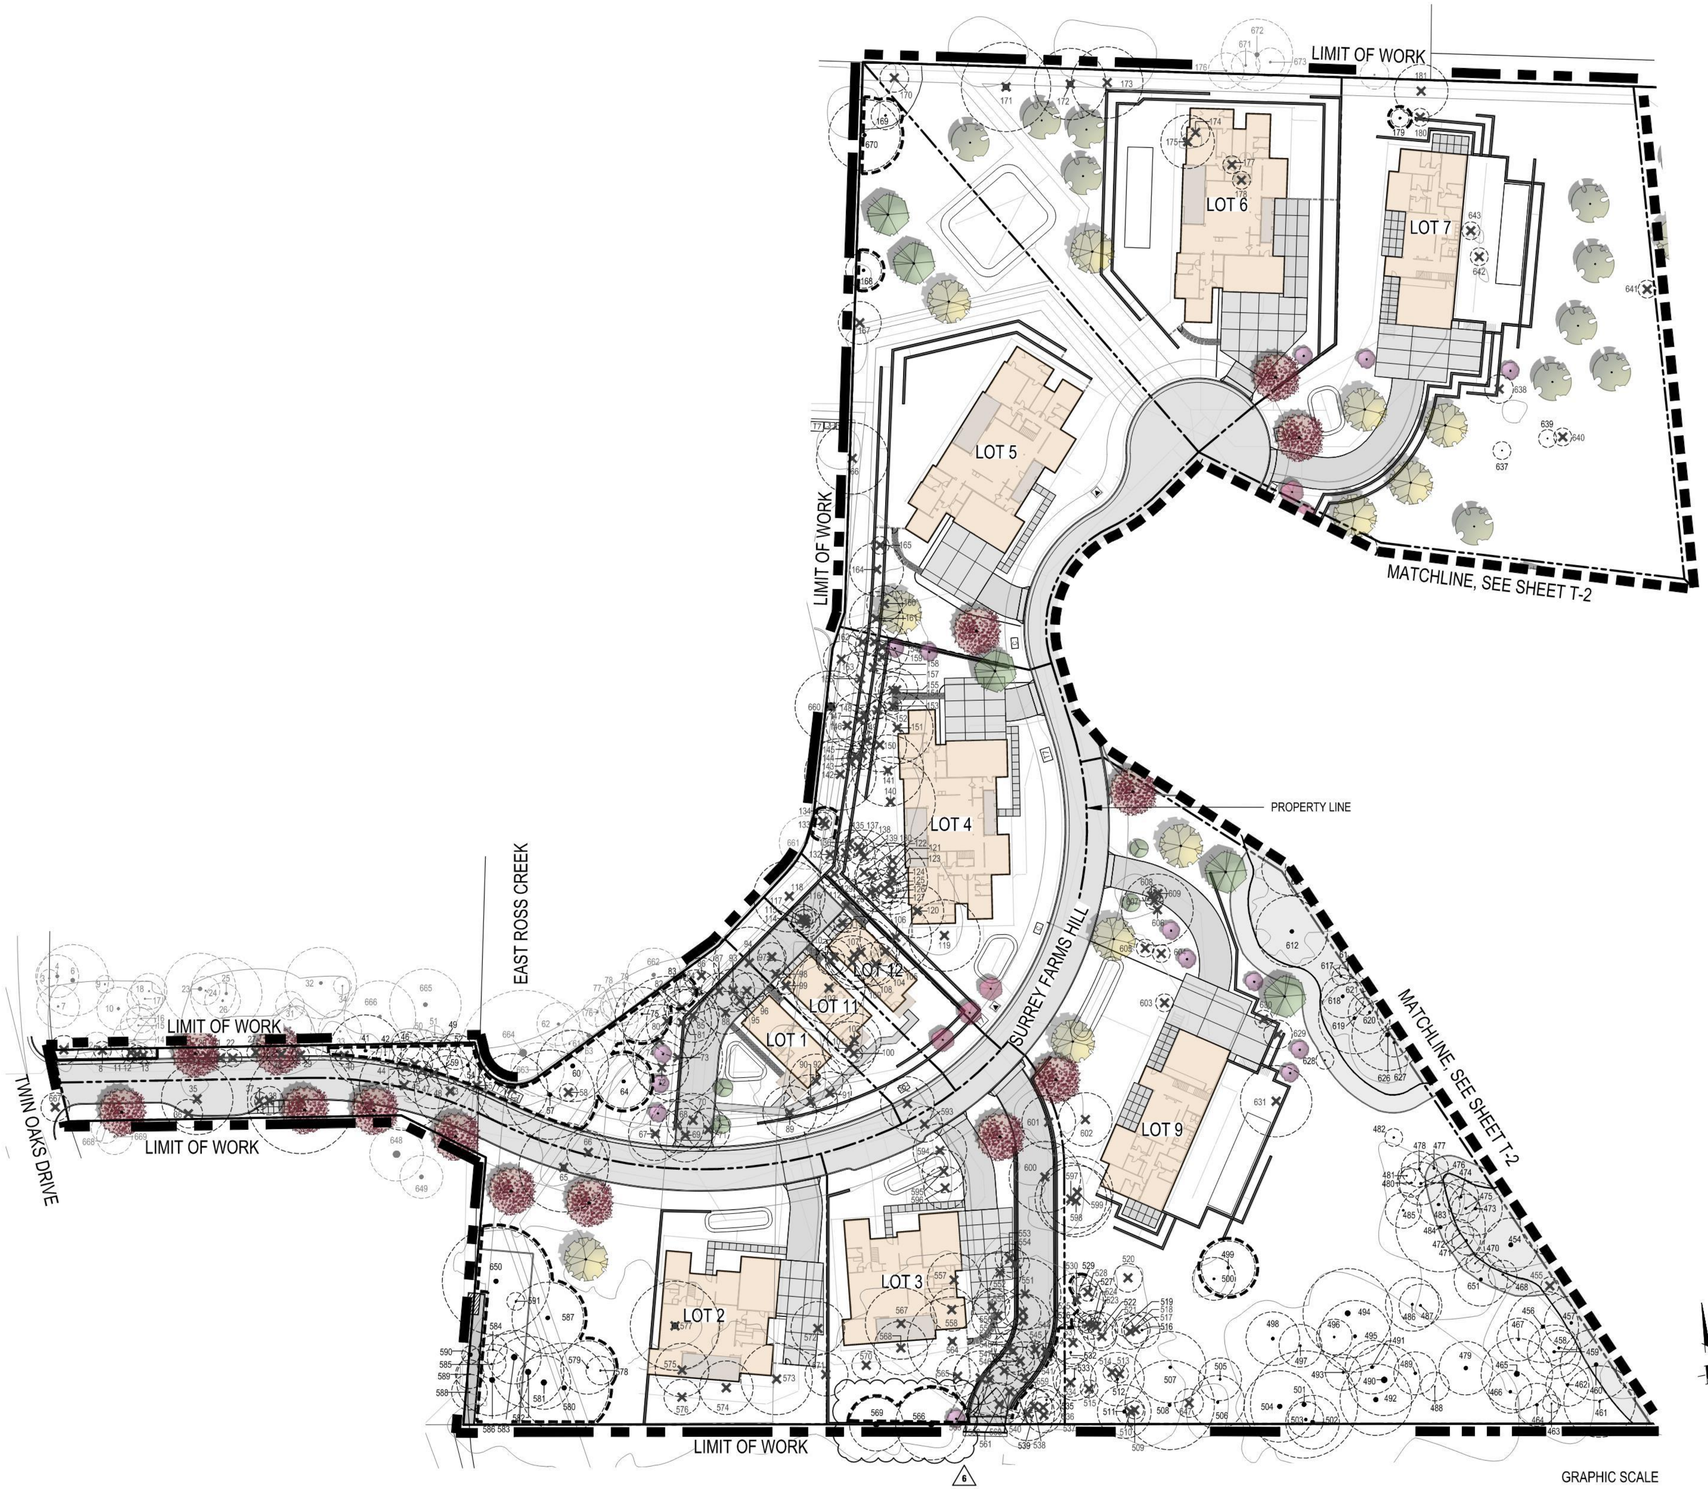
Appraisal method - Guide for Plant Appraisal, 10th Edition - Council of Tree and Landscape Appraisers
Reproduction Method - Trunk Formula Technique
LCANT - Largest Commonly Available Nursery Tree Selectree
Source for replacement tree cost for like species listed above-Online, Devil Mountain Wholesale Nursery, GDNC Nursery, Central Wholesale Nursery



Methodology:

To convert Health and Structure Ratings: Dead = 0%, 1 = 10%, 2 = 30%, 3 = 50%, 4 = 70%, 5 = 90%.

Form ratings are interpreted from field notes and other ratings.

Functional limitations are considered generally good for the naturalized site, ie. available growing space, etc. Some considerations are species characteristics such as disease susceptibility, invasiveness, proximity to property lines, etc.

External limitations are considered generally good for the naturalized site. Some considerations are proximity to powerlines, etc.

TREE PROTECTION NOTES

SITE PREPARATION:
ALL EXISTING TREES SHALL BE FENCED WITHIN OR AT THE DRIP LINE (FOLIAR SPREAD) OF THE TREE. DEPENDING ON THE LOCATION OF THE TREE THE FENCING MAY NOT BE ABLE TO BE AT THE DRIPLINE. EXAMPLES OF THIS WOULD BE PUBLIC RIGHT OF WAY, NEAR PROPERTY LINES OR AROUND EXISTING STRUCTURES TO REMAIN. WHERE COMPLETE DRIP LINE FENCING IS NOT POSSIBLE, THE ADDITION OF STRAW WADDLES AND ORANGE SNOW FENCING WRAPPING THE TRUNK SHALL BE INSTALLED PER THE TREE PROTECTION DETAIL. THE FENCE SHOULD BE A MINIMUM OF SIX FEET HIGH, MADE OF GALVANIZED 11-GAUGE WIRE MESH WITH GALVANIZED POSTS OR ANY MATERIAL SUPERIOR IN QUALITY. A TREE PROTECTION ZONE (TPZ) SIGN SHALL BE AFFIXED TO FENCING AT APPROPRIATE INTERVALS AS DETERMINED BY THE ARBORIST ON SITE. SEE TREE PROTECTION DETAIL FOR ADDITIONAL INFORMATION, INCLUDING TREE PROTECTION ZONE SIGN. IF THE FENCE IS WITHIN THE DRIP LINE OF THE TREES, THE FOLIAR FRINGE SHALL BE RAISED TO OFFSET THE CHANCE OF LIMB DAMAGE FROM ACTIVE CONSTRUCTION.

ACTIVE CONSTRUCTION:
ALL CONTRACTORS, SUBCONTRACTORS AND OTHER PERSONNEL SHALL BE WARNED THAT ENCROACHMENT WITHIN THE FENCED AREA AND DRIPLINE IS PROHIBITED WITHOUT THE CONSENT OF THE CERTIFIED ARBORIST ON THE JOB. THIS INCLUDES, BUT IS NOT LIMITED TO, STORAGE OF LUMBER AND OTHER MATERIALS, DISPOSAL OF PAINTS, SOLVENTS OR OTHER NOXIOUS MATERIALS, PARKED CARS, GRADING EQUIPMENT OR OTHER HEAVY EQUIPMENT. IF CONSTRUCTION ACTIVITY NEEDS TO HAPPEN IN THE TPZ THE FENCE CAN BE MOVED TEMPORARILY FOR DELIVERY OF CONSTRUCTION MATERIALS. THE CONTRACTOR SHOULD MAKE ACCOMMODATIONS TO OFF LOAD ITEMS SUCH AS TRUSSES, TIMBER, PLASTERBOARD, WALLBOARD, CONCRETE, GYPSUM BOARD, FLOORING, ROOFING OR ANY OTHER HEAVY CONSTRUCTION MATERIAL OUTSIDE THE FOLIAR SPREAD OF THE TREE SO THERE IS NO HEAVY EQUIPMENT NEEDED THAT COULD CAUSE DAMAGE TO THE CANOPY OF THE TREE OR COMPACT THE ROOT ZONE. THE TREE PROTECTION FENCING SHOULD BE REESTABLISHED PER THE PLANS AND DETAILS IMMEDIATELY AFTER ANY ACTIVITY THROUGH THE TPZ. PENALTIES, BASED ON THE COST OF REMEDIAL REPAIRS AND THE EVALUATION GUIDE PUBLISHED BY THE INTERNATIONAL SOCIETY OF ARBORICULTURE, SHALL BE ASSESSED FOR DAMAGES TO THE TREES.

GRADING/EXCAVATING:
ALL GRADING PLANS THAT SPECIFY GRADING WITHIN THE DRIP LINE OF ANY TREE, OR WITHIN THE DISTANCE FROM THE TRUNK AS OUTLINED IN THE SITE PREPARATION SECTION ABOVE WHEN SAID DISTANCE IS OUTSIDE THE DRIP LINE, SHALL FIRST BE REVIEWED BY A CERTIFIED ARBORIST. PROVISIONS FOR AERATION, DRAINAGE, PRUNING, TUNNELING BENEATH ROOTS, ROOT PRUNING OR OTHER NECESSARY ACTIONS TO PROTECT THE TREES SHALL BE OUTLINED BY AN ARBORIST. IF TRENCHING IS NECESSARY WITHIN THE AREA AS DESCRIBED ABOVE, SAID TRENCHING SHALL BE UNDERTAKEN BY HAND LABOR AND DUG DIRECTLY BENEATH THE TRUNK OF THE TREE. ALL ROOTS 2 INCHES OR LARGER SHALL BE TUNNELED UNDER AND OTHER ROOTS SHALL BE CUT SMOOTHLY TO THE TRUNK SIDE OF THE TRENCH. THE TRUNK SIDE SHOULD BE DRAPED IMMEDIATELY WITH TWO LAYERS OF UNTREATED BURLAP TO A DEPTH OF 3 FEET FROM THE SURFACE. THE BURLAP SHALL BE SOAKED NIGHTLY AND LEFT IN PLACE UNTIL THE TRENCH IS BACK FILLED TO THE ORIGINAL LEVEL. AN ARBORIST SHALL EXAMINE THE TRENCH PRIOR TO BACK FILLING TO ASCERTAIN THE NUMBER AND SIZE OF ROOTS CUT, SO AS TO SUGGEST THE NECESSARY REMEDIAL REPAIRS.

REMEDIAL REPAIRS:
AN ARBORIST SHALL HAVE THE RESPONSIBILITY OF OBSERVING ALL ONGOING ACTIVITIES THAT MAY AFFECT THE TREES AND PRESCRIBING NECESSARY REMEDIAL WORK TO ENSURE THE HEALTH AND STABILITY OF THE TREES. THIS INCLUDES, BUT IS NOT LIMITED TO, ALL ARBORIST ACTIVITIES BROUGHT OUT IN THE PREVIOUS SECTIONS. IN ADDITION, PRUNING, AS OUTLINED IN INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES: PRUNING AND ANSI A300 PART 1 STANDARD PRACTICES: PRUNING, SHALL BE PRESCRIBED AS NECESSARY. FERTILIZING, AERATION, IRRIGATION, PEST CONTROL AND OTHER ACTIVITIES SHALL BE PRESCRIBED ACCORDING TO THE TREE NEEDS, LOCAL SITE REQUIREMENTS, AND STATE AGRICULTURAL PEST CONTROL LAWS. ALL SPECIFICATIONS SHALL BE IN WRITING. FOR PEST CONTROL OPERATIONS, CONSULT THE LOCAL COUNTY AGRICULTURAL COMMISSIONER'S OFFICE FOR INDIVIDUALS LICENSED AS PEST CONTROL ADVISORS OR PEST CONTROL OPERATORS.

FINAL INSPECTION:
UPON COMPLETION OF THE PROJECT, THE ARBORIST SHALL REVIEW ALL WORK UNDERTAKEN THAT MAY IMPACT THE EXISTING TREES. SPECIAL ATTENTION SHALL BE GIVEN TO CUTS AND FILLS, COMPACTING, DRAINAGE, PRUNING AND FUTURE REMEDIAL WORK. AN ARBORIST SHOULD SUBMIT A FINAL REPORT IN WRITING OUTLINING THE ONGOING REMEDIAL CARE FOLLOWING THE FINAL INSPECTION.

TREE REMOVAL NOTES

1. CONSTRUCTION PROTECTION FOR TREES MUST BE PROVIDED BEFORE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY. SEE DETAILS AND NOTES ON THIS SHEET.
2. ALL TREES SHOWN FOR REMOVAL ARE PERMITTED UNDER CITY PD PERMIT. A NESTING BIRD SURVEY MAY BE REQUIRED IF TREE REMOVAL IS TO TAKE PLACE BETWEEN FEBRUARY 1 AND AUGUST 31. A QUALIFIED BIOLOGIST MUST COMPLETE THIS REPORT PRIOR TO TREE REMOVAL DONE DURING THE NESTING SEASON. REFER TO CONDITIONS OF THE PERMIT FOR ADDITIONAL INFORMATION.
3. CONTRACTOR SHALL TAKE CARE WHEN REMOVING TREES ADJACENT TO TREES TO REMAIN. PROVISIONS FOR THE PROTECTION OF EXISTING TREES MUST BE TAKEN INCLUDING WRAPPING THE TRUNK OF THE ADJACENT TREE PER THE TREE PROTECTION DETAIL. WHEN REMOVING ROOTS, CARE MUST BE TAKEN NOT TO DAMAGE ROOTS OF TREE TO REMAIN. ROOT PRUNING MAY BE NECESSARY AND MUST BE DONE UNDER THE SUPERVISION OF THE ARBORIST.
4. THE CONTRACTOR SHALL VISIT THE PROJECT SITE PRIOR TO BIDDING TO DETERMINE THE EXACT EXTENT OF ALL SITE DEMOLITION ITEMS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING UTILITIES IN THE FIELD PRIOR TO CONSTRUCTION. LOCATIONS SHOWN ON THE PLANS ARE APPROXIMATE AND ARE FOR GENERAL INFORMATION ONLY. HE SHALL BE RESPONSIBLE FOR MAKING HIMSELF FAMILIAR WITH ALL UNDERGROUND CONDITIONS PRIOR TO COMMENCEMENT OF WORK.
5. THESE PLANS MAY NOT SHOW ALL EXISTING CITY ELECTRICAL FACILITIES INCLUDING, BUT NOT LIMITED TO, TRAFFIC SIGNALS, STREETLIGHT AND TRAFFIC SIGNAL COMMUNICATION EQUIPMENT, CONDUIT, PULL BOXES, AND WIRING.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL SUCH FACILITIES AND FOR REPAIRING ANY SUCH FACILITIES THAT ARE DAMAGED DURING CONSTRUCTION. PAYMENT FOR LOCATING, COORDINATING, AND REPAIRING EXISTING CITY ELECTRICAL FACILITIES WILL BE DEEMED INCLUDED IN OTHER ITEMS OF WORK, AND NO ADDITIONAL COMPENSATION SHALL BE MADE THEREOF. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE SPECIFICATIONS & DETAILS.
7. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION ON THIS PROJECT. CALL U.S.A. AT (800) 624-2444
8. THE CONTRACTOR SHALL BE RESPONSIBLE UNDER THIS CONTRACT FOR REPAIRING AND REPLACING, AT HIS OWN EXPENSE, ANY STRUCTURES, FENCES, WALLS, OR PLANT LIFE DAMAGED OR DESTROYED BY HIS OPERATION. LIKEWISE, HE SHALL BE RESPONSIBLE FOR REPAIRING OR REPLACING ANY AND ALL DAMAGES, OCCURRING BY HIS OPERATION, ON ADJACENT PROPERTIES AND ANYWHERE OUTSIDE THE CONTRACT LIMIT LINES. THE DAMAGED ITEMS SHALL BE RESTORED TO THERE ORIGINAL CONDITIONS AND TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT.
9. THE CONTRACTOR SHALL BE RESPONSIBLE TO KEEP ALL STREET RIGHT-OF-WAYS CLEAN TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT ALL ITEMS INDICATED TO BE REMOVED SHALL BE DISPOSED OF FROM THE PROJECT SITE, EXCEPT ITEMS INDICATED TO BE RE-INSTALLED.
10. ALL TREES TO BE REMOVED SHALL HAVE THEIR STUMPS GROUND DOWN TO A MINIMUM DEPTH OF 24" REMOVE ALL LARGE ROOTS FROM PLANTING AREAS A MINIMUM DISTANCE OF 5' BEYOND THE DRIP LINE OF THE TREE.

SEC. 29.T-2005. PROTECTION OF TREES DURING CONSTRUCTION

(A) PROTECTIVE TREE FENCING SHALL SPECIFY THE FOLLOWING:
(1) SIZE AND MATERIALS. SIX (6) FOOT HIGH CHAIN LINK FENCING, MOUNTED ON TWO-INCH DIAMETER GALVANIZED IRON POSTS, SHALL BE DRIVEN INTO THE GROUND TO A DEPTH OF AT LEAST TWO (2) FEET AT NO MORE THAN 10-FOOT SPACING. FOR PAVING AREA THAT WILL NOT BE DEMOLISHED AND WHEN STIPULATED IN A TREE PRESERVATION PLAN, POSTS MAY BE SUPPORTED BY A CONCRETE BASE.

(2) AREA TYPE TO BE FENCED.
TYPE I: ENCLOSURE WITH CHAIN LINK FENCING OF EITHER THE ENTIRE DRIPLINE AREA OR AT THE TREE PROTECTION ZONE (TPZ), WHEN SPECIFIED BY A CERTIFIED OR CONSULTING ARBORIST.
TYPE II: ENCLOSURE FOR STREET TREES LOCATED IN A PLANTER STRIP: CHAIN LINK FENCE AROUND THE ENTIRE PLANTER STRIP TO THE OUTER BRANCHES.
TYPE III: PROTECTION FOR A TREE LOCATED IN A SMALL PLANTER CUTOUT ONLY (SUCH AS DOWNTOWN): ORANGE PLASTIC FENCING SHALL BE WRAPPED AROUND THE TRUNK FROM THE GROUND TO THE FIRST BRANCH WITH 2-INCH WOODEN BOARDS BOUND SECURELY ON THE OUTSIDE. CAUTION SHALL BE USED TO AVOID DAMAGING ANY BARK OR BRANCHES.

(3) DURATION OF TYPE I, II, III FENCING. FENCING SHALL BE ERECTED BEFORE DEMOLITION, GRADING OR CONSTRUCTION PERMITS ARE ISSUED AND REMAIN IN PLACE UNTIL THE WORK IS COMPLETED. CONTRACTOR SHALL FIRST OBTAIN THE APPROVAL OF THE PROJECT ARBORIST ON RECORD PRIOR TO REMOVING A TREE PROTECTION FENCE.

(4) WARNING SIGN. EACH TREE FENCE SHALL HAVE PROMINENTLY DISPLAYED AN 8.5 X 11-INCH SIGN STATING: "WARNING—TREE PROTECTION ZONE-THIS FENCE SHALL NOT BE REMOVED AND IS SUBJECT TO PENALTY ACCORDING TO TOWN CODE 29.T-2025".

(B) ALL PERSONS, SHALL COMPLY WITH THE FOLLOWING PRECAUTIONS:
(1) PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, INSTALL THE FENCE AT THE DRIPLINE, OR TREE PROTECTION ZONE (TPZ) WHEN SPECIFIED IN AN APPROVED ARBORIST REPORT, AROUND ANY TREE AND/OR VEGETATION TO BE RETAINED WHICH COULD BE AFFECTED BY THE CONSTRUCTION AND PROHIBIT ANY STORAGE OF CONSTRUCTION MATERIALS OR OTHER MATERIALS, EQUIPMENT CLEANING, OR PARKING OF VEHICLES WITHIN THE TPZ. THE DRIPLINE SHALL NOT BE ALTERED IN ANY WAY SO AS TO INCREASE THE ENCROACHMENT OF THE CONSTRUCTION.

(2) PROHIBIT ALL CONSTRUCTION ACTIVITIES WITHIN THE TPZ, INCLUDING BUT NOT LIMITED TO: EXCAVATION,GRADING, DRAINAGE AND LEVELING WITHIN THE DRIPLINE OF THE TREE UNLESS APPROVED BY THE DIRECTOR.

(3) PROHIBIT DISPOSAL OR DEPOSITING OF OIL, GASOLINE, CHEMICALS OR OTHER HARMFUL MATERIALS WITHIN THE DRIPLINE OF OR IN DRAINAGE CHANNELS, SWALES OR AREAS THAT MAY LEAD TO THE DRIPLINE OF A PROTECTED TREE.

(4) PROHIBIT THE ATTACHMENT OF WIRES, SIGNS OR ROPES TO ANY PROTECTED TREE.

(5) DESIGN UTILITY SERVICES AND IRRIGATION LINES TO BE LOCATED OUTSIDE OF THE DRIPLINE WHEN FEASIBLE.

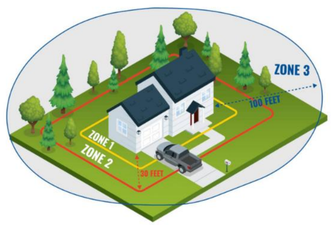
(6) RETAIN THE SERVICES OF A CERTIFIED OR CONSULTING ARBORIST WHO SHALL SERVE AS THE PROJECT ARBORIST FOR PERIODIC MONITORING OF THE PROJECT SITE AND THE HEALTH OF THOSE TREES TO BE PRESERVED. THE PROJECT ARBORIST SHALLBE PRESENT WHENEVER ACTIVITIES OCCUR WHICH MAY POSE A POTENTIAL THREAT TO THE HEALTH OF THE TREES TO BE PRESERVED AND SHALL DOCUMENT ALL SITE VISITS.

(7) THE DIRECTOR AND PROJECT ARBORIST SHALL BE NOTIFIED OF ANY DAMAGE THAT OCCURS TO A PROTECTED TREE DURING CONSTRUCTION SO THAT PROPER TREATMENT MAY BE ADMINISTERED. (ORD. NO. 2114, §§ I, II, 8-4-03)

SEC. 29.T-2010. PRUNING AND MAINTENANCE

ALL PRUNING SHALL BE IN ACCORDANCE WITH THE CURRENT VERSION OF THE INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES—TREE PRUNING AND ANSI A300-PART 1 TREE, SHRUB AND OTHER WOODY PLANT MANAGEMENT—STANDARD PRACTICES, (PRUNING) AND ANY SPECIAL CONDITIONS AS DETERMINED BY THE DIRECTOR. FOR DEVELOPMENTS, WHICH REQUIRE A TREE PRESERVATION REPORT, A CERTIFIED OR CONSULTING ARBORIST SHALL BE IN REASONABLE CHARGE OF ALL ACTIVITIES INVOLVING PROTECTED TREES, INCLUDING PRUNING, CABLING AND ANY OTHER WORK IF SPECIFIED.

(1) ANY PUBLIC UTILITY INSTALLING OR MAINTAINING ANY OVERHEAD WIRES OR UNDERGROUND PIPES OR CONDUITS IN THE VICINITY OF A PROTECTED TREE SHALL OBTAIN PERMISSION FROM THE DIRECTOR BEFORE PERFORMING ANY WORK, INCLUDING PRUNING, WHICH MAY CAUSE INJURY TO A PROTECTED TREE. (E.G. CABLE TV/FIBER OPTIC TRENCHING, GAS, WATER, SEWER TRENCH, ETC.).



(2) PRUNING FOR CLEARANCE OF UTILITY LINES AND ENERGIZED CONDUCTORS SHALL BE PERFORMED IN COMPLIANCE WITH THE CURRENT VERSION OF THE AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI) A300 (PART 1)- PRUNING, SECTION 5.9 UTILITY PRUNING. USING SPIKES OR GAFFS WHEN PRUNING, EXCEPT WHERE NO OTHER ALTERNATIVE IS AVAILABLE, IS PROHIBITED.

(3) NO PERSON SHALL PRUNE, TRIM, CUT OFF, OR PERFORM ANY WORK, ON A SINGLE OCCASION OR CUMULATIVELY, OVER A THREE-YEAR PERIOD, AFFECTING TWENTY-FIVE PERCENT OR MORE OF THE CROWN OF ANY PROTECTED TREE WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION EXCEPT FOR POLLARDING OF FRUITLESS MULBERRY TREES (MORUS ALBA) OR OTHER SPECIES APPROVED BY THE TOWN ARBORIST. APPLICATIONS FOR A PRUNING PERMIT SHALL INCLUDE PHOTOGRAPHS INDICATING WHERE PRUNING IS PROPOSED.

(4) NO PERSON SHALL REMOVE ANY HERITAGE TREE OR LARGE PROTECTED TREE BRANCH OR ROOT THROUGH PRUNING OR OTHER METHOD GREATER THAN FOUR (4) INCHES IN DIAMETER (12.5" IN CIRCUMFERENCE) WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION.

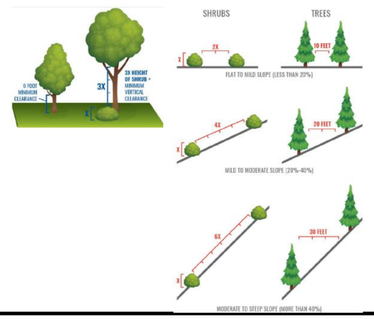
Defensible Space Zones

Following are guidelines from Santa Clara County Fire Department on how to create and maintain effective defensible space zones:

Zone 1, extends 0 to 5 feet out: The Noncombustible Zone

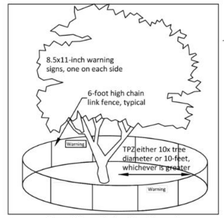
- Remove all plants and vegetation, especially those touching your home.
- Clean roofs and gutters of dead leaves, debris and pine needles that could catch embers.
- Replace or repair any loose or missing shingles or roof tiles to prevent ember penetration.
- Reduce embers that could pass through vents in the eaves by installing 1/8 inch metal mesh screening.
- Clean debris from exterior attic vents and install 1/8 inch metal mesh screening to block embers.
- Repair or replace damaged or loose window screens and any broken windows.
- Screen or box-in areas below patios and decks with wire mesh to prevent debris and combustible materials from accumulating.
- Move any flammable material away from wall exteriors – mulch, flammable plants, leaves and needles, firewood piles – anything that can burn. Remove anything stored underneath decks or porches.
- Mandated for new construction

Zone 2, extends 30 feet out: The Clean and Green Zone



- Remove all dead plants, grass and weeds (vegetation).
- Remove dead or dry leaves and pine needles from your yard, roof and rain gutters.
- Trim trees regularly to keep branches a minimum of 10 feet from other trees.
- Remove branches that hang over your roof and keep dead branches 10 feet away from your chimney.

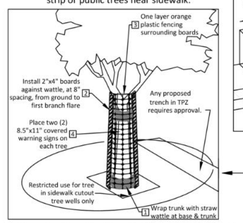
Zone 3, extends 100 feet out: The Reduced Fuel Zone



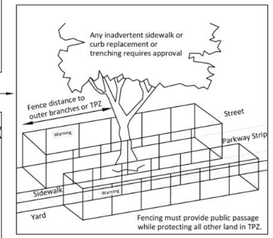
- Create horizontal spacing between shrubs and trees. (See diagram below)
- Create vertical spacing between grass, shrubs and trees. (See diagram below)
- Dispose of heavy accumulations of ground litter/debris.
- Remove dead plant and tree material.
- Remove small conifers growing between mature trees.
- Remove vegetation adjacent to storage sheds or other outbuildings within this area.
- Trees 30 to 60 feet from the home should have at least 12 feet between canopy tops.
- Trees 60 to 100 feet from the home should have at least 6 feet between the canopy tops.

Plant and Tree Spacing

For vertical spacing remove all tree branches at least 6 feet from the ground. If there is a shrub near the tree, the branch clearance needs to be 3 times the height of the shrub. *Example: A 5-foot shrub is growing near a tree. 3×5 = 15 feet of clearance needed between the top of the shrub and the lowest tree branch.*



Tree Protection Zone (TPZ) shown in gray (radius of TPZ equals 10-times the diameter of the tree or 10-feet, whichever is greater).

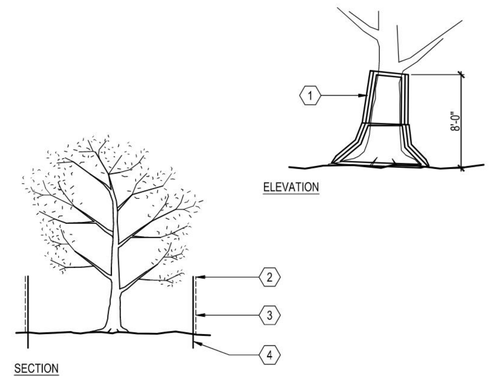


Type I Tree Protection: Layout configuration applies to all Protected Trees, matching the site diagram with the tree preservation report (TPR) distances written for this project. Fencing should be shown on plans as it will be installed. A curved fence for a TPZ is generally not practical.

Inspection pass/fail is dependent on correct layout and mounted sign placard.

Place two (2) 8.5"x11" covered warning signs at each tree.

Type II Tree Protection: Layout configuration applies to all parkway strip or public trees near sidewalk.



Type III Tree Protection: Layout for trunk protection applies to all Protected Trees when exclusively authorized for sidewalk cut-out. To be used only with approval from Public Works Operations.

Required protection shall be executed before demolition, excavation or site work occurs.

NOTES:
1. CONSTRUCTION PERIOD PROTECTION FOR TREES SHOULD BE PROVIDED BEFORE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY.
2. WHEN CONSTRUCTION IS TO TAKE PLACE BENEATH A TREE CANOPY ON ONE SIDE, THE FENCE SHOULD BE SITED 2 TO 3 FEET BEYOND THAT CONSTRUCTION, BUT BETWEEN CONSTRUCTION AND THE TREE TRUNK.
3. IF CONSTRUCTION OR PAVING IS TO TAKE PLACE THROUGHOUT THE AREA BENEATH CANOPY, AND DRIP LINE FENCING IS NOT PRACTICAL, SNOW FENCING SHOULD BE USED TO PROTECT THE TRUNKS FROM DAMAGE.

1. SNOW FENCING THREE LAYERS OF WIRE AND LATH SNOW FENCING TO 8 FEET ABOVE GROUND ON TREES WHERE CONSTRUCTION WILL TAKE PLACE BENEATH THE CANOPY.
2. TOP OF FENCE WITH FLUORESCENT FLAGGING TAPE HUNG EVERY 10 FEET
3. 6' CHAIN LINK OR WELDED WIRE MESH
4. 8' FENCE POST OF 2" DIAMETER GI PIPE OR T-ANGLE POST
5. FENCE PLACED AT DRIP LINE OR 50% GREATER THAN THE TREE CANOPY RADIUS WHERE POSSIBLE

This letter is in response to the latest submission for 178 Twin Oaks Drive (Surrey Farms) dated July 25, 2025. Enclosed is the prior response and the applicant's response to that submission. Enclosed are the most recent peer review comments and recommendations.

Please see HMH Landscape October responses in GREEN below.

MEMORANDUM

1. **Comment: Lot 3:** Lot 3 has a retaining wall around the site and along the property boundary adjacent to 221 Brook Acres Drive. There are two large trees, one valley oak (*Quercus lobata*) and one coast live oak (*Quercus agrifolia*) located on 221 Brook Acres Drive not accounted for in the plans, survey, or tree detail. Trees within 30 feet of the property boundary are to be included in survey and arborist's report. There are many trees "off site" included in the report but these are not.

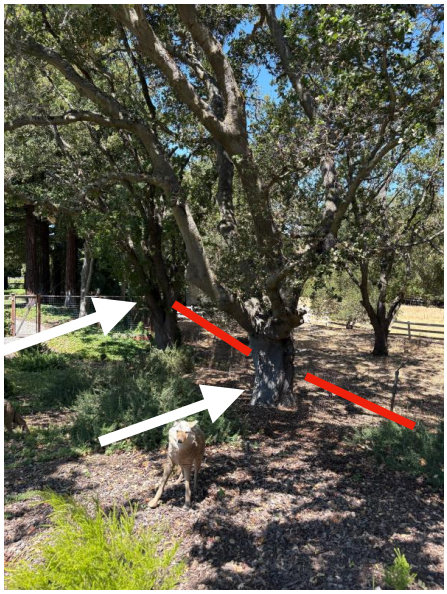

IMAGE 1: ADJACENT OAKS 221 BROOK ACRES

A. Recommendation: Tree protection for these two boundary trees is required. An adjustment to the wall location may be required as both trees are at or very close to the property boundary (Image 1). Include trees within 30 feet of the property in the plans and report.

B. Recommendation: Work performed within the drip line or twenty feet (20') of the trunks requires monitoring and documentation from the project arborist. Any work performed to the trees requires specifications in writing according to the most recent ANSI A300 document pertaining to the activity (Pruning, Soil Management etc.)

MEMORANDUM

HMH Response: Trees mentioned in comment are located within project boundary and called out in report and tagged for removal under numbers 566 and 569.

MCA: This item is currently unresolved. Ground observations of the tree locations do not appear to match was is indicated on the plans versus what is observed on site.

Recommendation: Please accurately locate the trees or verify their location accuracy. Please provide methodology used to obtain tree locations for the site. For example "the trees were surveyed by a California licensed engineer" or "trees were located with a GPS receiver with an error of "X" feet and plotted on a plan or aerial map".

HMH October Response: Please see the updated Landscape T-Sheets for lot 3 and the "Overall" for updated tree 566 and 569 tree locations. The 2 trees are now listed to remain and protect. This information is reflected in the updated Arborist report as well.

McClintock Landscape Horticultural Services used GPS to obtain the original tree locations as well as 3 specific known bench markers/monuments. All tree data for the Los Gatos project were gathered with iPads and iPhones running the ArborPro Software suite, enabling efficient real-time data entry and mapping. Each tree location was plotted directly onto the project's base map using integrated GPS functionality accurate within 1 meter. The location accuracy can change dramatically based on which base map is used, GPS location accuracy, and the quality of the base map image.

HMH's licensed Survey team directed Michael's team to use the 3 known benchmarks based on existing data per HMH's survey work located adjacent to the site, specifically at the cul-de-sac of Longmeadow Drive close to the project. The coordinates provided by Michael's team were inputted by the HMH survey team based on the 3 known benchmarks.

In some cases under heavy canopy coverage GPS coordinates can be offset by approximately 3 to 6 meters, which may explain any perceived discrepancies in this particular location. While such variance is a known limitation of GPS data collection, it has not previously presented an issue in past inventories to Michael Gladden's knowledge. Ariel views and data do reflect localized heavy canopy coverage in this portion of the site. We do believe that the discrepancy in the location of trees #566 and #569 are anomalies. Checks were performed, shifting the trees globally to observe alignment, which yielded results supporting the anomaly related to trees #566 and #569.

MEMORANDUM

2. **Comment: Plan Sheet and Report Discrepancies:** There are few discrepancies between the report disposition table and the plan sheets. The following need to be consistent:

   Tree #191 is labeled as "remove" in the report and "save" in the plan sheet.

   Trees #192, #195, #199, #202, and #585 are all labeled as "save" in the report and "remove" in the plan sheets.

A. Recommendation: Revise the plans and/or report to be consistent throughout the documents.

2. HMH Response: Trees on planning sheets have been updated to match the arborist report and landscape plans- Tree #191 as remove, Trees #192, #195, #199, #202, and #585 are all labeled as "save".

MCA: Accepted

3. **Comment: Dead Trees marked for retention: T**rees #393, #303, #353, #356, #358, #361, #370, #373, #376, #378, #379, #645, #640, #641, and #647 are labeled as to be in "Dead" condition but are listed as "Save" trees. It is possible to retain these dead trees for various reasons including wildlife habitat, if they don't pose an unreasonable risk to life or property.

A. Recommendation: Indicate and revise the plans and report to be consistent if changes are made to the disposition of these trees. If they are to be retained provide a Level 2: Basic Tree Risk Assessment to ensure public safety.

3. HMH Response: Trees listed above are updated to be removed, planning, landscape sheets and arborist report reflect these updates.

MCA: Accepted

MEMORANDUM

4. **Comment: Number Count Summary:** The inventory sheet and report contains 677 rows of data and the report summarizes twenty-nine (29) species. The summary in the report is incorrect or indicates incorrect counts. The report does not summarize the relevant tree data.

   52 trees are listed as "Off Site".
   37 trees are "Exempt" but only 11 are listed as "Exempt". There are an additional 26 that should be labeled "Exempt", which are primarily plums, olives, almonds, and one English walnut.
   4 spaces are labeled "not used"
   7 "stumps" are recorded.
   31 "dead" trees are recorded.

   The inventory implies twenty-nine (29) species, but there are really twenty-six (26). Twenty-two (22) of the twenty-six (26) are "Protected" by the ordinance when you remove the four "Exempt" species.

A. **Recommendation:** Correct the species summary in the report to reflect 26 overall and 22 "Protected". Include all plums, olives, English walnut, and almonds less than 18 inches in diameter as "Exempt" in the table per the Town Ordinance.

HMH Response: Arborist report "Tree Summary" has been updated to correctly reflect noted quantities above.

MCA: "Summary of Findings" on page 9 of the report has not been updated and still contains erroneous data including quantity of trees and quantity of species. There is no summary of tree "Protected", "Large Protected", "Exempt". This section of the report has not been updated. Recommendation: Update the report page 9 to provide the correct data including a summary of trees to be removed and retained along with what has been expressed and provided above in comment 4.

HMH October Response: Please see the updated Arborist report on page 9 with the requested information, including the categories listed in item 4 above.

4. **Comment: Mitigation:** The replacement trees indicated are 582. It is not clear where this number was derived from. The table at the end of the report indicates 551 replacements are required, eighty-five (85) total replacements are to be installed per the Landscape Plans, and the remaining 466 will still required mitigation. A total of 223 trees are indicated for removal.

HMH Response: 582 trees are not currently indicated on the landscape plans. A total of 551 replacements are calculated in the on-site tree mitigation table in the overall mitigation and protection plan landscape sheets.

MEMORANDUM

MCA: How many trees are indicated for removal and how many calculated replacements are required? How many replacements are shown on the plans?

HMH October Response: Listed on the "Overall" Landscape Plan T-Sheets ("Tree Mitigation Summary Table") and the updated Arborist report: 224 Trees are to be removed. 85 trees are proposed (40-24" box, 45-36" box). Required Trees: 439-24" box, 161-36" box.

5. **Recommendation:** See recommendations in comment 8 and be consistent with the report and plan sheets for replacement trees.

6. **Formatting:** The arborist report states the correct date of "Revision 3" on the title page. However, there are artifact dates of November 23, 2024, December 15, 2024 scattered throughout, and then no header, footer, dates or page numbers for the new appraisal data sheets and included T sheets in the report.

A. **Recommendation:** Upon next update revise headers, footers, page numbers, and dates for clarity.

HMH Response: Arborist report reflects latest date for headers, footers, and page numbers.

MCA: Accepted

6. **Comment:** All Landscape Plans need to be updated to include tree identification number locations within the plans.

A. **Recommendation:** Update landscape plans accordingly to reflect tree location/ID numbers.

HMH Response: Landscape plan sheets now have updated existing protected tree ID locations per request.

MCA: Accepted

7. **Comment:** Include the following summaries in the arborist's report:

A. **Recommendation:** Include the total quantity of trees on site with trunk diameters greater than four inches at fifty-four inches above grade, and the total quantity of those species.

B. **Recommendation:** Include a summary of the total quantity of trees considered "Protected" or Large Protected" on site.

C. **Recommendation:** Include a summary of the total quantity of "Protected" or "Large Protected" trees on site proposed for removal.

MEMORANDUM

D. Recommendation: Include the total quantity of trees required for replanting on site pursuant the Town of Los Gatos Tree Canopy Replacement Standard section Sec. 29.10.0985. Determination and conditions of permit. (1)(2) Table 3-1.

E. Recommendation: Include the total quantity of trees proposed to be planted on site, and be sure this amount is consistent with the submitted Landscape Plans.

8. HMH Response: Arborist report updated with requested summaries in the "Tree Summary" table following tree tag data. Required trees indicated on "T" sheets.

MCA: Partial acceptance, Items D and E need to be included. Items A, B, and C along with quantity of trees removed and retained needs to be updated on Page 9 of the report.

HMH October Response: Items D and E, as related to required and proposed trees, are now listed on page 9 of the updated Arborist report. Items A, B, and C along with quantities are now updated in the Arborist report.

This letter is in response to the latest submission for 178 Twin Oaks Drive (Surrey Farms) dated July 25, 2025. Enclosed is the prior response and the applicant's response to that submission. Enclosed are the most recent peer review comments and recommendations.

1. **Comment: Lot 3:** Lot 3 has a retaining wall around the site and along the property boundary adjacent to 221 Brook Acres Drive. There are two large trees, one valley oak (*Quercus lobata*) and one coast live oak (*Quercus agrifolia*) located on 221 Brook Acres Drive not accounted for in the plans, survey, or tree detail. Trees within 30 feet of the property boundary are to be included in survey and arborist's report. There are many trees "off site" included in the report but these are not.

IMAGE 1: ADJACENT OAKS 221 BROOK ACRES

A. **Recommendation:** Tree protection for these two boundary trees is required. An adjustment to the wall location may be required as both trees are at or very close to the property boundary (Image 1). Include trees within 30 feet of the property in the plans and report.

B. **Recommendation:** Work performed within the drip line or twenty feet (20') of the trunks requires monitoring and documentation from the project arborist. Any work performed to the trees requires specifications in writing according to the most recent ANSI A300 document pertaining to the activity (Pruning, Soil Management etc.)

. HMH Response: Trees mentioned in comment are located within project boundary and

called out in report and tagged for removal under numbers 566 and 569.

MCA: This item is currently unresolved. Ground observations of the tree locations do not appear to match was is indicated on the plans versus what is observed on site.

Recommendation: Please accurately locate the trees or verify their location accuracy. Please provide methodology used to obtain tree locations for the site. For example "the trees were surveyed by a California licensed engineer" or "trees were located with a GPS receiver with an error of "X" feet and plotted on a plan or aerial map".

2. **Comment: Plan Sheet and Report Discrepancies:** There are few discrepancies between the report disposition table and the plan sheets. The following need to be consistent:

   Tree #191 is labeled as "remove" in the report and "save" in the plan sheet.

   Trees #192, #195, #199, #202, and #585 are all labeled as "save" in the report and "remove" in the plan sheets.

A. **Recommendation:** Revise the plans and/or report to be consistent throughout the documents.

2. HMH Response: Trees on planning sheets have been updated to match the arborist report and landscape plans- Tree #191 as remove, Trees #192, #195, #199, #202, and #585 are all labeled as "save".

MCA: Accepted

3. **Comment: Dead Trees marked for retention:** Trees #393, #303, #353, #356, #358, #361, #370, #373, #376, #378, #379, #645, #640, #641, and #647 are labeled as to be in "Dead" condition but are listed as "Save" trees. It is possible to retain these dead trees for various reasons including wildlife habitat, if they don't pose an unreasonable risk to life or property.

A. **Recommendation:** Indicate and revise the plans and report to be consistent if changes are made to the disposition of these trees. If they are to be retained provide a Level 2: Basic Tree Risk Assessment to ensure public safety.

3. HMH Response: Trees listed above are updated to be removed, planning, landscape sheets and arborist report reflect these updates.

MCA: Accepted

4. **Comment: Number Count Summary:** The inventory sheet and report contains 677 rows of data and the report summarizes twenty-nine (29) species. The summary in the report is incorrect or indicates incorrect counts. The report does not summarize the relevant tree data.

   52 trees are listed as "Off Site".
   37 trees are "Exempt" but only 11 are listed as "Exempt". There are an additional 26 that should be labeled "Exempt", which are primarily plums, olives, almonds, and one English walnut.
   4 spaces are labeled "not used"
   7 "stumps" are recorded.
   31 "dead" trees are recorded.

   The inventory implies twenty-nine (29) species, but there are really twenty-six (26). Twenty-two (22) of the twenty-six (26) are "Protected" by the ordinance when you remove the four "Exempt" species.

A. **Recommendation:** Correct the species summary in the report to reflect 26 overall and 22 "Protected". Include all plums, olives, English walnut, and almonds less than 18 inches in diameter as "Exempt" in the table per the Town Ordinance.

4. HMH Response: Arborist report "Tree Summary" has been updated to correctly reflect noted quantities above.

MCA: "Summary of Findings" on page 9 of the report has not been updated and still contains erroneous data including quantity of trees and quantity of species. There is no summary of tree "Protected", "Large Protected", "Exempt". This section of the report has not been updated.

Recommendation: Update the report page 9 to provide the correct data including a summary of trees to be removed and retained along with what has been expressed and provided above in comment 4.

5. **Comment: Mitigation:** The replacement trees indicated are 582. It is not clear where this number was derived from. The table at the end of the report indicates 551 replacements are required, eighty-five (85) total replacements are to be installed per the Landscape Plans, and the remaining 466 will still required mitigation. A total of 223 trees are indicated for removal.

5. HMH Response: 582 trees are not currently indicated on the landscape plans. A total of 551 replacements are calculated in the on-site tree mitigation table in the overall mitigation and protection plan landscape sheets.

MCA: How many trees are indicated for removal and how many calculated replacements are required? How many replacements are shown on the plans?

6. **Recommendation:** See recommendations in comment 8 and be consistent with the report and plan sheets for replacement trees.

6. **Formatting:** The arborist report states the correct date of "Revision 3" on the title page. However, there are artifact dates of November 23, 2024, December 15, 2024 scattered throughout, and then no header, footer, dates or page numbers for the new appraisal data sheets and included T sheets in the report.

A. **Recommendation:** Upon next update revise headers, footers, page numbers, and dates for clarity.

6. HMH Response: Arborist report reflects latest date for headers, footers, and page numbers.

MCA: Accepted

7. **Comment:** All Landscape Plans need to be updated to include tree identification number locations within the plans.

A. **Recommendation:** Update landscape plans accordingly to reflect tree location/ID numbers.

7. HMH Response: Landscape plan sheets now have updated existing protected tree ID locations per request.

MCA: Accepted

8. **Comment:** Include the following summaries in the arborist's report:

A. **Recommendation:** Include the total quantity of trees on site with trunk diameters greater than four inches at fifty-four inches above grade, and the total quantity of those species.

B. **Recommendation:** Include a summary of the total quantity of trees considered "Protected" or Large Protected" on site.

C. **Recommendation:** Include a summary of the total quantity of "Protected" or "Large Protected" trees on site proposed for removal.

D. **Recommendation:** Include the total quantity of trees required for replanting on site pursuant the Town of Los Gatos Tree Canopy Replacement Standard section Sec. 29.10.0985. Determination and conditions of permit. (1)(2) Table 3-1.

E. **Recommendation:** Include the total quantity of trees proposed to be planted on site, and be sure this amount is consistent with the submitted Landscape Plans.

8. HMH Response: Arborist report updated with requested summaries in the "Tree Summary" table following tree tag data. Required trees indicated on "T" sheets.

MCA: Partial acceptance, Items D and E need to be included. Items A, B, and C along with quantity of trees removed and retained needs to be updated on Page 9 of the report.

www.monarcharborists.com

Summary

I was asked to review the plans and the applicant's arborist report and provide findings and recommendations.

The previous arborist's report provided by McClintock Landscape Horticultural Services (arborist Michael Gladden) dated December 15, 2024. New information and plans were provided.

- There are no specific tree protection measures regarding those proposed for retention - Sec. 29.10.1000. New property development. (c). **Not Completed:** The design and civil plans still have not been indicated as reviewed by the arborist. There is boiler plate protection information in the plan set and fence locations placed on the T sheets
- The table in the report does not properly indicate the disposition of each tree including "Protected" or "Large Protected". - 29.10.1000. New property development (a)(3). Sec. 29.10.0970. Exceptions. (1) or (2). **Not completed:** The tree table in the report was no not updated and still indicates several "Protected" trees as "Exempt". Unless the trees meet the criteria in 29.10.0970. Exceptions. (1) or (2) they would be considered "Protected." There was a new data sheet provided that does contain this information but it is not consistent or housed in one consolidated arborist report.
- Tree appraisals were performed and values provided per- 29.10.1000. New property development. (c)(3) **Not completed:** but still performed incorrectly. The Appraisal was provided by HMH and states the 10th edition the Guide for Plant Appraisal was used. The appraisals do not use the Western Chapter Supplement 2004 for tree size or those now provided in SelecTree website (same information). There is no discussion as to how the condition ratings provided in the McClintock report were translated to percentages used in the HMH calculations. "Functional and External Limitations" do not appear to follow the guidance in the tenth edition either, and all depreciation factors were indicated to be .6 or .7 (60% or 70%). The result significantly undervalued trees. For example tree #227 (valley oak in good condition with 24 inch trunk diameter) as appraised using the tenth edition, while using the HMH provided depreciation factors, would result in a rounded depreciated value of $8,100. However the HMH report stated this tree as valued at $2,118.00.

- No specific development plans were reviewed or indicated or any assessment of impacts (remove or retain). **Partially completed:** The disposition of removal and retention is now provided in the supplemental sheet but needs to be consistent and housed in one consolidated updated arborist's report.
- The plan sheets provide unacceptable tree protection specifications including fence details and materials. **Completed:** Sheets have been updated to reflect the Town's requirements.

Completed: The plan set now contains the required Tree Preservation Instructions (Sheet T-1) sheet Sec. 29.10.1000. New property development. (c) (1) or a Landscape Plan indicating replanting information consistent with the Town of Los Gatos Tree Canopy Replacement Standard section Sec. 29.10.0985. Determination and conditions of permit. (1)(2) Table 3-1.

Observations to be Resolved, and Recommendations

Tree Data Sheets: The overall plan set needs to include the overall data sheets with all the trees, however for each individual lot only the trees on that lot and those directly adjacent that could be affected should be included. At this point each lot plan sheet includes the overall data sheet with all the trees.

Tree Tables on sheets 2.2 and T-1 need to be consistent with the same information, preferably as they appear on sheet 2.2. The T-1 sheet does not include critical information such as species, trunk diameter and other information as included in 2.2.

All plans require the tree numbers to be placed on those plans whether trees are to be removed or retained.

Appraisals: The appraisals need to be performed according to the 10th edition the Guide for Plant Appraisal Trunk Formula Technique. This has not been done correctly to date and trees are significantly under values with incorrect "Replacement Tree Sizes", "Replacement Cost" and unjustified "Functional" and "External Limitations". There is no consistency between the tree condition ratings within the report that use a 1-4 scale and the actual percentages required to perform the appraisal calculations.

Final Arborist Report: The arborist report from December of 2024 provided by McClintock has not been updated and only untethered supplements have been supplied. The final arborist report needs to be updated and housed in one document including the tree inventory, assessment, protection guidelines and specifications, appraisal data and results, expected impacts, and disposition of the trees.

Lot 1: Trees #1, #8, #11 and #41 are all four to six feet from a proposed newly constructed road, it does not appear these trees have any chance to survive construction of that infrastructure and al the other trees in the same trajectory are labeled as removals. Please explain how and why these trees will survive construction.

There is nothing affecting Large protected tree #60 yet it is proposed for removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lot 2: There does not appear to be anything affect trees #585 and #578. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Tree #36 is not likely to survive construction impacts, please indicate how this tree will be protected throughout construction or label it for removal.

Lot 3: Tree #569 does not appear to have any construction impacts around it causing its removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lot 4: Both save trees on this site, #106 and #133, are atop retaining walls and will not survive construction. Please indicate how these trees will be protected throughout construction or label them for removal.

Lot 5: There appears to be a tree adjacent to the driveway with no I.D. number. On the T-1 sheet it looks like it could be a replacement tree, however it also shows up on the grading plans. Please confirm this tree is present or not and if not it should not be on the grading plan.

Lot 6: Tree #170 does not appear to have any construction impacts around it causing its removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lot 7: No remarks.

Lot 8: No tree table on sheet 2.2, keep plan sets consistent with tree tables on the same sheets with the same data.

Trees #610, #622, and #616 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lot 9: Trees #509, #510, #513, #514, #515, #517, #518, #521, #523, #524, #525, #528, #529, #530, #531, #534, #617, #620, #621, and #627 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lot 10: No tree table on sheet 2.2, keep plan sets consistent with tree tables on the same sheets with the same data.

Trees #182, #183, #186, #188, #190, #192, #195, and #199 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Lots 11 and 12: No remarks.

Re: Twin Oaks | Surrey Farms Arborist Review and Responses

HMH Response to Comments provided by Richard J. Gessner and Erin Walters.

Dear Team:

This letter is in response to plan check comments made on the document titled, "Arborists review" dated May 13, 2025. The HMH responses are in **Green** font below.

Sincerely,

Shawn Taylor
HMH Landscape
Landscape Architecture Manager

Summary

I was asked to review the plans and the applicant's arborist report and provide findings and recommendations.

The previous arborist's report provided by McClintock Landscape Horticultural Services (arborist Michael Gladden) dated December 15, 2024. New information and plans were provided.

- There are no specific tree protection measures regarding those proposed for retention - Sec. 29.10.1000. New property development. (c). **Not Completed:** The design and civil plans still have not been indicated as reviewed by the arborist. There is boiler plate protection information in the plan set and fence locations placed on the T sheets

  HMH Response: The following note has been added to page 3 of the updated Arborist report:

  **Note: Grading and Planting Plans were reviewed as of June I, 2025. All reviewed plans appear typical and appropriate. However, the Project Arborist should be present during excavation activities within tree protection zones to ensure proper procedures are followed.*

  All detailed tree protection information, notes and details are on the "T" sheets within the Landscape Plans. Additionally, the following is stated for future prescriptive measures needed during the construction phase of the project:

  (6) RETAIN THE SERVICES OF A CERTIFIED OR CONSULTING ARBORIST WHO SHALL SERVE AS THE PROJECT ARBORIST FOR PERIODIC MONITORING OF THE PROJECT SITE AND THE HEALTH OF THOSE TREES TO BE PRESERVED. THE PROJECT ARBORIST SHALL BE PRESENT WHENEVER ACTIVITIES OCCUR WHICH MAY POSE A POTENTIAL THREAT TO THE HEALTH OF THE TREES TO BE PRESERVED AND SHALL DOCUMENT ALL SITE VISITS.

178 Twin Oaks Drive Arborist's Review May 13, 2025

- The table in the report does not properly indicate the disposition of each tree including "Protected" or "Large Protected". - 29.10.1000. New property development (a)(3). Sec. 29.10.0970. Exceptions. (1) or (2). **Not completed:** The tree table in the report was no not updated and still indicates several "Protected" trees as "Exempt". Unless the trees meet the criteria in 29.10.0970. Exceptions. (1) or (2) they would be considered "Protected." There was a new data sheet provided that does contain this information but it is not consistent or housed in one consolidated arborist report.

  HMH Response: The Arborist report "June 4, 2025, Revision 2" has been updated per your direction.

- Tree appraisals were performed and values provided per- 29.10.1000. New property development. (c)(3) **Not completed:** but still performed incorrectly. The Appraisal was provided by HMH and states the 10th edition the Guide for Plant Appraisal was used. The appraisals do not use the Western Chapter Supplement 2004 for tree size or those now provided in SelecTree website (same information). There is no discussion as to how the condition ratings provided in the McClintock report were translated to percentages used in the HMH calculations. "Functional and External Limitations" do not appear to follow the guidance in the tenth edition either, and all depreciation factors were indicated to be .6 or .7 (60% or 70%). The result significantly undervalued trees. For example tree #227 (valley oak in good condition with 24 inch trunk diameter) as appraised using the tenth edition, while using the HMH provided depreciation factors, would result in a rounded depreciated value of $8,100. However the HMH report stated this tree as valued at $2,118.00.

  HMH Response: The tree appraisals have been corrected. The formula has been updated to match the 10th edition Guide for Plant Appraisal. SelecTree was used for the approximate cross-sectional area for the LCANT. A methodology explanation was added to the end of the appraisals explaining what criteria was used in converting the ratings from the report to the appraisals.

- No specific development plans were reviewed or indicated or any assessment of impacts (remove or retain). **Partially completed:** The disposition of removal and retention is now provided in the supplemental sheet but needs to be consistent and housed in one consolidated updated arborist's report.

  HMH Response: The Arborist report "June 4, 2025, Revision 2" has been updated per your direction, showing this additional information as consistent with the "T" sheets in the Landscape Sheets.

178 Twin Oaks Drive Arborist's Review May 13, 2025

- The plan sheets provide unacceptable tree protection specifications including fence details and materials. **Completed:** Sheets have been updated to reflect the Town's requirements.

Completed: The plan set now contains the required Tree Preservation Instructions (Sheet T-1) sheet Sec. 29.10.1000. New property development. (c) (1) or a Landscape Plan indicating replanting information consistent with the Town of Los Gatos Tree Canopy Replacement Standard section Sec. 29.10.0985. Determination and conditions of permit. (1)(2) Table 3-1.

Observations to be Resolved, and Recommendations

Tree Data Sheets: The overall plan set needs to include the overall data sheets with all the trees, however for each individual lot only the trees on that lot and those directly adjacent that could be affected should be included. At this point each lot plan sheet includes the overall data sheet with all the trees.

HMH Response: The Landscape "T" sheets for each lot are updated to list the specific associated lot information extracted from the overall tree data.

Tree Tables on sheets 2.2 and T-1 need to be consistent with the same information, preferably as they appear on sheet 2.2. The T-1 sheet does not include critical information such as species, trunk diameter and other information as included in 2.2.

HMH Response: The Landscape "T" sheets for each lot are updated to list the specific associated lot critical information as listed/recommended above.

All plans require the tree numbers to be placed on those plans whether trees are to be removed or retained.

Appraisals: The appraisals need to be performed according to the 10th edition the Guide for Plant Appraisal Trunk Formula Technique. This has not been done correctly to date and trees are significantly under values with incorrect "Replacement Tree Sizes", "Replacement Cost" and unjustified "Functional" and "External Limitations". There is no consistency between the tree condition ratings within the report that use a 1-4 scale and the actual percentages required to perform the appraisal calculations.

HMH Response: The tree appraisals have been corrected. The formula has been updated to match the 10th edition Guide for Plant Appraisal. SelecTree was used for the approximate cross-sectional area for the LCANT. A methodology explanation was added to the end of the appraisals explaining what criteria was used in converting the ratings from the report to the appraisals.

178 Twin Oaks Drive Arborist's Review May 13, 2025

Final Arborist Report: The arborist report from December of 2024 provided by McClintock has not been updated and only untethered supplements have been supplied. The final arborist report needs to be updated and housed in one document including the tree inventory, assessment, protection guidelines and specifications, appraisal data and results, expected impacts, and disposition of the trees.

HMH Response: The Arborist report has been updated to contain the specific information as listed/recommended above.

Lot 1: Trees #1, #8, #11 and #41 are all four to six feet from a proposed newly constructed road, it does not appear these trees have any chance to survive construction of that infrastructure and al the other trees in the same trajectory are labeled as removals. Please explain how and why these trees will survive construction.

There is nothing affecting Large protected tree #60 yet it is proposed for removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. The disposition updates shown are:

Removed	1,8,11
Saved	60

Lot 2: There does not appear to be anything affect trees #585 and #578. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

Tree #36 is not likely to survive construction impacts, please indicate how this tree will be protected throughout construction or label it for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. The disposition updates shown are:

Saved	585, 578
Removed	36

178 Twin Oaks Drive Arborist's Review May 13, 2025

Lot 3: Tree #569 does not appear to have any construction impacts around it causing its removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Some trees are removed as related to utility easement conflicts with canopy and additional agency comments. The disposition updates shown are:

Removed 566

Lot 4: Both save trees on this site, #106 and #133, are atop retaining walls and will not survive construction. Please indicate how these trees will be protected throughout construction or label them for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. Additionally, some trees are removed as related to utility easement conflicts with canopy. The disposition updates shown are:

Removed 106, 133, 163

Lot 5: There appears to be a tree adjacent to the driveway with no I.D. number. On the T-1 sheet it looks like it could be a replacement tree, however it also shows up on the grading plans. Please confirm this tree is present or not and if not it should not be on the grading plan.

HMH Response: This tree is a proposed replacement tree and counted toward mitigation. It shall be removed from the grading plan. Tree 167 now shown for removal based on canopy conflicts with proposed utility easements and additional agency comments.

Lot 6: Tree #170 does not appear to have any construction impacts around it causing its removal. Please indicate how this tree meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. Additionally, some trees are removed as related to utility easement conflicts with canopy. The disposition updates shown are:

Removed 170, 171, 172

Lot 7: No remarks.

178 Twin Oaks Drive Arborist's Review May 13, 2025

Lot 8: No tree table on sheet 2.2, keep plan sets consistent with tree tables on the same sheets with the same data.

Trees #610, #622, and #616 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: Sheet 2.2 data had to continue to 2.3 due to number of trees and site size. The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. The disposition updates shown are:

Saved: 610, 622, 616, 624

Lot 9: Trees #509, #510, #513, #514, #515, #517, #518, #521, #523, #524, #525, #528, #529, #530, #531, #534, #617, #620, #621, and #627 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. Additionally, some trees are removed as related to utility easement conflicts with canopy. The disposition updates shown are:

Saved	617, 620, 621, 627
Saved	500, 647
Removed	531, 530

Lot 10: No tree table on sheet 2.2, keep plan sets consistent with tree tables on the same sheets with the same data.

Trees #182, #183, #186, #188, #190, #192, #195, and #199 do not appear to have any construction impacts around them causing removal. Please indicate how these trees meets Town findings for removal since there are no construction or arboricultural reasons for removal.

HMH Response: The listed trees have been re-evaluated for retention and disposition. Certain tree removals or associated thinning/pruning are associated with Hillside Development Guidelines for Fire Prevention. The disposition updates shown are:

Saved	182, 184, 186, 186, 188 192
Saved	195, 199, 202
Removed	191

Subject: SB330 & "Builder's Remedy" Projects

[EXTERNAL SENDER]

Please do not succumb to developers with greedy eyes on our sacred local environment under State Bill 330 mandates with their "Builder's Remedy" projects designated New Town, Ace, Blossom Hill, Capri, Union 76, etc.!

Town residents (& business owners who wisely know that our town's unique village character draws tourism) are counting on you to disallow such inner-city style density and high-rise structures that close in our beautiful open skies and mountain vistas.

The imposition of universal density across our state is a threat to quality of life in California. The threats to our very existence were made obvious by the disastrous firestorms that have wiped out so much in our state's southern communities recently.

Dense housing increases statistical risks:

>that more accidents can occur (such as a fire in an apartment kitchen or garage)

>that more innocent people can be affected (with closer and more numerous neighbors)

>that emergency responses will be more difficult (to reach and provide)

>that escape is hampered (by congestion)

>that illnesses are more likely to spread

>that garbage & sewage can back up

>that water & power supplies can fail

>that air quality can deteriorate

>that natural animal & vegetal environments can be destroyed.

As Los Gatos homeowners since 1969 and town residents since 1968, my family values local uniqueness — as well as the different characters of **all** communities that contribute to our state's diversity of heritages and lifestyles.

We welcome neighbors of any culture, faith, ethnicity, sexuality or social status; but we ask you to defend local density and design restrictions that preserve the quality of life in which all of us have invested hard work and resources.

Although homelessness is a serious concern that I share, it has many causes other than "lack of housing supply." Universal density development will not help those most vulnerable and needy (those disabled by mental illness and/or addiction, those untrusting of offered help, some who dislike structured living, etc.) — they need better public and charitable assistance programs.

For others, I believe the lack of affordable housing supply is caused more by the predominance of ownership by real estate investor groups and individuals — some out of state and country — whose only motive for ownership is to profit by renting or "flipping" sales of multiple properties ***at "whatever the market will bear".*** In my opinion, such ownerships should be limited by law if we are really to solve the problem of housing monopoly and affordability.

Please stand up to state mandates on local zoning regulations and join other local governments in doing so.

With thanks for your service to Los Gatos,

Karen Ettinger

Hi Joel

My first letter was for the allowed two minutes at the Tuesday town council meeting. That agenda item has been removed from the meeting. I thought I should forward it. The second Letter is what my attorney thought was important for your consideration. We are already experiencing extreme congestion during certain periods. Anything we can accomplish to minimize this project size and impact would be appreciated.

Thank you
Jon witkin

3-28-2025
Erin Walters
Twin Oaks Subdivision

This effort is a real cannibalization of California SB 330 housing law. Approximately ten $10m dollar homes will do nothing to help solve our housing crisis. It will further deteriorate Our family home and neighborhood. 100% more traffic on Twin Oaks drive and 30% more traffic on longmeadow drive. These street feed into Kennedy road where already three to four time a day residents will have to wait 3 to 4 signal light cycles to merge onto los gatos boulevard. We are not located near a transit hub.Two 20% below market townhomes are farcical.

We all enjoy a beautifully sloped hillside behind our homes. It is very steep and included Ross Creek and a naturally riparian corridor for local animal life. Approximately 350 trees and natural ponding basins for hillside runoff exist. Twice we have experienced mud flow runoffs from that hillside.

Our family has lived here since 1955 and has appreciated responsible growth. These SB 330 projects will make our weekend summer traffic a daily reality. Our town council used to look out for the current residents best interests. I think it is a real mistake to support these activities. Cal Fire has recently designated this area a high fire zone hazard area. We can now only wait unit we become the next Palisades disaster area. I implore the town to return to common sense decisions.

Thank You
Jon Witkin

Sec. 29.40.155. - Intent.
The purpose and intent of the RC zone is to enhance the quality of life in the Town through the protection of open space, special land forms, scenic areas, watershed, wildlife and vegetation; to restrict access to and within these certain designated areas, to restrict the intensity of activity and development, to limit residential density, to reduce fire hazards in the hillside areas which are under Williamson Act contract with the Town, and to provide for open space in the form of parks, playgrounds, and other community facilities.
(Ord. No. 1316, § 4.22.010, 6-7-76)

Sec. 29.40.230. - Intent.
The intent and purpose of the HR zone is to provide for an orderly, harmonious development of the foothills and mountains resulting in the minimum amount of disturbance of the natural terrain through existing residential density to the natural slope to encourage and provide incentive for excellence in design principles and engineering techniques, and to provide for a variety of dwelling types where land assembly and a unified development scheme are more appropriate. Slope-density regulations will be utilized to assist in relating the intensity of development to the steepness of terrain in order to minimize grading, removal of vegetation, runoff, erosion, geologic hazards, fire hazards, and to help ensure utilization of land in balance with its natural capabilities to support development.
(Ord. No. 1316, § 4.24.010, 6-7-76)

14789 Oka Rd.

Dear Mayor Hudes and Honorable Councilmembers,

Please accept this communication as a respectful plea to the Council to adopt a much more aggressive posture in reviewing all of these SB 330 applications. The current cautious and conservative review process, will fail to fully inform yourselves as decision makers of all the impacts and health and safety risks that these projects will impose on our community, especially when evaluated .cumulatively

The Town should demand and insist that an EIR be conducted to identify all the impacts posed by these projects, whether in reviewing each individual application, especially the more massive developments, or at a minimum, preparation of an EIR to review the cumulative impacts all these projects will impose on a community such as ours with very limited resources.

Some of the impacts that are not being reviewed in any depth at all during the current review process include the impacts on the Town's ability to fight urban wildfire, wildfire evacuation ability, building beyond the capacity of our urban waters supply system to sustain firefighting against wildfire, building beyond the capacity of our sewage system, building in known floodzones, cumulative impacts on our the capacities and service levels that can be sustained by our educational, roadway, emergency responders ,and capital improvement systems.

These items address health and safety issues directly affecting current residents and the Town as a whole. Health and safety issues as Town wide objective review standards. These are not issues affecting design or building standards. Health and Safety issues are protected review issues under the language of SB330 . That statutory language recited protects the Town in taking action to gain information to promote public health and safety.through the environmental review process.

SB330 does not preclude a California jurisdiction from requiring EIRs for builder remedy projects. I have completed some research, and I am unaware of any subsequent legislation that has been adopted by the State that specifcally prevents jurisdictions from requiring Environmental Impact Reports on any SB 330 development application. If I am misinfomed here, I apologize, But what I have heard is that the Governor's Emergency Declaration relating solely to the affected LA wildire area, somehow, now prohibits agencies from demanding EIRs be prepared for any builders remedy projects. I strongly disagree. I believe the legal representatives of these applicants are attempting to intimidate and threaten our elected officials by claiming legal rights that have not yet been granted.

So unless there is specific legislation changing the original scope and rights specified in SB 330, this Council should and must proceed to demand EIRs to protect public health and safety. I firmly believe whatever financial risks you fear, will be acceptable to your constituents. The people of this community want to protect our unique quality of life, and insure the ongoing health and safety of all residents. The very people you represent would rather the Town fight these projects undermining public health and safety, than have its elected leaders throw its hand into the air, saying "there is nothing we can do."

It is a time for strong leadership and accepting some risks for the future well being of all. Courage not fear. The people of this community will rally behind you!

Respectfully submitted,

Brent N. Ventura

14789 Oka Rd.

Dear Mayor Hudes and Honorable Councilmembers,

Since the filing period for SB 330 projects has terminated, and while the review process has commenced and is underway, there have been two critically significant changes to the health and safety, as well as the sustainability of residential habitation in identified portions of Los Gatos. Both of these critically significant public health and safety changes occurred after January 1, 2025.

The first of these was two urban wildfires in the Los Angeles metropolitan area that manifested current Fire Codes and Standards are inadequate for emergency responders to save life or property. Firefighting resources proved woefully inadequate, and the urban/municipal water supply was exhausted briefly after the conflagration commenced. Also, the rapid spread of wildfire in the urbanized, densely populated areas, which occurred in quarter mile leaps, by windblown embers illustrated the extreme risk of wildfire spreading from wildfire risk zones into heavily urbanized, densely populated areas, once thought completely safe from the threat, creates entirely new threats and health and safety issues when considering community development.

The second critical change after 1/1/25 occurred when CALFIRE finalized its maps identifying in Los Gatos the zones of severe wildfire risk. As you are well aware, the land area of Los Gatos at risk of severe wildfire was greatly increased than what previous analysis had predicted. There are some SB 330 projects proposed that are either within, adjacent to or within a half mile a severe wildfire risk zone. The idea of greatly intensifying residential densities in areas identified as subject ot severe wildfire risk is objective grounds to question the health and safety of proceeding with these projects.

Whether these facts alone give the Town valid legal grounds to deny these projects, is an open legal question. But it does seem prudent for the Town to make inquiry, and require the State and/or HCD to issue clear guidance to jurisdictions reviewing these projects, as to whether public health and safety are protected and satisfied by allowing the construction of high density residential towers immediately adjacent or within a half mile of severe wildfire risk zones. If the State mandates these projects despite the patent and severe risks, than at least the Town should be indemnified from liability. The State should immunize jurisdictions for compelling them to approve high density residential projects under SB 330 when doing so clearly raise very significant health and safety risks to both current and future residents of the community.

Regardless, while the Town seeks to gain clarity from HCD, the State or the Courts on these health and safety concerns. Los Gatos as an independent government entity in California can proceed independently without any prior authorization, to act, on an Emergency basis, and immediately protect the health and safety of its current residents

by enacting a new Fire Building Code.

My legal research indicates that the Town as its own independent legal government entity in California has the right to enact and adopt its own, specific fire building codes that reflect the specific risks, geography, climate, and topography of our jurisdiction. Los Gatos is not obligated to adopt and implement any national or Statewide Fire Code. The Town has the legal authority to draft, adopt, and implement its own Fire Code reflecting the very specific Firefighting risks facing the hillside community with 3 different severe wildfire risk zones within our borders.

The Town is currently endangering the health and safety of its citizens, to whom they have a sworn duty to protect, by delegating the Building Fire Permit authority to a Central Fire clerk, working with an outdated Fire Code that was drafted and implemented without absolutely any consideration of the health and safety issues::

- The zones of severe wildfire risk coming down from the hillsides directly into Downtown Los Gatos;

- That the LA wildfires showed the urban water supply system failed leaving firefighters without sufficient water pressure and adequate water supply to fight the wildfire;

-That emergency evacuation Notices failed, and first responders were unsuccessful in evacuating in the region exposed to fire resulting in extremely high deaths and injuries;

- That the Los Angeles conflagration was spread from burning areas to areas up to a half a mile away that were uninvolved in the initial firestorm by windblown burning embers which firefighters had no ability to contain;

- That to now build very high density, high rise residential towers within, adjacent to, or within a half mile of severe wildfire risk zones presents an imminent, clear and present danger to public health and safety;

Los Gatos needs to immediately adopt a new, current Fire Building Code that

incorporates and mitigates the harsh realities and lessons from the tragic LA wildfires, as well area the large area of the community identified as being located within a severe wildfire risk zone.

If Los Gatos does not act independently and immediately,it will take years for the administrative process to collaborate and develop a new statewide firefighting building code to incorporate the recent lessons learned. Los Gatos needs to immediately take the leash of this beast, and on an emergency basis, inlight of the imminent clear and present threat to public health and safety adopt a new Fire Building Code that all new construction projects in Los Gatos must satisfy in order to obtain necessary permits before any construction can commence.

I make note that it from my review of some of the revised development plans submitted for some of the taller projects (6-13 story towers), to supply only that towers fire suppression needs, will significantly lower the water pressure available to the surrounding neighborhood!. The plans also indicate the specifics on their Fire suppression plans will be "deferred" until the time of sumbittal of the permits.. This appears to be an obfuscation and misleading the Town and Central Fire of the wildfire and firefighting risks addressed in this correspondence.

There is no requirement under state law that existing homeowners and neighborhoods should have their emergency water pressure reduced in order to facilitate these SB 330 projects. In fact, the underlying guidance in SB 330 is that these projects should proceed only where consistent with insuring the general health and safety of current residents.

While these residential towers with their fully sprinkled fire suppression systems and metal facades may be immune form wildfire risks, they accomplish same only by compromising the water pressure and water supply available for firefighters to suppress fire in the surrounding neighborhoods.

I urge the Town Council to immediately address this issue. From my limited research and without any specific expertise, can advise that the following measures must be incorporated into Los Gatos' new Fire Building Code

- Every new construction over 35' in height located within, or within one-half mile of any severe risk wildfire zone, must have an independent water supply system on site such that its fire suppression system is independent of the existing urban water system and will not affect either the available water supply or water pressure to any of the surrounding area. Such on site water supply system shall include dual gravity fed tanks and dual mechanically supplied water for its internal firefighting needs sufficient to suppress fire for 2 hours.
- Every new construction over 55' in height, more than one-half mile away from any severe wildfire risk zone, must have an independent water supply system on site such that its fire suppression system is independent of the existing urban water system and will not affect either the available water supply or water pressure to any of the surrounding area. Such on site water supply system shall include dual gravity fed tanks and dual mechanically supplied water for its internal firefighting needs sufficient to suppress fire for 2 hours.

Thank you for your courteous consideration of this matter.

Dear Mayor Hudes and Honorable Council Members,

Please accept this communication as a respectful plea to the Council to adopt a much more aggressive posture in reviewing all of these SB 330 applications. The current cautious and conservative review process, will fail to fully inform yourselves as decision makers of all the impacts on health and safety risks that these projects will impose on our community, especially when evaluated cumulatively.

The Town should insist that an EIR be conducted to identify all the impacts posed by these projects, rather than reviewing each individual application, especially the more massive developments. Or at a minimum, preparation of an EIR to

review the cumulative impacts all these projects will impose on a community such as ours with very limited resources.

Some of the impacts that are not being reviewed in any depth at all, during the current review process, include: the impacts on the Town's ability to fight urban wildfire, wildfire evacuation ability, building beyond the capacity of our urban waters supply system (to sustain fire fighting against wildfire), building beyond the capacity of our sewage system, building in known flood zones, cumulative impacts on our the capacities and service levels that can be sustained by our educational, roadway, emergency responders, and capital improvement systems.

These items address Health and Safety issues directly affecting current residents and the Town as a whole. Health and Safety issues should be a Town wide objective review standard. These are not issues affecting design or building standards. Health and Safety issues are protected review issues under the language of SB330. That statutory language recited protects the Town in taking action to gain information to promote public health and safety through the environmental review process.

SB 330 does not preclude a California jurisdiction from requiring EIRs for builder remedy projects. I have completed some research and I am unaware of any subsequent legislation that has been adopted by the State that specifically prevents jurisdictions from requiring Environmental Impact Reports on any SB 330 development application. If I am misinformed here, I apologize. But what I have heard is that the Governor's Emergency Declaration relating solely to the affected LA wildfire area, somehow, now prohibits agencies demanding EIRs be prepared for any Builders Remedy Projects. I strongly disagree. I believe the legal representatives of these applicants are attempting to intimidate and threaten our elected officials by claiming legal rights that have not yet been granted.

So unless there is specific legislation changing the original scope and rights specified in SB 330, this Council should and must proceed to demand EIRs to protect public health and safety. I firmly believe whatever financial risks you fear, will be acceptable to your constituents. The people of this community want to protect our unique quality of life and ensure the ongoing health and safety of all residents. The very people you represent would rather the Town fight these projects undermining public health and safety, then have its elected leaders throw its hand into the air and say, "There is nothing we can do."

It is a time for strong leadership and accepting some risks for the future well being of all. Courage not fear. The people of this community will rally behind you!

Dear Mayor Hudes and Honorable Council Members,

Since the filing period for SB 330 projects has expired and the review process has first of which was two urban wildfires in the Los Angeles metropolitan area that manifested current fire codes and standards that identified inadequacies for emergency responders to save life and property. Firefighting resources proved woefully inadequate and the urban/municipal water supply was exhausted briefly after the conflagration commenced.The extreme risk of wildfire spreading in wildfire risk zones can be seen in the rapid spread of wildfire in the urbanized and densely populated areas that occurred in quarter-mile leaps by windblown embers.These areas, once thought completely safe from the threat, helped with the

consideration of community development by illustrating entirely new threats to health and safety issues.

The second critical change after 1/1/25 that occurred was when CALFIRE finalized its zone maps, identifying Los Gatos zones to be at severe wildfire risk. As you are well aware, the land area of Los Gatos indicated to be at risk for severe wildfire has greatly increased from what previous analysis had predicted. There are some SB 330 projects proposed that are either within, adjacent to, or within a half mile of a severe wildfire risk zone. The idea of greatly intensifying residential densities in areas identified as subject to severe wildfire risk is objective grounds to question the health and safety of proceeding with these projects. commenced, there have been two critically significant changes to the health and safety and the sustainability of residential habitation in identified portions of Los Gatos. Both of these critically significant public health and safety changes occurred after January 1, 2025.

Whether these facts alone give the Town valid legal grounds to deny these projects is an open legal question, but it does seem prudent for the Town to make inquiry and require the State and/or HCD to issue clear guidance to jurisdictions reviewing these projects. It must be brought into question and consideration whether public health and safety is protected and satisfied by allowing the construction of high density residential towers immediately adjacent to or within a half mile of severe wildfire risk zones.

If the State mandates these projects despite the patent and severe risks, then the Town should be indemnified from liability at least. The State should immunize jurisdictions for compelling them to approve high-density residential projects under SB 330 when doing so clearly raises very significant health and safety risks to both current and future residents of the community.

Regardless, Los Gatos as an independent government entity in California can proceed independently, without any prior authorization, to act on an Emergency basis and immediately protect the health and safety of its current residents by enacting a new Fire Building Code.

My legal research indicates that the Town, as its own independent legal government entity in California, has the right to enact and adopt its own specific Fire Building Codes that reflect the specific risks- geography, climate, and topography- of our jurisdiction. Los Gatos is not obligated to adopt and implement any national or Statewide Fire Code. The Town has the legal authority to draft, adopt, and implement its own Fire Code reflecting the very specific firefighting risks facing a hillside community with 3 different severe wildfire risk zones within its borders.

The Town is currently endangering the health and safety of its citizens, to whom they have a sworn duty to protect, by delegating the Building Fire Permit authority to a Central Fire Clerk working with an outdated Fire Code that was drafted and implemented without absolutely any consideration of the health and safety issues pertaining to:

- The severe wildfire risk zones coming down from the hillsides directly into Downtown Los Gatos;

- The LA wildfires that showed the urban water supply system failure, leaving firefighters without sufficient water pressure and adequate water supply to fight the wildfire;

-The emergency evacuation Notice failure and first responders being unsuccessful in evacuating the region exposed to fire, thus resulting in extremely high deaths and injuries;

- That the Los Angeles conflagration spread, burning areas up to a half a mile away that were uninvolved in the initial firestorm by windblown burning embers, which firefighters had no ability to contain;

- That building very high density high rise residential towers within, adjacent to, or within a half mile of severe wildfire risk zones presents an imminent, clear and present danger to public health and safety.

Los Gatos needs to immediately adopt a new Fire Building Code that incorporates and mitigates the harsh realities and lessons from the tragic LA wildfires. It must also account for the large area of the community identified to be located within a severe wildfire risk zone.

If Los Gatos does not act independently and immediately, it will take years for the administrative process to collaborate and develop a new statewide Firefighting Building Code to incorporate the recent lessons learned. Los Gatos needs to immediately take the leash of this beast on an emergency basis. In light of the imminent, clear, and present threat to public health and safety, Los Gatos should adopt a new Fire Building Code that all new construction projects in Los Gatos must satisfy in order to obtain necessary permits before any construction can commence.

From my review of some of the revised development plans submitted for some of the taller projects that are 6-13 story towers, they indicate that the supply of water is only to that tower's fire suppression needs and will significantly lower the water pressure available to the surrounding neighborhood. The plans also indicate the specifics on their Fire Suppression Plans will be "deferred" until the time of submission of the permits. This appears to be an obfuscation and is misleading the Town and Central Fire of the wildfire and firefighting risks addressed in this correspondence.

There is no need or requirement under state law that existing homeowners and neighborhoods should have their emergency water pressure reduced in order to facilitate these SB 330 projects. In fact, the underlying guidance in SB 330 is that these projects should proceed only where consistent with insuring the general health and safety of current residents.

While these residential towers, with their sprinkler fire suppression systems and metal facades may be less prone to wildfire risks, they compromise the water pressure and water supply available for firefighters to suppress fire in the surrounding neighborhoods.

I urge the Town Council to immediately address this issue. From my limited research and without any specific expertise, I can advise that the following measures must be incorporated into Los Gatos' new Fire Building Code:

• Every new construction over 35' in height, located within a half mile of any severe risk wildfire zone must have an independent water supply system on site. Its fire suppression system must be independent of the existing urban water system and will not affect either the available water supply or water pressure to any of the surrounding area. Such on-site water supply system shall include dual gravity fed tanks and dual mechanically supplied water for its internal firefighting needs sufficient to suppress fire for 2 hours.

• Every new construction over 55' in height, more than a half mile away from any severe wildfire risk zone must have an independent water supply system on site, such that its fire suppression system is independent of the existing urban water system and will not affect either the available water supply or water pressure to any of the surrounding area. Such on site water supply system shall include dual gravity fed tanks and dual mechanically supplied water for its internal firefighting needs sufficient to suppress fire for 2 hours.

Thank you for your courteous consideration of this matter.

Subject: Comments on Initial Study/Mitigated Negative Declaration for Surrey Farms Estates (SCH No. 2025090920)

Dear Ms. Walters and Members of the Planning Commission,

The Santa Clara Valley Bird Alliance (SCVBA) and the Sierra Club Loma Prieta Chapter (SCLP) respectfully submit the following comments on the Initial Study/Mitigated Negative Declaration (IS/MND) prepared for the proposed Surrey Farms Estates Subdivision at 178 Twin Oaks Drive. SCVBA is a nonprofit organization dedicated to the protection of birds, other wildlife, and their habitats across Santa Clara County. The Sierra Club mission is to promote the responsible use of the earth's ecosystems and resources.

As conservation organizations with members who live, recreate, and observe wildlife in Los Gatos and the Ross Creek watershed, we have a direct and substantial interest in ensuring full compliance with the California Environmental Quality Act (CEQA). Our long history of engagement in environmental review involving riparian corridors, oak woodlands, and hillside developments reflects our commitment to protecting regional biodiversity and ecological integrity. Given the project's location adjacent to critical habitat and wildlife movement corridors, rigorous environmental review is essential.

Based on our review of the IS/MND and the recent October 2025 comment letter from the San Francisco Bay Regional Water Quality Control Board (RWQCB), we find substantial evidence that the project may result in significant hydrological and biological impacts that are not adequately disclosed, analyzed, or mitigated. As detailed below, the IS/MND fails to address the jurisdictional status of an on-site ephemeral drainage, potential dewatering of riparian habitat, habitat fragmentation for wildlife, impacts from lighting and collision hazards to birds, and procedural conflicts with CEQA's fair argument standard.

For these reasons, the Town must withdraw the IS/MND and prepare a full Environmental Impact Report (EIR) to ensure adequate environmental review in compliance with CEQA.

Project Overview and Summary of Environmental Concerns

The proposed Surrey Farms Estates project would subdivide approximately 17.5 acres within a hillside area at 178 Twin Oaks Drive, to construct multiple single-family residences, internal roadways, driveways, and associated infrastructure. The site includes oak woodland, sloped topography, and an ephemeral drainage feature that ultimately conveys runoff toward Ross Creek. Despite the project's location within an ecologically sensitive transition zone between existing development and natural hillside habitat, the IS/MND concludes that all potential impacts can be mitigated to less-than-significant levels without the preparation of an Environmental Impact Report (EIR).

However, substantial evidence in the record, including evidence provided in the October 2025 comment letter from the San Francisco Bay Regional Water Quality Control Board (RWQCB), demonstrates that the project may cause significant environmental impacts that have not been fully evaluated or mitigated. These include, but are not limited to:

- **Hydrologic impacts** to a potentially jurisdictional ephemeral creek, including diversion of contributing stormwater flows that may result in dewatering of riparian vegetation,

- **Loss and fragmentation of biological habitat**, including oak woodland, wildlife corridors, and breeding/nesting habitat for birds, raptors, and pollinators such as Crotch's Bumble Bee,

- **Unaddressed light pollution and bird collision risks** associated with hillside residential development and night lighting at the wildland–urban interface, and

- **Procedural deficiencies under CEQA**, including reliance on deferred mitigation, absence of required agency consultation, and disregard of substantial evidence submitted by a responsible agency.

Under CEQA's "fair argument" standard (Guidelines §§15064, 15065), the existence of substantial evidence supporting a reasonable possibility of significant effects mandates preparation of an EIR. The presence of unresolved agency disagreement, particularly from the RWQCB, a responsible agency with jurisdiction over waters of the State, further compels elevation of environmental review. These omissions provide substantial evidence of a fair argument that the project may have a significant effect on the environment, requiring preparation of an EIR under CEQA Guidelines §§15064 and 15065.

Accordingly, SCVBA and SCLP submit that adoption of a Mitigated Negative Declaration would be legally improper, and that a full Environmental Impact Report is required to analyze, disclose, and mitigate the project's hydrologic, ecological, and cumulative impacts.

I. Hydrology and Waters of the State: Dewatering, Jurisdiction, and RWQCB Conflict

The IS/MND fails to properly evaluate or mitigate significant hydrologic impacts to an on-site ephemeral drainage that is subject to potential jurisdiction by the San Francisco Bay Regional Water Quality Control Board (RWQCB) and the California Department of Fish and Wildlife (CDFW). The document relies exclusively on a determination by the U.S. Army Corps of Engineers regarding federal jurisdiction, while omitting State jurisdictional standards under the Porter-Cologne Water Quality Control Act and Fish and Game Code §1602.

A. Unresolved Jurisdiction over Waters of the State

The IS/MND asserts that the on-site ephemeral drainage is "non-jurisdictional," yet it provides no confirmation or concurrence from RWQCB or CDFW. This omission directly conflicts with the RWQCB's October 2025 comment letter, which reiterates the agency's ongoing concern:

> "Ten years after our initial comment letter, we remain concerned that the extent of waters subject to the jurisdiction of the Water Board and the California Department of Fish and Wildlife… has not been confirmed… Until jurisdiction is determined, the Project should assume that the ephemeral creek is a water of the State."

Waters of the State are defined independently of federal jurisdiction and include seasonal and ephemeral drainages under the Porter-Cologne Act. Failure to acknowledge jurisdiction of a State-regulated waterway constitutes a procedural and substantive CEQA flaw, as the project may require Waste Discharge Requirements (WDRs) or Clean Water Act §401 certification from RWQCB, and a Lake and Streambed Alteration Agreement (LSAA) from CDFW.

B. Diversion and Dewatering of Riparian Flow

Current site hydrology supports riparian vegetation and wildlife habitat along the ephemeral drainage. The IS/MND proposes bioretention basins and pervious pavements designed to **divert**

stormwater runoff into storm drains, away from the natural drainage. As RWQCB emphasizes:

> "Stormwater runoff that currently supports riparian vegetation along the ephemeral creek would be diverted… This could deprive riparian vegetation of sufficient water to sustain the vegetation, a significant impact to the creek."

The MND does not contain any hydromodification management analysis, despite the Town's obligations under the Municipal Regional Stormwater Permit (MRP). No measures are provided to maintain base flows, protect channel stability, or preserve riparian hydrology.

C. Inconsistency with the Los Gatos General Plan

The Los Gatos General Plan calls for protection of riparian corridors, habitat connectivity, and natural hydrologic functions. An ephemeral creek that supports riparian growth is subject to these protections, and cannot be dismissed without agency consultation or hydrological analysis.

D. Lack of Enforceable Maintenance and Ownership Measures

The IS/MND defers long-term maintenance to a future homeowners' association (HOA), without identifying:

- Responsibility for inspection and repair of stormwater infrastructure,
- Funding mechanisms for hydrologic mitigation, or
- Standards for performance over time.

Deferred mitigation violates CEQA Guidelines §15126.4(a)(1)(B), which prohibits mitigation dependent on undefined future actions.

Conclusion on Hydrology

Because substantial evidence demonstrates the potential for significant hydrologic impacts - including dewatering of a State-regulated waterway - CEQA mandates preparation of an Environmental Impact Report. The IS/MND must be withdrawn or recirculated to address these deficiencies.

II. Bird Collisions with Glass

Bird collisions with glass are one of the leading human-caused sources of bird mortality in North America. Scientists estimate that up to one billion birds die each year in the United States from collisions with buildings and transparent or reflective surfaces. This is not a marginal issue; it is a primary driver in the continent-wide decline of bird populations, including species already stressed by habitat loss, climate change, and drought.

Birds do not perceive glass as a barrier. They see reflected sky or vegetation and attempt to fly through it, or they see a direct line of habitat through a structure and follow a "line of flight", often fatally. While some environmental documents briefly acknowledge reflective glass, a truly protective approach must also address clear glass and see-through conditions, such as parallel glass façades or corridors that create direct flight paths through structures, as well as stand-alone glass elements such as balcony railings.

These features can be especially hazardous in hillside or riparian-edge developments, where migrating and resident birds move through tree canopy or along drainages. Local oak woodland and creek corridors serve as flyways for warblers, thrushes, towhees, and raptors, species that cannot adapt to invisible barriers.

Los Gatos General Plan Recognizes Bird Collision Risk

Importantly, the **Town of Los Gatos 2040 General Plan explicitly acknowledges bird collisions as a serious environmental concern** and commits to requiring safer building design. Under the *Environment and Sustainability Element*, the Town states:

> *"Require new development to increase bird safety by reducing hazardous building and architectural elements, and including bird safe and lighting design."*

The General Plan further anticipates a dedicated **Bird Safety Ordinance** to reduce collisions with windows and regulate hazardous materials and lighting:

> *"Adopt a Bird Safety Ordinance to reduce bird collisions with windows… regulate building design and lighting implementation."*

Despite these commitments, the environmental document does not analyze bird collision hazards nor propose any bird-safe measures for glazing, transparency, or façade design. This absence creates a direct inconsistency between the project and the Town's adopted policy direction.

Architectural Collision Hazards That Must Be Addressed

Basic bird-safe design is especially critical in hillside and riparian-edge developments where migratory routes cross tree canopies and drainages. Hazardous features include:

- **Expansive reflective glass** facing vegetation
- **Parallel or transparent façades** creating "line-of-flight" conditions, and
- **Glass balcony railings, corner glazing, and atriums** that create illusions of open passage

These features are known to cause high-speed bird strikes, a long-term operational impact that CEQA requires agencies to identify and mitigate.

CEQA Requires Addressing Operational Wildlife Mortality

CEQA evaluates not only temporary construction effects but long-term biological impacts from the operation of the built environment. Because bird-glass collision mortality is foreseeable, preventable, and recognized in Town policy, it must be mitigated at the project level through enforceable measures such as patterned glazing, reduced reflectivity, and design alterations to eliminate see-through corridors.

Conclusion

Given the Town of Los Gatos' explicit policy to **"increase bird safety by reducing hazardous building elements,"** it is essential that this project incorporate bird-safe architectural standards. Absent such measures, the project would perpetuate a known and significant source of avoidable wildlife mortality, inconsistent with both CEQA and the Town's own General Plan.

III. Artificial Lighting (ALAN) and Impacts on Wildlife and Ecological Health

Artificial Light at Night (ALAN) poses significant and well-documented impacts on wildlife, ecological function, and human health. While the environmental document discusses lighting only from an aesthetic or glare perspective, the evaluation of lighting impacts on **biological resources**, including migratory birds, nocturnal wildlife, and ecosystems is warranted. Light is not merely a visual issue, it is a biological force that disrupts circadian systems, navigation, foraging, predator-prey behavior, and reproductive timing.

Los Gatos General Plan: Lighting is a Biological Resource Concern

The **Town of Los Gatos 2040 General Plan** expressly recognizes lighting as an environmental impact affecting wildlife, not just visual character. Under the *Environment and Sustainability Element*, the Town directs:

> *"Require the design of building, street, landscape, and parking area lighting to improve safety, energy efficiency,* ***protection of the night skies (dark sky***

***protections), biological resources**, and environmental soundness."*

The General Plan also calls for a **Dark Skies Ordinance** to minimize ecological disruption:

> *"Adopt a Dark Skies Ordinance ... to regulate exterior lighting, skyglow, and impacts to wildlife."*

Despite these adopted policy commitments, the MND does not analyze lighting impacts on wildlife movement, riparian corridors, or nocturnal species. It treats lighting solely in terms of visual compatibility with surrounding homes, overlooking its ecological consequences.

Scientific Basis: Why ALAN Is an Ecological Impact

Peer-reviewed research has shown that nighttime lighting causes the following:

- **Disorients migrating birds**, pulling them off-route into developed areas where collision risk increases,
- **Disrupts circadian hormones** in wildlife and humans by suppressing melatonin,
- **Alters predator–prey dynamics**, favoring some species (rats, crows) over others (owls, bats), and
- **Reduces insect populations**, which cascades upward to birds and bats reliant on them.

Blue-rich light (high CCT LEDs) is especially harmful. The spectral range of 4000–5000K commonly used in development has been linked to higher disorientation and physiological stress in wildlife. Warm-spectrum lighting at **2700 Kelvin or below** significantly reduces ecological disruption.

Location Sensitivity: Hillsides and Riparian Zones

Lighting impacts are particularly severe at the **urban–wildland interface**, such as hillside developments bordering Ross Creek and oak woodland. These areas support nighttime movement of the following:

- Owls (Great Horned, Barn Owl),
- Bats and nocturnal pollinators, and

- Migratory thrushes, warblers, and tanagers navigating by starlight.

General Plan implementation guidance even identifies **riparian corridor lighting** as an ecological concern requiring directional control:

> *"Require careful lighting design in and near natural riparian corridors to direct light away and maximize the distance between nighttime lighting and the corridor."*

This heightened sensitivity is entirely absent in the MND.

Recommended Mitigation – Consistent with General Plan

To comply with CEQA and align with General Plan sustainability goals, outdoor lighting should incorporate the following:

- **Full shielding and downward direction** (no uplight, no spill into habitat),
- **2700K or lower color temperature** to minimize harmful blue light,
- **Automatic shut-off or curfews after 10:00 PM**, except motion-activated security lighting, and
- **No unshielded façade or landscape lighting** near riparian or canopy edges.

Conclusion on Lighting

By omitting wildlife analysis and relying solely on human visual standards, the MND fails to address a documented environmental impact recognized in both science and Town policy. Effective lighting mitigation must protect ecological function, not just visual ambiance. A full EIR is warranted to evaluate operational lighting impacts in this sensitive hillside and riparian environment.

IV. Biological and Wildlife Impacts: Habitat Loss, Fragmentation, and Special-Status Species

The IS/MND fails to adequately assess significant and irreversible impacts to biological resources, including native woodland habitat, wildlife movement corridors, nesting birds, and special-status pollinators. The project lies within a transitional zone between developed hillside residences and the Ross Creek watershed, an area known to support raptors, migratory songbirds, and oak-associated wildlife. The document's reliance on generic pre-construction surveys does not satisfy CEQA's requirements for identification, analysis, and mitigation of long-term habitat impacts.

A. Oak Woodland and Habitat Fragmentation

The project would remove a substantial number of mature coast live oaks and associated understory vegetation. Oak woodlands provide critical foraging, roosting, and nesting habitat for species such as Acorn Woodpecker, American Kestrel, Red-Shouldered Hawk, and multiple migratory warblers. Despite the scale of proposed vegetation clearing, the IS/MND does not quantify total tree loss, assess habitat fragmentation, or evaluate impacts to wildlife corridor functionality across the Ross Creek drainage interface.

Fragmentation of woodland habitat at this location poses long-term ecological consequences, including reduced canopy continuity, loss of acorn mast availability, and disruption of species movement between hillside and riparian zones. CEQA requires disclosure and mitigation of such impacts (Guidelines §15380), which the MND does not provide.

B. Riparian Dependency and Loss of Hydrologic Support

The IS/MND acknowledges the presence of an ephemeral drainage but incorrectly concludes there will be no biological impact. As documented by the RWQCB, the project's stormwater design would redirect runoff away from the drainage, depriving the riparian system of seasonal hydrology:

> "Stormwater runoff that currently supports riparian vegetation… would be diverted… This could deprive riparian vegetation of sufficient water to sustain the vegetation."

The biological effects of hydrologic alteration, loss of vegetative cover, reduced insect prey availability, and increased temperature exposure, were not analyzed.

C. Nesting Birds and Raptors: Inadequate Mitigation

The site supports habitat suitable for breeding birds protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code §3503. However, the IS/MND proposes only seasonal nest surveys, deferring species protection to future conditions. CEQA prohibits reliance on deferred mitigation in place of substantive analysis. Permanent loss of nesting and roosting habitat is not mitigated by temporal surveying.

Raptor species such as Red-tailed Hawk, Cooper's Hawk, and Great Horned Owl are known to utilize this region. The MND does not analyze displacement, loss of hunting perches, or effects on prey availability.

D. Special-Status Pollinators: Omission of Crotch's Bumble Bee

The IS/MND omits any analysis of special-status invertebrates, including **Crotch's Bumble Bee (Bombus crotchii)**, a California Endangered Species Act (CESA) Candidate species. This omission violates CEQA Guidelines §15380, which requires treatment of candidate species as threatened or endangered. Oak-woodland and chaparral-edge habitats within Santa Clara County are within the known range of this species.

No botanical or pollinator surveys appear to have been conducted.

Conclusion on Biological Impacts

The MND fails to disclose the scale of habitat conversion, analyze biological connectivity, or mitigate for permanent ecological loss. Substantial evidence supports a fair argument that the project may have significant biological impacts, requiring a full Environmental Impact Report.

V. CEQA Procedural Failures: Reliance on an MND is Legally Improper

The IS/MND for Surrey Farms Estates does not comply with the procedural requirements of the California Environmental Quality Act (CEQA). Multiple deficiencies in analysis, consultation, and mitigation demonstrate that reliance on a Mitigated Negative Declaration is legally improper. Under CEQA's "fair argument" standard, the presence of substantial evidence supporting a significant impact mandates preparation of an Environmental Impact Report (EIR).

A. Failure to Apply the Fair Argument Standard

CEQA Guidelines §15064(f)(1) requires an EIR where substantial evidence indicates a project may have a significant effect on the environment, even if the lead agency believes impacts can be mitigated. In this case, expert agency evidence from the RWQCB clearly disputes the MND's conclusions on hydrology and biological impacts. Disagreement among experts requires an EIR, not an MND.

B. Deferral of Mitigation and Absence of Performance Standards

The IS/MND repeatedly defers mitigation to future plans, HOA oversight, or permitting processes, without defining performance standards or enforceable obligations. This violates CEQA Guidelines §15126.4(a)(1)(B), which prohibits reliance on unspecified or future mitigation, particularly where long-term resource impacts are involved (e.g., habitat loss, hydrology modification).

Examples of impermissible deferral include the following:

- Stormwater operation and maintenance left to an undefined HOA,

- Lack of binding commitments to preserve riparian flow or tree canopy, and
- Absence of defined mitigation ratios for habitat or tree removal.

C. Failure to Recirculate After New Substantial Evidence (RWQCB 2025 Letter)

The October 2025 RWQCB comment letter introduces substantial new evidence that the project may significantly impact waters of the State. Under CEQA Guidelines §15088.5, a lead agency must recirculate an environmental document when new information shows the project will result in new or substantially more severe impacts than previously disclosed. The Town did not recirculate, thereby depriving decision-makers and the public of a full review.

D. Misapplication of Housing Laws Does Not Exempt CEQA

While the project appears to invoke the Builder's Remedy provisions under Government Code §65589.5, CEQA remains fully applicable. Housing law does not waive or reduce CEQA review. Courts have consistently held that compliance with CEQA is mandatory and independent of zoning or housing authorization. The IS/MND's approach suggests environmental review is secondary to entitlement, which is legally incorrect.

Conclusion on Procedural Failures

The procedural shortcomings of the IS/MND, combined with substantive omissions in hydrology, biology, and lighting, render it legally indefensible under CEQA. A full Environmental Impact Report (EIR) is required to ensure compliance with state environmental law and to provide accurate assessment, disclosure, and mitigation of the project's impacts.

VI. Conclusion and Request for Preparation of an Environmental Impact Report

For the reasons outlined in the sections above, the Santa Clara Valley Bird Alliance finds that the Initial Study/Mitigated Negative Declaration for the Surrey Farms Estates project is inadequate under CEQA. Substantial evidence in the record, including technical comment from the Regional Water Quality Control Board, demonstrates that the project may cause significant environmental impacts that have not been fully analyzed, disclosed, or mitigated. These include potential dewatering of Waters of the State, permanent loss of biological habitat, wildlife disturbance from lighting, and unmitigated operational effects.

Under CEQA Guidelines §§15064 and 15065, a Mitigated Negative Declaration cannot be adopted where substantial evidence supports a fair argument of significant impact. Furthermore, CEQA Guidelines §15088.5 requires recirculation when new information indicates the potential for new or more severe impacts, as is the case with RWQCB's October 2025 letter.

Accordingly, SCVBA and SCLP respectfully requests the following from the Town of Los Gatos:

1. **Withdraw the Mitigated Negative Declaration**,

2. **Recirculate the environmental document** to incorporate agency concerns and hydrologic and biological analysis, and

3. **Prepare a full Environmental Impact Report (EIR)** that evaluates project alternatives, hydrologic modifications, biological resource impacts, lighting effects, and cumulative conditions within the Ross Creek watershed.

   The EIR must also include a reasonable range of alternatives that would reduce impacts to hydrology, wildlife corridors, and hillside habitat, as required under CEQA.

We appreciate the opportunity to provide these comments and remain available to participate in future consultation, provide biological expertise, and ensure that environmental review for this site reflects the region's ecological values and legal standards. Please include these comments in the administrative record for this project.

Respectfully,

Shani Kleinhaus, Ph.D.

Subject: Follow up on Drainage Issues & History of Surrey Farms

[EXTERNAL SENDER]

Hi Corvell,

Thank you for meeting with us a couple weeks ago. I apologize for the delay in getting this information to you. As we mentioned during the meeting, we have a sump pump on our property that runs regularly due to water flow/ groundwater flow, even when there is no rain. When there is rain, we have to sandbag the fence between our property and the hill (Dodge property); we have had our pool flood and fill with mud and dirt; and we are able to see the above-ground natural flow of Ross Creek. For your reference, I have attached:

(1) The History of Surrey Farms document

(2) Link to video and photos of water from hill during rainstorm

If there is any other information or documentation I can provide, please let me know. Additionally, if you would like to set up a site visit, we are happy to accommodate.

Kind regards,

Jill Fordyce

[redacted]

I. History of Surrey Farms Neighborhood and Previous Development Proposals for This Site

In 1956, the original Surrey Farms Development CC&Rs were recorded. In the mid-1970's, the last four houses on Longmeadow (185-191) were built. Around this same time, the Town was considering making Longmeadow a through-street, connecting to Kennedy and Shannon. That project was ultimately denied, primarily due to neighborhood resistance to the idea of transforming the quiet, closed Surrey Farms neighborhood into a thoroughfare. Around this time, it appears that similar proposals to extend Cerro Vista and Brooke Acres were also denied, making all three of these neighborhoods "cul de sac neighborhoods."

In September 1974, residents of the Surrey Farms neighborhood submitted a petition regarding "the future of Longmeadow Drive as it affects Surrey Farm." Discussing the proposed development of the last four homes on the street, Mrs. Lila June McGrath wrote: "If this proposed development assures the termination (i.e., deadend) of the road added onto Longmeadow Drive in the vicinity of Ross Creek, our grievance is diminished. This was the plan originally submitted by the developers with the blessing of the town government. If, on the other hand, this added-on road, at Longmeadow Dr. paves the way to ultimately turning Longmeadow Drive into a through-way from Kennedy Road to Shannon Road, the residents of Surrey Farm would strongly oppose the attachment of any public road..."

Mrs. McGrath sites three areas of concern held by the Surrey Farms residents of the mid-1970s: *"(1) the possible destruction of Surrey Farm as we now enjoy it and as we were assured it would remain; (2) the potential increase in pedestrian and traffic hazard; (3) A thought that the termination of Longmeadow Drive at Ross Creek might be a wholesome, intelligent and most*

logical place to call a halt to this never ending maze of interlocking roadway, and to this checkerboard square mentality we seem to be facing."

Ultimately, the Town agreed with Mrs. McGrath, and our home (191 Longmeadow Drive) and the Meleyco home (189 Longmeadow) became the end of Longmeadow, in a cul de sac, terminating any thought that Longmeadow—and indeed Surrey Farms—would have a connecting street.

On February 2, 1975, Bob and Dorothy Dodge and the Town of Los Gatos entered into a Land Conservation Contract with regard to the property in question, which now constituted the backdrop of the entire, and fully-developed Surrey Farms neighborhood. The contract itself stated that*: "The property is located in an agricultural preserve established by the Town."* The intent of the original Land Conservation Contract was to preserve the rural quality of the land, recognizing that the maintenance of open space and land of rural character holds significant value. It also gave a significant tax benefit to the landowner. This property has never been used for agricultural purposes, at least since 1948 (according to the Town), which pre-dates the Williamson Act contract.

On March 19, 1975, just after the Land Conservation Contract was signed and the decision to terminate Longmeadow was made, the Town Council approved the four-lot subdivision at the end of Longmeadow.

On May 8, 1975, a Cerro Vista Court extension road was denied by the Planning Commission. Thereafter, residents of Brooke Acres reasoned there would no longer be a road to connect to, and requested that Brooke Acres also be developed as a cul de sac "for the health, safety and welfare of the surrounding neighborhood, also by reasons of Sec. 1.4 Purpose of Ord. 867 (Zoning)."

On June 16, 1975, an ordinance was passed by the Town Council to rezone the hillside from HR-1:20 to RC.

In 1975, 187 Longmeadow was built.

On January 1, 1976, the first term of the Williamson commenced.

In 1976, 185, 189 and 191 Longmeadow were built.

These last four residences were constructed to end Longmeadow Drive in a manner that would assure that Surrey Farms would not encroach on Ross Creek and the floodplain and would not have a through street; and the proposal to create roads from Cerro Vista and Brooke Acres were denied and, thus all three surrounding neighborhoods became landlocked.

Prior to purchasing our home at 191 Longmeadow Drive in February 1999, we went to the Town and inquired as to the likelihood of the hill (proposed project site) being developed. Noting that it was Resource Conservation space, the clerk told us “not in your lifetime.” In 2016, the applicant herein submitted an application to cancel the Williamson Act Contract and to approve a ten-home planned development on the site. In August 2017, the Town prepared an EIR on the proposed project. According to the IS/MND, “although the project has since changed and the EIR was never certified by the Town, the setting of the site has remained the same and, thus, a number of the technical reports associated with the former project and 2017 EIR remain applicable to the proposed project.” (IS/MND p. 6)

On October 9, 2016, we submitted comments in response to the DEIR, which discussed all of the problems with regard to the project. Those comments are incorporated into the EIR as “Letter D - Fordyce Family” (pages 2-44 to 2-92). (The Town’s response to our comments can be found in the EIR at pages 2-93 to 2-108). We also submitted a response to the RDEIR on June 19, 2017, and to the Final EIR on February 28, 2018. Given that a number of the technical

reports associated with the former project are relied upon for the current project, we request that those documents, as well the entirety of the previous EIR be included in the record herein.

On May 1, 2018, the Town Council voted unanimously to decline a request to cancel the Williamson Act contract, thereby rejecting the proposed project. In reaching this decision, the Town Council acknowledged that the Williamson Act contract would expire in April 2025 and expressed a desire to find a way to permanently preserve the hill as open space and/or create a development plan that preserves a majority of the hillside as open space. The Town Council also specifically acknowledged that rural hillsides like this are part of the Town's essential identity and should be preserved.

In 2023, Robson Homes submitted a proposal to subdivide this same property into 12 parcels and construct 11 detached single family residences, 11 ADU's, and 2 BMP units in the form of attached single-family residential units to the town's Conceptual Development Advisory Committee (Application CD-23-001). In response to a notification and call for comments by the Conceptual Development Advisory Committee, we provided our 2018 submission in opposition to the previous proposed development, which outlined many of the issues confronting *any* proposed development of the property. The Conceptual Development Committee expressed the following concerns regarding the proposed Robson project: too many homes; the potential for even more structures with ADUs; the increase in traffic; fire access; the potential for increased water runoff; the loss of open space; the need for hillside preservation and wildlife corridors; overall impacts to environment and existing neighborhood; impact of increased density on fire safety and rain/erosion; a single ingress and egress. One commissioner noted that in 2023, the project has to be evaluated differently than in 2018 because of SB 9 and ADU's, noting that there would have to be a fair amount of less units. Another stated that there must be fewer homes for

many reasons including ingress/egress/access, the “real burden” on the neighborhood, and the water and drainage issues. Another summarized the recommendations of the Conceptual Design Committee as follows: the number of units proposed is excessive; the fire risk is severe; there should be the bare minimum for density; and the development needs to comply with hillside standards and guidelines. (Conceptual Development Advisory Committee Meeting April 12, 2023).

It should also be noted that before the proposed Robson development was before the Conceptual Design Advisory Committee, we were approached by Robson Homes to determine what they could do to mitigate the effects of the proposed project on the neighborhood. This included, among other things, discussion of a grove of trees in between the proposed development and the property lines along Longmeadow and Twin Oaks, and the possibility of deeding a portion of land to adjacent properties to ensure privacy.

To date, we have not been approached by the developer of the current proposed project to determine what, if anything, could be done to lessen the impact on the neighborhood and specifically, the homes directly adjacent to the site. We are unaware of this current proposed project going before the Conceptual Development Advisory Committee; therefore, this is our first opportunity to formally present our concerns with regard to the current proposed project to the Town.

One final note: over the years, many of us have been told by original Surrey Farms residents that there was a deal struck between the Town of Los Gatos and Bob Dodge during the time he was developing the neighborhood. According to that deal, he would get a certain density if the hill was preserved as resource conservation space and the rural backdrop to the developed neighborhood. I have not been able to find evidence of this deal in Town records, as the Planning

Commission and Town Council documents from this time period are sparse and not digitized; however, it should be noted that the Williamson Act contract entered into between Bob and Dorothy Dodge and the Town included the language: *"The property is located in an agricultural preserve established by the Town."*

Subject: 178 Twin Oaks Drive

Dear Ms. Walters,

The purpose of this note is to express serious concern about the Bioretention Basin (pond, man made wetland) proposed for this development.

In my judgment, the need for this pond is a clear indicator that the drainage from the proposed development will exceed the natural drainage capability of the land. The proposed development should be modified to eliminate this pond. Examples of options that should be considered are reducing the scope of the development such that the drainage will not require the pond or redesigning the drainage system, so it is completely underground (i.e. connecting it to the storm drain system serving the rest of Surrey Farm).

The pond as proposed will cause the accumulation of stagnant water which in turn will cause infestation of mosquitoes. The risk of West Nile Virus Disease transmitted by mosquitoes, which can be neurologically damaging as well as fatal, is unacceptable near the neighborhoods and school surrounding the proposed development. The lack of clarity about who will be responsible for the operation and maintenance of the pond will only exacerbate this risk.

In summary, the Planning Commission should direct the developer to create an alternative plan that will not require this pond and which will not have risk of flooding of the adjoining communities.

Sincerely Yours,

Christopher Bajorek

MITIGATION MONITORING AND REPORTING PROGRAM

INTRODUCTION

Section 15097 of the California Environmental Quality Act (CEQA) requires all State and local agencies to establish monitoring or reporting programs for projects approved by a public agency whenever approval involves the adoption of either a "mitigated negative declaration" or specified environmental findings related to environmental impact reports.

The following is the Mitigation Monitoring and Reporting Program (MMRP) for the Surrey Farms Estates Subdivision Project (proposed project). The intent of the MMRP is to ensure implementation of the mitigation measures identified within the Initial Study/Mitigated Negative Declaration (IS/MND) for this project. Unless otherwise noted, the cost of implementing the mitigation measures as prescribed by this MMRP shall be funded by the applicant.

COMPLIANCE CHECKLIST

The MMRP contained herein is intended to satisfy the requirements of CEQA as they relate to the IS/MND for the proposed project, prepared by the Town of Los Gatos. This MMRP is intended to be used by Town staff and mitigation monitoring personnel to ensure compliance with mitigation measures during project implementation. Mitigation measures identified in this MMRP were developed in the IS/MND that was prepared for the proposed project. The MMRP will provide for monitoring of construction activities as necessary and in-the-field identification and resolution of environmental concerns.

The proposed project IS/MND presents a detailed set of mitigation measures that will be implemented throughout the lifetime of the proposed project. Mitigation is defined by CEQA Guidelines, Section 15370, as a measure that:

- Avoids the impact altogether by not taking a certain action or parts of an action;
- Minimizes impacts by limiting the degree or magnitude of the action and its implementation;
- Rectifies the impact by repairing, rehabilitating, or restoring the impacted environment;
- Reduces or eliminates the impact over time by preservation and maintenance operations during the life of the project; or
- Compensates for the impact by replacing or providing substitute resources or environments.

Monitoring and documenting the implementation of mitigation measures will be coordinated by the Town of Los Gatos. The applicant will be responsible for fully understanding and effectively implementing the mitigation measures contained within the MMRP. The Town will be responsible for monitoring compliance.

MITIGATION MONITORING AND REPORTING PROGRAM

The following table indicates the item number, the checklist questions the measure is designed to address, the measure text, the monitoring agency, implementation schedule, and an area for sign-off indicating compliance.

		surveys, inspecting potential roosting habitat with fiberoptic cameras, or a combination thereof. *If a non-breeding bat colony is discovered, the individuals shall be humanely evicted via two-step removal under the direction of a qualified biologist to ensure that harm or take would not occur to any bats as a result of tree removal. Two-step removal can only occur during March 1 to April 15 and September 1 to October 15 to avoid harm to maternity and overwintering colonies.* *If a maternity colony is detected, then a qualified biologist shall determine an appropriate size for a construction-free buffer to be established around the tree and remain in place until the qualified biologist has determined that the nursery is inactive. Tree removal shall preferably be done between March 1 and April 15 or August 15 and October 15 to avoid interfering with an active nursery.* *Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.* San Francisco Dusky-Footed Woodrat *IV-7 A qualified biologist shall conduct a pre-construction survey for San Francisco dusky-footed woodrat nests between 30 and 14 days prior to the onset of construction activities. The survey shall encompass all construction zones within the woodland habitat and developed areas, and surrounding lands within 25 feet.*	Town of Los Gatos Planning Division	Between 30 and 14 days prior to the onset of construction activities	

MITIGATION MONITORING AND REPORTING PROGRAM SURREY FARMS ESTATES SUBDIVISION PROJECT					
Item Number	**Checklist Question**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-Off**
		Results of the assessment shall be submitted to the Town of Los Gatos Community Development Department. *Identified nests shall be avoided, where possible, and buffered by a minimum of 20 feet. If avoidance is not possible, the nest(s) shall be manually deconstructed by a qualified biologist when helpless young are not present, typically during the non-breeding season (October through January). If is the qualified biologist has determined that young may be present during the nest deconstruction, a suitable buffer of a minimum of 20 feet shall be established around the nest until a qualified biologist determines that the young are independent enough to successfully move from the deconstructed nest. Approximate age of the juveniles shall be recorded when observed and appropriate time shall be extrapolated out to when they would be independent from their parents; then the deconstruction can continue after the biologist confirms that the young are not present in the nest at the time. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.* <u>American Badger</u> *IV-8 During the course of the pre-construction surveys for other species, a qualified biologist shall also determine the presence or absence of badgers prior to the start of construction. If badgers are found to be absent, other*	Town of Los Gatos Planning Division	During the course of the pre-construction surveys for other species	

MITIGATION MONITORING AND REPORTING PROGRAM SURREY FARMS ESTATES SUBDIVISION PROJECT					
Item Number	**Checklist Question**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-Off**
		mitigations for the protection of badgers shall not be warranted. *If an active badger den is identified during pre-construction surveys within or immediately adjacent to an area subject to construction, a construction-free buffer of up to 300 feet shall be established around the den. Once a qualified biologist has determined that badger has vacated the burrow, the burrow can be collapsed or excavated, and ground disturbance can proceed. Should the burrow be determined to be a natal or reproductive den, and because badgers are known to use multiple burrows in a breeding burrow complex, a biological monitor shall be present on-site during construction activities in the vicinity of the burrows to ensure the buffer is adequate to avoid direct impacts to individuals or natal/reproductive den abandonment. The monitor shall be present until is the qualified biologist has determined that young are of an independent age and construction activities would not harm individual badgers.* *Additionally, all workers shall attend a "tailgate" training that includes a description of the species, a brief summary of the species' biology, and minimization measures and instructions on what to do if American badger is observed.* *Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.*			

MITIGATION MONITORING AND REPORTING PROGRAM SURREY FARMS ESTATES SUBDIVISION PROJECT					
Item Number	**Checklist Question**	**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-Off**
		Burrowing Owl *IV-9* *A qualified biologist shall conduct a preconstruction survey for burrowing owl following the 2012 CDFW Guidelines, or the most recent guidelines, which includes two surveys, one within 14 days prior to the start of construction and the second within 24 hours prior to the start of construction. If a lapse in project-related work of 15 calendar days or longer occurs, an additional survey shall be required prior to reinitiation. A written summary of the survey results shall be submitted to the Town of Los Gatos Community Development Department before any construction permits are issued. If burrowing owls or active burrows/refugia are not found, then further mitigation measures are not necessary.* *Identified burrowing owls shall be avoided and active burrowing owl burrows shall be avoided with a 250-foot non-disturbance buffer until the burrow is abandoned. The project biologist shall conduct a weekly check-in to confirm the buffer is still intact and confirm the current activity of that burrow. Proof of compliance with this mitigation measure shall be provided to the Town of Los Gatos Community Development Department.*	Town of Los Gatos Planning Division	Within 14 days prior to the start of construction and within 24 hours prior to the start of construction	
IV-e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	*IV-10* *Prior to the start of construction activities, the applicant shall comply with the Town of Los Gatos Tree Protection Ordinance and a tree removal permit shall be obtained from the Town for the removal of any on-site trees that qualify as a protected tree. If the trees proposed for removal are found to be in good condition, and the tree removal permit is*	Town of Los Gatos Planning Division	Prior to the start of construction activities	

MITIGATION MONITORING AND REPORTING PROGRAM SURREY FARMS ESTATES SUBDIVISION PROJECT						
Item Number	**Checklist Question**		**Mitigation Measure**	**Monitoring Agency**	**Implementation Schedule**	**Sign-Off**
			granted primarily for the convenience of the applicant, then the full cost and responsibility of such removal shall be borne by the applicant, including planting of replacement trees. According to the Tree Mitigation and Protection Plan prepared for the proposed project, the project would not meet the required on-site tree replacement requirement; thus, the project applicant shall pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code. The above noted requirements shall be completed to the satisfaction of the Town of Los Gatos Planning Division.			
V. Cultural Resources						
V-b; V-c	Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5; or disturb any human remains, including those interred outside of dedicated cemeteries?	*V-1*	*If historic, archaeological, or paleontological resources are encountered during subsurface excavation activities, all construction activities within a 100-foot radius of the resource shall cease until a qualified archaeologist determines whether the resource requires further study. The Town shall require that the applicant include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. Any previously undiscovered resources found during construction shall be recorded on appropriate California Department of Parks and Recreation forms and evaluated for significance in terms of California Environmental Quality Act (CEQA) criteria by a qualified archaeologist. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell*	The Town of Los Gatos Community Development Department	During construction, if historic, archaeological, or paleontological resources are encountered during subsurface excavation activities

			notify the Native American Heritage Commission (NAHC), which then will designate a Native American Most Likely Descendant (MLD) for the project (Section 5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the applicant does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the Public Resources Code). If an agreement is not reached, the qualified archaeologist or MLD must rebury the remains where they will not be further disturbed (Section 5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate Information Center, using an open space or conservation zoning designation or easement, or recording a reinternment document with the county in which the property is located (AB 2641). Work cannot resume within the no-work radius until the lead agency, through consultation as appropriate, determines that the treatment measures have been completed to the Town's satisfaction.

	evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				

RESPONSES TO COMMENTS

INTRODUCTION

This Responses to Comments document contains comments received during the public review period of the Surrey Farms Estates Subdivision Project Initial Study/Mitigated Negative Declaration (IS/MND).

According to CEQA Guidelines Sections 15073 and 15074, the lead agency must consider the comments received during consultation and review periods together with the IS/MND. However, unlike with an Environmental Impact Report (EIR), comments received on an IS/MND are not required to be attached to the negative declaration, nor must the lead agency make specific written responses to public agencies. Nonetheless, the lead agency has chosen to provide responses to the comments for consideration by the Town decision-makers.

BACKGROUND

The Town of Los Gatos used the following methods to solicit public input on the IS/MND: a Notice of Completion of the IS/MND was posted with the State Clearinghouse on September 19, 2025. The IS/MND was distributed to applicable public agencies, responsible agencies, and interested individuals. In addition, copies of the document were made available at the Town of Los Gatos Town Hall, located at 110 East Main Street. Electronic copies of the IS/MND were also available on the Town's website at the following page: https://www.losgatosca.gov/DocumentCenter/Index/2227. The public review period ended October 8, 2025.

LIST OF COMMENTERS

The Town of Los Gatos received 24 comment letters during the public review period of the IS/MND for the proposed project. The comment letters were received from the following agencies and individuals, and are included in the Responses to Comments section below:

Agencies

Letter 1 ..... San Francisco Bay Regional Water Quality Control Board

Individuals

Letter 2 ..... Ken and Pat Arendt
Letter 3 ..... Sameer Bidichandani and Shabina Mirajkar

RESPONSES TO COMMENTS

The Responses to Comments below include each comment letter received regarding the Surrey Farms Estates Subdivision Project IS/MND, as well as responses to each comment. Each bracketed comment letter has been numbered at the top and bracketed to indicate how the letter has been divided into individual comments. Each comment is given a number with the letter number appearing first, followed by the comment number. For example, the first comment in Letter 1 would have the following format: 1-1. The response to each comment will reference the comment number.

Where revisions to the IS/MND text were made, new text is double underlined and deleted text is ~~struck through~~. All such revisions to the IS/MND are minor and merely clarify, amplify, or make insignificant modifications that do not affect the adequacy of the conclusions presented therein. CEQA Guidelines Section 15073.5 states the following regarding recirculation requirements for negative declarations:

> (c) Recirculation is not required under the following circumstances:
>
> (1) Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.
>
> (2) New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.
>
> (3) Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA, which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.
>
> (4) New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.

Based on the above, pursuant to CEQA Guidelines Section 15073.5, recirculation of the IS/MND is not warranted.

Initial Study / Mitigated Negative Declaration, 178 Twin Oaks, Surrey Farms Estates Subdivision Project
SCH No. 2025090920

Dear Ms. Walters

This is the third comment letter provided by San Francisco Bay Regional Water Quality Control Board (Water Board) staff on proposals to develop a residential subdivision at 178 Twin Oaks Drive in the Town of Los Gatos (Project). We provided comments on the Draft Environmental Impact Report (DEIR) on October 8, 2015, and comments on a recirculated DEIR on June 12, 2017 (See Attachments). As we note below in our comments on the Initial Study / Mitigated Negative Declaration (ISMND), 10 years after our initial comment letter, we remain concerned that the extent of waters subject to the jurisdiction of the Water Board and the California Department of Fish and Wildlife (CDFW) in the ephemeral creek at the Project site has not been confirmed and that State jurisdictional waters may be impacted by the proposed Project. In addition, we have concerns with the proposed post construction stormwater treatment measures, which may be difficult to inspect and may also dewater the ephemeral channel.

1-1

Comment 1. The ISMND does not acknowledge the potential need to obtain approvals from the Water Board and CDFW.
The Water Board and CDFW have not been asked to confirm the full extent of jurisdictional waters of the State associated with the ephemeral creek channel at the Project site. If the Project will impact a jurisdictional ephemeral creek either through fill of a portion of the creek or through disconnecting the creek from its watershed, approvals will be necessary from the Water Board and CDFW.

1-2

Comment 2. Section IV, Biological Resources, asserts that the ephemeral creek is not a water of the State without providing documentation that State agencies concur with this assertion.
The ISMND includes the following text on Page 48.

Letter 1 cont.

> The on-site ephemeral drainage with swales was determined not to be considered jurisdictional water of the U.S. or the State. Nonetheless, as shown in Figure 3, the proposed project would be designed to incorporate a minimum 10-foot buffer between the proposed development and the vegetation surrounding the ephemeral drainage. As such, the ephemeral drainage with swales would not be directly impacted by the proposed project. Similarly, as discussed above, the proposed project would retain the 100- to 110-foot flood easement between the development footprint and Ross Creek. Therefore, the proposed project would not result in the disturbance of any on-site wetlands.

The ISMND notes that the U.S. Army Corps of Engineers (Corps) has determined that the ephemeral creek is not a water of the U.S. However, no documentation is provided that the Water Board or CDFW have determined that the ephemeral creek is not a water of the State. Until the Water Board and CDFW have assessed the jurisdictional status of the ephemeral creek, the Project should assume that the ephemeral creek is a water of the State.

1-2 cont.

The ISMND states that a 10-foot buffer will be established along vegetation adjacent to the ephemeral creek. However, a topographic map of the Project site provided on the Town of Los Gatos' (Town's) website indicates that the channel appears to extend upstream from the uppermost cluster of vegetation. Based on the topographic map, the footprint of the access road may fill the upper portion of the ephemeral creek. If this is the case, the road should be redesigned to completely avoid the upper end of the ephemeral creek or mitigation should be proposed for impacting the ephemeral creek.

Also, as discussed below in Comment 5, the proposed stormwater treatment infrastructure appears to divert the runoff that currently sustains the ephemeral creek into the bioretention areas and pervious pavement. From the bioretention areas and pervious pavement, the treated runoff would be discharged to the municipal storm drain system. This will deprive the ephemeral creek of the hydrology necessary to sustain the preserved vegetation along the creek. We encourage the Project to redesign the proposed post-construction stormwater treatment system to direct treated runoff back to the ephemeral creek.

At this time, we disagree with the conclusion presented on page 49 of the ISMND, that asserts that the proposed Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community.

Comment 3. The proposed use of pervious pavement may not be appropriate at the Project site.

1-3

Text on page 73 in Section X, Hydrology and Water Quality, states that:

> A portion of the internal roadway, as well as the proposed driveways, would be lined with pervious pavement to allow for stormwater infiltration.

1-3 cont.

However, it is not clear from the ISMND if the soils at the Project site are sufficiently permeable to make the use of pervious pavement an effective form of treatment or if the steep topography of portions of the Project site is appropriate for the use of pervious pavement. Pervious pavements shouldn't be used on slopes greater than 5 percent (without underdrains) or 16 percent (with underdrains). Please provide the slopes of the roads and driveways at which pervious pavement is proposed, along with the permeability of the underlying soils at the site. If underdrains are required for the pervious pavement, please include designs for the underdrains.

Comment 4. The ISMND does not identify the responsible party for operation and maintenance of stormwater treatment infrastructure or the treatment proposed to mitigate the impact of hydrograph modification.

As a permittee under the Municipal Regional Stormwater NPDES Permit (MRP) (Order No. R2-2022-0018, as amended; NPDES Permit No. CAS612008), the Town must ensure that stormwater runoff from new areas of impervious surfaces is treated in conformance with Section C.3 of the MRP. In addition to confirming that proposed treatment measures are appropriately sized and designed, the Town must confirm that the Project's stormwater treatment measures are operated and maintained in conformance with the requirements of the MRP.

1-4

For a new subdivision, it is easiest to confirm the proper operation and maintenance of stormwater treatment measures if they are maintained by a Homeowners Association (HOA), rather than individual homeowners. And there is also less risk of damage to the bioretention areas if the bioretention areas and any necessary hydromodification management measures are located on land that is held in fee title by the HOA. The Covenants, Contracts, and Restrictions (CC&Rs) for the HOA provide a legally binding mechanism for ensuring that stormwater treatment and management measures are operated and maintained in conformance with the requirements of the MRP.

To facilitate the Town's ability to inspect bioretention areas for proper operation and maintenance, the bioretention areas should be visible from public roadways. In the current design, the bioretention areas at Lots 5, 6, and 10 would be difficult to inspect from the roadway.

Finally, the ISMND lacks a discussion of hydromodification management measures. Section X should be revised to discuss the need for MRP-compliant hydromodification measures.

Comment 5. The proposed stormwater treatment measures will dewater the preserved ephemeral creek channel.

1-5

Page 16 of the ISMND contains the following text:

> Following on-site treatment, stormwater flows would be directed to the existing 27- and 36-inch storm drains located north and west of the site, respectively.

Letter 1 cont.

1-5 cont.

Stormwater runoff that currently supports riparian vegetation along the ephemeral creek would be diverted to storm drains. This could deprive riparian vegetation along the ephemeral creek of sufficient water to sustain the vegetation. We urge the Project design team to redesign the stormwater treatment system to discharge treated runoff of the ephemeral creek. Diverting water away from the ephemeral creek channel would be a significant impact to the creek.

Sincerely,

Brian K. Wines

Attn: Marni Moseley (MMosely@losgatosca.gov)

Subject: Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006, Town of Los Gatos, Santa Clara County
SCH No. 2012072027

Dear Ms. Moseley:

San Francisco Bay Regional Water Quality Control Board (Water Board) staff has reviewed the *Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006* (DEIR). The DEIR assesses potential impacts associated with approving a General Plan Amendment that would allow the 17.55-acre site at 170 Twin Oaks Drive to be developed with 10 single-family residences. Water Board staff have the following comments on the ISMND.

Comment 1. Section 4.3, Biological Resources. The extent of waters of the State should be verified.
Water Board staff encourage the project proponent to contact U.S. Army Corps of Engineers (Corps) regulatory staff, California Department of Fish and Wildlife (CDFW) staff, and Water Board staff to confirm the jurisdictional status of the ephemeral headwater tributary to Ross Creek at the Project site. If the apparent full apparent extent of the ephemeral creek is a jurisdictional water of the State, then the Project should be redesigned to avoid the channel to the maximum extent practicable. When we review applications for permits to fill waters of the State, we require that the applicant demonstrate that all opportunities to avoid or minimize fill in waters of the State have been avoided. The project proponent should not assume that all proposed fill at the project site will be authorized by the Water Board.

Comment 2. Section 4.3, Biological Resources. Mitigation Measure 4.3-7, of the DEIR does not include a concrete mitigation proposal and is, therefore, inadequate.
For proposed impacts to the ephemeral channel, Mitigation Measure 4.3-7 consists of the following:

a. Prior to initiation of project construction, the project proponent shall secure a verified jurisdictional determination from the USACE.

Letter 1 cont.

b. For impacts to federally regulated waters of the U.S. that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CWA. The project proponent shall comply with all permit conditions, as specified by the USACE. Mitigation ultimately required by the USACE could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.

c. For impacts to waters of the State or other State-regulated habitats that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CFGC Section 1602 and Porter Cologne, as applicable. Section 1602 applies to impacts to the ephemeral swale that drains into Ross Creek, while Porter-Cologne would apply to impacts to waters of the State that are not also waters of the US subject to regulation by USACE under the Clean Water Act. The project proponent shall comply with all permit conditions (including monitoring of any restoration plantings for long-term survivorship), as specified by the CDFW and RWQCB. Mitigation ultimately required by the CDFW/ RWQCB could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.

Applying for permits from the resource agencies prior to impacting jurisdictional waters is a legal requirement, but it is not a mitigation measure. The DEIR lacks concrete proposals for mitigation. Therefore, the DEIR fails to demonstrate that the project's impacts to waters of the State can be mitigated to less than significant levels. Without a revision to include concrete mitigation proposals, it is likely that the DEIR will not be adequate to support the issuance of State permits for impacts to the ephemeral channel.

In a CEQA document, a project's potential impacts and proposed mitigation measures should be presented in sufficient detail for readers of the CEQA document to evaluate the likelihood that the proposed remedy will actually reduce impacts to a less than significant level. CEQA requires that mitigation measures for each significant environmental effect be adequate, timely, and resolved by the lead agency. In an adequate CEQA document, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding instruments (CEQA Guidelines Section 15126.4). Mitigation measures to be identified at some future time are not acceptable. It has been determined by court ruling that such mitigation measures would be improperly exempted from the process of public and governmental scrutiny which is required under the California Environmental Quality Act. While it is true that any impacts to waters of the State would require permit(s) from the Water Board, compliance with regulatory requirements is not in itself a mitigation measure. CEQA documents should identify impacts associated with a project and propose specific mitigation measures in sufficient detail for persons reviewing the CEQA document to assess the feasibility and adequacy of the proposed mitigation measures. This kind of assessment is not possible on the basis of the information provided in the DEIR.

According to the DEIR, a culverted portion of Ross Creek abuts the project site. The project proponent is encouraged to consider options for daylighting the portion of the Ross Creek at the project site. This may provide appropriate mitigation for any impacts to the ephemeral creek channel that the resource agencies determine to be unavoidable. Opportunities for creek

Letter 1 cont.

daylighting are very rare. Since the Project site is currently undeveloped, there may be unique opportunities for revising the project design to allow for creek daylighting.

Please contact me at (510) 622-5680 or brian.wines@waterboards.ca.gov if you have any questions. All future correspondence regarding this Project should reference the CIWQS Place ID Number indicated at the top of this letter.

Sincerely,

Brian Wines

Los Gatos, CA 95030

Attn: Jennifer Armer (jarmer@losgatosca.gov)

Subject: Partial Recirculated Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006, Town of Los Gatos, Santa Clara County
SCH No. 2012072027

Dear Ms. Armer:

On October 8, 2015, San Francisco Bay Regional Water Quality Control Board (Water Board) staff submitted comments on the *Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006* (DEIR). The October 8, 2015, letter is included as an attachment to this letter. The DEIR circulated for comment in 2015 assessed potential impacts associated with approving a General Plan Amendment that would allow the 17.55-acre site at 170 Twin Oaks Drive to be developed with 10 single-family residences. In 2015, Water Board staff expressed concerns with respect to the unconfirmed jurisdictional status of an ephemeral channel at the project site and the lack of an actual mitigation proposal for impacts to waters of the State at the Project site.

In May of 2017, the Town of Los Gatos issued a *Partial Recirculated Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application* PD-10-006 (PRDEIR). Section 1.2 of the PRDEIR provides the reason for recirculation.

> In the time since the Draft EIR was released for public review (August 26, 2015 to October 9, 2015), the project applicant received correspondence from the United States Army Corps of Engineers (USACE) confirming the amount of jurisdictional Waters of the U.S. Waters of the U.S. are regulated by the USACE. The Draft EIR assumed that the ephemeral swale that traverses the western portion of the site would be jurisdictional waters. Following a site visit by USACE personnel in June 2016, the Army Corps of Engineers prepared a letter stating the extent of the jurisdictional Waters of the U.S. consisted of a 342-square foot (0.008-acre) area in the northwestern corner of the site. The ephemeral swale was determined not be jurisdictional Waters of the U.S.

Water Board staff are providing comments on the PRDEIR that explain why the issues raised in the October 8, 2015, comment letter on the DEIR have not been sufficiently resolved in the PRDEIR.

Comment 1. Section 4.3, Biological Resources. The extent of waters of the State should be verified.

In the October 8, 2015, comment letter, Water Board staff encouraged the project proponent to contact the U.S. Army Corps of Engineers (Corps) regulatory staff, California Department of Fish and Wildlife (CDFW) staff, and Water Board staff to confirm the jurisdictional status of the ephemeral headwater tributary to Ross Creek at the Project site. Since 2015, the project proponent has contacted the Corps, and in June of 2016 the Corps determined that the ephemeral headwater tributary was not a water of the U.S. According to text on page 4.3-12 of the PRDEIR:

> An ephemeral swale crosses the middle of the property, conveying sheet flow to the northwestern corner of the site, where it is collected in a storm drain system that outfalls into Ross Creek. ~~While only incised portions of the ephemeral swale are expected to qualify as waters of the U.S.,~~ It is assumed the entire swale ~~is expected to~~ would qualify as a waters of the State, given that it conveys concentrated flows from an off-site watershed to a named tributary. As such, impacts to this feature are expected to be regulated by the CDFW pursuant to the LSAPs and the RWQCB pursuant to Porter-Cologne.

In addition, Page 4.3-46 of the PRDEIR contains the following text:

> Preliminary input from the CDFW (D. Johnston, e-mail dated 7/17/2012) indicates that impacts to the ephemeral swale would require authorization under the Lake and Streambed Alteration Program (CFGC Section 1600, et seq.). Work within the ephemeral swale is also expected to require issuance of a water quality certification under Section 401 of the Clean Water Act and the State Porter Cologne Act and either individual or general waste discharge requirements from the RWQCB ~~pursuant to Porter-Cologne~~ (see Section 4.5, Hydrology and Water Quality, Impact and Mitigation Measure 4.5-1). Implementation of Mitigation Measures 4.3-7a and 4.3.7b, and ~~C~~conformance with Applicable Federal and State Regulations and Jurisdictional Waters Mitigation, would ensure that project-related impacts on surface waters would be reduced to less than significant.

Therefore, the PDREIR continues to treat the ephemeral swale as a water of the State, subject to CDFW and Water Board jurisdiction. When the project proponent applies to the Water Board for permits for impacts to the ephemeral channel, Water Board staff will request that the Project be redesigned to avoid the channel to the maximum extent practicable. Water Board staff will require that the applicant demonstrate that all opportunities to avoid or minimize fill in waters of the State have been avoided. The project proponent should not assume that all proposed fill at the project site will be authorized by the Water Board.

When the DEIR was circulated, the ephemeral channel was assumed to be subject to Corps, CDFW, and Water Board jurisdiction. At the time that the PRDEIR was circulated, the ephemeral channel was assumed to be subject to CDFW and Water Board jurisdiction. It is not clear why establishing the absence of federal jurisdiction over the ephemeral channel, while continuing to assume State jurisdiction over the channel, was a sufficiently significant change to justify the circulation of a partially recirculated DEIR.

Letter 1 cont.

Comment 2. Section 4.3, Biological Resources. Mitigation Measures 4.3-7a and 4.3-7b, of the PRDEIR do not include a concrete mitigation proposal and are, therefore, inadequate. For proposed impacts to the ephemeral channel, the PRDEIR includes two mitigation Measures; Mitigation Measure 4.3-7a, which was Mitigation Measure 4.3-7 in the DEIR, and new Mitigation Measure 4.3-7b. Mitigation Measure 4.3-7a consists of the following:

a. Prior to initiation of project construction, the project proponent shall secure a verified jurisdictional determination from the USACE.
b. For impacts to federally regulated waters of the U.S. that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CWA. The project proponent shall comply with all permit conditions, as specified by the USACE. Mitigation ultimately required by the USACE could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.
c. For impacts to waters of the State or other State-regulated habitats that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CFGC Section 1602 and Porter Cologne, as applicable. Section 1602 applies to impacts to the ephemeral swale that drains into Ross Creek, while Porter-Cologne would apply to impacts to waters of the State that are not also waters of the US subject to regulation by USACE under the Clean Water Act. The project proponent shall comply with all permit conditions (including monitoring of any restoration plantings for long-term survivorship), as specified by the CDFW and RWQCB. Mitigation ultimately required by the CDFW/ RWQCB could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.

Mitigation Measure 4.3-7b consists of the following:

***Mitigation Measure 4.3.7b, Jurisdictional Waters Mitigation**: The project applicant shall implement avoidance, minimization, and compensation measures to reduce impacts on jurisdictional waters and riparian habitats to a less than significant level. If avoidance of jurisdictional waters is not feasible, the project applicant shall implement one or more of the following options to the satisfaction of the Community Development Director and the applicable the appropriate [sic] federal and State regulatory agencies.*

Option 1: Mitigation Banking

Prior to the issuance of a grading permit or improvement plan, the applicant shall provide to the satisfaction of the Community Development Director, a letter from a qualified mitigation bank showing that the appropriate mitigation credits for wetland habitat have been purchased at a replacement-to-loss ratio of 2:1. The mitigation bank must be a habitat mitigation bank approved by the appropriate federal and State regulatory agencies. Additionally, the habitat mitigation bank must be within the same watershed (or other hydrological connection, to the satisfaction of the resource agencies listed in Mitigation Measures 4.3-7a above) of which Ross Creek is located.

Option 2: Wetland Creation

Prior to the issuance of a grading permit or improvement plan, the applicant shall provide to the satisfaction of the Community Development Director, a mitigation plan that results in the creation of new habitat as replacement for habitat lost or enhance the quality of existing habitat for native plants and wildlife. Mitigation measures shall include replacement of riparian and aquatic habitat at a replacement-to-loss ratio of up to 2:1 for permanent acreage impacts (up to two acres created for each acre permanently impacted) as well as reseeding or replanting of vegetation in temporarily disturbed areas according to a site-specific mitigation plan. At a minimum, this plan shall identify mitigation areas, a planting plan, site maintenance activities, success criteria, and remedial measures to compensate for lack of success. The mitigation goal shall be to create and enhance riparian or aquatic habitats with habitat functions and values greater than or equal to those existing in the impact zone. This could include enhancing the ephemeral drainages to increase their wetland and riparian value, which would benefit native wildlife in the region.

A detailed Habitat Mitigation and Monitoring Plan, including specific success criteria, shall be developed and submitted to permitting agencies during the permit process. The mitigation area shall be monitored in accordance with the plan approved by the permitting agencies. The basic components of the monitoring plan consist of final success criteria, performance criteria, monitoring methods, data analysis, as-built plans, monitoring schedule, contingency/remedial measures, and reporting requirements.

The Habitat Mitigation and Monitoring Plan shall at a minimum:

- *Define the location of all restoration/creation activities;*
- *Provide evidence of suitable water availability (e.g., from precipitation and surface runoff) to support any created wetland and riparian habitats;*
- *Identify the species, amount and location of plants to be installed;*
- *Identify time of year for planting and method for supplemental watering during the establishment period;*
- *Identify the monitoring period which should be not less than five years for wetland restoration and not less than five years for riparian restoration, defines success criteria that shall be required for the wetland restoration to be deemed a success;*
- *Identify adaptive management procedures that accommodate the uncertainty that comes with restoration projects. These include (but not limited to) measures to address colonization by invasive species, unexpected lack of water, excessive foraging of installed wetland plants by native wildlife; etc.;*
- *Define management and maintenance activities (weeding of invasive, providing for supplemental water, repair of water delivery systems, etc.); and,*
- *Provide for surety in funding the monitoring and ensuring that the created wetland and riparian habitats fall within lands to be preserved and managed into perpetuity.*

Option 3: Wetland Restoration

Prior to the issuance of a grading permit or improvement plan, the applicant shall provide to the satisfaction of the Community Development Director, a wetland restoration plan that results in the daylighting of a portion of Ross Creek on the project site. Currently a portion of Ross Creek is conveyed through an underground culvert on the project site. The project applicant, with the concurrence of the resource agencies (listed in Mitigation

Measures 4.3-7a above) and the Santa Clara Valley Water District proposed, shall remove the culvert (daylight) from a portion of Ross Creek on the project site. The restoration plan shall include replacement of riparian and aquatic habitat at a replacement-to-loss ratio of up to 2:1 for permanent acreage impacts. The wetland restoration plan shall include a hydrological report, prepared by a qualified civil engineer to demonstrate that the restored creek has been designed such that it is compatible with the upstream point of connection, the design is appropriate for the specific stretch of Ross Creek, and that it has been designed to accommodate the appropriate flood conditions. The restoration plan shall also include a Habitat Mitigation and Monitoring Plan.

A detailed Habitat Mitigation and Monitoring Plan, including specific success criteria, shall be developed and submitted to permitting agencies during the permit process. The mitigation area shall be monitored in accordance with the plan approved by the permitting agencies. The basic components of the monitoring plan consist of final success criteria, performance criteria, monitoring methods, data analysis, as-built plans, monitoring schedule, contingency/remedial measures, and reporting requirements.

The Habitat Mitigation and Monitoring Plan shall at a minimum:

- *Define the location of all restoration/creation activities;*
- *Provide evidence of suitable water availability (e.g., from precipitation and surface runoff) to support any created wetland and riparian habitats;*
- *Identify the species, amount and location of plants to be installed;*
- *Identify time of year for planting and method for supplemental watering during the establishment period;*
- *Identify the monitoring period which should be not less than five years for wetland restoration and not less than five years for riparian restoration, defines success criteria that shall be required for the wetland restoration to be deemed a success;*
- *Identify adaptive management procedures that accommodate the uncertainty that comes with restoration projects. These include (but not limited to) measures to address colonization by invasive species, unexpected lack of water, excessive foraging of installed wetland plants by native wildlife; etc.;*
- *Define management and maintenance activities (weeding of invasive, providing for supplemental water, repair of water delivery systems, etc.); and,*
- *Provide for surety in funding the monitoring and ensuring that the created wetland and riparian habitats fall within lands to be preserved and managed into perpetuity.*

Water Board staff are not aware of any mitigation bank capable of providing mitigation credits for impacts to the ephemeral channel. At present there are no mitigation banks with a service area that includes the project site. Therefore, Option 1 is not a viable mitigation option.

In the October 8, 2015, comment letter, Water Board staff made the following statements:

> Applying for permits from the resource agencies prior to impacting jurisdictional waters is a legal requirement, but it is not a mitigation measure. The DEIR lacks concrete proposals for mitigation. Therefore, the DEIR fails to demonstrate that the project's impacts to waters of the State can be mitigated to less than significant levels. Without a revision to include concrete mitigation proposals, it is likely that the DEIR will not be adequate to support the issuance of State permits for impacts to the ephemeral channel.

> In a CEQA document, a project's potential impacts and proposed mitigation measures should be presented in sufficient detail for readers of the CEQA document to evaluate the likelihood that the proposed remedy will actually reduce impacts to a less than significant level. CEQA requires that mitigation measures for each significant environmental effect be adequate, timely, and resolved by the lead agency. In an adequate CEQA document, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding instruments (CEQA Guidelines Section 15126.4). Mitigation measures to be identified at some future time are not acceptable. It has been determined by court ruling that such mitigation measures would be improperly exempted from the process of public and governmental scrutiny which is required under the California Environmental Quality Act. While it is true that any impacts to waters of the State would require permit(s) from the Water Board, compliance with regulatory requirements is not in itself a mitigation measure. CEQA documents should identify impacts associated with a project and propose specific mitigation measures in sufficient detail for persons reviewing the CEQA document to assess the feasibility and adequacy of the proposed mitigation measures. This kind of assessment is not possible on the basis of the information provided in the DEIR.

Option 2 does not provide sufficient detail to satisfy the concerns raised in the October 2015 comment letter. Option 2 proposes to create new habitat as replacement for habitat lost or enhance the quality of existing habitat. However, the text of Option 2 does not identify property available to the project proponent for a mitigation project and does not describe an actual mitigation project. In the absence of an actual mitigation project, Water Board staff is not able to determine if Option 2 would provide sufficient mitigation for the project's impacts to the ephemeral channel.

Option 3 consists of daylighting a culverted section of Ross Creek. Water Board staff had encouraged the project proponent to consider the feasibility of daylighting a culverted section of Ross Creek in the October 2015 comment letter. Option 3 should be improved by assessing how much land around the existing culvert would be necessary to establish a geomorphically stable daylighted reach of Ross Creek, and verifying that the project proponent has sufficient control over this land to support successful daylighting of the culverted reach and placing a conservation easement or deed restriction over the daylighted reach. Also, for a channel mitigation project, impacts and mitigation should be quantified in linear feet, rather than surface area.

Comment 3. Section 4.3, Biological Resources. Mitigation Measures 4.3-8 of the PRDEIR do not include a concrete mitigation proposal and is, therefore, inadequate.
As mitigation for impacts to riparian habitat near Ross Creek and the fill of part of the ephemeral channel at the projects site, the PRDEIR provides Mitigation Measure 4.3-8.

> *Mitigation for the placement of fill into the ephemeral swale is outlined in Mitigation Measure 4.3-7, above. Construction in and adjacent to Ross Creek and the ephemeral swale requires conformance to the Town's adopted sections of the Guidelines and Standards for Land Use Near Streams. In order to conform to these guidelines, the following measures shall be implemented:*
>
> - *Protection of the riparian zone shall be assured by establishment of an appropriate riparian corridor buffer. Based on site conditions, channel geomorphology, slope, size of watershed, and type of habitat, a minimum*

riparian setback of 25 feet from the top of bank or outer edge of the riparian zone, whichever is greater, would provide for an appropriate protection of the habitat values and water quality associated with Ross Creek.

- *Based on site conditions, channel geomorphology, slope, size of watershed, and type of habitat, a minimum riparian setback of 10 feet from the top of bank of the incised portion of the ephemeral swale and outer oak canopy edge would provide for an appropriate protection of the habitat values and water quality. It is recognized that the placement of fill into the ephemeral swale is necessary to construct Streets A and B. At these locations, there is no habitat meeting the definitions of "riparian vegetation" or "stream/channel/creek" as provided in the Guidelines. As such, this portion of the proposed project is not in conflict with the Guidelines. Mitigation for these impacts is specified in Mitigation Measure 4.3-7.*

a. Grading and culvert construction to accommodate the construction of Street B would result in impacts on the portions of the ephemeral swale that are incised and situated directly beneath the canopy of mature oak woodland. Such grading and construction at this location would not necessarily conflict with the Guidelines, but would be subject to review and permitting requirements by the regulatory agencies. Mitigation for these impacts is specified in Mitigation Measure 4.3-7.

b. A 10-foot wide protective easement shall be recorded over the length of the preserved swale across Lot 9. No grading, filling, or trenching shall be permitted within this easement.

c. Orange construction fencing or a similar visual barrier shall be installed to prevent accidental grading or movement of equipment beyond what is specified on the grading plans and approved under the grading permit.

d. Construction activities shall conform to the Town of Los Gatos' Tree Protection Ordinance, as required in Mitigation Measure 4.3-10, Tree Mitigation and Monitoring Plan.

As Water Board staff noted in Comment 2, above, Mitigation Measures 4.3-7a and 4.3-7b are not yet sufficient to establish that impacts to waters of the State at the ephemeral channel can be mitigated to a less than significant level. Since Mitigation Measure 4.3-8 relies on Mitigation Measures 4.3-7a and 4.3-7b to provide mitigation for impacts to the ephemeral channel, the PRDEIR has not demonstrated that impacts to the ephemeral channel can be mitigated to less than significant levels.

Please contact me at (510) 622-5680 or brian.wines@waterboards.ca.gov if you have any questions. All future correspondence regarding this Project should reference the CIWQS Place ID Number indicated at the top of this letter.

Subject: Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006, Town of Los Gatos, Santa Clara County
SCH No. 2012072027

Dear Ms. Moseley:

San Francisco Bay Regional Water Quality Control Board (Water Board) staff has reviewed the *Draft Environmental Impact Report, Surrey Farm Estates, 170 Twin Oaks Drive, Planned Development Application PD-10-006* (DEIR). The DEIR assesses potential impacts associated with approving a General Plan Amendment that would allow the 17.55-acre site at 170 Twin Oaks Drive to be developed with 10 single-family residences. Water Board staff have the following comments on the ISMND.

Comment 1. Section 4.3, Biological Resources. The extent of waters of the State should be verified.
Water Board staff encourage the project proponent to contact U.S. Army Corps of Engineers (Corps) regulatory staff, California Department of Fish and Wildlife (CDFW) staff, and Water Board staff to confirm the jurisdictional status of the ephemeral headwater tributary to Ross Creek at the Project site. If the apparent full apparent extent of the ephemeral creek is a jurisdictional water of the State, then the Project should be redesigned to avoid the channel to the maximum extent practicable. When we review applications for permits to fill waters of the State, we require that the applicant demonstrate that all opportunities to avoid or minimize fill in waters of the State have been avoided. The project proponent should not assume that all proposed fill at the project site will be authorized by the Water Board.

Comment 2. Section 4.3, Biological Resources. Mitigation Measure 4.3-7, of the DEIR does not include a concrete mitigation proposal and is, therefore, inadequate.
For proposed impacts to the ephemeral channel, Mitigation Measure 4.3-7 consists of the following:

a. Prior to initiation of project construction, the project proponent shall secure a verified jurisdictional determination from the USACE.

b. For impacts to federally regulated waters of the U.S. that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CWA. The project proponent shall comply with all permit conditions, as specified by the USACE. Mitigation ultimately required by the USACE could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.

c. For impacts to waters of the State or other State-regulated habitats that cannot be avoided, the applicant shall apply for and receive authorization pursuant to CFGC Section 1602 and Porter Cologne, as applicable. Section 1602 applies to impacts to the ephemeral swale that drains into Ross Creek, while Porter-Cologne would apply to impacts to waters of the State that are not also waters of the US subject to regulation by USACE under the Clean Water Act. The project proponent shall comply with all permit conditions (including monitoring of any restoration plantings for long-term survivorship), as specified by the CDFW and RWQCB. Mitigation ultimately required by the CDFW/ RWQCB could include on-site habitat creation, off-site habitat creation, purchase of credits from an approved habitat mitigation bank, and/or payment of in-lieu fees to an approved conservation organization for wetland habitat enhancement of preservation activities.

Applying for permits from the resource agencies prior to impacting jurisdictional waters is a legal requirement, but it is not a mitigation measure. The DEIR lacks concrete proposals for mitigation. Therefore, the DEIR fails to demonstrate that the project's impacts to waters of the State can be mitigated to less than significant levels. Without a revision to include concrete mitigation proposals, it is likely that the DEIR will not be adequate to support the issuance of State permits for impacts to the ephemeral channel.

In a CEQA document, a project's potential impacts and proposed mitigation measures should be presented in sufficient detail for readers of the CEQA document to evaluate the likelihood that the proposed remedy will actually reduce impacts to a less than significant level. CEQA requires that mitigation measures for each significant environmental effect be adequate, timely, and resolved by the lead agency. In an adequate CEQA document, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding instruments (CEQA Guidelines Section 15126.4). Mitigation measures to be identified at some future time are not acceptable. It has been determined by court ruling that such mitigation measures would be improperly exempted from the process of public and governmental scrutiny which is required under the California Environmental Quality Act. While it is true that any impacts to waters of the State would require permit(s) from the Water Board, compliance with regulatory requirements is not in itself a mitigation measure. CEQA documents should identify impacts associated with a project and propose specific mitigation measures in sufficient detail for persons reviewing the CEQA document to assess the feasibility and adequacy of the proposed mitigation measures. This kind of assessment is not possible on the basis of the information provided in the DEIR.

According to the DEIR, a culverted portion of Ross Creek abuts the project site. The project proponent is encouraged to consider options for daylighting the portion of the Ross Creek at the project site. This may provide appropriate mitigation for any impacts to the ephemeral creek channel that the resource agencies determine to be unavoidable. Opportunities for creek

Letter 1 cont.

daylighting are very rare. Since the Project site is currently undeveloped, there may be unique opportunities for revising the project design to allow for creek daylighting.

Please contact me at (510) 622-5680 or brian.wines@waterboards.ca.gov if you have any questions. All future correspondence regarding this Project should reference the CIWQS Place ID Number indicated at the top of this letter.

Sincerely,

Brian Wines
Water Resources Control Engineer
Watershed Division

LETTER 1: BRIAN WINES, SAN FRANCISCO BAY REGIONAL WATER QUALITY CONTROL BOARD

Response to Comment 1-1

The commenter refers to an "ephemeral creek channel." The referenced ephemeral creek channel historically supports water only in storm events.

Under Impact 3.3.11, the Biological Evaluation Report prepared for the proposed project by LOA (included as Appendix B to the IS/MND) states: "…the proposed project will not directly impact Ross Creek, the intermittent ephemeral drainage, or the seasonal wetland drainage feature. Therefore, the project will not result in impacts to waters or sensitive habitat under the jurisdiction of the USACE, CDFW, or RWQCB." The foregoing conclusion was confirmed by the project engineer, is based on the current project plans, and is adequately reflected in the IS/MND.

In addition, as discussed within Section IV, Biological Resources, of the IS/MND, a site visit was conducted on May 14, 2025, by LOA, a professional biological consulting firm under contract with the Town's environmental consultant for the project, to confirm the characteristics of the on-site ephemeral drainage as part of the Biological Evaluation (which was conducted to identify on-site habitats and the likelihood of special-status species occurrence). Pages 48 and 49 of the IS/MND include the following discussion, with revisions shown in response to the comment:

> ~~The on-site ephemeral drainage with swales was determined not to be considered jurisdictional water of the U.S. or the State. Nonetheless, a~~As shown in Figure 3, the proposed project would be designed to incorporate a minimum 10-foot buffer between the proposed development and the vegetation surrounding the ephemeral drainage. As such, the ephemeral drainage with swales would not be directly impacted by the proposed project. Similarly, as discussed above, the proposed project would retain the 100- to 110-foot flood easement between the development footprint and Ross Creek. Therefore, the proposed project would not result in the disturbance of any on-site wetlands.

The design of the proposed project, inclusive of the aforementioned buffer, would ensure that no direct impacts would occur to the on-site ephemeral drainage. Thus, whether or not the ephemeral drainage is subject to RWQCB jurisdiction would not change the conclusions of the IS/MND.

It is recognized that the 10-foot buffer intersects with a proposed public utility easement along the internal roadway at the northernmost end of the ephemeral drainage. Underground utilities are not proposed within the easement area, and thus, no ground disturbance would occur within the easement area. Nonetheless, construction of the internal roadway would occur in close proximity to the northern edge of the ephemeral drainage. The potential indirect effects of this construction on water quality of the ephemeral drainage, should it receive flow from a precipitation event, would be addressed through implementation of the erosion control measures of the Storm Water Pollution Prevention Plan (SWPPP), required by Mitigation Measure X-1 on page 74 of the IS/MND. In response to RWQCB concerns, the Town has made the following amplifications to Mitigation Measure X-1:

> *X-1* *Prior to any ground-disturbing activities, the project applicant shall prepare and submit a final erosion and sediment control plan for review and approval by the Town of Los Gatos Engineering Division of the Parks and Public Works Department. A Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) shall be submitted to the San*

Francisco Bay Regional Water Quality Control Board. A maximum of two weeks is allowed between clearing of an area and stabilizing/building on an area if grading is allowed during the rainy season. Prior to any ground disturbance, the on-site aquatic features (i.e., the ephemeral drainage/drainage swale and Ross Creek) shall be flagged by a qualified biologist with highly visible flagging tape, or similar, to clearly demarcate the limits of the aquatic features, and interim erosion control measures shall be installed around the aquatic features, at a minimum. The project applicant shall submit a letter to the Town prepared by the qualified biologist confirming completion of the flagging for review and approval prior to commencement of any ground disturbance. ~~Interim erosion control measures, to be carried out during construction and before installation of the final landscaping, shall be included~~. Interim erosion control methods shall include, but are not limited to: silt fences, fiber rolls (with locations and details), erosion control blankets, Town standard seeding specification, filter berms, check dams, retention basins, etc. The project contractor shall provide erosion control measures as needed to protect downstream water quality during winter months. The grading, drainage, erosion control plan and SWPPP shall be prepared in compliance with applicable measures contained in the amended provisions C.3 and C.14 of most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). Monitoring for erosion and sediment control is required and shall be performed by the Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) as required by the Construction General Permit. Stormwater samples are required for all discharge locations and projects may not exceed limits set forth by the Construction General Permit Numeric Action Levels and/or Numeric Effluent Levels. A Rain Event Action Plan (REAP) shall be developed 48 hours prior to any likely precipitation event, defined by a 50 percent or greater probability as determined by the National Oceanic and Atmospheric Administration (NOAA), and/or whenever rain is imminent. The QSD or QSP must print and save records of the precipitation forecast for the project location area from (https://www.cpc.ncep.noaa.gov/) which shall accompany monitoring reports and sampling test data. A rain gauge is required on-site. The Town of Los Gatos Engineering Division ~~of the Parks and Public Works Department and the Building Department~~ shall conduct periodic NPDES inspections of the site throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

The above revisions serve as minor amplifications to Mitigation Measure X-1.

Response to Comment 1-2

Please see Response to Comment 1-1 above.

Response to Comment 1-3

Section 6.13.1 of the Geotechnical and Geologic Hazard Investigation (GGHI) prepared for the proposed project (included as Appendix D to the IS/MND) includes the possibility of using pervious pavement when discussing stormwater treatment designs. Except for Lots 7, 8, and 10, the maximum slope of the proposed pervious pavement areas is 3.5 percent. The lots include pervious pavers on the private driveways, which are shown with a maximum slope of 15 percent on the grading plan. According to the geotechnical report, underdrains are required for all pervious

paver installations, with which the proposed project would comply. Overall, as stated on page 73 of the IS/MND, the proposed project would comply with the requirements of the SWRCB and the RWQCB, and would meet C.3 Standards related to stormwater treatment, which would be ensured through a condition of approval and as part of the Town's review of final project plans.

Response to Comment 1-4

The Covenants, Conditions, and Restrictions (CC&Rs) include language that a maintenance agreement be put in place between the Town and the property owner, requiring the owner to operate and maintain all on-site stormwater treatment infrastructure. The City will require the owner to operate and maintain all on-site stormwater treatment infrastructure as a Condition of Approval.

With respect to the placement of the proposed bioretention basins and proximity to public roadways, all of the proposed lots would front a private roadway. The maintenance agreement will include language allowing Town personnel to access each bioretention area periodically as required for inspection purposes.

Hydromodification management for the project site was discussed under question c.i-iii within Section X, Hydrology and Water Quality, of the IS/MND. In addition, a Bay Area Hydrology Model (BAHM) report was prepared for the proposed project by Balance Hydrologics (see Appendix A to this document), which was submitted to, and reviewed by, the Town. Page 76 of the IS/MND is hereby revised as follows to incorporate additional details from the BAHM report:

> Furthermore, as discussed above, following project development, stormwater runoff from each on-site DMA would be directed into an associated bioretention area located adjacent to each lot, which would be lined with an impermeable liner. Following on-site treatment, stormwater flows would be metered out into the existing 27- and 36-inch storm drains located north and west of the site, respectively. The proposed on-site stormwater infrastructure would be sized to meet Provision C.3.g of the County's Municipal Regional Stormwater NPDES permit (MRP), which requires new development to manage stormwater flows such that post-development runoff does not exceed pre-project runoff rates and durations.
>
> In order to calculate the project's ability to meet flow-duration frequency requirements while also meeting the required water quality treatment standards, a Bay Area Hydrology Model (BAHM) report was prepared for the proposed project by Balance Hydrologics.[1] As discussed therein, site runoff would be directed to one of nine proposed bioretention basins that provide both water quality treatment and flow-duration control. Each bioretention area has been designed in accordance with the standard design criteria outlined in the C.3 Stormwater Handbook. Specifically, each basin was modeled with six inches of surface ponding, 18 inches of biotreatment soil media, and 12 inches of drain rock. A four-inch underdrain would collect the treated water, which would then be metered through a two-inch orifice integrated into the storm drain overflow structure. The two-inch orifice is required to meet the hydromodification management criteria. The modeling conducted as part of the BAHM report showed that the basins would biofilter an approximate average of 90 percent of the mean annual runoff. Such filtration rates are well in excess of the minimum 80 percent required by the MRP. As such, the BAHM report concluded that the proposed stormwater management facilities would provide effective water-quality treatment and flow-duration controls for the full range of flows, from one-tenth of the two-year flood event up to the 10-year event.

[1] Balance Hydrologics. *Summary of BAHM Modeling for the Surrey Farm Project, Town of Los Gatos*. July 31, 2025.

Based on the above, the proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in erosion, siltation, or flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff. Consequently, implementation of the proposed project would result in a ***less-than-significant*** impact.

Response to Comment 1-5

The ephemeral drainage/drainage swale historically supports water only during storm events. As shown in Figure 15 of the IS/MND (On-Site Habitats), the ephemeral drainage/drainage swale does not extend across the entirety of the site; the downstream end of the ephemeral drainage currently tapers off at the northernmost extent, which occurs on Lot 8, near the proposed roadway. As shown in the proposed Site Plan (included as Figure 3 in the IS/MND), the project was purposefully designed to avoid the on-site aquatic features, including the ephemeral drainage. The majority of Lot 8, which is located upslope and to the east of the drainage, and that currently sheet flows towards the drainage during storm events, would remain undisturbed. This upslope area is shown as Drainage Management Area (DMA) B in the Stormwater Control Plan sheet of the BAHM report. Similarly, much of the upslope areas on Lot 9, located on the western side of the drainage, would not be disturbed. Accordingly, development of the proposed project would not be expected to substantially alter the amount of stormwater entering the ephemeral drainage/drainage swale during storm events, as those upslope areas that would remain undisturbed would continue to sheet flow to the drainage.

As part of the Biological Evaluation Report, LOA mapped the trees within the ephemeral drainage/drainage swale as mixed oak woodland habitat, not as riparian habitat. According to LOA, the trees within the drainage would not be negatively impacted by the project's current stormwater plan.

Response to Comment 1-6

The attachments to the comment letter are related to a previous project proposal that, while located on the same site, was not approved by the Town. Because the attached comments are on a separate CEQA analysis than the IS/MND prepared for the proposed project, the comments are not directly applicable to the proposed project and are considered more for context and reference. Therefore, responses to the attached comments are not required or provided. In addition, LOA reviewed the biological reconnaissance, wetland evaluation, three-season floristic survey, and tree inventory prepared for the 2017 EIR as part of their preparation of the Biological Evaluation for the proposed project. Therefore, the same reports that were used to inform the 2017 EIR were considered as part of the proposed project.

Letter 2

To: Erin Walters <EWalters@losgatosca.gov>
Subject: Surrey Farms Project

[EXTERNAL SENDER]

We vote against this project. The email content below describes completely the risks and hazards asscíated with this project. The fire danger for this project and as a result the entire Town is of utmost concern. It was submitted by another resident of Los Gatos.

2-1 Thank you.

Ken and Pat Arendt

2-2 Fire Risk: According to the SCCFD, the project is in a Very High Fire Hazard Severity Zone. Ingress/egress, evacuation routes, and increased risk of fire associated with development are key issues. The SCCFD has not yet approved site access or water supply. Removal of Trees: The arborist report indicates that there are 546 on-site trees that qualify for protection under the Los Gatos Tree Protection Ordinance. The applicant is proposing to remove 223 of those protected trees in violation of that ordinance, destroying habitat for protected species, creating potential additional risks of landslide, mudslide, and drainage issues. Under the ordinance, the applicant would be required to plant 551 replacement **2-3** trees. Applicant proposes to plant 85 replacement trees and pay in-lieu fees for the remainder. Protected Species Will Lose Their Habitat: Due to the grading, construction, and removal of trees, multiple protected species will be harmed or displaced, including the California red-legged fog, white-tailed kite, golden eagle, purple martin, pallid bat, Townsend's big-eared bat, San Francisco dusky-footed woodrat, American badger, and burrowing owl. Multiple Lot Size, Building Height, and Setback Exceptions are Requested: The applicant is asking for reduced lot size and increased home size throughout the **2-4** project. Most notably, one of the three homes directly visible from the end of Longmeadow is proposed to be nearly 41' tall, when the maximum height is 25 feet under the Hillside Design Standards & Guidelines. Grading and Erosion Issues: Although the site is located in **2-5** a county Geologic Hazard Zone, with risks of landslide, liquefaction, and potentially compression soils and fault rupture hazard areas, the applicant requests multiple cut, fill,

Letter 2 cont.

2-5 cont. and grading exceptions. According to the IS/MND a final erosion and sediment control plan has yet to be prepared in conjunction with the project. There is, therefore, currently no plan to protect us from the potential risks to health and safety associated with the excessive grading, cut, fill, and construction on steep slopes in a Geologic Hazard Zone. Drainage and Water Issues: We already have drainage issues at the end of Longmeadow. The project will introduce 62,224 sf of impervious surfaces. The project proposes various bioretention areas, including one large one to be located directly adjacent to Hillbrook School and two homes. The drainage issues have also not been fully analyzed because of the lack of a final erosion and sediment control plan. In addition to our concern regarding flooding and

2-6 erosion, we are also concerned with the safety issues and hazards related to the introduction of a bioretention pond adjacent to the school and our homes. Noise and Traffic: Construction is expected to go on for at least two years. During that time, there will be an unmitigable increase in noise and traffic, creating health and safety issues for Surrey

2-7 Farms residents and Hillbrook School. After construction, there will be twelve additional households using Twin Oaks, Longmeadow, and Kennedy for ingress and egress. Traffic in the Kennedy corridor is already a significant issue. This project is tentatively scheduled to be reviewed by the Planning Commission at the November 13, 2025 Planning Commission

2-8 hearing. In addition to submitting written comments, it is helpful to show up and speak to our neighborhood concerns.

LETTER 2: KEN AND PAT ARENDT

Response to Comment 2-1

Please see Responses to Comments 2-2, 2-5, and 2-6. The comments will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 2-2

As noted on page seven of the IS/MND, the Builder's Remedy status of the project allows the project vested rights to be subject only to the applicable ordinances, policies, and standards in place at the time the project application was submitted. While the site is currently identified by the California Department of Forestry and Fire Protection (CAL FIRE) as being within a High Fire Hazard Severity Zone (FHSZ), at the time of project application, the site was mapped within a Very High FHSZ. Page 102 of the IS/MND is hereby revised accordingly:

a-d. According to maps prepared as part of the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within an SRA; however, the site is located within a Very High FHSZ.[2]

The project site is currently undeveloped and contains scattered oak woodlands throughout. Development of the proposed residential uses would include the clearing of on-site fuel sources and, thus, is not anticipated to increase wildfire risks at the site relative to the existing conditions within the project site. Additionally, the proposed project would be required to comply with all applicable requirements of the CFC through the installation of fire sprinkler systems, fire hydrants, and other applicable requirements. In addition, the proposed project would be subject to the requirements of Chapter 7A of the CBC which include, but are not limited to, use of ignition-resistant materials, fire-intrusion design of roofing and vents, and use of glazed exterior windows and doors. The proposed project would also be situated near existing roads, water lines, and other utilities, which would reduce risks related to wildfire due to the existing development generally acting as a fuel break because of a lack of natural debris (e.g., vegetation).

Wildfire risks are not anticipated to be exacerbated during project operation, as the anticipated residential uses typically do not involve operational components that would increase the risk of wildfire. Development of the site for residential uses would help to reduce the risk of wildland fire in the area due to site improvements, such as roadways, driveways, and irrigated landscaping, which would reduce readily combustible vegetation. Additionally, pursuant to Mitigation Measure VII-1, the project design would be required to show that final grading or improvement plans incorporate all recommendations included within the site-specific GGHI prepared for the proposed project to ensure slope stability at the project site. Furthermore, as shown in Figure 16 of the IS/MND, the proposed project locates the residences outside of the areas of the site with the steepest slopes. Although some slopes occur within the project site, the on-site slopes are limited in size and are not sufficient to facilitate rapid spread of wildfire, as compared to mountainous areas with slopes sufficiently large enough to accommodate rapid spread of wildfire. As a result, the proposed project would not exacerbate wildfire risks due to slope. The off-site improvement areas do not include significant slopes.

As discussed in Section IX, Hazards and Hazardous Materials, of this IS/MND implementation of the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically

interfere with the Town's EOP, particularly with any emergency evacuation routes. Furthermore, the proposed project would not include land uses or operations that could impair implementation of the plan. While the long-term maintenance of the proposed roadways, water and wastewater infrastructure, and other utilities would not exacerbate fire risks, the activities associated with the initial construction and placement of the utilities and infrastructure could cause a temporary increase in fire risks due to the use of heavy equipment, which would contain combustible materials such as fuels, oils, and ignition sources. However, the project contractor would be required to comply with all applicable health and safety standards, including the California Health and Safety Codes and local Town ordinances regulating the handling, storage, and transportation of hazardous materials. Compliance with such standards would help to minimize the potential for accidental conditions, including fire.

~~Additionally, the Santa Clara County Fire Department~~ SCCFD has also adopted Genasys Protect (formerly known as Zonehaven) to provide specific, timely and accurate information regarding evacuations within the County. Genasys Protect divides geographic regions into smaller zones to help simplify evacuations. In the event of a wildfire or public safety emergency, fire department and law enforcement agencies will issue evacuation orders and other protective actions for impacted areas. Genasys Protect is a web-based platform that provides real-time evacuation updates. The project site is located within Zone LGA-008, which includes the area north of Kennedy Road, south of Blossom Hill Road, east of Los Gatos Boulevard, and west of Short Road and Brooke Acres Drive.[2]

Therefore, the proposed project would not be expected to be subject to or result in substantial adverse effects related to wildfires, and a ***less-than-significant*** impact would occur.

As shown above, the foregoing revisions elaborate on the discussion within Section XX, Wildfire, of the IS/MND, but do not result in any new significant impacts or substantial increase in impact significance from what was identified in the IS/MND. Page 70 of the IS/MND is hereby also revised as follows to ensure consistency with the revisions shown above:

g. Issues related to wildfire hazards are discussed in Section XX, Wildfire, of this IS/MND. As noted therein, the project site is not located within a State Responsibility Area (SRA). However, the site is located within a Very High Fire Hazard Severity Zone (FHSZ).[3]

As noted within Section XX, Wildfire, of the IS/MND, development of the proposed residential uses would include the clearing of on-site fuel sources and is therefore not anticipated to increase wildfire risks relative to the existing site conditions. In particular, the IS/MND notes that the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically interfere with the Town's Emergency Operation Plan (EOP), particularly with any emergency evacuation routes. Further, in addition to the proposed access points from Twin Oaks Drive and Cerro Vista Court (for Lot 10 only), as noted on page 70 of the IS/MND, the proposed project would include a 20-foot-wide emergency vehicle access (EVA) route extending south from the site to connect to Brooke Acres Drive. Following construction of

[2] Protect Genasys. *Genasys Protect*. Available at: https://protect.genasys.com/zones/US-CA-XSC-LGA-008. Accessed May 2025.

[3] California Department of Forestry and Fire Protection. *Santa Clara County: State Responsibility Area Fire Hazard Severity Zones*. Effective April 1, 2024.

the EVA route, construction trips could use the roadway. During project operations, the EVA route could also be used for egress during evacuation scenarios. Furthermore, the project improvement plans would be submitted to the Town for review by the Town, which would ensure compliance with the California Fire Code (CFC) and California Building Code (CBC).

Response to Comment 2-3

Removal of trees does not violate the Town's Tree Protection Ordinance. The Ordinance allows for tree removal, provided that certain conditions are met. The discussion under question IV-e of the IS/MND acknowledges that the proposed project would not meet the on-site tree replacement requirements. As a result, the IS/MND includes a mitigation measure (IV-9) requiring compliance with the Town of Los Gatos Tree Protection Ordinance. For example, the mitigation requires the project applicant to pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code.

According to LOA, the proposed project would result in a small loss of habitat for the various wildlife species that occur regionally. Many of the species currently using the site would continue to use the site for movement or daily activities, as less than half of the site would be impacted, and less than half of the on-site woodlands would be impacted. Therefore, while some oak woodland habitat would be impacted, the amount is negligible on a regional scale; those species currently using woodland habitat within the impact area would be able to use woodland habitat in the unimpacted areas of the site or elsewhere regionally. In addition, Mitigation Measures IV-1 through IV-9 as set forth in the IS/MND would ensure that significant impacts related to adverse effects on the special-status species listed by the comment would not occur.

Response to Comment 2-4

The comment does not address the adequacy of the IS/MND. However, the IS/MND does address the proposed height in comparison to the Hillside Development Standards and Guidelines on page 21 as follows:

> As discussed above, the proposed project currently includes subdivision of the 17.55-acre project site into 12 lots and the subsequent development of 12 single-family residences. The project site is identified as a Hillside Area pursuant to the Hillside Development Standards and Guidelines. The foregoing standards and guidelines include requirements related to hillside grading, development intensity, architectural design, landscape design, and other site elements such as fences, walls, and driveway entries. The project has been designed such that several residential lots would comply with a number of Hillside Development Standards and Guidelines, including standards related to the Least Restrictive Development Areas (LRDAs), the maximum allowable floor area ratio (FAR) for the site, and the location of the proposed residences within the lots. For example, nine of the 12 proposed residences would be located within the LRDAs, where the slopes are less than 30 percent, consistent with the Hillside Development Standards.
>
> However, because the project is invoking Builder's Remedy, compliance with all of the Town's guidelines, policies, or programs is not required unless noncompliance constitutes a significant health or safety risk. As such, multiple aspects of the project are not in compliance with the Hillside Development Standards and Guidelines, such as the extent of grading and maximum heights. Regarding the latter, it should be noted that seven of the residential lots (Lot 1 and Lots 7 through 12) would only exceed the maximum height of 25 feet by approximately one to two feet, and Lots 7 through 10 would be located on the upper sloped portions of the project site. Thus, an effort has been made to minimize the height exceedance on the proposed residential lots that may be more visible.

In addition, Figure 11 of the IS/MND shows the existing and proposed view of the project site as seen from Longmeadow Drive. As noted on page 23 of the IS/MND, the majority of the project site would remain screened by the existing trees and vegetation and the proposed project would not conflict with existing regulations related to views of the Hillside Area from Longmeadow Drive. Therefore, the IS/MND appropriately concluded that the proposed project would not conflict with applicable Hillside Development Standards and Guidelines regulations governing scenic quality.

Response to Comment 2-5

Potential impacts related to geology and soils, including the risks of landslide, liquefaction, and fault rupture, are discussed in Section VII of the IS/MND. As discussed therein, the project site is located in a zone designated as having a "low" fault rupture hazard potential and is considered to be outside recognized fault zones. Similarly, the site is not located within County- or State-designated liquefaction hazard zones. Finally, Mitigation Measure VII-1 requires the project to incorporate the recommendations of the GGHI prepared for the proposed project, which would require the proposed project to be designed sufficient to ensure that impacts related to soil instability would not occur.

With respect to the erosion and sediment control plan required by Mitigation Measure X-1, the measure and associated plan require interim erosion control measures to be carried out during project construction. The specifics of such measures would be reviewed and approved by the Town of Los Gatos Engineering Division of the Parks and Public Works Department prior to ground-disturbing activities associated with the project. As specified on page 73 of the IS/MND, the erosion control methods shall include, but are not limited to: silt fences, fiber rolls (with locations and details), erosion control blankets, Town standard seeding specification, filter berms, check dams, retention basins, etc. Implementation of such erosion control methods would ensure that impacts related to drainage and erosion would not occur.

In addition, monitoring for erosion and sediment control is required by Mitigation Measure X-1 and by the Construction General Permit. Such monitoring would be performed by a qualified professional and would ensure the control measures are performing adequately.

Response to Comment 2-6

Bioretention basins are standard features of development projects and, as noted on page 12 of the IS/MND, would be sized and designed to meet the Town's C.3 Stormwater Standards design criteria, which require new development to manage stormwater flows such that post-development runoff does not exceed pre-project runoff rates and durations, thereby ensuring flooding would not occur. Bioretention basins filter stormwater runoff naturally through percolation, and do not pond water or result in long-term standing water. Thus, the proposed bioretention basins would not result in any safety concerns.

Response to Comment 2-7

Project construction noise is evaluated on pages 80 through 82 within question XIII-a of the IS/MND. As discussed therein, noise levels associated with project construction at the nearest existing single-family residences could exceed the applicable noise level standards. Mitigation Measure XIII-1 requires the project implement construction equipment staging areas to create distance between construction-related noise sources and noise-sensitive receptors; use electric tools, which create less noise than non-electric; and use mobile construction equipment with smart back-up alarms, which automatically adjust their volume instead of using a fixed volume.

Such measures are consistent with Mitigation Measure N-1 in the Town's General Plan EIR and would reduce potential impacts related to construction noise to a less-than-significant level.

With respect to ingress and egress routes, as well as roadway safety, the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically interfere with the Town's EOP. Increased traffic from project construction would be temporary and cease upon buildout of the proposed project. As presented on page 82 of the IS/MND, generally, a doubling in traffic volumes is required to increase traffic noise levels by 3.0 dB, which is the level at which an increase in noise is generally perceptible. The proposed project would generate approximately 113 trips per day. Although traffic volume data for the roadways adjacent to the project site is not available, an average of 799 daily trips were recorded during the Spring 2024 trimester at Hillbrook School near the site's northwestern corner. Even under the conservative assumption that the traffic volumes at Hillbrook School are representative of the traffic on the nearest roadways in the project vicinity, the proposed project would not double traffic volumes on local roadways and, thus, would not substantially increase traffic noise in the project vicinity.

Response to Comment 2-8

The comment does not address the adequacy of the IS/MND.

Letter 3

From: Sameer Bidichandani [redacted]
Sent: Thursday, October 9, 2025 11:06 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Shabina Mirajkar [redacted]
Subject: Comments Regarding Proposed 12-Home Surrey Farms Development by home owner next door to the proposed site

[EXTERNAL SENDER]

Hi Erin,

We live at [redacted] and have a few concerns regarding the proposed development at 178 Twin Oaks Drive.

We fully understand that some building will take place at this site though are concerned about the size and scope of the development and the impact it will have on both the hillside and existing home-owners in Surrey Farms.

Our top concern is the single point of access which means that every single construction truck and truckload of dirt/asphalt/concrete/building supplies will come screaming down Longmeadow Drive to the Twin Oaks entrance. While there would be an added cost to the builders, there needs to be a second entrance beyond Longmeadow Drive which will also help with emergency access (and exit) during a potential fire event (and the entrance on Olde doesn't count here as no large construction vehicle would use this entrance). Placing the entire traffic burden on Longmeadow Drive residents isn't reasonable - simply add a second entrance from one of the other potential access sites/roads. A temporary entrance directly from Kennedy during construction (while challenging) would be least impactful.

3-1

One additional recommendation/request (augmenting my prior input on spreading the construction traffic impact beyond Longmeadow Drive) is to push 40% of the construction traffic (including new road construction) to Brooke Acres. Clearly the Brooke Acres neighborhood won't be supportive (any more than Surrey Farms is excited about all the traffic coming down Longmeadow), but this would be a more equitable sharing of the construction pain involved here for all existing residents. If one home will be built connected to Cerro Vista (10% of the homes), then splitting the remaining construction vehicles/traffic between Longmeadow Drive and Cerro Vista would dramatically reduce the impact on Surrey Farms.

Like many neighbors, we also remain concerned with fire hazards, drainage, harm to biological resources, protected species and wildlife, degradation of the hillside,

3-2

3-2 cont.

noncompliance with Hillside Development Standards and Hillside Specific Plan, removal of protected trees, interference with the Riparian Habitat (Ross Creek), pollution (light, air, noise), traffic, and encroachment on protected wetlands. Builders Remedy should not be an excuse to trample all legitimate zoning concerns and the mitigation details do not provide sufficient detail to remedy these concerns.

Finally, as we fully expect some building to happen in the future, we'd like to see the builders provide a nice trail navigating the entire property.

3-3

We would be happy to provide further detail on these concerns.

Thank you for the consideration here.

Regards,

Sameer Bidichandani & Shabina Mirajkar

[redacted], Los Gatos, CA 95032

LETTER 3: SAMEER BIDICHANDANI AND SHABINA MIRAJKAR

Response to Comment 3-1

In addition to the proposed access points from Twin Oaks Drive and Cerro Vista Court (for Lot 10 only), as noted on page 70 of the IS/MND, the proposed project would include a 20-foot-wide EVA route extending south from the site to connect to Brooke Acres Drive. Following construction of the EVA route, construction trips could use the roadway.

Response to Comment 3-2

According to CEQA Guidelines Section 15088, "The level of detail contained in the response, however, may correspond to the level of detail provided in the comment (i.e., responses to general comments may be general). A general response may be appropriate when a comment does not contain or specifically refer to readily available information, or does not explain the relevance of evidence submitted with the comment." Thus, when a commenter expresses general concerns, such as the proposed project would result in "more traffic", "effects on water quality", or "increased noise", a specific response is not offered.

Rather, the commenter is referred to the sections where the referenced general concern is evaluated in detail. For example, project-related impacts related to biological resources, such as trees, habitats, or protected species, are evaluated in Section IV, Biological Resources, of the IS/MND. Potential impacts related to drainage are discussed under Section X, Hydrology and Water Quality, and impacts related to evacuation and fire risk are discussed under Sections IX, Hazards and Hazardous Materials, and XX, Wildfire, of the IS/MND. Light pollution and consistency with the applicable Hillside Standards and Guidelines policies are discussed under Section I, Aesthetics, of the IS/MND; potential impacts related to air pollutant and greenhouse gas (GHG) emissions associated with the proposed project are discussed under Sections III, Air Quality, and VIII, Greenhouse Gas Emissions, of the IS/MND; and Section XIII, Noise, addresses potential impacts related to construction and operational noise.

Potential impacts related to transportation are discussed under Section XVII, Transportation, of the IS/MND. As discussed therein, traditionally, lead agencies used level of service (LOS) to assess the significance of impacts related to transportation. LOS represents a qualitative description of the traffic operations experienced by the driver at an intersection or along a roadway segment. However, pursuant to SB 743, the Natural Resources Agency promulgated CEQA Guidelines Section 15064.3 in late 2018, which became effective in early 2019. Subdivision (a) of that section provides that "[g]enerally, vehicle miles traveled is the most appropriate measure of transportation impacts. Thus, pursuant to CEQA Guidelines Section 15064.3, vehicle miles traveled (VMT) is now used, rather than LOS, to assess the significance of transportation impacts under CEQA. As discussed under question XVII-b, the proposed project would result in a less-than-significant impact related to VMT with implementation of Mitigation Measure XVII-1.

The comment does not provide substantial evidence supporting why the mitigation measures set forth in the IS/MND would not be sufficient. In addition, the proposed project would be subject to all existing objective development regulations.

The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 3-3

The comment does not address the adequacy of the IS/MND and has been noted for the record. It should be noted that the addition of a trail is not proposed as part of the project, anticipated or planned for the site, nor required by the Town. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

Letter 4

Subject: Surrey Farm Estates Project

[EXTERNAL SENDER]

Dear Ms. Walters,

We are writing to give our views on the proposed Surrey Farm Estates project.

We have been homeowners in Surrey Farm for over 28 years and we feel that this project will have a major negative impact on our neighborhood.

4-1

As proposed, many trees will have to be removed to make room for this subdivision. It is known that there are protected species living in the hills and trees in this neighborhood and they will be displaced. This was once protected space for wildlife.

There are CC&R's in place for Surrey Farm that all neighbors have had to adhere to when remodeling our aging homes. With few exceptions from the origination of the neighborhood, 2 story homes are not permitted.

4-2

There are known water problems and fire safety issues that impact us all. In case of evacuation there is only one viable entrance/exit from this neighborhood.

4-3

The noise and traffic that will be created during construction will be overwhelming and greatly disruptive to all neighbors, who range from elderly couples who have lived here since these homes were new to young families with small children that play, ride bikes, scooters... and walk their dogs in this neighborhood. This project will place an unfair burden on all of us.

4-4

Thank you for your time and attention,

Jim and Karen Brown

Blueberry Hill Drive

Surrey Farm

Letter 5

From: Jill Fordyce [redacted]
Sent: Wednesday, October 8, 2025 4:27 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Craig Fordyce [redacted]>; Bill Meleyco [redacted]>;
Jon Witkin [redacted]
Subject: 178 Twin Oaks, Proposed Surrey Farms Estates Subdivision Project

[EXTERNAL SENDER]

Hi Erin,

Attached please find our comments with regard to the Mitigated Negative Declaration prepared for 178 Twin Oaks, Proposed Surrey Farms Subdivision Project. Can you please confirm receipt?

Thank you,

Jill Fordyce

Letter 5 cont.

Dear Ms. Walters and Town of Los Gatos Planning Commission,

We have lived in Surrey Farms since 1999 and raised our five children in our home at the end of Longmeadow Drive. We are immediate adjacent neighbors to the proposed project, and as various development plans have come before the town over the last decade, we have consistently voiced our support for preservation of the rural hillside and the Surrey Farms neighborhood. We are now writing in response to the Notice of Intent to adopt a Mitigated Negative Declaration

5-1 (MND) for the proposed 178 Twin Oaks, Surrey Farms Subdivision Project. This project, as detailed in the MND was submitted under SB 330 "Builder's Remedy." Specifically, we are writing to encourage the town to: (1) Prepare a full Environmental Impact Report (EIR) to study the vast environmental effects of this proposed project, including harm to aesthetics, air quality, biological resources, geology and soils, hydrology and water quality, noise, and wildfire risk; and (2) To require the applicant to comply with all objective federal, state, and local guidelines and standards.

After reviewing the Initial Study/MND, we believe the Town cannot lawfully adopt an MND under the California Environmental Quality Act (CEQA) because substantial evidence supports a fair argument that the project may have environmental impacts. The proposed

5-2 development of twelve homes on a rural hillside poses several environmental impacts that cumulatively cannot be reduced to a less-than-significant level through mitigation measures. CEQA therefore requires preparation of an EIR. (It should be noted that when this proposed project came before the town in 2016 for a proposed ten homes, the Town required an EIR.)

In the Letter of Justification dated January 10, 2025, the applicant states that it is

5-3 requesting 153 waivers (9-16 per lot) from the town development standards. Specifically, the applicant requests waivers relative to grading and tree removal to accommodate the development

5-3 cont.

of homes ranging in size from 5775 SF to 6170 SF. In addition, waivers are requested for reduction in lot sizes, increase in home size (including square footage and height), reduced setbacks, unquantified exceptions to cut and fill, removal of protected trees, exceptions regarding grading and construction within the dripline of trees, grading within areas that are greater than 25%, and exceptions to the LRDA. (A list of the requested exceptions is attached hereto as Exhibit A).

5-4

Los Gatos has a right, and indeed a duty, to require adherence to all applicable objective standards. Given the applicant's reliance on Builder's Remedy to construct a twelve-home subdivision on a hillside that has been Resource Conservation Space since 1975, there is even more reason to require strict adherence to all objective standards and codes. Compliance with these standards and codes are the only way to ensure that the Town, the environment, and the neighborhood are protected.

I. Summary of Argument

In an effort to be comprehensive, we have submitted lengthy comments herein. Here is a brief summary of some of the issues we consider most important, all of which are more thoroughly discussed below.

5-5

Fire Risk: According to the SCCFD, the project is in a Very High Fire Hazard Severity Zone (VHFHSZ). Ingress/egress, evacuation routes, and increased risk of fire associated with development are key issues. The SCCFD has not yet approved site access or water supply. The IS/MND misclassifies the site as being located in an HFHSZ, thereby calling into question reliance on any of its findings relative to fire risk.

5-6

Removal of Trees: The arborist report indicates that there are 546 on-site trees that qualify for protection under the Los Gatos Tree Protection Ordinance. The applicant is proposing

Letter 5 cont.

5-6 cont. to remove 223 of those protected trees in violation of that ordinance, destroying habitat for protected species, creating potential additional risks of landslide, mudslide, and drainage issues. Under the ordinance, the applicant would be required to plant 551 replacement trees. Applicant proposes to plant 85 replacement trees and pay in-lieu fees for the remainder.

5-7 **Protected Species Will Lose Their Habitat:** Due to the grading, construction, and removal of trees, multiple protected species will be harmed or displaced, including the California red-legged fog, white-tailed kite, golden eagle, purple martin, pallid bat, Townsend's big-eared bat, San Francisco dusky-footed woodrat, American badger, and burrowing owl.

5-8 **Multiple Lot Size, Building Height, and Setback Exceptions are Requested:** The applicant is asking for reduced lot size and increased home size throughout the project. Most notably, one of the three homes directly visible from the end of Longmeadow is proposed to be nearly 41' tall, when the maximum height is 25 feet under the Hillside Design Standards & Guidelines.

5-9 **Grading and Erosion Issues:** Although the site is located in a county Geologic Hazard Zone, with risks of landslide, liquefaction, and potentially compression soils and fault rupture hazard areas, the applicant requests multiple cut, fill, and grading exceptions. According to the IS/MND a final erosion and sediment control plan has yet to be prepared in conjunction with the project. There is, therefore, currently no plan to protect us from the potential risks to health and safety associated with the excessive grading, cut, fill, and construction on steep slopes in a Geologic Hazard Zone.

5-10 **Drainage and Water Issues:** We already have drainage issues at the end of Longmeadow. The project will introduce 62,224 sf of impervious surfaces. The project proposes various bioretention areas, including one large one to be located directly adjacent to Hillbrook

5-10 cont.

School, and the Fordyce and Meleyco homes. The drainage issues have also not been fully analyzed because of the lack of a final erosion and sediment control plan. In addition to our concern regarding flooding and erosion, we are also concerned with the safety issues and hazards related to the introduction of a bioretention pond adjacent to the school and our homes.

5-11

Noise and Traffic: Construction is expected to go on for at least two years. During that time, there will be an unmitigable increase in noise and traffic, creating health and safety issues for Surrey Farms residents and Hillbrook School. After construction, there will be twelve additional households using Twin Oaks, Longmeadow, and Kennedy for ingress and egress. Traffic in the Kennedy corridor is already a significant issue.

II. History of Surrey Farms Neighborhood and Previous Development Proposals for This Site

5-12

In 1956, the original Surrey Farms Development CC&Rs were recorded. In the mid-1970's, the last four houses on Longmeadow (185-191) were built. Around this same time, the Town was considering making Longmeadow a through-street, connecting to Kennedy and Shannon. That project was ultimately denied, primarily due to neighborhood resistance to the idea of transforming the quiet, closed Surrey Farms neighborhood into a thoroughfare. Around this time, it appears that similar proposals to extend Cerro Vista and Brooke Acres were also denied, making all three of these neighborhoods "cul de sac neighborhoods."

In September 1974, residents of the Surrey Farms neighborhood submitted a petition regarding "the future of Longmeadow Drive as it affects Surrey Farm." Discussing the proposed development of the last four homes on the street, Mrs. Lila June McGrath wrote: "If this proposed development assures the termination (i.e., deadend) of the road added onto Longmeadow Drive in the vicinity of Ross Creek, our grievance is diminished. This was the plan originally submitted by the developers with the blessing of the town government. If, on the other

hand, this added-on road, at Longmeadow Dr. paves the way to ultimately turning Longmeadow Drive into a through-way from Kennedy Road to Shannon Road, the residents of Surrey Farm would strongly oppose the attachment of any public road..."

Mrs. McGrath sites three areas of concern held by the Surrey Farms residents of the mid-1970s: *"(1) the possible destruction of Surrey Farm as we now enjoy it and as we were assured it would remain; (2) the potential increase in pedestrian and traffic hazard; (3) A thought that the termination of Longmeadow Drive at Ross Creek might be a wholesome, intelligent and most logical place to call a halt to this never ending maze of interlocking roadway, and to this checkerboard square mentality we seem to be facing."*

5-12 cont.

Ultimately, the Town agreed with Mrs. McGrath, and our home (191 Longmeadow Drive) and the Meleyco home (189 Longmeadow) became the end of Longmeadow, in a cul de sac, terminating any thought that Longmeadow—and indeed Surrey Farms—would have a connecting street.

On February 2, 1975, Bob and Dorothy Dodge and the Town of Los Gatos entered into a Land Conservation Contract with regard to the property in question, which now constituted the backdrop of the entire, and fully-developed Surrey Farms neighborhood. The contract itself stated that*: "The property is located in an agricultural preserve established by the Town."* The intent of the original Land Conservation Contract was to preserve the rural quality of the land, recognizing that the maintenance of open space and land of rural character holds significant value. It also gave a significant tax benefit to the landowner. This property has never been used for agricultural purposes, at least since 1948 (according to the Town), which pre-dates the Williamson Act contract.

Letter 5 cont.

On March 19, 1975, just after the Land Conservation Contract was signed and the decision to terminate Longmeadow was made, the Town Council approved the four-lot subdivision at the end of Longmeadow.

On May 8, 1975, a Cerro Vista Court extension road was denied by the Planning Commission. Thereafter, residents of Brooke Acres reasoned there would no longer be a road to connect to, and requested that Brooke Acres also be developed as a cul de sac "for the health, safety and welfare of the surrounding neighborhood, also by reasons of Sec. 1.4 Purpose of Ord. 867 (Zoning)."

On June 16, 1975, an ordinance was passed by the Town Council to rezone the hillside from HR-1:20 to RC.

In 1975, 187 Longmeadow was built.

5-12 cont.

On January 1, 1976, the first term of the Williamson commenced.

In 1976, 185, 189 and 191 Longmeadow were built.

These last four residences were constructed to end Longmeadow Drive in a manner that would assure that Surrey Farms would not encroach on Ross Creek and the floodplain and would not have a through street; and the proposal to create roads from Cerro Vista and Brooke Acres were denied and, thus all three surrounding neighborhoods became landlocked.

Prior to purchasing our home at 191 Longmeadow Drive in February 1999, we went to the Town and inquired as to the likelihood of the hill (proposed project site) being developed. Noting that it was Resource Conservation space, the clerk told us "not in your lifetime." In 2016, the applicant herein submitted an application to cancel the Williamson Act Contract and to approve a ten-home planned development on the site. In August 2017, the Town prepared an EIR on the proposed project. According to the IS/MND, "although the project has since changed and

Letter 5 cont.

the EIR was never certified by the Town, the setting of the site has remained the same and, thus, a number of the technical reports associated with the former project and 2017 EIR remain applicable to the proposed project." (IS/MND p. 6)

On October 9, 2016, we submitted comments in response to the DEIR, which discussed all of the problems with regard to the project. Those comments are incorporated into the EIR as "Letter D - Fordyce Family" (pages 2-44 to 2-92). (The Town's response to our comments can be found in the EIR at pages 2-93 to 2-108). We also submitted a response to the RDEIR on June 19, 2017, and to the Final EIR on February 28, 2018. Given that a number of the technical reports associated with the former project are relied upon for the current project, we request that those documents, as well the entirety of the previous EIR be included in the record herein.

5-12 cont.

On May 1, 2018, the Town Council voted unanimously to decline a request to cancel the Williamson Act contract, thereby rejecting the proposed project. In reaching this decision, the Town Council acknowledged that the Williamson Act contract would expire in April 2025 and expressed a desire to find a way to permanently preserve the hill as open space and/or create a development plan that preserves a majority of the hillside as open space. The Town Council also specifically acknowledged that rural hillsides like this are part of the Town's essential identity and should be preserved.

In 2023, Robson Homes submitted a proposal to subdivide this same property into 12 parcels and construct 11 detached single family residences, 11 ADU's, and 2 BMP units in the form of attached single-family residential units to the town's Conceptual Development Advisory Committee (Application CD-23-001). In response to a notification and call for comments by the Conceptual Development Advisory Committee, we provided our 2018 submission in opposition to the previous proposed development, which outlined many of the issues confronting *any*

Letter 5 cont.

5-12 cont.

proposed development of the property. The Conceptual Development Committee expressed the following concerns regarding the proposed Robson project: too many homes; the potential for even more structures with ADUs; the increase in traffic; fire access; the potential for increased water runoff; the loss of open space; the need for hillside preservation and wildlife corridors; overall impacts to environment and existing neighborhood; impact of increased density on fire safety and rain/erosion; a single ingress and egress. One commissioner noted that in 2023, the project has to be evaluated differently than in 2018 because of SB 9 and ADU's, noting that there would have to be a fair amount of less units. Another stated that there must be fewer homes for many reasons including ingress/egress/access, the "real burden" on the neighborhood, and the water and drainage issues. Another summarized the recommendations of the Conceptual Design Committee as follows: the number of units proposed is excessive; the fire risk is severe; there should be the bare minimum for density; and the development needs to comply with hillside standards and guidelines. (Conceptual Development Advisory Committee Meeting April 12, 2023).

It should also be noted that before the proposed Robson development was before the Conceptual Design Advisory Committee, we were approached by Robson Homes to determine what they could do to mitigate the effects of the proposed project on the neighborhood. This included, among other things, discussion of a grove of trees in between the proposed development and the property lines along Longmeadow and Twin Oaks, and the possibility of deeding a portion of land to adjacent properties to ensure privacy.

To date, we have not been approached by the developer of the current proposed project to determine what, if anything, could be done to lessen the impact on the neighborhood and specifically, the homes directly adjacent to the site. We are unaware of this current proposed

5-12 cont.

project going before the Conceptual Development Advisory Committee; therefore, this is our first opportunity to formally present our concerns with regard to the current proposed project to the Town.

III. The Town is Required to Apply All Appropriate Objective Standards to the Proposed Project

Pursuant to SB 330, while the Town cannot deny the project solely for zoning inconsistency if the project meets affordability thresholds, Builder's Remedy does not override building codes, fire codes, CEQA, the Hillside Standards & Guidelines (HDS&G) or objective health and safety standards.

Pursuant to Ca. Govt Code s. 65589.5 (j)(1): A local agency shall not disapprove a housing development project…unless it makes written findings based upon a preponderance of the evidence in the record that: (A) The housing development project would have a specific, adverse impact upon the public health or safety; and (B) There is no feasible method to satisfactorily mitigate or avoid the specific adverse impact, other than the disapproval of the project or the reduction of density.

5-13

"Specific, adverse impact" is defined as: "a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete."

"Feasible" means "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Gov't Code s. 65589.5 (d)(2); Pub. Res. Code s. 21061.1). A project is not considered infeasible under the HAA if it is merely less profitable. The California Department of Housing and Community Development (HCD), in its 2024 Builder's Remedy and

HAA guidance, stated: "Infeasibility means the project cannot reasonably proceed, not merely that it would yield lower profits or returns." (HCD, Builder's Remedy FAQ (2024 update), p. 6).

It is well-documented that the applicable building and fire codes, the HDS&G, CEQA, and Los Gatos Tree Protection Ordinance exist to protect and promote the health and safety of our community. The location of the project in a Very High Fire Hazard Severity Zone (VHFHSZ) of the Local Responsibility Area (LRA) requires compliance with the California Fire (CFC) & Building (CBC) Code, 2022 edition, as adopted by the Town of Los Gatos Town Code (LGTC), California Code of Regulations (CCR) and Health & Safety Code. (SCCFD Developmental Review Comments dated 8/12/25).

The HDS&G Protects the Health & Safety of the Community

5-13 cont.

Specifically, the HDS&G's objectives include:

1. Minimize risk of geologic failure, fire, and floods.
2. Ensure projects fit the site and avoid physical hazards.
3. Maintain safe access and emergency service standards.
4. Preserve drainage and vegetation to prevent erosion and flood hazards.

The Town has identified the following key hazards in hillside zones: wildfire, landslides and erosion, seismic shaking and fault rupture, and flooding from hillside drainage. The following HDS&G standards are tied directly to health and safety: Chapter 2 includes standards embedded in constraints mapping, including identification of hazard areas. Chapter 3 includes Site Planning standards relating to grading/ cut & fill, drainage, driveways & parking; fire/ safety (HDS&G p. 20-23). Chapter 5 includes Architectural Design standards relating to fire safety, height and setback, and structural/noncombustible material constraints. (HDS&G p. 32-35).

Letter 5 cont.

5-13 cont.

The Tree Protection Ordinance Protects the Health & Safety of the Community

The proposed project is subject to the town's Tree Protection Ordinance (Chapter 29), the stated objective of which is as follows: "Tree protection preservation is necessary for the health and welfare of the citizens of the Town of Los Gatos in order to … minimize spread of disease to healthy trees, conserve scenic beauty, prevent erosion of topsoil, protect against flood hazards, counteract pollutants in the air, and generally maintain the climatic and ecological balance of the area." (From Ordinance 2332, amending Chapter 29; Los Gatos Municipal Code, Section 29.10.0950). Preservation of trees protects the community by:

1. Mitigation of physical hazards (erosion, landslides, flooding).
2. Fire risk reduction.
3. Preservation of air quality (air pollutant removal, climate moderation).
4. Safety from wind forces.

CEQA Protects the Health & Safety of the Community

The stated objective of CEQA is to ensure that public agencies and the public are informed about the potential environmental effects of proposed projects before decisions are made and actions are taken. Several of CEQA's foundational policies explicitly relate to preserving health, safety, and welfare of the community, including:

1. Preventing the elimination of fish and wildlife habitats essential to human welfare.
2. Ensuring that major consideration is given to preventing environmental damage to life-supporting natural systems.
3. Safeguarding the environment to maintain the health, safety, and comfort of people living in California.

(CA Public Resources Code section 21001-02).

Letter 5 cont.

By preserving natural systems (air, water, soil, biological communities), CEQA aims to maintain the environmental conditions necessary for human health, clean air, and safe water supplies. Environmental degradation directly impacts respiratory, waterborne, and ecosystem-related health risks.

5-13 cont.

Grading and height limits, required setbacks, tree protection, height and ridgeline protection, retaining walls, site elements, landscaping, tree protection, erosion control, and fire safety codes are all objective, quantifiable standards that were adopted to protect the health and safety of our community. Accordingly, the Town can and should insist that the proposed project comply with these standards.

IV. The Proposed Project Will Cause Significant Environmental Effects and Requires Preparation of an EIR

The MND lists the environmental factors that are potentially affected by the proposed development as: Biological Resources, Geology and Soils, Hydrology and Water Quality, Noise, Cultural Resources, Transportation, Air Quality, and Tribal Cultural Resources. Notably, it does not include Aesthetics or Wildfire as potentially affected factors. CEQA establishes a low threshold for requiring an EIR: if there is substantial evidence, including reasonable inferences,

5-14

supporting a fair argument that a project may cause a significant environmental effect, an EIR is mandatory (CA Pub. Res. Code s. 21080, 21082.2; CEQA Guidelines s. 15064 (f)(1)). The "fair argument" standard is intentionally low, designed to ensure environmental impacts are fully studied. The factors are addressed below in the order they were presented in the Environmental Checklist in the IS/MND as follows: Aesthetics, Air Quality, Biological Resources, Geology and Soils, Hydrology and Water Quality, Noise, Public Services, Transportation, Wildfire, and Mandatory Findings of Significance (Cumulative Impacts).

The Proposed Project Will Significantly Impact the Aesthetics of the Site and the Surrounding Neighborhoods

The IS/MND found less than significant impact as to aesthetics with the proposed development. According to the IS/MND, "Multiple aspects of the project are not in compliance with the Hillside Development Standards and Guidelines, such as the extent of grading and maximum heights." As to the noncompliance with the maximum height limitations "…it should be noted that seven of the residential lots would only exceed the maximum heigh of 25 feet by approximately 1-2 feet….." (IS/MND p. 21).

Figure 11 depicts the existing view of the project site in comparison to the view of the project site with the proposed development. The view from Longmeadow Drive with the proposed development is altered from a rural landscape to three towering homes above the already existing neighborhood. Lot 5, in particular, proposes a home over 40 feet high (more than 15 feet over the maximum height) directly behind and above our home, the Meleyco home, and the Witkin home. These new, large homes will dominate the landscape and the foreground at the end of Longmeadow Drive.

5-15

According to the IS/MND, "[t]he majority of the project site would remain screened by existing trees and vegetation. The proposed project would not conflict with existing regulations related to view of the Hillside Area from Longmeadow Drive. Because the proposed project would not substantially affect view of the Hillside are from Longmeadow Drive, the proposed project would not conflict with applicable Hillside Development Standards and Guidelines regulations governing scenic quality." (IS/MND p.23-4). We strongly encourage Town staff, planning commissioners, and council members to view not only Figure 11, but to view the property in person to understand the effect of constructing three large homes directly behind the already existing homes at the end of Longmeadow. Privacy and views are completely eliminated,

Letter 5 cont.

5-15 cont. and there is no screening and/or vegetation proposed to protect the neighbors at the end of Longmeadow and Twin Oaks.

Additionally, the aesthetics of the large bioretention pond directly adjacent to our home,

5-16 the Meleyco home, and Hillbrook School should also be considered and is not discussed herein. (See discussion of possible bioretention pond hazards herein at pp. 23-24).

The hillside does not contain any current unnatural source of light; construction of a neighborhood on the hill will create multiple new sources of substantial light and glare. The IS/MND states that the project site is currently undeveloped and surrounded by existing residences and the Hillbrook School. "Therefore, existing sources of light and glare including, but not limited to, headlights on cars and trucks travelling along nearby roadways and private driveways, exterior light fixtures, and interior light spilling through windows, are present with in the project vicinity. Therefore, while the development of the project site with 12 single-family residences would add new sources of light and glare to the site, such sources would be similar in

5-17 nature to the existing surrounding conditions and would not adversely affect day or nighttime view in the area." (IS/MND p. 28).

Further, it states that, because the homes must comply with the Town's building codes and HDS&G, there will minimal aesthetic harm from sources of light. However, this fails to take into account that the site is and has always been a natural hill that is currently 100% dark at night, so all new sources of light will be prominent; the town code cannot control car lights, which will shine directly into our homes at the base of the hill; and the homes and streets of the proposed development, with all of their interior and exterior lighting, are located directly above our homes.

Letter 5 cont.

5-18 Because the entire backdrop to Surrey Farms would be changed from an open, grassy hill, to a neighborhood with twelve homes, the potential for as many ADUs, cars, lights, streets, and other infrastructure, the proposed project will substantially impact scenic vistas, damage scenic resources, and degrade the visual character of the site and its surroundings.

The Proposed Project Will Adversely Affect the Air Quality in the Area

According to the IS/MND the proposed project will have a less than significant impact with mitigation incorporated on air quality. (IS/MND 31). The project anticipated commencing in September 2025, with construction taking place over approximately two years. During grading, a total of 10,878 cubic yards (CY) of soil would be exported from the site and 21,082 CY would be imported. (IS/MND p. 32). The combined emissions of the on-site and off-site construction activities could exceed the BAAQMD threshold of significance for NOx.

5-19 The mitigation proposed to prevent this outpouring of pollutants and dust into the neighborhood below is to water exposed areas two times a day, to require all haul trucks to be covered, to limit the vehicle speed to 15 mph on unpaved roads, to limit idling time, to maintain construction equipment, and to post a sign of who to call with dust complaints. (IS/MND p. 33-4). These mitigation efforts will at best minimally reduce what we expect that will be a constant source of dust, pollution, and runoff in our backyard for at least a period of two years. We already have drainage issues at the base of the hill, and now to mitigate dust, the solution proposed is to water twice a day. What will happen to the new, constant runoff down the hill and onto our properties and into our neighborhood is not addressed in the IS/MND.

Additionally, it is noted that the construction activities will be occurring within 50 feet of the Hillbrook School, the population of which (children) are particularly vulnerable. The major pollutants of concern are localized carbon monoxide emissions and TAC emissions. (IS/MND p.

5-19 cont.

35-6). The IS/MND concludes, however, that because the emissions would not adversely affect "a substantial number of people", a less than significant impact would result. The current enrollment at Hillbrook School is over 400 students. The Hillbrook sports field is directly adjacent to the site.

The Proposed Project Will Irrevocably Harm Biological Resources

5-20

According to the IS/MND, the project will have a "less than significant impact with mitigation incorporated" as it relates to: "habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service" and "conflict with any local policies or ordinances protecting biological resources such as a tree preservation policy or ordinance." The Project was deemed to have a less than significant impact on "any riparian habitat", "federally protected wetlands", and interference with "movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors." (IS/MND p. 39).

Protected Species Will Be Harmed and Displaced

5-21

According to the IS/MND, the proposed project has a potential to result in adverse effects to nine special-status wildlife species, as well as additional nesting raptors and migratory birds (California red-legged frog, white-tailed kite, golden eagle, purple martin, pallid bat, Townsend's big-eared bat, San Francisco dusky-footed woodrat, American badger, and burrowing owl.) As with all the wildlife affected or potentially affected by this proposed development, the destruction of their natural habitat cannot be mitigated. 223 trees will be removed and countless others "impacted" by the development.

5-22 The California red-legged frog is a California "species of special concern." Ross Creek may be suitable for dispersal and foraging habitat for the species and, given the potential for the frog to be present within the site, on-site construction activities could result in a potentially significant adverse impact. (IS/MND p. 43).

5-23 The white-tailed kite and golden eagle are both California Fully Protected species. The purple martin is a California "species of special concern." According to the Biological Evaluation, the project site provides suitable foraging habitat for both species. "In addition to the suitable foraging habitat provided by the project site for white-tailed kite, golden eagle, and purple martin, as well as the marginally suitable nesting habitat for the white-tailed kite, the site contains existing trees that could provide nesting habitat for raptors and migratory birds protected by MBTA. Construction activities that adversely affect the nesting success of raptors and migratory birds (i.e., lead to the abandonment of active nests) or result in mortality of individual birds constitute a violation of State and federal laws. Thus, if such species occur on-site during the breeding season, project construction activities could result in an adverse effect to species protected under the MBTA. (IS/MND p. 43-4).

5-24 The San Francisco dusky-footed woodrat is a California "species of special concern." During the field survey conducted as part of the Biological Evaluation, San Francisco dusky-footed woodrat nests were observed on-site, within the "oak woodland understory in the north portion of the site." As such, if construction activities were to occur within this habitat, the project could result in adverse impacts to the San Francisco dusky-footed woodrat. (IS/MND p. 44).

5-25 It should be noted that in the previous DEIR on this property, ten target species were determined to have the potential to occur within the study area. Those include one federally

5-25 cont.

listed species (California red-legged frog), one State fully protected species (white-tailed kite), and eight other special-status species (foothill yellow legged frog, Cooper's hawk, sharp shined hawk, Bell's sage sparrow, loggerhead shrike, Nuttall's woodpecker, Allen's hummingbird, pallid bat). One large stick nest was observed on the project site, potentially belonging to a great–horned owl and two barn owls were also observed. Both are protected raptor species. Furthermore, according to the previous DEIR, although they are not expected to occur on site, the presence of an additional 16 target species could not be entirely ruled out.

5-26

The mitigation measures include surveying for presence of any of the protected species by a qualified biologist prior to commencement of "ground disturbing activities", tree removal, or vegetation clearing. Mitigation also includes ceasing activities until the protected species "moves out" or is "relocated." It is unclear how these mitigation measures can compensate for the essential destruction of the habitat of these special species who live among the oaks and woodlands on the site. None of the mitigation measures can reduce the impact of the habitat being altered and destroyed. There is notably no effort to preserve the habitat.

The Proposed Project Requires the Removal of 223 Protected Trees

5-27

The Arborist Report determined there are 603 on-site trees measuring four inches or greater in diameter, consisting of 26 species. 546 of the on-site trees qualify for protection under the town's Tree Protection ordinance. "According to the proposed Tree Mitigation and Protection Plan, 223 protected trees would be removed, which would require a total of 551 replacement trees to be planted on-site pursuant to the Town of Los Gatos Tree Protection Ordinance. A total of 85 trees are proposed to be planted on-site, which would not meet the on-site tree replacement requirements." (IS/MND p. 50). Given that the proposed project would result in the removal of protected trees, including mixed oak woodland, and would not meet the on-site tree replacement

requirements, a potentially significant impact could occur related, in particular, to tree preservation.

In order to mitigate the damage caused by the removal of 223 protected trees, the applicant proposes the following: applicant shall obtain a permit to remove protected trees and if the tree is in good condition, they will pay for removal and the planting of replacement trees. Because the applicant does not intend to meet the tree replacement requirement, they will pay appropriate in-lieu fees (IS/MND p. 50-1). Therefore, the proposed development would remove over 40% of the protected trees on the property. Although the ordinance would require applicant to "replace" those trees by planting 551 new trees, the applicant proposes to only add 85 (about 15% of what would be required.) As indicated above, protected species rely on these trees for nesting, food, and habitat. The sheer volume of the removal coupled with the minimal replacement cannot be mitigated by the payment of fees. The trees and the species that rely on them will be irrevocably harmed. Additionally, the stability of the geology and soils, will also be called into question once this long-existing vegetation is cleared.

5-27 cont.

In *Save the Agoura Cornell Knoll v. City of Agoura*, 46 Cal. App. 5th 665 (2020), the court held that there was substantial evidence that the city's MND did not adequately analyze the significant impacts that the subject project may have on the site's oak trees, nor did it effectively mitigate those potential impacts to a less than significant level. In that case, the court noted that native oak trees are considered a valuable resource by the California Department of Fish and Wildlife and were protected by Agoura Hills' Oak Tree Ordinance. (*Id.* at p. 16) The Agoura ordinance is comparable to the Los Gatos ordinance, in that it provides for the protection and replacement of oak trees that are disturbed or removed by development. In the Agoura case, the city adopted an MND, concluding that the project would have significant impacts on the site's

oak trees, but that such impacts would be reduced to less than significant with two mitigation measures. One provided for the replacement of oak trees removed during the project development, and where onsite replacement is not feasible, it allowed for an in-lieu fee to be paid to the city to acquire land to plant new oak trees.

Prior to the issuance of a grading permit, Agoura's Oak Tree Consultant and Appellant's landscape architect each described the risk that the mass grading would result in a water deficit to the oak trees at the project site. A tree advocacy group objected to the in-lieu fee option noting that this mitigation would allow the applicant to pay a fee in lieu of replacement of destroyed trees, which would be a "tremendous loss to your community." It urged the city to reconsider the measure because it would allow eliminating 59% of the city protected Valley Oak and Coast Live Oak trees on this site simply by paying a fee. They further noted that this "does not mitigate the loss of oak woodlands on the site and will result in a new loss of oak trees. Even if trees are replanted, grading and drainage alterations to the site will reduce the ability of replanted oak trees to survive…" (Id. at 17).

5-27 cont.

The appellant in *Agoura* contended that an EIR was not necessary to consider the project's potential impacts to native oak trees because the mitigation measures were effective. The court, however, disagreed. (Id. at 17-18). Specifically, the court pointed to the ineffectiveness of replanting trees on the site where there were both risks of mass grading and no provision for mitigating the loss of water for the retained or replacement trees. Additionally, there was substantial evidence that once these woodland areas are destroyed, they cannot be restored. "To date, there have been no successful restorations of oak woodlands. It is relatively easy to plant oak trees, but the extensive ecological network and soils that make a forest from

those trees has thus far been impossible to recreate." (*Id.* at 18, quoting letter from Resource Conservation District of the Santa Monica Mountains).

The court noted that, in addition to the loss of the trees, the flora and fauna that are part of the oak forest are also lost. The court further pointed out that even though the city allowed for in-lieu fees, it does not relieve the city of its obligation to analyze the in-lieu fee measure under CEQA to determine if it adequately mitigates this project's impacts to a point where clearly no significant effect on the environment would occur. (Id. at 19).

5-27 cont.

In addition to the CEQA cause of action, the petition alleged a cause of action for violation of the city's Oak Tree Ordinance. The trial court granted the petition, concluding that the oak tree permit issued by the city violated the ordinance's prohibition on the removal of more than 10% of the total estimated tree canopy. (*Id.* at 21).

The *Agoura* case is instructive to the case herein. The facts are remarkably similar. There is a tree protection ordinance that is violated. There is an inadequate analysis under CEQA as to the impact of the removal of those trees. The mitigation measures herein are limited to a fraction of the replanting obligations, and payment of in-lieu fees. As in *Agoura*, the mitigation is insufficient to compensate for the loss of the trees, the loss of the habitat the trees provide, and the alteration of the geology and soils due to the removal of vegetation. As the expert noted in *Agoura*, once these trees are removed, the ecological network and soils cannot be recreated.

The Proposed Project Will Have a Detrimental Effect on the Site Geology and Soils, Including the Potential for Landslides

5-28

The IS/MND indicates that there is less than significant impact with mitigation incorporated as to the following issues: seismic-related ground failure, including liquefaction; landslides; and unstable soil, creating substantial direct or indirect risks to life or property. (IS/MND p. 59). The California Geological Survey (CGS) Mapping shows that all or a portion of

the site lies within a landslide hazard area, and hazard mapping by Santa Clara County indicates that the eastern half of the site is within a county landslide hazard zone; USGS mapping shows that there were "many landslides" in the area containing the project site. (IS/MND p. 61).

The proposed project requests multiple waivers in order to exceed the maximum allowable grading, cut and fill pursuant to the HDS&G. According to IS/MND Section 6 of the Geotechnical and Geologic Hazard Investigation (GGHI), discusses various requirements related to earthwork, including temporary and permanent cut and fill slopes, subgrade preparation, wet soil stabilization material for fill, compaction requirements and backfill. "Without incorporating the recommendations included within the GGHI, new fill placed for the planned structures and streets on existing including slopes could cause a significant impact related to slope instability." (IS/MND p. 61).

5-28 cont.

Undocumented fill was encountered in the southwestern section of the site, the presence of which could cause settlement due to the variable nature and consistency of undocumented fills. Therefore, potential adverse impacts related to subsidence/settlement could occur. (IS/MND p. 61). The GGHI further concluded that moderately expansive soils generally blanket the project site, resulting in potential hazards or risks related to expansive soils. The study concludes that the proposed project could result in potential hazards or risks related to landslides, lateral spreading, subsidence, and/or soil expansion, and a potentially significant impact could occur.

To mitigate these potential impacts, prior to approval of any grading or improvement plans, a licensed engineer shall review the plans to ensure the engineering recommendations are adequately incorporated to the satisfaction of the Town's Engineer. (IS/MND p. 63). Given the excess of grading and fill requested for this project, in contravention of the standards identified by the HDS&G, it is unclear what this proffered mitigation actually provides. It appears to be a

"future determined" mitigation. It is clearly stated in the IS/MND that there are inherent risks to construction of a project on this site. The applicant is asking for exceptions to these standards, which are designed to protect us from these risks. We are requesting that the Town abide by its objective and necessary standards relative to grading and fill.

5-28 cont.

According to the map of Santa Clara County Geologic Hazard Zones (Twin Oaks / Los Gatos), the project parcel lies within designated Geologic Hazard Zones, including landslide, liquefaction, and potentially compressible soils and fault rupture hazard areas. Under Santa Clara County policy, development within these zones requires geologic review and site-specific investigation. The presence of multiple overlapping hazards constitutes substantial evidence that the project may result in significant environmental impacts, triggering the requirement for a full EIR under CEQA. The property sits on steep slopes in a region with documented landslide and erosion hazards (see USGS and Santa Clara County hazard maps.) The site's steep slopes create elevated risks of slope instability, erosion, and mass movement, especially under grading and vegetation removal. The IS/MND fails to adequately evaluate slope stability under grading, vegetation removal, and increased stormwater runoff. These hazards and the failure to mitigate them in a meaningful way represents substantial evidence of potentially significant environmental effects, requiring full evaluation in an EIR.

Drainage is a Pre-existing Problem That Will Be Made Worse by This Project

5-29

In January 1975, when the last four homes on Longmeadow were constructed, the Assistant Planning Director acknowledged that this four lot subdivision at the end of Longmeadow included lots of varying sizes due to the flood plain area required by Ross Creek, which lies directly behind what is now our home (191 Longmeadow) and the Meleyco home (189 Longmeadow). Ross Creek is identified in the IS/MND as part of the riparian woodland.

Letter 5 cont.

According to the IS/MND, "consistent with the Town's Standards and Guidelines for Land Use Near Streams, the proposed project would include a 25-foot riparian setback from the top-of-bank of Ross Creek and incorporate the 100-110 foot flood easement from Ross Creek. As such according to the site plan prepared for the proposed project, development with the riparian woodland area is not proposed, and Ross Creek would not be directly impacted by the proposed project." (IS/MND p. 48).

Approximately 62,224 square feet of the project site will be covered by impervious surfaces. The Town requires projects that create or alter 10,000 or more square feet of impervious area to contain and treat all stormwater runoff from the project site. Stormwater runoff would be directed into various bioretention areas, one of which is located at the base of the hill in between our home, the Meleyco home, and Hillbrook School.

5-29 cont.

The conclusion of the initial study as it relates to hydrology and water quality is: "…because a final erosion and sediment control plan has not yet been prepared for the proposed project, the proposed project could result in the violation of water quality standards or degradation of water quality during construction, and a potentially significant impact would occur." (IS/MND p. 73) The mitigation measure is essentially to prepare and submit this plan. This is insufficient. What if the plan is prepared and does result in the violation of water quality standards? What then is the mitigation? This issue is not sufficiently evaluated, as it relies on further study as a mitigation measure.

There is No Plan for Sediment and Erosion Control During Construction

5-30

According to the IS/MND, during construction, topsoil will be exposed, and the potential exists for wind and water erosion to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality downstream. The SWRCV regulates

stormwater discharges associated with construction activities where clearing, grading or excavation results in a land disturbance of one or more acres. The project is required to show coverage under the State's General Protection Permit, which in turn, requires applicant to prepare a Storm Water Pollution Prevention Plan. (IS/MND p. 71). The project is also required to comply with Chapter 12 of the Town's Municipal Code, which includes standards for managing stormwater runoff during "construction and operation."

Approval of an erosion and sediment control plan by the Town Engineer is required. Final erosion and sediment control plans would be required to comply with the recommendations of the civil engineer, engineering geologist, or landscape architect involved in preparation for the town grading plans, as well as any and all standards and specifications adopted by the Town Engineer for the control of erosion and sedimentation. "*Because a final erosion and sediment control plan has not yet been prepared for the proposed project, proper compliance with the aforementioned regulations cannot be ensured at this time, and the proposed project could discharge sediment or urban pollutants through soil erosion, violate water quality standards or waste discharge requirements, or otherwise substantially degrade surface or ground water quality during construction."* (IS/MND p. 72) Again, there is not enough information due to the lack of a final erosion and sediment control plan. This is significant because it defers any actual mitigation to a known environmental impact—one that has the potential to directly affect the health and safety of the adjacent neighbors, including a school.

5-30 cont.

There is No Plan for Sediment and Erosion Control During Operation

5-31

Following the buildout of the proposed twelve homes and associated roadways and infrastructure, approximately 62,224 sf of the project site would be covered by impervious surfaces; the remaining 702,502 sf of the project site would remain unpaved. The project would

Letter 5 cont.

install an on-site stormwater drainage system to collect and treat the on-site runoff. The project is subject to both County and Town standards. Applicant proposes multiple bioretention areas, including a large one in the corner of the property adjacent to Hillbrook School, the Meleyco home, and our home. Because a final erosion and sediment control plan has not yet been prepared for the proposed project, the project could result in the violation of water quality standards or degradation of water quality during construction, and a *potentially significant* impact would occur. (IS/MND p. 73). Again, the mitigation measure proposed is only preparation of the required plan.

While the IS/MND lays out possible interim erosion, sediment control, and stormwater runoff measures, there is no plan; currently, there are retaining walls and bioretention ponds, and a "stormwater drainage system to capture and treat on site runoff", all of which create their own problems. The conclusion of the IS/MND is that because a compliant plan will ultimately be required, the proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in erosion, siltation or flooding, exceed stormwater capacity or create additional sources of potential runoff. As mentioned above, drainage is a pre-existing problem in Surrey Farms. Water naturally runs from the hillside into the neighborhoods, and can be quite substantial after significant rains, as shown in this video taken after a rainstorm in February 2019. Link to water flow video.

5-31 cont.

In addition to the increased volume of water coming down the hill due to the introduction of grading and impervious surfaces, we have concerns about the health and safety of having a bioretention basin at the base of the hill adjacent to Hillbrook School, the Meleyco home, and our home. We don't understand how this works, i.e., where does the water ultimately go? What happens if the basin fills? Where is the water redirected? Who is maintaining the basin? As the

5-32

5-32 cont.

proposed plan has not yet been prepared, we don't understand exactly how it functions. How is water treated on-site? Does that involve additional mechanical/noise/pollution impacts that are not addressed in the IS/MND? And what are the remedies if this new system fails, and/or the water is directed into our yards or the adjacent schoolyard? What safety measures will be employed to protect the neighborhood and the school from the potential dangers inherent in a body of water? Another fundamental question that has not been answered by the IS/MND, is how significantly the grading of the hillside, the construction of homes and roads, and the removal of vegetation will affect the amount of water accumulating in the northwestern portion of the property. We are gravely concerned about the potential for flooding and mudslides. These issues are not adequately addressed by the MND. The applicant has not provided an adequate solution to protect our neighborhood from flooding, erosion, drainage issues, and proposed consequences to health and safety caused by the grading, construction, and removal of natural vegetation in an environment where drainage is already a significant issue.

The Project Will Significantly Increase the Noise in the Surrounding Areas

5-33

According to section XIII of the IS/MND, the Town has concluded that there is "a less than significant impact with mitigation incorporated" as to the generation of increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies (and) generation of excessive groundborne vibration or groundborne noise levels. "Sensitive noise receptors" in proximity of the site include residences and schools. (IS/MND p. 79). According to Section 16.20.035 of the Town's Municipal Code, between the hours of 8:00 a.m. and 6:00 p.m. weekdays, and 9:00 a.m. and 4:00 p.m. Saturdays, construction is allowed if it meets one of the following noise limitations: (1) no individual piece of equipment shall produce a noise level exceeding 85 dba at

25 feet; (2) the noise level at any point outside the property plane shall not exceed 85 dba. The Town's General Plan establishes a maximum outdoor noise limit of 55 dB for residential land uses within the Town.

The project construction noise will include the use of heavy equipment as well as noise generated by increased truck traffic in neighborhood roadways. At a distance of 25 feet, construction of the project will generate noise levels up to 94 db. As a result, the proposed project would not meet the first noise limitation. As for the second noise limitation, because there are sensitive receptors located approximately 50 feet from the project site boundaries, noise levels at the existing single-family residences could exceed 85 dba during construction activities. (IS/MND p. 81). Without the limitations required by Mitigation Measure N-1 in the General Plan EIR, the proposed construction activities could result in the generation of a substantial temporary increase in ambient noise levels in the vicinity of the project in excess of standards established in the local noise ordinance.

5-33 cont.

The IS/MND finds no substantial noise increase beyond that created during construction because the proposed residences would be compatible with adjacent existing residential uses. The IS/MND concludes that a potentially significant impact would occur because of the construction noise. (IS/MND p. 82). The mitigation measure proposed is "construction staging areas to create distance between construction-related noise sources and noise-sensitive receptors" and "additional noise attenuation techniques during the clearing, earth moving, grading, and foundation/condition phases of construction". Proposed on-site construction activities would occur at a distance of approximately 50 feet from the nearest residence to the west of the site. (IS/MND p. 84). Table 7 indicates the effects of the vibrations on people and buildings, concluding that the proposed project could expose people to or generate excessive groundborne

5-33 cont. vibration or groundborne noise levels, and a potentially significant impact could occur. (IS/MND p. 84). The mitigation measure proposed to reduce this impact appears to only relate to the off-site improvement areas and proposes "preconstruction crack documentation and construction vibration monitoring."

While it is a given that the project will cause an increase in noise and vibration during construction (for two years or more), it will also increase noise and vibration after the new neighborhood is constructed. Instead of hearing birds, frogs, and other wildlife, we will hear cars, alarms, cars, people, phones, radios, televisions, parties, and possibly a water treatment facility. According to the IS/MND, it will be comparable to current residential noise. It must be

5-34 recognized, however, that there is no noise from "residential activities" at the end of Longmeadow and the homes along Twin Oaks. Other than wildlife, the only noise we typically hear is children on the field at Hillbrook School, and occasionally, because of the way sound travels down the hill, we can hear telephones and people speaking from the one house on Cerro Vista directly above Hillbrook and visible from our yard. To go from essentially no noise to a neighborhood full of noise, with sound that travels downhill, will impact all the homes at the end of Longmeadow, along Twin Oaks, and I expect Cerro Vista and Brooke Acres, as well.

Construction of the project will affect our home and our way of life in Surrey Farms. The construction will not create havoc for a few months, but for years. The mitigation measures provide no relief. Construction, with its accompanying dirt, dust, pollution, and noise are allowed

5-35 for ten hours a day on weekdays, and eight hours a day on weekends. It appears that nearly every waking hour of the day our home life will be exposed to construction noise, for an indefinite period of time. This will prevent use of our backyard by our family, including our grandchildren who should not be exposed to the dust, noise, and pollution. Whereas many of us in the

5-35 cont. neighborhood also work from home, there will be virtually no respite from the noise, dust, and pollution and the activities of both daily homelife, and work will be disrupted.

The Proposed Project Will Likely Have an Impact on Public Services

The IS/MND concludes that there is a less than significant impact on public services, including schools, fire protection, and police protection because there are only twelve new homes proposed, which would result in "an increase of approximately 29 residents." (IS/MND p. 89). It is unclear where this figure comes from but seems to be a miscalculation based even on simply the size of the homes. Is the presumption that these homes would have an average of only 2.42 people? This seems to be an unreasonable presumption given that nine of these homes are between 5775 SF to 6170 SF and offsite parking includes room for 86 additional vehicles. To adequately study the impacts on public services, importantly those that directly impact health and safety, this presumption must be further evaluated by the Town.

5-36

The Proposed Project Conflicts with CEQA Guidelines Relative to Transportation

The proposed project is expected to exceed the applicable VMT (vehicle miles traveled) threshold required under the Town threshold and CEQA, creating a potential significant impact. To counteract this excess in VMT, the applicant is required to submit off-site improvement plans for the construction of new sidewalks on Blossom Hill Road and Fisher Avenue. It is unclear how these off-site improvements mitigate the increase in VMT. Access for emergency equipment is achieved through a connection to Twin Oaks Drive known as Surrey Farms Hill. There is a proposed EVA from Brook Acres Drive. In order to access either of these, emergency vehicles will be required to traverse Kennedy Road and Longmeadow Drive, both of which are two lane roads.

5-37

The traffic analysis does not account for the cumulative projects recently proposed in Los Gatos. Even without these future developments, it should be noted that there are already summer days when the beach traffic creates gridlock on Kennedy, Shannon, Englewood, Los Gatos Boulevard, and Highway 9, preventing and/or delaying a simple outing to the grocery store or pharmacy from Surrey Farms. On a regular school day, if you leave at the wrong time, you can sit for four or five lights at Kennedy and Los Gatos Boulevard. Evacuation and daily traffic impacts must be analyzed together, taking into consideration all of the current pending projects.

5-38

We also ask the town to consider the effects of construction traffic on our neighborhood. We anticipate that development of the infrastructure and twelve individual homes would result in years of trucks, dust, pollution, and traffic up and down Longmeadow all day every day, changing the landscape of our neighborhood for this generation of residents.

5-39

This Proposed Project Will Increase the Risk of Wildfire in a Very High Fire Hazard Severity Zone

According to section XX of the IS/MND, there is a less than significant impact to wildfire risks. According to the Cal Fire–designated Fire Hazard Severity Zone map, the project parcel is located within a Very High Fire Hazard Severity Zone (VHFHSZ). In the SCCFD Developmental Review Comments, the project was approved with the following conditions: "Review of this Developmental proposal is limited to acceptability of site access, water supply and may include specific additional requirements as they pertain to fire department operations and shall not be construed as a substitute for formal plan review to determine compliance with adopted model codes." (SCC Fire Department Developmental Review Comments, August 12, 2025). The IS/MND misclassifies the site as being located in an HFHSZ, thereby calling into question reliance on any of its findings relative to fire risk. ("…the project site is not located within an SRA; however, the site is located within a High FHSZ") (IS/MND at p. 102).

5-40

Letter 5 cont.

5-40 cont.

According to the SCCFD Developmental Review Comments, the site is in both a VHFHSZ and an LRA.

Development in VHFHSZ areas pose increased wildfire ignition, spread, and evacuation risks. CEQA requires analysis of emergency access, fire response capacity, and evacuation feasibility, which cannot be adequately addressed through an MND. The site is served by Twin Oaks, Longmeadow Drive, and Kennedy Road, which is narrow, winding, and already congested during peak hours.

In February 2025, Cal Fire updated fire hazard severity maps for the first time since 2011 and Los Gatos' fire risk has spiked since 2011, with more than 1,000 acres in the red. (Freimarck, San Jose Spotlight, March 29, 2025). Vice Mayor Rob Moore is quoted in the article stating that, although Builder's Remedy takes away a lot of discretion from the local government, "There are still important regulations that remote developments have to comply with, and I hope that anything that is proposed in a very high fire zone understands Los Gatos' position as a community that is deeply concerned about our risk of wildfire."

A site inside the VHFHSZ is subject to California Building Code Ch. 7A (wildfire resistant construction); Defensible space vegetation management requirements (Ca. Pub. Res. Code s. 4290-91); and emergency access standards (road width, slope, fire truck turnarounds, water supply for firefighting). There will also be insurance implications, i.e., will the homes that are developed even be able to obtain fire insurance? The risk of wildfire increases with the introduction of a population into a rural environment, as most fires are caused by humans. The likelihood of fire in this VHFHSZ is increased by the proposed project.

State law and fire hazard mapping require that new subdivisions in High Fire Zones have multiple evacuation routes, adequate water infrastructure, fuel breaks, defensible space around

5-40 cont.

structures, etc. There are 70+ homes in Surrey Farms. There are significantly more homes along Kennedy Road between Surrey Farms and Los Gatos Boulevard. In the event of wildfire, all of these homes would need to be evacuated and the exit routes from the new development would be insufficient. The condition listed in the SCCFD Developmental Review Comments indicates that is unclear whether the proposed project meets any of the requirements listed therein, including access and water supply. A full EIR is required to analyze wildfire evacuation, water supply/fire flow, and cumulative safety risks. The Town cannot lawfully approve a project with unavoidable wildfire risks under HAA's health and safety exception.

The Proposed Project Will Add to Significant Cumulative Impacts in the Town

5-41

CEQA requires evaluation of cumulative impacts, not just the project in isolation. The MND ignores cumulative wildfire evacuation, traffic congestion, and infrastructure strain from multiple projects under review in Los Gatos. Under SB 330, there are currently three approved projects and twelve pending applications for a total of 1611 proposed residential units in Los Gatos, in addition to the twelve proposed by this project. At a minimum, some of these projects will increase the flow of traffic in the Kennedy corridor. We request that an EIR examine the proposed project in conjunction with the additional projects approved and pending to fully understand the scope of the impact on the Town, the environment, and our neighborhood.

The Mitigation Measures Are Uncertain and Insufficient

5-42

Many mitigation measures included in the IS/MND are insufficient, lack performance standards, and/or are deferred to future studies and plans. CEQA prohibits deferring or weakening mitigation. Given the lack of plans with regard to erosion, drainage, soils, and wildfire planning, it also calls into question whether this application was properly deemed complete. For these reasons, we believe the MND is legally inadequate, and we request that the

Letter 5 cont.

5-42 cont.

Town prepare a full EIR to thoroughly analyze these issues, evaluate feasible alternatives, and identify enforceable mitigation. Further, we request that the Town decline the multiple exceptions and waivers requested by the applicant and enforce all objective standards relative to the proposed project.

Very truly yours,

Jill & Craig Fordyce

[redacted]

Letter 5 cont.

EXHIBIT A

Combined List of Exceptions Requested by Applicant

Here is the list of the exceptions the applicant is requesting as to each specific lot. We could not locate a list of exceptions as to the entirety of the project, including infrastructure, roads, drainage, utilities, etc., so this only covers the exceptions requested for the individual lots. This information is taken from the twelve individual "Development Standards Matrix" submitted by applicant.

Lot 1:

Reduce minimum required lot size

Requesting additional height to 27'7"

Requesting reduced front setback

Requesting reduced side setback

Requesting reduced off street parking count

Exceeding minimum cut and fill*

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"**

Grading within areas that are greater than 25%

Lot 2:

Reduce minimum required lot size

Requesting additional height to 32'6"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced rear setback

Requesting reduced side setback

Exceeding cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Grading within areas that are greater than 25%

Letter 5 cont.

Lot 3:

Reduce minimum required lot size

Requesting additional height to 38'

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced front setback

Requesting reduced side setback

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Exception from LRDA for 30% slope

Lot 4:

Reduce minimum required lot size

Requesting additional height to 37'3"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced front setback

Requesting reduced side setback

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Lot 5:

Reduce minimum required lot size

Requesting additional height to 40'10"***

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Letter 5 cont.

Requesting reduced front setback

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Grading within areas that are greater than 25%

Lot 6:

Reduce minimum required lot size

Requesting additional height to 33'10"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced rear setback

Requesting reduced off street parking count

Exception from LRDA for 30% slope

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Grading within areas that are greater than 25%

Lot 7:

Reduce minimum required lot size

Requesting additional height to 27'6"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced off street parking count

Exceeding minimum cut and fill

Proposed driveway exceeds 15% max

Portion of pool within area greater than 30% slope

Letter 5 cont.

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Site needs exception from LRDA; portion of building/motorcourt/yard are within areas greater than 30% slope and landslide hazard areas

Grading within areas that are greater than 25%

Lot 8:

Reduce minimum required lot size

Requesting additional height to 27'6"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced off street parking count

Exceeding minimum cut and fill

Proposed driveway exceeds 15% max

Portion of pool within area greater than 30% slope

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Grading within areas that are greater than 25%

Lot 9:

Reduce minimum required lot size

Requesting additional height to 27'6"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Site needs exception from LRDA; portion of building/motor court/yard are within areas greater than 30% slope and landslide hazard areas

Grading within areas that are greater than 25%

Letter 5 cont.

Lot 10:

Reduce minimum required lot size

Requesting additional height to 27'6"

Requesting exception from lower level at no more than 3' above existing grade

Requesting additional floor area

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Site needs exception from LRDA; portion of house is within areas greater than 30% slope and landslide hazard area, portion of driveway in area over 30% slope

Lot 11:

Reduce minimum required lot size

Requesting additional height to 27'8"

Requesting additional floor area

Requesting reduced side setbacks

Requesting reduced off street parking count

Exceeding minimum cut and fill

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

Lot 12:

Reduce minimum required lot size

Requesting additional height to 27'4"

Requesting additional floor area

Requesting reduced front setback

Requesting reduced side setbacks

Exceeding minimum cut and fill

Letter 5 cont.

Unclear as to number of trees removed; exception requested to "no grading or construction within dripline of tree"

*The Development Standards Matrix for multiple lots state that the developer is "exceeding the minimum cut and fill from Table 1, page 20 HDSG. The site development strategy and road alignment servicing lots 1-9, 11 and 12 requires fill." Further it states that items S2-S10 "intend to be met and will provide more detail once construction document (sic) are prepared." We don't understand what this means; it appears to be an unquantified request.

**The Development Standards Matrix for Lots 1-12 each state that "visual impact of tree removal shall be submitted with plans" and "plans note an exception to 'no grading or construction within dripline of tree.'" This is another unquantified request.

***Lot 5 is directly above/behind our home. It is the tallest home by far at over 40 feet and will be looking directly down into our home and yard.

LETTER 5: JILL AND CRAIG FORDYCE (1 OF 2)

Response to Comment 5-1
The comment is introductory and does not address the adequacy of the IS/MND. Please see the following responses to specific comments.

Response to Comment 5-2
The comment generally states that the Town cannot lawfully adopt an MND under CEQA because substantial evidence supports a fair argument that the project may have environmental impacts. The comment does not provide any substantial evidence supporting this claim. Please see the following responses to more specific comments.

Response to Comment 5-3
The comment identifies the waivers being requested for the project but does not provide any substantial evidence how the waivers result in significant environmental impacts.

Response to Comment 5-4
Per Government Code Section 65589.5, the Town can impose objective development standards so long as those standards meet the following criteria:

1) Appropriate to, and consistent with, meeting the local agency's share of its Regional Housing Needs Allocation;
2) Applied to facilitate and accommodate development at the density permitted on the site and proposed by the applicant; and
3) Meet the definition of "objective" in that they involve no personal or subjective judgment by a public official and are uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the applicant and the public official.

In addition, no objective standard can be applied if it will render the project "infeasible" (unless the project will have a specific adverse impact on public health or safety and there is no feasible method to mitigate or avoid the impact). The statute defines "feasible" as capable of being accomplished successfully within a reasonable period, considering economic, environmental, social, and technological factors. The Town decision-makers, at a public hearing, will consider whether the project will have a specific adverse impact on public health or safety and whether there is no feasible method to mitigate or avoid the impact. The IS/MND prepared for the project provides substantial evidence that all potentially significant project-related environmental impacts can be mitigated.

In an effort to make this clearer in the IS/MND, the following revision is made to page 16 of the IS/MND:

> Architecture and Site Plan Review
> The Town's ~~Building Division~~ Community Development Department is responsible for a plan review of all new construction, additions, and remodels for both commercial and residential properties, as well as construction inspection services for projects including electrical, plumbing and mechanical installations. Plan review ensures compliance with applicable State and local codes, policies, guidelines, and standards of all residential and commercial structures within the Town limits, including the Hillside Development Standards and Guidelines. As described in the Town's Code, the purpose of Architecture and Site

> Plan Review through the Planning Division is to regulate the height, width, shape, proportion, siting, exterior construction and design of buildings to ensure that they are architecturally compatible with their surroundings. Section 29.20.150 of the Town Code lists the matters that the Town must consider when reviewing applications for Architecture and Site Approval. ~~The Town's review is limited to objective standards only, pursuant to SB 330 and Builder's Remedy.~~

The above revision is intended to clarify the Town's authority and does not affect the conclusions of the IS/MND.

Response to Comment 5-5

Please see Response to Comment 2-2.

With respect to water supply, page 99 of the IS/MND includes the following discussion:

> As discussed in Section X, Hydrology and Water Quality, of this IS/MND, while the on-site development of 12 proposed single-family residences would increase water usage beyond the current on-site water demand, the relatively minor increase in water usage would not be considered substantial, as the Santa Clara Subbasin has an operational storage capacity of approximately 350,000 AF per year, and both SCWVD and SJW have sufficient water supplies through 2045. The project would also comply with Chapter 26.40 of the Town's Municipal Code, which contains the Town's Water Efficient Landscape Ordinance.

Fire water would be included within the project's anticipated water supplies.

Response to Comment 5-6

Please see Response to Comment 2-3.

Response to Comment 5-7

Please see Response to Comment 2-3.

Response to Comment 5-8

Please see Response to Comment 5-15.

Response to Comment 5-9

Engineering level detail, such as a final erosion and sediment control plan, is not required as part of CEQA review (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.).

Pursuant to Mitigation Measure X-1, a final erosion and sediment control plan would be reviewed and approved by the Town of Los Gatos Engineering Division prior to any ground-disturbing activities. In addition, a SWPPP must be approved by the RWQCB and is submitted after project approval before operations begin, not for review during the CEQA process.

Response to Comment 5-10

As discussed under question X-c.i-iii on pages 75 and 76 of the IS/MND, the proposed on-site stormwater infrastructure would be sized to manage stormwater flows such that post-development runoff does not exceed pre-project runoff rates and durations, consistent with Provision C.3.g of the County's Municipal Regional Stormwater National Pollutant Discharge Elimination System (NPDES) permit. Therefore, the new impervious surfaces are not anticipated to result in significant impacts related to altering the drainage pattern of the site.

With respect to the proposed bioretention basins, each bioretention area has been designed in accordance with the standard design criteria outlined in the County C.3 Stormwater Handbook. Town personnel would be able to access each bioretention area periodically as required for inspection purposes. Therefore, the bioretention basins are not anticipated to create any safety issues or hazards.

Response to Comment 5-11

Please see Response to Comment 2-7.

Response to Comment 5-12

The comment does not address the adequacy of the IS/MND and has been noted for the record. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 5-13

Please see Response to Comment 5-4.

Response to Comment 5-14

Please see Response to Comment 5-2.

Response to Comment 5-15

As shown in Figure 11 of the IS/MND, existing trees along Longmeadow Drive currently obscure views of the site. Because the trees are not proposed for removal as part of the proposed project, such screening effects would be maintained, and the IS/MND's conclusion is accurate. Notwithstanding, substantial degradation of views of the site is not the relevant question as that would be the appropriate inquiry, pursuant to Appendix G, Section I c., if the site were within a non-urbanized area. Furthermore, privacy and private views are not protected pursuant to CEQA as noted in Footnote 6 on page 23 of the IS/MND.

As noted on page 21 of the IS/MND, the project site is within an urbanized area, and thus, the relevant threshold is whether the project would conflict with applicable zoning and other regulations governing scenic quality. As noted on page 23 of the IS/MND:

> From an aesthetics perspective, it is reasonable to conclude that not every conflict with a scenic regulation would result in a significant aesthetic impact, pursuant to CEQA. Because the Hillside Development Standards and Guidelines contain standards related to preserving views of hillsides, computer-generated photo simulations of the project were prepared from public viewpoints. Although the simulated public viewpoints do not coincide with the Town's designated Hillside Area viewing areas, the simulations were prepared to meet the Town's Height Pole, Flagging, Netting, and Signage Policy For Additions and New Construction Policy and are used herein to facilitate an understanding as to whether the project's deviations from Hillside Development Standards are consequential from an aesthetics perspective. Potential views of the project site from public spaces were determined to include views from Longmeadow Drive (Figure 11, View #1), which is located west of the project site; from the Hillbrook School campus north of the site (Figure 12, View #2); from Cerro Vista Court (Figure 13, View #3); and from Brooke Acres Drive, south of the project site (Figure 14, View #4).
>
> Figure 11 presents the existing view of the project site in comparison to the view of the project site with development of the proposed project from View #1. As shown in the figure,

> the existing view of the site from Longmeadow Drive consists of the street frontages and existing trees associated with the existing single-family residences, as well as the existing vegetation on the project site in the background. With the proposed project, the view from Longmeadow Drive would include a partial view of three of the 12 proposed single-family residences in the background. The majority of the project site would remain screened by the existing trees and vegetation. The proposed project would not conflict with existing regulations related to views of the Hillside Area from Longmeadow Drive. Because the proposed project would not substantially affect views of the Hillside Area from Longmeadow Drive, the proposed project would not conflict with the applicable Hillside Development Standards and Guidelines regulations governing scenic quality.

Response to Comment 5-16

The existing visual character or quality of public views of the site and its surroundings would not be substantially degraded by bioretention basins, which are standard features of development projects and generally appear coherent with the rest of a developed site.

Response to Comment 5-17

The relevant threshold pursuant to Appendix G, Section I d. is whether the project would create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area. The Town acknowledges that the project would increase lighting in the area, including lighting from headlights. However, there is no substantial evidence showing that vehicle trips from 12 new homes would be considered substantial, and furthermore, the CEQA threshold is focused on protecting nighttime views of the area, not interior private living spaces of adjacent homes.

Response to Comment 5-18

Please see Responses to Comments 5-15 and 5-17.

As discussed on page 20 of the IS/MND:

> Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing and sightseeing. In general, a project's impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista. The General Plan EIR identifies southward views of the Santa Cruz Mountains and ridgelines as the primary protected scenic vistas within the Town. Due to the heavily-wooded nature of the Town, scenic views are most prominent from the southbound lanes of the Town's major north-south running streets. The project site is located in an area of the Town that is heavily obscured from view due to intervening topography and vegetation. Therefore, views of the Santa Cruz Mountains would not be obstructed by project development. In addition, due to the intervening topography and vegetation described above, views of any other potential ridgelines beyond the project site are not visible from the surrounding roadways.
>
> At a local level, the Town does not identify any roadways as scenic routes. In addition, while State Route (SR) 17 is designated as eligible for listing as a State Scenic Highway, State Scenic Highways are not located within the Town of Los Gatos.[5] The project site is located approximately 1.06 miles east of SR 17 and is obscured from view through various natural features and existing development. Therefore, the proposed project would not have the potential to damage scenic resources within the vicinity of a State Scenic Highway.

Response to Comment 5-19

The NOx-related impact would only occur if the off-site sidewalk improvements were constructed concurrently with the on-site project components. Mitigation Measure III-1 address this by restricting construction of the off-site sidewalk from occurring simultaneously with the on-site construction of the proposed project, or alternatively, ensuring that all construction equipment greater than 50 horsepower to be used in construction of the off-site sidewalk improvements shall be Tier 4 final off-road construction equipment.

The measures listed by the comment to manage construction dust emissions are standard measures implemented by all projects within the Bay Area Air District (BAAD). The BAAD Basic Construction Mitigation Measures (BCMMs) were developed to ensure continued attainment of ambient air quality standards (AAQS) or to work towards attainment of AAQS for which the area is currently designated nonattainment. The watering of exposed surfaces does not involve sufficient amounts of water to generate runoff, but is a standard procedure intended to dampen surfaces enough to reduce dust generation when such surfaces are disturbed during project construction.

With respect to pollutants of concern, as discussed under question III-c of the IS/MND, the proposed project meets the screening criteria for localized carbon monoxide (CO) emissions established by BAAD. As discussed on page 37 of the IS/MND, toxic air contaminants (TACs) generally result in health risks when populations are exposed to high concentrations over extension periods of time (e.g., 30 years or greater). Despite the proximity of the Hillbrook School, the construction period would be temporary and would occur over a short duration as compared to the length of time required for health risks to occur. In addition, all construction equipment and operation thereof would be regulated by the California Air Resources Board (CARB) and their In-Use Off-Road Diesel Vehicle Regulation, which would reduce emissions associated with off-road diesel vehicles and equipment.

Response to Comment 5-20

The comment summarizes the findings of the IS/MND and does not address the adequacy of the document. Therefore, further response is not necessary.

Response to Comment 5-21

Mitigation Measures IV-1 through IV-9 would reduce the potential impacts to the species listed within the comment by ensuring thorough surveys for the presence of the species are conducted (as well as avoidance and minimization steps to take if the species are identified). In addition, the IS/MND includes a mitigation measure requiring compliance with the Town's Tree Protection Ordinance. Payment of in-lieu fees to the Town Tree Replacement Fund is allowed by the ordinance. Pursuant to Section 29.10.0985 of the Town's Municipal Code, the funds generated by payment of such fees would be used at the Town's discretion to add or replace trees on public property in the vicinity of the project site; add or replace trees or landscaping on other Town property; or support the Town's urban forestry management program.

Response to Comment 5-22

The comment summarizes the findings of the IS/MND and does not address the adequacy of the document. Mitigation Measures IV-1 through IV-3 address potential impacts to the California red-legged frog. Therefore, further response is not necessary.

Response to Comment 5-23

The comment summarizes the findings of the IS/MND and does not address the adequacy of the document. Mitigation Measure IV-4 addresses potential impacts to protected raptor and migratory bird species. Therefore, further response is not necessary.

Response to Comment 5-24

The comment summarizes the findings of the IS/MND and does not address the adequacy of the document. Mitigation Measure IV-7 addresses potential impacts to protected San Francisco dusky-footed woodrat. Therefore, further response is not necessary.

Response to Comment 5-25

The analysis of special-status wildlife species, which starts on page 42 of the IS/MND, was informed by the Biological Evaluation prepared for the proposed project. The EIR prepared for the project site referred to by the comment was prepared in August 2017, more than eight years ago from the time of the IS/MND. A recent field survey of the project site was conducted on December 19, 2024, as part of the Biological Evaluation to identify on-site habitats and to determine the likelihood of any occurrences of special-status species. An additional site visit was conducted on May 14, 2025, to confirm the characteristics of the on-site ephemeral drainage. A literature review of various biological databases was also conducted to assess the suitability of on-site habitats.

In addition, the mitigation measures included within the IS/MND would provide protection to the species listed in the comment. Although the species listed within the comment were not specifically identified as having a high potential to occur on-site by the Biological Evaluation and, thus, were not specifically analyzed under question IV-a, the required measures within Mitigation Measures IV-3 and IV-4 through IV-6 would also reduce any potential impacts to any unlikely occurrences of the species.

Response to Comment 5-26

Please see Response to Comment 2-3.

Response to Comment 5-27

Please see Response to Comment 2-3 above.

The proposed project does not include mass grading, nor does the site include forest land as defined in PRC Section 12220(g). The standards of a tree protection ordinance of a separate city from the Town, such as the City of Agoura Hills, would not apply to the proposed project.

The arborist report was revised during the public review period, during which the total number of on-site trees and the project's potential impacts were revised. According to the revised Arborist Report, the new inventory identified a total of 673 individual trees over four inches in diameter, 630 of which qualify for some level of protection under the Town's tree protection ordinance and 43 of which are exempted.[4] Of the total, 244 trees would be removed (223 of which would qualify as protected) and 371 trees would be retained.

[4] McClintock Landscape Horticultural Services. *Certified Arborist Report, Tree Preservation Plan, Surrey Farms, Project #4185.10, Los Gatos, CA 95032*. October 16, 2025, Revision 5.

Page 50 of the IS/MND is hereby revised to reflect the findings of the revised Arborist Report:

> As discussed above, mixed oak woodland is present throughout the project site, some of which would be impacted by the proposed development. In order to determine if on-site trees proposed for removal qualify for protection under the provisions of the Town's Municipal Code, an Arborist Report was prepared for the site by McClintock Landscape Horticultural Services (McClintock) (see Appendix C), which has been peer reviewed by Monarch Consulting Arborists. During a site tree survey conducted of the project site, the Arborist Report identified ~~603~~ 673 on-site trees measuring four inches or greater in diameter at breast height (DBH), consisting of 26 species. According to the Arborist Report, ~~546~~ 630 of the on-site trees qualify for protection under the Town's Tree Protection Ordinance.
>
> According to the Tree Mitigation and Protection Plan prepared for the proposed project, 223 protected trees would be removed, which would require a total of 551 replacement trees to be planted on-site, pursuant to the Town of Los Gatos Tree Protection Ordinance. A total of 85 trees are proposed to be planted on-site, which would not meet the on-site tree replacement requirements (see Figure 8 and Figure 9). Thus, payment of in-lieu fees consistent with Division II of Chapter 29.10 of the Town's Municipal Code would be required to mitigate for the shortfall in on-site tree replacement.

Because the number of protected trees proposed for removal has not changed, further revisions to the IS/MND are not necessary. As discussed therein, compliance with the project's Tree Mitigation and Protection Plan and the mitigation measures within the IS/MND would ensure that significant impacts related to conflicts with the Town's tree ordinance do not occur.

Response to Comment 5-28

As shown in Figure 16 of the IS/MND, the proposed project locates the residences outside of the areas of the site with the steepest slopes. Such siting significantly reduces the potential for the effects discussed by the comment.

In addition, the GGHI was included in the IS/MND as Appendix D. The GGHI was subject to a Geologic and Geotechnical Peer Review conducted by the Town's consulting geotechnical firm, Cotton, Shires, and Associates, Inc. (CSA), and Cornerstone subsequently prepared an Interim Response to Geotechnical Peer Review to respond to the comments and resolve identified concerns. The GGHI included review of geotechnical literature and available conceptual layouts, a site visit in August 2024, the drilling of six test borings to depths between 10 and 20 feet, and the excavation of six test pits.

During the excavation of test pits, evidence of either shallow or deep-seated landslide deposits were not observed, and field features indicative of slope failure and instability were not observed during the site reconnaissance. As such, the GGHI concluded that the underlying slopes of the project site are relatively stable and, thus, the landslide hazard is considered low to moderate. In addition, the peer review of the GGHI notes that the majority of the proposed residences (i.e., Lots 1, 2, 4, 5, 8, 9, 10, 11, and 12) are outside of the indicated on-site slopes (see Figure 16). While the proposed lots would exceed the maximum allowable graded cut or fill for each lot pursuant to the Hillside Development Standards and Guidelines, the proposed earthwork activities are accounted for in the analysis of the project-specific GGHI. Specifically, Section 6 of the GGHI discusses various requirements related to earthwork, including, but not limited to, temporary and permanent cut and fill slopes, subgrade preparation, wet soil stabilization, material for fill, compaction requirements, and trench backfill. Compliance with such requirements would ensure

that the earthwork activities associated with the proposed project would be acceptable and would lead to instability. Without incorporating the recommendations included within the GGHI, new fill placed for the planned structures and streets on existing inclined slopes could cause a significant impact related to slope instability (IS/MND, pg. 61).

Mitigation Measure VII-1 has been included in the IS/MND to ensure that all geotechnical recommendations in the GGHI are incorporated into grading and improvement plans. It is not necessary to list all recommendations in the mitigation measure. The summary nature of Mitigation Measure VII-1 is a standard approach intended to eliminate excessively technical details from the text of the IS/MND. The measure relies upon the authority of the Town as the lead agency, as well as all applicable CBSC standards, the combination of which would ensure potential impacts related to geological and soil hazards are reduced to a less-than-significant level.

Response to Comment 5-29

Please see Responses to Comments 5-9 and 5-10.

Response to Comment 5-30

Please see Response to Comment 5-9.

Response to Comment 5-31

Please see Response to Comment 5-9.

Response to Comment 5-32

Bioretention is a way to clean and filter stormwater runoff naturally through percolation, or the slow movement of water through the pores in soil or permeable rock. As noted on page 12 of the IS/MND, the stormwater bioretention basins would be sized and designed to meet the Town's C.3 Stormwater Standards design criteria. Such standards are intended to ensure new development controls stormwater runoff pollutant discharges. Following on-site treatment, stormwater flows would be metered out from the bioretention areas into the existing 27- and 36-inch storm drains located north and west of the site, respectively. As discussed within Response to Comment 1-4, a maintenance agreement would be put in place between the Town and the future property owners requiring the owners to operate and maintain all the stormwater treatment infrastructure.

Potential impacts related to flooding are analyzed within question X-c.i-iii. Based on the design of the bioretention areas, as well as the proposed retaining walls, which would serve to prevent erosion, the IS/MND concluded that the proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in erosion, siltation, or flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff.

Response to Comment 5-33

The comment summarizes the findings of the IS/MND and does not address the adequacy of the document. Mitigation Measure XIII-1 includes the requirements of the Town's General Plan EIR's Mitigation Measure N-1. Therefore, further response is not necessary.

Response to Comment 5-34

A water treatment facility is not proposed as part of the project; therefore, noise or vibration from such a source would not occur at the site or surrounding areas.

It is acknowledged that noise would result from residential activity, but there is no evidence to suggest that residential noise from the project would be any different from the residential noise associated with the surrounding residential neighborhoods. Further, any level of increased noise is not the relevant CEQA threshold used to determine impact significance. The Town of Los Gatos has numerical noise thresholds, and substantial evidence supports that these levels would not be exceeded by the operation of the proposed project.

Response to Comment 5-35

As discussed under Response to Comment 5-19, the proposed project would implement the BAAQMD BCMMs to reduce dust generation and manage pollutant emissions.

With respect to construction noise, Mitigation Measure XIII-1 requires multiple measures to reduce noise at the existing sensitive receptors. Specifically, any construction proposed within 25 feet of a noise-sensitive receptor would be required to create distance between construction-related noise sources and noise-sensitive receptors; use electric tools, which create less noise than non-electric; and use mobile construction equipment with smart back-up alarms, which automatically adjust their volume instead of using a fixed volume. In addition, the project would implement additional noise attenuation techniques during the clearing, earth moving, grading, and foundation/conditioning phases of construction, such as temporary sound barriers between the construction site and the sensitive receptors.

Response to Comment 5-36

As discussed on page 86 of the IS/MND within Section XIV, Population and Housing, the IS/MND used the average household size as estimated by the Town's 2040 General Plan (2.4 persons per household). Using this average household size, the proposed project would result in a maximum increase of 29 residents within the Town (2.4 persons per household x 12 proposed residences = 28.8 residents). Such figures are consistent with the Town's approach to estimating population increases.

It should be noted that the 86 total on-site parking spaces include both off-street parking and 27 garage parking spaces. Parking is not generally an indication of the number of residents associated with the project.

Response to Comment 5-37

The methods used to determine Mitigation Measure XVII-1 are discussed on page 94 of the IS/MND. As discussed therein, the VMT Technical Memorandum coordinated with Town staff and identified the off-site improvement locations where feasible pedestrian network improvements could occur as part of the proposed project. The foregoing sidewalk connection improvements would be consistent with the planned improvements identified within the Town's 2020 Bicycle and Pedestrian Master Plan.

In order to assess the VMT reduction potential associated with the, the VMT Technical Memorandum included a quantitative analysis using the California Air Pollution Control Officers Association (CAPCOA) Handbook (Measure T-17: Provide Pedestrian Network Improvements). The Handbook provides methods to assess potential benefits of different climate vulnerability reduction measures, as well as measures that can be implemented to improve health and equity. In the case of the proposed project, the associated off-site sidewalk improvements would encourage alternative modes of travel, thereby reducing VMT.

Response to Comment 5-38

Contrary to the comment, cumulative impacts to traffic are discussed within the IS/MND, on page 105 under question XXI-b as follows:

> With respect to cumulative transportation impacts, public concerns have been raised about increased congestion, particularly along Los Gatos Boulevard, where several of the SB 330 projects are located. Pursuant to the CEQA Guidelines Section 15064.3, environmental analysis documents must use VMT rather than LOS as the metric to analyze transportation impacts. Section 21099(b)(2) of the California PRC states that "automobile delay, as described solely by level of service or similar measures of vehicle capacity or traffic congestion, shall not be considered a significant impact on the environment." The State's requirement to transition from LOS to VMT is instead aimed at promoting infill development, public health through active transportation, and a reduction in GHG emissions. Overall, the transition from LOS alters the focus of CEQA analysis from congestion to more physical impacts on the environment related to vehicle trips. Accordingly, impacts related to traffic congestion are not required to be evaluated pursuant to CEQA, and thus, are appropriately not addressed herein.

In addition, potential impacts to evacuation are discussed under question IX-f within Section IX, Hazards and Hazardous Materials, as well as under Section XX, Wildfire, of the IS/MND. As discussed therein, the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically interfere with the Town's adopted EOP, particularly with any emergency evacuation routes.

Response to Comment 5-39

The comment is conclusory and does not address the adequacy of the IS/MND. Please see Responses to Comments 5-19 and 5-37 for further discussion. The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 5-40

Please see Response to Comment 2-2. In addition, the roadways noted within the comment were all designed consistent with the Town standards, which accommodate for emergency vehicles. Further, as noted on page 70 of the IS/MND, the proposed project would include a 20-foot-wide EVA route extending south from the site to connect to Brooke Acres Drive. The EVA route would result in an additional point of access reserved specifically for emergency response vehicles.

With respect to regulations applicable to the proposed project, as noted on page 102 of the IS/MND, the proposed project would be required to comply with all applicable requirements of the CFC, including the installation of fire sprinkler systems, fire hydrants, and other applicable requirements, as well as the requirements of Chapter 7A of the CBC, including the use of ignition-resistant materials and glazed exterior windows and doors. The Builder's Remedy status of the project does not affect the applicability of the foregoing requirements, which would reduce potential impacts related to wildfire.

Contrary to the comment, the likelihood of wildfire would be reduced by development of the project due to the clearing of on-site fuel sources (i.e., vegetation and trees). The proposed project would also be situated near existing roads, water lines, and other utilities, which would reduce risks related to wildfire.

Emergency evacuation scenarios are discussed under question IX-f within Section IX, Hazards and Hazardous Materials, as well as under Section XX, Wildfire, of the IS/MND. As discussed therein, the proposed project would not result in any substantial modifications to the existing roadway system and, thus, would not physically interfere with the Town's adopted EOP, particularly with any emergency evacuation routes.

Response to Comment 5-41

The comment does not address the adequacy of the IS/MND. Cumulative impacts are discussed within the IS/MND under question XXI-b within Section XXI, Mandatory Findings of Significance. Please see Responses to Comments 4-3 and 5-38.

Response to Comment 5-42

The comment states that many mitigation measures included in the IS/MND are insufficient, lack performance standards, and/or are deferred to future studies and plans, but provides no substantial evidence to support this position. Please see Responses to Comments 5-9, 5-28, 5-30, and 5-40.

Subject: 178 Twin Oaks - Photo/ Video Addendum to Fordyce Letter

[EXTERNAL SENDER]

Hi Erin,

6-1

Attached please find a Photo Addendum to accompany our letter regarding the proposed 178 Twin Oaks development. The photo depicts the hillside, wildlife, trees, neighborhood, and water flow after rain. The last photo of the deer standing beneath the story poles is from July 2012.

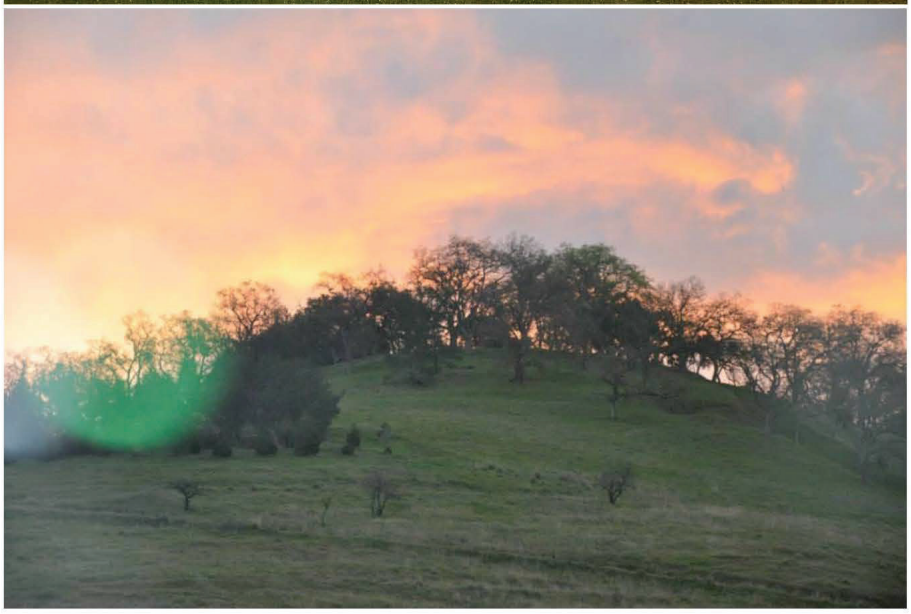
Here are three additional video links.

This video is from this morning, illustrating typical noise on the hill.

This video depicts water flow after a rainstorm.

This video also depicts water flow after a rainstorm.

Can you confirm that you will be able to disseminate the digital (video) evidence to the planning commissioners? Thank you for your assistance and for including this email and attached photo addendum with our letter.



Kind regards,

Jill & Craig Fordyce

Letter 7

From: David Greenfield [redacted]
Sent: Saturday, October 4, 2025 12:46 PM
To: Erin Walters <EWalters@losgatosca.gov>; Karri Greenfield [redacted]
Subject: Re: Feedback regarding proposed development at 178 Twin Oaks Drive

[EXTERNAL SENDER]

Hi Erin,

One additional recommendation/request (augmenting my prior input on spreading the construction traffic impact beyond Longmeadow Drive) is to push 40% of the construction traffic (including new road construction) to Brooke Acres. Clearly the Brooke Acres neighborhood won't be supportive (any more than Surrey Farms is excited about all the traffic coming down Longmeadow), but this would be a more equitable sharing of the construction pain involved here for all existing residents. If one home will be built connected to Cerro Vista (10% of the homes), then splitting the remaining construction vehicles/traffic between Longmeadow Drive and Cerro Vista would dramatically reduce the impact for Surrey Farms.

Thank you for the consideration here.

Regards,

7-1

Dave & Karri Greenfield

On Sat, Sep 27, 2025 at 1:19 PM David Greenfield <[redacted]> wrote:

Hi Erin,

We live at [redacted] and have a few concerns regarding the proposed development at 178 Twin Oaks Drive.

We fully understand that some building will take place at this site, though we are concerned about the size and scope of the development and the impact it will have on both the hillside and existing home-owners in Surrey Farms.

Our top concern is the single point of access which means that every single construction truck and truckload of dirt/asphalt/concrete/building supplies will come screaming down

Letter 7 cont.

7-1 cont. Longmeadow Drive to the Twin Oaks entrance. While there would be an added cost to the builders, there needs to be a second entrance beyond Longmeadow Drive which will also help with emergency access (and exit) during a potential fire event (and the entrance on Olde doesn't count here as no large construction vehicle would use this entrance). Placing the entire traffic burden on Longmeadow Drive residents isn't reasonable - simply add a second entrance from one of the other potential access sites/roads. A temporary entrance directly from Kennedy during construction (while challenging) would be least impactful.

7-2 Like many neighbors, we also remain concerned with fire hazards, drainage, harm to biological resources, protected species and wildlife, degradation of the hillside, noncompliance with Hillside Development Standards and Hillside Specific Plan, removal of protected trees, interference with the Riparian Habitat (Ross Creek), pollution (light, air, noise), traffic, and encroachment on protected wetlands. Builders Remedy should not be an excuse to trample all legitimate zoning concerns and the mitigation details do not provide sufficient detail to remedy these concerns.

7-3 Finally, as we fully expect some building to happen in the future, we'd like to see the builders provide a nice trail navigating the entire (currently) undeveloped property.

We would be happy to provide further detail on these concerns.

Regards,

David & Karri Greenfield

Letter 8

From: Gigi Harrell [redacted]
Sent: Thursday, October 2, 2025 12:04 PM
To: Erin Walters <EWalters@losgatosca.gov>
Subject: Comments for 178 Twin Oaks Development

[EXTERNAL SENDER]

Hi Erin,

We live at [redacted] and would like to share several concerns regarding the proposed development at 178 Twin Oaks Drive. We understand and expect that some building will occur at this site, but we are requesting that modifications be made to the current plan to ensure it is both safer and more sustainable for the community.

8-1

Our primary concern is the single point of access. As currently planned, years of heavy construction traffic would be routed down Longmeadow Drive—a residential road not designed or rated for such loads. This poses safety risks for neighbors, including children, and will cause significant damage to the roadway. We strongly recommend establishing a separate entrance to mitigate this issue. Based on the plot of land, an entrance from Kennedy Road appears feasible and would improve both resident safety and emergency access. If the town does not require a separate entrance for approval, we request that the town and developer implement a robust traffic calming and safety plan. Please note that Olde Road is too narrow and steep to serve as a viable alternative access point.

8-2

Additionally, we are concerned about the overall size and scope of the development, particularly the potential impacts on the hillside in Surrey Farms. It is critical that this project not create additional hazards for the community. Specifically, we are concerned about increased fire risk, drainage issues, impacts to biological resources and protected species, degradation of the hillside, potential noncompliance with the Hillside Development Standards and Hillside Specific Plan, removal of protected trees, disruption to Riparian Habitat (Ross Creek), pollution (light, air, noise), increased traffic, and encroachment on protected wetlands.

8-3

Thank you for your time and attention in reviewing these concerns. We look forward to seeing modifications that ensure this development is a safe and responsible use of town land.

Regards,

Georgette & Michael Harrell

Subject: Surrey Farm/Dodge proposed development

[EXTERNAL SENDER]

Dear Ms. Walters,

9-1 My husband and I moved to Los Gatos from Washington State in 2011 when our children were in middle school and high school. Even today, I drive up Longmeadow Drive and pinch myself because I am living in my dream home and neighborhood. Now that our children are successfully "launched," we find ourselves at the precipice of deciding whether LG is our forever home, or not. Unfortunately, the proposed development gives us substantial pause.

9-2 We are located across from Twin Oaks Drive on Longmeadow. I can't even imagine the noise, dirt, and scattered wildlife becoming a daily occurrence. Today, we are blessed with a green space to our east where we often wake up to wild turkeys, deer, quail, rabbits, and the occasional wildcat. I cannot fathom the impact ten homes plus ten ADUs would take on their habitat.

9-3 Mr. Dodge has stated that he will build access to this parcel of land for development. This is unconscionable. Within mere weeks, our existing streets would be destroyed with myriad construction vehicles. Also, if this development would indeed be benefiting our town, why aren't other access points being considered? Our neighborhood should not bear the brunt of any of this construction.

9-4 I implore you and the entire city council to reconsider approving this development. I recognize the need for more housing in our state. But at what cost? I am not even addressing the impact on traffic or other infrastructures (schools, etc.) in our town. California is known for its natural beauty and enviable whether. We should try our best to keep this beauty intact for our town as well.

Letter 9 cont.

9-4 cont.

We echo all the concerns outlined by our neighbors. Access points, protecting wildlife, noncompliance with Hillside Development Standards and Hillside Specific Plan, and removal of protected trees to name a few. This proposed development needs to be reevaluated in the least, stopped at best.

Please take in consideration all my neighbors and our concerns. Thank you for your time.

Sincerely,

Monica and Lotfi Herzi

[redacted]

Los Gatos, CA 95032

LETTER 9: MONICA AND LOTFI HERZI

Response to Comment 9-1
The comment is introductory and does not address the adequacy of the IS/MND.

Response to Comment 9-2
Please see Response to Comment 3-2 related to general comments on environmental concerns. In addition, the wildlife species mentioned by the commenter are common species that are not afforded special-status requiring review pursuant to CEQA.

Response to Comment 9-3
Please see Responses to Comments 3-1 and 3-2. The comment does not provide details to explain how the "existing streets would be destroyed" by construction vehicles. Heavy-duty truck traffic would only occur throughout the duration of construction activities and would cease upon buildout of the proposed project.

Response to Comment 9-4
Please see Response to Comment 3-2 related to general comments on environmental concerns. The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Letter 10

From: [redacted]
Sent: Wednesday, October 8, 2025 4:03 PM
To: Erin Walters <EWalters@losgatosca.gov>
Subject: Proposed 12-Home Surrey Farms Development

[EXTERNAL SENDER]

I am a 45 year owner of [redacted] I have read all the concerns about this project as presented by Jill Fordyce in an email to me as copied below and do state here that I have all the same concerns. All these concerns need to be addressed satisfactorily before the project is approved.

Fire Risk: According to the SCCFD, the project is in a Very High Fire Hazard Severity Zone. Ingress/egress, evacuation routes, and increased risk of fire associated with development are key issues. The SCCFD has not yet approved site access or water supply.

Removal of Trees: The arborist report indicates that there are 546 on-site trees that qualify for protection under the Los Gatos Tree Protection Ordinance. The applicant is proposing to remove 223 of those protected trees in violation of that ordinance, destroying habitat for protected species, creating potential additional risks of landslide, mudslide, and drainage issues. Under the ordinance, the applicant would be required to plant 551 replacement trees. Applicant proposes to plant 85 replacement trees and pay in-lieu fees for the remainder.

10-1

Protected Species Will Lose Their Habitat: Due to the grading, construction, and removal of trees, multiple protected species will be harmed or displaced, including the California red-legged fog, white-tailed kite, golden eagle, purple martin, pallid bat, Townsend's big-eared bat, San Francisco dusky-footed woodrat, American badger, and burrowing owl.

Multiple Lot Size, Building Height, and Setback Exceptions are Requested: The applicant is asking for reduced lot size and increased home size throughout the project. Most notably, one of the three homes directly visible from the end of Longmeadow is proposed to be nearly 41' tall, when the maximum height is 25 feet under the Hillside Design Standards & Guidelines.

Grading and Erosion Issues: Although the site is located in a county Geologic Hazard Zone, with risks of landslide, liquefaction, and potentially compression soils and fault

Letter 10 cont.

10-1 cont.

rupture hazard areas, the applicant requests multiple cut, fill, and grading exceptions. According to the IS/MND a final erosion and sediment control plan has yet to be prepared in conjunction with the project. There is, therefore, currently no plan to protect us from the potential risks to health and safety associated with the excessive grading, cut, fill, and construction on steep slopes in a Geologic Hazard Zone.

Drainage and Water Issues: We already have drainage issues at the end of Longmeadow. The project will introduce 62,224 sf of impervious surfaces. The project proposes various bioretention areas, including one large one to be located directly adjacent to Hillbrook School, and the Fordyce and Meleyco homes. The drainage issues have also not been fully analyzed because of the lack of a final erosion and sediment control plan. In addition to our concern regarding flooding and erosion, we are also concerned with the safety issues and hazards related to the introduction of a bioretention pond adjacent to the school and our homes.

Noise and Traffic: Construction is expected to go on for at least two years. During that time, there will be an unmitigable increase in noise and traffic, creating health and safety issues for Surrey Farms residents and Hillbrook School. After construction, there will be twelve additional households using Twin Oaks, Longmeadow, and Kennedy for ingress and egress. Traffic in the Kennedy corridor is already a significant issue.

Sincerely, Paul Krug

[EXTERNAL SENDER]

Hi Erin

11-1

We live on Twin Oaks Drive. I want to register the fact that we are not thrilled about the 12-home development project on our street. This will add lots of traffic in our quiet neighborhood, not to mention other environmental impacts on the flora and fauna. The construction period will also be very disruptive with heavy machinery and trucks etc.

I would like to request that we reduce the scope of the project to not allow more than 6 homes at best.

Thanks for your attention!

Regards

Raj

To: Erin Walters <EWalters@losgatosca.gov>
Subject: Building project on Twin Oaks

[EXTERNAL SENDER]

We are Donna & Roger Maltbie and have lived at [redacted] for 38 years. We have serious concerns regarding the building project on Twin Oaks Drive.

12-1 Water issues have always been an issue in our Surrey Farms neighborhood. Many of the residents have pumps and fans underneath their homes to deal with excessive underground water.

12-2 We have concern about traffic in our quiet neighborhood. A traffic survey taken this summer is not indicative of real world traffic on our street. Many residents are away for the summer, on vacation, as well as children are not in school with the added activities that increase traffic flow on our streets.

Over the years we have enjoyed our proximity to the open space behind Twin Oaks Drive. We have witnessed deer, bobcats, possum, turkey's, foxes, eagles, owl's, etc.

12-3 We moved into this neighborhood for a reason 38 years ago. We certainly don't want the sanctity and peace of the neighborhood we call home to be forever altered in a negative way for all its resident's.

Sincerely,

Donna Maltbie

Roger Maltbie

LETTER 12: DONNA AND ROGER MALTBIE

Response to Comment 12-1
Please see Response to Comment 3-2 related to general comments on environmental concerns.

Response to Comment 12-2
Please see Response to Comment 3-2 related to general comments on environmental concerns. It is unclear what traffic survey the commenter is referring to. As discussed in detail in Section XVII, Transportation, of the IS/MND, the analysis of impacts related to transportation within the IS/MND is based on a VMT Technical Memorandum prepared for the proposed project by TJKM (included as Appendix E to the IS/MND). Traffic counts within the project area were not required or relied upon for the analysis.

Response to Comment 12-3
The comment does not address the adequacy of the IS/MND and has been noted for the record. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

Wednesday, October 8, 2025

Ms. Erin Walters
Senior Planner
Town of Los Gatos Planning Department
October 7, 2025

Dear Ms. Walters:

My name is Bruce McCombs, and I'm a life-long resident of the Town of Los Gatos. My wife and I live at [redacted], and we are writing today in support of a neighborhood walking path which we hope will be included as part of the proposed Twin Oaks Development. As we learned first-hand, more than 30 years ago in our own neighborhood, when the Kennedy Court Development was first built back in 1995, the addition of a walking path completely transformed our neighborhood, bringing neighbors together, and allowing us to get to know one another on a very casual and informal basis. We believe that the addition of a neighborhood walking path to the proposed Twin Oaks Development would provide the same positive outcome, as it would provide a safe place for residents of the neighborhood to enjoy the outdoors, and at the same time, to get some heart-healthy exercise. We believe that a brief visit to the walking path which surrounds the Kennedy Court Development, will provide all of the evidence you and the Town might need, in order to support this very worthwhile neighborhood-friendly proposal.

13-1 cont.

We are grateful for this opportunity to strongly support this very valuable and much-needed addition to our neighborhood.
Sincerely,
Bruce and Jackie McCombs

LETTER 13: BRUCE AND JACKIE MCCOMBS

Response to Comment 13-1

Letter 14

-----Original Message-----
From: Darcie McNeil <[redacted]>
Sent: Wednesday, October 8, 2025 3:32 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Tom McNeil [redacted]
Subject: Surrey farms proposal

[EXTERNAL SENDER]

Hi Erin!

14-1 We live at [redacted]. We have many concerns about the scope of the project being proposed at twin creeks.

Besides maintaining the beautiful hills and over populating our already over populated town, there are safety concerns.

There is only one viable outlet to our neighborhood as Olde Rd. Cannot handle large trucks which is Longmeadow. If there is a fire or flood there are serious safety hazards. The construction trucks going up and down through the neighborhood will cause much obstruction in terms of noise, traffic on one road, and safety concerns with many workers in the quiet, small neighborhood.

14-2 My grandparents were the first of our family to live in Los Gatos and boy have times changed. From such a small quaint town to now mansions and obnoxious amounts of housing going up everywhere taking over the beautiful hills in our town. Already the traffic to Santa Cruz causes issues as we all know. Not sure why we need even more people populating our town.

If this does happen we sincerely hope you consider two things. One is adding a new road to access the hillside for construction and for the new homes to access their homes instead of the long trip down Longmeadow. This will provide a sense of security that if a fire or flood arises everyone gets out safety without traffic jams or even worse being trapped in our neighborhood with only one outlet.

Letter 14 cont.

14-3 Second if it is built, it would be nice to provide a hiking trail in the hills nearby for all of the neighborhood to enjoy.

14-4 As we do not like the idea of the construction as it disrupts the wildlife habitats, adds to light, air and noise pollution, disrupts wetlands, adds more traffic, adds to drainage concerns in an already troubled flood area, adds safety concerns.... We hope that if you do approve it you take into consideration our concerns and take steps to mitigate them. Another access road and new trail system would definitely make things a bit easier to digest.

Thanks much,

Darcie and Tom McNeil

LETTER 14: DARCIE AND TOM MCNEIL

Response to Comment 14-1
The comment is introductory and does not address the adequacy of the IS/MND.

Response to Comment 14-2
Please see Response to Comment 3-2 related to general comments on environmental concerns. Please also see Responses to Comments 2-2, 2-7, and 3-1. Impacts related to flooding are addressed in the IS/MND under Section X. As discussed therein, the project site is not located within a Federal Emergency Management Agency (FEMA) floodplain and, thus, development of the proposed project would not result in any impacts related to flooding.

Response to Comment 14-3
The comment does not address the adequacy of the IS/MND and has been noted for the record. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 14-4
Please see Response to Comment 3-2, as well as Response to Comment 14-2 above.

Letter 15

Erin Walters, Senior Planner
Town of Los Gatos

September 20, 2025

Re: 178 Twin Oaks Drive/ Surrey Farms Estates

Dear Ms. Walters,

I am unclear as to the current relationship between the Town and the state with respect to SB-330, and what control the Town actually has over its future. But I did want to tell you of my concerns regarding this development, and ask, "What would the Town's people want?"

15-1 The construction and placement of homes on this natural hillside would have an adverse effect on the people of the Town by increasing traffic, noise, and glare. It would detract from open space and vistas, and endanger wildlife. If throughout the town, structures and lighting were visible on all hillsides, the eye would have no place to rest. There would be a monotonous, continuous view of development. This would detract from the quality of life in Los Gatos. Under the General Plan's Guiding Principals is "to protect and enhance the natural environment and biotic communities that define Los Gatos…" General Plan ENV-1 states "To promote and protect viewsheds and scenic resources…..to encourage the protection of key view corridors…to preserve the natural landscape and views of the surrounding hillsides."

15-2 The people of the town are already fed up with the traffic in Los Gatos. Locating increased construction and housing, with their accompanying support services, away from main arteries of transportation only increases traffic in our residential neighborhoods leading to those main arteries.

To the residents of Surrey Farms, these adverse effects would be magnified, along with the potential for flooding, the increased construction creating dirt and dust, the danger from more residents using limited egress routes in case of fire in our

Letter 15 cont.

"high risk fire" area, and the safety issues on our Surrey Farms neighborhood roads due to increased traffic.

The increase in traffic on Surrey Farm's streets will be substantial and significant. It would be felt by us residents in the form of increased noise, safety risks, dirt and pollution. Many large trucks will be driving up and down our streets for several years as this project would build out. Our two-lane streets with cars parked along them would become one-lane streets as numerous large trucks travel up and down them. After the build out, increased traffic would continue. These large houses would have gardeners, housekeepers, deliveries being made, parents taking children to school and activities, etc. And would these new homes be allowed to build ADU's? The addition of more units (and hardscape) would further magnify the problems. All of these impacts adversely affect the quality of our lives.

15-2 cont.

The development would substantially degrade the visual character or quality of the site and its surroundings. The developer wants to take a hillside in its natural state, grade it, and fill it with structures, lighting, hardscape. The developer's colored renditions of the proposed houses on the hill do not give a true picture of the slope of the hillside and the proposed houses relationship within the hill. Rather, it depicts a flat picture that seems to have little impact on the surrounding neighborhoods. Ariel photographs taken from a high position do not paint a clear picture either.

15-3

The visual impact of this project would greatly affect us residents of Surrey Farms. Driving up Longmeadow, as well as from other viewpoints within the Town, instead of seeing hillsides with natural vegetation; turkey, deer and coyote roaming; and birds soaring searching for prey, we would see large structures, glare from interior and exterior lighting, reduced natural landscape. For us at 189 Longmeadow, we would no longer have a view of the hillside. Our view would now be of the houses on lots 5,6,7, and 10. And they would have the view right into our backyard, family room, kitchen, dining room and master bedroom. So much for our privacy!

Letter 15 cont.

15-3 cont. With respect to the proposed landscape plan, should this project, in any form, be approved, screening trees, such as redwoods, at a minimum of 30' would need to be planted on the property line between our home and the Dodge property to reduce glare, noise, dirt and dust, and to provide us some amount of privacy. This would need to be done before construction begins, and it would be my hope that this responsibility and cost would be borne by the developer. The proposal to plant trees with a diameter of 2.24-3.8 inches would do little to screen us from this project's adverse effects.

The project could cause a substantial temporary or periodic increase in ambient noise levels in the project vicinity above existing levels. What does "temporary" mean? Years? When the houses on Cerro Vista Court were being built, we clearly heard every conversation, swear word, radio broadcast, nail pounding, saw buzzing from the construction crews. Now we hear phones ringing, music and conversations when those residents use their patios and backyards. Noise does travel down the hillside.

15-4 When 191 Longmeadow was rebuilt, for three years rarely could we use our backyard due to basement and pool dirt movement and construction noise. One summer, when Hillbrook School raised their baseball field by three feet, we were unable to be in our backyard the entire summer as they graded, brought in additional dirt, dug and laid irrigation. With this proposed development, we would not have the use of our backyard for years! We have experienced construction. We know that the proposed development will take away our views, privacy, the use of our backyard, and greatly affect our ability to use and enjoy our home. It will directly cost us money as our water bills go up as we more frequently wash our windows, hose down our patios, shrubs and trees to remove dirt. Our PG&E bills will increase as we will need to run our pool filter for more hours to rid it of extra dirt. We will not be able to open our windows so we will be running our air conditioning more often at an additional expense. The value of our property would be reduced during the years of construction. In so many ways, this proposed development would diminish the quality of our lives.

Letter 15 cont.

15-4 cont.

What benefit to the Town and its people does this proposed development provide? Adding three 'low income' houses and nine expensive, exclusive houses to our Town's natural hillside does little increase affordable housing. This proposal does nothing to "preserve and enhance." It contracts a natural habitat which is doing fine under its existing conditions, and it degrades the quality of life of nearby residents.

My husband and I have lived in Surrey Farms for over 30 years. We have volunteered, chaired fundraisers, and financially supported local schools. We still do. The proposed development will greatly affect us! We would be affected during the course of construction, which could take many years, and for the duration once the development is built out. I ask that you consider our quality of life and that of our fellow residents. Please put the needs of Los Gatos Town residents above that of one developer looking for a profit at our expense.

Ask yourself, is this development what the people of our Town want? Do they benefit from it?

I ask for your support in finding a way to deny this development.

Thank you for the many, many hours you put in to make our Town the special place that it is.

Sincerely,

Kathy Meleyco
[redacted]
Los Gatos, CA 95032

LETTER 15: KATHY MELEYCO

Response to Comment 15-1

Please see Responses to Comments 2-4 and 3-2. In addition, in *Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, the Appellate Court evaluated whether community character is a consideration in CEQA and whether changes to community character or social impacts constitute an environmental impact under CEQA. The Court determined CEQA does not require an analysis of subjective psychological feelings or social impacts. Rather, CEQA's overriding and primary goal is to protect the physical environment. CEQA defines a "significant effect on the environment" as "substantial, or potentially substantial, adverse changes in physical conditions ...." (PRC section 21100. subd. [d]). Therefore, comments concerning potential social or economic effects of the project, including quality of life comments, need not be analyzed or addressed further. Nonetheless, the comment has been noted for the record and will be forwarded to the decision-makers as part of their consideration of the proposed project.

Response to Comment 15-2

Please see Responses to Comments 2-7, 3-1, 3-2, and 14-2.

Response to Comment 15-3

Please see Response to Comment 2-4 related to consistency with the Hillside Development Standards and Guidelines.

As discussed under question I-c of the IS/MND, because the site is considered to be located within an urbanized area of the Town, the appropriate CEQA threshold related to aesthetic impacts is not whether the proposed project would substantially degrade the existing visual character or quality of public views of the site and its surroundings, but whether the project would conflict with applicable zoning and other regulations governing scenic quality. Therefore, question I-c of the IS/MND evaluates whether the proposed project would conflict with applicable standards set forth by the Town, including those contained within the Town's Hillside Development Standards and Guidelines. The IS/MND concludes that, overall, because the proposed project would not be visible from the four viewing areas identified in the Hillside Development Standards and Guidelines, and because the proposed project would be designed compliant with Hillside Development Standards and Guidelines policies to the extent feasible such that public views of the Hillside Area would not be significantly affected, the proposed project would not conflict with applicable zoning and other regulations governing scenic quality, including policies related to reducing visual impacts of projects.

With respect to glare and lighting, as discussed under question I-d of the IS/MND, the proposed project would comply with both the Town's Municipal Code standards and policies within the Hillside Design Standards and Guidelines related to lighting for new development. The IS/MND concludes that implementation of the Town's programs, policies, and code requirements would reduce the light and glare-related impacts from the proposed project to a less-than-significant level.

The Town does not currently have a requirement related to screening trees between adjacent properties. In addition, the IS/MND does not identify any impacts that would necessitate inclusion of screening trees in order to reduce the impact to a less-than-significant level. Therefore, a nexus to require screening trees be planted along the property line does not exist.

Response to Comment 15-4

Please see Responses to Comments 2-7 and 15-1. As noted on page 32 of the IS/MND, construction is anticipated to take place over approximately two years. Regarding dust, as stated on page 32 of the IS/MND, BAAQMD requires all projects within the District's jurisdiction to implement Basic Construction Mitigation Measures (BCMMs) related to dust suppression. Further discussion regarding dust is provided on page 38 of the IS/MND.

Letter 16

From: Malea Mordaunt <[redacted]>
Sent: Thursday, October 9, 2025 5:49 PM
To: Erin Walters <EWalters@losgatosca.gov>
Subject: Opposed to development at 178 Twin Oaks

[EXTERNAL SENDER]

Good evening Erin,

We live near the proposed development at 178 Twin Oaks Drive.

We understand that some building will take place at this site. We are concerned about the size and scope of the development and the impact it will have on both the hillside and existing home-owners in the neighborhood.

One concern is the single point of access. There needs to be a second entrance beyond Longmeadow Drive which will also help with **emergency access (and exit) during a potential fire event** (and the entrance on Olde doesn't count here as no large construction vehicle would use this entrance). Simply add a second entrance from one of the other potential access sites/roads.

16-1

Like many neighbors, we are also concerned with **fire hazards, drainage, harm to biological resources, protected species and wildlife, degradation of the hillside,** noncompliance with Hillside Development Standards and Hillside Specific Plan, removal of protected trees, interference with the Riparian Habitat (Ross Creek), pollution (light, air, noise), traffic, and encroachment on protected wetlands. Builders Remedy should not be an excuse to ignore all legit zoning concerns, and the mitigation details do not provide adequate detail to remedy these concerns.

Finally, as we sadly expect building to happen, we'd like to see the builders provide a **beautiful and accessible trail** navigating the entire property. Our town needs to **preserve some of its remaining, diminishing open spaces**, that's truly part of the reason people enjoy living here.

Regards,

Malea and Mike Mordaunt

From: Huipeng Ren <[redacted]>
Sent: Wednesday, October 8, 2025 9:33 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Tingting [redacted]
Subject: Strong Opposition – Proposed 12-Home Surrey Farms Estates Subdivision

[EXTERNAL SENDER]

Dear Ms. Walters,

We are writing to strongly oppose the proposed 12-home Surrey Farms Estates Development.

This project poses unacceptable risks to our community:

- **Fire Safety:** The site is in a Very High Fire Hazard Severity Zone with limited evacuation routes. Adding more homes would put residents and Hillbrook School at greater risk during emergencies.
- **Tree Removal & Habitat Loss:** Removing 223 protected trees violates the Town's Tree Protection Ordinance and destroys critical habitat for protected species. Planting only 85 replacement trees is grossly inadequate.
- **Geologic & Drainage Hazards:** The site sits in a Geologic Hazard Zone with risks of landslide and flooding. Without a finalized erosion and drainage plan, surrounding homes and the school face serious safety threats.
- **Neighborhood Character & Traffic:** The project requests major exceptions to height and lot size limits, including a 41-foot home where only 25 feet is allowed. This, combined with two years of disruptive construction and more traffic on Kennedy, will significantly harm our neighborhood.

17-1

For these reasons, we urge the Town to deny this project. It is unsafe, environmentally damaging, and inconsistent with our community standards.

Sincerely,
Huipeng Ren & Tingting Yang

Letter 19

From: Dan Sherbeck [redacted]>
Sent: Wednesday, October 8, 2025 1:39 PM
To: Erin Walters <EWalters@losgatosca.gov>
Subject: URGENT – Official Fire Hazard Finding & Gross Deficiencies in Surrey Farms Estates Application

[EXTERNAL SENDER]

Dear Ms. Walters,

I am writing on behalf of my family, residents of [redacted], to express our grave concerns about the proposed Surrey Farms Estates Subdivision Project.

Our review has uncovered a critical, fact-based error in the project's environmental assessment that constitutes a significant public safety risk. The **Santa Clara County Fire Department (SCCFD)**, in its official "Developmental Review Comments," has definitively classified the entire project site as being within the **Very High Fire Hazard Severity Zone (VHFHSZ)** (Fire Comments - 178 Twin Oaks Lots 1-12, p. 1).

This official finding directly contradicts the project's **Initial Study/Mitigated Negative Declaration (IS/MND)**, which incorrectly analyzes the site as being in a less severe "High" Fire Hazard Severity Zone (IS/MND, p. 102). This fundamental flaw invalidates the IS/MND's conclusions regarding public safety and fire risk, and it is on this basis, among many others detailed below, that we insist on the preparation of a full Environmental Impact Report (EIR).

19-1

1. The Project's Environmental Document Is Invalidated by Official Fire Department Findings and Creates a Clear Public Safety Hazard

The developer's entire argument for why their project does not create a significant health and safety risk rests on a flawed and inaccurate premise.

- **Official Designation is "Very High" Risk:** The Santa Clara County Fire Department, the authority having jurisdiction, has determined the property is in the **Very High Fire Hazard Severity Zone (VHFHSZ)** (Fire Comments - 178 Twin Oaks Lots 1-12, p. 1). This is the official classification for applying all safety standards.
- **The IS/MND is Factually Wrong and Inadequate:** The IS/MND bases its entire safety analysis on the incorrect assumption that the site is in a "High" FHSZ

19-1 cont.

(IS/MND, p. 102). This error means the review of fire risk, emergency access, and evacuation is fundamentally unreliable.

- **Risk is Compounded by Known Geological Hazards:** This VHFHSZ designation is made even more dangerous by the site's documented instability. The project's own *Geotechnical Investigation* identifies the eastern half of the property as being within a **county landslide hazard zone** and notes that its slopes are susceptible to **"soil creep or localized shallow soil movement"** (Geotechnical and Geologic Hazard Investigation, p. 9).
- **A Full EIR is Mandatory:** The Builder's Remedy does not permit development that constitutes a "significant health or safety risk." Allowing the developer to bypass Hillside Development Standards for **excessive grading** and **building height** on these unstable slopes within an official VHFHSZ creates, by definition, a new and undeniable public safety hazard. A full EIR is the only legally sufficient way to analyze these combined risks.

2. Unmitigated Impact of Construction Traffic on Neighborhood Safety

19-2

A significant and direct threat to neighborhood safety is the plan to route all construction traffic onto our neighborhood streets. The *VMT Technical Memorandum* confirms the project would result in a **significant VMT impact** (VMT Technical Memorandum, p. 5). The proposed mitigation—off-site sidewalk construction miles away—is entirely irrelevant to the **direct, temporary, and severe local public safety hazard** created by heavy construction traffic on streets that serve as our de facto sidewalks and bike paths.

This is not a new issue. Historical records show the Town previously denied proposals to make Longmeadow a through-street to preserve the quiet, safe character of Surrey Farms. By approving this construction plan, the Town would be enabling the very outcome it previously prevented. We urgently request a dedicated **Construction Traffic Management Plan (CTMP)** that details the daily volume of traffic, the duration of the impact, and specific, enforceable on-site mitigation measures.

3. Effects of Drainage on an Unstable, Inaccurately Mapped Site

19-3

The proposed addition of **62,224 square feet of impervious surfaces** on a hillside with known geotechnical challenges is alarming (IS/MND, p. 74). Many residents of Surrey Farms can attest to a historically high-water table and existing drainage issues. The *Geotechnical and Geologic Hazard Investigation* confirms these concerns, noting that

perched groundwater was encountered at just 13 feet and that the site is blanketed in **"moderately expansive surficial soils"** that shrink and swell (Geotechnical and Geologic Hazard Investigation, pp. 7, 12).

19-3 cont.

Even more concerning, the Town's own August 20, 2025, review documents that the developer's **own grading plans are inaccurate and inconsistent**, with cut depths in drawings being significantly larger than what was reported in data tables (Planning Comment Letter, 08/20/25, p. 4). If the project's foundational data is this unreliable, the conclusions of the entire Geotechnical and Hydrological analysis cannot be trusted. We request a **site-specific hydrogeological analysis** to demonstrate that the increased runoff will not cause adverse impacts on down-gradient properties, based on verified and accurate grading plans.

4. Builder's Remedy: A Conflict with Decades of Town Planning

The project's reliance on the Builder's Remedy to bypass the site's **Resource Conservation (RC) zoning** represents a profound conflict with the Town's deliberate, long-term planning for this exact parcel. On **June 16, 1975, the Town passed an ordinance to rezone this specific hillside to Resource Conservation (RC)** to preserve its character. As recently as 2018, the Town Council publicly affirmed that rural hillsides like this are an essential part of the Town's identity. Invoking a legal provision to overturn these historical commitments will cause permanent environmental damage, including the destruction of **223 protected native oak trees** and the habitat of special-status wildlife (Arborist Report, pp. 9, 26; Biological Evaluation Report, pp. 18, 33).

19-4

5. Premature and Procedurally Flawed Proposal

The August 20, 2025, Staff Review makes it clear that this project is being rushed toward public hearing despite fundamental unresolved issues. The Town's own staff has compiled a summary list of at least **15 distinct ways the project violates local regulations**, including those for density, setbacks, grading limits, fire safety, and the explicit failure to provide **required public trails and open space easements** (Planning Comment Letter, 08/20/25, p. 6). Approving a project with such extensive, documented deficiencies—compounded by a dangerously flawed environmental review—would be premature and irresponsible.

We urge the Town to reject the current IS/MND as legally and factually inadequate and require the developer to prepare a full Environmental Impact Report that addresses the

Letter 19 cont.

19-4 cont.

project's true fire risk in a **Very High Fire Hazard Severity Zone** before any further consideration.

Thank you for your attention to these matters.

Sincerely,

Daniel S. Sherbeck

[redacted]

LETTER 19: DAN SHERBECK (1 OF 2)

Response to Comment 19-1

Please see Response to Comment 2-2.

With respect to geological hazards, the IS/MND requires Mitigation Measure VII-1 requires the proposed project to incorporate the recommendations of the GGHI, which would reduce the significance level of impacts related to soil instability. Implementation of Mitigation Measure VII-1 would reduce the potential impact to a less-than-significant level.

Response to Comment 19-2

Potential impacts to VMT and impacts to hazards are separate questions within Appendix G of the CEQA Guidelines. Construction of the proposed project, including the off-site sidewalk improvements required by Mitigation Measure XVII-1, would be limited to the project site and small portions of Blossom Hill Road and Fisher Avenue. In addition, as discussed by the comment, project construction would be temporary.

The IS/MND also acknowledges the above factors on page 95, as follows:

> Construction traffic associated with the proposed project would include heavy-duty vehicles which would share the area roadways with normal vehicle traffic, as well as transport of construction materials, and daily construction employee trips to and from the site. However, such heavy-duty truck traffic would only occur throughout the duration of construction activities and would cease upon buildout of the proposed project.

The Town would impose standard conditions of approval upon the project related to traffic safety during construction. Therefore, revisions to the IS/MND are not required.

Response to Comment 19-3

As previously discussed, Mitigation Measure VII-1 requires the project to incorporate the recommendations of the GGHI prepared for the proposed project, which would reduce the significance level of impacts related to expansive soils.

In addition, please see Response to Comment 1-4 related to the project's management of stormwater runoff. Furthermore, the project's conditions of approval, as imposed by the Town, would require compliance with C.3 standards.

Response to Comment 19-4

As discussed under question IV-e within Section IV, Biological Resources, of the IS/MND, the proposed project would not meet the on-site tree replacement requirements. As a result, the IS/MND includes a mitigation measure requiring compliance with the Town of Los Gatos Tree Protection Ordinance.

With respect to Builder's Remedy, page seven of the IS/MND includes the following discussion:

> Because the project is subject to Builder's Remedy, compliance with all of the Town's guidelines, policies, or programs is not required unless noncompliance would constitute a significant health or safety risk. Although not legally required, the proposed project would comply with many of the Town's Hillside Development Standards and Guidelines, such as standards related to lot configuration and building locations within the proposed lots.

Therefore, because the local regulations related to density, setbacks, and public trails are not considered related to health or safety, compliance with such standards is not required. The noncompliance discussed in the comment, including conflicts related to the extent of grading and building heights, is discussed throughout the IS/MND.

With respect to fire safety, please see Response to Comment 2-2.

Letter 20

To: Erin Walters <EWalters@losgatosca.gov>
Subject: Re: URGENT – Official Fire Hazard Finding & Gross Deficiencies in Surrey Farms Estates Application

[EXTERNAL SENDER]

Good morning Erin,

Thank you for the links and additional information. I hadn't actually read much of SB 330, but now that I've read parts of it I found some ironic conflicts between this subdivision proposal and the legislative intent of SB 330.

Would you accept a version 2 of my letter? I only updated point 4, but I've included the full, updated letter for convenience. It is below.

Regards,

Dan

20-1

========== Version 2 ==========

Dear Ms. Walters,

I am writing on behalf of my family, residents of [redacted], to express our grave concerns about the proposed Surrey Farms Estates Subdivision Project.

Our review has uncovered a critical, fact-based error in the project's environmental assessment that constitutes a significant public safety risk. The **Santa Clara County Fire Department (SCCFD)**, in its official "Developmental Review Comments," has definitively classified the entire project site as being within the **Very High Fire Hazard Severity Zone (VHFHSZ)** (Fire Comments - 178 Twin Oaks Lots 1-12, p. 1).

20-1 cont.

This official finding directly contradicts the project's **Initial Study/Mitigated Negative Declaration (IS/MND)**, which incorrectly analyzes the site as being in a less severe "High" Fire Hazard Severity Zone (IS/MND, p. 102). This fundamental flaw invalidates the IS/MND's conclusions regarding public safety and fire risk, and it is on this basis, among many others detailed below, that we insist on the preparation of a full Environmental Impact Report (EIR).

---

1. The Project's Environmental Document Is Invalidated by Official Fire Department Findings and Creates a Clear Public Safety Hazard

The developer's entire argument for why their project does not create a significant health and safety risk rests on a flawed and inaccurate premise.

- **Official Designation is "Very High" Risk:** The Santa Clara County Fire Department, the authority having jurisdiction, has determined the property is in the **Very High Fire Hazard Severity Zone (VHFHSZ)** (Fire Comments - 178 Twin Oaks Lots 1-12, p. 1). This is the official classification for applying all safety standards.
- **The IS/MND is Factually Wrong and Inadequate:** The IS/MND bases its entire safety analysis on the incorrect assumption that the site is in a "High" FHSZ (IS/MND, p. 102). This error means the review of fire risk, emergency access, and evacuation is fundamentally unreliable.
- **Risk is Compounded by Known Geological Hazards:** This VHFHSZ designation is made even more dangerous by the site's documented instability. The project's own *Geotechnical Investigation* identifies the eastern half of the property as being within a **county landslide hazard zone** and notes that its slopes are susceptible to **"soil creep or localized shallow soil movement"** (Geotechnical and Geologic Hazard Investigation, p. 9).
- **A Full EIR is Mandatory:** The Builder's Remedy does not permit development that constitutes a "significant health or safety risk." Allowing the developer to bypass Hillside Development Standards for **excessive grading** and **building height** on these unstable slopes within an official VHFHSZ creates, by definition, a new and undeniable public safety hazard. A full EIR is the only legally sufficient way to analyze these combined risks.

---

2. Unmitigated Impact of Construction Traffic on Neighborhood Safety

A significant and direct threat to neighborhood safety is the plan to route all construction traffic onto our neighborhood streets. The *VMT Technical Memorandum* confirms the project would result in a **significant VMT impact** (VMT Technical Memorandum, p. 5). The proposed mitigation—off-site sidewalk construction miles away—is entirely irrelevant to the **direct, temporary, and severe local public safety hazard** created by heavy construction traffic on streets that serve as our de facto sidewalks and bike paths.

This is not a new issue. Historical records show the Town previously denied proposals to make Longmeadow a through-street to preserve the quiet, safe character of Surrey Farms. By approving this construction plan, the Town would be enabling the very outcome it previously prevented. We urgently request a dedicated **Construction Traffic Management Plan (CTMP)** that details the daily volume of traffic, the duration of the impact, and specific, enforceable on-site mitigation measures.

3. Effects of Drainage on an Unstable, Inaccurately Mapped Site

20-1 cont.

The proposed addition of **62,224 square feet of impervious surfaces** on a hillside with known geotechnical challenges is alarming (IS/MND, p. 74). Many residents of Surrey Farms can attest to a historically high-water table and existing drainage issues. The *Geotechnical and Geologic Hazard Investigation* confirms these concerns, noting that **perched groundwater was encountered at just 13 feet** and that the site is blanketed in **"moderately expansive surficial soils"** that shrink and swell (Geotechnical and Geologic Hazard Investigation, pp. 7, 12).

Even more concerning, the Town's own August 20, 2025, review documents that the developer's **own grading plans are inaccurate and inconsistent**, with cut depths in drawings being significantly larger than what was reported in data tables (Planning Comment Letter, 08/20/25, p. 4). If the project's foundational data is this unreliable, the conclusions of the entire Geotechnical and Hydrological analysis cannot be trusted. We request a **site-specific hydrogeological analysis** to demonstrate that the increased runoff will not cause adverse impacts on down-gradient properties, based on verified and accurate grading plans.

4. Builder's Remedy: A Conflict with Decades of Town Planning and State Law

20-2

The project's reliance on the Builder's Remedy creates a profound conflict with both the Town's deliberate, long-term planning for this parcel and the stated legislative intent of Senate Bill (SB) 330 itself.

Letter 20 cont.

20-2 cont.

First, it seeks to overturn decades of local protection. On **June 16, 1975, the Town passed an ordinance to rezone this specific hillside to Resource Conservation (RC)** to preserve its character. As recently as 2018, the Town Council publicly affirmed that rural hillsides like this are an essential part of the Town's identity. Invoking a legal provision to overturn these historical commitments will cause permanent environmental damage, including the destruction of **223 protected native oak trees** and the habitat of special-status wildlife (Arborist Report, pp. 9, 26; Biological Evaluation Report, pp. 18, 33).

Second, the project stands in direct opposition to the law's own stated purpose. Section 2 of SB 330 explicitly acknowledges the state's need to address the *"Increasing pressure to develop the state's farmlands, open space, and rural interface areas to build affordable housing, and increasing fire hazards that generate massive greenhouse gas emissions."* This project does precisely that by destroying a protected open-space hillside.

Furthermore, the legislature noted that the housing crisis has been *"exacerbated by the additional loss of units due to wildfires."* It is a dangerous irony to use this very law to justify constructing new homes in a **Very High Fire Hazard Severity Zone**, placing future residents at extreme risk and ignoring the hard-learned lessons that informed the bill's creation. The Builder's Remedy should not be interpreted as a mandate to approve developments that fly in the face of public safety and the explicit concerns of the legislation itself.

5. Premature and Procedurally Flawed Proposal

20-3

The August 20, 2025, Staff Review makes it clear that this project is being rushed toward public hearing despite fundamental unresolved issues. The Town's own staff has compiled a summary list of at least **15 distinct ways the project violates local regulations**, including those for density, setbacks, grading limits, fire safety, and the explicit failure to provide **required public trails and open space easements** (Planning Comment Letter, 08/20/25, p. 6). Approving a project with such extensive, documented deficiencies—compounded by a dangerously flawed environmental review—would be premature and irresponsible.

We urge the Town to reject the current IS/MND as legally and factually inadequate and require the developer to prepare a full Environmental Impact Report that addresses the project's true fire risk in a **Very High Fire Hazard Severity Zone** before any further consideration.

Thank you for your attention to these matters.

Letter 20 cont.

Sincerely,

Daniel S. Sherbeck

[redacted]

========== End Version 2 ==========

LETTER 20: DAN SHERBECK (2 OF 2)

Response to Comment 20-1
Please see Responses to Comments 19-1 through 19-3.

Response to Comment 20-2
The comment does not address the adequacy of the IS/MND and has been noted for the record. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

With respect to Builder's Remedy, the Project qualifies for the requirements established by the Housing Accountability Act (Government Code Section 65589.5), a newer housing production statute that seeks "to significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects…" (Section 65589.5(a)(2)(K)). In addition, the Housing Accountability Act expresses the State's policy that the statute "be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing" (Government Code Section 65589.5(a)(2)(L)).

The proposed project does not include mass grading, and does not proposed development on the steepest parts of the site, thereby preserving substantial amounts of the existing hillside.

With respect to the site's FHSZ, please see Response to Comment 2-2.

Response to Comment 20-3
Please see Response to Comment 19-4.

Letter 21

From: Brad Stahl <[redacted]>
Sent: Thursday, October 9, 2025 11:27 AM
To: Erin Walters <EWalters@losgatosca.gov>
Subject: 178 Twin Oaks Dr Project

[EXTERNAL SENDER]

Erin Walters Town Of Los Gatos Planning Department

Please Respond to the email letting me know you have received it

Thank you

Brad

Susan and Brad Stahl represent the Stahl Residence at [redacted]

The Stahl family has a long relationship with the Dodge family as we have been neighbors for over 50 years and hope a mutual agreement can be reached with our concerns.

21-1 The proposed Surry Farms Hill Road intersection with Twin Oaks Drive will cause all the Automobile traffic headlights to either face or sweep across all three bedrooms and living room windows located on 110 Twin Oaks Drive while turning right on to Twin Oaks Dr.

We have talked with Jim Foley about our concerns. Jim was supportive about our concerns and indicated corrective action would be taken.

Our Mitigation Requests are as follows:

21-2

1) A slight realignment of the intersection of Surry Farms Hill Road intersection with Twin Oaks Drive. The realignment would change the 90 degree intersection angle to a 60

Letter 21 cont.

21-2 cont.

degree +/- angle. This angle change would force the headlights to face down hill and sweep across the garage, not the windows in the home.

2) Offer a plan that would, at the developers expense, create vegetation or fencing barriers to mitigate the Automotive headlight issue for 110 Twin Oaks Drive.

21-3

3) Change the access points on the project to better share the traffic impact between Twin Oaks Drive and Cerro Vista Court. For example Lots 6, 7 and 8 are added to lot 10 for access off Cerro Vista Court.

Thank you for your time and consideration.

Susan and Brad Stahl

[redacted]

LETTER 21: SUSAN AND BRAD STAHL

Response to Comment 21-1
Please see Response to Comment 5-17.

Response to Comment 21-2
Please see Response to Comment 5-17. Because the IS/MND concluded that the project would not result in any impacts related to creating a new source of substantial light or glare, a nexus to require the requested mitigation measures under CEQA does not exist. Any such measures would be voluntary. The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 21-3
Emergency access to the project site is discussed under question XVII-c,d of the IS/MND. As noted on page 95 therein, access to the project site would be provided through a connection to Twin Oaks Drive, by a new private driveway extending from Cerro Vista Court, and through the proposed EVA route connection to Brooke Acres Drive. The IS/MND did not identify potentially significant impacts related to insufficient access routes to the site. Thus, a nexus to require the requested mitigation measure under CEQA does not exist. In addition, the Town does not have any standards or requirements that would require additional access points from those noted above. The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Letter 22

From: Eric van Miltenburg <[redacted]>
Sent: Wednesday, October 8, 2025 1:42 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Lori Owen [redacted]
Subject: Proposed Development - 178 Twin Oaks Drive / near Surrey Farms

[EXTERNAL SENDER]

Dear Erin,

22-1 I am writing again to express my concerns regarding the proposed housing development at 178 Twin Oaks Drive. While I understand that some development on this site is likely to happen, the current size, scope, and design raise serious concerns for our neighborhood, particularly with respect to traffic, fire safety, and environmental impacts.

22-2 My top concern remains the **single point of access** via Longmeadow Drive. Every construction vehicle, truckload of dirt, asphalt, and supplies—as well as all future resident traffic—would funnel down this narrow street and directly past our home. This is not reasonable or safe. At a minimum, a **second access road must be required** to share the traffic burden and provide emergency ingress/egress, particularly given the property's location in a **Very High Fire Hazard Severity Zone**.

22-3 In addition to traffic and fire safety, we remain deeply concerned about the project's environmental and safety impacts. The applicant proposes to remove 223 protected trees—despite clear requirements under the Los Gatos Tree Protection Ordinance—destroying wildlife habitat and increasing the risk of landslides, mudslides, and drainage issues. Multiple protected species, including the California red-legged frog, golden eagle, and burrowing owl, stand to lose critical habitat.

22-4 Further, significant grading is proposed on a site already located in a designated **Geologic Hazard Zone**, with incomplete erosion and sediment control plans. Drainage impacts remain unresolved, particularly the introduction of a large bioretention area near Hillbrook School and existing homes.

22-5 The project also seeks multiple exceptions to lot size, height, and setback requirements. Most notably, one proposed home would exceed 40 feet in height—far beyond the 25-foot maximum under the Hillside Design Standards. Construction itself is expected to last at least two years, creating unavoidable noise, traffic, and safety issues for Surrey Farms residents and Hillbrook School.

22-6 In short, while we accept that some building will occur at this site, the current proposal overreaches and fails to adequately address community, safety, and environmental

Letter 22 cont.

22-6 cont.

concerns. We strongly urge the Commission to require meaningful changes—including a second access road, strict adherence to fire and safety standards, full compliance with tree and habitat protections, and realistic mitigation measures—before considering approval.

Thank you for your continued attention to this matter.

Sincerely,

Eric van Miltenburg & Lori Owen

Re: 178 Twin Oaks, Surrey Farms Estates Subdivision Project Initial Study and Mitigated Negative Declaration

Dear Ms. Walters:

These comments on the Initial Study and Mitigated Negative Declaration ("IS/MND") for the proposed 178 Twin Oaks, Surrey Farms Estates Subdivision Project ("Project") are submitted on behalf of my client Jon Witkin who owns and resides on the property immediately adjacent to the 17.55 Project site in the Los Gatos Hills where he has lived for seventy (70) years since 1955. Five (5) of the proposed twelve (12) residences would share a property line with my client's property and therefore he is vitally concerned about the Project's potentially significant impacts on the environment.

23-1

The Project Site is zoned Resource Conservation, has a General Plan land use designation of Agriculture, is within the Town's Hillside Specific Plan Area, and until just very recently was protected under Williamson Act contract. The Project would result in the wholesale alteration of the Project site's steeply sloped landscape and the mixed oak woodland community it supports, removing an alarming 223 protected trees (exactly 50% of the 246 total protected trees on the Project site) and introducing a staggering 62,224 square feet of impervious surfaces, thereby

23-2

23-2 cont. permanently destroying the site's scenic character and the oak woodlands habitat it provides for numerous special-status wildlife species.

Based on our initial review, and as further detailed below, there is substantial evidence in the record that the Project may have a significant adverse impact on the environment. Further, the IS/MND fails to adequately describe the Project, fails to adequately analyze the Project's

23-3 significant environmental impacts under the California Environmental Quality Act ("CEQA"). Moreover, many of the mitigation measures proposed for the impacts that are identified patently violate CEQA, including, but not limited to, the mitigation measure designed to reduce the biological impacts resulting from the removal of the 223 trees protected under the Town's Tree Protection Ordinance.

CEQA therefore mandates that an environmental impact report ("EIR") be prepared for the Project rather than an IS/MND to ensure that the significant impacts of this Project are fully disclosed, analyzed, and mitigated and a full range of alternatives to the Project are identified and analyzed. We therefore request that Town Planning staff direct the environmental consultant to prepare an EIR and delay the Planning Commission's consideration of this Project until the EIR is prepared as required by CEQA.

I. **Preparation of an EIR is Required for the Project Because it can be Fairly Argued Based on Substantial Evidence that the Project May Result in Potentially Significant Adverse Impacts on the Environment**

While we acknowledge that, due to the application's Builder's Remedy status, the Project does not require approval of a General Plan Amendment or a Rezone, its Builder's Remedy status does not exempt the Project from the California Environmental Quality Act, Public Resources Code Section 21000 et. Seq. ("CEQA"). (Cal. Gov. Code Section 65589.5(e)) An agency must prepare an environmental impact report ("EIR") whenever it is presented with a "fair argument" that a project may have a significant effort on the environment, even if there is also substantial evidence to indicate that the impact is not significant. See *No Oil, Inc. v City of Los Angeles* (1974) 13 Cal.3d 68, 75.

23-4 Notably, an EIR was prepared for a smaller, prior version of this project in 2017 which was never certified because the Town Council voted unanimously to deny the applicant's request to cancel the Williamson Act and thereby rejected the proposed project. There is no explanation in the IS/MND as to why the Town required an EIR for a smaller 10-lot version of this Project eight years ago and yet just eight years letter is now proceeding with only an IS/MND for this 12-lot Project on the very same project site. Common sense should dictate that if an EIR was required by the Town for a smaller project on the site, it should require an EIR for the current larger project which would have even more potential to result in significant environmental impacts.

The Town's determination on whether to prepare an EIR for this Project is subject to a very low threshold called the "fair argument" test (*Laurel Heights Improvement Assoc. v. U.C. Regents* (1993) 47 Cal.4th 376), meaning that if a fair argument can be made on the basis of "substantial evidence" in the record that the project may have a significant adverse environmental impact - even if evidence also exists to the contrary - then an EIR is required. An IS/MND is authorized only when the Lead Agency (which in this case is the Town) determines that changes to the project or mitigation measures would mitigate any identified potentially significant adverse

2

Letter 23 cont.

environmental effects of the project "to a point where clearly no significant effect on the environmental would occur" and no substantial evidence exists supporting a fair argument that the Project will result in a significant environmental effect. Cal. Pub. Res C Section 21064.5; 14 Cal Code Regs 15063(c)(2); 15070(b).

CEQA places the burden of environmental investigation on the Town rather than the public. The Town's finding that the project will have no significant adverse impact will be set aside if there is no support in the record for it. See *Sundstrom v County of Mendocino* (1988) 202 CA3d 296. 311 which stated that a public agency "should not be allowed to hide behind its own failure to gather relevant data." Moreover, an IS/MND will be set aside if there is substantial evidence in the record that the mitigation measures imposed as conditions to its adoption are insufficient to mitigate the project impacts. See *California Native Plant Soc'y v County of El Dorado* (2009) 170 CA4th 1026; *Citizens for Responsible & Open Gov't v City of Grand Terrace* (200) 160 CA4th 1323, 1340. An in-lieu fee program cannot be presumed to provide adequate mitigation unless the effectiveness of the fee program has been examined under CEQA. *California Native Plant Soc'y v County of El Dorado* (2009) 170 CA4th 1026.

23-4 cont.

For the reasons described below, the Town may not adopt the IS/MND because it does not meet the requirements of CEQA. A fair argument exists, based on substantial evidence, that significant adverse environmental impacts may result from the Project. Further the Initial Study's analyses and conclusions with regard to aesthetics, biological resources, land use and planning and wildfire impacts, are not supported by substantial evidence and many of the mitigation measures it identifies are insufficient to mitigate the impacts the IS/MND does acknowledge. Finally, the IS/MND fails completely to analyze the Project's cumulative impacts. Accordingly, the Town must reject the IS/MND and require an EIR that fully analyzes the Project's potentially significant impacts, identifies feasible mitigation measures to reduce these impacts to the extent possible, and evaluates a full range of Project alternatives.

23-5

II. The Project Description Improperly Excludes Reasonably Foreseeable Consequences of the Project and Their Associated Impacts

The CEQA Guidelines provide that a "'Project' means the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment…." (Cal. Code Regs., tit. 14, § 15378(a).) A project is defined broadly under CEQA in order to maximize environmental protection. (*City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438, 1452.) It must be defined and accurately described to ensure an "intelligent evaluation of the potential environmental effects of a proposed activity." (*Burbank-Glendale-Pasadena Airport Auth. v. Hensler* (1991) 233 Cal.App.3d 577, 592, citing *McQueen v. Board of Directors of the Mid-Peninsula Regional Open Space District* (1988) 202 Cal.App.3d 1136, 1143-44, disapproved on other grounds.) "A narrow view of a project could result in the fallacy of division, that is, overlooking its cumulative impact by separately focusing on isolated parts of the whole." (*Id.* This big picture approach to the definition of a project (i.e., including "the whole of an action") prevents a proponent or a public agency from avoiding CEQA requirements by dividing a project into smaller components which, when considered separately, may not have a significant environmental effect. (*Nelson v. County of Kern* (2010) 190 Cal.App.4th 252, 271.)

23-6

Letter 23 cont.

23-7 The IS/ MND's description of the Project improperly excludes future reasonable, foreseeable consequences of the Project including but not limited to additional accessory dwelling units (ADUs) being built on each of the proposed twelve lots thereby doubling the number of dwelling units on the Project site and the impacts associated with them. Other future reasonable, foreseeable consequences of the Project include swimming pools and cabanas, sports courts and other accessory structures and impervious surfaces which will result in additional environmental impacts that the IS/MND fails to address. As stated by the Court in *Christward Ministry v. Superior Court* (1986) 184 Cal.App.3d 180, 195-196: "[t]his is exactly the type of piecemeal environmental review prohibited by CEQA. '... CEQA mandates '... that environmental considerations do not become submerged by chopping a large project into many little ones—each with a minimal potential impact on the environment—which cumulatively may have disastrous consequences.'" While ADUs are generally entitled to ministerial approval, "[w]here a project involves an approval that contains elements of both a ministerial action and a discretionary action, the project will be deemed to be discretionary and will be subject to the requirements of CEQA." Cal. Code Regs., tit 14, § 15268(d)

III. **Substantial Evidence Supports a Fair Argument that the Project May Result in Potentially Significant Aesthetic Impacts, Contrary to the IS/MND's Conclusion**

23-8 The Initial Study does not provide the comprehensive analysis and substantial evidence necessary to support its conclusion that the Project will not result in potentially significant aesthetic impacts. Moreover, there is a fair argument supported by substantial evidence to the contrary – that the Project will result in potential significant aesthetic impacts. CEQA requires analysis of a project's impacts on "view and other features of beauty." *Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396,401. "the opinions of area residents, if based on direct observation, may be relevant as to aesthetic impact and may constitute substantial evidence in support of a fair argument; no special expertise is required on this topic." *Pocket Protectors,* 124 Cal.App.4th at 908, 937 (requiring EIR, rather than Initial Study, in part to address neighbors' concerns regarding aesthetic impacts of project).

A. <u>The IS/MND Fails to Identify and Mitigate the Significant Aesthetic Impact Resulting from the Loss of Protected Trees</u>.

23-9 As a preliminary matter, the IS/ MND erroneously concludes that the Project will not exceed listed threshold of significance (b) which considers whether the Project will "[s]ubstantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway." Despite that trees are explicitly listed as a scenic resource in this threshold, and despite that the Project will remove 223 or 50% of the 546 protected trees onsite which consist mostly of oak woodlands, the IS/ MND concludes that this threshold will not be exceeded, failing to identify these trees and the oak woodland they comprise as a scenic resource or analyze the Project's impacts to them. See *Save Agoura Cornell Knoll v. City of Agoura Hills* (2020) 46 Cal.App.5th 665, 704-705 (2020) in which the MND at issue concluded that the "the mature oak trees on the project site offer a scenic resource…" and concluded that the Project would result in a significant impact to this scenic

23-9 cont.

resource. The court held that the MND *improperly* concluded that this significant impact would be reduced to a less than significant level because the identified mitigation measures did not protect from risk to harm to these trees from project construction and changes in subsurface water flow caused by mass grading and therefore did not reduce the visual impact of the potential loss of these trees to a less than significant level. As in *Save Agoura,* and as further explained below in Section III of this letter, the IS/MND fails to mitigate for the loss of the protected trees and oak woodlands on the Project site and therefore the Project may result in a potentially significant impact to these scenic resources.

B. The IS/MND Conclusion that the Project will Not Conflict with Applicable Zoning and other Regulations Governing Scenic Quality Is Unsupported by Substantial Evidence

23-10

The IS/ MND concludes that the Project will not exceed listed threshold of significance (c) because it will not conflict with applicable zoning and other regulations governing scenic quality. This conclusion is unsupported and contradicted by the evidence in the record. The IS/MND acknowledges that "multiple aspects of the project are not in compliance with the Hillside Development Standards and Guidelines, such as the extent of grading and maximum heights" ((IS/MND, p.21) and in fact the home on Lot 5 at 40 feet tall will exceed the maximum height by over 15 feet. Despite these acknowledged conflicts, the IS/ MND weakly explains, without any support, that "[f]rom an aesthetics perspective, it is reasonable to conclude that not every conflict with a scenic regulation would result in a significant aesthetic impact, pursuant to CEQA." (IS/MND, p.23) The IS/ MND fails to support this statement with any thorough methodical analysis which should include first identifying the "applicable zoning and other regulations governing scenic quality", then discussing the Project's compatibility with these regulations, and if a conflict between the Project and these regulations is identified, explaining why exactly this conflict would not result in a significant impact.

23-11

Although Figure 11 clearly shows three of the homes front and center in the view from Longmeadow Drive, the IS/ MND concludes without support, that "the majority of the project site would remain screened by the existing trees and vegetation". The Hillside Development Standards and Guidelines state that "[a] Deed Restriction shall be required that identifies the on-site trees that were used to provide screening in the visibility analysis and requires replacement screening … if these trees die or are removed." There is no mention of any such deed restriction requirement or the Project's adherence to this requirement in the IS/MND. Since the ISMND relies on screening of trees to conclude that the project will not result in aesthetic impacts, a deed restriction to ensure their protection and replacement should be required.

23-12

The IS/MND further concludes that "[t]he proposed project would not conflict with existing regulations related to views of the Hillside Area from Longmeadow Drive"(IS/MND p. 23) without even identifying what these regulations are let alone providing an analysis to support this conclusion. In fact, the evidence supports a conclusion to the contrary: the Project does not protect views of the hillsides by locating buildings on the least visible areas of the Project site and does not mitigate the visual impact of the buildings to the greatest extent reasonable

Letter 23 cont.

23-12 cont. by reducing the height of the buildings or moving the structure to another location on the site (Standards C2 and C3 of the Hillside Development Standards and Guidelines).

C. The IS/MND Conclusion that the Project will Not Create a New Source of Substantial Light or Glare Is Unsupported by Substantial Evidence

23-13 Despite that the 17.55 acre Project site is entirely undeveloped and has no existing sources of light, the IS/ MND astoundingly concludes that the Project will not exceed threshold of significance (d) by creating a new source of substantial light or glare. It attempts (but fails) to rationalize this conclusion by stating that the new sources of light and glare from the Project "would be similar in nature to the existing surrounding conditions" and that "[a]ccording to the project applicant, all exterior lighting (i.e., both building-mounted and landscape lighting) would be designed consistent with the Hillside Design Standards and Guidelines outdoor lighting standards, which require the minimum lighting required for pedestrian safety" (IS/ MND pp. 28-29). However, early in the IS/MND on page 7, it states that "[b]ecause the project is subject to Builder's Remedy, compliance with all of the Town's guidelines, policies, or programs is not required unless noncompliance would constitute a significant health or safety risk." Accordingly, the Town cannot rely on the applicant's stated voluntary compliance with the exterior lighting standards to reduce the Project's light and glare impact; such standards must be imposed as mitigation measures and required as conditions of approval. ""A requirement that [a project] comply with the [applicable] Code does not, by itself, constitute an adequate assessment of mitigation measures that can be taken to address the . . . impacts during construction and operation of the project." *California Clean Energy Com.*,225 Cal.App.4th at 211.

23-14 Completely absent from the Aesthetic Impact analysis is a shadow impact analysis. The Town's minor residential development application form excerpted below requires this: https://www.losgatosca.gov/DocumentCenter/View/162/Minor-Residential-Development-Application-Packet-PDF:

23-14 cont.

D. STREETSCAPE, SHADOW STUDY AND CROSS SECTION (NOT NECESSARY FOR ACCESSORY STRUCTURES)

1. Shadow study to include the following:
   a. Winter/summer shadow lines at 9 A.M., noon, and 3 P.M. on June 21st and December 21st;
   b. All structures on adjacent properties;
   c. Height and number of stories of adjacent structures.
2. Streetscape to include the following:
   a. Front elevation of structure and plan view with changes superimposed on existing structure;
   b. Streetscape including both sides of street. Include at least three structures on each side of applicant's property and six structures on opposite side of the street.
3. Cross Section:
   a. Front elevation of structure and plan view with changes superimposed on existing structure;

If a shadow study is required of minor residential development, it should most certainly be required for this major residential development and included in the environmental review of the aesthetic impacts of the Project.

IV. **Substantial Evidence Supports a Fair Argument that the Project May Have a Potentially Significant Impact on Protected Trees and the Oak Woodlands on the Project Site, Contrary to the IS/ MND's Conclusion**

23-15

According to the IS/MND and the Arborist Report (attached as Exhibit C to the IS/MND) upon which it relies, the Project site contains 603 onsite trees measuring four (4) inches or greater at breast height, with 546 of those trees qualifying for protection under the Town's Tree Protection Ordinance whose intent and purpose is to is "retain as many trees as possible." The Project proposes to remove 223 or exactly *one-half (50%)* of those protected trees to accommodate the Project build out. The Tree Protection Ordinance requires that 551 tree replacement trees be planted on-site to mitigate the loss of the 223 protected trees, yet the Project proposes to plant only 85 trees, which is just fifteen percent (15%) of what the Tree Protection Ordinance requires.

The IS/MND acknowledges that "a potentially significant impact could occur related to a conflict any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance" but concludes that this impact would be reduced to a less than significant level with implementation of a single mitigation measure – Mitigation Measure IV-9. This mitigation measure states in pertinent part that since the project would not meet the Tree Protection Ordinance tree replacement requirements, "*the project applicant shall pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code.*" This mitigation measure fails to satisfy the requirements of CEQA and therefore fails to reduce this identified impact to

7

a less than significant level.

A. Mitigation Measure IV-9 Fails to Reduce the Identified Impact to Protected Trees to a Less Than Significant Level

23-15 cont.

Mitigation Measure IV-9 relies entirely on the applicant's compliance with the Town's Tree Protection Ordinance. Under well-established case law, the IS/MND must engage in a project- specific analysis of the effects of regulatory compliance in order to support a determination that compliance is sufficient to prevent significant impacts. *See Californians for Alternatives to Toxics* v. *Dept. of Food and Agriculture* (2005) 136 Cal. App. 4th 1, 17 ("Compliance with the law is not enough to support a finding of no significant impact under the CEQA."); *California Clean Energy Com. v. City of Woodland* (2014) 225 Cal.App.4th 173, 211 ("requirement that [a project] comply with the [applicable] Code does not, by itself, constitute an adequate assessment of mitigation measures"). Moreover, uncertain, vague, and speculative mitigation measures are inadequate to reduce the significance of an impact because they lack a commitment to enforcement. *See, e.g., Anderson First Coalition v. City of Anderson* (2005) 130 Cal. App. 4th 1173, 1188-89 (holding traffic mitigation fee measure inadequate under CEQA due to vagueness in program for implementing required improvements). Finally, a fee program cannot be presumed to provide adequate mitigation unless the effectiveness of the fee program itself has been examined under CEQA. *California Native Plant Soc'y v County of El Dorado* (2009) 170 CA4th 1026. There is no evidence in the record that the Town's in-lieu fee program incorporated into its Tree Protection Ordinance has undergone such an examination.

23-16

With regard to the onsite tree replacement component of Mitigation Measure IV-9, there is nothing in the mitigation measure or the Town's Tree Protection Ordinance that it references which requires care, maintenance, monitoring and protection of the proposed 85 replacement trees (which represents just 15% of the total protected trees the Project will remove) to ensure their health and survival and/or replacement of these trees if they do not thrive or survive. Oak trees have a slow growth rate and take years to mature or show signs of stress that could lead to mortality. Without such a long-term requirement spanning at least 10 years, this mitigation measure does not reduce the identified impact to a less than significant level. (See Attachment 1, page 6.)

23-17

With regard to the in-lieu fee component, Mitigation Measure IV-9 states that the in-lieu fee shall be paid pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code which states as follows:

(2) If a tree or trees cannot be reasonably planted on the subject property, an in-lieu payment in an amount set forth by the Town Council by resolution shall be paid to the Town Tree Replacement Fund to:

a. Add or replace trees on public property in the vicinity of the subject property; or

b. Add or replace trees or landscaping on other Town property; or

c. Support the Town's urban forestry management program.

The adopted Town fee schedule for 2025-26 states as follows:

26	Replacement Trees - Town Forestry Fund Per Tree Ordinance Section 29.10.0985	Tree cost for each 24",36", and/or 48" box size will be the Market Price plus the installation cost, determined by the Director

Fee will be waived if tree removal is done to implement or maintain Defensible Space.

23-17 cont.

The amount of the in-lieu fee is therefore entirely within the discretion of the Director and may not even be required depending on whether the removed tree it is associated with is removed "to implement or maintain Defensible Space" which in turn appears also to be discretionary. Additionally, Mitigation Measure IV-9 nor the Town's Tree Protection Ordinance states anything about how or when the in-lieu fee will be administered and applied to appropriately mitigate the loss of oak woodland and the individual 223 protected trees on the Project site. Moreover, the mitigation measure does not disclose a timeframe by which the deposited funds will be allocated toward actual mitigation efforts, which may result in unmitigated Project impacts and ongoing temporal loss of nesting and/or foraging habitat for wildlife. Without disclosure of the amount of the in-lieu fee and exactly how and when it will be appropriated, the Town cannot conclude that Mitigation Measure IV-9 will reduce the impact of the loss of oak woodland and the individual 223 protected trees to a less than significant level.

B. The IS/MND Fails to Analyze or Mitigate Impacts to the Remaining Trees on the Project Site

23-18

Moreover, the IS/MND reports only the number of individual protected trees (223) that are planned to be removed to construct the Project (IS/MND p. 50). It fails to consider, much less mitigate for, additional oaks that may be lost or harmed as a result of the subdivision improvements constructed within oak woodlands or close to protected trees that will not be removed. Given the steepness and high density of mature oaks in this area and the amount of grading and impervious surface area that the Project will introduce, thereby diverting ground water that otherwise would have irrigated these trees' roots, these improvements will certainly cause deterioration or loss of additional oaks through damage to their roots and deprivation of ground water. The IS/ MND does not consider or mitigate for this potential impact by requiring ongoing long-term irrigation, monitoring of their health and/or replacement if they do not survive.

C. The IS/MND Fails to Identify, Analyze or Mitigate Impacts resulting from the Loss of Oak Woodland Community as a Whole

23-19

Letter 23 cont.

Additionally, and perhaps most concerning, the IS/ MND does analyze or even acknowledge that the loss of the oak woodland habitat on the Project site *as a whole interdependent community* of organisms would be a significant impact and mitigate for this loss. The IS/ MND fails mention that oak woodlands is a natural community protected by the Oak Woodlands Conservation Act (pursuant under Fish and Game Code sections 1360- 1372) and Public Resources Code section 21083.4, due to the historic and on-going loss of these resources. Literally, the IS/MND does not see the forest for the trees. As explained in the enclosed August 28, 2025 letter (Attachment 1) submitted by the California Department of Fish and Wildlife (CDFW) on another project, the CDFW considers oak woodlands as a sensitive natural community that supports a host of wildlife and takes the position that impacts to this natural community should be appropriately mitigated for. The Project's impact on the oak woodland community as a whole is glaringly missing from the IS/MND entirely.

23-19 cont.

Oak woodlands are some of the richest overall wildlife habitats in California, and rank among the top three habitats for birds[1]yet they are increasingly diminishing due to fire suppression, overgrazing, urban development, and disease. Oak trees provide nesting and perching habitat for approximately 170 species of birds.[2] In addition to birds, mammals, reptiles, and amphibians depend on oak woodlands at some stage in their life cycle whether it is foraging acorns, providing refugia through leaf litter, or using cavities as shelter.[3] Oak woodlands also serve several important ecological functions such as protecting soils from erosion and land sliding; regulating water flow in watersheds; and maintaining water quality in streams and rivers. Moreover, oak woodlands also have higher levels of biodiversity than any other terrestrial ecosystem in California.[4]

As explained in CDFW's enclosed letter (Attachment 1), replacement of individual trees whether onsite or offsite does not offset the loss in total area of this sensitive natural community and the wildlife it supports. Replacing individual trees, but not habitat area, is ineffective. Planting individual trees does not fully mitigate on a biological level the permanent and temporal impacts on an oak woodland community because this does not account for the loss of the woodland understory and is not viewed by CDFW as appropriate mitigation since the replacement trees

[1] Wilson, R. A., P. Manley, and B. R. Noon. 1991. Covariance patterns among birds and vegetation in a California oak woodland. Pages 126–135 in R. B. Standiford, editor. Proceedings of the symposium on oak woodlands and hardwood rangeland management. Gen. Tech. Rep. PSW-GTR-126. Pacific Southwest Research Station, Forest Service, U.S. Department of Agriculture, Berkeley, California.

[4] Block, W.M., Morrison, M.M., Verner, J. 1990. Wildlife and oak-woodland interdependency. Fremontia 18(3):72-76.

will be subject to maintenance (i.e., pruning and irrigation) especially if they are within fuel modification zones.

The loss of area of oak woodlands which is a sensitive natural community constitutes a significant impact that, even if it were properly identified in the IS/MND, is not mitigated by application of the Town's Tree Protection Ordinance. In a recent case precisely on point, the court in *Save Agoura Cornell Knoll v. City of Agoura Hills* (2020) 46 Cal.App.5th 665 (2020) held that MND analyzing the impacts of a project which would result in the removal of 29 oak trees and 21,271 square feet of oak scrub habitat did not adequately analyze the project's impacts on these oak trees, nor did it effectively mitigation the impacts to a less than significant level, and accordingly mandated the preparation of an EIR.

23-19 cont.

Specifically the court held that the MND (1) did not include any mitigation measures to address the loss of water for the retained or replacement trees that would result from the project's extensive grading and impervious surface area; (2) did not include any analysis on how the identified mitigation measures would be likely to succeed in recreating or restoring the oak woodland lost to the project development; (3) did not specify in the in-lieu fee program it includes as a mitigation measure how many trees would be planted off site or identify where such trees will be planted or if any such sites are even available for planting; and (4) did not include mitigation to address the long term survival of the retained trees and/or replacement trees onsite. *Id a pp 698-704.*

The IS/ MND and Mitigation Measure IV-0 is deficient for these same reasons and the reasons summarized above, and therefore an EIR is required to properly analyze and mitigation the potentially significant impact to the oak woodland on the Project site. In preparation of the EIR, we urge the Town to review and consider incorporation of the oak woodland mitigation measures recommended by the CDFW in the enclosed letter at pages 5-8 (Attachment 1).

V. **Substantial Evidence Supports a Fair Argument that the Project May Result in Potentially Significant Land Use and Planning Impacts**

The IS/MND concludes without any analysis whatsoever that the Project will not "cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." While we acknowledge that this is a Builder's Remedy project and therefore a General Plan Amendment and Rezone is not required, this does not exempt the Project from CEQA and its requirement that the land use and planning impacts of the Project be adequately analyzed. The IS/MND does not even bother to identify what land use plans, policies, and regulations were adopted for the purpose of avoiding or mitigating an environmental effect, let alone conduct the required consistency analysis to determine whether there is a conflict between the Project and these plans, policies and regulations. Notably the IS/MND concludes that the Project would not conflict with "*some*" of the standards of the Hillside Specific Plan without identifying which of those standards the Project does conflict with and explaining why those standards were not adopted for the purpose of avoiding or mitigating an environmental effect. Given that IS/MND itself acknowledges that the Project would conflict with standards set forth in the Hillside Specific Plan which was adopted for the purpose of protecting the Town's hillsides, and the Tree Ordinance, which was adopted for the purposes of protecting trees, substantial evidence

23-20

Letter 23 cont.

23-20 cont. supports a fair argument that the Project would result in a potentially significant land use and planning impact and an EIR must be prepared.

VI. **Substantial Evidence Supports a Fair Argument that the Project May Result in Wildfire Impacts, Contrary to the IS/MND's Conclusion**

23-21 The IS/MND mischaracterizes the Project sites fire zone as "High FHSC" (Fire Hazard Severity Zone) when in fact per Town Council Ordinance 2374 adopted June 17, 2025 to comply with State Government Code Section 5117 (Attachment 2) the Project site is in a ***Very High*** FHSC which means it is located in an area with the highest possible potential for widespread wildfire over a 30-50 year period. Accordingly, the IS/ MND is not accurate and its conclusion that project would not be expected to be subject to or result in substantial adverse wildfire effects is not supported by the evidence in the record.

VII. **Conclusion**

23-22 For the reasons stated above, the Town may not adopt the IS/MND because it does not meet the requirements of CEQA. By failing to include and analyze the reasonable foreseeable consequences of the Project such as accessory structures and uses, the Project description does not describe the "whole of the action" and therefore does not adequately analyze the full impacts of the Project. Additionally, a fair argument can be made based on substantial evidence that the Project will result in potentially significant environmental impacts with respect to Aesthetics, Biological Resources, Land Use and Planning and Wildfire Impacts. Finally, the IS/MND impact analyses and conclusions with respect to these categories are not supported by substantial evidence in the record. Accordingly, the Town must require a full EIR that analyzes the Project's potentially significant environmental impacts, identifies feasible mitigation to reduce these impacts, and analyzes a full range of Project alternatives.

Sincerely,

Camas J. Steinmetz

SUBJECT: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE HOPE GARDENS PROJECT, SCH NO. 2022060277, LOS ANGELES COUNTY, CA

Dear Jolee Hui:

The California Department of Fish and Wildlife (CDFW) reviewed the Draft Environmental Impact Report (DEIR) from the Los Angeles County Department of Regional Planning (LACDRP; Lead Agency) for the Hope Gardens Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines[1].

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, CDFW appreciates the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Fish & G. Code, § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW may also act as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law[2] of any species protected under the California Endangered Species Act (CESA; Fish & G. Code, § 2050 et seq.) or the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

PROJECT DESCRIPTION SUMMARY

Proponent: Union Rescue Mission

Objective: The Project proposes the demolition and redevelopment of the existing Sequoia Lodge with a new multi-use Sequoia building within the Hope Gardens Family Center. The current development pad of the Sequoia Lodge would be replaced to accommodate the new building. The new building would consist of three stories with a main ground floor basement that would provide building space for 117 housing units and supportive services. The housing capacity would be increased to support 525 formerly homeless women and children. Supportive services that would be located on site for residents include counseling offices, administration offices, security office, medical examination rooms, dental examination rooms, day care center, computer lab, multi-purpose room, kitchen, and a communal dining room. The subterranean parking area would provide 22 parking spaces, bicycle spaces, and ADA parking. Additional Project improvements would include new paving and resurfacing of internal roadways and hardscapes around the new building footprint for circulation and building access as well as widening of the on-site bridge that is accessible from Lopez Canyon Road. Project activities required to complete the Project would entail demolition, construction, paving, resurfacing, and landscaping.

Location: The Project site is located at 12249 Lopez Canyon Road, near Sylmar in the unincorporated County of Los Angeles. The Project site is approximately 77 acres set within the Lopez Canyon in the San Gabiel Mountains. The site is bounded by Interstate 210 to the south, undeveloped land to the west, and the Angeles National Forest to the north and east.

Biological Setting: The Hope Gardens Family Center encompasses 77 acres in the foothills of the San Gabriel Mountains. The Project site is located within a woodland area of mature native and landscaped trees and has a relatively small increase in elevation from south to north in the main developed area. Currently the site has perimeter fencing surrounding the property that abuts the Angeles National Forest. General biological field surveys of the Project site were conducted in May 2019, June 2020, and October 2022, and findings were compiled in a Biological Resources Report (BRR). An oak tree survey was conducted in May 2019, and the site was revisited in

[2] "Take" is defined in Section 86 of the Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

October 2022. The BRR, jurisdictional delineation report, oak tree survey report, and oak woodland report are included in the DEIR appendices. During biological surveys, three vegetation communities were identified within the Biological Study Area, which include California sagebrush scrub (*Artemisia californica-Salvia leucophylla* Alliance), coast live oak woodland (*Quercus agrifolia* forest & woodland Alliance), and scrub oak chapparal (*Quercus berberidifolia* Alliance). Within the Project footprint, 0.13 acre of coast live oak woodland and 1.61 acres of the developed area will be impacted. In the Project footprint, there are 57 coast live oak trees and one heritage oak. The Project intends to remove four coast live oak trees and encroach upon the protected zone of 12 oak trees. No special-status plants were identified during surveys. Moreover, three unnamed ephemeral channels that traverse the oak woodland were identified on site.

No special-status wildlife were observed during the surveys. Species that are of potential concern for the Project include, but are not limited to, white-tailed kite (*Elanus leucurus*; fully protected species), Crotch's bumble bee (*Bombus crotchii*; CESA candidate endangered), western mastiff bat (*Eumops perotis californicus*; California Species of Special Concern (SSC)), and nesting birds and raptors. The DEIR includes seven biological mitigation measures which detail nesting bird preconstruction surveys, replacement of coast live oak trees, tree protection for remaining coast live oak trees, focused bat surveys, notifying for a Lake and Streambed Alternation (LSA) Agreement, alternative off-site mitigation, fencing, and lighting.

Project Timeline: The Project is anticipated to commence in the third quarter of 2026 for a span of approximately 34 months. Demolition, grading, bridge widening, and installation of underground utilities are expected to take 10 months to complete. Building construction from foundations to occupancy is expected to take 24 months to complete.

Project History: CDFW previously reviewed the Notice of Preparation (NOP) and submitted a comment letter on July 19, 2022. Comments in the NOP addressed streams, oak trees, migratory birds, landscaping, pest management, and rodenticide use.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist LACDRP in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. Additional comments or other suggestions may also be included to improve the document.

COMMENT # 1: Impacts on Oak Woodlands

Issue: The Project will directly impact the coast live oak woodland and remove oak trees within the Project site. The mitigation measures in the DEIR do not appropriately mitigate for the loss of oak woodland.

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Specific impact: Project activities (e.g., tree removal, grading, and brush removal) would directly impact 0.13 acre of coast live oak woodland, remove four oak trees, and encroach on several remaining oak trees. Use of heavy machinery may result in the removal of whole trees, canopy, or roots which would adversely impact wildlife that utilize the trees as nesting and/or foraging habitat.

Why impact would occur: The coast live oak woodland is the primary vegetation community intermixed with the landscaping surrounding the Sequoia Lodge. The DEIR notes that coast live oak woodland does not classify as a sensitive natural community; however, portions of the oak woodland surrounding the river are considered riparian habitat and are considered sensitive (pg. 4.1-13). Furthermore, the DEIR states that the "[C]oast live oak woodland in this area is designated as Southern Coast Live Oak Riparian Forest by the CDFW and is considered a sensitive natural community because it is a riparian community surrounding the channelized areas" (pg. 4.1-5). CDFW considers oak woodlands as a sensitive natural community that supports a host of wildlife and impacts to this natural community should be appropriately mitigated for. Oak trees provide nesting and perching habitat for approximately 170 species of birds (Griffin and Muick 1990). In addition to birds, mammals, reptiles, and amphibians depend on oak woodlands at some stage in their life cycle whether it is foraging acorns, providing refugia through leaf litter, or using cavities as shelter (Zack et al. 2002). Oak woodlands also serve several important ecological functions such as protecting soils from erosion and land sliding; regulating water flow in watersheds; and maintaining water quality in streams and rivers. Moreover, oak woodlands also have higher levels of biodiversity than any other terrestrial ecosystem in California (Block et al. 1990).

LACDRP acknowledges that the loss of 0.13 acre of sensitive coast live oak woodland community would be a significant impact and proposes Mitigation Measure BIO-1, which would require the Project to plant eight replacement coast live oak trees along the adjacent the creek to reduce the level of impact to less than significant (pg. 4.1-32). Mitigation Measure BIO-5 is also incorporated in the DEIR to outline an alternative mitigation option to purchase mitigation credits at a 2:1 ratio. While CDFW appreciates the Project proponent would plant eight coast live oak trees, only planting trees does not fully mitigate on a biological level the permanent and temporal impacts on an oak woodland community. Appropriate compensatory mitigation would include habitat restoration or preservation of an in-kind oak woodland to ensure mitigation accounts for the natural community as a whole which includes, but is not limited to, plant assemblages, habitat composition, function, diversity, and structure.

Additionally, the location of the replanted trees may be within the current fuel modification zones and part of the landscaping plan. Generally, fuel modification activities such as tree trimming are conducted on a continuous basis and would not be appropriate for oak trees that are considered part of mitigation as it will take longer for those oaks to reach maturity. Planting eight oak trees as part of landscaping does not account for the loss of the woodland understory and is not viewed as appropriate mitigation since it will be subject to maintenance (i.e., pruning and irrigation).

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Furthermore, Mitigation Measure BIO-1 states that the eight replacement trees would be cared for and maintained for a period of two years and replaced if mortality occurs. Oak trees have a slow growth rate and would take much longer than two years to mature or show signs of stress that could lead to mortality. If the Project proponent has to replace trees due to mortality, this action would result in prolonged temporal loss of habitat for wildlife that currently use that the Project site.

Lastly, the DEIR discusses potential off-site mitigation alternatives. Mitigation Measure BIO-5 discusses the option for the Project proponent to purchase mitigation credits for impacts at a 2:1 replacement ratio, which is the same proposed ratio as on-site tree replacement. Depending on the Project, off-site mitigation ratios may be higher than what is proposed on site given that the Project impacts are not being mitigated at the direct location of impacts. In addition to mitigation credits, Mitigation Measure BIO-1 provides the option to pay into the oak forests special fund at a dollar amount that will be determined by a qualified arborist. As currently written in the DEIR, it is unclear how or when the in-lieu fees would be applied to appropriately mitigate the loss of 0.13-acre oak woodland. Without disclosure of how the special funds are appropriated, the funds requested by LACDRP may not be at an amount sufficient to fully offset the loss of oak woodland. Additionally, the DEIR does not disclose a timeframe by which the special funds will be allocated toward mitigation efforts, which may result in unmitigated Project impacts and ongoing temporal loss of nesting and/or foraging habitat for wildlife.

Evidence impact would be significant: Oak trees and woodlands are protected by the Oak Woodlands Conservation Act (pursuant under Fish and Game Code sections 1360-1372) and Public Resources Code section 21083.4, due to the historic and on-going loss of these resources. Currently, coast live oak has a reduced range largely due to development and are often vulnerable to environmental effects of projects. Currently, only two-thirds of California's original oak woodlands remain (Zack et al. 2002). Inadequate or lack of avoidance, minimization, and mitigation measures for impacts to coast live oak woodlands may not minimize the Project's direct, indirect, and cumulative impacts to biological resources.

Recommended Potentially Feasible Mitigation Measure(s)

CDFW requests the following recommendations and mitigation measures are incorporated into the final EIR:

Mitigation Measure # 1: Mitigation Measure BIO-1 – Given that compensatory mitigation should account for the impacts on 0.13 acre of oak woodland as whole, CDFW requests that LACDRP revise Mitigation Measure BIO-1 to incorporate the underlined language and omit language in strikethrough:

Replacement of Coast Live Oak Woodland ~~Protected Coast Live Oak Trees~~:

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

- If avoidance is not feasible, the Project proponent shall provide on- or off-site mitigation for impacts to the coast live oak woodland to mimic the pre-Project percent basal, canopy, and vegetation cover of oak woodland impacted. At a minimum, 0.26 acres of coast live oak woodland shall be restored or preserved on site. Mitigation shall involve recreation of an oak woodland of similar composition, structure, and function to the selected oak woodland that was impacted. Mitigation shall include restoration of structurally diverse understory vegetation species (i.e., grass, forb, shrub, subshrub, vine) occurring in the impacted oak woodlands. Oak tree acorns shall be collected or grown from on-site sources or adjacent areas within the same watershed and shall not be purchased from a supplier. Seeds shall originate from plants/trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted. Mitigation monitoring, management, and reporting for oak woodland should be provided for at least 10 years, with a minimum of seven years without supplemental irrigation, to ensure success of the restoration effort.

- A ~~Landscaping~~ Restoration Plan shall be prepared that includes requirements for oak-friendly landscaping under oaks and removal of regular irrigation under oak trees.

- At a minimum, ~~A total of~~ 16 ~~8~~ replacements oaks shall be planted to replace oaks removed. This replacement accounts for the removal of 4 protected oaks at a 4 ~~2~~:1 replacement ratio.

- A total of 8 oaks were assessed with the potential for death or significant decline due to the Project from either the trunk being located within 15 feet of the construction/area of disturbance or greater than 30 percent of the TPZ would be encroached. These oaks (#17, #18, #19, #20, #22, #23, #25, and #50) shall be properly cared for and monitored for a period of 10 ~~2~~ years and replaced at a 4 ~~2~~:1 replacement ratio by the permittee if mortality or significant decline (health assessed at a 1 or 2) occurs within that 10 ~~2~~-year period.

- Required replacement trees shall consist exclusively of indigenous oak trees and shall be in the replacement ratio of 4 ~~2~~:1. Each replacement tree shall be at least a 15-gallon size specimen and measure at least one inch in diameter one foot above the base. The hearing officer, director, or commission may, in lieu of this requirement, require the substitution of one larger container specimen for each oak tree to be replaced, where, in its opinion, the substitution is feasible, and conditions warrant such greater substitution.

- Replacement trees shall be properly cared for and maintained for a period of 10 ~~two~~ years and replaced by the permittee if mortality occurs within that period.

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

- Where feasible replacement trees should consist exclusively of indigenous oak trees and certified as being grown from a seed source collected in Los Angeles and Ventura counties.

- Replacement trees shall be planted and maintained within ~~or near~~ the Survey Area and outside of landscaping and fuel modification zones ~~and, if feasible, in the same general area where the trees were removed~~. The process of restoring or preserving a coast live oak woodland and replacement of oak trees shall be supervised in the field by a person who, in the opinion of the County forester and fire warden, has expertise in the planting, care and maintenance of oak trees.

- Potential planting sites within and near the Survey Area are shown in Figure 4.1-6, Potential Mitigation Planting Area. ~~Replacement plantings should be incorporated into proposed landscaping for the New Sequoia Building to the extent possible.~~ Plantings can be in the areas shown in Figure 4.1-6, Potential Mitigation Planting Area, that were chosen because they are currently free of trees or native vegetation and are contiguous with existing forested landscaping on the property. If enough suitable areas for mitigation plantings are not found within or near the Survey Area or within the Project Site as a whole, potential additional areas for replacement plantings include along Lopez Canyon Road and in the open areas of Angeles National Forest immediately east of the Project Site. Coordination with federal land managers would be required for plantings in the Angeles National Forest and coordination with state land managers would be necessary for plantings in the roadway right-of-way.

- No special-status plants or wildlife shall be impacted during the planting of replacement trees. If replacement trees are to be planted in areas of native habitat outside of the landscaped areas on the Hope Gardens property, or within the Angeles National Forest, a preconstruction survey shall be performed to ensure avoidance of impacts to special-status species. Prior to planting the replacement trees, the area shall be surveyed by a qualified biologist to determine that the area is suitable for the installation of replacement trees and that native plants or habitats would not be removed or crowded by the planting. Preconstruction surveys shall be timed to occur when able to observe potential target species above ground. A biologist shall prepare a report regarding the methods and findings of the preconstruction surveys, and an assessment of suitability of the location for installation of replacement planting. Any location determined to have special-status species or where planting would disturb, alter, or decrease the biological value of the habitat shall be avoided, and only locations where no impacts would occur (as determined by the qualified biologist) shall be used as planting sites. The County shall review the preconstruction survey report and approve all replacement planting and restoration or preservation of coast live oak woodland sites within areas of habitat outside of the Hope Gardens landscaped and disturbed areas prior to the installation of the planting.

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

- ~~If no suitable areas for replacement plantings are found~~ In addition to replanting on site, the Project proponent shall provide a payment into the oak forests special fund would be an alternative mitigation. The payment amount would be equivalent to the oaks that are impacted as determined by a qualified arborist, and the amount would require approval from the County forester.

Mitigation Measure #2: Mitigation Measure BIO-5 – CDFW request that LACDRP revise Mitigation Measure BIO-5 to incorporate the underlined language and omit language in strikethrough:

~~Oak trees are required to be planted at a 2:1 replacement ratio for each removal (see MM-BIO-1). The replacement plantings of the coast live oaks shall be planted along the channels within riparian areas in the Survey Area to the extent feasible. This replacement of riparian habitat would be considered suitable compensation for the impacts to riparian trees.~~ Alternative off-site mitigation considered suitable would be through purchase of mitigation credits for impacts to coast live oak riparian woodlands at a minimum 2:1 replacement ratio based on the existing and proposed mitigation woodland habitat value and function and would be subject to County review and approval.

Recommendation # 1: Oak Litter - CDFW recommends salvaging oak leaf litter or duff prior to Project ground-disturbing activities or vegetation removal impacting oak woodlands. Oak leaf litter contains beneficial mycorrhizae, microorganisms, and nutrients that could be used in restoration of oak woodlands. Oak leaf litter should not be taken outside of the Project boundary to prevent the spread of potential pathogens.

COMMENT # 2: Impacts on Crotch's Bumble Bee

Issue: The Project has potential to impact suitable nesting habitat and foraging opportunities for Crotch's bumble bee or may result in direct or indirect mortality. The DEIR does not include measures to ensure impacts to the species are appropriately addressed.

Specific impact: The Project may result in temporal or permanent loss of suitable nesting and foraging habitat of Crotch's bumble bee. Project ground disturbing activities may cause death or injury of adults, eggs, and larva, result in burrow collapse or nest abandonment, and may result in reduced nest success.

Why impact would occur: The DEIR acknowledges the medium potential for Crotch's bumble bee to utilize the California sagebrush scrub identified within the Biological Study Area. Additionally, the DEIR states that "[W]hile the coast live oak woodland has a species that serves as a host plant to Crotch's bumble bee (*Eriogonum fasciculatum*), only a few small shrubs were observed, and the level of disturbance has eliminated habitat" (pg. 4.1-30, 31). CDFW disagrees with LACDRP's conclusion that the Project would not result in direct and indirect impacts to Crotch's bumble bee.

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Crotch's bumble bee are generalists and known to utilize a variety of sources for nesting and overwintering opportunities. Crotch's bumble bee primarily uses abandoned small mammal burrows to nest, but this species may also nest under perennial bunch grasses or thatched annual grasses, under brush piles, in old bird nests, and in dead trees or hollow logs (Williams et al. 2014; Hatfield et al. 2018). Overwintering sites utilized by Crotch's bumble bee mated queens include soft, disturbed soil (Goulson 2010), or under leaf litter or other debris (Williams et al. 2014). Given that a coast live oak woodland exist on site and California sagebrush scrub is adjacent to the Project footprint, there is potential for this CESA candidate species to be detected prior to or during Project activities.

No focused surveys were conducted for Crotch's bumble bee by a CDFW-approved qualified biologist. Additionally, the DEIR does not have any species specific-measures that outline focused surveys or actions if this CESA candidate species is observed on site. If the Project proceeds without appropriate focused surveys, the Project may result in mortality and/or injury of undetected individual Crotch's bumble bee that may be present during Project activities. Ground disturbance and vegetation removal associated with Project implementation during the breeding season could also result in the incidental loss of breeding success or otherwise lead to nest abandonment in areas adjacent to the Project area.

Evidence impact would be significant: The California Fish and Game Commission accepted a petition to list the Crotch's bumble bee as endangered under CESA, determining the listing "may be warranted" and advancing the species to the candidacy stage of the CESA listing process. The Project may substantially reduce and adversely modify habitat as well as reduce and potentially impair the viability of populations of Crotch's bumble bee. The Project may also reduce the population size and range of the species without considering the likelihood that special status species on adjacent and nearby natural lands may rely upon the habitat that occurs on the proposed Project site. In addition, Crotch's bumble bee has a State Ranking of S1/S2. This means that the Crotch's bumble bee is considered critically imperiled or imperiled and is extremely rare (often 5 or fewer populations). Crotch's bumble bee is also listed as an invertebrate of conservation priority under the California Terrestrial and Vernal Pool Invertebrates of Conservation Priority[3]. Accordingly, Crotch's bumble bee meets the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). Therefore, take of Crotch's bumble bee could require a mandatory finding of significance by the District (CEQA Guidelines, § 1565).

Recommended Potentially Feasible Mitigation Measure(s)

CDFW requests the following recommendations and mitigation measures are incorporated into the final EIR:

[3] https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=157415&inline

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure # 3: Herbicide and Pesticide Use – To avoid impacts to pollinators, including Crotch's bumble bee, the Project proponent shall ensure that herbicides and pesticides are not sprayed at any time in the Project site or near any flowering plants.

Mitigation Measure # 4: Crotch's Bumble Bee Surveys - The Project proponent shall retain a qualified biologist with the appropriate handling permits to conduct focused surveys. Focused surveys shall follow CDFW's Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species[4]. Focused surveys shall also be conducted throughout the entire Project site during the appropriate flying season (April through August) to ensure no missed detection of Crotch's bumble bee occurs. Prior to focused surveys, surveyors shall reach out to CDFW to discuss methodologies and surveyor qualifications. Survey results, including negative findings, shall be submitted to CDFW and LACDRP prior to implementing Project ground-disturbing activities.

Mitigation Measure #5: Incidental Take Permit - If Crotch's bumble bee is detected, the Project proponent shall coordinate with CDFW and obtain appropriate take authorization from CDFW (pursuant to Fish & Game Code, § 2080 et seq). The Project proponent shall comply with all conditions detailed in the take authorization issued by CDFW. The Project proponent shall provide a copy of a fully executed take authorization to LACDRP prior to implementing Project ground-disturbing activities and vegetation removal.

Recommendation #2: CEQA - CDFW's issuance of an Incidental Take Permit (ITP) for a Project is subject to CEQA. As a Responsible Agency, CDFW may consider the CEQA document from the Lead Agency/Project proponent for the Project. However, additional documentation may be required as part of an ITP application for the Project in order for CDFW to adequately develop an accurate take analysis and identify measures that would fully mitigate for take of CESA-listed species. To minimize additional requirements by CDFW pursuant to Fish and Game Code section 2081 and/or under CEQA, a project's CEQA document should fully identify the potential impacts to Crotch's bumble bee and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the ITP.

COMMENT # 3: Impacts on Bat Species and Roosts

Issue: Mitigation Measure BIO-3 does not propose compensatory mitigation to offset Project impacts on bats species that may utilize the Project site as roosting habitat.

Specific impact: The Project would result in the removal of trees, demolition of buildings, and vegetation removal within the Project footprint. These activities could result in direct mortality of individual bats or roost disturbance via increased noise

[4] https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=213150&inline

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

disturbances, human activity, dust, ground-disturbing activities (e.g., staging, access, grading, excavating, paving), and vibrations caused by heavy equipment.

Why impact would occur: As stated in the DEIR "[S]pecial-status bats, such as western mastiff bat, may forage in the open woodland habitat or roost in the hollows of oak trees and the loss of 0.13-acre of this habitat would be a significant impact" (pg. 4.1-31). LACDRP incorporates Mitigation Measure BIO-3 in the DEIR that outlines focused bat surveys and roosting site protection during Project activities. CDFW appreciates the robust mitigation measure and believes that the mitigation measure should also outline compensatory mitigation in the event that full Project avoidance on individual bats and/or roosts (i.e., daytime, maternity) is not achievable. Without replacement of bat roosting habitat, the Project would contribute to the cumulative loss of suitable bat habitat on a local and regional scale. At a minimum the LACDRP and Project proponent should consider providing artificial roosting structures to replace natural roosting habitat on site.

Evidence impact may be significant: Bats are considered non-game mammals and are afforded protection by State law from take and/or harassment (Fish & G. Code, § 4150; Cal. Code of Regs, § 251.1). Additionally, a California Species of Special Concern is a species, subspecies, or distinct population of an animal native to California that currently satisfies one or more of the following (not necessarily mutually exclusive) criteria:

1. if the species is extirpated from the State or, in the case of birds, is extirpated in its primary season or breeding role;
2. if the species is listed as threatened or endangered under ESA-, but not CESA-, threatened, or endangered;
3. if the species meets the State definition of threatened or endangered but has not formally been listed;
4. if the species is experiencing, or formerly experienced, serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for State threatened or endangered status; and
5. if naturally small populations exhibiting high susceptibility to risk from any factor(s), that if realized, could lead to declines that would qualify it for CESA- threatened or - endangered status (CDFW 2025).

CEQA provides protection not only for CESA-listed species, but for any species including but not limited to SSC that can be shown to meet the criteria for State listing. These SSC meet the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). Take of SSC could require a mandatory finding of significance by the Lead Agency (CEQA Guidelines, § 15065).

Recommended Potentially Feasible Mitigation Measure(s)

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

CDFW requests the following recommendations and mitigation measures are incorporated into the final EIR:

Mitigation Measure # 6: CDFW requests LACDRP revise Mitigation Measure BIO-3 to incorporate the underlined language and omit the language in strikethrough:

- Where Project-related implementation, construction, and activities would occur near potential roosting habitat for bats, such as tall trees, a qualified bat specialist shall conduct bat surveys within 14 days before construction throughout ~~within~~ these areas (plus a 100-foot buffer as access allows) to identify potential habitat that could provide daytime and/or nighttime roost sites, and any maternity roosts. Surveys should be conducted using acoustic recognition technology to maximize detection of bats. The biologist conducting the preconstruction survey would also identify the nature of the bat utilization (in essence, no roosting, night roost, day roost, hibernation roost, or maternity roost) and determine if passive bat exclusion would be necessary and feasible. A discussion of survey results, including negative findings, shall be provided to LACDRP and CDFW. If individual bats are identified, the Project proponent and qualified bat specialist shall coordinate and receive written concurrence from CDFW on the appropriate avoidance buffers and avoidance actions.

- To the greatest extent feasible, tree trimming and tree removal shall be performed outside the bat maternity season (April 1 through August 31) to avoid direct impact to non-volant young that may roost in trees within the Project site. If bats are not detected, but the bat specialist determines that roosting bats may be present at any time of year and could roost in trees at a given location, during tree removal, trees should be pushed down using heavy machinery rather than felling with chainsaw. To ensure the optimum warning for any roosting bats that may still be present, trees should be pushed lightly two or three times, with a pause of approximately 30 seconds between each nudge to allow bats to become active. The tree should then be pushed to the ground slowly and remain in place until it is inspected by a bat specialist. Trees that are known to be bat roosts should not be bucked or mulched immediately. A period of at least 24 hours, and preferably 48 hours, should elapse prior to such operations to allow bats to escape.

- If maternity roosts are found, to the extent feasible, work should be scheduled between October 1 and February 28, outside of the maternity roosting season when young bats are present but are yet ready to fly out of the roost (March 1 to September 30).

- If maternity roosts are found and the County and CDFW determines that impacts are unavoidable, a qualified bat specialist should conduct a preconstruction survey to identify those trees proposed for disturbance that could provide hibernacula or nursery colony roosting habitat. Acoustic recognition technology

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

should be used to maximize the detection of bats. Each tree identified as potentially supporting an active maternity roost should be closely inspected by the bat specialist no more than 7 days prior to tree disturbance to determine the presence or absence of roost bats more precisely. If maternity roosts are detected, trees/structures determined to be maternity roosts should be left in place until the end of the maternity season. Work should not occur within 100 feet of or directly under or adjacent to an active roost. Work should also not occur between 30 minutes before subset and 30 minutes after sunrise.

- If the Project impacts confirmed bat-roosting habitat and/or humane eviction/exclusion of bats is performed, the Project proponent shall provide alternate roosting habitat to ensure no net loss of bat-roosting habitat. The design, numbers, and locations of these artificial bat roost structures shall be determined in coordination with CDFW and a qualified bat specialist. The qualified bat specialist shall prepare a management plan for the bat roost structures for CDFW to review and approve. At a minimum, the management plan shall include: a map of the locations of roost structures; management actions of the structures; and monitoring of roost structures for bat occupancy.

ADDITIONAL COMMENTS

Fully Protected Species. White-tailed kite are generally found in open areas such as open woodlands and nest in the canopy of trees. The DEIR notes that white-tailed kite may move through the Project site and surrounding areas (pg. 4.1-17). Fully Protected Species may not be taken or possessed at any time according to the Fish and Game Code § 3511. CDFW cannot authorize take for white-tailed kite and LACDRP must completely avoid impacts to these species during Project's construction and operational activities. While the DEIR claims white-tailed kite would likely avoid the development and prefer the adjacent undeveloped habitat. CDFW recommends that the final EIR contain a discussion of full avoidance of impacts to white-tailed kite and include a mitigation measure, if appropriate.

Nesting Birds and Raptors. – The Migratory Bird Treaty Act of 1918 prohibits the take of protected migratory bird species and Fish and Game Code § 3503.5 prohibits the take of any birds in the orders of Falconiformes or Strigiformes. To avoid impacts on nesting birds and raptors, CDFW requests LACDRP revise RR-BIO-1 to incorporate the underlined language and omit language in strikethrough:

- If possible, ground disturbing activities and vegetation removal (including tree trimming) should be timed to occur outside the bird nesting season (September 1 – January 14).

- If ground disturbing activities or vegetation removal (including tree trimming) are scheduled during the bird nesting season (January 15 – August 31) a preconstruction survey for nesting birds and raptors should be conducted within

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

72 hours prior to construction activities. The survey should be conducted by a qualified biologist with prior experience conducting nesting bird and raptors surveys for construction projects. The preconstruction survey area should include the Development Site boundary and suitable habitat within a 500 ~~300~~-foot buffer, as access allows ~~or a buffer size determined by the qualified biologist based on level of proposed disturbance and access~~. If no active nests are found, no additional measures are required.

- If active nests are found the biologist will map the location and document the species and nesting stage. A no-work buffer will be established around the active nest as determined by the qualified biologist. A no-work buffer of 500 feet shall be used to protect nesting raptors, and a no-work buffer of 300 feet shall be used to protect nesting birds. If appropriate, a small buffer may be considered as determined by the qualified biologist ~~and~~ based on the species sensitivity to disturbance and the type and duration of the disturbance. No construction activities shall occur within the no-work buffer until the biologist has determined the nest is no longer active. Personnel working on the Project, including all contractors working on site, shall be instructed on the presence of nesting birds and raptors, area sensitivity, and adherence to the no-work buffers.

Lake and Streambed Alteration Agreement Acknowledgement. CDFW concurs with MM BIO-4 to coordinate with CDFW pursuant to Fish and Game Code, section 1600 et seq. The Project proponent should notify prior to any Project construction or activities. Based on this notification and other information, CDFW determines whether an LSA with the Project proponent is required prior to conducting the proposed activities. Please visit the Lake and Streambed Alteration[5] Program webpage to obtain a notification package for an LSA. We look forward to further coordination with the Project proponent, and receipt of the streambed notification package for the Project.

Landscaping. CDFW recommends the LACDRP incorporates a planting palette in the final EIR, specifying the vegetation that will be used as landscaping for this Project. The Project proponent should use only native species found in naturally occurring vegetation communities within or adjacent to the Project site. The Project proponent should not plant, seed, or otherwise introduce nonnative, invasive plant species to areas that are adjacent to and/or near native habitat areas. CDFW recommends the Project proponent restrict use of any species, particularly 'moderate' or 'high' listed by the California Invasive Plant Council[6]. These species are documented to have substantial and severe ecological impacts on physical processes, plant and animal communities, and vegetation structure.

Mitigation and Monitoring Reporting Plan. CDFW recommends the Project's environmental document include the MMs recommended in this letter. CDFW has

[5] https://wildlife.ca.gov/Conservation/Environmental-Review/LSA
[6] https://www.cal-ipc.org/plants/inventory/

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

provided comments via a mitigation monitoring and reporting plan to assist in the development of feasible, specific, detailed (i.e., responsible party, timing, specific actions, location), and fully enforceable MMs (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). LACDRP is welcome to coordinate with CDFW to further review and refine the Project's MMs. Per Public Resources Code section 21081.6(a)(1), CDFW has provided a summary of our suggested MMs and recommendations in the form of an attached Draft Mitigation Monitoring and Reporting Plan (Attachment A).

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNDDB website[7] provides direction regarding the types of information that should be reported and allows on-line submittal of field survey forms.

In addition, information on special status native plant populations and sensitive natural communities, should be submitted to CDFW's Vegetation Classification and Mapping Program using the Combined Rapid Assessment and Relevé Form[8].

LACDRP should ensure data collected for the preparation of the DEIR is properly submitted.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by LACDRP and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CONCLUSION

CDFW appreciates the opportunity to comment on the DEIR to assist LACDRP in identifying and mitigating Project impacts on biological resources. CDFW requests an opportunity to review and comment on any response that LACDRP has to our comments and to receive notification of any forthcoming hearing date(s) for the Project (CEQA Guidelines, § 15073(e)).

ATTACHMENT A: DRAFT MITIGATION MONITORING AND REPORTING PROGRAM (MMRP)

CDFW provides the following language to be incorporated into the MMRP for the Project.

Mitigation Measure	Timing	Responsible Party
Mitigation Measure #1: Mitigation Measure BIO-1 **Replacement of Coast Live Oak Woodland**: • If avoidance is not feasible, the Project proponent shall provide on- or off-site mitigation for impacts to the coast live oak woodland to mimic the pre-Project percent basal, canopy, and vegetation cover of oak woodland impacted. At a minimum, 0.26 acres of coast live oak woodland shall be restored or preserved on site. Mitigation shall involve recreation of an oak woodland of similar composition, structure, and function to the selected oak woodland that was impacted. Mitigation shall include restoration of structurally diverse understory vegetation species (i.e., grass, forb, shrub, subshrub, vine) occurring in the impacted oak woodlands. Oak tree acorns shall be collected or grown from on-site sources or adjacent areas within the same watershed and shall not be purchased from a supplier. Seeds shall originate from plants/trees of the same species (i.e., Genus, species, subspecies, and variety) as the species impacted. Mitigation monitoring, management, and reporting for oak woodland should be provided for at least 10 years, with a minimum of seven years without supplemental irrigation, to ensure success of the restoration effort. • A Restoration Plan shall be prepared that includes requirements for oak-friendly landscaping under oaks and removal of regular irrigation under oak trees.	Prior to, during, and following Project activities	Lead Agency/ Project Proponent

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
• At a minimum, 16 replacements oaks shall be planted to replace oaks removed. This replacement accounts for the removal of 4 protected oaks at a 4 :1 replacement ratio. • A total of 8 oaks were assessed with the potential for death or significant decline due to the Project from either the trunk being located within 15 feet of the construction/area of disturbance or greater than 30 percent of the TPZ would be encroached. These oaks (#17, #18, #19, #20, #22, #23, #25, and #50) shall be properly cared for and monitored for a period of 10 years and replaced at a 4:1 replacement ratio by the permittee if mortality or significant decline (health assessed at a 1 or 2) occurs within that 10 year period. • Required replacement trees shall consist exclusively of indigenous oak trees and shall be in the replacement ratio of 4:1. Each replacement tree shall be at least a 15-gallon size specimen and measure at least one inch in diameter one foot above the base. The hearing officer, director, or commission may, in lieu of this requirement, require the substitution of one larger container specimen for each oak tree to be replaced, where, in its opinion, the substitution is feasible, and conditions warrant such greater substitution. • Replacement trees shall be properly cared for and maintained for a period of 10 years and replaced by the permittee if mortality occurs within that period. • Where feasible replacement trees should consist exclusively of indigenous oak trees and certified as being grown from a seed source collected in Los Angeles and Ventura counties.		

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
• Replacement trees shall be planted and maintained within the Survey Area and outside of landscaping and fuel modification zones. The process of restoring or preserving a coast live oak woodland and replacement of oak trees shall be supervised in the field by a person who, in the opinion of the County forester and fire warden, has expertise in the planting, care and maintenance of oak trees. • Potential planting sites within and near the Survey Area are shown in Figure 4.1-6, Potential Mitigation Planting Area. Plantings can be in the areas shown in Figure 4.1-6, Potential Mitigation Planting Area, that were chosen because they are currently free of trees or native vegetation and are contiguous with existing forested landscaping on the property. If enough suitable areas for mitigation plantings are not found within or near the Survey Area or within the Project Site as a whole, potential additional areas for replacement plantings include along Lopez Canyon Road and in the open areas of Angeles National Forest immediately east of the Project Site. Coordination with federal land managers would be required for plantings in the Angeles National Forest and coordination with state land managers would be necessary for plantings in the roadway right-of-way. • No special-status plants or wildlife shall be impacted during the planting of replacement trees. If replacement trees are to be planted in areas of native habitat outside of the landscaped areas on the Hope Gardens property, or within the Angeles National Forest, a preconstruction survey shall be performed to ensure avoidance of impacts to special-status species. Prior to planting the replacement trees, the area shall be surveyed by a qualified biologist to determine that the area is suitable for the installation of replacement trees and that native plants or habitats would not be removed or crowded by the planting.		

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
Preconstruction surveys shall be timed to occur when able to observe potential target species above ground. A biologist shall prepare a report regarding the methods and findings of the preconstruction surveys, and an assessment of suitability of the location for installation of replacement planting. Any location determined to have special-status species or where planting would disturb, alter, or decrease the biological value of the habitat shall be avoided, and only locations where no impacts would occur (as determined by the qualified biologist) shall be used as planting sites. The County shall review the preconstruction survey report and approve all replacement planting and restoration or preservation of coast live oak woodland sites within areas of habitat outside of the Hope Gardens landscaped and disturbed areas prior to the installation of the planting. • In addition to replanting on site, the Project proponent shall provide a payment into the oak forests special fund would be an alternative mitigation. The payment amount would be equivalent to the oaks that are impacted as determined by a qualified arborist, and the amount would require approval from the County forester.		
Mitigation Measure #2: Mitigation Measure BIO-5 Alternative off-site mitigation considered suitable would be through purchase of mitigation credits for impacts to coast live oak riparian woodlands at a minimum 2:1 replacement ratio based on the existing and proposed mitigation woodland habitat value and function and would be subject to County review and approval.	Prior to Project activities	Project Proponent
Mitigation Measure #3: Herbicide and Pesticide Use To avoid impacts to pollinators, including Crotch's bumble bee, the Project proponent shall ensure that	Prior to, during, and following	Project Proponent

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
herbicides and pesticides are not sprayed at any time in the Project site or near any flowering plants.	Project activities	
Mitigation Measure #4: Crotch's Bumble Bee Surveys The Project proponent shall retain a qualified biologist with the appropriate handling permits to conduct focused surveys. Focused surveys shall follow CDFW's Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species. Focused surveys shall also be conducted throughout the entire Project site during the appropriate flying season (April through August) to ensure no missed detection of Crotch's bumble bee occurs. Prior to focused surveys, surveyors shall reach out to CDFW to discuss methodologies and surveyor qualifications. Survey results, including negative findings, shall be submitted to CDFW and LACDRP prior to implementing Project ground-disturbing activities.	Prior to Project activities	Qualified Biologist
Mitigation Measure #5: Incidental Take Permit If Crotch's bumble bee is detected, the Project proponent shall coordinate with CDFW and obtain appropriate take authorization from CDFW. The Project proponent shall comply with all conditions detailed in the take authorization issued by CDFW. The Project proponent shall provide a copy of a fully executed take authorization to LACDRP prior to implementing Project ground-disturbing activities and vegetation removal.	Prior to Project activities	Project Proponent
Mitigation Measure #6: Mitigation Measure BIO-3 • Where Project-related implementation, construction, and activities would occur near potential roosting habitat for bats, such as tall trees, a qualified bat specialist shall conduct bat surveys within 14 days before construction throughout these areas (plus a 100-foot buffer as access allows) to identify potential habitat that could provide daytime and/or nighttime roost sites, and any	Prior to and during Project activities	Project Proponent/ Bat Specialist

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
maternity roosts. Surveys should be conducted using acoustic recognition technology to maximize detection of bats. The biologist conducting the preconstruction survey would also identify the nature of the bat utilization (in essence, no roosting, night roost, day roost, hibernation roost, or maternity roost) and determine if passive bat exclusion would be necessary and feasible. A discussion of survey results, including negative findings, shall be provided to LACDRP and CDFW. If individual bats are identified, the Project proponent and qualified bat specialist shall coordinate and receive written concurrence from CDFW on the appropriate avoidance buffers and avoidance actions. • To the greatest extent feasible, tree trimming and tree removal shall be performed outside the bat maternity season (April 1 through August 31) to avoid direct impact to non-volant young that may roost in trees within the Project site. If bats are not detected, but the bat specialist determines that roosting bats may be present at any time of year and could roost in trees at a given location, during tree removal, trees should be pushed down using heavy machinery rather than felling with chainsaw. To ensure the optimum warning for any roosting bats that may still be present, trees should be pushed lightly two or three times, with a pause of approximately 30 seconds between each nudge to allow bats to become active. The tree should then be pushed to the ground slowly and remain in place until it is inspected by a bat specialist. Trees that are known to be bat roosts should not be bucked or mulched immediately. A period of at least 24 hours, and preferably 48 hours, should elapse prior to such operations to allow bats to escape. • If maternity roosts are found, to the extent feasible, work should be scheduled between October 1 and February 28, outside of the maternity roosting season		

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
when young bats are present but are yet ready to fly out of the roost (March 1 to September 30). • If maternity roosts are found and the County and CDFW determines that impacts are unavoidable, a qualified bat specialist should conduct a preconstruction survey to identify those trees proposed for disturbance that could provide hibernacula or nursery colony roosting habitat. Acoustic recognition technology should be used to maximize the detection of bats. Each tree identified as potentially supporting an active maternity roost should be closely inspected by the bat specialist no more than 7 days prior to tree disturbance to determine the presence or absence of roost bats more precisely. If maternity roosts are detected, trees/structures determined to be maternity roosts should be left in place until the end of the maternity season. Work should not occur within 100 feet of or directly under or adjacent to an active roost. Work should also not occur between 30 minutes before subset and 30 minutes after sunrise. • If the Project impacts confirmed bat-roosting habitat and/or humane eviction/exclusion of bats is performed, the Project proponent shall provide alternate roosting habitat to ensure no net loss of bat-roosting habitat. The design, numbers, and locations of these artificial bat roost structures shall be determined in coordination with CDFW and a qualified bat specialist. The qualified bat specialist shall prepare a management plan for the bat roost structures for CDFW to review and approve. At a minimum, the management plan shall include: a map of the locations of roost structures; management actions of the structures; and monitoring of roost structures for bat occupancy.		

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
Mitigation Measure #7: RR-BIO-1 • If possible, ground disturbing activities and vegetation removal (including tree trimming) should be timed to occur outside the bird nesting season (September 1 – January 14). • If ground disturbing activities or vegetation removal (including tree trimming) are scheduled during the bird nesting season (January 15 – August 31) a preconstruction survey for nesting birds and raptors should be conducted within 72 hours prior to construction activities. The survey should be conducted by a qualified biologist with prior experience conducting nesting bird and raptors surveys for construction projects. The preconstruction survey area should include the Development Site boundary and suitable habitat within a 500-foot buffer, as access allows. If no active nests are found, no additional measures are required. • If active nests are found the biologist will map the location and document the species and nesting stage. A no-work buffer will be established around the active nest as determined by the qualified biologist. A no-work buffer of 500 feet shall be used to protect nesting raptors, and a no-work buffer of 300 feet shall be used to protect nesting birds. If appropriate, a small buffer may be considered as determined by the qualified biologist based on the species sensitivity to disturbance and the type and duration of the disturbance. No construction activities shall occur within the no-work buffer until the biologist has determined the nest is no longer active. Personnel working on the Project, including all contractors working on site, shall be instructed on the presence of nesting birds and raptors, area sensitivity, and adherence to the no-work buffers.	Prior to and during Project activities	Qualified Biologist

Letter 23 cont.

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
Recommendation #1: Oak Litter CDFW recommends salvaging oak leaf litter or duff prior to Project ground-disturbing activities or vegetation removal impacting oak woodlands. Oak leaf litter contains beneficial mycorrhizae, microorganisms, and nutrients that could be used in restoration of oak woodlands. Oak leaf litter should not be taken outside of the Project boundary to prevent the spread of potential pathogens.	Prior to Project activities	Qualified Biologist
Recommendation #2: CEQA To minimize additional requirements by CDFW pursuant to Fish and Game Code section 2081 and/or under CEQA, a project's CEQA document should fully identify the potential impacts to Crotch's bumble bee and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the ITP.	Prior to final EIR	Lead Agency
Recommendation #3: Fully Protected Species CDFW recommends that the final EIR contain a discussion of full avoidance of impacts to white-tailed kite and include a mitigation measure, if appropriate.	Prior to final EIR	Lead Agency
Recommendation #4: Lake and Streambed Alteration Agreement Acknowledgment The Project proponent should notify prior to any Project construction or activities. Based on this notification and other information, CDFW determines whether an LSA with the Project proponent is required prior to conducting the proposed activities. Please visit the Lake and Streambed Alteration Program webpage to obtain a notification package for an LSA.	Prior to Project activities	Project Proponent

Letter 23

Docusign Envelope ID: 7B91EC4E-77DC-4918-9DB2-06F801FD849C

Mitigation Measure	Timing	Responsible Party
Recommendation #5: Landscaping CDFW recommends the LACDRP incorporates a planting palette in the final EIR, specifying the vegetation that will be used as landscaping for this Project. The Project proponent should use only native species found in naturally occurring vegetation communities within or adjacent to the Project site. The Project proponent should not plant, seed, or otherwise introduce nonnative, invasive plant species to areas that are adjacent to and/or near native habitat areas. CDFW recommends the Project proponent restrict use of any species, particularly 'moderate' or 'high' listed by the California Invasive Plant Council. These species are documented to have substantial and severe ecological impacts on physical processes, plant and animal communities, and vegetation structure.	Prior to final EIR	Lead Agency/ Project Proponent

Letter 23 cont.

ORDINANCE 2374

AN ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF LOS GATOS ADOPTING REVISED CAL FIRE REQUIREMENTS FOR LOCAL RESPONSIBILITY AREA FIRE HAZARD SEVERITY ZONES

WHEREAS, the State's Government Code Section 51178 requires the local agency to designate moderate, high, and very high fire hazard severity zones in its jurisdiction within 120 days of receiving recommendations from the State Fire Marshal; and

WHEREAS, the local agency may, at its discretion, include areas within the jurisdiction of the local agency, not identified as very high fire hazard severity zones by the State Fire Marshal, as very high fire hazard severity zones following a finding supported by substantial evidence in the record that the requirements of Section 51182 are necessary for effective fire protection within the area; and

WHEREAS, the local agency may, at its discretion, include areas within the jurisdiction of the local agency, not identified as moderate and high fire hazard severity zones by the State Fire Marshal, as moderate and high fire hazard severity zones, respectively; and

WHEREAS, the local agency shall not decrease the level of fire hazard severity zone as identified by the State Fire Marshal for any area within the jurisdiction of the local agency, and, in exercising its discretion, may only increase the level of fire hazard severity zone as identified by the State Fire Marshal for any area within the jurisdiction of the local agency; and

WHEREAS, the local agency shall transmit a copy of an adopted ordinance to the State Board of Forestry and Fire Protection within 30 days of adoption.

NOW, THEREFORE, BE IT ORDAINED by the Town Council of the Town of Los Gatos as follows:

SECTION I.

The Local Responsibility Area Fire Hazard Severity Zones Map (Exhibit A) as designated by the Office of the State Fire Marshal is hereby adopted and designated as the map delineating fire hazard severity zones for the Town of Los Gatos.

SECTION II. Severability.

In the event that a court of competent jurisdiction holds any Section, subsection, paragraph, sentence, clause, or phrase in this Ordinance unconstitutional, preempted, or otherwise invalid, the invalid portion shall be severed from this Section and shall not affect the validity of the remaining portions of this Section. The Town hereby declares that it would have adopted each Section, subsection, paragraph, sentence, clause, or phrase in this Section

irrespective of the fact that any one or more Sections, subsections, paragraphs, sentences, clauses or phrases in this Section might be declared unconstitutional, preempted, or otherwise invalid.

SECTION III. CEQA.

Adoption of this ordinance is a ministerial action which is exempt pursuant to CEQA, Section 15268 in that it is required by the State.

SECTION IV. Publication.

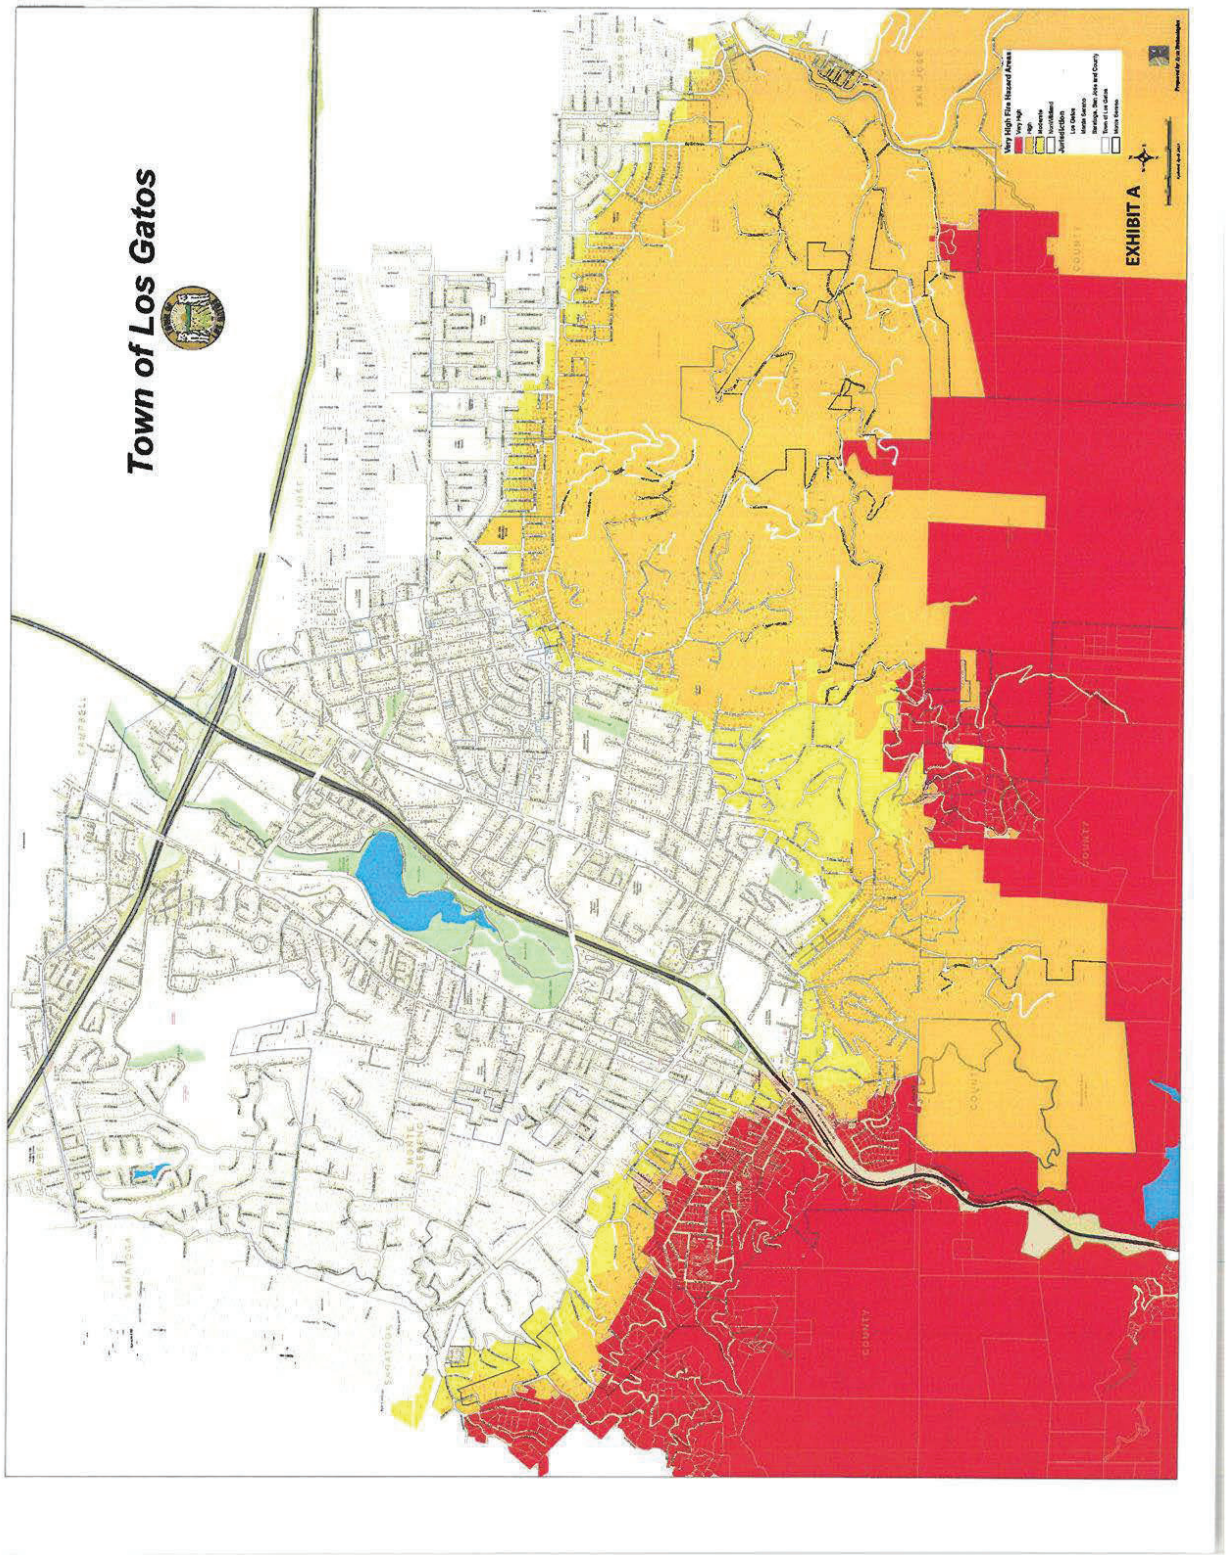
In accordance with Section 63937 of the Government Code of the State of California, this Ordinance takes effect 30 days from the date of its adoption. The Town Council hereby directs the Town Clerk to cause this Ordinance or a summary thereof to be published or posted in accordance with Section 36933 of the Government Code of the State of California.

SECTION V. Effective Date.

This Ordinance was introduced at a regular meeting of the Town Council of the Town of Los Gatos on the 3rd day of June 2025, and adopted by the Town Council of the Town of Los Gatos at its regular meeting on the 17th day of June 2025, by the following vote:

COUNCIL MEMBERS:

AYES:	Maria Ristow, Rob Rennie, Rob Moore, Mary Badame, Mayor Matthew Hudes
NAYS:	None
ABSENT:	None
ABSTAIN:	None



SIGNED:

MAYOR OF THE TOWN OF LOS GATOS
LOS GATOS, CALIFORNIA

ATTEST:

TOWN CLERK OF THE TOWN OF LOS GATOS
LOS GATOS, CALIFORNIA

Letter 23 cont.

LETTER 23: JON WITKIN (THROUGH CAMAS J. STEINMETZ)

Response to Comment 23-1
The comment is introductory and does not address the adequacy of the IS/MND. The comment has been noted for the record and will be forwarded to the decision-makers as part of the consideration of the proposed project.

Response to Comment 23-2
Please see Responses to Comments 2-3 and 5-15.

Response to Comment 23-3
The comment is introductory to a section of the comment letter, where specific elements of the comment are discussed in greater detail. Please see detailed responses below.

Response to Comment 23-4
The IS/MND prepared for the project provides substantial evidence that all potentially significant project-related environmental impacts can be fully mitigated, and thus, an EIR is not required.

Response to Comment 23-5
Please see Responses to Comments 23-10 through 23-23. In addition, cumulative impacts are discussed within the IS/MND under question XXI-b within Section XXI, Mandatory Findings of Significance.

Response to Comment 23-6
Comment noted. See Response to Comment 23-7.

Response to Comment 23-7
Analysis of accessory dwelling units (ADUs) is not required pursuant to CEQA unless the developer has a specific proposal to include such units in the project. For example, in *Save Round Valley Alliance v County of Inyo*, the court upheld an EIR's project description for a residential subdivision against claims the description should have included units that might be built under a county ordinance allowing a second unit on each lot, because future construction of second units was speculative. A specific proposal to build ADUs on the project site does not exist as part of the proposed project, and thus, evaluating ADUs as part of the project would be speculative.

The proposed project does not include swimming pools, cabanas, or sport courts within the development proposal, and thus, evaluating such features is speculative. Further, it is unclear how inclusion of such fairly typical residential amenities could result in significant physical environmental impacts.

Response to Comment 23-8
Please see Response to Comment 5-15.

Response to Comment 23-9
As noted on page 20 of the IS/MND, State Scenic Highways are not located within the Town of Los Gatos and the Town does not identify any roadways as scenic routes at a local level. Therefore, the proposed project would not have the potential to damage scenic resources, such as trees, that are located within the vicinity of a State Scenic Highway.

In addition, the discussion under question IV-e on pages 49 and 50 of the IS/MND acknowledges that the proposed project would result in a potentially significant impact related to the removal of on-site trees. As a result, the IS/MND includes a mitigation measure requiring compliance with the Town of Los Gatos Tree Protection Ordinance.

Response to Comment 23-10

Contrary to the comment, the IS/MND identifies the applicable regulations governing scenic quality. Question I-c includes multiple references to the Hillside Development Standards and Guidelines, the scenic regulations of which would apply to the proposed project. For example, the Hillside Development Standards and Guidelines require an analysis of how a project would impact views from four specific "viewing areas." The IS/MND includes such an analysis, as well as further discussion using simulated public viewpoints that were prepared to meet the Town's Height Pole, Flagging, Netting, and Signage Policy For Additions and New Construction Policy. Based on the dual analyses and the simulated views presented in Figures 11 through 14 of the IS/MND, the IS/MND presents sufficient evidence to support the conclusion that the project's deviations from Hillside Development Standards are inconsequential from an aesthetics perspective. Please see Response to Comment 5-15.

Response to Comment 23-11

Please see Response to Comment 5-15. A deed restriction related to the trees in question is not required for the proposed project, as such a deed restriction is associated with a visibility analysis pursuant to the Hillside Development Standards and Guidelines. In accordance with State Density Bonus Law, the proposed project was not required to conduct a Hillside Development Standards and Guidelines visibility analysis.

Response to Comment 23-12

The standard referenced by the comment, on page 17 of the Hillside Development Standards and Guidelines, is related to locating building sites within the least visible areas of the Least Restrictive Development Areas (LRDAs), not the least visible areas of the project site as a whole. With respect to the on-site LRDAs, page 21 of the IS/MND includes the following discussion:

> The project has been designed such that several residential lots would comply with a number of Hillside Development Standards and Guidelines, including standards related to the Least Restrictive Development Areas (LRDAs), the maximum allowable floor area ratio (FAR) for the site, and the location of the proposed residences within the lots. For example, nine of the 12 proposed residences would be located within the LRDAs, where the slopes are less than 30 percent, consistent with the Hillside Development Standards.

The above analysis supports the IS/MND's conclusion that views of the site, including from Longmeadow Drive, would not conflict with the policy referenced by the comment.

Please also see Response to Comment 5-15.

Response to Comment 23-13

Please see Response to Comment 5-4.

Response to Comment 23-14

The commenter provides no substantial evidence showing that the proposed two-story homes would result in substantial shadow effects to nearby residences. Such analyses are typically conducted for taller structures.

Response to Comment 23-15

As discussed in Response to Comment 5-27, the total number of on-site trees has been revised to 630. Therefore, the 223 trees proposed for removal is actually 35 percent.

As noted by the comment, the appropriate CEQA threshold is whether the project would conflict with a local policy intended to protect biological resources, such as the Town's Tree Protection Ordinance. Because the mitigation measure would require compliance with the ordinance, a conflict would not occur, and the project would result in a less-than-significant impact.

Response to Comment 23-16

The CEQA threshold within question IV-e is related to whether the project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Maintenance of on-site trees can be ensured through the covenants codes & restrictions that will be established for the project.

Response to Comment 23-17

Section 29.10.0985 of the Town's Municipal Code requires that two or more trees be planted per tree removed to mitigate permitted protected tree removal. The exact number of required replacement trees is determined by using Table 3-1 as presented in Section 29.10.0985 and indexing the canopy size of the tree to be removed with the required replacement quantity. The Municipal Code section also provides that, if a tree or trees cannot be reasonably planted on a site, an in-lieu payment, as set forth by the Town Council, shall be paid to the Town Tree Replacement Fund.

The Town's Comprehensive Fee Schedule sets the in-lieu fee as the Market Price plus installation cost for replacement trees, as determined by the Director. The current in-lieu fees are $250 for a 24-inch box replacement tree and $500 for a 36-inch box replacement tree. As part of the conditions of approval associated with the proposed project, the project applicant shall be required to obtain an approved Tree Removal and/or Pruning Permit prior to construction and tree removal. The Town will require payment of any required in-lieu fees prior to issuance of the Tree Removal and/or Pruning Permit. Funds collected through the fees are continually used to replant trees throughout the Town.

Defensible space is defined in Section 29.10.0955 of the Town's Municipal Code as follows:

> Defensible Space means an area around the perimeter of a structure in which vegetation, debris, and other types of combustible fuels are treated, cleared, or reduced to slow the rate and intensity of potentially approaching wildfire or fire escaping from structures.

Because the project's development application is proposing development on vacant land, the defensible space finding required for an exception from obtaining a Tree Removal and/or Pruning Permit does not apply. As noted on page 16 and throughout the IS/MND, the proposed project would require Town approval of such a permit.

Response to Comment 23-18
Please see Response to Comment 23-19.

Response to Comment 23-19
The Oak Woodlands Conservation Act is a voluntary program to encourage landowners to protect oak woodlands, and does not obligate landowners to conserve oak woodlands. The project site is a relatively small infill project of 17.55 acres and is currently surrounded by existing development. The site supports approximately 5.5 acres of mixed oak woodlands, less than half which would be impacted by the project. Because the Oak Woodlands Conservation Act is a voluntary program and the project is impacting a relatively small amount of oak woodlands as compared to the amount of oak woodlands in the region, the project's impact is less than significant and does not require specific mitigation. In addition, as discussed under question IV-f of the IS/MND, project would also comply with the Town's Tree Protection Ordinance.

Response to Comment 23-20
Contrary to the comment, question XI-b within Section XI, Land Use and Planning, of the IS/MND includes specific policies, as follows (emphasis added):

> As discussed throughout this IS/MND, the proposed project, including the proposed off-site improvements, would not result in any significant environmental effects that cannot be mitigated to a less-than-significant level by the mitigation measures provided herein. **In addition, the proposed project would not conflict with Town policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect, including, but not limited to, the Town's noise standards, applicable SWRCB regulations related to stormwater, the Town's tree protection ordinance, and the development standards included in the Town's General Plan and zoning code, as well as some of the standards included within the 1987 Hillside Specific Plan.** Therefore, the proposed project would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental impact. Thus, a less-than-significant impact would occur.

The consistency with the applicable policies, including the Hillside Standards and Guidelines, are discussed throughout the IS/MND (e.g., consistency with applicable noise standards is analyzed under Section XIII, Noise).

In addition, the determination that the project is consistent or inconsistent with the Town policies or other plans and policies, such as the Hillside Standards and Guidelines, is ultimately the decision of the Town Council. Furthermore, although CEQA analysis may identify some areas of general consistency with jurisdiction policies, the jurisdiction has the ability to impose additional requirements or conditions of approval on a project, at the time of its approval, to bring a project into more complete conformance with existing policies, though this ability is more narrow in this case due to Builder's Remedy.

Response to Comment 23-21
Please see Response to Comment 2-2.

Response to Comment 23-22
The comment is conclusory and summarizes the comments contained within the letter, which are addressed in further detail above within Responses to Comments 23-2 through 23-21. For the

reasons discussed therein, revision and recirculation of the IS/MND and/or preparation of an EIR are not required.

Letter 24

From: Zamudio, Grant [redacted]
Sent: Monday, October 6, 2025 1:37 PM
To: Erin Walters <EWalters@losgatosca.gov>
Cc: Shelby Zamudio [redacted]
Subject: Proposed Development in Surrey Farms - Objection / Feedback

[EXTERNAL SENDER]

Hi Erin,

We live at [redacted] in Los Gatos and have a few concerns regarding the proposed development at 178 Twin Oaks Drive.

We fully understand that some building will take place as there is a legal right to do so, but are mainly concerned that the city may be providing variances to city code which is not fair or reasonable. The size and scope of the development is too large and it will materially impact the neighborhood, the hillside, and the existing home-owners in Surrey Farms.

24-1

- One of our main concerns is the noncompliance with Hillside Development Standards and Hillside Specific Plan. These should be maintained as they are in the code for a reason and should not be waived.

- Protected trees should not be removed as that has been a key component to Los Gatos development and redevelopment plans and a variance should not be waived. These trees will not be coming back.

24-2

- Encroachment on protected wetlands should not be permitted as they are "protected" for a reason. This development also interferes with the Riparian Habitat (Ross Creek),

- We also have concerns over the increased fire hazards, drainage, harm to biological resources, protected species and wildlife, degradation of the hillside pollution (light, air, noise), traffic

24-3

Builders Remedy should not be an excuse to trample all legitimate zoning concerns, and the mitigation details do not provide sufficient detail to remedy these concerns.

As we know construction is likely to take place, we would request some construction protocols be followed as there are many children in the neighborhood, many of which will be unable to pay in the streets for years due to the construction project.

24-4

Letter 24 cont.

1. There should be more than 1 point of entrance to the construction site from a safety, cleanliness, noise, and traffic consideration. This will also allow for proper fire truck access in case there was an emergency.
2. Divide the traffic amongst other neighborhoods as Longmeadow shouldn't be the only impacted street. This can be done on a pro rata basis (# of homes accessed or impacted by other neighborhoods, or other means)
3. Due to all of this traffic on Longmeadow, we fully expect the road to be severely impacted and damaged due to the weight of the trucks and the sheer number of them. We would expect the city or building to resurface the streets following the completion.
4. I know some neighbors have requested for a trail to be built for walking as part of the new development – we would be in support of this if possible as that would help the neighborhood maintain its community feel and enhance our access to nature.

We would be happy to provide further detail on these concerns & thank you for the consideration

Regards,

Grant & Shelby Zamudio

LETTER 24: GRANT ZAMUDIO

Response to Comment 24-1
Commented noted. Please see Response to Comment 5-4.

Response to Comment 24-2
Please see Responses to Comments 1-1 and 2-3. The proposed project is not requesting a variance or waiver related to the Town's tree removal requirements.

The IS/MND evaluates potential impacts to riparian habitat and protected wetlands under question IV-b,c. As discussed therein, the proposed project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community, or have a substantial adverse effect on State- or federally protected wetlands, and a less than significant impact would occur. With respect to Ross Creek specifically, page 48 of the IS/MND includes the following discussion:

> As discussed above, the Biological Evaluation identified riparian woodland in the vicinity of Ross Creek in the site's southwest corner. However, distinctive riparian vegetation is absent, and only the presence of Ross Creek qualifies the surrounding vegetation as a riparian corridor. Furthermore, consistent with the Town's Standards and Guidelines for Land Use Near Streams, the proposed project would include a 25-foot riparian setback from the top-of-bank of Ross Creek and incorporate the 100- to 110-foot flood easement from Ross Creek. As such, according to the site plan prepared for the proposed project, development within the riparian woodland area is not proposed, and Ross Creek would not be directly impacted by the proposed project. Therefore, the proposed project would not directly or indirectly impact riparian habitat.

Response to Comment 24-3
Please see Response to Comment 3-2.

Response to Comment 24-4
Please see Responses to Comments 2-2, 3-1, 3-3, and 21-3. The comment does not provide sufficient detail or evidence supporting the claim that an existing road would be substantially damaged as a result of the proposed project. Project construction would be required to comply with all applicable standards and requirements set forth by the Town, State, or other regulatory agency. The comment will be forwarded to the decision-makers as part of the consideration of the proposed project.

RE: **Summary of BAHM Modeling for the Surrey Farm Project, Town of Los Gatos**

Dear Rafael Hernandez:

I would like to begin by again thanking you for providing Balance Hydrologics the opportunity to assist with the modeling of water-quality and hydromodification control measures for the proposed Surrey Farm Project (Project) in the Town of Los Gatos, California. Coordinating with your office, Balance has proceeded with completing modeling of the proposed stormwater treatment measures, demonstrating that the project can meet flow-duration frequency requirements while meeting the required water quality treatment standards. This letter reviews our technical approach and methodology, summarizes the modeling input parameters and assumptions, and discusses the results of the work.

Regulatory and Project Setting

Compliance with runoff water quality and hydromodification management criteria was assessed using the Bay Area Hydrology Model (BAHM, version 2023). Per the latest version of Municipal Regional Stormwater Permit (MRP3) issued by the San Francisco Bay Regional Water Quality Control Board, treatment controls must be provided and must be capable of treating 80 percent of the mean annual runoff from the post-project site. Additionally, changes in runoff flow and duration must be mitigated to avoid hydromodification impacts. The pertinent range for flow-duration control is from one-tenth of the 2-year pre-project flow rate to the 10-year pre-project flow rate.

The proposed project will construct a clustered group of residential structures on a previously undeveloped property totaling approximately 1765 acres in the south-central part of the Town. The site is located roughly a quarter mile south of Shannon Drive between Twin Oaks Drive to the west and Cerro Vista Drive to the east. The existing site is characterized by relatively steep terrain with land cover consisting largely of non-native grassland with some scattered trees.

The site is underlaid by three soil types per soil mapping information prepared by the Natural Resources Conservation Service (see **Appendix A**). The dominant soil type covering 86% of the site is Zeppelin-Alumrock Complex, which is classified as a Hydrologic Soil Group C soil, indicative of low infiltration soils that are prone to high rates of runoff.

BAHM Modeling

Input parameters for the BAHM model were compiled from project plans provided by HMH. The BAHM model used data from the San Jose rain gauge with a factor of 1.724 to account for the difference in mean annual precipitation between the project site and the reference gauge location.

The pre- and post-project drainage areas were analyzed as follows and pertinent parameters are summarized in **Table 1**:

- *Pre-project*. The overall site was divided into three drainage management areas (DMAs) to characterize runoff in the pre-project condition, and these are identified as DMA A, DMA B, and DMA C (see **Figure 1** below). The first two DMAs represent distinct connection points to an existing storm drain system that crosses the western portion of the site and runs north to the end of Longmeadow Drive. Given the close proximity of these two connections, they were considered to represent a single point of compliance identified as POC1. DMA C represents runoff from the northeastern portion of the site that runs north as sheet flow toward Cerro Vista Court. Flow is picked up there by a separate trunk storm drain line, and, though part of the same overall watershed, was assigned a separate point of compliance, POC2. There is no appreciable impervious cover on the site in the pre-project condition, and all three DMAs were parameterized in BAHM as C/D grass cover on moderate slopes (DMA A) or steep slopes (DMAs B and C).

- *Post-project*. For the post-project conditions, the overall analysis framework of three DMAs and two points of compliance is maintained. Minor DMA boundary shifts occur within two of the lots and along the principal access road to the site (see the plan sheet included as **Appendix B**). The residential lots will all drain to treatment measures located within DMA B. The only land cover changes in DMA A will be the initial, roughly 400 feet of the access road, which will be constructed with permeable concrete and/or pavers over a course of aggregate base rock. A similar situation will exist in DMA B and DMA C where some access driveways will be constructed of permeable material. Since all runoff in DMA A will be routed to the pavers, that DMA is separated into two parts in the post-project case, one representing the preserved open space portion (permeable) and another for the small impervious cover area, both of which are then connected to a permeable paver element in BAHM. The permeable paver area in DMA B1 is modeled analogously to that in DMA but receives runoff from a larger impervious area. The other permeable roadway areas are modeled as pervious self-treating areas.

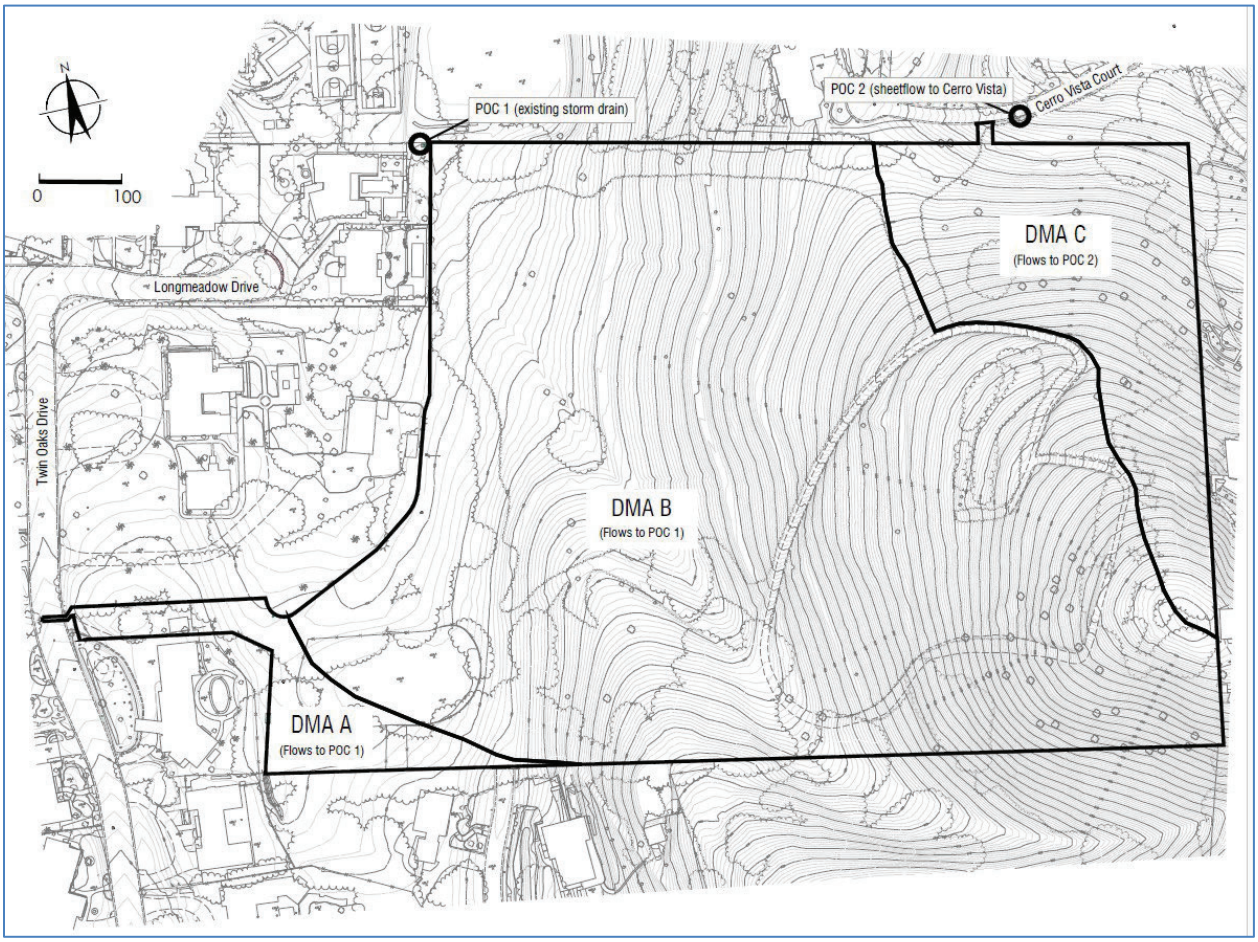

Figure 1. Pre-project DMA boundaries and points of compliance

As noted above, all the developed portions of the residential lots and the remainder of the access road will be located in DMA B. That said, the site plan uses compact structure configurations to limit impervious cover and preserve pervious area as practical. In fact, overall impervious cover is projected to be approximately 16% of the 14.2-acre DMA B. Runoff from all impervious areas will be collected in field inlets and/or catch basins and routed to one of nine bioretention basins that will provide water-quality treatment and flow-duration control. The bioretention basins are identified using numbering based on the respective lot draining to each. In all but three cases, each bioretention basin (BR) will handle the runoff from only the impervious area for one residential lot. The exceptions include the following: DMA B1 will drain to an area of permeable pavers sized to infiltrate the required treatment volume as described previously, BR 5+6 which will serve two lots (DMA 5+6), and BR 11 which will handle runoff from the eastern part of the main site roadway (DMA 11).

The proposed bioretention basins will follow standard design elements as summarized in the C.3 Stormwater Handbook published by the Santa Clara Valley Urban Runoff Pollution Prevention Program (June 2016). Each facility is modeled with a total surface ponding depth of 6 inches, an 18-inch-thick biosoil layer, and a bottom 12-inch-thick rock layer. The model was parameterized using a 4-inch diameter underdrain, and model results show that 2-inch diameter underdrain orifices will be needed to meet hydromodification management criteria. The basins were assumed to have 3:1 side slopes.

Figure 2 shows the post-project schematic of the BAHM model.

Figure 2. Post-Project BAHM Model Schematic

Model Results

Iterative BAHM model runs were completed to optimize the size and configuration of the stormwater infrastructure components. The full BAHM model output is included in **Appendix C.** The bioretention top of biosoil area and runoff treatment performance for each basin are summarized in **Table 2**.
The modeling indicates that very high treatment rates can be anticipated from the proposed treatment measures. In fact, the BAHM output shows that the basins will biofilter approximately 90% of the mean annual runoff on average, well in excess of the minimum 80% required per MRP3, with no single basin failing to meet 80% treatment.

Table 2. Treatment Areas and Resulting Runoff Treatment

Facility	Eff Impervious *(sq ft)*	Surface Area *(sq ft)*	Area/Eff Imp *(%)*	Treated *(%)*
DMA B1 Pavers	4139	3,280	79%	99.0
BR 2	5,431	259	4.8%	92.6
BR 3	5,507	259	4.7%	93.0
BR 4	7,438	306	4.1%	87.7
BR 5+6	32,516	1,682	5.2%	88.9
BR 7	9,224	305	3.3%	87.4
BR 8	8,973	371	4.1%	92.9
BR 9	9,168	346	3.8%	90.2
BR 10	10,418	363	3.5%	88.8
BR 11	5,857	238	4.1%	91.3

Figure 3 illustrates the flow-duration plots for POC2 for the pre- and post-project (mitigated) cases.

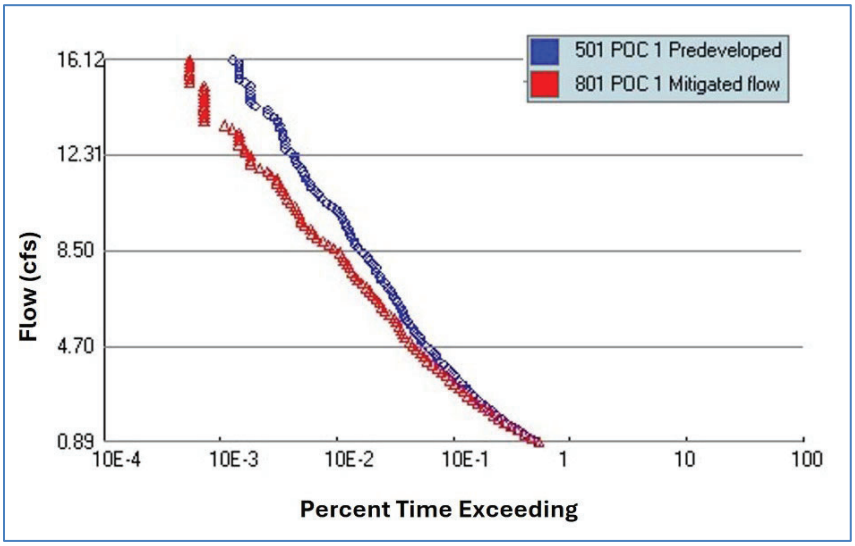

Figure 3. Flow-Duration Compliance Plot for POC 1 from the BAHM Model Output

Flow-duration compliance for POC2 is shown in **Figure 4** below.

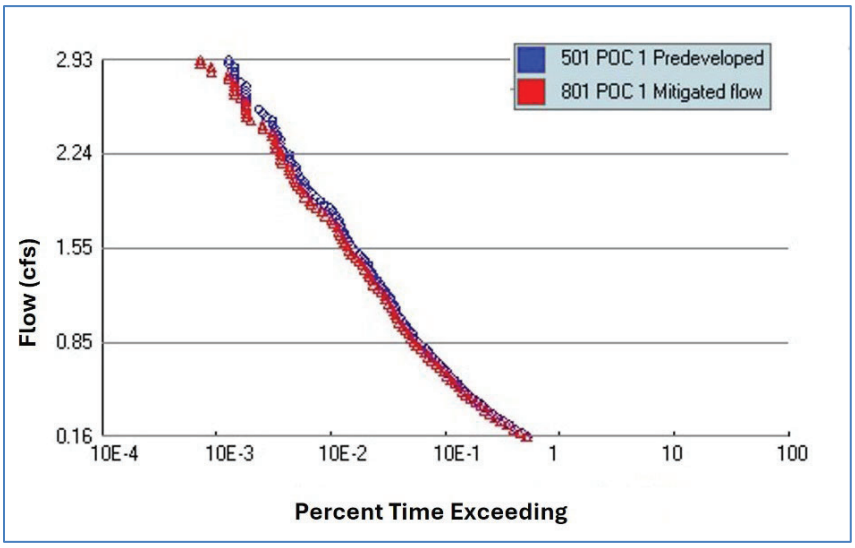

Figure 4. Flow-Duration Compliance Plot for POC 2 from the BAHM Model Output

Closing

Thank you again for the opportunity to assist with these stormwater management analyses. The modeling of the proposed stormwater management facilities shows that effective water-quality treatment and flow-duration controls can be provided for the full range of flows from one-tenth of the 2-year event up to the 10-year event.

Please do not hesitate to contact us if you have questions related to the modeling work, results, or conclusions presented herein.

Sincerely,

BALANCE HYDROLOGICS, Inc.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

2. Project Size

a. Total Site Area: 765,028 (ft²)		b. Total Land Area Disturbed During Construction: 742,482 (ft²) (including clearing, grading, excavating, or recreating)			
Project Totals	**Total Existing (Pre-project) Area (ft²)**	**Existing Area Retained[1] (ft²)**	**Existing Area Replaced[2] (ft²)**	**New Area Created[3] (ft²)**	**Total Post-Project Area (ft²)**
Impervious Area (IA)					
c. Total on-site IA	0	0	0	96,692	96,692
d. Total off-site IA[3]	202		202	0	202
e. Total project IA	202	0	202	96,692	96,894
f. Total new and replaced IA			96,894		
Pervious Area (PA)[4]					
g. Total on-site PA	764,378				667,686
h. Total off-site PA[3]	448				448
i. Total project PA	764,826				668,134
j. Total Project Area (I.a.+2.i.)	765,028				765,028
k. Percent Replacement of IA in Redevelopment Projects: (Total Existing IA Replaced ÷ Total Existing IA) x 100%			00 %		

[1] "Retained" means to leave existing IA in place. An IA that receives surface treatment (e.g., pavement resurfacing/slurry seal/grind) only is considered "retained". This category does not apply to off-site areas

[2] The "new" and "replaced" IA are based on the total project area and not specific location within the project. Constructed IA on a project that does not exceed the total pre-project IA will be considered "replaced" A. A project will have "new" IA only if the total post-project IA exceeds the total pre-project IA (total post-project IA – total pre-project IA = New IA).

[3] Off-site areas include sidewalks and other parts of the public right-of-way (e.g., roads, bike lanes, curbs, ramps, pass strip) that are being reconstructed as part of the project footprint. Do not include frontage areas that are not being reconstructed as part of the project. Note that gravel is considered an impervious surface.

[4] Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

PROJECT REPORT

General Model Information

BAHM2023 Project Name: 224067 Surrey Farm July 2025

Site Name:	Surrey Farm
Site Address:	
City:	Los Gatos
Report Date:	7/29/2025
Gage:	San Jose
Data Start:	1959/10/01
Data End:	2022/09/30
Timestep:	Hourly
Precip Scale:	1.724
Version Date:	2024/06/19

POC Thresholds

Low Flow Threshold for POC1:	10 Percent of the 2 Year
High Flow Threshold for POC1:	10 Year
Low Flow Threshold for POC2:	10 Percent of the 2 Year
High Flow Threshold for POC2:	10 Year

Landuse Basin Data

Pre-Project Land Use

DMA B Pre

Bypass:	No
GroundWater:	No

Pervious Land Use	acre
C D,Grass,Ste(10-20)	14.0795
Pervious Total	14.0795

Impervious Land Use	acre
Impervious Total	0
Basin Total	14.0795

Element Flow Componants:

Surface	Interflow	Groundwater

Componant Flows To:

POC 1	POC 1	

DMA C Pre

Bypass:	No
GroundWater:	No
Pervious Land Use	acre
C D,Grass,Ste(10-20)	2.6829
Pervious Total	2.6829
Impervious Land Use	acre
Impervious Total	0
Basin Total	2.6829

Element Flow Componants:

Surface	Interflow	Groundwater

Componant Flows To:

POC 2	POC 2

DMA A Pre

Bypass:	No
GroundWater:	No

Pervious Land Use	acre
C D,Grass,Mod(5-10%)	0.7956
Pervious Total	0.7956

Impervious Land Use	acre
Roads,Flat(0-5%)	0.0046
Impervious Total	0.0046
Basin Total	0.8002

Element Flow Componants:

Surface	Interflow	Groundwater

Componant Flows To:

POC 1	POC 1

Mitigated Land Use

DMA B OS

Bypass:	Yes
GroundWater:	No
Pervious Land Use	acre
C D,Grass,Ste(10-20)	11.1346
Pervious Total	11.1346
Impervious Land Use	acre
Impervious Total	0
Basin Total	11.1346

Element Flow Componants:

Surface	Interflow	Groundwater

Componant Flows To:

POC 1	POC 1

DMA B2

Bypass:	No
GroundWater:	No

Pervious Land Use	acre
C D,Grass,Flat(0-5%)	0.0552
Pervious Total	0.0552

Impervious Land Use	acre
Roads,Mod(5-10%)	0.0238
Roof Area	0.0953
Impervious Total	0.1191
Basin Total	0.1743

Element Flow Componants:

Surface	Interflow	Groundwater

Componant Flows To:

Surface	Interflow	Groundwater
BR B2	BR B2	

DMA B3

Bypass:	No
GroundWater:	No

Pervious Land Use	acre

ERRATA SHEET

INTRODUCTION

This Errata presents, in ~~strike-through~~ and double-underline format, the revisions to the Surrey Farms Estates Subdivision Project Initial Study/Mitigated Negative Declaration (IS/MND). The revisions to the IS/MND reflected in this Errata do not affect the adequacy of the previous environmental analysis contained in the Surrey Farms Estates Subdivision Project IS/MND. Because the changes presented below would not result in any new significant impacts or increase in impact significance from what was identified in the IS/MND, recirculation of the Surrey Farms Estates Subdivision Project IS/MND is not required.

CHANGES TO IS/MND

The following revision is hereby made to page 16 of the IS/MND:

> Architecture and Site Plan Review
> The Town's ~~Building Division~~ Community Development Department is responsible for a plan review of all new construction, additions, and remodels for both commercial and residential properties, as well as construction inspection services for projects including electrical, plumbing and mechanical installations. Plan review ensures compliance with applicable State and local codes, policies, guidelines, and standards of all residential and commercial structures within the Town limits, including the Hillside Development Standards and Guidelines. As described in the Town's Code, the purpose of Architecture and Site Plan Review through the Planning Division is to regulate the height, width, shape, proportion, siting, exterior construction and design of buildings to ensure that they are architecturally compatible with their surroundings. Section 29.20.150 of the Town Code lists the matters that the Town must consider when reviewing applications for Architecture and Site Approval. ~~The Town's review is limited to objective standards only, pursuant to SB 330 and Builder's Remedy.~~

Mitigation Measure III-1 on page 35 of the IS/MND is hereby revised as follows as part of staff-initiated changes:

> *III-1* *The project applicant shall show on Improvement Plans via notation that the project contractor shall restrict the construction of the off-site sidewalk improvements along the north side of Blossom Hill Road between Regent Drive and Union Avenue and along the north side of Fisher Avenue between Mitchell Avenue and Roberts Road from occurring simultaneously with the on-site construction of the proposed project.*
>
> *Alternatively, if simultaneous construction of the on-site and off-site components of the proposed project cannot be avoided, prior to the initiation of ground disturbance associated with the off-site sidewalk improvements, the project applicant shall show on project improvement plans via notation the following requirements:*

- *The contractor shall ensure that all construction equipment greater than 50 horsepower to be used in the construction of the off-site sidewalk improvements, including owned, leased, and subcontractor vehicles, shall be Tier 4 final off-road construction equipment. In addition, all off-road equipment operating at the off-site construction site must be maintained in proper working condition according to manufacturer's specifications.*
- *Idling shall be limited to five minutes or less in accordance with the In-Use Off-Road Diesel Vehicle Regulation as required by CARB. Clear signage regarding idling restrictions shall be placed at the entrances to the construction site.*
- *Portable equipment over 50 horsepower must have either a valid BAAQMD Permit to Operate (PTO) or a valid statewide Portable Equipment Registration Program (PERP) placard and sticker issued by CARB.*

Conformance with the foregoing requirements shall be confirmed through review and approval of plans by the Town of Los Gatos ~~Community Development~~ Parks and Public Works Department.

Pages 48 and 49 of the IS/MND is hereby revised as follows:

~~The on-site ephemeral drainage with swales was determined not to be considered jurisdictional water of the U.S. or the State. Nonetheless, a~~As shown in Figure 3, the proposed project would be designed to incorporate a minimum 10-foot buffer between the proposed development and the vegetation surrounding the ephemeral drainage. As such, the ephemeral drainage with swales would not be directly impacted by the proposed project. Similarly, as discussed above, the proposed project would retain the 100- to 110-foot flood easement between the development footprint and Ross Creek. Therefore, the proposed project would not result in the disturbance of any on-site wetlands.

Mitigation Measure IV-9 on page 50 of the IS/MND is hereby revised as follows as part of staff-initiated changes:

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

IV-~~9~~10 *Prior to the start of construction activities, the applicant shall comply with the Town of Los Gatos Tree Protection Ordinance and a tree removal permit shall be obtained from the Town for the removal of any on-site trees that qualify as a protected tree. If the trees proposed for removal are found to be in good condition, and the tree removal permit is granted primarily for the convenience of the applicant, then the full cost and responsibility of such removal shall be borne by the applicant, including planting of replacement trees. According to the Tree Mitigation and Protection Plan prepared for the proposed project, the project would not meet the required on-site tree replacement requirement; thus, the project applicant shall pay the appropriate in-lieu fees, pursuant to the requirements of Division II of Chapter 29.10 of the Town's Municipal Code. The above noted requirements shall be completed to the satisfaction of the Town of Los Gatos ~~Parks and Public Works Department~~ Planning Division.*

Page 50 is further revised as follows:

As discussed above, mixed oak woodland is present throughout the project site, some of which would be impacted by the proposed development. In order to determine if on-site trees proposed for removal qualify for protection under the provisions of the Town's Municipal Code, an Arborist Report was prepared for the site by McClintock Landscape Horticultural Services (McClintock) (see Appendix C), which has been peer reviewed by Monarch Consulting Arborists. During a site tree survey conducted of the project site, the Arborist Report identified ~~603~~ 673 on-site trees measuring four inches or greater in diameter at breast height (DBH), consisting of 26 species. According to the Arborist Report, ~~546~~ 630 of the on-site trees qualify for protection under the Town's Tree Protection Ordinance.

According to the Tree Mitigation and Protection Plan prepared for the proposed project, 223 protected trees would be removed, which would require a total of 551 replacement trees to be planted on-site, pursuant to the Town of Los Gatos Tree Protection Ordinance. A total of 85 trees are proposed to be planted on-site, which would not meet the on-site tree replacement requirements (see Figure 8 and Figure 9). Thus, payment of in-lieu fees consistent with Division II of Chapter 29.10 of the Town's Municipal Code would be required to mitigate for the shortfall in on-site tree replacement.

Page 70 is hereby revised as follows:

g. Issues related to wildfire hazards are discussed in Section XX, Wildfire, of this IS/MND. As noted therein, the project site is not located within a State Responsibility Area (SRA). However, the site is located within a Very High Fire Hazard Severity Zone (FHSZ).[1]

Mitigation Measure X-1 on page 74 of the IS/MND is hereby revised as follows:

X-1 *Prior to any ground-disturbing activities, the project applicant shall prepare and submit a final erosion and sediment control plan for review and approval by the Town of Los Gatos Engineering Division of the Parks and Public Works Department. A Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) shall be submitted to the San Francisco Bay Regional Water Quality Control Board. A maximum of two weeks is allowed between clearing of an area and stabilizing/building on an area if grading is allowed during the rainy season. Prior to any ground disturbance, the on-site aquatic features (i.e., the ephemeral drainage/drainage swale and Ross Creek) shall be flagged by a qualified biologist with highly visible flagging tape, or similar, to clearly demarcate the limits of the aquatic features, and interim erosion control measures shall be installed around the aquatic features, at a minimum. The project applicant shall submit a letter to the Town prepared by the qualified biologist confirming completion of the flagging for review and approval prior to commencement of any ground disturbance. ~~Interim erosion control measures, to be carried out during construction and before installation of the final landscaping, shall be included.~~ Interim erosion control methods shall include, but are not limited to: silt fences, fiber rolls (with locations and details), erosion control blankets, Town standard seeding specification, filter berms, check dams, retention basins, etc. The project*

[1] California Department of Forestry and Fire Protection. *Santa Clara County: State Responsibility Area Fire Hazard Severity Zones*. Effective April 1, 2024.

contractor shall provide erosion control measures as needed to protect downstream water quality during winter months. The grading, drainage, erosion control plan and SWPPP shall be prepared in compliance with applicable measures contained in the amended provisions C.3 and C.14 of most current Santa Clara County National Pollutant Discharge Elimination System (NPDES) Municipal Regional Permit (MRP). Monitoring for erosion and sediment control is required and shall be performed by the Qualified SWPPP Developer (QSD) or Qualified SWPPP Practitioner (QSP) as required by the Construction General Permit. Stormwater samples are required for all discharge locations and projects may not exceed limits set forth by the Construction General Permit Numeric Action Levels and/or Numeric Effluent Levels. A Rain Event Action Plan (REAP) shall be developed 48 hours prior to any likely precipitation event, defined by a 50 percent or greater probability as determined by the National Oceanic and Atmospheric Administration (NOAA), and/or whenever rain is imminent. The QSD or QSP must print and save records of the precipitation forecast for the project location area from (https://www.cpc.ncep.noaa.gov/) which shall accompany monitoring reports and sampling test data. A rain gauge is required on-site. The Town of Los Gatos Engineering Division ~~of the Parks and Public Works Department and the Building Department~~ shall conduct periodic NPDES inspections of the site throughout the recognized storm season to verify compliance with the Construction General Permit and Stormwater ordinances and regulations.

Page 76 of the IS/MND is hereby revised as follows:

Furthermore, as discussed above, following project development, stormwater runoff from each on-site DMA would be directed into an associated bioretention area located adjacent to each lot, which would be lined with an impermeable liner. Following on-site treatment, stormwater flows would be metered out into the existing 27- and 36-inch storm drains located north and west of the site, respectively. The proposed on-site stormwater infrastructure would be sized to meet Provision C.3.g of the County's Municipal Regional Stormwater NPDES permit (MRP), which requires new development to manage stormwater flows such that post-development runoff does not exceed pre-project runoff rates and durations.

In order to calculate the project's ability to meet flow-duration frequency requirements while also meeting the required water quality treatment standards, a Bay Area Hydrology Model (BAHM) report was prepared for the proposed project by Balance Hydrologics.[2] As discussed therein, site runoff would be directed to one of nine proposed bioretention basins that provide both water quality treatment and flow-duration control. Each bioretention area has been designed in accordance with the standard design criteria outlined in the C.3 Stormwater Handbook. Specifically, each basin was modeled with six inches of surface ponding, 18 inches of biotreatment soil media, and 12 inches of drain rock. A four-inch underdrain would collect the treated water, which would then be metered through a two-inch orifice integrated into the storm drain overflow structure. The two-inch orifice is required to meet the hydromodification management criteria. The modeling conducted as part of the BAHM report showed that the basins would biofilter an approximate average of 90 percent of the mean annual runoff. Such filtration rates are well in excess of the minimum 80 percent required by the MRP. As such, the BAHM report concluded that the proposed stormwater management facilities would provide effective water-quality

[2] Balance Hydrologics. *Summary of BAHM Modeling for the Surrey Farm Project, Town of Los Gatos*. July 31, 2025.

treatment and flow-duration controls for the full range of flows, from one-tenth of the two-year flood event up to the 10-year event.

Based on the above, the proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in erosion, siltation, or flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff. Consequently, implementation of the proposed project would result in a ***less-than-significant*** impact.

Page 102 of the IS/MND is revised as follows:

a-d. According to maps prepared as part of the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within an SRA; however, the site is located within a Very High FHSZ.[3]

The project site is currently undeveloped and contains scattered oak woodlands throughout. Development of the proposed residential uses would include the clearing of on-site fuel sources and, thus, is not anticipated to increase wildfire risks at the site relative to the existing conditions within the project site. Additionally, the proposed project would be required to comply with all applicable requirements of the CFC through the installation of fire sprinkler systems, fire hydrants, and other applicable requirements. In addition, the proposed project would be subject to the requirements of Chapter 7A of the CBC which include, but are not limited to, use of ignition-resistant materials, fire-intrusion design of roofing and vents, and use of glazed exterior windows and doors. The proposed project would also be situated near existing roads, water lines, and other utilities, which would reduce risks related to wildfire due to the existing development generally acting as a fuel break because of a lack of natural debris (e.g., vegetation) within developed sites.

Wildfire risks are not anticipated to be exacerbated during project operation, as the anticipated residential uses typically do not involve operational components that would increase the risk of wildfire. Development of the site for residential uses would help to reduce the risk of wildland fire in the area due to site improvements, such as roadways, driveways, and irrigated landscaping, which would reduce readily combustible vegetation. Additionally, pursuant to Mitigation Measure VII-1, the project design would be required to show that final grading or improvement plans incorporate all recommendations included within the site-specific GGHI prepared for the proposed project to ensure slope stability at the project site. Furthermore, as shown in Figure 16 of the IS/MND, the proposed project locates the residences outside of the areas of the site with the steepest slopes. Although some slopes occur within the project site, the on-site slopes are limited in size and are not sufficient to facilitate rapid spread of wildfire, as compared to mountainous areas with slopes sufficiently large enough to accommodate rapid spread of wildfire. As a result, the proposed project would not exacerbate wildfire risks due to slope. The off-site improvement areas do not include significant slopes.

As discussed in Section IX, Hazards and Hazardous Materials, of this IS/MND implementation of the proposed project would not result in any substantial

[3] California Department of Forestry and Fire Protection. *Santa Clara County: State Responsibility Area Fire Hazard Severity Zones*. Effective April 1, 2024.

modifications to the existing roadway system and, thus, would not physically interfere with the Town's EOP, particularly with any emergency evacuation routes. Furthermore, the proposed project would not include land uses or operations that could impair implementation of the plan. While the long-term maintenance of the proposed roadways, water and wastewater infrastructure, and other utilities would not exacerbate fire risks, the activities associated with the initial construction and placement of the utilities and infrastructure could cause a temporary increase in fire risks due to the use of heavy equipment, which would contain combustible materials such as fuels, oils, and ignition sources. However, the project contractor would be required to comply with all applicable health and safety standards, including the California Health and Safety Codes and local Town ordinances regulating the handling, storage, and transportation of hazardous materials. Compliance with such standards would help to minimize the potential for accidental conditions, including fire.

~~Additionally, the Santa Clara County Fire Department~~ SCCFD has also adopted Genasys Protect (formerly known as Zonehaven) to provide specific, timely and accurate information regarding evacuations within the County. Genasys Protect divides geographic regions into smaller zones to help simplify evacuations. In the event of a wildfire or public safety emergency, fire department and law enforcement agencies will issue evacuation orders and other protective actions for impacted areas. Genasys Protect is a web-based platform that provides real-time evacuation updates. The project site is located within Zone LGA-008, which includes the area north of Kennedy Road, south of Blossom Hill Road, east of Los Gatos Boulevard, and west of Short Road and Brooke Acres Drive.[4]

Therefore, the proposed project would not be expected to be subject to or result in substantial adverse effects related to wildfires, and a ***less-than-significant*** impact would occur.

The above modifications are for clarification purposes only and do not change the analysis or conclusions of the IS/MND.

HYDROMODIFICATION NOTE:

1. REFER TO THE "SUMMARY OF BAHM MODELING FOR THE SURREY FARM PROJECT" REPORT FOR HYDROMODIFICATION AND STORMWATER TREATMENT DESIGN ASSUMPTIONS AND SUMMARY OF RESULTS.

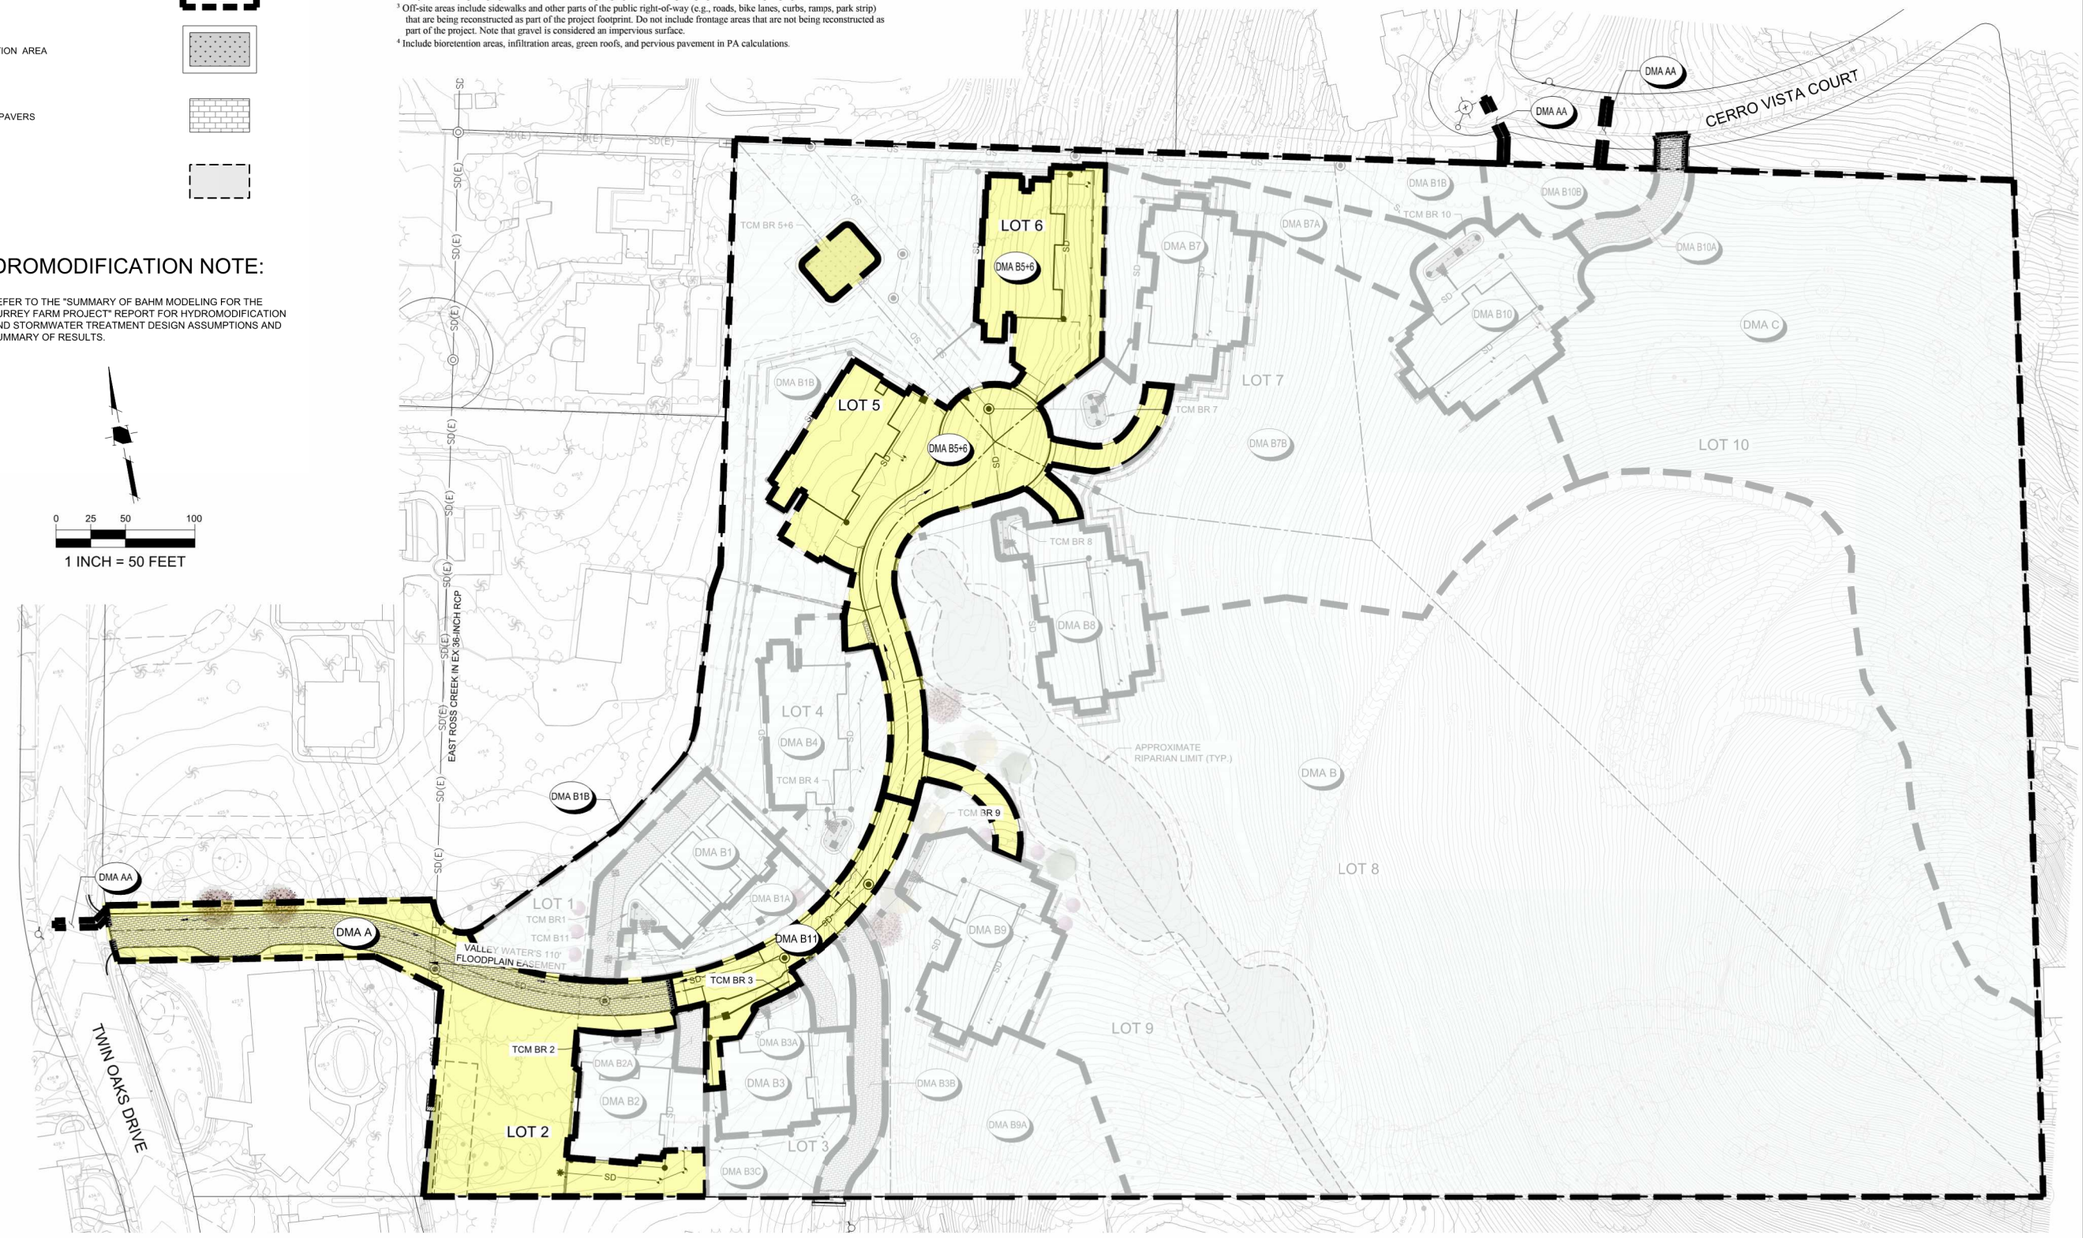
2. Project Size

a. Total Site Area: 765,552 (ft²)		b. Total Land Area Disturbed During Construction: 242,482 (ft²) (including clearing, grading, stockpiling, or excavating)			
Project Totals	**Total Existing (Pre-project) Area (ft²)**	**Existing Area Retained[1] (ft²)**	**Existing Area Replaced[2] (ft²)**	**New Area Created[3] (ft²)**	**Total Post-Project Area (ft²)**
Impervious Area (IA)					
c. Total on-site IA	0	0	0	96,692	96,692
d. Total off-site IA[3]	694		694	0	694
e. Total project IA	694	0	694	96,692	97,386
f. Total new and replaced IA			97,386		
Pervious Area (PA)[4]					
g. Total on-site PA	764,361				667,669
h. Total off-site PA[3]	497				497
i. Total project PA	764,858				668,166
j. Total Project Area (2.e.+2.i.)	765,552				765,552
k. Percent Replacement of IA in Redevelopment Projects: (Total Existing IA Replaced ÷ Total Existing IA) x 100% 100 %					

[1] "Retained" means to leave existing IA in place. An IA that receives surface treatment (e.g., pavement resurfacing/slurry seal/grind) only is considered "retained". This category does not apply to off-site areas.
[2] The "new" and "replaced" IA are based on the total project area and not specific locations within the project. Constructed IA on a project that does not exceed the total pre-project IA will be considered "replaced" IA. A project will have "new" IA only if the total post-project IA exceeds the total pre-project IA (total post-project IA – total pre-project IA = New IA).
[3] Off-site areas include sidewalks and other parts of the public right-of-way (e.g., roads, bike lanes, curbs, ramps, park strip) that are being reconstructed as part of the project footprint. Do not include frontage areas that are not being reconstructed as part of the project. Note that gravel is considered an impervious surface.
[4] Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

BIORETENTION & FLOW-THROUGH PLANTER NOTES:

1. SEE GRADING PLAN FOR BASIN FOOTPRINT AND DESIGN ELEVATIONS.
2. PLACE 3 INCHES OF COMPOSTED, NON-FLOATABLE MULCH IN AREAS BETWEEN STORMWATER PLANTINGS AND SIDE SLOPE.
3. SEE LANDSCAPE PLAN FOR MULCH, PLANT MATERIALS AND IRRIGATION REQUIREMENTS
4. CURB CUTS SHALL BE A MINIMUM 18" WIDE AND SPACED AT MAXIMUM 10' O.C. INTERVALS AND SLOPED TO DIRECT STORMWATER TO DRAIN INTO THE BASIN. CURB CUTS SHALL ALSO NOT BE PLACED INLINE WITH OVERFLOW CATCH BASIN. SEE GRADING PLAN FOR MORE DETAIL ON LOCATIONS OF CURB CUTS.
5. A MINIMUM 0.2' DROP BETWEEN STORM WATER ENTRY POINT (I.E. CURB OPENING, FLUSH CURB, ETC.) AND ADJACENT LANDSCAPE FINISHED GRADE.
6. DO NOT COMPACT NATIVE SOIL / SUBGRADE AT BOTTOM OF BASIN. LOOSEN SOIL TO 12" DEPTH.



PERVIOUS PAVER REQUIREMENTS

CONTRACTOR OR PERMITEE SHALL:

- PROVIDE CERTIFICATION FROM THE PAVER MANUFACTURER THAT THE PAVERS MEET THE REQUIREMENTS OF THE C3 STORMWATER HANDBOOK FOR PERVIOUS PAVERS. THIS INCLUDES, BUT IS NOT LIMITED TO, HAVING A MINIMUM SURFACE INFILTRATION RATE OF 100"/HR WHEN TESTED IN ACCORDANCE WITH ASTM C1701.
- ONLY CONTRACTORS HOLDING CERTIFICATION OF COMPLETION IN THE INTERLOCKING CONCRETE PAVEMENT INSTITUTES PICP INSTALLER TECHNICIAN COURSE SHALL BE USED TO INSTALL THE PAVERS AND AT LEAST ONE FOREMAN WITH THIS CERTIFICATION MUST BE ON THE JOBSITE AT ALL TIMES DURING CONCRETE PAVER INSTALLATION.
- PROTECT THE EXCAVATED AREA FOR PERVIOUS PAVERS FROM EXCESSIVE COMPACTION DUE TO CONSTRUCTION TRAFFIC AND PROTECT THE FINISHED PAVEMENT FROM CONSTRUCTION TRAFFIC.

STANDARD STORMWATER CONTROL NOTES:

- STANDING WATER SHALL NOT REMAIN IN THE TREATMENT MEASURES FOR MORE THAN FIVE DAYS, TO PREVENT MOSQUITO GENERATION. SHOULD ANY MOSQUITO ISSUES ARISE, CONTACT THE SANTA CLARA VALLEY VECTOR CONTROL DISTRICT (DISTRICT). MOSQUITO LARVICIDES SHALL BE APPLIED ONLY WHEN ABSOLUTELY NECESSARY, AS INDICATED BY THE DISTRICT, AND THEN ONLY BY A LICENSED PROFESSIONAL OR CONTRACTOR. CONTACT INFORMATION FOR THE DISTRICT IS PROVIDED BELOW.
- DO NOT USE PESTICIDES OR OTHER CHEMICAL APPLICATIONS TO TREAT DISEASED PLANTS, CONTROL WEEDS OR REMOVED UNWANTED GROWTH. EMPLOY NON-CHEMICAL CONTROLS (BIOLOGICAL, PHYSICAL AND CULTURAL CONTROLS) TO TREAT A PEST PROBLEM. PRUNE PLANTS PROPERLY AND AT THE APPROPRIATE TIME OF YEAR. PROVIDE ADEQUATE IRRIGATION FOR LANDSCAPE PLANTS. DO NOT OVER WATER.

STORMWATER CONTROL PLAN

5.0

PLOTTED: 10/24/2025 11:42 AM
I:\4185\10\PLUPERMIT_SITEPERMIT\4185105W.DWG

PROJECT SITE INFORMATION:

1. **SOILS TYPE: C (SANDY LOAM)**
2. **GROUND WATER DEPTH: 30' - 50'**
3. **NAME OF RECEIVING BODY: GUADALUPE CREEK**
4. **FLOOD ZONE: X**
5. **FLOOD ELEVATION (IF APPLICABLE): N/A**

OPERATION AND MAINTENANCE INFORMATION:

I. PROPERTY INFORMATION:

I.A. PROPERTY ADDRESS:
178 TWIN OAKS DRIVE
LOS GATOS, CA, 95032

I.B. PROPERTY OWNER:
JEFFREY L DODGE EXEMPT TRUST

II. RESPONSIBLE PARTY FOR MAINTENANCE:

II.A. CONTACT:
LARRY DODGE

II.B. PHONE NUMBER OF CONTACT:
858-243-7768

II.C. EMAIL:
lddodge@gmail.com

II.D. ADDRESS:
PO BOX 2029
RANCHO SANTA FE, CA 92067

SOURCE CONTROL MEASURES:

1. BENEFICIAL LANDSCAPING.
2. MAINTENANCE (PAVEMENT SWEEPING, CATCH BASIN CLEANING, GOOD HOUSEKEEPING).
3. STORM DRAIN LABELING.

SITE DESIGN MEASURES:

1. MINIMIZE LAND DISTURBED
2. MINIMUM-IMPACT STREET OR PARKING LOT DESIGN
3. PERVIOUS PAVEMENT
4. OTHER SELF-TREATING AREA
5. PRESERVE OPEN SPACE
6. PROTECTED RIPARIAN AND WETLAND AREAS/BUFFERS

BIOTREATMENT SOIL REQUIREMENTS

- BIORETENTION SOIL MIX SHALL MEET THE REQUIREMENTS AS OUTLINED IN APPENDIX C OF THE C.3 STORM WATER HANDBOOK AND SHALL BE A MIXTURE OF FINE SAND AND COMPOST MEASURED ON A VOLUME BASIS OF 60-70% SAND AND 30-40% COMPOST. CONTRACTOR TO REFER TO APPENDIX C FOR SAND AND COMPOST MATERIAL SPECIFICATIONS. CONTRACTOR MAY OBTAIN A COPY OF THE C3 HANDBOOK AT : HTTPS://CLEANWATER.SCCGOV.ORG/SITES/G/FILES/EXJCPB461/FILES/SCVURPPP_C.PDF
- PRIOR TO ORDERING THE BIOTREATMENT SOIL MIX OR DELIVERY TO THE PROJECT SITE, CONTRACTOR SHALL PROVIDE A BIOTREATMENT SOIL MIX SPECIFICATION CHECKLIST, COMPLETED BY THE SOIL MIX SUPPLIER AND CERTIFIED TESTING LAB.

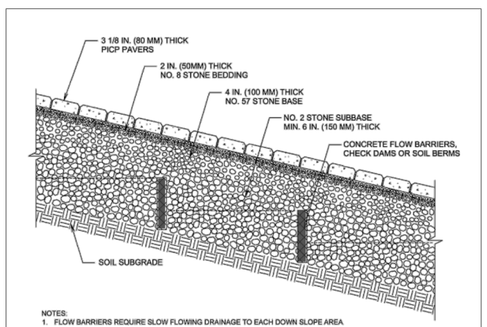
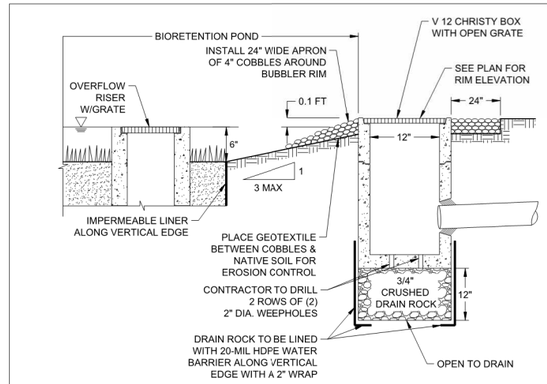
TOTAL	**97386**	**668166**		



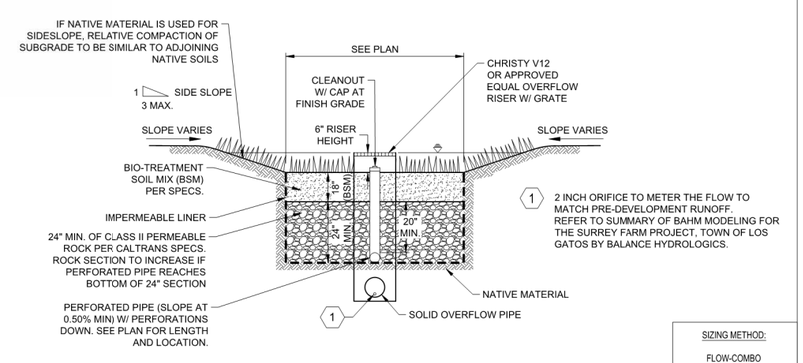
*"Lined" refers to an impermeable liner placed on the bottom of a bioretention area, such that no infiltration into native soil occurs.

TABLE 1
ROUTINE MAINTENANCE ACTIVITIES FOR BIORETENTION AREAS



NO.	MAINTENANCE TASK	FREQUENCY OF TASK
1	REMOVE OBSTRUCTIONS, WEEDS, DEBRIS AND TRASH FROM BIORETENTION AREA AND ITS INLETS AND OUTLETS; AND DISPOSE OF PROPERLY.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
2	INSPECT BIORETENTION AREA FOR STANDING WATER. IF STANDING WATER DOES NOT DRAIN WITHIN 2-3 DAYS, TILL AND REPLACE THE SURFACE BIOTREATMENT SOIL WITH THE APPROVED SOIL MIX AND REPLANT.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
3	CHECK UNDERDRAINS FOR CLOGGING. USE THE CLEANOUT RISER TO CLEAN ANY CLOGGED UNDERDRAINS.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
4	MAINTAIN THE IRRIGATION SYSTEM AND ENSURE THAT PLANTS ARE RECEIVING THE CORRECT AMOUNT OF WATER (IF APPLICABLE).	QUARTERLY
5	ENSURE THAT THE VEGETATION IS HEALTHY AND DENSE ENOUGH TO PROVIDE FILTERING AND PROTECT SOILS FROM EROSION. PRUNE AND WEED THE BIORETENTION AREA. REMOVE AND/OR REPLACE ANY DEAD PLANTS.	ANNUALLY, BEFORE THE WET SEASON BEGINS
6	USE COMPOST AND OTHER NATURAL SOIL AMENDMENTS AND FERTILIZERS INSTEAD OF SYNTHETIC FERTILIZERS, ESPECIALLY IF THE SYSTEM USES AN UNDERDRAIN.	ANNUALLY, BEFORE THE WET SEASON BEGINS
7	CHECK THAT MULCH IS AT APPROPRIATE DEPTH (2 - 3 INCHES PER SOIL SPECIFICATIONS) AND REPLENISH AS NECESSARY BEFORE WET SEASON BEGINS. IT IS RECOMMENDED THAT 2" – 3" OF ARBOR MULCH BE REAPPLIED EVERY YEAR.	ANNUALLY, BEFORE THE WET SEASON BEGINS
8	INSPECT THE ENERGY DISSIPATION AT THE INLET TO ENSURE IT IS FUNCTIONING ADEQUATELY, AND THAT THERE IS NO SCOUR OF THE SURFACE MULCH. REMOVE ACCUMULATED SEDIMENT.	ANNUALLY, BEFORE THE WET SEASON BEGINS
9	INSPECT OVERFLOW PIPE TO ENSURE THAT IT CAN SAFELY CONVEY EXCESS FLOWS TO A STORM DRAIN. REPAIR OR REPLACE DAMAGED PIPING.	ANNUALLY, BEFORE THE WET SEASON BEGINS
10	REPLACE BIOTREATMENT SOIL AND MULCH, IF NEEDED. CHECK FOR STANDING WATER, STRUCTURAL FAILURE AND CLOGGED OVERFLOWS. REMOVE TRASH AND DEBRIS. REPLACE DEAD PLANTS.	
11	INSPECT BIORETENTION AREA USING THE ATTACHED INSPECTION CHECKLIST.	ANNUALLY, BEFORE THE WET SEASON

TABLE 2
ROUTINE MAINTENANCE ACTIVITIES FOR PERVIOUS PAVEMENT



NO.	MAINTENANCE TASK	FREQUENCY OF TASK
1	CHECK FOR SEDIMENT AND DEBRIS ACCUMULATION. PREVENT SOIL FROM WASHING OR BLOWING ONTO THE PAVEMENT. DO NOT STORE SAND, SOIL, MULCH OR OTHER LANDSCAPING MATERIALS ON PERVIOUS PAVEMENT SURFACES.	TWO TO FOUR TIMES ANNUALLY
2	CONDUCT PREVENTATIVE SURFACE CLEANING, USING COMMERCIALLY AVAILABLE REGENERATIVE AIR OR VACUUM SWEEPERS, TO REMOVE SEDIMENT AND DEBRIS.	TWO TO FOUR TIMES ANNUALLY
3	INSPECT FOR ANY SIGNS OF PAVEMENT FAILURE. REPAIR ANY SURFACE DEFORMATIONS OR BROKEN PAVERS. REPLACE MISSING JOINT FILLER IN PICP.	TWO TO FOUR TIMES ANNUALLY
4	CHECK FOR STANDING WATER ON THE PAVEMENT SURFACE WITHIN 30 MINUTES AFTER A STORM EVENT.	TWO TO FOUR TIMES ANNUALLY
5	INSPECT UNDERDRAIN OUTLETS AND CLEANOUTS, PREFERABLY BEFORE THE WET SEASON. REMOVE TRASH/DEBRIS.	TWO TO FOUR TIMES ANNUALLY
6	REMOVE SEDIMENT AND DEBRIS ACCUMULATION ON PERVIOUS PAVEMENT.	TWO TO FOUR TIMES ANNUALLY
7	REMOVE WEEDS. MOW VEGETATION IN GRID PAVEMENTS (SUCH AS TURF BLOCK) AS NEEDED.	AS NEEDED
8	PERFORM RESTORATIVE SURFACE CLEANING WITH A VACUUM SWEEPER, AND/OR RECONSTRUCTION OF PART OF THE PERVIOUS SURFACE TO RESTORE SURFACE PERMEABILITY AS NEEDED. REPLENISH AGGREGATE IN PICP JOINTS OR GRIDS AS NEEDED AFTER RESTORATIVE SURFACE CLEANING.	AS NEEDED
9	POWER WASHING WITH SIMULTANEOUS VACUUMING ALSO CAN BE USED TO RESTORE SURFACE INFILTRATION TO HIGHLY CLOGGED AREAS OF PERVIOUS CONCRETE, POROUS ASPHALT OR PICP, BUT IS NOT RECOMMENDED FOR GRID PAVEMENTS.	AS NEEDED
10	INSPECT PERVIOUS PAVING AREA USING THE ATTACHED INSPECTION CHECKLIST.	QUARTERLY OR AS NEEDED

3 PERVIOUS PAVEMENT ON SLOPED SUBGRADE (SELF TREATING) N.T.S.

EROSION AND SEDIMENT CONTROL NOTES

1. CONTRACTOR/OWNER:
   JEFF CURRAN
   1475 SARATOGA AVENUE
   SAN JOSE, CA 95129
   (408) 252-9131

   IT SHALL BE THE OWNER'S RESPONSIBILITY TO MAINTAIN CONTROL OF THE ENTIRE CONSTRUCTION OPERATION AND TO KEEP THE ENTIRE SITE IN COMPLIANCE WITH THE SOIL EROSION CONTROL PLAN.
2. CIVIL ENGINEER:
   HMH ENGINEERS
   1570 OAKLAND ROAD
   SAN JOSE, CA 95131
   ATTN: RAFAEL HERNANDEZ
   408 487 2200
3. THIS PLAN IS INTENDED TO BE USED FOR INTERIM EROSION AND SEDIMENT CONTROL ONLY AND IS NOT TO BE USED FOR FINAL ELEVATIONS OR PERMANENT IMPROVEMENTS.
4. IT IS THE RESPONSIBILITY OF THE OWNER/CONTRACTOR TO ENSURE THAT NO MUD OR SILTATION LEAVES THE PROJECT SITE.
5. INTERIM EROSION CONTROL MEASURES MUST BE COMPLETED AND IN PLACE BY OCTOBER 1.
6. ALL INTERIM EROSION CONTROL MEASURES MUST BE CONTINUOUSLY MAINTAINED THROUGHOUT THE OCTOBER 1 TO APRIL 15 RAINY SEASON.
7. CALL THE INSPECTION LINE AT (408) 399-5760 BY SEPTEMBER 15 FOR INSPECTION OF EROSION CONTROL DEVICES. CALL 24 HOURS IN ADVANCE. INCLUDE GRADING PERMIT NUMBER.
8. IF EROSION CONTROL MEASURES ARE NOT IN PLACE AS REQUIRED OR NOT MAINTAINED, ALL WORK SHALL CEASE UNTIL EROSION CONTROL MEASURES ARE REMEDIED.

MAINTENANCE SCHEDULE

CONTROL	INSPECTION FREQUENCY	MAINTENANCE/REPAIR MEASURES
STABILIZED CONSTRUCTION ENTRANCE	WEEKLY & AFTER EACH RAIN	REPLACE GRAVEL MATERIAL WHEN VOIDS ARE PRESENT REMOVE ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS WITHIN 24 HOURS REMOVE GRAVEL AT COMPLETION OF CONSTRUCTION
STORM DRAIN INLET PROTECTION	WEEKLY & AFTER EACH RAIN	REPLACE CLOGGED FILTER FABRIC IMMEDIATELY REMOVE SEDIMENT WHEN IT REACHES 1/2 THE HEIGHT OF THE FILTER
SEDIMENT BASIN	WEEKLY & AFTER EACH RAIN	REMOVE SEDIMENT WHEN THE SEDIMENT STORAGE ZONE IS HALF FULL REPAIR EROSION AS NECESSARY UNCLOG OUTLET RISER
HYDROSEED/HYDROMULCH EROSION CONTROL BLANKETS	PERIODICALLY DURING & AFTER EACH RAIN	PRIOR TO RESEEDING, REPAIR ALL RILLS AND GULLIES REMOVE SEDIMENT BUILDUP AT TOE OF SLOPES REAPPLY SEED AND/OR MULCH TO AREAS THAT HAVE BEEN REPAIRED, ERODED, OR ARE WITHOUT ADEQUATE VEGETATION DISLOCATED BLANKETS, NETS, OR MATS SHOULD BE REPAIRED OR REPLACED
STRAW ROLLS	WEEKLY & AFTER EACH RAIN	REPAIR WHENEVER STRAW ROLL IS DAMAGED REMOVE SEDIMENT WHEN IT REACHES 1/3 THE HEIGHT OF THE ROLLS ESPECIALLY IF HEAVY RAINS ARE EXPECTED

BUILDING PAD PROTECTION NOTE:

1. IF PAD WILL REMAIN WITHOUT BUILDING CONSTRUCTION DURING THE RAINY SEASON, THE PAD SHALL BE STABILIZED OR PROVIDED WITH AN EROSION BLANKET TO PROTECT THE BUILDING PAD.

EROSION CONTROL PLAN NOTE:

THIS WATER POLLUTION CONTROL PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS. THE CONTRACTOR SHALL IMPLEMENT BEST MANAGEMENT PRACTICES (BMPS) LISTED IN THE STORM WATER POLLUTION PREVENTION PLAN (SWPPP), AND SHALL IMPLEMENT AND MAINTAIN THE SWPPP FOR THE PROJECT IN FULL COMPLIANCE WITH THE REVISED STATE REGULATIONS TO CONTROL THE DISCHARGE OF STORMWATER POLLUTANTS.

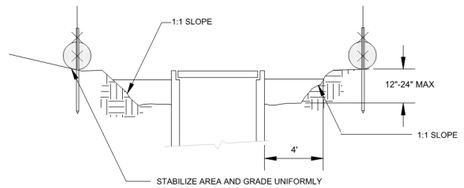
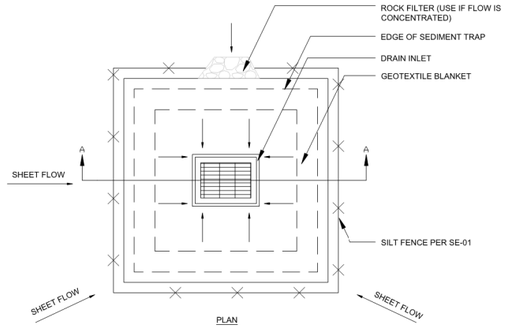
PLOTTED: 10/20/2025 3:29 PM

SECTION A-A



PLAN

NOTES:
1. FOR USE IN AREAS WHERE GRADING HAS BEEN COMPLETED AND FINAL SOIL STABILIZATION AND SEEDING ARE PENDING SHAPE BASIN SO THAT LONGEST INFLOW AREA FACES LONGEST LENGTH OF TRAP
2. NOT APPLICABLE IN PAVED AREAS
3. NOT APPLICABLE WITH CONCENTRATED FLOWS

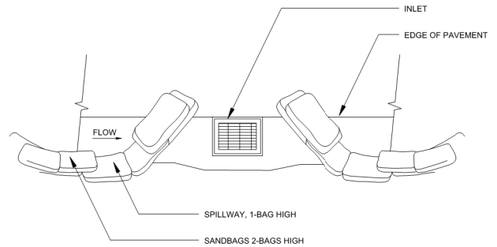


SE-10 STORM DRAIN INLET PROTECTION - TYPE 1

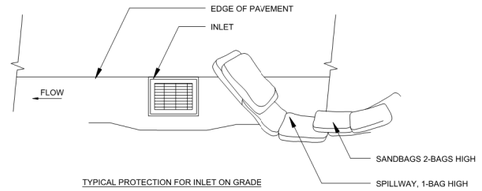
N.T.S.

NOTE:
REMOVE SEDIMENT BEFORE REACHING ONE-THIRD FULL

SECTION A-A



PLAN

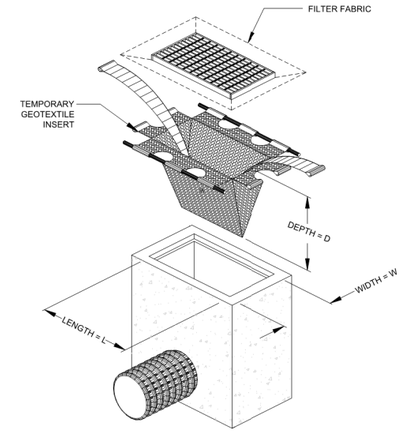


NOTES:
1. FOR USE IN CLEARED AND GRUBBED AND IN GRADED AREAS
2. SHAPE BASIN SO THAT LONGEST INFLOW AREA FACES LONGEST LENGTH OF TRAP
3. FOR CONCENTRATED FLOWS SHAPE BASIN IN 2:1 RATIO WITH LENGTH ORIENTED TOWARDS DIRECTION FLOW

SE-10 STORM DRAIN INLET PROTECTION - TYPE 2

N.T.S.

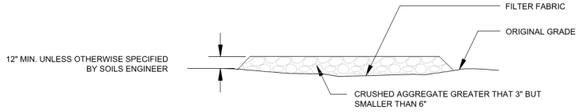
TYPICAL PROTECTION FOR INLET ON SUMP



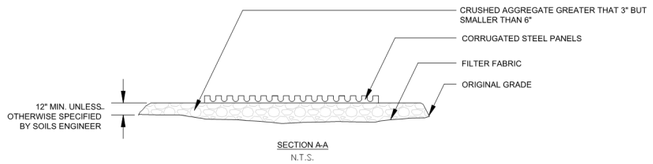
TYPICAL PROTECTION FOR INLET ON GRADE

NOTES:
1. INTENDED FOR SHORT TERM USE
2. USED TO INHIBIT STORM WATER FLOW
3. ALLOW FOR PROPER MAINTENANCE AND CLEANUP
4. BAG MUST BE REMOVED AFTER ADJACENT OPERATION IS COMPLETED
5. NOT APPLICABLE IN AREAS WITH HIGH SILTS AND CLAYS WITHOUT FILTER FABRICS

SE-10 STORM DRAIN INLET PROTECTION - TYPE 3



N.T.S.



NOTES:
1. INTENDED FOR SHORT TERM USE
2. INSTALL PER MANUFACTURER INSTRUCTION
3. PERFORM MAINTENANCE PER MANUFACTURER RECOMMENDATION

Pollution Prevention — It's Part of the Plan

Make sure your crews and subs do the job right!

Runoff from streets and other paved areas is a major source of pollution in San Francisco Bay. Construction activities can directly affect the health of the Bay unless contractors and crews plan ahead to keep dirt, debris, and other construction waste away from storm drains and local creeks. Following these guidelines will ensure your compliance with local ordinance requirements.

Materials storage & spill cleanup

Non-hazardous materials management

- ✓ Sand, dirt, and similar materials must be stored at least 10 feet from catch basins, and covered with a tarp during wet weather or when rain is forecast.
- ✓ Use (but don't overuse) reclaimed water for dust control as needed.
- ✓ Sweep streets and other paved areas daily. Do not wash down streets or work areas with water!
- ✓ Recycle all asphalt, concrete, and aggregate base material from demolition activities.
- ✓ Check dumpsters regularly for leaks and to make sure they don't overflow. Repair or replace leaking dumpsters promptly.

Hazardous materials management

- ✓ Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, state, and federal regulations.
- ✓ Store hazardous materials and wastes in secondary containment and cover them during wet weather.
- ✓ Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- ✓ Be sure to arrange for appropriate disposal of all hazardous wastes.

Spill prevention and control

- ✓ Keep a stockpile of spill cleanup materials (rags, absorbents, etc.) available at the construction site at all times.
- ✓ When spills or leaks occur, contain them immediately and be particularly careful to prevent leaks and spills from reaching the gutter, street, or storm drain. Never wash spilled material into a gutter, street, storm drain, or creek!
- ✓ Report any hazardous materials spills immediately! Dial 911 or your local emergency response number.

Vehicle and equipment maintenance & cleaning

- ✓ Inspect vehicles and equipment for leaks frequently. Use drip pans to catch leaks until repairs are made; repair leaks promptly.
- ✓ Fuel and maintain vehicles on site only in a bermed area or over a drip pan that is big enough to prevent runoff.
- ✓ If you must clean vehicles or equipment on site, clean with water only in a bermed area that will not allow rinsewater to run into gutters, streets, storm drains, or creeks.
- ✓ Do not clean vehicles or equipment on-site using soaps, solvents, degreasers, steam cleaning equipment, etc.

Earthwork & contaminated soils

- ✓ Keep excavated soil on the site where it is least likely to collect in the street. Transfer to dump trucks should take place on the site, not in the street.
- ✓ Use hay bales, silt fences, or other control measures to minimize the flow of silt off the site.

- ✓ Avoid scheduling earth moving activities during the rainy season if possible. If grading activities during wet weather are allowed in your permit, be sure to implement all control measures necessary to prevent erosion.
- ✓ Mature vegetation is the best form of erosion control. Minimize disturbance to existing vegetation whenever possible.
- ✓ If you disturb a slope during construction, prevent erosion by securing the soil with erosion control fabric, or seed with fast-growing grasses as soon as possible. Place hay bales down-slope until soil is secure.
- ✓ If you suspect contamination (from site history, discoloration, odor, texture, abandoned underground tanks or pipes, or buried debris), call your local fire department for help in determining what testing should be done.
- ✓ Manage disposal of contaminated soil according to Fire Department instructions.

Dewatering operations

- ✓ Reuse water for dust control, irrigation, or another on-site purpose to the greatest extent possible.
- ✓ Be sure to call your city's storm drain inspector before discharging water to a street, gutter, or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- ✓ In areas of known contamination, testing is required prior to reuse or discharge of groundwater. Consult with the city inspector to determine what testing to do and to interpret results. Contaminated groundwater must be treated or hauled off-site for proper disposal.

Saw cutting

- ✓ Always completely cover or barricade storm drain inlets when saw cutting. Use filter fabric, hay bales, sand bags, or fine gravel dams to keep slurry out of the storm drain system.
- ✓ Shovel, absorb, or vacuum saw-cut slurry and pick up all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- ✓ If saw cut slurry enters a catch basin, clean it up immediately.

Paving/asphalt work

- ✓ Do not pave during wet weather or when rain is forecast.
- ✓ Always cover storm drain inlets and manholes when paving or applying seal coat, tack coat, slurry seal, or fog seal.
- ✓ Place drip pans or absorbent material under paving equipment when not in use.
- ✓ Protect gutters, ditches, and drainage courses with hay bales, sand bags, or earthen berms.
- ✓ Do not sweep or wash down excess sand from sand sealing into gutters, storm drains, or creeks. Collect sand and return it to the stockpile, or dispose of it as trash.
- ✓ Do not use water to wash down fresh asphalt concrete pavement.

Concrete, grout, and mortar storage & waste disposal

- ✓ Be sure to store concrete, grout, and mortar under cover and away from drainage areas. These materials must never reach a storm drain.
- ✓ Wash out concrete equipment/trucks off-site or designate an on-site area for washing where water will flow onto dirt or into a temporary pit in a dirt area. Let the water seep into the soil and dispose of hardened concrete with trash.

- ✓ Divert water from washing exposed aggregate concrete to a dirt area where it will not run into a gutter, street, or storm drain.
- ✓ If a suitable dirt area is not available, collect the wash water and remove it for appropriate disposal off site.

Painting

- ✓ Never rinse paint brushes or materials in a gutter or street!
- ✓ Paint out excess water-based paint before rinsing brushes, rollers, or containers in a sink. If you can't use a sink, direct wash water to a dirt area and spade it in.
- ✓ Paint out excess oil-based paint before cleaning brushes in thinner.
- ✓ Filter paint thinners and solvents for reuse whenever possible. Dispose of oil-based paint sludge and unusable thinner as hazardous waste.

Bay Area Stormwater Management Agencies Association (BASMAA)
1-888-BAYWISE

Storm drain polluters may be liable for fines of up to $10,000 per day!

FIRE FLOW: 500 GPM FOR 1/2 HOUR, PER CFC APPENDIX B, TABLE B105.1(1)
HYDRANTS: 1 HYDRANT WITH AVERAGE SPACING 500' PER CFC APPENDIX C, TABLE C102.1

NOTES

1. PRIVATE STREETS WILL INCLUDE EMERGENCY ACCESS EASEMENTS
2. MAX HOSE PULL LENGTH IS 200'
3. CONSTRUCTION TYPE IS V-B
4. OCCUPANCY GROUPS: R-3
5. ACCESS ROADWAYS SHALL BE PROVIDED TO COMPLY WITH ALL OF THE FOLLOWING REQUIREMENTS:
   a. FIRE APPARATUS ACCESS ROADWAYS SHALL HAVE A "MINIMUM" WIDTH OF A FIRE APPARATUS ACCESS ROADWAY FOR ENGINES IS 20 FEET.
   b. FIRE ACCESS ROADWAYS SHALL HAVE A "MINIMUM" UNOBSTRUCTED VERTICAL CLEARANCE OF NOT LESS THAN 13 FEET 6 INCHES.
   c. ALL FIRE DEPARTMENT ACCESS ROADWAYS INCLUDING THE PRIVATE STREET, DRIVEWAYS, AND EMERGENCY ACCESS EASEMENTS SHALL BE AN ALL-WEATHER SURFACE DESIGNED TO SUPPORT THE IMPOSED LOAD OF FIRE APPARATUS WITH A GROSS VEHICLE WEIGHT OF 75,000-POUNDS.
   d. FIRE APPARATUS ACCESS ROADWAYS SHALL HAVE A "MINIMUM" INSIDE TURNING RADIUS FOR FIRE DEPARTMENT ACCESS ROADWAYS SHALL BE 30 FEET OR GREATER.
   e. THE GRADE FOR EMERGENCY APPARATUS ACCESS ROADWAYS SHALL NOT EXCEED 10 PERCENT TO FACILITATE FIRE-GROUND OPERATIONS.
   f. TRAFFIC CALMING DEVICES ARE NOT PERMITTED ON ANY DESIGNATED FIRE ACCESS ROADWAY, UNLESS APPROVED BY THE FIRE PREVENTION & HAZARDOUS MATERIALS DIVISION.
6. ALL DESIGNATED FIRE LANES WITH RAISED CURBS SHALL BE PAINTED RED. "NO PARKING - FIRE LANE" SHALL BE IN WHITE PAINT, 6 INCHES IN HEIGHT WITH A MINIMUM 1 INCH STROKE. LETTERING SHALL BE PAINTED AT AN INTERVAL OF EVERY 25 FEET.
7. SPRINKLERS SHALL BE PROVIDED (DEFERRED SUBMITTAL)
8. NO COMBUSTIBLE CONSTRUCTION SHALL OCCUR PRIOR TO NEW HYDRANT INSTALLATION.
9. BUILDING SQUARE FOOTAGES LISTED HEREON INCLUDE ALL COVERED PORCHES, PATIOS, ETC.

PLAN REVIEW No. 25 3804
BLDG PERMIT No.

DEVELOPMENTAL REVIEW COMMENTS

Plans and Scope of Review:

This project shall comply with the following:

The California Fire (CFC) & Building (CBC) Code, 2022 edition, as adopted by the Town of Los Gatos Town Code (LGTC), California Code of Regulations (CCR) and Health & Safety Code.

The scope of this project includes the following:
Request for exception to State Minimum Fire Safe Regulations for a new 7,699 SF two-story single family dwelling (Lot 10) as part of a 12 lots subdivision development.

Plan Status:
The Exception Request, per 14 CCR § 1270.06 is **APPROVED**.
Discussion:
This alternate proposes to mitigate deficiencies of required 20 feet roadway width per California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2 Articles 1-5, § 1273.01. and CFC Section 503. A 10 feet in length segment of roadway on Cerro Vista Dr that is less than the required 20 feet.

In order to mitigate the this noncompliant roadway width, the applicant proposes the following:
-Upgraded sprinkler system with additional heads in closets, bathrooms, attic and covered porch for the 7,699 SF SF house.
-4 heads hydraulic calculation sprinkler system will be provided.

Plan Review Comments:
-Make a note on building permit set coversheet that an approved AMMR/PRC 4290 request of exception is included and modified sprinkler system will be installed.
-A copy of the Alternate Means/Methods application form with approval signature shall be made part of the building permit drawing set, to be routed to Santa Clara County Fire Department for final approval
-A copy of this comment letter shall be made part of the building permit drawing set.

This review shall not be construed to be an approval of a violation of the provisions of the California Fire Code or of other laws or regulations of the jurisdiction. A permit presuming to give authority to violate or cancel the provisions of the fire code or other such laws or regulations shall not be valid. Any addition to or alteration of approved construction documents shall be approved in advance. [CFC, Ch.1, 105.3.6]

APPLICATION FOR USE OF ALTERNATE MATERIALS, METHODS OF CONSTRUCTION, OR MODIFICATION OF CODE

Project Street Address: 178 Twin Oaks Way
Project City: Los Gatos **Building Permit #** 25 1961

Applicant's Name: Dodge Family c/o Jim Foley/Pennant Properties
Applicant's Address: 223 W Main St Los Gatos CA 95030 Suite:
Phone Number: (408) 813-7490 Email: jimfoley@pennantproperties.com

The applicant hereby requests the following:

☒ Use of Alternate Materials or Method of Construction

☐ Modification of Code

Codes Affected:

☐ Building Code
☒ Fire Code
☐ Mechanical Code
☐ Electrical Code
☐ Others:

Specific section(s) of the code involved: (California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 2 Articles 1 & 2, § 1273.01, CFC Sec 503, PRC 4290)

Brief description of the request: Mitigate for a small section of roadway less than 20' wide to a new lot and potential dwelling.

The Building and Fire Official must evaluate information that the material(s), method of work, and / or modification is equal to the intent of the code in strength, effect, fire-resistance, durability, safety, etc.

PROJECT DESCRIPTION / DATA:

Site Area: 17.55 acres
APN: 532-16-006
General Plan Landuse: AG

Proposed Project:

12 Lot Subdivision consisting of the following:
3 BMR units detached on 3 proposed lots
9 Proposed Market Rate Homes on proposed lots

SHEET INDEX:

G0.0 Title Page / Project Info
G0.1 Existing Site Photos

TREE PROTECTION NOTES

SITE PREPARATION:
ALL EXISTING TREES SHALL BE FENCED WITHIN OR AT THE DRIP LINE (FOLIAR SPREAD) OF THE TREE. DEPENDING ON THE LOCATION OF THE TREE THE FENCING MAY NOT BE ABLE TO BE AT THE DRIPLINE. EXAMPLES OF THIS WOULD BE PUBLIC RIGHT OF WAY, NEAR PROPERTY LINES OR AROUND EXISTING STRUCTURES TO REMAIN. WHERE COMPLETE DRIP LINE FENCING IS NOT POSSIBLE, THE ADDITION OF STRAW WADDLES AND ORANGE SNOW FENCING WRAPPING THE TRUNK SHALL BE INSTALLED PER THE TREE PROTECTION DETAIL. THE FENCE SHOULD BE A MINIMUM OF SIX FEET HIGH, MADE OF GALVANIZED 11-GAUGE WIRE MESH WITH GALVANIZED POSTS OR ANY MATERIAL SUPERIOR IN QUALITY. A TREE PROTECTION ZONE (TPZ) SIGN SHALL BE AFFIXED TO FENCING AT APPROPRIATE INTERVALS AS DETERMINED BY THE ARBORIST ON SITE. SEE TREE PROTECTION DETAIL FOR ADDITIONAL INFORMATION, INCLUDING TREE PROTECTION ZONE SIGN. IF THE FENCE IS WITHIN THE DRIP LINE OF THE TREES, THE FOLIAR FRINGE SHALL BE RAISED TO OFFSET THE CHANCE OF LIMB DAMAGE FROM ACTIVE CONSTRUCTION.

ACTIVE CONSTRUCTION:
ALL CONTRACTORS, SUBCONTRACTORS AND OTHER PERSONNEL SHALL BE WARNED THAT ENCROACHMENT WITHIN THE FENCED AREA AND DRIPLINE IS PROHIBITED WITHOUT THE CONSENT OF THE CERTIFIED ARBORIST ON THE JOB. THIS INCLUDES, BUT IS NOT LIMITED TO, STORAGE OF LUMBER AND OTHER MATERIALS, DISPOSAL OF PAINTS, SOLVENTS OR OTHER NOXIOUS MATERIALS, PARKED CARS, GRADING EQUIPMENT OR OTHER HEAVY EQUIPMENT. IF CONSTRUCTION ACTIVITY NEEDS TO HAPPEN IN THE TPZ THE FENCE CAN BE MOVED TEMPORARILY FOR DELIVERY OF CONSTRUCTION MATERIALS. THE CONTRACTOR SHOULD MAKE ACCOMMODATIONS TO OFF LOAD ITEMS SUCH AS TRUSSES, TIMBER, PLASTERBOARD, WALLBOARD, CONCRETE, GYPSUM BOARD, FLOORING, ROOFING OR ANY OTHER HEAVY CONSTRUCTION MATERIAL OUTSIDE THE FOLIAR SPREAD OF THE TREE SO THERE IS NO HEAVY EQUIPMENT NEEDED THAT COULD CAUSE DAMAGE TO THE CANOPY OF THE TREE OR COMPACT THE ROOT ZONE. THE TREE PROTECTION FENCING SHOULD BE REESTABLISHED PER THE PLANS AND DETAILS IMMEDIATELY AFTER ANY ACTIVITY THROUGH THE TPZ. PENALTIES, BASED ON THE COST OF REMEDIAL REPAIRS AND THE EVALUATION GUIDE PUBLISHED BY THE INTERNATIONAL SOCIETY OF ARBORICULTURE, SHALL BE ASSESSED FOR DAMAGES TO THE TREES.

GRADING/EXCAVATING:
ALL GRADING PLANS THAT SPECIFY GRADING WITHIN THE DRIP LINE OF ANY TREE, OR WITHIN THE DISTANCE FROM THE TRUNK AS OUTLINED IN THE SITE PREPARATION SECTION ABOVE WHEN SAID DISTANCE IS OUTSIDE THE DRIP LINE, SHALL FIRST BE REVIEWED BY A CERTIFIED ARBORIST. PROVISIONS FOR AERATION, DRAINAGE, PRUNING, TUNNELING BENEATH ROOTS, ROOT PRUNING OR OTHER NECESSARY ACTIONS TO PROTECT THE TREES SHALL BE OUTLINED BY AN ARBORIST. IF TRENCHING IS NECESSARY WITHIN THE AREA AS DESCRIBED ABOVE, SAID TRENCHING SHALL BE UNDERTAKEN BY HAND LABOR AND DUG DIRECTLY BENEATH THE TRUNK OF THE TREE. ALL ROOTS 2 INCHES OR LARGER SHALL BE TUNNELED UNDER AND OTHER ROOTS SHALL BE CUT SMOOTHLY TO THE TRUNK SIDE OF THE TRENCH. THE TRUNK SIDE SHOULD BE DRAPED IMMEDIATELY WITH TWO LAYERS OF UNTREATED BURLAP TO A DEPTH OF 3 FEET FROM THE SURFACE. THE BURLAP SHALL BE SOAKED NIGHTLY AND LEFT IN PLACE UNTIL THE TRENCH IS BACK FILLED TO THE ORIGINAL LEVEL. AN ARBORIST SHALL EXAMINE THE TRENCH PRIOR TO BACK FILLING TO ASCERTAIN THE NUMBER AND SIZE OF ROOTS CUT, SO AS TO SUGGEST THE NECESSARY REMEDIAL REPAIRS.

REMEDIAL REPAIRS:
AN ARBORIST SHALL HAVE THE RESPONSIBILITY OF OBSERVING ALL ONGOING ACTIVITIES THAT MAY AFFECT THE TREES AND PRESCRIBING NECESSARY REMEDIAL WORK TO ENSURE THE HEALTH AND STABILITY OF THE TREES. THIS INCLUDES, BUT IS NOT LIMITED TO, ALL ARBORIST ACTIVITIES BROUGHT OUT IN THE PREVIOUS SECTIONS. IN ADDITION, PRUNING, AS OUTLINED IN INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES: PRUNING AND ANSI A300 PART 1 STANDARD PRACTICES: PRUNING, SHALL BE PRESCRIBED AS NECESSARY. FERTILIZING, AERATION, IRRIGATION, PEST CONTROL AND OTHER ACTIVITIES SHALL BE PRESCRIBED ACCORDING TO THE TREE NEEDS, LOCAL SITE REQUIREMENTS, AND STATE AGRICULTURAL PEST CONTROL LAWS. ALL SPECIFICATIONS SHALL BE IN WRITING. FOR PEST CONTROL OPERATIONS, CONSULT THE LOCAL COUNTY AGRICULTURAL COMMISSIONER'S OFFICE FOR INDIVIDUALS LICENSED AS PEST CONTROL ADVISORS OR PEST CONTROL OPERATORS.

FINAL INSPECTION:
UPON COMPLETION OF THE PROJECT, THE ARBORIST SHALL REVIEW ALL WORK UNDERTAKEN THAT MAY IMPACT THE EXISTING TREES. SPECIAL ATTENTION SHALL BE GIVEN TO CUTS AND FILLS, COMPACTING, DRAINAGE, PRUNING AND FUTURE REMEDIAL WORK. AN ARBORIST SHOULD SUBMIT A FINAL REPORT IN WRITING OUTLINING THE ONGOING REMEDIAL CARE FOLLOWING THE FINAL INSPECTION.

TREE REMOVAL NOTES

1. CONSTRUCTION PROTECTION FOR TREES MUST BE PROVIDED BEFCRE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY. SEE DETAILS AND NOTES ON THIS SHEET.
2. ALL TREES SHOWN FOR REMOVAL ARE PERMITTED UNDER CITY PD PERMIT. A NESTING BIRD SURVEY MAY BE REQUIRED IF TREE REMOVAL IS TO TAKE PLACE BETWEEN FEBRUARY 1 AND AUGUST 31. A QUALIFIED BIOLOGIST MUST COMPLETE THIS REPORT PRIOR TO TREE REMOVAL DONE DURING THE NESTING SEASON. REFER TO CONDITIONS OF THE PERMIT FOR ADDITIONAL INFORMATION.
3. CONTRACTOR SHALL TAKE CARE WHEN REMOVING TREES ADJACENT TO TREES TO REMAIN. PROVISIONS FOR THE PROTECTION OF EXISTING TREES MUST BE TAKEN INCLUDING WRAPPING THE TRUNK OF THE ADJACENT TREE PER THE TREE PROTECTION DETAIL. WHEN REMOVING ROOTS, CARE MUST BE TAKEN NOT TO DAMAGE ROOTS OF TREE TO REMAIN. ROOT PRUNING MAY BE NECESSARY AND MUST BE DONE UNDER THE SUPERVISION OF THE ARBORIST.
4. THE CONTRACTOR SHALL VISIT THE PROJECT SITE PRIOR TO BIDDING TO DETERMINE THE EXACT EXTENT OF ALL SITE DEMOLITION ITEMS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING UTILITIES IN THE FIELD PRIOR TO CONSTRUCTION. LOCATIONS SHOWN ON THE PLANS ARE APPROXIMATE AND ARE FOR GENERAL INFORMATION ONLY. HE SHALL BE RESPONSIBLE FOR MAKING HIMSELF FAMILIAR WITH ALL UNDERGROUND CONDITIONS PRIOR TO COMMENCEMENT OF WORK.
5. THESE PLANS MAY NOT SHOW ALL EXISTING CITY ELECTRICAL FACILITIES INCLUDING, BUT NOT LIMITED TO, TRAFFIC SIGNALS, STREETLIGHT AND TRAFFIC SIGNAL COMMUNICATION EQUIPMENT, CONDUIT, PULL BOXES, AND WIRING.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL SUCH FACILITIES AND FOR REPAIRING ANY SUCH FACILITIES THAT ARE DAMAGED DURING CONSTRUCTION. PAYMENT FOR LOCATING, COORDINATING, AND REPAIRING EXISTING CITY ELECTRICAL FACILITIES WILL BE DEEMED INCLUDED IN OTHER ITEMS OF WORK, AND NO ADDITIONAL COMPENSATION SHALL BE MADE THEREOF. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE SPECIFICATIONS & DETAILS.
7. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION ON THIS PROJECT. CALL U.S.A. AT (800) 624-2444
8. THE CONTRACTOR SHALL BE RESPONSIBLE UNDER THIS CONTRACT FOR REPAIRING AND REPLACING, AT HIS OWN EXPENSE, ANY STRUCTURES, FENCES, WALLS, OR PLANT LIFE DAMAGED OR DESTROYED BY HIS OPERATION. LIKEWISE, HE SHALL BE RESPONSIBLE FOR REPAIRING OR REPLACING ANY AND ALL DAMAGES, OCCURRING BY HIS OPERATION, ON ADJACENT PROPERTIES AND ANYWHERE OUTSIDE THE CONTRACT LIMIT LINES. THE DAMAGED ITEMS SHALL BE RESTORED TO THERE ORIGINAL CONDITIONS AND TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT.
9. THE CONTRACTOR SHALL BE RESPONSIBLE TO KEEP ALL STREET RIGHT-OF-WAYS CLEAN TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT ALL ITEMS INDICATED TO BE REMOVED SHALL BE DISPOSED OF FROM THE PROJECT SITE, EXCEPT ITEMS INDICATED TO BE RE-INSTALLED.
10. ALL TREES TO BE REMOVED SHALL HAVE THEIR STUMPS GROUND DOWN TO A MINIMUM DEPTH OF 24" REMOVE ALL LARGE ROOTS FROM PLANTING AREAS A MINIMUM DISTANCE OF 5' BEYOND THE DRIP LINE OF THE TREE.

SEC. 29.T-2005. PROTECTION OF TREES DURING CONSTRUCTION

(A) PROTECTIVE TREE FENCING SHALL SPECIFY THE FOLLOWING:
(1) SIZE AND MATERIALS. SIX (6) FOOT HIGH CHAIN LINK FENCING, MOUNTED ON TWO-INCH DIAMETER GALVANIZED IRON POSTS, SHALL BE DRIVEN INTO THE GROUND TO A DEPTH OF AT LEAST TWO (2) FEET AT NO MORE THAN 10-FOOT SPACING. FOR PAVING AREA THAT WILL NOT BE DEMOLISHED AND WHEN STIPULATED IN A TREE PRESERVATION PLAN, POSTS MAY BE SUPPORTED BY A CONCRETE BASE.

(2) AREA TYPE TO BE FENCED.
TYPE I: ENCLOSURE WITH CHAIN LINK FENCING OF EITHER THE ENTIRE DRIPLINE AREA OR AT THE TREE PROTECTION ZONE (TPZ), WHEN SPECIFIED BY A CERTIFIED OR CONSULTING ARBORIST.
TYPE II: ENCLOSURE FOR STREET TREES LOCATED IN A PLANTER STRIP: CHAIN LINK FENCE AROUND THE ENTIRE PLANTER STRIP TO THE OUTER BRANCHES.
TYPE III: PROTECTION FOR A TREE LOCATED IN A SMALL PLANTER CUTOUT ONLY (SUCH AS DOWNTOWN): ORANGE PLASTIC FENCING SHALL BE WRAPPED AROUND THE TRUNK FROM THE GROUND TO THE FIRST BRANCH WITH 2-INCH WOODEN BOARDS BOUND SECURELY ON THE OUTSIDE. CAUTION SHALL BE USED TO AVOID DAMAGING ANY BARK OR BRANCHES.

(3) DURATION OF TYPE I, II, III FENCING. FENCING SHALL BE ERECTED BEFORE DEMOLITION, GRADING OR CONSTRUCTION PERMITS ARE ISSUED AND REMAIN IN PLACE UNTIL THE WORK IS COMPLETED. CONTRACTOR SHALL FIRST OBTAIN THE APPROVAL OF THE PROJECT ARBORIST ON RECORD PRIOR TO REMOVING A TREE PROTECTION FENCE.

(4) WARNING SIGN. EACH TREE FENCE SHALL HAVE PROMINENTLY DISPLAYED AN 8.5 X 11-INCH SIGN STATING: "WARNING—TREE PROTECTION ZONE-THIS FENCE SHALL NOT BE REMOVED AND IS SUBJECT TO PENALTY ACCORDING TO TOWN CODE 29.T-2025".

(B) ALL PERSONS, SHALL COMPLY WITH THE FOLLOWING PRECAUTIONS:
(1) PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, INSTALL THE FENCE AT THE DRIPLINE, OR TREE PROTECTION ZONE (TPZ) WHEN SPECIFIED IN AN APPROVED ARBORIST REPORT, AROUND ANY TREE AND/OR VEGETATION TO BE RETAINED WHICH COULD BE AFFECTED BY THE CONSTRUCTION AND PROHIBIT ANY STORAGE OF CONSTRUCTION MATERIALS OR OTHER MATERIALS, EQUIPMENT CLEANING, OR PARKING OF VEHICLES WITHIN THE TPZ. THE DRIPLINE SHALL NOT BE ALTERED IN ANY WAY SO AS TO INCREASE THE ENCROACHMENT OF THE CONSTRUCTION.

(2) PROHIBIT ALL CONSTRUCTION ACTIVITIES WITHIN THE TPZ, INCLUDING BUT NOT LIMITED TO: EXCAVATION,GRADING, DRAINAGE AND LEVELING WITHIN THE DRIPLINE OF THE TREE UNLESS APPROVED BY THE DIRECTOR.

(3) PROHIBIT DISPOSAL OR DEPOSITING OF OIL, GASOLINE, CHEMICALS OR OTHER HARMFUL MATERIALS WITHIN THE DRIPLINE OF OR IN DRAINAGE CHANNELS, SWALES OR AREAS THAT MAY LEAD TO THE DRIPLINE OF A PROTECTED TREE.

(4) PROHIBIT THE ATTACHMENT OF WIRES, SIGNS OR ROPES TO ANY PROTECTED TREE.

(5) DESIGN UTILITY SERVICES AND IRRIGATION LINES TO BE LOCATED OUTSIDE OF THE DRIPLINE WHEN FEASIBLE.

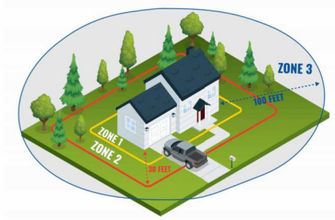
(6) RETAIN THE SERVICES OF A CERTIFIED OR CONSULTING ARBORIST WHO SHALL SERVE AS THE PROJECT ARBORIST FOR PERIODIC MONITORING OF THE PROJECT SITE AND THE HEALTH OF THOSE TREES TO BE PRESERVED. THE PROJECT ARBORIST SHALLBE PRESENT WHENEVER ACTIVITIES OCCUR WHICH MAY POSE A POTENTIAL THREAT TO THE HEALTH OF THE TREES TO BE PRESERVED AND SHALL DOCUMENT ALL SITE VISITS.

(7) THE DIRECTOR AND PROJECT ARBORIST SHALL BE NOTIFIED OF ANY DAMAGE THAT OCCURS TO A PROTECTED TREE DURING CONSTRUCTION SO THAT PROPER TREATMENT MAY BE ADMINISTERED. (ORD. NO. 2114, §§ I, II, 8-4-03)

SEC. 29.T-2010. PRUNING AND MAINTENANCE

ALL PRUNING SHALL BE IN ACCORDANCE WITH THE CURRENT VERSION OF THE INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES—TREE PRUNING AND ANSI A300-PART 1 TREE, SHRUB AND OTHER WOODY PLANT MANAGEMENT—STANDARD PRACTICES, (PRUNING) AND ANY SPECIAL CONDITIONS AS DETERMINED BY THE DIRECTOR. FOR DEVELOPMENTS, WHICH REQUIRE A TREE PRESERVATION REPORT, A CERTIFIED OR CONSULTING ARBORIST SHALL BE IN REASONABLE CHARGE OF ALL ACTIVITIES INVOLVING PROTECTED TREES, INCLUDING PRUNING, CABLING AND ANY OTHER WORK IF SPECIFIED.

(1) ANY PUBLIC UTILITY INSTALLING OR MAINTAINING ANY OVERHEAD WIRES OR UNDERGROUND PIPES OR CONDUITS IN THE VICINITY OF A PROTECTED TREE SHALL OBTAIN PERMISSION FROM THE DIRECTOR BEFORE PERFORMING ANY WORK, INCLUDING PRUNING, WHICH MAY CAUSE INJURY TO A PROTECTED TREE. (E.G. CABLE TV/FIBER OPTIC TRENCHING, GAS, WATER, SEWER TRENCH, ETC.).



(2) PRUNING FOR CLEARANCE OF UTILITY LINES AND ENERGIZED CONDUCTORS SHALL BE PERFORMED IN COMPLIANCE WITH THE CURRENT VERSION OF THE AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI) A300 (PART 1)- PRUNING, SECTION 5.9 UTILITY PRUNING. USING SPIKES OR GAFFS WHEN PRUNING, EXCEPT WHERE NO OTHER ALTERNATIVE IS AVAILABLE, IS PROHIBITED.

(3) NO PERSON SHALL PRUNE, TRIM, CUT OFF, OR PERFORM ANY WORK, ON A SINGLE OCCASION OR CUMULATIVELY, OVER A THREE-YEAR PERIOD, AFFECTING TWENTY-FIVE PERCENT OR MORE OF THE CROWN OF ANY PROTECTED TREE WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION EXCEPT FOR POLLARDING OF FRUITLESS MULBERRY TREES (MORUS ALBA) OR OTHER SPECIES APPROVED BY THE TOWN ARBORIST. APPLICATIONS FOR A PRUNING PERMIT SHALL INCLUDE PHOTOGRAPHS INDICATING WHERE PRUNING IS PROPOSED.

(4) NO PERSON SHALL REMOVE ANY HERITAGE TREE OR LARGE PROTECTED TREE BRANCH OR ROOT THROUGH PRUNING OR OTHER METHOD GREATER THAN FOUR (4) INCHES IN DIAMETER (12.5" IN CIRCUMFERENCE) WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION.

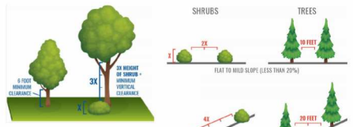
Defensible Space Zones

Following are guidelines from Santa Clara County Fire Department on how to create and maintain effective defensible space zones:

Zone 1, extends 0 to 5 feet out: The Noncombustible Zone

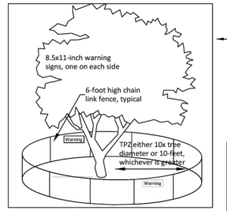
- Remove all plants and vegetation, especially those touching your home.
- Clean roofs and gutters of dead leaves, debris and pine needles that could catch embers.
- Replace or repair any loose or missing shingles or roof tiles to prevent ember penetration.
- Reduce embers that could pass through vents in the eaves by installing 1/8 inch metal mesh screening.
- Clean debris from exterior attic vents and install 1/8 inch metal mesh screening to block embers.
- Repair or replace damaged or loose window screens and any broken windows.
- Screen or box-in areas below patios and decks with wire mesh to prevent debris and combustible materials from accumulating.
- Move any flammable material away from wall exteriors – mulch, flammable plants, leaves and needles, firewood piles – anything that can burn. Remove anything stored underneath decks or porches.
- Mandated for new construction

Zone 2, extends 30 feet out: The Clean and Green Zone



- Remove all dead plants, grass and weeds (vegetation).
- Remove dead or dry leaves and pine needles from your yard, roof and rain gutters.
- Trim trees regularly to keep branches a minimum of 10 feet from other trees.
- Remove branches that hang over your roof and keep dead branches 10 feet away from your chimney.

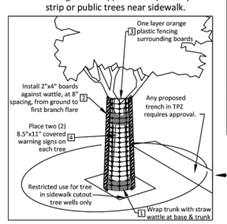
Zone 3, extends 100 feet out: The Reduced Fuel Zone



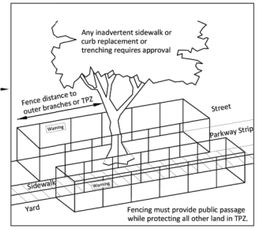
- Create horizontal spacing between shrubs and trees. (See diagram below)
- Create vertical spacing between grass, shrubs and trees. (See diagram below)
- Dispose of heavy accumulations of ground litter/debris.
- Remove dead plant and tree material.
- Remove small conifers growing between mature trees.
- Remove vegetation adjacent to storage sheds or other outbuildings within this area.
- Trees 30 to 60 feet from the home should have at least 12 feet between canopy tops.
- Trees 60 to 100 feet from the home should have at least 6 feet between the canopy tops.

Plant and Tree Spacing

For vertical spacing remove all tree branches at least 6 feet from the ground. If there is a shrub near the tree, the branch clearance needs to be 3 times the height of the shrub. *Example: A 5-foot shrub is growing near a tree. 3×5 = 15 feet of clearance needed between the top of the shrub and the lowest tree branch.*



Tree Protection Zone (TPZ) shown in gray (radius of TPZ equals 10-times the diameter of the tree or 10-feet, whichever is greater).

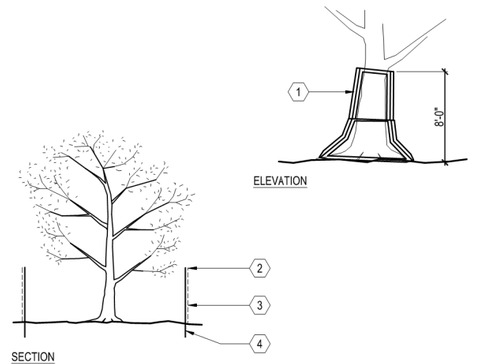


Type I Tree Protection: Layout configuration applies to all Protected Trees, matching the site diagram with the tree preservation report (TPR) distances written for this project. Fencing should be shown on plans as it will be installed. A curved fence for a TPZ is generally not practical.

Inspection pass/fail is dependent on correct layout and mounted sign placard.

Place two (2) 8.5"x11" covered warning signs at each tree.

Type II Tree Protection: Layout configuration applies to all parkway strip or public trees near sidewalk.



Type III Tree Protection: Layout for trunk protection applies to all Protected Trees when exclusively authorized for sidewalk cut-out. To be used only with approval from Public Works Operations.

Required protection shall be executed before demolition, excavation or site work occurs.

NOTES:
1. CONSTRUCTION PERIOD PROTECTION FOR TREES SHOULD BE PROVIDED BEFORE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY.
2. WHEN CONSTRUCTION IS TO TAKE PLACE BENEATH A TREE CANOPY ON ONE SIDE, THE FENCE SHOULD BE SITED 2 TO 3 FEET BEYOND THAT CONSTRUCTION, BUT BETWEEN CONSTRUCTION AND THE TREE TRUNK.
3. IF CONSTRUCTION OR PAVING IS TO TAKE PLACE THROUGHOUT THE AREA BENEATH CANOPY, AND DRIP LINE FENCING IS NOT PRACTICAL, SNOW FENCING SHOULD BE USED TO PROTECT THE TRUNKS FROM DAMAGE.

1. SNOW FENCING THREE LAYERS OF WIRE AND LATH SNOW FENCING TO 8 FEET ABOVE GROUND ON TREES WHERE CONSTRUCTION WILL TAKE PLACE BENEATH THE CANOPY.
2. TOP OF FENCE WITH FLUORESCENT FLAGGING TAPE HUNG EVERY 10 FEET
3. 6' CHAIN LINK OR WELDED WIRE MESH
4. 8' FENCE POST OF 2" DIAMETER GI PIPE OR T-ANGLE POST
5. FENCE PLACED AT DRIP LINE OR 50% GREATER THAN THE TREE CANOPY RADIUS WHERE POSSIBLE

e. Total project IA	694	0	694	96,692	97,386
f. Total new and replaced IA			97,386		
Pervious Area (PA)					
g. Total on-site PA	764,361				667,669
h. Total off-site PA[3]	497				497
i. Total project PA	764,858				668,166
j. Total Project Area (2.e.+2.i.)	765,552				765,552
k. Percent Replacement of IA in Redevelopment Projects: (Total Existing IA Replaced ÷ Total Existing IA) x 100% 100 %					

[1] "Retained" means to leave existing IA in place. An IA that receives surface treatment (e.g., pavement resurfacing/slurry seal/grind) only is considered "retained". This category does not apply to off-site areas.

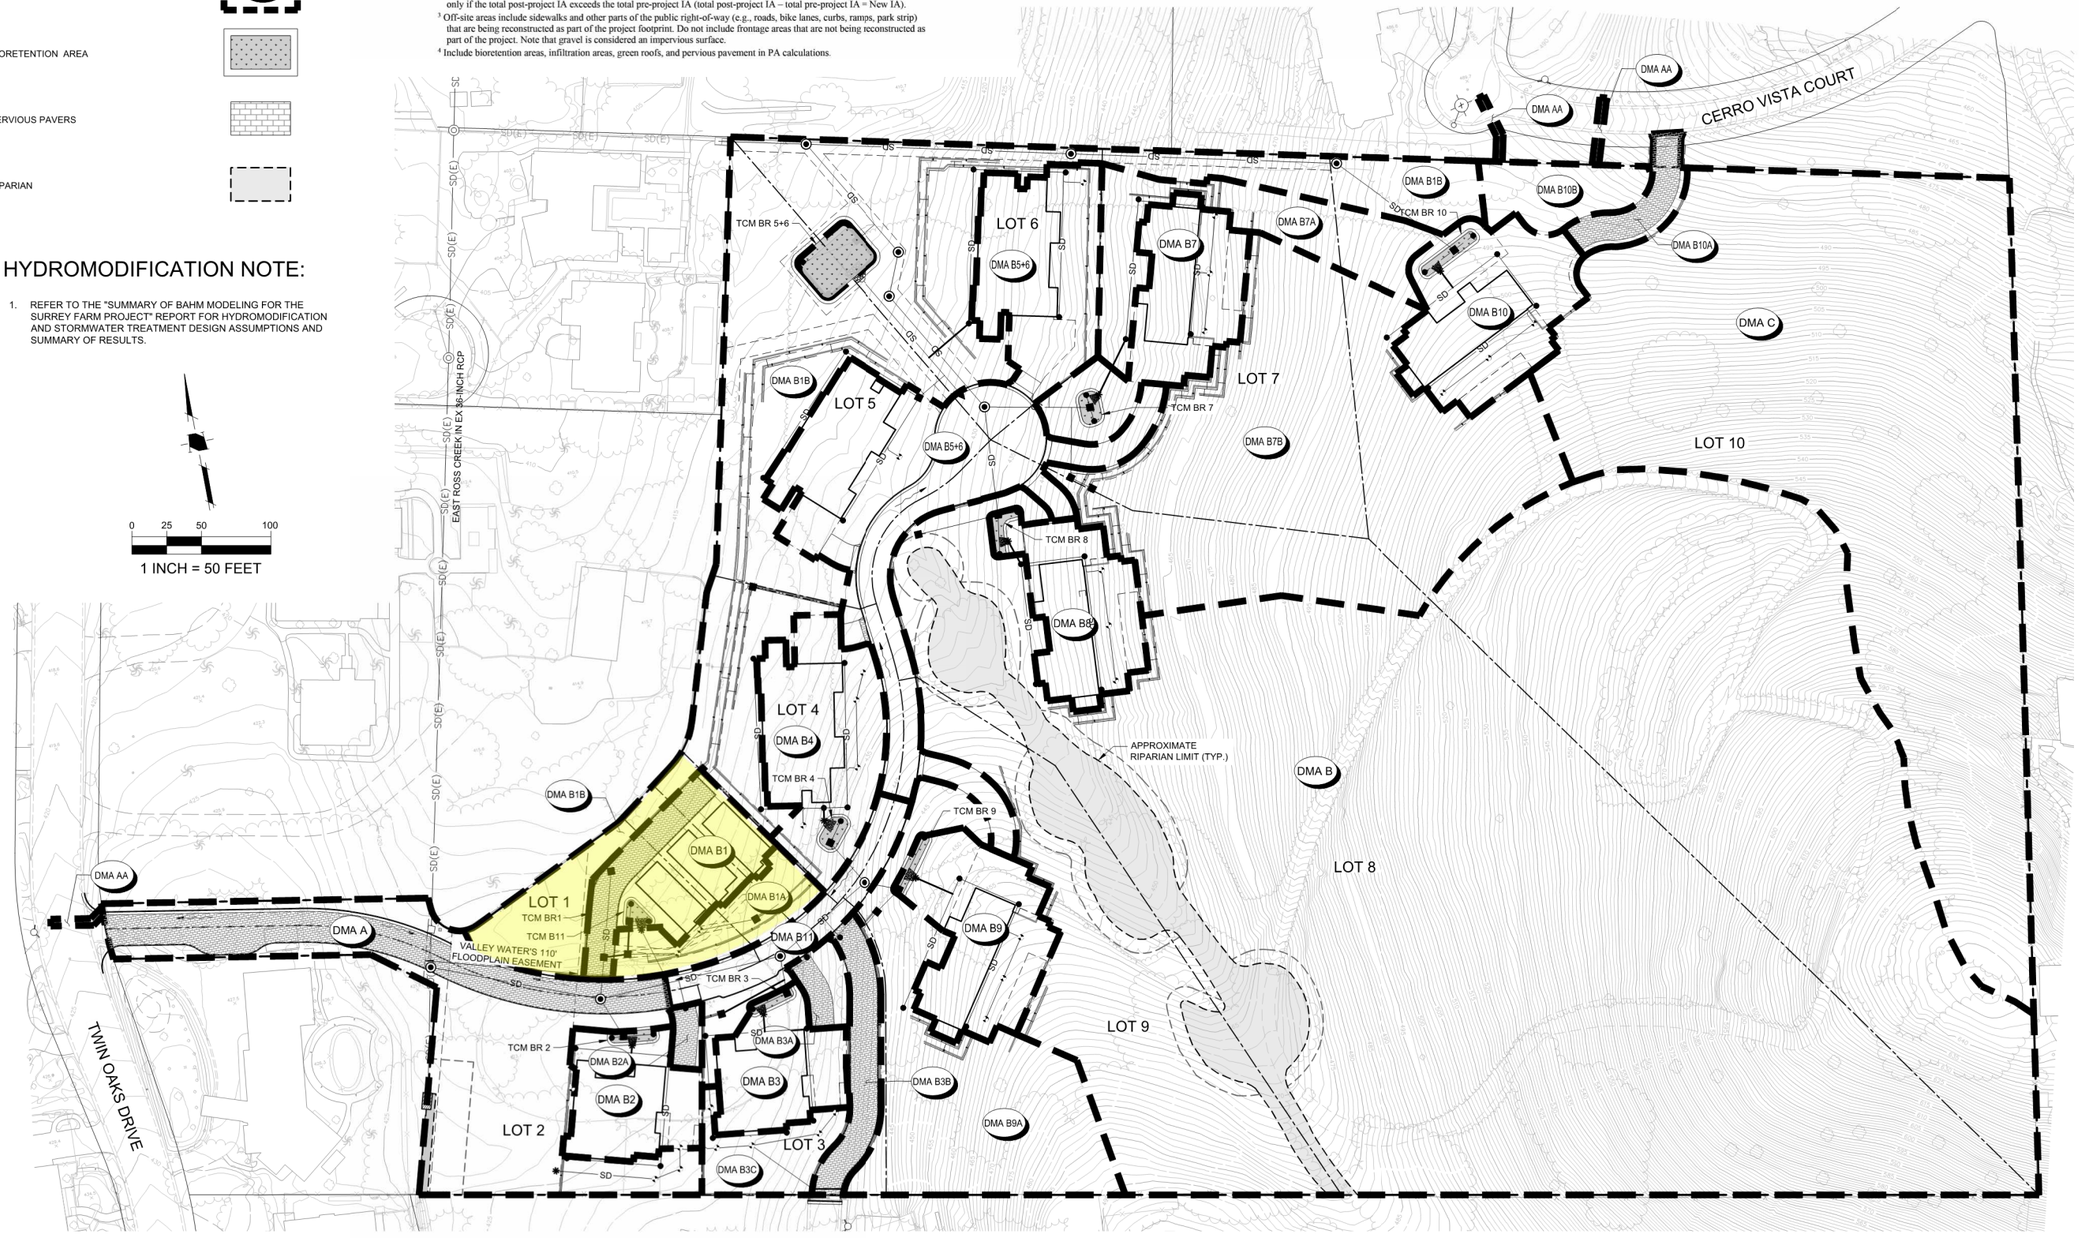
[2] The "new" and "replaced" IA are based on the total project area and not specific locations within the project. Constructed IA on a project that does not exceed the total pre-project IA will be considered "replaced" IA. A project will have "new" IA only if the total post-project IA exceeds the total pre-project IA (total post-project IA – total pre-project IA = New IA).

[3] Off-site areas include sidewalks and other parts of the public right-of-way (e.g., roads, bike lanes, curbs, ramps, park strip) that are being reconstructed as part of the project footprint. Do not include frontage areas that are not being reconstructed as part of the project. Note that gravel is considered an impervious surface.

[4] Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

BIORETENTION & FLOW-THROUGH PLANTER NOTES:

1. SEE GRADING PLAN FOR BASIN FOOTPRINT AND DESIGN ELEVATIONS.
2. PLACE 3 INCHES OF COMPOSTED, NON-FLOATABLE MULCH IN AREAS BETWEEN STORMWATER PLANTINGS AND SIDE SLOPE.
3. SEE LANDSCAPE PLAN FOR MULCH, PLANT MATERIALS AND IRRIGATION REQUIREMENTS
4. CURB CUTS SHALL BE A MINIMUM 18" WIDE AND SPACED AT MAXIMUM 10' O.C. INTERVALS AND SLOPED TO DIRECT STORMWATER TO DRAIN INTO THE BASIN. CURB CUTS SHALL ALSO NOT BE PLACED INLINE WITH OVERFLOW CATCH BASIN. SEE GRADING PLAN FOR MORE DETAIL ON LOCATIONS OF CURB CUTS.
5. A MINIMUM 0.2' DROP BETWEEN STORM WATER ENTRY POINT (I.E. CURB OPENING, FLUSH CURB, ETC.) AND ADJACENT LANDSCAPE FINISHED GRADE.
6. DO NOT COMPACT NATIVE SOIL / SUBGRADE AT BOTTOM OF BASIN. LOOSEN SOIL TO 12" DEPTH.



PERVIOUS PAVER REQUIREMENTS

CONTRACTOR OR PERMITEE SHALL:

- PROVIDE CERTIFICATION FROM THE PAVER MANUFACTURER THAT THE PAVERS MEET THE REQUIREMENTS OF THE C3 STORMWATER HANDBOOK FOR PERVIOUS PAVERS. THIS INCLUDES, BUT IS NOT LIMITED TO, HAVING A MINIMUM SURFACE INFILTRATION RATE OF 100"/HR WHEN TESTED IN ACCORDANCE WITH ASTM C1701.
- ONLY CONTRACTORS HOLDING CERTIFICATION OF COMPLETION IN THE INTERLOCKING CONCRETE PAVEMENT INSTITUTES PICP INSTALLER TECHNICIAN COURSE SHALL BE USED TO INSTALL THE PAVERS AND AT LEAST ONE FOREMAN WITH THIS CERTIFICATION MUST BE ON THE JOBSITE AT ALL TIMES DURING CONCRETE PAVER INSTALLATION.
- PROTECT THE EXCAVATED AREA FOR PERVIOUS PAVERS FROM EXCESSIVE COMPACTION DUE TO CONSTRUCTION TRAFFIC AND PROTECT THE FINISHED PAVEMENT FROM CONSTRUCTION TRAFFIC.

STANDARD STORMWATER CONTROL NOTES:

- STANDING WATER SHALL NOT REMAIN IN THE TREATMENT MEASURES FOR MORE THAN FIVE DAYS, TO PREVENT MOSQUITO GENERATION. SHOULD ANY MOSQUITO ISSUES ARISE, CONTACT THE SANTA CLARA VALLEY VECTOR CONTROL DISTRICT (DISTRICT). MOSQUITO LARVICIDES SHALL BE APPLIED ONLY WHEN ABSOLUTELY NECESSARY, AS INDICATED BY THE DISTRICT, AND THEN ONLY BY A LICENSED PROFESSIONAL OR CONTRACTOR. CONTACT INFORMATION FOR THE DISTRICT IS PROVIDED BELOW.
- DO NOT USE PESTICIDES OR OTHER CHEMICAL APPLICATIONS TO TREAT DISEASED PLANTS, CONTROL WEEDS OR REMOVED UNWANTED GROWTH. EMPLOY NON-CHEMICAL CONTROLS (BIOLOGICAL, PHYSICAL AND CULTURAL CONTROLS) TO TREAT A PEST PROBLEM, PRUNE PLANTS PROPERLY AND AT THE APPROPRIATE TIME OF YEAR. PROVIDE ADEQUATE IRRIGATION FOR LANDSCAPE PLANTS. DO NOT OVER WATER.

STORMWATER CONTROL PLAN

5.0

P:\4185105\PLUPERMIT\4185105W_LOT 1.DWG
PLOTTED: 9/12/2025 11:32 AM

PROJECT SITE INFORMATION:

1. **SOILS TYPE: C (SANDY LOAM)**
2. **GROUND WATER DEPTH: 30' - 50'**
3. **NAME OF RECEIVING BODY: GUADALUPE CREEK**
4. **FLOOD ZONE: X**
5. **FLOOD ELEVATION (IF APPLICABLE): N/A**

OPERATION AND MAINTENANCE INFORMATION:

I. **PROPERTY INFORMATION:**

I.A. PROPERTY ADDRESS:
178 TWIN OAKS DRIVE
LOS GATOS, CA, 95032

I.B. PROPERTY OWNER:
JEFFREY L DODGE EXEMPT TRUST

II. **RESPONSIBLE PARTY FOR MAINTENANCE:**

II.A. CONTACT:
LARRY DODGE

II.B. PHONE NUMBER OF CONTACT:
858-243-7768

II.C. EMAIL:
lddodge@gmail.com

II.D. ADDRESS:
PO BOX 2029
RANCHO SANTA FE, CA 92067

SOURCE CONTROL MEASURES:

1. BENEFICIAL LANDSCAPING.
2. MAINTENANCE (PAVEMENT SWEEPING, CATCH BASIN CLEANING, GOOD HOUSEKEEPING).
3. STORM DRAIN LABELING.

SITE DESIGN MEASURES:

1. MINIMIZE LAND DISTURBED
2. MINIMUM-IMPACT STREET OR PARKING LOT DESIGN
3. PERVIOUS PAVEMENT
4. OTHER SELF-TREATING AREA
5. PRESERVE OPEN SPACE
6. PROTECTED RIPARIAN AND WETLAND AREAS/BUFFERS

BIOTREATMENT SOIL REQUIREMENTS

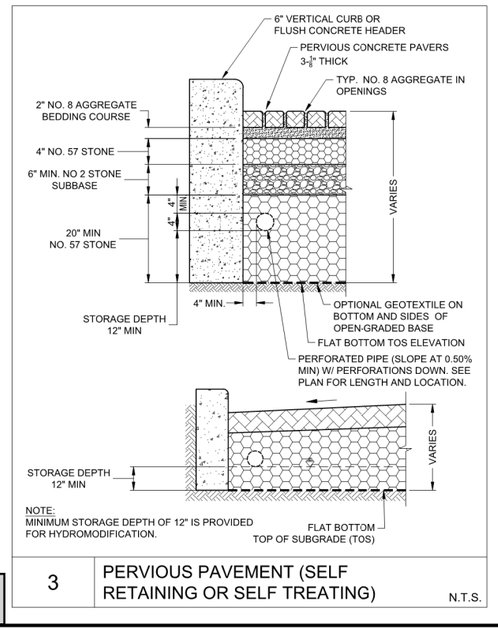
- BIORETENTION SOIL MIX SHALL MEET THE REQUIREMENTS AS OUTLINED IN APPENDIX C OF THE C.3 STORM WATER HANDBOOK AND SHALL BE A MIXTURE OF FINE SAND AND COMPOST MEASURED ON A VOLUME BASIS OF 60-70% SAND AND 30-40% COMPOST. CONTRACTOR TO REFER TO APPENDIX C FOR SAND AND COMPOST MATERIAL SPECIFICATIONS. CONTRACTOR MAY OBTAIN A COPY OF THE C3 HANDBOOK AT : HTTPS://CLEANWATER.SCCGOV.ORG/SITES/G/FILES/EXJCPB461/FILES/SCVURPPP_C.PDF
- PRIOR TO ORDERING THE BIOTREATMENT SOIL MIX OR DELIVERY TO THE PROJECT SITE, CONTRACTOR SHALL PROVIDE A BIOTREATMENT SOIL MIX SPECIFICATION CHECKLIST, COMPLETED BY THE SOIL MIX SUPPLIER AND CERTIFIED TESTING LAB.

TABLE 1
ROUTINE MAINTENANCE ACTIVITIES FOR BIORETENTION AREAS

NO.	MAINTENANCE TASK	FREQUENCY OF TASK
1	REMOVE OBSTRUCTIONS, WEEDS, DEBRIS AND TRASH FROM BIORETENTION AREA AND ITS INLETS AND OUTLETS; AND DISPOSE OF PROPERLY.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
2	INSPECT BIORETENTION AREA FOR STANDING WATER. IF STANDING WATER DOES NOT DRAIN WITHIN 2-3 DAYS, TILL AND REPLACE THE SURFACE BIOTREATMENT SOIL WITH THE APPROVED SOIL MIX AND REPLANT.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
3	CHECK UNDERDRAINS FOR CLOGGING. USE THE CLEANOUT RISER TO CLEAN ANY CLOGGED UNDERDRAINS.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
4	MAINTAIN THE IRRIGATION SYSTEM AND ENSURE THAT PLANTS ARE RECEIVING THE CORRECT AMOUNT OF WATER (IF APPLICABLE).	QUARTERLY
5	ENSURE THAT THE VEGETATION IS HEALTHY AND DENSE ENOUGH TO PROVIDE FILTERING AND PROTECT SOILS FROM EROSION. PRUNE AND WEED THE BIORETENTION AREA. REMOVE AND/OR REPLACE ANY DEAD PLANTS.	ANNUALLY, BEFORE THE WET SEASON BEGINS
6	USE COMPOST AND OTHER NATURAL SOIL AMENDMENTS AND FERTILIZERS INSTEAD OF SYNTHETIC FERTILIZERS, ESPECIALLY IF THE SYSTEM USES AN UNDERDRAIN.	ANNUALLY, BEFORE THE WET SEASON BEGINS
7	CHECK THAT MULCH IS AT APPROPRIATE DEPTH (2 - 3 INCHES PER SOIL SPECIFICATIONS) AND REPLENISH AS NECESSARY BEFORE WET SEASON BEGINS. IT IS RECOMMENDED THAT 2" – 3" OF ARBOR MULCH BE REAPPLIED EVERY YEAR.	ANNUALLY, BEFORE THE WET SEASON BEGINS
8	INSPECT THE ENERGY DISSIPATION AT THE INLET TO ENSURE IT IS FUNCTIONING ADEQUATELY, AND THAT THERE IS NO SCOUR OF THE SURFACE MULCH. REMOVE ACCUMULATED SEDIMENT.	ANNUALLY, BEFORE THE WET SEASON BEGINS
9	INSPECT OVERFLOW PIPE TO ENSURE THAT IT CAN SAFELY CONVEY EXCESS FLOWS TO A STORM DRAIN. REPAIR OR REPLACE DAMAGED PIPING.	ANNUALLY, BEFORE THE WET SEASON BEGINS
10	REPLACE BIOTREATMENT SOIL AND MULCH, IF NEEDED. CHECK FOR STANDING WATER, STRUCTURAL FAILURE AND CLOGGED OVERFLOWS. REMOVE TRASH AND DEBRIS. REPLACE DEAD PLANTS.	
11	INSPECT BIORETENTION AREA USING THE ATTACHED INSPECTION CHECKLIST.	ANNUALLY, BEFORE THE WET SEASON

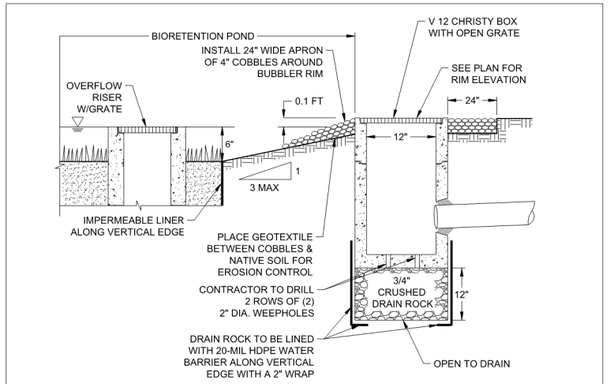
TABLE 2
ROUTINE MAINTENANCE ACTIVITIES FOR PERVIOUS PAVEMENT

NO.	MAINTENANCE TASK	FREQUENCY OF TASK
1	CHECK FOR SEDIMENT AND DEBRIS ACCUMULATION. PREVENT SOIL FROM WASHING OR BLOWING ONTO THE PAVEMENT. DO NOT STORE SAND, SOIL, MULCH OR OTHER LANDSCAPING MATERIALS ON PERVIOUS PAVEMENT SURFACES.	TWO TO FOUR TIMES ANNUALLY
2	CONDUCT PREVENTATIVE SURFACE CLEANING, USING COMMERCIALLY AVAILABLE REGENERATIVE AIR OR VACUUM SWEEPERS, TO REMOVE SEDIMENT AND DEBRIS.	TWO TO FOUR TIMES ANNUALLY
3	INSPECT FOR ANY SIGNS OF PAVEMENT FAILURE. REPAIR ANY SURFACE DEFORMATIONS OR BROKEN PAVERS. REPLACE MISSING JOINT FILLER IN PICP.	TWO TO FOUR TIMES ANNUALLY
4	CHECK FOR STANDING WATER ON THE PAVEMENT SURFACE WITHIN 30 MINUTES AFTER A STORM EVENT.	TWO TO FOUR TIMES ANNUALLY
5	INSPECT UNDERDRAIN OUTLETS AND CLEANOUTS, PREFERABLY BEFORE THE WET SEASON. REMOVE TRASH/DEBRIS.	TWO TO FOUR TIMES ANNUALLY
6	REMOVE SEDIMENT AND DEBRIS ACCUMULATION ON PERVIOUS PAVEMENT.	TWO TO FOUR TIMES ANNUALLY
7	REMOVE WEEDS. MOW VEGETATION IN GRID PAVEMENTS (SUCH AS TURF BLOCK) AS NEEDED.	AS NEEDED
8	PERFORM RESTORATIVE SURFACE CLEANING WITH A VACUUM SWEEPER, AND/OR RECONSTRUCTION OF PART OF THE PERVIOUS SURFACE TO RESTORE SURFACE PERMEABILITY AS NEEDED. REPLENISH AGGREGATE IN PICP JOINTS OR GRIDS AS NEEDED AFTER RESTORATIVE SURFACE CLEANING.	AS NEEDED
9	POWER WASHING WITH SIMULTANEOUS VACUUMING ALSO CAN BE USED TO RESTORE SURFACE INFILTRATION TO HIGHLY CLOGGED AREAS OF PERVIOUS CONCRETE, POROUS ASPHALT OR PICP, BUT IS NOT RECOMMENDED FOR GRID PAVEMENTS.	AS NEEDED
10	INSPECT PERVIOUS PAVING AREA USING THE ATTACHED INSPECTION CHECKLIST.	QUARTERLY OR AS NEEDED



Drainage Management Area (DMA) Summary Table

Complete the information below at the Building Permit stage for Regulated C3 Projects and Non-Regulated Green Stormwater Infrastructure Projects



Project Name	Surrey Farm Estates

EROSION AND SEDIMENT CONTROL NOTES

1. CONTRACTOR/OWNER:
   JEFF CURRAN
   1475 SARATOGA AVENUE
   SAN JOSE, CA 95129
   (408) 252-9131

   IT SHALL BE THE OWNER'S RESPONSIBILITY TO MAINTAIN CONTROL OF THE ENTIRE CONSTRUCTION OPERATION AND TO KEEP THE ENTIRE SITE IN COMPLIANCE WITH THE SOIL EROSION CONTROL PLAN.
2. CIVIL ENGINEER:
   HMH ENGINEERS
   1570 OAKLAND ROAD
   SAN JOSE, CA 95131
   ATTN: RAFAEL HERNANDEZ
   408 487 2200
3. THIS PLAN IS INTENDED TO BE USED FOR INTERIM EROSION AND SEDIMENT CONTROL ONLY AND IS NOT TO BE USED FOR FINAL ELEVATIONS OR PERMANENT IMPROVEMENTS.
4. IT IS THE RESPONSIBILITY OF THE OWNER/CONTRACTOR TO ENSURE THAT NO MUD OR SILTATION LEAVES THE PROJECT SITE.
5. INTERIM EROSION CONTROL MEASURES MUST BE COMPLETED AND IN PLACE BY OCTOBER 1.
6. ALL INTERIM EROSION CONTROL MEASURES MUST BE CONTINUOUSLY MAINTAINED THROUGHOUT THE OCTOBER 1 TO APRIL 15 RAINY SEASON.
7. CALL THE INSPECTION LINE AT (408) 399-5760 BY SEPTEMBER 15 FOR INSPECTION OF EROSION CONTROL DEVICES. CALL 24 HOURS IN ADVANCE. INCLUDE GRADING PERMIT NUMBER.
8. IF EROSION CONTROL MEASURES ARE NOT IN PLACE AS REQUIRED OR NOT MAINTAINED, ALL WORK SHALL CEASE UNTIL EROSION CONTROL MEASURES ARE REMEDIED.

MAINTENANCE SCHEDULE

CONTROL	INSPECTION FREQUENCY	MAINTENANCE/REPAIR MEASURES
STABILIZED CONSTRUCTION ENTRANCE	WEEKLY & AFTER EACH RAIN	REPLACE GRAVEL MATERIAL WHEN VOIDS ARE PRESENT REMOVE ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS WITHIN 24 HOURS REMOVE GRAVEL AT COMPLETION OF CONSTRUCTION
STORM DRAIN INLET PROTECTION	WEEKLY & AFTER EACH RAIN	REPLACE CLOGGED FILTER FABRIC IMMEDIATELY REMOVE SEDIMENT WHEN IT REACHES 1/2 THE HEIGHT OF THE FILTER
SEDIMENT BASIN	WEEKLY & AFTER EACH RAIN	REMOVE SEDIMENT WHEN THE SEDIMENT STORAGE ZONE IS HALF FULL REPAIR EROSION AS NECESSARY UNCLOG OUTLET RISER
HYDROSEED/HYDROMULCH EROSION CONTROL BLANKETS	PERIODICALLY DURING & AFTER EACH RAIN	PRIOR TO RESEEDING, REPAIR ALL RILLS AND GULLIES REMOVE SEDIMENT BUILDUP AT TOE OF SLOPES REAPPLY SEED AND/OR MULCH TO AREAS THAT HAVE BEEN REPAIRED, ERODED, OR ARE WITHOUT ADEQUATE VEGETATION DISLOCATED BLANKETS, NETS, OR MATS SHOULD BE REPAIRED OR REPLACED
STRAW ROLLS	WEEKLY & AFTER EACH RAIN	REPAIR WHENEVER STRAW ROLL IS DAMAGED REMOVE SEDIMENT WHEN IT REACHES 1/3 THE HEIGHT OF THE ROLLS ESPECIALLY IF HEAVY RAINS ARE EXPECTED

BUILDING PAD PROTECTION NOTE:

1. IF PAD WILL REMAIN WITHOUT BUILDING CONSTRUCTION DURING THE RAINY SEASON, THE PAD SHALL BE STABILIZED OR PROVIDED WITH AN EROSION BLANKET TO PROTECT THE BUILDING PAD.

EROSION CONTROL PLAN NOTE:

THIS WATER POLLUTION CONTROL PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS. THE CONTRACTOR SHALL IMPLEMENT BEST MANAGEMENT PRACTICES (BMPS) LISTED IN THE STORM WATER POLLUTION PREVENTION PLAN (SWPPP), AND SHALL IMPLEMENT AND MAINTAIN THE SWPPP FOR THE PROJECT IN FULL COMPLIANCE WITH THE REVISED STATE REGULATIONS TO CONTROL THE DISCHARGE OF STORMWATER POLLUTANTS.

Pollution Prevention — It's Part of the Plan

Make sure your crews and subs do the job right!

Runoff from streets and other paved areas is a major source of pollution in San Francisco Bay. Construction activities can directly affect the health of the Bay unless contractors and crews plan ahead to keep dirt, debris, and other construction waste away from storm drains and local creeks. Following these guidelines will ensure your compliance with local ordinance requirements.

Materials storage & spill cleanup

Non-hazardous materials management

- ✓ Sand, dirt, and similar materials must be stored at least 10 feet from catch basins, and covered with a tarp during wet weather or when rain is forecast.
- ✓ Use (but don't overuse) reclaimed water for dust control as needed.
- ✓ Sweep streets and other paved areas daily. Do not wash down streets or work areas with water!
- ✓ Recycle all asphalt, concrete, and aggregate base material from demolition activities.
- ✓ Check dumpsters regularly for leaks and to make sure they don't overflow. Repair or replace leaking dumpsters promptly.

Hazardous materials management

- ✓ Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, state, and federal regulations.
- ✓ Store hazardous materials and wastes in secondary containment and cover them during wet weather.
- ✓ Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- ✓ Be sure to arrange for appropriate disposal of all hazardous wastes.

Spill prevention and control

- ✓ Keep a stockpile of spill cleanup materials (rags, absorbents, etc.) available at the construction site at all times.
- ✓ When spills or leaks occur, contain them immediately and be particularly careful to prevent leaks and spills from reaching the gutter, street, or storm drain. Never wash spilled material into a gutter, street, storm drain, or creek!
- ✓ Report any hazardous materials spills immediately! Dial 911 or your local emergency response number.

Vehicle and equipment maintenance & cleaning

- ✓ Inspect vehicles and equipment for leaks frequently. Use drip pans to catch leaks until repairs are made; repair leaks promptly.
- ✓ Fuel and maintain vehicles on site only in a bermed area or over a drip pan that is big enough to prevent runoff.
- ✓ If you must clean vehicles or equipment on site, clean with water only in a bermed area that will not allow rinsewater to run into gutters, streets, storm drains, or creeks.
- ✓ Do not clean vehicles or equipment on-site using soaps, solvents, degreasers, steam cleaning equipment, etc.

Earthwork & contaminated soils

- ✓ Keep excavated soil on the site where it is least likely to collect in the street. Transfer to dump trucks should take place on the site, not in the street.
- ✓ Use hay bales, silt fences, or other control measures to minimize the flow of silt off the site.

- ✓ Avoid scheduling earth moving activities during the rainy season if possible. If grading activities during wet weather are allowed in your permit, be sure to implement all control measures necessary to prevent erosion.
- ✓ Mature vegetation is the best form of erosion control. Minimize disturbance to existing vegetation whenever possible.
- ✓ If you disturb a slope during construction, prevent erosion by securing the soil with erosion control fabric, or seed with fast-growing grasses as soon as possible. Place hay bales down-slope until soil is secure.
- ✓ If you suspect contamination (from site history, discoloration, odor, texture, abandoned underground tanks or pipes, or buried debris), call your local fire department for help in determining what testing should be done.
- ✓ Manage disposal of contaminated soil according to Fire Department instructions.

Dewatering operations

- ✓ Reuse water for dust control, irrigation, or another on-site purpose to the greatest extent possible.
- ✓ Be sure to call your city's storm drain inspector before discharging water to a street, gutter, or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- ✓ In areas of known contamination, testing is required prior to reuse or discharge of groundwater. Consult with the city inspector to determine what testing to do and to interpret results. Contaminated groundwater must be treated or hauled off-site for proper disposal.

Saw cutting

- ✓ Always completely cover or barricade storm drain inlets when saw cutting. Use filter fabric, hay bales, sand bags, or fine gravel dams to keep slurry out of the storm drain system.
- ✓ Shovel, absorb, or vacuum saw-cut slurry and pick up all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- ✓ If saw cut slurry enters a catch basin, clean it up immediately.

Paving/asphalt work

- ✓ Do not pave during wet weather or when rain is forecast.
- ✓ Always cover storm drain inlets and manholes when paving or applying seal coat, tack coat, slurry seal, or fog seal.
- ✓ Place drip pans or absorbent material under paving equipment when not in use.
- ✓ Protect gutters, ditches, and drainage courses with hay bales, sand bags, or earthen berms.
- ✓ Do not sweep or wash down excess sand from sand sealing into gutters, storm drains, or creeks. Collect sand and return it to the stockpile, or dispose of it as trash.
- ✓ Do not use water to wash down fresh asphalt concrete pavement.

Concrete, grout, and mortar storage & waste disposal

- ✓ Be sure to store concrete, grout, and mortar under cover and away from drainage areas. These materials must never reach a storm drain.
- ✓ Wash out concrete equipment/trucks off-site or designate an on-site area for washing where water will flow onto dirt or into a temporary pit in a dirt area. Let the water seep into the soil and dispose of hardened concrete with trash.

- ✓ Divert water from washing exposed aggregate concrete to a dirt area where it will not run into a gutter, street, or storm drain.
- ✓ If a suitable dirt area is not available, collect the wash water and remove it for appropriate disposal off site.

Painting

- ✓ Never rinse paint brushes or materials in a gutter or street!
- ✓ Paint out excess water-based paint before rinsing brushes, rollers, or containers in a sink. If you can't use a sink, direct wash water to a dirt area and spade it in.
- ✓ Paint out excess oil-based paint before cleaning brushes in thinner.
- ✓ Filter paint thinners and solvents for reuse whenever possible. Dispose of oil-based paint sludge and unusable thinner as hazardous waste.

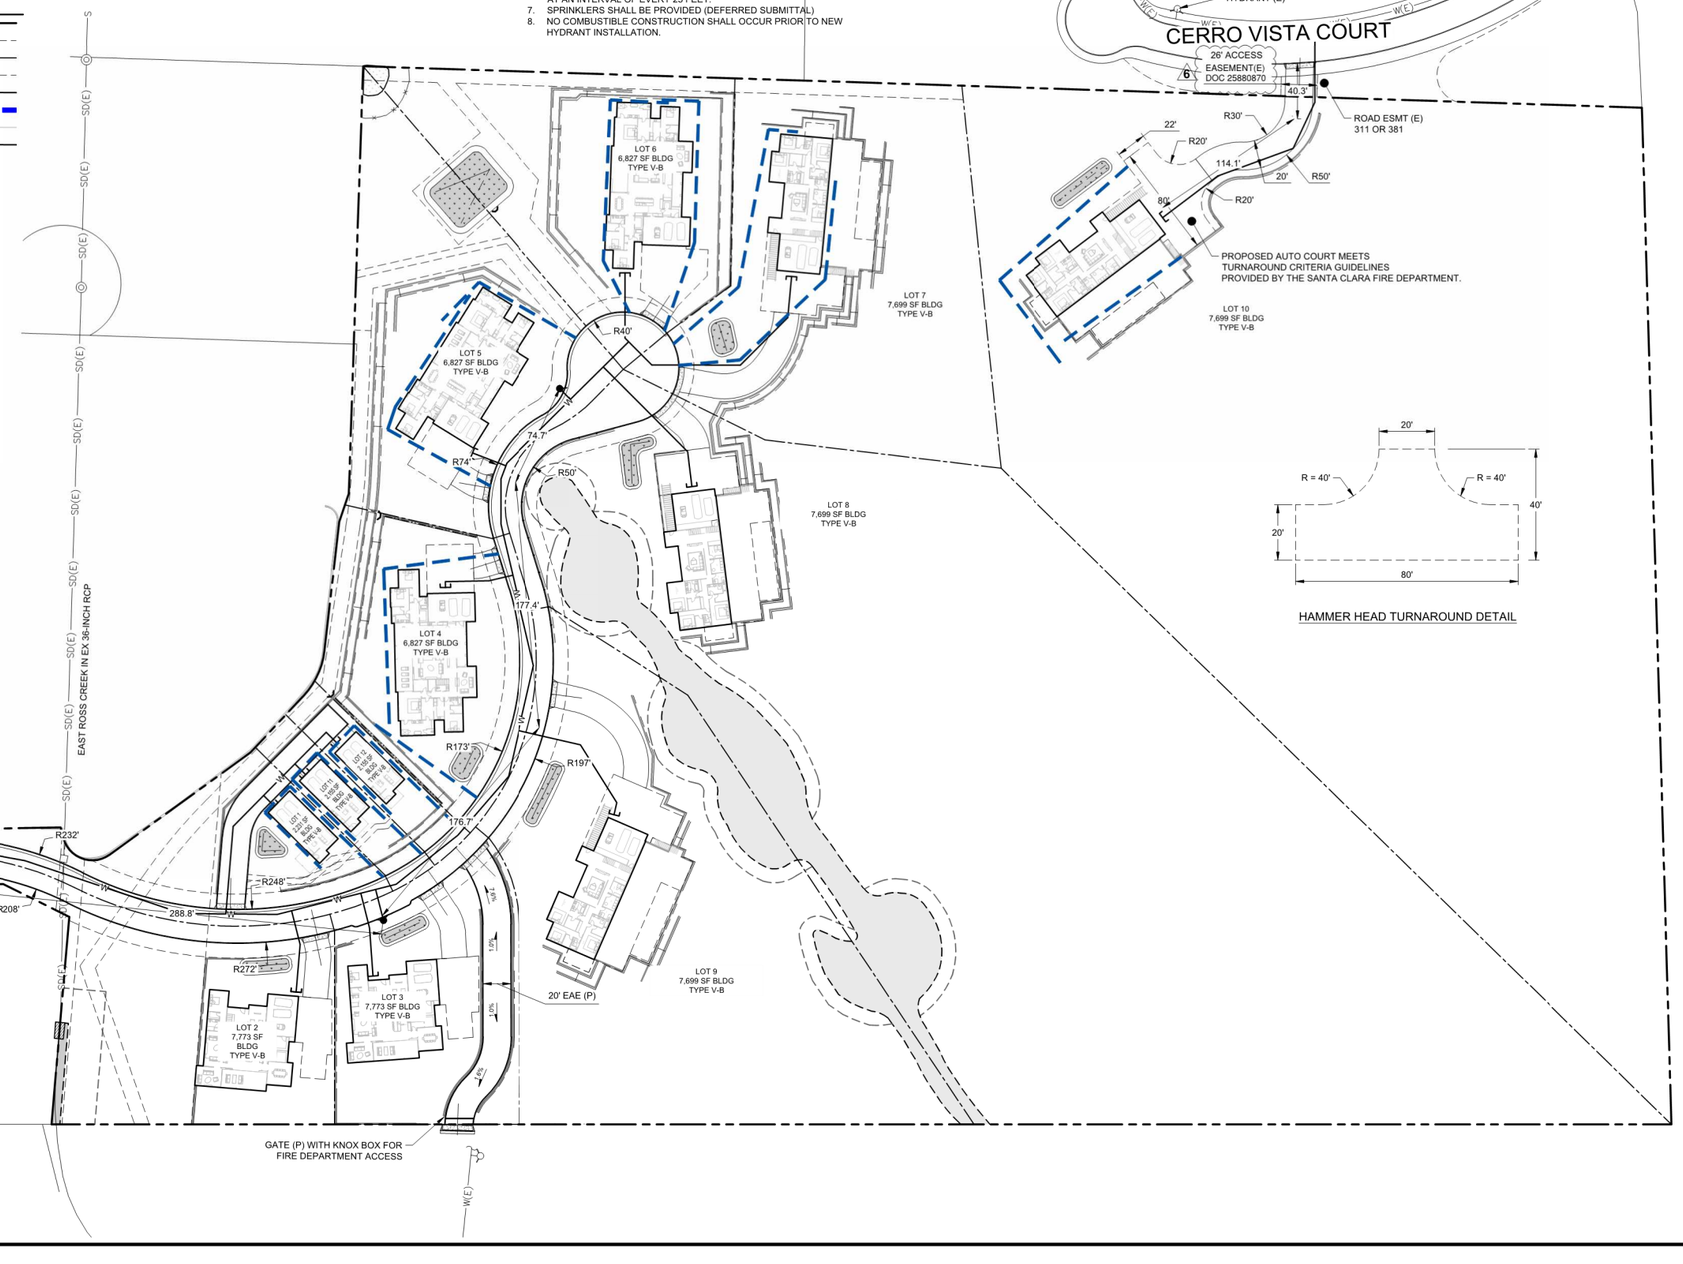
LOT 2 & 3: 2155 SF, TYPE VB
FIRE FLOW: 500 GPM FOR 1/2 HOUR, PER CFC APPENDIX B, TABLE B105.1(1)
HYDRANTS: 1 HYDRANT WITH AVERAGE SPACING 500' PER CFC APPENDIX C, TABLE C102.1

LOTS 4,5,6: 6827 SF, TYPE VB
FIRE FLOW: 1125 GPM FOR 1 HOUR, PER CFC APPENDIX B, TABLE B105.1(1) AND TABLE B105.1(2)
HYDRANTS: 2 HYDRANTS WITH AVERAGE SPACING 450' PER CFC APPENDIX C, TABLE C102.1

LOTS 2,3: 7773 SF, TYPE VB
FIRE FLOW: 1250 GPM FOR 1 HOUR, PER CFC APPENDIX B, TABLE B105.1(1) AND TABLE B105.1(2)
HYDRANTS: 2 HYDRANTS WITH AVERAGE SPACING 450' PER CFC APPENDIX C, TABLE C102.1

LOTS 7,8,9,10: 7699 SF, TYPE VB
FIRE FLOW: 1125 GPM FOR 1 HOUR, PER CFC APPENDIX B, TABLE B105.1(1) AND TABLE B105.1(2)
HYDRANTS: 2 HYDRANTS WITH AVERAGE SPACING 450' PER CFC APPENDIX C, TABLE C102.1



NOTES

1. PRIVATE STREETS WILL INCLUDE EMERGENCY ACCESS EASEMENTS
2. MAX HOSE PULL LENGTH IS 200'
3. CONSTRUCTION TYPE IS V-B
4. OCCUPANCY GROUPS: R-3
5. ACCESS ROADWAYS SHALL BE PROVIDED TO COMPLY WITH ALL OF THE FOLLOWING REQUIREMENTS:
   a. FIRE APPARATUS ACCESS ROADWAYS SHALL HAVE A "MINIMUM" WIDTH OF A FIRE APPARATUS ACCESS ROADWAY FOR ENGINES IS 20 FEET.
   b. FIRE ACCESS ROADWAYS SHALL HAVE A "MINIMUM" UNOBSTRUCTED VERTICAL CLEARANCE OF NOT LESS THAN 13 FEET 6 INCHES.
   c. ALL FIRE DEPARTMENT ACCESS ROADWAYS INCLUDING THE PRIVATE STREET, DRIVEWAYS, AND EMERGENCY ACCESS EASEMENTS SHALL BE AN ALL-WEATHER SURFACE DESIGNED TO SUPPORT THE IMPOSED LOAD OF FIRE APPARATUS WITH A GROSS VEHICLE WEIGHT OF 75,000-POUNDS.
   d. FIRE APPARATUS ACCESS ROADWAYS SHALL HAVE A "MINIMUM" INSIDE TURNING RADIUS FOR FIRE DEPARTMENT ACCESS ROADWAYS SHALL BE 30 FEET OR GREATER.
   e. THE GRADE FOR EMERGENCY APPARATUS ACCESS ROADWAYS SHALL NOT EXCEED 10 PERCENT TO FACILITATE FIRE-GROUND OPERATIONS.
   f. TRAFFIC CALMING DEVICES ARE NOT PERMITTED ON ANY DESIGNATED FIRE ACCESS ROADWAY, UNLESS APPROVED BY THE FIRE PREVENTION & HAZARDOUS MATERIALS DIVISION.
6. ALL DESIGNATED FIRE LANES WITH RAISED CURBS SHALL BE PAINTED RED. "NO PARKING - FIRE LANE" SHALL BE IN WHITE PAINT, 6 INCHES IN HEIGHT WITH A MINIMUM 1 INCH STROKE. LETTERING SHALL BE PAINTED AT AN INTERVAL OF EVERY 25 FEET.
7. SPRINKLERS SHALL BE PROVIDED (DEFERRED SUBMITTAL)
8. NO COMBUSTIBLE CONSTRUCTION SHALL OCCUR PRIOR TO NEW HYDRANT INSTALLATION.

PROJECT DESCRIPTION / DATA:

Site Area: 17.55 acres
APN: 532-16-006
General Plan Landuse: AG

Proposed Project:

12 Lot Subdivision consisting of the following:
3 BMR units detached on 3 proposed lots
9 Proposed Market Rate Homes on proposed lots

Lot 1 is a proposed as a BMR unit on its own lot and part of the 12 lot subdivision. See Civil Title Pg 1.0 for detailed Project Data.

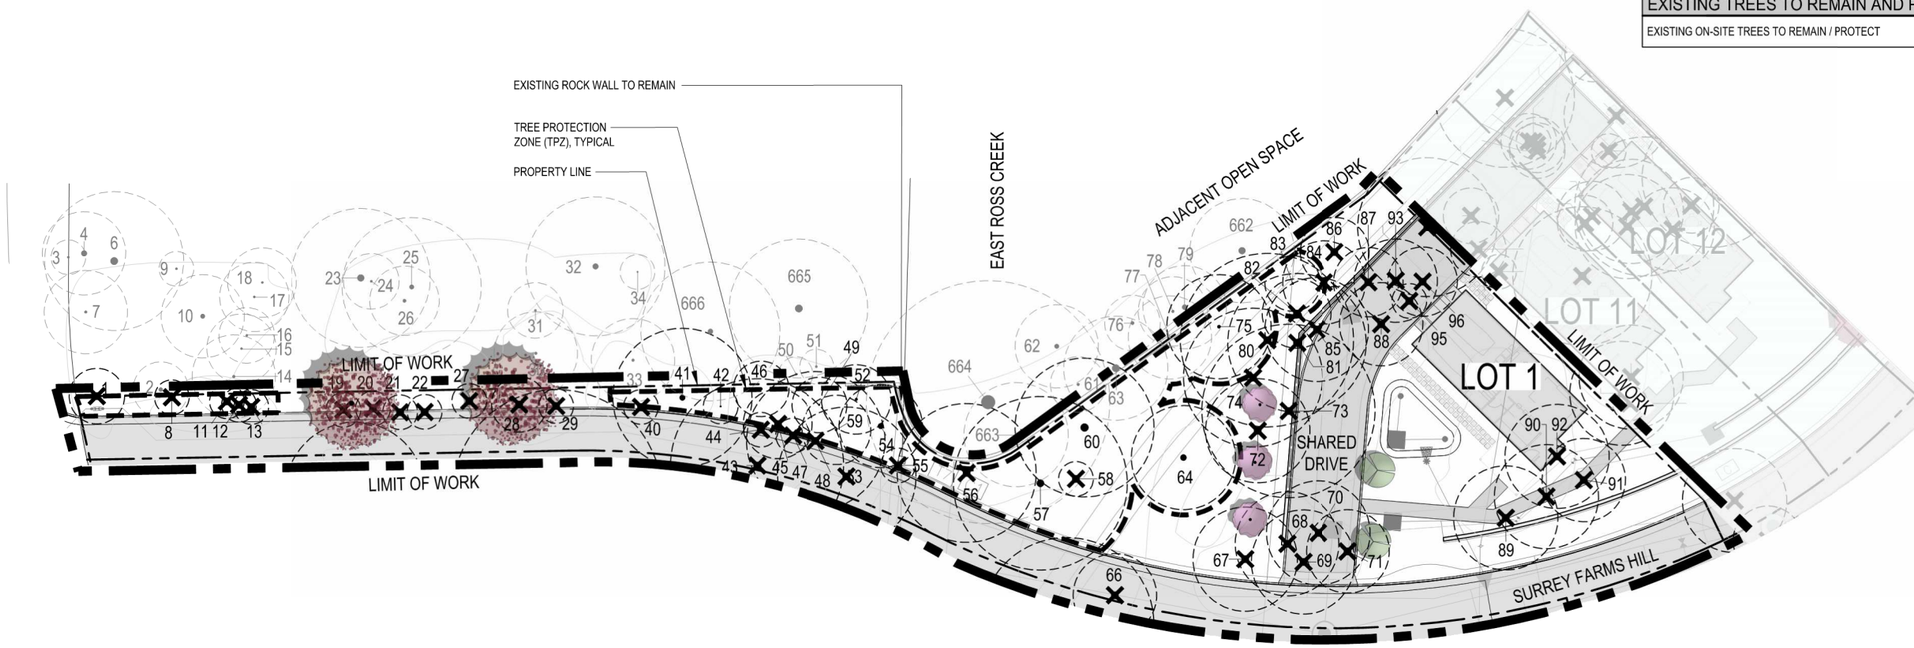
TREE TO BE REMOVED	
OFF-SITE TREE TO REMAIN / PROTECT	
TREE PROTECTION FENCING AND TPZ (SEE DETAIL ON SHEET T-4)	
PROPOSED TREES. SEE LANDSCAPE PLAN AND LANDSCAPE LEGEND	

NOTES:
1. SEE SHEET T-2 FOR TREE EVALUATION TABLE.
2. SEE SHEET T-3 FOR TREE APPRAISAL TABLE.
3. SEE SHEET T-4 FOR TREE PROTECTION FENCING DETAIL AND NOTES.

ON-SITE TREE MITIGATION TABLE

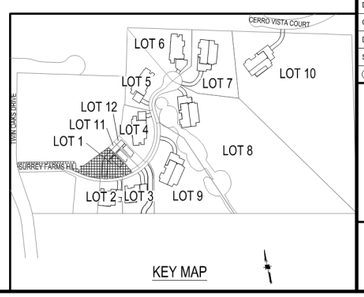
	CANOPY SIZE	QTY	REPLACEMENT REQUIREMENT	QUANTITY REQUIRED
TOTAL NUMBER OF TREES TO BE REMOVED	< 10'	7	TWO - 24" BOX	14 - 24" BOX
	11' - 25'	24	THREE - 24" BOX	72 - 24" BOX
	26' - 40'	11	FOUR - 24" BOX OR TWO - 36" BOX	22 - 36" BOX
	41' - 55'	4	SIX- 24" BOX OR THREE- 36" BOX	15 - 36" BOX
	> 55'	0	TEN - 24" BOX OR FIVE- 36" BOX	0 - 36" BOX

- IF QUANTITY OF PROPOSED TREES ARE NOT EQUAL TO OR GREATER THAN REQUIRED TREES, THE PROJECT IS SUBJECT TO MITIGATION FEES PER CITY OF LOS GATOS POLICY.
- SEE ARBORIST REPORT, DATED DECEMBER 15, 2024, REVISED JULY 23, 2025 FOR ADDITIONAL INFORMATION.



TREE MITIGATION SUMMARY TABLE

	QUANTITY	SIZE
TOTAL TREES REQUIRED TO MEET MITIGATION REQUIREMENTS ON-SITE	86	24" BOX
	34	36" BOX
TOTAL PROPOSED TREES ON-SITE (NOT INCLUDING STREET TREES)	7	24" BOX
	0	36" BOX
REMAINING NUMBER OF TREES NOT BEING MITIGATED FOR	79	24" BOX
	34	36" BOX



NOTES:
1. TREE REMOVAL SHALL BE BY CONTRACTOR.
2. SEE TREE EVALUATION SUMMARY FOR INFORMATION INCLUDING SPECIES AND DIAMETER.
3. CONTRACTOR TO VERIFY ACTUAL CANOPY CLEARANCES WITHIN 100' OF EVERY HOME. UNDER ARBORIST SUPERVISION, PRUNE AND TRIM TREES WITHIN ACCORDANCE ON TREE SPACING DIAGRAM ON SHEET 10.1.

TREE MITIGATION AND PROTECTION PLAN

T-1

418510\PLAN\PLANNING\418510CL - LOT 1.DWG
PLOTTED: 9/12/2025 11:33 AM

TREE EVALUATION NOTES:
*SEE SHEET T-4 FOR TREE PROTECTION REQUIREMENT DETAILS

**REASON FOR REMOVAL
1. THE TREE IS DEAD, SEVERELY DISEASED, DECAYED OR DISFIGURED TO SUCH AN EXTENT THAT THE TREE IS UNABLE TO RECOVER OR RETURN TO A HEALTHY AND STRUCTURALLY SOUND CONDITION.
2. THE TREE HAS A TREE RISK RATING OF EXTREME OR HIGH ON THE ISA TREE RISK RATING MATRIX AS SET FORTH IN THE ISA TREE RISK ASSESSMENT BEST MANAGEMENT PRACTICES, OR SUCCESSOR PUBLICATION.
3. THE TREE IS CROWDING OTHER PROTECTED TREES TO THE EXTENT THAT REMOVAL OR SEVERE PRUNING IS NECESSARY TO ENSURE THE LONG-TERM VIABILITY OF ADJACENT AND MORE SIGNIFICANT TREES.
4. THE RETENTION OF THE TREE RESTRICTS THE ECONOMIC ENJOYMENT OF THE PROPERTY OR CREATES AN UNUSUAL HARDSHIP FOR THE PROPERTY OWNER BY SEVERELY LIMITING THE USE OF THE PROPERTY IN A MANNER NOT TYPICALLY EXPERIENCE BY OWNERS OF SIMILARLY SITUATED PROPERTIES, AND THE APPLICANT HAS DEMONSTRATED TO THE SATISFACTION OF THE DIRECTOR OR DECIDING BODY THAT THERE ARE NO REASONABLE ALTERNATIVES TO PRESERVE THE TREE.

TREE PROTECTION NOTES

SITE PREPARATION:
ALL EXISTING TREES SHALL BE FENCED WITHIN OR AT THE DRIP LINE (FOLIAR SPREAD) OF THE TREE. DEPENDING ON THE LOCATION OF THE TREE THE FENCING MAY NOT BE ABLE TO BE AT THE DRIPLINE. EXAMPLES OF THIS WOULD BE PUBLIC RIGHT OF WAY, NEAR PROPERTY LINES OR AROUND EXISTING STRUCTURES TO REMAIN. WHERE COMPLETE DRIP LINE FENCING IS NOT POSSIBLE, THE ADDITION OF STRAW WADDLES AND ORANGE SNOW FENCING WRAPPING THE TRUNK SHALL BE INSTALLED PER THE TREE PROTECTION DETAIL. THE FENCE SHOULD BE A MINIMUM OF SIX FEET HIGH, MADE OF GALVANIZED 11-GAUGE WIRE MESH WITH GALVANIZED POSTS OR ANY MATERIAL SUPERIOR IN QUALITY. A TREE PROTECTION ZONE (TPZ) SIGN SHALL BE AFFIXED TO FENCING AT APPROPRIATE INTERVALS AS DETERMINED BY THE ARBORIST ON SITE. SEE TREE PROTECTION DETAIL FOR ADDITIONAL INFORMATION, INCLUDING TREE PROTECTION ZONE SIGN. IF THE FENCE IS WITHIN THE DRIP LINE OF THE TREES, THE FOLIAR FRINGE SHALL BE RAISED TO OFFSET THE CHANCE OF LIMB DAMAGE FROM ACTIVE CONSTRUCTION.

ACTIVE CONSTRUCTION:
ALL CONTRACTORS, SUBCONTRACTORS AND OTHER PERSONNEL SHALL BE WARNED THAT ENCROACHMENT WITHIN THE FENCED AREA AND DRIPLINE IS PROHIBITED WITHOUT THE CONSENT OF THE CERTIFIED ARBORIST ON THE JOB. THIS INCLUDES, BUT IS NOT LIMITED TO, STORAGE OF LUMBER AND OTHER MATERIALS, DISPOSAL OF PAINTS, SOLVENTS OR OTHER NOXIOUS MATERIALS, PARKED CARS, GRADING EQUIPMENT OR OTHER HEAVY EQUIPMENT. IF CONSTRUCTION ACTIVITY NEEDS TO HAPPEN IN THE TPZ THE FENCE CAN BE MOVED TEMPORARILY FOR DELIVERY OF CONSTRUCTION MATERIALS. THE CONTRACTOR SHOULD MAKE ACCOMMODATIONS TO OFF LOAD ITEMS SUCH AS TRUSSES, TIMBER, PLASTERBOARD, WALLBOARD, CONCRETE, GYPSUM BOARD, FLOORING, ROOFING OR ANY OTHER HEAVY CONSTRUCTION MATERIAL OUTSIDE THE FOLIAR SPREAD OF THE TREE SO THERE IS NO HEAVY EQUIPMENT NEEDED THAT COULD CAUSE DAMAGE TO THE CANOPY OF THE TREE OR COMPACT THE ROOT ZONE. THE TREE PROTECTION FENCING SHOULD BE REESTABLISHED PER THE PLANS AND DETAILS IMMEDIATELY AFTER ANY ACTIVITY THROUGH THE TPZ. PENALTIES, BASED ON THE COST OF REMEDIAL REPAIRS AND THE EVALUATION GUIDE PUBLISHED BY THE INTERNATIONAL SOCIETY OF ARBORICULTURE, SHALL BE ASSESSED FOR DAMAGES TO THE TREES.

GRADING/EXCAVATING:
ALL GRADING PLANS THAT SPECIFY GRADING WITHIN THE DRIP LINE OF ANY TREE, OR WITHIN THE DISTANCE FROM THE TRUNK AS OUTLINED IN THE SITE PREPARATION SECTION ABOVE WHEN SAID DISTANCE IS OUTSIDE THE DRIP LINE, SHALL FIRST BE REVIEWED BY A CERTIFIED ARBORIST. PROVISIONS FOR AERATION, DRAINAGE, PRUNING, TUNNELING BENEATH ROOTS, ROOT PRUNING OR OTHER NECESSARY ACTIONS TO PROTECT THE TREES SHALL BE OUTLINED BY AN ARBORIST. IF TRENCHING IS NECESSARY WITHIN THE AREA AS DESCRIBED ABOVE, SAID TRENCHING SHALL BE UNDERTAKEN BY HAND LABOR AND DUG DIRECTLY BENEATH THE TRUNK OF THE TREE. ALL ROOTS 2 INCHES OR LARGER SHALL BE TUNNELED UNDER AND OTHER ROOTS SHALL BE CUT SMOOTHLY TO THE TRUNK SIDE OF THE TRENCH. THE TRUNK SIDE SHOULD BE DRAPED IMMEDIATELY WITH TWO LAYERS OF UNTREATED BURLAP TO A DEPTH OF 3 FEET FROM THE SURFACE. THE BURLAP SHALL BE SOAKED NIGHTLY AND LEFT IN PLACE UNTIL THE TRENCH IS BACK FILLED TO THE ORIGINAL LEVEL. AN ARBORIST SHALL EXAMINE THE TRENCH PRIOR TO BACK FILLING TO ASCERTAIN THE NUMBER AND SIZE OF ROOTS CUT, SO AS TO SUGGEST THE NECESSARY REMEDIAL REPAIRS.

REMEDIAL REPAIRS:
AN ARBORIST SHALL HAVE THE RESPONSIBILITY OF OBSERVING ALL ONGOING ACTIVITIES THAT MAY AFFECT THE TREES AND PRESCRIBING NECESSARY REMEDIAL WORK TO ENSURE THE HEALTH AND STABILITY OF THE TREES. THIS INCLUDES, BUT IS NOT LIMITED TO, ALL ARBORIST ACTIVITIES BROUGHT OUT IN THE PREVIOUS SECTIONS. IN ADDITION, PRUNING, AS OUTLINED IN INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES: PRUNING AND ANSI A300 PART 1 STANDARD PRACTICES: PRUNING, SHALL BE PRESCRIBED AS NECESSARY. FERTILIZING, AERATION, IRRIGATION, PEST CONTROL AND OTHER ACTIVITIES SHALL BE PRESCRIBED ACCORDING TO THE TREE NEEDS, LOCAL SITE REQUIREMENTS, AND STATE AGRICULTURAL PEST CONTROL LAWS. ALL SPECIFICATIONS SHALL BE IN WRITING. FOR PEST CONTROL OPERATIONS, CONSULT THE LOCAL COUNTY AGRICULTURAL COMMISSIONER'S OFFICE FOR INDIVIDUALS LICENSED AS PEST CONTROL ADVISORS OR PEST CONTROL OPERATORS.

FINAL INSPECTION:
UPON COMPLETION OF THE PROJECT, THE ARBORIST SHALL REVIEW ALL WORK UNDERTAKEN THAT MAY IMPACT THE EXISTING TREES. SPECIAL ATTENTION SHALL BE GIVEN TO CUTS AND FILLS, COMPACTING, DRAINAGE, PRUNING AND FUTURE REMEDIAL WORK. AN ARBORIST SHOULD SUBMIT A FINAL REPORT IN WRITING OUTLINING THE ONGOING REMEDIAL CARE FOLLOWING THE FINAL INSPECTION.

TREE REMOVAL NOTES

1. CONSTRUCTION PROTECTION FOR TREES MUST BE PROVIDED BEFORE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY. SEE DETAILS AND NOTES ON THIS SHEET.
2. ALL TREES SHOWN FOR REMOVAL ARE PERMITTED UNDER CITY ²D PERMIT. A NESTING BIRD SURVEY MAY BE REQUIRED IF TREE REMOVAL IS TO TAKE PLACE BETWEEN FEBRUARY 1 AND AUGUST 31. A QUALIFIED BIOLOGIST MUST COMPLETE THIS REPORT PRIOR TO TREE REMOVAL DONE DURING THE NESTING SEASON. REFER TO CONDITIONS OF THE PERMIT FOR ADDITIONAL INFORMATION.
3. CONTRACTOR SHALL TAKE CARE WHEN REMOVING TREES ADJACENT TO TREES TO REMAIN. PROVISIONS FOR THE PROTECTION OF EXISTING TREES MUST BE TAKEN INCLUDING WRAPPING THE TRUNK OF THE ADJACENT TREE PER THE TREE PROTECTION DETAIL. WHEN REMOVING ROOTS, CARE MUST BE TAKEN NOT TO DAMAGE ROOTS OF TREE TO REMAIN. ROOT PRUNING MAY BE NECESSARY AND MUST BE DONE UNDER THE SUPERVISION OF THE ARBORIST.
4. THE CONTRACTOR SHALL VISIT THE PROJECT SITE PRIOR TO BIDDING TO DETERMINE THE EXACT EXTENT OF ALL SITE DEMOLITION ITEMS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING UTILITIES IN THE FIELD PRIOR TO CONSTRUCTION. LOCATIONS SHOWN ON THE PLANS ARE APPROXIMATE AND ARE FOR GENERAL INFORMATION ONLY. HE SHALL BE RESPONSIBLE FOR MAKING HIMSELF FAMILIAR WITH ALL UNDERGROUND CONDITIONS PRIOR TO COMMENCEMENT OF WORK.
5. THESE PLANS MAY NOT SHOW ALL EXISTING CITY ELECTRICAL FACILITIES INCLUDING, BUT NOT LIMITED TO, TRAFFIC SIGNALS, STREETLIGHT AND TRAFFIC SIGNAL COMMUNICATION EQUIPMENT, CONDUIT, PULL BOXES, AND WIRING.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL SUCH FACILITIES AND FOR REPAIRING ANY SUCH FACILITIES THAT ARE DAMAGED DURING CONSTRUCTION. PAYMENT FOR LOCATING, COORDINATING, AND REPAIRING EXISTING CITY ELECTRICAL FACILITIES WILL BE DEEMED INCLUDED IN OTHER ITEMS OF WORK, AND NO ADDITIONAL COMPENSATION SHALL BE MADE THEREOF. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE SPECIFICATIONS & DETAILS.
7. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION ON THIS PROJECT. CALL U.S.A. AT (800) 624-2444
8. THE CONTRACTOR SHALL BE RESPONSIBLE UNDER THIS CONTRACT FOR REPAIRING AND REPLACING, AT HIS OWN EXPENSE, ANY STRUCTURES, FENCES, WALLS, OR PLANT LIFE DAMAGED OR DESTROYED BY HIS OPERATION. LIKEWISE, HE SHALL BE RESPONSIBLE FOR REPAIRING OR REPLACING ANY AND ALL DAMAGES, OCCURRING BY HIS OPERATION, ON ADJACENT PROPERTIES AND ANYWHERE OUTSIDE THE CONTRACT LIMIT LINES. THE DAMAGED ITEMS SHALL BE RESTORED TO THERE ORIGINAL CONDITIONS AND TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT.
9. THE CONTRACTOR SHALL BE RESPONSIBLE TO KEEP ALL STREET RIGHT-OF-WAYS CLEAN TO THE SATISFACTION OF THE PROJECT SUPERINTENDENT ALL ITEMS INDICATED TO BE REMOVED SHALL BE DISPOSED OF FROM THE PROJECT SITE, EXCEPT ITEMS INDICATED TO BE RE-INSTALLED.
10. ALL TREES TO BE REMOVED SHALL HAVE THEIR STUMPS GROUND DOWN TO A MINIMUM DEPTH OF 24" REMOVE ALL LARGE ROOTS FROM PLANTING AREAS A MINIMUM DISTANCE OF 5' BEYOND THE DRIP LINE OF THE TREE.

SEC. 29.10.1005. PROTECTION OF TREES DURING CONSTRUCTION

(A) PROTECTIVE TREE FENCING SHALL SPECIFY THE FOLLOWING:
(1) SIZE AND MATERIALS. SIX (6) FOOT HIGH CHAIN LINK FENCING, MOUNTED ON TWO-INCH DIAMETER GALVANIZED IRON POSTS, SHALL BE DRIVEN INTO THE GROUND TO A DEPTH OF AT LEAST TWO (2ı FEET AT NO MORE THAN 10-FOOT SPACING. FOR PAVING AREA THAT WILL NOT BE DEMOLISHED AND WHEN STIPULATED IN A TREE PRESERVATION PLAN, POSTS MAY BE SUPPORTED BY A CONCRETE BASE.

(2) AREA TYPE TO BE FENCED.
TYPE I: ENCLOSURE WITH CHAIN LINK FENCING OF EITHER THE ENTIRE DRIPLINE AREA OR AT THE TREE PROTECTION ZONE (TPZ), WHEN SPECIFIED BY A CERTIFIED OR CONSULTING ARBORIST.
TYPE II: ENCLOSURE FOR STREET TREES LOCATED IN A PLANTER STRIP: CHAIN LINK FENCE AROUND THE ENTIRE PLANTER STRIP TO THE OUTER BRANCHES.
TYPE III: PROTECTION FOR A TREE LOCATED IN A SMALL PLANTER CUTOUT ONLY (SUCH AS DOWNTOWN): ORANGE PLASTIC FENCING SHALL BE WRAPPED AROUND THE TRUNK FROM THE GROUND TO THE FIRST BRANCH WITH 2-INCH WOODEN BOARDS BOUND SECURELY ON THE OUTSIDE. CAUTION SHALL BE USED TO AVOID DAMAGING ANY BARK OR BRANCHES.

(3) DURATION OF TYPE I, II, III FENCING. FENCING SHALL BE ERECTED BEFORE DEMOLITION, GRADING OR CONSTRUCTION PERMITS ARE ISSUED AND REMAIN IN PLACE UNTIL THE WORK IS COMPLETED. CONTRACTOR SHALL FIRST OBTAIN THE APPROVAL OF THE PROJECT ARBORIST ON RECORD PRIOR TO REMOVING A TREE PROTECTION FENCE.

(4) WARNING SIGN. EACH TREE FENCE SHALL HAVE PROMINENTLY DISPLAYED AN 8.5 X 11-INCH SIGN STATING: "WARNING—TREE PROTECTION ZONE-THIS FENCE SHALL NOT BE REMOVED AND IS SUBJECT TO PENALTY ACCORDING TO TOWN CODE 29.10.1025".

(B) ALL PERSONS, SHALL COMPLY WITH THE FOLLOWING PRECAUTIONS:
(1) PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, INSTALL THE FENCE AT THE DRIPLINE, OR TREE PROTECTION ZONE (TPZ) WHEN SPECIFIED IN AN APPROVED ARBORIST REPORT, AROUND ANY TREE AND/OR VEGETATION TO BE RETAINED WHICH COULD BE AFFECTED BY THE CONSTRUCTION AND PROHIBIT ANY STORAGE OF CONSTRUCTION MATERIALS OR OTHER MATERIALS, EQUIPMENT CLEANING, OR PARKING OF VEHICLES WITHIN THE TPZ. THE DRIPLINE SHALL NOT BE ALTERED IN ANY WAY SO AS TO INCREASE THE ENCROACHMENT OF THE CONSTRUCTION.

(2) PROHIBIT ALL CONSTRUCTION ACTIVITIES WITHIN THE TPZ, INCLUDING BUT NOT LIMITED TO: EXCAVATION,GRADING, DRAINAGE AND LEVELING WITHIN THE DRIPLINE OF THE TREE UNLESS APPROVED BY THE DIRECTOR.

(3) PROHIBIT DISPOSAL OR DEPOSITING OF OIL, GASOLINE, CHEMICALS OR OTHER HARMFUL MATERIALS WITHIN THE DRIPLINE OF OR IN DRAINAGE CHANNELS, SWALES OR AREAS THAT MAY LEAD TO THE DRIPLINE OF A PROTECTED TREE.

(4) PROHIBIT THE ATTACHMENT OF WIRES, SIGNS OR ROPES TO ANY PROTECTED TREE.

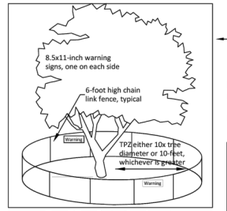
(5) DESIGN UTILITY SERVICES AND IRRIGATION LINES TO BE LOCATED OUTSIDE OF THE DRIPLINE WHEN FEASIBLE.

(6) RETAIN THE SERVICES OF A CERTIFIED OR CONSULTING ARBORIST WHO SHALL SERVE AS THE PROJECT ARBORIST FOR PERIODIC MONITORING OF THE PROJECT SITE AND THE HEALTH OF THOSE TREES TO BE PRESERVED. THE PROJECT ARBORIST SHALL BE PRESENT WHENEVER ACTIVITIES OCCUR WHICH MAY POSE A POTENTIAL THREAT TO THE HEALTH OF THE TREES TO BE PRESERVED AND SHALL DOCUMENT ALL SITE VISITS.

(7) THE DIRECTOR AND PROJECT ARBORIST SHALL BE NOTIFIED OF ANY DAMAGE THAT OCCURS TO A PROTECTED TREE DURING CONSTRUCTION SO THAT PROPER TREATMENT MAY BE ADMINISTERED. (ORD. NO. 2114, §§ I, II, 8-4-03)

SEC. 29.10.1010. PRUNING AND MAINTENANCE

ALL PRUNING SHALL BE IN ACCORDANCE WITH THE CURRENT VERSION OF THE INTERNATIONAL SOCIETY OF ARBORICULTURE BEST MANAGEMENT PRACTICES—TREE PRUNING AND ANSI A300-PART 1 TREE, SHRUB AND OTHER WOODY PLANT MANAGEMENT—STANDARD PRACTICES, (PRUNING) AND ANY SPECIAL CONDITIONS AS DETERMINED BY THE DIRECTOR. FOR DEVELOPMENTS, WHICH REQUIRE A TREE PRESERVATION REPORT, A CERTIFIED OR CONSULTING ARBORIST SHALL BE IN REASONABLE CHARGE OF ALL ACTIVITIES INVOLVING PROTECTED TREES, INCLUDING PRUNING, CABLING AND ANY OTHER WORK IF SPECIFIED.

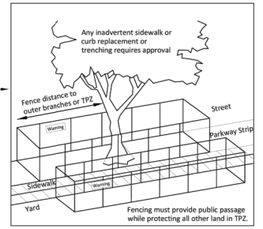


(1) ANY PUBLIC UTILITY INSTALLING OR MAINTAINING ANY OVERHEAD WIRES OR UNDERGROUND PIPES OR CONDUITS IN THE VICINITY OF A PROTECTED TREE SHALL OBTAIN PERMISSION FROM THE DIRECTOR BEFORE PERFORMING ANY WORK, INCLUDING PRUNING, WHICH MAY CAUSE INJURY TO A PROTECTED TREE. (E.G. CABLE TV/FIBER OPTIC TRENCHING, GAS, WATER, SEWER TRENCH, ETC.).

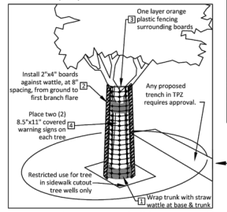
(2) PRUNING FOR CLEARANCE OF UTILITY LINES AND ENERGIZED CONDUCTORS SHALL BE PERFORMED IN COMPLIANCE WITH THE CURRENT VERSION OF THE AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI) A300 (PART 1)- PRUNING, SECTION 5.9 UTILITY PRUNING. USING SPIKES OR GAFFS WHEN PRUNING, EXCEPT WHERE NO OTHER ALTERNATIVE IS AVAILABLE, IS PROHIBITED.

(3) NO PERSON SHALL PRUNE, TRIM, CUT OFF, OR PERFORM ANY WORK, ON A SINGLE OCCASION OR CUMULATIVELY, OVER A THREE-YEAR PERIOD, AFFECTING TWENTY-FIVE PERCENT OR MORE OF THE CROWN OF ANY PROTECTED TREE WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION EXCEPT FOR POLLARDING OF FRUITLESS MULBERRY TREES (MORUS ALBA) OR OTHER SPECIES APPROVED BY THE TOWN ARBORIST. APPLICATIONS FOR A PRUNING PERMIT SHALL INCLUDE PHOTOGRAPHS INDICATING WHERE PRUNING IS PROPOSED.

(4) NO PERSON SHALL REMOVE ANY HERITAGE TREE OR LARGE PROTECTED TREE BRANCH OR ROOT THROUGH PRUNING OR OTHER METHOD GREATER THAN FOUR (4) INCHES IN DIAMETER (12.5" IN CIRCUMFERENCE) WITHOUT FIRST OBTAINING A PERMIT PURSUANT TO THIS DIVISION.



Tree Protection Zone (TPZ) shown in gray (radius of TPZ equals 10-times the diameter of the tree or 10-feet, whichever is greater).

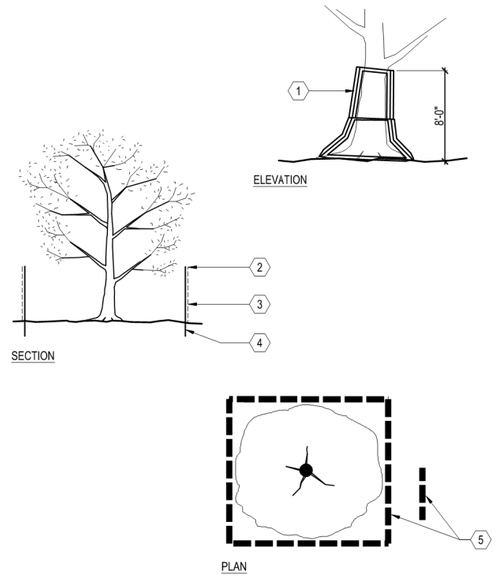


Type I Tree Protection: Layout configuration applies to all Protected Trees, matching the site diagram with the tree preservation report (TPR) distances written for this project. Fencing should be shown on plans as it will be installed. A curved fence for a TPZ is generally not practical.

Inspection pass/fail is dependent on correct layout and mounted sign placard.

Place two (2) 8.5"x11" covered warning signs at each tree.

Type II Tree Protection: Layout configuration applies to all parkway strip or public trees near sidewalk.



Type III Tree Protection: Layout for trunk protection applies to all Protected Trees when exclusively authorized for sidewalk cut-out. To be used only with approval from Public Works Operations.

Required protection shall be executed before demolition, excavation or site work occurs.

NOTES:
1. CONSTRUCTION PERIOD PROTECTION FOR TREES SHOULD BE PROVIDED BEFORE GRADING OR OTHER EQUIPMENT IS ALLOWED ON THE PROPERTY.
2. WHEN CONSTRUCTION IS TO TAKE PLACE BENEATH A TREE CANOPY ON ONE SIDE, THE FENCE SHOULD BE SITED 2 TO 3 FEET BEYOND THAT CONSTRUCTION, BUT BETWEEN CONSTRUCTION AND THE TREE TRUNK.
3. IF CONSTRUCTION OR PAVING IS TO TAKE PLACE THROUGHOUT THE AREA BENEATH CANOPY, AND DRIP LINE FENCING IS NOT PRACTICAL, SNOW FENCING SHOULD BE USED TO PROTECT THE TRUNKS FROM DAMAGE.

1. SNOW FENCING THREE LAYERS OF WIRE AND LATH SNOW FENCING TO 8 FEET ABOVE GROUND ON TREES WHERE CONSTRUCTION WILL TAKE PLACE BENEATH THE CANOPY.
2. TOP OF FENCE WITH FLUORESCENT FLAGGING TAPE HUNG EVERY 10 FEET
3. 6' CHAIN LINK OR WELDED WIRE MESH
4. 8' FENCE POST OF 2" DIAMETER GI PIPE OR T-ANGLE POST
5. FENCE PLACED AT DRIP LINE OR 50% GREATER THAN THE TREE CANOPY RADIUS WHERE POSSIBLE

NOTES:
1. SEE HMH CIVIL PLANS FOR WALL LOCATIONS AND GRADING.
2. PROPOSED FENCE LINES SHALL FOLLOW SITE GRADING, TYPICAL.
3. A MINIMUM VERITCAL CLEARANCE OF 13.5 FEET SHALL BE MAINTAINED OVER FIRE ACCESS ROADS AND DRIVEWAYS.
4. FOR HORIZONTAL AND VERTICAL SPACING FOR PLANTING, SEE SHEET 10.1.
