TUALATIN CITY COUNCIL MEETING

MONDAY, JUNE 12, 2023

TUALATIN CITY SERVICES
10699 SW HERMAN ROAD
TUALATIN, OR 97062

Mayor Frank Bubenik
Council President Valerie Pratt
Councilor Maria Reyes — Councilor Bridget Brooks
Councilor Christen Sacco — Councilor Cyndy Hillier
Councilor Octavio Gonzalez

To the extent possible, the public is encouraged to watch the meeting live on local cable channel 28, or on the City's website.

For those wishing to provide comment during the meeting, there is one opportunity on the agenda: Public Comment. Written statements may be sent in advance of the meeting to Deputy City Recorder Nicole Morris up until 4:30 pm on Monday, June 12. These statements will be included in the official meeting record, but not read during the meeting.

For those who would prefer to make verbal comment, there are two ways to do so: either by speaking in person or entering the meeting using the zoom link and writing your name in chat. As always, public comment is limited to three minutes per person.

Phone: +1 669 900 6833

Meeting ID: 861 2129 3664

Password: 18880

Work Session

1. ***5:00 p.m. – 6:00 p.m. (60 min) – Consideration of the Prohibition & Regulation of Camping on Public Property.*** Staff is asking for policy direction on how Tualatin should address when, where, and how people experiencing homelessness can camp in Tualatin. Staff will present the legal background, what neighboring jurisdictions are doing, recommendations on time, place, and manner regulations, and next steps.

2. ***6:00 p.m. (30 min) – Council Meeting Agenda Review, Communications, and Roundtable.*** Council will review the agenda for the June 12 City Council meeting and brief the Council on issues of mutual interest.

7:00 P.M. CITY COUNCIL MEETING

Call to Order

Pledge of Allegiance

Announcements

1. Proclamation Declaring the Week of June 19 – June 25, 2023 as National Pollinator Week in the City of Tualatin

2. Proclamation Declaring June 19, 2023, as Juneteenth Day in the City of Tualatin

Public Comment

This section of the agenda allows anyone to address the Council regarding any issue not on the agenda, or to request to have an item removed from the consent agenda. The duration for each individual speaking is limited to 3 minutes. Matters requiring further investigation or detailed answers will be referred to City staff for follow-up and report at a future meeting.

Consent Agenda

The Consent Agenda will be enacted with one vote. The Mayor will ask Councilors if there is anyone who wishes to remove any item from the Consent Agenda for discussion and consideration. If you wish to request an item to be removed from the consent agenda you should do so during the Citizen Comment section of the agenda.

1. Consideration of Approval of the Work Session and Regular Meeting Minutes of May 22, 2023

2. Consideration of **Resolution No. 5699-23** Authorizing the City Manager to Execute a Maintenance and Operations Agreement with Randy McLeod and Janine McLeod for Basalt Creek Parkland

3. Consideration of **Resolution No. 5700-23** Adopting Tualatin's Equitable Housing Funding Plan

4. Consideration of **Resolution No. 5701-23** Authorizing the Purchase of Right-of-Way and Easements for the Construction of the Boones Ferry Corridor Phase 2 Project, Part of the Tualatin Moving Forward Program

Public Hearings - *Legislative or Other*

1. Consideration of **Resolution No. 5702-23** Declaring the City's Election to Receive State Revenue Sharing Funds During Fiscal Year 2023-24

Public Hearings - *Quasi-Judicial*

1. Consideration of the Norwood Road Plan Text Amendment and Plan Map Amendment (PTA 23-0001 and PMA 23-0001)

Items Removed from Consent Agenda

Items removed from the Consent Agenda will be discussed individually at this time. The Mayor may impose a time limit on speakers addressing these issues.

Council Communications

Adjournment

Meeting materials, including agendas, packets, public hearing and public comment guidelines, and Mayor and Councilor bios are available at www.tualatinoregon.gov/council.

Tualatin City Council meets are broadcast live, and recorded, by Tualatin Valley Community Television (TVCTV) Government Access Programming. For more information, contact TVCTV at 503.629.8534 or visit www.tvctv.org/tualatin.

In compliance with the Americans with Disabilities Act, this meeting location is accessible to persons with disabilities. To request accommodations, please contact the City Manager's Office at 503.691.3011 36 hours in advance of the meeting.

CITY OF TUALATIN
Staff Report

TO:	Honorable Mayor and Members of the City Council
THROUGH:	Sherilyn Lombos, City Manager
FROM:	Megan George, Deputy City Manager
DATE:	June 12, 2023

SUBJECT:
Review Draft Ordinance for the Prohibition and Regulation of Camping on Public Property

EXECUTIVE SUMMARY:
Staff is asking for policy direction on how Tualatin should address when, where, and how people experiencing homelessness can camp in Tualatin.

Two recent decisions out of the Ninth Circuit Court of Appeals (*Martin v. Boise* and *Johnson v. City of Grants Pass*) held that a governmental entity cannot "criminalize conduct that is an unavoidable consequence of being homeless – namely sitting, lying, or sleeping" under the Eighth Amendment to the Constitution. In addition, individuals similarly must be permitted to take minimal measures to keep warm and dry while sleeping.

In 2021, the Oregon Legislature passed HB 3115 (codified as ORS 195.530), which requires any regulation of sitting, lying, sleeping, or keeping warm and dry outdoors on public property that is open to the public to be objectively reasonable as to time, place, and manner prior to July 1, 2023.

Tualatin Municipal Code Chapter 6-12-030 states "No person shall camp in or upon any sidewalk, street, alley, lane, or public right-of-way, park or any other publicly owned property or under any bridge or viaduct, unless otherwise specifically authorized by this code or by declaration of the Mayor in emergency circumstances or authorized by a City permit for a special event." Tualatin's ordinance does not comply with HB 3115.

Homelessness is a significant issue affecting many communities in Oregon, including Tualatin. This update to Tualatin's camping ordinance is narrow and does not address many related issues. Staff will continue to coordinate with regional partners and service providers on issues related to provision of services, shelter, and long-term housing opportunities, as the ultimate goal is to transition people into stable housing.

In drafting the attached ordinance, staff prioritized:

- Compliance with HB 3115;
- Providing clarity to City staff implementing and enforcing the time, place, and manner regulations;
- Consistency, where possible, with nearby jurisdictions; and
- Balancing the intended use of properties with compassion for people experiencing homelessness.

Staff have prepared the following time, place, and manner regulations for the City Council to consider.

Time

- Camping prohibited between 7am and 7pm.

Place

Camping prohibited in:

- City-owned or maintained parking lots.
- Within 500 feet of schools, freeway entrances/exits.
- Within 20 feet of a building.
- Natural Resource Protection Overlay, Natural Areas, greenways, and landscaped areas.
- Public right-of-way and railroad right-of-way
- Municipal grounds and the Library Plaza.
- City Parks.

Manner

- May not accumulate, discard, or leave behind trash, etc.
- May not dig, excavate, erect/install fixtures, harm vegetation.
- May not obstruct or attach camp materials to public infrastructure or private property structures.
- Campsite is limited to 12x12 feet.
- No unauthorized connections to electrical outlets or other utilities.
- May not start or maintain a fire.
- May not create a physical impairment to emergency ingress or egress.

OUTCOMES OF DECISION:
Following the City Council's discussion on June 12, 2023, staff will update the draft ordinance and bring it back for adoption by the City Council on June 26, 2023 in order to comply with HB 3115 by July 1, 2023.

FINANCIAL IMPLICATIONS:
City staff, particularly in the Police Department and Parks Maintenance Division, currently engage with people camping on public property on a day-to-day basis. At this time, we do not expect a significant increase to workload related to enforcement of time, place, and manner restrictions.

Related to clean-up of established campsites, earlier this year, the City entered into an Intergovernmental Agreement with Metro for "Regional Illegal Dumping (RID) Patrol". Under this agreement, Metro is responsible for cleaning up established campsites and all costs incurred. In addition, the Police Department has already developed procedures to comply with HB 3124, passed by the Oregon Legislature in 2021. Under HB 3124, property removed from an established campsite must be managed in specific ways.

Prohibition and Regulation of Camping on Public Property

City Council Work Session | June 12, 2023

Outline

- Background
- Neighboring Jurisdictions
- Draft Ordinance
- Next Steps
- Questions and Discussion

Background

Case Law

- Martin v. Boise
  - Cities cannot punish a person who is experiencing homelessness for sitting, sleeping, or lying on public property when that person has no place else to go;
  - Cities are not required to build or provide shelters for persons experiencing homelessness;
  - Cities can continue to impose traditional sit, sleep, and lie prohibitions and regulations on persons who do have access to shelter; and
  - Cities are allowed to build or provide shelters for persons experiencing homelessness.
- Johnson v. City of Grants Pass
  - Whether a city's prohibition is a civil or criminal violation is irrelevant. If the prohibition punishes an unavoidable consequence of one's status as a person experiencing homelessness, then the prohibition, regardless of its form, is unconstitutional;
  - Persons experiencing homelessness who must sleep outside are entitled to take necessary minimal measures to keep themselves warm and dry while they are sleeping; and
  - The case defined when someone does not have access to shelter.

Oregon Law: HB 3115

- Any city or county law regulating the acts of sitting, lying, sleeping or keeping warm and dry outside on public property must be "objectively reasonable" based on the totality of the circumstances as applied to all stakeholders, including persons experiencing homelessness.
- Deadline of July 1, 2023.

Tualatin's Current Ordinance

Tualatin Municipal Code Chapter 6-12-030

No person shall camp in our upon any sidewalk, street, alley, lane, or public right-of-way, park or any other publicly owned property or under any bridge or viaduct, unless otherwise specifically authorized by this code or by declaration of the Mayor in emergency circumstances or authorized by a City permit for a special event.

Tualatin's ordinance is not in compliance with HB 3115 and must be repealed or modified.

Tualatin Municipal Code Chapter 6-12-030

Neighboring Jurisdictions

	Tigard	Sherwood	Washington County	Wilsonville
Time	• 9am – 7pm	• 7am – 9pm	• Limited to 5 calendar days	• 7am – 9pm
Place	• Sensitive lands • City parks • City parking lots • 500 ft buffer from schools, freeway entrances/exits	• Sensitive areas • Residential zones and structures • 1000 ft buffer from schools • Reduces sidewalk width below 4 ft	• Riparian corridor, etc. • 500 ft buffer from schools, day care facilities	• Only on specific property designated for camping in the Administrative Rules
Manner	• No fires • Campsite limited to 12 x 12 ft • 20 ft buffer between campsites	• No fires • No structures • No digging, removing vegetation	• No accumulation of waste • Campsite limited to 12 x 12 ft • Roadway/sidewalk clearance	• No fires • Campsite limited to 10 x 10 ft • 100 ft buffer between campsites • No digging

Draft Ordinance

Ordinance Goals

- Compliance with HB 3115;
- Clarity for City staff implementing and enforcing the time, place, and manner regulations;
- Consistency, where possible, with nearby jurisdictions; and
- Balance between the intended use of properties and compassion for people experiencing homelessness.

Time

Considerations

- When services are available for people experiencing homelessness
- Staff's ability to enforce time regulations
- When properties are in use
- Consistency with neighboring jurisdictions

Recommendation

- Camping prohibited between 7am and 7pm

Manner

Considerations

- Neighboring jurisdictions are largely consistent with manner regulations
- Discouraging large encampments
- Integrity and access to public infrastructure
- Environmental concerns

Recommendation

- May not accumulate, discard, or leave behind trash, etc.
- May not dig, excavate, erect/install fixtures, harm vegetation
- May not obstruct or attach camp materials to public infrastructure or private property structures
- Campsite is limited to 12x12 ft
- No unauthorized connections to electrical outlets or other utilities
- May not start or maintain a fire
- May not create a physical impairment to emergency ingress or egress

Place

Considerations

- Must have areas where camping is not prohibited
- Number of people estimated to be camping outdoors within City limits currently
- Neighboring jurisdictions have prohibited camping on sensitive lands, City/County property, parks, public right-of-way, and created buffers around services for people experiencing homelessness, schools, residential properties and zones, and freeway entrances/exits
- Protection of environment, City infrastructure, and intended use of the property

Place

Recommendation

Camping Prohibited in:

- City-owned or maintained parking lots
- Within 500 feet of schools, freeway entrances/exits
- Within 20 feet of a building
- Natural Resource Protection Overlay, Natural Areas, greenways, and landscaped areas
- Public rights-of-way and railroad right-of-way
- Municipal grounds and Library plaza
- City Parks

Questions and Discussion

CITY OF TUALATIN
ORDINANCE NO. XXXX-23
AN ORDINANCE PROHIBITING AND REGULATING CAMPING IN THE CITY OF TUALATIN

WHEREAS, the court decisions *Martin v Boise* and *Johnson v Grants Pass* held that prohibiting camping in the absence of available shelter violates a person's Eighth Amendment rights against cruel and unusual punishment, but that a municipality may adopt reasonable time, place, and manner regulations; and

WHEREAS, Oregon House Bill 3115 (2021) codified the *Martin v Boise* decision and required all local government regulation of sitting, lying, sleeping, or keeping warm and dry outdoors on public property that is open to the public must be objectively reasonable as to time, place, and manner prior to July 1, 2023; and

WHEREAS, the intent of this ordinance is to enhance the livability, including health and safety, for all community members as well as to protect the environment, community assets, and infrastructure of Tualatin; and

WHEREAS, camping in certain sensitive or high-risk areas creates a danger to the environment, the public, and the persons experiencing homelessness; and

WHEREAS, camping in certain locations or infrastructure prevents the public's ability to use those locations for their intended purpose and may result in imminent threats to life safety; and

WHEREAS, when shelter is not available, this ordinance allows a person to sleep protected from the elements and maintain the essentials for living, while still allowing others to use public spaces in a safe way, as designed and intended.

NOW THEREFORE, THE CITY OF TUALATIN ORDAINS AS FOLLOWS:

SECTION 1: Tualatin Municipal Code Chapter 6-12-030, Camping Prohibited on Public Property, is hereby repealed in its entirety and replaced with the attached Exhibit A.

SECTION 2: Tualatin Municipal Code Chapter 6-12-010, Definitions, is hereby amended as provided in Exhibit B.

SECTION 3: If any provision of this ordinance or the application thereof to any person or circumstance is held invalid, such invalidity does not affect the other provisions or applications of the ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this ordinance are severable. This City Council hereby declares that it would have adopted this ordinance irrespective of the invalidity of any particular portion therefore and intends that the invalid portions should be severed and the balance of the ordinance be enforced.

DRAFT

SECTION 4: This ordinance being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this ordinance takes effect immediately on its passage.

ADOPTED by the City Council this ____ day of June, 2023.

CITY OF TUALATIN, OREGON

DRAFT

Exhibit A

Tualatin Municipal Code Chapter 6-12-030

Camping Prohibited on Public Property

(1) Camping Prohibited.

It is unlawful for any person to camp in or upon any public right-of-way or City property, unless specifically authorized.

(a) By City Code.

(b) In a declaration of a local emergency or disaster.

(c) By the City Manager or designee when deemed necessary to serve the public interest.

(2) Time, Place, and Manner Regulations.

(a) A person without available shelter may camp on outdoor City property that is open to the public if all of the following time, place, and manner regulations are followed.

(b) Time Regulations. A person without available shelter may camp on City property as permitted by subsection (2)(a) only if the person complies with all of the following time restrictions.

(i) A person may only camp between the hours of 7pm and 7am. After 7am, a person without available shelter must dismantle the campsite and remove all personal property and camp materials from the campsite.

(c) Place Regulations. A person without available shelter may not camp in the following places at any time.

(i) Within any City-owned or maintained parking lot.

(ii) Within 500 feet from a public or private elementary school, secondary school, or career school attended primarily by minors.

(iii) Within 500 feet from an egress or ingress to a freeway.

(iv) Within 20 feet of a building, including but not limited to, residences, commercial buildings and City buildings.

(v) Within the Natural Resource Protection Overlay, Natural Areas identified in the Parks and Recreation Master Plan, greenways, and landscaped areas on publicly owned land.

(vi) In areas underneath roadways or bridges and publicly owned property that is not open to the public.

(vii) In the public right-of-way and railroad right-of-way.

(viii) Within City Parks.

(ix) Within municipal grounds and the Library Plaza.

DRAFT

(d) Manner Regulations. A person without available shelter may camp on City property as permitted by subsection (2)(a) if the person complies with all of the following manner regulations.

(i) A person may not accumulate, discard, or leave behind in or around a campsite any rubbish, trash, garbage, debris, or other refuse, unsanitary or hazardous materials, or any animal or human urine and feces.

(ii) Digging, excavating, terracing of soil or other alteration of City property, or causing environmental damage or damage to vegetation or trees is prohibited.

(iii) Obstruction or attachment of camp materials to public infrastructure or private property structures, including bridges or bridge infrastructure, fire hydrants, utility poles, streetlights, traffic signals, signs, fences, trees, vegetation, vehicles, or buildings is prohibited.

(iv) Erecting, installing, placing, leaving, or setting up any type of permanent or temporary fixture or structure of any material or materials in or around a campsite is prohibited. For purposes of this section, a "permanent or temporary fixture or structure" does not include a tent, tarpaulin, or other similar item used for shelter that is readily portable.

(v) A campsite must be limited within a spatial footprint of 12 feet by 12 feet, or 144 square feet. Multiple persons may camp together in a single campsite, subject to the limitations of this subsection.

(vi) Unauthorized connections or taps to electrical or other utilities, or violations of building, fire, or other relevant codes or standards are prohibited.

(vii) Dumping of gray water (i.e. wastewater from bathwater, sinks and cooking) or black water (sewage) on City property is prohibited.

(viii) Open flames, recreational fires, burning of garbage, and bonfires are prohibited except as specified in Chapter 5-2-040.

(ix) Camping materials may not create a physical impairment to emergency ingress or egress or emergency response including within 10 feet of any fire hydrant, utility pole, or other utility, fire gate/bollards, or public infrastructure used for emergency response.

(3) Violation.

(a) A violation of this Chapter is punishable as follows:

(i) Civil Infraction, punishable by a fee of $35;

(ii) Citation in lieu of arrest for criminal trespass in the second degree; or

(iii) Arrest for criminal trespass in the second degree.

(b) A civil infraction or citation in lieu of arrest issued pursuant to section (3)(a)(i-ii) (above) may be accompanied by an order of exclusion for up to 60 days.

(c) An arrest for criminal trespass pursuant to section (3)(a)(iii) (above) may be accompanied by an order of exclusion for not more than 180 days.

DRAFT

(d) Nothing in this Section is intended to prescribe any particular order of violation or penalty. A police officer has discretion to impose a violation tailored to the circumstances and necessary to maintain the health and safety of persons experiencing homelessness and the community.

DRAFT

Exhibit B

Tualatin Municipal Code Chapter 6-12

PROHIBITED PUBLIC BEHAVIORS

6-12-010 Definitions.

Alcoholic Beverage includes beer, wine, ales, alcoholic liquors and all beverages containing alcohol.

Available shelter is a shelter that is able to be used or at a person's disposal based on the individual facts and circumstances of that particular person. A shelter is considered not available to a person if, based on the individual facts and circumstances of that particular person, the shelter cannot be accessed or utilized for sitting, sleeping, and keeping warm and dry. Such situations include, but are not limited, to a shelter that:

1. Requires payment and the individual does not have money to pay for the shelter;
2. Has a maximum stay rule or temporal requirement or deadline the person has exceeded or not met;
3. Has excluded the person from the shelter for any lawful reason;
4. Cannot reasonably accommodate the person's mental health or physical needs;
5. Is unavailable due to the person's family status, age, gender, gender identity, sexual orientation, or other status;
6. Has excluding general rules that prohibit alcohol or drug use in the shelter or on shelter grounds or is unavailable to the person because the shelter has rules about alcohol or drug use that the person does not meet;
7. May prohibit a minor child to be housed in the same facility with at least one parent or legal guardian;
8. Requires participation in religious activity or receipt of religious information or religious teaching the person does not wish to participate in or receive; or
9. Requires a person to leave their pet(s) unattended in order to stay at the shelter. This section does not apply to service animals under the Americans with Disabilities Act.

Camp or Camping means to pitch, erect, create, use or occupy camp materials for the purpose of establishing or maintaining a permanent or temporary place to live.

Camp materials include, but are not limited to, tents, huts, awnings, lean-tos, chairs, tarps or tarpaulins, cots, beds, sleeping bags, blankets, mattresses, sleeping or bedding materials, food or food storage items, or similar items that are or appear to be used as living or sleeping accommodations, or to assist with living or sleeping activities. *Campsite* means any place established or maintained for the purpose of camping.

City property means any real property or structures owned, leased, or managed by the City.

Downtown Area means the area bounded on the north beginning at 90th and Tualatin Road along the north right-of-way to the access road by the Tualatin Country Club back to the Tualatin River then extending to include the incorporated portion of the City of Tualatin that lies north of the Tualatin River

DRAFT

down to the intersection of the railroad tracks with the Interstate Highway 5 right-of-way; on the East by the east side of the Interstate Highway 5 right-of-way; on the South by the south side of the right-of-way of Nyberg Street through its connection with and along Tualatin-Sherwood Road to 90th; and on the West by the west side of the right-of-way of 90th Street up to its intersection with Tualatin Road. (See Map.)

Freeway means a highway for through traffic where access to the highway is fully controlled except as may be allowed at designated interchanges and includes Interstate 5, Interstate 205, and Highway 99W.

Open to the public shall mean City properties where members of the public are not prohibited from being by law, rule, regulation, or custom including, but not limited to the properties being closed due to hour restrictions, physical barriers, or because they are temporarily being used for another purpose. Examples of properties that are not open to the public include properties being used for City water facilities such as reservoirs, parks that are closed overnight, properties that are under repair, or properties for which a permit has been issued for an event.

Parking lot means all developed or undeveloped areas or facilities owned, maintained, and/or leased by the City and are designated for the parking of vehicles.

Right-of-way means an area that allows for the passage of people, goods, or utilities. Right-of-way may include freeways, pedestrian connections, and streets. A right-of-way may be dedicated or deeded to the public for the public use or owned by the City or other public body.

Shelter means a place an individual may access for the purposes of sitting, sleeping, and keeping warm and dry, which may include but is not limited to a residence, hotel, motel, or a public or private facility developed or legally established for people experiencing homelessness that does not charge for services.

SUBJECT:
National Pollinator Week Proclamation

EXECUTIVE SUMMARY:
National Pollinator Week is the third full week of June each year. The National Pollinator Week Proclamation recognizes the importance of pollinators to our ecosystem and affirms the City's commitment to help sustain pollinators. Additionally, the proclamation supports a goal of the Tualatin Parks Advisory Committee and the City's Bee City USA affiliation.

Tualatin Parks Advisory Committee members will provide the Pollinator Week presentation emphasizing the importance of native pollinator species.

POLLINATOR WEEK

JUNE 19-25, 2023

BEE CITY USA COMMITMENTS

- Bee City USA committee
- Create & enhance pollinator habitat
- Reduce the use of pesticides
- Pollinator-conscious practices, policies & plans
- Pollinator awareness events
- Bee City USA signs & online presence
- Pay annual renewal fee

POLLINATOR EVENTS & ACTIVITIES

13 Planting events & activities

29,340 square feet planted

725 Volunteers

CITY OF TUALATIN PARKS & RECREATION POLLINATOR WEEK JUNE 19-25, 2023

COMMUNITY BENEFITS

- Ensure survival of vital animal species
- Build community locally and nationally
- Improve local food production
- Support small businesses
- Address pest problems with fewer pesticides
- Heighten awareness of biological diversity

POLLINATION FACTS

- Pollination is a vital to the life cycle of all flowering plants.
- Pollinators are critical to the native species ecosystem.
- An estimated 1/3 of all foods and beverages is delivered by pollinators.
- In the U.S., pollination produces nearly $20 billion worth of products annually.
- Help pollinators by planting pollinator friendly gardens.
- Reduce use of pesticide to support pollinators.

QUESTIONS & COMMENTS

Proclamation

Declaring the Week of June 19 – June 25, 2023 as
National Pollinator Week in the City of Tualatin

WHEREAS, pollinators such as thousands of species of bees are essential partners in producing much of our food supply; and

WHEREAS, pollinators provide significant environmental benefits that are necessary for maintaining healthy, diverse ecosystems in towns and cities; and

WHEREAS, pollination plays a vital role for the trees and plants of our community, enhancing our quality of life, and creating recreational and economic development opportunities; and

WHEREAS, the City of Tualatin manages parks, public landscaping, and other public lands that includes greenways, natural areas and wildlife habitats; and

WHEREAS, the City of Tualatin provides recommendations to developers and residents regarding landscaping to promote wise conservation stewardship, including the protection of pollinators and maintenance of their habitats.

NOW, THEREFORE, BE IT PROCLAIMED BY THE CITY COUNCIL OF THE CITY OF TUALATIN, Oregon that the City of Tualatin designates the week of June 19-25, 2023 as National Pollinator Week in the City of Tualatin.

All are urged to recognize this observance, and support efforts to protect and plant pollinators.

The City of Tualatin supports Bee City USA certified affiliate status in their recognition of the value of pollinators by proclaiming June 19-25, 2023, as National Pollinator Week in Tualatin.

INTRODUCED AND ADOPTED this 12th day of June, 2023.

Proclamation

Declaring June 19, 2023, as Juneteenth Day in the City of Tualatin

WHEREAS, the City Council's 2030 Vision is for Tualatin to be an inclusive community that promotes equity, diversity, and access in creating a meaningful quality of life for everyone; and

WHEREAS, President Abraham Lincoln signed the Emancipation Proclamation on January 1, 1863, declaring enslaved people as free, paving the way for the passage of the 13th Amendment, which formally abolished slavery in the United States; and

WHEREAS, Texas was the last of the Confederate States to receive orders requiring the end of slavery, with Union troops announcing that all slaves were free in Galveston, Texas, on June 19, 1865; and

WHEREAS, June 19 has a special meaning to African Americans, and has been celebrated by the Black American community for more than 150 years; and

WHEREAS, Juneteenth celebrates the end of slavery and recognizes the high price Black Americans have paid for civil rights and equal access; and

WHEREAS, Juneteenth is an occasion to remember and reflect on the significant ways that African Americans have enriched society through their contributions; and

WHEREAS, Tualatin is a community that includes, values, and welcomes diversity in our community, and we believe that the rich diversity of communities in Tualatin is one of our greatest strengths.

NOW THEREFORE, BE IT PROCLAIMED BY THE CITY COUNCIL OF THE CITY OF TUALATIN, OREGON, that:

June 19, 2023, is recognized as Juneteenth in the City of Tualatin. The community is encouraged to respect and honor our diverse community, celebrate, and build a culture of inclusivity and acceptance.

INTRODUCED AND ADOPTED this 12th day of June, 2023.

OFFICIAL MINUTES OF THE TUALATIN CITY COUNCIL WORK SESSION MEETING FOR MAY 22, 2023

Present: Mayor Frank Bubenik, Council President Valerie Pratt, Councilor Bridget Brooks, Councilor Maria Reyes, Councilor Cyndy Hillier, Councilor Christen Sacco, Councilor Octavio Gonzalez

---

Mayor Bubenik called the meeting to order at 6:00 p.m.

1. Parks Bond Projects Update.

Parks and Recreation Director Ross Hoover and Parks Planning Manager Rich Mueller provided an update on the Parks and Trails Bond. Director Hoover acknowledged the formation of the Parks Funding Measure Committee and expressed his appreciation for their involvement. He mentioned the committee had finalized the funding package for the community. Manager Mueller shared the progress of various bond projects and provided status updates. He highlighted the new river access in Community Park, mentioning that the property acquisition had recently concluded and that planning, design, and construction would follow, with completion expected in 2026. Manager Mueller also discussed ongoing playground upgrades at Atfalati, Ibach, and Jurgens Park, as well as the trail connection at the Nyberg Creek Wetlands. He stated construction design for the Veterans Plaza improvements has begun. Manager Mueller mentioned that discussion regarding athletic field upgrades, including lighting and field improvements, taking place at Tualatin Community Park have begun. He also mentioned that several property acquisitions are being discussed for natural areas.

Director Hoover stated the Tualatin Parks Advisory Committee would serve as the Bond Oversight Committee for the bond projects. He outlined the communication tools that would be utilized to keep the community informed, including updates during Council meetings, website updates, email blasts, the city e-newsletter, and social media posts. Director Hoover stated next steps for the bond projects include providing information to the community, progressing with projects, engaging with TPARK, and providing ongoing updates to the Council.

Council President Pratt asked when the completion of the Browns Ferry Park connection would be open. Manager Mueller explained the project was in the hands of the developer and should be completed soon. He mentioned the trail was mostly finished but they were waiting for legal documents from the developer before opening it to the public.

Councilor Hiller inquired about the partnership between the city and the Tigard-Tualatin School District. Director Hoover stated they have initiated discussions with the school district to establish an intergovernmental agreement (IGA) for the joint operation and management of school district and city fields. He stated a comprehensive community engagement process would be conducted to determine where bond investments should be allocated as part of the IGA.

Councilor Brooks asked about the website interface and how people could find information based on topic and timeline. Director Hoover provided an explanation of how the website would be organized to facilitate easy access to information.

Councilor Reyes asked if communications would be available in multiple languages and inquired about the handling of suggested projects. Director Hoover noted that voters had already selected key investment areas, which would guide the project selection process.

2. Council Meeting Agenda Review, Communications, and Roundtable.

Councilor Sacco stated she attended the Clackamas Cities Association Dinner.

Councilor Brooks stated she attended the Policy Advisory Board meeting and the Tualatin Arts Advisory Committee meeting.

Council President Pratt stated she attended the Stafford-Hamlet meeting, the Greater Portland Inc. meeting at Clean Water Services, the C4 Metro meeting, the Clackamas Cities Association Dinner, and the Tualatin Valley Fire and Rescue Citizen Academy.

Mayor Bubenik stated he attended the Greater Portland Inc. meeting at Clean Water Services, the Neighbors Nourishing Communities Plant Hand Out event, the Washington County Coordinating Committee meeting, the Washington County Chair and Mayors meeting, the Greater Portland Inc. Board meeting, the Clackamas County Chair and Mayors meeting, and the Regional Tolling Advisory Committee meeting.

Adjournment

Mayor Bubenik adjourned the meeting at 6:45 p.m.

Public Hearings - *Quasi-Judicial*

1. Consideration of the Norwood Road Plan Text Amendment and Plan Map Amendment (PTA 23-0001 and PMA 23-0001)

   Mayor Bubenik opened the hearing for Plan Text Amendment 23-0001 and Plan Map Amendment 23-0001. He stated this item is being continued to the June 12, 2023 City Council meeting. Mayor Bubenik closed the hearing.

Special Reports

1. Summer Programs Preview

   Recreation Manager Julie Ludemann and Library Public Service Manager Sarah Jesudason provided an overview of the upcoming summer programs. Manager Ludemann began by announcing the Blender Dash event scheduled for June 10th. Manager Jesudason mentioned that the Summer Reading kickoff would take place from June 16-18, with this year's theme being "Find Your Voice." She also highlighted that the library will be organizing Makers in Residence workshops and projects throughout the summer. Manager Ludemann announced that Viva Tualatin is set to be held on July 22nd at Atfalati Park. Additionally, she mentioned that summer camps catering to grades 1-10 would be offered this year. Manager Ludemann shared that Concerts in the Parks will be taking place in July and August. Manager Jesudason presented various volunteer opportunities available at the library and other event being held throughout the summer. She noted the Tualatin Police Department would be hosting summer programs for children and organizing National Night Out on the first Tuesday in August. Manager Ludemann discussed summer programs tailored for active older adults at the Juanita Pohl Center. She acknowledged the contributions and support of the city's recreation partners, including Willowbrook Arts Camp, Skyhawks Sports Camp, Skate Like A Girl, Tualatin Youth Sports Leagues, and the Tualatin Historical Society.

   Councilor Sacco raised the concern about the large waitlist for the summer camps and inquired about strategies to accommodate more children. Manager Ludemann stated that addressing the high demand would require additional staff and space resources.

Council Communications

Mayor Bubenik announced the Memorial Day Observance and Community Picnic to be held May 29th at 10:45 am at the Lake of the Commons. He invited everyone to attend.

Councilor Brooks invited community members to check out the new utility box wraps located around the city.

Adjournment

Mayor Bubenik adjourned the meeting at 7:36 p.m.

CITY OF TUALATIN
Staff Report

TO:	Honorable Mayor and Members of the City Council
THROUGH:	Sherilyn Lombos, City Manager
FROM:	Ross Hoover, Parks and Recreation Director Rich Mueller, Parks Planning and Development Manager
DATE:	June 12, 2023

SUBJECT:
Consideration of **Resolution No. 5699-23** Authorizing the City Manager to Execute a Maintenance and Operations Agreement with Randy McLeod and Janine McLeod for Basalt Creek Parkland

RECOMMENDATION:
Staff recommends that the Council approve Resolution No. 5699-23 authorizing a Maintenance and Operations Agreement with the McLeod's for the maintenance and security of Basalt Creek Parkland located at 23465 SW Boones Ferry Road.

EXECUTIVE SUMMARY:
At the February 27, 2023 meeting, City Council authorized the purchase of parkland at 23465 SW Boones Ferry Road to serve the community as residential and employment areas are developed in Basalt Creek. This property acquisition closed and the deed was recorded by Washington County on May 31, 2023. Staff presented information regarding agreements for the maintenance and operations of Basalt Creek parkland to Council during work session on September 12, 2022; this type of agreement is in use at other City parklands to reduce costs, provide security/safety and maintain the existing condition of the property in order to preserve the useful property value.

This property location is adjacent to residential development activity in Basalt Creek, including an affordable housing complex. The City plans to engage future community members in the Basalt Creek area to plan the park. The future housing and employment are yet to occur, and the City has a need to maintain and secure this park property. In the short term, the property sellers are interested in continuing to reside at the property to maintain and provide maintenance and security.

FINANCIAL IMPLICATIONS:
The Maintenance and Operations Agreement is expected to save City funds on a short-term basis. The City will avoid the routine building operations, maintenance and potential vandalism costs, and receive public benefits shown in Appendix A of the Agreement. The building structures and land are in acceptable condition, although the City may have costs if major system issues occur.

Resolution No. 5699-23
Maintenance and Operations Agreement

RESOLUTION NO. 5699-23

RESOLUTION AUTHORIZING AN AGREEMENT BETWEEN THE CITY OF TUALATIN AND RANDY F. MCLEOD AND JANINE B. MCLEOD FOR MANAGEMENT AND OPERATIONS OF BASALT CREEK PARKLAND

WHEREAS, the City Council authorized parkland acquisition in Basalt Creek at 23465 SW Boones Ferry Road, Tualatin OR 97062;

WHEREAS, the City has acquired this property as parkland to serve the growing Basalt Creek area residential and employment needs;

WHEREAS, the City plans to involve future community members in preserving the natural areas on the property, and plan active recreation facilities and features;

WHEREAS, the City has the ability to receive public benefits to maintain, secure and enhance safety of the property and building structures through a Maintenance and Operations Agreement;

WHEREAS, the City can reduce operating costs, discourage vandalism and shift routine maintenance of the premises; and

NOW THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF TUALATIN, OREGON, that:

Section 1. The City Manager is authorized to execute a Management and Operations Agreement for Basalt Creek Parkland located at 23465 SW Boones Ferry Road, Tualatin OR 97062.

Section 3. This resolution is effective upon adoption.

INTRODUCED AND ADOPTED this 12th day of June, 2023.

CITY OF TUALATIN
MANAGEMENT AND OPERATIONS AGREEMENT
for Basalt Creek Park Property
(23465 SW Boones Ferry Road, Tualatin OR 97062)

This Management and Operations Agreement ("Agreement") is between the City of Tualatin ("City") and McLeod Trust, ("Provider") for the property of the future "Basalt Creek Park, located at 23465 SW Boones Ferry Road, Tualatin, Oregon 97062" ("Premises"), for the purposes of maintaining, caretaking, security and safety for residents, and employment in the City of Tualatin.

Provider will occupy the residence, garage, and other sheds/out buildings, as-is, at the Premises, having a building space of approximately 1,725 square feet, and land area of 6.35 acres (collectively the Premises). No building changes/additions or change in Premise's current use will be permitted, unless approved in writing from the City's Parks and Recreation Director.

Section 1. Purpose. The purpose of this Agreement is to set out the terms and conditions Provider agrees to in order to maintain the condition and useful value of the Premises consistent with the terms of City of Tualatin Charter, Ordinances, and parks and recreation policies.

Section 2. Use of Property; Agreement Term. In consideration of the promises and covenants contained herein the receipt and sufficiency of which are hereby acknowledged by the Parties, the City allows Provider to use and occupy Premises for the purposes outlined in this Agreement from the date beginning May 31, 2023 (Commencement Date) and ending May 31, 2025. This Agreement will automatically extend for one year if not terminated by either party with at least 90 days written notice.

Section 3. Caretaker, Maintenance, Security and Safety Responsibilities.

A. Caretaker & Maintenance. Provider must operate and use the Premises as it is currently being used and to maintain the Premises' condition and value to serve Tualatin residents and employees. Provider and City enter this Agreement with the expectation that Provider will perform the obligations listed in Appendix A which is incorporated by reference herein.

B. Performance Standards. The specific performance standards applicable for each obligation listed in Appendix A, such as maintenance, caretaker, security, and safety are also outlined in Appendix A. City and Provider may meet as needed to discuss the terms of this Agreement and may modify performance standards to meet City goals.

C. Access to Tualatin Residents. The Provider will not allow access to community members or the general public.

Section 4. Management of Property.

A. Provider to Manage. Provider will manage, care-take, and maintain the Premises, consistent with the policies and procedures of the City of Tualatin and as set forth in Appendix A. Provider bears all costs and expenses related thereto. The Premises may be used for residential purposes while providing maintenance, security, and safety functions to keep the Premises in the same condition it is in on the Commencement Date. In the event there is a repair or maintenance obligation that arises that is not listed in Appendix A and, Provider does not want to cover such cost, the Provider agrees to provide notice to the City of the need for such maintenance and repair (Repair Notice) as soon as practicable. Upon receipt of a Repair Notice, the City may determine in its sole and absolute discretion, whether to undertake such maintenance and repair. Provider shall not use nor allow the Premises to be used in any manner inconsistent with City of Tualatin Park Rules or permit anything to be done upon or about the Premises that creates a nuisance.

B. Coordination with City. The parties may coordinate building management to maximize the value to the community.

C. Compliance with Laws. Provider must comply with and faithfully observe in the use and occupation of the Premises all rules, laws, regulations, requirements, and codes of the city, county, state, federal, and other applicable governmental authorities.

Section 5. Acceptance of Current Conditions; Modifications to the Premises.

A. Acceptance. Provider acknowledges the condition of the Premises as it currently exists. City, its officers, employees, or agents have made no representations or warranties as to the condition of the Premises except as otherwise provided in this Agreement.

B. Modifications. Provider may not modify the Premises without the prior express written consent of City which consent is in the City's sole and absolute discretion. Any such approved modification will be made at Provider's sole expense and becomes the property of the City. If Provider makes any alterations, decorations, additions or improvements to the Premises, Provider must promptly pay all service providers who have furnished labor or materials. Provider agrees to protect, defend, indemnify, and hold harmless City and the Premises from any liens or claims. Should such a lien be filed, Provider must bond against or discharge the lien within ten (10) business days after the lien is filed or attached.

Section 6. Nondiscrimination. Provider acknowledges it will not discriminate against any person, group, or employee due to race, color, creed, religion, sex, sexual orientation, marital status, age, disability, national origin, ancestry, or any other protected class acknowledged under State and Federal law, in the performance of its duties under this Agreement.

Section 7. Insurance.

A. Personal Property. Provider shall bear the expense of any insurance maintained by Provider insuring the personal property of Provider on the Premises against risk of theft or damage.

B. Liability Insurance. Provider shall procure and maintain during the term of the Agreement public liability, property damage, and renter's insurance with a responsible company with limits of not less than $1,000,000.00 for injury to one person and $1,000,000.00 for injury to two or more persons in one occurrence, which insurance shall name the City, its elected officials, officers, employees, agents and insurers as additional named insureds. Provider shall deliver to City a certificate and endorsement of such insurance describing such coverage.

Section 8. Hazardous Materials; Dangerous Conditions; Notification of Dangers.

A. Hazardous Materials. Provider must not bring, keep, or use any Hazardous Materials in or about the Premises without the prior written consent of City, which consent is in the City's sole and absolute discretion. As used in this Agreement, "Hazardous Material" means any hazardous or toxic substance, material or waste, including but not limited to, those substances, materials, and wastes listed in the United States Department of Transportation Hazardous Materials Table (49CFR§172.101), or by the United States Environmental Protection Agency as hazardous substances (40CFR pt 302) petroleum products or other such substances, materials and wastes that are or become regulated under applicable local, state or federal law.

B. Dangerous Conditions. Provider must not create any dangerous conditions at the Premises, including but not limited to any fire danger, nuisance, or other violation of law.

C. Notification of Dangers. Provider must promptly notify City of any dangers to person or property, or any dangerous conditions, that exist on the Premises, which are either known or

discovered by Provider. Provider must inform its visitors, guests and service providers of any known or discovered dangers, or any dangerous conditions, that are present at the Premises, until such time as the condition is remedied.

Section 9. Nonassignment. Provider may not assign this Agreement in whole or in part, without the prior written consent of City which consent is in the City's sole and absolute discretion.

Section 10. Signs. No permanent signs are permitted on the Premises.

Section 11. Maintenance of Facility and Common Areas. Provider will repair and maintain the residence on the Premises and out buildings including the roof, heating, air conditioning, plumbing, water, sewage, gas and electrical systems, fixtures and equipment in good condition and repair. In the event such costs to repair and maintain a system at the Premises that totals $500.00 or more, and additional amounts will be the responsibility of the City. If a defect, malfunction, or damage results from Provider's act or omission, City is not responsible for such repair and may charge to and collect the cost of such repair from Providers.

A. Areas. Provider will maintain the Premises.

B. Utility Costs. Provider will obtain and pay cost of electric, sanitary and storm, sewer, road maintenance, and water utilities; solid waste removal and recycling service; and provide regular custodial and cleaning consistent with the level of service provided other City-owned buildings. Provider shall be responsible for any paper products and toilet supplies used. Provider shall obtain and pay cost of telephone, fax, cable, and Internet service.

C. Repairs. City has no duty to make repairs under this Agreement until Provider gives written notice to City of the repairs to be made or condition to be corrected. In no event will City be liable for nor will City indemnify the Provider for a failure to make repairs to the Premises if the repair is completed within a reasonable time following notice from Provider.

D. Access to Premises. The parties agree that the City staff, consultant's and service providers may, upon 24 hours' notice to Provider (except no notice shall be required in an emergency), enter any portion of the Premises at any time and erect all necessary structures to repair, alter, or maintain the Premises. Provider waives any claim to damages resulting from such activities, except those caused by City's negligence.

Section 12. Vacate Premises Upon Termination; Damages for Violations.

A. Vacate the Premises. Upon termination of this Agreement, Provider must vacate the Premises and leave the Premises in the same condition as it was at the beginning of this Agreement, except for reasonable wear and tear and damage by unavoidable casualty to the extent that the damage is covered by City's fire insurance policy with extended coverage endorsement. Provider must return all keys for the structures/improvements on the Premises to City, inform City of all combinations on locks, if any, and remove any alterations before vacating the Premises.

B. Removal of Furnishings. Upon termination of this Agreement, Provider must remove all of its furnishings and trade fixtures and restore all damage resulting from such removal. Failure to remove shall be an abandonment of the furnishings and fixtures, and City may dispose of it in any manner without liability.

C. Damages for Violations. If Provider causes any damage to the Premises, City has the right to recover from Provider the following damages:

- **a.** All costs incurred in the cost of clean-up and repair and preparation for a new use including the cost of correcting any defaults or restoring unauthorized alterations;
- **b.** Reasonable attorney fees incurred in connection with the damage, whether or not any litigation has commenced;

c. City may institute actions to recover such amounts as they accrue and no one action for accrued damages shall bar a later action for damages subsequently accruing.

Section 13. Indemnity and Status

Indemnification by Provider. Provider must indemnify and hold City, its officers, agents, employees, elected officials, and volunteers harmless from and against any and all claims, actions, liabilities, costs, including costs of defense, arising out of or in any way related to any act or failure to act by Provider and its visitors, guests and agents in connection with this Agreement including but not limited to any injury or property damage that occurs on the Premises.

Indemnification by City. To the extent allowed under the Oregon Constitution and the Oregon Tort Claims Act and notwithstanding anything to the contrary herein, City must indemnify and hold Provider, its visitors, guests and agents harmless from and against any and all claims, actions, liabilities, costs, including costs of defense, arising out of or in any way related to any act or failure to act by City and its employees, agents, officers, volunteers in connection with this Agreement.

Nothing herein is intended to nor does it create an employment relationship between the Provider and City. Provider is not an employee of the City.

Section 14. Damage by Casualty or Fire and Duty to Repair. If the Premises is damaged by fire or other casualty, City may use its discretion to repair the damage. If the City chooses not to repair the damage, this Agreement may be terminated by either party after providing written notice to that effect to the other party. If the City chooses to make repairs, City may take possession of and occupy, to the exclusion of Provider, all or part of the Premises to make the necessary repairs. Provider agrees to temporarily vacate, upon request, all or any part of the Premises that City may require to make necessary repairs. City will endeavor to minimize disruption associated with repair. Provider waives all claims for recovery from City for loss or damage to the Premises insured under the City's casualty or fire insurance policies to the extent of any recovery collectable under such insurance.

Section 15. Performance by City. City will not be in default for the nonperformance or interruption or delay in performance of any of the terms, covenants, or conditions of this Agreement if due to a labor dispute, strike, lockout, civil commotion or like operation, government regulation or controls, inability to obtain labor or materials, or through an act of God or other cause beyond the reasonable control of City, if such cause is not due to the willful act or neglect of City.

Section 16. Default; Termination.

A. For Cause Termination. If Provider fails to perform any of the terms, conditions, or covenants of this Agreement, City will provide written notice of the default and a reasonable opportunity to cure. If Provider fails to cure the default within thirty days, then City may terminate this Agreement. This remedy is not exclusive but in addition to all other remedies and rights provided by law.

B. Termination for Convenience. The parties may terminate this Agreement by mutual written agreement at any time.

Section 17. Entire Agreement; Waiver. This Agreement, constitutes the entire agreement between the parties on the subject matter hereof. There are no understandings, agreements, or representations, oral or written, not specified herein regarding this Agreement. No waiver, consent, modification or change of terms of this Agreement will bind the parties unless in writing and signed by both parties and all necessary City approvals have been obtained.

Section 18. Notice to Parties. Except as otherwise expressly provided in this Agreement, any communications between the parties hereto or notices to be given hereunder must be given in writing by personal delivery, mail facsimile, or email.

A. Notice by Personal Delivery. Any communication or notice given by personal delivery is effective when actually delivered.

B. Notice by Mail. Notice given by mail must be by postage prepaid, to Provider or City at the address, set forth herein, or to such other addresses or numbers as either party may indicate pursuant to this Section. Any communication or notice so addressed and mailed is effective five (five) days after mailing.

C. Notice by Email. Any communication or notice given by email is effective upon the sender's receipt of confirmation generated by the recipient's email system that the notice has been received by the recipient's email system.

D. Party to be Notified. Unless otherwise notified in writing as set forth above, notices must be given to the Project Managers. If a Party's Project Manager is changed, notification of the change must be promptly made in writing to the other party. If a party receives a communication from the other party not executed by the Project Manager, the party may request clarification by the other party's Project Manager, which must be promptly furnished.

1. City's Project Manager
   Rich Mueller
   Parks & Recreation Manager
   18880 SW Martinazzi Avenue
   Tualatin, OR 97062
   503 691-3064

2. Provider Project Manager
   Janine & Randy McLeod
   23465 SW Boones Ferry Road
   Tualatin, OR 97062
   Phone: 503 866-1110
   Email: janinemcleod55@gmail.com

Section 19. Public Contracting Requirements. Provider must comply with provisions of ORS 279A.110; 279B.220, 279B, 225, 279B.230, and 279B.235, which are incorporated by reference herein. City's performance under the Agreement is conditioned upon Provider's compliance.

Section 20. Certification of Compliance with Tax Laws. As required by ORS 279B.110(2)(e), Provider represents and warrants that it has complied with the tax laws of this state, the City, and applicable political subdivisions of this state, including but not limited to ORS 305.620 and ORS chapters 316, 317 and 318, hereafter ("Tax Laws"). Provider further covenants to continue to comply with the Tax Laws during the term of this Agreement and Provider covenants and acknowledges that the failure to comply with the Tax Laws is a default for which City may terminate this Agreement and seek damages.

Section 21. Tax Exempt Status. Provider shall provide to City proof of filing for property tax exemption with the Washington County Assessor's Office. Provider must apply for this exemption in a timely manner. Application fees will be the expense of Provider. Any fees associated with a late filing must be paid by Provider. If Provider fails to file for such exemption, or is not eligible for such exemption as determined by Washington County, Provider will be responsible for all real property taxes assessed to City as a result of the Agreement.

Section 22. Dispute Resolution.

A. Process. If Provider disagrees with a decision of the City under this Agreement, Provider must provide written notice to the City's Project Manager of Provider's disagreement, and include all relevant information and exhibits, within thirty (30) days of Provider's knowledge of the decision to which Provider disagrees. The City's Project Manager will review the information and meet with

Provider to attempt to come to resolution on the dispute. If City and Provider are unable to come to resolution, the City's Project Manager will issue a written decision outlining the City's reasons to decline Provider's request regarding the dispute.

B. Complaint. Any claim that cannot be resolved between the parties as set forth herein shall be initiated by filing a complaint in the appropriate court as provided in this Agreement. The claim and all cross and counter-claims filed in response to the complaint shall be submitted to mediation. If the parties cannot agree on a mediator, the Presiding Judge for Washington County will select the mediator. Only if the dispute cannot be resolved by mediation, will the parties proceed to litigate the claim within the Circuit Court of Washington County for the State of Oregon. Provider, BY EXECUTION OF THIS AGREEMENT, HEREBY CONSENTS TO THE IN PERSONAM JURISDICTION OF SAID COURT.

Section 23. Execution of Agreement; Electronic Signature. This Agreement may be executed in one or more counterparts, all of which when taken together constitute one agreement binding on all parties, notwithstanding that all parties are not signatories to the same counterpart. Each copy of the Agreement so executed constitutes an original. A signature of a party provided by email, "pdf," or other electronic data file constitutes an original signature of that party.

Section 24. Governing Law. This Agreement is governed by and will be construed in accordance with the laws of the State of Oregon without regard to principles of law.

DATE:	June 12, 2023

SUBJECT:
Consideration of Resolution No. 5700-23 adopting Tualatin's Equitable Housing Funding Plan.

BACKGROUND:
In 2021, the City Council adopted a Housing Production Strategy (HPS) which serves as a City's commitment to develop strategies that encourage the production of needed housing, with an emphasis on improving outcomes for underserved communities, people with lower incomes, and people in state and federal protected classes. The state requires cities to evaluate the effectiveness of their HPS strategies and report on implementation progress over a six-year period.

And in 2022, the City of Tualatin was awarded a grant to work with EcoNW to develop an Equitable Housing Funding Plan as the next step in studying select actions in the HPS. Staff then held a work session with City Council on October 24, 2022, to introduce the project and on March 13, 2023, to provide a project update. An advisory committee was formed to discuss and provide feedback on the financial considerations being studied over the course of five meetings.

EXECUTIVE SUMMARY:
Tualatin has an urgent need for more housing that is affordable to people who live and work in Tualatin. While these problems are not unique to Tualatin and are common across the Portland region and state, Tualatin has a role in supporting the development of housing that is affordable to people who live and work in Tualatin.

The Equitable Housing Funding Plan studies actions identified in the HPS that either produce funding or require funding to support the development of housing that is affordable for moderate and low-income households with greater-than-average housing needs in Tualatin. This plan intentionally incorporates equity into its recommendations for implementing strategic actions by prioritizing those with the greatest housing needs, including:

- **Low-income households.** Households below 60% of MFI who account for roughly a third of Tualatin's households are considered to require publicly subsidized housing to avoid cost burdening.
- **Cost-burdened renters.** Cost burdening typically describes households that pay more than 30% of their monthly income toward their total housing costs. In 2016-2020, nearly half of renters in Tualatin were cost burdened, compared to only 17% of homeowners.

- **People of color.** Cost burdening in Tualatin disproportionately affects people of color who both rent or own their homes. The legacy of historic discriminatory practices such as denial of financial services still creates housing disparities for households of color.
- **Seniors.** On average, Tualatin householders 65 years of age and over had a lower income than the overall median and may have more challenges finding affordable housing or paying for maintenance in a home that they own.
- **Disabled residents.** About 8% of Tualatin's population had one or more disabilities, who may have additional housing needs beyond affordability, including accessible home features, proximity to transit, and other resources.
- **Commuters.** In Tualatin, 93% of workers commute from other nearby areas each day, some of whom are not currently able to afford the city's rental rates or homeownership.

The table below page, shows a summary of each of the strategic actions that were studied and their estimated range of funding in the next five years, either by providing revenue that can be used for housing, forgoing revenue to reduce costs for affordable development, or using funding for targeted programs.

Tool	What Does it Do	Population Served	Provides, Forgoes or Requires Revenue?
Construction Excise Tax	Levies a tax on new construction to fund housing programs and investments	Moderate Income and Lower-Income households	Provides Funding
Urban Renewal	Uses tax increment financing revenue for capital projects in urban renewal plan areas to support housing goals	Current and future residents within urban renewal area	Provides Funding
Nonprofit Low Income Tax Exemption	Forgoes property taxes for affordable housing provided by nonprofit organizations	Extremely and Very Low Income (<50%)	Forgoes Revenue
Multiple Unit Property Tax Exemption	Forgoes a portion of property taxes for mixed-income housing provided by market-rate developers	Low Income (50-80%)	Forgoes Revenue
System Development Charges Exemption	Reduces up-front development fees charged by the City for new affordable units (which must be backfilled from another funding source).	Extremely and Very Low Income (<50%) or Low Income (50-80%)	Forgoes Revenue
Down Payment Assistance	Provides funding for up-front costs to support moderate-income first-time homebuyers.	Moderate Income (80-120%) Seniors or disabled residents	Requires Funding
Home Rehabilitation	Provides funding for home repairs, weatherization, and/or accessibility improvements for qualifying homeowners.	Moderate Income (80-120%)	Requires Funding

All of the tools in the funding plan will need future study and buy-in from the public, partners (such as overlapping taxing districts, developers, etc.), and City Council decision before being implemented.

RECOMMENDATION:
The Advisory Committee unanimously recommends that Council pass Resolution No. 5700-23, adopting Tualatin's Housing Equitable Funding Plan.

OUTCOMES OF DECISION:
Adoption of the Equitable Housing Funding Plan acknowledges preliminary evaluation and support for select strategies identified in the Housing Production Strategy. Council may choose to direct staff to further evaluate or implement all, some, or none of the tools studied in the Equitable Housing Funding Plan.

On a related note, staff will be required to submit a report to the state that summarizes scheduled implementation of strategic actions set forth by the Housing Production Strategy under OAR 66-0008 by August 2024. For strategic actions not adopted on the schedule in the HPS, the City must provide an explanation of the circumstances that posed a barrier to implementation and a plan for addressing the need identified in the strategy.

ALTERNATIVES TO RECOMMENDATION:
- Propose modification to the Equitable Housing Funding Plan ;
- Continue the discussion to a future time; or
- Deny the proposed Equitable Housing Funding Plan.

FINANCIAL IMPLICATIONS:
There are no direct financial implications of adoption of the Equitable Housing Funding Plan; however the plan highlights potential costs (or revenues), financial tradeoffs, and equity considerations for each strategic action studied. Staff time will be required to further evaluate and implement potential strategic actions as directed by Council.

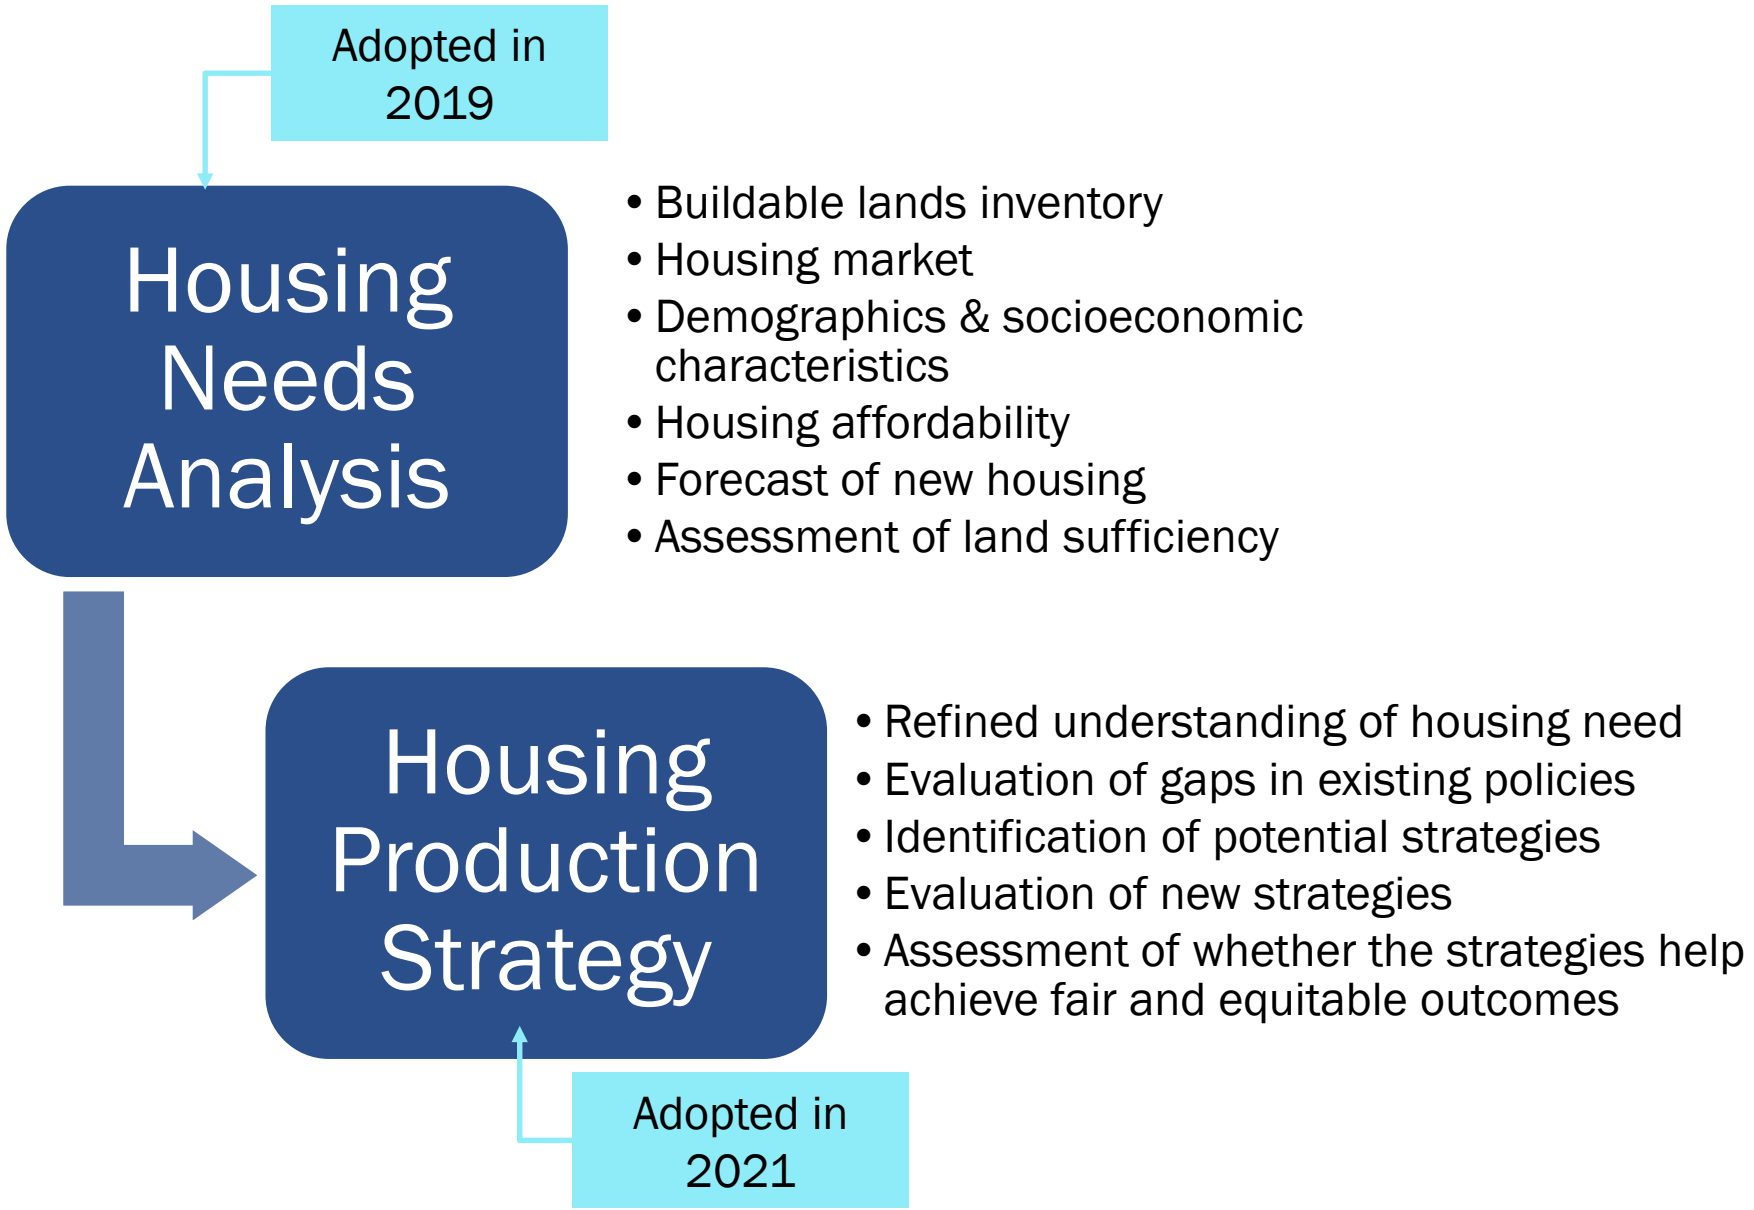
ECONOMICS · FINANCE · PLANNING

Tualatin's Recent Housing Planning Work



Project Purpose

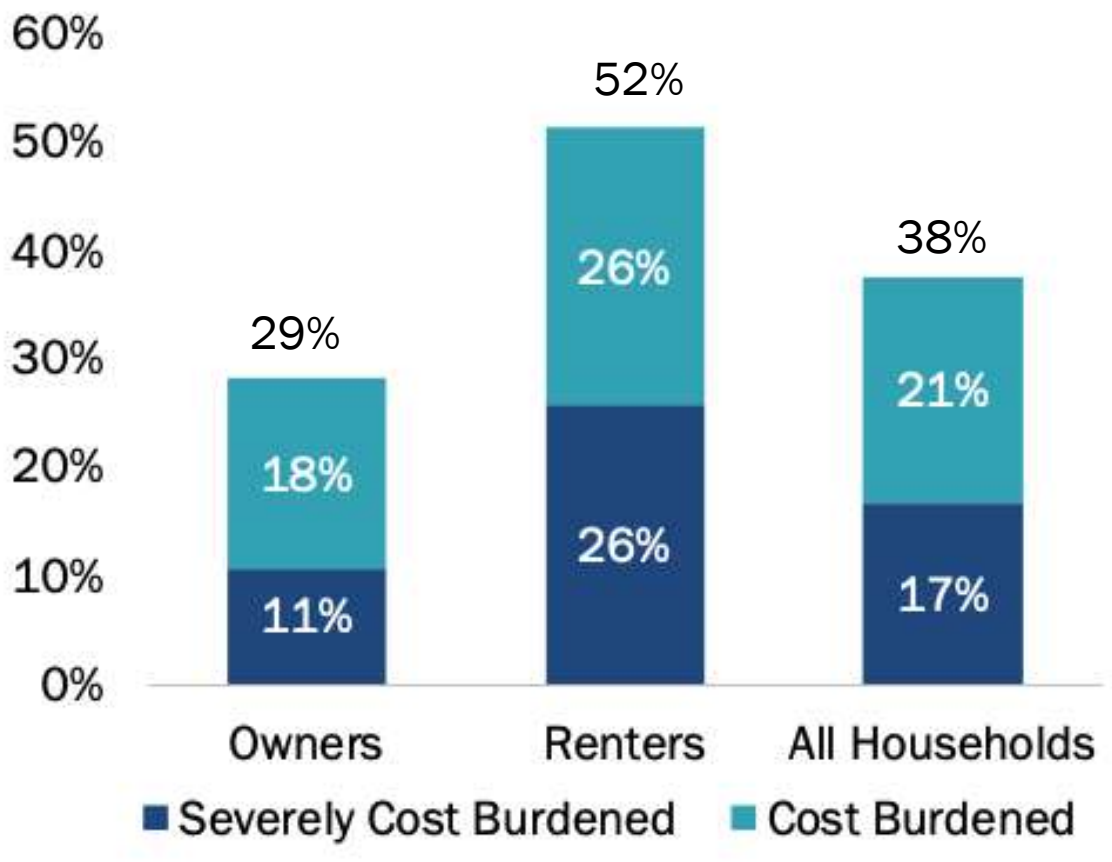
- The Equitable Housing Funding Plan provides next steps towards affordable, fair and equitable housing outcomes
  - Will give guidance for financial and regulatory actions
  - Examines HPS strategic actions that produce funding and those that require funding
  - Focuses on financial and equity tradeoffs of these actions

Tualatin's Cost Burdened Households

Cost Burden by Tenure, Tualatin, 2016-2020

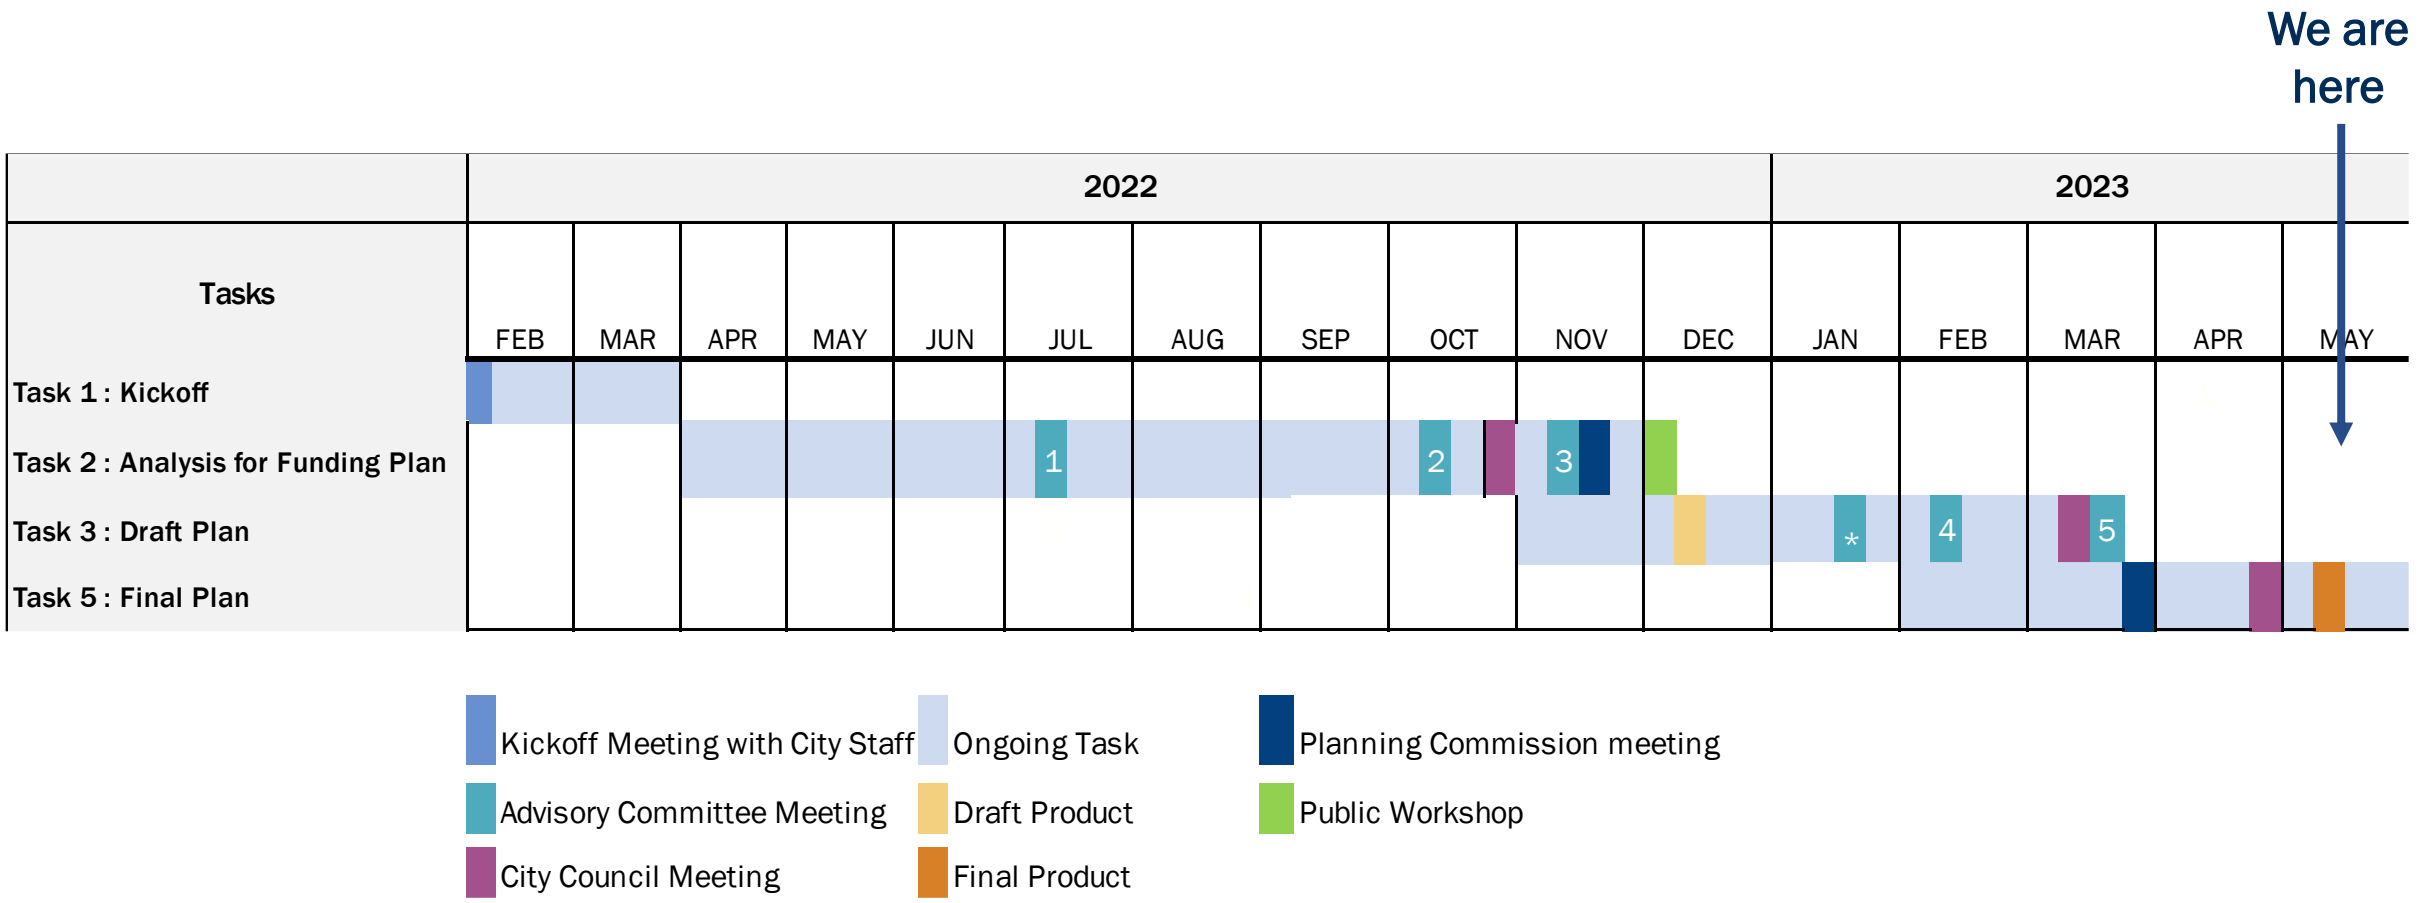
Cost burdened:
spending more than 30% of income on housing costs

Severely cost burdened:
spending more than 50% of income on housing costs



Source: 2016-2020 American Community Survey, U.S. Census

Project Schedule and Primary Tasks



Housing Funding Plan Summary

HPS Actions Considered in this Plan

5.a Consider development of a Funding Action Plan to implement the HPS with attention to Equity

1.a Evaluate a Low-Income Housing Property Tax Exemption Program for affordable rental housing

1.b Evaluate changes to Systems Development Charges

1.c Evaluate implementation of a Construction Excise Tax (CET)

1.d Evaluate support for affordable and workforce rental housing as part of Urban Renewal

2.a Evaluate impediments to homeownership and their removal

4.a Evaluate development of incentives to preserve low-cost rentals for below market-rate privately owned rental housing

4.b Evaluate using the Multiple Unit Property Tax Exemption to slow rental cost increases

6.a Evaluate ways to incentivize inclusion of Workforce Housing Units within new multifamily rental development

8.a Evaluate establishing local housing rehabilitation program

Potential Actions

Construction Excise Tax (CET)	Urban Renewal Area Revenue
Adds revenue to the City through new local regulation	**Adds revenue in a specific area through tax increment financing**
• **What does it do:** Levies a tax on new construction to fund housing programs and investments • **How does it work:** Allows cities to collect a 1% tax on permit value of new residential development or higher for commercial/industrial. • **Our findings:** 0.5% to 1% CET on commercial and industrial development may be worthwhile in Tualatin. <u>Impact</u> • **Estimated to generate $500,000 in revenue over 5 years for both residential and commercial/industrial CET based on historical permits**	• **What does it do:** Provides local funding for capital projects to support URA plan goals (including housing) • **How does it work:** Uses revenue from tax increment financing (TIF) to make public investments • **Our findings:** Tualatin's proposed urban renewal area could integrate goals for housing and access TIF dollars. <u>Impact</u> • **Estimated $2.5 million available for all uses in the Core Reinvestment Area based on current approximations, undetermined what share would be for housing.**

Potential Actions

Multiple Unit Property Tax Exemption[1]	System Development Charge Exemption
Forgoes revenue to the City for targeted housing type	**Forgoes revenue to the City for targeted housing type**
• **What does it do:** Provides a partial property tax exemption for private developers of mixed-income housing • **How does it work:** Can exempt only city taxes or all taxing districts if at least 51% of the total tax roll agrees to participate. • **Our findings:** If providing an exemption from all districts, MUPTE could create an incentive for private developers to offer units at or below 80 percent of area median income <u>Impact</u> • **Estimated to cost $144,000 for 100 units over 5 years for City taxes only (~16.5% of total) if rents are discounted for 20% of units at 80% AMI level**	• **What does it do:** Reduces upfront development fees for developers who provide new affordable units • **How does it work:** Can exempt City-controlled system development fees for Parks and Water, but not those collected by other service providers • **Our findings:** Tualatin could provide an exemption for its two SDCs only but would likely have to backfill the forgone revenue <u>Impact</u> • **Estimated to cost approximately $751,000 for 100 units over 5 years (Parks is a flat rate, but Water is more variable based on meter size)**

[1]The City has already implemented the Nonprofit Tax Exemption on its own property taxes, which serves households at or below 60% AMI.

Potential Actions

Down Payment Assistance

Provides funding to support homeownership

- **What does it do:** Provides direct assistant to pay for upfront down payment costs for new first-time homebuyers.
- **How does it work:** Typically works as a one-time grant or deferred interest loan for homebuyers who meet other necessary qualifications for purchasing a home
- **Our findings:** Partnerships with counties and/or nonprofits have been successful in peer cities to cover the high cost of down payment assistance

<u>Impact</u>

- **Estimated to cost $250,000 to $1,100,000 for 10 units over 5 years, depending on subsidy granted**

Home Rehabilitation Programs

Provides funding to stabilize existing residents

- **What does it do:** Provides direct assistance with home rehabilitation, accessibility improvements, and weatherization for low-income current homeowners.
- **How does it work:** Typically functions as a low- or no-interest loan or grant which can be scaled to different types of home repair projects.
- **Our findings:** Some programs are already available to Tualatin residents, which could be strengthened and supported through partnerships

<u>Impact</u>

- **Estimated to cost $750,000 to $500,000 for 10 units over five years, depending on subsidy granted**

Findings

Funding Plan Conclusions

- CET could be the largest source of flexible revenue
- Balance funding allocation for potential projects in the Core Reinvestment Area
- Support development of more units affordable to moderate income households through MUPTE
- Support development of more affordable lower-income housing through partner with nonprofit housing developers and operators
- Periodically review the Housing Funding Plan and HPS to evaluate effectiveness and identify changing priorities
- Continue to track additional funding that may become options

Equity Opportunities

- Establish an Oversight Committee:
  - Membership could ensure representation from underrepresented groups
  - Compensating members allows people of diverse backgrounds to participate
- Partner with nonprofits who provide specific support, like cultural outreach
- Develop an equity framework for decision-making process
  - Consider distribution of costs and benefits to low-income residents, seniors, people of color, and other groups with higher housing needs in Tualatin
  - Align with other City projects, such as the Climate Action Plan
  - Periodically review equity framework assumptions

Explore Additional Funding Sources

- Consider an Affordable Housing Trust Fund to collect and manage housing funds
  - Convene an advisory committee including low-income residents, renters, seniors, people with disabilities, commuters, and POC
- Explore sources for supporting both homeownership and affordable rental housing
  - Federal, state, second round of Metro bond funding

Recommendation

Advisory Committee Recommendation

- The Advisory Committee unanimously recommended that the City adopt and implement the Equitable Housing Funding Plan

Council Action

- The City Council is asked to consider the adoption of the Equitable Housing Funding Plan by Resolution No. 5700-23

RESOLUTION NO. 5700-23

A RESOLUTION ADOPTING TUALATIN'S EQUITABLE HOUSING FUNDING PLAN.

WHEREAS, in 2019, the Tualatin 2040 project began with the goal of identifying updates to Tualatin's land use policies for the next 20 years;

WHEREAS, in 2019, the Oregon Legislature passed House Bill 2003, which requires Oregon's cities with a population of over 10,000 people to study the future housing needs of their residents and to develop strategies that encourage housing production;

WHEREAS, in 2019, the City of Tualatin accepted the Tualatin 2040 project, including a Housing Needs Analysis by Resolution No. 5479-19;

WHEREAS, in 2021, the City of Tualatin adopted a Housing Production Strategy Report by Resolution No. 5565-21; and

WHEREAS, in 2022, the City of Tualatin was awarded a grant to create an Equitable Housing Funding Plan to study strategic actions identified in the Housing Production Strategy that support the development of housing that is affordable for moderate and low-income households.

NOW THEREFORE, be it resolved by the City Council of the City of Tualatin, Oregon, that:

Section 1. The Council adopts the *Equitable Housing Funding Plan as part of* Tualatin 2040 Implementation, consistent with its Housing Production Strategy, which is attached as Attachment A and incorporated by reference.

Section 2. The Council directs staff to begin the implementation of the *Equitable Housing Funding Plan* as adopted by this resolution.

Section 3. Nothing in this resolution is or shall be construed as a final decision by the Council that concerns the adoption, amendment or application of statewide planning goals, a Comprehensive plan provision, or land use regulation.

Section 4. This resolution is effective upon adoption.

INTRODUCED AND ADOPTED by the City Council this 12th day of June, 2023.

APPENDIX A: DETAILED EVALUATION AND INFORMATION ABOUT EACH ACTION 50

This page intentionally blank

Executive Summary

Tualatin has an urgent need for more housing that is affordable to people who live and work in Tualatin. More than one-third of Tualatin's households are cost burdened and cannot afford their housing, including 52% of renter households. Some groups are more likely to have difficulty finding affordable housing because of factors such as lower incomes, housing discrimination, and inability to find housing that meets their needs. In addition, low- and moderate-income workers at jobs in Tualatin may struggle to afford rental housing and homeownership in Tualatin.

While these problems are not unique to Tualatin and are common across the Portland region and state, Tualatin has a role in supporting development of housing that is affordable to people who live and work in Tualatin.

The purpose of the Equitable Funding Action Plan is to consider how to best implement the strategic actions in the HPS with a consideration of financial issues and increasing equitable access to housing.

This project builds on housing studies completed by Tualatin over the last several years. Tualatin adopted a *Housing Needs Analysis* in 2019 and a *Housing Production Strategy* (HPS) in 2021, which respectively identified gaps that exist for households in Tualatin and identified a set of strategies to address those needs. This document focuses on implementation of actions to fund and implement key strategies identified in the HPS.

Goals and Outcomes of This Plan

This report focuses on describing the actions in the HPS that are most dependent on funding to support their implementation. These and other actions in the HPS are intended to provide the City with tools to support affordable housing development and preservation. Taken on their own and separately, they may not result in a large change in the availability of affordable housing. But they provide the City with policies to support bold development proposals that can, taken together, help create substantial change in availability of affordable housing. The actions considered in this report are:

- **Evaluate potential funding sources to support affordable housing development.** The strategic actions that generate funding for affordable housing development and preservation include Construction Excise Tax (CET), Urban Renewal tax increment financing, and other potential funding sources for affordable housing.
- **Identify opportunities to reduce development costs in support of affordable rental housing.** The strategic actions that focus on reduction of the cost of affordable multifamily development include the Nonprofit Low Income Housing Tax Exemption, Multiple Unit Property Tax Exemption, and System Development Charges Exemption.
- **Identify ways to support homeownership for lower-income households.** Strategic actions that increase and retain homeownership include down payment assistance and home rehabilitation.

This plan also intentionally incorporates equity into its recommendations for implementing strategic actions by prioritizing those with the greatest housing needs. In Tualatin, this includes:

- **Low-income households.** Households below 60% of MFI who account for roughly a third of Tualatin's households are considered to require publicly subsidized housing to avoid cost burdening.
- **Cost-burdened renters.** Cost burdening typically describes households that pay more than 30% of their monthly income toward their total housing costs. In 2016-2020, nearly half of renters in Tualatin were cost burdened, compared to only 17% of homeowners.
- **People of color.** Cost burdening in Tualatin disproportionately affects people of color who both rent or own their homes. The legacy of historic discriminatory practices such as denial of financial services still creates housing disparities for households of color.
- **Seniors.** On average, Tualatin householders 65 years of age and over had a lower income than the overall median and may have more challenges finding affordable housing or paying for maintenance in a home that they own.
- **Disabled residents.** About 8% of Tualatin's population had one or more disabilities, who may have additional housing needs beyond affordability, including accessible home features, proximity to transit, and other resources.
- **Commuters.** In Tualatin, 93% of workers commute from other nearby areas each day, some of whom are not currently able to afford the city's rental rates or homeownership.

Actions Considered in This Plan

This report provides information about what it will take to implement the strategic actions shown in

Exhibit 1. This includes analysis of the potential costs (or revenues) of each strategic action, financial tradeoffs and considerations, equity considerations, and information about existing programs and potential partnerships. The strategic actions in this plan fall into three categories: those that **provide funding** by introducing a new source of revenue to support affordable housing, **forgo revenue** for the City to reduce costs for developing affordable housing, or **require funding** to pay for new programs.

The strategic actions considered in this report touch on some but not all issues considered in the HPS. Examples of other actions in the HPS include changes to Tualatin's development code to better support housing development, preservation of existing affordable housing, opportunities for redevelopment and potential land banking, and additional actions to support affordable housing development.

Exhibit 1. Summary of Financial Tradeoffs Between Funding Tools

Tool	What Does it Do	Population Served	Provides, Forgoes or Requires Revenue?
Construction Excise Tax	Levies a tax on new construction to fund housing programs and investments	Moderate Income and Lower-Income households	**Provides Funding**
Urban Renewal	Uses tax increment financing revenue for capital projects in urban renewal plan areas to support housing goals	Current and future residents within urban renewal area	**Provides Funding**
Nonprofit Low Income Tax Exemption	Forgoes property taxes for affordable housing provided by nonprofit organizations	Extremely and Very Low Income (<50%)	**Forgoes Revenue**
Multiple Unit Property Tax Exemption	Forgoes a portion of property taxes for mixed-income housing provided by market-rate developers	Low Income (50-80%)	**Forgoes Revenue**
System Development Charges Exemption	Reduces up-front development fees charged by the City for new affordable units (which must be backfilled from another funding source).	Extremely and Very Low Income (<50%) or Low Income (50-80%)	**Forgoes Revenue**
Down Payment Assistance	Provides funding for up-front costs to support moderate-income first-time homebuyers.	Moderate Income (80-120%) Seniors or disabled residents	**Requires Funding**
Home Rehabilitation	Provides funding for home repairs, weatherization, and/or accessibility improvements for qualifying homeowners.	Moderate Income (80-120%)	**Requires Funding**

Equity Impacts and Tradeoffs

Each of the strategic actions in this funding plan have tradeoffs related to equitable housing outcomes. These benefits and challenges include critical considerations for the recommendations in this plan and should be integrated in decision-making for affordable housing in Tualatin. Some of the key benefits and challenges for consideration in implementation of the strategic actions in this plan include:

Exhibit 2. Summary of Key Equity Considerations Funding Tools

Equity Benefits	Equity Challenges
• **CET and Urban Renewal** can be used to serve low- and moderate-income households. CET is more flexible, but urban renewal can provide a greater total amount. • **SDC and Tax Exemptions** incentivize new affordable multifamily units for low- to moderate-income households, typically at a lower cost per unit than homeownership. • **Down Payment Assistance** can benefit moderate-income households who have historically been excluded from homeownership and build intergenerational wealth. • **Home Rehabilitation** supports longer-term stability for homeowners, and specific support for people with disabilities and seniors.	• **CET** increases housing costs for some types of housing to fund affordable housing. • **Urban Renewal's** geographic limitations can create concentrated areas of poverty. • **Tax Exemptions** forgo City general fund revenue, which could be used for other city programs. **MUPTE** has a limited 10-year time frame for affordability. **SDC exemptions** also forgo funding that must be backfilled from other sources. • The higher cost per household for **Down Payment Assistance and Home Rehabilitation** means that often they serve relatively fewer people.

Key Conclusions from Analysis

The City of Tualatin should carefully consider limitations of how different funding can be used to implement its Housing Production Strategy. The following are primary conclusions that we identified through our analysis:

- **Urban Renewal funding can only be used for limited project types and requires broader discussion about tradeoffs.** Tax increment financing can only be used for projects within the district and takes time for funding to accumulate.
- **Construction Excise Tax spending is relatively flexible.** It takes time to accumulate CET funds and can be used to support a wide range of affordable housing actions.
- **System Development Charge Exemptions will need to be backfilled.** SDC exemptions can reduce costs for developers to provide affordable units but requires a funding source to backfill the forgone SDCs, such as CET or Urban Renewal revenue.
- **The Multifamily Tax Exemption will need support from overlapping taxing districts.** Providing enough incentive to support affordable housing development by market-rate developers requires exempting the property taxes of overlapping taxing district, as well as the City's exemption.
- **Increasing access to affordable homeownership is expensive.** Homeownership programs require a larger amount of funding because of the relatively high cost of housing sales. Increasing access to homeownership leads to longer-term housing stability and provides households with opportunities to gain equity and build wealth.
- **The City can prioritize other actions to support homeownership that have lower costs.** The City could partner with a land trust to support development of affordable ownership housing or use Urban Renewal funding to assemble a development site where affordable ownership units would be built.
- **The City can pursue funding from other sources, such as the general fund.** Tualatin should seek to make a case for an allocation from the second round of the Metro General Obligation bond, pursue its own local option levy, implement new taxes (which would require voter approval), or allocate general fund revenue.

Recommendations for Implementing the HPS

Recommendations for implementing the HPS and the strategic actions covered in this Plan include the following:

- **Build Equity into Decision-Making Processes.** As the City continues to implement the HPS, the City should develop an equity framework for decision-making that considers the distribution of cost and benefits and impacts on low-income residents, seniors, people of color, and other groups with higher housing needs in Tualatin. This framework should align with similar equity work that the City is developing for other

initiatives (such as the climate action plan). Over the next five years, the City can begin to use this framework to prioritize initiatives, monitor outcomes, and begin applying it to subsequent strategic actions.

Establish an Affordable Housing Trust Fund and Create an Advisory Committee to Oversee it. An Affordable Housing Trust Fund (AHTF) is a mechanism that can centralize revenue sources into a collective account and distribute money for housing in the city. The City can set eligibility criteria to affirm that projects that receive public funding go toward priority needs. Trust funds are typically overseen by a committee who works with city staff to formulate the application criteria and administer the approval process. An advisory committee should include low-income residents, renters, seniors, people with disabilities, commuters, and people of color in Tualatin, whom the City should compensate for their participation. Over time, the City can monitor outcomes and look for opportunities to add new funding sources to grow the AHTF. Ideal sources of funding for the AHTF are flexible, allowing the fund to support different types of housing initiatives over time.

- **Explore Available Private, Regional, State, and Federal Funding Sources for Homeownership and Affordable Rental Housing.** Our analysis of additional funding tools begins to show the range of further options for funding affordable housing from a number of private, regional, state, and federal sources, which vary in terms of time frame, scale, and eligibility. Tualatin should continue pursuing additional sources of funding for affordable housing beyond the strategic actions in this plan. For example, if there is a second round of allocations from Metro's General Obligation bond for affordable housing, Tualatin could be a candidate to receive funding to support affordable multifamily rental housing.
- **Pursue a Construction Excise Tax on Residential and Commercial/Industrial Development.** Construction Excise Tax could be a large source of flexible revenue to fund strategic actions for housing in Tualatin within the next five years. Consistent with the schedule in the HPS, the City should prioritize exploring CET by 2025.
- **Work with Council to Identify the Right Balance of Housing Support in Implementing Urban Renewal.** The City is committed to implementing the Core Reinvestment Area Plan, including an explicit goal for development and preservation of multifamily housing affordable to a range of income levels. City staff should work with the City Council and Urban Renewal Agency to find the right balance of funding allocation for projects in the area. Decision-makers should discuss what is possible and what is an appropriate amount of funding to use for housing development in the Urban Renewal district within the next five years.
- **Implement a SCD Exemption for Affordable Housing Development.** The City can exempt the system development fees that it controls for Parks and Water and will need to identify a source to backfill the forgone revenue from other sources, such as the CET or Urban Renewal. The City will need to establish criteria for granting the exemption,

such as what level of affordability, the amount of SDC that will be exempted, and the number of affordable units it will require for an exemption.

- **Work with Overlapping Taxing Districts to Provide the Full Nonprofit Low Income Tax Exemption.** The City Council adopted the Nonprofit Low Income Tax Exemption on its own taxes in 2022, which accounts for 16.5% of all property taxes in the city. Applying the exemption to all property taxes requires approval from other taxing districts that make up at least 51% of the total tax roll.
- **Implement the Multiple Unit Property Tax Exemption and Seek Partnerships with Overlapping Taxing Districts.** The Multiple Unit Property Tax Exemption can add another tool to the City's options for creating affordable units for moderate-income households and incentivize more housing overall to be built in Tualatin.
- **Build Partnerships with Nonprofit Housing Organizations.** Nonprofit housing developers and operators are effective at delivering units that serve low-income residents and provide other supportive or culturally specific services. There are organizations operating within Tualatin and the region with whom the City could seek to build partnerships and include as part of decision-making conversations.

  Maintaining ongoing communication with nonprofit housing providers can help to identify regulatory and financial barriers that these organizations may be encountering in Tualatin. Through these conversations, the City may find opportunities to support nonprofit staff. Likewise, local partners may also present opportunities to reduce the amount of city staff capacity needed for ongoing program implementation.

- **Revisit the Funding Action Plan and Continue to Implement the Housing Production Strategy.** In the next five years (and beyond), the City should undergo periodic review of the Funding Action Plan and HPS. This process should include evaluating whether the analysis included within the Funding Action Plan or future analysis findings alter priorities for funding actions in the HPS.

  The City should also be proactive about monitoring whether actions which are not currently being explored become more viable or if precedents emerge for similar communities in Oregon. If such funding options emerge, the City can consider conducting further analysis and reorganizing its priorities for implementation.

1. Introduction

Tualatin has an urgent need for more housing that is affordable to people who live and work in Tualatin. More than one-third of Tualatin's households are cost burdened and cannot afford their housing, including 52% of renter households. Some groups are more likely to have difficulty finding affordable housing because of factors such as lower incomes, housing discrimination, and inability to find housing that meets their needs. These groups include seniors, people with disabilities, people of color, and people experiencing houselessness.

In addition, more than 90% of people that work at jobs in Tualatin commute in from another community. Workers with lower-wage jobs in Tualatin would struggle to afford rental housing in Tualatin and average-wage workers in Tualatin would struggle to afford homeownership in Tualatin.

While these problems are not unique to Tualatin and are common across the Portland region and state, Tualatin has a role in supporting development of housing that is affordable to people who live and work in Tualatin.

The purpose of the Equitable Funding Action Plan is to consider how to best implement the strategic actions in the HPS with a consideration of financial issues and increasing equitable access to housing.

This project builds on housing studies completed by Tualatin over the last several years. Tualatin adopted a *Housing Needs Analysis* in 2019 and a *Housing Production Strategy* in 2021, which respectively identified gaps that exist for households in Tualatin and identified a set of strategies to address those needs. This document focus on implementation of actions to fund and implement key strategies identified in the *Housing Production Strategy*.

The *Housing Production Strategy* (HPS) recommended development of a Funding Action Plan to Implement the HPS with Attention to Equity (Action 5.a in the HPS). The purpose of the Equitable Funding Action Plan is to consider how to best implement the strategic actions in the HPS with a consideration of equity, with the intended outcome of increasing access to income-restricted and workforce affordable housing. Implementing housing policies in an equitable way goes beyond affordability—it aims to ensure all people have housing choices that are diverse, high quality, physically accessible, and reasonably priced with access to opportunities, services, and amenities (e.g., transit, schools, childcare, food, and parks). These issues are addressed throughout the 12 goals and the strategic actions in the HPS.

The Equitable Funding Action Plan also ensures that there are ongoing opportunities to revise the HPS' priorities based on changing conditions and input of underserved communities, as well as opportunities to determine how the city will fund implementation of the HPS. The funding action plan is intended to focus implementation of the HPS on increasing access to housing with an emphasis on low and moderate-income households while also furthering racial and social equity.

Goals and Outcomes of This Plan

This report focuses on describing the actions in the HPS that are most dependent on funding to support their implementation and describing the funding sources (and potential available funding) for supporting their implementation. These and other actions in the HPS are intended to provide the City with tools to support affordable housing development and preservation. Taken on their own and separately, they may not result in a large change in the availability of affordable housing. But they provide the City with policies to support bold development proposals that can, taken together, create substantial change in availability of affordable housing.

The actions considered in this report are:

- **Evaluate potential funding streams to support affordable housing development.** This report examines strategic actions that generate funding for affordable housing development and preservation: Construction Excise Tax (CET), Urban Renewal tax increment financing, and other potential funding sources for affordable housing.
- **Identify opportunities to reduce development costs in support of development of affordable rental housing.** The strategic actions that focus on reduction of the cost of affordable multifamily development: Nonprofit Low Income Housing Tax Exemption, Multiple Unit Property Tax Exemption, and System Development Charges Exemption.
- **Identify ways to support homeownership for lower-income households.** Strategic actions that increase and retain homeownership: down payment assistance and home rehabilitation.

This report provides more information about what it will take to implement the action, the potential costs (or revenues) of the strategic action, financial tradeoffs and considerations of

each strategic action, and equity considerations for each strategic action. It also provides information about some existing programs and potential partnerships that can help lower-income households in Tualatin access affordable rental housing and attain homeownership.

The report is not intended to make specific recommendations about the details of how actions in the HPS should be implemented but to give the City Council (and other decision-makers) information about the tradeoffs and considerations of implementation of these actions. Additionally, it provides suggestions about how to embed equity further into implementation of these actions in the HPS to better achieve the goals of the HPS by increasing housing access for low and moderate-income households and increasing racial and social equity.

As the HPS notes, the City may consider updating the Funding Action Plan in 2026 to reevaluate the impact the HPS has had on increasing housing access to low and moderate-income households and on increasing racial and social equity.

The strategic actions considered in this report touch on some but not all issues considered in the HPS. Other actions that the City may implement, as part of the HPS, include:

- Opportunities for redevelopment and potential land banking
- Changes to Tualatin's development code to better support housing development, especially affordable housing development
- Support to increase access to affordable homeownership
- Support of development of affordable rental housing, both for workforce affordable housing and income-restricted affordable housing
- Preservation of existing affordable housing
- Evaluation of impediments to Fair Housing and education about Fair Housing
- Encouraging opportunities for mixed-use development and redevelopment in commercial areas

What Goals of Tualatin's Housing Production Strategy Are Being Addressed?

Affordable Housing: Strongly prioritize, encourage, and support affordable rental housing development to increase affordable housing for households earning 0-60% Median Family Income.

Affordable Homeownership: Encourage and support affordable homeownership to create opportunities for wealth creation.

Preservation of Naturally Occurring Affordable Housing (NOAH): Preserve naturally occurring affordable housing, where possible, to prevent loss of affordable units and to mitigate resident displacement.

Housing for Underserved Communities: Implement housing policies, projects, programs, and partnerships to further support racial and social equity.

Workforce Housing: Encourage, plan for, and support the development of workforce housing for households earning 61-80% Median Family Income for both owner and renter, in order to increase the jobs-housing balance, reduce commute time, and provide attainable housing for workers in Tualatin.

Housing Rehabilitation: Plan for and support housing programs and initiatives that are responsive to the safety and health needs of households earning 0-80% of Median Family Income.

Mixed-Use Housing and Redevelopment: Encourage and support development of mixed-use, mixed-income, and multifamily housing in commercial zones and urban renewal areas for households earning 0-80% Median Family Income.

Equitable Implementation

Equitable implementation of housing strategies should prioritize actions which support households with the greatest needs. The *Housing Needs Assessment* and *Housing Production Strategy* identified specific groups that have higher rates of cost burdening, lower incomes, and other unmet housing needs in Tualatin.

This plan targets households in those demographic cohorts that currently have higher-than-average unmet housing needs. Although the Funding Plan does not cover all of the strategies identified in the HPS, it addresses funding for those which could have significant impact on affordability for specific groups, including low-income households, renters, people of color, seniors, and disabled residents.

Median Family Income (MFI) for a four-person household in the Portland metropolitan area was $96,900 in 2021, while average monthly housing costs in Tualatin were estimated to be around $1,580, meaning that average rental housing costs require an income of $63,000 per year (65% of the median).

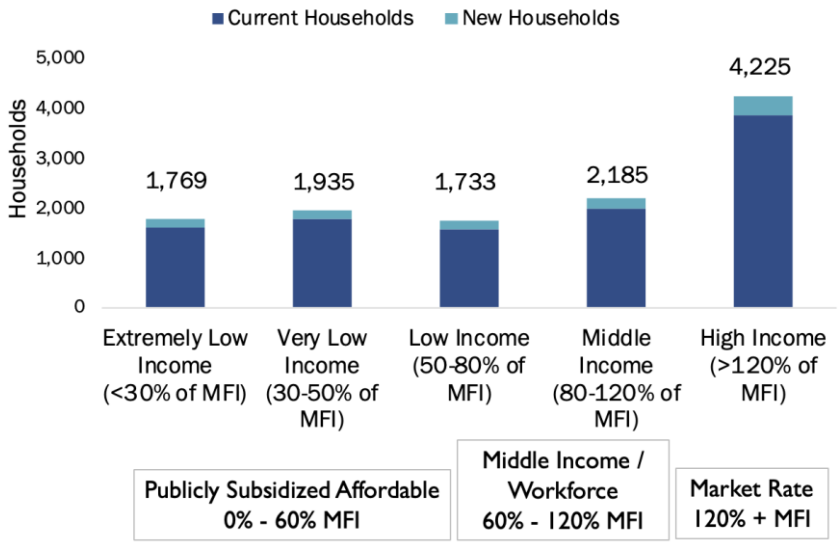
Exhibit 3. Affordable Housing Costs by MFI Level, 2021
Source: US Department of HUD 2021. US Census Bureau, 2016-2020 ACS Table 19001.
Note: Median Family Income is estimated for a family of 4

Low-Income Households

Households below 60% of MFI are considered to require publicly subsidized housing in order to not spend over 30% of their income on housing.

Middle income (or 'workforce') housing for those between 60 and 120% of MFI may also need support in order to ensure there is an adequate supply of housing affordable at these levels.

Exhibit 4. Share of Current and Future Tualatin Households by Income
Source: 2014-2018 ACS, U.S. Census; PRC at PSU (2020-2040); and U.S. Department of HUD 2020 MFI.
Note: Median Family Income is estimated for a family of 4.

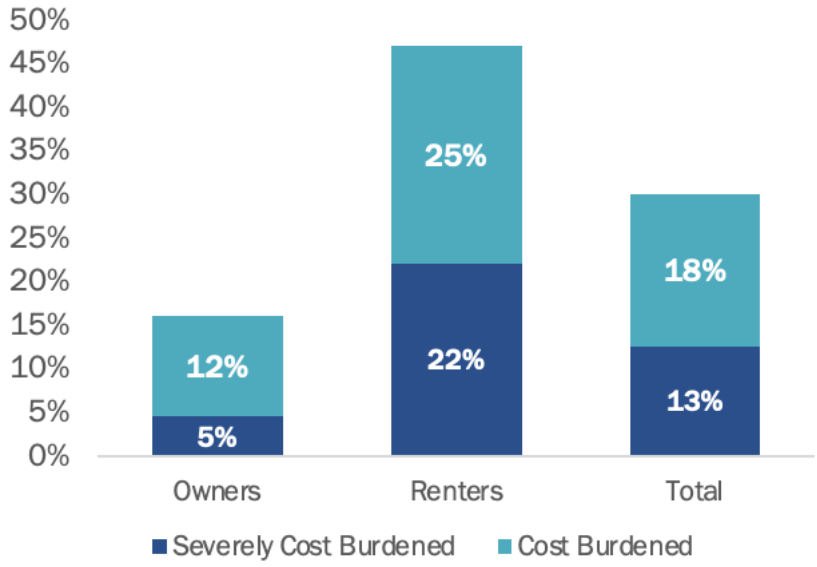


Cost Burden

Cost burdening typically describes households that pay more than 30% of their monthly income toward their total housing costs (including rent, mortgage, utilities, etc.). About 47% of renters in Tualatin were cost burdened in 2016-2020, compared to 17% of homeowners. About 25% of Tualatin's renters and 5% of homeowners were severely cost burdened, spending 50% or more of their income on housing costs.

Exhibit 5. Share of Cost Burdened or Severely Cost Burdened Households by Tenure, 2016-2020

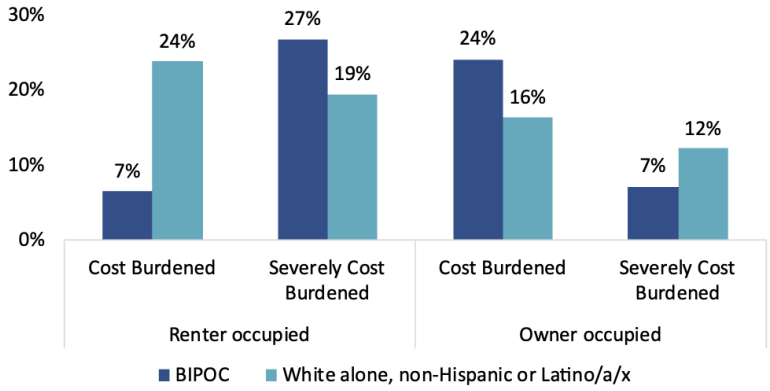
Source: US Census, ACS 2016-2020, Tables B25091 and B25070



Cost burdening in Tualatin was also disproportionately higher for people of color who both rent and own their homes, consistent with trends across Oregon. Over a quarter of people of color who rented were severely cost burdened, compared to 19% of white renters. Nearly a quarter of people of color who owned their homes were also cost burdened, a higher rate overall than white homeowners.

Exhibit 6. Cost-Burdened Households by Tenure and Race/Ethnicity, 2015-2019

Source: CHAS 2015-2019, Table 9.
Note: 'BIPOC' indicates 'Black, Indigenous, and People of Color,' including Hispanic or Latino/a/x residents of any race.



Why Look at Race and Housing Needs?

In the United States, many people of color have been historically prohibited from purchasing homes or accessing housing through discriminatory practices, such as exclusion from federal housing programs and denial of financial services.[1] The legacy of these historical practices contributes to ongoing homeownership and cost burdening disparities nationwide. People of color have also been systemically prevented from accumulating generational wealth to the extent of white families in the United States, creating persistent barriers for achieving homeownership and other housing-related needs.[2] Actions that make homeownership and rental housing more attainable for people of color can help address these ongoing inequities.

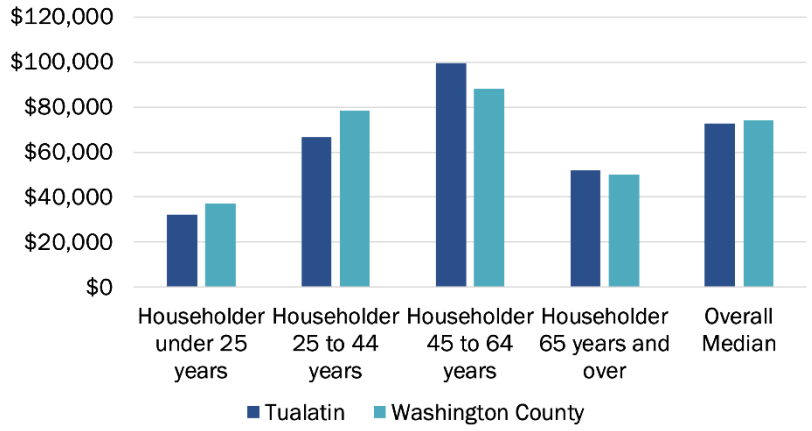
Seniors

Tualatin householders 65 years of age and over typically had an income lower than the overall median. Although this may not always correlate with cost burdening, seniors may have more challenges finding affordable housing or paying for maintenance in a home that they own.

Exhibit 7. Median Household Income by Age of Householder, 2013-2017

Source: US Census Bureau, 2013-2017 ACS 5-Year Estimate, Table B19049.



Why Look at Age and Housing Needs?

Housing needs can often change for people over time as they age. As individuals retire, their annual income typically lowers, and some may be unable to keep up with rising rents or make critical repairs to their homes.[3] Many older adults may also require physical modifications to their homes due to mobility or other disabilities. In the United States, only a small share of homes provide basic accessibility features, such as no-step entry, single-floor living, and door widths to accommodate a wheelchair.[4] These accessibility improvements can be costly and create displacement risks for seniors. Actions that enable housing that is affordable, right sized, and connected to community services can address the needs of many older adults.

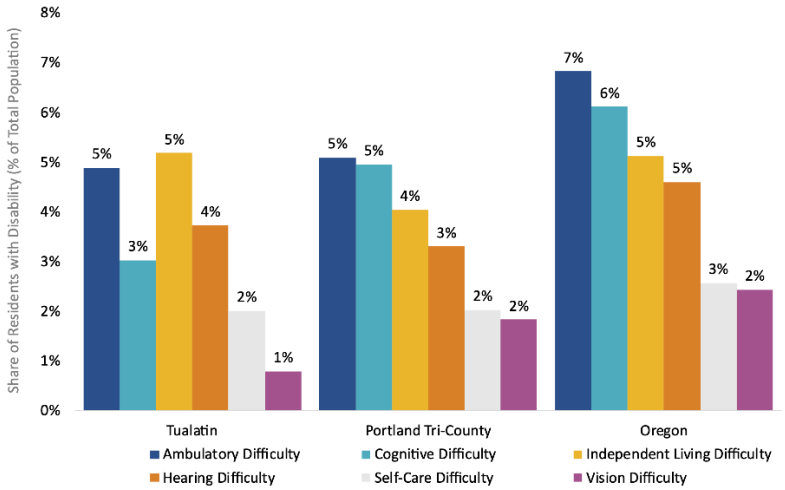
Disabled Residents

About 8% of Tualatin's population has one or more disabilities. Disabled residents may have additional housing needs beyond affordability, including accessible home features, as well as proximity to transit and other resources.

Exhibit 8. Share of Persons with a Disability by Type (% of Total Population), 2021

Source: US Census Bureau, 2021 ACS 1-Year Estimate, Table K201803.
Note that an individual can have more than one disability.



Why Look at Disabilities and Housing Needs?

Disabled residents may require certain structural features in their homes, with similar concerns as older adults for finding adequately accessible units. In the United States, communities of color also often have higher incidence of disabilities due to interconnected issues of systemic racism and poverty.[5] Individuals may become disabled and require new accessibility features that they did not previously need in their homes, which may range in terms of scale and cost. Actions that support housing for disabled residents vary, but may overlap with those which support older households, such as financial support for low- and moderate-income households to make home improvements as well as location near community services and transit.

Commuters

Commuting is a large concern in Tualatin because most people who work in Tualatin live in another community. Tualatin has nearly twice as many jobs as housing units, as described in the *Tualatin Housing Needs Analysis* (December 2019). Decreasing commuting will require building more housing in Tualatin, especially housing that people who work in Tualatin can afford. The Tualatin *Economic Opportunities Analysis* report (December 2019) reported an average wage of $57,000 in Tualatin in 2017. Many workers have below-average wages and work in retail, the service industry, and administration and waste services. Reducing commuting will require increasing access to affordable housing for people to live and work in Tualatin.

Tualatin's *Economic Opportunities Analysis* report (December 2019) reported that of the more than 23,800 people who work in Tualatin, 93% of workers commute into Tualatin from other areas (such as Portland, Tigard, Beaverton, or Hillsboro) each day.

Some people who work in Tualatin can afford rent or homeownership in Tualatin, but some would be cost burdened.

Process for Developing the Funding Plan

The consulting team from ECONorthwest collaborated with city staff, local leadership, and residents while developing this funding and implementation plan, including:

- **City of Tualatin staff** in the Community Development and Planning department, who helped to convene stakeholders as well as review and refine funding strategies.
- The **Community Advisory Committee (CAC),** composed of Tualatin residents and an affordable housing developer, which convened six times during 2022 and 2023 to provide valuable direction and input for the funding and implementation actions proposed in this plan.
- **Tualatin Planning Commission,** who met with the project team at one work session while the plan was being developed.
- **Tualatin City Council**, who met with the project team at two work sessions while the plan was being developed.

Organization of This Report

The rest of this document is organized as follows:

- **Chapter 2. Housing Needs and Development Funding Structures** gives an overview of housing needs in Tualatin for the next twenty years and the types of strategic actions available to the City for funding housing projects in Tualatin. These include ways to generate new funds for affordable housing, reduce costs for affordable multifamily housing development, and support homeownership for low to moderate-income households.
- **Chapter 3. Strategic Actions that Generate Funds for Affordable Housing** provides details on actions that create new local funding sources which the City could allocate to affordable housing projects or programs. Two sources in particular have been shown to be effective in other Oregon cities: Construction Excise Taxes and Urban Renewal.
- **Chapter 4. Strategic Actions that Reduce Costs for Affordable Multifamily Development** presents details on funding tools which provide multiple options for the City to support this type of housing by reducing costs from property taxes or development costs. For each action, the chapter includes multiple options for how the City could structure implementation. These actions include the Nonprofit Low Income Tax Exemption, Multiple Unit Property Tax Exemption, and System Development Charge Exemptions.
- **Chapter 5. Strategic Actions to Increase and Retain Homeownership** addresses actions to increase affordable homeownership opportunities for Tualatin residents. These actions involve the City contributing funds that help residents become homeowners or

remain in their homes through down payment assistance or home rehabilitation programs.

- **Chapter 6. Tradeoffs and Conclusions** includes a summary of the amount of funding available and the amount needed for strategic actions in Chapters 3 to 5. This chapter presents fiscal tradeoffs as well as equity benefits and challenges for each action. It also sets up key questions for decision-makers related to these conclusions.
- **Chapter 7: Recommendations** were developed with the input of Steering Committee and City staff, including opportunities to build equity into implementation and opportunities to determine how the City might prioritize actions.
- **Appendix A** provides detailed background on each strategic action with a series of memoranda which were used during plan development, and a survey of additional funding tools that might be available to the City.

2. Housing Needs and Development Funding Structures

This chapter clarifies the specific affordable housing needs in Tualatin and potential actions to address them. These actions focus on ways to generate new funding streams, reduce development costs, as well as programs focused on homeownership. Considerations are included throughout, though specific recommendation will be discussed later in the report. The analysis is broken down into the near term (five years) and long term (twenty years) to help demonstrate the pace needed to meet the city's goals.

Housing Needs in Tualatin

The 2021 *Housing Production Strategy* (HPS) provided a summary of Tualatin's housing needs. Each of the strategic actions evaluated for this funding plan are related to a specific action in the HPS, though not every action from the HPS is covered in this analysis. Those with the greatest impact on funding and those which covered the widest range of income levels were prioritized.

How many affordable units are needed for Tualatin?

The HPS identified the total need of new units in Tualatin over the next twenty years and the breakdown of these units by household income levels (based on analysis from Tualatin's 2019 *Housing Needs Analysis)*. In the 2016-2020 period, approximately 17% of households (1,790 total) in Tualatin were already severely cost burdened by housing expenses, including 26% of renter households. This plan details funding tools intended to **at minimum** meet the additional need for affordable housing anticipated in the next five years, with the goal of providing as many units as possible.

The *Housing Needs Analysis* shows that Tualatin is forecast to grow by about 1,014 households through 2040. About 45% of Tualatin's new households are expected to have income below 80% of MFI. Based on the forecast in the HNA, approximately 600 new units of this 1,000 would need to be for new low- and moderate-income households (with income below 120% of MFI). In addition, Tualatin has nearly 6,500 existing households with income below 120% of MFI, some of whom have unmet housing needs and are cost burdened. Tualatin has more than 4,200 existing households with income below 80% of MFI, many of whom are cost burdened or have other unmet housing needs. The actions in this report, as well as other actions in the HPS, are intended to help better meet these housing needs.

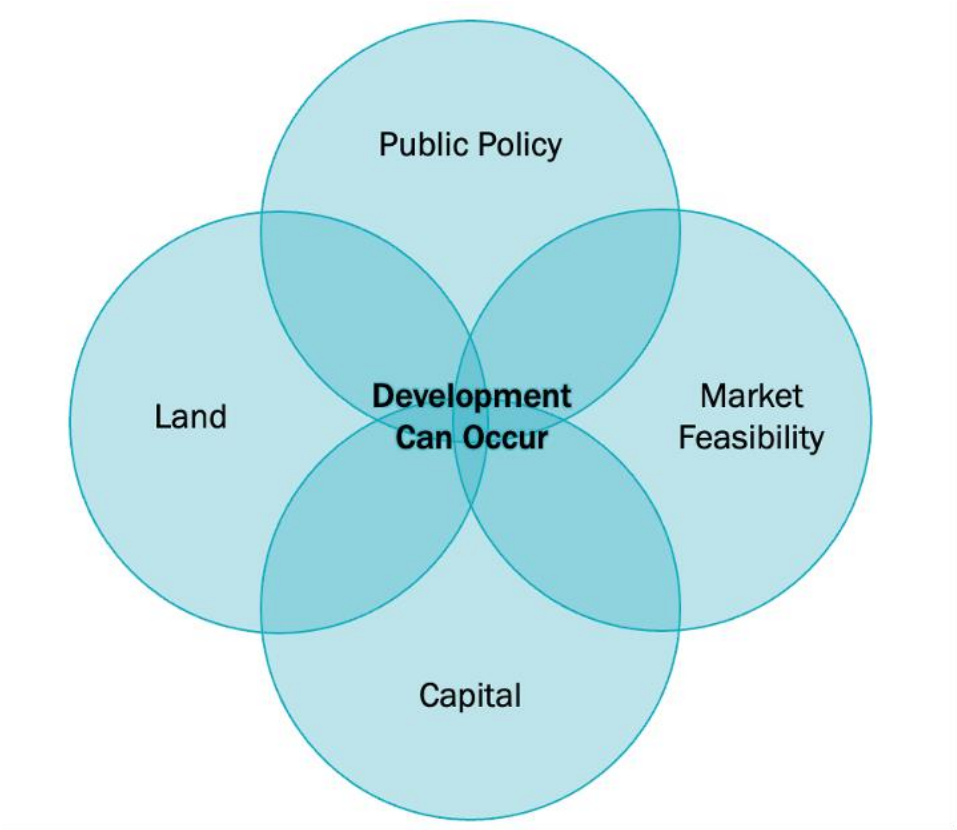
How can cities support affordable housing development?

Housing development is a complex process that requires input from numerous interrelated markets and players, and each development input functions in its own market with supply and demand factors constantly in flux. Exhibit 10 illustrates the key factors necessary for development to occur. Cities have varying influence on these factors.[6]

- **Land.** Landowners and property developers evaluate opportunities for development that can occur on a specific parcel. The city completed a *Housing Needs Analysis* (HNA) in 2019 to study the availability of land and redevelopment opportunities to accommodate 20 years of growth. The HNA found that Tualatin had limited buildable land available, making the provision of affordable housing an even greater challenge. Cities also have an influence on development by planning for and building necessary infrastructure, such as roads, water service, wastewater services, and stormwater services to serve this growth.
- **Public Policy.** Cities set public policies that affect development, such as zoning, density, building height, or subdivision policies.
- **Market feasibility.** This is a process that assesses the demand for development – comparing the expected revenues against the investment costs (e.g., labor and materials) – for the desired types of development. If a development project is not feasible, it will not be built. Cities can influence market feasibility through policies that lower the costs of development or lower the costs of operating the new housing, such as waiving fees or offering property tax exemptions.
- **Capital.** Building housing requires access to capital to pay for the costs of development and influences market feasibility through the financing terms set by the lender and the returns expected by the investor. When real estate development cannot meet return requirements of potential inventory, building housing becomes infeasible. Cities have a more minor role in supplying capital for construction, generally limited to funding rehabilitation programs or, occasionally, more significant funding for affordable housing development.

[6] This discussion is adapted from the report *Oregon Transit and Housing Study, Housing Market Primer*, December 2020, by ECONorthwest with Parametrix and HDR.
https://www.oregon.gov/odot/Planning/documents/TransitHousing_PrimerWithGlossary.pdf

Exhibit 10. Factors Influencing Housing Development
Source: ECONorthwest



This project is primarily concerned with supporting development of housing affordable below 120% of MFI, which can be separated into two categories: *income-restricted* housing affordable to households with income of 60% of MFI or less and *market-rate* affordable housing affordable to households with incomes of 60% to 120%.

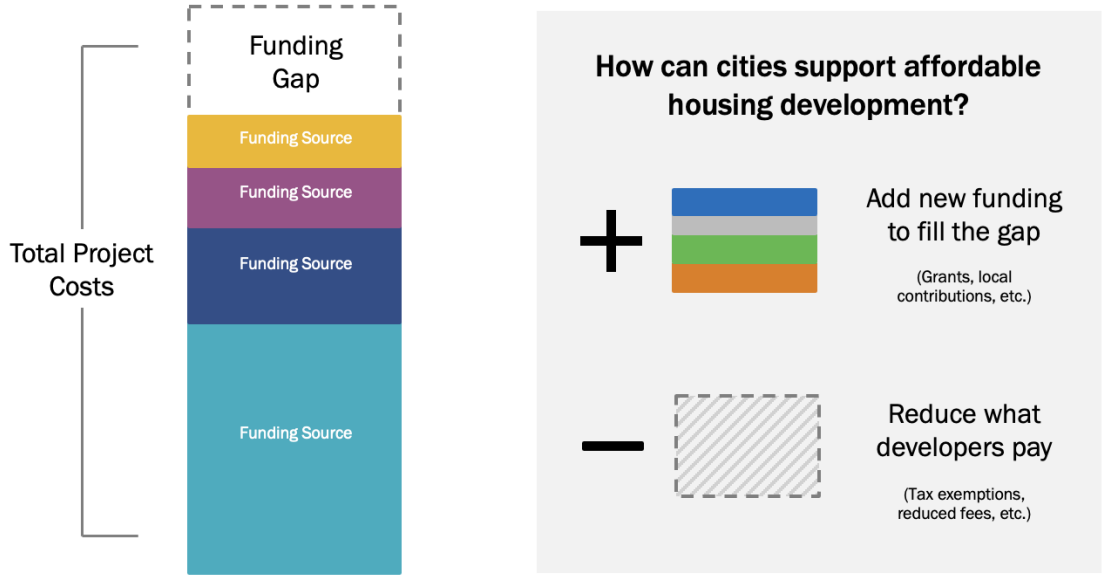
Most funding for *income-restricted* housing comes from state and federal sources, such as Low-Income Housing Tax Credits (LIHTC), or nonprofit sources. Developing market-rate affordable housing (affordable to households with income of 60% to 120% of MFI) has different sources of funding, which are more likely to be private funding sources but can include some public funding.

Funding to support development of *market-rate affordable* housing is less readily available from public sources, making it less common because it is typically not financially feasible. Housing affordable to households in this income group, especially households with incomes of 60% to 80% of MFI, may not be built unless there are subsidies to make development financially feasible. The intention of the strategic actions under consideration in this plan is to increase market feasibility for development, by lowering development costs or supplementing available funding for either income-restricted housing or market-rate affordable housing with rents that are below market rate.

When developing affordable housing, the developer must fund the costs of building and operating new housing. For income-restricted housing development, which is typically multifamily, funding may come from a wide range of sources, sometimes with 10 to 20 funding sources necessary to build new housing. Development costs of income-restricted housing vary based on location, scale, and other factors. Medium to large multifamily income-restricted affordable housing projects in Oregon typically have a funding gap between $10 and $15 million, or about $100,000 - $150,000 per unit on a 100-unit project.

The primary approaches that jurisdictions take to overcome these funding gaps are by directly contributing local funds, reducing costs associated with development (such as permitting fees or system development charges), or providing services such as technical assistance. Exhibit 11 illustrates a potential funding source.

Exhibit 11. Illustration of potential funding gap for affordable housing development
Source: ECONorthwest



This plan includes three types of strategic actions: (1) actions to generate additional funds to support Tualatin's housing programs and actions in the HPS, (2) actions to lower costs for income-restricted and market-rate affordable multifamily rental housing, and (3) actions to increase and retain affordable homeownership.

In Tualatin and nearby jurisdictions (such as Tigard) a typical affordable multifamily housing development would provide between 50 and 100 units on a single development site, though developers may seek to include more units if they choose. Where possible, this analysis includes an estimate for potential funding impact over five and twenty years (per unit and applied across a hypothetical 100-unit building), to provide comparable examples.

3. Strategic Actions that Generate Funds for Affordable Housing

The strategic actions in this section are ways for the City to create new local funding sources to allocate to affordable housing projects or programs. Two sources in particular have been shown to be effective in other Oregon cities: Construction Excise Taxes and Urban Renewal.

HPS Actions and Funding Plan Tools

The tools included in this funding plan align with some of the specific actions in the 2021 Tualatin Housing Production Strategy. The table below demonstrates the associated actions and funding tools.

HIP Tool	HPS Action
Construction Excise Tax	1.c Evaluate Implementation of a Construction Excise Tax
Urban Renewal Area	1.d Evaluate Support for Affordable and Workforce Rental Housing as part of Urban Renewal
Other Funding Tools	1.e Evaluate Financial Resources for Local Contributions to Affordable Housing Development

Construction Excise Tax (CET)

- **What does it do:** CET levies a tax on new construction to fund housing programs and investments. It can be levied on any combination of residential, commercial, and industrial development.
- **Who initiates it:** As of 2016, local jurisdictions in Oregon can pass CET by adopting an ordinance through City Council, authorized by SB 1533.
- **How does it work:** This tax allows cities to collect up to a 1% tax on permit value of new residential development or any percentage for commercial/industrial development.
- **How can CET be used:** Residential CET and commercial/industrial CET have different rules for how the City can directly use revenues required by ORS 320.195:

  <u>For residential CET:</u>

  - 50% must be used for developer incentives (e.g., SDC exemptions, tax abatements, or finance-based incentives).
  - 35% may be used flexibly for affordable housing programs.
  - 15% is not available to the city and flows to Oregon Housing and Community Services for homeownership programs that provide down payment assistance.

  <u>For commercial/industrial CET:</u>

  - 50% of the funds must be used for housing-related (but not necessarily limited to affordable housing)
  - The remaining 50% is unrestricted.

In addition to providing direct funding, CET can also be leveraged by the City to attract affordable housing developers or match other funding sources. In both scenarios, the secondary impact of new funding could potentially provide additional benefits on top of the amount generated by the strategic action.

- **What is its potential funding impact:** A 0.5% to 1% CET on commercial and industrial development may be worthwhile in Tualatin. Through OHCS, this can also be explicitly used to fund down payment grants.

  Based on historical permitting between 2016 and 2020, we calculated what CET could be expected to look like over a **five-year** time period. If Tualatin assessed a tax of 0.5%, on the low end of the allowable rate, collections from new commercial and industrial development could generate:

+

For Residential CET*

At 0.5%	At 1.0%
$43,000	**$86,000**

+

For Commercial/Industrial CET

At 0.5%	At 1.0%
$208,000	**$416,000**

Combined

At 0.5%	At 1.0%
$251,000	**$502,000**

*This shows the portion of residential CET which would be available to the City

- **Limitations of CET:** Although CET generates funds that the City can explicitly use to meet its housing goals, the amount will not be sufficient to fully fund all projects. Additionally, administration for residential CET would be somewhat more complex due to the requirement of separating out revenues toward the spending categories as specified in statute, while the funding available to cover administrative costs would be negligible.
- **Equity Considerations:** CET gives a certain amount of flexibility in deciding how to use revenues. The City could choose to focus on programs that have equitable outcomes.

Urban Renewal District

- **What does it do:** Within an active urban renewal district, tax increment financing (TIF) allows the jurisdiction to borrow against future property taxes in order to finance expenditures on current capital projects. This would be within specific district boundaries to support goals identified in the plan, including housing development. TIF funds cannot be used outside of the district and are mostly limited to capital projects. Cities sometimes use a share of revenue from urban renewal districts toward housing goals within district boundaries, including infrastructure that supports affordable housing or direct support for rehabilitation, acquisition, or site preparation.

- **Who initiates it:** In Oregon, after an area has been deemed 'blighted,' a local urban renewal agency can propose an urban renewal plan, which must go through a hearing with public testimony and planning commission recommendations. City Council may then adopt the urban renewal plan by ordinance. Assuming a TIF borrowing will be undertaken, a framework for the eligible uses of those TIF funds would be developed by the City, including any goals for affordable housing.
- **How does it work:** Tualatin's Core Opportunity Reinvestment Area, comprising commercial areas south of Bridgeport Road, Town Commons, I-5 Corridor, and Tualatin-Sherwood Road, has potential to provide funding for housing projects within the area boundaries.
- **How can Urban Renewal be used to support affordable housing**: The Urban Renewal Plan for Tualatin's Core Opportunity Reinvestment Area could be used to support development of new infrastructure (such as water or wastewater upgrades or flood mitigation), land acquisition and parcel assembly, and for a variety of housing options.

  The City has not yet identified any specific actions that it will take to support housing development but expects to identify those actions as it implements the Urban Renewal Plan. Mixed-income development that integrates market-rate and affordable housing is a route that the City could pursue to avoid concentrating a large amount of affordable housing in one area, while still increasing the overall supply of units.
- **What is its potential funding impact:** Tualatin's newly adopted urban renewal area in the Core Opportunity Reinvestment Area could integrate goals for housing and access urban renewal funds. The current estimates for revenue to be generated in the next thirty years range from $248 to $362 million.[7] However, only a portion of this total funding would potentially go toward housing. The amount of funding available to support affordable housing development will be decided as the City implements its Urban Renewal plan. The City could also dedicate land currently owned by the City within the urban renewal area, which would also reduce acquisition costs.

  + Low Estimate: **$2.5 million**

  + High Estimate: **TBD**

  If the City were to provide support for an affordable housing developer, the average gap funding needed per unit in Oregon is typically between $100,000 and $150,000 per unit (see section above). Depending on how many units are subsidized and how much of the gap is filled with urban renewal funding, a rough approximation would be $5 to $15 million to finance 50 to 100 units.

[7] Tiberius Solutions and Elaine Howard Consulting, "Tualatin North District Urban Renewal Feasibility Study," August 31, 2020, https://www.tualatinoregon.gov/economicdevelopment/proposed-area-district-2, 11-13.

- **Limitations of Urban Renewal:** Urban Renewal funding can only be spent within the Urban Renewal District, which is a limited area within Tualatin, around downtown. Much of the Urban Renewal District area is in the floodplain, so the City will need to be careful to ensure that new housing is designed in locations that are sufficiently elevated above the floodplain and constructed of appropriately flood-resistant materials.
- **Equity Considerations:** Urban Renewal can provide a large amount of funding for housing for extremely and very low-income households. However, because it is geographically limited to the boundaries of the urban renewal plan area, it also has the potential to create areas of concentrated poverty. Housing in different areas of the city can also help to meet diverse household needs: for some it is critical to be located near social services, while other households (such as low-income families with children) may need to be located closer to amenities like schools and parks.

Summary of Potential New Funding for Affordable Housing

The City could choose to pursue a Construction Excise Tax on new buildings in Tualatin and would be able to flexibly decide the configuration within the limits set by the state. The City would be able to set the tax rate within these parameters and determine whether to apply it to residential, commercial/industrial, or both construction types. The way that the City spends this revenue must also follow the framework set out by ORS 320.195, which ensures that a portion goes toward housing programs. The revenue that CET could generate for affordable housing over the five- and twenty-year period is likely to change based on trends in construction costs, inflation rates, the labor market, other economic factors.

The Core Opportunity Reinvestment Area is projected to generate a large amount of revenue through tax increment financing. Depending on the availability of funds in the next five years, a portion could be used within the plan area for gap funding of affordable housing projects or other actions to support housing development such as site preparation or land acquisition.

Exhibit 12. Rough Estimate of Potential Tools to Generate Funds

Note: High and low funding estimates are derived from the analysis memos attached to this report

Tool	Funding Considerations	Impact on Affordable Housing	Five Year Estimate		Twenty Year Estimate	
			Low	High	Low	High
Construction Excise Tax	• For commercial and industrial CET, 50% of funds must be used for housing programs • For residential CET, 50% must be used for developer incentives	Medium	$251,000 (0.5% tax)	$502,000 (1% tax)	$1 million (0.5% tax)	$2.5 million (1% tax)
Urban Renewal	• Urban renewal revenue has limitations on applicable types of projects and location	High	$2.5 million	TBD	Unknown	Unknown

4. Strategic Actions that Reduce Costs for Affordable Multifamily Development

The funding tools in this section provide multiple options for the City to support development of affordable multifamily housing by reducing costs from property taxes or development costs. For each tool, there are multiple options for how the City could structure implementation.

In some cases, these tools could be layered with multiple programs or combined with other tools that contribute funding, such as funds from the Construction Excise Tax to backfill these exemptions in support of eligible development.

HPS Actions and Funding Plan Tools

The tools included in this funding plan align with some of the specific actions in the 2021 Tualatin Housing Production Strategy. The table below demonstrates the associated actions and funding tools.

HIP Tool	HPS Action
Low Income Tax Exemption	1.a Evaluate a Low-Income Housing Property Tax Exemption Program for Affordable Rental Housing
Multiple Unit Property Tax Exemption	4.b Evaluate Using the Multiple Unit Property Tax Exemption to Slow Rental Cost Increases
System Development Charge Exemption	1.b Evaluate Changes to Systems Development Charges

Nonprofit Low Income Tax Exemption

- **What does it do:** This tool provides a full property tax exemption for nonprofit-owned affordable housing serving households with incomes at or below 60% of MFI. This tax exemption supports development of income-restricted housing.
- **Who initiates it:** In 2022, Tualatin's City Council adopted the Nonprofit Low Income Tax Exemption (enabled through ORS 307.540 to 307.548) on its own taxes, which accounts for 16.5% of all property taxes in the city. Applying the exemption to all property taxes requires approval from other taxing districts that make up at least 51% of the total tax roll.
- **How does it work:** The City presently has adopted an exemption only to its own property taxes for low-income rental housing. It may also explore whether additional taxing districts are willing to join in the exemption. If the districts whose taxes comprise at least 51% of the total tax roll agree to participate, then all taxes for all districts would be exempted. This would provide a 10-year exemption for property owned or operated by a nonprofit entity, which may be renewed after the first ten years.

Overlapping taxing districts in the city include the Tigard-Tualatin School District (44.7%), Washington County (17.3%), Tualatin Valley Fire and Rescue (12.2%), Portland Community College (3.8%), Metro Regional Government (3.3%), Northwest Regional Education Service District (0.9%), Tigard-Tualatin Aquatic District (0.5%), Soil Water Conservation Tualatin (0.5%), and Port of Portland (0.4%).

The Tigard-Tualatin school district comprises the largest share of the tax roll and covers a large area of the city. However, there are three other school districts that apply to smaller areas of Tualatin's city limits, including West Linn-Wilsonville, Sherwood, and Lake Oswego. It is possible that if the exemption were accepted only by some of these districts that it would not apply across the whole city.

- **What is its potential funding impact:** Tested on comparable developments in Tualatin and Tigard, over **five years** the **City's** nonprofit exemption would likely result in the City foregoing approximately $900 per year (an amount that will vary over time) for each unit. Assuming development of a building with 100 units of income-restricted affordable housing, the City would forgo about $90,000 per year in property taxes in a five-year time frame. Although this would provide support for nonprofit developers, this tax exemption is most effective when all taxing districts participate.

– Operating Cost Reduction Per Unit (City only, over 5 years):

$900

– Operating Cost Reduction Per 100 Units (City only, over 5 years):

$90,000

The amount of the exemption may not seem high compared to other strategic actions and the cost of development, but it does allow nonprofit housing developers to incur less permanent debt and creates greater savings for these organizations in the long term. This creates a higher incentive to attract nonprofit developers to the area.

If a sufficient share of taxing districts were to join the City in providing the exemption to trigger a 100% property tax exemption, then the value would be approximately **$538,000 for 100 units over a period of five years**.

- **Limitations of the Nonprofit Tax Exemption:** The Nonprofit Tax Exemption does provide some gap financing support for organizations seeking to build affordable housing in Tualatin. However, since the City only accounts for 16.5% of total property taxes, this exemption is not as effective without the support of overlapping taxing districts.
- **Equity Considerations:** Many nonprofit organizations also serve specific populations and may provide culturally specific or supportive services alongside housing. Examples in the region include Las Adelitas operated by Hacienda CDC, Casa Amparo operated by Centro Cultural, and Nesika Illahee operated by the Native American Youth and Family Center.

Multiple Unit Property Tax Exemption (MUPTE)

- **What does it do:** MUPTE provides a property tax exemption for up to ten years on the residential building portion of a property (but not land or building area for other uses such as commercial space). The incentive is for private developers of housing affordable to households with incomes of 60% to 120% of MFI. MUPTE can be used to support development where all housing in the building is affordable below 120% of MFI or mixed-income housing, where some housing is priced higher.
- **Who initiates it:** City Council can adopt the exemption on its own taxes but requires approval from other taxing districts to exempt all property taxes on the building.
- **How does it work:** The City can exempt only its own property taxes for nonprofit low-income housing, or all taxes for all districts if the districts whose taxes comprise at least 51% of the total tax roll agrees to participate. This program is flexible, with City discretion over many aspects of eligibility, including the level of affordability requirements, the minimum number of units in the property, and any design requirements.
- **What is its potential funding impact:** MUPTE could potentially create an incentive for private developers to offer rental units at a discounted rate that is affordable to moderate-income households. Other cities in Oregon have used this program with different configurations for affordability, though not all jurisdictions have these requirements:
    - In Newport, to meet MUPTE's local affordability requirements, projects may provide 20% of units at 80% of MFI or below, 10% of units at 60% of MFI or below, or make an in-lieu payment equal to 10% of the total property tax exemption.
    - In Salem, projects using the program with 100 units or more must provide at least 15% of units affordable at 80% of MIF or below, or at least two public benefits (such as daycare facilities, ground level commercial space, etc.).
    - In Bend, the program does not have an explicit affordability requirement. Instead, developers must provide at least three public benefits from a list in the Municipal Code, which includes 'Affordable Housing' and 'Middle Income Housing,' though developers can alternatively include other features, including childcare, open space, or green building features.

- When tested on recent multifamily buildings in Tigard and Tualatin, the value of the exemption for the **City's** portion in **five years** was $1,439 for each unit. Assuming that a developer used the program on a new building with 100 units of income-restricted affordable housing, the **City** would forgo about $144,000 in property taxes over five years.

  The program configuration tested in our analysis (20% of units at 80% of MFI) would provide a net benefit to developers if the tax abatement applies to all overlapping taxing districts. However, **the city's share of the tax exemption alone is insufficient to provide a net incentive for developers**. If all taxing districts participated, this total benefit to developers would be $8,531 over the first five years, or $853,100 for 100 units.

Operating Cost Reduction Per Unit (City Only, over 5 Years):

$1,439

Operating Cost Reduction Per 100 Units (City Only, over 5 Years):

$144,000

- **Potential sources of replacement funding:** The City could backfill the forgone property taxes from MUPTE through use of CET funds if so desired.
- **Limitations of MUPTE:** The effectiveness of this exemption depends on whether it can incentivize developers to include affordable units in otherwise market-rate projects. To do so, MUPTE must generate a net profit. Our analysis shows that the City would need to achieve buy-in from overlapping tax districts if it were to use the benchmark of 20% of units at 80% of MFI in order to create a sufficient incentive. However, given the flexibility of the program, the City could pursue a number of different configurations.

System Development Charge (SDC) Exemption

- **What does it do**: System Development Charges are one-time fees for new development, both for single-family and multifamily housing, that help pay for increased loads on infrastructure systems. Exempting SDCs reduces the up-front fees developers pay for those who provide new affordable units. In most cases the City will be required to backfill exempted SDCs from CET or another funding source.
- **What SDCs are paid in Tualatin**: New development pays the following SDCs:
  - Tualatin-specific SDCs: Water (typically around $1,150 per unit in a multifamily building, but varies based on the size of water meter) and Parks ($6,371 per unit)
  - SDCs for other service districts: Transit Development Tax ($6,542 per unit) and Sewer ($7,266 per unit)

The Tualatin Parks and Recreation Department has already adopted an Affordable Housing Waiver Policy through Resolution 2020-24, which provides a 100% waiver for regulated affordable units at or below 30% of MFI, and 50% for those between 30 and 60% of MFI.

- **Who initiates it**: City Council can adopt the exemption for City SDCs but would have to identify a source to backfill the forgone revenue from other sources. The City could also request that other districts that assess SDCs (sewer) or TDTs (roads) adopt an exemption, but either the City or that entity would also need to backfill the forgone revenue.
- **How does it work**: The City can exempt the system development fees that it controls for Parks and Water. In most cases, the City will be required to backfill the costs of the SDC waivers. If the City wanted to subsidize the costs of SDCs collected by other service providers (such as sewage or TDT), the City could subsidize those costs in agreement with the developer. The City could decide what level of affordability and the number of affordable units it will require for an exemption. SDC exemptions can be used to support development of both income-restricted and market-rate affordable units.
- **What is its potential funding impact:** Tualatin could provide an exemption for its two SDCs for Parks and Water but would likely have to backfill the forgone revenue.[8] Exempting both **city-controlled SDCs** in multifamily buildings over **five years** would amount to approximately $7,514 per unit, or $751,400 for 100 multifamily units in that time period.

Developer Cost Reduction Per Unit:

$7,514

Developer Cost Reduction Per 100 Units:

$751,400

- **Potential sources of funding:** The City could backfill the SDC exemptions through use of CET funds.
- **Limitations of the SDC waivers:** There are a limited amount of City SDCs, which reduces the potential impact of this tool. An SDC exception will also require the City to backfill forgone revenue, and it may be more effective to use funds to directly supplement affordable housing projects.

Summary of Potential Cost Exemption Programs for Affordable Multifamily Development

Both Nonprofit Tax Exemption and MUPTE are recurring programs, where the City would most likely continue to forgo property tax revenue on the same units over time.

[8] Typically, cities in Oregon need to backfill forgone revenue when they offer exemptions, but in some cases (such as Tigard) cities do not backfill based on local legal interpretation.

The Nonprofit Tax Exemption does not include a limit in its duration per state regulations. Therefore, developers could continue to receive the benefit as long as they are in compliance with the program criteria. MUPTE has a limit of 10 years included in state regulations. Although ORS 307.600-637 does allow for this time frame to be potentially extended for projects that provide affordable housing, this analysis assumes that the incentive will be a recurring program that applies over a 10-year period.

Exhibit 13 shows what the total forgone revenue would be per unit and per 100 units over time. This analysis is based on the property taxes derived from the cost of recent buildings in the Tualatin area but would likely change over time based on construction costs, inflation, and other economic factors.

System Development Charges are not a recurring program and are instead a one-time charge on new development. The exemption would apply to new units as they are built but would not be forgone annual revenue for the City.

Exhibit 13. Potential Tools for Subsidize Multifamily Development

Note: High and low funding estimates are derived from the analysis memos attached to this report

Tool	Funding Considerations	Impact on Affordable Housing	Five-Year Estimate		Twenty-Year Estimate	
			Per Unit	Per 100 Units	Per Unit	Per 100 Units
Nonprofit Low Income Tax Exemption	• Flexibility for City to set up program requirements • No required end to duration, renewable after 10 years • Supports deep affordability (<60% MFI)	Low	$900[9]	$90,000	$3,600	$360,000
Multiple Unit Property Tax Exemption	• Needs to create an incentive to private development • 10-year duration • Supports workforce housing (60-80% MFI)	Medium	$1,439	$144,000	$2,878[10]	$287,800
System Development Charges Exemption	• City will likely be required to backfill forgone revenue • Flexibility for City to set up program requirements • Can be set up to support workforce housing or deeper affordability	Medium	$7,514	$751,400	$7,514[11]	$3,005,600[12]

[9] The estimated annual costs are based on the first year of the exemption and would likely change in subsequent years based on construction costs, inflation rates, and other factors.

[10] The MUPTE program is limited by the state to 10 years, so this estimate is capped on a 10-year time frame rather than 20 years.

[11] Because SDCs are a one-time charge for developers and not an ongoing cost like property taxes, the amount spent *per new unit* would only change with the rates charged by the City for Parks and Water SDCs.

[12] Because SDCs are only a one-time charge for developers, this amount assumes that 100 new units use the exemption every five years for a total of 400 units.

5. Strategic Actions to Increase and Retain Homeownership

The previous section identified programs that support new construction of multifamily apartment buildings that have income-restricted units or market-rate affordable units. Tools in this section address maintaining and increasing affordable homeownership opportunities for Tualatin residents. The HPS says that, in 2020, a household would need to earn about $140,500 a year (153% of MFI for a family of four) to afford the median sales price of a home in Tualatin ($492,000). More than 60% of Tualatin's households are unable to afford the median sales price of housing in Tualatin.

Increasing access to affordable homeownership for households with income below 120% of MFI may require assisting existing residents with programs that help them stay in their homes. In addition, helping renters become homeowners can provide stability and the potential to build wealth. Given the lower-than-average household incomes and disproportionate rates of cost burden among people of color, homeownership is especially out of reach.

Cities can help moderate income households (between 80 and 120% of MFI) to achieve and maintain homeownership by contributing funds for down payments and/or reduce unexpected costs that homeowners may have to pay to maintain their homes. This section provides information about these strategic actions, including typical costs of these programs for cities in Oregon.

To understand the amount typically provided, this section references observations from other down payment and home rehabilitation programs in Oregon (see 'Homeownership Assistance Analysis' memorandum). Exhibit 14 provides a summary of the range of assistance provided by type.

HPS Actions and Funding Plan Tools

The tools included in this funding plan align with some of the specific actions in the 2021 Tualatin Housing Production Strategy. The table below demonstrates the associated actions and funding tools.

HIP Tool	HPS Action
Down Payment Assistance	2.a Evaluate Impediments to Homeownership and Their Removal
Homeownership Assistance	8.a Evaluate Establishing Local Housing Rehabilitation Program

Cities can take many other actions, in addition to those considered in this section, to support growth in homeownership. The Tualatin Housing Production Strategy includes other actions such as partnering with land trusts that build housing affordable to lower-income households; partnering with organizations that provide education to support households in becoming homeowners; and allowing for a wider range of housing types to be developed, some of which may be more affordable forms of homeownership housing.

Exhibit 14. Summary of Homeownership Assistance Program Types
Source: ECONorthwest analysis

Program Type	Who is Typically Served	Typical Assistance Provided per Household*	Potential Funding Sources**
Down Payment Assistance	First-time homebuyers (current renters) below 80% MFI	$25,000 – $110,000	US HUD (CDBG), OHCS (HOAP and CET revenue), Community Frameworks
Home Repairs	Existing low-income homeowners at or below 80% MFI	$10,000 – $50,000	US HUD (CDBG, HOME), OHCS (Repair Health and Safety Program), OHA (Healthy Homes Grants)
Weatherization	Existing low-income homeowners at or below 80% MFI	$10,000 – $25,000	US HUD (CDBG, HOME), public purpose charges, IIJA grants
Accessibility Improvements	Existing homeowners at or below 80% MFI, seniors, people with disabilities	$7,500 – $10,000	US HUD (CDBG, HOME)

*These ranges are derived from case studies in this analysis but are not exhaustive of programs in Oregon
**If over $100,000 of state CDBG funds are used for administration costs they must be matched, but otherwise would not carry a matching requirement[13]

Down Payment Assistance

- **What does it do:** Down payment assistance programs reduce one up-front cost barrier for moderate-income households to become first-time homeowners by providing grant funds for a down payment. Some households may have the ability to pay for a mortgage but lack the savings necessary to pay for an up-front down payment on a house.

  Typically, programs that provide access to homeownership are able to reach households at 80 to 120% of MFI, while rental programs are more efficient at targeting deeper levels of affordability.[14] Although these programs typically have a higher cost per household served, they are aimed at providing longer-term stability.

- **Who initiates it:** The City could develop and administer its own program or identify a partnering organization. Several nonprofit organizations operate down payment assistance programs in nearby jurisdictions with whom the City could work to provide funding and resources specific to Tualatin, including Proud Ground, Community Frameworks, and DevNW.

[13] US Department of Housing and Urban Development, "State CDBG Program Eligibility Requirements," n.d., https://www.hudexchange.info/programs/cdbg-state/state-cdbg-program-eligibility-requirements/.

[14] US Department of Housing and Urban Development, "The HOME Program: HOME Investment Partnerships," September 20, 2017, https://www.hud.gov/hudprograms/home-program.

- **How does it work:** This type of program provides grants or forgivable loans to individual renter households to pay for initial down payments. Partnership between government entities and nonprofits can be successful in offsetting the amount of administration required from city staff for homeownership assistance programs and providing funds through existing sources like Community Development Block Grants.

  Some jurisdictions may choose to implement their own independent program directly. Local programs may allow city staff flexibility in setting stronger MFI provisions and measures to achieve equitable outcomes but will have higher administrative costs and staff effort needed. Typically MFI is set at time of purchase for all household earners.

- **What is its potential impact:** Partnerships to administer programs have been successful when offered in Tualatin's peer cities. Washington and Clackamas County, as well as organizations like Proud Ground, offer potential partnership options for the City to leverage existing programs instead of creating new ones.

  In other homeownership programs surveyed in Oregon, the amount per unit offered varies between programs. We found that on the low end, cities provided at least $25,000 per household (in Springfield, OR, where the program is administered directly by staff), with the highest amount of $110,000 provided in Beaverton through Proud Ground. If the City provided support, the cost **per ten units** would be between $250,000 and $1,100,000.

  + Per 10 Units – Low: **$250,000**

  + Per 10 Units – High: **$1,100,000**

  The amount of funding required to provide effective down payment support may vary by the type of housing that buyers are purchasing. Prefabricated homes or homes held in a community land trust may be available at lower price points and require less funding than market rate housing. If the City were able to direct assistance to these types of units, then it could potentially serve more households or avoid the need to seek additional funding sources.

- **Limitations of down payment assistance:** Down payment assistance is typically more expensive per household served than other programs. It needs a substantial amount of funding which will likely go toward households with moderate income (80 to 120% of MFI) rather than residents with low income (50-80% of MFI) or extremely and very low income (<50% of MFI).

  Many down payment assistance programs also include other requirements that participants must meet, which can exclude households who have faced barriers to accumulating wealth. These include qualifying for a specific mortgage amount, meeting a minimum credit score, demonstrating a favorable debt-to-income ratio, providing proof of steady employment, and having personal savings to cover earnest money, inspections, and closing costs.

- **Equity Considerations:** Assisting first-time homebuyers can be an effective strategy to help address the racial wealth gap in the United States.[15] Many people of color have been historically prohibited from purchasing homes through discriminatory practices, unable to access federal programs such as low-interest loans, and prevented from accumulating the generational wealth that many rely on for purchasing their first home.[16] Down payment assistance can address the continuing homeownership gap by allowing households to overcome initial financial barriers to purchasing a home, but does not fully address these systemic inequalities.[17] Additionally, publicly funded and/or administered programs cannot give preference based on race or ethnicity, making it challenging to direct down payment programs specifically to homebuyers of color.

Home Rehabilitation

- **What does it do:** Home rehabilitation programs can help low to moderate-income homeowners to pay for the following types of housing maintenance:
    - Major home repairs, such as roofing, electrical, or plumbing issues. The purpose of major home repair programs is to help people stay in their homes by addressing larger-scale maintenance problems that may force a homeowner to sell their house if they are unable to do essential work. *Typical Cost: $10,000-50,000*
    - Accessibility improvements include upgrades such ramps, doorway modifications, or handrail installation for seniors and/or disabled residents. These serve homeowners who may not have needed accessibility features when they purchased their home. *Typical Cost: $10,000-20,000*
    - Weatherization makes buildings more energy efficient by making upgrades to features like siding, windows, or mechanical systems. These improvements can reduce utility costs, contribute to climate goals, and proactively extend the life of housing units for existing homeowners. *Typical Cost: $7,500-10,000*
- **Who initiates it:** The City could initiate its own program with local funding or coordinate with existing programs to connect residents to these resources. Washington

[16] Tim Henderson, "Black Families Fall Further behind on Homeownership," The Pew Charitable Trusts, October 13, 2022, https://www.pewtrusts.org/en/research-and-analysis/blogs/stateline/2022/10/13/black-families-fall-further-behind-on-homeownership.

[17] Jung Hyun Choi and Laurie Goodman, "What Explains the Homeownership Gap between Black and White Young Adults?," Urban Institute, November 20, 2018, https://www.urban.org/urban-wire/what-explains-homeownership-gap-between-black-and-white-young-adults.

and Clackamas Counties operate home rehabilitation programs in nearby jurisdictions, with whom the City could work to provide funding and resources specific to Tualatin:

  - Washington County's HARDE program is available for residents below 50% of MFI who are disabled or over the age of 62. Although it is primarily targeted at homeowners, renters may also apply for accessibility improvements up to $10,000. The deferred interest-bearing loans (DIBL) program is also available for homeowners between 50 and 80% MFI up to $25,000.
  - Clackamas County also provides assistance through accessibility grants up to $7,500 for low-income homeowners and eligible renters at or below 80% of MFI and a deferred payment loan (DPL) program for home repair loans up to $35,000 depending on the project type. DPL also covers weatherization up to $25,000.

- **How does it work:** These programs provide funds to individual households either through low-interest/deferred payment loans or outright grants for specific types of home projects. Deferred payment loans in both Washington and Clackamas County accrue only 3% interest for up to ten years and do not need to be paid monthly.
- **What is its potential impact:** Like down payment assistance, partnerships with the county and nonprofit organizations are often an effective way to deliver home rehabilitation programs. To understand the amount of assistance typically provided, we surveyed other home rehabilitation programs in Oregon, including City and County-funded programs, summarized above in Exhibit 14.

  The amount offered per unit varies by the type of support. Accessibility improvements tend to be lower and major repairs tend to be higher. If the City provided this type of support, the range of funding needed **per ten units** would be between $75,000 and $500,000.

  + Per 10 Units – Low: **$75,000**

  + Per 10 Units – High: **$500,000**

- **Limitations of the rehabilitation assistance:** Like down payment assistance, home rehabilitation is typically more expensive per household served than strategies that target multifamily housing. This substantial funding typically goes to households that are moderate income (between 80 and 120% of MFI), rather than households with low (50-80% of MFI) or extremely and very low (<50% of MFI) incomes.

  Equity Considerations: Home rehabilitation work targets people who are already homeowners but who may face displacement pressures due to a number of circumstances. Some types of home repair work contribute explicitly toward equitable outcomes, such as accessibility improvements for low-income disabled residents or older adults who may need to make physical home improvements.

  Low-income seniors may also be at risk of losing their homes if they are unable to make critical structural repairs. Providing financial support for rehabilitation projects can

ensure that residents stay in their homes as they age and can reduce the risk of being unhoused.

Summary of Potential Strategic Actions to Increase and Retain Homeownership

The low and high estimates for Down Payment Assistance and Home Rehabilitation funding are based on a limited survey of other programs in the region. There may be variation in the amount needed in Tualatin based on a number of factors, including the cost of labor and materials for home repair, home prices, and the type of rehabilitation work needed.

The number of households served may also vary by the type of rehabilitation work needed or size of down payments provided. For instance, if a large share of households sought accessibility improvement grants (which are typically less expensive than major home repairs), the same total amount of funding may be able to serve more households.

Exhibit 15. Potential Tools to Support Homeownership

Note: High and low funding estimates are derived from the analysis memos attached to this report

Tool	Funding Considerations	Impact on Affordable Housing	Low Estimate Per 10 Units	High Estimate Per 10 Units
Down Payment Assistance	• City can likely access CET revenue from OHCS • Recipients must meet other criteria (credit score, earnest, etc.)	Medium to High	$250,000	$1,100,000
Home Rehabilitation	• CDBG funds are typically used for these programs • Typically supports moderate income levels (80-120% MFI) • Can be delivered as grants or deferred payment/low interest/ forgivable loans	Low to Medium	$75,000	$500,000

6. Tradeoffs and Conclusions

This plan includes tools that **provide** the city with new revenue to fund affordable housing programs or **forgo** potential city revenue that enable affordable housing development. There is also detail on potential affordable housing programs that **require** funding. The table below summarizes the considerations for each tool in the plan. Although these are estimates based on the analysis included in the Appendices, they highlight the relative tradeoffs between funding options.

Housing Needs

Over the next twenty years, the greatest need for new **affordable units** will be for extremely and very low-income households, earning below 50% of MFI. While the largest group of new housing needed will be market rate (serving those at or above 120% of MFI), it is assumed that most of these units will not require any of the public subsidy covered in this plan.

The Housing Needs Analysis shows that Tualatin is forecast to grow by about 1,014 households through 2040. About 45% of Tualatin's new households are expected to have income below 80% of MFI. In addition, Tualatin already has more than 4,200 existing households with income below 80% of MFI, many of whom are cost burdened or have other unmet housing needs. The actions in this report, as well as other actions in the HPS, are intended to help better meet these housing needs.

Fiscal Impacts and Tradeoffs

Increases or decreases to the taxes or fees paid by the developer can have a myriad of impacts. Some considerations to take into account:

- Over a five-year period, a **Construction Excise Tax** might provide up to $500,000 that the City may use for some of the actions in this plan which require funding (such as rehabilitation funds and down payment assistance), or to backfill forgone revenue. The state also has some restrictions on how CET revenue can be spent. For residential CET, the state requires that the City use 50% toward developer incentives like SDC exemptions and that 15% goes to state down payment assistance programs. Commercial and industrial CET funds are more flexible, only requiring that 50% of funds are used for housing-related projects.
- **Urban Renewal** revenue has some flexibility in terms of uses and can theoretically be used on everything from homeownership and home rehab programs to parking infrastructure to backfilling lost SDC funds. These funds are restricted to the urban renewal area, which impacts the flexibility of where projects could take place.
- **Property tax abatement programs**, including MUPTE and the nonprofit tax exemption, are eligible at the time of construction, and as such, do not reduce existing revenue

levels. Nonetheless, it is potential revenue lost and could be made up in new CET funds if so desired.

- **SDC exemptions** will likely require the City to backfill forgone revenue, as new construction increases the capacity that infrastructure must accommodate. SDCs could be backfilled using CET funds which may not be sufficient on its own.
- **Down payment assistance** requires a large amount of funding and serves a relatively smaller number of households. However, it would provide longer-term stability for Tualatin residents and could help to achieve homeownership for groups who have faced historical barriers. The cost for **home rehabilitation** programs is also high and serves relatively few households but varies significantly by the type of assistance offered. While large home repairs can require more contribution per household, weatherization and accessibility programs can typically cost less.

Exhibit 16. Summary of Financial Tradeoffs Between Funding Tools

Tool	Population Served	Provides, Forgoes, or Requires Revenue?	Estimated Funding Range	
			5 Years	20 Years
Construction Excise Tax	Moderate Income and lower-income households	**Provides Funding**	$251,000-502,000	$832,000-$1,664,000
Urban Renewal	Current and future residents within urban renewal area	**Provides Funding**	$2.5 million	$2.5 million
Nonprofit Low Income Tax Exemption	Extremely and Very Low Income (<50%)	**Forgoes Revenue**	$90,000[18] per 100 units	$360,000 per 100 units
Multiple Unit Property Tax Exemption	Low Income (50-80%)	**Forgoes Revenue**	$144,000[19] per 100 units	$287,800 per 100 units[20]
System Development Charges Exemption	Extremely and Very Low Income (<50%) or Low Income (50-80%)	**Forgoes Revenue**	$751,400 per 100 units	$3,005,600 per 400 units[21]
Down Payment Assistance	Moderate Income (80-120%) Seniors or disabled residents	**Requires Funding**	$250,000 - $1,100,000 per 10 units	$1,250,000-4,400,000 per 40 units

[18] The estimated annual costs are based on the first year of the exemption and would likely change in subsequent years. This estimate shows only the City's portion of property taxes.

[19] The estimated annual costs are based on the first year of the exemption and would likely change in subsequent years. This estimate shows only the City's portion of property taxes.

[20] The MUPTE program is limited by the state to 10 years, so this estimate is capped on that time frame, not 20 years.

[21] Because SDCs are only a one-time charge for developers, this amount assumes that 100 new units use the exemption every five years, for a total of 400 new units using the program.

Home Rehabilitation	Moderate Income (80-120%)	**Requires Funding**	$75,000 - $500,000 per 10 units	$300,000 - $2,000,000 per 40 units

Equity Impacts and Tradeoffs

Each of the strategic actions in this funding plan have tradeoffs related to equitable housing outcomes. These benefits and challenges include critical considerations for the recommendations in this plan and should be integrated in decision-making for affordable housing in Tualatin.

Exhibit 17. Summary of Equity Considerations Funding Tools

Strategic Action	Equity Benefits	Equity Challenges
Construction Excise Tax	• Revenue can be used to serve low- and moderate-income households • Allows some flexibility in deciding how to use revenues • The City could choose to focus on programs that have specific equitable outcomes	• State statute somewhat limits the options for what can be done with CET; a portion for residential must go toward developer incentives • A CET increases housing costs for some types of housing to lower costs for more affordable housing.
Urban Renewal	• Can provide a larger amount of funding for housing for extremely and very low-income households, as well as low- and moderate-income households • Can provide housing near employment for Tualatin workers.	• Geographic limitations create the potential to create areas of concentrated poverty if most of the city's affordable housing is built exclusively in the urban renewal district. • Potential to displace existing residents or businesses in the plan area
Nonprofit Low Income Tax Exemption	• Supports development of housing that serves very low-income levels • Nonprofits may often provide culturally specific or other services alongside housing • Multifamily housing typically serves more households for less cost per unit • Local contribution can attract more affordable housing developers to the area and reduce their amount of permanent debt incurred for providing below-market rents	• Tax exemptions forgo revenue for the City general fund which could be used for other citywide programs and operations.
Multiple Unit Property Tax Exemption	• Supports moderate-income and mixed-income development, which may provide affordable units in higher-opportunity areas across the city • Multifamily housing may serve more households for less cost per unit	• Limited time frame for program applicability (10 years), after which rents would likely increase to market-rate. This increase could cause displacement risk for low-income residents after the program ends. • Tax exemptions forgo revenue for the City general fund which goes to citywide programs and operations.
System Development Charges Exemption	• Can be used to support development of housing that serves low- and moderate-income levels • Multifamily housing may serve more households for less cost per unit	• SDC exemptions must be backfilled from other sources of funding • SDC exemptions forgo revenue for the City general fund, which could be used for other citywide programs and operations

Down Payment Assistance	• Often benefits households who have been historically excluded from homeownership • Allows households to build intergenerational wealth through home equity	• Higher cost per household means that assistance serves relatively fewer people • Limited funding creates challenging questions around who receives assistance
Home Rehabilitation	• Benefits existing low-income homeowners in Tualatin and ensures longer-term stability • Some programs specifically provide resources for disabled residents and seniors	• Higher cost per household means that assistance serves relatively fewer people

Conclusions about Available Funding

Strategic actions that support development of **multifamily rental housing,** (including property tax and SDC exemptions) are likely to serve a greater number of households at low, extremely low, and very low incomes. These actions could address the needs of a larger overall portion of Tualatin's projected housing needs and typically require less public subsidy per unit compared to homeownership.

- The **Nonprofit Low Income Tax Exemption, MUPTE**, and **SDC exemptions** all increase equitable access to housing in this way. If the City implemented all three of these, then the amount of forgone revenue in the next five years for Tualatin would be **$985,000**. Most of this total amount would be from SDC exemptions.
- However, in the case of the nonprofit exemption and MUPTE, **City taxes only account for about 16% of the total tax roll**. If taxing bodies which made up at least 51% of the total tax roll agreed to participate, then all taxes for all districts would be exempted per state statute. This could increase the exemptions for 100 units over five years by an estimated $448,000 for the nonprofit exemption and $709,000 for MUPTE, outside of the City's taxes.

Strategic actions that target **homeownership** are more likely to benefit a smaller pool of moderate-income households but do typically provide longer-term stability than multifamily rental units.

- **Down payment assistance** has a high cost on a per-unit basis and can likely only serve a small number of households. While urban renewal revenue could potentially be used for funding these programs, single-family homes do not comprise a large share of the new Core Opportunity Reinvestment Area. Based on a survey of what other jurisdictions offer, the cost for a down payment program could range from **$250,000** to **$1,100,000** in the next five years.
- For **home rehabilitation** programs, the cost per household and direct equity benefit varies substantially depending on the type of project. The projected cost for a home rehabilitation program in the next five years could range from **$75,000** to **$500,000**. Several other state and federal sources are also available for home rehabilitation programs, which the City could pursue outside of the tools in this plan (see Exhibit 18).

Tualatin has limited sources of generating local revenue to be used for affordable housing programs. The total cost of both the multifamily rental housing and homeownership programs described above could be between **$1.3 and $2.5 million,** which new revenue sources will likely not be able to cover entirely. Most of this variation in program costs is based on what amount would be allocated to homeownership programs.

- **CET will not produce enough revenue to fund all of these programs**, as it is only estimated to provide up to **$500,000** in the next five years if it covered residential, commercial, and industrial construction. The state also sets out rules for how revenue must be distributed. Construction and industrial CET is flexible, but **50% of residential CET revenue must go to developer incentives** like tax exemptions and SDC exemptions (about $48,000).
- **Urban Renewal** may be able to provide the largest single source of funding at **$2.5 million** in the next five years, which can potentially help to fund SDC exemptions and homeownership programs. However, **urban renewal funds are not able to meet all of Tualatin's affordable housing needs because their use is geographically limited to the boundaries of urban renewal districts.** There is limited single-family housing currently within the Core Opportunity Reinvestment Area that could use down payment or home rehabilitation assistance. Additionally, concentrating a large share of Tualatin's new affordable units in one area could have unintended consequences of creating a concentrated area of poverty.

Additional Funding Tools

ECONorthwest evaluated additional potential funding tools such as new taxes or fees that could be used to fund affordable housing initiatives, as well as grants, partner contributions, and state funding (detailed in the Additional Funding Tools Analysis memorandum and summarized below in Exhibit 18).

Many of the largest funding sources would require popular buy-in or a public vote but likely lack political viability; others are restricted by state law. Grants and partner contributions can have an impact but are likely not ongoing sources that could be used for continued programs. If the City did find additional funding sources, it could centralize revenue from them (and others listed in this report) in an Affordable Housing Trust Fund. This could be used as a vehicle to fund projects with oversight from a committee who set clear criteria for use and prioritization.

The City should pay close attention to potential new sources of funding from the State to support homeownership programs in coming years. For example, the Oregon Housing Authority's Healthy Housing program is still under development and is expected to provide funding to cities to support rehabilitation. In the 2023 Legislative Session, the Legislature is considering multiple additional funding opportunities to support development of new affordable rental housing and increase access to homeownership for lower-income households.

Exhibit 18. Summary of New Funding Sources Evaluated

Revenue Source	Potential to Implement	Description	Assessment
Most Common Local Sources			
General Fund Revenue	Low	Contribution from the city's general budget	Can contribute directly but competing with other city priorities
Tualatin-specific or regional General Obligation (GO) Bond	High	Increases property taxes to pay back the amount of bonds taken out by the city for capital projects. In 2018, voters approved a regional GO Bond for housing for the Metro region. Funds from that bond are being used to create permanently affordable housing. Metro may consider issuing an additional GO Bond.	Requires a public vote but could provide long-term stable source Tualatin could be the recipient of additional funding from a new Metro GO Bond.
Local Option Levy	Medium	A time-limited property tax issued as a rate used for capital projects, operations, or programs	Also requires a public vote but GO bond is probably better
Increases to Existing Taxes and Fees			
Lodging Tax	Medium	An increase to the city's current lodging tax levied on hotels, motels, and short-term rentals, paid by visitors	Uses of revenue are restricted by the state; majority (70%) for tourism
Marijuana Tax	Medium	A targeted change in the city's current marijuana tax levied on marijuana purchases, paid by consumers	Marijuana tax revenues may already be at their maximum for Oregon
Building and Planning Permit Fee Surcharge	Low to Medium	An additional charge added to the city's existing fee for staffing and operational costs	The City has relatively low fees now, but increasing them would not help to incent new housing development
Utility Fee Surcharge	Low to Medium	An additional fee on utility bills, similar to the city's current parks utility fee	Potential nexus with infrastructure to support affordable projects
System Development Charges (SDCs)	Low	An increase to the city's existing one-time fees charged on new buildings, paid by developers	Conflicts with strategy to exempt SDCs for certain affordable development
New Taxes and Fees			
Business License Fee	Low	An additional fee issued with new business licenses	Could hinder economic development goals
Food and Beverage Tax	Low	A tax added to food and beverage sales within the city, paid by consumers	Unlikely to be politically viable
Real Estate Transfer Tax	Low	A tax levied on real estate transactions, paid by property owners	Not proven legal in Oregon
Sales Tax	Low	A tax on retail goods purchased within the city, paid by consumers	Unlikely to be politically viable
Payroll/Business Income Tax	Low	A tax for local business revenue, paid by business owners	Likely to face pushback from business community

Vacancy/Second Home Tax	Low	A tax levied on homes that are unoccupied for a certain period of time, paid by property owners	Likely not legal in Oregon or enough vacation homes
Other Funding Sources			
Donations and Gifts	Medium	Funds given by private foundations, firms, or individuals	Could have a mid-sized to low impact and likely to fluctuate
Grants	Medium	Funding from public agencies or companies for a specific purpose that the city applies for	Dependent on grant writing capacity and changing availability
State Funding (OHCS)	Medium to High	Oregon Housing and Community Services (OHCS) provides a number of funding opportunities for which Tualatin would be eligible including grants and CET	Mostly available as one-time contributions but can be spread out over years
State Funding (OHA)	High	OR HB 2842 (adopted in 2021) directs the Oregon Health Authority (OHA) to provide $10 million in grants to fund the Healthy Homes program aimed at weatherization, accessibility, and home repair programs	A task force is currently working to configure eligibility for households to access program, which the City would need to include in its criteria if it received funding to implement this program
Federal Funding (IIJA)	High	The 2021 Infrastructure Investment and Jobs Act (IIJA) included $3.5 billion in funding for the federal Weatherization Assistance Program (WAP) for states and local jurisdictions nationwide	In Oregon, OHCS has an allocation for WAP; local jurisdictions can apply through them

Approval Processes and Administration

All of the tools in the funding plan will need buy-in from the public, City Council, and partners (such as overlapping taxing districts, developers, etc.). Decisions to implement some tools may require a public vote (such as a Local Option Levy) or Council decision, which should provide opportunities for public discussion about implementation of the strategic actions presented in this plan (as well as others in the HPS).

The need for City staff resources and ongoing administration/reporting are another consideration beyond funding that may impact whether these tools can be effective. The next section of this report (Chapter 7: Recommendations) includes general discussion of administration but will likely require refinement by the City.

7. Recommendations

This chapter presents final recommendations for implementing Tualatin's Housing Production Strategy. Our team developed these actions with input from discussion with the project's Steering Committee, city staff, City Council, and Planning Commission.

Key Conclusions from Analysis

The City of Tualatin should carefully consider limitations of how different funding can be used to implement its Housing Production Strategy. The following are primary conclusions that we identified through our analysis, including relevant fiscal impacts and equity tradeoffs of strategic actions. These conclusions about available funding sources informed our recommendations for the City in the next five years.

- **Urban Renewal funding can only be used for limited project types and requires broader discussion about tradeoffs.** Tax increment financing is a potentially powerful mechanism for affordable housing, but it can only be used for projects within the urban renewal district and takes time for funding to accumulate. Without issuing a bond on future funding, then Tualatin's Core Opportunity Urban Renewal district may have little to no funding over the next five years. If funding is not available in the next few years, that limits opportunities to execute on near-term actions in the Urban Renewal district.

  Additionally, housing is also only one component of the Core Opportunity Reinvestment Area plan, and large portions of the plan area are zoned primarily for industrial and commercial use. There are other competing priorities for businesses, public space, and employment which will receive Urban Renewal revenue. The City and Urban Renewal Commission will need to discuss what to prioritize in the near-term and what projects it wants to pursue later within the plan area.

- **Construction Excise Tax spending is relatively flexible.** It takes time to accumulate CET funds and can be used to support a wide range of affordable housing actions. CET has to adhere to state regulations that set standards for what share of revenue which the City can allocate to different type of programs, including affordable housing.

  It will take some time after the City would implement a CET to receive any revenue, which is paid when construction projects are complete. Depending on how quickly Tualatin sees new development happening and what type, it may take several years to have enough CET revenue to execute some of the actions in this plan.

- **System Development Charge Exemptions will need to be backfilled.** SDC exemptions can reduce costs for developers to provide affordable units but requires a funding source to backfill the forgone SDCs, such as CET or Urban Renewal revenue. These funding sources may not be sufficient to backfill all the potential requests for SDC exemptions.

The City could consider capping the amount of SDCs that it will exempt based on the availability of funding to backfill them. The City may want to prioritize the types of projects that it awards SDC exemptions for, focusing on the projects that best align with City goals. Alternatively, the City could also use a competitive selection process, though this may discourage developers to apply, depending on the criteria and will require a greater amount of staff capacity. Allocating general fund revenue could be an additional way to backfill the gap between exempted SDCs and available funding.

- **The Multifamily Tax Exemption will need support from overlapping taxing districts.** The City only controls about 16% of the tax roll. Providing enough incentive to support affordable housing development by market-rate developers requires exempting the property taxes of overlapping taxing district, as well as the City's exemption. If the city can't get other taxing bodies on board, then MUPTE will probably not be effective at producing new affordable units. The time limit on MUPTE could also be a significant equity challenge. The benefit only lasts for ten years, after which time rents will presumably rise without ongoing subsidy.
- **Increasing access to affordable homeownership is expensive.** Homeownership programs require a larger amount of funding because of the relatively high cost of housing sales prices. Increasing access to homeownership leads to longer term housing stability and provides lower-income households the opportunity to gain equity and build wealth. These programs are especially important for those who have been historically prohibited from homeownership. Rehabilitation programs can be important to combat displacement of seniors and people with disabilities.

  Strategic actions in this plan can contribute to down payment assistance and home rehabilitation. Given the likely available funds, the City is unlikely to be able to provide the total amount of funding needed to address more than a small part of the need for down payment assistance and some of the need for rehabilitation. This is true even if the City dedicates a large share of revenue from CET and available revenue from Urban Renewal toward them. The City should pay close attention to potential new sources of funding from the State to support homeownership programs in coming years.
- **The City can prioritize other actions to support homeownership that have lower costs.** The City could partner with a land trust to support development of affordable ownership housing or use Urban Renewal funding to assemble a development site where affordable ownership units would be built by the land trust.
- **The City can pursue funding from other sources, such as the general fund.** Tualatin should seek to make a case for an allocation from the second round of the Metro General Obligation bond, pursue its own local option levy, or new taxes and (which would require voter approval). The City could pursue use of general fund revenue toward actions that support affordable homeownership and rental housing. To do so, the City would need to make tradeoffs elsewhere in the budget. This report includes other potential funding sources, most of which may have lower levels of probable public support.

Recommendations for Implementing the HPS

This section presents recommended actions for the City of Tualatin. As a whole, they cover implementation steps within the City's power to address a range of housing needs in Tualatin for people at varying income levels.

- **Build Equity into Decision-Making Processes.** As the City continues to implement the HPS, the City should develop an equity framework for decision-making that considers the distribution of costs and benefits and impacts on low-income residents, seniors, people of color, and other groups with higher housing needs in Tualatin. This framework should align with similar equity work that the City is developing for other initiatives (such as the climate action plan).

  Over the next five years, the City can begin to use this framework to prioritize initiatives and monitor outcomes. This framework can also apply for subsequent strategic actions that develop further into implementation of the HPS beyond the five-year horizon. The City should periodically revisit this framework and ensure that it captures relevant concerns and reflects broader equity work across Tualatin.

- **Establish an Affordable Housing Trust Fund and Create an Advisory Committee to Oversee it.** An Affordable Housing Trust Fund (AHTF) is a mechanism that can centralize revenue sources into a collective account and distribute money for housing in the city. Although most of the potential sources for an AHTF can also be used independently, this structure is useful for affirming that projects that receive public funding go toward priority needs. Trust funds are typically overseen by a committee who work with city staff to formulate the application criteria and administer the approval process. However, the City needs money to contribute to the AHTF, such as CET revenue and other funding sources (such as tax revenue, fees collected, bonds, etc.).

  - *AHTF Structure.* An AHTF would allow the City to make investments in the specific types of housing that are needed in Tualatin. The City could configure the criteria and eligibility standards to a specific affordability level, unit type, tenure type, and more. The fund can combine multiple funding sources, increasing stability because there is less dependence on a single revenue stream to fund affordable housing.
  - *Advisory Committee.* Alongside structuring the AHTF, the City should consider convening an ongoing advisory committee with the role of goal setting and oversight on how AHTF funds are used. This committee should include low-income residents, renters, seniors, people with disabilities, commuters, and people of color in Tualatin. The City could also consider targeting other populations to join the committee, such as local employers. To equitably implement this action, the City should compensate participants in the advisory committee, given that it is actively seeking to include underrepresented and low-income individuals. Compensation can include monetary compensation as well as accommodations while committee members are participating in meetings, such as meals, childcare, and transit tickets.

- *Monitoring.* Within the first few years of implementing an AHTF, the City could also initiate a monitoring system to track whether allocated funds are accomplishing intended goals. This could involve city staff reviewing projects that have received support from the AHTF and identifying the number of units that are serving households at different income levels (or other demographic groups such as seniors). Monitoring could also help to reveal challenges for projects that do not meet intended goals and give direction on further actions that the City could take to ease affordable housing development.
- *Look for Additional Sources of Funding to Grow the Affordable Housing Trust Fund.* Right now, there are not many sources that the City is able to put into an AHTF. If Tualatin implements a CET, the revenue from this tax could be allocated to the fund (which several other cities in Oregon have done). Allocations from the local general fund or other new revenue sources could also feed into the AHTF if the City is able to dedicate some amount toward housing.

  Ideal sources of funding for the AHTF are flexible, allowing the fund to support different types of housing initiatives over time. Some funding sources that are available for affordable housing may have barriers for inclusion in the AHTF because of restrictions that prohibit them from going toward certain types of projects or programs.

- **Explore Available Private, Regional, State, and Federal Funding Sources for Homeownership and Affordable Rental Housing.** Our analysis of additional funding tools (summarized in Exhibit 18) begins to show the range of further options for funding affordable housing from a number of private, regional, state, and federal sources, which vary in terms of time frame, scale, and eligibility. Tualatin should continue pursuing additional sources of funding for affordable housing beyond the strategic actions in this plan to enhance equitable access to both homeownership opportunities and affordable rental housing.
  - *Homeownership.* Actions that support homeownership often require a relatively high amount of funding for each household served. These are important actions that support equitable access to homeownership but will likely be outside of the City's funding capacity, even if it allocates a significant amount of revenue from other strategic actions in this plan.

    If the City implements a residential Construction Excise Tax, it will be eligible to access funds for down payment assistance from Oregon Housing and Community Services (OHCS). OHCS offers several resources of new homebuyers statewide (such as education programs) but uses CET funds specifically to augment local down payment assistance programs in jurisdictions that adopt this tax.[22] There are currently other opportunities for state and federal funding that can be used for home rehabilitation, such as funding from the Infrastructure Investment and Jobs Act

[22] Oregon Housing and Community Services, "Residential Construction Excise Tax," n.d., https://www.oregon.gov/ohcs/homeownership/Pages/homeownership-publications.aspx.

(IIJA) and Oregon Health Authority (OHA)'s Healthy Homes Program. In coming years, the State may make additional funds available to support development of affordable rental housing and homeownership programs. The City should track these programs closely and identify opportunities for the City to apply for funding.

  - *Rental Housing.* There are funding opportunities that the City could pursue to further support affordable rental housing. For example, if there is a second round of allocations from Metro's General Obligation bond for affordable housing, Tualatin could be a candidate to receive funding to support affordable multifamily rental housing. City residents already pay property taxes toward this bond, and the city meets several of Metro's criteria for priority selection.

- **Pursue a Construction Excise Tax on Residential and Commercial/Industrial Development.** Construction Excise Tax could be a large source of flexible revenue to fund strategic actions for housing in Tualatin within the next five years. Consistent with the schedule in the HPS, the City should prioritize exploring CET by 2025. As part of that process, the City should consider the level of tax that it wishes to levy on residential, commercial, and industrial development. Our analysis assumes that this rate will be 1% on all these types of development, but the City could consider a lower rate (or higher rate for commercial and industrial development).

- **Work with Council to Identify the Right Balance of Housing Support in Implementing Urban Renewal.** The City is committed to implementing the Core Reinvestment Area Plan, including an explicit goal for development and preservation of multifamily housing affordable to a range of income levels. City staff should work with the City Council and Urban Renewal Agency to find the right balance of funding allocation for projects in the area. Decision-makers should discuss what is possible and what is an appropriate amount of funding to use for housing development in the Urban Renewal district within the next five years.

  - *Potential for Land Acquisition and Site Assembly.* The City should also be proactive about identifying potential development sites where it could dedicate or lease land to an affordable housing developer in the Core Reinvestment Area Plan. If there are underutilized parcels owned by the City within the plan area, staff and decision-makers could identify initial steps for how it could leverage them for affordable housing. This could include selling land at a discounted rate, leasing it at a low rate, or subsidizing acquisition costs with urban renewal revenue.

- **Implement a SCD exemption for affordable housing development.** The City can exempt the system development fees that it controls for Parks and Water and will need to identify a source to backfill the forgone revenue from other sources, such as the CET or Urban Renewal. The City will need to establish criteria for granting the exemption, such as what level of affordability, the amount of SDC that will be exempted, and the number of affordable units it will require for an exemption.

- **Work with overlapping taxing districts to provide the full Nonprofit Low Income Tax Exemption.** The City Council adopted the Nonprofit Low Income Tax Exemption on its

own taxes, which accounts for 16.5% of all property taxes in the city. Applying the exemption to all property taxes requires approval from other taxing districts that make up at least 51% of the total tax roll.

- **Implement the Multiple Unit Property Tax Exemption and Seek Partnerships with Overlapping Taxing Districts.** The City has already implemented the Nonprofit Tax Exemption on its own share of the local property tax roll in Tualatin, which will help to provide new housing for low-income residents at or below 60% of MFI, in line with the program configuration. The Multiple Unit Property Tax Exemption can add another tool to the City's options for creating affordable units for moderate-income households and incentivize more housing overall to be built in Tualatin.
- **Build Partnerships with Nonprofit Housing Organizations.** Nonprofit housing developers and operators are effective at delivering units that serve low-income residents and provide other supportive or culturally specific services. These can include translation assistance, financial literacy, child support, mental health services, and more. There are organizations operating within Tualatin and the region with whom the City could seek to build partnerships and include as part of decision-making conversations.

  Maintaining ongoing communication with nonprofit housing providers can help to identify regulatory and financial barriers that these organizations may be encountering in Tualatin. Through these conversations, the City may find opportunities to provide technical support from staff to overcome these barriers, or new initiatives to prioritize down the line. Likewise, local partners may also present opportunities to reduce the amount of city staff capacity needed for ongoing program implementation. For example, organizations that process down payment assistance can educate, track opportunities, and administer grants to individual households with city funding, while reducing potentially extensive time and effort required from staff.

- **Revisit the Funding Action Plan and Continue to Implement the Housing Production Strategy.** In the next five years (and beyond), the City should undergo periodic review of the Funding Action Plan and Housing Production Strategy. This process should include evaluating whether the analysis included within the Funding Action Plan or future analysis findings alter priorities for funding actions in the HPS.

  This Funding Action Plan provides an initial list of additional funding sources (detailed in the Appendix), including some which may not currently be politically or legally feasible but could become so if conditions change in the future. The City should be proactive about monitoring whether actions become more viable or if precedents emerge for similar communities in Oregon. If such funding options emerge, the City can consider conducting further analysis and reorganizing its priorities for implementation.

Appendix A: Detailed Evaluation and Information about Each Action

This appendix presents the memoranda that ECONorthwest developed as a part of this project. They provide additional information about implementation of each strategic action considered in this plan.

DATE: July 14, 2022
TO: City of Tualatin
FROM: ECONorthwest
SUBJECT: Summary of Construction Excise Tax Analysis

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy into a Housing Implementation Plan. To understand the potential trade-offs of these strategies in Tualatin, this memorandum describes strategic actions around a Construction Excise Tax (CET) and how it works. In addition, it summarizes an analysis of the potential impacts of implementing this action. The final section outlines potential next steps for the City of Tualatin to consider.

Construction Excise Tax

Overview

In 2016, the Oregon Legislature passed Senate Bill 1533, which permits cities to adopt a construction excise tax (CET) on the value of new construction projects to raise funds for affordable housing projects. The tax is limited to 1% of the permit value on residential construction with no cap on the rate applied to commercial and industrial construction. A number of cities of various sizes in Oregon have adopted a CET.

Construction Excise Tax: Levies a tax on new construction projects to fund housing programs and/or investments. It can be applied to residential and/or commercial and industrial development.

How the Construction Excise Tax Works

The allowed uses for CET funding are defined by state statute:

- The City may retain up to 4% of funds to cover administrative costs. The funds remaining must be allocated as follows, depending on whether the CET is on residential or commercial and industrial development:
- For a residential CET:
  - 50% must be used for developer incentives (e.g., permit fee and SDC waivers,[23] tax abatements, or finance-based incentives). The City would have to offer incentives but could cover the costs or foregone revenues with CET funds.
  - 35% may be used flexibly for affordable housing programs, as defined by the jurisdiction.
  - 15% is not available to the city and flows instead to Oregon Housing and Community Services for homeownership programs that provide down payment assistance.

[23] Note that while these are called "waivers," they are really subsidies, since the fees would still be paid by CET revenues rather than by the developer.

- For a commercial/industrial CET:
  - 50% of the funds must be used for housing-related programs, as defined by the jurisdiction (note that these funds are not necessarily limited to affordable housing).
  - The remaining 50% is unrestricted.

Fiscal Impacts/Who Pays

The source for CET funds is new development. The statute exempts public buildings, regulated affordable housing, places of worship, public and private hospitals, agricultural buildings, nonprofit facilities, long-term care facilities, residential care facilities, and continuing care retirement communities.[24] The City can exempt other types of development if desired.

Pros and Cons

Pros:

- Offers the ability to link industrial or other employment investments, which generate new jobs and demand for new housing, with funding for housing development.
- CET is a flexible funding source, especially for funds derived from commercial/industrial development.
- Program funds can fund administration of the CET as well as staff time needed to administer programs funded by CET.

Cons:

- CET increases development costs in an environment where many developers are already seeking relief from system development charges. Depending on the rates imposed, CET could have an impact on feasibility. More research would be necessary to understand the potential magnitude of the impact.
- Where demand is high relative to supply, additional fees on residential development may be passed on to tenants or home buyers through higher housing costs.
- Because CET revenue is development derived, it will fluctuate with market cycles and will not be a steady source of revenue for affordable housing when limited development is occurring.

[24] Oregon Revised Statute 320.173

Summary of CET Analysis

Estimating Revenue Potential

Methodology Overview

There is no statutory cap on the CET rate applied on commercial and industrial construction. Therefore, this analysis assumed a range of potential rates that the City could apply on this development type: 0.3%, 0.5%, 1%, and 2%. The CET rate applied on residential construction is capped at 1%. Therefore, this analysis assumed a range of potential rates that the City could apply on this development type under the 1% threshold: 0.3%, 0.5%, .75%, and 1%.

After establishing a range of rates, the analysis assessed what revenue would look like based on historical building permit values for each respective development type (i.e., commercial and industrial development over the last five years and residential development over the last five years).

Based on the statutory regulations about how the CET funds can be expended, we allocated the projected revenue forecasts as follows:

- **Commercial/Industrial Construction: (1)** 4% to administrative costs, **(2)** 50% of the balance after subtracting administrative costs to housing-related programs (i.e., 48% of the total), and **(3)** 50% of the balance after subtracting administrative costs to an unrestricted use (i.e., 48% of the total).
- **Residential Construction: (1)** 4% administrative costs, **(2)** 15% of the balance after subtracting administrative costs to OHCS (i.e., 14% of the total), **(3)** 35% of the balance after subtracting administrative costs to affordable housing programs (i.e., 34% of the total), and **(4)** 50% of the balance after subtracting administrative costs to developer incentives (i.e., 48% of the total).

Results: Historical Permit Values

One way to estimate CET revenue is a backward-looking analysis. If the City of Tualatin had charged CET fees on recent development that had occurred, how much revenue might have the City collected (assuming the permitting activity had been unchanged as a result of that CET)?

Building permits for residential development and commercial/industrial development in Tualatin fluctuated from year to year over the last five years. Exhibit 19 summarizes annual total permit values for new residential and commercial/industrial construction as well as additions that increase square feet (excluding exempt development) in 2020 dollars.[25] The annual average over the five-year period (2016-2020) for residential development is about **$10m in qualifying permit value** in 2020 dollars. The annual average over the five-year period for

[25] ECONorthwest used the Construction Cost Index published by Engineering News Record to inflate permit values to 2020 dollars.

commercial and industrial development is about **$41.8m in qualifying permit value** in 2020 dollars.

Exhibit 19. Residential Building Permit and Commercial/Industrial Building Permit Values by Year (2016 to 2020), (in 2020 dollars)

Source: ECONorthwest analysis of City of Tualatin permit data.

Note: The large bump in residential permit valuation in 2018 is primarily due to the City of Tualatin permitting an above-average number of residential developments (101 total permits in 2018, compared to 11, 12, 35, and 37 total permits in other years). The large bump in commercial/industrial valuation in 2020 is predominately due to a new industrial structure permitted on Blake Street with a permit value of $90m (2020$).

Year	Commercial and Industrial Bulilding Permit Valuation (2020$)	Residential Building Permit Valuation (2020$)
2016	$17,166,894	$9,304,128
2017	$11,042,600	$6,270,048
2018	$53,020,643	$32,351,852
2019	$14,918,542	$1,257,071
2020	$112,883,996	$926,520
Annual Average	**$41,806,535**	**$10,021,924**
Total (2016-2020)	**$209,032,675**	**$50,109,618**

Next, the analysis calculated the revenue that the City would have generated if it had a CET in place during the 2016 to 2020 period (assuming the permitting activity had been unchanged as a result of that CET) using the different CET rates listed previously.

Exhibit 20 and Exhibit 21 show potential CET revenue for commercial/industrial development. This analysis shows that under the highest rate tested (2%), the average annual CET revenue over this period would have been about $836,100.

Exhibit 22 and Exhibit 23 show potential CET revenue for residential development. This analysis shows that under the highest rate tested (1%), the average annual CET revenue over this period would have been about $100,200.

Under either development type, the minimum CET revenue collected in a slow year would have varied little with the different rates, while the maximum collected in a "busy" year would have varied substantially.

Exhibit 20. Potential Annual Commercial/Industrial CET Revenue by Year and Rate (2016 to 2020)
Source: ECONorthwest analysis of City of Tualatin permit data.

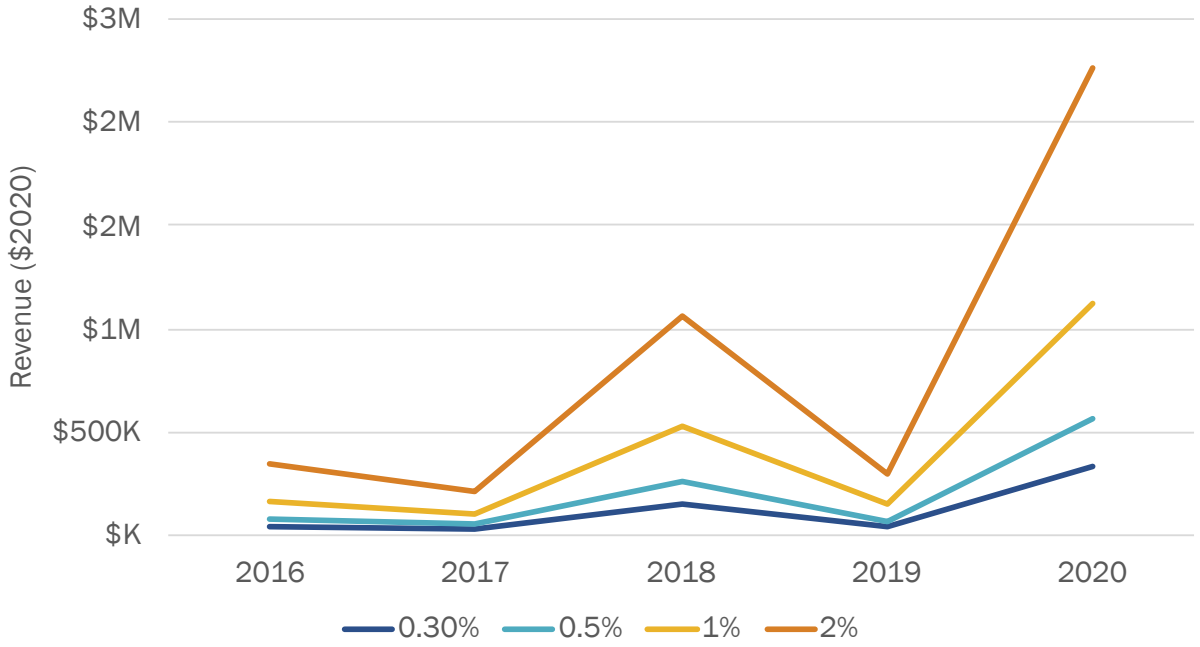

Exhibit 21. Historical Minimum, Maximum, and Average Annual Potential Commercial/Industrial CET Revenue by Rate (2016 to 2020)
Source: ECONorthwest analysis of City of Tualatin permit data.

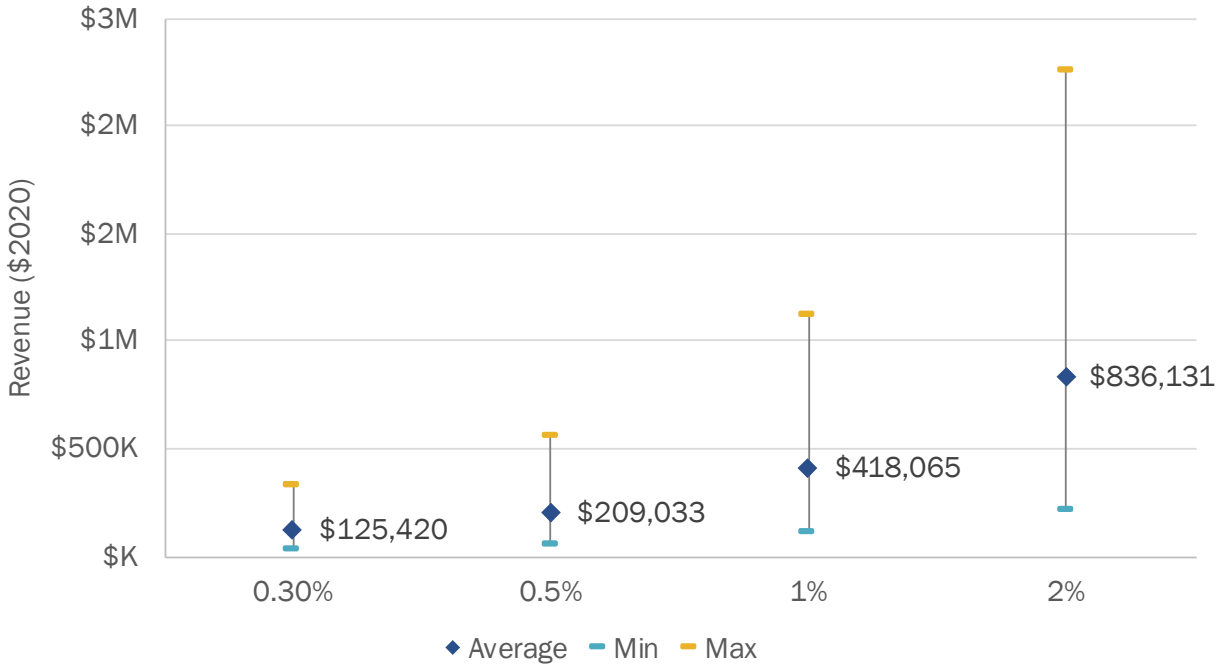

Exhibit 22. Potential Annual Residential CET Revenue by Year and Rate (2016 to 2020)
Source: ECONorthwest analysis of City of Tualatin permit data.

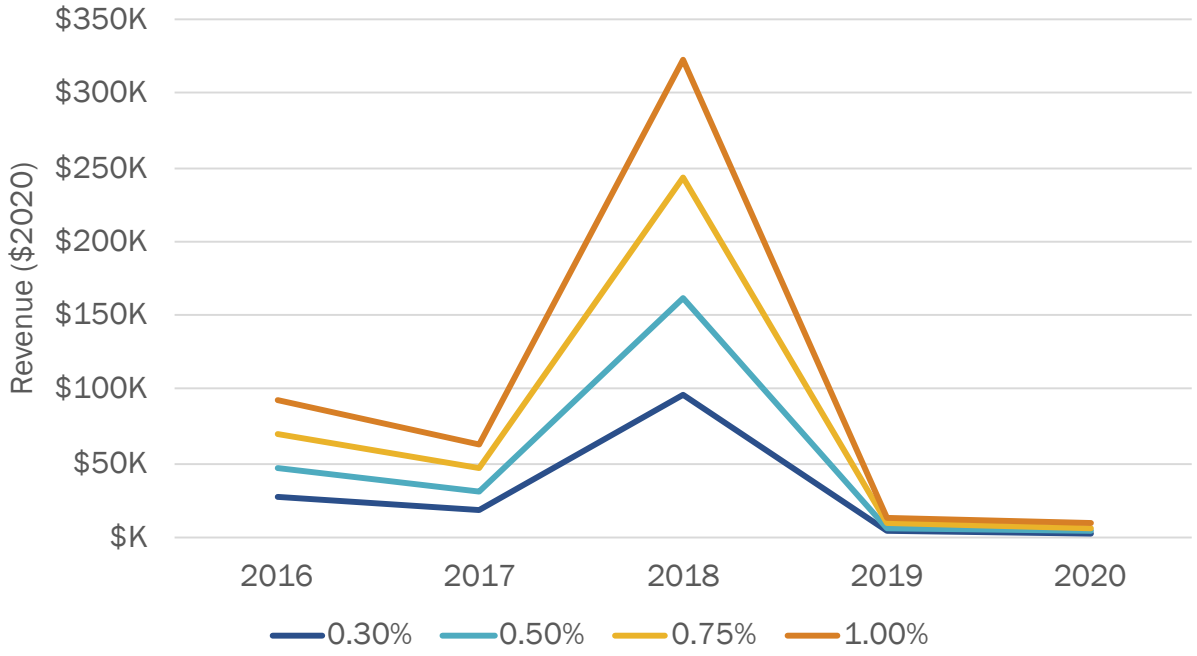

Exhibit 23. Historical Minimum, Maximum, and Average Annual Potential Residential CET Revenue by Rate (2016 to 2020)
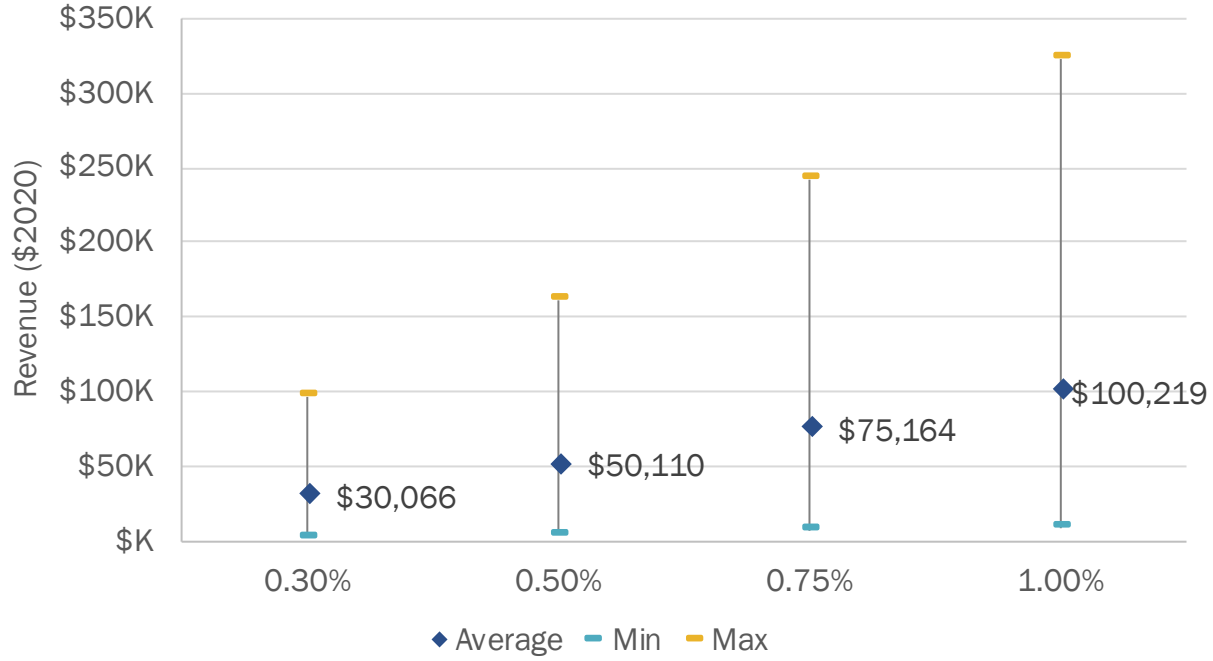
Source: ECONorthwest analysis of City of Tualatin permit data.



Based on the statutory requirements about use of funds, ECONorthwest translated the average annual simulated CET collections between 2016 and 2020 into funds available for each funding category, as shown in Exhibit 24 and Exhibit 25.

Exhibit 24. Hypothetical Total Commercial/Industrial CET Revenue (2016 to 2020) by Rate and Use of Funds

Source: ECONorthwest analysis of City of Tualatin permit data.

	0.30%	0.5%	1%	2%
Unrestricted	$60,201	$100,336	$200,671	$401,343
Housing Programs	$60,201	$100,336	$200,671	$401,343
Admin Costs	$5,017	$8,361	$16,723	$33,445

Exhibit 25. Hypothetical Total Residential CET Revenue (2016 to 2020) by Rate and Use of Funds

Source: ECONorthwest analysis of City of Tualatin permit data.

	0.30%	0.50%	0.75%	1.00%
OHCS	$4,329	$7,216	$10,824	$14,432
Affordable Housing Programs	$10,102	$16,837	$25,255	$33,674
Developer Incentives	$14,432	$24,053	$36,079	$48,105
Admin Costs	$1,203	$2,004	$3,007	$4,009

As shown above, a 0.5% or 1% rate on commercial and industrial development could generate meaningful revenue for programs, especially if the unrestricted portion is also dedicated toward housing programs. Because of the greater flexibility for these revenues, the City could design a flexible program for the revenues, or direct all of the net revenues towards a Housing Trust Fund or similar fund. This ease of use is important, because even with the higher revenue potential of the commercial/industrial CET, a 0.5% to 1% rate would offer little funding for administrative costs.

A CET on residential development would generate relatively little revenue given past trends in residential development, even at the maximum rate (1%). In addition, the administration would be more complex due to needing to separate out revenues toward the spending categories as specified in statute, while the funding available to cover administrative costs would be negligible.

Conclusions and Next Steps

Given the results summarized above, a 0.5% to 1% CET on commercial and industrial development may be worthwhile to consider as it could generate a flexible source of revenue for local housing programs, especially if the City continues to see strong industrial and commercial growth. Imposing a CET on residential development is likely not worth considering unless the City annexes a large amount of vacant residential land where higher-end new housing is expected.

If the City chooses to further evaluate adoption of a CET, it should conduct additional outreach to stakeholders and local businesses to offer an opportunity for discussion and to raise any concerns. The City should also advance conversations about the potential uses of the funds, even though this is flexible and does not necessarily need to be determined prior to adoption. Working with stakeholders to clearly define the program's intended purpose, how the funds (especially the unrestricted portion) would be used, and who would make decisions about the use of funds is likely to help build support for the program. If the City chooses to adopt a CET, it must pass an ordinance or resolution that states the rate and base of the tax. Most communities also identify any further self-imposed restrictions on the use of funds as part of adopting the ordinance. If the ordinance passes, the City must then establish a process to distribute the funds.

SUBJECT: Urban Renewal Districts – Affordable Housing Funding Opportunities

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes what each strategic action is and how it works. In addition, it summarizes an analysis of the potential impacts of implementing each action. The final section outlines potential next steps for the City of Tualatin to consider.

Urban Renewal Districts

Overview

Urban Renewal Districts: Areas where a local urban renewal authority has created a plan for new public investments.

Tax Increment Financing: TIF revenues generally pay off bonds used for catalytic improvements like parks, infrastructure, commercial development, or affordable housing.

Urban renewal districts in Oregon are authorized by the state in ORS Chapter 457 and implemented by local jurisdictions. State law specifies requirements for a city to create an urban renewal agency, which can then create plans for areas that are officially designated as 'blighted' by a local governing body (either the city or county).[26]

Urban renewal districts use tax increment financing (TIF) to fund strategic public investments intended to spur more development in designated areas. This tool works by leveraging future growth for new catalytic projects through bonds. When the plan is adopted, the total assessed value for properties in the boundary is 'frozen' for the plan's lifespan. Taxes from that original base continue going to the taxing jurisdictions at the time of adoption at that base rate. The growth in tax revenue above the base is called the 'increment,' which goes to the urban renewal agency to be used for funding projects within the plan area. Agencies most often use bonds to begin projects, then when new development in the urban renewal area leads to an increase in property value and more tax revenue, the agency uses it to pay the bonds with TIF dollars. When the bonds are paid off and the plan sunsets, the entire valuation of the district is returned to the general property tax rolls.

In 2021, the City of Tualatin adopted the new Southwest and Basalt Creek Development Area, and in 2022 adopted the Core Opportunity Reinvestment Area. While much of the land included in these two areas is planned for industrial and commercial use, some portions of the new districts are also planned for residential or mixed-use development. These could be appropriate locations for new affordable housing rehabilitation or mixed-income housing funded by increment revenue. The City would only be able to use TIF revenue within renewal

[26] ORS 457.020(1)

plan areas, though there may be flexibility for revenue generated within one district to be used in another urban renewal area.

Fiscal Impacts/Who Pays

Designating TIF dollars from urban renewal is a way for the City to directly provide funding for affordable housing. While regulated affordable housing is often tax exempt and does not generate additional tax revenue, some jurisdictions allocate a portion of TIF revenues to fund affordable housing projects to support equitable development within the designated district. TIF can be invested in the form of low interest loans and/or grants for housing projects or a variety of capital investments. There are other restrictions that make it difficult to use TIF funding for operations and it is typically directed towards construction and capital projects such as multifamily development, rehabilitation, or supportive utilities.

Direct funds generated by TIF are typically not able to be used outside the boundaries of the plan district. There may be some possible exceptions for utilities located outside of the district that serve the urban renewal area. If there is a citywide program, TIF funds may be used as the funding source for it in the specific urban renewal area if projects align with plan goals. There are other restrictions that make it difficult to use TIF funding for operations and it is typically directed towards construction and capital projects such as multifamily development, rehabilitation, or supportive utilities.

Pros and Cons

Pros:

- Urban renewal revenue is the city's largest locally-controlled funding source that could be available to support affordable housing development through direct project subsidies, land write-downs, and infrastructure enhancements.
- The City has recently created a new urban renewal district which includes explicit goals for development and preservation of affordable multifamily housing. The agency could use these goals in its investment criteria in the district.
- The City can use TIF revenue to ensure affordable housing is available in districts as properties appreciate due to investments in the urban renewal area. Including affordable housing investments as part of a comprehensive set of infrastructure enhancements can help to mitigate potential displacement when the district grows.

Cons:

- In many cases, regulated affordable housing projects are tax exempt, and therefore do not contribute to the growth of tax increment revenues. Investments should be made with this trade-off in mind.
- TIF can only be used in areas already designated for urban renewal. These may not necessarily be areas that have the highest need, ideal transportation options, or proximity to jobs.

- In active TIF areas in Tualatin, the majority of the land is zoned for industrial or commercial use rather than residential development, limiting the area where urban renewal funds could be used.
- Investing over $750,000 in TIF (or any public funds) directly into a new or renovated privately developed project triggers prevailing wage requirements. Prevailing wages are specific local rates set by the US Department of Labor by different types of construction projects funded by federal dollars, including fringe benefits. These can typically increase overall project costs by 10 to 20% for developers.
- Setting aside TIF revenue or using bonds for affordable housing projects means that that amount is no longer available to other projects in the district like infrastructure, parks, or commercial development.

Summary of Urban Renewal in Tualatin

Potential Uses of Urban Renewal Revenue

The Agency must use TIF funds within the boundaries of the plan district and they must align with eligible project types included in ORS Chapter 457.020(4)-457.020(7) that are included in the goals of the urban renewal plan. The types of uses allowed by state law include:[27]

- Housing Authority powers
- Rehabilitation and conservation work in district
- Acquisition of property
- Clearance or rehabilitation for acquired property
- Construction or improvement of streets, utilities, and site improvements
- Carrying out plans for voluntary repair and rehabilitation of buildings or other improvements
- Relocation of displaced persons and property
- Selling or leasing property
- Neighborhood development programs

There may be some possible exceptions for utilities located outside of the district that serve the urban renewal area. If there is a citywide program, TIF funds may be used as the funding source for it in the specific urban renewal area if projects align with plan goals. The City currently has three active urban renewal areas that could include these eligible uses if it explicitly writes them into the plan.

[27] Oregon Economic Development Association, "Best Practices for Tax Increment Financing Agencies in Oregon," November 2019, https://oeda.biz/committees/urban-renewal/, 48.

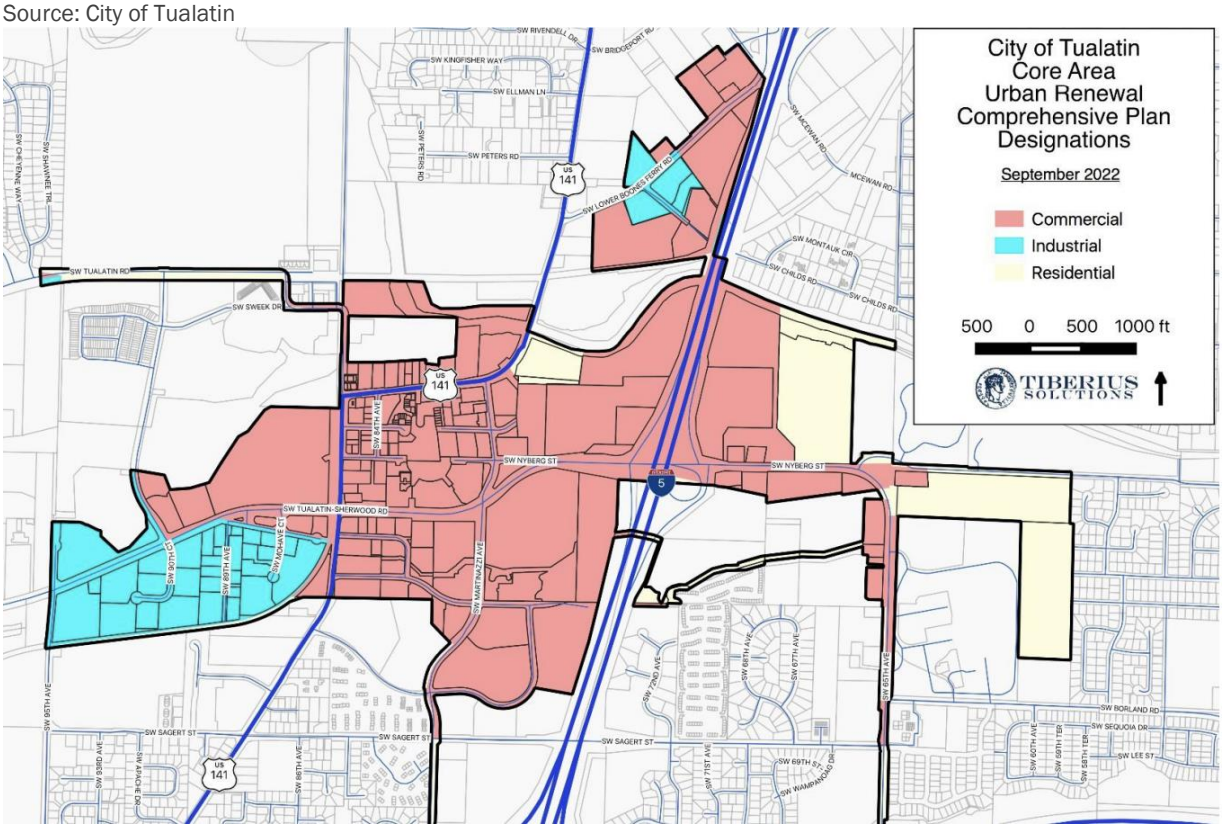
Core Opportunity Reinvestment Area Urban Renewal Plan

The City would only be able to use TIF revenue within renewal plan areas, though there may be flexibility for revenue generated within one district to be used in another urban renewal area.

The City's **Core Opportunity Reinvestment Area** adopted in November 2022 comprises commercial areas south of Bridgeport Road, Town Commons, I-5 Corridor, and Tualatin-Sherwood Road. It could be a potential site for investment in affordable housing through TIF, as the adopted plan's Goal 3: Mixed Use Development specifically aims to "Support development of housing affordable to people who have incomes between 30-120% of median family income in Washington County."[28] Like the City's other urban renewal areas, the Core Opportunity Reinvestment Area contains large amounts of industrial and commercially zoned land, but it does have portions for residential use where projects could be located.

Although majority of land exclusively zoned for residential use in the Core Opportunity Reinvestment Area is already developed, there could be potential for denser or mixed-use housing development in Downtown. Exhibit 26 shows the final boundaries for this plan area. It includes Downtown Tualatin as well commercial areas south of Bridgeport Village and residentially zoned areas on the outer parts of the district.

Exhibit 26. Core Opportunity Reinvestment Area Boundaries and Comprehensive Plan Designations
Source: City of Tualatin



[28] City of Tualatin, "Core Opportunity Reinvestment Area Plan," November 2022, https://www.tualatinoregon.gov/economicdevelopment/core-opportunity-and-reinvestment-area.

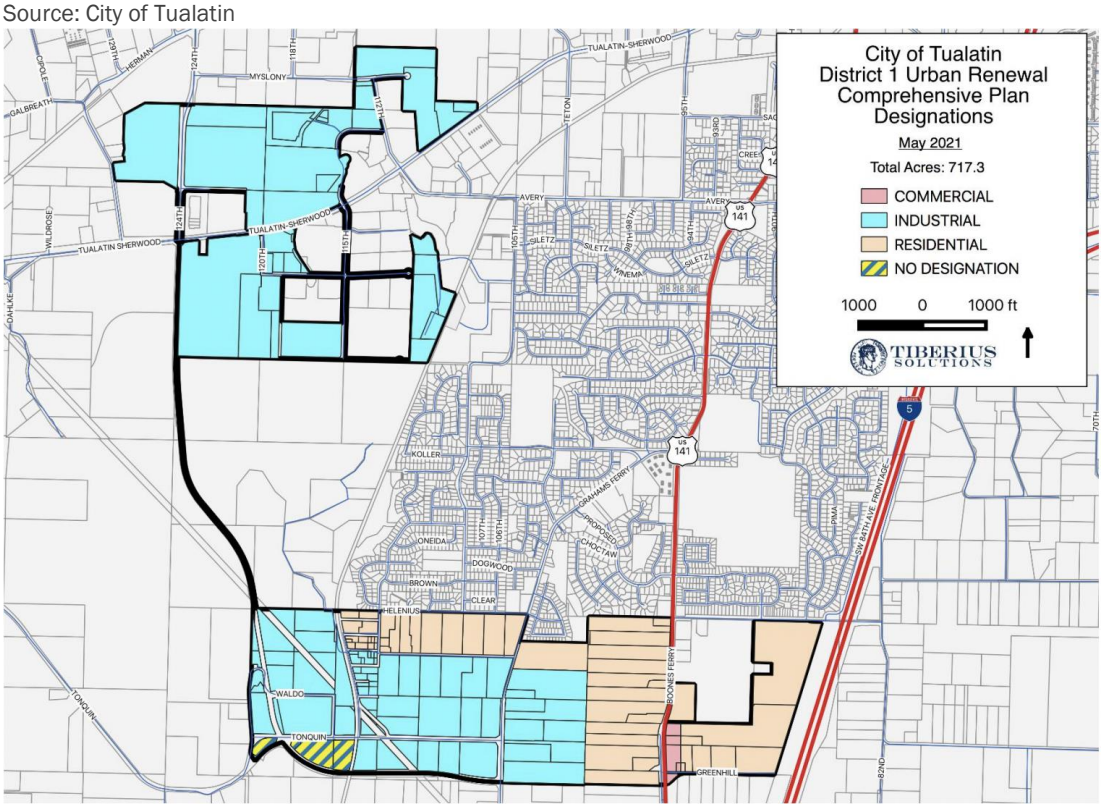
Other Urban Renewal Areas

Exhibit 27 shows the boundaries for the **Southwest and Basalt Creek Area** and its comprehensive plan designations. While a part of the area is residential, large portions are zoned for industrial or commercial uses which could limit the actual area where affordable housing investments could be made. The residential zones in the district are focused in the eastern part of the district, near I-5. Many of the lots that would be eligible for the use of urban renewal funds are already developed and not available for new construction.

Within the Southwest and Basalt Creek Plan Area, Community Partners for Affordable Housing (CPAH) owns a parcel. CPAH was a part of the Task Force Advisory Board for developing the plan, which included infrastructure provisions that benefit affordable housing and other housing development within the plan boundaries.[29]

Exhibit 27 Urban Renewal Plan Area Boundaries and Comprehensive Plan Designations in Southwest and Basalt Creek Plan Area

Source: City of Tualatin



The area of Tualatin's existing **Leveton Tax Increment Plan** is almost entirely designated for commercial and industrial use, with only a small corner designated for high density residential.[30] While the plan stresses compatibility with adjacent residential areas, it does not

[29] City of Tualatin, "Southwest and Basalt Creek Development Area Plan," August 2021, https://www.tualatinoregon.gov/economicdevelopment/southwest-and-basalt-creek-development-area.

[30] City of Tualatin, "Leveton Tax Increment Plan," April 2002, https://www.tualatinoregon.gov/economicdevelopment/leveton-tax-increment-district.

explicitly include initiatives or goals around housing. To use TIF funds in this area, the City would need to update their plan with objectives around housing but would be limited to a relatively small area for implementation.

Estimating Potential Revenue

There are two potential urban renewal areas where Tualatin could consider using tax increment financing (TIF) revenue to support affordable housing projects. These include the Southwest and Basalt Creek Development which was established in 2021 and the Core Opportunity Reinvestment Area established in 2022.

The Southwest and Basalt Creek Development potential total TIF revenue over 30 years is estimated to be between $28.4 million and $55.5 million,[31] depending on future growth in assessed value in the area. The plan for this area includes objectives for affordable housing, including a parcel owned by Community Partners for Affordable Housing (CPAH).

The Core Opportunity Reinvestment Area's potential total TIF revenue over 30 years is estimated between $118.1 –$171.4 M million based on three different growth scenarios detailed in a 2021 report and revisited for the 2022 adoption process.[32] Each urban renewal area has a maximum indebtedness that caps the total amount that projects can access which is typically lower than the district's potential revenue.

Exhibit 28. Summary of Urban Renewal Districts in Tualatin

	Leveton	Southwest and Basalt Creek	Core Opportunity Reinvestment Area
Year Established	1985 (last updated 2002)	2021	N/A
Potential TIF Revenue (30 years)	Undefined	$28.4 - $55.5M[33]	$118.1 –$171.4 M[34]
Maximum Indebtedness	$36.4M	$24.5 - $48.7M[35]	$140M[36]
Affordable Housing Considerations in URA Plan	Relocation of displaced residents[37]	"Assist in the provision of infrastructure to support the development of additional housing options in the Area"[38]	"Support development of housing affordable to people who have incomes between 30-120% of median family

			income in Washington County."[39]
Possible Eligible Uses in District	Relocation of displaced people	Construction or improvement of streets, utilities, and site improvements	Many possible uses – Rehabilitation, acquisition, or construction projects could be used to meet desired outcomes

Examples of Other Urban Renewal Revenue Housing Programs

Other cities in Oregon have set aside tax increment funds for various local affordable housing initiatives in urban renewal areas. Some examples that could be relevant to Tualatin include set aside programs, financial and technical assistance, or gap financing for specific affordable housing projects. Infrastructure or utilities investments that reduce costs for required construction or dedication by affordable housing developers can also help to achieve goals for housing. Jurisdictions in Oregon that have implemented these kind of urban renewal projects include:

- **Portland.** The City began using a **45% set aside** of their tax increment dollars for new affordable housing for households at or below 100% of MFI in 2006. Although funds could still only be used within the boundaries of urban renewal areas, the policy set a minimum share of TIF revenue to be put towards affordable housing projects. In the first twelve years of implementation, the set aside policy generated more than $275 million in direct investment in housing affordable to low-income and workforce residents. In the years since, affordable housing investment has accounted for one-third of TIF expenditures across nine urban renewal areas in Portland.

  The set aside has provided capital resources for key projects like the Bud Clark Commons, Block 49 veterans housing in South Waterfront, and preservation of existing low-income apartment units. Funds have also been used for down payment assistance programs and home repairs throughout urban renewal areas.[40]

- **Tigard.** The City Center and Tigard Triangle Urban Renewal Plans included explicit goals to provide **financial and technical assistance** to targeted types of housing development. The City Center area has seen a 32% increase in multifamily housing since 2006, compared with a 25% increase in the rest of the city, while the Tigard Triangle has seen a 265% increase.[41] Although this progress is the result of multiple overlapping strategies, the urban renewal agency has contributed development assistance.

  In 2017, Tigard's Town Center Development Agency participated in a public-private partnership with Capstone Development to complete a 165-unit apartment building. Through the agreement, the developer team purchased the agency-owned property for

[39] City of Tualatin, "Core Reinvestment Opportunity Area."

[40] Portland Housing Bureau, "Importance of TIF Set-aside Policy," City of Portland, accessed August 2, 2022, https://www.portlandoregon.gov/phb/article/653603.

[41] Town Center Development Agency of the City of Tigard, "TIF District/Urban Renewal Financial Impact Report," January 31, 2022, https://www.tigard-or.gov/home/showpublisheddocument/2017/637792251216970000.

its appraised value of $1.7 million, and the City provided an SDC waiver for the same amount to the developer to offset some of the estimated $2.8 million in SDCs incurred by the project. Since the project qualifies for a partial 10-year property tax reduction under the state's Vertical Housing program, some of the estimated $7.8 million in property taxes that would be generated over 20 years will be forgone.[42]

- **Redmond.** The local urban renewal agency provided $150,000 in **gap financing** in 2017 to fund Housing Works' 48-unit affordable housing project for seniors located in its Downtown Urban Renewal District. The building includes community space and a full-service 10,000 SF medical clinic. The total project cost was $12 million and included financing from Wells Fargo's Community Lending & Investment team. It includes one residential condo and six project-based HUD Section 8 voucher units.[43]

Conclusions and Next Steps

- The City should evaluate areas designated for residential use within its urban renewal areas, as well as potential for mixed-use development in commercial areas of the Core Opportunity Reinvestment Area.
- The City should evaluate a potential seaside or other policy language as part of the implementation of its existing urban renewal plan.
- The City should implement the flexible language in the Core Opportunity Reinvestment Area plan that could support the use of TIF funding for affordable housing. By including affordable housing in the urban renewal plan, the City should identify whether it wants to set unit production and affordability targets over time or simply include affordable housing as an eligible project category.

SUBJECT: Affordable Housing Trust Fund and Additional Funding Tools Analysis

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes strategic actions around an affordable housing tax exemption and how it works. In addition, it summarizes an analysis of the potential impacts of implementing these actions. The final section outlines potential next steps for the City of Tualatin to consider.

Additional Funding Tools

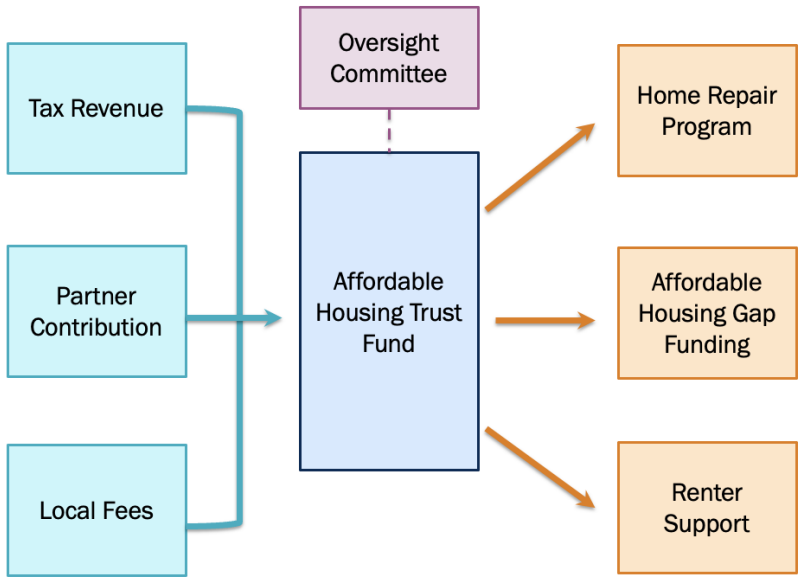
Overview

There are many potential strategies for creating new revenue sources or directing existing sources towards affordable housing, including new taxes or fees, local bonds and levies, partner contributions, and more. Some of the tools covered in other Housing Implementation Plan memorandums could contribute revenue to the city in order to financially support targeted types of housing. This analysis expands on those additional funding sources and how the city could use them in an Affordable Housing Trust Fund.

Affordable Housing Trust Fund: Trust Funds provide a single location to collect a variety of local contributions and other funds for affordable housing. They are typically managed by a combination of city staff and a steering committee who ensure the funds are distributed to fulfill priority housing goals.

An Affordable Housing Trust Fund is a mechanism that can centralize revenue sources into a collective account and distribute money for housing in the city. Although most of the sources analyzed can also be used independently, this structure could be useful for affirming that projects that receive public funding go towards meeting priority needs. Trust

Exhibit 29. Affordable Housing Trust Fund Structure
Source: ECONorthwest



funds are typically steered by a committee who work alongside city staff to formulate the application criteria and administer the approval process. However, these funds only work if there are sufficient inputs in the form of tax revenue, fees collected, bonds, etc.

Fiscal Impacts/Who Pays

These tools can leverage a variety of local, existing revenue sources; they are typically spread out to different funds, levies, and bonds to accumulate a larger sum. The fiscal impacts depend on the source, but in general it means that the City is choosing to allocate money towards housing projects in lieu of spending it elsewhere. In some cases, sources may also stipulate that funds can only be used for certain types of projects which may restrict how the trust can distribute its money. These may prohibit their use in the fund altogether: for example, urban renewal funds cannot be use outside of the boundaries of a district and are primarily used for supporting new capital projects, limiting their use for citywide goals or programmatic elements.

Pros and Cons

Pros:

- An affordable housing trust fund would allow the City to make investments in the specific types of housing that are needed in Tualatin. The City could configure the criteria and eligibility standards to a specific affordability level or unit/tenure type.
- The fund can combine multiple funding sources and lower dependence on a single revenue stream to fund affordable housing. It could also reduce the strain on any one source.
- Some sources that have low potential now because of political viability or legal status in Oregon may become more feasible over time with changes to state legislation that enable more tools to be used for affordable housing. For example, vacancy taxes have not been legally tested in the state but could be in the future.

Cons:

- A trust fund requires administrative capacity from the City and will likely require support from a volunteer committee to oversee the application and approval processes.
- If goals and eligible project types are not clear from the outset of the trust, funding could go towards lower priority types of projects and/or cause public controversy.
- Other challenges might arise with requirements depending on the funding source within the trust fund, such as restrictions on the types of projects that can be funded by certain revenue sources, requirements for prevailing wages, or annual fluctuations in availability.

Summary of Additional Funding Tools Analysis

ECONorthwest evaluated a number of revenue sources that could contribute funding to an affordable housing trust fund.

Exhibit 30 summarizes these sources and provides rationale for their recommended inclusion or exclusion in the Housing Implementation Plan.

An affordable housing trust fund could also collect revenue from other tools that ECONorthwest evaluated for this plan, such as revenue from a Construction Excise Tax. This analysis includes those explored in other sections of the Housing Implementation Plan and integrates ideas from the previous Housing Production Strategy.

Exhibit 30. Summary of New Funding Sources Evaluated

Revenue Source	Potential to Implement	Description	Assessment
Most Common Local Sources			
Tualatin-specific Construction Excise Tax (CET)	High	A tax levied on new construction of commercial, industrial, and/or residential buildings	Likely a high source of flexible local revenue
General Fund Revenue	Low	Contribution from the city's general budget	Can contribute directly but competing with other city priorities
Tualatin-specific or regional General Obligation (GO) Bond	High	Increases property taxes to pay back the amount of bonds taken out by the city for capital projects In 2018, voters approved a regional GO Bond for housing for the Metro region. Funds from that bond are being use to create permanently affordable housing. Metro may consider issuing an additional GO Bond.	Requires a public vote but could provide long term stable source Tualatin could be the recipient of additional funding from a new Metro GO Bond.
Local Option Levy	Medium	A time-limited property tax issued as a rate used for capital projects, operations, or programs	Also requires a public vote but GO bond is probably better
Increases to Existing Taxes and Fees			
Lodging Tax	Medium	An increase to the city's current lodging tax levied on hotels, motels, and short-term rentals, paid by visitors	Uses of revenue are restricted by the state; majority (70%) for tourism
Marijuana Tax	Medium	A targeted change in the city's current marijuana tax levied on marijuana purchases, paid by consumers	Marijuana tax revenues may already be at their maximum for Oregon
Building and Planning Permit Fee Surcharge	Low to Medium	An additional charge added to the city's existing fee for staffing and operational costs	The City has relatively low fees now, but increasing them would not help to incent new housing development

Utility Fee Surcharge	Low to Medium	An additional fee on utility bills, similar to the city's current parks utility fee	Potential nexus with infrastructure to support affordable projects
System Development Charges (SDCs)	Low	An increase to the city's existing one-time fees charged on new buildings, paid by developers	Conflicts with strategy to exempt SDCs for certain affordable development
New Taxes and Fees			
Business License Fee	Low	An additional fee issued with new business licenses	Could hinder economic development goals
Food and Beverage Tax	Low	A tax added to food and beverage sales within the city, paid by consumers	Unlikely to be politically viable
Real Estate Transfer Tax	Low	A tax levied on real estate transactions, paid by property owners	Not proven legal in Oregon
Sales Tax	Low	A tax on retail goods purchased within the city, paid by consumers	Unlikely to be politically viable
Payroll/Business Income Tax	Low	A tax for local business revenue, paid by business owners	Likely to face pushback from business community
Vacancy/Second Home Tax	Low	A tax levied on homes that are unoccupied for a certain period of time, paid by property owners	Likely not legal in Oregon or enough vacation homes
Other Funding Sources			
Donations and Gifts	Medium	Funds given by private foundations, firms, or individuals	Could have a mid-sized to low impact and likely to fluctuate
Grants	Medium	Funding from public agencies or companies for a specific purpose that the city applies for	Dependent on grant writing capacity and changing availability
State Funding	Medium to High	Oregon Housing and Community Services provides a number of funding opportunities for which Tualatin would be eligible including grants and CET	Mostly available as one-time contributions but can be spread out over years

The City's Highest Potential Revenue Sources Are Construction Excise Tax (CET) Revenue and Property Taxes.

CET is a Promising New Option, with Multiple Configurations Available.

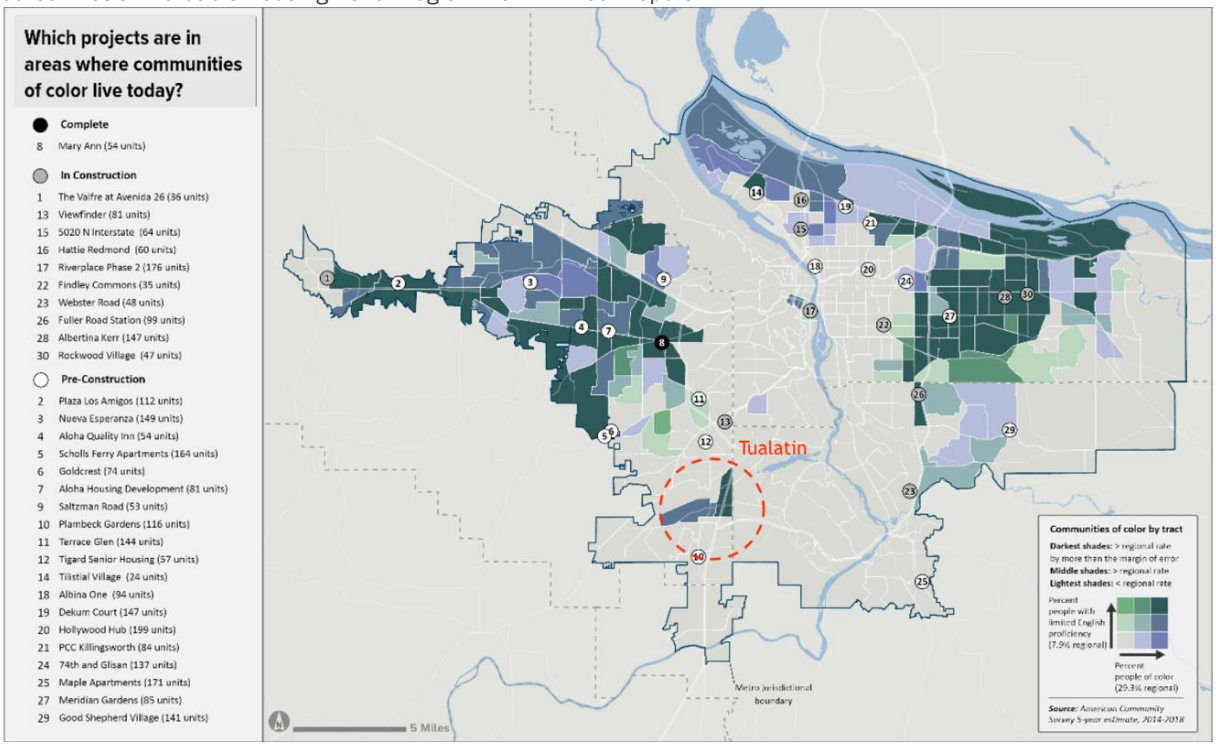
Construction Excise Taxes (CET) is increasingly popular for funding affordable housing in Oregon, as SB 1533 passed in 2017 permits cities to adopt a tax on the value of new construction projects explicitly for the purpose of raising funds for affordable housing projects. The tax is limited to 1% of the permit value on residential construction with no cap on the rate applied to commercial and industrial construction. For residential, 50% of revenue must go to developer incentives like backfilling SDC abatements or forgone MUPTE revenue, 15% goes to OHCS programs, the city can use the remaining 35% flexibly (including adding to a trust). For commercial and industrial CET, 50% of revenue has to be used for housing related programs and could also flow into the trust, while the other half is unrestricted and could also go to other city programs.

A Local Option Levy or General Obligation Bond Would Require a Public Vote.

A new local option levy (ORS 280.040-280.145) or general obligation bond (ORS Chapter 456) would be a powerful tool but require an extensive public process and vote in order to pass. Depending on which route the city pursued, it would either take out a bond to be repaid by a property tax increase or increase the property tax rate for a fixed period of time to add towards housing. Both require a local public vote to implement.

The existing Metro GO Bond which Tualatin residents already pay property taxes towards covers Washington, Multnomah, and Clackamas County and is estimated to generate $652.8 million for housing and homes for approximately 12,000 people.[44] Although Tualatin currently does not have an allocation for projects within the city, the intent of the bond is to be distributed regionally to provide more affordable units across all three counties with considerations for racial equity and existing access to regulated affordable housing.[45]

Exhibit 31. Metro Housing GO Bond Projects in Areas Where Communities of Color Live Today
Source: Metro Affordable Housing Bond Program 2021 Annual Report



The city's tracts with relatively high share of people with limited English proficiency and people of color compared to the region (shown in Exhibit 31) and lack of current funding provided from the bond revenue could make Tualatin a strong candidate to receive funding within this regional equity framework. Like other cities (including Portland[46]), Tualatin could

seek to partner with the Metro Housing Bond, set goals for adding affordable units, and solicit proposals for new affordable development.

General Fund Revenue is Powerful but Competitive with Other Resources.

The City could decide to reallocate a portion of its general fund revenue as it chooses, which could potentially provide a large contribution towards housing projects and programs. However, using the city budget would likely mean reallocating funds from where they are currently going and competing with other city priorities.

Increasing and Allocating Existing Taxes and Fees Has Limitations.

Increasing or reallocating revenue from existing taxes and fees may be more politically viable than introducing new ones in Tualatin. However, for existing funds and fees, the city typically already has earmarked where they are going to be spent and would need to evaluate if they want to divert resources from other projects or increase the tax and allocate the additional revenue to housing.

Existing taxes and fees considered include the city's lodging tax, marijuana tax, building and planning permitting fees, and system development charges (SDCs). In the case of lodging and marijuana taxes, it may be possible to eventually increase the current rate but the effectiveness of both is dependent on state legislative decisions.

Increases to SDC rates are not conducive to increasing housing feasibility and may cause challenges for attracting development. These rates are also typically set by service districts for infrastructure rather than by the City for funding other initiatives. Adding a surcharge that is linked to the cost of staff capacity for working on affordability initiatives may have a stronger nexus with the affordable housing trust fund and create less of a challenge for feasibility. Similarly, a surcharge to the City's utility bills like the existing park utility bill could be applied towards supporting infrastructure for new affordable projects.

New Taxes and Fees May Be Difficult to Implement.

There are many theoretical options for adding new taxes or fees within the city, but most of them face challenges of political feasibility, legal issues, or hindering other goals. Taxes or fees could apply to a range of different parties, broadly including consumers, property owners, and business owners in the city. See this document's Appendix for detail on taxes and fees.

Taxes and Fees Paid by Consumers Could Lack Political Viability.

New taxes and fees paid by consumers often face challenges of political viability. Both of those considered could have pushback from the business community and residents because they could be seen as disincentives to spending within the city.

Taxes and Fees Paid by Property Owners Could Face Legal Challenges.

Local option levy and general obligation bonds would already add to existing property taxes, but there are other taxes that would apply primarily to property owners. Both options included here are likely to face legal challenges in Oregon and are not tested in the state.

Taxes and Fees Paid by Business Owners Could Hinder Other Economic Goals.

Taxes levied on businesses are another option that the city could enact, but this could also discourage new small firms from establishing in Tualatin. Available options for these taxes and fees can also often be transferred on to consumers when businesses add on the cost for paying the tax to the price of their goods and services.

Most Grants and Partner Contributions Have Short Term Impact.

One-Time Grants and Partner Contributions Have Been Used in Other Funds.

Grants and partner contributions can have an impact but are likely not ongoing sources that could be used for continued programs or an AHTF. Cities like Newberg have relied on them as a part of their trust fund,[47] but they don't always produce enough contributions to be effective for long term programs. The city could explore funding campaigns for donors and grant writing efforts, but this is typically more effective for specific projects than open-ended funding.

State Funding Could Add More Opportunities for Specific Goals.

Oregon Housing and Community Services (OHCS) offers a range of grant programs and tax credits that can be used for affordable housing development. Individual projects could utilize programs like the Oregon Affordable Housing Tax Credit (OAHTC), while the city could utilize the General Housing Account Program (GHAP) Capacity Building program to build out the affordable housing trust. The state's share of locally collected construction excise tax can also be used for down payment assistance programs.[48] The state Housing Development Grant Program ('Trust Fund') could be used by projects in Tualatin to match local funds.[49]

Affordable Housing Trust Fund Case Study: Eugene

Affordable Housing Trust Funds are fairly common for cities in Oregon. Eugene, Portland, Ashland, Newberg, and Bend are all examples of jurisdictions who have established such funds, but their impact typically varies based on how much funding they are able to provide. Some may also be subject to vary over time based on their revenue sources.

Eugene has been successful in creating an Affordable Housing Trust Fund (AHTF) in 2019 when the City Council passed Ordinance 20609. The fund receives revenue from the city's Construction Excise Tax (CET) and the Council General Fund. CET revenue collects 0.5% on construction and additions in Eugene which makes it subject to fluctuation, but in FY22 it produced $1.1 million that went towards the city's AHTF projects.[50]

An advisory committee oversees Eugene's AHTF and makes recommendations to staff about how funds should be used. Eligible types of expenditures include gap financing and acquisition for affordable development (which accounts for 75% of funds) and direct assistance for renters and home down payments (25%).[51]

Exhibit 32. 'Peace Village' Project Funded by Eugene's AHTF
Source: Cultivate Architects

In the past three years, the fund has spent $1.3 million and supported the creation of over 200 new units, including 122 rental units, 70 owner-occupied tiny homes, and 10 transitional units. AHTF money was also used for rental assistance and foreclosure prevention in response to the COVID-19 pandemic. More recently the City has begun to use the fund for down payment assistance, a tenant hotline, and rental housing navigation sources.

Additional Considerations

- **Increasing Lodging Tax** could be possible as Tualatin currently charges 2.5% locally and other jurisdictions in Oregon have used a portion of their lodging tax towards an affordable housing fund, including Portland.[52] However, only 30% of the tax may be used for purposes other than tourism and workforce housing for employees in the tourism industry does not apply as tourism related expenditure.
- **Increasing the Marijuana Tax Rate** for housing is an increasingly popular strategy in Oregon (including Ashland where revenue is put towards their housing trust)[53] but may not be possible in Tualatin as the city is already levying the maximum tax for local jurisdictions at 3% of sales prices. However, if new legislation raises the maximum local tax rate to 10% the city could consider this increase.[54]
- **Increasing the Building and Planning Permit Fee** would add a cost for developers and may have the effect of discouraging development in general. This could include projects that may have used other incentives like MUPTE or SDC waivers in a market where not many new buildings are currently being delivered. These fees are also typically sized to project valuation and staffing operational costs/capacity so it could be difficult to justify. This has been used in other cities, including Bend,[55] but may be best used in cities with strong demand in current housing markets.
- **Higher System Development Charges** to fund housing projects would be possible, particularly for city-controlled taxes, but conflicts with this project's recommendation to exempt fees for affordable development as it would increases the amount the city would need backfill for any projects utilizing the program.
- **Food and Beverage Taxes** have been passed in other local jurisdiction in Oregon, though not explicitly for affordable housing.[56] To pass the tax requires voter approval, which has been contentious in other cities – most recently Cannon Beach where it did pass.
- **A Local Sales Tax** is also unlikely to be politically viable as it would require a voting process and is not widely implemented in Oregon. The state does not charge a sales tax,

though Josephine County has recently proposed a seasonal sales tax of 3% to use for law enforcement.[57]

- **Real Estate Transfer Taxes** are prohibited in Oregon by ORS 306.815, with the exception of Washington County where there was already a tax in place when the legislation was enacted.[58] Unless there is significant chance to Oregon law this tax is not an option beyond what Washington County already collects in Tualatin.
- **Vacancy Taxes** (sometimes called 'second home' taxes) have been adopted or explored in some large cities with high development pressure, including Oakland, San Francisco, Vancouver, and Los Angeles.[59] However, vacancy taxes have not been legally tested in Oregon. The strength of the housing market in a city also helps to determine whether it will have sufficient impact.
- **A Business Income Tax** would add a local charge on net business income, often for firms that make over a certain amount annually. Metro already charges a 1% business tax in Clackamas, Multnomah, and Washington Counties that goes towards housing services,[60] so an added local tax may be unlikely to gain traction.
- **A Business License Fee** would add a local fee for registering a new business within Tualatin but would likely conflict with other economic development goals in the city. Unless there is a clear line with workforce housing it may also be difficult to establish a nexus with affordable housing.

FROM: ECONorthwest
SUBJECT: Summary of Nonprofit Corporation Low Income Housing Exemption

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes strategic actions around an affordable housing tax exemption and how it works. In addition, it summarizes an analysis of the potential impacts of implementing these actions. The final section outlines potential next steps for the City of Tualatin to consider.

Nonprofit Corporation Low-Income Rental Housing Tax Exemption

Overview

The **Nonprofit Corporation Low-Income Rental Housing Exemption**[61] provides a full property tax exemption for new and existing affordable housing owned and operated by a 501(c)(3) or (4) nonprofit organization, and land held by a nonprofit for future affordable housing development.

Tax Exemptions: Incentivizes affordable housing development by waiving some property taxes for qualifying projects. Depending on the local program, nonprofits or all housing developers may be eligible.

The Nonprofit Corporation Low-Income Rental Housing Exemption can apply for as long as the property using it meets eligibility criteria. These include requirements that tenants must initially qualify at 60% of Median Family Income (MFI) or below, which is about $55,000 for a family of four people in Tualatin based on 2020 MFI.[62] Once qualified, existing tenant incomes may rise to as much as 80% of MFI ($74,000 for a family of four) over time. Annual renewal is required to ensure compliance with these requirements.[63]

The City has options to consider in implementing the tax exemption. First and foremost are which taxing districts will participate in the tax exemption. Only the City's property taxes would be exempted unless there is sufficient support from overlapping taxing districts. If the City and other taxing districts that comprise at least 51% of the local tax roll participated in the program, qualifying developments could have 100% of their property taxes waived. With this majority, all taxing districts would be obligated to participate. Without the support of at least 51% of overlapping districts, only city taxes would be affected by the exemption. The city could

[61] This tax exemption is authorized in ORS 307.540 to 307.548.

[62] The information about Median Family Income below (and throughout the report) use the 2020 MFI for Washington County ($92,000). This is based on information in the Tualatin Housing Production Strategy.

[63] This requirement is stated in ORS 307.545.

also determine the length of these programs and whether to apply a cap on how long organizations may participate.

In addition, the City must select a definition of affordability (if different from the one stated above of having income at or below 60% of MFI) and set local requirements for receiving this tax exemption, if any. The exemption can be granted for as long as the property meets eligibility criteria, but the property owner must reapply on an annual basis to demonstrate on-going eligibility. For land held for future affordable housing development, the City sets a limit on how long the exemption can apply, with the option for property owners to apply for an extension after that time.

This exemption is granted to development of rental housing with state and federal funding that requires verification of tenant incomes to ensure the tenants meet the income requirements. As a result, little or no additional monitoring or enforcement is likely needed for this program, since eligibility is limited to nonprofit affordable housing providers and the annual application process provides evidence of eligibility. In addition, if part of an eligible property is used for purposes other than low-income housing (e.g., a commercial use or mixed-income housing), the exemption is pro-rated.

Some examples of cities that have adopted this tax exemption include: Newport, Beaverton, Portland, Tigard, Forest Grove, Cornelius, and Wilsonville.

Fiscal Impacts/Who Pays

If the Nonprofit Low-Income Rental Housing Exemption is implemented, the City would forgo property tax income for qualifying new development for the duration of the exemption. This reduces some revenue for city services and potentially revenue for participating taxing districts such as school districts. However, if no development was to happen, then no taxes would be generated. The level of impact on tax revenue is contingent on affordable projects occurring in Tualatin and developers using the program.

Pros and Cons

Pros:

- The abatement can be used for most nonprofit affordable rental housing development.
- Can apply to both existing and new housing.
- Reduces carrying costs before development occurs (tax exemption available for land being held for development of affordable units), and offsets operational costs once the development is complete, reducing feasibility gaps.
- Allows a city to adopt additional criteria, such as a cap on the number of eligible properties or on the amount of lost tax revenue.
- City services and other taxing districts would not forgo any revenue unless projects were built that served tenants under 60% MFI and developers used the program.

- The structure of this subsidy is simple and straightforward to affordable housing developers. Because it is by-right, it also eliminated some of the administrative costs of programs that are more discretionary.

Cons:

- The city must get affirmative support from enough overlapping taxing districts to apply to their tax collections.
- The tax exemption reduces general fund revenues for all affected taxing districts. This could potentially cause funding gaps that need to be backfilled for some taxing districts
- This tax exemption only applies to housing that is affordable for households with income below 60% of MFI. So, it does not support development of mixed-income housing or affordable housing built by for-profit developers.
- The requirement for the property owner to resubmit eligibility documentation every year may be burdensome, though a streamlined application process can mitigate this.
- Compared to state or federal affordable housing programs, the burden is on local tax payers. Unfortunately, due to construction costs and lack of significant affordable housing funds, layering local, state and federal funds is often necessary.
- Some review of income eligibility by residents is required to maintain these programs. In other jurisdictions in Oregon programs are typically administered by a city's housing bureau or planning and development staff. This will also require some capacity for reporting from participating developers.

Summary of Tax Exemption Analysis

Estimating Forgone Revenue

Methodology Overview

To estimate forgone tax revenue from implementing the Nonprofit Corporation Low-Income Rental Housing Exemption, ECONorthwest identified recent examples of affordable multifamily developments that could have potentially qualified for this program (Exhibit 34).

Given the shortage of new affordable multifamily development in Tualatin in the last ten years, two of the three examples used are comparable projects built nearby in Tigard. Tigard shares some of the same taxing districts as Tualatin, including schools and aquatic centers as well as Washington County, Port of Portland, and Metro Regional Government rates. The third example used was an older affordable housing complex in Tualatin originally built in 1972 but recently renovated in 2021.

Exhibit 33. Comparable Affordable Multifamily Buildings
Source: CoStar

	Red Rock Creek Commons	The Fields	River Loft Apartments
Developer	Community Partners for Affordable Housing (CPAH)	DBG Properties	Next Wave Investors
Jurisdiction	Tigard	Tigard	Tualatin
Year Built	2021	2021	1972 (Renov. 2021)
Lot Size	0.88 acres	24.12 acres	3.8 acres
Units	48	264	74
Average Sq. Ft. per Unit	591 sq ft.	759 sq ft.	930 sq ft.
Assessed Value*	$2,974,590	$17,576,080	$4,274,350

*For those examples recently built in Tigard, the assessed value was not directly available through the Washington County Assessment and Taxation portal because they were already using the city's Nonprofit Corporation Low Income Housing Exemption. To approximate this value, we used their real market value (RMV) included in publicly available assessor files and Washington County's 2021-2022 changed property ration (CPR) for apartment buildings (0.356).

Using these assessed values, we calculated the hypothetical tax dollars that would have been exempted by unit if these projects had been built in Tualatin with the tax schedule in Exhibit 34. Then, we projected how these onto a hypothetical building to demonstrate the forgone tax revenue for a 100-unit building, with considerations for the impact on different taxing districts.

Property Tax Rates

There are a number of taxing districts which have coverage in the City of Tualatin. The City could either model their exemption with their own taxes or all overlapping districts. Exhibit 34 shows the rate each of these districts alongside the rate that they charge on assessed property value and their share of the total tax roll.

The largest share of property taxes in Tualatin goes to public school systems. Although multiple school districts overlap the city including Tigard-Tualatin, West Linn-Wilsonville, Sherwood, and Lake Oswego, this model uses the district with the most coverage (Tigard-Tualatin).

Tualatin also spans two counties in Oregon. Although a portion of the city is in Clackamas County, the majority of the city falls on the Washington County side. This model assumes Washington County's tax rates, though they may generally be lower in Clackamas.

Exhibit 34. Property Tax Rates for All Districts in Tualatin, OR
Source: Washington County Assessment and Taxation

Taxing District	Tax Rate per $1,000 of value	Share
Tigard-Tualatin School District	0.78%	44.7%
Washington County	0.30%	17.3%
City of Tualatin	**0.29%**	**16.5%**
Tualatin Valley Fire and Rescue	0.21%	12.2%
Portland Community College	0.07%	3.8%
Metro Regional Government	0.06%	3.3%
Northwest Regional Education Service District	0.02%	0.9%
Port of Portland	0.01%	0.4%
Tigard-Tualatin Aquatic District	0.01%	0.5%
SWC Tualatin	0.01%	0.5%
Total (All Districts)	**1.74%**	**100%**

Results

If the City alone were to implement a Nonprofit Low-Income Rental Housing Tax Exemption program, it would alleviate 16.5% of property taxes for participating projects. If all taxing districts were to participate, this total exemption would be higher and alleviate 100% of annual tax burden for years that the building was included in the program.

Using comparable multifamily building examples, we first estimated the total forgone revenue that would have been associated with those projects (Exhibit 35). There is a wide range in these values based on the number of units, unit mix, location, and other features.

Exhibit 35. Total Potential Annual Forgone Tax Revenue in Comparable Multifamily Buildings
Source: Washington County Assessment and Taxation, ECONorthwest Analysis

	River Loft	The Fields	Red Rock Creek
City Total	$12,055	$50,971	$8,626
Other Districts Total	$60,689	$256,611	$43,429

City Total Other Districts Total

Exhibit 36. Potential Forgone Tax Revenue Per Unit in Comparable Multifamily Buildings
Source: Washington County Assessment and Taxation, ECONorthwest Analysis

	River Loft	The Fields	Red Rock Creek
City Revenue Per Unit	$163	$193	$180
Other Districts Per Unit	$820	$972	$905

City Revenue Per Unit Other Districts Per Unit

Based on these total figures and building specifications, the potential forgone annual revenue for the City would range from $163-193 per affordable unit (Exhibit 36). Different unit sizes and types may also account for the variability in this range. The average across all example buildings would be **$179 of forgone annual revenue to the City per unit**. If applied to all taxing districts this impact higher, ranging from **$983-1,165 per unit with an average of $1,078.**

For Tualatin only, using the average amount per unit (approximately $179), we estimate that multiplied across a new development, **for every 100 affordable units built using the exemption, the City would forgo $17,856 in potential tax revenue per year of the program.**

It is possible that the City may reach an agreement with taxing districts that make up at least 51% of the total levy. In this case all taxing districts would be obligated to participate, resulting in a 100% tax exemption program. If this total exemption were applied at the average of approximately $1,078 per unit, **it would total $107,753 in annual savings for a 100-unit affordable building.** Of this amount, public school districts would account for the largest share at 45% (or $48,204 annually) of the forgone revenue for those units.

Example Tax Exemption Programs

Other jurisdictions have applied the Nonprofit Low-Income Rental Housing Tax Exemptions to their areas. The examples below provide implementation considerations for how Tualatin could structure a similar exemption program.

Portland: Non-Profit Low Income Housing Limited Tax Exemption (NPLTE)

- Portland offers three limited tax exemption programs, including one specifically for nonprofit organizations. To qualify for this program, properties must be located within the City of Portland and rents must be affordable to households earning 60% MFI or less.
- NPLTE is available to participating organizations who are certified by the Internal Revenue Service as 501(c)(3) or (4). They must own, have a leasehold interest in the property, or participate in a partnership where they are responsible for day-to-day property management.
- The Portland Housing Bureau (PHB) administers this program on behalf of the City of Portland by reviewing and approving applications. There is an annual renewal process and fee for participants. In PHB's most recent reporting (2017-18), 11,365 units in the city were using the program for rent-restricted housing units in multifamily buildings. No units in the program were for single-family homes, though it is not specifically prohibited.

Conclusions and Next Steps

- The City should consider this subsidy mechanism as part of the larger mix of funding sources to support development of income-restricted affordable housing. Given the substantial funding gaps that exist with affordable housing projects, this is a powerful and relatively simple tool to put into play.
- A tax abatement does not layer with all potential forms of subsidy. For example, Urban Renewal uses tax increment financing that typically accesses the same property taxes which would be forgone by the program. A tax exemption would work well with other approaches that add revenue to the City's budget (for instance, a Construction Excise Tax).
- The total impact of the tax exemption for supporting affordable housing development will depend on whether other taxing districts are willing to join the abatement or if it will just apply to city taxes. The Tigard-Tualatin School District participates in a nonprofit tax exemption in Tigard, indicating that they may be willing to consider a similar program in Tualatin. Washington County (who accounts for 17.3% of the tax roll) also offers an exemption for unincorporated areas outside of cities.

ECONorthwest
ECONOMICS · FINANCE · PLANNING

DATE: October 4, 2022
TO: City of Tualatin
FROM: ECONorthwest
SUBJECT: Summary of Multiple Unit Property Tax Exemption Analysis

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes what each strategic action is and how it works. In addition, it summarizes an analysis of the potential impacts of implementing each action. The final section outlines potential next steps for the City of Tualatin to consider.

Multiple Unit Property Tax Exemption (MUPTE)

Overview

The Multiple Unit Property Tax Exemption (MUPTE, sometimes referred to as MULTE) provides a 10-year partial property tax exemption on new or rehabilitated multifamily rental housing (or middle housing rentals like duplexes, triplexes, etc.) that meets criteria set by the City.[64] It can be used for market-rate multifamily housing with particular features, or for mixed-income or fully regulated affordable housing. If used for housing with affordability restrictions, the exemption can last longer than 10 years and continue as long as the restrictions remain in place. This program is flexible, with City discretion over many aspects of eligibility, including the level of affordability requirements, the minimum number of units in the property, and any design requirements.

Multiple Unit Property Tax Exemption: Can be used to incent multifamily housing with particular features or at particular price points by offering qualifying developments a partial property tax exemption for 10 years (or longer, for housing subject to affordability agreements).

Regardless of the local eligibility criteria, the exemption applies to 100% of the residential portion of the property's improvement value but does not apply to the land value. In other words, all of a residential project's improvement value can be exempt even if only 10% of the units are affordable if the city's criteria require a minimum of 10% affordability. Further, if there are nonresidential portions of the building (like ground floor commercial), it won't apply over that portion of the development.

Like the Nonprofit Corporation Low-Income Tax Exemption (described in ECONorthwest's previous memorandum), this program applies only to the City's taxes unless the boards of other taxing districts representing at least 51% of the combined levy agree to the exemption, in which case all districts are included. The same taxing districts detailed in ECONorthwest's Summary of Nonprofit Corporation Low Income Housing Exemption memorandum apply for this program.

[64] This tax exemption is authorized in ORS.307.600 to 307.637

A number of cities in Oregon have implemented tax abatement programs under these statutes, though the program names vary between jurisdictions. This memorandum includes several examples to illustrate different program structures with similar goals to Tualatin for housing. Some cities use the same program to incentivize housing in specific areas with specific design features rather than affordability.

This memorandum focuses on the use of MUPTE to incentivize mixed-income development through inclusion of affordable units in market rate buildings to provide workforce housing. MUPTE can also preserve unregulated affordable housing by encouraging owners to rehabilitate properties without raising rents or displacing tenants, but the analysis for this memorandum focuses primarily on its function for providing new units.

Fiscal Impacts/Who Pays

If this tool is implemented, MUPTE reduces general fund revenues for either the City alone or for all overlapping taxing districts (if at least 51% of the levy agrees to participate). The loss of tax revenue may or may not outweigh the value of affordable rents offered by new development using the program. If it does not, market rate developers would not opt into a voluntary program. However, there is no upfront cost to the City for introducing the program. In this case, revenue would only be forgone if eligible projects used the program to provide or preserve affordable units.

Pros and Cons

Pros:

- MUPTE is a tool that can be used for mixed-income development that supports Tualatin's workforce between 60-80% of MFI.
- Although Tualatin has not seen much new multifamily development in the past decade, this tool could be used to incentivize developers to the area.
- The City can exempt its own taxes without any other taxing districts approval, and potentially extend the benefit to all taxing districts if school districts sign on. However, this will not likely be a strong enough incentive with only the City participating.

Cons:

- Depending on the City's requirements for the duration of affordability, building owners will most likely use the program as long as they apply and then raise rents to the market rate when they expire. Although this helps achieves affordability goals short term, it may have negative long-term implications for tenants.
- City could be the only entity monitoring compliance with income and rent restrictions on an otherwise market-rate property.

Summary of MUPTE Analysis for Tualatin

Estimating Forgone Tax Revenue

Methodology Overview

To estimate the value of the MUPTE incentive for developers, ECONorthwest analyzed its benefit relative to the cost of rent discounts, using an assumption that rents would be set to be affordable to households earning 80% of MFI. We used example multifamily developments that were recently built in Tualatin and Tigard, which were selected as the most comparable new market-rate buildings in the past five years (2017-2022).

The example we used for testing the incentive is a multifamily development. While MUPTE could be applied to middle housing (e.g. triplexes), most smaller-scale middle housing development is unlikely to allow for efficient administration of income qualification within a mixed-income project.[65] The example property is a 180-unit development, 3-story development with a clubhouse, pool, and fitness center. To reach 20% of units affordable at 80% of MFI, this example would have to provide 36 income-restricted units.

Example 1 was used to test these results on the most recent multifamily development within Tualatin. Estimated market rents and the difference with 80% MFI rents are listed in Exhibit 37.

Exhibit 37. Estimated Market Rents by Example Property and Market Area and 80% MFI Rent
Source: ECONorthwest, based on data from CoStar, HUD, and Washington County

Unit Type	Residential Market Rate Rent*	80% MFI Max Rent**	Rent Discount to 80% MFI	Share of Discount to Market Rent
Studio	$1,780	$1,477	$303	17%
1BR	$1,926	$1,578	$348	18%
2BR	$2,596	$1,833	$763	29%
3BR	$2,763	$2,174	$589	21%

* Market rents are based on current asking rents for comparable properties, adjusted for an assumed 6% increase to next year.
*Affordable rents are based on 2022 Washington County maximum rents by income level and unit size for Low Income Housing Tax Credit projects,[66] adjusted for a water, sewer, and garbage allowance and an assumed 3% increase to next year.

Results

Exhibit 38 illustrates the value of the abatement (the combined navy and turquoise positive bars) compared to the foregone revenue from below-market rents (shown as an orange negative bar), and the net benefit to the developer (shown as a yellow dot and line).

[65] The improvement value for each example property was available from Washington County assessor data; although part of Tualatin is in Clackamas County, all the properties examined here fall in the Washington County side.

[66] https://www.oregon.gov/ohcs/compliance-monitoring/Documents/rents-incomes/2022/LIHTC/Washington.pdf

This analysis indicates that in Year 1, the value of the abatement from all taxing districts would likely exceed the rent loss from the affordable units if all taxing districts participated, exempting a total of roughly $307,000 in the first year. The total rent discount is estimated at roughly $249,000 in year one, offering a net benefit to the developer of roughly $58,000 in increased net operating income (NOI).

If the City were to allow MUPTE participants to allocate any units in the building to meet 80% MFI affordability criteria, it would increase the incentive and potentially encourage more developers to participate in the program. The unit mix of the example development is not the most advantageous for maximizing the benefits of MUPTE. Of the 180 units in the building, 102 are 2-bedroom apartments, which equates with the largest rent discount to 80% MFI at a loss of $763 per unit (a higher share of market rent than larger 3-bedroom units). Even though the incentive is applied evenly across all unit types in the building, there is a higher share that fall into this higher discount difference.

Exhibit 38. Tax Abatement Value vs. Foregone Rent (Year 1) for Example Development

	Example 1
Other districts' portion of abatement	$255,327
City portion of abatement	$51,822
Difference in Net Operating Income from units at 80% AMI (Year 1)	($248,886)
Net benefit to developer of tax abatement with affordability (Year 1)	$58,262

If these same rates were applied to a new 100-unit building (assuming a similar unit mix and even distribution of the incentive across types of units), the total value of the abatement would be $170,638 for one year, or $1,706 per unit. The City's portion of this would be $28,790 total, or $287 per unit.

Revenue impacts may change over time. Over time, property taxes (and the value of the abatement) will most likely grow at 3% per year.[67] Based on this projection, the total value of taxes abated over 10 years would be approximately $3.07 million if all taxing districts were included. Rent may grow at a similar rate but rent growth will vary from year to year and is less predictable. In the near future, it is likely to grow at more than 3% per year given recent trends, though this may slow over time. In addition, the allowed rent for the income-restricted units will change over time as the MFI determined by the US Department of Housing and Urban Development changes.

As a result, the net value of the abatement may change over the life of the program. If the net benefit is negative to start, there is a likely chance that the value of the abatement may not exceed the foregone revenue in the future. A longer affordability period means greater unknowns about how the foregone rent will change over time.

Other Considerations

Coordination with Other Taxing Districts: The City represents only about 17% of the overall tax rate, meaning that if that were the only portion included in the abatement it would generally not provide a sufficient incentive. The Tigard-Tualatin School District's support along with the City would be enough to apply the tax abatement to all taxing districts as their share totals about 45% of the tax rate.[68] The school district previously supported the Nonprofit Low Income Rental Housing tax exemption program in Tigard, but the City would need to seek their support for this or other additional tax abatement programs.

Administrative Effort: For market rate developers, participating in an income-restricted program may add significantly more administrative effort to maintain compliance. Verifying tenant incomes, reporting, and monitoring can take additional capacity beyond what would typically be needed for a non-regulated building. If benefits from the abatement program increase the net operating income, this may offset the burden of administrative needs.

Program Design: The specific design of a MUPTE program may change developers' willingness to participate in a voluntary program. Flexibility with requirements may be effective in allowing developers to choose an optimal approach, while still providing clear enough guidelines that ensure public benefits.

If affordable units must be distributed across all unit sizes, developers cannot meet the requirement by simply providing smaller units where market rents would meet or nearly meet the affordability requirements. For example, studio or 1-bedroom units are both a lower overall discount for affordable units relative to market rate prices and a lower share of the market rate rent lost compared with 2-bedroom units. (ECONorthwest's analysis assumes that the affordable units are distributed across unit sizes consistent with the overall unit mix).

[67] This is due to Oregon's property taxation system, which caps the increase in taxable value at 3% per year unless major improvements are made to the property.

[68] https://www.co.washington.or.us/AssessmentTaxation/upload/2020-Summary-Book.pdf

If the affordable units can be designated as specific units within the building, the developer can also economize on finishes (e.g., laminate countertops vs. granite) to mitigate the reduced rent from those units. What features are economized and their impact on livability in a unit also has potential equity implications for the program.

Example Multiple Unit Housing Tax Exemption Programs

A number of cities have implemented programs under the multiple unit housing statutes summarized above (ORS 307.600 to ORS 307.637), though the program names vary between jurisdictions, including:

- **Newport,** where the City refers to its program as the Multiple Unit Housing Property Tax Exemption (MUPTE).
  - **Applicability:** MUPTE applies to projects with 3 or more units (or renovation projects that add 2 or more units) within certain zones that are located within a quarter-mile of bus service. Projects must meet green building and affordability requirements. To meet the affordability requirements, projects may provide 20% of units at 80% of MFI or below, 10% of units at 60% of MFI or below, or make an in-lieu payment equal to 10% of the total property tax exemption.
  - **Administration**: The application process includes submitting a proforma for review by a third party to show a need for the exemption. Once approved, property owners must sign a Regulatory Agreement that is recorded against the title and submit annual documentation of tenant income and rents for the affordable units to the City's Community Development Department.
- **Portland,** which refers to its program as the Multiple-Unit Limited Tax Exemption (MULTE) Program.[69]
  - **Applicability:** MULTE is currently paired with Portland's Inclusionary Housing (IH) requirement. Projects must have a minimum of 20 units (the same threshold for the IH program). For projects within the Central City Plan District that meet a minimum floor area ratio (FAR), it applies to 100% of the residential portion of the improvement value, including residential parking. For other projects, the City limits the exemption to the affordable portion of the project. At least 5% of the affordable units must be adaptable for ADA accessibility, and the affordable units must be distributed evenly by bedroom size within the project. While the affordability restriction period is for 99 years, the City limits the exemption to 10 years.
  - **Administration:** Applicants must provide project information and basic financial information to calculate the value of the exemption, but do not need to provide a pro forma because the financial need is demonstrated by the City's calibration of their IH

[69] All program details from City of Portland, "Multiple-Unit Limited Tax Exemption (MULTE) Program Interim Administrative Rule," https://www.portland.gov/sites/default/files/policies/hou-3.02-multiple-unit-limited-tax-exemption-multe-program.pdf

program. During the compliance period, projects must provide tenant income and rental data annually.

  - **Program cap:** The City imposes a rolling cap on foregone revenue of no more than $15 million within a 5-year period, except for projects located within an urban renewal area. Projects within an urban renewal area require approval from Prosper Portland and the City's Debt Manager.

- **Salem** calls their program the Multi-Unit Housing Tax Incentive Program (MUHTIP).[70]
  - **Applicability:** Can apply to projects with at least two dwelling units located in the downtown core. Projects must include at least one public benefit, though these are discretionary and include a range of options including recreation facilities or common meeting rooms, daycare facilities, ground-level commercial space, special architectural features, and "Units at sales prices or rental rates which are accessible to a broad income range of the general public."[71] Projects with 100 or more units must provide at least 15% of units affordable at 80% of MFI or below, or at least two public benefits.
  - **Administration**: Applicants must attend a pre-application conference and submit project information. Applications are reviewed by other city departments and the City Council.

Conclusions and Next Steps

- The program configuration of 20% of units at 80% MFI could provide a net benefit to developers if the tax abatement applies to all overlapping taxing districts. However, the city's rate alone is insufficient to provide an incentive.
- MUPTE may offer a greater incentive for development of smaller studio or 1-bedroom units because these units have a smaller gap between market rate and affordable rents. This could make it a potential tool to align with the City's goals around providing senior housing or generally meeting the needs of smaller 1-to-2 person households.
- If the City is unable to garner sufficient support from overlapping taxing districts, the City could explore pairing it with other incentives that reduce development costs (such as system development charge exemptions). However, in order to be layered with other incentives, those programs would also have to include mixed-income development projects in their eligibility criteria.
- If the City is the sole party providing funding or financial incentives in exchange for affordability, as is likely for a mixed-income development by a market-rate developer, the City would need to take on monitoring and enforcement or find a partner to take

[71] Salem Revised Code: *SRC 2.815* (c).

this on. Property managers would also need to income-qualify applicants for the affordable units.

- The City could reach out to the Washington County Housing Authority to see if the County would be willing to provide administrative support for the program.

FROM: ECONorthwest
SUBJECT: Summary of System Development Charge Exemption Analysis

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes what each strategic action is and how it works. In addition, it summarizes an analysis of the potential impacts of implementing each action. The final section outlines potential next steps for the City of Tualatin to consider.

System Development Charge Exemptions

Overview

System Development Charges are one-time fees for new development and certain types of redevelopment that help pay for increased loads on infrastructure systems. These charges are a way for local governments to pay for public facilities like sewer, water, transportation, and parks. SDCs are designed to vary with the magnitude of development impacts, but this can be calculated in a variety of ways depending on the service with which they are associated; for example, water SDCs are often measured by the size of the meter needed, not by the number of dwelling units, square footage, or valuation of the building.

New Development Charges in Tualatin: SDCs are a part of the fees that new developments pay to service districts. Rates for SDCs in Tualatin are different based on these districts. The table below summarizes the rates for these charges are in Tualatin. (*indicates that a line shows a charge that is a different type of fee, not an SDC)

Service District	Rate
Metro Construction Excise Tax (CET) *	0.12% of valuation
Transit Development Tax (TDT)	$6,542 / unit
Parks and Recreation	$6,371 / unit
Schools CET (Tigard-Tualatin District) *	$1.45 / sq ft.
Sewer	$7,266 / unit
Water	Varies by meter size

While SDCs are primarily intended to be based on impact, some jurisdictions in Oregon offer exemptions or reductions in system development charges (SDCs) for specific types of development based on local policies. Some jurisdictions offer exemptions or reductions for regulated affordable rentals, deed-restricted affordable homeownership, and/or accessory dwelling units. This memo focuses on analysis for a potential SDC exemption for regulated affordable housing in Tualatin.

Lowering SDCs for affordable housing projects can help to make development more feasible by lowering upfront building costs. Typically, affordability requirements are put in place for a period of time, with the level of affordability and duration of requirements varying by jurisdiction. For rental units or affordable homeownership this can include annual reporting requirements or deed restrictions respectively to ensure compliance. Jurisdictions set their own

standards for these requirements, like program caps that may set a limit on how much the city can forgo per year.

Generally, cities can only exempt the SDCs that they control, not those controlled by special districts or other service providers.

Some cities "backfill" the lost revenue by paying the lost amount from other specific funding sources allocated to fill the gap. In other cases, cities simply forego SDC revenue for exempt projects. Whether a city backfills revenue or not depends on local determinations.

Fiscal Impacts/Who Pays

The City of Tualatin has limited control over SDCs because most of these charges are collected on behalf of other service districts and providers. These entities determine their own rates and fee structure. However, the City does control Parks and Water SDCs.

ECONorthwest's analysis in the Tualatin Housing Production Strategy identified the Parks SDC as the most promising option for implementing an exemption (this charge recently went through a review and update process). The Water SDC is based on meter size, which makes it difficult to predict what new buildings will pay, especially for multifamily projects. An exemption for Parks would theoretically mean forgone revenue for the City's Parks and Recreation Department or the need to identify another funding source to backfill the funding gap. However, if projects are only feasible with the SDC exemption, this may be revenue that the City would not have collected regardless.

The City does not control TDT (Transportation Development Tax), which is a voter-approved charge imposed on new development and redevelopment within Washington County. This charge helps to pay for the impact development has on the transportation system.

Pros and Cons

Pros:

- Tualatin would be able to set its own qualifying standards for development to use the SDC exemption, allowing the city to target the kind of units it most needs in terms of apartments vs. single family homes, MFI level, and duration of affordability.
- SDC exemptions have been successful in other jurisdictions in Oregon, including Portland, Tigard, Eugene, and Bend. Some backfill forgone revenue using a variety of local funding options while others do not.
- The City has the flexibility to control whether it wants to implement a program cap that could avoid excessive forgone revenue in Tualatin, depending on the estimated gap created by projected participation in the program. Like the nonprofit tax exemption, revenue would not actually be forgone unless affordable housing projects are built which qualify for the desired criteria. If implemented, considerations for how projects are chosen should be clear and based on an application process.

Cons:

- Tualatin only has control over Parks and Water SDCs. TDT and sewer/stormwater SDCs are collected for other service providers, restricting the City's ability offer an exemption.
- It is difficult to estimate what the cost of Water SDCs will be for multifamily buildings, giving the City less certainty about the impact of an exemption program. Since the charge is based on a fixed water meter size, this incentive also does not scale easily with more units the way that Parks and other SDCs do. This would require careful consideration for lost revenue and how it could be backfilled when there is only a very rough approximation that is subject to variation.
- Most other jurisdictions in Oregon that have offered SDC exemptions have included more than one. It is possible that only exempting the Parks SDC would not provide a strong enough incentive to encourage development, though for regulated affordable housing it will still likely provide some assistance for existing plans.

Summary of the SDCs in Tualatin

Estimating Forgone Revenue

Methodology Overview

To estimate the potential impact of providing an SDC exemption for Tualatin, city staff provided data on the new development charges estimated for an affordable housing project currently undergoing land use review. The example site is planned as a 116-unit housing development split between two 4-story wood-framed residential buildings, with a freestanding community center located on the site that includes additional resident services and offices.

ECONorthwest used the rates for this example site and confirmed that they aligned with the most current rates through public facing information as of July 2022 from the City and Clean Water Services. Exhibit 39 shows the rate schedule and its total estimated costs that they created for the sample building. Some of these charges are calculated by unit, including Transit Development Tax, Parks, and Sewer. Other charges are calculated by specific measurements, including total valuation or building area.

Exhibit 39. Summary of New Development Charges for Sample Multifamily Development
Source: City of Tualatin
Note: There is a cap on the amount that the Metro or Schools CET can charge on new development. Metro's CET will not collect more than $12,000 per project, while the Tigard-Tualatin CET caps at $36,100 for nonresidential development only.

Charge Category	Rate	Cost	Per Unit Estimate
Metro Construction Excise Tax (CET)*	0.12% of valuation	TBD	N/A
Transit Development Tax (TDT)	$6,542 / unit	$758,872	$6,542
Parks (City)	**$6,371 / unit**	**$739,036**	**$6,371**
Schools CET (Tigard-Tualatin)*	1.45 / sq ft.	$175,035	$1,508
Sewer (CWS)	$7,266 / unit	$842,856	$7,266
Water (City)	**One (1) 4" water meter**	**$132,634**	**$1,143**
Total		**$2,574,077**	**$22,190**

System Development Charge Rates

In addition to this building's SDCs, we also used the rates listed in Exhibit 39 to generate estimates for three other recent examples of comparable affordable multifamily buildings. While we were able to gather information about each building's valuation, unit number, and square footage, we relied on the per unit estimate from our example building for the water SDC. School district rates may also vary throughout Tualatin. The example building used is located in the Sherwood School District, which as a rate of $1.39/sq ft. rather than $1.45. For this model we used $1.45/sq ft. because that is consistent with the other three of the four school districts covering the city. Some school districts also include caps on what they charge development. This includes Tigard-Tualatin which has a non-residential maximum of $35,000.

In our analysis the example building, which is not yet completed, there was not yet a permit valuation publicly listed from the Washington County Assessor. Since this was not available to generate the likely charge from Metro CET, it is lower than the developer is likely to pay, but we were able to include this in all other buildings analyzed.

There is a wide range in these values based on the number of units, unit mix, location, and other features. For example, although the total estimate for The Fields is much higher than the other buildings analyzed, this building contains more units. Exhibit 40
Exhibit 42 shows a rate per unit that is closer to that of other recent affordable housing developments.

Exhibit 40. Total Estimated New Development Charges in Comparable Buildings
Source: City of Tualatin, ECONorthwest Analysis

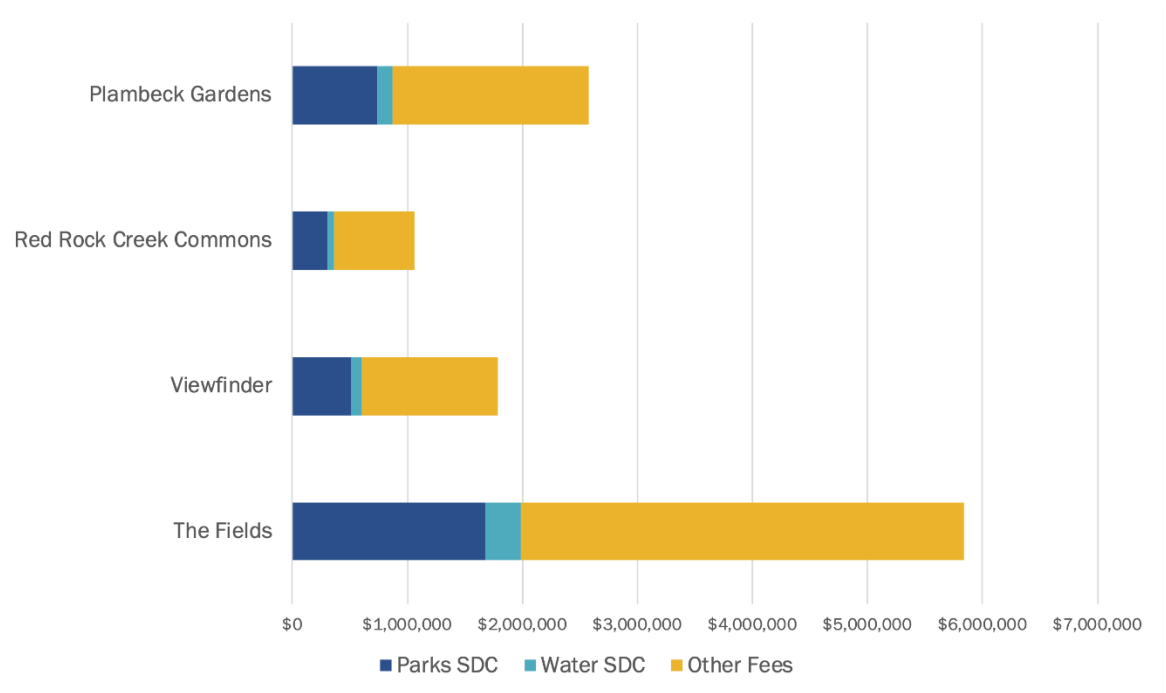

Exhibit 41. Detail of Total Estimated New Development Charges in Comparable Buildings
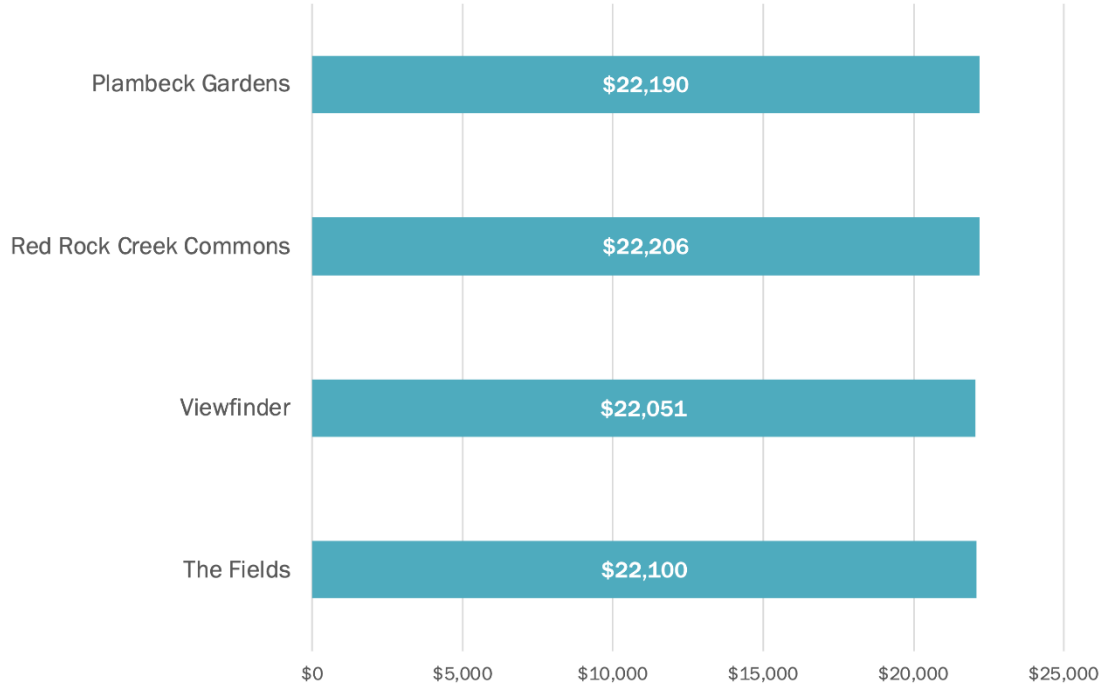
Source: City of Tualatin, ECONorthwest Analysis

	Plambeck Gardens (116 units)	Red Rock Creek (48 units)	ViewFinder (81 units)	The Fields (264 units)
Parks SDC	$739,036	$305,808	$516,051	$1,681,944
Water SDC	$132,634	$54,883	$92,615	$301,857
Other Fees	$1,702,407	$705,186	$1,177,498	$3,850,588
Total	$2,574,077	$1,065,877	$1,786,164	$5,834,389

Exhibit 42. Total Estimated System Development Charges Per Unit in Comparable Buildings
Source: City of Tualatin, ECONorthwest Analysis



Results

For these comparable multifamily buildings, the value of all SDCs ranged between $705,000 to $3.8 million (Exhibit 41). However, when controlled for the number of units in each building, the cost of SDCs had very little variation. This may be in part because four of the six SDC rates are calculated at a flat rate per unit, putting costs for all four buildings around $22,000 for each apartment. Of these total costs, the Parks SDC accounted for a greater share of the total SDC amount than the Water SDC in each building.

Since the Parks SDC is a flat rate per unit in multifamily buildings, it can be easily measured by the number of units. If the City had offered an exemption for Parks SDCs during this period for the example building, it would have foregone roughly $739,000 in revenue ($6,371 per unit). Applied to a hypothetical new multifamily development, this exemption would translate to $667,100 in forgone Parks revenue per 100 units in an affordable development. Water SDC rates are more difficult to measure consistently for hypothetical buildings, but based on an average for the example, this would roughly equate to $114,300 in forgone Water SDC revenue per 100 affordable units. The Parks and Water SDC exemptions combined would equal $7,514 per unit.

If an SDC exemption were to be used for developing affordable single-family residential units, the City applies a flat rate of $8,133 per unit for the Parks SDC which would be forgone. Although Water SDCs can be difficult for multifamily buildings, it may be easier to offer this incentive for single family affordable homeownership. Typical new homes require between a 5/8”-3/4” water meter, which costs a flat rate of either $5,306 or 7,958 in Tualatin as of the City’s 2022 rate schedule. If the City were able to offer both Parks and Water SDC exemptions for

affordable homeownership projects, the forgone revenue would be between $13,439-16,091 per unit depending on water meter size. Regarding just Parks (the most likely charge to be exempted) forgone SDC revenue is 22% higher per unit for single family homeownership than it is per unit in a multifamily building.

Fiscal Requirements

Requirements to backfill exempted SDCs vary by jurisdiction in Oregon depending on local determinations. If Tualatin were to pursue this strategy, first steps would need to include setting up a conversation about legal requirements. Based on an initial assessment it is likely that the City would have to find a source to backfill forgone revenue for Parks and Water.

A number of cities have implemented SDC programs with different configurations of city and participant requirements:

- **Tigard** provides exemptions for the local Transportation and Park SDCs for regulated affordable housing that serves households earning 80% of MFI or less. The exemption can be used for rental or for sale housing, but affordability restrictions must last for at least 20 years. There is no program cap or backfill.

- **Eugene** offers an SDC exemption of all charges except the Metropolitan Wastewater Management Commission (MWMC) regional wastewater fees. This program is for rental and affordable homeownership affordable housing developments. For rentals, units must be affordable to households at 60% of MFI for at least five years. For homeownership, they must be affordable to households at 80% of MFI or less for at least five years. Eugene's exemption is backfilled using local funds, which is capped at $372,280, to be split evenly between rental and homeownership applicants.

- **Bend** offers a forgivable loan for City Transportation, Water, and Sewer SDCs. This is available for affordable rental and homeownership housing that is deed restricted. The program can be used for projects affordable to households at 80% of MFI or less for at least five years.[72] Bend backfills the program using local funds and the program initially had a cap and projects were selected on a competitive basis.

    - The program is structured as a forgivable loan at 6% interest per annum for 5-year installment loans or 7% for 10-years. If the property owner leaves the program or is out of compliance, the SDCs must be paid back with interest. Applications are reviewed by the Affordable Housing Advisory Committee on a rolling basis.[73]

[72] Bend City Code 12.10.120(C)(1-2)

[73] https://www.bendoregon.gov/government/departments/economic-development/affordable-housing-program/developer-resources

Conclusions and Next Steps

- The City should consider this exemption as a method to help close gaps for affordable multifamily housing development. Although it is possible to offer for affordable single-family homeownership, the benefits are multiplied when used for larger developments which have higher total upfront system development charges. To ensure compliance with either type of housing, the City could also include deed restriction agreements for developers or property owners.
- To implement this action, the City should begin a conversation with the Parks and Recreation Department and Public Works Department as well as consulting with an attorney to understand the impact to their revenues and any requirements for backfilling. In addition, the City should consider steps to identify backfilling sources either from the general fund, another local funding source, or other tools examined in this project that generate revenue for affordable housing development.
- In addition to an outright exemption, the City could consider a deferral program where developers or homeowners can pay SDCs later in the development process (for example at certificate of occupancy), but this would likely require a higher level of staff capacity.
- An SDC exemption would work more efficiently alongside some tools than others. Projects funded by Low Income Housing Tax Credits (LIHTC) will not receive as strong of a benefit from an exemption because of the reduction in eligible costs used to calculate equity for those projects.

ECONorthwest
ECONOMICS · FINANCE · PLANNING

DATE: November 2, 2022
TO: City of Tualatin
FROM: ECONorthwest
SUBJECT: Homeownership Assistance Analysis

The City of Tualatin is considering a range of strategies and actions to fund and implement the goals from its 2021 Housing Production Strategy. To understand the potential trade-offs of implementing these strategies in Tualatin, this memorandum describes strategic actions around an affordable housing tax exemption and how it works. In addition, it summarizes an analysis of the potential impacts of implementing these actions. The final section outlines potential next steps for the City of Tualatin to consider.

Homeownerships Assistance

Overview

This memorandum focuses on strategies that address housing stability for existing homeowners and current renters who wish to become homeowners. Keeping Tualatin an affordable place to live may require assisting existing residents with programs that help them stay in their homes. Alongside that, helping renters become homeowners can provide stability and the potential to build wealth.

Housing Rehabilitation: Older housing often needs improvements to continue to be safe and livable, which can be unexpected costs for some households.

Weatherization: Home improvements that make buildings more energy efficient to reduce utility costs and contribute to climate goals, as well as help to proactively extend the life of housing units for existing homeowners.

Down Payment Assistance: Some households may have the ability to pay for a mortgage but lack the savings necessary to pay for an upfront down payment on a house. Low-interest loans or grants can help households overcome this barrier to homeownership.

Rehabilitation and Weatherization Programs

Many available programs for rehabilitation and weatherization in Oregon target low- to moderate-income homeowners, typically for owner-occupied single-family dwellings or middle housing such as duplexes. Some of these tools can also be used for preserving existing affordable multifamily housing to benefit renters, but they typically do not apply to market rate buildings. Tenants typically do not have the same flexibility or incentive as homeowners to pursue rehabilitation or weatherization of their units, though some programs related to accessibility are available to individual renters. Here our analysis focuses on single households accessing programs directly rather than benefitting through a third-party owner making upgrades.

Rehabilitation programs typically serve low-income households, often those that have owned homes for a long time but need to make repairs to keep them up to the city code (including roof replacement, plumbing, and other critical needs). Many repair programs also cover accessibility upgrades such ramps, doorway modifications, or handrail installation for disabled residents.

For residents on a fixed income, large one-time repairs may not appear viable within their current budgets.

Weatherization assists households in proactively modifying their homes to reduce the cost of utility bills while increasing energy efficiency. Projects that these programs often cover include replacing windows, adding insulation, or upgrading heating and cooling systems.

Homebuyer Assistance Programs

Barriers to homeownership are often costs which are outside of regular monthly housing expenses (such as a mortgage and utility bills) that would figure into a household's budget. A down payment on a new home, physical upkeep work, weatherization, and accessibility additions can all become financial obstacles for residents who are otherwise able to afford housing costs but require a larger lump sum.

Typically homeownership programs are able to reach households at 80% of median family income, while rental programs are more efficient at targeting deeper levels of affordability.[74]

A variety of tools can be used to remove homeownership barriers for households by reducing upfront costs for purchasing a home (typically through loans or grants) or maintaining the quality of housing over time, allowing residents to remain compliant with local code.

The actions in this memorandum support stability for existing homeowners below the area's median income as well as support for more relatively low income households to become new homeowners. Potential tools associated with this strategy include low interest loans, publicly funded grants, and technical support for weatherization or healthy home projects.

Fiscal Impacts/Who Pays

Tools for homeownership assistance can come from a variety of local, state, and federal funds. They can be spread out to different grants, levies, bonds, and other sources, then streamlined into a single homeownership program. A local Affordable Housing Trust Fund could also be a mechanism that combines local contributions and supplies funding for such programs.

Some of the tools discussed in other memoranda for the Housing Implementation Plan that provide the city with revenue earmarked for affordable housing could also be used towards funding for rehabilitation programs and downpayent assistance (such as a new Construction Excise Tax). Urban renewal revenue typically cannot be used for downpayment assistance or is difficult to implement, but could potentially be used more readily for directly funding renovation work.

Exhibit 43 below provides a summary of four types of homeownership assistance programs with details about our findings from case study research. This includes who is served by each

[74] US Department of Housing and Urban Development, "The HOME Program: HOME Investment Partnerships," September 20, 2017, https://www.hud.gov/hudprograms/home-program.

type of assistance, the typical range of funding that is provided per household and potential funding sources that other programs in Oregon have accessed.

Exhibit 43. Summary of Homeownership Assistance Program Types
Source: ECONorthwest analysis

Program Type	Who is Typically Served	Typical Assistance Provided per Household*	Potential Funding Sources**
Down Payment Assistance	First time home buyers (current renters) below 80% MFI	$25,000-$110,000	US HUD (CDBG), OHCS (HOAP and CET), Community Frameworks
Home Repairs	Existing low-income homeowners at or below 80% MFI	$10,000-$50,000	US HUD (CDBG, HOME), OHCS funds (Repair Health and Safety Program), CET revenues
Weatherization	Existing low-income homeowners at or below 80% MFI	$10,000-$25,000	US HUD (CDBG, HOME), public purpose charges
Accessibility Improvements	Existing homeowners at or below 80% MFI, seniors, people with disabilities	$7,500-$10,000	US HUD (CDBG, HOME)

*These ranges are derived from case studies in this memorandum but not exhaustive of programs in Oregon
**If over $100,000 of state CDBG funds are used for administration costs they must be matched, but otherwise would not carry a matching requirement[75]

Pros and Cons

Pros:

- Providing accessible paths to homeownership through down payment assistance helps to stabilize existing renter households and provides them with the opportunity for long-term equity in their homes.
- Improving existing housing provides better environmental quality, is typically associated with lower carbon emissions, and ensures that older housing is consistent with the city code.
- Partnership between government entities and nonprofits has been successful for funding and administering homeownership assistance programs in Oregon, providing models that could be used by Tualatin. There are multiple programs already operating at the state and county level where the City could begin building new relationships.

[75] US Department of Housing and Urban Development, "State CDBG Program Eligibility Requirements," n.d., https://www.hudexchange.info/programs/cdbg-state/state-cdbg-program-eligibility-requirements/.

Cons:

- Staff capacity for administration or funds required to support nonprofit partnerships can be limiting factors for the scope of these homeownership assistance programs.
- Availability of grant funding and external sources may be unpredictable from year-to-year, making programs inconsistent over time.
- Down payment assistance still comes with requirements that are hard for some households to fulfill, such as personal savings for earnest money and closing costs.
- Federal funding sources may come with program requirements that make it difficult for some households to participate, such as debt-to-income ratio. They may also trigger prevailing wages in some cases, depending on the size and source of funding.

Summary of Homeownership Assistant Tools Analysis

For this analysis we used a case study approach to understand how comparable cities to Tualatin provide tools for homeownership through rehabilitation or down payment assistance. We explored examples from around Oregon to understand their respective approaches to homeownership assistance. Our team used these key questions to analyze the intent, structure, and impact of these programs:

- What programs are available for rehabilitation and/or down payment assistance?
- What is the City's role in this strategy?
- How are the programs structured and funded? How are recipients prioritized?
- Who is eligible to use the program? Is the program targeted to help specific groups of people (for example, seniors, households below 60% MFI, etc.)?
- What are the reporting requirements to ensure compliance with the program?

City-Nonprofit Partnerships for Down Payment Grants

Overview

Several jurisdictions in Washington County partner with the nonprofit organization Proud Ground to provide down payment assistance for residents. The cities of Beaverton, Hillsboro, and Tigard are all participants who use local Community Development Block Grant (CDBG) dollars to fund homeownership assistance alongside funding from Oregon Housing and Community Services (OHCS) and Community Frameworks.

Role of the City

The cities' role in these programs is as a partner rather than the ongoing administer for down payment grants. Specifically, cities in Washington County have allocated portions of their federal funding that are eligible for the program, but do not have to contribute ongoing staff capacity for monitoring, distribution, and outreach.

Program Details

The amount that local programs offer differs between each city; Beaverton[76] and Tigard[77] currently offer up to $110,000 for qualified buyers and Hillsboro[78] offers up to $90,000. Grant recipients for Proud Ground administered programs must be first-time home buyers that meet extensive qualifications for income and their plans to purchase a home.

Eligibility

For participating buyers' household income must match CDBG guidelines from 80% of median family income (MFI) in line with federal requirements - currently in Washington County this is $85,200 for a family of four. In order to verify income, program users must provide federal tax returns and W-2 forms. Eligibility is on a first-come, first-served basis when funds are available.

Buyers must also qualify for a minimum total mortgage of $350,000 with a lender from the organization's list. They must also have at least $3,000-5,000 in personal savings depending on the jurisdiction to cover earnest money, inspections, and closing costs. They must also have a credit score above 620, a debt-to-income ratio below 10%, and two years of steady employment history that is verifiable through paystubs, benefit statements, child support forms, or other formal documentation.

Takeaways

Partnerships can be an efficient way to deliver homeownership support without exceeding capacity of city staff to process applications and verify income information. There is likely an opportunity for Tualatin to pursue a similar program, including one with the same configuration as its peer cities in Washington County, though Proud Ground does not currently serve any cities in Clackamas County.

State and Federal Funding for Home Repairs and Weatherization

Overview

The 2021 Infrastructure Investment and Jobs Act (IIJA) included $3.5 billion in funding for the federal Weatherization Assistance Program (WAP). This is a one-time source targeted towards long-term energy efficiency for low-income households.[79]

Oregon's HB 2842 (adopted in 2021) also directs the Oregon Health Authority (OHA) to provide grants to fund the Healthy Homes program. This program provides funding for homeowners and landlords for essential home repairs, accessibility improvements, and rehabilitation to address climate hazards.[80] $10 million is currently allocated to this program statewide.

Role of the City

The federal Weatherization Assistance Program and state Health Homes program accept applications from local governments to receive funding, which is used for home repair or weatherization projects for low-income households. In both cases, the City could apply for these grants and establish a program to distribute funds to households who meet eligibility criteria included in state and federal programs.

Program Details

WAP grants are awarded through the US Department of Energy to states, tribes, and territories to contract with local organizations including nonprofit organizations and local governments.[81] Oregon Housing and Community Services (OHCS) distributes WAP funds to local organizations and housing authorities in the state, as well as assistance with utility bills through the federal program Low-Income Home Energy Assistance Program (LIHEAP).[82] The program helps to fund services including insulation, air filtration, furnace repair, heating duct improvements, and energy conservation education.

Healthy Homes is primarily intended to support weatherization and can also be used for projects that maximize energy efficiency, extend the usable life of residences, or improve health

[79] Carlos Martín, "Harnessing the IIJA's Weatherization Assistance Program to Leave No Household in the Cold," Joint Center for Housing Studies (Harvard University, January 23, 2023), https://www.jchs.harvard.edu/blog/harnessing-iijas-weatherization-assistance-program-leave-no-household-cold.

[80] Oregon Health Authority, "Healthy Homes Grant Program," accessed February 3, 2023, https://www.oregon.gov/oha/ph/healthyenvironments/healthyneighborhoods/healthyhomesgrantprogram/pages/index.aspx.

[81] US Department of Energy, "Weatherization Assistance Program," accessed February 3, 2023, https://www.energy.gov/scep/wap/weatherization-assistance-program.

[82] Oregon Housing and Community Services, "Home Weatherization Services: Energy & Weatherization," accessed February 3, 2023, https://www.oregon.gov/ohcs/energy-weatherization/Pages/weatherization-services.aspx.

and safety. In addition to traditional weatherization, these may include removal of radon, lead, and mold, fire resistance, smoke filtration, and accessibility improvements.[83]

Eligibility

Both WAP and Healthy Homes are targeted towards low-income households. To access WAP, households must be at or below 200% of the federal poverty level, based on income level and household size. WAP gives priority to households with seniors, disabled residents, children under the age of 19, high energy use, and high energy burden.

Healthy Homes provides funding for entities that serve communities with a high concentration of low-income households or areas impacted by environmental justice factors. An Interagency Task Force is currently working to determine the final eligibility criteria for households receiving assistance from the program.[84]

Takeaways

The City of Tualatin could be eligible to apply for grant funding from both state and federal resources. The City would be responsible for administering a program and providing funds to individual households. Alternatively, the City could partner with a nonprofit organization in applying for funding and serving households in Tualatin.

County-Administered Low Interest Loans for Rehab, Weatherization, and Accessibility

Overview

In Oregon, counties and regional bodies sometimes provide homeownership resources that cities can leverage for their residents. Clackamas and Washington County are examples of larger scale government agencies that provide grant and loan programs for home rehabilitation, weatherization, and accessibility that are already applicable in Tualatin.

Role of the City

For regional low interest loan programs, cities are partners with other government bodies rather than directly delivering a program. City staff can direct local residents to appropriate resources and promote them for targeted groups, but do not track ongoing compliance or process applications. Some larger jurisdictions like Beaverton and Hillsboro within the county opt out in favor of their own nonprofit partnerships for home repairs and accessibility.

[83] Catie Gould, "Oregon Experiments with Healthy Homes Repair Fund," Sightline Institute, November 12, 2021, https://www.sightline.org/2021/11/12/oregon-experiments-with-healthy-homes-repair-fund/.

[84] Ibid.

Program Details

Both Clackamas County and Washington County offer low interest loans for home rehabilitation, including additional outright grants for accessibility projects. Both counties prioritize funding for the most critical health and safety projects (such as dangerous electrical systems, roof leakage, and structural problems) ahead of nonemergency repairs or upgrades (such as weatherization).

Clackamas County structures their home repair loan program as a 3% simple low interest loan with deferred payments for owner-occupants. The eligible amount varies depending on project type: up to $15,000 is available for a single purpose health or safety items like water, septic or roof repair, $25,000 for exterior repairs, and $35,000 for complete repairs that meet Community Development Block Grant rehab standards. Outright grants are not given for home repairs but are available for accessibility improvements up to $7,500.[85]

Washington County has two programs depending on the income level of participants. The Home Access and Repair for Disabled and Elderly (HARDE) provides outright grants targeted at very low-income residents up to $10,000. The Deferred Interest-Bearing Loan (DIBL) is provided for moderately low-income residents up to $25,000 with a similar structure to Clackamas County, accruing 3% interest for up to ten years that does not need to be paid monthly. Up to 10% of DIBL funds may be used for 'nonessential' projects like Homeowners who qualify for DIBL assistance may use up to 10% of the loan amount for non-essential items like lighting fixtures or floor upgrades.[86]

Eligibility

Both Clackamas and Washington County homeowners are eligible for home repair loans at or below 80% MFI who have sufficient equity in the property. Taxes and mortgage payments must also be current in both jurisdictions, and applicants must have a sufficient debt-to-income ratio. Both programs used deferred low-interest loans where the owner does not have to make monthly payments; the loan is then repaid when the home is sold or transferred.

Washington County's HARDE program is available for residents below 50% MFI who are disabled or over the age of 62. Although it is primarily targeted at homeowners, renters may also apply for accessibility improvements. The DIBL is for homeowners between 50-80% MFI.

[85] Clackamas County. "Home Repair Loans and Home Accessibility Grants." www.clackamas.us. Accessed October 19, 2022. https://www.clackamas.us/communitydevelopment/repair.html.

[86] Washington County Office of Community Development, "Housing Rehabilitation Program Policies," 2022, https://www.washingtoncountyor.gov/commdev/housing-rehabilitation.

Takeaways

Programs provided at a higher level like a county or regional body can cover a wide area and serve multiple jurisdictions with programs for home rehabilitation. These programs are often funded through CDBG and must be compliant with their regulations.

Washington and Clackamas Counties offer program which Tualatin residents could use, while jurisdictions like Beaverton and Hillsboro have operated their own independent options. Tualatin could work with the County to increase participation or set up their own separately to give them more latitude over allocation of their CDBG funding for other projects.

City-Administered Assistance for Down Payments and Rehabilitation

Overview

Some cities in Oregon choose to administer their own programs for homeownership assistance rather than partnering with a nonprofit organization to work with individual households. Springfield and Corvallis are examples of local jurisdictions that offer this direct support, including home repair support and down payments (in Springfield).

Role of the City

With city administered programs, staff directly work with homebuyers and homeowners. Springfield and Corvallis are located in Lane and Benton Counties respectively, neither of which have an alternative county-level program. There are additional nonprofit organizations providing resources with coverage in both areas. Like cities who use a partnership model, both of these programs also utilize federal funding from the US Department of Housing and Urban Development, including the CDBG and HOME (for multifamily building rehab projects).

Program Details

Springfield offers up to $25,000 in interest-free loans for down payments, with repayment not required until the home is sold, refinanced, or transferred. It is not intended for full coverage, as homebuyers must contribute at least 50% of the required down payment. The city also provides funding for rehabilitation up to $10,000, targeted at urgent home repairs and those that will enhance health, safety, or accessibility. It does not cover weatherization improvements but refers residents towards a nonprofit operating in Lane County. All rehab work must be performed by licensed and bonded contractors hired and paid by the City.[87]

Corvallis only provides local rehab funding but covers weatherization and accessibility improvements. The loan is structured with two options: program participants between 50-80%

[87] City of Springfield, "Homeowner Programs," accessed October 21, 2022, https://springfield-or.gov/city/development-public-works/homeowner-programs/.

MFI accrue no interest with their monthly payments, and those below 50% as well as disabled homeowners and seniors can defer payments until the homeowner moves or sells the house.[88]

Eligibility

Springfield's income requirements are set slightly higher than other jurisdictions surveyed in this memo, with residents qualifying for the home repair program at 50% MFI in 2022. The City also limits the rehab program based on the value of the home, which must be under $334,000 according to the Lane County Assessor. For its down payment program, buyers must be prequalified, below 80% MFI, and first-time home buyers. Additionally, the property must be vacant or occupied by either the buyer or seller to avoid renter displacement.

Corvallis requires that residents are below 80% MFI for their weatherization, rehab, and accessibility loans, but offers additional help for those under 50% MFI. Requirements are also similar to county and nonprofit programs.

Takeaways

The amount offered in cities that administer their own program may be lower than in jurisdictions that partner with a nonprofit or county. Although it is a small sample size, this may be due to the costs of administration. Local programs also allow city staff flexibility in setting stronger MFI provisions and adding measures to avoid displacement.

Conclusions and Next Steps

- The City should consider the extent to which it wants to directly provide programs or establish on partnerships for administration based on current capacity.
- Federal funding from HUD's Community Development Block Grants or state funds from OHCS are typically what other places in Oregon use to fund homeownership assistance programs for down payments and rehabilitation work. If Tualatin has these available, it should leverage them and explore partnerships with established programs.
- Given its location in Washington and Clackamas Counties, there are resources that can be used already in Tualatin for home rehabilitation work. However, residents may need help navigating which programs apply for their needs and understanding the criteria. The City could increase guidance available for individuals to find existing resources rather than building new programs.
- The City could also help to put together resources for some of the other requirements that existing programs use, such as building sufficient credit for a down payment grants or identifying eligible contractors to perform rehab work within the parameters of available grants.

CITY OF TUALATIN
Staff Report

TO:	Honorable Mayor and Members of the City Council
THROUGH:	Sherilyn Lombos, City Manager
FROM:	Mike McCarthy, City Engineer
DATE:	June 12, 2023

SUBJECT:
Consideration of **Resolution No. 5701-23** Authorizing the Purchase of Right-of-Way and Easements for the Construction of the Boones Ferry Corridor Phase 2 Project, Part of the Tualatin Moving Forward Program.

RECOMMENDATION:
Staff recommends that the Council approve the attached resolution to purchase right-of-way and easements for the Boones Ferry Corridor Phase 2 project.

EXECUTIVE SUMMARY:
This resolution enables the City Manager to execute legal documents to acquire the property needed to construct and maintain the Boones Ferry Road Phase 2 project.

The majority of the project is to be constructed within existing right-of-way. However, In order to have space for key areas of the project, the City needs to acquire right-of-way and easements from four properties. These are the second and third of these four properties, and it is important to execute the purchase agreements now so that construction work can get started in the newly-acquired right-of-way. The project has been designed to minimize the impact to the property and the amount of right-of-way and easements to be acquired.

This resolution authorizes the purchase of right-of-way and easements from the following properties:

Todd Village – 8325 SW Mohawk Street

- Property is located on the northeast corner of Boones Ferry Road and Mohawk Street
- Owners: Todd Village – 285, LLC
- The City is purchasing Public Right-Of-Way (2,579 sf), Public Utility Easement (81sf), and Temporary Construction Easement (2,539 sf).
- **Acquisition Amount $67,000**, which includes $63,730 for right-of-way, $209 for Public Utility Easement, and $3,061 for Temporary Construction Easement.

Chelan Apartments – 19705 SW Boones Ferry Road

- Property is located on the west side of Boones Ferry Road, approximately 1,000 feet north of its intersection with SW Sagert St, and north of the Marquis senior living facility.
- Owners: Envoy Chelan LLC and Realvest Chelan LLC

- The City is purchasing Public Right-Of-Way (1,943 sf) and Temporary Construction Easement (1,619 sf).
- **Acquisition Amount $51,100**, which includes $49,226 for Right-of-Way and $1,874 for Temporary Construction Easement.

The City's offering prices were based on appraisals performed by Oregon Valuation Group, Inc. and recommendations from Universal Field Services, Inc., and have been agreed to by each of the property owners.

The project team is working with the owners of one other property to acquire Right-of-Way and easements from that property and anticipates bringing it to Council for approval soon, but would like to execute this acquisition now in order to get started with construction in this area.

OUTCOMES OF DECISION:
Approval of the attached resolution would allow staff to purchase right-of-way and easements for the Boones Ferry Corridor project.

ALTERNATIVES TO RECOMMENDATION:
Council could elect to not approve the attached resolution

FINANCIAL IMPLICATIONS:
The total acquisition cost is $118,100. This amount is budgeted, along with the cost of design and construction of this project, in the Transportation Project Fund (Tualatin Moving Forward program).

ATTACHMENTS:

Resolution 5701-23
Exhibits showing the area to be acquired

RESOLUTION NO. **5701-23**

A RESOLUTION AUTHORIZING THE CITY MANAGER TO EXECUTE DEEDS ACQUIRING PROPERTY FOR THE BOONES FERRY CORRIDOR PHASE 2 IMPROVEMENT PROJECT

WHEREAS, in May 2018, Tualatin voters approved a $20 million bond measure to support high priority transportation projects.

WHEREAS, the City identified the need to improve traffic flow and bicycle and pedestrian safety along Boones Ferry Road from Tualatin-Sherwood Road to Avery Street (hereafter "Project") as a high-priority project in this program.

WHEREAS, the City has identified the need to acquire certain properties in order to facilitate the construction of the Boones Ferry Road improvement project; and

WHEREAS, the City has negotiated property transactions with willing sellers to acquire right-of-way, public utility easements, and temporary construction easements.

NOW THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF TUALATIN, OREGON, that:

Section 1. The City Manager is authorized to acquire and execute deeds for the following properties:

A. Tax Lot 2S124CC00300 – Todd Village – 8325 SW Mohawk Street
- Right-of-Way for $63,730
- Public Utility Easement for $209
- Temporary Construction Easement for $3,061

B. Tax Lot 2S123DD00400 – Chelan Apartments – 19705 SW Boones Ferry Road
- Right-of-Way for $49,226
- Temporary Construction Easement for $1,874

Section 2. The City Manager is hereby authorized to execute any and all documents necessary to acquire property and property interests identified in Section 1.

Section 3. This resolution is effective upon adoption.

INTRODUCED and ADOPTED by the City Council this 12th day of June, 2023.

CITY OF TUALATIN
Staff Report

TO:	Honorable Mayor and Members of the City Council
THROUGH:	Sherilyn Lombos, City Manager
FROM:	Don Hudson, Assistant City Manager/Finance Director
DATE:	June 12, 2023

SUBJECT:
Consideration of **Resolution No. 5702-23** Declaring the City's Election to Receive State Revenue Sharing Funds During Fiscal Year 2023-24

RECOMMENDATION:
Staff recommends adopting the attached Resolution after conducting the required public hearing.

EXECUTIVE SUMMARY:
In order for the City to receive state shared revenues, the City must have levied property taxes in the prior fiscal year, pass a resolution approving participation in the program, and hold two public hearings on the use of state revenue sharing funds. The first public hearing, before the budget committee, is to discuss possible uses of the funds. That public hearing was held on May 30, 2023. The second public hearing, before the City Council this evening, is to discuss the proposed uses of the funds.

The City is set to receive $456,315 in State Revenue Sharing Funds in 2023-24. This amount is a portion of the Liquor Tax and is apportioned to cities based upon a calculation defined in Oregon Revised Statutes (ORS) 221.770 using factors such as adjusted population and state per capita income.

The City also receives allocations for another portion of Liquor Tax funds, as well as Cigarette and Gas Taxes, based upon a per capita distribution. These funds are governed under ORS 221.760. The law provides that cities located within a county having more than 100,000 inhabitants, must provide four or more municipal services (out of a list of seven types of services) to be eligible to receive these revenues. Ability to receive these revenues are not part of tonight’s public hearing.

These revenues are not restricted by the State and are therefore used as a General Fund revenue source.

OUTCOMES OF DECISION:
If the Council approves the Resolution, the City will be eligible to receive state shared revenues. If the Council does not approve the Resolution, the City will not receive state shared revenues and will need to reduce its expenditures or contingencies.

FINANCIAL IMPLICATIONS:
The City has budgeted $456,315 of state shared revenues in the General Fund for general city operations in Fiscal Year 2023-2024.

ATTACHMENTS:

- Resolution No. 5702-23

RESOLUTION NO. 5702-23

A RESOLUTION ELECTING TO RECEIVE STATE REVENUE SHARING FUNDS FOR THE 2023-24 FISCAL YEAR

WHEREAS, ORS 221.770 requires the City Council adopt a resolution declaring the City's election to receive State Revenue Sharing Funds; and

WHEREAS, the 2023-24 budget for the City of Tualatin contains State Revenue Sharing Funds as a resource in the budget year beginning July 1, 2023; and

WHEREAS, the Budget Advisory Committee held a public hearing to discuss the possible uses of State Revenue Sharing Funds on May 30, 2023 and the City Council held a public hearing on June 12, 2023 to discuss the proposed use of the funds for Fiscal Year 2023-24, giving citizens an opportunity to comment on use of State Revenue Sharing, and

WHEREAS, the City levied a property tax for the preceding fiscal year, beginning July 1, 2022.

NOW THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF TUALATIN, OREGON, that:

Section 1. Pursuant to ORS 221.770, the City of Tualatin elects to receive State Revenue Sharing Funds for Fiscal Year 2023-24.

Section 2. This resolution is effective upon adoption.

Adopted by the City Council this 12th day of June, 2023.

City Recorder

CITY OF TUALATIN
Staff Report

TO:	Honorable Mayor and Members of the City Council
THROUGH:	Sherilyn Lombos, City Manager
FROM:	Steve Koper, Assistant Community Development Director Madeleine Nelson, Assistant Planner
DATE:	June 12, 2023

SUBJECT:
Consideration of the Norwood Road Plan Text Amendment and Plan Map Amendment (PTA 23-0001 and PMA 23-0001)

EXECUTIVE SUMMARY:
The proposal was submitted by AKS Engineering & Forestry, LLC, on behalf of Vista Residential Partners and Property Owner, Horizon Community Church; the submittal proposes two land use applications – a Plan Text Amendment and a Plan Map Amendment – applicable to a 9.2-acre site at 23370 SW Boones Ferry Road (Tax Lot: 2S135D000106).

Applications Proposed:

Plan Text Amendment:
The applicant, Vista Residential Partners, is requesting approval of a Plan Text Amendment (PTA) that would remove the locational factors from the High-Density High Rise (RH-HR) purpose statement in Tualatin Development Code Section 44.100 and revise Table 44-3 to limit the structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road, which would be applicable to the subject site.

Plan Map Amendment:
The applicant, Vista Residential Partners, is requesting approval of a Plan Map Amendment (PMA) from Medium-Low Density Residential (RML) and Institutional (IN) to High-Density High Rise (RH-HR) located on a 9.2-acre site at 23370 SW Boones Ferry Road.

The applicant's Narrative (Exhibit A) addresses the applicable criteria to the proposal for Comprehensive Plan Amendments. The applicant has also included a Supplemental Memorandum (Exhibit D), Transportation Impact Analysis (Exhibit E), Economic Needs Analysis (Exhibit R), and Utility Capacity Analysis (Exhibit H).

The Findings and Analysis (Attachment 2) include a review of the proposal and application materials relative to the applicable criteria and standards, which include: Statewide Planning Goals, Oregon Administrative Rules, Metro Code, and the Tualatin Comprehensive Plan and Development Code. The specific approval criteria for a Plan Amendment are found in Tualatin Development Code (TDC) Section 33.070(5), and include other applicable criteria and standards that must be met.

Summary of Approval Criteria from TDC 33.070(5) (full criteria and findings are included in the Analysis & Findings - Attachment 2):

(a) Granting the amendment is in the public interest.

- The applicant has cited the Tualatin Comprehensive Plan Chapter 3 goals and policies and 2019 Housing Needs Analysis (HNA) which showed a deficit of 4 acres of RH-HR land (the proposed zoning) and the goal of increasing the supply of multifamily housing. The HNA also showed limited vacant and underdeveloped lands capable of rezoning to address the deficit of RH-HR in order to achieve more multifamily supply. The applicant has also cited Tualatin's Housing Production Strategy which reiterated a lack of supply of multifamily land and noted challenges (costs and complexity) of private sector development limiting willing participants. The applicant highlighted the "significant" role that increasing the overall supply of available housing (including market-rate housing) plays in overall housing affordability.
- Testimony from members of the public has been both in support and against the proposal (Exhibit W). Those in favor of the proposal have made similar arguments to the applicant. Those against the proposal have argued that this is not an appropriate location for the application of the proposed zoning and thus not in the public interest. The Byrom CIO has argued that as representatives of all of the Tualatin CIOs representing residents of the city, that the proposed amendments are not in the public interest (Exhibit U). This testimony is discussed in further detail in the Findings & Analysis (Attachment 2).
- On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the Plan Text and Plan Map Amendments applications to the City Council. The Planning Commission concluded that the proposed text and map amendments would not be in the best interest of the public. The Planning Commission concluded the location of the proposed plan map amendment was not in a location to support housing at the greatest density of household living with the greatest access to amenities consistent with the purpose of the RH-HR zone found in Comprehensive Plan Chapter 10. Comments from the Planning Commission are included as Exhibit V and draft minutes from the Planning Commissions April 20, 2023 meeting are included as Exhibit X.

(b) The public interest is best protected by granting the amendment at this time.

- The applicant has again cited the 2019 Housing Needs Analysis and argued that the public interest is best protected by granting the amendment at this time due to Tualatin having few vacant lands with willing property owners with the ability to provide housing at the needed densities. Citing the 2021 Housing Production Strategy the applicant has argued that allowing for increased density through the plan map amendment could help alleviate households' cost burdens by providing opportunities to add dwelling units to the housing market. Lastly, the applicant has argued that the subject site is unique in that it is primarily institutionally zoned, and is unlike other vacant or redevelopable employment or residential lands, both of which the City has existing deficits. Lastly, the applicant's proposal includes the installation of a traffic signal at SW Norwood Road and SW Boones Ferry Road, which would address ongoing traffic congestion.
- Testimony from members of the public has been both in support and against the proposal. Those in favor of the proposal have made similar arguments to the applicant. Those against the proposal, including the Byrom CIO (Exhibit U), have argued that the City has already approved most of its needed housing to date (545 units approved after the December 2019 HNA of 1,014 needed with no units at a finished stage of construction), and given that the HNA was a 20-year projection of need, granting the amendment is not timely.
- The applicant has rebutted this evidence by providing a supplemental economic analysis (Exhibit M) that argues that the projected need in the HNA understates the actual market demand for housing. The applicant has also presented a legal argument that the HNA is a floor and not a cap (Exhibit D).

(c) The proposed amendment is in conformity with the applicable objectives of the Tualatin Community Plan.

- The applicant has argued that the Comprehensive Plan goals and policies serve as the adopted expression of the public interest.
    - GOAL 3.1 HOUSING SUPPLY. Ensure that a 20-year land supply is designated and has urban services planned to support the housing types and densities identified in the Housing Needs Analysis. The HNA reported 4-acres of RH-HR zoning are needed to provide additional housing in the City. The proposed map amendment would provide a ±9.2-acre site to support the housing types and densities identified within the HNA.
    - POLICY 3.1.2 ZONING FOR MULTIFAMILY. Provide zoning for multifamily development, which may be located in areas adjacent to transit. There are no areas of RH-HR zoning that are considered available for additional housing. The plan map amendment would provide zoning for multi-family development near Trimet Bus Route 96 which is located along SW Boones Ferry Road.
    - The applicant provided a memorandum from Johnson Economics (Exhibit M) that stated the subject location is advantageous in terms of site size and configuration, transportation access, and multi-family housing will be in demand and market feasible at this location. The memorandum continued to state that buildable residential sites of this size, and roughly rectangular are rare not just locally but in much of the Metro area. This style of site is well suited for multi-family development, while low-density development can more easily adjust to smaller and more irregular parcels. The Johnson Economics memorandum concluded the subject site and location are well-suited for multi-family housing, and the proposal is likely the "highest and best" economic use for a parcel of this size and configuration.
- As discussed above, public testimony against the application argues that the City has made significant strides in addressing its 20-year housing need and thus the proposed amendment is not needed. The Byrom CIO argues (Exhibit U) that the Comprehensive Plan does not call for building residential high rises outside of the downtown area, and the area for the proposed Norwood high rise is specifically left as undeveloped on the maps associated with the Comprehensive Plan. As noted in Chapter 10 of the Comprehensive Plan the purpose of the RH-HR zone is to support housing in areas with the greatest access to amenities and that the site at Norwood Rd has no access to amenities. The Planning Commission also concluded that the proposal would create a surplus of RH-HR zoned land (Exhibits V and X)
- The applicant has rebutted this evidence by providing a supplemental economic analysis (Exhibit M) that argues that the projected need in the HNA understates the actual market demand for housing (Exhibit D).

(d) The following factors were consciously considered:

(i) The various characteristics of the areas in the City;
(ii) The suitability of the areas for particular land uses and improvements in the areas;
(iii) Trends in land improvement and development;
(iv) Property values;
(v) The needs of economic enterprises and the future development of the area; needed right-of-way and access for and to particular sites in the area;
(vi) Natural resources of the City and the protection and conservation of said resources;
(vii) Prospective requirements for the development of natural resources in the City;
(viii) The public need for healthful, safe, esthetic surroundings and conditions; and
(ix) Proof of change in a neighborhood or area, or a mistake in the Plan Text or Plan Map for the property under consideration are additional relevant factors to consider.

- The applicant has identified several characteristics of the area relative to the City's plans and goals for housing that it argues makes this location suitable for the type of housing that could be developed under the proposed amendment.
- Public testimony in favor of the applications largely reiterate the applicant's arguments. Public testimony against the applications argues that the proposed location is not appropriate for the

application of the RH-HR zoning due to factors such as traffic and limited public transportation and the fact that the site is within the Sherwood School District requiring students to be bussed to school (Exhibit W).

(e) If the amendment involves residential uses, then the appropriate school district or districts must be able to reasonably accommodate additional residential capacity by means determined by any affected school district.

- The applicant provided comments from the Sherwood School District included as Exhibit K. Sherwood School District Chief Operations Officer, Jim Rose, provided confirmation that the school district could accommodate any additional students from the future multifamily development on the subject site.

(f) Granting the amendment is consistent with the applicable State of Oregon Planning Goals and applicable Oregon Administrative Rules, including compliance with the Transportation Planning Rule TPR (OAR 660-012-0060).

- The applicant has provided a Transportation Impact Analysis (Exhibit E) which concludes that the proposed amendments are consistent with the above standard with the imposition of a condition of approval requiring the applicant to construct a traffic signal at the SW Boones Ferry Road and SW Norwood Road intersection. The City's Traffic Engineer and Washington County transportation engineering staff have reviewed the applicant's analysis and agreed with its conclusions.
- Public testimony against the application has argued that existing traffic is an issue and that therefore the proposed amendments should not be approved as the future development would create more traffic.
- The applicant has highlighted the fact that this standard requires a comparison of the impact of "worst-case" development that could reasonably be approved in the existing zone and proposed development under the RH-HR zone and that through that lens, with the construction of a signal and associated intersection improvements, the proposed amendments meet the standard.

(g) Granting the amendment is consistent with the Metropolitan Service District's Urban Growth Management Functional Plan.

- The applicant has argued the proposed amendments would not adversely impact the City's compliance with Titles 1-14 of the Metro Chapter 3.07, Urban Growth Management Functional Plan.

(h) Granting the amendment is consistent with Level of Service F for the p.m. peak hour and E for the one-half hour before and after the p.m. peak hour for the Town Center 2040 Design Type (TDC Map 10-4), and E/E for the rest of the 2040 Design Types in the City's planning area.

- The attached Transportation Impact Analysis (Exhibit E) concludes that the proposed amendments are consistent with the above standard with the imposition of a condition of approval requiring the applicant to construct a traffic signal at the SW Boones Ferry Road and SW Norwood Road intersection. The City's Traffic Engineer and Washington County transportation engineering staff have reviewed the applicant's analysis and agreed with its conclusions.
- Public testimony against the application has argued that existing traffic is an issue and that therefore the proposed amendments should not be approved.

(i) Granting the amendment is consistent with the objectives and policies regarding potable water, sanitary sewer, and surface water management pursuant to TDC 12.020, water management issues are adequately addressed during development or redevelopment anticipated to follow the granting of a plan amendment.
[…]

- The applicant submitted a Utility Capacity Analysis (Exhibit G) in response to the City's objectives

and policies regarding potable water, sanitary sewer, and stormwater management.
- Public testimony has identified stormwater management as a public facility of concern, however full compliance with applicable standards.
- The applicant has further addressed these comments and the applicable standard in their Supplemental Memorandum (Exhibit D).

POTENTIAL DECISIONS:
If the Plan Text Amendment application is approved by the Council, then the purpose statement in Tualatin Development Code Section 44.100 and Table 44-3 would be amended to remove the locational factors and limit the structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road. If the Plan Text Amendment is denied by the Council then the purpose statement in TDC 44.100 and the development standards in Table 44-3 would remain unchanged and the Plan Map Amendment would not be able to be approved.

If the Plan Text Amendment is approved, the Council may consider the Plan Map Amendment, which, if approved, would change the subject property's zoning designation to High-Density High Rise (RH-HR). If the application is denied, the existing zoning would continue to apply.

In sum, the Council may:

- Approve the PTA and PMA;
- Deny the PTA and PMA; or
- Approve the PTA but deny the PMA.

ALTERNATIVES TO A DECISION:
Alternatively, the Council may:

- Continue consideration of the applications to a specified future Council hearing, leaving the hearing and written record open.
- Close the hearing and the written record, but continue Council deliberations on the applications to a specified future Council hearing.

Norwood Road Plan Text & Plan Map Amendment (PTA 23-0001 & PMA 23-0001)

City Council Meeting
June 12, 2023

CITY OF TUALATIN OREGON

PROJECT DESCRIPTION

AKS Engineering & Forestry, LLC, on behalf of Vista Residential Partners and Property Owner, Horizon Community Church propose two land use applications – a Plan Text Amendment and a Plan Map Amendment – applicable to a 9.2-acre site at 23370 SW Boones Ferry Road (Tax Lot: 2S135D000106).

APPLICATIONS PROPOSED

Plan Text Amendment (PTA) to:

- Remove the locational factors from the High-Density High-Rise (RH-HR) purpose statement in Tualatin Development Code (TDC) Section 44.100, which currently limits the zone to downtown.
- Revise TDC Table 44-3 to limit structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road, which would be applicable to the subject site.

The requested Plan Map Amendment (PMA) would

- Change the existing zoning on 9.2 acres of property from 1 acre of Medium Low Density Residential (RML) and 8.2 acres of Institutional (IN) to High Density High Rise (RH-HR).

TEXT AMENDMENT

Chapter 44 High Density High Rise Zone (RH-HR)

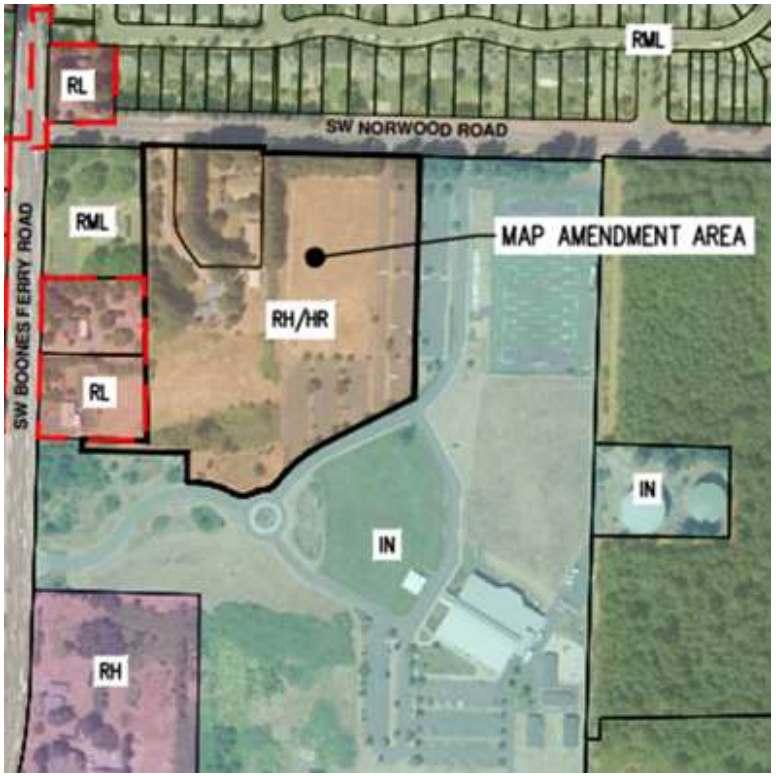
TDC 44.100. Purpose.

The purpose of the High Density High Rise (RH-HR) zone is to provide areas of the City ~~within the City's Central Urban Renewal area, an area west of the Central Urban Renewal area, north of the wetlands, and south of the Tualatin Country Club~~ that are suitable for high density apartment or condominiums ~~towers~~.

STANDARD	REQUIREMENT	LIMITATIONS AND CODE REFERENCES
STRUCTURE HEIGHT		
Minimum Height, Multi-Family and Condominium Developments	4 stories	
Maximum Height	64 feet	South of SW Norwood Road, structure height is limited to 4 stories or 50 feet, whichever is less. If structure does not include underground parking, maximum height is 5 stories. If the first story includes underground parking, maximum height is 6 stories. Regardless of the number of stories, structure height must not exceed 64 feet.

EXISTING AND PROPOSED ZONING

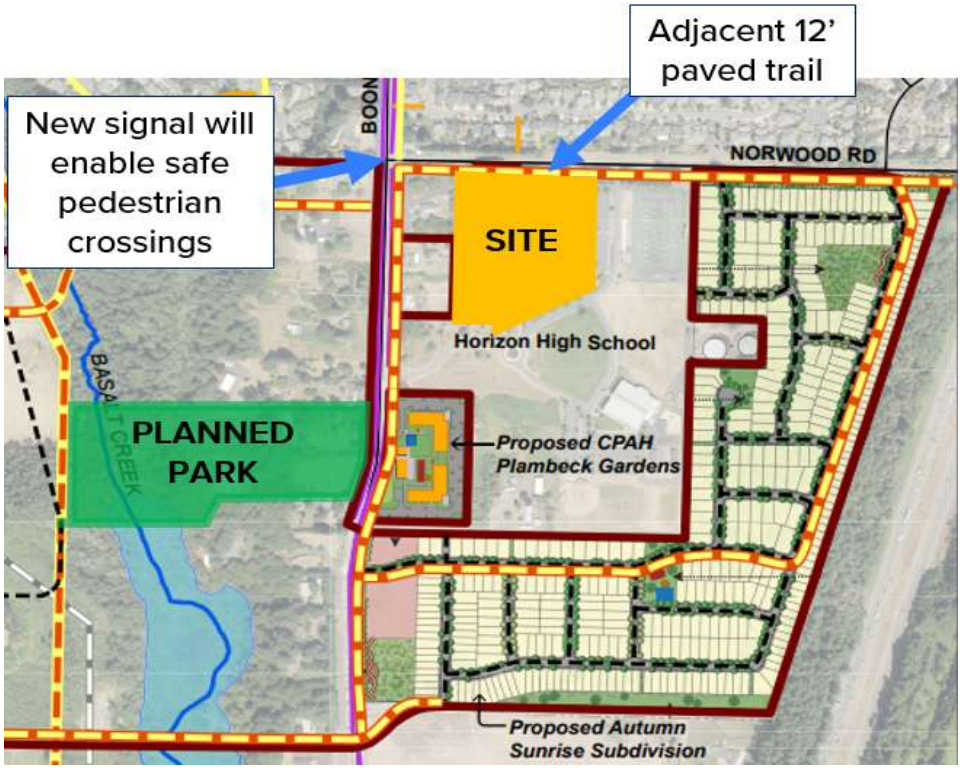
EXISTING



PROPOSED

VOLUNTARY APPLICANT CONDITIONS

- A traffic signal at the SW Norwood Road & SW Boones Ferry Road prior to occupancy of future site development
- A 60-foot buffer along SW Norwood Rd to preserve trees that do not need to be removed for the future access or public roadway improvements



CITY OF TUALATIN OREGON

ADDITIONAL VOLUNTARY APPLICANT CONDITIONS

- Commitment to restrict 10% of the units so they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years
- Construct 40 electric vehicle charging stations
- Build a sustainable apartment project that meets a US Green Building Council LEED green building standard

ADDITIONAL CONDITIONS

- Based on the TIA, in addition to the traffic signal at SW Norwood Road & SW Boones Ferry, staff recommends that should the Council approve the applications, the applicant be conditioned to:
  - Construct a left turn on SW Norwood Road;
  - Contribute a proportional share to the City of Tualatin for future construction of the identified transportation system improvements in RTP project (11489) for the proposal to construct a second right-turn lane on the I-5 southbound off-ramp prior to Certificate of Occupancy.

APPLICABLE CRITERIA – TDC 33.070

- (a) Granting the amendment is in the public interest.
- (b) The public interest is best protected by granting the amendment at this time.
- (c) The proposed amendment is in conformity with the applicable goals and policies of the Tualatin Comprehensive Plan.

APPLICABLE CRITERIA – TDC 33.070

- (d) The following factors were consciously considered:
  - (1) The various characteristics of the areas in the City;
  - (2) The suitability of the areas for particular land uses and improvements in the areas;
  - (3) Trends in land improvement and development;
  - (4) Property values;
  - (5) The needs of economic enterprises and the future development of the area; needed right-of-way and access for and to particular sites in the area;
  - (6) Natural resources of the City and the protection and conservation of said resources;
  - (7) Prospective requirements for the development of natural resources in the City;
  - (8) The public need for healthful, safe, esthetic surroundings and conditions;
  - (9) Proof of change in a neighborhood or area, or a mistake in the Plan Text or Plan Map for the property under consideration are additional relevant factors to consider.

APPLICABLE CRITERIA – TDC 33.070

- (e) If the amendment involves residential uses, then the appropriate school district or districts must be able to reasonably accommodate additional residential capacity by means determined by any affected school district.
- (f) Granting the amendment is consistent with the applicable State of Oregon Planning Goals and applicable Oregon Administrative Rules, including compliance with the Transportation Planning Rule TPR (OAR 660-012-0060).
- (g) Granting the amendment is consistent with the Metropolitan Service District's Urban Growth Management Functional Plan.

TUALATIN PLANNING COMMISSION RECOMMENDATION

- On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the Plan Text and Plan Map Amendments to the City Council.

CITY COUNCIL ACTION

The City Council may make a decision to:

- Approve the PTA and PMA either as proposed or with additional modification;
- Deny the PTA and PMA; or
- Approve the PTA but deny the PMA.

Alternatively, the Council may:

- Continue consideration of the applications to a specified future Council hearing, leaving the hearing and written record open.
- Close the hearing and the written record, but continue Council deliberations on the applications to a specified future Council hearing.

I. INTRODUCTION

A. Applicable Criteria

Tualatin Development Code (TDC) Chapters 32 and 33; Tualatin Comprehensive Plan; Applicable Oregon Statewide Planning Goals; Applicable Oregon Administrative Rules including compliance with the Transportation Planning Rule; and Metropolitan Service District's Urban Growth Management Functional Plan.

B. Project Description

AKS Engineering & Forestry, LLC, on behalf of Vista Residential Partners and Property Owner, Horizon Community Church propose two land use applications located on a 9.2-acre site at 23370 SW Boones Ferry Road (Tax Lot: 2S135D000106).

Plan Text Amendment:
The requested Plan Text Amendment (PTA) would remove the locational factors from the High Density High Rise (RH-HR) purpose statement in Tualatin Development Code Section 44.100 and revise Table 44-3 to limit the structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road, which would be applicable to the subject site.

Plan Map Amendment:
The requested Plan Map Amendment (PMA) would change the existing zoning from Medium Low Density Residential (RML) and Institutional (IN) to High Density High Rise (RH-HR). Future development would require submittal and approval of an Architectural Review application subject to compliance with design and siting standards applicable to the RH-HR District.

C. Site Description and Surrounding Land Use

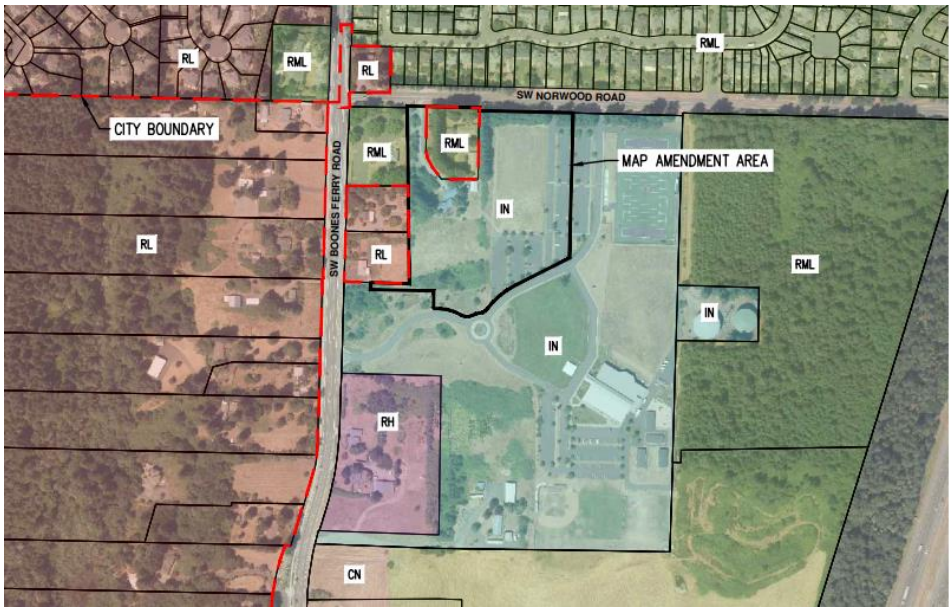

Figure 1 Surrounding Zoning and Land Use

The subject property is a 9.2-acre site located at 23370 SW Boones Ferry Road, which is east of SW Boones Ferry Road and South of SW Norwood Road. The property takes access from existing access

points on SW Boones Ferry and SW Norwood Road. The Horizon Community Church is located on the site with improved sports fields, parking areas, buildings, and access driveways. There are several open and unimproved areas throughout the site. An approximately 60-foot buffer of evergreen trees is located adjacent to SW Norwood road. Stormwater ponds are adjacent to the access driveway from SW Boones Ferry. 1-acre of the property is zoned Medium Low Density Residential (RML) and includes an existing detached single-family home on site. A portion of the site is within the Basalt Creek Planning Area.

D. Previous Land Use Actions

- AR 12-03 – Expired, Approval May of 2012
- AR 15-20 – Expired, Approval in September of 2019

E. Surrounding Uses

Surrounding uses include:

North: Medium Low Density Residential (RML)

- Norwood Heights Subdivision
- Pennington Heights Subdivision
- SW Norwood Road

South: Medium Low Density Residential (RML)/Neighborhood Commercial (CN)

- Autumn Sunrise Subdivision

West: High Density Residential (RH)/Unincorporated Lots with County FD-20 Zoning

- Plambeck Gardens Apartments
- Low Density Residential Properties Zoned County FD-20
- SW Boones Ferry Road

East: Medium Low Density Residential (RML)/Institutional (IN)

- Autumn Sunrise Subdivision
- City-Owned Water Tanks

II. FINDINGS

A: Oregon Statewide Planning Goals

Goal 1 – Citizen Involvement
To develop a citizen involvement program that insures the opportunity for citizens to be involved in all phases of the planning process.

Finding:
The Planning Commission reviewed the proposed amendment at a public meeting on April 20, 2023. The Tualatin Planning Commission voted 4-1 to recommend denial of both the Plan Text and Plan Map Amendments to the City Council. Comments from Commissioners have been included as Exhibit V "Planning Commission Comments". The Planning Commission is the City's acknowledged Committee for Citizen Involvement (CCI), in compliance with Goal 1.

In addition, the City has followed its acknowledged public notice procedures for quasi-judicial Comprehensive Plan Amendments, found in TDC 32.240. The procedures include mailed notice of the City Council hearing to surrounding property owners, publishing notice of the City Council hearing in the Tualatin Times, notice of the hearing to the Department of Land Conservation and Development (Exhibit O) at least 35 days prior to the first hearing, notice to affected government entities, and publicly posting notice of the hearing. Postcard land use application notices were sent to property owners on March 17, 2023 (Exhibit O). The Tualatin Times published the City Council public hearing notice on April 6, 2023 and April 13, 2023 (Exhibit O). The proposed amendment will be considered at a City Council at a public hearing on June 12, 2023.

Goal 2 – Land Use Planning
To establish a land use planning process and policy framework as a basis for all decision and actions related to use of land and to assure an adequate factual base for such decisions and actions.

Finding:
The City of Tualatin's Comprehensive Plan and Development Code provide an acknowledged and established land use planning process and policy framework which serve as the basis for all decisions and actions related to use of land, including requirements to assure that an adequate factual basis is provided for those decisions and actions. The proposed amendment has been processed in accordance with these procedures.

Goal 5 – Open Spaces, Scenic and Historic Area, and Natural Resource
Goal 5 establishes a process for each resource to be inventoried and evaluated. OAR 660-015-0000(5) and OAR 660.023 (Procedures and Requirements for Complying with Goal 5)

Finding:
The proposed amendment does not modify the City's existing open space and natural resources requirements or include any text amendment to the regulations for those Goal 5 resources regulated by Tualatin Development Code Chapter 71 (Wetlands Protection District) and Tualatin Development Code Chapter 72 (Natural Resource Protection Overlay District). All development would be reviewed under the Architectural Review (AR) process to ensure that new construction will be reviewed consistent with these requirements.

Goal 6 – Air, Water and Land Resources Quality

Finding:
The Oregon Department of Environmental Quality (DEQ) regulates air, water and land with Clean Water Act (CWA) Section 401 Water Quality, Water Quality Certificate, State 303(d) listed waters, Hazardous Wastes, Clean Air Act (CAA), and Section 402 NPDES Construction and Stormwater Permits. The Oregon Department of State Lands and the U.S. Army Corps of Engineers regulate jurisdictional wetlands and CWA Section 404 water of the state and the country respectively. Clean Water Services (CWS) coordinates storm water management, water quality and stream enhancement projects throughout the City. Future development would need to comply with national, state and regional regulations and protections for air, water and land resources. Tualatin has an acknowledged Comprehensive Plan that complies with this goal. All future development will be required to be reviewed consistent with these requirements.

Goal 7 – Areas Subject to Natural Disasters and Hazards

Finding:
Tualatin has an acknowledged Comprehensive Plan that complies with this goal. The proposed amendment does not modify the City's natural hazards requirements or existing goals and policies associated with Goal 7 established by the Comprehensive Plan. Future development would be required to be consistent with the applicable requirements of the Tualatin Development Code under Chapters 70 and 72.

Goal 8 – Recreation Needs
To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.

Finding:
The proposed amendment does not affect policies associated with recreational needs. Any change to the existing recreational facilities will be reviewed as part of an Architectural Review and compliance with the Tualatin Development Code recreational facilities requirements.

Goal 9 – Economy of the State
To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens.

Finding:
The proposed amendment does not affect policies, lands, or opportunities associated with Goal 9 established by the Comprehensive Plan. There are no impacts on the inventory of commercial and industrial lands with the submission of this amendment. The major employment areas of the City are protected.

Goal 10 – Housing
To provide for the housing needs of citizens of the state.

Finding:
The proposed plan map amendment would change the zoning designation of the subject site from Medium Low Density Residential (RML) and Institutional (IN) to High Density High Rise (RH-HR). This change would allow a maximum of 30 units per acre for household living uses. Tualatin's 2019 Housing Needs Analysis (Exhibit P) identified a deficit of land zoned RH-HR as opposed to a surplus of land zoned

RML and IN.

The text amendment, as proposed, is consistent with OAR 660-007 (the Metropolitan Housing Rule) which is used by cities such as Tualatin that are within the Portland Metropolitan UGB to demonstrate compliance with Goal 10. Additional findings addressing OAR 660-007 are found below.

Goal 11 – Public Facilities and Services

Finding:
Land within the City of Tualatin is adequately served by public facilities and services. The amendment would encourage compact development and the use of existing services and facilities. The proposed amendment does not affect policies related to public facilities and services including water, sewer, and emergency services. Public facilities are addresses in Tualatin Development Code Chapter 33.070(5)(f)(h)(i), additional materials addressing this standard are provided in Exhibit E, F, G, H and I.

Goal 12 – Transportation

Finding:
The requirements of Goal 12 are addressed by compliance with Oregon Administrative Rule (OAR) Section 660-012-0060, also known as the Transportation Planning Rule or TPR. The proposed amendment's compliance with the TPR is addressed below under the applicable OAR Section.

Goal 13 – Energy

Finding:
The proposed amendment does not include any changes that are related to or intended to impact Tualatin's land use regulations pertaining to energy consumption.

Goal 14 – Urbanization

Finding:
The subject property is within the Urban Growth Boundary. The proposal does not contain any proposed modification to the Urban Growth Boundary or development outside of the Urban Growth Boundary.

B: Oregon Administrative Rules

OAR Chapter 660 Division 7 (Metropolitan Housing)
[…]
660-007-0045
Computation of Buildable Lands

(1) The local buildable lands inventory must document the amount of buildable land in each residential plan designation.

(2) The Buildable Land Inventory (BLI): The mix and density standards of OAR 660-007-0030, 660-007-0035 and 660-007-0037 apply to land in a buildable land inventory required by OAR 660-007-0010, as modified herein. Except as provided below, the buildable land inventory at each jurisdiction's choice shall either be based on land in a residential plan/zone designation within the jurisdiction at the time of periodic review or based on the jurisdiction BLI at the time of acknowledgment as updated. Each jurisdiction must include in its computations all plan and/or zone changes involving residential land which that jurisdiction made since acknowledgment. A jurisdiction need not include plan and/or zone changes made by another jurisdiction before annexation to a city. The adjustment of the BLI at the time of acknowledgment shall:

(a) Include changes in zoning ordinances or zoning designations on residential planned land if allowed densities are changed;

(b) Include changes in planning or zoning designations either to or from residential use. A city shall include changes to annexed or incorporated land if the city changed type or density or the plan/zone designation after annexation or incorporation;

(c) The county and one or more cities affected by annexations or incorporations may consolidate buildable land inventories. A single calculation of mix and density may be prepared. Jurisdictions which consolidate their buildable lands inventories shall conduct their periodic review simultaneously;

(d) A new density standard shall be calculated when annexation, incorporation or consolidation results in mixing two or more density standards (OAR 660-007-0035). The calculation shall be made as follows:

(A)

(i) BLI Acres x 6 Units/Acre = Num. of Units;

(ii) BLI Acres x 8 Units/Acre = Num. of Units;

(iii) BLI Acres x 10 Units/Acre = Num. of Units;

(iv) Total Acres (TA) - Total Units (TU).

(B) Total units divided by Total Acres = New Density Standard;

(C) Example:

(i) Cities A and B have 100 acres and a 6-unit-per-acre standard: (100 x 6 = 600 units); City B has 300 acres and a 10-unit-per-acre standard: (300 x 10 = 3000 units); County has 200 acres and an 8-unit-per-acre standard: (200 x 08 = 1600 units); Total acres = 600 - Total Units = 5200.

(ii) 5200 units divided by 600 acres = 8.66 units per acre standard.

(3) Mix and Density Calculation: The housing units allowed by the plan/zone designations at periodic review, except as modified by section (2) of this rule, shall be used to calculate the mix and density. The number of units allowed by the plan/zone designations at the time of development shall be used for developed residential land.

660-007-0050
Regional Coordination
(1) At each periodic review of the Metro UGB, Metro shall review the findings for the UGB. They shall determine whether the buildable land within the UGB satisfies housing needs by type and density for the region's long-range population and housing projections.
(2) Metro shall ensure that needed housing is provided for on a regional basis through coordinated comprehensive plans.

660-007-0060
Applicability
(1) The new construction mix and minimum residential density standards of OAR 660-007-0030 through 660-007-0037 shall be applicable at each periodic review. During each periodic review local government shall prepare findings regarding the cumulative effects of all plan and zone changes affecting residential use. The jurisdiction's buildable lands inventory (updated pursuant to OAR 660-007-0045) shall be a supporting document to the local jurisdiction's periodic review order.
(2) For plan and land use regulation amendments which are subject to OAR 660, Division 18, the local jurisdiction shall either:
(a) Demonstrate through findings that the mix and density standards in this Division are met by the amendment; or
(b) Make a commitment through the findings associated with the amendment that the jurisdiction will comply with provisions of this Division for mix or density through subsequent plan amendments.

Finding:
In 2019, the City of Tualatin completed a Housing Needs Analysis (HNA) which included a computation of the City's residential buildable lands inventory (BLI) (Exhibit P). The BLI analysis complied with statewide planning Goal 10 policies that govern planning for residential uses. Consistent with these sections, the detailed methodology used to complete the buildable lands inventory is presented in Appendix A of the HNA (Exhibit P).

OAR 660 Division 12 (Transportation Planning)
OAR 660-012-0060
Plan and Land Use Regulation Amendments
(1) If an amendment to a functional plan, an acknowledged comprehensive plan, or a land use regulation (including a zoning map) would significantly affect an existing or planned transportation facility, then the local government must put in place measures as provided in section (2) of this rule, unless the amendment is allowed under section (3), (9) or (10) of this rule. A plan or land use regulation amendment significantly affects a transportation facility if it would:
(a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);
(b) Change standards implementing a functional classification system; or
(c) Result in any of the effects listed in paragraphs (A) through (C) of this subsection based on projected conditions measured at the end of the planning period identified in the adopted TSP. As part of evaluating projected conditions, the amount of traffic projected to be generated within the area of the amendment may be reduced if the amendment includes an enforceable, ongoing requirement that would demonstrably limit traffic generation, including, but not limited to, transportation demand management. This reduction may diminish or completely eliminate the significant effect of the amendment.
(A) Types or levels of travel or access that are inconsistent with the functional

classification of an existing or planned transportation facility;
(B) Degrade the performance of an existing or planned transportation facility such that it would not meet the performance standards identified in the TSP or comprehensive plan; or
(C) Degrade the performance of an existing or planned transportation facility that is otherwise projected to not meet the performance standards identified in the TSP or comprehensive plan.

(2) If a local government determines that there would be a significant effect, then the local government must ensure that allowed land uses are consistent with the identified function, capacity, and performance standards of the facility measured at the end of the planning period identified in the adopted TSP through one or a combination of the remedies listed in (a) through (e) below, unless the amendment meets the balancing test in subsection (2)(e) of this section or qualifies for partial mitigation in section (11) of this rule. A local government using subsection (2)(e), section (3), section (10) or section (11) to approve an amendment recognizes that additional motor vehicle traffic congestion may result and that other facility providers would not be expected to provide additional capacity for motor vehicles in response to this congestion.

(a) Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.
(b) Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of this division; such amendments shall include a funding plan or mechanism consistent with section (4) or include an amendment to the transportation finance plan so that the facility, improvement, or service will be provided by the end of the planning period.
(c) Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.
(d) Providing other measures as a condition of development or through a development agreement or similar funding method, including, but not limited to, transportation system management measures or minor transportation improvements. Local governments shall, as part of the amendment, specify when measures or improvements provided pursuant to this subsection will be provided.
(e) Providing improvements that would benefit modes other than the significantly affected mode, improvements to facilities other than the significantly affected facility, or improvements at other locations, if:
(A) The provider of the significantly affected facility provides a written statement that the system-wide benefits are sufficient to balance the significant effect, even though the improvements would not result in consistency for all performance standards;
(B) The providers of facilities being improved at other locations provide written statements of approval; and
(C) The local jurisdictions where facilities are being improved provide written statements of approval.

(3) Notwithstanding sections (1) and (2) of this rule, a local government may approve an amendment that would significantly affect an existing transportation facility without assuring that the allowed land uses are consistent with the function, capacity and performance standards of the facility where:

(a) In the absence of the amendment, planned transportation facilities, improvements and services as set forth in section (4) of this rule would not be adequate to achieve consistency with the identified function, capacity or performance standard for that facility by the end of the planning period identified in the adopted TSP;

(b) Development resulting from the amendment will, at a minimum, mitigate the impacts of the amendment in a manner that avoids further degradation to the performance of the facility by the time of the development through one or a combination of transportation improvements or measures;

[…]

(4) Determinations under sections (1)–(3) of this rule shall be coordinated with affected transportation facility and service providers and other affected local governments.

(a) In determining whether an amendment has a significant effect on an existing or planned transportation facility under subsection (1)(c) of this rule, local governments shall rely on existing transportation facilities and services and on the planned transportation facilities, improvements and services set forth in subsections (b) and (c) below.

(b) Outside of interstate interchange areas, the following are considered planned facilities, improvements and services:

(A) Transportation facilities, improvements or services that are funded for construction or implementation in the Statewide Transportation Improvement Program or a locally or regionally adopted transportation improvement program or capital improvement plan or program of a transportation service provider.

(B) Transportation facilities, improvements or services that are authorized in a local transportation system plan and for which a funding plan or mechanism is in place or approved. These include, but are not limited to, transportation facilities, improvements or services for which: transportation systems development charge revenues are being collected; a local improvement district or reimbursement district has been established or will be established prior to development; a development agreement has been adopted; or conditions of approval to fund the improvement have been adopted.

(C) Transportation facilities, improvements or services in a metropolitan planning organization (MPO) area that are part of the area's federally-approved, financially constrained regional transportation system plan.

(D) Improvements to state highways that are included as planned improvements in a regional or local transportation system plan or comprehensive plan when ODOT provides a written statement that the improvements are reasonably likely to be provided by the end of the planning period.

(E) Improvements to regional and local roads, streets or other transportation facilities or services that are included as planned improvements in a regional or local transportation system plan or comprehensive plan when the local government(s) or transportation service provider(s) responsible for the facility, improvement or service provides a written statement that the facility, improvement or service is reasonably likely to be provided by the end of the planning period.

(c) Within interstate interchange areas, the improvements included in (b)(A)–(C) are considered planned facilities, improvements and services, except where:

(A) ODOT provides a written statement that the proposed funding and timing of mitigation measures are sufficient to avoid a significant adverse impact on the Interstate Highway system, then local governments may also rely on the improvements identified in paragraphs (b)(D) and (E) of this section; or

(B) There is an adopted interchange area management plan, then local governments may also rely on the improvements identified in that plan and which are also identified in paragraphs (b)(D) and (E) of this section.

(d) As used in this section and section (3):

(A) Planned interchange means new interchanges and relocation of existing interchanges

that are authorized in an adopted transportation system plan or comprehensive plan;
(B) Interstate highway means Interstates 5, 82, 84, 105, 205 and 405; and
(C) Interstate interchange area means:
(i) Property within one-quarter mile of the ramp terminal intersection of an existing or planned interchange on an Interstate Highway; or
(ii) The interchange area as defined in the Interchange Area Management Plan adopted as an amendment to the Oregon Highway Plan.
(e) For purposes of this section, a written statement provided pursuant to paragraphs (b)(D), (b)(E) or (c)(A) provided by ODOT, a local government or transportation facility provider, as appropriate, shall be conclusive in determining whether a transportation facility, improvement or service is a planned transportation facility, improvement or service. In the absence of a written statement, a local government can only rely upon planned transportation facilities, improvements and services identified in paragraphs (b)(A)–(C) to determine whether there is a significant effect that requires application of the remedies in section (2).

[…]

Finding:

The applicant proposed an amendment to the Comprehensive Plan and Zoning Map designation of the subject property as Tualatin is a single-map Comprehensive Plan/Zoning Map jurisdiction. The proposed plan amendment would increase the maximum density from 25 units per acre (townhouses) under the current Medium Low Density Residential (RML) zoning to a maximum of 30 units per acre (household living uses) under the High Density High Rise Zone (RH-HR).

The applicant provided a review of Oregon's Transportation Planning Rule (TPR) (OAR 660-012-0060) and a trip generation analysis by Lancaster Mobley included in Exhibit E. The review identified the proposed amendment would impact an existing transportation facility. Specifically, the applicant identified the intersection of SW Norwood Road and SW Boones Ferry Road as failing. Staff note that the applicant's TPR analysis, which was reviewed and concurred by DKS Associates, indicated that this intersection would ultimately fail, with or without the proposed plan map amendment, unless a traffic signal is installed at the intersection of SW Norwood Road and SW Boones Ferry Road. The applicant's analysis stated all study intersections show operational results that meet standards under all analysis scenarios except the intersection of SW Norwood Road and SW Boones Ferry Road if it remains unsignalized.

On behalf of the City of Tualatin, DKS Associates evaluated the applicant's TPR analysis and mitigation recommendation (Exhibit F). DKS Associates agreed with the applicant's TPR analysis findings and that the construction of a traffic signal would be an adequate mitigation measure to address the failing intersection of SW Boones Ferry Rd and SW Norwood Road. DKS Associates also stated the intersection should include a separate striped westbound left turn lane for safety reasons, consistent with the functional classification. It is recommended the westbound left turn run on a separate phase to protect the pedestrians on the south crosswalk, which is directly adjacent to a transit stop. A leading pedestrian interval could also be used and a northbound right turn overlap could be implemented to shorten the right turn queue length.

The application of the reasonable worst-case analysis must be performed to show no significant impact of the zone change per the Transportation Planning Rule. The trip generation comparison for the zone change shows the reasonable worst-case build-out of the two subject parcels under both the existing and proposed zoning. Overall the trip generation comparison shows a decrease of 157 trips in the AM peak hour due to less contributing school traffic and an increase of 60 trips in the PM peak hour. There is an increase of 636 daily trips which is over the 450 trip threshold set by ODOT which requires operational analysis to

determine if there are significant impacts from this zone change.

Operations analysis was performed for the existing and proposed zoning scenarios under year 2040 conditions. The study intersections generally performed slightly better in the AM peak hour and the same or slightly worse in the PM peak hour under the proposed zoning. Under both zoning scenarios, the intersection of Boones Ferry Road/Norwood Road would fail without signalization. This triggers OAR 660-012-0060 section (1)(c)(C). With signalization, the intersection performs at LOS B and v/c ratio 0.73 under the proposed zoning. Thus, with the proposed mitigation of signalization, the analysis concluded the significant effect due to the proposed zoning change is mitigated per OAR 660-012-0660(2)(d).

The City of Wilsonville submitted comments (Exhibit S) that stated the proposal does not provide sufficient analysis of the Level of Service impact at City of Wilsonville-owned intersection at SW Boones Ferry Road/SW Day Road. The City of Wilsonville stated the traffic report should be updated throughout to compare to the City of Wilsonville LOS D standard at this intersection. The City of Wilsonville supplied an analysis by DKS Associates that stated it appears reasonable that 45-50% of project-generated traffic will travel through Wilsonville, including this intersection. The comments also stated the Basalt Creek Parkway Extension has not secured funding, the TRP analysis should also include analysis of study intersections without the Basalt Creek Parkway construction. The intersection of SW Boones Ferry Road/SW 95th Avenue should be added to the analysis. The comments stated the documentation should provide an updated analysis of the total planned trip generation in the Basalt Creek planning area under Tualatin's jurisdiction compared to previous trip caps agreed to between Tualatin and Wilsonville during the Basalt Creek concept planning. The applicant provided a memorandum from Lancaster Mobley in response to the City of Wilsonville comments in Exhibit T.

ODOT submitted comments (Exhibit S) that stated the TIA submitted by Lancaster Mobley dated September 20, 2021 with the Autumn Sunrise Subdivision application, showed that the new development would contribute traffic volume to the I-5 southbound off ramp at the Elligsen Rd interchange. Therefore, ODOT has determined that the proposed plan amendment and subsequent development will likely add traffic to the I-5 interchange at Elligsen Rd. The comments also stated the 2018 RTP project (11489) proposes to construct a second right-turn lane on the southbound off-ramp. Since the project is on the RTP financially constrained project list, it can be assumed to be in place for the purposes of this plan amendment. The RTP project acknowledges that "conditions are currently congested" and suggests that the time period for the improvement is 2028-2040. Funding for the project has not been committed to date. ODOT also stated that future development of the site will contributes traffic volumes to the I-5 southbound off-ramp, ODOT recommends that the future development be required to prepare a TIA that includes the I-5 interchange at Elligsen Rd. ODOT intends to recommend that the future development of this site contribute its proportionate share of its contribution to interchange improvements. This recommendation is consistent with ODOT comments submitted for the Autumn Sunrise Subdivision dated October 28, 2021. The applicant provided a memorandum from Lancaster Mobley in response to the ODOT comments in Exhibit T.

Should the Council approve the subject applications, staff recommends a condition of approval requiring the applicant to contribute a proportional share to the City of Tualatin for future construction of the identified transportation system improvements in RTP project (11489) for the proposal to construct a second right-turn lane on the I-5 southbound off-ramp prior to Certificate of Occupancy.

C: Metro Chapter 3.07, Urban Growth Management Functional Plan

The following Chapters and Titles of Metro Code are applicable to the proposed amendments:
Chapter 3.07, Urban Growth Management Functional Plan

Finding:
Metro's Urban Growth Management Functional Plan is established in Metro Code as Section 3.07. The following Functional Plan sections are applicable to the proposed plan and map amendments:

Title 1 – Housing Capacity: requires a city or county to maintain or increase its housing capacity.

- *The proposed amendment would create a High Density High Rise (RH-HR) zone that permits multi-family housing at 26-30 units an acre from the current zoning of Medium Low Density (RML) and Institutional (IN). Page 3 of the applicant's narrative (Exhibit A) cited Tualatin's Housing Needs Analysis (HNA) (Exhibit P) and stated there is a surplus in Low Density Residential (RL), Medium Low Density Residential (RML), and High Density Residential (RH) designations in the City of Tualatin. As there are currently no buildable acres of RH-HR lands, a deficit of 101 dwelling units is shown. After the proposed plan map amendment, there would still be a surplus of RML land and there would no longer be a deficit of RH-HR land. The applicant stated the proposed amendment does not seek to adjust minimum or maximum densities or uses required by the RH-HR zone. The proposed map and plan text amendment changes also do not decrease housing supply, density, or capacity within the City of Tualatin.*

Title 2 – Regional Parking Policy: repealed.

Title 3 – Water Quality and Flood Management: protects Water Quality and Flood Management Areas.

- *Water Quality and Flood Management are addressed in Tualatin Development Code Chapters 70, 71, and 74. No amendments are proposed to these chapters. No physical development is proposed with this application for the plan map and text amendment. Although there are no known or identified resources existing on the subject site, it would be further examined for natural resources with future development of the site through an Architectural Review. Future development of the site would need to comply with local, regional, state, and federal requirements for the protection of air, water, and land resources.*

Title 4 – Industrial and Other Employment Areas: promotes "clustering" of industries that operate more productively and efficiently when in proximity to each other.

- *The site is currently zoned to allow Medium Low Density (RML) and Institutional (IN) uses. While the area was previously designated by Metro as an Industrial Area (Title 4, Industrial and Other Employment Areas map), the proposed map and text amendments do not diminish the industrial or commercial capacities of the City because the area was not zoned for industrial or commercial uses by the City of Tualatin.*

Title 5 - Neighbor Cities and Rural Reserves: repealed

Title 6 – Centers, Corridors, Station Communities and Main Streets: enhancements of these areas as principal centers of urban life via actions and investments.

- *The subject site is not a Regional Center, Town Center, Station Community or Main Street.*

Title 7 – Housing Choice: implements policies regarding establishment of voluntary affordable housing production goals to be adopted by local governments.

- *The proposed plan map amendment would permit multi-family housing at 26-30 units an acre. Page 29 of the applicant's narrative stated the amendments do not prohibit regulated affordable housing on the project site. The applicant submitted a supplemental memorandum (Exhibit D) that provided a voluntary condition to commit to restrict 10% of the proposed units so they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years. The amendments will allow for the development of multifamily dwelling units, which provide additional housing choices; choices that are more affordable than detached single-family housing. The applicant cited Tualatin's Housing Needs Analysis (Exhibit P) recommendation that the City provide all types of housing, including market-rate multifamily housing.*

Title 8 – Compliance Procedures: ensures all cities & counties are equitably held to the same standards.

- *The City of Tualatin continues to partner with Metro to comply with the Functional Plan.*

Title 9 – Performance Measures: *repealed.*

Title 10 – Functional Plan Definitions.

Title 11 – Planning for New Urban Areas: guides planning of areas brought into the UGB.

- *The proposed High Density High Rise (RH-HR) zone subject site is not on land eligible for annexation into the City of Tualatin; therefore amendments do not affect planning areas outside of the UGB.*

Title 12 – Protection of Residential Neighborhoods: **protects existing residential neighborhoods from pollution, noise, crime, and provides adequate levels of public services.**

- *The site of the proposed plan map amendment would be adequately serviced by existing and proposed infrastructure and services. Infrastructure and public services are discussed in greater detail under the findings for TDC 33.070(5)(i).*
- *The proposed text amendment would limit the height of structures on the subject site to 50 feet or four stories to make the aesthetic of the site compatible with surrounding uses. The applicant has proposed a 60-foot landscape buffer along SW Norwood Rd for additional screening.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response (Exhibit U) that argue the proposed project, as well as, the building of any high rise developments in Tualatin is not needed due to Tualatin's forecasted housing needs outlined in the 2040 Comprehensive Plan. The Byrom CIO argues that the proposed apartments are contradictory to the Metropolitan Service District's Urban Growth Management Functional Plan, specifically Title 12: Protection of Residential Neighborhoods and Title 13 Nature in Neighborhoods. The CIO stated that South Tualatin has already experienced a reduction in healthful, safe and aesthetic surrounding due to the tree removal from the neighboring Autumn Sunrise subdivision. The comments stated the removal of additional trees as a result of the proposed Norwood project would further reduce the healthful, aesthetic surroundings of South Tualatin.

The applicant voluntarily proposes to preserve the 60-foot-wide buffer of Douglas-fir trees south of Norwood Road. The applicant has also submitted a supplemental memorandum (Exhibit D) that provided

additional voluntary conditions to build a sustainable apartment project that meets a US Green Building Council LEED green building standard. The memorandum stated a LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community. In addition, the applicant also proposed to construct 40 electric vehicle charging stations onsite.

Title 13 – Nature in Neighborhoods: conserves, protects and restores a continuous ecologically viable streamside corridor system integrated with upland wildlife habitat and the urban landscape.

- *Protection of natural resources are addressed in Chapter 72 of the Tualatin Development Code. In addition, sites are reviewed for the presence of natural resources and are reviewed by Clean Water Services at the time of development. No physical development is proposed with this application for the plan map and text amendment. Although no known or identified resources existing on the subject site, it would be further examined for natural resources with future development of the site through an Architectural Review. Future development of the site would need to comply with local, regional, state, and federal requirements for the protection of air, water, and land resources. No amendments to this chapter are proposed under this application.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response (Exhibit U) that argue the proposed project, as well as, the building of any high rise developments in Tualatin is not needed due to Tualatin's forecasted housing needs outlined in the 2040 Comprehensive Plan. The Byrom CIO argues that the proposed apartments are contradictory to the Metropolitan Service District's Urban Growth Management Functional Plan, specifically Title 12: Protection of Residential Neighborhoods and Title 13 Nature in Neighborhoods. The CIO that stated a forest was removed to build the neighboring development, Autumn Sunrise, and what remains of the forest is on the subject site. The comments stated the City has provided no evidence that protection and conservation of natural resources was considered in the proposed map amendment. The comments noted the proposed text amendment could have a reaching impact on natural resources through the city if it enables remaining natural land to be developed as high rise apartments. Public comments (Exhibit W) have been received in reference to the loss of trees along SW Norwood Road due to nearby development. Concerns have been raised regarding the habitats of local animals and birds. However, none of these features are listed as natural resources of the City.

The applicant voluntarily proposes to preserve the 60-foot-wide buffer of Douglas-fir trees south of Norwood Road. The applicant has also submitted a supplemental memorandum (Exhibit D) that provided additional voluntary conditions to build a sustainable apartment project that meets a US Green Building Council LEED green building standard. The memorandum stated a LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community. In addition, the applicant also proposed to construct 40 electric vehicle charging stations onsite.

Title 14 – Urban Growth Boundary: prescribes criteria and procedures for amendments to the UGB.

- *No amendments are proposed to the UGB under this application.*

D: Tualatin Comprehensive Plan

Chapter 1 – Community Involvement:
POLICY 1.1.3. Conduct the planning process with adequate input and feedback from citizens in each affected neighborhood.

Finding:
The applicant provided evidence that an in-person Neighborhood/Developer Meeting was held on October 25, 2022, that discussed the proposed plan map and plan text amendments (Exhibit K). The meeting was held and noticed in accordance with TDC 32.120. As a land use application requiring a Type IV-A procedure, an advisory recommendation was sought before the Tualatin Planning Commission prior to the City Council meeting. On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the Plan Text and Plan Map Amendments. Comments from Commissioners are included in Exhibit V. City staff issued public notice and request for comment in accordance with the noticing procedures outlined in TDC 32.240 and included as Exhibit O.

Chapter 3 – Housing & Residential Growth:
GOAL 3.1 HOUSING SUPPLY. Ensure that a 20-year land supply is designated and has urban services planned to support the housing types and densities identified in the Housing Needs Analysis.

Finding:
Plan Map Amendment: *Tualatin's 2019 Housing Needs Analysis (HNA) identified a deficit of land designated for housing in the High Density High Rise (RH-HR) residential comprehensive plan designations. The HNA reported 4 acres of RH-HR zoning are needed to provide additional housing in the City. There are existing properties identified for RH-HR zoning on the City's Comprehensive Map. The current RH-HR area is generally located south of SW Tualatin Road and is constrained by public ownership, lack of direct public access and environmental factors such as the existing wetlands and floodplains. The HNA has considered the land to be unbuildable and is not considered available for additional housing. The proposed map amendment would provide a ±9.2-acre site to support the housing types and densities identified within the HNA. The HNA forecasts that multifamily units will provide 45 percent (456 dwelling units) of the 1,014 dwellings that are needed in Tualatin between 2020 and 2040.*

Page 8 of the applicant's narrative (Exhibit A) provided information from the Tualatin Housing Production Strategy (HPS) that presented a housing strategy for the implementation of Tualatin's HNA. The applicant's narrative highlighted HPS Actions 1.2 "Evaluate opportunities to rezone land to provide additional opportunities for multifamily housing development", 5.1 "Identify districts within Tualatin with opportunities for redevelopment for housing and employment uses" and 5.2 "Support redevelopment of underutilized commercial buildings for housing". The applicant stated the proposed plan map amendment aligns with the cited actions of the HPS.

The applicant supplied a memorandum from Johnson Economics, LLC (Exhibit M) that concluded the housing need forecasted in the 2019 HNA for 1,014 units is understated for a 20-year timeframe. From the data supplied on page 11 of the Johnson Economics memorandum, the local demand is outpacing the HNA forecast. The memorandum highlighted the summary of actions of the 2019 Tualatin Housing Strategy (Exhibit Q) that are applicable to the proposed zone change application, Strategy 1 "Ensure an adequate supply of land is available and serviceable", Recommendation 1.2b "Evaluate opportunities to re-zone Residential Low Density and Residential Medium Low Density residential land for higher-density housing",

Strategy 3 "Support development and preservation of housing that is affordable for all households" and Action 3.2 "Develop policies to support development of housing affordable to people who have income between 60% and 120% of MFI ($48,900 to $98,000 for a household of four in Washington County) and live and work in Tualatin". The memorandum reported the adopted strategies identified are supportive of rezoning residential lands to allow greater housing density. Action 3.2 also encouraged the development of market rate rental housing which is typically affordable to middle-income households, and having higher density supplies would supply more units for these households.

The Johnson Economics memorandum included additional key findings from the 2021 Tualatin Housing Production Strategy (Exhibit Q) that are applicable to the proposed zone change application such as, "Tualatin needs increased housing diversity", "Tualatin needs greater housing affordability and availability to renters" and "Housing is needed for people who live and work in Tualatin". The Johnson Economics memorandum also identified barriers to the development of needed housing within the City of Tualatin as identified in the HPS. One barrier cited was land for housing and quoted, "Scarcity of vacant land, especially for multifamily development is one of Tualatin's primary barriers to development of needed housing". The other barrier mentioned was the complexity and expense of redevelopment. The provided memorandum listed the following goal and strategic actions adopted with the HPS that would be addressed in the proposed map amendment; Goal 11 "Increase housing development opportunities through regulatory and zone changes to accommodate a diverse range of housing types and price points to meet the housing needs in Tualatin", Action 11a " Evaluate updating density standards for multifamily housing in medium-density, high-density, and mixed use zones", and Action 11b "Evaluate opportunities to rezone lower-density residential land to higher density". The Johnson Economics memorandum concluded the findings of the HNA and HPA are supportive of rezoning lower density residential land and encouraging housing opportunities for households at middle income, many of whom are typically served by market-rate rental apartments.

On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the plan text and plan map amendments to the City Council. The Planning Commission found that Comprehensive Plan Goal 3.1 was not met due to the plan map amendment creating a surplus of RH-HR zoned lands. The HNA identified a deficit of 4 acres of RH-HR zoning and the proposed plan map amendment would provide 9.2 acres of RH-HR land resulting in a surplus. Planning Commissioner comments are attached as Exhibit V.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response (Exhibit U) that stated the approved and in development housing units in Tualatin that have yet to be occupied units are well in excess of the anticipated need of the city by 2040. The comments stated it is not critical or necessary to change the restriction on residential high rises at this time. The CIO stated there should not be urgency for additional housing in Tualatin when compared to other cities. Additional public comments (Exhibit W) have been received that express similar concerns that the City is ahead of the 2019 Housing Needs Analysis and that the City's growth will outpace the available supporting infrastructure.

The applicant submitted a supplemental memorandum (Exhibit D) providing a legal argument that the Housing Needs Analysis is the floor, not the ceiling for needed housing. The applicant further argued the HNA is not an adequate evidentiary basis to limit additional housing. The applicant cited the Johnson Economics memorandum (Exhibit M) that noted that cities are not bound by the forecasts adopted in an HNA if reality outpaces the forecast. The number of units forecasted is a floor, not a statutory ceiling beyond which more permits cannot be issued. If the population growth exceeds the forecast in the HNA (the memorandum notes it already has), the City is not obligated to put limits on growth to conform to the HNA. The memorandum said the HNA (with dated information) demonstrated a need for additional RH-HR zoned land. The updated population date indicated that the need is even greater than projected.

Plan Text Amendment: *The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The applicant's narrative (Exhibit A) stated the areas where RH-HR areas are currently designated within the City are considered unbuildable by the HNA – meaning that they are not considered available for additional housing. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access. Application of the RH-HR zoning to areas of the City other than the subject site would still be required to go through the Plan Map Amendment process, including requirements that the location meet the specific suitability criteria of TDC 33.070.*

Public comments were received (Exhibit W) that express concerns that by allowing the RH-HR zoning designation to be applied to lands outside of Tualatin's downtown will "open the door" to high density high rise buildings throughout the city limits.

The applicant provided a supplemental memorandum (Exhibit D) which stated the approval of the proposed Text Amendment will not result in the construction of high-rises all over the City. Rather, the Text Amendment will remove the current locational requirement of the RH-HR zone that restricts the zone to a very small unbuildable part of the City. This will simply allow the City flexibility to locate higher density residential uses where it concludes that the approval criteria are met. A Map Amendment application, which is only approvable by the City Council, would need to be approved through a public process for each site where a rezoning is desired.

POLICY 3.1.1 DENSITY. Maintain a citywide residential density of at least eight (8) dwelling units per net acre.

Finding:

Plan Map Amendment: *OAR 660-007 requires that Tualatin provide the opportunity for the development of housing at an overall average density of eight dwelling units per net acre. The High Density High Rise (RH-HR) zoning requires a density between 26 and 30 dwelling units per acre for household living uses. The proposed plan map amendment would increase the City's residential land supply and contribute to the minimum target density provisions.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response (Exhibit U) that stated the approved and in development housing units that have yet to be occupied units are well in excess of the anticipated need of the city by 2040. The comments stated it is not critical or necessary to change the restriction on residential high rises at this time. The CIO stated there should not be urgency for additional housing in Tualatin when compared to other cities. Additional public comments (Exhibit W) have been received that express similar concerns that the City is ahead of the 2019 Housing Needs Analysis and that the City's growth will outpace the available supporting infrastructure.

The applicant submitted a supplemental memorandum (Exhibit D) providing a legal argument that the Housing Needs Analysis is the floor, not the ceiling for needed housing. The applicant further argued the HNA is not an adequate evidentiary basis to limit additional housing. The applicant cited the Johnson Economics memorandum (Exhibit M) that noted that cities are not bound by the forecasts adopted in an HNA if reality outpaces the forecast. The number of units forecasted is a floor, not a statutory ceiling beyond which more permits cannot be issued. If the population growth exceeds the forecast in the HNA (the memorandum notes it already has), the City is not obligated to put limits on growth to conform to the HNA.

The memorandum said the HNA (with dated information) demonstrated a need for additional RH-HR zoned land. The updated population date indicated that the need is even greater than projected.

Plan Text Amendment: *The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

POLICY 3.1.2 ZONING FOR MULTIFAMILY. Provide zoning for multifamily development, which may be located in areas adjacent to transit.

Finding:
Plan Map Amendment: *Page 10 of the applicant's narrative (Exhibit A) cited Tualatin's Housing Needs Analysis, which stated there are no areas of High Density High Rise (RH-HR) zoning that are considered available for additional housing. Although the above policy does not require that zoning for multifamily development be provided in areas located adjacent to transit, the location of the proposed map amendment is adjacent (within ¼ mile or less) to Trimet Bus Route 96 which is located along SW Boones Ferry Road.*

Public comments have been received (Exhibit W) that express concerns that the Trimet Bus Route 96 is not a reliable or adequate transportation option. Comments have suggested the RH-HR zoning designation should remain in locations in downtown Tualatin to access the WES Commuter Rail.

The applicant submitted a supplemental memorandum (Exhibit D) that stated the apartment project would provide a tangible incentive for the City of Tualatin, Washington County, and Trimet to discuss and implement service improvements to Bus Route 96.

Plan Text Amendment: *The proposed text amendment would remove the zoning district's locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The removal of this language would allow the City to apply the RH-HR zoning for multifamily development beyond the locational limits of the current code. This would include other sites that could be zoned for multi-family development and also adjacent to transit that are outside of the current permitted locations.*

GOAL 3.2 HOUSING FOR ALL. Encourage development and preservation of housing that is affordable for all households in Tualatin.

Finding:
Plan Map Amendment: *Page 10 of the applicant's narrative (Exhibit A) cited Tualatin's 2019 Housing Needs Analysis which identified the need for a higher percentage of multifamily dwelling units (45% of new housing) to meet the demographics of the City and to increase housing affordability. The applicant stated that for rent apartments are an affordable alternative to buying a home and that without an additional supply of residential rental units the demand would continue to raise rents and make renting less affordable in Tualatin. The plan map amendment would permit a density of 26-30 units per acre for multi-family housing.*

The applicant provided a memorandum from Johnson Economics (Exhibit M) that stated the rental housing market in Tualatin is strong and supportive of the continued development of market-rate rental supply. The

memorandum reported that average rents have climbed steadily over the past decade while the vacancy rate has fallen resulting in a tight supply of available units, increasing rent levels, and less choice for renters among properties. Johnson Economics concluded that the new housing supply would help to alleviate rent increases and help renter households remain in the community.

Public comments were received (Exhibit W) that state the proposed apartments would not be affordable housing. Commenters have stated the proposed rents are higher than the mortgage they currently pay on a single family detached home.

The applicant submitted a supplemental memorandum (Exhibit D) that provided a voluntary condition to commit to restrict 10% of the proposed units so they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years. The memorandum stated there is a need for middle income housing in Tualatin. According to ECONorthwest's Draft Equitable Funding Action Plan dated April 2023 approximately 47% of renters in Tualatin are cost burdened compared to 17% of homeowners. Middle income housing is attainable for people who earn too much to qualify for government-subsidized affordable housing (e.g., "Affordable Housing" targeted at households that earn <80% of MFI), but that become cost burdened with housing targeted toward the upper end of the market, such as detached single family homes. The applicant has stated the apartments planned for the site will be market rate units, however this does not mean that the project will provide only high income housing opportunities. Instead, because of the housing type, range of unit sizes and characteristics offered, the project will include housing affordable to a range of households, including middle income/workforce households earning between 80% and 120% of MFI. The applicant concluded the project will include housing that is affordable to middle income households, and that even new apartments that are not targeted at middle income households are beneficial because increased supply tends to lower rents on existing units. Additional options for renters will help increase affordability and reduce their rent burden. The memorandum also noted it is important to avoid comparing what one may be paying on their mortgage to current rental rates. The accurate comparison is the cost to buy a home today vs. the cost of renting an apartment today. If one has lived in their home for years, due to rapid appreciation, the purchase price they paid is likely significantly lower than the value of their home today. Additionally, their associated historic mortgage rate is likely significantly lower than what is available today (e.g., 30 year mortgage rates below 4% in the 2010s and into the pandemic compared to current rates of over 6%).

***Plan Text Amendment**: The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

POLICY 3.2.1 HOUSING TYPE DIVERSITY. Support development of townhomes, duplexes, triplexes, quadplexes, cottages, courtyard housing, accessory dwelling units, single story units, senior housing, and extended family and multi-generational housing in all residential zoning districts.

Finding:
Page 11 of the applicant's narrative (Exhibit A) stated the proposed plan map and text amendment would increase the supply of renter occupied housing and the diversity of housing types within the City of Tualatin by allowing the construction of apartment housing.

***Plan Map Amendment:** The proposed plan map amendment would change the subject site zoning from*

Institutional (IN) and Medium Low Density Residential (RML) to High Density High Rise (RH-HR). The proposed map amendment could allow for the construction of up to 276 housing units on the ±9.2-acre site,

Public comments have been received (Exhibit W) that state the proposed apartment project does not support the housing diversity types listed in Policy 3.2.1 as it is not proposing to construct townhomes, duplexes, triplexes, quadplexes, cottages, courtyard housing, accessory dwelling units, single story units, senior housing, or multi-generational housing.

The applicant provided a supplemental memorandum (Exhibit D) which stated the 2019 HNA identified a goal of having at least 45% of new residential units be multifamily apartments in order to increase the availability of rental units within the City. The HNA identified that the RH-HR zone is a suitable zone for providing needed multifamily housing because that zone's allowed densities are an efficient use of a limited supply land. The memorandum stated the City has a current limited range of housing and the lack of apartments constructed in recent years. (Only three market rate projects of larger than 50 units have been approved in Tualatin since 2003. See Exhibit B.) Two-thirds of the City's existing housing stock is single-family detached housing, which typically is only available to those with higher incomes, especially because today's higher mortgage rates have significantly impacted home buying affordability. This reality limits the City's ability to attract new residents that will add to the Tualatin's desired diversity and limit the ability to achieve its equity and inclusion goals. This also limits young families from making Tualatin home, which is critical to support the existing schools. The applicant concluded Multifamily housing options help provide housing options for both underrepresented groups and young families.

***Plan Text Amendment:** The plan text amendment would allow the City to apply the RH-HR zoning for multifamily development on properties without the constraints of the current available land inventory for RH-HR lands such as wetland habitats and floodplains.*

Public comments were received (Exhibit W) that express concerns that multi-story apartment housing will look out of place outside of Tualatin's downtown area and in close proximity to the low density residential zone.

The applicant provided a supplemental memorandum (Exhibit D) in response which stated the RH-HR zone description unfortunately uses the term "high rise." Typically, a density of 30 units to the acre (the maximum allowed in this zone) can be achieved in four story buildings. Four story buildings are considered "low rise" under the building code. This application includes a Text Amendment to limit the height of this site to four stories, or 50 feet, whichever is less. The RH-HR density maximum, which provides the greatest efficiency and affordability, is still achievable with this height limitation. The four-story height also preserves area for a tree buffer along Norwood and for sufficient parking with a 1.65 parking ratio that exceeds the City's minimum standards.

GOAL 3.5 HOUSING AND TRANSPORTATION. Encourage development and redevelopment in Tualatin that supports all modes of transportation, including walking, biking and mass transit.

Finding:

The location of the proposed plan map amendment is near the intersection of SW Boones Ferry Road, SW Norwood Road, and the future extension of the Basalt Creek Parkway. The submitted narrative from the applicant (Exhibit A) implied that future increased residential, commercial, and industrial growth in the area could lead to expanded levels of service along the route. Development of the subject site would include construction of a portion of an identified trail in the Basalt Creek Trails Plan and bike lanes along the site

frontage. As discussed above, the site is adjacent (within ¼ mile or less) to public transit (TriMet 96 bus line).

Public comments were received (Exhibit W) that stated the subject site is not close to any walkable amenities. Comments express concerns that the Trimet Bus Route 96 is not a reliable or adequate transportation option. Comments have suggested the RH-HR zoning designation should remain in locations in downtown Tualatin to access the WES Commuter Rail.

The applicant submitted a supplemental memorandum (Exhibit D) that stated the apartment project would provide a tangible incentive for the City of Tualatin, Washington County, and Trimet to discuss and implement service improvements to Bus Route 96.

GOAL 3.7 RESIDENTIAL GROWTH AND THE ENVIRONMENT. Plan for housing and residential growth to minimize and mitigate for environmental impacts.

Finding:

Plan Map Amendment: *On page 12 of the submitted narrative, the applicant provided additional figures in response to Goal 3.7 (Exhibit A). The figures depicted the existing High Density High Rise (RH-HR) zoned lands in the City of Tualatin. The figures included an overlay that showed the land constraints of the existing RH-HR zoned areas. The applicant stated the existing RH-HR lands within the City have been classified as largely unbuildable due to wetland habitats and floodplains. Other nearby residential lands to the amendment subject site such as that west of SW Boones Ferry Road, are also significantly impacted by historic buildings, wetland, riparian, and upland habitats. In comparison, the applicant noted that the proposed subject site does not feature any mapped or known upland or riparian habitats. The plan map amendment would provide zoning for multi-family development on land free from identified historic buildings, wetland, riparian, and upland habitats.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response (Exhibit U) that stated a forest was removed to build the neighboring development, Autumn Sunrise, and what remains of the forest is on the subject site. The comments stated the City has provided no evidence that protection and conservation of natural resources was considered in the proposed map amendment.

The applicant voluntarily proposes to preserve the 60-foot-wide buffer of Douglas-fir trees south of Norwood Road. The applicant has also submitted a supplemental memorandum (Exhibit D) that provided additional voluntary conditions to build a sustainable apartment project that meets a US Green Building Council LEED green building standard. The memorandum stated a LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community. In addition, the applicant also proposed to construct 40 electric vehicle charging stations onsite.

Plan Text Amendment: *The plan text amendment would allow the City to apply the RH-HR zoning for multifamily development on properties that meet the above criterion without the constraints of the current available land inventory for RH-HR lands such as wetland habitats and floodplains.*

Public comments (Exhibit W) noted the proposed text amendment could have a reaching impact on natural resources through the city if it enables remaining natural land to be developed as high rise apartments. Comments have been received in reference to the loss of trees along SW Norwood Road due to nearby

development. Concerns have been raised regarding the habitats of local animals and birds. However, none of these features are listed as natural resources of the City.

The applicant provided a supplemental memorandum (Exhibit D) which stated the approval of the proposed Text Amendment will not result in the construction of high-rises all over the City. Rather, the Text Amendment will remove the current locational requirement of the RH-HR zone that restricts the zone to a very small unbuildable part of the City. This will simply allow the City flexibility to locate higher density residential uses where it concludes that the approval criteria are met. A Map Amendment application, which is only approvable by the City Council, would need to be approved through a public process for each site where a rezoning is desired.

POLICY 3.7.1 ENVIRONMENTAL PROTECTION. Housing and residential growth policies will be evaluated for consistency with the environmental protection goals and policies of Chapter 7 (Parks, Open Space, and the Environment).

Finding:
Although there are no known or identified resources existing on the subject site, it would be further examined for natural resources with future development of the site through an Architectural Review to confirm compliance with the environmental protection goals and policies of Chapter 7. Chapters 71 and 72 of the Tualatin Development Code address any Wetland Protection Districts and Natural Resource Overlay Districts.

Chapter 10 – Land Use Designations and Zoning:
Planning District Objectives

RESIDENTIAL PLANNING DISTRICTS:
Medium Low Density Residential Planning District (RML)
This district supports household living uses with a variety of housing types at moderately low densities. This district is primarily oriented toward middle housing types including attached dwellings, multi-family development, and manufactured dwelling parks.

High Density Residential/High-Rise Planning District (RH-HR)
This district supports a wide range of housing types at the greatest density of household living in areas with the greatest access to amenities.

OTHER PLANNING DISTRICTS:
Institutional Planning District (IN)
The purpose of this district is to provide an environment exclusively for, and conducive to, the development and operation of religious institutions, schools, public parks, and related uses, in a manner that is harmonious with adjacent and nearby residential, commercial, or manufacturing planning districts and uses.
The district is intended to accommodate large-scale campus-style developments, owned and operated by governmental or nonprofit entities, consisting of multiple structures or facilities, which may serve multiple purposes and provide multiple services to the community.
Permitted and conditional uses shall be developed and operated in a manner that promotes and protects the health, safety, and general welfare of all adjacent and nearby planning districts and uses. Additionally, conditional uses shall be allowed provided that the use is developed and operated in a manner that is consistent with the intent of the planning district, and that promotes and protects the

health, safety, and general welfare of all adjacent and nearby planning districts and uses.
The district may be applied to land that is able to accommodate large-scale campus-style development and operation of religious institutions, schools, public parks, and related uses, as follows:
- **Contiguous land one and one-half acre in size or greater;**
- **Access to a collector or arterial street;**
- **Adequate public facilities are available to the property.**

Finding:
Plan Map Amendment: *The proposed amendment would rezone the subject site to High Density High Rise (RH-HR) from the current zoning of Institutional (IN) and Medium Low Density Residential (RML). On page 14 of the narrative, the applicant stated the removal of the ±8.2-acres of Institutional land will not compromise the ability of the Horizon Church and School to optimize the use of their land and the services they provide. The applicant cited the 2019 Housing Needs Analysis and Economic Opportunities Analysis which identified the surplus of existing RML and IN zoning in the City of Tualatin. The applicant's narrative also provided additional background information regarding the subject site. Prior to annexation to the City of Tualatin, Washington County approved a Master Plan in 2006 for the church and school property. The church has determined that their needs and the realization of the Master Plan can be met on a more compact portion of their property. This provides the opportunity to rezone and develop the remainder of the property with multifamily housing. The proposed plan map amendment would change the zoning designation of the subject site from Medium Low Density Residential (RML) and Institutional (IN) to High Density High Rise (RH-HR). This change would allow a maximum of 30 units per acre for household living uses. Tualatin's 2019 Housing Needs Analysis identified a deficit of land zoned RH-HR as opposed to a surplus of land zoned RML and IN.*

The High Density High Rise planning district is intended to support a wide range of housing types at the greatest density of household living in areas with the greatest access to amenities. The Comprehensive Plan does not define what qualifies as an amenity. The subject site is located near a variety of existing schools and other institutional uses, the site of a future City park, future employment opportunities in the Basalt Creek Planning Area and Trimet bus route 96 that runs along SW Boones Ferry Road.

On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the plan text and plan map amendments to the City Council. The Planning Commission found that the proposed text and map amendments would not be consistent with the objectives of Comprehensive Plan Chapter 10 for the High Density High Rise Planning District. The Planning Commission found the location of the proposed plan map amendment was not in a location to support housing at the greatest density of household living with the greatest access to amenities. Planning Commissioner comments are attached as Exhibit V.

Public comments have been submitted (Exhibit W) that state the project site does not fulfill the purpose of the RH-HR zone. Commenters have expressed the site does not have the greatest access to amenities.

The applicant provided a supplemental memorandum (Exhibit D) that stated the Tualatin Development Code does not define what qualifies as an amenity. The applicant stated that "access to amenities" is not an approval criterion for the applications. The memorandum argued that the Comprehensive Plan provides a section that generally describes the purpose of each planning district, but those are generalized provisions that are non-binding and not a basis for denying the application. The applicant provided the following list of services and corresponding map (Exhibit D) that are available near the subject site; TriMet Route 96, places of worship (Horizon Church, Bridge NW Church), recreational facilities (Horizon sports fields, Tualatin Swim Center, etc), future park west of Boones Ferry Rd, Tualatin Valley Fire and Rescue Station 56 and

commercial uses (future neighborhood commercial, existing large retail, dining and services. The applicant also stated the project is planning to provide amenities to onsite residents including open spaces, a pool, a dog park and a clubhouse for community gatherings.

Plan Text Amendment: *The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

E: Tualatin Development Code

Chapter 32: Procedures

TDC 32.010. - Purpose and Applicability.

(2) Applicability of Review Procedures. All land use and development permit applications and decisions, will be made by using the procedures contained in this Chapter. The procedure "type" assigned to each application governs the decision-making process for that permit or application. There are five types of permit/application procedures as described in subsections (a) through (e) below. Table 32-1 lists the City's land use and development applications and corresponding review procedure(s).

> **(d)Type IV-A Procedure (Quasi-Judicial Review—City Council Public Hearing). Type IV-A procedure is used when the standards and criteria require discretion, interpretation, or policy or legal judgment and is the procedure used for site-specific land use actions initiated by an applicant. Type IV-A decisions are made by the City Council and require public notice and a public hearing. Appeals of Type IV-A decisions are heard by the Land Use Board of Appeals (LUBA).**

(3) Determination of Review Type. Unless specified in Table 32-1, the City Manager will determine whether a permit or application is processed as Type I, II, III, IV-A or IV-B based on the descriptions above. Questions regarding the appropriate procedure will be resolved in favor of the review type providing the widest notice and opportunity to participate. An applicant may choose to elevate a Type I or II application to a higher numbered review type, provided the applicant pays the appropriate fee for the selected review type.

Table 32-1—Applications Types and Review Procedures

Application/Action	Procedure Type	Decision Body*	Appeal Body*	Pre-Application Conference Required	Neighborhood/ Developer Mtg Required	Applicable Code Chapter
Plan Amendments						
• Map or Text Amendments for a specific property	IV-A	CC	LUBA	Yes	Yes	TDC 33.070

*** City Council (CC); Planning Commission (PC); Architectural Review Board (ARB); City Manager or designee (CM); Land Use Board of Appeals (LUBA).**

Finding:

The proposed plan map and plan text amendment applications are subject to the Type IV-A procedures according to Table 32-1. Both applications have been processed according to the applicable code for Type IV-A procedures. Any future development or construction will be reviewed under a separate land use application.

TDC 32.020. - Procedures for Review of Multiple Applications.

Multiple applications processed individually require the filing of separate applications for each land use action. Each application will be separately reviewed according to the applicable procedure type and processed sequentially as follows:

(1) Applications with the highest numbered procedure type must be processed first;

(2) Applications specifically referenced elsewhere in the TDC as to the particular order must be processed in that order; and

(3) Where one land use application is dependent on the approval of another land use application, the land use application upon which the other is dependent must be processed first (e.g., a conditional use permit is subject to prior approval before architectural review).

Finding:

Public comment was received requesting clarification of the procedure for reviewing both the Plan Text Amendment and Plan Map Amendment (Exhibit W). Because the Plan Map Amendment to RH-RH relies on the removal of the locational restriction found in Chapter 44 that would be facilitated by approval of the Plan Text Amendment, the Plan Map Amendment is therefore dependent on the approval of the Plan Text Amendment. As such the land use application upon which the other is dependent (the Plan Text Amendment) must be processed first. Therefore, although the applicant has requested Council consideration of both applications, the Council will be required to make a decision on the Plan Text Amendment, thus completing the process of that application, before moving on to making a decision on the Plan Map Amendment in order to be consistent with the above criteria.

TDC 32.030. - Time to Process Applications.

(1)Time Limit—120-day Rule. The City must take final action on all Type II, Type III, and Type IV-A land use applications, as provided by ORS 227.178, including resolution of all local appeals, within 120 days after the application has been deemed complete under TDC 32.160, unless the applicant provides written request or consent to an extension in compliance with ORS 227.178. (Note: The 120-day rule does not apply to Type IV-B (Legislative Land Use) decisions.)

(3)Time Periods. "Days" means calendar days unless otherwise specified. In computing time periods prescribed or allowed by this Chapter, the day of the act or event from which the designated period of time begins is not included. The last day of the period is included, unless it is a Saturday, Sunday, or a legal holiday, in which case the period runs until the end of the next day that is not on a weekend or City recognized legal holiday.

Finding:

The proposed plan map amendment and plan text amendments are an amendment to the City's Comprehensive Plan and Tualatin Development Code, the 120-day rule portion of ORS 227.178 is not applicable.

TDC 32.110. - Pre-Application Conference.

(1) Purpose of Pre-Application Conferences. Pre-application conferences are intended to familiarize applicants with the requirements of the TDC; to provide applicants with an opportunity discuss proposed projects in detail with City staff; and to identify approval criteria, standards, and procedures prior to filing a land use application. The pre-application conference is intended to be a tool to assist applicants in navigating the land use process, but is not intended to be an exhaustive review that identifies or resolves all potential issues, and does not bind or preclude the City from enforcing any applicable regulations or from applying regulations in a manner differently than may have been indicated at the

time of the pre-application conference.
(2) When Mandatory. Pre-application conferences are mandatory for all land use actions identified as requiring a pre-application conference in Table 32-1. An applicant may voluntarily request a pre-application conference for any land use action even if it is not required.
(3) Timing of Pre-Application Conference. A pre-application conference must be held with City staff before an applicant submits an application and before an applicant conducts a Neighborhood/Developer meeting.
(4) Application Requirements for Pre-Application Conference.
(a) Application Form. Pre-application conference requests must be made on forms provided by the City Manager.
[…]

Finding:
A Pre-Application meeting is mandatory for plan map and text amendment applications. The applicant participated in a Pre-Application meeting on July 13, 2022, and submitted their application approximately six months later on January 11, 2023.

TDC 32.120. - Neighborhood/Developer Meetings.
(1) Purpose. The purpose of this meeting is to provide a means for the applicant and surrounding property owners to meet to review a development proposal and identify issues regarding the proposal so they can be considered prior to the application submittal. The meeting is intended to allow the developer and neighbors to share information and concerns regarding the project. The applicant may consider whether to incorporate solutions to these issues prior to application submittal.
(2) When Mandatory. Neighborhood/developer meetings are mandatory for all land use actions identified in Table 32-1 as requiring a neighborhood/developer meeting. An applicant may voluntarily conduct a neighborhood/developer meeting even if it is not required and may conduct more than one neighborhood/developer meeting at their election.
(3) Timing. A neighborhood/developer meeting must be held after a pre-application meeting with City staff, but before submittal of an application.
(4) Time and Location. Required neighborhood/developer meetings must be held within the city limits of the City of Tualatin at the following times:
(a) If scheduled on a weekday, the meeting must begin no earlier than 6:00 p.m.
(b) If scheduled on a weekend, the meeting must begin between 10:00 a.m. and 6:00 p.m.
(5) Notice Requirements.
(a) The applicant must provide notice of the meeting at least 14 calendar days and no more than 28 calendar days before the meeting. The notice must be by first class mail providing the date, time, and location of the meeting, as well as a brief description of the proposal and its location. The applicant must keep a copy of the notice to be submitted with their land use application.
(b) The applicant must mail notice of a neighborhood/developer meeting to the following persons:
(i) All property owners within 1,000 feet measured from the boundaries of the subject property;
(ii) All property owners within a platted residential subdivision that is located within 1,000 feet of the boundaries of the subject property. The notice area includes the entire subdivision and not just those lots within 1,000 feet. If the residential subdivision is one of two or more individually platted phases sharing a single subdivision name, the notice area need not include the additional phases; and
(iii) All designated representatives of recognized Citizen Involvement Organizations as

established in TMC Chapter 11-9.

(c) The City will provide the applicant with labels for mailing for a fee.

(d) Failure of a property owner to receive notice does not invalidate the neighborhood/developer meeting proceedings.

(6) Neighborhood/Developer Sign Posting Requirements. The applicant must provide and post on the subject property, at least 14 calendar days before the meeting. The sign must conform to the design and placement standards established by the City for signs notifying the public of land use actions in TDC 32.150.

(7)Neighborhood/Developer Meeting Requirements. The applicant must have a sign-in sheet for all attendees to provide their name, address, telephone number, and email address and keep a copy of the sign-in sheet to provide with their land use application. The applicant must prepare meeting notes identifying the persons attending, those commenting and the substance of the comments expressed, and the major points that were discussed. The applicant must keep a copy of the meeting notes for submittal with their land use application.

Finding:

The applicant provided evidence that a Neighborhood/Developer Meeting was held on October 25, 2022 that discussed the proposed plan map and plan text amendments. The applicant provided documentation of sign posting and notification in compliance with Section 32.120 in Exhibit K.

Section 32.130 – Initiation of Applications.

(1) Type I, Type II, Type III, and Type IV-A Applications. Type I, Type II, Type III, and Type IV-A applications may be submitted by one or more of the following persons:

(a) The owner of the subject property;

(b) The contract purchaser of the subject property, when the application is accompanied by proof of the purchaser's status as such and by the seller's written consent;

(c) A lessee in possession of the property, when the application is accompanied by the owners' written consent; or

(d) The agent of any of the foregoing, when the application is duly authorized in writing by a person authorized to submit an application by paragraphs (a), (b) or (c) of this subsection, and accompanied by proof of the agent's authority.

[…]

Finding:

The applicant has provided a title report, included as Exhibit K, showing Horizon Community Church and 9300 SW Norwood Road OR LLC to be the current owners of the subject site. The applications have been submitted by the property owners and contract purchasers of all properties affected by the proposed plan map and text amendments.

Section 32.140 – Application Submittal.

(1) Submittal Requirements. Land use applications must be submitted on forms provided by the City. A land use application may not be accepted in partial submittals. All information supplied on the application form and accompanying the application must be complete and correct as to the applicable facts. Unless otherwise specified, all of the following must be submitted to initiate completeness review under TDC 32.160:

(a) A completed application form. The application form must contain, at a minimum, the following information:

(i) The names and addresses of the applicant(s), the owner(s) of the subject property, and any authorized representative(s) thereof;
(ii) The address or location of the subject property and its assessor's map and tax lot number;
(iii) The size of the subject property;
(iv) The comprehensive plan designation and zoning of the subject property;
(v) The type of application(s);
(vi) A brief description of the proposal; and
(vii) Signatures of the applicant(s), owner(s) of the subject property, and/or the duly authorized representative(s) thereof authorizing the filing of the application(s).

(b) A written statement addressing each applicable approval criterion and standard;
(c) Any additional information required under the TDC for the specific land use action sought;
(d) Payment of the applicable application fee(s) pursuant to the most recently adopted fee schedule;
(e) Recorded deed/land sales contract with legal description.
(f) A preliminary title report or other proof of ownership.
(g) For those applications requiring a neighborhood/developer meeting:
(i) The mailing list for the notice;
(ii) A copy of the notice;
(iii) An affidavit of the mailing and posting;
(iv) The original sign-in sheet of participants; and
(v) The meeting notes described in TDC 32.120(7).
(h) A statement as to whether any City-recognized Citizen Involvement Organizations (CIOs) whose boundaries include, or are adjacent to, the subject property were contacted in advance of filing the application and, if so, a summary of the contact. The summary must include the date when contact was made, the form of the contact and who it was with (e.g. phone conversation with neighborhood association chairperson, meeting with land use committee, presentation at neighborhood association meeting), and the result;
(i) Any additional information, as determined by the City Manager, that may be required by another provision, or for any other permit elsewhere, in the TDC, and any other information that may be required to adequately review and analyze the proposed development plan as to its conformance to the applicable criteria;

(2) Application Intake. Each application, when received, must be date-stamped with the date the application was received by the City, and designated with a receipt number and a notation of the staff person who received the application.
(3) Administrative Standards for Applications. The City Manager is authorized to establish administrative standards for application forms and submittals, including but not limited to plan details, information detail and specificity, number of copies, scale, and the form of submittal

Finding:
The applicant submitted an application for PMA23-0001 and PTA23-0001 on January 11, 2023. The application was deemed complete on February 10, 2023. Comments from the Byrom CIO (Exhibit U) are included in response to the applicant's proposal. The other general land use submittal requirements were included with the application.

Section 32.150 - Sign Posting.
(1) When Signs Posted. Signs in conformance with these standards must be posted as follows:
(a) Signs providing notice of an upcoming neighborhood/developer meeting must be posted

prior to a required neighborhood/developer meeting in accordance with Section 32.120(6); and

(b) Signs providing notice of a pending land use application must be posted after land use application has been submitted for Type II, III and IV-A applications.

(2) Sign Design Requirements. The applicant must provide and post a sign(s) that conforms to the following standards:

(a) Waterproof sign materials;

(b) Sign face must be no less than eighteen (18) inches by twenty-four (24) inches (18" x 24"); and

(c) Sign text must be at least two (2) inch font.

(3) On-site Placement. The applicant must place one sign on their property along each public street frontage of the subject property. (Example: If a property adjoins four public streets, the applicant must place a sign at each of those public street frontages for a total of four signs). The applicant cannot place the sign within public right of way.

(4) Removal. If a sign providing notice of a pending land use application disappears prior to the final decision date of the subject land use application, the applicant must replace the sign within fortyeight (48) hours of discovery of the disappearance or of receipt of notice from the City of its disappearance, whichever occurs first. The applicant must remove the sign no later than fourteen (14) days after:

(a) The meeting date, in the case of signs providing notice of an upcoming neighborhood/developer meeting; or

(b) The City makes a final decision on the subject land use application, in the case of signs providing notice of a pending land use application.

Finding:

The applicant provided certification, included as Exhibit K, that signs for the plan map and text amendment applications in conformance with Section 32.150 were placed on site.

Section 32.160 – Completeness Review.

(1) Duration. Except as otherwise provided under ORS 227.178, the City Manager must review an application for completeness within 30 days of its receipt.

(2) Considerations. Determination of completeness will be based upon receipt of the information required under TDC 32.140 and will not be based on opinions as to quality or accuracy. Applications that do not respond to relevant code requirements or standards can be deemed incomplete. A determination that an application is complete indicates only that the application is ready for review on its merits, not that the City will make a favorable decision on the application.

(3) Complete Applications. If an application is determined to be complete, review of the application will commence.

(4) Incomplete Applications. If an application is determined to be incomplete, the City Manager must provide written notice to the applicant identifying the specific information that is missing and allowing the applicant the opportunity to submit the missing information. An application which has been determined to be incomplete must be deemed complete for purposes of this section upon receipt of:

(a) All of the missing information;

(b) Some of the missing information and written notice from the applicant that no other information will be provided; or

(c) Written notice from the applicant that none of the missing information will be provided.

(5) Vesting. If an application was complete at the time it was first submitted, or if the applicant submits additional required information within 180 days of the date the application was first submitted, approval or denial of the application must be based upon the standards and criteria that were in effect at the time the application was first submitted.

(6) Void Applications. An application is void if the application has been on file with the City for more than 180 days and the applicant has not provided the missing information or otherwise responded, as provided in subsection (4) of this section.
[…]

Finding:
The applicant submitted an application for PMA23-0001 and PTA 23-0001 on January 11, 2023. The applications were deemed complete on February 10, 2023.

TDC 32.240. - Type IV-A Procedure (Quasi-Judicial Review—City Council Public Hearing).
Type IV-A decisions are quasi-judicial decisions made by the City Council after a public hearing. A hearing under these procedures provides a forum to apply standards to a specific set of facts to determine whether the facts conform to the applicable criteria and the resulting determination will directly affect only a small number of identifiable persons. Except as otherwise provided, the procedures set out in this section must be followed when the subject matter of the evidentiary hearing would result in a quasi-judicial decision. City Council decisions may be appealed to the state Land Use Board of Appeals pursuant to ORS 197.805—197.860.
(1) *Submittal Requirements.* Type IV-A applications must include the submittal information required by TDC 32.140(1).
(2) *Determination of Completeness.* After receiving an application for filing, the City Manager will review the application will for completeness in accordance with TDC 32.160.
(3) Written Notice of Public Hearing—Type IV-A. Once the application has been deemed complete, the City must mail by regular first class mail Notice of a Public Hearing to the following individuals and agencies no fewer than 20 days before the hearing.
(a) Recipients:
(i) The applicant and, the owners of the subject property;
(ii) All property owners within 1,000 feet measured from the boundaries of the subject property;
(iii) All property owners within a platted residential subdivision that is located within 1,000 feet of the boundaries of the subject property. The notice area includes the entire subdivision and not just those lots within 1,000 feet. If the residential subdivision is one of two or more individually platted phases sharing a single subdivision name, the notice area need not include the additional phases;
(iv) All recognized neighborhood associations within 1,000 feet from the boundaries of the subject property;
(v) All designated representatives of recognized Citizen Involvement Organizations as established in TMC Chapter 11-9;
(vi) Any person who submits a written request to receive a notice;
(vii) Any governmental agency that is entitled to notice under an intergovernmental agreement entered into with the City and any other affected agencies, including but not limited to: school districts; fire district; where the project either adjoins or directly affects a state highway, the Oregon Department of Transportation; and where the project site would access a County road or otherwise be subject to review by the County, then the County; and Clean Water Services; Tri Met; and, ODOT Rail Division and the railroad company if a railroad-highway grade crossing provides or will provide the only access to the subject property. The failure of another agency to respond with written comments on a pending application does not invalidate an action or permit approval made by the City under this Code;

(viii) Utility companies (as applicable); and,
(ix) Members of the City Council.

(b) The Notice of a Public Hearing, at a minimum, must contain all of the following information:
(i) The names of the applicant(s), any representative(s) thereof, and the owner(s) of the subject property;
(ii) The street address if assigned, if no street address has been assigned then Township, Range, Section, Tax Lot or Tax Lot ID;
(iii) The type of application and a concise description of the nature of the land use action;
(iv) A list of the approval criteria by TDC section for the decision and other ordinances or regulations that apply to the application at issue;
(v)Brief summary of the local decision making process for the land use decision being made and a general explanation of the requirements for submission of testimony and the procedure for conduct of hearings;
(vi) The date, time and location of the hearing;
(vii) Disclosure statement indicating that if any person fails to address the relevant approval criteria with enough detail, he or she may not be able to appeal to the Land Use Board of Appeals on that issue, and that only comments on the relevant approval criteria are considered relevant evidence;
(viii) The name of a City representative to contact and the telephone number where additional information may be obtained;
(ix) Statement that the application and all documents and evidence submitted to the City are in the public record and available for review, and that copies can be obtained at a reasonable cost from the City; and
(x) Statement that a copy of the staff report will be available for inspection at no cost at least seven days prior to the hearing and will be provided at reasonable cost.

(c) Failure of a person or agency to receive a notice, does not invalidate any proceeding in connection with the application, provided the City can demonstrate by affidavit that required notice was given.

(4) Additional Notice Requirements for Certain Type IV-A Application Types. The following additional notice requirements apply to Type IV-A Hearings where the City Council will be considering the application or removal of a Historic Landmark Designation or a Plan Text or Map Amendment for a particular property or discrete set of properties.

(a) The City Manager will notify in writing the Oregon Department of Land Conservation and Development (DLCD) in accordance with the minimum number of days required by ORS Chapter 197.
(b) At least 14 calendar days before the scheduled City Council public hearing date, public notice must be provided by publication in a newspaper of general circulation in the City.
(c) At least 14 calendar days before the scheduled City Council public hearing date, public notice must be posted in two public and conspicuous places within the City.

Finding:

The first evidentiary public hearing before the City Council will be held on June 12, 2023 and will follow the Quasi-Judicial review process. After submittal and completeness review as required by this section, a notice of public hearing for Type IV-A application for PMA23-0001 and PTA23-0001 was mailed by city staff on March 17, 2023, and contained the information required by this section, as attached in Exhibit O. The Oregon Department of Land Conservation was notified prior to the 35-day notice period on March 20, 2023, attached in Exhibit O. Public notice has been provided in the Tualatin Times during the weeks of April 6, 2023 and April 13, 2023, attached in Exhibit O. Public notice was posted in two public places within the City

on March 17, 2023, attached as Exhibit O. Comments have been received and included in Exhibit S, U, V and W.

(5) Conduct of the Hearing—Type IV-A.
The Mayor (or Mayor Pro Tem) must follow the order of proceedings set forth below. These procedures are intended to provide all interested persons a reasonable opportunity to participate in the hearing process and to provide for a full and impartial hearing on the application before the body. Questions concerning the propriety or the conduct of a hearing will be addressed to the chair with a request for a ruling. Rulings from the Mayor must, to the extent possible, carry out the stated intention of these procedures. A ruling given by the Mayor on such question may be modified or reversed by a majority of those members of the decision body present and eligible to vote on the application before the body. The procedures to be followed by the Mayor in the conduct of the hearing are as follows:

(a) At the commencement of the hearing, the Mayor (or designee) must state to those in attendance all of the following information and instructions:

(i) The applicable approval criteria by Code Chapter that apply to the application;

(ii) Testimony and evidence must concern the approval criteria described in the staff report, or other criteria in the comprehensive plan or land use regulations that the person testifying believes to apply to the decision;

(iii) Failure to raise an issue with sufficient detail to give the City Council and the parties an opportunity to respond to the issue, may preclude appeal to the state Land Use Board of Appeals on that issue;

(iv) At the conclusion of the initial evidentiary hearing, the City Council must deliberate and make a decision based on the facts and arguments in the public record; and

(v) Any participant may ask the City Council for an opportunity to present additional relevant evidence or testimony that is within the scope of the hearing; if the City Council grants the request, it will schedule a date to continue the hearing as provided in TDC 32.240(5)(e), or leave the record open for additional written evidence or testimony as provided TDC 32.240(5)(f).

(b) The public is entitled to an impartial decision body as free from potential conflicts of interest and pre-hearing ex parte (outside the hearing) contacts as reasonably possible. Where questions related to ex parte contact are concerned, members of the City Council must follow the guidance for disclosure of ex parte contacts contained in ORS 227.180. Where a real conflict of interest arises, that member or members of the City Council must not participate in the hearing, except where state law provides otherwise. Where the appearance of a conflict of interest is likely, that member or members of the City Council must individually disclose their relationship to the applicant in the public hearing and state whether they are capable of rendering a fair and impartial decision. If they are unable to render a fair and impartial decision, they must be excused from the proceedings.

(c) Presenting and receiving evidence.

(i) The City Council may set reasonable time limits for oral presentations and may limit or exclude cumulative, repetitious, irrelevant, or personally derogatory testimony or evidence;

(ii) No oral testimony will be accepted after the close of the public hearing. Written testimony may be received after the close of the public hearing only as provided by this section; and

(iii) Members of the City Council may visit the property and the surrounding area, and may use information obtained during the site visit to support their decision, if the

information relied upon is disclosed at the beginning of the hearing and an opportunity is provided to dispute the evidence.

(d) The City Council, in making its decision, must consider only facts and arguments in the public hearing record; except that it may take notice of facts not in the hearing record (e.g., local, state, or federal regulations; previous City decisions; case law; staff reports). Upon announcing its intention to take notice of such facts in its deliberations, it must allow persons who previously participated in the hearing to request the hearing record be reopened, as necessary, to present evidence concerning the newly presented facts.

(e) If the City Council decides to continue the hearing, the hearing must be continued to a date that is at least seven days after the date of the first evidentiary hearing (e.g., next regularly scheduled meeting). An opportunity must be provided at the continued hearing for persons to present and respond to new written evidence and oral testimony. If new written evidence is submitted at the continued hearing, any person may request, before the conclusion of the hearing, that the record be left open for at least seven days, so that he or she can submit additional written evidence or arguments in response to the new written evidence. In the interest of time, after the close of the hearing, the decision body may limit additional testimony to arguments and not accept additional evidence.

(f) If the City Council leaves the record open for additional written testimony, the record must be left open for at least seven days after the hearing. Any participant may ask the decision body in writing for an opportunity to respond to new evidence (i.e., information not disclosed during the public hearing) submitted when the record was left open. If such a request is filed, the decision body must reopen the record, as follows:

(i) When the record is reopened to admit new evidence or arguments (testimony), any person may raise new issues that relate to that new evidence or testimony;

(ii) An extension of the hearing or record granted pursuant to this section is subject to the limitations of TDC 32.030(1) (ORS 227.178—120-day rule), unless the applicant waives his or her right to a final decision being made within 120 days of filing a complete application; and

(iii) If requested by the applicant, the City Council must grant the applicant at least seven days after the record is closed to all other persons to submit final written arguments, but not evidence, provided the applicant may expressly waive this right.

(6) Notice of Adoption of a Type IV-A Decision. Notice of Adoption must be provided to the property owner, applicant, and any person who provided testimony at the hearing or in writing. The Type IV-A Notice of Adoption must contain all of the following information:

(a) A description of the applicant's proposal and the City's decision on the proposal, which may be a summary, provided it references the specifics of the proposal and conditions of approval in the public record;

(b) The address or other geographic description of the property proposed for development, including a map of the property in relation to the surrounding area;

(c) A statement a statement that a copy of the decision and complete case file, including findings, conclusions, and conditions of approval, if any, is available for review and how copies can be obtained;

(d) The date the decision becomes final; and

(e)The notice must include an explanation of rights to appeal a City Council decisions to the state Land Use Board of Appeals pursuant to ORS 197.805—197.860.

(7) Effective Date of a Type IV-A Decision.

(a) The written order is the final decision on the application.

(b) The date of the order is the date it is mailed by the Mayor (or designee) certifying its approval by the decision body.
(c) Appeal of a IV-A City Council decision is to the State Land Use Board of Appeals pursuant to ORS 197.805—197.860.

Finding:
The City Council hearing will be conducted according to these requirements. Staff notes that the first evidentiary hearing was held on May 22, 2023, at which the Council continued consideration of the subject amendments to June 12, 2023. Notice of Adoption of a Type IV-A Decision and any appeal will follow the requirements of this section.

Chapter 33: Applications and Approval Criteria

Section 33.070 Plan Amendments

(1) Purpose. To establish a process for the review of proposed amendments to the Zone Standards of the Tualatin Development Code and to the Text or the Plan Map of the Tualatin Comprehensive Plan.

(2) Applicability. Quasi-judicial amendments may be initiated by the City Council, the City staff, or by a property owner or person authorized in writing by the property owner. Legislative amendments may only be initiated by the City Council.

(3) Procedure Type.
(a) Map or text amendment applications which are quasi-judicial in nature (e.g. for a specific property or a limited number of properties) is subject to Type IV-A Review in accordance with TDC Chapter 32.

(4) Specific Submittal Requirements. An application for a plan map or text amendment must comply with the general submittal requirements in TDC 32.140 (Application Submittal).

Finding:
The proposed plan map and plan text amendments are quasi-judicial in nature and has been processed according to the Type IV-A procedures discussed above.

(5) Approval Criteria.
(a) Granting the amendment is in the public interest.

Finding:
Plan Map Amendment: *Page 21 of the applicant's provided narrative stated the proposed map amendment serves the public interest by accommodating the housing, employment and transportation needs of the community as identified in the goals and policies of the Comprehensive Plan. The applicant cited the City's most recent Housing Needs Analysis (HNA) conducted in 2019 stating the lack of vacant units and continued demand for housing will drive the need to provide additional multifamily housing, which is expected to be 45% of Tualatin's future housing stock. Providing housing of various densities and levels of affordability are key housing needs addressed in Tualatin's HNA. From the HNA, the applicant cites that nearly 93% of the 23,800 people who work in Tualatin commute from outside of the city. A recommendation of the HNA was to provide housing closer to workplaces and thereby reducing transportation issues associated with long commutes. The submitted narrative references Tualatin's Basalt Creek Planning Area and its employment lands which are located near the subject site. The applicant stated the industrial lands and anticipated employment capacity would not be affected by the proposed zoning change from the current IN and RML zoning to RH-HR zoning, and that the plan map amendment would provide additional housing near the anticipated employment zone.*

The applicant has also submitted a supplemental memorandum (Exhibit D) that provided an additional voluntary condition to commit to restrict 10% of the proposed units so they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI for 15 years. In Exhibit D, the applicant stated the need for workforce/middle income housing in Tualatin. The applicant cited ECONorthwest's draft Equitable Funding Action Plan dated April 2023 that said approximately 47% of renters in Tualatin are cost burdened compared to 17% of homeowners. The applicant stated the project will include housing that is affordable to middle income households and a benefit to increasing the supply of middle income housing is to bridge the gap between income restricted affordable housing and home ownership.

The applicant provided information pertaining to utility and transportation infrastructure for the plan map and text amendments outlined in the Transportation Impact Analysis located in Exhibit E and the Utility Capacity Analysis located in Exhibit H. The applicant proposed the addition of a traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection to mitigate existing traffic impacts and the future impact of development on the subject site. Transportation and utilities in relation to the proposed amendments are further addressed in Section B: Oregon Administrative Rules and TDC 33.070(5)(f)(h)(i).

The proposed plan map amendment would change the subject site zoning from Institutional (IN) and Medium Low Density Residential (RML) to High Density High Rise (RH-HR). The proposed map amendment could allow for the construction of up to 276 housing units on the ±9.2-acre site, and would provide additional multifamily housing opportunities near an anticipated employment zone.

Comprehensive Plan goals and policies serve as the adopted expression of the public interest. As identified in Section D, above, the applicant has provided evidence that the proposed Map Amendment would satisfy several existing Plan policies and goals, and therefore argues the change would be in the public interest.

Members of the Byrom Community Involvement Organization (CIO) Executive Board and members of a Joint Residential CIO Executive Board provided comments in response to TDC 33.070(5)(a) (Exhibit U) that stated as representatives of all the Tualatin CIOs representing residents of the city, they identify that the proposed amendments are not in the public interest. Both the Byrom CIO and additional public commenters (Exhibit W) have suggested that the public interest would be better served by rezoning other alternative sites RH-HR. Comments have suggested several alternative locations in downtown Tualatin that would have walkable access to restaurants, the WES Commuter Rail, the public library, etc.

On April 20, 2023, the Tualatin Planning Commission voted 4-1 to recommend denial of both the plan text and plan map amendments to the City Council. The Tualatin Planning Commission consciously considered if granting the proposed amendments would be in the public interest. The Planning Commission concluded that the proposed text and map amendments would not be in the best interest of the public. The Planning Commission concluded the location of the proposed plan map amendment was not consistent with the purpose statement for the RH-HR zone in Chapter 10 of the Comprehensive Plan. Planning Commissioner comments are attached in Exhibit V.

The applicant provided a supplemental memorandum (Exhibit D) that stated the Tualatin Development Code does not define what qualifies as an amenity. The applicant stated that "access to amenities" is not an approval criterion for the applications. The memorandum argued that the Comprehensive Plan provides a section that generally describes the purpose of each planning district, but those are generalized provisions that are non-binding and not a basis for denying the application. The applicant has argued that the proposed location for RH-HR zoning does not directly conflict with the purpose statement given its

ambiguity, and therefore, the proposed zoning is otherwise consistent with the public interest. The applicant's memorandum also provided the following response to comments received; The City's adopted Buildable Land Inventory Map and the City's Buildable Lands Inventory of the HNA, which have concluded that existing RH-HR zoned area in downtown was deemed unbuildable. Other vacant parcels downtown with zoning that allows multifamily development remain undeveloped because there is a lack of willing sellers. The memorandum stated there is broad community interest to see more investment in the downtown core of the City, including mixed-use and higher density residential development, this application will not disincentivize downtown redevelopment from happening. The demand for housing is great and permitting apartments elsewhere in the City will not prohibit future development of the downtown.

Plan Text Amendment: *There are existing properties identified for RH-HR zoning on the City's Comprehensive Map. The current RH-HR area is generally located south of SW Tualatin Road and is constrained by public ownership, lack of direct public access and environmental factors such as the existing wetlands and floodplains. The HNA has considered the land to be unbuildable and is not considered available for additional housing. The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered buildable, and in effect precludes practical application of the RH-HR zone. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

Public comments (Exhibit W) have been received in opposition amendments that noted concerns over the protection of public interest.

The applicant provided a supplemental memorandum (Exhibit D) in response which stated the RH-HR zone description unfortunately uses the term "high rise." Typically, a density of 30 units to the acre (the maximum allowed in this zone) can be achieved in four story buildings. Four story buildings are considered "low rise" under the building code. This application includes a Text Amendment to limit the height of this site to four stories, or 50 feet, whichever is less. The RH-HR density maximum, which provides the greatest efficiency and affordability, is still achievable with this height limitation. The four-story height also preserves area for a tree buffer along Norwood and for sufficient parking with a 1.65 parking ratio that exceeds the City's minimum standards.

(b) The public interest is best protected by granting the amendment at this time.

Finding:

Plan Map Amendment*: Page 22 of the narrative submitted by the applicant stated the public interest is best protected by granting the amendment at this time due to Tualatin having few vacant lands with the ability to provide housing at the needed density established by the 2019 Housing Needs Analysis (HNA). The narrative continued to reference the HNA by stating the City would be challenged over the next 20 years to provide housing of all types, including market-rate multi-family housing. The applicant mentioned that allowing for increased density through the plan map amendment could help alleviate households' cost burdens by providing opportunities to add dwelling units to the housing market. The proposed plan map amendment would change the subject site zoning from Institutional (IN) and Medium Low Density Residential (RML) to High Density High Rise (RH-HR). The applicant stated the conversion of IN land to residential zoning protects the public interest by preserving employment lands in commercial and industrial zoning areas. The narrative referenced the Tualatin Economic Opportunities Analysis (Exhibit M) that was completed in 2019, which found there is low demand for land zoned IN in*

comparison to industrial, commercial, and residential zoning. The applicant went on to say, the City's HNA determined that the City has a 27-acre surplus of RML lands and a deficit of RH-HR lands. The conversion of RML lands to RH-HR specifically help address a previously identified, and thus already existing, deficient of land for needed housing. Despite the fact that there are other housing developments in various stages of approval and construction that will help meet the City's housing need, none are located or proposed to be located in the RH-RH zone. In addition, the applicant's proposal includes the installation of a traffic signal at SW Norwood Road and SW Boones Ferry Road. The applicant has also submitted a supplemental memorandum (Exhibit D) that provided an additional voluntary condition to commit to restrict 10% of the proposed units so they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years.

***Plan Text Amendment**: The proposed text amendment intends to limit the height of future buildings on the subject site to four stories or 50 feet (Exhibit C). The applicant has also proposed a 60-foot landscape buffer along SW Norwood Rd for additional screening. The narrative stated this would protect the public interest by ensuring compatibility with the surrounding aesthetics of neighborhoods and existing nearby structures.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board and members of a Joint Residential CIO Executive Board provided comments in response to TDC 33.070(5)(b) (Exhibit U) that stated the approved and in development housing units that have yet to be occupied and that these units are well in excess of the anticipated need of the city by 2040, it is not critical or necessary to change the restriction on residential high rises at this time. Furthermore, public interest would be harmed by granting the amendments, as traffic will worsen on Boones Ferry, adversely impacting quality of life. The CIO stated there should not be urgency for additional housing in Tualatin when compared to other cities. Additional public comments noted other concerns regarding protection of public interest (Exhibit W).

The applicant provided a supplemental memorandum (Exhibit D) that stated the goals and policies adopted in the Comprehensive Plan are what the City has determined are the issues and objectives that are considered to be in the public interest. Meaning, if an application for an amendment complies with the Comprehensive Plan, then it also is in the public interest and protects the public interest, so it meets the approval criteria. TDC 33.070(5)(a) and (b). Compliance with the Comprehensive Plan is a separate approval criterion. TDC 33.070(5)(c).The memorandum stated that due to the severe housing shortage and high housing costs statewide and locally, housing issues are a priority at all levels of government. In fact, the Oregon Governor has made housing production a statewide priority, signing Executive Order 23-02 on her first day of office. The applicant stated the City's Comprehensive Plan reflects this urgent need for housing, and includes goals, policies and strategies on housing supply, housing diversity, housing affordability, workforce housing, and others. In Exhibit C (attached) you will see an extensive list of policy documents targeted at housing. These policy documents direct as how the City will act in the public interest when considering how to create new opportunities for housing. As detailed below and through the materials, the proposal complies with each of the policies and action items, and is an opportunity for the City to implement its chosen policy direction.

(c) The proposed amendment is in conformity with the applicable objectives of the Tualatin Community Plan.

Finding:

As discussed above in Section D, the plan map amendment – application of the RH-HR zone to the subject property – has been identified by the applicant as being consistent with several existing goals and policies

of the Comprehensive Plan. The plan map amendment also meets the same applicable goals and policies of the Tualatin Community Plan in that it allows for the application of the RH-HR zone in a location that is considered buildable.

Members of the Byrom Community Involvement Organization (CIO) Executive Board and members of a Joint Residential CIO Executive Board provided comments in response to TDC 33.070(5)(c) (Exhibit U). The CIO argues that the Comprehensive Plan does not make any mention of building residential high rises outside of the downtown area. The CIO further argues that the subject site is not identified as a potential area for future high-density residential development. Additionally, the CIO and other public commenters (Exhibit W) argue that the Comprehensive Plan specified the RH-HR zone is to be in areas with the greatest access to amenities and argues that the subject site does not have the greatest access to amenities. Commenters have provided lists of alternative sites to zone RH-HR.

The applicant provided a supplemental memorandum (Exhibit D) that stated the Tualatin Development Code does not define what qualifies as an amenity. The applicant stated that "access to amenities" is not an approval criterion for the applications. The memorandum argued that the Comprehensive Plan provides a section that generally describes the purpose of each planning district, but those are generalized provisions that are non-binding and not a basis for denying the application. The applicant provided the following list of services and corresponding map (Exhibit D) that are available near the subject site; TriMet Route 96, places of worship (Horizon Church, Bridge NW Church), recreational facilities (Horizon sports fields, Tualatin Swim Center, etc), future park west of Boones Ferry Rd, Tualatin Valley Fire and Rescue Station 56 and commercial uses (future neighborhood commercial, existing large retail, dining and services. The applicant also stated the project is planning to provide amenities to onsite residents including open spaces, a pool, a dog park and a clubhouse for community gatherings.

(d) The following factors were consciously considered:

(i) The various characteristics of the areas in the City;

Finding:

Plan Map Amendment: *Page 22 of the applicant's narrative addressed the various characteristics of the area of the subject property. The site is located near public transportation bus lines, future goods and services, and employment areas. The site is in an area of growth and in close proximity to the Basalt Creek Employment Area which is expected to provide up to 2,300 jobs in the next 16 years. The subject site location would provide housing opportunities closer to future local workplaces in the Basalt Creek area. The applicant stated the subject site would allow for the provision of housing in a relatively undeveloped greenfield area without the reduction of housing stock or displacement of current residents. The proposed plan map amendment is not in an area with known environmental constraints, and would not be in need of environmental protection. The applicant provided a Transportation Impact Analysis including a Transportation Planning Rule analysis attached in Exhibit E. The report found that a traffic signal at the intersection of SW Norwood Road and SW Boones Ferry Road would be necessary even without the proposed apartment project due to the current conditions. With the addition of the traffic signal, the proposed zoning could be accommodated by the surrounding transportation network and frontage improvements.*

The applicant provided a memorandum from Johnson Economics (Exhibit M) that stated the subject location is advantageous in terms of site size and configuration, transportation access, multi-family housing will be in demand and market feasible at this location. The memorandum continued to state buildable residential sites of this size, and roughly rectangular are rare not just locally but in much of the Metro area.

This style of site is well suited for multi-family development, while low density development can more easily adjust to smaller and more irregular parcels. The Johnson Economics memorandum concluded the subject site and location are well-suited for multi-family housing, and the proposal is likely the "highest and best" economic use for a parcel of this size and configuration. The applicant has identified several characteristics of the area relative to the City's plans and goals for housing that it argues makes this location suitable for the type of housing that could be developed under the proposed amendment.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(i) (Exhibit U) arguing the proposed apartments on the subject site would not be in context with the neighborhood and would not match the characteristics of the community. The CIO stated the next nearest quasi residential structure of similar height is Marquis assisted living, a shorter, 3 story structure located 1.9 miles from the proposed development site at SW Boones Ferry and SW Sagert. The approved, though as of yet not constructed Plambeck Garden apartments, will be over 1000 feet from the nearest RML zoned structure. Creating a 50 foot, 4 story structure within less than 500 feet of single family homes, as proposed in the PMA, is without precedent in the Byrom CIO community, and no abutment of an RH-HR zone within 500 feet of RML single family structures as proposed by the PMA exists anywhere else in Tualatin. Other public testimony was received that also argues that the location is unsuitable (Exhibit W).

The applicant submitted a supplemental memorandum (Exhibit D) that stated the application provides the City a rare opportunity with a willing property owner who desires to add residential land to the City and help meet housing need. The memorandum stated the site has excellent access to Norwood Road (a Major Collector) and Boones Ferry Road (A Major Arterial) and it is compatible with adjacent uses (Church to the west and Horizon church and school to the east and south, Norwood Road and tree buffer between the site and the existing residential uses to the north, recently approved residential projects in the vicinity).

***Plan Text Amendment:** The proposed text amendment would allow the application of High Density High Rise (RH-HR) zone to an area that meets the above factors and is not in a floodplain. The proposed text amendment requests to limit the height of future buildings on the subject site to four stories or 50 feet (Exhibit C). The applicant argues that the proposed height limitation would reduce the visual impacts and characteristics of the future site improvements in surrounding areas.*

Public comments were received (Exhibit W) that express concerns that by allowing the RH-HR zoning designation to be applied to lands outside of Tualatin's downtown will "open the door" to high density high rise buildings throughout the city limits.

The applicant provided a supplemental memorandum (Exhibit D) which stated the approval of the proposed Text Amendment will not result in the construction of high-rises all over the City. Rather, the Text Amendment will remove the current locational requirement of the RH-HR zone that restricts the zone to a very small unbuildable part of the City. This will simply allow the City flexibility to locate higher density residential uses where it concludes that the approval criteria are met. A Map Amendment application, which is only approvable by the City Council, would need to be approved through a public process for each site where a rezoning is desired.

(ii) The suitability of the areas for particular land uses and improvements in the areas;

Finding:

***Plan Map Amendment:** Within the submitted narrative (Exhibit A), the applicant addressed the*

suitability of this particular geographic area on page 23 for the proposed land use which would be multi-family residential units. The applicant provided a Utility Capacity Analysis included as Exhibit H to address the proposed plan map amendment. The applicant noted nearby service and planned improvements to include water, sanitary sewer, stormwater, transportation and public transit. The services and improvements are reviewed in greater detail in Section 33.070(5)(i).

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(ii) (Exhibit U) that argue that the area is not suitable for use as a residential high rise due to the poor traffic infrastructure, an inadequate parking plan, a lack of access to amenities and a lack of support by public transportation. Other public testimony was received that also argue that the location is unsuitable (Exhibit W). Both the CIO and public commenters have argued that there are other sites within Tualatin that would be more suitable to the proposed project due to better access to existing amenities.

The applicant provided a memorandum from Johnson Economics (Exhibit M) that stated the subject location is advantageous in terms of site size and configuration, transportation access, multi-family housing will be in demand and market feasible at this location. The memorandum continued to state buildable residential sites of this size, and roughly rectangular are rare not just locally but in much of the Metro area. This style of site is well suited for multi-family development, while low density development can more easily adjust to smaller and more irregular parcels. The Johnson Economics memorandum concluded the subject site and location are well-suited for multi-family housing, and the proposal is likely the "highest and best" economic use for a parcel of this size and configuration. The applicant has identified several characteristics of the area relative to the City's plans and goals for housing that it argues makes this location suitable for the type of housing that could be developed under the proposed amendment. The applicant submitted a supplemental memorandum (Exhibit D) that stated the application provides the City a rare opportunity with a willing property owner who desires to add residential land to the City and help meet housing need. The memorandum stated the site has excellent access to Norwood Road (a Major Collector) and Boones Ferry Road (A Major Arterial) and it is compatible with adjacent uses (Church to the west and Horizon church and school to the east and south, Norwood Road and tree buffer between the site and the existing residential uses to the north, recently approved residential projects in the vicinity).

***Plan Text Amendment**: The proposed text amendment would allow the application of High Density High Rise (RH-HR) zone to an area that meets the above factors and is not in a floodplain. The locational factors of the current development code do not allow for a suitable area for RH-HR land uses. The proposed text amendment requests to limit the height of future buildings on the subject site to four stories or 50 feet (Exhibit C). The proposed height limitation would reduce the visual impacts and characteristics of the future site improvements in surrounding areas. The applicant provided a Utility Capacity Analysis included as Exhibit H to address the proposed plan text amendment. The applicant noted nearby service and planned improvements to include water, sanitary sewer, stormwater, transportation and public transit. The services and improvements are reviewed in greater detail in Section 33.070(5)(i).*

(iii) Trends in land improvement and development;

Finding:

***Plan Map Amendment:** The applicant's narrative (Exhibit A) cited the City's Housing Needs Analysis identified need for diverse housing choices and additional multifamily dwelling units on page 24. The surrounding areas are also experiencing housing development. The Autumn Sunrise subdivision is under*

development to the east of the subject site. Plambeck Gardens Apartments has completed the land use process to construct a 116 unit multi-family development southwest of the subject site. The applicant supplied a memorandum from Johnson Economics (Exhibit M) that compared the proposed project to the recently approved Plambeck Gardens apartments. The memorandum stated the proposed multi-family development would be very similar in form and density to Plambeck Gardens which is located roughly 500 feet to the south of the site. The applicant stated the proposed plan map amendment would provide additional housing opportunities in an area of the City currently experiencing growth. The applicant cited the City's most recent Housing Needs Analysis (HNA) conducted in 2019 stating the lack of vacant units and continued demand for housing will drive the need to provide additional multifamily housing, which is expected to be 45% of Tualatin's future housing stock. Providing housing of various densities and levels of affordability are key housing needs addressed in Tualatin's HNA.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(iii) (Exhibit U) that argue that there are no trends of building high rise apartments in any other areas of Tualatin, including presently in the only approved area downtown. High rise apartment projects should focus on the area where zoning is already approved before considering expanding the zoning area.

The applicant provided a supplemental memorandum (Exhibit D) which stated the 2019 HNA identified a goal of having at least 45% of new residential units be multifamily apartments in order to increase the availability of rental units within the City. The HNA identified that the RH-HR zone is a suitable zone for providing needed multifamily housing because that zone's allowed densities are an efficient use of a limited supply land. The memorandum stated the City has a current limited range of housing and the lack of apartments constructed in recent years. (Only three market rate projects of larger than 50 units have been approved in Tualatin since 2003. See Exhibit B.) Two-thirds of the City's existing housing stock is single-family detached housing, which typically is only available to those with higher incomes, especially because today's higher mortgage rates have significantly impacted home buying affordability.

***Plan Text Amendment:** The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the High Density High Rise (RH-HR) zoning to be permitted in a location that is considered buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

Public comments were received (Exhibit W) that the height of the proposed project would not match the development trends in the surrounding area.

The applicant provided a supplemental memorandum (Exhibit D) in response which stated the RH-HR zone description unfortunately uses the term "high rise." Typically, a density of 30 units to the acre (the maximum allowed in this zone) can be achieved in four story buildings. Four story buildings are considered "low rise" under the building code. This application includes a Text Amendment to limit the height of this site to four stories, or 50 feet, whichever is less. The RH-HR density maximum, which provides the greatest efficiency and affordability, is still achievable with this height limitation. The four-story height also preserves area for a tree buffer along Norwood and for sufficient parking with a 1.65 parking ratio that exceeds the City's minimum standards.

(iv) Property values;

Finding:
The applicant submitted a memorandum from Johnson Economics (Exhibit M) that stated the subject development is unlikely to have negative impacts on the property values of the surrounding properties. Page 9 of the memorandum also provided studies that have demonstrated that multifamily housing does not have an impact on the value of neighboring properties, and in many cases increased the value of adjacent homes.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(iv) (Exhibit U) that stated precedents that construction of a high rise apartment complex is associated with negative impacts on nearby single family home property values. Public comments (Exhibit W) have been received that note concerns over the property value of homes declining in the surrounding neighborhoods due to the proposed plan map and text amendments and future site development.

The applicant supplied Johnson Economics memorandum (Exhibit M) stated the new multi-family uses in the area (the subject site and Plambeck Gardens) should be expected to increase the value of nearby uses in the long run, as it increases the viability of more intensive development on those sites as well, if the property owners should choose to pursue it. This includes the adjacent high school site, and church site, though these users may not choose to sell their property for a very long time, if ever. Adding new households in an area also tends to attract new services and amenities to the area that can benefit the property values of everyone in the neighborhood.

(v) The needs of economic enterprises and the future development of the area; needed right-of-way and access for and to particular sites in the area;

Finding:
***Plan Map Amendment**: Page 25 of the submitted narrative stated that providing multifamily residential zoning in the proposed area relieves pressure to rezone other non-residential lands for the purpose of housing. The narrative added that an employment center with nearby residences could create an attractive environment for companies relocating to the Basalt Creek Planning Area. The subject site would be close to future employment centers and would provide the opportunity for employees to live nearer to their workplace. The applicant stated a future right-of-way dedication along SW Norwood Road would be provided to meet the short-term and long-term transportation improvement needs identified by the City and Washington County. Any future development would be reviewed through the Architectural Review process to address specific right-of-way and access needs for the site development.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(v) (Exhibit U) argued the Comprehensive Plan includes economic development of the Basalt Creek Planning area which did not include the Norwood property and there is no support for the creation of the Norwood high rise apartments having been factored into consideration. The CIO expressed interest in exploring mixed use zoning options.

***Plan Text Amendment:** The proposed text amendment would remove the zoning district locational language from the purpose statement of Chapter 44 of the Tualatin Development Code. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered*

buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.

Public comments were received (Exhibit W) that express concerns that by allowing the RH-HR zoning designation to be applied to lands outside of Tualatin's downtown will "open the door" to high density high rise buildings throughout the city limits.

The applicant provided a supplemental memorandum (Exhibit D) which stated the approval of the proposed Text Amendment will not result in the construction of high-rises all over the City. Rather, the Text Amendment will remove the current locational requirement of the RH-HR zone that restricts the zone to a very small unbuildable part of the City. This will simply allow the City flexibility to locate higher density residential uses where it concludes that the approval criteria are met. A Map Amendment application, which is only approvable by the City Council, would need to be approved through a public process for each site where a rezoning is desired.

(vi) Natural resources of the City and the protection and conservation of said resources;
(vii) Prospective requirements for the development of natural resources in the City;

Finding:
There are no mapped natural resources on the site affected by the plan map and text amendment. No physical development is proposed with this application for the plan map and text amendment. The subject site would be further examined for natural resources with future development of the site. Future development of the site would need to comply with local, regional, state, and federal requirements for the protection of air, water, and land resources.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(vii) (Exhibit U) that stated a forest was removed to build the neighbor development, Autumn Sunrise, and what remains of the forest is on the subject site. The comments stated the City has provided no evidence that protection and conservation of natural resources was considered in the proposed map amendment. The comments noted the proposed text amendment could have a reaching impact on natural resources through the city if it enables remaining natural land to be developed as high rise apartments. Public comments (Exhibit W) have been received in reference to the loss of trees along SW Norwood Road due to nearby development. Concerns have been raised regarding the habitats of local animals and birds. However, none of these features are listed as natural resources of the City.

The applicant voluntarily proposes to preserve the 60-foot-wide buffer of Douglas-fir trees south of Norwood Road. The applicant has also submitted a supplemental memorandum (Exhibit D) that provided additional voluntary conditions to build a sustainable apartment project that meets a US Green Building Council LEED green building standard. The memorandum stated a LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community. In addition, the applicant also proposed to construct 40 electric vehicle charging stations onsite.

(viii) The public need for healthful, safe, esthetic surroundings and conditions;

Finding:
Plan Map Amendment: *The proposed plan map amendment would change the subject site zoning*

and development standards from Institutional (IN) and Medium Low Density Residential (RML) to High Density High Rise (RH-HR). The proposed map amendment could allow for the construction of up to 276 housing units on the ±9.2-acre site. The applicant supplied a memorandum from Johnson Economics (Exhibit M) that stated the proposed multi-family development is compatible with neighboring uses. The memorandum provided the existing high school on the subject site produces traffic, noise, and other activity expected of an active daytime use. Multi-family development is often used as a buffer between active daytime uses, such as a school or commercial use, and neighboring low density residential. Multi-family zoning is a common "step down" land use between higher activity land uses, and low activity neighborhoods.

The applicant provided an Arborist Report conducted by Todd Prager & Associates, LLC (Exhibit L) that concluded adjustments to the preliminary design for the Norwood Multi-Family project have maximized tree preservation near Norwood Road. The report started preserving the 60-foot-wide buffer of Douglas-fir south of Norwood Road is compatible with the proposed road improvements and site plan at this stage of the planning process. Construction impacts and tree preservation measures would be further reviewed through the Architectural Review process.

***Plan Text Amendment:** The removal of the locational criteria by itself is not anticipated to have an impact on the elements listed above, considerations of these factors would be applicable on where to apply the zone. The applicant's text amendment proposal (Exhibit C) requests to revise the height limitation of development to four stories or 50 feet for future projects on the subject site. The applicant proposed a 60-foot buffer of vegetation to remain along SW Norwood Road to create a visual barrier to the site on page 4 of the narrative. The applicant stated these measures will make the future development of the site compatible with the existing neighborhoods.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(d)(viii) (Exhibit U) that stated that South Tualatin has already experienced a reduction in healthful, safe and aesthetic surrounding due to the tree removal from the neighboring Autumn Sunrise subdivision. The comments stated the removal of additional trees as a result of the proposed Norwood project would further reduce the healthful, aesthetic surroundings of South Tualatin. Public comments (Exhibit W) have been received that have concerns about higher crime rates around apartment developments. Comments have also been received that multi-story developments would look out of place in the area.

The applicant has also submitted a supplemental memorandum (Exhibit D) that provided additional voluntary conditions to build a sustainable apartment project that meets a US Green Building Council LEED green building standard. The memorandum stated a LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community. In addition, the applicant also proposed to construct 40 electric vehicle charging stations onsite. The memorandum stated the proposed project will deliver 276 units in six residential buildings (plus a community building) on approximately 9 acres. That level of density is only allowed under the RH-HR zone. The RH-HR zone description unfortunately uses the term "high rise." Typically, a density of 30 units to the acre (the maximum allowed in this zone) can be achieved in four story buildings. Four story buildings are considered "low rise" under the building code. This application includes a Text Amendment to limit the height of this site to four stories, or 50 feet, whichever is less. The RH-HR density maximum, which provides the greatest efficiency and affordability, is still achievable with this height limitation. The four-story height also preserves area for a tree buffer along Norwood and for sufficient parking with a 1.65 parking ratio that exceeds the City's minimum standards.

(ix) Proof of change in a neighborhood or area, or a mistake in the Plan Text or Plan Map for the property under consideration are additional factors to consider.

Finding:
Page 26 of the applicant's narrative noted the Basalt Creek Planning Area south of SW Norwood Road is an area planned for future growth within the Cities of Tualatin and Wilsonville. The concept plan for the area includes lands planned for residential, neighborhood commercial, and industrial uses. Housing developments are underway on the Autumn Sunrise Subdivision located east of the subject site and the Plambeck Gardens Apartments located to the southwest of the subject site. The City of Tualatin has purchased ±14 acres of land in the vicinity of the project for the purpose of providing public parks. The parks are intended to provide amenities to existing and future residents in this area of the City. The applicant stated there was no mistake in the plan text or map for the property under consideration, however, the Housing Needs Analysis has identified that the City has a deficit of High Density High Rise (RH-HR) lands with no buildable acres available due to constraints.

(e) If the amendment involves residential uses, then the appropriate school district or districts must be able to reasonably accommodate additional residential capacity by means determined by any affected school district.

Finding:
The applicant provided comments from the Sherwood School District included as Exhibit K. Sherwood School District Chief Operations Officer, Jim Rose, provided confirmation that the school district could accommodate any additional students from the future multifamily development on the subject site.

City staff provided an email notice of public hearing and request for comment that was sent to the Sherwood School District on March 17, 2023 included in Exhibit O. As of the date of writing this report, the City of Tualatin has not received any response from the school district.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(e) (Exhibit U) that stated the Tigard Tualatin School District was not contacted to identify how they could accommodate students that may petition to enroll in the Tigard Tualatin School District in order to not have to travel to Sherwood School District schools. The comments stated there is no assurance that school district boundary lines would remain in place and Tigard Tualatin School District should also be consulted should boundary lines change in the future. Public comments (Exhibit W) have been received that express concerns of overcrowding in the surrounding Tigard-Tualatin Schools, as well as, students bussing and driving to the Sherwood schools.

The applicant provided an additional memorandum "Supplemental Information on School Capacity" dated April 19, 2023 found in Exhibit N. The memorandum stated, ORS 195.110 dictates the rules regarding school capacity. ORS 195.110(12) states that a development moratorium cannot be based on school capacity. Under ORS 195.110(13), a city can deny an application for residential development based on lack of school capacity if three requirements are met: 1) the issue is raised by the school district; 2) the lack of school capacity is based on a school facility plan formally adopted under the statute and incorporated in the comp plan; and 3) the city has considered options to address school capacity. The memorandum also stated, the Sherwood

School District has not raised the issue of lack of school capacity. Additionally, the Sherwood School District has over 2,500 students, which means it qualifies as a "large school district." The City of Tualatin is therefore required to include as an element of its Comprehensive Plan a school facility plan per ORS 195.110(2). Tualatin does not have a school facility plan included within the Comprehensive Plan. Instead, there is a general policy related to coordination (see Policy 5.1.7). Therefore, pursuant to ORS 195.110(13), the City cannot deny the application based on lack of school capacity. TDC 33.070.5.e is not an independent basis for denial because it does not satisfy the standards in ORS 195.110.

(f) Granting the amendment is consistent with the applicable State of Oregon Planning Goals and applicable Oregon Administrative Rules, including compliance with the Transportation Planning Rule TPR (OAR 660-012-0060).

Finding:

The applicant provided a review of Oregon's Transportation Planning Rule (TPR) (OAR 660-012-0060) and a trip generation analysis by Lancaster Mobley included in Exhibit E. This standard was previously addressed in Section B. Oregon Administrative Rules.

On behalf of the City of Tualatin, DKS Associates conducted a review of the applicant's Transportation Impact Analysis and Transportation Planning Rule analysis (Exhibit F). The development is proposed on existing Medium Low Density Residential (RML) and Institutional (IN) zoned land. The development proposes to change the zoning to High Density High Rise (RH-HR), a reasonable worst-case analysis must be performed to show no significant impact of the zone change per the Transportation Planning Rule. Operations analysis was performed for the existing and proposed zoning scenarios under year 2040 conditions. The study intersections generally performed slightly better in the AM peak hour and the same or slightly worse in the PM peak hour under the proposed zoning. Under both zoning scenarios the intersection of Boones Ferry Road/Norwood Road would fail without signalization. This triggers OAR 660-012-0060 section (1)(c)(C). With signalization the intersection performs at LOS B and v/c ratio 0.73 under the proposed zoning. Thus, with the proposed mitigation of signalization, the analysis concludes the significant effect due to the proposed zoning change is mitigated per OAR 660-012-0660(2)(d). The proposed mitigation of a signal at Boones Ferry Road/Norwood Road should include a separate striped westbound left turn lane for safety reasons, consistent with the functional classification. It is recommended the westbound left turn run on a separate phase to protect the pedestrians on the south crosswalk, which is directly adjacent to a transit stop. A leading pedestrian interval could also be used and a northbound right turn overlap could be implemented to shorten the right turn queue length.

The review from DKS Associates concluded that the benefit to the public of the proposed plan map amendment would be the requirement of the development to install a new traffic signal as mitigation at SW Norwood Rd and SW Boones Ferry Rd. The signal would decrease existing delays at the intersection and increase safety with the existing crash risks. The installation of the traffic signal would create a safer, protected crossing for pedestrians to access the nearby transit stop and the future proposed park to the west.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(f) (Exhibit U) that stated the increased population as a result of the proposed apartments would overburden SW Norwood and SW Boones Ferry Road. Comments stated there is inadequate public transportation. The Byrom CIO stated the proposed apartments are not consistent with the TPR. Public comments (Exhibit W) have been received that express concerns over the validity of the traffic studies and crash data. Comments have been received that say SW Norwood Road and SW Boones

Ferry Road cannot handle additional traffic. Comments have been received that question the potential of individuals being able to turn left onto SW Norwood Road from the proposed development. Comments have stated that they believe people will cut through the existing neighborhoods to avoid traffic. Comments are concerned about traffic accidents in the area. Some comments express that the proposed traffic signal will not help the situation.

The applicant supplied a supplemental memorandum (Exhibit D) in repose which stated that a full Transportation Impact Analysis (TIA) including an evaluation of the state Transportation Planning Rule (TPR) was completed by Lancaster Mobley and provided with the applications. The City's engineer, the City's independent traffic engineer (DKS) and Washington County Transportation all agreed with the scope, the analysis, the conclusions, and the recommendations of the report. Additional information from Lancaster Mobley was provided on May 25, 2023 in response to comments received from ODOT and the City of Wilsonville. The TIA concludes that the change in zoning from Institutional and RML to RH-HR, and the impacts of the proposed apartment project, can be accommodated by the surrounding transportation network. The apartment project will create a minor impact on the transportation system which will be mitigated by the recommended traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection. Additional transportation improvements include widening SW Norwood Road and a new multiuse path along the project frontage. The memorandum stated these critically important improvements will not occur without the development of this project. All of the technical experts agree that the evidence in the TIA support the conclusion that with the conditioned transportation improvements, the impacts of the proposed zone change are mitigated in compliance with OAR 660.012.0060(2)(d) of the TPR. The memorandum also stated that In addition to ensuring that the application complies with all applicable approval criteria, the required transportation improvements will clearly help to mitigate access from Norwood onto Boones Ferry for existing residents, approved developments, and futures needs, as well as provide a much-needed safe crossing for individuals intending to use the planned City Park on the west side of Boones Ferry. The applicant's memorandum also included the apartment project provides a tangible incentive for the City, Washington County, and TriMet to discuss and implement service improvements to Bus Route 96.

(g) Granting the amendment is consistent with the Metropolitan Service District's Urban Growth Management Functional Plan.

Finding:
The proposed amendment would not adversely impact the City's compliance with Titles 1-14 of the Metro Chapter 3.07, Urban Growth Management Functional Plan as discussed in Section C of these findings.

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(g) (Exhibit U) that argue the proposed project, as well as, the building of any high rise developments in Tualatin is not needed due to Tualatin's forecasted housing needs outlined in the 2040 Comprehensive Plan. The Byrom CIO argues that the proposed apartments are contradictory to the Metropolitan Service District's Urban Growth Management Functional Plan, specifically Title 12: Protection of Residential Neighborhoods and Title 13 Nature in Neighborhoods.

(h) Granting the amendment is consistent with Level of Service F for the p.m. peak hour and E for the one-half hour before and after the p.m. peak hour for the Town Center 2040 Design Type (TDC Map 10-4), and E/E for the rest of the 2040 Design Types in the City's planning area.

Finding:

Plan Map Amendment: *The subject site is outside of the Town Center Design Type area. The applicant submitted a Transportation Planning Rule Review and a trip generation analysis provided in Exhibit E. The Level of Service in relation to the proposed changes is expected to meet the City standards. Operations analysis was performed for the existing and proposed zoning scenarios under year 2040 conditions. The study intersections generally performed slightly better in the AM peak hour and the same or slightly worse in the PM peak hour under the proposed zoning. Under both zoning scenarios the intersection of Boones Ferry Road/Norwood Road would fail without signalization. This triggers OAR 660-012-0060 section (1)(c)(C). With signalization the intersection performs at LOS B and v/c ratio 0.73 under the proposed zoning. Thus, with the proposed mitigation of signalization, the analysis concludes the significant effect due to the proposed zoning change is mitigated per OAR 660-012-0660(2)(d). The proposed plan map amendment and plan text amendment will not alter the transportation needs of the affected parcels in Tualatin's Transportation System Plan.*

Plan Text Amendment: *The criterion is not applicable to the proposed plan text amendment.*

Members of the Byrom Community Involvement Organization (CIO) Executive Board provided comments in response to TDC 33.070(5)(h) (Exhibit U) that stated the project integrated data from the neighboring Autumn Sunrise subdivision to complete the traffic study. The comment stated the study gathered data during the pandemic when driving patterns were irregular. The Byrom CIO also said the project's traffic impacts were not comprehensively considered with the impact of Plambeck Gardens and the industrial development in the Basalt Creek Planning area. The comment stated that if a comprehensive study were to be completed there would be significant failures on both SW Boones ferry Road and SW Norwood Roads. Public comments (Exhibit W) have been received that express concerns over traffic increases and congestion as a result of the proposed plan map and text amendments. There is not specific evidence to indicate the overall level of service would be degraded as a result of the amendments.

The applicant supplied a supplemental memorandum (Exhibit D) in repose which stated that a full Transportation Impact Analysis (TIA) including an evaluation of the state Transportation Planning Rule (TPR) was completed by Lancaster Mobley and provided with the applications. The City's engineer, the City's independent traffic engineer (DKS) and Washington County Transportation all agreed with the scope, the analysis, the conclusions, and the recommendations of the report. Additional information from Lancaster Mobley was provided on May 25, 2023 in response to comments received from ODOT and the City of Wilsonville. The TIA concludes that the change in zoning from Institutional and RML to RH-HR, and the impacts of the proposed apartment project, can be accommodated by the surrounding transportation network. The apartment project will create a minor impact on the transportation system which will be mitigated by the recommended traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection. Additional transportation improvements include widening SW Norwood Road and a new multiuse path along the project frontage. The memorandum stated these critically important improvements will not occur without the development of this project. All of the technical experts agree that the evidence in the TIA support the conclusion that with the conditioned transportation improvements, the impacts of the proposed zone change are mitigated in compliance with OAR 660.012.0060(2)(d) of the TPR. The memorandum also stated that in addition to ensuring that the application complies with all applicable approval criteria, the required transportation improvements will clearly help to mitigate access from Norwood onto Boones Ferry for existing residents, approved developments, and futures needs, as well as provide a much-needed safe crossing for individuals intending to use the planned City Park on the west side of Boones Ferry. The applicant's memorandum also included that the apartment project provides a tangible incentive for the City, Washington County, and TriMet to discuss and implement service improvements to

Bus Route 96.

(i) Granting the amendment is consistent with the objectives and policies regarding potable water, sanitary sewer, and surface water management pursuant to TDC 12.020, water management issues are adequately addressed during development or redevelopment anticipated to follow the granting of a plan amendment.
[…]

Finding:
The applicant submitted a Utility Capacity Analysis (Exhibit H) in response to the City's objectives and policies regarding potable water, sanitary sewer, and stormwater management.

Water: *Water service for the subject site will tie into existing public water mains within SW Norwood Road. Per the 9300 SW Norwood – Water System Capacity Analysis, dated September 11, 2022, from Brian Ginter, PE of Murraysmith, Inc. included as part of Exhibit I, "adequate water service for domestic use and fire suppression is available" for the proposed development.*

Sanitary Sewer: *An 8-inch gravity sanitary sewer line will be constructed north of the proposed site within the SW Norwood Road and SW Boones Ferry Road rights-of-way. This line is planned to lead to an existing sanitary sewer line within SW Boones Ferry Road north of its intersection with SW Norwood Road. Adequate capacity is available to serve the proposed increase in residential density*

Stormwater: *A new connection to an existing stormwater main within SW Boones Ferry Road is planned. Using a combination of an existing on-site stormwater pond and new underground detention facilities, CWS water quality and hydromodification requirements can be met that ensure release rates for the site will be less than or equal to those currently observed.*

The City of Wilsonville provided comments (Exhibit S) that the submitted application materials lack sufficient information on stormwater to determine any downstream impact on City of Wilsonville stormwater system.

Public comments have been received (Exhibit W) that expressed concern regarding the City of Tualatin's lack of a Stormwater Management Plan adoption for the Basalt Creek Area. Comments state that no projects should be approved in the Basalt Creek Area without an adopted Stormwater Management Plan.

The applicant provided a memorandum response to stormwater comments in Exhibit T. The memorandum stated that the approval of the Plan Text Amendment and Plan Map Amendment applications does not include approval of any site improvements, and any improvements would be reviewed as part of subsequent land use processes. As noted in the previously provided utility capacity analysis, this development will be required to comply with water quality (Section 4.04), water quantity (Section 4.02), and hydromodification (Section 4.03) requirements per CWS Design Standards R&O 19-5 (as amended by R&O 19-22). A combination of surface LIDA facilities and proprietary underground systems will be used to treat and detain water in accordance with these requirements. Therefore, overall release rates from the subject site and accompanying public improvements will be less than or equal to the existing condition. Flows from this development will be conveyed via an existing outfall and drainageway to Tapman Creek to the west. This project will be required to assess the downstream conveyance system per CWS R&O 19- 5 Section 2.04.2.m.3 and do a hydromodification assessment CWS R&O 19-5 Section 2.04.2.m.4. In addition, per conversations with City staff, a site assessment in conjunction with City and CWS staff will be required

to assess the potential for erosion downstream of the site. Additional information regarding these processes will be provided in subsequent reports as required by land use and permitting processes.

Chapter 41: Medium Low Density Residential Zone (RML)

Section 41.000 Purpose

The purpose of this zone is to provide household living uses with a variety of housing types at moderately low densities. This district is primarily oriented toward middle housing types including attached dwellings, multi-family development, and manufactured dwelling parks.

Finding:

In the submitted narrative, the applicant cited Tualatin's Housing Needs Analysis which identified a surplus of 27-acres of Medium Low Density Residential (RML) designated land.

Plan Map Amendment: *The proposed plan map amendment would reduce the quantity of RML lands by approximately one acre.*

Plan Text Amendment: *The proposed text amendment does not reference or affect the RML district.*

Chapter 44: High Density High Rise Zone (RH-HR)

Section 44.100 Purpose.

The purpose of the High Density High Rise (RH-HR) zone is to provide areas of the City within the City's Central Urban Renewal area, an area west of the Central Urban Renewal area, north of the wetlands, and south of the Tualatin Country Club that are suitable for high density apartment or condominium towers.

Finding:

The purpose statement of the High Density High Rise (RH-HR) zoning district restricts the zoning designation to Tualatin's Central Urban Renewal Area.

Plan Map Amendment: *The proposed map amendment would be applicable to the ±9.2-acre site that is currently zoned Medium Low Density Residential (RML) and Institutional (IN). The applicant has identified a surplus of both of these zoning types in Tualatin's Housing Needs Analysis (HNA) and Economic Opportunities Analysis, while there is an existing deficient in buildable RH-HR lands.*

Plan Text Amendment*: The draft plan text amendment language is included in Exhibit C. The proposed text amendment would remove the locational restrictions from the purpose statement, as well as, the statement to only provide residences in "towers". The proposed plan text amendment would impose a four story or 50 foot height limitation for the area south of SW Norwood Road, which is applicable to the subject site. The existence of the locational language does not allow the RH-HR zoning to be permitted in a location that is considered buildable. The text amendment would allow RH-HR to be permitted on other properties with access to facilities, services, and without the constraints of the wetlands, floodplains and lack of public access.*

Section 44.300 Development Standards.

Development standards in the RH-HR zone are listed in Table 44-3. Additional standards may apply to some uses and situations, see TDC 44.310.

Table 44-3
Development Standards in the RH-HR Zone

STANDARD	REQUIREMENT	LIMITATIONS AND CODE REFERENCES
MAXIMUM DENSITY		
Household Living Uses	Maximum: 30 units per acre Minimum: 26 units per acre	
Retirement Housing or Congregate Care Facility	45 units per acre	
Nursing Facility	45 units per acre	
Group Living Uses	30 units per acre	Does not apply to Nursing Facility or Congregate Care Facility.
MINIMUM LOT SIZE		
Multi-Family Structure		
• Development on Less than One Acre	10,000 square feet	For up to two units, plus an additional 1,198 square feet for each unit exceeding two.
• Development on More than One Acre	1,452 square feet per unit	
Multi-Family Structure under Condominium Ownership	20,000 square feet	Limited to the primary condominium lot.
All Other Permitted Uses	10,000 square feet	
Conditional Uses	20,000 square feet	
Infrastructure and Utilities Uses	—	As determined through the Subdivision, Partition, or Lot Line Adjustment process.
MINIMUM AVERAGE LOT WIDTH		
Townhouses (Rowhouses)	14 feet	
Multi-Family Structure	75 feet	May be 40 feet on a cul-de-sac street.
Multi-Family Structure under Condominium Ownership	75 feet	Limited to the primary condominium lot. Minimum lot width at street is 40 feet.
All Other Permitted Uses	75 feet	
Conditional Uses	100 feet	Minimum lot width at street is 40 feet.
Flag Lots	—	Must be sufficient to comply with minimum access requirements of TDC 73C.
MINIMUM SETBACKS		
Front Setback		Minimum setback to a garage door must be 20 feet.
• 1 story structure	20 feet	
• 1.5 story structure	25 feet	
• 2 story structure	30 feet	
• 2.5 story structure	35 feet	
• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Side and Rear Setback		Where living spaces face a side yard, the minimum setback must be 10 feet.
• 1 story structure	5 feet	
• 1.5 story structure	7 feet	
• 2 story structure	10 feet	
• 2.5 story structure	12 feet	

• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Corner Lots	—	On corner lots, the setback is the same as the front yard setback on any side facing a street other than an alley.
Minimum Distance Between Buildings within One Development	10 feet	
Parking and Vehicle Circulation Areas	10 feet	
Conditional Uses	—	As determined through Architectural Review process. No minimum setback must be greater than 50 feet.
Any Yard Adjacent to a Wetland Protected Area	100 feet	As defined in TDC Chapter 71.
Any Yard Area Adjacent to Basalt Creek Parkway	50 feet	
STRUCTURE HEIGHT		
Minimum Height, Multi-Family and Condominium Developments	4 stories	
Maximum Height	64 feet	If structure does not include underground parking, maximum height is 5 stories. If the first story includes underground parking, maximum height is 6 stories. Regardless of the number of stories, structure height must not exceed 64 feet.

Finding:

Plan Map Amendment: *The proposed map amendment would be applicable to the ±9.2-acre site that is currently zoned Medium Low Density Residential (RML) and Institutional (IN). The applicant has identified a surplus of both of these zoning types in Tualatin's Housing Needs Analysis (HNA) and Economic Opportunities Analysis, while there is an existing deficient in buildable RH-HR lands.*

Plan Text Amendment: *The proposed text amendment would modify the development standards of TDC 44.300 to place a 4-story height limitation or 50-foot maximum on structures in the High Density High Rise (RH-HR) zoning district in areas south of SW Norwood Road. The described area would be applicable to the subject site. Due to the development constraints of the areas currently zoned RH-HR that are available within the City's core areas, properties that may be designated for this zoning may be proximate to lower density zoning. The subject site is generally surrounded by Medium Low Density Residential (RML) and Institutional (IN) uses. The proposed plan text amendment would limit the height of buildings to four stories or 50 feet to remain compatible with the adjacent residential and institutional uses.*

PLAN AMENDMENTS

Plan Map Amendments provide for the review of proposed amendments to the standards of the Community Plan Map of the Tualatin Community Plan as described in TDC 33.070.

Plan Text Amendments provide for the review of proposed amendments to the standards of the Tualatin Development Code as described in TDC 33.070.

PROCEDURE Amendments to the Zone Standards of the Tualatin Development Code and to the Plan Text or the Plan Map of Tualatin Comprehensive Plan are a Type IV-A quasi-judicial decision made by Tualatin City Council after a public hearing and a recommendation from the Tualatin Planning Commission.

PRIOR TO APPLICATION SUBMITTAL

- ✔ Attend a Pre-Application Meeting (TDC 32.110)
- ✔ Notice and host a Neighborhood/Developer Meeting (TDC 32.120)

Following submittal of the application, the applicant must post a sign on the subject property to provide notice of the pending land use application.

SUBMITTAL REQUIREMENTS

Please submit all materials electronically through the following link: https://permits.ci.tualatin.or.us/eTrakit/
Details regarding submittal requirements are listed in TDC 32.140(1) and 33.070.

GENERAL:
- ✔ Land Use Application
- ✔ Narrative addressing all criteria
- ✔ Title Report
- ✔ Fee

PUBLIC NOTICE:
- ✔ Documentation for Neighborhood Developer Meeting, including notice and mailing list, affidavit of mailing notice, certification of sign posting, participant sign in sheet and meeting notes
- ☐ Certification of Sign Posting for Pending Land Use Application — To be provided after submittal.

ADDITIONAL DOCUMENTS AS APPLICABLE, SUCH AS:
- ✔ Transportation Impact Analysis
- ✔ Transportation Planning Rule (TPR) Analysis
- ✔ School District Approval

APPROVAL CRITERIA

The applicant's plans and narrative must work together to demonstrate that all applicable criteria are met.

Tualatin Development Code:
- Chapter 33.070 Plan Amendments
- Applicable sections of the Tualatin Community Plan (Chapters 1-30)

Proposed Land Use District:	High-Density High-Rise Residential (RH-HR)

I. Executive Summary

Vista Residential Partners (Applicant) is pleased to submit this plan map and text amendment application to the City of Tualatin. Horizon Community Church is selling a portion of their property south of SW Norwood Road and east of SW Boones Ferry Road. This plan map and text amendment will change the zoning of this land (as well as an adjacent one acre of land) to allow an apartment use and limit the height of the future buildings to 4 stories. The site is currently zoned Institutional (IN) and Medium-Low Density Residential (RML). A portion of the subject site is within the Basalt Creek Planning Area which has been the focus of years of planning effort between the City of Tualatin, the City of Wilsonville, Washington County, and Metro and is currently under various stages of development.

Housing Need

There is a well-known need for housing within the City of Tualatin, as well as within the region and state. As part of *Tualatin 2040* (a visioning process the City underwent in 2019 to identify updates needed to the City's Comprehensive Plan and Development Code), stakeholders identified housing affordability and the need for a wider variety of housing types (other than single-family homes) as two of the highest policy priorities. The City produced a *Housing Needs Analysis* (HNA), and *Housing Production Strategy* (HPS) to support the Tualatin 2040 project. The HNA evaluated and recommended various ways to meet the overall housing need within the City, recognizing the extent of the housing crisis and the need for a multi-faceted approach to find solutions. The HPS built on the HNA recommendations and established goals and strategic actions related to the identified housing needs in the City.

The City's Housing Needs Analysis states that Tualatin's housing market is strongly impacted by the regional housing market and nearly 93% of the 23,800 people who work in Tualatin commute from outside of the city. The US Census Bureau's 2021 American Community Survey estimates that ±43.1 percent of those employed in Tualatin spend greater than 30 minutes traveling to work. Allowing additional housing opportunities to be constructed near these centers of employment would allow more people to live near their work and reduce the number and length of time vehicles were on the road. The lack of vacant units and continued demand for housing drives the need to provide additional multifamily housing, which is expected to be 45% of Tualatin's future housing stock.

The analysis also determined that Tualatin is challenged to provide new multifamily housing over the next 20 years due to limited land supply of appropriately zoned property. In order to solve this problem, the HNA and HPS recommendations include:

- looking for opportunities to add residentially zoned land for multifamily development,
- adding density to existing residentially zoned land,
- accommodating a higher percentage of apartment units in the City than has historically been built, and
- locating housing near employment centers.

Approval of this map and text amendment application will implement the Tualatin 2040 policies and the specific HNA and HPS recommendations above. This application will allow apartments to be built on a site that currently only allows institutional uses (churches or recreational uses) and detached or attached homes and is located in an area of the City slated for future growth including a significant employment district.

Multifamily Land Deficit

The HNA outlines the numbers and types of housing units Tualatin should plan for within the 20-year planning period. This analysis found that Tualatin has a deficit of lands available for higher density multifamily housing and will need to provide a greater number of multifamily homes. As further discussed on page 28 of this narrative, the City of Tualatin currently has no buildable acres of High-Density High-Rise Residential (RH-HR) and a deficit of 4 acres was identified. Medium Low-Density (RML) zoning, by contrast, has a land surplus of 27 acres within the City. Lower density zoning with capacity does not have the potential to provide the same types of multifamily housing opportunities as higher density zoning districts where those uses are permitted.

Simply stated, rezoning lower density land as RH-HR is a solution to the City's housing deficit that the City has adopted as part of the HNA. One challenge with using the RH-HR zone to partially address the City's housing deficit is the current text of the RH-HR zoning district restricts the possibility of providing higher density housing within the City of Tualatin by confining the location of RH-HR zoning to a specific area of the City – one which has already been identified as having no significant buildable acreage. The text amendment portion of this application seeks to remove the locational restriction from the text of the RH-HR zoning district, allowing the City to meet the specific goals and recommendations of its adopted plans.

The HNA also states that over half of renter households in the City are cost burdened and that the City will be challenged over the next 20 years to provide housing of all types, including market-rate multifamily housing. Allowing for increased density can help alleviate households' cost burdens by providing opportunities to add dwelling units to the housing market. This application provides additional land for future apartments and fulfills a need identified in the HNA to help alleviate households' cost burden.

Current market information for the Sherwood/Tualatin area, included as Exhibit J to this application package, supports the conclusions found by the Housing Needs Analysis. The current multifamily market within Tualatin has experienced a 70 percent increase in rent in the past decade. Conversely, rents within the Metro area had a cumulative increase of only 48.7 percent in the past decade. Tualatin rents increased 6.2 percent over the past year. The number of units to be built in the foreseeable future are forecast to have little effect on these overall trends, with Commons on the Tualatin expected to deliver ±260 units in 2023 and those units expected to be absorbed within the year. Tualatin also sees ±8.75 percent higher average rents than the average rents within the Portland Metro area. The Plambeck Garden Apartment project, an affordable housing development approved in 2022 south of the site along SW Boones Ferry Road, will provide essential affordable housing to the neighborhood. Allowing market rate apartments at this SW Norwood Road site will further fill a need within the City to provide additional housing stock that fits between income restricted affordable housing and single family homes.

This site is appropriate for a multifamily use with easy access to higher classified streets (SW Norwood Road, a Major Collector, and SW Boones Ferry Road, a Major Arterial), bus service along SW Boones Ferry Road, accessibility to future jobs on the industrial lands to the south and west, and compatibility with the adjacent church and school uses. Infrastructure improvements in the surrounding area are in various stages of planning, funding and construction, with road, water, sewer, stormwater, and other improvements in progress and available to the site. Development of the site will contribute to infrastructure and solve an existing traffic capacity problem by providing a traffic signal at SW Norwood and Boones Ferry Road.

Transportation

The future apartment project will gain access onto SW Norwood Road. A Transportation Impact Analysis (TIA) including a Transportation Planning Rule analysis (Exhibit H) has been prepared to address the impacts of this plan map and text amendment with the future project in mind. The study, completed by Jennifer Danziger, PE, Senior Transportation Engineer at Lancaster Mobley, determined that the proposed zoning and project could be accommodated by the surrounding planned transportation network.

The TIA determined that when only background growth is considered (i.e., the project is not constructed) the intersection of SW Norwood Road and SW Boones Ferry Road is projected to need a signal, but a signal is not currently planned or funded. Further, under a reasonable worst case development scenario with the existing zoning (not the proposed zoning), the intersection is eventually projected to fail. However, if the project installs a signal at that intersection, then the existing near-term and long-term problem is solved. The project's traffic is mitigated so that the street network performance standards are met and the zone change will not require any additional mitigation or change in classification.

As directed by City and County transportation staff, the study used a more conservative approach to the traffic counts (using higher trip numbers than the Institute of Transportation Engineers Trip Generation Manual, 10th Edition, requires for a similar apartment project). Even with the assumed higher number of trips, the study found that a future apartment project will create a minor impact on the transportation system which will be mitigated by the recommended traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection.

Conditions of Approval

The Applicant is willing to agree to conditions of approval that would require the following:

- Off-site improvements as recommended in the TIA, including the signal at the SW Norwood Road and SW Boones Ferry Road prior to occupancy of future site development.
- A 60-foot buffer along SW Norwood Road to preserve trees that do not need to be removed for the future access or public roadway improvements.
- Limit the height allowed at this site. The RH-HR zone allows a 64-foot maximum height. The text amendment portion of this application, as further detailed in Exhibit B, includes a height limit of 4 stories or 50 feet, whichever is less, on property south of SW Norwood Road.

Associated Land Use Applications

Several applications are needed in order to prepare the site for multifamily housing. The following is an outline of the various applications and their sequencing:

Partition (previously submitted, under review)

The existing Horizon Community Church and Christian School campus is located on a ±38-acre lot (Tax Lot 106 of Washington County Assessor's Map 2S135D). The partition application was submitted to the City in November 2022 to divide the existing lot into two parcels, resulting in a ±30-acre parcel for the school and church campus (Parcel 1) and an ±8.2-acre parcel planned for future multifamily housing (Parcel 2).

Annexation (previously submitted, under review)

Tax Lot 108 is an adjacent ±1.0-acre lot. An annexation application to the City of Tualatin for Tax Lot 108 was submitted concurrent with the partition application to the City in November. This annexed

lot is planned to be combined with the ±8.2-acre parcel (Parcel 2) to create a ±9.2-acre site for future multifamily housing (see Lot Consolidation, below).

Map and Text Amendment (current application)

Associated with the partition and annexation applications, this plan map and text amendment application is submitted to the City to apply the High-Density High-Rise (RH-HR) zoning district to the new ±9.2-acre site on SW Norwood Road (this ±9.2-acre site combines Parcel 2 of the partition application and adjacent Tax Lot 108, as described above). Currently, the RH-HR zoning district is restricted to a specific area within the City's Central Urban Renewal Area (URA). A text amendment to the Tualatin Development Code (TDC) is included that modifies the TDC's RH-HR language to allow the zoning district to be applied elsewhere in the City.

The text amendment also limits the maximum height of buildings to four stories south of SW Norwood Road in order to provide appropriate building massing in the Basalt Creek Planning Area. The proposed four-story height limitation to the RH-HR is significant, and results in the "High-Density High-Rise" name of the zone to be a misnomer because a four-story building is not a high-rise. (The term "high-rise" is subjective and depends on the context of the community. For example, in a denser urban area, a building would need to be at least 9 stories tall to be considered a "high-rise".) It is also worth noting that the Institutional (IN) zone allows up to 50-foot tall buildings; therefore, the proposed height limit of 4 stories or 50 feet is consistent with the existing zoning on the majority of the site.

Lot Consolidation (future application)

After annexation and partition approval, a lot consolidation application will be submitted to combine the ±1.0-acre annexed site with the ±8.2-acre parcel (Parcel 2) from the partition. This ±9.2-acre site is the same area subject to the map and text amendment and will be the subject of a future architectural review (AR) application.

Architectural Review (future application)

The future use of the ±9.2-acre site is anticipated to be multifamily housing. Planned improvements will require review and approval through the architectural review process with the Architectural Review Board acting as the decision-making body.

As described above, this plan map and text amendment application follows the partition and annexation applications. The area applicable to this application is shown in Figure 1 below.

This application satisfies the applicable approval criteria for map and text amendments outlined within the Tualatin Development Code (TDC) and Tualatin Comprehensive Plan and includes the City application forms and written materials necessary for the City to review and determine compliance with the applicable approval criteria. The evidence is substantial and supports approval of the application.

II. Site Description/Setting

The subject site is ±9.2 acres in size and is comprised of two tax lots on the south side of SW Norwood Road ±290 feet east of SW Boones Ferry Road. Tax Lot 108 is located within the Portland Metropolitan Urban Growth Boundary (UGB) and Basalt Creek Planning Area and will be designated RML upon its annexation. The larger portion of the site proposed for a plan map amendment is currently annexed, is not included within the Basalt Creek Planning Area, and is zoned Institutional (Tax Lot 106). This portion

of the site is currently part of the Horizon Christian Church and School campus. There are two existing detached single-family homes and parking areas on the subject site.

Figure 1: Existing Zoning of Site

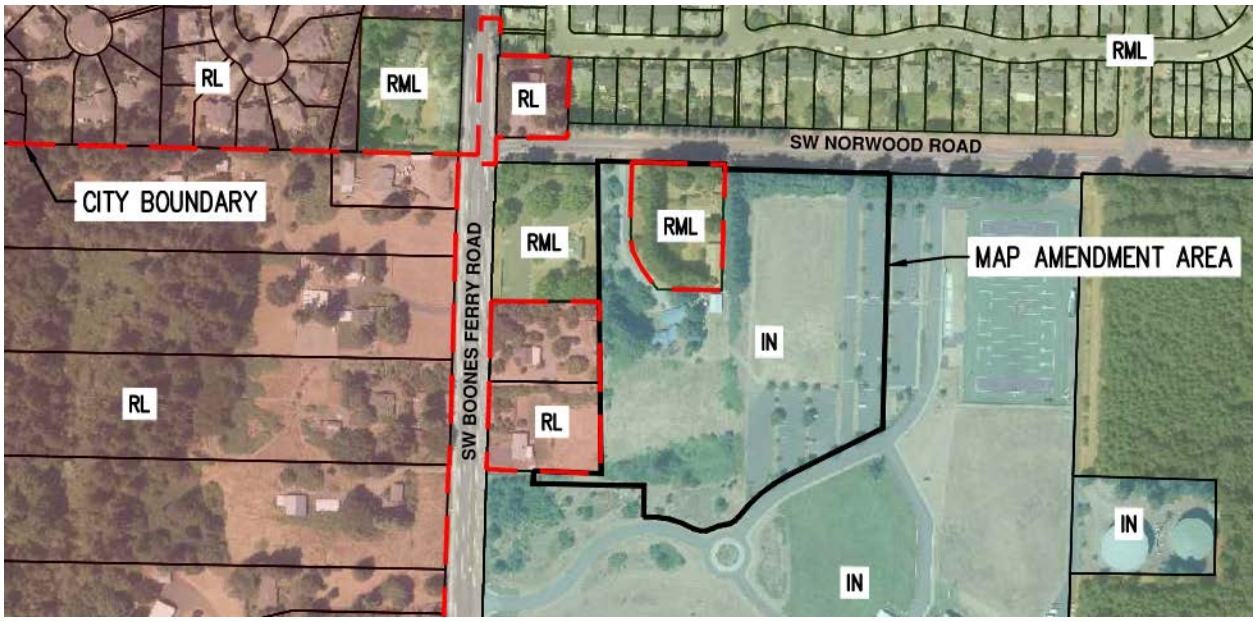

Figure 2: Proposed Plan Map Changes

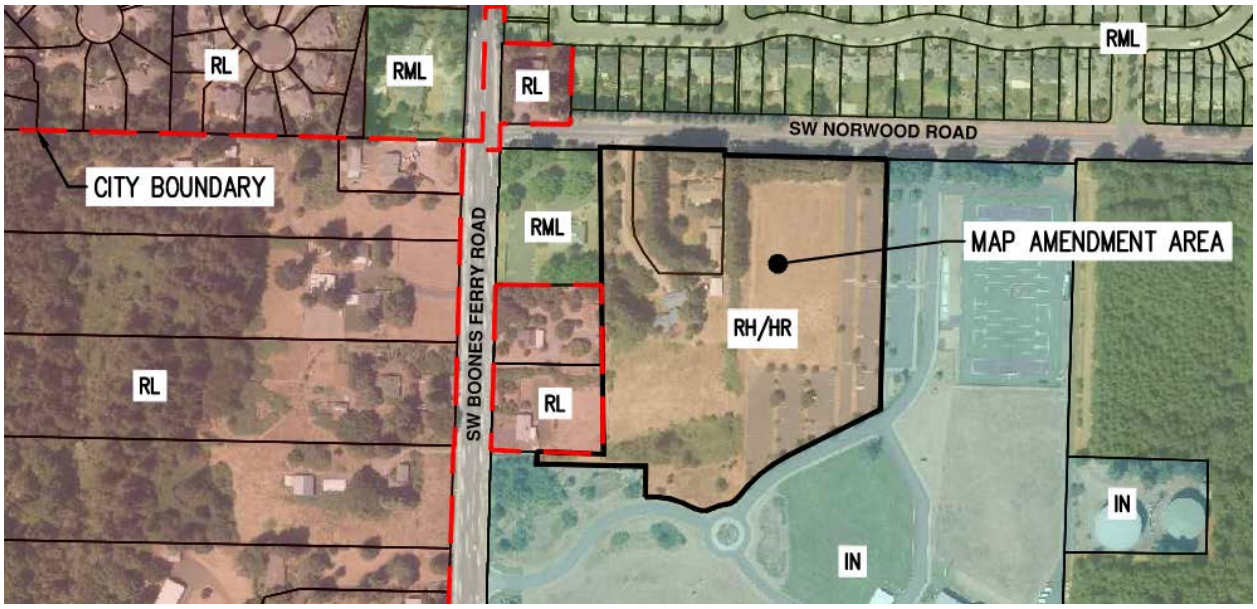

Adjacent uses include the following:

North: SW Norwood Road and Norwood Heights residential subdivision, zoned Medium-Low Density Residential (RML).

East: Horizon Community Church and Horizon Christian School campus (Tax Lot 106) with church and school buildings, sports fields, parking areas, and stormwater facilities zoned Institutional (IN). City-owned water tanks zoned IN. Autumn Sunrise residential subdivision zoned RML.

South: Horizon Community Church and Horizon Christian School campus (Tax Lot 106) with church and school buildings, sports fields, parking areas, and stormwater facilities. Zoned Institutional (IN). Autumn Sunrise residential subdivision zoned RML and Neighborhood Commercial (CN).

West: The Tualatin Hills Christian Church site is located west at the southeast corner of SW Boones Ferry Road and SW Norwood Road (zoned RML). Unincorporated low-density residential properties are located on the east and west sides of SW Boones Ferry Road (with County Zoning of FD-20).

Additionally, the site is close to a number of services and amenities such as:

- TriMet bus route 96-Tualatin/I-5 providing service between Commerce Circle and the Portland City Center with connections to Wilsonville's SMART transit system and TriMet Westside Express Service (WES) commuter rail
- Pedestrian and bicycle facilities, including existing and future facilities along SW Norwood Road
- Future park lands along Basalt Creek on the west side of SW Boones Ferry Road
- Ibach Park
- Employment areas within the Basalt Creek Planning Area
- Wilsonville and the SW Elligsen Road/I-5 interchange
- Tualatin High School
- Edward Byrom Elementary School

III. Applicable Review Criteria

TUALATIN COMPREHENSIVE PLAN 2040

CHAPTER 1 – COMMUNITY INVOLVEMENT

GOAL 1.1

Implement community involvement practices in line with Statewide Planning Goal 1.

Policy 1.1.3

Conduct the planning process with adequate input and feedback from citizens in each affected neighborhood.

Response: An in-person Neighborhood/Developer Meeting was held on October 25, 2022 at the Tualatin Public Library where feedback was received from citizens in the affected neighborhood. The meeting was held and noticed in accordance with the City's neighborhood meeting requirements outlined in the Tualatin Development Code.

As a land use application requiring a Type IV-A procedure, a Planning Commission meeting and City Council public hearing will be required. These meetings will provide an opportunity for the public to comment on the application.

CHAPTER 3 – HOUSING

GOAL 3.1 HOUSING SUPPLY.

Ensure that a 20-year land supply is designated and has urban services planned to support the housing types and densities identified in the Housing Needs Analysis.

Response: The City's HNA found that approximately 4 acres of RH-HR zoning are needed to provide additional multifamily housing in the City. Where RH-HR areas are currently designated within the City, they are considered unbuildable by the HNA – meaning that they are not considered available for additional housing. The current RH-HR area is generally located south of SW Tualatin Road around the Tualatin Police Department and is largely owned by the City of Tualatin. It is unlikely that these lands, because of their public ownership and environmental constraints, would be available for residential development. Additionally, only a small portion of the currently designated area is unbuilt or unencumbered by wetlands, floodplains, and historic buildings.

The proposed map amendment provides a ±9.2-acre site to support the housing types and densities identified within the HNA. The HNA forecasts that multifamily units will provide 45 percent (456 dwelling units) of the 1,014 dwellings that are needed in Tualatin between 2020 and 2040.

The one-acre residential property (Tax Lot 106) is within the Basalt Creek Concept Plan area and, upon annexation to the City of Tualatin, will be zoned Residential Medium Low (RML). An additional 8.2-acre portion, following finalization of the proposed partition of Tax Lot 108 (Horizon Site), is currently zoned Institutional (IN). IN areas are generally designated where existing public or semi-public facilities already exist and were not considered as part of any land supply analysis. Meaning, the 8.2 acres of IN-zoned land have not been included in residential or employment land inventories.

The *Tualatin Housing Strategy Memorandum*, cited by the *City of Tualatin Housing Needs Analysis* (December 2019), presents a list of recommendations, and calls for the City to look for opportunities to re-zone lands to higher density residential. While Actions 1.2, 5.1, and 5.2 (excerpted and annotated below) don't specifically list IN zoned lands, the recommendations clearly call for the City to identify opportunities for redevelopment and rezoning that would accommodate the City's housing needs. During the process of creating the HNA, ECONorthwest and the City's Community Advisory Committee (CAC) identified Actions 1.2 and 5.1 as high priorities to provide needed housing for the City.

Strategies, Actions, and Recommendations	Priority
Strategy 1: Ensure an adequate supply of land that is available and serviceable.	
Action 1.1. Evaluate opportunities to increase development densities within Tualatin's existing zones by modifying the Development Code. ▪ **Recommendation 1.1a:** Evaluate increasing densities in the Residential High and Residential High Density / High Rise residential designations by allowing buildings that are five to eight stories tall. ▪ **Recommendation 1.1b:** Conduct an audit of the City's Development Code to identify barriers to residential development (e.g., lot size, setbacks, and lot coverage ratio) and identify alternatives for lowering or eliminating the barriers. ▪ **Recommendation 1.1c:** Evaluate off-street parking requirements for multifamily housing to identify opportunities for reduction in parking requirements, especially for housing developed for groups who have fewer cars. ▪ **Recommendation 1.1d:** Adopt a Planned Unit Development (PUD) ordinance to allow flexibility in both development standards and housing types.	High
Action 1.2. Evaluate opportunities to rezone land to provide additional opportunities for multifamily housing development. ▪ **Recommendation 1.2a:** Identify opportunities to rezone industrial or commercial land for mixed-use that includes employment and residential uses. ▪ **Recommendation 1.2b:** Evaluate opportunities to re-zone Residential Low Density and Residential Medium Low Density residential land for higher-density housing. ▪ **Recommendation 1.2c:** Evaluate merging High Density zone and the High Density / High Rise zone into one zone and evaluate increasing the maximum density and maximum height limit allowed.	High
Action 1.3. Plan for infrastructure development to support residential development, consistent with Strategy 3. ▪ **Recommendation 1.3a:** Identify opportunities to increase coordination between transportation planning and residential growth to manage congestion from growth. ▪ **Recommendation 1.3b:** Identify opportunities to increase transit service.	Medium
Action 1.4. Plan for long-term development in Tualatin through 2040 and beyond. ▪ **Recommendation 1.4a:** Actively work with Metro staff on upcoming Regional Growth Management reports. Coordinate Tualatin's planning with regional plans. ▪ **Recommendation 1.4b:** Develop and implement a system to monitor the supply of residential land every two years. ▪ **Recommendation 1.4c:** Reevaluate Tualatin's housing needs and land sufficiency on a schedule tied to the Metro Growth Management cycle. ▪ **Recommendation 1.4d:** When needed in the future, work with Metro on potential expansion of the Metro UGB to include the Stafford area.	High

Strategies, Actions, and Recommendations	Priority
Action 3.8. Ensure that Tualatin has sufficient staff capacity to implement the housing program priorities set by the City Council. ▪ **Recommendation 3.8a:** Determine whether the City will need to add staff to implement the policies in the housing strategy.	Low
Strategy 4: Identify funding tools to support residential development.	
Action 4.1. Evaluate opportunities to use leveraged funds from the Metro Housing Bond to support development of affordable housing. ▪ **Recommendation 4.1a:** Evaluate opportunities, such as housing development incentives (in Strategy 3), to use leveraged funding from the Metro Housing Bond to support the development of affordable housing.	High
Action 4.2. Evaluate establishing an urban renewal district. ▪ **Recommendation 4.2a:** Continue the evaluation of establishing a new urban renewal district and consider including urban renewal projects that support development of multifamily housing affordable for households earning less than 60% of MFI.	High
Action 4.3. Evaluate implementation of a construction excise tax. ▪ **Recommendation 4.3a:** Evaluate implementation of a CET, starting with an analysis of the financial capacity of a CET.	Medium
Strategy 5: Identify redevelopment opportunities.	
Action 5.1. Identify districts within Tualatin with opportunities for redevelopment for housing and employment uses. ▪ **Recommendation 5.1a:** Identify opportunities for redevelopment of mixed-use districts and initiate an area planning process to guide redevelopment.	High
Action 5.2. Support redevelopment of underutilized commercial buildings for housing. ▪ **Recommendation 5.2a:** Identify underutilized commercial areas that are ripe for redevelopment and work with landowners and developers to support redevelopment.	Medium
Strategy 6: Ensure there are connections between planning for housing and other community planning.	
Action 6.1. Ensure that updates to the Transportation System Plan are coordinated with planning for residential growth. ▪ **Recommendation 6.1a:** Evaluate opportunities to decrease dependence on automotive transportation in areas planned for housing. ▪ **Recommendation 6.1b:** Evaluate opportunities to expand transit and improve transportation connectivity in Tualatin, particularly from the future Southwest Corridor station in Bridgeport to the Tualatin's Town Center. ▪ **Recommendation 6.1c:** Evaluate opportunities for planning transit-oriented development. ▪ **Recommendation 6.1d:** Develop a bicycle and pedestrian plan for Tualatin to increase connectivity within Tualatin.	High
Action 6.2. Coordinate planning for economic development planning with housing planning. ▪ **Recommendation 6.2a:** Ensure the City includes housing planning for housing that is affordable to people who work at businesses in Tualatin.	Medium
Action 6.3. Develop a design and planning framework for "ten-minute neighborhoods" that include a mixture of uses. ▪ **Recommendation 6.3a:** Develop a framework for mixed-use neighborhoods that includes the elements that residents need for day-to-day life.	Low
Action 6.4. Support sustainable development practices. ▪ **Recommendation 6.4a:** Evaluate sustainable building practices, including certifications, to determine whether the City should offer incentives for certification or require certification of new buildings as sustainable.	Low

Amendment of the City's RH-HR zoning district locational language will allow the City to apply RH-HR zoning beyond the limited area to where it is currently restricted, accomplishing the housing supply goal of the City's HNA. The provision of additional lands for this purpose helps the City meet its 20-year land supply needs. The proposal satisfies this goal.

POLICY 3.1.1 DENSITY.

Maintain a citywide residential density of at least eight (8) dwelling units per net acre.

Response: High-Density High-Rise Residential (RH-HR) zoning is a critical part of the provision of appropriate residential densities within the City of Tualatin. The district requires density between 26 and 30 dwelling units per acre, and per the City's HNA, accounts for only one percent of the total residential acreage within the City. The residential densities of the City's various zoning districts are combined to provide the City's overall target density of 8.0 dwelling units per acre, on average. According to the HNA, the City is below the target density of 8.0 dwelling units per acre. This map amendment will contribute to the City's overall residential land supply and will help the City to better meet the minimum target density provisions. The proposal complies with this policy.

POLICY 3.1.2 ZONING FOR MULTIFAMILY.

Provide zoning for multifamily development, which may be located in areas adjacent to transit.

Response: According to the City's Housing Needs Analysis, no areas of RH-HR zoning are vacant or partially vacant, meaning that they are not considered available for additional housing. This creates a two-fold problem – an identified need of 110 housing units will remain unmet because of the 4-acre land supply deficit, but the current plan text includes locational restrictions that limit the ability to apply this zoning within other areas of the City. The proposed amendments will remove the locational requirements within the TDC and allow for this site to be redesignated as RH-HR, allowing the City to meet its multifamily development housing needs. The subject site is also in close proximity to TriMet bus route 96 along SW Boones Ferry Road. Therefore, this policy to provide zoning for multifamily housing adjacent to transit is met.

GOAL 3.2 HOUSING FOR ALL.

Encourage development and preservation of housing that is affordable for all households in Tualatin.

Response: The proposed zoning changes will allow for the development of needed housing within Tualatin. The HNA identified the need for a higher percentage of multifamily dwelling units (45% of new housing) in order to meet the changing demographics and increasing housing affordability (*Housing Needs Analysis*, Page XI). In the current real estate market, it is difficult for many families, and especially first-time homeowners, to buy a home. For rent apartment homes are an affordable alternative to buying and provide housing options for households that might not be able to or want to buy a home in today's market. Without additional supply of residential units, demand will continue to drive rents up significantly making renting less affordable. This application helps meets the goal of providing housing for all.

POLICY 3.2.1 HOUSING TYPE DIVERSITY.

Support development of townhomes, duplexes, triplexes, quadplexes, cottages, courtyard housing, accessory dwelling units, single story units, senior housing, and extended family and multi-generational housing in all residential zoning districts.

Response: The City implemented Development Code updates in 2021 to comply with statewide "middle housing" mandates and to allow for more housing diversity within single-family residential districts. However, changes to allow additional multifamily residential development were not included in the Development Code updates. The proposed map amendment will allow for the construction of apartment housing that will increase the supply of renter occupied housing and the diversity of housing types within the City.

GOAL 3.5 HOUSING AND TRANSPORTATION.

Encourage development and redevelopment in Tualatin that supports all modes of transportation, including walking, biking, and mass transit.

GOAL 3.7 RESIDENTIAL GROWTH AND THE ENVIRONMENT.

Plan for housing and residential growth to minimize and mitigate for environmental impacts.

Response: Compact growth within a city is more transit-supportive, has a smaller environmental impact, and allows for more efficient use of infrastructure. As most of Tualatin's available residential buildable lands (88 acres) are within the Basalt Creek Planning Area, and there are no acres of available RH-HR lands within the rest of the City, rezoning is the only option to make RH-HR lands available to meet the City's future housing needs.

The location of proposed new RH-HR lands is near the intersection of SW Boones Ferry Road, SW Norwood Road, and the future extension of Basalt Creek Parkway allowing for greater pedestrian and bicycle connections to Tualatin and beyond. Transit options are currently available near the project site and increased residential, commercial, and industrial growth nearby may lead to increased levels of service along this route in the future.

The location of the project site accomplishes the goal of minimizing environmental impacts. The site does not feature any identified upland or riparian habitat, in contrast with existing RH-HR lands within the City (pictured below as Figure 3) which have been classified as largely unbuildable due to wetland habitats and floodplain. Other nearby residential lands, such as those west of SW Boones Ferry Road, are also significantly impacted by historic buildings, wetland, riparian, and upland habitats (Figure 4 below). Figure 4 demonstrates the location of the proposed map amendment. These goals are met.

Figure 3: Existing RH-HR Zoning and Residential Land Constraints

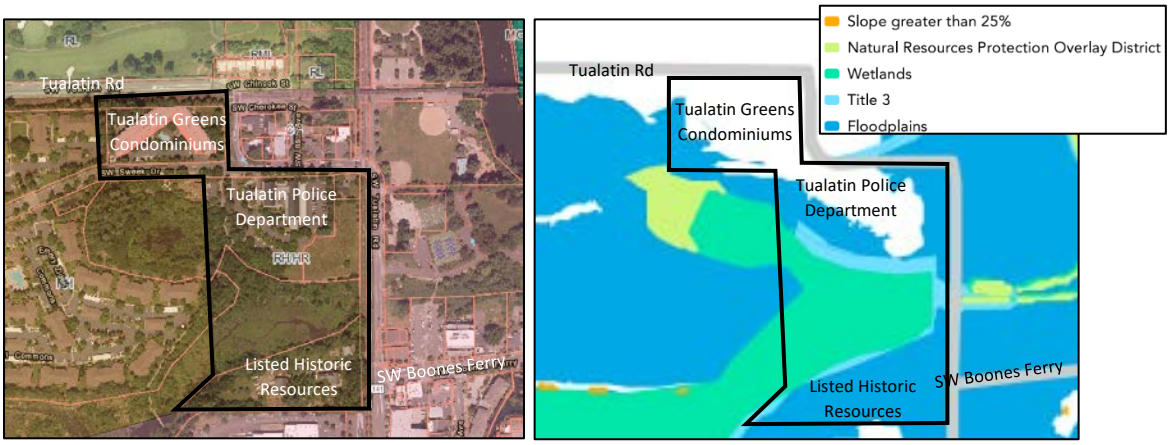

Figure 4: Project Site Residential Land Constraints

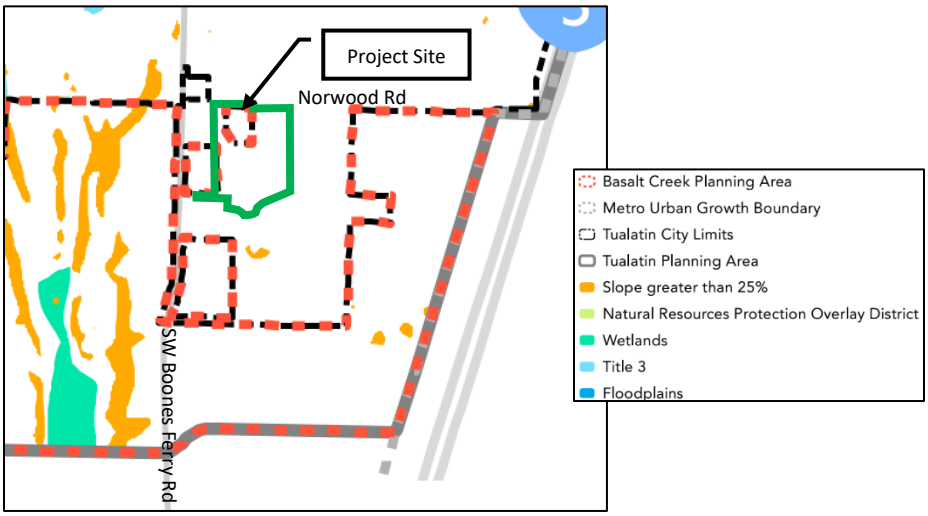


CHAPTER 7 – PARKS, OPEN SPACE & ENVIRONMENT

GOAL 7.1

Identify and protect significant natural resources that promote a healthy environment and natural landscape that improves livability, and to provide recreational and educational opportunities.

POLICY 7.1.1

Protect significant natural resources that provide fish and wildlife habitat, scenic values, water quality improvements, storm-water management benefits, and flood control.

GOAL 7.2

Balance natural resource protection with growth and development needs.

Response: The project area is located where it will not infringe on natural resource areas. Removing the locational requirement of the RH-HR zoning and rezoning this area will allow for needed growth and development while still protecting natural resources within the City. While not considered a natural resource area, there are existing trees on the subject site along SW Norwood Road. As detailed in the Executive Summary, the applicant is willing

to commit to a 60-foot tree preservation area. Due to access needs to the site and the widening requirements of SW Norwood Road, not all of the trees will be preserved, but a substantial number can be. These provisions are met.

CHAPTER 10 – LAND USE DESIGNATIONS & ZONING

PLAN MAP BACKGROUND

PLANNING DISTRICT BOUNDARIES.

The boundaries between planning districts, as portrayed on the Plan Map, are intended to follow property lines (or extensions thereof), roadways, or natural features such as creeks. Where such definition was not possible, the Map is drawn to scale and district boundaries can be determined by using this scale. It should be noted that property lines shown on the Plan Map were derived from County Assessor's Maps and are therefore relatively accurate. Consequently, the planning districts shown on the Plan shall be considered zoning districts, as normally termed. This eliminates the need for two sets of maps and simplifies the understanding of what land uses may be allowed on an individual property.

Response: The proposed map amendment follows the property lines created by a proposed partition of one of the subject lots. A future application will consolidate the recently annexed property and the parcel created through the partition of the Horizon Community Church campus (Parcel 2). The intent of the plan map district boundaries has been met.

PLANNING DISTRICT OBJECTIVES

RESIDENTIAL PLANNING DISTRICTS:

Medium-Low Density Residential Planning District (RML)

This district supports household living uses with a variety of housing types at moderately low densities. This district is primarily oriented toward middle housing types including attached dwellings, multi-family development, and manufactured dwelling parks.

High-Density Residential/High-Rise Planning District (RH-HR)

This district supports a wide range of housing types at the greatest density of household living in areas with the greatest access to amenities.

OTHER PLANNING DISTRICTS:

Institutional Planning District (IN)

The purpose of this district is to provide an environment exclusively for, and conducive to, the development and operation of religious institutions, schools, public parks, and related uses, in a manner that is harmonious with adjacent and nearby residential, commercial, or manufacturing planning districts and uses.

The district is intended to accommodate large-scale campus style developments, owned and operated by governmental or nonprofit entities, consisting of multiple structures or facilities, which may serve multiple purposes and provide multiple services to the community.

Permitted and conditional uses shall be developed and operated in a manner that promotes and protects the health, safety, and general welfare of all adjacent and nearby planning districts and uses. Additionally, conditional uses shall be allowed provided that the use is developed and operated in a manner that is consistent with the intent of the planning district, and that

promotes and protects the health, safety, and general welfare of all adjacent and nearby planning districts and uses.

The district may be applied to land that is able to accommodate large-scale campus-style development and operation of religious institutions, schools, public parks, and related uses, as follows:

- Contiguous land one and one-half acre in size or greater;
- Access to a collector or arterial street;
- Adequate public facilities are available to the property.

Response: The project site is proposed to be rezoned to High-Density High-Rise Residential (RH-HR) from its current zoning of Institutional (IN) and Medium-Low Residential (RML). The removal of ±8.2-acres of IN land will not compromise the ability of the Horizon Church and School to optimize the use of their land and services they provide. And as previously discussed in this narrative, the HNA identified a surplus of RML zoning within the City and rezoning to RH-HR will meet numerous City goals and policies.

Prior to annexation to the City of Tualatin, Washington County approved a Master Plan in 2006 for the church and school property. The church has determined that their needs and the realization of the Master Plan can be met on a more compact portion of their property. This provides the opportunity to rezone and develop the remainder of the property with needed multifamily housing, making the current IN designation unnecessary. The proposed changes do not bring the remaining Institutional-zoned property out of compliance with the Tualatin Comprehensive Plan or previous land use approvals nor prevent its use in a manner that satisfies the purpose of the Institutional district.

Therefore, this application for a plan map and text amendment complies with the intent of the applicable planning districts.

TUALATIN DEVELOPMENT CODE

CHAPTER 32 – PROCEDURES

TDC 32.010. – Purpose and Applicability

(1) *Purpose.* The purpose of this Chapter is to establish standard procedures for the review and processing of land use applications and legislative land use proposals, as well as ministerial actions. This Chapter is intended to enable the City, the applicant, and the public, where applicable, to reasonably review applications and participate in the local decision-making process in a timely and effective way. Table 32-1 provides a key for determining the review procedure and the decision-making body for particular applications.

(2) *Applicability of Review Procedures.* All land use and development permit applications and decisions, will be made by using the procedures contained in this Chapter. The procedure "type" assigned to each application governs the decision-making process for that permit or application. There are five types of permit/application procedures as described in subsections (a) through (e) below. Table 32-1 lists the City's land use and development applications and corresponding review procedure(s).

(d) Type IV-A Procedure (Quasi-Judicial Review—City Council Public Hearing). Type IV-A procedure is used when the standards and criteria require discretion, interpretation, or policy or legal judgment and is the

procedure used for site-specific land use actions initiated by an applicant. Type IV-A decisions are made by the City Council and require public notice and a public hearing. Appeals of Type IV-A decisions are heard by the Land Use Board of Appeals (LUBA).

Table 32-1 – Application Types and Review Procedures

Application/ Action	Procedure Type	Decision Body*	Appeal Body*	Pre-Application Conference Required	Neighborhood/ Developer Mtg Required	Applicable Code Chapter
Plan Amendments						
• Map or Text Amendments for a specific property	IV-A	CC	LUBA	Yes	Yes	TDC 33.070

Response: This application is for plan map and text amendments that affect two parcels to be owned by the applicant. The requested action affects a limited number of properties and will require public notice and a public hearing before the City Council.

TDC 32.110. – Pre-Application Conference.

(1) *Purpose of Pre-Application Conferences.* Pre-application conferences are intended to familiarize applicants with the requirements of the TDC; to provide applicants with an opportunity discuss proposed projects in detail with City staff; and to identify approval criteria, standards, and procedures prior to filing a land use application. The pre-application conference is intended to be a tool to assist applicants in navigating the land use process, but is not intended to be an exhaustive review that identifies or resolves all potential issues, and does not bind or preclude the City from enforcing any applicable regulations or from applying regulations in a manner differently than may have been indicated at the time of the pre-application conference.

(2) *When Mandatory.* Pre-application conferences are mandatory for all land use actions identified as requiring a pre-application conference in Table 32-1. An applicant may voluntarily request a pre-application conference for any land use action even if it is not required.

(3) *Timing of Pre-Application Conference.* A pre-application conference must be held with City staff before an applicant submits an application and before an applicant conducts a Neighborhood/Developer meeting.

Response: A pre-application conference was held with City of Tualatin staff to discuss the overall project and this specific redesignation of residential lands and required text amendment. The required pre-application conference was held with City of Tualatin Staff on July 13, 2022, prior to the application submittal date.

(4) *Application Requirements for Pre-Application Conference.*

(a) *Application Form.* Pre-application conference requests must be made on forms provided by the City Manager.

(b) *Submittal Requirements.* Pre-application conference requests must include:

(i) A completed application form;

(ii) Payment of the application fee;

(iii) The information required, if any, for the specific pre-application conference sought; and

(iv) Any additional information the applicant deems necessary to demonstrate the nature and scope of the proposal in sufficient detail to allow City staff to review and comment.

(5) *Scheduling of Pre-Application Conference.* Upon receipt of a complete application, the City Manager will schedule the pre-application conference. The City Manager will coordinate the involvement of city departments, as appropriate, in the pre-application conference. Pre-application conferences are not open to the general public.

(6) *Validity Period for Mandatory Pre-Application Conferences; Follow-Up Conferences.* A follow-up conference is required for those mandatory pre-application conferences that have previously been held when:

(a) An application relating to the proposed development that was the subject of the pre-application conference has not been submitted within six months of the pre-application conference;

(b) The proposed use, layout, and/or design of the proposal have significantly changed; or

(c) The owner and/or developer of a project changes after the pre-application conference and prior to application submittal.

Response: A pre-application conference to discuss the application was held on July 13, 2022. The conference followed the above procedures and is valid for six months (until January 13, 2023). These criteria are met.

TDC 32.120. - Neighborhood/Developer Meetings.

(1) *Purpose.* The purpose of this meeting is to provide a means for the applicant and surrounding property owners to meet to review a development proposal and identify issues regarding the proposal so they can be considered prior to the application submittal. The meeting is intended to allow the developer and neighbors to share information and concerns regarding the project. The applicant may consider whether to incorporate solutions to these issues prior to application submittal.

(2) *When Mandatory.* Neighborhood/developer meetings are mandatory for all land use actions identified in Table 32-1 as requiring a neighborhood/developer meeting. An applicant may voluntarily conduct a neighborhood/developer meeting even if it is not required and may conduct more than one neighborhood/developer meeting at their election.

(3) *Timing.* A neighborhood/developer meeting must be held after a pre-application meeting with City staff, but before submittal of an application.

(4) *Time and Location.* Required neighborhood/developer meetings must be held within the city limits of the City of Tualatin at the following times:

(a) If scheduled on a weekday, the meeting must begin no earlier than 6:00 p.m.

(b) If scheduled on a weekend, the meeting must begin between 10:00 a.m. and 6:00 p.m.

(5) *Notice Requirements.*

(a) The applicant must provide notice of the meeting at least 14 calendar days and no more than 28 calendar days before the meeting. The notice must be by first class mail providing the date, time, and location of the meeting, as well as a brief description of the proposal and its location. The applicant must keep a copy of the notice to be submitted with their land use application.

(b) The applicant must mail notice of a neighborhood/developer meeting to the following persons:

(i) All property owners within 1,000 feet measured from the boundaries of the subject property;

(ii) All property owners within a platted residential subdivision that is located within 1,000 feet of the boundaries of the subject property. The notice area includes the entire subdivision and not just those lots within 1,000 feet. If the residential subdivision is one of two or more individually platted phases sharing a single subdivision name, the notice area need not include the additional phases; and

(iii) All designated representatives of recognized Citizen Involvement Organizations as established in TMC Chapter 11-9.

(c) The City will provide the applicant with labels for mailing for a fee.

(d) Failure of a property owner to receive notice does not invalidate the neighborhood/developer meeting proceedings.

(6) *Neighborhood/Developer Sign Posting Requirements.* The applicant must provide and post on the subject property, at least 14 calendar days before the meeting. The sign must conform to the design and placement standards established by the City for signs notifying the public of land use actions in TDC 32.150.

(7) *Neighborhood/Developer Meeting Requirements.* The applicant must have a sign-in sheet for all attendees to provide their name, address, telephone number, and email address and keep a copy of the sign-in sheet to provide with their land use application. The applicant must prepare meeting notes identifying the persons attending, those commenting and the substance of the comments expressed, and the major points that were discussed. The applicant must keep a copy of the meeting notes for submittal with their land use application.

Response: A Neighborhood/Developer Meeting is required for this type of application, and one was held in-person on October 25, 2022 at the Tualatin Public Library. The required information is provided in Exhibit E. These requirements are met.

TDC 32.130. - Initiation of Applications.

(1) *Type I, Type II, Type III, and Type IV-A Applications.* Type I, Type II, Type III, and Type IV-A applications may be submitted by one or more of the following persons:

(a) The owner of the subject property;

(b) The contract purchaser of the subject property, when the application is accompanied by proof of the purchaser's status as such and by the seller's written consent;

(c) A lessee in possession of the property, when the application is accompanied by the owners' written consent; or

(d) The agent of any of the foregoing, when the application is duly authorized in writing by a person authorized to submit an application by paragraphs (a), (b) or (c) of this subsection, and accompanied by proof of the agent's authority.

(2) *Type IV-A or B Applications.* Type IV-A or B applications may be initiated by the City.

Response: This application has been submitted by the property owners and contract purchaser of all properties affected by the proposed map and text amendment. The applicable criteria are met.

TDC 32.140. - Application Submittal.

(1) **Submittal Requirements. Land use applications must be submitted on forms provided by the City. A land use application may not be accepted in partial submittals. All information supplied on the application form and accompanying the application must be complete and correct as to the applicable facts. Unless otherwise specified, all of the following must be submitted to initiate completeness review under TDC 32.160:**

(a) **A completed application form. The application form must contain, at a minimum, the following information:**

(i) **The names and addresses of the applicant(s), the owner(s) of the subject property, and any authorized representative(s) thereof;**

(ii) **The address or location of the subject property and its assessor's map and tax lot number;**

(iii) **The size of the subject property;**

(iv) **The comprehensive plan designation and zoning of the subject property;**

(v) **The type of application(s);(vi)A brief description of the proposal; and**

(vii) **Signatures of the applicant(s), owner(s) of the subject property, and/or the duly authorized representative(s) thereof authorizing the filing of the application(s).**

(b) **A written statement addressing each applicable approval criterion and standard;**

(c) **Any additional information required under the TDC for the specific land use action sought;**

(d) **Payment of the applicable application fee(s) pursuant to the most recently adopted fee schedule;**

(e) **Recorded deed/land sales contract with legal description.**

(f) **A preliminary title report or other proof of ownership.**

(g) **For those applications requiring a neighborhood/developer meeting:**

(i) **The mailing list for the notice;**

(ii) **A copy of the notice;**

(iii) **An affidavit of the mailing and posting;**

(iv) **The original sign-in sheet of participants; and**

(v) **The meeting notes described in TDC 32.120(7).**

(h) **A statement as to whether any City-recognized Citizen Involvement Organizations (CIOs) whose boundaries include, or are adjacent to, the subject property were contacted in advance of filing the application and, if so, a summary of the contact. The summary must include the date when contact was made, the form of the contact and who it was with (e.g. phone conversation with neighborhood association chairperson, meeting with land use committee, presentation at neighborhood association meeting), and the result;**

(i) **Any additional information, as determined by the City Manager, that may be required by another provision, or for any other permit elsewhere, in the TDC, and any other information that may be required to adequately review and analyze the proposed development plan as to its conformance to the applicable criteria;**

(2) Application Intake. Each application, when received, must be date-stamped with the date the application was received by the City, and designated with a receipt number and a notation of the staff person who received the application.

(3) Administrative Standards for Applications. The City Manager is authorized to establish administrative standards for application forms and submittals, including but not limited to plan details, information detail and specificity, number of copies, scale, and the form of submittal.

Response: Required information, city forms, and this narrative have been submitted to the City of Tualatin for approval. These criteria are met.

TDC 32.150. - Sign Posting.

(1) When Signs Posted. Signs in conformance with these standards must be posted as follows:

(a) Signs providing notice of an upcoming neighborhood/developer meeting must be posted prior to a required neighborhood/developer meeting in accordance with Section 32.120(6); and

(b) Signs providing notice of a pending land use application must be posted after land use application has been submitted for Type II, III and IV-A applications.

(2) Sign Design Requirements. The applicant must provide and post a sign(s) that conforms to the following standards:

(a) Waterproof sign materials;

(b) Sign face must be no less than 18 inches by 24 inches (18" x 24"); and

(c) Sign text must be at least two inch font.

(3) On-site Placement. The applicant must place one sign on their property along each public street frontage of the subject property. (Example: If a property adjoins four public streets, the applicant must place a sign at each of those public street frontages for a total of four signs.) The applicant cannot place the sign within public right-of-way.

(4) Removal. If a sign providing notice of a pending land use application disappears prior to the final decision date of the subject land use application, the applicant must replace the sign within 40-eight (48) hours of discovery of the disappearance or of receipt of notice from the City of its disappearance, whichever occurs first. The applicant must remove the sign no later than 14 days after:

(a) The meeting date, in the case of signs providing notice of an upcoming neighborhood/developer meeting; or

(b) The City makes a final decision on the subject land use application, in the case of signs providing notice of a pending land use application.

Response: Signs duly notifying the public of the pending land use application will be posted in accordance with the above provisions. Signs for the Neighborhood/Developer Meeting were posted in accordance with TDC 32.120(6). Signage providing notice of the pending land use application hearing will be posted when applicable. The applicable criteria have been or will be met.

TDC 32.230. - Type III Procedure (Quasi-Judicial Review—Public Hearing).

Type III decisions involve the use of discretion and judgment and are made by the Planning Commission or Architectural Review Board after a public hearing with an opportunity for appeal to the City Council. The decision body for each application type is specified in Table 32-1. A hearing under these procedures provides a forum to apply standards to a specific set of facts to determine whether the facts conform to the applicable criteria and the resulting determination will directly affect only a small number of identifiable persons.

(1) Submittal Requirements. Type III applications must include the submittal information required by TDC 32.140(1).

[…]

Response: The application includes the applicable information listed within TDC 32.140(1). This criterion is met.

CHAPTER 33 – APPLICATIONS AND APPROVAL CRITERIA

TDC 33.070. – Plan Amendments.

(1) *Purpose.* To provide processes for the review of proposed amendments to the Zone Standards of the Tualatin Development Code and to the Text or the Plan Map of the Tualatin Comprehensive Plan.

Response: The applicant is applying for a plan map amendment in order to provide opportunities for multifamily housing.

The applicant has also applied for plan text amendments in order to remove location restrictions related to the placement of RH-HR zoning and limit the height to four stories south of SW Norwood Road. Current TDC language restricts this zoning to a ±17.8-acre area on SW Tualatin Road largely encumbered with wetlands, floodplain, other obstacles to development and allows building to be up to 64 feet in height.

The required materials have been attached to this narrative as exhibits, providing justification for these plan map and text amendment requests.

(2) *Applicability.* Quasi-judicial amendments may be initiated by the City Council, the City staff, or by a property owner or person authorized in writing by the property owner. Legislative amendments may only be initiated by the City Council.

Response: A pre-application conference with City of Tualatin staff has identified this application for plan map and text amendments, with a limited scope affecting a small number of properties, as requiring a quasi-judicial process. The application is subject to a Type IV-A review in accordance with TDC 32.010. This application has been submitted by the property owner and their authorized representatives. This criterion is met.

(3) *Procedure Type.*

(a) Map or text amendment applications which are quasi-judicial in nature (e.g. for a specific property or a limited number of properties) is subject to Type IV-A Review in accordance with TDC Chapter 32.

(b) Map or text amendment applications which are legislative in nature are subject to Type IV-B Review in accordance with TDC Chapter 32.

Response: This application affects a limited number of properties and is therefore quasi-judicial in nature and subject to a Type IV-A Review in accordance with the procedures outlined within TDC Chapter 32.

(4) *Specific Submittal Requirements.* **An application for a plan map or text amendment must comply with the general submittal requirements in TDC 32.140 (Application Submittal).**

Response: The applicant has submitted the required materials in accordance with TDC 32.140. These specific materials were outlined previously within this application. This criterion is met.

(5) *Approval Criteria.*

(a) **Granting the amendment is in the public interest.**

Response: Providing housing, especially those types identified by the City as specifically needed in Tualatin, are important to reaching the City's goals of offering residents various densities and levels of affordability. Additionally, Metro requires at least 50% of new residential units within the City of Tualatin to be either multifamily or attached single family units. The proposed map amendment could allow for the construction of up to 276 housing units on the ±9.2-acre site. The public interest is served through providing an opportunity for housing and helping the City meet both identified goals of the Tualatin Comprehensive Plan and regional Metro housing requirements.

The City's Housing Needs Analysis states that Tualatin's housing market is strongly impacted by the regional housing market and nearly 93% of the 23,800 people who work in Tualatin commute from outside of the city. The US Census Bureau's 2021 American Community Survey estimates that ±43.1 percent of those employed in Tualatin spend greater than 30 minutes traveling to work. Allowing additional housing opportunities to be constructed near these centers of employment would have an impact in the number and length of time vehicles were on the road. The lack of vacant units and continued demand for housing will drive the need to provide additional multifamily housing, which is expected to be 45% of Tualatin's future housing stock. The analysis also determined that Tualatin would be challenged to provide multifamily housing over the next 20 years.

A key recommendation of the Housing Needs Analysis is providing housing closer to workplaces and thereby reducing transportation issues associated with long commutes. The Basalt Creek Planning Area is expected to provide up to 2,300 jobs over the next 16 years. Because the lands proposed for map amendment are surplus Institutional and residential lands, the industrial and employment capacity within the Basalt Creek Planning Area is preserved. Amending other districts within the Basalt Creek Planning Area would either reduce employment capacity or require locating higher density housing further away from transportation facilities and amenities.

Another key component of this application is the provision of utility and transportation infrastructure, as outlined in the TIA (Exhibit H) and the Utility Capacity Analysis (Exhibit I). The addition of the traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection will mitigate for existing traffic impacts as well as the minor impact of the future apartment project on the site.

The proposed map and text amendments serve the public interest by accommodating the housing, employment, utility, and transportation needs of the community. Therefore, the amendments benefit the public and the applications satisfy this criterion.

(b) The public interest is best protected by granting the amendment at this time.

Response: Since the City has few vacant lands and no ability to provide housing at the needed density established by the HNA on existing buildable lands, approval of these amendments at this time is needed and is in the best interest of the public. Additionally, the City's Housing Needs Analysis states that over half of renter households in the City are cost burdened. Allowing for increased density can help alleviate households' cost burdens by providing opportunities to add dwelling units to the housing market. The City's HNA also states that the City will be challenged over the next 20 years to provide housing of all types, including market-rate multifamily housing. The public interest is served and protected through meeting public needs for housing.

The provision of the traffic signal protects the public interest by solving an existing problem and mitigating future impacts of additional traffic from future improvements to the site. The text amendment to limit the height of buildings at the site to 4-stories also protects the public interest by ensuring compatibility with surrounding neighborhoods.

The conversion of IN zoned land to residential zoning also protects the public interest by preserving employment lands in commercial and industrial zoned areas. According to the *Tualatin Economic Opportunities Analysis* completed in 2019, there is little demand for institutionally zoned land in the City when compared to industrial, commercial, or residential designations.

This criterion is met.

(c) The proposed amendment is in conformity with the applicable goals and policies of the Tualatin Comprehensive Plan.

Response: Conformance with the applicable goals and policies of the Tualatin Comprehensive Plan have been reviewed and responses provided previously within this application. This criterion is satisfied.

(d) The following factors were consciously considered:

(i) The various characteristics of the areas in the City;

Response: The characteristics of the proposed location were considered. The subject site is located near transportation options, goods and services, and employment areas. As previously stated, the City lacks the buildable lands necessary to provide housing to meet its projected residential growth. Other available areas do not have the necessary level of services, access to employment centers and transportation, or amenities that are or will be available in this location. The site is in an area of future growth and in close proximity to the Basalt Creek employment area which is expected to provide up to 2,300 jobs in the next 16 years.

Many other lands, 86 percent of the total acres with residential comprehensive plan designations, are also considered "developed" per Metro Regional Services (Metro) definitions and must be redeveloped to accommodate any changes to housing or additional housing in the future. Redevelopment requires consideration of the project site and surroundings and can be costly in comparison to development of a vacant site. This application allows for the provision of housing in a relatively undeveloped greenfield area

without the possible reduction in housing stock or displacement of current residents that may occur with the redevelopment of a developed site.

Neighbors attending the Neighborhood/Developer Meeting expressed concerns related mainly with traffic and building height. As part of this application, the Applicant has provided a Transportation Impact Analysis including a Transportation Planning Rule analysis (Exhibit H). The report, completed by Jennifer Danziger, PE, Senior Transportation Engineer at Lancaster Mobley, studied the existing and background conditions of the transportation network. The report concluded that the traffic signal at the intersection of SW Norwood Road and SW Boones Ferry Road is required even without the apartment project being built. However, with the addition of the signal, the proposed zoning and project could be accommodated by the surrounding planned transportation network, frontage improvements, and traffic signal. The recommended improvements will allow the street network performance standards to be met without any additional mitigation or change in classification.

Concern about the height of the buildings has been addressed by the proposed text amendment which would limit the height of the RH-HR zone to four stories within areas south of SW Norwood Road (Exhibit B). (See discussion in the Executive Summary about the text amendment for height.) The proposed code height limitation would reduce the visual impacts of the future site improvements on the surrounding area. Along with the required transportation improvements, the proposed plan map and text amendments consciously consider the characteristics of this and other areas of the City, and this criterion is met.

(ii) The suitability of the areas for particular land uses and improvements in the areas;

Response: The site proposed for the map amendment is a future growth area of the City, near transportation options, a neighborhood commercial area, parks, schools, and employment centers, and is a suitable location for multifamily development. Planned improvements and infrastructure that is anticipated to be the responsibility of the project will accommodate development in the area. Nearby service and planned improvements include:

Water: Water service for the subject site will tie into existing public water mains within SW Norwood Road. Per the *9300 SW Norwood – Water System Capacity Analysis*, dated September 11, 2022, from Brian Ginter, PE of Murraysmith, Inc. included as part of Exhibit I, "adequate water service for domestic use and fire suppression is available" for the proposed development.

Sanitary Sewer: An 8-inch gravity sanitary sewer line will be constructed north of the proposed site within the SW Norwood Road and SW Boones Ferry Road rights-of-way. This line is planned to lead to an existing sanitary sewer line within SW Boones Ferry Road north of its intersection with SW Norwood Road. Adequate capacity is available to serve the proposed increase in residential density.

Stormwater: A new connection to an existing stormwater main within SW Boones Ferry Road is planned. Using a combination of an existing on-site stormwater pond and new underground detention facilities, CWS water quality and hydromodification requirements can be met that ensure release rates for the site will be less than or equal to those currently observed.

Transportation: As previously discussed and detailed within the TIA (Exhibit H), a signal at the intersection of SW Norwood Road and SW Boones Ferry Road is warranted without any changes to the subject site. With the addition of a signal and other improvements to the transportation network surrounding the site, there is adequate capacity for the proposed development. Additionally, as described in the Executive Summary above, a bus stop for TriMet route 96 is within 350 feet of the site providing service to Portland City Center and connections to Wilsonville's SMART transit system and TriMet Westside Express Service (WES) commuter rail. Capacity of the surrounding network is adequate, and the proposed project does not require additional measures of mitigation.

Emergency and School Services: The project site is served by the Tualatin Police Department and is within the Sherwood School and Tualatin Valley Fire and Rescue (TVF&R) Districts. Correspondence with the Sherwood School District is included as Exhibit G which states that capacity for additional students is available within Sherwood schools. Compliance with TVF&R standards and service requirements can be provided and will be reviewed with future applications for architectural review related to site design and layout.

Further analysis of current and proposed utilities is available within Exhibit I. The proposal is consistent with the City's Master Plans and the area is suitable for this type of development. This criterion is satisfied.

(iii) Trends in land improvement and development;

Response: As outlined in the Executive Summary, the state, region, and City are in the midst of a housing emergency. State and regional policies are addressing the shortages of all types of housing. The City's HNA identified a need for diverse housing choices and additional multifamily dwelling units. Future development of this and surrounding sites was considered when creating this plan map and text amendment proposal. A portion of the area of the map change is part of the Basalt Creek Planning Area which has been the focus of years of planning effort between the City of Tualatin, City of Wilsonville, Washington County, and Metro and is currently under various stages of development.

To the east, Phase 1 of the Autumn Sunrise Subdivision is under development. To the southwest, Plambeck Garden Apartments has received land use approval and is likely to begin construction soon. The City has purchased lands west of SW Boones Ferry Road for the purpose of providing public parklands. Areas of industrial employment to the south and west are readying for development and existing facilities are growing. Infrastructure improvements are in various stages of progress, with road, water, sewer, stormwater, and other improvements completed or scheduled in conjunction with this growth.

This application provides a significant opportunity for the City to provide needed housing within an area of future growth of the City. The proposed zoning would allow an appropriate use and one the City and region are in dire need of at a suitable site. This criterion is met.

(iv) Property values;

Response: The proposed amendments include a height limitation for future projects on the site. The future site plan will also propose a buffer of existing vegetation along SW Norwood Road, creating a visual barrier to the site. These measures will make the future development of the site compatible with the nearby homes. We are unaware of data that supports a conclusion that mitigated multifamily development negatively impacts property values of the surrounding area. The proposed rezone of the site increases the value of the church's excess land. The effects of the proposed amendments on property values were consciously considered and this criterion is met.

(v) The needs of economic enterprises and the future development of the area; needed right-of-way and access for and to particular sites in the area;

Response: The plan map and text amendment are necessary to provide additional needed housing within the City of Tualatin. Providing multifamily residential zoning in the proposed area relieves pressure to rezone other non-residential lands for the purpose of housing. Supplying this area relatively close to future employment centers provides the opportunity for employees to live nearer to their work. An employment center with nearby residences creates an attractive environment for companies relocating to the Basalt Creek Planning Area.

A future right-of-way dedication along SW Norwood Road will be provided to meet the short term and long-term transportation improvement needs identified by the City and County. A future architectural review application will address the specific right-of-way and access needs for the site development and ensure a thoughtfully designed project. This criterion is met.

(vi) Natural resources of the City and the protection and conservation of said resources;

Response: There are no mapped natural resources on the site affected by the plan map and text amendment. The site is largely vacant and underdeveloped with single-family residences and a parking lot. Vegetation is largely concentrated in the area adjacent to SW Norwood Road and surrounding Tax Lot 108. A wetland is located on the Horizon church and school site southwest of the plan map amendment area. This wetland was delineated and reviewed with the partition application submitted in November 2022. No physical development is proposed with this application for plan map and text amendment. The site will be further examined for natural resources, with any resources delineated, appropriately protected, and any impacts to resources mitigated with future development of the site. Future development of the site will need to comply with local, regional, state, and federal requirements for the protection of air, water, and land resources. This criterion is met.

(vii) Prospective requirements for the development of natural resources in the City;

Response: There are no mapped natural resources on the site affected by the plan map and text amendment. The site is largely vacant and underdeveloped with single-family residences and a parking lot. Vegetation is largely concentrated in the area adjacent to SW Norwood Road and surrounding Tax Lot 108.

No physical development is proposed with this application for plan map and text amendment, and future development of the site will need to comply with local, regional, state, and federal requirements for the protection of air, water, and land resources. The site will be examined for natural resources, with any resources delineated, appropriately protected, and any impacts to resources mitigated with future development of the site. This criterion is met.

(viii) The public need for healthful, safe, esthetic surroundings and conditions; and

Response: This application helps satisfy the public need for housing in an appropriate location that considers the specific site conditions. The 2019 *Housing Needs Analysis* forecasted demand for 101 dwelling units of new housing between 2020 and 2040 within the RH-HR zoning district. Per the analysis and as explained previously, new housing opportunities for RH-HR do not exist within Tualatin, leaving a deficiency of at least 101 dwelling units.

The Basalt Creek Planning Area is projected to provide around 2,300 new jobs per the *Basalt Creek Concept Plan* adopted by the City in 2018. This job growth is expected to drive the need for additional housing units in Tualatin, especially in areas close to the centers of future employment, such as the proposed amendment area. The subject site is one of the closest residential areas in proximity to the burgeoning employment areas and would be highly desirable to employees of businesses in the area.

Key findings of the 2019 HNA are that Tualatin must "plan for more single-family attached and multifamily dwelling units in the future to meet the City's housing needs" and that multifamily housing will account for 45 percent of future housing in the City. Another finding of the HNA states that the City could not "accommodate all of its housing needs" without employing strategies such as "by re-zoning land, increasing densities allowed in Plan Designations with deficits, or by accommodating housing in Plan Designations with surpluses." Approving this request will serve the purposes of the plans outlined within this narrative as well as meet the public need for efficient and safe future development of the area.

The provisions of the TDC address safety, health, and aesthetic factors that will be adequately considered as part of future applications for architectural design review.

The application complies with this criterion.

(ix) Proof of change in a neighborhood or area, or a mistake in the Plan Text or Plan Map for the property under consideration are additional relevant factors to consider.

Response: The Basalt Creek Planning Area south of SW Norwood Road is an area planned for future growth within the Cities of Tualatin and Wilsonville. The concept plan for this area includes lands planned for residential, neighborhood commercial, and industrial uses. The first stages of development in this area are currently underway with the approvals of the Autumn Sunrise Subdivision and Plambeck Gardens Apartments. The City has recently purchased ±14 acres of land in the vicinity of the project, at 23465 and 23515 SW Boones Ferry Road, for the purpose of providing public parks. These parks are planned to provide amenities for existing and future residents in this area of the City. This map and text amendment to allow for future residential uses is compatible and appropriate for the neighborhood as the planned growth occurs.

While there was no mistake in the plan text or map for the property under consideration, the HNA has identified that the City has a deficit of RH-HR lands and this narrative demonstrates that no buildable acres are available due to constraints. This application complies with this criterion.

(e) If the amendment involves residential uses, then the appropriate school district or districts must be able to reasonably accommodate additional residential capacity by means determined by any affected school district.

Response: The proposed plan map and text amendment will modify zoning code text, re-zone a portion of the Basalt Creek Planning Area, and increase residential densities in the area. The proposed site is located within the Sherwood School District; therefore, the school district's input was sought as part of this application. Those comments are included as part of Exhibit G. Sherwood School District's Chief Operations Officer, Jim Rose, provided confirmation that the district could accommodate any additional students from future multifamily development on the site. This criterion is met.

(f) Granting the amendment is consistent with the applicable State of Oregon Planning Goals and applicable Oregon Administrative Rules, including compliance with the Transportation Planning Rule TPR (OAR 660-012-0060).

Response: The proposed amendments are consistent with Oregon Statewide Planning Goal 1 – Citizen Involvement and Goal 2 – Land Use Planning and the applicable Oregon Administrative Rules. This proposal complies by satisfying the citizen involvement criteria of the TDC. The plan and map amendments are compliant with Goal 2 because the amendments satisfy the City's established land use planning processes and procedures.

By rezoning IN land to allow for housing, both Statewide Planning Goals 9 and 10 are met. The purpose of Goal 9 – Economic Development, is to make sure cities have enough land available to realize economic growth and development opportunities. There are no impacts to the inventory of commercial and industrial zoned lands with this application and major employment areas of the City are protected.

The amendments are compliant with Oregon Statewide Goal 10 (OAR 660-015-0000(10)) as they consider the City's *Housing Needs Analysis*, help address the City's deficit of housing by providing appropriate types and amounts of land for housing, provide an appropriate location currently undergoing development, and consider the carrying capacity of the City's natural resources.

The text amendment, as proposed, is consistent with OAR 660-007 (the Metropolitan Housing Rule), as it does not propose to change aspects of the type or density of housing within the RH-HR zoning district.

The proposal will allow the construction of needed housing and the efficient use of lands within the City of Tualatin. A review of Oregon's Transportation Planning Rule (OAR 660-012-0060) and trip generation analysis have been provided by a traffic engineer (Exhibit H). Based on this analysis, the proposed map amendment was found to meet the TPR criteria, and the transportation system was found to have the capacity to accommodate the proposed changes. This criterion has been met.

(g) Granting the amendment is consistent with the Metropolitan Service District's Urban Growth Management Functional Plan.

Response: Metro's *Urban Growth Management Functional Plan* is established in Metro Code as Section 3.07. The following Functional Plan sections are applicable to the proposed plan and map amendments:

Title 1: Housing Capacity: Title 1 requires that a City maintain or increase its housing capacity. The City's HNA established the need for housing. Specifically, it identified a deficit of lands available for high-density multifamily housing and medium high-density residential. (See below.)

Exhibit 4. Comparison of capacity of existing residential land with demand for new dwelling units and land surplus or deficit, Tualatin City Limits and Basalt Creek, 2020 to 2040
Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Capacity (Dwelling Units)	Demand for New Housing	Remaining Capacity (Supply minus Demand)	Land Surplus or (Deficit) Gross Acres
Low Density	523	466	57	10
Medium Low Density	386	71	315	27
Medium High Density	13	122	(109)	(7)
High Density	285	254	31	2
High Density High-Rise	-	101	(101)	(4)

As shown above, the Medium High-Density (RMH) and High-Density High-Rise (RH-HR) designations are deficient in future housing capacity, while there is a surplus in Low Density (RL), Medium Low Density (RML), and High-Density (RH) designations. A surplus of 315 dwelling units was calculated for the City's RML districts. As there are currently no buildable acres of RH-HR lands, a deficit of 101 dwelling units is shown. After the proposed plan map amendments, there will still be a surplus of RML land and there will no longer be a deficit of RH-HR land.

The proposed amendment does not seek to adjust minimum or maximum densities or uses required by the RH-HR zone. The proposed map and plan text amendment changes also do not decrease housing supply, density, or capacity within the City of Tualatin.

Title 4: Industrial and Other Employment Areas: This portion of the Functional Plan protects the supply of industrial and employment lands within cities. The site is currently

zoned to allow Medium-Low Residential and Institutional uses. While the area was previously designated by Metro as an Industrial Area (Title 4, Industrial and Other Employment Areas map), the proposed map amendment does not diminish the industrial or commercial capacities of the City because the area was not zoned for industrial or commercial uses by the City of Tualatin.

Title 7: Housing Choice: Title 7 establishes voluntary affordable housing production goals for local governments. The amendments do not prohibit regulated affordable housing on the project site, but the project plan does not plan to utilize or provide affordable housing. The amendments, however, will allow for the development of multifamily dwelling units, which provides additional housing choices; choices that are more affordable than detached single family housing. The City's HNA recommends that the City provide all types of housing, including market rate multifamily housing.

The increased density and change in established zoning will allow for the construction of needed multifamily dwelling units while not diminishing the City's ability to provide other deficient housing types or commercial and industrial lands.

This criterion is met and the application is consistent with the applicable sections of Metro Code Chapter 3.07.

(h) Granting the amendment is consistent with Level of Service F for the p.m. peak hour and E for the one-half hour before and after the p.m. peak hour for the Town Center 2040 Design Type (Comprehensive Plan Map 10-4), and E/E for the rest of the 2040 Design Types in the City's planning area.

Response: A Transportation Planning Rule review and trip generation analysis has been provided by a traffic engineer (Exhibit H). The Level of Service following the proposed changes is expected to meet the City's standards. The proposed plan map amendment and plan text amendment will not alter the transportation needs of the affected parcels in the City's Transportation System Plan. This criterion is met.

(i) Granting the amendment is consistent with the objectives and policies regarding potable water, sanitary sewer, and surface water management pursuant to applicable goals and policies in the Tualatin Comprehensive Plan, water management issues are adequately addressed during development or redevelopment anticipated to follow the granting of a plan amendment.

Response: The proposed plan map and text amendments are consistent with the City's objectives and policies regarding potable water, sanitary sewer, and stormwater management. This analysis is further detailed within Exhibit I – Utility Capacity Analysis and above in the response to TDC 33.070.(5)(d)(ii). This criterion is met.

(j) The applicant has entered into a development agreement. This criterion applies only to an amendment specific to property within the Urban Planning Area (UPA), also known as the Planning Area Boundary (PAB), as defined in both the Urban Growth Management Agreement (UGMA) with Clackamas County and the Urban Planning Area Agreement (UPAA) with Washington County.

Response: The Applicant has not entered into a development agreement nor is the site within the Urban Planning Area. This standard does not apply.

CHAPTER 41 – MEDIUM LOW DENSITY RESIDENTIAL ZONE (RML)

TDC 41.100 - Purpose

The purpose of this zone is to provide household living uses with a variety of housing types at moderately low densities. This district is primarily oriented toward middle housing types including attached dwellings, multi-family development, and manufactured dwelling parks.

Response: As detailed in the HNA, there is currently a surplus of approximately 27 acres of RML designated land. The proposed changes to the plan map will reduce the quantity of RML lands by approximately one acre or up to 25 dwelling units. The proposed text changes do not affect the RML district. After the approval of this application, sufficient RML land will continue to be available and the purpose of this district is not impacted.

CHAPTER 44 – HIGH DENSITY HIGH RISE ZONE (RH-HR)

TDC 44.100. - Purpose.

The purpose of the High Density High Rise (RH-HR) zone is to provide areas of the City within the City's Central Urban Renewal area, an area west of the Central Urban Renewal area, north of the wetlands, and south of the Tualatin Country Club that are suitable for high density apartment or condominium towers.

Response: As previously mentioned, the purpose statement of the High-Density High-Rise (RH-HR) zoning district restricts the zone to the City's Central Urban Renewal area. The proposed text amendment would remove this restriction as well as the suggestion that the zone would only provide residences in "towers." The proposed amendments would also impose a 4-story height limitation south of SW Norwood Road to allow for increased compatibility between future multifamily structures and existing neighborhoods. Please see Exhibit B for the planned text changes.

The proposed changes would allow the City to meet its expected future needs for higher density housing.

TDC 44.200. - Use Categories.

(1) ***Use Categories.*** **Table 44-1 lists use categories Permitted Outright (P) or Conditionally Permitted (C) in the RH-HR zone. Use categories may also be designated as Limited (L) and subject to the limitations listed in Table 44-1 and restrictions identified in TDC 44.210. Limitations may restrict the specific type of use, location, size, or other characteristics of the use category. Use categories which are not listed are prohibited within the zone, except for uses which are found by the City Manager or appointee to be of a similar character and to meet the purpose of this zone, as provided in TDC 31.070.**

(2) ***Overlay Zones.*** **Additional uses may be allowed in a particular overlay zone. See the overlay zone Chapters for additional uses.**

[…]

Response: The applicant has proposed the removal of the locational restriction contained within the Purpose section of the code (Exhibit B). The uses allowed within the zoning district by Table 44-1 have not been proposed to change as part of this application.

[…]

TDC 44.220. - Housing Types.

Table 44-2 lists Housing Types permitted in the RH-HR zone. Housing types may be Permitted Outright (P), Conditionally Permitted (C), or Not Permitted (N) in the RH-HR zone.

[…]

Response: The contents of Table 44-2 have not been proposed to change as part of this application.

TDC 44.300. - Development Standards.

Development standards in the RH-HR zone are listed in Table 44-3. Additional standards may apply to some uses and situations, see TDC 44.310.

Table 44-3
Development Standards in the RH-HR Zone

STANDARD	REQUIREMENT	LIMITATIONS AND CODE REFERENCES
MAXIMUM DENSITY		
Household Living Uses	Maximum: 30 units per acre Minimum: 26 units per acre	
Retirement Housing or Congregate Care Facility	45 units per acre	
Nursing Facility	45 units per acre	
Group Living Uses	30 units per acre	Does not apply to Nursing Facility or Congregate Care Facility.
MINIMUM LOT SIZE		
Multi-Family Structure		
• Development on Less than One Acre	10,000 square feet	For up to two units, plus an additional 1,198 square feet for each unit exceeding two.
• Development on More than One Acre	1,452 square feet per unit	
Multi-Family Structure under Condominium Ownership	20,000 square feet	Limited to the primary condominium lot.
All Other Permitted Uses	10,000 square feet	
Conditional Uses	20,000 square feet	
Infrastructure and Utilities Uses	—	As determined through the Subdivision, Partition, or Lot Line Adjustment process.
MINIMUM AVERAGE LOT WIDTH		
Townhouses (Rowhouses)	14 feet	
Multi-Family Structure	75 feet	May be 40 feet on a cul-de-sac street.
Multi-Family Structure under Condominium Ownership	75 feet	Limited to the primary condominium lot. Minimum lot width at street is 40 feet.
All Other Permitted Uses	75 feet	
Conditional Uses	100 feet	Minimum lot width at street is 40 feet.
Flag Lots	—	Must be sufficient to comply with minimum access requirements of TDC 73C.
MINIMUM SETBACKS		
Front Setback		Minimum setback to a garage door must be 20 feet.
• 1 story structure	20 feet	
• 1.5 story structure	25 feet	
• 2 story structure	30 feet	
• 2.5 story structure	35 feet	

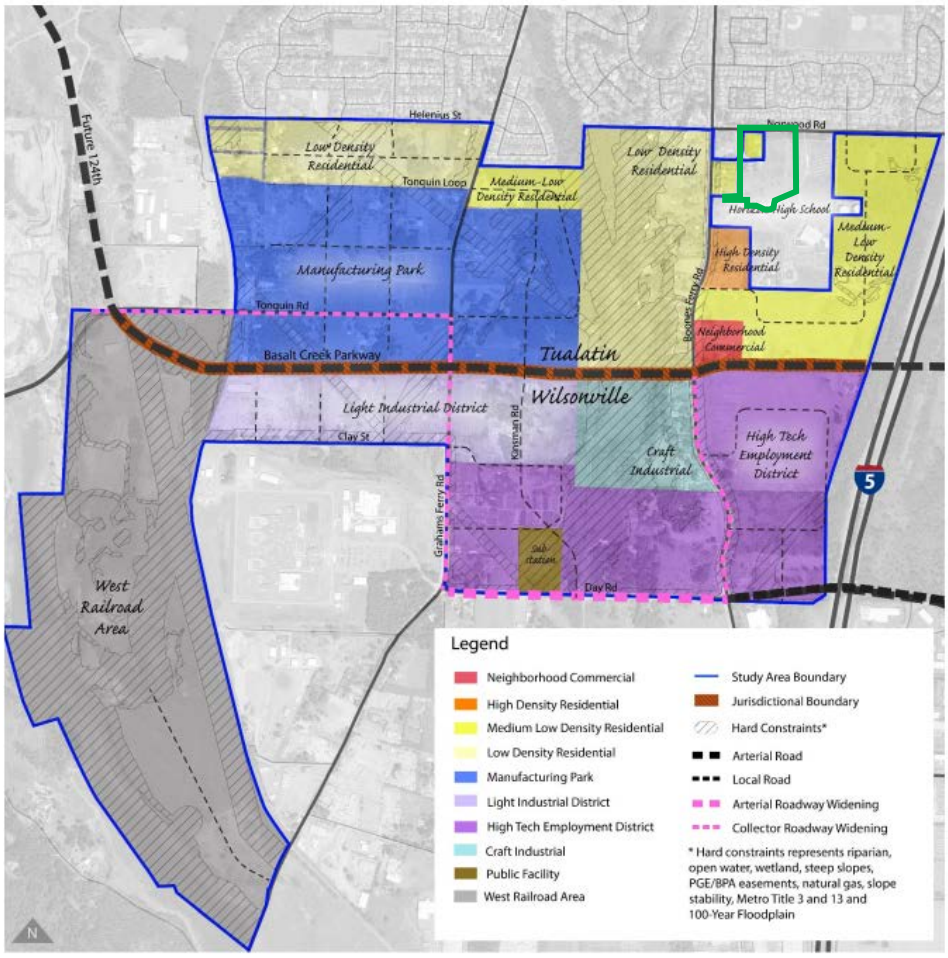
• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Side and Rear Setback		Where living spaces face a side yard, the minimum setback must be 10 feet.
• 1 story structure	5 feet	
• 1.5 story structure	7 feet	
• 2 story structure	10 feet	
• 2.5 story structure	12 feet	
• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Corner Lots	—	On corner lots, the setback is the same as the front yard setback on any side facing a street other than an alley.
Minimum Distance Between Buildings within One Development	10 feet	
Parking and Vehicle Circulation Areas	10 feet	
Conditional Uses	—	As determined through Architectural Review process. No minimum setback must be greater than 50 feet.
Any Yard Adjacent to a Wetland Protected Area	100 feet	As defined in TDC Chapter 71.
Any Yard Area Adjacent to Basalt Creek Parkway	50 feet	
STRUCTURE HEIGHT		
Minimum Height, Multi-Family and Condominium Developments	4 stories	
Maximum Height	64 feet	If structure does not include underground parking, maximum height is 5 stories. If the first story includes underground parking, maximum height is 6 stories. Regardless of the number of stories, structure height must not exceed 64 feet.
MAXIMUM LOT COVERAGE		
All Uses	45%	

Response: The proposed text amendment would modify the development standards of TDC 44.300 to place a 4-story height limitation on structures in the RH-HR zoning district in areas south of SW Norwood Road. Because there are no buildable RH-HR-zoned properties available within the City's core areas, properties which may be designated for this zoning may be proximate to lower density zoning. This site is generally surrounded by medium-density residential and institutional uses. The proposed code provision limits the height of buildings to 4-stories to remain compatible with the adjacent residential and institutional uses.

[…]

BASALT CREEK CONCEPT PLAN

Figure 8 Basalt Creek Land Use Concept Map



Response: The Basalt Creek Concept Plan was included in the Comprehensive Plan Update in 2019. The Basalt Creek Planning Area, shown above outlined in blue, includes a one-acre portion of the ±9.2-acre site. (The site is outlined in green.) The one-acre area is designated Medium Low Residential (RML) and is currently used for a single-family detached home. This area conforms with the applicable sections of the Basalt Creek Concept Plan, reviewed herein.

Concept Plan for Basalt Creek

Development Types

Table 3 Summary of Development Types Identified for Basalt Creek Planning Area by Jurisdiction

Jurisdiction	Land Use Designation	Buildable Acreage	Households		Employment	
			Count	Density per Gross Acre	Count (jobs)	Jobs per Gross Acre
Tualatin	High Density Residential	3.36	67	19.9	-	-
	Medium-Low Density Residential	59.83	374	6.3	-	-
	Low Density Residential	24.83	134	5.4	-	-
	Neighborhood Commercial	2.89	-	-	33	11.3
	Manufacturing Park	92.95	-	-	1,897	20.4
	Functionally Unbuildable	10.37	-	-	-	-
	Tualatin Subtotal	**194.23**	**575**		**1,929**	

Tualatin

Housing. Most of the remaining land north of the proposed Basalt Creek Parkway (beyond employment land) is allocated to a mix of residential uses at varying densities. The Concept Plan organizes residential land uses into two general areas that are intended to have easy access to services and be connected to parks, schools, and natural areas.

1. The plan focuses the lowest density housing (a mixture of low-density and medium-low density) along the northern portion of the Planning Area and low density along the west side of Boone's Ferry Road, adjacent to existing neighborhoods of Tualatin. This land is expected to accommodate 134 new households.

2. The eastern portion of the Tualatin future annexation area is anticipated to be a mixture of high and medium-low density residential; the land immediately east of Boones Ferry Rd is intended for high density housing; The remainder of the land east and south of Horizon School is planned for medium-low density residential. This eastern subarea is expected to accommodate 407 new housing units in Tualatin. This land is near the intersection between Boones Ferry Road and the new Basalt Creek Parkway.

Response: As the site represents a small portion of the area accounted for within the Basalt Creek Concept Plan, the proposed map and text amendment does not signify a substantial change in the number of dwelling units which will be provided within the Basalt Creek Planning Area. With its current RML designation, Table 3 above assumed the site would

accommodate 6.3 dwelling units per gross acre. (It is worth noting that since the adoption of the Basalt Creek Concept Plan in 2019, middle housing code was adopted by the City in 2021 which now allows up to 25 townhome units per net acre in the RML zone.)

The City's *Housing Needs Analysis* determined that the City has a 27-acre surplus of RML lands and a deficit of High Density High Rise Residential lands. The conversion of RML lands to RH-HR lands can help remedy these projected deficits in housing types and densities. The area of the proposed RH-HR lands is east of SW Boones Ferry Road as described under (2) above and is consistent and compatible with the planned uses within the Basalt Creek Concept Plan.

The proposal does not contradict the identified policies of the Basalt Creek Concept Plan.

IV. Conclusion

The required findings have been made and this written narrative and accompanying documentation demonstrate that the application is consistent with the applicable provisions of the Tualatin Development Code and the Tualatin Comprehensive Plan. The evidence in the record is substantial and supports approval of the application. Therefore, the Applicant respectfully requests that the City approve this application.

CHAPTER 44 HIGH DENSITY HIGH RISE ZONE (RH-HR)

TDC 44.100. Purpose.

The purpose of the High Density High Rise (RH-HR) zone is to provide areas of the City ~~within the City's Central Urban Renewal area, an area west of the Central Urban Renewal area, north of the wetlands, and south of the Tualatin Country Club~~ that are suitable for high density apartment or condominium~~s towers~~.

TDC 44.200. Use Categories.

(1) *Use Categories.* Table 44-1 lists use categories Permitted Outright (P) or Conditionally Permitted (C) in the RH-HR zone. Use categories may also be designated as Limited (L) and subject to the limitations listed in Table 44-1 and restrictions identified in TDC 44.210. Limitations may restrict the specific type of use, location, size, or other characteristics of the use category. Use categories which are not listed are prohibited within the zone, except for uses which are found by the City Manager or appointee to be of a similar character and to meet the purpose of this zone, as provided in TDC 31.070.

(2) *Overlay Zones.* Additional uses may be allowed in a particular overlay zone. See the overlay zone Chapters for additional uses.

Table 44-1
Use Categories in the RH-HR Zone

USE CATEGORY	STATUS	LIMITATIONS AND CODE REFERENCES
RESIDENTIAL USE CATEGORIES		
Household Living	P/C	Permitted housing types subject to TDC 44.220.
Residential Accessory Uses	P (L)	Permitted uses limited to Family Day Care subject to ORS 329A.440.
Group Living	P/C (L)	Permitted uses limited to: • Residential Home; • Residential Facility; and • Nursing Facility Conditional uses limited to Congregate Care Facility subject to TDC 34.400.
COMMERCIAL USE CATEGORIES		
Agriculture	C (L)	Subject to TDC 44.210(1).
Durable Goods Sales	C (L)	Conditional uses limited to retail nurseries.
Retail Sales and Service	C (L)	Conditional uses limited to Child Day Care Center.
INSTITUTIONAL USE CATEGORIES		
Assembly Facilities	C (L)	Conditional uses limited to places of religious worship. See TDC 34.800 Religious uses and ORS 227.500 pertaining to activities customarily associated with the practices of religious activity.
Community Services	C	
Medical Center	C (L)	Conditional uses limited to a hospital.

Schools	C	—
INFRASTRUCTURE AND UTILITIES USE CATEGORIES		
Basic Utilities	P/C (L)	Permitted uses limited to water or sewage pump stations and pressure reading stations. Conditional uses limited to water reservoirs, with a maximum height of 75 feet.
Greenways and Natural Areas	P	—
Parks and Open Areas	P/C (L)	Permitted uses limited to public park or playground. Conditional uses limited to golf course or country club with golf course.
Public Safety Facilities	C (L)	Conditional uses limited to fire stations.
Transportation Facilities	P	—
Wireless Communication Facilities	P/C (L)	Subject to TDC 44.210(2). Maximum height and minimum setbacks subject to TDC Chapter 73F.

TDC 44.210. Additional Limitations on Uses.

(1) *Agricultural Uses.* The following agricultural uses are allowed with a conditional use permit within areas designated on Comprehensive Plan Map 10-6:

(a) *Conditional Use of Agricultural Animals.* Raising of agricultural animals, limited to cattle, horses and sheep. The City Council may limit the number of animals to be allowed on a specific parcel of property; and

(b) *Agricultural structures such as barns, stables, sheds, but excluding feed lots.* Feed lots are prohibited.

(2) *Wireless Communication Facilities.* Wireless Communication Facilities may be permitted uses or conditional uses, depending on the nature of the use.

(a) *Permitted Uses.* The following uses are permitted outright:

(i) Wireless Communication Facility Attached, provided the facility is not mounted on a single-family dwelling or its accessory structures; and

(ii) Wireless Communication Facility, provided the facility is located within 300 feet of the centerline of Interstate 5.

(b) *Conditional Uses.* All other detached wireless communication facilities may be allowed with a conditional use permit.

(Ord. No. 1450-20 , § 22, 12-14-20)

TDC 44.220. Housing Types.

Table 44-2 lists Housing Types permitted in the RH-HR zone. Housing types may be Permitted Outright (P), Conditionally Permitted (C), or Not Permitted (N) in the RH-HR zone.

Table 44-2
Housing Types in the RH-HR Zone

HOUSING TYPE	STATUS	LIMITATIONS AND CODE REFERENCES
Single-Family Dwelling	N	
Accessory Dwelling Unit	N	
Duplex Townhouse (or Rowhouse)	P	See definition in TDC 31.060.
Multi-Family Structure	P	See definition in TDC 31.060.
Manufacturing Dwelling	N	
Manufactured Dwelling Park	N	
Retirement Housing Facility	C	Subject to TDC 34.400.
Residential Home	P	See definition in TDC 31.060.

TDC 44.300. Development Standards.

Development standards in the RH-HR zone are listed in Table 44-3. Additional standards may apply to some uses and situations, see TDC 44.310.

Table 44-3
Development Standards in the RH-HR Zone

STANDARD	REQUIREMENT	LIMITATIONS AND CODE REFERENCES
MAXIMUM DENSITY		
Household Living Uses	Maximum: 30 units per acre Minimum: 26 units per acre	
Retirement Housing or Congregate Care Facility	45 units per acre	
Nursing Facility	45 units per acre	
Group Living Uses	30 units per acre	Does not apply to Nursing Facility or Congregate Care Facility.
MINIMUM LOT SIZE		
Multi-Family Structure		
• Development on Less than One Acre	10,000 square feet	For up to two units, plus an additional 1,198 square feet for each unit exceeding two.
• Development on More than One Acre	1,452 square feet per unit	
Multi-Family Structure under Condominium Ownership	20,000 square feet	Limited to the primary condominium lot.
All Other Permitted Uses	10,000 square feet	
Conditional Uses	20,000 square feet	
Infrastructure and Utilities Uses	—	As determined through the Subdivision, Partition, or Lot Line Adjustment process.
MINIMUM AVERAGE LOT WIDTH		
Townhouses (Rowhouses)	14 feet	
Multi-Family Structure	75 feet	May be 40 feet on a cul-de-sac street.
Multi-Family Structure under Condominium Ownership	75 feet	Limited to the primary condominium lot. Minimum lot width at street is 40 feet.

All Other Permitted Uses	75 feet	
Conditional Uses	100 feet	Minimum lot width at street is 40 feet.
Flag Lots	—	Must be sufficient to comply with minimum access requirements of TDC 73C.
MINIMUM SETBACKS		
Front Setback		Minimum setback to a garage door must be 20 feet.
• 1 story structure	20 feet	
• 1.5 story structure	25 feet	
• 2 story structure	30 feet	
• 2.5 story structure	35 feet	
• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Side and Rear Setback		Where living spaces face a side yard, the minimum setback must be 10 feet.
• 1 story structure	5 feet	
• 1.5 story structure	7 feet	
• 2 story structure	10 feet	
• 2.5 story structure	12 feet	
• Over 2.5 story structure	—	As determined through Architectural Review process. No setback must be required which is greater than the height of the structure.
Corner Lots	—	On corner lots, the setback is the same as the front yard setback on any side facing a street other than an alley.
Minimum Distance Between Buildings within One Development	10 feet	
Parking and Vehicle Circulation Areas	10 feet	
Conditional Uses	—	As determined through Architectural Review process. No minimum setback must be greater than 50 feet.
Any Yard Adjacent to a Wetland Protected Area	100 feet	As defined in TDC Chapter 71.
Any Yard Area Adjacent to Basalt Creek Parkway	50 feet	
STRUCTURE HEIGHT		
Minimum Height, Multi-Family and Condominium Developments	4 stories	
Maximum Height	64 feet	South of SW Norwood Road, structure height is limited to 4 stories or 50 feet, whichever is less. If structure does not include underground parking, maximum height is 5 stories. If the first story includes underground parking, maximum height is 6 stories. Regardless of the number of stories, structure height must not exceed 64 feet.

MAXIMUM LOT COVERAGE		
All Uses	45%	

(Ord. No. 1450-20 , § 23, 12-14-20)

TDC 44.310. Projections Into Required Yards.

The following architectural features may project into a required front or rear yard setback area not more than three feet, and into a required side yard not more than two feet: cornices, eaves, canopies, decks, sun-shades, gutters, chimneys, flues, belt courses, leaders, sills, pilasters, lintels, ornamental features, and other similar architectural features.

TDC 44.320. Density Bonus or Setback Reduction for Developments Adjacent to Greenways and Natural Areas.

To preserve natural areas and habitat for fish and wildlife, the decision-making authority may provide a density bonus or setback reduction for developments that are adjacent to Greenways or Natural Areas that dedicate land for conservation or public recreational purposes, in accordance with the following standards:

(1) *Density Bonus.* The lot(s) may be developed to the same number of dwelling units that would be permitted in the RH-HR zone if none of the land area in the Greenway or Natural Area lots were in a conservation or protection area.

(2) *Setback Reduction.* All permitted uses may be allowed a reduction of up to 35 percent of the front, side or rear yard setbacks, as determined through the Architectural Review process, if as a result the buildings are farther away from fish and wildlife habitat areas. Setback areas that abut property lines in the RL zone are not eligible for the setback reduction.

(3) *Location of Greenway or Natural Area Lot.* A portion of the parcel must be located wholly in one of the following conservation or protection areas:

  (a) Natural Resource Protection Overlay (NRPO) District (TDC Chapter 72); or

  (b) Clean Water Services Vegetated Corridor.

(4) *Ownership of Greenway or Natural Area Lot.* The ownership of each Greenway or Natural Area Lot must be one of the following.

  (a) Dedicated to the City at the City's option;

  (b) Dedicated in a manner approved by the City to a non-profit conservation organization; or

  (c) Retained in private ownership.

(5) *Ownership Considerations.* The decision-making authority must consider, but not limited to, the following factors when determining the appropriate ownership of the Greenway or Natural Area Lot:

  (a) Does the Park and Recreation Master Plan designate the lot for a greenway, pedestrian or bike path, public park, recreation, overlook or interpretive facility, or other public facility;

  (b) Does the lot include one or more designated Heritage Trees, or one or more significant trees;

  (c) Does the lot provide a significant view or esthetic element, or does it include a unique or intrinsically valuable element;

  (d) Does the lot connect publicly owned or publicly accessible properties;

(e) Does the lot abut an existing park, greenway, natural area or other public facility;

(f) Does the lot provide a public benefit or serve a public need;

(g) Does the lot contain environmental hazards;

(h) Geologic stability of the lot; and

(i) Future maintenance costs for the lot.

May 26, 2023

Tualatin Mayor Bubenik and City Council
18880 SW Martinazzi Avenue
Tualatin, OR 97062

RE: Norwood Multifamily Plan Text and Plan Map Amendments - Summary of Key Elements (PTA23-0001 and PMA23-0001)

Dear Mayor Bubenik and Tualatin City Councilors:

The proposed Norwood multifamily project presents Tualatin with a rare opportunity to significantly improve housing options and affordability for a diverse community of residents during the current housing crisis. The proposal is in the public interest, meets all approval criteria, and is supported by substantial evidence.

This letter provides a summary of the primary issues that have been raised, correlates those issues to the approval criteria, and provides a summary of the applicant's responses and evidence.

New and Prior Conditions of Approval Offered in Response to Community Feedback

Before turning to the substance of the issues, we'd like to highlight revisions to the proposal that the applicant offers as conditions of approval in response to community feedback, including:

- Commitment to **restrict 10% of the units so that they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years.**
- Construct **40 electric vehicle charging stations** (in addition to providing the conduit to 40% of the parking spaces as required by current State of Oregon code).
- Commitment to build a **sustainable apartment project that meets a US Green Building Council LEED green building standard**. A LEED-certified building saves money, improves efficiency, lowers carbon emissions, enhances resilience, and supports a more equitable community.

These are in addition to the conditions previously offered, including:

- **Limiting the maximum allowed height** to 4-story (or 50-foot height)
- **Preserving the existing tree buffer** (60' from original Norwood Road right-of-way)
- **Transportation improvements** including a new traffic signal at the SW Boones Ferry Road and SW Norwood Road intersection and frontage improvements along SW Norwood Road which include street widening and a multi-use pathway

I. Responses to Issues Raised Related to the Public Interest Approval Criteria

The approval criteria require that "granting the amendment is in the public interest" and that "the public interest is best protected by granting the amendment at this time." TDC 33.070(5)(a) and (b). The primary public interest served by the proposed text and map amendments are that they provide opportunities for needed housing that the City has identified in the goals and policies of the Comprehensive Plan. While increasing housing supply generally is in the public interest, this application best protects the public interest because it addresses specific needs identified by the City's Comprehensive Plan:

- It facilitates **multifamily housing type at a needed density;** and
- includes a commitment to include **workforce/middle income housing** in the project.

Other elements of the proposal that are in the public interest are the public benefits provided by the conditions of approval summarized above, including:

- **increased sustainability features**, such as EV charging stations, LEED green building standards and preserving a 60' wide existing buffer of trees;
- **transportation improvements**, such as a new traffic signal, street widening and a multi-use pathway; and
- **reduced maximum height** of buildings south of Norwood.

1. Housing Need

As you are aware, the state of Oregon is in the midst of a housing supply crisis. Numerous studies have been done, and there is ample evidence of the rising cost of housing and low vacancy rates in Tualatin and the broader Portland Metro region. As noted in the attached Oregon Community Foundation (OCF) editorial (Exhibit A), the lack of housing options significantly impacts a community's ability to attract and retain a diverse and inclusionary community that provides opportunities for economic advancement.

a. Categories of Housing Affordability

Housing affordability is a spectrum from extremely low income housing to high income housing. Housing affordability categories correlate to what is affordable for households based upon the percentage of a household's median family income (MFI) that is spent on housing costs.[1] Tualatin's *2019 Tualatin Housing Needs Analysis* generally defines the categories of housing as:

- **Affordable Housing** is housing that requires government subsidizes and is affordable for households making 80% or less of the MFI, with subcategories of extremely low income (<30% MFI), very low income (30-50% of MFI) and low income (50% to 80% MFI).
- **Middle Income Housing,** which is also sometimes referred to as **Workforce Housing**, is housing that is affordable for households making 80% to 120% MFI.
- **High Income Housing** is housing that is affordable to housing making >120% MFI.

Market rate housing does not necessarily always mean that the housing is high income housing. Instead, where a market rate housing unit falls on the housing affordability continuum depends on a variety of factors, with the most important being the type of housing (e.g., apartment vs. detached single family home) and the MFI of the community. As a snapshot example, Exhibit 82 of the HNA indicates that 89% of the home sales prices in 2018 are considered High Income Housing because it was affordable to households making >120% MFI, with the most homes sold in the 150% to 200% MFI range, and the second most sold in the >200% MRI range. This data supports the conclusion that market rate detached single family dwellings in Tualatin are affordable to high income households.

[1] The median family income (MFI) for a four-person household in the Portland metropolitan area was $96,900 in 2021.

While data for apartment rents during that time is not included in the HNA, it is intuitive that attached and multifamily units are more affordable than detached single family homes.[2] This is why the 2019 "middle housing" state law (HB 2001) targeted at expanding the supply of middle housing prohibited detached single family housing only zones, and required cities to allow in all zones middle housing types such as attached single family homes (duplexes, triplexes, fourplexes and townhomes) and multifamily apartments.

b. Need for Workforce/Middle Income Housing

There is a need for middle income housing in Tualatin. According to ECONorthwest's Draft *Equitable Funding Action Plan* dated April 2023 approximately 47% of renters in Tualatin are cost burdened compared to 17% of homeowners.

The OCF article describes the challenges for working families to find housing. This is especially true in Tualatin where the vast majority (93%) of workers do not live here and where a limited supply of workforce housing is available. Middle income housing is attainable for people who earn too much to qualify for government-subsidized affordable housing (e.g., "Affordable Housing" targeted at households that earn <80% of MFI), but that become cost burdened with housing targeted toward the upper end of the market, such as detached single family homes.

The apartments that are planned for the site will be market rate units. As explained above, this does not mean that the project will provide only high income housing opportunities. Instead, because of the housing type, range of unit sizes and characteristics offered, the project will include housing affordable to a range of households, including middle income/workforce households earning between 80% and 120% of MFI. As detailed below, the applicant offers a condition of approval that will guarantee the project will include some units affordable to the lowest end of the middle income housing range.

A benefit of increasing the supply of middle income housing is to bridge the gap between income restricted affordable housing and home ownership. These homes provide the upward mobility for households that have historically struggled to improve their housing situation.

While the applicant's project will include housing that is affordable to middle income households, even new apartments that are not targeted at middle income households are beneficial because increased supply tends to lower rents on existing units. Additional options for renters will help increase affordability and reduce their rent burden.

i. Condition Requiring Middle Income/Workforce Housing Units

While the fundamental principles of supply and demand demonstrate that increasing the housing supply as proposed will result in lower cost housing opportunities in the City, the applicant desires to provide additional assurances that needed workforce housing is an element of the future development.

[2] When trying to understand relative housing affordability, it is important to avoid comparing what one may be paying on their mortgage to current rental rates The accurate comparison is the cost to buy a home today vs. the cost of renting an apartment today.

If one has lived in their home for years, due to rapid appreciation, the purchase price they paid is likely significantly lower than the value of their home today. Additionally, their associated historic mortgage rate is likely significantly lower than what is available today (e.g., 30 year mortgage rates below 4% in the 2010s and into the pandemic compared to current rates of over 6%).

Accordingly, the applicant volunteers to have a condition of approval imposed that commits the future project to **restrict 10% of the units so that they are affordable to workforce/middle income households earning 80% of area median income (AMI) or median family income (MFI) for 15 years.**

c. City-Identified Need for Multifamily Housing in the HNA

The City acknowledged the need for additional housing and the limited supply of land available for new residential development in the HNA. Many people who work within the City can afford to rent or own a home in Tualatin, but there is simply not enough housing available. Others would like to live in Tualatin but cannot find housing within their price range. The HNA projected that there was a need for at least 1,014 residential units for the next 20 years. The 2019 HNA identified a goal of having at least 45% of new residential units to be multifamily apartments in order to increase the availability of rental units within the City. As detailed below in Section I.3 of this letter, the HNA identified that the RH-HR zone is a suitable zone for providing needed multifamily housing because that zone's allowed densities are an efficient use of a limited supply land, and there is a deficit of RH-HR zoned land.

That so many of the City-identified needed units are multifamily units is not surprising, given the City's current limited range of housing and the lack of apartments constructed in recent years. (Only three market rate projects of larger than 50 units have been approved in Tualatin since 2003. See Exhibit B.) Two-thirds of the City's existing housing stock is single-family detached housing, which typically is only available to those with higher incomes, especially because today's higher mortgage rates have significantly impacted home buying affordability. This reality limits the City's ability to attract new residents that will add to the Tualatin's desired diversity and limit the ability to achieve its equity and inclusion goals. This also limits young families from making Tualatin home, which is critical to support the existing schools. Multifamily housing options help provide housing options for both underrepresented groups and young families.

d. The HNA is the Floor, Not the Ceiling for Needed Housing. The HNA is <u>Not</u> a Basis to Limit Additional Housing.

It is important to clarify that the HNA's projected need, state law and Tualatin's Comprehensive Plan do <u>not</u> limit the amount of housing the City can accommodate. As summarized on the bottom of page 12 of *Needs Analysis for Multifamily Housing Uses at a Site in South Tualatin, OR* dated April 11, 2023 by Johnson Economics (the "**Johnson Needs Analysis**") included as Exhibit L in the City Council packet:

> ***Impacts of the HNA:*** *It is important to note that cities are not bound by the forecasts adopted in an HNA if reality outpaces the forecast. The number of units forecasted is a floor, not a statutory ceiling beyond which more permits cannot be issued. If the population growth exceeds the forecast in the HNA (as it already has), the City is not obligated to put limits on growth to conform to the HNA. The HNA (with dated information) demonstrated a need for additional RH-HR zoned land. The updated population data indicates that the need is even greater than projected.*

There is nothing in state law (Goal 10 and its implementing rules) or the City's approval criteria that limit the amount of housing the City can accommodate to only 1,014 units. For example, Comprehensive Plan Goal 3.1 (Ensure that a 20-year land supply is designated and has urban services planned to support the housing types and densities identified in the Housing Needs Analysis) sets the HNA as a floor. It does not prohibit providing additional housing opportunities. In other words, there is no legally supportable basis

for denying the application because the City is ahead of schedule in satisfying the HNA need, or that the application results in a surplus of units or acreage.

e. Updated Data Show that Demand has Grown Since the HNA was Adopted

While the HNA is the City's adopted projection, the evidence in the Johnson Needs Analysis demonstrates that the actual demand for housing has significantly outpaced the HNA forecast. The population forecast used in the HNA was from 2016, and while it was the best data available at the time, the assumptions and projections based upon that older data have been shown to be much lower than the 2020 census data and the actual rate of growth for the City. For example, the HNA uses 2020 as the base year and includes a forecast of Tualatin's total population in 2040. The 2020 Census concluded that the actual number of residents in 2020 was higher than what the HNA projected would live in Tualatin in 2040. (Johnson Needs Analysis, page 11.) This is significant because it demonstrates that the actual population growth, and related demand for housing, is drastically underestimated in the HNA. This means that if only the HNA's projected 1,014 units are accommodated, it does not satisfy the actual housing demand over the next 20 years.

2. The Application Meets and Implements Existing and Adopted Housing Policies

The goals and policies adopted in the Comprehensive Plan are what the City has determined are the issues and objectives that are considered to be in the public interest. Meaning, if an application for an amendment complies with the Comprehensive Plan, then it also is in the public interest and protects the public interest, so it meets the approval criteria. TDC 33.070(5)(a) and (b). Compliance with the Comprehensive Plan is a separate approval criterion. TDC 33.070(5)(c).

Due to the severe housing shortage and high housing costs statewide and locally, housing issues are a priority at all levels of government. In fact, the Oregon Governor has made housing production a statewide priority, signing Executive Order 23-02 on her first day of office.

The City's Comprehensive Plan reflects this urgent need for housing, and includes goals, policies and strategies on housing supply, housing diversity, housing affordability, workforce housing, and others. In Exhibit C (attached) you will see an extensive list of policy documents targeted at housing.

These policy documents direct as how the City will act in the public interest when considering how to create new opportunities for housing. As detailed below and through the materials, the proposal complies with each of the policies and action items, and is an opportunity for the City to implement its chosen policy direction. A few key elements and/or quotes from the various policy documents follow below. Several of the same policies are discussed in the Johnson Needs Analysis (pages 13-14).

Tualatin Comprehensive Plan 2040 (Adopted 2020)

Policy 3.1.2 Zoning for Multifamily. *Provide zoning for multifamily development, which may be located in areas adjacent to transit.*

Goal 3.2 Housing for All. *Encourage development and preservation of housing that is affordable for all households in Tualatin.*

Strategic Actions include:

- *Evaluate opportunities to rezone land to provide additional opportunities for multifamily housing development.*

Tualatin Housing Needs Analysis (Adopted 2019)

- Identified a 4-acre deficit in RH-HR zoned land. (As discussed in Sections I.1.d. and e above, the need is likely much higher, and the 4-acre deficit of RH-HR is the floor not the ceiling.)
- Goal of 45% of new housing units to be multifamily units.

Tualatin Housing Strategy (Adopted 2019)

- ***Recommendation 1.2b:*** *Evaluate opportunities to re-zone Residential Low Density and Medium-Low Density residential land for higher-density housing.*
- ***Strategy 3:*** *Support development and preservation of housing that is affordable for all households.*
- ***Action 3.2.*** *Develop policies to support development of housing affordable to people who have incomes between 60% and 120% MFI ….. and live and work in Tualatin.*

Tualatin Housing Production Strategy (Adopted 2021)

Key Findings (page ii)

- Tualatin needs increased housing diversity. Approximately 2/3 of Tualatin's housing stock is single-family detached.
- Tualatin needs greater housing affordability and availability to renters.
- Housing is needed for people to live and work in Tualatin.

Barriers to Development include:

- *"Scarcity of vacant land, especially for multifamily development, is one of Tualatin's primary barriers to development of needed housing."* Pg. 17

The Private Market has a role in helping with affordability:

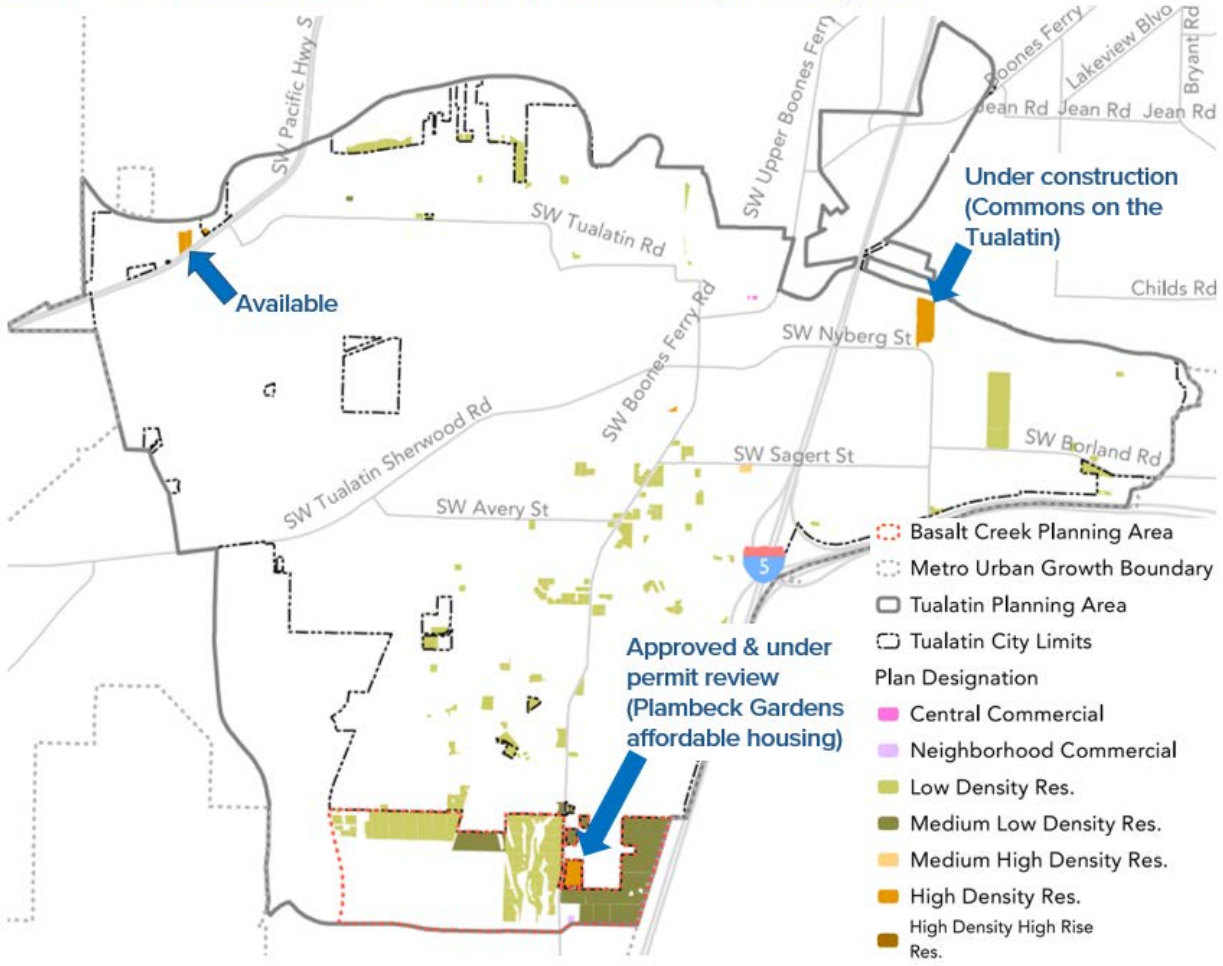
- *"In evaluating the implementation of potential strategic actions, it will be important to consider supporting and leveraging the private market's ability to deliver market-rate development at a variety of price points, due to the limited public funding available to support income-restricted housing. In other words, increasing the overall supply of available housing units plays a significant role in housing affordability….."* pg. 21

3. There is Limited Land to Accommodate Needed Housing

City housing policy acknowledges the limited supply of lands suitable for housing. Land within Tualatin, like many communities in the Portland Metro area, is constrained with few available locations to significantly impact housing need.

The HNA identified ±18 acres of residentially zoned land suitable for apartments. Since 2019, ±16 acres of that land have received land use approvals, although as staff indicated in the table in the staff report, few if any of those units are occupied. Therefore only ±2 acres of land are currently available for new multifamily housing within the City. The HNA Buildable Land Inventory map below illustrates the minimal land available within the City for residential development. The orange areas are buildable sites where apartments are permitted. The existing RH-HR zoned area is not included on the map since it has been deemed "unbuildable".

TUALATIN HNA BUILDABLE LAND INVENTORY
Exhibit 9. Unconstrained Vacant and Partially Vacant Land by Plan Designation



If approved, this amendment adds ±9 acres of buildable residential land for apartments. The Planning Commission and others have stated that the project should be rejected because it will provide too much RH-HR land, but the HNA provides a projection of the minimum need and is not intended as a "ceiling" that should not be exceeded, as detailed in Section I.1.d of this letter. Given the true housing need and the shortage of land available, an additional 5-acres of RH-HR zoned land for housing should be welcomed.

a. Suitability of the Site for RH-HR Designation

This application provides the City a rare opportunity with a willing property owner who desires to add residential land to the City and help meet housing need. The Johnson Needs Analysis explains on page 6:

> *Buildable residential sites of this size, and roughly rectangular, are rare not just locally but in much of the Metro area. These sites are well suited for multi-family development, while low-density residential development can more easily adjust to smaller and more irregular parcels. Growth management measures limit the number of these large "greenfield" sites that come available, making it valuable to use these opportunities effectively.*

The site has excellent access to Norwood Road (a Major Collector) and Boones Ferry Road (A Major Arterial) and it is compatible with adjacent uses (Church to the west and Horizon church and school to the

east and south, Norwood Road and tree buffer between the site and the existing residential uses to the north, recently approved residential projects in the vicinity).

i. Access to Amenities

The question was raised at the Planning Commission meeting as to whether sufficient amenities are available to support a multifamily project in the Norwood and Boones Ferry Road area. As a threshold matter, access to amenities is not an approval criterion. The Comprehensive Plan includes a section that generally describes the purpose of each planning district, but those generalized provisions are non-binding and not a basis for denying the application.

While not an approval criterion, the site has access to a great number of amenities. Neither the Tualatin Comprehensive Plan nor Tualatin Development Code defines what qualifies as an amenity, which means that the City Council has discretion to interpret the term broadly. The City Council may seek guidance from the Merriam-Webster dictionary's definition of amenity to mean "something that helps to provide comfort, convenience, or enjoyment."[3] As shown in the map attached as Exhibit D, ample services and amenities are available a short distance from the site including:

- TriMet Route 96
- Places of Worship (Horizon Church and the Bridge NW Church)
- Recreational Facilities (Horizon sport fields, Tualatin Swim Center, Tualatin High School track and cross-country path)
- Parks (future park west of Boones Ferry Road)
- Tualatin Valley Fire and Rescue Station 56
- Commercial uses (future neighborhood commercial, existing large retail, dining and services)
- Employment centers

The project is also planning to provide amenities to residents on site including open space, pool, dog park, and a clubhouse for community gathering.

ii. Land Downtown is Either Unsuitable or Unavailable, and Approving this Amendment Will Not Impact Development Opportunities Downtown

Commentary was offered at the Planning Commission meeting that designating land outside of downtown as RH-HR would somehow discourage development of housing downtown. No explanation or evidence was offered. Instead, the evidence is the City's adopted Buildable Land Inventory Map (shown above) and the City's Buildable Lands Inventory of the HNA, which have concluded that existing RH-HR zoned area in downtown was deemed unbuildable. Other vacant parcels downtown with zoning that allows multifamily development remain undeveloped because there is a lack of willing sellers.

While there is broad community interest to see more investment in the downtown core of the City, including mixed-use and higher density residential development, this application will not disincentivize downtown redevelopment from happening. The demand for housing is great and permitting apartments elsewhere in the City will not prohibit future development of the downtown.

[3] "Amenity." Merriam-Webster.com Dictionary, Merriam-Webster, https://www.merriam-webster.com/dictionary/amenity. Accessed 26 May. 2023.

b. Suitability of the RH-HR Designation for the Planned Project

The proposed project will deliver 276 units in six residential buildings (plus a community building) on approximately 9 acres. That level of density is only allowed under the RH-HR zone. The RH-HR zone description unfortunately uses the term "high rise." Typically, a density of 30 units to the acre (the maximum allowed in this zone) can be achieved in four story buildings. Four story buildings are considered "low rise" under the building code. This application includes a Text Amendment to limit the height of this site to four stories, or 50 feet, whichever is less. The RH-HR density maximum, which provides the greatest efficiency and affordability, is still achievable with this height limitation. The four-story height also preserves area for a tree buffer along Norwood and for sufficient parking with a 1.65 parking ratio that exceeds the City's minimum standards.

c. Property Elsewhere in the City Will be Zoned RH-HR Only if there is a Public Process in Which the City Council Determines that All of the Approval Criteria are Met.

The approval of the proposed Text Amendment will not result in the construction of high-rises all over the City. Rather, the Text Amendment will remove the current locational requirement of the RH-HR zone that restricts the zone to a very small unbuildable part of the City. This will simply allow the City flexibility to locate higher density residential uses where it concludes that the approval criteria are met. A Map Amendment application, which is only approvable by the City Council, would need to be approved through a public process for each site where a rezoning is desired.

II. Responses to Issues Related to Transportation Approval Criteria

A full Transportation Impact Analysis (TIA) including an evaluation of the state Transportation Planning Rule (TPR) was completed by Lancaster Mobley and provided with the applications. The City's engineer, the City's independent traffic engineer (DKS) and Washington County Transportation all agreed with the scope, the analysis, the conclusions, and the recommendations of the report. Additional information from Lancaster Mobley was provided on May 25, 2023 in response to comments received from ODOT and the City of Wilsonville.

The TIA concludes that the change in zoning from Institutional and RML to RH-HR, and the impacts of the proposed apartment project, can be accommodated by the surrounding transportation network. The apartment project will create a minor impact on the transportation system which will be mitigated by the recommended traffic signal at the SW Norwood Road and SW Boones Ferry Road intersection. Additional transportation improvements include widening SW Norwood Road and a new multiuse path along the project frontage. These critically important improvements will not occur without the development of this project. All of the technical experts agree that the evidence in the TIA support the conclusion that with the conditioned transportation improvements, the impacts of the proposed zone change are mitigated in compliance with OAR 660.012.0060(2)(d) of the TPR.

In addition to ensuring that the application complies with all applicable approval criteria, the required transportation improvements will clearly help to mitigate access from Norwood onto Boones Ferry for existing residents, approved developments, and futures needs, as well as provide a much-needed safe crossing for individuals intending to use the planned City Park on the west side of Boones Ferry.

Finally, the apartment project provides a tangible incentive for the City, Washington County, and TriMet to discuss and implement service improvements to Bus Route 96.

III. Conclusion: All Criteria are Met

As discussed in the application narrative and supported by Tualatin Planning staff's findings, the applicable criteria for the Plan Text and Plan Map Amendment applications are met. The materials provided demonstrate that:

1. There is a public need to rezone land for multifamily housing.
2. The applications comply with the applicable goals and policies of the Tualatin Comprehensive Plan, including adopted housing policy documents, and the Tualatin Development Code.
3. The applications comply with the applicable State Planning Goals and Oregon Administrative Rule (including the Transportation Planning Rule), and Metro Code.

The City's adopted housing policies identify that a solution to the housing crisis is to seek opportunities to increase density, provide more multifamily units, and encourage development of workforce housing within the City. Simply stated, that is precisely what is proposed by these applications.

The applicant, Vista Residential, has committed to build a project that will utilize green building methods, improve the existing transportation network, and provide housing that is affordable to working families in the City of Tualatin. For all these reasons, we ask that the City Council approve the applications.

Sincerely,

AKS ENGINEERING & FORESTRY, LLC

PORTLAND BUSINESS JOURNAL

For a thriving economy, Oregon needs more housing for middle-income earners

Apr 20, 2023

Kor Community Land Trust's Poplar Community is one of the first communities in the nation to use its workforce housing preference to prioritize employees of local, partnering employers.

In much of Oregon, a lack of housing accessible to families earning 60% to 120% of area median income ($42,000 to $84,000 a year, statewide) means many of the people whose energy and ideas enable their communities to thrive can't afford to live in them.

Take Corvallis, for example, where a shortage of middle-income housing affects the kind of folks who run programs at the Boys & Girls Club, operate local restaurants, teach public school, and serve as medical assistants and IT specialists for the regional health system. Some find homes in Albany, Lebanon or Philomath and join the 21,000 employees who commute daily into Corvallis for work.

Others have turned down job offers and sought opportunities elsewhere. When that happens, the impact is felt throughout the community, local leaders say. Residents wait longer at understaffed pharmacies or to schedule surgery. School enrollment has shrunk. Some restaurants now close multiple days a week due to a lack of servers. New businesses fail to blossom.

For Samaritan Health Services, headquartered in Corvallis, the lack of housing at all price points, including middle-income (or workforce) housing, makes it difficult to recruit the mental health specialists, nurses and doctors the community needs and is asking for, says Doug Boysen, Samaritan's president and CEO.

Doug Boysen, Samaritan's president and CEO

"We can't ask for more services but not be willing to make sure there's going to be housing for the people that are going to come in and provide those services. There's a disconnect there," Boysen says. "To be successful and grow — whether it's additional health care services, new restaurants or new startup businesses — it's critical that you can get talented people into the community who have initiative and are in that stage of their careers. But they're not going to come here if there's not housing."

The connection Boysen draws between workforce housing and economic vitality deserves a bigger spotlight in Oregon's housing conversation. Our state needs more housing for Oregonians at all income levels. It's also true that in our cities and rural areas alike, there is a specific, documented need to accelerate production of housing that is accessible to working people who earn too much to qualify for government-subsidized affordable housing but not enough to pay market rates.

OCF as catalyst for all kinds of housing

For 50 years, Oregon Community Foundation (OCF) has worked with donors and nonprofits to expand opportunities for Oregonians and create communities where everyone can thrive. Oregon's lack of abundant housing doesn't just limit individual opportunity. It holds us back — hampering our economic vitality, social safety nets and capacity to be a vibrant, well-functioning state.

As a foundation, it is a priority for OCF to serve as a catalyst for the development of all types of housing. We support and invest in housing stability across a continuum, from emergency shelter to affordable housing to homeownership opportunities. Ensuring that all Oregonians have access to shelter and safe, affordable housing is a moral imperative. Creating sufficient workforce housing is an economic one.

Under current market conditions, it's difficult to build workforce housing, developers say. As a result, it is vastly underproduced: Oregon is short 22,000 housing units for people earning 60% to 120% of area median income (AMI). Statewide, these are families making $42,000 to $84,000 a year. To help communities create more housing and to ensure a vibrant economic future for our state, OCF is cultivating community

conversations and listening for opportunities where philanthropy can help invest in innovative solutions.

We've heard from leaders in every region — Corvallis to Enterprise, Brookings to Bend — who are asking for more tools to help them create the middle-income housing their communities need. This is especially true in Oregon's rural areas, where such resources can be scarce, and a lack of workforce housing is not only hampering growth but, in some cases, hastening decline.

Since early 2022, OCF staff have co-convened the Housing Innovation Partnership, with state Rep. Pam Marsh of southern Oregon (District 5) and the i-Sector. This politically diverse group of 35 public, private and civic organizations have identified and lifted up financial tools that can rapidly accelerate housing production. Some of the partnership's proposed solutions were included in the $200 million housing and homeless plan adopted last month by the legislature — for example, loans that builders of workforce housing can use to pay predevelopment costs and funds to spur production of off-site modular and mass timber housing.

Intentional investments needed to fill workforce housing gap

At OCF we're inspired by communities like Corvallis, where Helen Higgins, CEO of the Boys & Girls Club, has gathered business, education and nonprofit employers to explore innovative solutions. The group is investigating how to create a demonstration project of 100 to 250 units of employer-assisted workforce housing and are willing to fundraise together to reduce land costs or development fees. Local employers who contribute to the development — such as the school district or hospital — would receive a share of the units to rent at affordable rates to their employees and families.

The need is urgent, Higgins says. For example, nearly all the recent college graduates that run youth programs at the Boys & Girls Club must commute from nearby towns. Even though most are paid near or at 80% of the Corvallis AMI ($53,250 for an individual; $76,050 for a family of four), most can't find housing they can afford in the city they serve, she says.

The challenges to creating sufficient workforce housing, Higgins says, include overly strict and outdated city codes that make it easy for one individual to block development; investors who purchase houses to rent them out, which further reduces the sparse supply available to homebuyers; and an influx of newcomers from Portland and other states who drive up already-steep prices for the limited homes available in the area. As of late March, only 50 single-family homes were listed for sale in Corvallis, a community of 60,000.

New state funding for housing is vital and welcome, Higgins says. But to use those funds effectively, communities need additional tools to overcome local barriers to building, create housing that middle-income earners can afford, and apply protections to keep it that way.

“Just building more housing is not going to solve our problems, because as soon as a house opens up or new houses get built, they're going for $50,000 or more over the asking price,” she says. “We need help to figure out how to reserve some percentage of housing for our workforce — for the people who are doing the work that sustains our community.”

Learn about OCF’s work to support and invest in housing stability across a continuum — to ensure that all Oregonians have access to safe, affordable housing and that all communities have the ample housing they need to thrive. To learn more, visit oregoncf.org/housing.

Project Name: Norwood Multifamily Plan Text and Plan Map Amendments
Application #: **PTA23-0001 and PMA23-0001**

Subject: **List of Housing Policy Documents**

All of Tualatin's, Metro's and the State's housing policies clearly support approval of the Norwood Multifamily Plan Text Amendment and Plan Map Amendment applications. The policies[1] generally include the need to add residential land, increase affordability, increase density and sustainability, encourage more apartments, and provide housing opportunities to those who are underserved within the City, region, and state in an equitable and inclusive way. The Norwood application simply implements the policy direction that has already been adopted by the Tualatin City Council, Metro Council, Governor, and State Legislature.

Those policies include:

Executive Summary

As summarized in the key findings below, the proposed Norwood Apartments project will create a minor impact on the transportation system, which will be mitigated by the recommended traffic signal at the intersection of SW Boones Ferry Road & Norwood Road. The traffic signal is warranted under background conditions without the proposed project, and the long-term analysis of the reasonable worst case scenario traffic analysis of the existing zone concludes that the SW Boones Ferry Road & SW Norwood Road intersection will fail without a signal. However, if the project installs a signal at that intersection, then the existing near-term and long-term problem is solved. The project's traffic is mitigated so that the street network performance standards are met and the zone change will not require any additional mitigation or change in classification.

Overview

1. The proposed Norwood Apartments project includes the development of a 276-unit apartment complex on a site located south of SW Norwood Road and east of SW Boones Ferry Road in Tualatin, Oregon. The project site consists of two lots (Tax Lot 2S135D 000108 and a portion of Tax Lot 2S135D 000106) with an approximate total of 9.2 acres.
2. The application will require rezoning the site from Institutional (IN) and Medium Low Density Residential (RML) to High Density-High Rise Residential (RH-HR).
3. The site will take access from SW Norwood Road. An emergency access connection to the Horizon School circulation network is also provided.

Proposed Zone Change Findings

4. To understand the potential impacts of the requested zone change, the reasonable worst-case land uses under existing and proposed zoning were compared. Under existing zoning, the residentially-zoned land was assumed to redevelop to its maximum density with 25 attached homes while the institutionally-zoned land was assumed to develop with a 250-student private school. The proposed development of 276 apartments is the maximum density under the proposed zoning.
5. The existing zoning would likely generate a greater number of trips during the morning peak hour, when congestion associated with schools is most prevalent. However, the proposed zoning could generate a greater number of trips in the evening peak hour; thus, a TPR analysis was performed.
6. A comparison of long-term operations with the existing and proposed zoning shows that the proposed zoning would have a significant effect that can be mitigated with a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road, to be installed by the applicant at the time of development. This proposal is consistent with the mitigation recommended to address the impacts of the proposed development in the TIA.

Traffic Impact Analysis Findings

7. The Norwood Apartments project could be characterized as two different land use categories, low-rise multifamily housing or mid-rise multifamily. This analysis uses the more conservative (e.g., assumes a higher level of traffic) land use category, low-rise multifamily housing, as requested by the City of Tualatin. The trip generation calculations show that the proposed Norwood Apartments development is estimated to

generate a net increase of 107 trips during the morning peak hour, 137 trips during the evening peak hour, and 1,826 daily trips during the average weekday.

8. In general, impacts from the proposed project are expected to be minor. All study intersections show operational results that meet standards under all analysis scenarios except for the intersection of SW Boones Ferry Road & SW Norwood Road if it remains unsignalized. However, with the recommended signal installation, this intersection will be improved to meet agency standards.

9. In general, changes in 95th percentile queuing between the year background and buildout conditions are anticipated to be small, one vehicle or two vehicles. As with the operational findings, one intersection is anticipated to have significant growth in queues: SW Boones Ferry Road & SW Norwood Road. However, with the recommended signal installation, queueing will be consistently improved.

10. A traffic signal is recommended at the intersection of SW Boones Ferry Road & SW Norwood Road. With a signal but no widening on SW Norwood Road, the overall intersection v/c ratio will meet the City mobility standard of LOS D and the County mobility target of 0.90. On the westbound approach, delays will be shorter than background conditions without the proposed project and recommended traffic signal. The queuing analysis shows that even with five years of additional growth, the 95th percentile queues on the shared westbound approach will not extend to the first driveway on SW Norwood Road. Therefore, widening SW Norwood Road to include a westbound right-turn lane or widening SW Boones Ferry Road to lengthen the northbound right-turn lane should not occur until the adjacent parcels redevelop.

11. Traffic signal warrants are met under both background and buildout conditions at the intersection of SW Boones Ferry Road & SW Norwood Road. Installing a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road is a recommended mitigation measure.

12. Traffic signal warrants are not met at the site access intersection with SW Norwood Road or at the unsignalized intersection of SW Norwood Road & SW 82nd Avenue.

13. Left-turn lane warrants are not met at the proposed site access intersection on SW Norwood Road for either peak hour under the 2026 buildout scenario for any analysis period.

14. At the proposed site accesses on SW Norwood Road, dense foliage restricts existing sight lines; however, preliminary assessment or horizontal and vertical curvature indicate that the 500-foot sight distance requirement is expected to be satisfied.

15. On SW Norwood Road, the minimum access spacing standard of 100 feet will be met with construction of the proposed site access.

16. Based on a review of the most recent five years of available crash data, no significant trends or crash patterns were identified at any of the study intersections. Accordingly, no safety mitigation is recommended per the crash data analysis.

Project Description

Introduction

The proposed Norwood Apartments project includes the development of a 276-unit apartment complex on a site located south of SW Norwood Road and east of SW Boones Ferry Road in Tualatin, Oregon. The application will require rezoning the site from Institutional (IN) and Medium Low Density Residential (RML) to High Density/High Rise Residential (RH-HR). The site will take all access from SW Norwood Road.

The purposes of this study are to determine whether the transportation system within the vicinity of the site is capable of safely and efficiently supporting the proposed development, to determine any mitigation that may be necessary to do so, and to demonstrate compliance with the Transportation Planning Rule (TPR).

Based on prior scoping coordination with the City of Tualatin and Washington County, the report includes safety and capacity analyses at 6 intersections:

1. SW Boones Ferry Road & SW Ibach Street
2. SW Boones Ferry Road & SW Norwood Road
3. Site Access & SW Norwood Road (future intersection)
4. SW 82nd Avenue & SW Norwood Road
5. SW Boones Ferry Road & Basalt Creek Parkway Extension (future intersection)
6. SW Boones Ferry Road & SW Day Road

Detailed information on traffic counts, trip generation calculations, safety analyses, and level of service calculations are included in the appendix to this report.

Location Description

The project site consists of tax lots 2S135D 000108 and 2S135D 000106. Lot 108 includes a 1.0-acre parcel located at 9300 SW Norwood Road and is currently occupied by one single-family home. The lot is currently outside the City of Tualatin with a Washington County zoning designation of FD-20; once annexed, the lot will be zoned Medium Low Density Residential (RML).

Lot 106 includes an 8.2-acre portion of the parcel located at 23370 SW Boones Ferry Road, which is part of the Horizon Christian School property. The portion of this lot to be redeveloped is currently zoned Institutional (IN) and is occupied by one single-family home. It is also developed with a parking lot with approximately 120 striped spaces. Both parcels are proposed for rezoning to High Density/High Rise Residential (RH-HR).

The proposed Norwood Apartments development includes the development of six 4-story buildings totaling 276 apartments on the site. Future access to the site will be provided via one new driveway along SW Norwood Road. An emergency access connection to the Horizon School circulation network is also provided.

A site plan is included in Appendix A and the site location is shown in Figure 1 with the project site outlined in yellow.

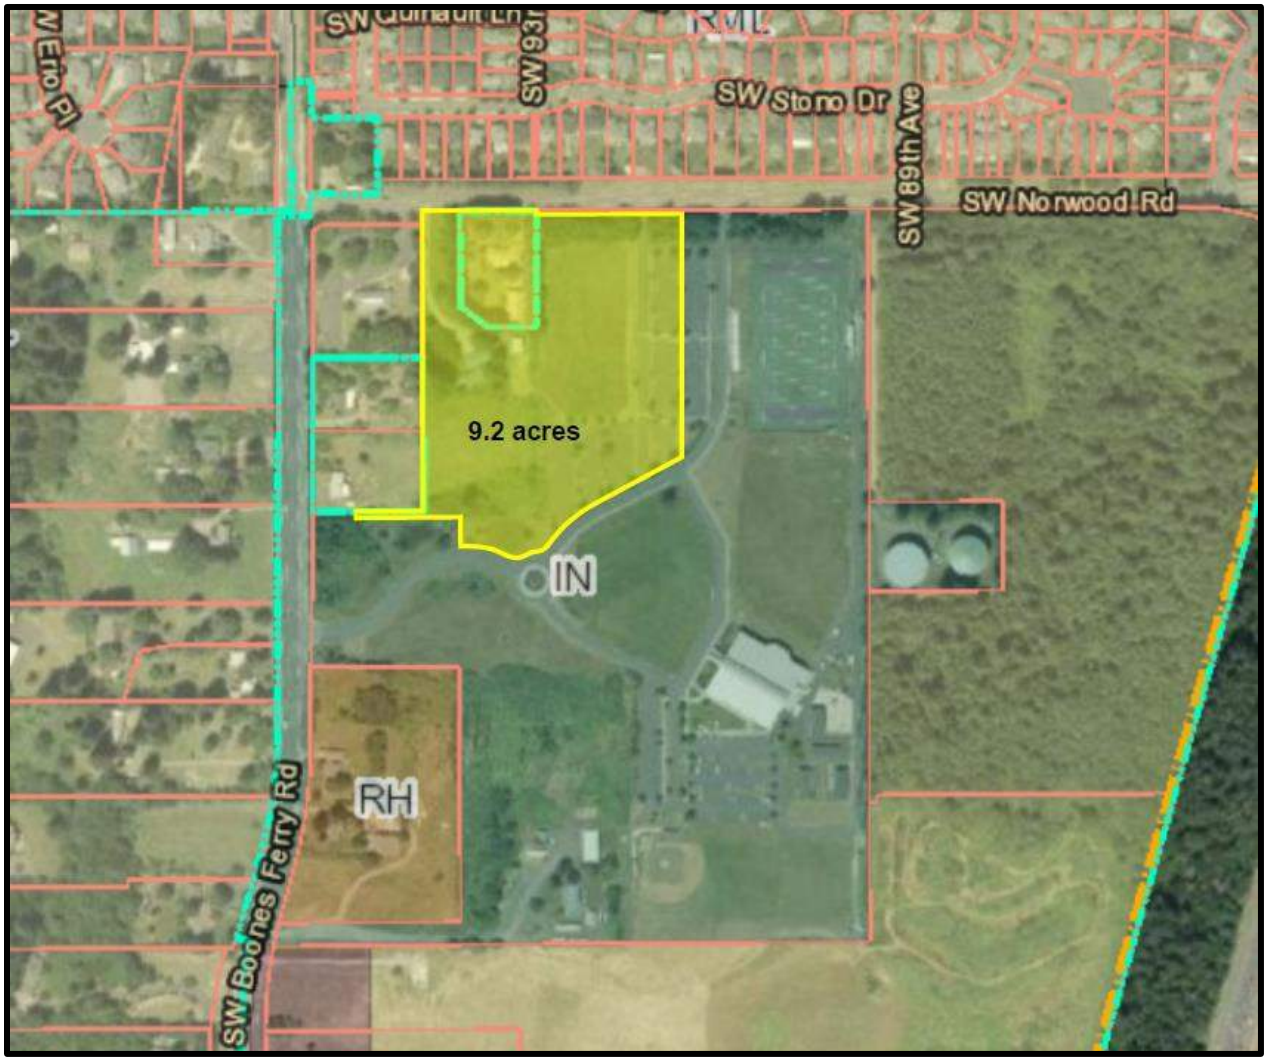

Figure 1: Project Location (Source: City of Tualatin Interactive Zoning Map)

Vicinity Streets

Five roadways within the study area are expected to be impacted by the proposed development. The characteristics of these roadways are summarized in Table 1.

Study Intersections

Through coordination with the City of Tualatin and Washington County, six study intersections were identified for evaluation. The existing characteristics of these intersections are summarized in Table 2. A vicinity map showing the project site, vicinity streets, and study intersection configurations is shown in Figure 2.

Table 1: Roadway Characteristics

Street Name	Jurisdiction	Functional Classification	Posted Speed	Curbs & Sidewalks	On-Street Parking	Bicycle Facilities
SW Boones Ferry Road	City of Tualatin / Washington County	Major Arterial / Arterial	35 / 45 mph[1]	Partial Both Sides	None	Bike Lanes
SW 82nd Avenue	Washington County	Major Collector	45 mph	None	None	None
SW Ibach Street / Court	City of Tualatin	Major Collector / Local	35 / 25 mph	Both Sides	None	Bike Lanes
SW Norwood Road	Washington County	Collector (Major Collector[2])	45 mph	Both Sides	None	None
SW Day Road	City of Wilsonville	Major Arterial	40 mph	South Side	None	Bike Lanes

Notes:
1. Speed increases from 35 mph to 45 mph south of SW Norwood Road.
2. City of Tualatin Classification.

Table 2: Vicinity Intersection Descriptions

Intersection		Geometry	Traffic Control	Phasing/Stopped Approaches
1	SW Boones Ferry Road & SW Ibach Street/SW Ibach Court	Four-Legged	Signalized	Protected NB Left/ Permitted EB/WB/SB Left
2	SW Boones Ferry Road & SW Norwood Road	Three-Legged	Stop-Controlled	WB Stop-Controlled
3	Site Access & SW Norwood Road (future intersection)	Three-Legged	Stop-Controlled	NB Stop-Controlled
4	SW 82nd Avenue & SW Norwood Road	Three-Legged	Stop-Controlled	NB/SB Stop-Controlled Except SB Free Right
5	SW Boones Ferry Road & Basalt Creek Parkway Extension (future intersection)	Three-Legged	Signalized	Protected/Permitted NB Left w/ EB Right Turn Overlap

Public Transit

The project is located near one transit line that has stops within less than a one-quarter mile walking/biking distance of the site.

Route 96 – Tualatin/I-5 provides weekday rush-hour service between Commerce Circle and the Mohawk Park & Ride in Tualatin, and regular service between Mohawk Park & Ride and Portland City Center. Weekday service is scheduled from approximately 5:15 AM to 9:10 PM with headways of approximately 30 to 60 minutes. There is currently no weekend or holiday service. The nearest bus stops to the site are currently located just south of the intersection of SW Boones Ferry Road at SW Norwood Road.

Site Trips

The proposed development consists of six 4-story buildings totaling 276 apartments. All access will be taken from SW Norwood Road.

Trip Generation

To estimate the number of trips that will be generated by the proposed development, trip rates from the *Trip Generation Manual*[1] were used. Rates from land use code 210, *Single-Family Detached Housing*, were used to estimate existing site trip generation based on the number of dwelling units. City staff requested land use code 220, *Multifamily Housing (Low-Rise)*[2] be used to estimate the proposed trip generation of the 276 apartment units; therefore, this assumption was used in the trip estimates presented in Table 3.

As shown in Table 3, the trip generation calculations as requested by the City show that the proposed Norwood Apartments development is estimated to generate a net increase of 107 trips during the morning peak hour, 137 trips during the evening peak hour, and 1,826 daily trips during the average weekday. Detailed calculation worksheets are provided in Appendix A.

Table 3: Trip Generation Summary

ITE Code – Land Use	Intensity (DU)	Morning Peak Hour			Evening Peak Hour			Weekday Trips
		In	Out	Total	In	Out	Total	
Existing								
210 - Single-Family Detached Housing	-2	0	-1	-1	-1	-1	-2	-18
Propose								
220 - Multifamily Housing (Low-Rise)	276	26	82	108	88	51	139	1,844
Net New Trips		26	81	107	87	50	137	1,826

Trip Distribution

The directional distribution of site trips to/from the project site was assumed to be the same as the distribution used for other approved projects in the area. That trip distribution was estimated based on the locations of likely trip destinations, locations of major transportation facilities in the site vicinity, and a select zone analysis using Metro's Regional Travel Demand Forecasting Model. An additional consideration was Google Maps estimated travel times along various routes to/from the site.

[1] Institute of Transportation Engineers (ITE), *Trip Generation Manual*, 10th Edition, 2017.

[2] As the proposed apartments will be four stories, ITE guidance suggests that the appropriate land use code for the development is 221, *Multifamily Housing (Mid-Rise),* which includes data for apartment complexes ranging from four to 10 stories. Trip rates for this land use are generally lower during the evening peak and over the course of the day than those for land use code 220, *Multifamily Housing (Low-Rise)*, which includes data for apartment complexes ranging from one to three stories. Using the low-rise multifamily housing option provides a more conservative estimate of trip generation.

The initial distribution, prior to the construction of the Basalt Creek Parkway Extension, is summarize below:

- Approximately 40 percent of site trips will travel to/from the north on SW Boones Ferry Road
    - Approximately 3 percent will travel to/from uses south of SW Ibach Road
    - Approximately 5 percent will travel to/from SW Ibach Road
    - Approximately 32 percent will travel to/from areas north of SW Ibach Road
- Approximately 45 percent of site trips will travel to/from the south on SW Boones Ferry Road
    - Approximately 10 percent will travel to/from SW Day Road
    - Approximately 35 percent will travel to/from areas south of SW Day Road
- Approximately 15 percent of site trips will travel to/from the east on SW Norwood Road

The anticipated project trip distribution and assignment of site trips generated during the morning and evening peak hours is provided in Figure 3.

Basalt Creek Parkway Extension

Washington County is currently engineering the extension of the Basalt Creek Parkway eastward from SW Grahams Ferry Road to SW Boones Ferry Road at a connection just south of SW Greenhill Lane. Although funding for construction has not been secured yet, both city and county staff requested an analysis of the study area with the extension. The following changes in trip distribution with the Basalt Creek Parkway Extension anticipated are:

- Shift five (5) percent of project trips heading north on SW Boones Ferry Road (continuing onto SW Ibach Street and SW Avery Street) to the Basalt Creek Parkway Extension.
- Shift eight (8) percent of project trips heading south on SW Boones Ferry Road (continuing onto SW Day Road) to the Basalt Creek Parkway Extension.

These changes are not anticipated to change the project study area. The resulting project trip distribution and assignment of site trips generated during the morning and evening peak hours with the Basalt Creek Parkway Extension is provided in Figure 4.

Traffic Volumes

Existing Conditions

Traffic counts were conducted at the study intersections on Thursday, October 20th, 2022, from 7:00 AM to 9:00 AM and from 4:00 PM to 6:00 PM. Additionally, a 12-hour count (7:00 AM to 7:00 PM) from September 29, 2021, was obtained for the intersection of SW Boones Ferry Road & SW Norwood Road. Counts were collected while school was in session, and no COVID-19 adjustments were used as traffic volumes have largely stabilized.

The year 2022 data was summarized for each intersection's respective morning and evening peak hours. At the intersection of SW Boones Ferry Road & SW Norwood Road, peak hour data was also summarized for the year 2021. During the morning peak hour, the year 2021 peak hour counts were lower than the 2022 peak hour counts; therefore, only the 2022 count data were used. During the evening peak hour, the year 2021 peak hour counts were higher for some but not all turning movements; therefore, an average of the two traffic counts was used. Additionally, the through volumes on SW Boones Ferry Road at SW Ibach Road and SW Day Road were also increased to reflect the higher demand.

Figure 5 shows the existing traffic volumes at the study intersections during the morning and evening peak hours.

Background Conditions

To provide analysis of the impact of the proposed development on the nearby transportation facilities, an estimate of future traffic volumes is required. Two components were included in the background traffic estimates: 1) general growth and 2) growth associated with planned developments.

For the background growth, a short-term annual growth rate of two percent per year was applied to the year 2022 existing traffic volumes. This growth rate is generally consistent with historical growth rates on study area roadways although conservatively higher than trends on SW Boones Ferry Road.

Two projects were assumed for the in-process development. The affordable housing development known as Plambeck Gardens is planned to be constructed to the south of the project site along SW Boones Ferry Road. The buildout year for this project was assumed to be 2025. The Autumn Sunrise housing development is planned to be constructed east and south of the project site, taking access via SW Boones Ferry Road and SW Norwood Road. The buildout year for this project was assumed to be 2026. Therefore, trip assignment associated with both nearby developments were included in the 2026 background year scenario. Detailed project trip information for both planned developments can be found in Appendix B.

Figure 6 shows the projected year 2026 background traffic volumes at the study intersections during the morning and evening peak hours.

Background Year 2026 with Basalt Creek Parkway Extension

Washington County is currently engineering the extension of the Basalt Creek Parkway eastward from SW Grahams Ferry Road to SW Boones Ferry Road at a connection just south of SW Greenhill Lane. Engineering is under way but construction is contingent on securing funding for the project.

Since funding and the construction timeline are indefinite, this project was not assumed as part of the base transportation network. However, an analysis scenario with the planned project has been developed to understand how it might change traffic operations with the proposed project. A County study for[3] this phase of the Basalt Creek Parkway project was provided for the new intersection created by the extension to SW Boones Ferry Road for the year 2023. Although the projections did not address other study area intersections, year 2015 base year and year 2040 future year model forecasts were also obtained from Washington County and Metro.

To develop background volumes for a year 2026 background condition, the following assumptions were made:

- The year 2023 forecast volumes for the intersection of SW Boones Ferry Road and the Basalt Creek Parkway Extension were compared with the existing year 2022 volumes on SW Boones Ferry Road. Since the volumes were comparable, the forecasts were assumed as year 2022 volumes for the new intersection.
- Increases in traffic volumes on SW Boones Ferry Road due to the Basalt Creek Parkway Extension were added to through movements at the intersections north and south of the new intersection.
- Based on the model forecasts, the following traffic shifts were assumed to estimate study area traffic with completion of the extension:
    - 50 percent of the northbound traffic currently turning left from SW Boones Ferry Road to SW Day Road will continue traveling northward and turn left on the Basalt Creek Parkway Extension.
    - 50 percent of the eastbound traffic currently turning right from SW Day Road to SW Boones Ferry Road will travel along the Basalt Creek Parkway Extension and turn right on SW Boones Ferry Road at the new intersection.
    - 50 percent of the southbound traffic currently turning right from SW Boones Ferry Road to SW Day Road will turn on the Basalt Creek Parkway Extension instead of continuing south to SW Day Road.
    - 50 percent of the eastbound traffic currently turning left from SW Day Road to SW Boones Ferry Road will travel along the Basalt Creek Parkway Extension and turn left onto SW Boones Ferry Road at the new intersection.
    - 25 percent of the eastbound traffic currently turning left from SW Ibach Road to SW Boones Ferry Road will have diverted to the Basalt Creek Parkway Extension.
    - 25 percent of the southbound traffic currently turning right from SW Boones Ferry Road to SW Ibach Road will have diverted to the Basalt Creek Parkway Extension.
- Once year 2022 traffic volumes were developed to reflect the Basalt Creek Parkway Extension, an annual growth rate of 2 percent per year was applied and the in-process traffic was added.

Figure 7 shows the projected year 2026 background traffic volumes at the study intersections during the morning and evening peak hours with the Basalt Creek Parkway Extension in place.

[3] DKS Associates, "Washington County Basalt Creek Extension – Traffic Analysis Memorandum," January 16, 2020.

Buildout Conditions

The project is proposed to be occupied by the year 2026, so 2026 is used as the buildout year. Peak hour trips calculated to be generated by the proposed development, as described earlier within the *Site Trips* section, were added to the projected year 2026 background traffic volumes to obtain the expected 2026 site buildout volumes.

Figure 8 shows the projected year 2026 buildout traffic volumes at the study intersections during the morning and evening peak hours and Figure 9 shows the projected year 2026 buildout traffic volumes at the study intersections during the morning and evening peak hours with the Basalt Creek Parkway Extension in place.

Safety Analysis

Crash History Review

Using data obtained from ODOT's Crash Data System, a review of approximately five years of the most recent available crash history (January 2016 through December 2020) was performed at the study intersections. The crash data was evaluated based on the number of crashes, the type of collisions, and the severity of the collisions. Crash severity is based on injuries sustained by people involved in the crash, and includes five categories:

- Property Damage Only (PDO)
- Possible Injury (Injury C)
- Non-Incapacitating Injury (Injury B)
- Incapacitating Injury (Injury A)
- Fatality or Fatal Injury

Crash rates provide the ability to compare safety risks at different intersections by accounting for both the number of crashes that have occurred during the study period and the number of vehicles that typically travel through the intersection. Crash rates were calculated using the common assumption that traffic counted during the evening peak period represents approximately 10 percent of the annual average daily traffic (ADT) at the intersection.

Table 4 provides a summary of crash types while Table 5 summarizes crash severities and crash rates for each of the study intersections. Detailed ODOT crash reports are included in Appendix C.

Table 4: Crash Type Summary

Intersection		Crash Type								Total Crashes
		Rear End	Turning	Fixed Object	Angle	Bicycle	Head On	Ped Involved	Sideswipe	
1	SW Boones Ferry Road & SW Ibach Street/Court	6	1	1	0	0	0	1	0	9
2	SW Boones Ferry Road & SW Norwood Road	2	4	1	0	0	0	0	0	7
4	SW 82nd Avenue & SW Norwood Road	0	0	0	0	0	0	0	0	0
6	SW Boones Ferry Road & SW Day Road	21	4	1	0	0	1	0	2	29

Table 5: Crash Severity and Rate Summary

Intersection		Crash Severity					Total Crashes	PHV	Crash Rate	90th % Rate
		PDO	C	B	A	Fatal				
1	SW Boones Ferry Road & SW Ibach Street/Court	3	5	1	0	0	9	1,950	0.25	0.860
2	SW Boones Ferry Road & SW Norwood Road	6	1	0	0	0	7	1,333	0.29	0.293
4	SW 82nd Avenue & SW Norwood Road	0	0	0	0	0	0	250	0.00	0.408
6	SW Boones Ferry Road & SW Day Road	16	11	1	1	0	29	2,213	0.72	0.860

PHF = Peak Hour Volume

Crash Severity

None of the crashes reported in the five-year analysis period resulted in a fatality but one of the crashes resulted in an incapacitating injury (Injury A):

- A fixed object collision reported at the intersection of SW Boones Ferry Road at SW Day Road resulted in one incapacitating injury (Injury A). The crash involved a single eastbound vehicle on a rainy day with the driver at fault for driving improperly.

Pedestrian Collisions

One of the reported crashes involved a pedestrian:

- A pedestrian walking southbound in the west crosswalk was reportedly struck by a northbound vehicle making a left turn onto SW Ibach Street. The pedestrian sustained possible injuries (Injury C) and the driver was reported at fault for failing to yield right of way to a pedestrian crossing in a marked crosswalk.

ODOT 90th Percentile Crash Rates

Intersection crash rates were compared to the published statewide 90th percentile crash rates within ODOT's Analysis Procedures Manual (APM). According to Exhibit 4-1: Intersection Crash Rates per MEV by Land Type and Traffic Control in the APM, intersections which experience crash rates in excess of 90th percentile crash rates should be "flagged for further analysis".

None of the intersections in the study area were calculated to have crash rates that exceed the 90th percentile crash rates for the intersection type.

ODOT Safety Priority Index System

According to the ODOT TransGIS website, none of the study area intersections were listed in the worst 15 percent of ODOT's 2019 Safety Priority Index System (SPIS) list.

Washington County Safety Priority Index System

One of the study area intersections is listed in the Washington County 2015-2017 SPIS List. The intersection of SW Boones Ferry Road & SW Day Road is ranked 323 of 365 based on 11 crashes over a three-year period. The crash analysis shows that most (65 percent) crashes were rear-end collisions and the severity was generally low.

Conclusion

Based on a review of the most recent five years of available crash data, no significant trends or crash patterns were identified at any of the study intersections. Accordingly, no safety mitigation is recommended per the crash data analysis.

Sight Distance

SW Norwood Road is under Washington County jurisdiction, so intersection sight distance (ISD) was measured and evaluated in accordance with Washington County Community Development Code (CDC) Section 501-8.5.F. Sight distance measurements were made from an entering driver's eye height of 3.5 feet above the roadway surface 15 feet behind the curb line/edge of pavement of the intersecting street to the position of an oncoming vehicle in the major-street traffic lane 4.25 feet above the roadway.

At the proposed site access on SW Norwood Road, the posted speed is 45 mph. Assuming a travel speed 5 mph over the posted speed results in an intersection sight distance requirement of 500 feet.

Due to foliage along the roadside, accurate sight distance measurements cannot be taken along the future roadway frontage. SW Norwood Road is straight and horizontal curvature is not anticipated to be an issue. The elevation profiles show that vertical curvature is unlikely to be an issue as well. Based on this preliminary assessment, the 500-foot sight distance requirement is expected to be satisfied at the proposed site access on SW Norwood Road.

Access Spacing

Site access will be taken from SW Norwood Road, which is under Washington County jurisdiction. The county access requirements are shown in CDC Section 501-8.5B. For SW Norwood Road with a collector classification, the access spacing standard is 100 feet measured between the edge of travel lanes or easements on both sides of the roadway.

One access on SW Norwood Road is proposed with the development. Measured consistently with the CDC, the access is planned approximately 540 feet east of SW Boones Ferry Road, 298 feet east of the existing driveway serving the Tualatin Hills Christian Church, and 376 feet west of an existing driveway serving the Horizon Christian School. There are no accesses on the north side of SW Norwood Road between SW Boones Ferry Road and SW 89th Avenue. Thus, the proposed site access will meet the Washington County access spacing standard of 100 feet as shown in the CDC Section 501-8.5B.

Left-Turn Lane Warrants

Left-turn lanes are not present on SW Norwood Road; therefore, left-turn lane warrants were examined at the proposed site access on SW Norwood Road using the methodology outlined in the National Cooperative Highway Research Program Report (NCHRP) 457, published by the Transportation Research Board in 2001. These turn-lane warrants are evaluated based on the number of left-turning vehicles, the number of advancing and opposing vehicles, and the roadway travel speed. The results are summarized in Table 6 for year 2026 conditions with full buildout of the proposed development, both with and without the Basalt Creek Parkway Extension. Detailed information on the warrant analysis is included in Appendix C.

Table 6: Summary of Left-Turn Lane Warrant Evaluation

Intersection & Scenario	Warrant Met?	
	Morning Peak	Evening Peak
3. Site Access & SW Norwood Road (westbound)		
2026 Buildout – No BCP Extension	No	No
2026 Buildout –With BCP Extension	No	No

BCP = Basalt Creek Parkway

As shown in Table 6, left-turn lane warrants are not met at the proposed site access intersection for either peak hour under the 2026 buildout scenario for any analysis period.

Traffic Signal Warrants

Preliminary Signal Warrants

Preliminary traffic signal warrants were examined at the unsignalized study area intersections to determine whether the installation of a new traffic signal will be warranted at these intersections upon completion of the proposed development.

At all three intersections, the speed assumed for the evaluation was 45 mph. The posted speed on SW Norwood Road is 45 mph. The posted speed on SW Boones Ferry Road changes from 45 mph south of the intersection with SW Norwood Road to 35 mph north of the intersection. A speed study conducted on SW Boones Ferry Road south of SW Norwood Road shows that the 85th percentile speed is 45 mph in both directions (see Appendix B). While drivers may be traveling slower north of the intersection, they are still likely to be traveling at a speed near 40 mph as they approach SW Norwood Road. Both the City of Tualatin and Washington County confirmed that using the 70 percent warrant thresholds for speeds of 40 mph or greater is appropriate.

The results are summarized in Table 7 for year 2026 conditions with full buildout of the proposed development, both with and without the Basalt Creek Parkway Extension. Detailed information on the warrant analysis is included in Appendix C.

Table 7: Summary of Preliminary Traffic Signal Warrant Evaluation

Intersection & Scenario	Warrant Met?	
	Based on Morning Peak	Based on Evening Peak
2. SW Boones Ferry Road & SW Norwood Road (Shared Lane – 50% Right-Turn Discount)		
2026 Buildout – No BCP Extension	Yes	Yes
2026 Buildout – With BCP Extension	Yes	Yes
2. SW Boones Ferry Road & SW Norwood Road (Separate Left- and Right-Turn Lanes)		
2026 Buildout – No BCP Extension	No	No
2026 Buildout – With BCP Extension	Yes	No
3. Site Access & SW Norwood Road		
2026 Buildout – No BCP Extension	No	No
2026 Buildout – With BCP Extension	No	No
4. SW 82nd Avenue & SW Norwood Road		
2026 Buildout – No BCP Extension	No	No
2026 Buildout – With BCP Extension	No	No

BCP = Basalt Creek Parkway

As shown in Table 7, preliminary traffic signal warrants are met at the SW Boones Ferry Road & SW Norwood Road intersection both with and without the Basalt Creek Parkway Extension with a shared westbound approach lane on SW Norwood Road. If separate left- and right-turn lanes are provided on SW Norwood Road, the preliminary warrant is met based on morning peak hour volumes. No warrants are met at the other two intersections evaluated.

Detailed Warrant Analysis

Since the preliminary warrants are met at the intersection of SW Boones Ferry Road & SW Norwood Road, a more detailed warrant analysis was conducted to better understand the circumstances that would warrant a traffic signal.

Using the 12-hour count as the basis of the evaluation, future volume forecasts were developed by growing the hourly volumes by 2 percent per year and adding the in-process traffic for the background condition and site-generated traffic for the buildout condition. The "Hourly Distribution of Entering and Exiting Vehicle Trips by Land Use" from the ITE *Trip Generation Manual* were used to estimate the hourly volumes for the in-process and site-generated trips based on the daily volume estimates. To account for the effects of the Basalt Creek Parkway Extension, through traffic volumes on SW Boones Ferry Road were increased by 5 percent in each direction.

The results of the detailed evaluation are summarized in Table 8 for two scenarios, one where a shared westbound approach lane is maintained and a second where a separate right-turn lane is added. As noted previously, at the request of City staff, land use code 220, *Multifamily (Low-Rise)*, was used rather than 221,

Multifamily (Mid-Rise), because it has higher trip rates and presents a more conservative assessment of project impacts. Detailed analyses are included in Appendix C.

Table 8: Detailed Signal Warrant Evaluation

Condition	Warrant Met?		
	8-Hour	4-Hour	Peak Hour
2. SW Boones Ferry Road & SW Norwood Road (Shared Lane – 50% Right-Turn Discount)			
2026 Background – No BCP Extension	Yes	Yes	Yes
2026 Background – With BCP Extension	Yes	Yes	Yes
2026 Buildout – No BCP Extension	Yes	Yes	Yes
2026 Buildout – With BCP Extension	Yes	Yes	Yes
2. SW Boones Ferry Road & SW Norwood Road (Separate Left- and Right-Turn Lanes)			
2026 Background – No BCP Extension	No	No	No
2026 Background – With BCP Extension	No	No	No
2026 Buildout – No BCP Extension	Yes	Yes	Yes
2026 Buildout – With BCP Extension	Yes	Yes	Yes

As shown in Table 8, with a shared westbound approach lane and a 50 percent right-turn discount to account for the ease of making right turns compared with left turns, all of the warrants are met under both background and buildout conditions with either land use category.

If a separate westbound right-turn lane is added, which requires acquiring right-of-way from the property on the north side of the street, the warrant results varied. The background condition would not meet any signal warrants but the buildout condition would meet the warrants with the conservative land use assumptions.[4]

Since the signal warrants are met for the buildout conditions with the shared westbound lane, a traffic signal is recommended as mitigation.

[4] Under these conditions, the assumption of land use category is shown to make a difference in the results. Using trip rates for low-rise apartments, as requested by the City, generates volumes that would meet the warrants while using trip rates for mid-rise apartments generates volumes that would not meet the warrants if a separate right-turn lane were to be provided.

Operational Analysis

The operations of the transportation were evaluated for the morning and evening peak hours for existing conditions and the future scenarios without and with the proposed development presented in this TIS.

Intersection Capacity Analysis

A capacity and delay analysis were conducted for each of the study intersections per the signalized and unsignalized intersection analysis methodologies in the *Highway Capacity Manual* (HCM)[5]. Intersections are generally evaluated based on the average control delay experienced by vehicles and are assigned a grade according to their operation. The level of service (LOS) of an intersection can range from LOS A, which indicates very little, or no delay experienced by vehicles, to LOS F, which indicates a high degree of congestion and delay. The volume-to-capacity (v/c) ratio is a measure that compares the traffic volumes (demand) against the available capacity of an intersection.

The analysis was performed using the Synchro (version 11) software which applies the HCM6 methodologies to all study intersections.

Performance Standards

The following agency performance standards are applicable in the study area:

- The City of Tualatin requires intersections to operate at a minimum LOS D and LOS E for signalized and unsignalized intersections, respectively.
- Washington County has a mobility target of 0.90 but a v/c ratio of 0.99 or less is acceptable.

Assumptions for Basalt Creek Parkway Extension

The Basalt Creek Parkway Extension will create a new intersection along SW Boones Ferry Road. The geometry for the intersection and the traffic control were assumed to be the same as was used for the Opening Year Minimum Build 2023 scenario. Note, volumes differ because of additional background growth and in-process traffic from developments constructed after year 2023. The peak hour factor also differs based on more recent traffic counts.

Delay & Capacity Analysis

The LOS, delay, and v/c results of the capacity analysis are shown in Table 9 for the morning and evening peak hours and five scenarios. No changes to existing intersection configurations are assumed in this analysis except for those specifically associated with the Basalt Creek Parkway Extension project; recommended mitigation is discussed separately, after potential project impacts have been identified. Detailed calculations as well as tables showing the relationship between delay and LOS are included in Appendix D.

[5] Transportation Research Board, *Highway Capacity Manual 6th Edition*, 2016.

Table 9: Capacity Analysis Summary

Intersection & Scenario	Performance Standard	Morning Peak Hour			Evening Peak Hour		
		LOS	Delay (s)	V/C	LOS	Delay (s)	V/C
1. SW Boones Ferry Road & SW Ibach Street/Court							
2022 Existing	LOS D	B	18	0.73	B	19	0.77

2026 Background		C	31	0.58	C	34	0.67
2026 Background w/ BCPE		C	24	0.74	C	25	0.73
2026 Buildout		C	31	0.60	C	33	0.68
2026 Buildout w/ BCPE		C	24	0.74	C	24	0.75

BCPE = Basalt Creek Parkway Extension
Locations that do not meet standards are BOLDED.

In general, impacts from the proposed project are expected to be minor. All study intersections show operational results that meet standards under all analysis scenarios except for the intersection of SW Boones Ferry Road & SW Norwood Road. This intersection exceeds operational standards during the year 2026 buildout scenario with the Basalt Creek Parkway Extension in place during the morning peak hour.

To address these impacts, we recommend installing a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road to mitigate the operational impacts of the project. The benefits of the recommended signal are described in the section of this report titled *Mitigation Analysis*.

Queuing Analysis

An analysis of projected queuing was conducted for the study intersections. The 95th percentile queue lengths were estimated based on the same Synchro/SimTraffic simulations used for the delay calculations. The 95th percentile queue is a statistical measurement which indicates there is a 5 percent chance that the queue may exceed this length during the analysis period; however, given this is a probability, the 95th percentile queue length may theoretically never be met or observed in the field.

No changes to existing intersection configurations are assumed in this analysis except for those specifically associated with the Basalt Creek Parkway Extension project; recommended mitigation is discussed separately, after potential project impacts have been identified. All queues more than 5 feet longer than a multiple of 25 were rounded up. Those that were 5 feet or less were rounded down since 5 feet is equivalent to the space between queued vehicles.

The 95th percentile queue lengths reported in the simulation are presented for the three concepts in Table 10 for the morning and evening peak hours. Detailed queuing analysis reports are included in Appendix D.

Table 10: Queuing Analysis Summary

BCPE = Basalt Creek Parkway Extension
BOLDED results show projected queues which exceed current available storage

In general, changes in 95th percentile queuing between the year background and buildout conditions are anticipated to be small, one vehicle or two vehicles. One intersection is anticipated to have significant growth in queues: SW Boones Ferry Road & SW Norwood Road. Buildout conditions show queuing on the westbound approach fluctuates considerably from simulation to simulation but is sometimes expected to extend past the first driveway under build conditions.

To address these impacts, we recommend installing a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road to mitigate the operational impacts of the project. The benefits of the recommended signal are described in the section of this report titled *Mitigation Analysis*.

Mitigation Analysis

The intersection of SW Boones Ferry Road & SW Norwood Road is expected to exceed mobility targets under one buildout scenario. Both the preliminary and detailed signal warrant analysis show that a signal is warranted at the intersection with a westbound shared-lane approach. The operational results and 95th percentile queues for the 2026 buildout condition with these mitigation options are summarized in Table 11. Detailed analysis and queuing reports are included in Appendix D.

Table 11: SW Boones Ferry Road & SW Norwood Road with Signal and No Widening

Measure	Condition/ Potential Improvement			
	2026 Buildout		2026 Buildout w/ BCPE[1]	
	Morning Peak	Evening Peak	Morning Peak	Evening Peak

SBT (230 ft)	75/125	100/200	75/150	125/225

Notes:

1. *BCPE = Basalt Creek Parkway Extension*
2. *Storage lengths reflect the distance to the closest driveway.*

BOLDED results show projected queues which exceed current available storage

Findings

The results of the operational analysis show that installing a traffic signal at the intersection, as warranted, will result in an overall intersection v/c ratio that would meet the City mobility standard of LOS D and the County mobility target of 0.90. On the westbound approach, delays will be shorter than background conditions without the project.

The queuing analysis with the recommended signal shows that the 95th percentile queues on the shared westbound approach will not extend to the first driveway on SW Norwood Road. Furthermore, analysis (see Appendix D) shows that with five years of additional growth, in 2031, westbound queues will still not extend to the first driveway on SW Norwood Road. These results support a conclusion a separate right-turn is not needed to accommodate the proposed development.

The queuing analysis shows that, when the intersection is signalized, the northbound queues in the through lane will sometimes block access to the northbound right-turn lane; however, the northbound right-turn is not necessary to meet operational thresholds. Queues for the northbound through lane will extend past the first driveway on the west side of SW Boones Ferry Road, which currently serves a single-family residence.

Recommendations

Based on these findings, a traffic signal is recommended at the intersection of SW Boones Ferry Road & SW Norwood Road but no additional travel lanes are needed to accommodate the proposed development. Therefore, widening SW Norwood Road to include a westbound right-turn lane or widening SW Boones Ferry Road to lengthen the northbound right-turn lane should not occur until the adjacent parcels redevelop.

Transportation Planning Rule

The Transportation Planning Rule (TPR) is in place to ensure that the transportation system can support possible increases in traffic intensity that could result from changes to adopted plans and land-use regulations.

The Norwood Apartments project proposes a zone change for a 9.2-acre parcel of land in Tualatin. The 9.2-acre site consists of Tax Lot 2S135D 000108, which is 1.0 acres and will be zoned Medium Low Density Residential (RML) upon annexation and 8.2 acres of Tax Lot 2S135D 000106, which is currently zone Institutional (IN). The site is proposed for rezoning to High Density/High Rise Residential (RH-HR).

The TPR requires an analysis of a reasonable worst-case development scenario of the site under existing and proposed zoning. If trip generation under the proposed zoning is greater than it would be under the existing zoning, then operational analysis is necessary to demonstrate that the change in zoning can be accommodated or mitigation will be necessary.

Trip Generation

The assumptions and potential development scenarios are described below.

Existing Zoning Assumptions

The Tualatin Development Code (TDC) describes allowed uses under RML zoning in Chapter 41 and the IN zoning in Chapter 49. In considering development scenarios for the TPR analysis, only permitted uses in the zone were considered.

Medium Low Density Residential (RML)

For Lot 108 with the RML zoning, residential development is the only permitted use that will generate significant traffic. TDC Table 41-3 describes the permitted densities for different types of residential development which range from 10 to 25 units per acre. For a reasonable worst-case analysis scenario, the site was assumed accommodate 25 townhomes, the maximum density that could be achieved.

Institutional (IN)

For Lot 106 with the IN zoning, allowed uses include assembly facilities (limited to places of religious worship), community services (limited to public facilities such as community recreation buildings or indoor aquatic centers), schools, and government offices. Allowed infrastructure uses include government-owned parks, sports fields, and tennis courts. Since the adjacent site to the west already includes a church and the remainder of the parcel will include a sanctuary/place of assembly, another church was not considered a reasonable option. Neither was a government office, which tend to be centrally located within a community. Although a community recreation center could be sited at this location, other nearby facilities make another recreation center at this location unlikely; therefore, a private school was selected for the reasonable worst-case analysis:

For a potential school use on the 8.2-acre site, the density of 31 students per acre from the annexation analysis was used. Based on this rate, a school accommodating approximately 250 students could be developed. For a reasonable worst-case analysis scenario, a private school offering kindergarten through 8th grade was assumed.

Proposed Zoning Assumptions

For the proposed RH-HR zoning, residential development is the only permitted use that will generate significant traffic. TDC Table 44-3 describes the permitted densities for different types of residential development. At the maximum density of 30 units/acre, the site could accommodate 276 apartments. Land use code 220, *Multifamily Housing (Low-Rise)* was used to estimate the reasonable worst case, which is consistent the proposed development.[6]

Trip Generation Comparison

To estimate trips that will be generated by the redevelopment, trip rates from the *Trip Generation Manual* were used based on the number of dwelling units (DU) or the number of students. The land use assumptions and trip generation estimates are summarized in Table 12.

Table 12: Trip Generation Comparison of Existing and Proposed Zoning

Option- Land Use (Code)	Intensity	Morning Peak Hour			Evening Peak Hour			Weekday Trips
		In	Out	Total	In	Out	Total	
Existing Zoning								
Lot 108 (1 Acre): RML Zoning (After Annexation)								
Single-Family Attached Housing (LUC 215)	25 DU	4	8	12	8	6	14	180
Lot 106 (8.2 Acres): IN Zoning								
Private School: K-8 (LUC 530)	250 Students	142	111	253	30	35	65	1,028
Combined Lots 106 & 108 (9.2 Acres) Worst Case								
Townhouses + K-8 School		146	119	265	38	41	79	1,208
Proposed Zoning								
Lots 106 & 108 (9.2 Acres): RH-HR Zoning								
Multifamily Housing: Low-Rise (221)	276 DU	26	82	108	88	51	139	1,844
Net Change with Proposed Zoning		-120	-37	-157	50	10	60	636

As shown in Table 12, the reasonable worst-case scenarios under the existing zoning would likely generate a greater number of trips during the morning peak hour, when congestion associated with schools is most prevalent. However, the proposed zoning could generate a greater number of trips in the evening peak hour. Therefore, a long-range assessment of peak hour conditions is needed for the TPR evaluation. Although the proposed zoning would only generate more traffic than existing zoning in the evening peak hour, the morning peak hour conditions were also evaluated.

[6] As explained in a prior footnote, the four-story project qualifies as ITE land use code is 221, *Multifamily Housing (Mid-Rise),* which includes trip rates that are generally lower during the evening peak and over the course of the day than those for land use code 220, *Multifamily Housing (Low-Rise).* Using the low-rise multifamily housing option provides a more conservative estimate of trip generation.

Future Traffic Volumes

For a TPR analysis, the forecasts should be based on "projected conditions measured at the end of the planning period identified in the adopted TSP." Although the current Tualatin TSP has a forecast year of 2035, it was amended to include the Basalt Creek Concept Plan, which has a forecast year of 2040. Therefore, the future year for the TPR analysis was assumed to be 2040.

To estimate future 2040 volumes, two sources of data were reviewed. One is the year 2040 regional travel demand model forecasts obtained from Washington County and Metro. The other was the "Washington County Basalt Creek Extension – Traffic Analysis Memorandum," dated January 16, 2020. After careful review of the various forecasts, a simple growth rate was used to estimate volumes in the study area.[7]

The long-term growth rates that best matched the future link forecasts from the other planning efforts were 0.5 percent per year for through traffic on SW Boones Ferry Road and 2.0 percent per year for all other movements. These growth rates were applied to the 2026 background condition volumes with the Basalt Creek Parkway Extension to estimate the 2040 existing zoning scenario.

The traffic generated by each zoning scenario was then added to the background growth to estimate the 2040 zoning scenario volumes. The resulting peak hour volumes are shown in Figure 10 for the existing zoning and Figure 11 for the proposed zoning.

Operational Analysis

For the 2040 future operations, the following traffic control and lane configuration changes were assumed:

- The current lane configurations on SW Boones Ferry Road at the intersections with SW Norwood Road and SW Ibach Street were assumed. The TSP assumes that SW Boones Ferry Road will generally remain two to three lanes north of SW Norwood Road.
- The intersection of SW Boones Ferry Road & SW Norwood Road was assumed to be unsignalized since the adopted Tualatin TSP does not identify a signal at the intersection.
- To accommodate the long-term demand under the 2040 existing scenario, SW Boones Ferry Road was assumed to be widened to a five-lane section ending north of the Basalt Creek Parkway Extension. This assumption is consistent with the long-term build configuration presented in the January 16, 2020, memorandum for Basalt Creek Parkway Extension and the Washington County TSP. Specific intersection configurations are consistent with assumptions in these documents.

The resulting evening peak hour analysis for the 2040 existing zoning scenario and the 2040 proposed zoning scenario is summarized in Table 13.

[7] The growth rate method was selected because forecasting model-based methods were producing future volumes that were lower than 2026 buildout volumes for several critical movements in the study area.

Table 13: Year 2040 Peak Hour Capacity Analysis Summary

Intersection	Performance Standard	Morning Peak Hour			Evening Peak Hour		
		LOS	Delay (s)	V/C	LOS	Delay (s)	V/C
1. SW Boones Ferry Road & SW Ibach Street/Court							
Existing Zoning	LOS D	C	34	0.83	C	29	0.90
Proposed Zoning		C	31	0.81	C	29	0.91
2. SW Boones Ferry Road & SW Norwood Road							
Existing Zoning	0.99 LOS E	F	100	1.07	F	72	0.91
Proposed Zoning		F	56	0.90	F	91	0.99
3. Site Access & SW Norwood Road							
Existing Zoning	0.99 LOSE	B	14	0.25	B	13	0.09
Proposed Zoning		B	12	0.15	B	14	0.12
4. SW 82nd Avenue & SW Norwood Road							
Existing Zoning	0.99	B	15	0.16	B	13	0.11
Proposed Zoning		B	15	0.15	B	13	0.11
5. S5\W Boones Ferry Road & Basalt Creek Parkway							
Existing Zoning	0.99	B	20	0.88	C	25	0.87
Proposed Zoning		B	19	0.88	C	25	0.87
6. SW Boones Ferry Road & SW Day Road							
Existing Zoning	0.99	B	18	0.78	B	18	0.84
Proposed Zoning		B	18	0.77	B	18	0.84

Locations that do not meet standards are BOLDED.

As shown in Table 13, changes in operations at all intersections will be the same or minimally better during the morning and the same or minimally worse during the evening with the proposed zoning. With either zoning scenario, all intersections will continue to meet agency standards except for intersection of SW Boones Ferry Road & SW Norwood Road. This intersection will operate at LOS F for under both the existing zoning and proposed zoning scenarios if it were to remain unsignalized. In the morning peak hour, conditions would be worse under existing zoning. In the evening peak hour, conditions would be worse with the proposed zoning.

Since the proposed zoning would worsen conditions during the evening peak hour, mitigation at the intersection of SW Boones Ferry Road & SW Norwood Road will be necessary. A traffic signal is proposed to mitigate the impact. As shown in Table 14, the signal would improve operations to meet standards.

Table 14: Year 2040 Peak Hour Capacity Analysis with Mitigation

Intersection	Performance Standard	Morning Peak Hour			Evening Peak Hour		
		LOS	Delay (s)	V/C	LOS	Delay (s)	V/C
1. SW Boones Ferry Road & SW Norwood Road							
Existing Zoning	0.99 LOS D	B	18	0.71	B	14	0.69
Proposed Zoning		B	15	0.67	B	13	0.73

TPR Findings

The applicable elements of the TPR are each quoted directly in italics below, with responses following.

660-012-0060

(1) If an amendment to a functional plan, an acknowledged comprehensive plan, or a land use regulation (including a zoning map) would significantly affect an existing or planned transportation facility, then the local government must put in place measures as provided in section (2) of this rule, unless the amendment is allowed under section (3), (9) or (10) of this rule. A plan or land use regulation amendment significantly affects a transportation facility if it would:

(a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);

Response: Subsection (a) is not triggered because the functional classification of an existing or planned transportation facility is not changed by the proposal.

(b) Change standards implementing a functional classification system; or

Response: Subsection (b) is not triggered because the standards for implementing a functional classification system are not changed by the proposal.

(c) Result in any of the effects listed in paragraphs (A) through (C) of this subsection. If a local government is evaluating a performance standard based on projected levels of motor vehicle traffic, then the results must be based on projected conditions measured at the end of the planning period identified in the adopted TSP. As part of evaluating projected conditions, the amount of traffic projected to be generated within the area of the amendment may be reduced if the amendment includes an enforceable, ongoing requirement that would demonstrably limit traffic generation, including, but not limited to, transportation demand management. This reduction may diminish or completely eliminate the significant effect of the amendment.

(A) Types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

(B) Degrade the performance of an existing or planned transportation facility such that it would not meet the performance standards identified in the TSP or comprehensive plan; or

(C) Degrade the performance of an existing or planned transportation facility that is otherwise projected to not meet the performance standards identified in the TSP or comprehensive plan.

Response: Subsection (c) would be triggered by the proposed zone change. The operational analysis with the proposed zoning would further degrade an intersection that would be performing below agency standards under existing zoning; the SW Boones Ferry Road & Norwood Road intersection, as summarized in Table 13. Therefore, the proposed zoning would have a significant effect. To address the effect, a traffic signal is proposed at the intersection of SW Boones Ferry Road & SW Norwood Road as mitigation. This proposal is consistent with the mitigation recommended to address the impacts of the proposed development in the TIA.

(2) If a local government determines that there would be a significant effect, then the local government must ensure that allowed land uses are consistent with the performance standards of the facility measured or projected at the end of the planning period identified in the adopted TSP through one or a combination of the remedies listed in subsections (a) through (e) below, unless the amendment meets the balancing test in subsection (e) or qualifies for partial mitigation in section (11) of this rule. A local government using subsection (e), section (3), section (10) or section (11) to approve an amendment recognizes that additional motor vehicle traffic congestion may result and that other facility providers would not be expected to provide additional capacity for motor vehicles in response to this congestion.

(a) Adopting measures that demonstrate allowed land uses are consistent with the performance standards of the transportation facility.

Response: This action is not recommended.

(b) Amending the TSP or comprehensive plan to provide transportation facilities, improvements, or services adequate to support the proposed land uses consistent with the requirements of this division. Such amendments shall include a funding plan or mechanism consistent with section (4) or include an amendment to the transportation finance plan so that the facility, improvement, or service will be provided by the end of the planning period.

Response: The City of Tualatin has indicated that they will be adding a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road as an element of the TSP. The addition is anticipated to occur with an update to the TSP scheduled for adoption in 2024. Funding of this improvement is anticipated to come from Transportation System Development Charges. However, this future amendment of the TSP is not relied upon in this application to comply with the TPR. Instead, a traffic signal will be installed at the intersection of SW Boones Ferry Road & SW Norwood Road at the time of development as mitigation, as provided in OAR 660-12-0660(2)(d).

(c) Amending the TSP to modify the performance standards of the transportation facility.

Response: This action is not recommended.

(d) Providing other measures as a condition of development or through a development agreement or similar funding method, including, but not limited to, transportation system management measures or minor transportation improvements. Local governments shall, as part of the amendment, specify when measures or improvements provided pursuant to this subsection will be provided.

Response: A condition of approval that requires the installation of a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road at the time of development will mitigate the impact of the rezone , and as shown in Table 14, the intersection will be consistent with performance standards at the end of the planning period.

(e) *Providing improvements that would benefit modes other than the significantly affected mode, improvements to facilities other than the significantly affected facility, or improvements at other locations, if:*

(A) *The provider of the significantly affected facility provides a written statement that the system-wide benefits are sufficient to balance the significant effect, even though the improvements would not result in consistency for all performance standards;*

(B) *The providers of facilities being improved at other locations provide written statements of approval; and*

(C) *The local jurisdictions where facilities are being improved provide written statements of approval.*

Response: This action is not recommended.

Conclusion

Based on this comparison of reasonable worst case trip generation, the proposed zoning would have a significant effect that can be mitigated with a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road. Accordingly, we recommend a condition of approval requiring installation of a traffic signal at SW Boones Ferry Road & SW Norwood Road at the time of development. This proposal is consistent with the mitigation recommended to address the impacts of the proposed development in the TIA.

Conclusions

Proposed Zone Change Findings

- To understand the potential impacts of the requested zone change, the reasonable worst-case land uses under existing and proposed zoning were compared. Under existing zoning, the residentially-zoned land was assumed to redevelop to its maximum density with 25 attached homes while the institutionally-zoned land was assumed to develop with a 250-student private school. The proposed development of 276 apartments is the maximum density under the proposed zoning.
- The existing zoning would likely generate a greater number of trips during the morning peak hour, when congestion associated with schools is most prevalent. However, the proposed zoning could generate a greater number of trips in the evening peak hour; thus, a TPR analysis was performed.
- A comparison of long-term operations with the existing and proposed zoning shows that the proposed zoning would have a significant effect that can be mitigated with a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road, to be installed by the applicant at the time of development. This proposal is consistent with the mitigation recommended to address the impacts of the proposed development in the TIA.

Traffic Impact Analysis Findings

- The Norwood Apartments project could be characterized as two different land use categories, low-rise multifamily housing or mid-rise multifamily. This analysis uses the more conservative (e.g., assumes a higher level of traffic) land use category, low-rise multifamily housing, as requested by the City of Tualatin. The trip generation calculations show that the proposed Norwood Apartments development is estimated to generate a net increase of 107 trips during the morning peak hour, 137 trips during the evening peak hour, and 1,826 daily trips during the average weekday.
- In general, impacts from the proposed project are expected to be minor. All study intersections show operational results that meet standards under all analysis scenarios except for the intersection of SW Boones Ferry Road & SW Norwood Road if it remains unsignalized. However, with the recommended signal installation, this intersection will be improved to meet agency standards.
- In general, changes in 95th percentile queuing between the year background and buildout conditions are anticipated to be small, one vehicle or two vehicles. As with the operational findings, one intersection is anticipated to have significant growth in queues: SW Boones Ferry Road & SW Norwood Road. However, with the recommended signal installation, queueing will be consistently improved.
- A traffic signal is recommended at the intersection of SW Boones Ferry Road & SW Norwood Road. With a signal but no widening on SW Norwood Road, the overall intersection v/c ratio will meet the City mobility standard of LOS D and the County mobility target of 0.90. On the westbound approach, delays will be shorter than background conditions without the proposed project and recommended traffic signal. The queuing analysis shows that even with five years of additional growth, the 95th percentile queues on the shared westbound approach will not extend to the first driveway on SW Norwood Road. Therefore, widening SW Norwood Road to include a westbound right-turn lane or widening SW Boones Ferry Road to lengthen the northbound right-turn lane should not occur until the adjacent parcels redevelop.

- Traffic signal warrants are met under both background and buildout conditions at the intersection of SW Boones Ferry Road & SW Norwood Road. Installing a traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road is a recommended mitigation measure.
- Traffic signal warrants are not met at the site access intersection with SW Norwood Road or at the unsignalized intersection of SW Norwood Road & SW 82nd Avenue.
- Left-turn lane warrants are not met at the proposed site access intersection on SW Norwood Road for either peak hour under the 2026 buildout scenario for any analysis period.
- At the proposed site accesses on SW Norwood Road, dense foliage restricts existing sight lines; however, preliminary assessment or horizontal and vertical curvature indicate that the 500-foot sight distance requirement is expected to be satisfied.
- On SW Norwood Road, the minimum access spacing standard of 100 feet will be met with construction of the proposed site access.
- Based on a review of the most recent five years of available crash data, no significant trends or crash patterns were identified at any of the study intersections. Accordingly, no safety mitigation is recommended per the crash data analysis.

Site Trips

The proposed development includes the construction of 320 detached home lots and 80 attached home lots. A supplemental memorandum addressing potential development of the commercial parcels abutting SW Boones Ferry Road is included in Appendix E. This memorandum includes trip generation for several potential commercial development scenarios of different intensities.

Trip Generation

To estimate trips that will be generated by the redevelopment, trip equations from the *Trip Generation Manual*[1] were used based on the number of dwelling units (DU). Land Use 210 – *Single-Family Detach Housing* was applied to the 320 detached units in the site while Land Use 220 – *Multifamily Housing (Low-Rise)* was applied to the 80 attached units.

As shown in Table 3, the trip generation calculations show that the proposed Autumn Sunrise Subdivision is estimated to generate 271 trips during the morning peak hour, 358 trips during the evening peak hour, and 3,596 daily trips during the average weekday.

Table 3: Trip Generation Summary

ITE Code	Intensity (DU)	Morning Peak Hour			Evening Peak Hour			Daily Trips
		In	Out	Total	In	Out	Total	
Single-Family Detached Housing	320	58	174	232	195	115	310	3,032
Multifamily Housing (Low-Rise)	80	9	30	39	30	18	48	564
Total	400	67	204	271	225	133	358	3,596

Note: Trip equations were applied for these land uses.

Table 4 presents the number and type of housing units and the trip generation by phase of development. With Phases 1 and 2, all site access will be taken from SW Norwood Road. The site access to SW Boones Ferry Road will be constructed with the completion of Phase 3. Phase 1 is expected to be constructed in year 2023 with each phase completed the subsequent year. Full buildout would occur in year 2026.

Table 1 Trip Generation Summary

ITE Land Use	Dwelling Units (#)	Weekday						
		ADT	AM Peak Hour			PM Peak Hour		
			Total	Enter	Exit	Total	Enter	Exit
Mid-Rise Housing (#221)	116							
Generation Rate [1]		5.44	0.36	26%	74%	0.44	61%	39%
Site Trips		**631**	**42**	11	31	**51**	31	20

[1] Source: *Trip Generation*, 10th Edition, ITE, 2017, average rates.

Two existing homes are located on the property site and will be demolished in conjunction with the proposed development. Trip credits totaling 19 daily trips, one AM trip, and two PM trips will result in a net trip generation of 612 daily trips, 41 AM peak hour trips, and 49 PM peak hour trips for Plambeck Gardens.

The Plambeck Gardens trip distribution was based on the existing count data and engineering judgment. This information is presented on Figure 4. The corresponding trip assignments are presented on Figure 5 for the AM & PM peak hours.

CAPACITY ANALYSIS

Capacity analyses were performed to determine the levels of service for the weekday peak hours. Synchro v11.1 software was used to determine the approach delays and level of service for the study intersections. The program is based on the Highway Capacity Manual (6^{th} edition) methodology. Table 2 summarizes the analysis results for the year 2021 existing traffic and for the year 2026 background and total traffic scenarios. Copies of the capacity analysis summaries are included in the appendix.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

Stopping Sight Distance

Travel Speed	50	mph
Reaction Time	2.5	seconds
Acceleration	11.2	ft/sec^2
Grade (percent)	0.00%	

SSD 425 feet

Reaction Distance

Travel Speed	50	mph
Travel Speed	73.5	fps
Reaction Time	2.5	seconds

Reaction Distance 183.8 feet

Braking Distance

Travel Speed	50	mph
Acceleration	11.2	ft/sec^2
Grade (percent)	0.00%	

Braking Distance 239.6 feet

Note: If grades are less than 3%, no adjustment is needed.

Intersection Sight Distance

	Left Turn Looking Left		*Left Turn Looking Right*		*Right Turn Looking Left*	
Approach Speed	50	mph	50	mph	50	mph
Number of Lanes	2	lanes	2	lanes		
Vehicle Type (P/S/C)	P	Passenger Car	P	Passenger Car	P	Passenger Car
Extra Crossing Lanes	0		0			
Time Gap	7.5	seconds	7.5	seconds	6.5	seconds
Intersection Sight Distance	555	feet	555	feet	480	feet
Washington County	**500**	**feet**	**500**	**feet**	**500**	**feet**

Notes:

1) For Approach speed, use the design speed of the roadway (typically 85th percentile speed).
2) For Time Gap, use 7.5 seconds for passenger cars, 9.5 seconds for single-unit trucks, and 11.5 seconds for combination trucks.
3) The above values are for 2-lane highways without medians and grades of 3 percent or less.
4) For grades in excess of 3 percent on the minor street, add .2 seconds for each percent grade.
5) For additional lanes, add 0.5 seconds per lane for passenger cars and 0.7 seconds per lane for trucks.

Left-Turn Lane Warrant Analysis

Project: 22172 - Norwood Apartments
Intersection: Site Access on Norwood
Date: 2/2/2023
Scenario: 2026 Buildout - AM Peak Hour - No BCP Extension

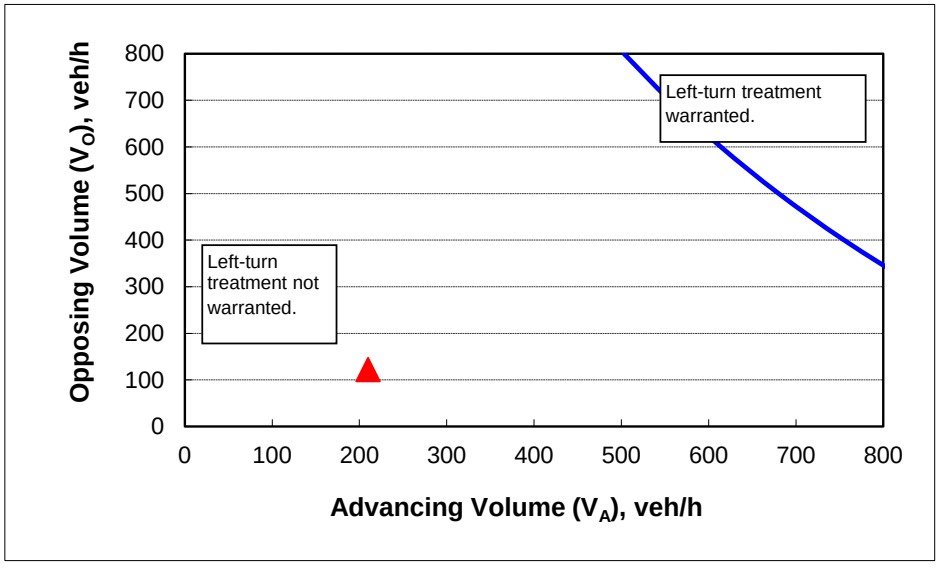
2-lane roadway (English)

INPUT

Variable	Value
85th percentile speed, mph:	45
Percent of left-turns in advancing volume (V_A), %:	2%
Left turns in advancing volume (V_A), veh/h:	4
Advancing volume (V_A), veh/h:	210
Opposing volume (V_O), veh/h:	122

OUTPUT

Variable	Value
Limiting advancing volume (V_A), veh/h:	1028
Guidance for determining the need for a major-road left-turn bay:	
Left-turn treatment NOT warranted.	



CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9

Left-Turn Lane Warrant Analysis

Project: 22172 - Norwood Apartments
Intersection: Site Access on Norwood
Date: 2/2/2023
Scenario: 2026 Buildout - PM Peak Hour - No BCP Extension

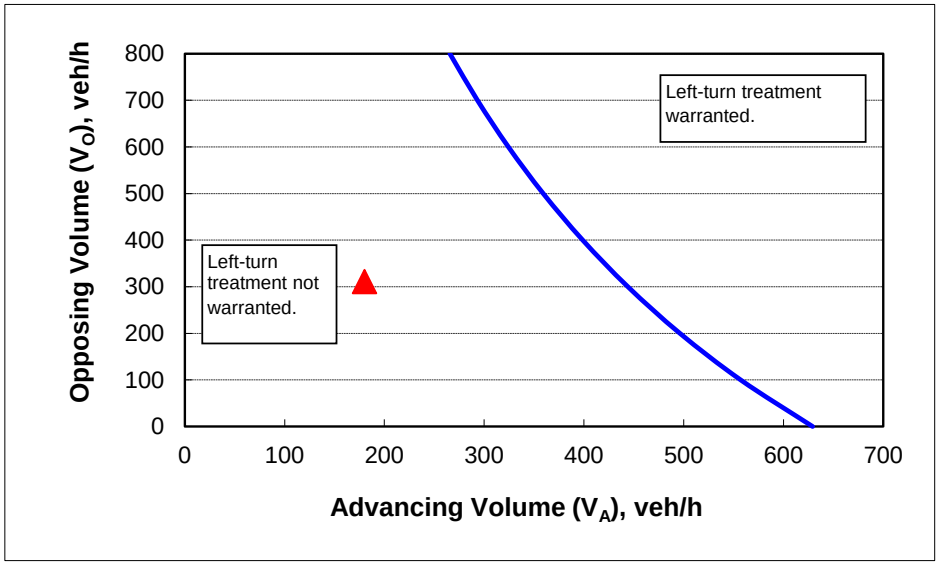
2-lane roadway (English)

INPUT

Variable	Value
85th percentile speed, mph:	45
Percent of left-turns in advancing volume (V_A), %:	7%
Left turns in advancing volume (V_A), veh/h:	13
Advancing volume (V_A), veh/h:	180
Opposing volume (V_O), veh/h:	311

OUTPUT

Variable	Value
Limiting advancing volume (V_A), veh/h:	439
Guidance for determining the need for a major-road left-turn bay:	
Left-turn treatment NOT warranted.	



CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9

Left-Turn Lane Warrant Analysis

Project: 22172 - Norwood Apartments
Intersection: Site Access on Norwood
Date: 2/2/2023
Scenario: 2026 Buildout - AM Peak Hour - With BCP Extension

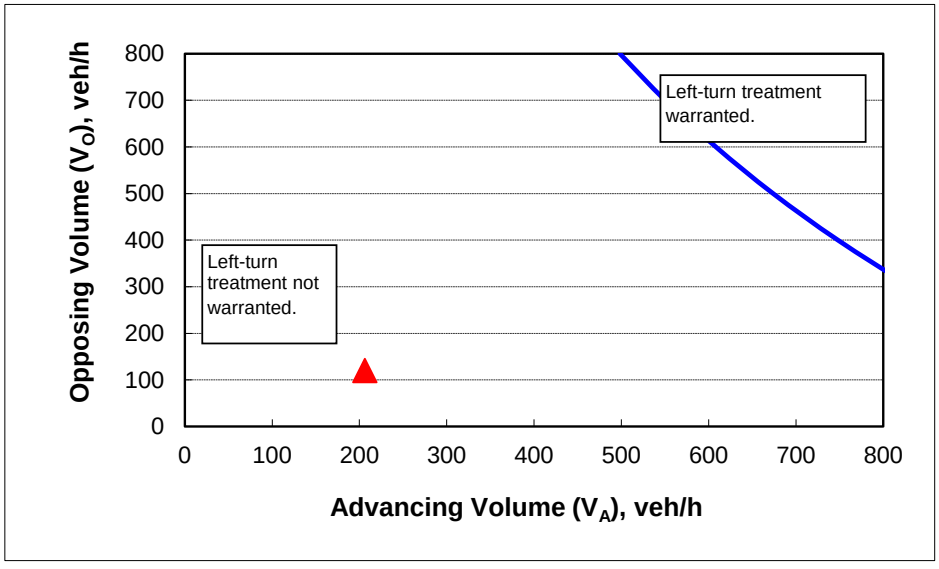
2-lane roadway (English)

INPUT

Variable	Value
85th percentile speed, mph:	45
Percent of left-turns in advancing volume (V_A), %:	2%
Left turns in advancing volume (V_A), veh/h:	4
Advancing volume (V_A), veh/h:	206
Opposing volume (V_O), veh/h:	120

OUTPUT

Variable	Value
Limiting advancing volume (V_A), veh/h:	1021
Guidance for determining the need for a major-road left-turn bay:	
Left-turn treatment NOT warranted.	



CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9

Left-Turn Lane Warrant Analysis

9:00 AM	257	308	565	0	62	62	N	Y	Y	N

Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:

Major Street Lanes: 1
Minor Street Lanes: 1

CONDITION A - Minimum Vehicular Volume

Minimum Volume on Combined Major Street Approaches: 350
Minimum Volume on Higher Minor Street Approach: 105

CONDITION B - Interruption of Continuous Traffic

Minimum Volume on Combined Major Street Approaches: 525
Minimum Volume on Higher Minor Street Approach: 53

IS CONDITION A OF SIGNAL WARRANT 1 MET? NO
IS CONDITION B OF SIGNAL WARRANT 1 MET? YES
IS COMBINATION OF A OR B MET? YES
IS 80% OF CONDITION A AND CONDITION B MET? NO

Note: Signal Warrant 1 is met if either Condition A or Condition B is met.

WARRANT 2, FOUR HOUR VEHICULAR VOLUME

	MAJOR			MINOR			Calculated	
	NB	SB	Total	EB	WB	Max	Threshold	
4:00 PM	723	805	1,528	0	90	90	60	Y
5:00 PM	712	727	1,439	0	138	138	60	Y
3:00 PM	353	672	1,025	0	97	97	60	Y
2:00 PM	405	481	886	0	82	82	60	Y
6:00 PM	337	447	784	0	93	93	60	Y
8:00 AM	383	329	712	0	114	114	68	Y

12:00 PM	357	365	722	0	73	73	66	Y

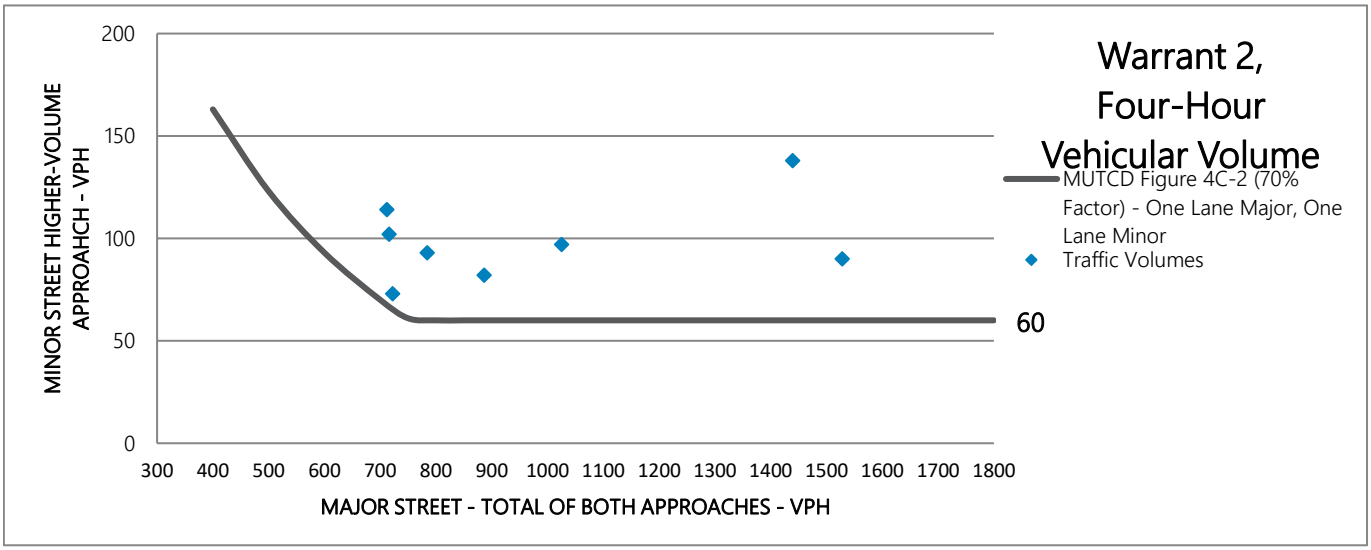
Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:

Major Street Lanes: 1

Minor Street Lanes: 1

IS SIGNAL WARRANT 2 MET? YES



WARRANT 3, PEAK HOUR VEHICULAR VOLUME

	MAJOR			MINOR			Calculated		
	NB	SB	Total	EB	WB	Max	Threshold (B	A-2&3	B
4:00 PM	723	805	1,528	0	90	90	75	N	Y
5:00 PM	712	727	1,439	0	138	138	75	Y	Y
3:00 PM	353	672	1,025	0	97	97	75	N	Y
2:00 PM	405	481	886	0	82	82	95	N	N

Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:
Major Street Lanes: 1
Minor Street Lanes: 1

CONDITION A-1 - Stopped Delay
Cannot be evaluated based on volumes alone. Condition met if traffic on one minor-street approach (one direction only) controlled by STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach.

CONDITION A-2 - Minor Street Volume
Minimum Volume on Higher Minor Street Approach: 100

CONDITION A-3 - Total Approach Volume
Minimum Volume of Total Approaches: 650

CONDITION B - Plot of Minor Street Volume (high vol approach) vs. Major Street Volume (Both approaches)

ARE CONDITIONS A-2 AND A-3 OF SIGNAL WARRANT 3 MET? **YES** *Stopped Delay Needs to be Checked*
Note: All 3 subsections of Condition A must be met to warrant signal.

IS CONDITION B OF SIGNAL WARRANT 3 MET? **YES**

Note: Signal Warrant 3 is met if either Condition A or Condition B is met.

9:00 AM	266	319	585	0	29	29	N	N	N	N

Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:

Major Street Lanes: 1
Minor Street Lanes: 1

CONDITION A - Minimum Vehicular Volume

Minimum Volume on Combined Major Street Approaches: 350
Minimum Volume on Higher Minor Street Approach: 105

CONDITION B - Interruption of Continuous Traffic

Minimum Volume on Combined Major Street Approaches: 525
Minimum Volume on Higher Minor Street Approach: 53

IS CONDITION A OF SIGNAL WARRANT 1 MET? NO
IS CONDITION B OF SIGNAL WARRANT 1 MET? NO
IS COMBINATION OF A OR B MET? NO
IS 80% OF CONDITION A AND CONDITION B MET? NO

Note: Signal Warrant 1 is met if either Condition A or Condition B is met.

WARRANT 2, FOUR HOUR VEHICULAR VOLUME

	MAJOR			MINOR			Calculated	
	NB	SB	Total	EB	WB	Max	Threshold	
4:00 PM	751	834	1,585	0	42	42	60	N
5:00 PM	737	751	1,488	0	63	63	60	Y
3:00 PM	365	696	1,061	0	36	36	60	N
2:00 PM	420	498	918	0	44	44	60	N
6:00 PM	349	461	810	0	41	41	60	N
7:00 AM	400	337	737	0	51	51	63	N
12:00 PM	370	378	748	0	39	39	62	N
8:00 AM	397	340	737	0	45	45	63	N

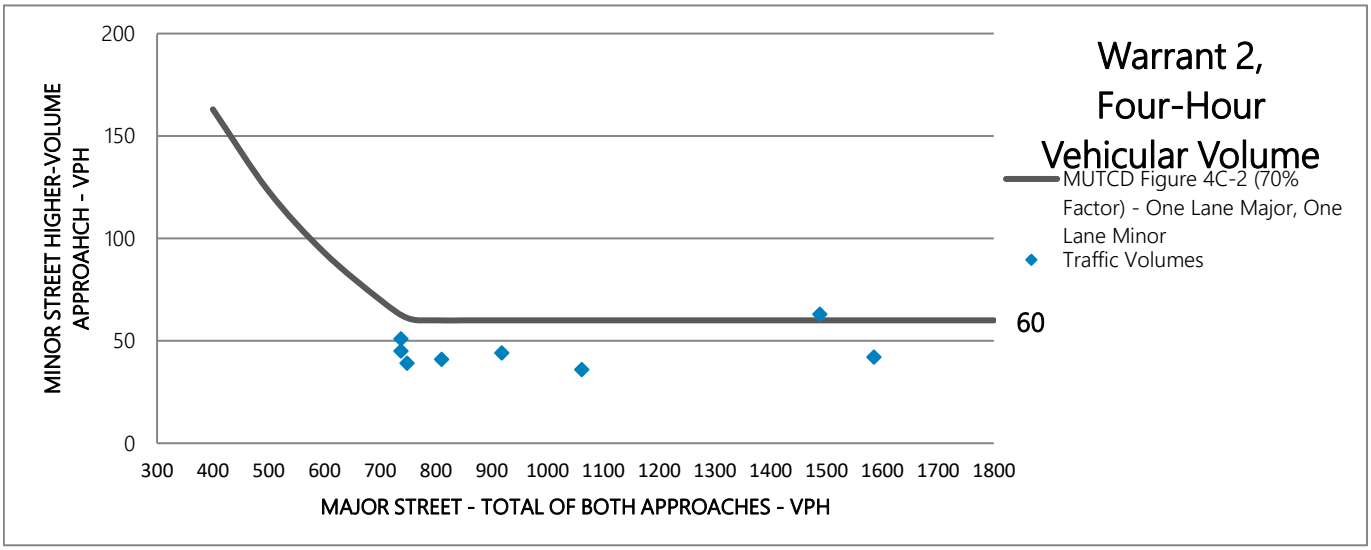
Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:

Major Street Lanes: 1

Minor Street Lanes: 1

IS SIGNAL WARRANT 2 MET? NO



WARRANT 3, PEAK HOUR VEHICULAR VOLUME

	MAJOR			MINOR			Calculated		
	NB	SB	Total	EB	WB	Max	Threshold (B	A-2&3	B
4:00 PM	751	834	1,585	0	42	42	75	N	N
5:00 PM	737	751	1,488	0	63	63	75	N	N
3:00 PM	365	696	1,061	0	36	36	75	N	N
2:00 PM	420	498	918	0	44	44	89	N	N

Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:
Major Street Lanes: 1
Minor Street Lanes: 1

CONDITION A-1 - Stopped Delay
Cannot be evaluated based on volumes alone. Condition met if traffic on one minor-street approach (one direction only) controlled by STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach.

CONDITION A-2 - Minor Street Volume
Minimum Volume on Higher Minor Street Approach: 100

CONDITION A-3 - Total Approach Volume
Minimum Volume of Total Approaches: 650

CONDITION B - Plot of Minor Street Volume (high vol approach) vs. Major Street Volume (Both approaches)

ARE CONDITIONS A-2 AND A-3 OF SIGNAL WARRANT 3 MET? NO
Note: All 3 subsections of Condition A must be met to warrant signal.

IS CONDITION B OF SIGNAL WARRANT 3 MET? NO

Note: Signal Warrant 3 is met if either Condition A or Condition B is met.

Note: The major street has a speed which exceeds 40 mph, therefore these minimum volumes are 70 percent of the regular requirements

Warrant Requirements:
Major Street Lanes: 1
Minor Street Lanes: 1

CONDITION A-1 - Stopped Delay
Cannot be evaluated based on volumes alone. Condition met if traffic on one minor-street approach (one direction only) controlled by STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach.

CONDITION A-2 - Minor Street Volume
Minimum Volume on Higher Minor Street Approach: 100

CONDITION A-3 - Total Approach Volume
Minimum Volume of Total Approaches: 650

CONDITION B - Plot of Minor Street Volume (high vol approach) vs. Major Street Volume (Both approaches)

ARE CONDITIONS A-2 AND A-3 OF SIGNAL WARRANT 3 MET? **YES** *Stopped Delay Needs to be Checked*
Note: All 3 subsections of Condition A must be met to warrant signal.

IS CONDITION B OF SIGNAL WARRANT 3 MET? **YES**

Note: Signal Warrant 3 is met if either Condition A or Condition B is met.

Queuing Reports

Level of Service Definitions

Level of service is used to describe the quality of traffic flow. Levels of service A to C are considered good, and rural roads are usually designed for level of service C. Urban streets and signalized intersections are typically designed for level of service D. Level of service E is considered to be the limit of acceptable delay. For unsignalized intersections, level of service E is generally considered acceptable. Here is a more complete description of levels of service:

- *Level of service A:* Very low delay at intersections, with all traffic signal cycles clearing and no vehicles waiting through more than one signal cycle. On highways, low volume and high speeds, with speeds not restricted by other vehicles.
- *Level of service B:* Operating speeds beginning to be affected by other traffic; short traffic delays at intersections. Higher average intersection delay than for level of service A resulting from more vehicles stopping.
- *Level of service C:* Operating speeds and maneuverability closely controlled by other traffic; higher delays at intersections than for level of service B due to a significant number of vehicles stopping. Not all signal cycles clear the waiting vehicles. This is the recommended design standard for rural highways.
- *Level of service D:* Tolerable operating speeds; long traffic delays occur at intersections. The influence of congestion is noticeable. At traffic signals many vehicles stop, and the proportion of vehicles not stopping declines. The number of signal cycle failures, for which vehicles must wait through more than one signal cycle, are noticeable. This is typically the design level for urban signalized intersections.
- *Level of service E:* Restricted speeds, very long traffic delays at traffic signals, and traffic volumes near capacity. Flow is unstable so that any interruption, no matter how minor, will cause queues to form and service to deteriorate to level of service F. Traffic signal cycle failures are frequent occurrences. For unsignalized intersections, level of service E or better is generally considered acceptable.
- *Level of service F:* Extreme delays, resulting in long queues which may interfere with other traffic movements. There may be stoppages of long duration, and speeds may drop to zero. There may be frequent signal cycle failures. Level of service F will typically result when vehicle arrival rates are greater than capacity. It is considered unacceptable by most drivers.

Level of Service Criteria
For Signalized Intersections

Level of Service (LOS)	Control Delay per Vehicle (Seconds)
A	<10
B	10-20
C	20-35
D	35-55
E	55-80
F	>80

Level of Service Criteria
For Unsignalized Intersections

Level of Service (LOS)	Control Delay per Vehicle (Seconds)
A	<10
B	10-15
C	15-25
D	25-35
E	35-50
F	>50

Intersection Summary	
HCM 6th Ctrl Delay	33.5
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay	17.5
HCM 6th LOS	B

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

REQUEST: Norwood Apartments Transportation Review

TASK NO: Tualatin On-Call Task 5 (P#21208-009)

REVIEWER: Amanda Deering, PE, DKS Associates

DKS Associates has reviewed the transportation impact study (TIS) for the proposed Norwood Apartments residential development[1]. The proposed project is located south of Norwood Road and east of Boones Ferry Road in Tualatin, Oregon. The general comments are based on a review of the TIS analysis.

TIS REVIEW

Key comments and issues related to the proposed project include:

- Overall, all required topics are covered in the TIS and look technically sufficient.
- This proposed development proposes to have its primary access on Norwood Road. The access location would meet the Washington County access spacing standard according to the site plan provided.
- Existing volumes were based on counts collected in 2022. No adjustments were made to these volumes since it is assumed volumes have returned to a consistent level post the impacts of the COVID-19 pandemic.
- The development is proposing to build 276 multifamily units. The apartment building is designed to have four floors which would qualify for the mid-rise multifamily rate in ITE, however to be more conservative and assume more trips would be added the low-rise multifamily rate was used (LUC 220).
- There are two existing single-family homes on part of the development parcel that will be demolished. Accounting for those trip credits, the development will generate 107 AM peak hour trips, 137 PM peak hour trips, and 1,826 daily trips.
    - Trip generation provided in the TIS cites the ITE Trip Generation Manual 10th edition. The most current edition is the 11th edition (September 2021). However, a comparison of rates shows the same trip generation for LUC 220.

[1] Norwood Apartments Transportation Impact Analysis, Lancaster Mobley, February 2023.

- Trip distribution provided in the TIS is based on patterns used for the adjacent approved developments (Autumn Sunrise and Plambeck Gardens).
  - The TIS shows 45% to the south, 15% to the east and 40% to the north
- Note that future build volumes include two scenarios: one with the completion of the Basalt Creek Parkway (BCP) extension project and one without. It is assumed that 13 percent of project trips will be shifted from the north and south to use the extension when it is complete. This analysis of the extension shows some intersections will have slightly less delay and some will have slightly more delay, depending on how travelers reroute.
- A review of the most recent five years of ODOT collision data (2016-2020) was performed for the study intersections. The Boones Ferry Road/Norwood Road intersection has an observed crash rate at the 90th percentile rate for the state. While it doesn't exceed the rate, it does have the potential to become a safety issue. The predominant crash type at this intersection was turning.
- Highway capacity manual (HCM) operations were performed using the 6th edition methodology. The build year analyzed was 2026. All study intersections operate within mobility standards except for Boones Ferry Road/Norwood Road under the 2026 buildout with BCP scenario. Implementing a traffic signal would mitigate this issue.
  - Additionally queuing analysis was performed for the build year scenarios. The westbound 95th percentile queue at Boones Ferry Road/Norwood Road would extend to 325 feet under the 2026 buildout PM peak hour scenario. This queue length could be mitigated with a signal so no nearby driveways are blocked.
- Traffic signal warrants (both preliminary and MUTCD peak hour) show that a traffic signal at Boones Ferry Road/Norwood Road would be met. In this case the preferred configuration of the signal is to have separate left and right turn lanes in the westbound direction. Under this assumption the detailed 8-hour, 4-hour, and peak hour warrants would be met under the 2026 build conditions with or without the BCP extension.
  - Norwood Road is classified as a collector per Washington County which has a 2 or 3 lane cross-section as needed. Note right-of-way may need to be acquired for the left turn lane at the intersection.
- The site plan shows appropriate frontage improvements and on-site pedestrian connectivity via sidewalks and crossings.
- The total number of parking spaces provided on site is not noted. This will have to be reviewed with application review. In the future, it is recommended to address parking standards and whether the number provided meets standard in the TIS.
- The proposed mitigation of a signal at Boones Ferry Road/Norwood Road should include a separate striped westbound left turn lane for safety reasons, consistent with the functional classification. It is recommended the westbound left turn run on a separate phase to protect the pedestrians on the south crosswalk, which is directly adjacent to a transit stop. A leading pedestrian interval could also be used and a northbound right turn overlap could be implemented to shorten the right turn queue length.
  - The turn pocket storage at the intersection should be based on the 2040 build scenario Synchro analysis. For the westbound left turn pocket this would be approximately 150 feet

and for the northbound right turn pocket this would extend the existing turn lane storage to 200 feet assuming no right turn overlap.[2]

TPR REVIEW

This section reviews the Transportation Planning Rule (TPR) analysis.

- The development is proposed on two parcels with the existing zoning medium low density residential (RML) and institutional (IN). Since the development proposes to change the land use to high density/high rise residential (RH-HR), a reasonable worst-case analysis must be performed to show no significant impact of the zone change per the Transportation Planning Rule.
- The trip generation comparison for the zone change shows the reasonable worst case build out of the two subject parcels under both the existing and proposed zoning.
  - For the existing zone this includes 25 dwelling units of single-family housing (attached, LUC 215). Per the City, this is a higher assumption than could be built here. The applicant should change this to 15 single family attached dwelling units. The institutional zone assumes building a K-8 private school[3]. This would complement the adjacent use of private high school in the parcel to the east. This seems reasonable. It is unlikely that a higher use such as a community college would be built on this small parcel.
  - For the proposed zoning, multi-family housing low rise is used, as discussed in the TIS.
  - Overall the trip generation comparison shows a decrease of 157 trips in the AM peak hour due to less contributing school traffic and an increase of 60 trips in the PM peak hour. There is an increase of 636 daily trips which is over the 450 trip threshold set by ODOT which requires operational analysis to determine if there are significant impacts from this zone change.
- Operations analysis was performed for the existing and proposed zoning scenarios under year 2040 conditions. The study intersections generally performed slightly better in the AM peak hour and the same or slightly worse in the PM peak hour under the proposed zoning. Under both zoning scenarios the intersection of Boones Ferry Road/Norwood Road would fail without signalization. This triggers OAR 660-012-0060 section (1)(c)(C). With signalization the intersection performs at LOS B and v/c ratio 0.73 under the proposed zoning. Thus, with the proposed mitigation of signalization, the analysis concludes the significant effect due to the proposed zoning change is mitigated per OAR 660-012-0660(2)(d).
- The benefit to the public of this zone change is that it will require the development to build a new signal as mitigation which would decrease existing delays at the intersection and increase safety at an intersection with existing crash risks. It will create a safer, protected crossing for pedestrians to access the nearby transit stop and the future park to the west. Additionally, it will allow for more housing to be built to address some of the housing needs in Tualatin.

---

[2] Note that this analysis assumes a shared westbound left and right turn lane. The City may request the applicant to update this analysis to reflect the separated westbound left turn lane and to reflect year 2040. This is from the year 2031 reports in the appendix.

[3] Note this land use (LUC 530) has a small sample size and should be used with caution. However it does yield a more conservative trip rate than public elementary school.

CITY OF TUALATIN
Engineering Division

Engineering Division Memo for
PMA & PTA23-0001 Norwood Multi Family
April 20, 2023

Planning Division,

Please have the applicant submit Engineering exhibits with a professional engineers stamp and signature for the packet.

Please incorporate the following Engineering Division considerations.

II. CONDITIONS OF APPROVAL

Based on the Findings and Conclusions presented herein **approval** subject to the following conditions:

PRIOR TO ISSUANCE OF CERTIFICATE OF OCCUPANCY AND/OR CERTIFICATE OF COMPLETION:

A1. The applicant must complete all public improvements as shown on approved permit plans. All improvements must also be accepted by the City in accordance with Tualatin Development Code (TDC) 74.120. These include:

1. Signalization of the SW Boones Ferry Road and SW Norwood Road intersection; and,
2. Separate westbound right and left turn lanes on SW Norwood Road for the SW Boones Ferry Road intersection within existing or, if needed, additional right-of-way dedicated by the applicant; and,
3. Increase northbound SW Boones Ferry Road right turn lane storage at the intersection of SW Norwood Road to 200 feet or as modified by the City Engineer based on final Traffic Analysis within existing or, if needed, additional right-of-way dedicated by the applicant.

III. FINDINGS

[ENGINEERING FINDINGS]

(i) Granting the amendment is consistent with the objectives and policies regarding potable water, sanitary sewer, and surface water management pursuant to applicable goals and policies in the Tualatin

Comprehensive Plan, water management issues are adequately addressed during development or redevelopment anticipated to follow the granting of a plan amendment.

Finding:

The proposed plan map and text amendments are consistent with the City's objectives and policies regarding public sanitary sewer, and stormwater, and water system availability. Submitted analysis is further detailed within the applicant's submitted Exhibit I – Utility Capacity Analysis.

Sanitary Sewer

The submitted materials show gravity sanitary sewer service for future development on this site. Extension of the existing public system within SW Boones Ferry Road north of SW Norwood Road could extend south to SW Norwood Road then east to the site. The capacity evaluation shows availability within existing lines matching diameters identified within the Sanitary Sewer Master Plan.

Stormwater

The submitted materials show the site includes areas to construct private onsite stormwater facilities. The site is shown to be able to provide gravity flow to existing public lines within SW Boones Ferry Road.

Water

Murraysmith provided the City a Water System Capacity Analysis memorandum for 9300 SW NORWOOD RD dated September 11, 2022 in response to application HWM22-0001. The memorandum states:

> *… proposed developments in the vicinity (SB21-0001, Autumn Sunrise subdivision and the AR22-0001, Community Partners for Affordable Housing – Plambeck Gardens), have already defined water service availability and required water system improvements.*
>
> *With the completion of the following planned improvements, a combination of City capital improvement projects and developer-constructed improvements, adequate water service for domestic and fire suppression is available at the proposed development.*
>
> - *An 18-inch diameter B-level water line in SW Boones Ferry Road (to SW Norwood Road) being designed by AKS Engineering as a City Capital Improvement Project (CIP). The line extends east on SW Norwood Road to the B Level Reservoir/C Level Pump Station site.*
> - *SB21-0001, Autumn Sunrise subdivision development will upsize additional lines for the C-level, either by adding a new line across the SW Norwood Road frontage of the Autumn Sunrise subdivision development or upsizing the internal lines (following the street layout).*
> - *AR22-0001, Plambeck Gardens development is required by issued land use conditions of approvals to extend a 12-inch diameter C-level water line down SW Boones Ferry Road, from SW Norwood Road to their south property line.*
> - *SB21-0001, Autumn Sunrise subdivision development will be installing upsized C-level lines from Norwood Road, through the development, out to SW Boones Ferry Road via SW Salinan Street, and then north to connect to the line AR22-0001, Plambeck Gardens development will be installing in SW Boones ferry Road.*
>
> *If the proposed development at 9300 SW Norwood Road occurs prior to the completion of these improvements, it may impact the availability of water service.*

Future development will be conditioned to obtain permits meeting applicable codes. For public sanitary sewer, stormwater, and water system availability this standard is met.

(5) Approval Criteria.

(f) Granting the amendment is consistent with the applicable State of Oregon Planning Goals and applicable Oregon Administrative Rules, including compliance with the Transportation Planning Rule TPR (OAR 660-012-0060).

(g) Granting the amendment is consistent with Level of Service F for the p.m. peak hour and E for the one-half hour before and after the p.m. peak hour for the Town Center 2040 Design Type (Comprehensive Plan Map 10-4), and E/E for the rest of the 2040 Design Types in the City's planning area.

(i) Granting the amendment is consistent with the objectives and policies regarding potable water, sanitary sewer, and surface water management pursuant to applicable goals and policies in the Tualatin Comprehensive Plan, water management issues are adequately addressed during development or redevelopment anticipated to follow the granting of a plan amendment.

Finding:

The applicant submitted a Transportation Impact Analysis prepared by Lancaster Mobley with recommended improvements identified in the executive summary:

> As summarized in the key findings below, the proposed Norwood Multi-Family project will create a minor impact on the transportation system, which will be mitigated by the recommended traffic signal at the intersection of SW Boones Ferry Road & SW Norwood Road. The traffic signal is warranted under background conditions without the proposed project, and the long-term analysis of the reasonable worst case scenario traffic analysis of the existing zone concludes that the SW Boones Ferry Road & SW Norwood Road intersection will fail without a signal. However, if the project installs a signal at that intersection, then the existing near-term and long-term problem is addressed. The project's traffic is mitigated so that the street network performance standards are met and the zone change will not require any additional mitigation or change in classification.
>
> Washington County staff have indicated that the amount of traffic generated by developments allowed the proposed amendment would not meet Washington County thresholds for requiring mitigation along SW Boones Ferry Road (a Washington County Road) south of the subject property.

City staff have reviewed the subject analysis and have determined that it meets the requirements above.

The SW Norwood Road approach to SW Boones Ferry Road will have separate right and left turn lanes in order to properly and safely operate for traffic flow and traffic and pedestrian safety. This is to allow for a pedestrian phase for crossing SW Boones Ferry Road with a corresponding red arrow for traffic turning from SW Norwood Road while still allowing non-conflicting traffic to turn right from the right turn lane.

No additional right-of-way is expected to be needed to construct separate right and left turn lanes on the SW Norwood Road approach. Some minor roadway curvature may need to be introduced for the roadway to remain within the existing right-of-way, but this could have a beneficial traffic calming effect at this location. Adequacy of right-of-way will be confirmed within future permit plans.

Note: Right-of-way dedication will be required along SW Norwood Road in conjunction with future development.

With Condition of Approval A1, this standard is met.

December 16, 2022

City of Tualatin - Engineering Department
18880 SW Martinazzi Ave
Tualatin, OR 97062

Subject: **Norwood Multi-Family Utility Capacity Analysis**

The purpose of this letter is to assess the capacity of the existing sanitary sewer, stormwater, and water systems following the development of the subject site. The proposed development is located southeast of the intersection of SW Norwood Road and SW Boones Ferry Road and consists of existing institutional (Horizon Church) and single-family residential properties. Assumed frontage improvements in this analysis are per conversations with City staff and the Pre-Application Meeting Summary provided by City staff.

Analysis of the sanitary sewer system consisted of a review of the City's InfoSWMM sanitary sewer model for the Martinazzi Basin and the City's 2019 Sanitary Sewer Master Plan (SSMP). Analysis of the downstream stormwater system consisted of an assessment of predeveloped and post-developed conditions in the storm main downstream of the subject. Last, the analysis of the existing water system consisted of coordination with City staff on a hydraulic model to assess the serviceability of the site.

Sanitary Sewer System

For the purpose of analyzing the Norwood Multi-Family private sanitary sewer system, wastewater flows were determined by utilizing the West Yost Associates *South Tualatin Sewer Study,* dated September 2010. Per the South Tualatin Sewer Study, the wastewater unit flow factor of 200 gpd per dwelling unit was used in the sewer capacity analysis. Peak wet weather flow (PWWF) was calculated by multiplying average dry weather flow by a 2.2 peaking factor and adding an Inflow and Infiltration (I&I) factor of 4,000 gpd per acre (gpad). Last, the pipe capacity was determined by Manning's equation and verified with the values from the City's InfoSWMM model.

The InfoSWMM model was originally prepared by Jacobs Engineering as part of the City's 2019 Sanitary Sewer Master Plan (SSMP). This model was then provided to AKS to analyze the downstream sanitary system impacts for the neighboring Autumn Sunrise Subdivision, including the scenarios and existing flows and capacities shown in Exhibit A. For the subject development, the Martinazzi Basin (East of SW Boones Ferry Road, North of SW Norwood Road, and West of I-5) was analyzed to determine whether the existing downstream sanitary system had sufficient capacity to convey the net increase in flow for this multi-family development.

Per the attached Figures 1 & 2, the subject site will extend a public sanitary sewer main line in SW Boones Ferry Road, to the site upstream of conduit #98435 in the InfoSWMM model and 2019 SSMP. The subbasin downstream of this line was analyzed until the line size increased from 8" to 12", located downstream of conduit #1706. This is the same point where the southwestern portion of the Martinazzi Basin converges with the southeastern portion, which includes the neighboring Autumn Sunrise subdivision development and Horizon Church.

Excluding the existing scenario, the resulting PWWF was added to the modeled flows for each scenario in the City's InfoSWMM model. The remaining pipe capacity was determined for each conduit to assess the overall capacity of the system post-development. Per the summary in the attached Exhibit A, each conduit

has sufficient capacity in the 2025, 2035, and Full Build-Out scenarios to convey the increase in flow from the subject development.

Water System

Per the Water System Capacity Analysis memorandum prepared by Murraysmith, upon completion of the planned city noted capital improvement projects and developer-constructed improvements, adequate water service for domestic and fire suppression will be available for this project. Refer to the memorandum in the attached Exhibit B for additional information.

Stormwater System

Per the attached Figure 3, the proposed development will connect to the existing 18" public stormwater main in SW Boones Ferry Road via a new public storm manhole. Per Figure 4, the contributing basins for this analysis include portions of SW Boones Ferry Road, portions of SW Norwood Road, and the subject site. The subject site will utilize a combination of an existing on-site stormwater pond and a new detention facility to satisfy water quantity and hydromodification requirements. Additionally, as part of the anticipated frontage improvements to SW Norwood Road, new public facilities will be implemented to detain stormwater in accordance with CWS water quantity and hydromodification requirements.

The attached HydroCAD report in Exhibit C analyzes the existing storm system's capacity post-development. However, the site will be required to satisfy water quantity and hydromodification requirements per Clean Water Services (CWS) standards. Since the release from the subject site and SW Norwood Road following anticipated frontage improvements will be required to be less than or equal to the predeveloped condition, the predeveloped condition was used in this analysis. Additionally, a lower curve number for redeveloped impervious area will be used in the predeveloped analysis per CWS standards, therefore post-developed release rates will be less than the rates in the provided calculations. Per the attached HydroCAD report, the existing stormwater system downstream of the site will have sufficient capacity to convey runoff from the proposed development in accordance with CWS standards.

Sincerely,

AKS ENGINEERING & FORESTRY, LLC

Memorandum

Date:	September 11, 2022
Project:	20-2737, On-Call Water System Analysis
To:	Ms. Kim McMillan, PE – Community Development Director Mr. Tony Doran – Engineering Associate City of Tualatin
From:	Brian Ginter, PE
Re:	9300 SW Norwood – Water System Capacity Analysis

Introduction

As requested, this memorandum has been prepared to present the findings of our analysis of the water service to the proposed multi-family development located at 9300 SW Norwood Road, southeast of the intersection of Boones Ferry Road and Norwood Road. This memorandum presents the findings of this analysis for the City's use in determining the water system improvements necessary to meet fire flow and pressure requirements.

Analysis and Conclusions

Murraysmith performed a review of the water service requirements associated with this development, and confirmed that the proposed multi-family develop does not require further analysis since prior analyses of proposed developments in the vicinity (Autumn Sunrise Subdivision and the Community Partners for Affordable Housing – Plambeck Gardens), have already defined water service availability and required water system improvements.

With the completion of the following planned improvements, a combination of City capital improvement projects and developer-constructed improvements, adequate water service for domestic and fire suppression is available at the proposed development.

- An 18-inch diameter B-level water line in Boones Ferry Road (to Norwood) being designed by AKS as a City CIP. The line extends east on Norwood to the B Level Reservoir/C Level Pump Station site.
- Lennar will upsize additional lines for the C-level, either by adding a new line across the Norwood frontage of the Autumn Sunrise development or upsizing the internal lines (following the street layout).

- CPAH is required by COAs to extend a 12-inch diameter C-level water line down Boones Ferry Road, from Norwood Road to their south property line.
- Autumn Sunrise will be installing upsized C-level lines from Norwood Road, through the development, out to BFR via Mahogany/Salinan, and then north to connect to the line CPAH will be installing in BFR.

If the proposed development at 9300 SW Norwood Road occurs prior to the completion of these improvements, it may impact the availability of water service.

Memorandum

To: **City of Tualatin**

Copy: **Vista Residential Partners**

From: **Jennifer Danziger**

Date: **January 30, 2023**

Subject: **Norwood Apartments – Conceptual Future Access on SW Boones Ferry Road**

Introduction

The proposed Norwood Apartments project includes the development of a 276-unit apartment complex on a site located south of SW Norwood Road and east of SW Boones Ferry Road in Tualatin, Oregon. The project site consists of tax map 2S135D lots 108 and 106. Lot 108 includes a 1.0-acre parcel located at 9300 SW Norwood Road and is currently occupied by one single-family home that currently takes access from SW Norwood Road. Lot 106 includes an 8.2-acre portion of the parcel located at 23370 SW Boones Ferry Road, which is part of the Horizon Christian School property, which has existing accesses on both SW Norwood Road and SW Boones Ferry Road.

Future access to the site will be provided via one new driveway along SW Norwood Road. An emergency access connection to the Horizon School circulation network will be provided. The site location is shown in Figure 1: Project Location (Source: City of Tualatin Interactive Zoning Map) with the project site outlined in yellow.

Figure 1: Project Location (Source: City of Tualatin Interactive Zoning Map)

Adjacent Properties

The proposed development abuts three parcels (tax map 2S135D lots 101, 102, and 109) with frontage along SW Boones Ferry Road. These parcels are outlined in red on Figure 1. Two of these parcels, Tax Lots 101 and 102, currently have direct access on SW Boones Ferry Road while Tax Lot 109 has direct access on SW Norwood Road.

Future Access Concept

SW Boones Ferry Road is an arterial in Washington County. Per CDC Section 501-8.5B, the access spacing on an arterial is 600 feet and direct access shall be from collectors or other arterial streets.

With the potential redevelopment of these properties at some time in the future, private access to SW Boones Ferry Road will not be permitted and alternative access will be required. Taking access through the proposed Norwood Apartments development is not appropriate as the internal network is designed to accommodate parking and circulation, not through traffic from other development. Connecting to the Horizon School Access Road would involve traversing the water quality facilities serving the school property. Therefore, Exhibit A illustrates a preliminary site access concept to demonstrate how future access could be provided for these three parcels.

The exhibit shows a local street access developed along the property line between Tax Lots 101 and 102 that would connect with SW Boones Ferry Road approximately 523 feet south of SW Norwood Road and 443 feet north of the Horizon School access. It is not possible to meet the 600-foot spacing requirement while the Horizon School has an access on SW Boones Ferry Road but this location is likely to be beyond any queuing that would occur with future signalization of the SW Boones Ferry Road & SW Norwood Road intersection, thus no conflict exists. This concept would also allow for a north-south connection that could serve Tax Lot 109 as well.

STATUTORY QUITCLAIM DEED

Horizon Community Church, an Oregon nonprofit corporation who acquired title as Grace Community Church of the Assemblies of God, Inc., an Oregon non-profit corporation, Grantor, releases and quitclaims to **Horizon Community Church, an Oregon nonprofit corporation** , all rights and interest in and to the following described real property:

LEGAL DESCRIPTION: Real property in the County of Washington, State of Oregon, described as follows:

See Exhibit "A" attached hereto and made part hereof.

The true consideration for this conveyance is **$0.00.** (Here comply with requirements of ORS 93.030)

BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON TRANSFERRING FEE TITLE SHOULD INQUIRE ABOUT THE PERSON'S RIGHTS, IF ANY, UNDER ORS 195.300, 195.301 AND 195.305 TO 195.336 AND SECTIONS 5 TO 11, CHAPTER 424, OREGON LAWS 2007, SECTIONS 2 TO 9 AND 17, CHAPTER 855, OREGON LAWS 2009, AND SECTIONS 2 TO 7, CHAPTER 8, OREGON LAWS 2010. THIS INSTRUMENT DOES NOT ALLOW USE OF THE PROPERTY DESCRIBED IN THIS INSTRUMENT IN VIOLATION OF APPLICABLE LAND USE LAWS AND REGULATIONS. BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON ACQUIRING FEE TITLE TO THE PROPERTY SHOULD CHECK WITH THE APPROPRIATE CITY OR COUNTY PLANNING DEPARTMENT TO VERIFY THAT THE UNIT OF LAND BEING TRANSFERRED IS A LAWFULLY ESTABLISHED LOT OR PARCEL, AS DEFINED IN ORS 92.010 OR 215.010, TO VERIFY THE APPROVED USES OF THE LOT OR PARCEL, TO DETERMINE ANY LIMITS ON LAWSUITS AGAINST FARMING OR FOREST PRACTICES, AS DEFINED IN ORS 30.930, AND TO INQUIRE ABOUT THE RIGHTS OF NEIGHBORING PROPERTY OWNERS, IF ANY, UNDER ORS 195.300, 195.301 AND 195.305 TO 195.336 AND SECTIONS 5 TO 11, CHAPTER 424, OREGON LAWS 2007, SECTIONS 2 TO 9 AND 17, CHAPTER 855, OREGON LAWS 2009, AND SECTIONS 2 TO 7, CHAPTER 8, OREGON LAWS 2010.

Dated this 24 day of September, 2015.

Horizon Community Church, an Oregon nonprofit corporation who acquired title as Grace Community Church of the Assemblies of God, Inc., an Oregon non-profit corporation

By: _____
Stan Russell, Senior Pastor

By: _____
William Stine, Secretary-Treasurer

STATE OF Oregon)

RE: Norwood Multi-Family - Annexation, Partition, and Map/Text Amendment

October 3, 2022

RE: Neighborhood Review Meeting
Annexation, Map & Text Amendment, and Partition Applications

Dear Property Owner/Neighbor:

AKS Engineering & Forestry, LLC, is holding a neighborhood meeting regarding two properties on the south side of SW Norwood Road and east of SW Boones Ferry Road in Tualatin, Oregon: the Horizon Christian School property (Tax Lot 106 of Washington County Assessor's Map 2S1135D) that is currently in the City of Tualatin and zoned Institutional (IN), and a one-acre lot (Tax Lot 108 of Washington County Assessor's Map 2S1135D) that is currently outside the Tualatin city limits and has Washington County zoning of Future Development 20-acre (FD-20). A map of the location is shown on the back of this letter. The project involves annexing Tax Lot 108 into the City of Tualatin, partitioning the school site (Tax Lot 106) into two lots, and amending the Tualatin Plan Map to apply the High Density High Rise (RH-HR) zone to ±9.2 acres of property along SW Norwood Road for future multi-family development. A Text Amendment to modify where the RH-HR zone can be applied will also be submitted.

The purpose of this meeting is to provide a forum for surrounding property owners/residents to review and discuss the project before applications are submitted to the City. This meeting will give you the opportunity to share any special information about the property involved. We will attempt to answer questions that may be relevant to meeting development standards consistent with the City of Tualatin Development Code. This neighborhood meeting is scheduled for:

October 25, at 6:30 p.m.
Tualatin Public Library- 18878 SW Martinazzi Avenue, Tualatin, OR 97062

Please note that this meeting will be an informational meeting on preliminary plans. These plans may be altered prior to submittal of applications to the City. Depending upon the type of land use action required, you may receive official notice from the City of Tualatin requesting that you participate with written comments and/or you may have the opportunity to attend a public hearing.

I look forward to discussing this project with you. If you have questions but will be unable to attend, please feel free to contact me at 503-563-6151 or by email at slotemakerm@aks-eng.com.

Sincerely,
AKS ENGINEERING & FORESTRY, LLC

Hello Byrom CIO Representatives,

I am pleased to invite you to participate in a Neighborhood/Developer meeting on **October 25, 2022 at 6:30 pm at the Tualatin Library** to discuss planned land use applications at the Horizon church and school site, and an adjacent one-acre lot on SW Norwood Road that will be annexed to the City. The meeting provides an opportunity for us to discuss the planned applications with surrounding property owners and the Byrom CIO before the application is submitted to the City.

Attached is the letter that was mailed out to the neighborhood with more information. Feel free to contact me if you are unable to attend the meeting or if you have any specific questions about the project and process.

Sincerely,
Melissa Slotemaker

Melissa Slotemaker, AICP

Neighborhood Meeting Summary: Norwood Multi-family Annexation, Partition, and Map/Text Amendment Applications

Meeting Date: October 25, 2022
Time: 6:30 PM
Location: Tualatin Public Library, 18878 SW Martinazzi Avenue, Tualatin, OR 97062

The following serves as a summary of the Neighborhood Meeting process. On October 3, 2022, property owners within 1000 feet of the proposed development site were sent notification of the planned Norwood Multi-family applications. This notification included the project location, project details, and the neighborhood meeting date, time, and location. The Byrom CIO and City staff were also emailed the meeting information. Signs with the neighborhood meeting information were also posted on the subject site on October 3, 2022.

On October 25, 2022, Mimi Doukas and Melissa Slotemaker from AKS Engineering & Forestry, LLC and Lee Novak from Vista Residential Partners were the meeting presenters. Other members of the Applicant's project team also attended the meeting and were available to answer questions. The meeting began with Mimi Doukas and Lee Novak providing introductory remarks. Melissa Slotemaker then presented an overview of the Norwood Multi-family project, the site area, expected roadway improvements, and the planned land use applications. She then provided details on the City's review process and opportunities for public input.

Following the presentation, attendees were given the opportunity to ask questions. The following topics were discussed:

Transportation

- Existing traffic issues on SW Boones Ferry Road and the impact of new development
- Anticipated roadway improvements along SW Norwood Road and SW Boones Ferry Road and how those would help roadway capacity
- Traffic signal at SW Norwood and SW Boones Ferry Road and when that would be constructed
- Mitigation in progress for Autumn Sunrise development
- The long-term plans for expansion of SW Norwood Road and if the City would take property for roadway
- If the developer would need to construct street improvements/mitigation
- Concerns about increase in traffic, especially on SW Norwood Road and if the project would route traffic north through Tualatin Woods

Zone Change/Future Project

- The density of the proposed project and whether the RH-HR district is appropriate
- The nature and purpose of the Institutional zoning district and the effects on the Horizon Church & School
- Height of the proposed project and whether the buildings would be taller than 4 stories
- The Basalt Creek Concept Plan and the type of residential development originally expected
- Other sites which could be used for apartments

Miscellaneous

- How the site was selected, expected rent, and market needs
- The need for housing equity and affordable housing
- How the project will affect schools in the area and if the Sherwood School District would bus children to Sherwood
- The land use process, how to submit testimony, and who the makes the decision

The meeting concluded at approximately 8:05 pm.

Sincerely,
AKS ENGINEERING & FORESTRY, LLC

Hi Glen,

The Sherwood School District can accommodate the additional students from the proposed complex.

Please let me know if you have any questions or need any additional information.

Thanks.

Jim

>
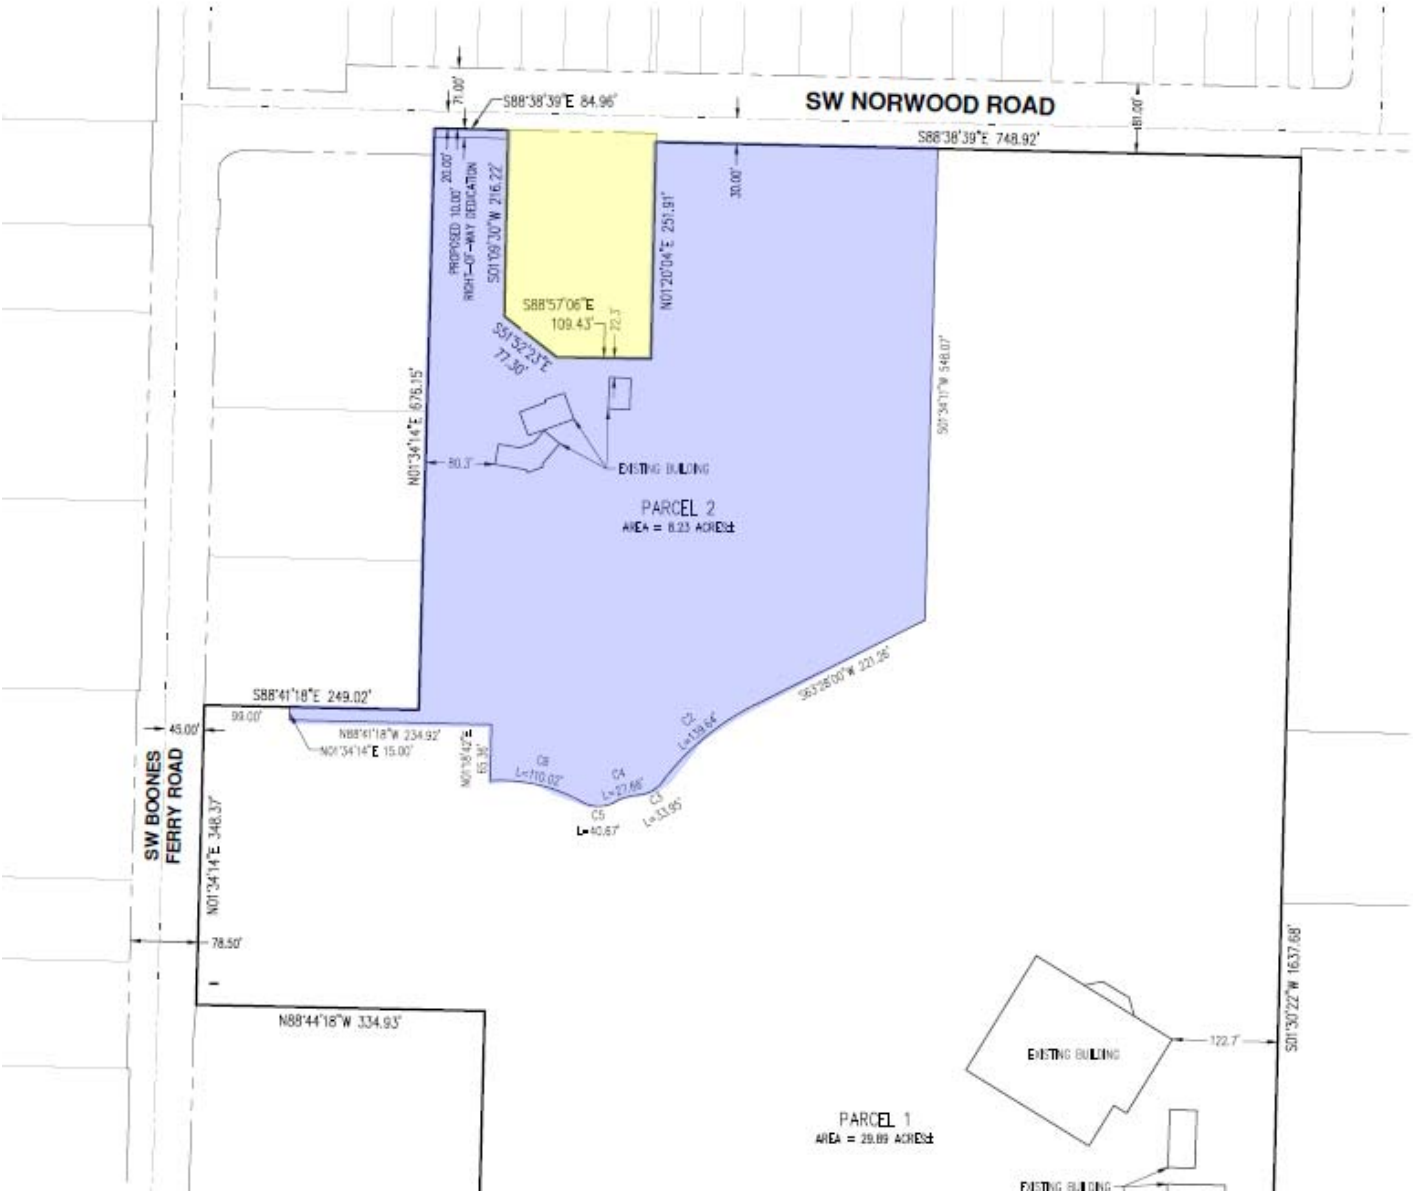
> We are currently working on several applications for two properties within the City of Tualatin, including an annexation and plan and map amendment, and culminating in an architectural review application for a multifamily development.

The area is south of SW Norwood Road in Tualatin, east of SW Boones Ferry Road, and currently has the address of 9300 SW Norwood Road. I've included a map showing the property below to help provide context.

The first application for this project involved an annexation of approximately 1 acre of residential land (shown in yellow below) within the Basalt Creek Area. Once annexed, it would be zoned Medium Low Residential (RML).

A zoning text amendment application would propose to allow High Density High Rise zoning within the Basalt Creek Planning Area, which includes this project site. The area does not currently have this zoning designated and the text of the zone specifies where it can be applied (Central Tualatin). Those restrictions are proposed to be changed to allow the higher density zoning in this area.

That application would also re-zone the annexed property (in yellow) and the area shown below in blue from Medium Low Residential (RML) to High Density High Rise Zone (RH-HR). The blue area is currently zoned Institutional and is currently part of the Horizon Community Church and School campus.



A future application is planned to involve a multifamily project with approximately 276 dwelling units.

Does the School District have capacity to accommodate the number of additional students expected as part of this development? Does the School District have any other comments regarding the proposed zone change?

There are obviously quite a few facets to what's being proposed, so please feel free to contact me with any questions you may have. If there is any other information that would be helpful or you'd like to have a call to discuss, please let me know.

Thank you!

MEMORANDUM

DATE: April 12, 2023

TO: Lee Novak (Vista Residential)

FROM: Christine Johnson, ISA Certified Arborist® PN-8730A
Todd Prager, RCA #597, ISA Board Certified Arborist®

RE: Tree Inventory and Preliminary Assessment for Road Improvements associated with the Norwood Multi-Family Project in Tualatin

---

Summary

Planning for the Norwood Multi-Family Project in Tualatin is underway. An existing buffer of mature Douglas-fir (*Pseudotsuga menziesii*) will be impacted by the proposed road improvements associated with development. Our firm was asked to inventory a 60-foot-wide strip south of Norwood Road and provide preliminary tree preservation recommendations. One hundred and ninety-nine (199) trees were inventoried. Successful tree preservation will require retention and protection of exterior trees, tree protection fencing, routing of utilities outside or boring underneath the tree protection zone when possible, and routine tree risk assessments if certain trees are removed. The site plan was altered in order to maximize tree preservation of the existing tree grove south of Norwood Road.

Background

The Norwood Multi-family Project is located southeast of the intersection of Boones Ferry Road and Norwood Road. An 8-foot-wide public utility easement (PUE) is proposed south of Norwood Road. Sidewalks exist along Norwood Road adjacent to the eastern portion of tax lot 106. No sidewalk is present along Norwood Road adjacent to tax lot 108 and the western portion of tax lot 106.

Assignment

The assignment asked of our firm was as follows:

1. Inventory an existing buffer of trees within a 60-foot-wide strip south of Norwood Road on tax lots 106 and 108.
2. Provide initial tree preservation recommendations to the project team.

Observations

Our firm visited the site on March 17 and March 20, 2023, and inventoried 199 trees within the designated area from Norwood Road to 60 feet south of Norwood Road. The existing conditions map with tree locations is provided in Attachment 1 and the preliminary grading exhibit with tree locations is provided in Attachment 2. The following information was recorded for each tree:

tree number, common name, scientific name, DBH (diameter at breast height, 4.5 feet above ground level), average canopy radius, health condition, structural condition, and pertinent comments. (Attachment 3) Tree numbers in the inventory in Attachment 3 correspond to tree numbers shown on Attachments 1 and 2. Photographs of the trees adjacent to tax lot 106 are provided in Attachment 4.

Discussion and Recommendations

The buffer of Douglas-fir trees are growing relatively close to one another. Exterior trees are healthy and have either good or fair structure (i.e., one sided crown, self-corrected phototropic lean). Interior trees are generally less healthy (i.e., thin foliage) and have fair to very poor structure (i.e, suppressed, narrow crowns, high crowns). This is typical of a buffer or grove of trees. That said, it will be extremely important to preserve exterior trees since their removal would negatively impact the health and stability of interior trees.

To preserve a 60-foot-wide buffer from Norwood Road going south from construction impacts, the following tree preservation measures are recommended:

1. **Buildings, hardscape, and grade changes.** Proposed buildings, hardscape, and grade changes will need to be located to allow for adequate root protection. A typical minimum root protection zone allows encroachments no closer than a radius from a tree of 0.5 feet per inch of DBH if no more than 25 percent of the root protection zone area (estimated at one foot radius per inch of DBH) is impacted. Figure 1 illustrates this concept. This standard may need to be adjusted on a case-by-case basis due to tree health, species, root distribution, whether the tree will be impacted on multiple sides, the specific development proposed, and other factors. A recommended limit of disturbance is provided on a preliminary site plan in Attachment 2. The recommended limit of disturbance designates where no construction, grading, or utilities should occur. If utilities must be constructed inside the limits of construction, alternative methods of construction will be recommended (i.e., horizontal directional drilling, pneumatic excavation, hydro excavation).

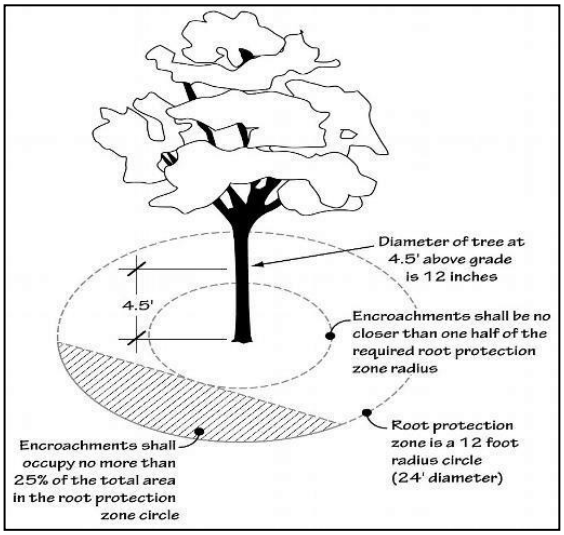

Figure 1 Typical minimum protection zone.

2. **Proposed road improvements.** If the existing access drive and sidewalk are reused for tax lot 106, then this will allow for tree preservation along that portion of the Norwood Road frontage. If a sidewalk and other improvements are required along the unimproved Norwood Road right of way adjacent to tax lots 106 and 108, trees will likely need to be removed along that frontage unless design changes are made to avoid the trees such as routing the sidewalk to the south of trees 50695, 50696, 50697 and 20698 through 20707. Coordination with the project arborist will be required during the design of right of way improvements if trees are to be retained along tax lots 106, 108, and the western portion of tax lot 106.

3. **Tree protection fencing.** Tree protection fencing with tree protection signage should enclose protected trees on all sides at the limits of disturbance.
4. **Underground electricity**. Overhead power lines exist along the south side of Norwood Road. These will be rerouted underground. The preferred location of this work is under the sidewalk or within the 7-foot-wide dedication and not within the PUE. Boring is the preferred method of installation.
5. **Routing of utilities.** An 8-foot-wide PUE is planned within the northern portion of the 60-foot-wide tree grove. If possible, additional utilities should be routed outside the recommended limit of disturbance or bored at least four feet below grade where there are existing trees to be retained. If alternative routes are unavailable or impractical, pneumatic excavation or hydro exaction under arborist supervision within the buffer may be compatible with tree preservation.
6. **Routine tree risk assessments.** If exterior trees are removed, or a new "edge" is created, routine risk assessments may be recommended.

Conclusion

Adjustments to the preliminary design for the Norwood Multi-Family project have maximized tree preservation near Norwood Road. Preserving the 60-foot-wide buffer of Douglas-fir south of Norwood Road is compatible with the proposed road improvements and site plan at this stage of the planning process. Efforts should be made to adequately protect grove exterior trees which will in-turn protect interior trees. Close coordination with the project arborist team will be necessary as the project design is refined to ensure the trees to be retained are adequately protected.

Please contact our firm if there are any questions about the information provided in this report.

Attachment 5 – Assumptions and Limiting Conditions

1. Any legal description provided to the consultant is assumed to be correct. The information provided by Vista Residential Partners was the basis of the information provided in this report.
2. It is assumed that this property is not in violation of any codes, statutes, ordinances, or other governmental regulations.
3. The consultant is not responsible for information gathered from others involved in various activities pertaining to this project. Care has been taken to obtain information from reliable sources.
4. Loss or alteration of any part of this delivered report invalidates the entire report.
5. Drawings and information contained in this report may not be to scale and are intended to be used as display points of reference only.
6. The consultant's role is only to make recommendations. Inaction on the part of those receiving the report is not the responsibility of the consultant.
7. The information provided in this report includes information and recommendations for the benefit of our client's decision making. The ultimate decision of whether to retain, remove, prune, inspect, monitor, or otherwise apply treatment recommendations to a tree is the sole responsibility of the tree owner, and not the responsibility of the project arborist.
8. If there are any questions or concerns with the information presented in this report, please contact our firm so that we can address any issues as soon as possible.
9. The purpose of this report is to (1) inventory trees within a 60-foot-wide area south of Norwood Road, and (2) provide tree preservation recommendations for the proposed development.

MEMORANDUM

DATE: April 19, 2023

TO: VISTA RESIDENTIAL PARTNERS
25 NW 23rd Street
Suite 6, #414
Portland, OR 97210

FROM: Brendan Buckley
Johnson Economics, LLC

SUBJECT: Needs Analysis for Multifamily Housing Uses at a Site in South Tualatin, OR

JOHNSON ECONOMICS have completed an analysis of the appropriateness of a site located in south Tualatin, Oregon for the common uses under its current and proposed zoning. The 9.2-acre site is currently zoned Institutional (IN) and Medium-Low Density Residential (RML). An application has been submitted to rezone the parcel to High-Density High Rise (RH-HR) to allow a multi-family housing complex including buildings of four stories in height.

This analysis examines the site for appropriateness for the proposed use from a market perspective, assessing the layout and location for successful multi-family housing. This memo reviews the findings of our analysis of demand and supply of land for housing uses in Tualatin.

CONTENTS

I. Executive Summary 2

II. Subject Site and Proposed Use 3

III. Site and Location Analysis 5

IV. Rental Housing Market Trends 7

V. Property Value Impacts 9

VI. Need for Housing in Tualatin/Basalt Creek 10

VII. Conclusions 15

I. EXECUTIVE SUMMARY

The analysis presented in this memo supports a zone change at the subject site from a medium-low density residential zone and institutional zone to a high-density residential zone based on market factors and land need findings. The following is a summary of major findings:

- The subject site's location and configuration are supportive of multi-family development at this location. The use would be compatible with neighboring uses, while having a greatly mitigated impact on any low density residential nearby. The proposed use will be complementary to the Plambeck Gardens development underway nearby.
- Multi-family development is a common transitional use found at the border of residential neighborhoods and active institutional uses with proper buffering.
- The subject location is advantageous in terms of site size and configuration and transportation access, and multi-family housing will be in demand and market feasible at this location. Buildable residential sites of this size, and roughly rectangular, are rare not just locally but in much of the Metro area. These sites are well suited for multi-family development, while low-density development can more easily adjust to smaller and more irregular parcels.
- The rental housing market in Tualatin is strong and supportive of the continued development of additional market-rate rental supply. Average rents have climbed steadily over the past decade, outpacing inflation, while the vacancy rate has fallen. This indicates a tight supply of available units which generally leads to increasing rent levels for renter households and offers them less choice among properties. New housing supply helps to alleviate rent increases and helps renter households remain in the community.
- The proposed development should not lower nearby property values and will very likely increase property values in the immediate area.
- There are compelling reasons to conclude that the housing need forecast included in the 2019 HNA is low, and the forecasted need for 1,014 units is significantly understated for a 20-year timeframe. The updated data demonstrates that demand is outpacing the HNA forecast and supports a policy choice by the City to provide needed housing based on the updated information. It is important to note that cities are not bound by the forecasts adopted in an HNA and may adapt to a new reality if it outpaces the forecast.
- The recent Decennial Census provided a new higher population estimate for Tualatin that is higher than not only the 2020 population assumption in the HNA, but higher than the *2040 population at the end of the forecast period.*
- The HNA assumes that multi-family housing will be built on RMH, RH, or RH-HR zoned land. The HNA concludes that there is a deficit of land in two of these zones, while most of the remaining RH land is under development at Plambeck Gardens. This means that the supply of land zoned for multi-family identified in the HNA has been exhausted, while the need for such housing has not been met.

- The low HNA forecast and rate of development already experienced since adoption indicate that the need for new housing of all types, including multi-family, is likely to be greatly in excess of the HNA forecast.
- The findings of the HNA and the subsequent Housing Production Strategy are supportive of rezoning lower density residential land and encouraging housing opportunities for households at middle income, many of whom are typically served by market-rate rental apartments. The policies laid out in the Strategy call for greater diversity of housing types, increased rental unit availability, and more housing for all segments of the local workforce so more residents can live and work in the same community.

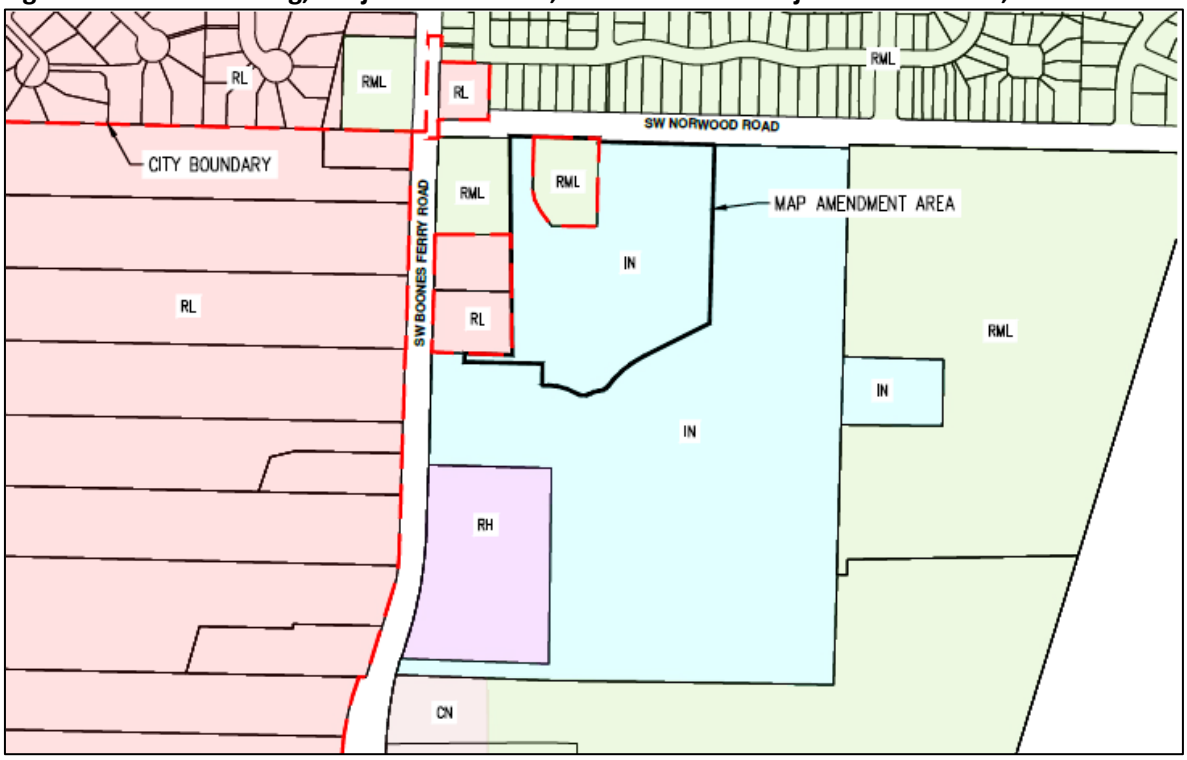
Analysis supporting these findings is presented in the following sections.

II. SUBJECT SITE AND PROPOSED USE

The subject site is located east of SW Boones Ferry Road and south of SW Norwood Road in south Tualatin. The site is roughly 9.2 vacant acres that was formerly a portion of the grounds of the Horizon Christian High School, plus one adjacent single-family home.

To the north of the subject site, across SW Norwood Road is a neighborhood of single-family homes, with medium-low density zoning. To the west are parcels with RML and RL zoning (Figure 1).

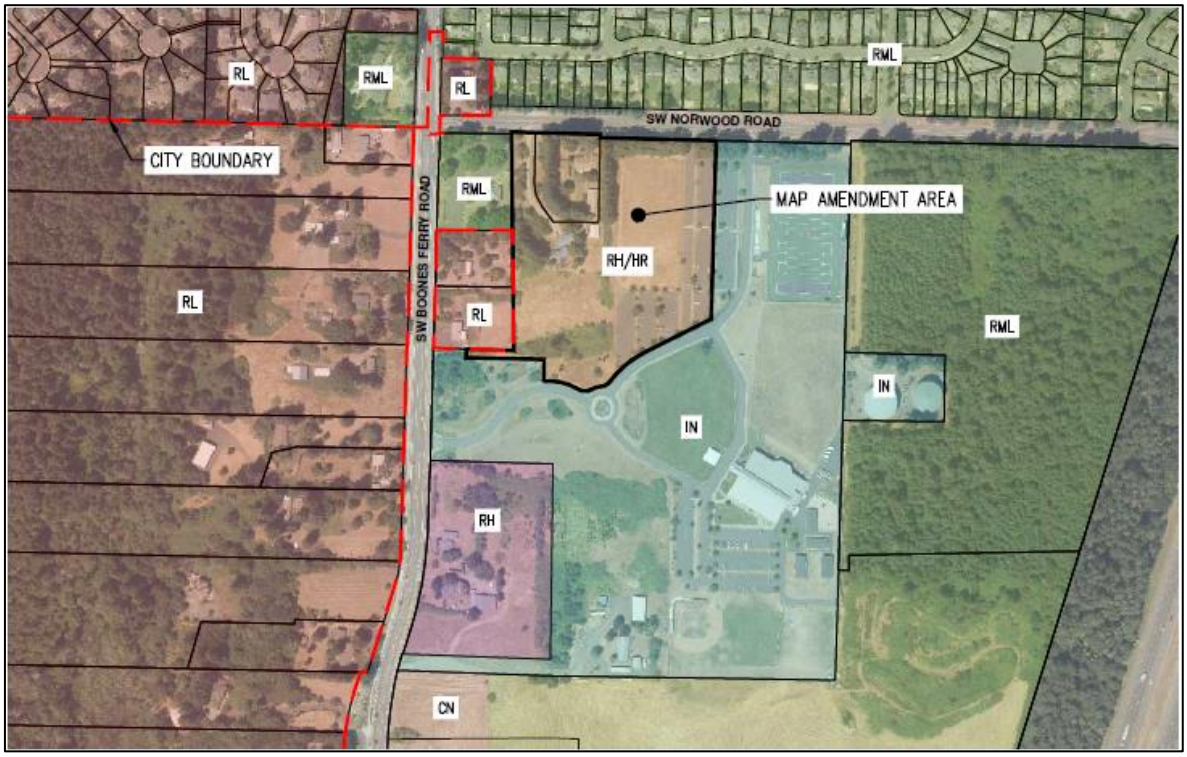
Figure 1: Current Zoning, Subject Site & Area, South Tualatin Subject Site Location, South Tualatin



Source: AKS Engineering

To the south of the site, beyond the access road of the high school, is a parcel of high-density residential zoning where the Plambeck Gardens apartments are currently under development. That 116-unit project will be compatible with the proposed development at the subject site. To the east of the site, beyond the alternate access and playing field of the high school is the large Autumn Sunrise master planned subdivision. This subdivision, currently underway on 62 acres, is zoned RML and planned to eventually accommodate 400 new single family units (80% detached, 20% attached).

Figure 2: Subject Site Location (Map Amendment Area), With Proposed Zoning, South Tualatin



Source: AKS Engineering

CURRENT ZONE: Medium-Low Density Residential (RML) - 1 acre of the site

Purpose and Permitted Uses

The City of Tualatin Development Code defines the purpose of the RML zone as follows:

> *The purpose of this zone is to provide household living uses with a variety of housing types at moderately low densities. This district is primarily oriented toward middle housing types including attached dwellings, multi-family development, and manufactured dwelling parks. (TDC Chapter 41.100)*

The RML zone permits a range of residential uses at a density of up to 25 townhouse units per acre.

CURRENT ZONE: Institutional (IN) - 8-acres of the site

Purpose and Permitted Uses

> *The purpose of the Institutional (IN) Zone is to provide areas of the City that are suitable for public, educational, religious, recreational, and incidental support facilities to serve the community.*
> *(TDC Chapter 49.100)*

The IN zone permits assembly uses such as churches as well as schools, government offices, or infrastructure. Oregon Senate Bill 8, passed in 2021, updated ORS 197.308 and allows for affordable housing to be located on property that is zoned for religious assembly. Therefore, affordable housing could currently be built on the IN zoned land at an undefined density.

PROPOSED ZONE: High-Density High Rise (RH-HR), Purpose and Permitted Uses

The proposed new zone for the subject site is RH-HR with some proposed textual amendments to that zone in the Tualatin Development Code. The following is the purpose of this zone as shown in Code, ***with the proposed textual changes of the applicant presented in red***:

> *The purpose of the High Density High Rise (RH-HR) zone is to provide areas of the City ~~within the City's Central Urban Renewal area, an area west of the Central Urban Renewal area, north of the wetlands, and south of the Tualatin Country Club~~ that are suitable for high density apartment or condominium~~s towers~~. (Chapter 44.100)*

The zone allows for residential density of up to 30 units per acre, the only residential zone to allow housing developments at this density. (The RH zone allows household uses at 25 units per acre). The proposed textual changes to the chapter would limit the height of development at the subject site to four stories, or 50 feet, whichever is less. (Elsewhere in this zone, the maximum allowed height is 64 feet.)

III. SITE AND LOCATION ANALYSIS

From a market perspective the subject site, like any property, will have strengths and weaknesses as a physical location for different potential land uses. While zoning determines what is allowed on a specific property, real estate market forces will determine if or when a property is actually developed.

HIGH-DENSITY RESIDENTIAL USE OF THE SUBJECT SITE

The subject site is well-suited to multi-family apartment development, given the location and site attributes. The surrounding area of the Basalt Creek Plan Area is intended to house medium-to-high density housing. Much of the remainder of the Plan Area is intended for low-density residential development. In general, residential uses do not face the same requirements of visibility and access as commercial properties do and can be located in internal neighborhoods and away from major arterial streets.

Access: As a high density residential use, the site will have access for its residents to SW Norwood Road, with ready access to SW Boones Ferry Road immediately to the west. SW Boones Ferry Road is a major arterial that provides access to North Wilsonville and the I-5 freeway roughly 1.25 miles to the south, and central Tualatin roughly 2 miles to the north. The location near this arterial will also greatly increase the visibility and marketability of apartments at this location, which helps to ensure that the project is successful in attracting and housing local households.

The arterial is served by Trimet Route 96, which runs roughly every half hour during rush hour periods, between Wilsonville and central Portland. It also features bike lanes for most of the length between central Tualatin and Wilsonville.

Site configuration: The 9.2-acre site is well configured for multi-family housing development. The site is roughly rectangular allowing for flexibility in site planning and building layout, while allowing open space and buffering of neighboring uses as well as the road. Buildable residential sites of this size, and roughly rectangular, are rare not just locally but in much of the Metro area. These sites are well suited for multi-family development, while low-density residential development can more easily adjust to smaller and more irregular parcels. Growth management measures limit the number of these large "greenfield" sites that come available, making it valuable to use these opportunities effectively.

Neighboring uses: The proposed multi-family development is compatible with neighboring uses. The high school produces traffic, noise, and other activity expected of an active daytime use. Multi-family development is often used as a buffer between active daytime uses, such as a school or commercial use, and neighboring low-density residential. Multi-family zoning is a common "step down" land use between higher activity land uses, and low activity neighborhoods. Also adjacent to the site, at the corner of SW Norwood and Boones Ferry roads is a church, which is a less active, but still non-residential use compatible with multi-family development.

In form and density, the proposed multi-family development will be very similar to the approved Plambeck Gardens apartments, currently under construction roughly 500 feet to the south of site.

To the west, are two low-density residential properties that will likely be redeveloped, and across Norwood Road to the north is a medium-low density residential neighborhood. These uses are commonly located near multi-family development, and impacts can be mitigated with setbacks, landscaping, fencing and other buffering. The neighborhood to the north is separated from the subject site by the road, a 30 foot landscape buffer, and a multi-use path. Furthermore, the homes in this neighborhood are not accessed via Norwood Road, but SW Stone Drive to the north, meaning these homes face away from the proposed development and are further buffered by backyards and fencing.

Residential Conclusions: The site and location are well-suited for multi-family housing, and this is likely the "highest and best" economic use for a parcel of this size and configuration. Low density housing is more adaptable to using smaller and more irregular sites. Rental apartments will be market feasible at the subject site as evidenced by the success of medium to high-density residential uses in the immediate area. The higher density of the proposed land use is compatible with surrounding uses, and can be further buffered by setbacks, landscaping, and other measures. The site is neighbored on two sides by non-active portions of the high school property (drives and parking), and a church to the west. Existing low-density residential use in the area is compatible with a nearby apartment complex, and properly buffered.

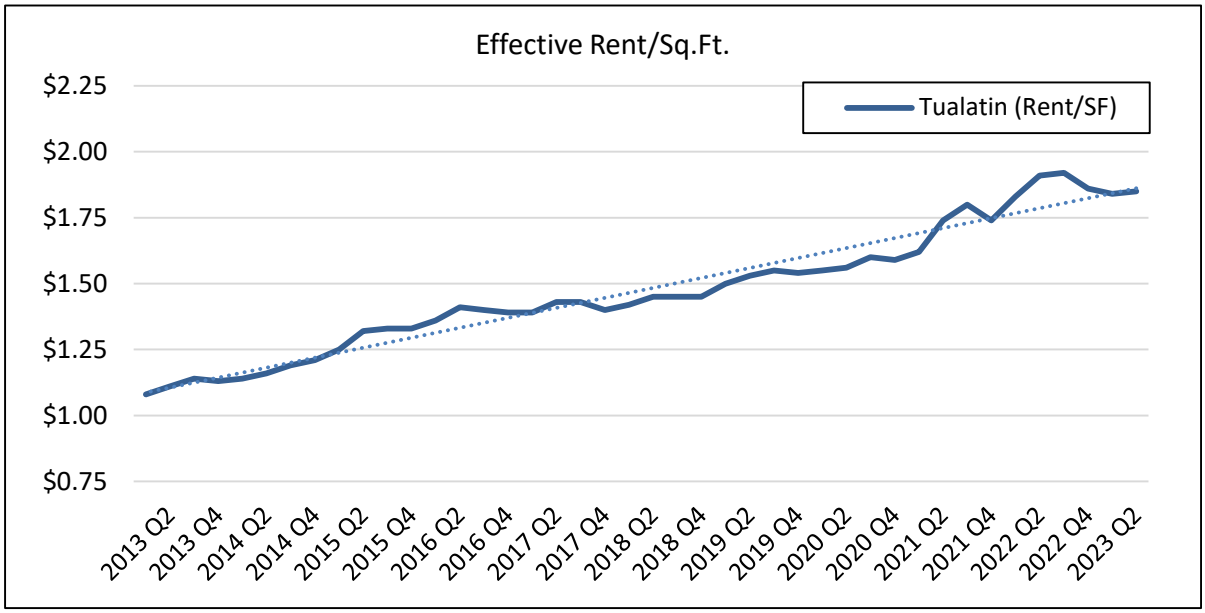
IV. RENTAL HOUSING MARKET TRENDS

The rental housing market in Tualatin is strong and supportive of the continued development of additional market-rate rental supply. Average rents have climbed steadily over the past decade, outpacing inflation, while the vacancy rate has fallen. This indicates a tight supply of available units which generally leads to increasing rent levels for renter households and offers them less choice among properties. New housing supply helps to alleviate rent increases and helps renter households remain in the community.

Rent levels in Tualatin are supportive of new development at the subject site, and the feasibility of multifamily housing in general. Development of new rental housing has migrated from Central Portland to suburban markets in recent years, due to the impacts of COVID including increased working from home, and households seeking different living situations during the "lockdown" phase. Simultaneously, Portland has implemented some conditions on new rental housing development and operations that have caused some regional developers to look to outer markets. These trends mean that demand for multi-family housing and the feasibility of building will likely continue to increase in coming years.

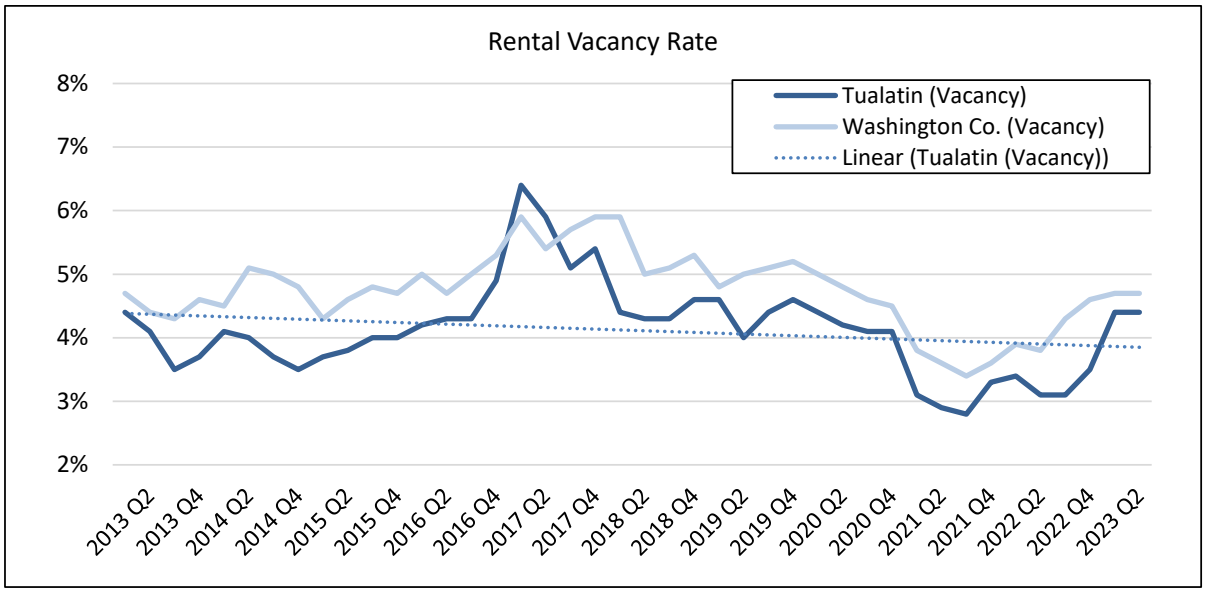
Figure 3 shows growth in effective rent per square foot in Tualatin over the prior decade. In that time, average rent grew by 77%, from $1.08/SF to $1.85/SF. The average monthly rent per unit grew from $945 to $1,613. Estimated inflation over this period was 31%, so the growth in average rent significantly outpaced inflation.

Figure 3: Average Effective Rent per Sq.Ft., Tualatin (2013 – 2023)



Source: CoStar

Figure 4: Average Vacancy Rate, Tualatin and Washington County (2013 – 2023)



Source: CoStar

Figure 4 shows vacancy rate trends over the same period. The vacancy rate shows more volatility than average rents, but still presents a general downward trend over time as the supply has tightened over the past decade. Tualatin has tended to experience a lower vacancy rate than Washington County. Generally, the rental housing market considers 5% to be a "healthy" vacancy rate, allowing choice and mobility for renters while supporting the upkeep of properties. The extended period of sub-5% vacancy in Tualatin over the last decade is another indicator that the community has

experienced a tight housing supply for many years. The low vacancy is contributing to increasing rent levels for local households as demand is high for the more limited supply.

The latest statistics tracked by Multifamily Northwest indicate that market rent units in broader Tualatin market area are generally affordable to households earning roughly $50k to $125k per year depending on unit size. The median household income in Tualatin is an estimated $98k per year. Therefore, market-rate rental housing in the city tends to serve those earning between 50% and 125% of the median income.

V. PROPERTY VALUE IMPACTS

The proposed development is unlikely to have demonstrable negative impacts on property values of surrounding properties. As a general rule, land zoned for multi-family development is *more* valuable than lower-density residential land, including land zoned for single-family homes. This is because multi-family land allows for a greater density of economic use and returns on investment per square foot of buildable land.

The new multi-family uses in the area (the subject site and Plambeck Gardens) should be expected to increase the value of nearby uses in the long run, as it increases the viability of more intensive development on those sites as well, if the property owners should choose to pursue it. This includes the adjacent high school site, and church site, though these users may not choose to sell their property for a very long time, if ever. Adding new households in an area also tends to attract new services and amenities to the area that can benefit the property values of everyone in the neighborhood.

Some community members might voice an intuitive concern that new apartments may decrease to nearby properties due to negative externalities such as additional traffic, noise, or appearance. However, there is little to support that multi-family properties have this impact on nearby property values. Multiple studies have demonstrated that multifamily housing does not have an impact on the value of neighboring properties, and in many cases increases the value of adjacent homes (Obrinsky, 2008; Eskic, 2021)[1]. The Eskic study found that homes within a half mile of newly constructed apartments actually appreciated faster than those located farther away. Additional studies support

[1] Obrinsky, Mark and Debra Stein. March 2007, *Overcoming Opposition to Multifamily Rental Housing* Massachusetts: Joint Center for Housing Studies Harvard University.

Eskic, Dejan. February 2021, *The Impact of High-Density Apartments on Surrounding Single-Family Home Values in Suburban Salt Lake County* Salt Lake City: Kern C. Gardner Policy Institute.

Chakraborty, A., & McMillan, A. November 2018, *Is Housing Diversity Good for Community Stability? Evidence from the Housing Crisis:* Journal of Planning Education and Research.

that a diverse mix of housing types within a neighborhood have greater stability in the face of a housing market downturn (Chakraborty, 2018).

The proposed development will be well buffered from neighboring properties, particularly to the north, east, and south. To the west, site plan considerations such as setbacks and landscape buffering will mitigate impacts on neighbors. Multi-family development is a common land use adjacent to lower density housing. As noted, the subject development is likely to *increase* the value of the church property and the adjacent single-family lots in the long run, by making them eventual candidates for greater residential density development in the future, either through a zone change or the new statewide middle housing rules.

VI. NEED FOR HOUSING IN TUALATIN/BASALT CREEK

The proposed zone change from Institutional (IN) and Medium Low Density Residential (RML) use to High Density High Rise (RH-HR) use at the subject site will increase the supply of land zoned for high-density residential development and the capacity for new housing units in the area. A review of the most recent relevant studies of housing land need in the city supports the increase in RH-HR land based on projected growth and identified need.

HOUSING NEEDS ANALYSIS (ADOPTED 2019)

The most recently adopted Tualatin Housing Needs Analysis (HNA) forecasted a need for 1,014 new housing units in the city between 2020 and 2040. Figure 5 summarizes the forecasted need (which is Exhibit 97 in the HNA report):

Figure 5: Comparison of Residential Land Capacity and 20-Year Need, Reproduced from HNA

Exhibit 97. Comparison of capacity of existing residential land with demand for new dwelling units and land surplus or deficit, Tualatin City Limits and Basalt Creek, 2020 to 2040
Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Capacity (Dwelling Units)	Demand for New Housing	Remaining Capacity (Supply minus Demand)	Land Surplus or (Deficit) *Gross Acres*
Low Density	523	466	57	10
Medium Low Density	386	71	315	27
Medium High Density	13	122	(109)	(7)
High Density	285	254	31	2
High Density High-Rise	-	101	(101)	(4)

Source: City of Tualatin Housing Needs Analysis (2019), ECONorthwest

- There was an estimated need for 571 units within the 2019 City limits, and 443 in the Basalt Creek planning area, most of which was not yet annexed. Of the total, an estimated 456 (or 45%) were forecasted to be multi-family units.

- The 2019 HNA concluded that there was a deficit of land for medium-high and high-density high-rise development, which are zones the HNA concludes are supportive of multi-family housing.

As discussed in detail below, there are reasons to believe that this 20-year housing forecast will prove to significantly understate the actual achieved growth over that period, and need for housing of all types, including multi-family will prove to be higher than was stated in the HNA.

HNA Population and Forecast Assumptions: An HNA analysis presents a good faith effort to estimate future growth in a city based on the best data and assumptions available at the time. But like any forecast, an HNA can be quickly overtaken by events on the ground.[2] The following is a range of points regarding the assumptions reflected in the HNA with the benefit of a few years of new data and observations:

- Like all Metro cities, Tualatin utilized the distributed population forecast from Metro regional government as the source of its growth figures. In the case of the adopted HNA, the analysis used the Metro forecast from 2020 to 2040; a forecast that was adopted in 2016.
- The forecast projected that the city (not including Basalt Creek area) would have 26,745 people in 2020 and grow to 27,372 people in 2040. This is 20-year growth of 627 people. These figures are reflected in the HNA document.
- However, the subsequent 2020 Decennial Census showed that Metro's 2020 population assumption (from 2016) was low. The 2020 Census counted a higher population of 27,942 people in Tualatin, or 533 people more than the HNA projected would live in Tualatin in 2020 (26,745 people).
- *This correction to the 2020 population figure means that 85% of the population growth forecasted in the HNA* ***had already occurred*** *before the base year of the analysis had even arrived (533 people/627 people).*
- In addition, the Census estimated a higher population in 2020 than the number forecasted by Metro *in 2040, at the end of the forecast period.*
- This indicates that Tualatin had been growing faster than assumed by either Metro or the PSU Population Center at the time the HNA was prepared in 2019.
- In the decade between 2010 and 2020, the Census estimates that the city grew by 1,888 people, or an average of roughly 190 people per year. At this rate, the total population

[2] Johnson Economics regularly prepares Housing Needs and Analysis for Oregon cities and has over a decade of direct experience on these analyses.

growth forecasted in the HNA (627 new people) *over 20 years*, would be realized *in just 3.3 years*.

- The achieved average population growth rate between 2010 and 2020 (Census) was 0.7% per year. The Metro 2020-2040 forecast used in the HNA reflects a much slower average annual growth rate assumption of 0.1% per year. Compounded over 20 years, this is a large difference. For instance, if we assume that the 0.7% growth rate continues into the future, that would mean over 31,000 residents in Tualatin by 2040, or over 4,000 new people.
- This indicates that the growth assumptions in the HNA for the period both prior to 2020 and going forward to the year 2040 were likely too low. Therefore, the finding of need for 1,014 housing units over 20 years is also likely very low.
- Since adoption of the HNA at the end of 2019, more than 800 units have already been permitted in Tualatin, including 380 multi-family units combined in the Plambeck Garden and the Commons on the Tualatin, and 400 single family units in Autumn Sunrise (320 detached and 80 attached). This means that roughly 80% of the 20-year forecasted housing growth (a total of 1,014 units) has been permitted in just the few years since the HNA's adoption.
- The HNA assumes that multi-family housing will be built on RMH, RH, or RH-HR zoned land. The HNA concludes that there is a deficit of land in two of these zones, while most of the remaining RH land is under development at Plambeck Gardens. This means that the supply of land zoned for multi-family identified in the HNA has been exhausted, while the need for such housing has not been met.
- As Figure 3 shows, as of 2019, Tualatin (including Basalt Creek) had an estimated remaining capacity for an additional 1,207 new housing units within its residential zones. As noted above, over 800 units have since been permitted in just a few years. Therefore, the estimated remaining capacity is likely to be greatly diminished.

The implication of the above points is that Tualatin is very likely to exceed the forecasted growth in population and households well before 2040, and perhaps in the next few years. It is safe to assume that new housing of all types, particularly multi-family, will be needed in coming years in excess of the amount forecasted in the HNA.

The points made above are not to disparage Tualatin's adopted HNA, which must reflect the best assumptions available at the time and is required by statute to use the forecasts provided by Metro. The 2019 HNA reflects these limitations.

Impacts of the HNA: It is important to note that cities are not bound by the forecasts adopted in an HNA if reality outpaces the forecast. The number of units forecasted is a floor, not a statutory ceiling beyond which more permits cannot be issued. If the population growth exceeds the forecast in the HNA (as it already has), the City is not obligated to put limits on growth to conform to the HNA. The HNA (with dated information) demonstrated a need for additional RH-HR zoned land. The updated population data indicates that the need is even greater than projected.

TUALATIN HOUSING STRATEGY (ADOPTED 2019)

The Housing Needs Analysis was accompanied by a Housing Strategy memo based on its findings. The Strategy, developed with input from advisory committees and City staff and officials, identified six major strategic priorities, with 24 underlying action items. The following findings and adopted strategies are most relevant to the proposed zone change application:

> The results of the HNA show that Tualatin has a deficit of land designated for housing the Medium High Density Residential and High Density/High Rise Residential comprehensive plan designations. The City will need to develop policies to meet this deficit, such as redevelopment or rezoning land to meet these housing needs. (Page 1)
>
> **Strategy 1: Ensure adequate supply of land that is available and serviceable.**
>
> - Recommendation 1.2b: Evaluate opportunities to re-zone Residential Low Density and Medium-Low Density residential land for higher-density housing.
>
> **Strategy 3: Support development and preservation of housing that is affordable for all households.**
>
> - Action 3.2: Develop policies to support development of housing affordable to people who have incomes between 60% and 120% of MFI… and live and work in Tualatin.
>
> Source: Tualatin Housing Strategy (2019), ECONorthwest

The adopted strategies identified are supportive of rezoning residential lands to allow greater housing density. The strategy also encourages development of market-rate rental housing, which is typically affordable to middle-income households, and having a higher density supplies more units for these households more efficiently.

TUALATIN HOUSING PRODUCTION STRATEGY (2021)

A more formal Housing Production Strategy was adopted in 2021. It is intended to establish a framework of policies and strategic actions that address the housing needs described in the Tualatin Housing Needs Analysis. The Housing Production Strategy included the following key findings that are applicable to the proposed zone change application.

- Tualatin needs increased housing diversity. Nearly two-thirds of Tualatin's housing stock is single-family detached housing. The City's demographic and socioeconomic characteristics suggest a need for a wide variety of housing types to meet the needs of a growing and diverse pool of existing and future residents.
- Tualatin needs greater housing affordability and availability for renters. Competition for lower-priced affordable units in Tualatin is strong and many cannot afford these rents or housing sales prices without cost burdening themselves. In the 2013-2017 period, about 56% of Tualatin's renters were cost burdened.
- Housing is needed for people to live and work in Tualatin. Tualatin's Economic Opportunities Analysis report (December 2019) reported that 93% of people working in Tualatin lived in

another community and commuted into Tualatin each day. Some people who work in Tualatin can afford rent or homeownership in Tualatin, but some would be cost burdened in Tualatin.

The Housing Production Strategy also identified barriers to development of needed housing within the City of Tualatin which include:

- Land for Housing – There is a limited amount of unconstrained, vacant buildable residential land within the city. Of this land, more than 90% is Low Density or Medium Low Density Residential, providing limited opportunities for development of multifamily housing. "Scarcity of vacant land, especially for multifamily development, is one of Tualatin's primary barriers to development of needed housing.
- Complexity and expense of redevelopment - While areas can be identified for redevelopment, the costs and complexity of redevelopment are substantial. Barriers to redevelopment include higher site acquisition and preparation costs, higher construction costs, and costs of upgrades to infrastructure to support increased development density. In a suburban environment, rents may not be high enough to justify these higher development costs. In addition, a number of the sites that the City has identified as potential redevelopment opportunities are located in a floodplain, or have other site-specific constraints that create challenges for development.

  - Tualatin Housing Production Strategy (2021), ECONorthwest

Another consideration outlined in The Housing Production Strategy is the importance of supporting and leveraging the private market's ability to deliver market-rate development, stating that "…increasing the overall supply of available housing units plays a significant role in overall housing affordability…" (Pg. 21).

Finally, the following goal and strategic actions were adopted with the Housing Production Strategy and would be addressed by the proposed zone change:

Goal 11: Increase housing development opportunities through regulatory and zoning changes to accommodate a diverse range of housing types and price points to meet the housing needs in Tualatin.

11.a. Evaluate updating density standards for multifamily housing in medium-density, high-density, and mixed-use zones.

11.b. Evaluate opportunities to rezone lower-density residential land to higher density.

- Tualatin Housing Production Strategy (2021), ECONorthwest

These actions support increasing residential densities to allow for efficient development, especially in proximity to transit. It encourages rezoning to the RH-HR to provide more housing on the limited available buildable land.

VII. CONCLUSIONS

The analysis presented in this memo supports a zone change at the subject site from a medium-low density residential zone and institutional zone to a high-density residential zone based on market factors and land need findings. The following is a summary of major findings:

- The subject site's location and configuration are supportive of multi-family development at this location. The use would be compatible with neighboring uses, while having a greatly mitigated impact on any low density residential nearby. The proposed use will be complementary to the Plambeck Gardens development underway nearby.
- Multi-family development is a common transitional use found at the border of residential neighborhoods and active institutional uses with proper buffering.
- The subject location is advantageous in terms of site size and configuration and transportation access, and multi-family housing will be in demand and market feasible at this location. Buildable residential sites of this size, and roughly rectangular, are rare not just locally but in much of the Metro area. These sites are well suited for multi-family development, while low-density development can more easily adjust to smaller and more irregular parcels.
- The rental housing market in Tualatin is strong and supportive of the continued development of additional market-rate rental supply. Average rents have climbed steadily over the past decade, outpacing inflation, while the vacancy rate has fallen. This indicates a tight supply of available units which generally leads to increasing rent levels for renter households and offers them less choice among properties. New housing supply helps to alleviate rent increases and helps renter households remain in the community.
- The proposed development should not lower nearby property values and will very likely increase property values in the immediate area.
- There are compelling reasons to conclude that the housing need forecast included in the 2019 HNA is low, and the forecasted need for 1,014 units is significantly understated for a 20-year timeframe. The updated data demonstrates that demand is outpacing the HNA forecast and supports a policy choice by the City to provide needed housing based on the updated information. It is important to note that cities are not bound by the forecasts adopted in an HNA and may adapt to a new reality if it outpaces the forecast.
- The recent Decennial Census provided a new higher population estimate for Tualatin that is higher than not only the 2020 population assumption in the HNA, but higher than the *2040 population at the end of the forecast period.*
- The HNA assumes that multi-family housing will be built on RMH, RH, or RH-HR zoned land. The HNA concludes that there is a deficit of land in two of these zones, while most of the remaining RH land is under development at Plambeck Gardens. This means that the supply of land zoned for multi-family identified in the HNA has been exhausted, while the need for such housing has not been met.

- The low HNA forecast and rate of development already experienced since adoption indicate that the need for new housing of all types, including multi-family, is likely to be greatly in excess of the HNA forecast.
- The findings of the HNA and the subsequent Housing Production Strategy are supportive of rezoning lower density residential land and encouraging housing opportunities for households at middle income, many of whom are typically served by market-rate rental apartments. The policies laid out in the Strategy call for greater diversity of housing types, increased rental unit availability, and more housing for all segments of the local workforce so more residents can live and work in the same community.

From: Melissa Slotemaker, AICP
Project Name: Norwood Multifamily Plan Map and Text Amendment
AKS Job No.: **8723**
Project Site: 9300 SW Norwood Road

Subject: **Supplemental Information on School Capacity**

Please add this memo as supplemental information to the Norwood Multifamily Plan Map and Text Amendment application (PMA 23-0001 and PTA 23-0001) that was originally submitted to the City in January 2023.

Criterion 33.070.5.e requires that "the appropriate school district must be able to reasonably accommodate additional residential capacity." The Plan Map and Text Amendment application includes correspondence from the Sherwood School District (see Exhibit G) which states that the School District can accommodate additional students expected from the development of a 276 unit apartment project.

Additionally, ORS 195.110 dictates the rules regarding school capacity. ORS 195.110(12) states that a development moratorium cannot be based on school capacity. Under ORS 195.110(13), a city can deny an application for residential development based on lack of school capacity if three requirements are met: 1) the issue is raised by the school district; 2) the lack of school capacity is based on a school facility plan formally adopted under the statute and incorporated in the comp plan; and 3) the city has considered options to address school capacity.

The Sherwood School District has not raised the issue of lack of school capacity. Additionally, the Sherwood School District has over 2,500 students, which means it qualifies as a "large school district." The City of Tualatin is therefore required to include as an element of its Comprehensive Plan a school facility plan per ORS 195.110(2). Tualatin does not have a school facility plan included within the Comprehensive Plan. Instead, there is a general policy related to coordination (see Policy 5.1.7). Therefore, pursuant to ORS 195.110(13), the City cannot deny the application based on lack of school capacity. TDC 33.070.5.e is not an independent basis for denial because it does not satisfy the standards in ORS 195.110.

CITY OF TUALATIN
Planning Division

NOTICE OF HEARING AND OPPORTUNITY TO COMMENT

NOTICE IS HEREBY GIVEN that a public hearing will be held before the City of Tualatin City Council at 7:00 p.m., Monday, May 22, 2023, held online over Zoom and additionally accessible at the Tualatin City Services Building (10699 SW Herman Road).

AKS Engineering & Forestry, LLC, on behalf of Vista Residential Partners and Property Owner Horizon Community Church, requests approval of two applications:

A Plan Map Amendment PMA 23-0001: The proposal requests the zone change from Medium-Low Density Residential (RML) and Institutional (IN) to High-Density High Rise (RH-HR) for property located on a 9.2-acre site at 23370 SW Boones Ferry Road (Tax Lot: 2S135D000106); and

A Plan Text Amendment PTA 23-0001: The proposal requests to remove locational factors from the High-Density High Rise (RH-HR) purpose statement in Tualatin Development Code Section 44.100 and revise Table 44-3 to limit the structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road, which would be applicable to the subject site.

You may view the application materials on our Projects web page: https://www.tualatinoregon.gov/planning/pma23-0001-pta23-0001-norwood-multi-family-plan-map-text-amendment

Comments due for staff report: **May 8, 2023.** Comments made after that date but prior to the close of the written record will be included in the written record but may not be included in the staff report to the City Council.

To grant the amendment, Council must find the proposal meets the applicable criteria of Tualatin Development Code (TDC) Chapters 32 and 33 and the Tualatin Comprehensive Plan; Applicable Oregon Statewide Planning Goals; Applicable Oregon Administrative Rules including compliance with the Transportation Planning Rule; and Metropolitan Service District's Urban Growth Management Functional Plan.

Individuals wishing to comment may do so in writing to the Planning Division prior to the hearing and/or present written and/or verbal testimony to the City Council at the hearing prior to the close of the written record. Testimony should be directed to the applicable criteria or those criteria the person testifying believes apply.

The public hearing process begins with a staff presentation, followed by testimony by proponents, testimony by opponents, and rebuttal. Individual testimony may be limited. At the conclusion of the hearing, the City Council will deliberate and make a decision based on the facts and arguments in the public record. Before the hearing is closed, a participant may request that the record remain open for at least seven days after the hearing.

Everyone is invited to attend the hearing and comment on the application's approval criteria. Failure of an issue to be raised in the hearing, in person, or by letter, or failure to provide sufficient specificity to afford the decision maker an opportunity to respond to the issue precludes appeal to the State Land Use Board of Appeals (LUBA) based on that issue. The failure of the applicant to raise constitutional or other issues relating to proposed conditions of approval with sufficient specificity to the decision maker to respond to the issue precludes an action for damages in circuit court.

A copy of the staff report, findings, and draft Ordinances on PMA 23-0001 and PTA 23-0001 will be available one week before the hearing at: https://www.tualatinoregon.gov/citycouncil.

Application materials are public record and are available for review. Copies can be viewed online or obtained at a reasonable cost, by contacting the Planning Division (503-691-3026 or planning@tualatin.gov).

NOTICE OF PUBLIC HEARING AND OPPORTUNITY TO COMMENT
CASE FILE: PMA 23-0001 & PTA 23-0001 — Norwood Multi-Family

NOTICE IS HEREBY GIVEN that an application for a Plan Map and Text Amendment (PMA 23-0001 & PTA 23-0001) will be heard by Tualatin City Council:

Monday, May 22, 2023 at 7 pm
Tualatin City Services Building
10699 SW Herman Road

To view the application materials visit:
www.tualatinoregon.gov/projects

TO PROVIDE COMMENTS:
Email: mnelson@tualatin.gov

Mail: Planning Division
Attn: Madeleine Nelson
10699 SW Herman Road
Tualatin, OR 97062

Questions?: 503-691-3027

To attend the hearing, there are two options:

- **Zoom Teleconference.** Details at: www.tualatinoregon.gov/citycouncil/council-meetings
- **Attend in person at the Tualatin City Services Building.**

AKS Engineering & Forestry, LLC, on behalf of Vista Residential Partners and Property Owner Horizon Community Church, proposes two applications located on a 9.2-acre site at 23370 SW Boones Ferry Road (Tax Lot: 2S135D000106).

Plan Map Amendment (PMA 23-0001): The proposal requests the zone change from Medium-Low Density Residential (RML) and Institutional (IN) to High-Density High Rise (RH-HR).

Plan Text Amendment (PTA 23-0001): The proposal requests to remove locational factors from the High-Density High Rise (RH-HR) purpose statement in Tualatin Development Code Section 44.100 and revise Table 44-3 to limit the structure height to 4 stories or 50 feet in the RH-HR zoning district south of Norwood Road.

- **Criteria**: Tualatin Development Code (TDC) Chapters 32 and 33; Tualatin Comprehensive Plan; Applicable Oregon Statewide Planning Goals; Applicable Oregon Administrative Rules including compliance with the Transportation Planning Rule; and Metropolitan Service District's Urban Growth Management Functional Plan.
- **Application materials** are public record and are available for review. Copies can be viewed online or obtained at a reasonable cost, by contacting the Planning Division.
- **Staff report materials** will be available for inspection at no cost, at least seven days prior to the hearing. Copies can be obtained for a reasonable cost.
- **Individuals wishing to comment** may do so via email (mnelson@tualatin.gov) or in writing to the Planning Division prior to the hearing and/or present

written and/or verbal testimony at the City Council hearing prior to the close of the written record. Comments should address the identified approval criteria or those criteria that the person commenting believes apply.

- **The public hearing process** begins with a staff presentation, followed by testimony by proponents, testimony by opponents, and rebuttal. Individual testimony may be limited. At the conclusion of the hearing, the City Council will deliberate and make a decision based on the facts and arguments in the public record. Before the hearing is closed, a participant may request that the record remain open for at least seven days after the hearing.
- **Everyone is invited to attend the hearing and comment** on the application's approval criteria. Failure of an issue to be raised in the hearing, in person, or by letter, or failure to provide sufficient specificity to afford the decision maker an opportunity to respond to the issue precludes appeal to the State Land Use Board of Appeals (LUBA) based on that issue. The failure of the applicant to raise constitutional or other issues relating to proposed conditions of approval with sufficient specificity to the decision maker to respond to the issue precludes an action for damages in circuit court.
- A copy of the staff report, exhibits, and findings for PMA 23-0001 and PTA 23-0001 will be available one week before the hearing at: https://www.tualatinoregon.gov/citycouncil.

Executive Summary

Planning Goal 10 and OAR 660-008. The methods used for this study generally follow the *Planning for Residential Growth* guidebook, published by the Oregon Transportation and Growth Management Program (1996).

The primary goals of the housing needs analysis were to (1) project the amount of land needed to accommodate the future housing needs of all types within the Tualatin Planning Area, (2) evaluate the existing residential land supply within the Tualatin Planning Area to determine if it is adequate to meet that need, (3) to fulfill state planning requirements for a twenty-year supply of residential land, and (4) identify policy and programmatic options for the City to meet identified housing needs.

What are the key housing needs in Tualatin?

Following are several key issues identified in the housing needs analysis:

- **Tualatin's housing market is strongly impacted by the regional market in the Portland Region.** Tualatin is relatively small, accounting for 4.5% of Washington County's population and 1.5% of the Portland Region's population. Of the more than 23,800 people who work in Tualatin, 93% of workers commute into Tualatin from other areas, most notably Portland, Tigard, Beaverton, and Hillsboro. Nearly 11,000 residents of Tualatin commute out of the city for work, many of them to Portland.
- **Household incomes in Tualatin are similar to Washington County's, and have not kept pace with housing prices.** Tualatin's home sales and rental costs are comparable to other communities in the region. Tualatin has a larger share of multifamily housing compared to Washington County and the Portland Region (42% the City's housing stock), and there are very few vacant units. Given these factors, Tualatin will continue to have demand for affordable, lower-income and middle-income housing.
- **Demographic and economic trends will drive demand for relatively affordable attached single-family housing and multifamily housing in Tualatin.** The key demographic trends that will affect Tualatin's future housing needs are: (1) the aging of the Baby Boomers, (2) aging of the Millennials, and (3) continued growth in the Latinx population.
    - As the Baby Boomers age, growth of retirees will drive demand for housing types specific to seniors, such as small and easy-to-maintain dwellings, assisted living facilities, or age-restricted developments.
    - Tualatin's ability to retain Millennials will depend on whether the city has opportunities for housing that both appeals to and is affordable to Millennials.
    - Growth in the number of Latinx households will result in increased demand for housing of all types, both for ownership and rentals, with an emphasis on

housing that is comparatively affordable. Latinx households are more likely to be larger than average, with more children and possibly with multigenerational households.

- **Tualatin has an existing lack of affordable housing.** Tualatin's key challenge over the next 20 years is providing opportunities for development of relatively affordable housing of all types of housing, from lower-cost single-family housing to market-rate multifamily housing.
  - About 26% of Tualatin's households had incomes less than $41,000 and cannot afford a two-bedroom apartment at Washington County's Fair Market Rent (FMR) of $1,330 without cost burdening themselves.
  - In 2018, a household needed to earn $25.58 an hour to afford a two-bedroom rental unit in Washington County.
  - Tualatin currently has a deficit of housing units that are affordable to households earning less than $35,000.
  - About 37% of Tualatin's households are cost burdened, with 56% of renters and 22% of owners paying more than 30% of their income on housing.

How much growth is Tualatin planning for?

A 20-year household forecast (in this instance, 2020 to 2040) is the foundation for estimating the number of new dwelling units needed. Exhibit 1 shows a household forecast for Tualatin for the 2020 to 2040 period. It shows that Tualatin will grow by about 1,014 households over the 20-year period (with 44% of households projected to locate in Basalt Creek).

Exhibit 1. Forecast of Household Growth, Tualatin city limits, 2020 to 2040
Source: Metro 2040 Population Distributed Forecast, Exhibit A. July 12, 2016.

10,791	11,362	571	5.3% increase
Households in 2020	Households in 2040	New households 2020 to 2040	0.26% Growth Rate

Exhibit 2. Forecast of Household Growth, Basalt Creek, 2020 to 2040
Source: Metro 2040 TAZ Forecast, Population Estimates (TAZ 980 and 981). November 6, 2015.

203	646	443	218% increase
Households in 2020	Households in 2040	New households 2020 to 2040	5.96% Growth Rate

How much buildable residential land does Tualatin currently have?

Exhibit 3 shows buildable residential acres by Plan Designation, after excluding constrained and unbuildable land. The results show that Tualatin has about 244 net buildable acres in residential Plan Designations. Of the 244 net acres, about 62% are located in Basalt Creek.

Exhibit 3. Buildable acres in vacant and partially vacant tax lots by Plan Designation, Tualatin Planning Area, 2018

Source: Metro BLI, ECONorthwest Analysis. *Note: The numbers in the table may not sum to the total as a result of rounding.*

Generalized Plan Designation	Total buildable acres	Buildable acres on vacant lots	Buildable acres on partially vacant lots
Residential			
Low Density Residential	79	11	68
Medium Low Density Residential	1	0	1
Medium High Density Residential	1	1	0
High Density High Rise Residential	0	0	0
High Density Residential	12	12	0
Commercial			
Mixed-Use Commercial Overlay Zone	0	0	0
Central Tualatin Overlay Zone	0	0	0
Basalt Creek Planning Area			
Low Density Residential	76	2	74
Medium Low Density Residential	69	49	20
High Density Residential	5	0	5
Neighborhood Commercial	0	0	0
Total	**244**	**75**	**168**

Exhibit 3 shows that Tualatin has 150 buildable acres in the Basalt Creek Planning Area. To analyze housing capacity and land sufficiency, this report uses the Basalt Creek Concept Plan's estimate of buildable acres (which is 88 buildable acres). The analysis uses the Basalt Creek Concept Plans estimate of buildable acres (rather than the buildable lands inventory estimate) to remain consistent with this recently adopted Concept Plan and the Comprehensive Plan amendment.

How much housing will Tualatin need?

Tualatin will need to plan for about 1,014 new dwelling units to accommodate forecasted household growth between 2020 and 2040. About 406 dwelling units will be single-family detached types (40%), 152 will be single-family attached (15%), and 456 will be multifamily (45%).

This mix represents a shift from the existing mix of housing, in which about 53% of the housing stock in the 2013-2017 period was single-family detached housing. The shift in mix is in response to the need for a broader range of housing types with a wider range of price points

than are currently available in Tualatin's housing stock, including housing types such as duplexes, townhouses, triplexes, and quadplexes, and apartments / condominiums.

How much land will be required for housing?

Exhibit 4 shows that Tualatin's 96 acres of buildable land in its city limits and 88 acres in Basalt Creek (per the Basalt Creek Concept Plan) has the capacity to accommodate 1,207 new dwelling units. While Tualatin's forecast for demand is for 1,014 new dwelling units, Tualatin has a deficit of capacity for 109 dwelling units in the Median High Density Plan Designation and 101 dwelling units in the High Density High-Rise Plan Designation (over the 2020 to 2040 period). The following summarizes Tualatin's land sufficiency results by Plan Designations:

- **Low Density:** Tualatin has a surplus of capacity for about 57 dwelling units, or 10 gross acres of land to accommodate growth.
- **Medium Low Density:** Tualatin has a surplus of capacity for about 315 dwelling units, or 27 gross acres of land to accommodate growth.
- **Medium High Density:** Tualatin has a deficit of capacity for about 109 dwelling units, or seven gross acres of land to accommodate growth.
- **High Density:** Tualatin has a surplus of capacity for about 31 dwelling units, or two gross acres of land to accommodate growth.
- **High Density High-Rise:** Tualatin has a deficit of capacity for about 101 dwelling units, or four gross acres of land to accommodate growth.

Exhibit 4. Comparison of capacity of existing residential land with demand for new dwelling units and land surplus or deficit, Tualatin City Limits and Basalt Creek, 2020 to 2040
Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Capacity (Dwelling Units)	Demand for New Housing	Remaining Capacity (Supply minus Demand)	Land Surplus or (Deficit) *Gross Acres*
Low Density	523	466	57	10
Medium Low Density	386	71	315	27
Medium High Density	13	122	(109)	(7)
High Density	285	254	31	2
High Density High-Rise	-	101	(101)	(4)

What are the Key Findings of the Housing Needs Analysis?

The key findings of the Tualatin's Housing Needs Analysis are that:

- **Tualatin is planning for 1,014 new dwelling units.** The growth of 1,014 households will result in demand for 1,014 new dwelling units over the 20-year planning period, averaging 51 new dwelling units annually.
- **Tualatin will plan for more single-family attached and multifamily dwelling units in the future to meet the City's housing needs.** Historically, about 53% of Tualatin's housing was single-family detached. While 40% of new housing in Tualatin is forecast to be single-family detached, the City will need to provide opportunities for development of new single-family attached (15% of new housing) and multifamily units (45% of new housing).
    - The factors driving the shift in types of housing needed in Tualatin include changes in demographics and decreases in housing affordability. The aging of the Baby Boomers and the household formation of the Millennials will drive demand for renter- and owner-occupied housing, such as single-family detached housing, townhouses, duplexes, triplexes, quadplexes, and apartments. Both groups may prefer housing in walkable neighborhoods, with access to services.
    - Tualatin's existing deficit of housing affordable for low- and high-income households indicates a need for a wider range of housing types, for renters and homeowners. About 37% of Tualatin's households are cost burdened (paying more than 30% of their income on housing), including a cost burden rate of 56% for renter households.
    - Without diversification of housing types, lack of affordability will continue to be a problem, possibly growing in the future if incomes continue to grow at a slower rate than housing costs. Under the current conditions, 307 of the forecasted new households will have incomes of $40,700 (in 2018 dollars) or less. These households often cannot afford market-rate housing without government subsidy. More than 300 new households will have incomes between $40,700 and $97,680. These households will all need access to affordable housing, such as the housing types described above.
- **Tualatin has a small deficit of land for higher density single-family and multifamily housing.** Tualatin has a deficit of land for 109 dwelling units in the Medium High Density Plan Designation (about seven gross acres) and 101 units in the High Density High-Rise Plan Designation (about four gross acres).
- **Tualatin will need to meet the requirements of House Bill 2001.** The Legislature passed House Bill 2001 in the 2019 Legislative session. The bill requires cities within the Metro UGB to allow "middle" housing types in low-density residential zones. The bill defines middle housing types as: duplexes, triplexes, quadplexes, cottage clusters, and townhouses. To comply with House Bill 2001, Tualatin will need to:

- Allow cottage cluster as a housing type in the Residential Low Density zone. Tualatin may want to allow cottage cluster housing in the Medium-Low Density and Medium-High Density zones. Tualatin will also need to include development standards in the Tualatin Development Code.
- Allow duplexes, townhouses, and multifamily housing as a permitted use in the Residential Low Density zone.

Following is a summary of ECONorthwest's recommendations to Tualatin based on the analysis and conclusions in this report. The *Tualatin Housing Strategy* memorandum presents the full list of recommendations for Tualatin.

- **Ensure an adequate supply of land that is available and serviceable.** Tualatin should evaluate opportunities to increase residential development densities by modifying the Development Code, such as increasing densities and height limits in higher density zones. Tualatin should identify opportunities to re-zone land, from lower density usage to higher density usage, to provide additional opportunities for multifamily housing development. Tualatin should plan for long-term development of housing in Tualatin through 2040 and beyond by working with Metro on upcoming Growth Management reports.
- **Encourage development of a wider variety of housing types.** Tualatin should allow duplexes, triplexes, quadplexes, cottage clusters, and townhouses in the Residential Low Density zone and allow cottage cluster housing in the Medium-Low Density and Medium-High Density zones (which already allow for the other housing types mentioned). These changes should be made in a way that makes the City's zoning code compliant with House Bill 2001.
- **Support development and preservation of housing that is affordable for all households.** The City should develop policies to support development of housing affordable to people who live and work in Tualatin. The City should identify opportunities to leverage resources (including funding) from the Metro Bond to support development of housing affordable to households earning less than 60% of Median Family Income in Washington County ($48,900 for a household size of four people). The City should develop policies to prevent and address homelessness, as well as to prevent and mitigate residential displacement resulting from redevelopment and increases in housing costs. These actions will require Tualatin to evaluate the adoption of a wide variety of housing policies such as creative financing opportunities for systems development charges, evaluating tax exemption programs, participating in a land bank, and other approaches to supporting development of housing affordable at all income levels.
- **Identify funding tools to support residential development.** The City should evaluate tools such as establishing a new Urban Renewal District and evaluate establishing a construction excise tax.
- **Identify redevelopment opportunities.** The City should identify districts within Tualatin with opportunities for redevelopment for both housing and employment

uses, as well as supporting redevelopment of underutilized commercial buildings for housing.

- **Ensure there are connections between planning for housing and other community planning**. Throughout the project, stakeholders emphasized the need to coordinate housing planning with economic development planning, transportation planning, and other community planning. Updates to the Tualatin Transportation System Plan should be coordinated with planning for housing growth. A key approach to accommodating new residential development is redevelopment that results in mixed-use districts, providing opportunities for more housing affordable to people working at businesses in Tualatin and living closer to work (thus reducing transportation issues). In addition, stakeholders would like to see the incorporation of services needed to meet daily needs of residents of neighborhoods without driving.

The *Tualatin Housing Strategy* memorandum presents more details about each of these topics and recommendations for specific actions to implement these recommendations.

1. Introduction

This report presents Tualatin's Housing Needs Analysis for the 2020 to 2040 period. It is intended to comply with statewide planning policies that govern planning for housing and residential development, including Goal 10 (Housing) and OAR 660 Division 8. The methods used for this study generally follow the *Planning for Residential Growth* guidebook, published by the Oregon Transportation and Growth Management Program (1996).

Tualatin has changed considerably in the last two decades. Tualatin grew from 22,791 people in 2000 to 27,135 people in the 2013-2017 period. This is an addition of 4,344 people, or 19% growth. In this time, rates of housing cost burden increased from 26% to 37%, with renter cost burdened rates increasing from 30% to 56%. Median gross rents increased by $386 (from $768 in 2000 to $1,154 in 2013-2017) and median home values increased by $83,168 (from $282,532 in 2000 to $365,700 in 2013-2017).

This report provides Tualatin with a factual basis to update the Housing Element of the City's Comprehensive Plan and Development Code, and to support future planning efforts related to housing and options for addressing unmet housing needs in Tualatin. This report provides information that informs future planning efforts, including development and redevelopment. It provides the City with information about the housing market in Tualatin and describes the factors that will affect future housing demand in Tualatin, such as changing demographics. This analysis will help decision makers understand whether Tualatin has enough land to accommodate growth over the next 20 years.

Framework for a Housing Needs Analysis

Economists view housing as a bundle of services for which people are willing to pay: shelter certainly, but also proximity to other attractions (job, shopping, parks and recreation), amenities (type and quality of fixtures and appliances, landscaping, views), prestige, and access to a range of services (i.e. medical, transportation) including public services (i.e. quality of schools). Because it is impossible to maximize all these services and simultaneously minimize costs, households must, and do, make tradeoffs. What they can get for their money is influenced both by economic forces and government policy. Moreover, different households will value what they can get differently. They will have different preferences, which in turn are a function of many factors like income, age of head of household, number of people and children in the household, number of workers and job locations, number of transportation vehicles, and so on.

Thus, housing choices of individual households are influenced in complex ways by dozens of factors. The housing market in Washington County and Tualatin are the result of the individual decisions of thousands of households. These points help to underscore the complexity of projecting what types of housing will be built in Tualatin between 2020 and 2040.

The complex nature of the housing market, demonstrated by the unprecedented boom and bust during the past decade, does not eliminate the need for some type of forecast of future housing

demand and need. This includes resulting implications for land demand and consumption. Such forecasts are inherently uncertain. Their usefulness for public policy often derives more from the explanation of their underlying assumptions about the dynamics of markets and policies than from the specific estimates of future demand and need. Thus, we start our housing analysis with a framework for thinking about housing and residential markets, and how public policy affects those markets.

Statewide Planning Goal 10

The passage of the Oregon Land Use Planning Act of 1974 (ORS Chapter 197) established the Land Conservation and Development Commission (LCDC) and the Department of Land Conservation and Development (DLCD). The Act required the Commission to develop and adopt a set of statewide planning goals. Goal 10 addresses housing in Oregon and provides guidelines for local governments to follow in developing their local comprehensive land use plans and implementing policies.

At a minimum, local housing policies must meet the requirements of Goal 10 and the statutes and administrative rules that implement it (ORS 197.295 to 197.314, ORS 197.475 to 197.490, and OAR 600-008).[1] Goal 10 requires incorporated cities to complete an inventory of buildable residential lands. Goal 10 also requires cities to encourage the numbers of housing units in price and rent ranges commensurate with the financial capabilities of its households. Jurisdictions located in the Metro UGB are also required to comply with Metropolitan Housing in OAR 660-007 and Title 7 of Metro's Urban Growth Management Functional Plan in the Metro Code (3.07 Title 7).

Goal 10 defines needed housing types as "all housing on land zoned for residential use or mixed residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the city with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes." ORS 197.303 defines needed housing types:

(a) Housing that includes, but is not limited to, attached and detached single-family housing and multiple family housing for both owner and renter occupancy.

(b) Government assisted housing.[2]

(c) Mobile home or manufactured dwelling parks as provided in ORS 197.475 to 197.490.

(d) Manufactured homes on individual lots planned and zoned for single-family residential use that are in addition to lots within designated manufactured dwelling subdivisions.

(e) Housing for farmworkers.

[1] ORS 197.296 only applies to cities with populations over 25,000.

[2] Government assisted housing can be any housing type listed in ORS 197.303 (a), (c), or (d).

DLCD provides guidance on conducting a housing needs analysis in the document *Planning for Residential Growth: A Workbook for Oregon's Urban Areas*, referred to as the Workbook.

Tualatin must identify needs for all of the housing types listed above as well as adopt policies that increase the likelihood that needed housing types will be developed. This housing needs analysis was developed to meet the requirements of Goal 10 and its implementing administrative rules and statutes.

The Metropolitan Housing Rule

OAR 660-007 (the Metropolitan Housing rule) is designed to "assure opportunity for the provision of adequate numbers of needed housing units and the efficient use of land within the Metropolitan Portland (Metro) urban growth boundary." OAR 660-0070-005(12) provides a Metro-specific definition of needed housing:

> "Needed Housing" defined. Until the beginning of the first periodic review of a local government's acknowledged comprehensive plan, "needed housing" means housing types determined to meet the need shown for housing within an urban growth boundary at particular price ranges and rent levels.

The Metropolitan Housing Rule also requires cities to develop residential plan designations:

> (1) Plan designations that allow or require residential uses shall be assigned to all buildable land. Such designations may allow nonresidential uses as well as residential uses. Such designations may be considered to be "residential plan designations" for the purposes of this division. The plan designations assigned to buildable land shall be specific so as to accommodate the varying housing types and densities identified in OAR 660-007-0030 through 660-007-0037.

OAR 660-007 also specifies the mix and density of new residential construction for cities within the Metro Urban Growth Boundary (UGB):

> "Provide the opportunity for at least 50 percent of new residential units to be attached single family housing or multiple family housing or justify an alternative percentage based on changing circumstances" (OAR 660-007-0030 (1).

OAR 660-007-0035 sets specific density targets for cities in the Metro UGB. Tualatin's average density target is eight dwelling units per net buildable acre.[3]

Metro Urban Growth Management Functional Plan

The Metro Urban Growth Management Functional Plan describes the policies that guide development for cities within the Metro UGB to implement the goals in the Metro 2040 Plan.

[3] OAR 660-024-0010(6) defines Net Buildable Acres as follows: "Net Buildable Acre" consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads.

Title 1: Housing Capacity

Title 1 of Metro's Urban Growth Management Functional Plan is intended to promote efficient land use within the Metro UGB by increasing the capacity to accommodate housing capacity. Each city is required to determine its housing capacity based on the minimum number of dwelling units allowed in each zoning district that allows residential development and maintain this capacity.

Title 1 requires that a city adopt minimum residential development density standards by March 2011. If the jurisdiction did not adopt a minimum density by March 2011, the jurisdiction must adopt a minimum density that is at least 80% of the maximum density.

Title 1 provides measures to decrease development capacity in selected areas by transferring the capacity to other areas of the community. This may be approved as long as the community's overall capacity is not reduced.

Metro's *2017 Compliance Report* concludes that Tualatin is in compliance for the City's Title 1 responsibilities.

Title 7: Housing Choice

Title 7 of Metro's Urban Growth Management Functional Plan is designed to ensure the production of affordable housing in the Metro UGB. Each city and county within the Metro region is encouraged to voluntarily adopt an affordable housing production goal.

Each jurisdiction within the Metro region is required to ensure that their comprehensive plans and implementing ordinances include strategies to:

- Ensure the production of a diverse range of housing types,
- Maintain the existing supply of affordable housing, increase opportunities for new affordable housing dispersed throughout their boundaries, and
- Increase opportunities for households of all income levels to live in affordable housing (3.07.730)

Metro's *2017 Compliance Report* concludes that Tualatin is in compliance for the City's Title 7 responsibilities.

Title 11: Planning for New Urban Areas

Title 11 of Metro's Urban Growth Management Functional Plan provides guidance on the conversion of land from rural to urban uses. Land brought into the Metro UGB is subject to the provisions of section 3.07.1130 of the Metro Code, which requires lands to be maintained at rural densities until the completion of a concept plan and annexation into the municipal boundary.

The concept plan requirements directly related to residential development are to prepare a plan that includes:

(1) A mix and intensity of uses that make efficient use of public systems and facilities,

(2) A range of housing for different types, tenure, and prices that addresses the housing needs of the governing city, and

(3) Identify goals and strategies to meet the housing needs for the governing city in the expansion area.

Organization of this Report

The rest of this document is organized as follows:

- **Chapter 2. Residential Buildable Lands Inventory** presents the methodology and results of Tualatin's inventory of residential land.
- **Chapter 3. Historical and Recent Development Trends** summarizes the state, regional, and local housing market trends affecting Tualatin's housing market.
- **Chapter 4. Demographic and Other Factors Affecting Residential Development in Tualatin** presents factors that affect housing need in Tualatin, focusing on the key determinants of housing need: age, income, and household composition. This chapter also describes housing affordability in Tualatin relative to the larger region.
- **Chapter 5. Housing Need in Tualatin** presents the forecast for housing growth in Tualatin, describing housing need by density ranges and income levels.
- **Chapter 6. Residential Land Sufficiency within Tualatin** estimates Tualatin's residential land sufficiency needed to accommodate expected growth over the planning period.

2. Residential Buildable Lands Inventory

This chapter provides a summary of the residential buildable lands inventory (BLI) for the Tualatin Planning Area. This buildable lands inventory analysis complies with statewide planning Goal 10 policies that govern planning for residential uses. The detailed methodology used to complete the buildable lands inventory is presented in Appendix A.

First, the analysis established the residential land base (parcels or portion of parcels with appropriate zoning), classified parcels by buildable status, identified/deducted environmental constraints, and lastly summarized total buildable area by Plan Designation.

Definitions

ECONorthwest developed the buildable lands inventory with a tax lot database from Metro Regional Land Information Systems (RLIS). Maps produced for the buildable lands inventory used a combination of GIS data based on the Metro BLI for the 2018 Urban Growth Report, adopted maps, and visual verification to verify the accuracy of Metro data. The tax lot database is current as of 2016, accounting for changes and development updates through April 2019. The inventory builds from the database to estimate buildable land per plan designations that allow residential uses. The following definitions were used to identify buildable land for inclusion in the inventory:

- *Vacant land.* Tax lots designated as vacant by Metro based on the following criteria: (1) fully vacant based on Metro aerial photo; (2) tax lots with less than 2,000 square feet developed and developed area is less than 10% of lot; (3) lots 95% or more vacant from GIS vacant land inventory.
- *Partially vacant land.* Single-family tax lots that are 2.5 times larger than the minimum lot size with a building value less than $300,000, or lots that are 5 times larger than the minimum lots size (no threshold for building value). These lots are considered to still have residential capacity. For this analysis, we classified these lots as Partially Vacant, and we assumed that 0.25 acres of the lot was developed, and the remaining land is available for development, less constraints.
- *Public or exempt land.* Lands in public or semi-public ownership are considered unavailable for residential development. This includes lands in Federal, State, County, or City ownership as well as lands owned by churches and other semi-public organizations and properties with conservation easements. These lands are identified using the Metro's definitions and categories.
- *Developed land*. Lands not classified as vacant, partially vacant, or public/exempt are considered developed. Developed land includes lots with redevelopment capacity, which are also included in the BLI. The unit capacity of developed but redevelopable lots is based on Metro's estimates.

Development Constraints

Consistent with state guidance on buildable lands inventories, ECONorthwest deducted the following constraints from the buildable lands inventory and classified those portions of tax lots that fall within the following areas as constrained, unbuildable land:

- *Lands within floodplains*. Flood Insurance Rate Maps from the Federal Emergency Management Agency (FEMA) were used to identify lands in floodways and 100-year floodplains, as well as lands identified in Metro's Title 3 Stream and Floodplain Protection Plan.
- *Land within natural resource protection areas*. The Locally Significant Wetlands shapefile was used to identify areas within wetlands. Riparian corridors and other natural resource areas identified in Tualatin's Natural Resource Protection Overlay District were all considered undevelopable. These areas are consistent with the City's Development Code Chapter 72.
- *Land with slopes over 25%*. Lands with slopes over 25% are considered unsuitable for residential development.

Buildable Lands Inventory Results

Land Base

Exhibit 5 shows residential land in Tualatin by classification (development status). The results show that the Tualatin Planning Area has 2,556 total acres in residential Plan Designations. (This includes the areas of the Mixed-Use Commercial Overlay Zone and Central Tualatin Overlay Zone that allow residential uses). Of these 2,556 acres, about 2,193 acres (86%) are classified as Developed or Public (or Exempt) and do not have development capacity, and the remaining 364 acres (14%) are Vacant or Partially Vacant and have development capacity (not including development constraints).[4]

[4] The buildable lands inventory results in Exhibit 5 does not account for development constraints (yet). Land with development constraints are not classified as buildable; we remove development constraints in Exhibit 6 and we present final buildable land results in Exhibit 7.

Exhibit 5. Residential acres by classification and Plan Designation, Tualatin Planning Area, 2019
Source: Metro BLI, ECONorthwest Analysis. *Note: The numbers in the table may not sum to the total as a result of rounding.*

Generalized Plan Designation	Vacant	Partially Vacant	Developed	Public or Exempt	Total Acres	Percent of Total
Residential						
Low Density Residential	26	138	1,063	510	1,737	68%
Medium Low Density Residential	-	2	168	68	238	9%
Medium High Density Residential	1	-	125	31	158	6%
High Density High Rise Residential	-	-	6	9	15	1%
High Density Residential	15	-	117	21	153	6%
Commercial						
Mixed-Use Commercial Overlay Zone	-	-	25	-	25	1%
Central Tualatin Overlay Zone	3	-	29	6	37	1%
Basalt Creek Planning Area						
Low Density Residential	2	99	11	-	113	4%
Medium Low Density Residential	49	23	-	-	72	3%
High Density Residential	-	5	-	-	5	0%
Neighborhood Commercial	-	1	4	-	4	0%
Total	**95**	**268**	**1,548**	**645**	**2,556**	**100%**

Exhibit 6 shows land in all residential Plan Designations by development and constraint status. After development constraints have been applied, about 68% of Tualatin's total residential land (1,747 acres) has no development capacity (i.e., committed), 22% (566 acres) is constrained, and 10% (244 acres) are unconstrained and buildable.

Exhibit 6. Residential land by comprehensive Plan Designation and constraint status, Tualatin Planning Area, 2019

Source: Metro BLI, ECONorthwest Analysis. *Note: The numbers in the table may not sum to the total as a result of rounding.*

Generalized Plan Designation	Total acres	Committed acres	Constrained acres	Buildable acres
Residential				
Low Density Residential	1,737	1,292	365	79
Medium Low Density Residential	238	190	47	1
Medium High Density Residential	158	128	29	1
High Density High Rise Residential	15	4	11	0
High Density Residential	153	77	64	12
Commercial				
Mixed-Use Commercial Overlay Zone	25	20	5	0
Central Tualatin Overlay Zone	37	16	21	0
Basalt Creek Planning Area				
Low Density Residential	113	13	23	76
Medium Low Density Residential	72	2	1	69
High Density Residential	5	0	0	5
Neighborhood Commercial	4	4	0	0
Total	**2,556**	**1,747**	**566**	**244**

Vacant Buildable Land

Exhibit 7 shows buildable acres (e.g., acres in tax lots after constraints are deducted) for vacant and partially vacant land by Plan Designation. Of Tualatin's 244 unconstrained buildable residential acres, about 31% are in tax lots classified as vacant, and 69% are in tax lots classified as partially vacant. About 32% of Tualatin's buildable residential land is in the Low Density Residential Plan Designation and about 62% of Tualatin's buildable residential land is located in the Basalt Creek Planning Area.

Exhibit 7. Buildable acres in vacant and partially vacant tax lots by Plan Designation and zoning, Tualatin Planning Area, 2019

Source: Metro BLI, ECONorthwest Analysis. *Note: The numbers in the table may not sum to the total as a result of rounding.*

Generalized Plan Designation	Total buildable acres	Buildable acres on vacant lots	Buildable acres on partially vacant lots
Residential			
Low Density Residential	79	11	68
Medium Low Density Residential	1	0	1
Medium High Density Residential	1	1	0
High Density High Rise Residential	0	0	0
High Density Residential	12	12	0
Commercial			
Mixed-Use Commercial Overlay Zone	0	0	0
Central Tualatin Overlay Zone	0	0	0
Basalt Creek Planning Area			
Low Density Residential	76	2	74

High Density Residential	5	0	5
Neighborhood Commercial	0	0	0
Total	**244**	**75**	**168**

Exhibit 8 and 5 (upcoming pages) show the results of Tualatin's residential BLI.

Exhibit 8. Residential Land by Development Status with Constraints, Tualatin Planning Area, 2019

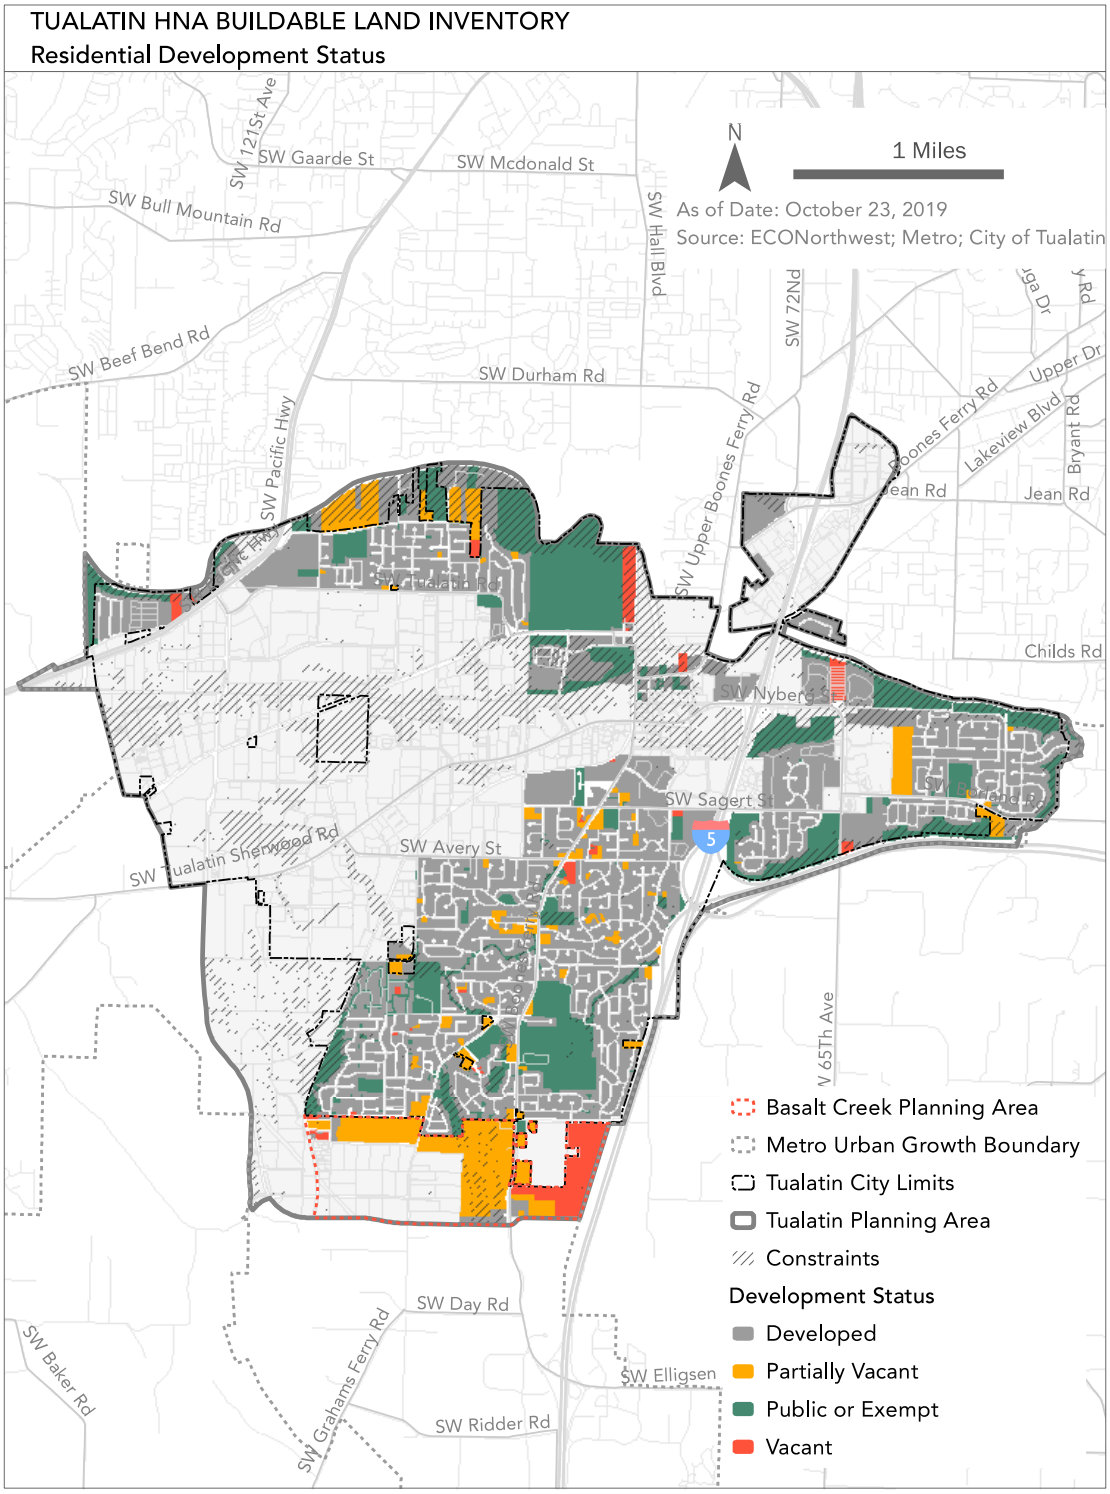

Exhibit 9. Unconstrained Vacant and Partially Vacant Residential Land, Tualatin Planning Area, 2019

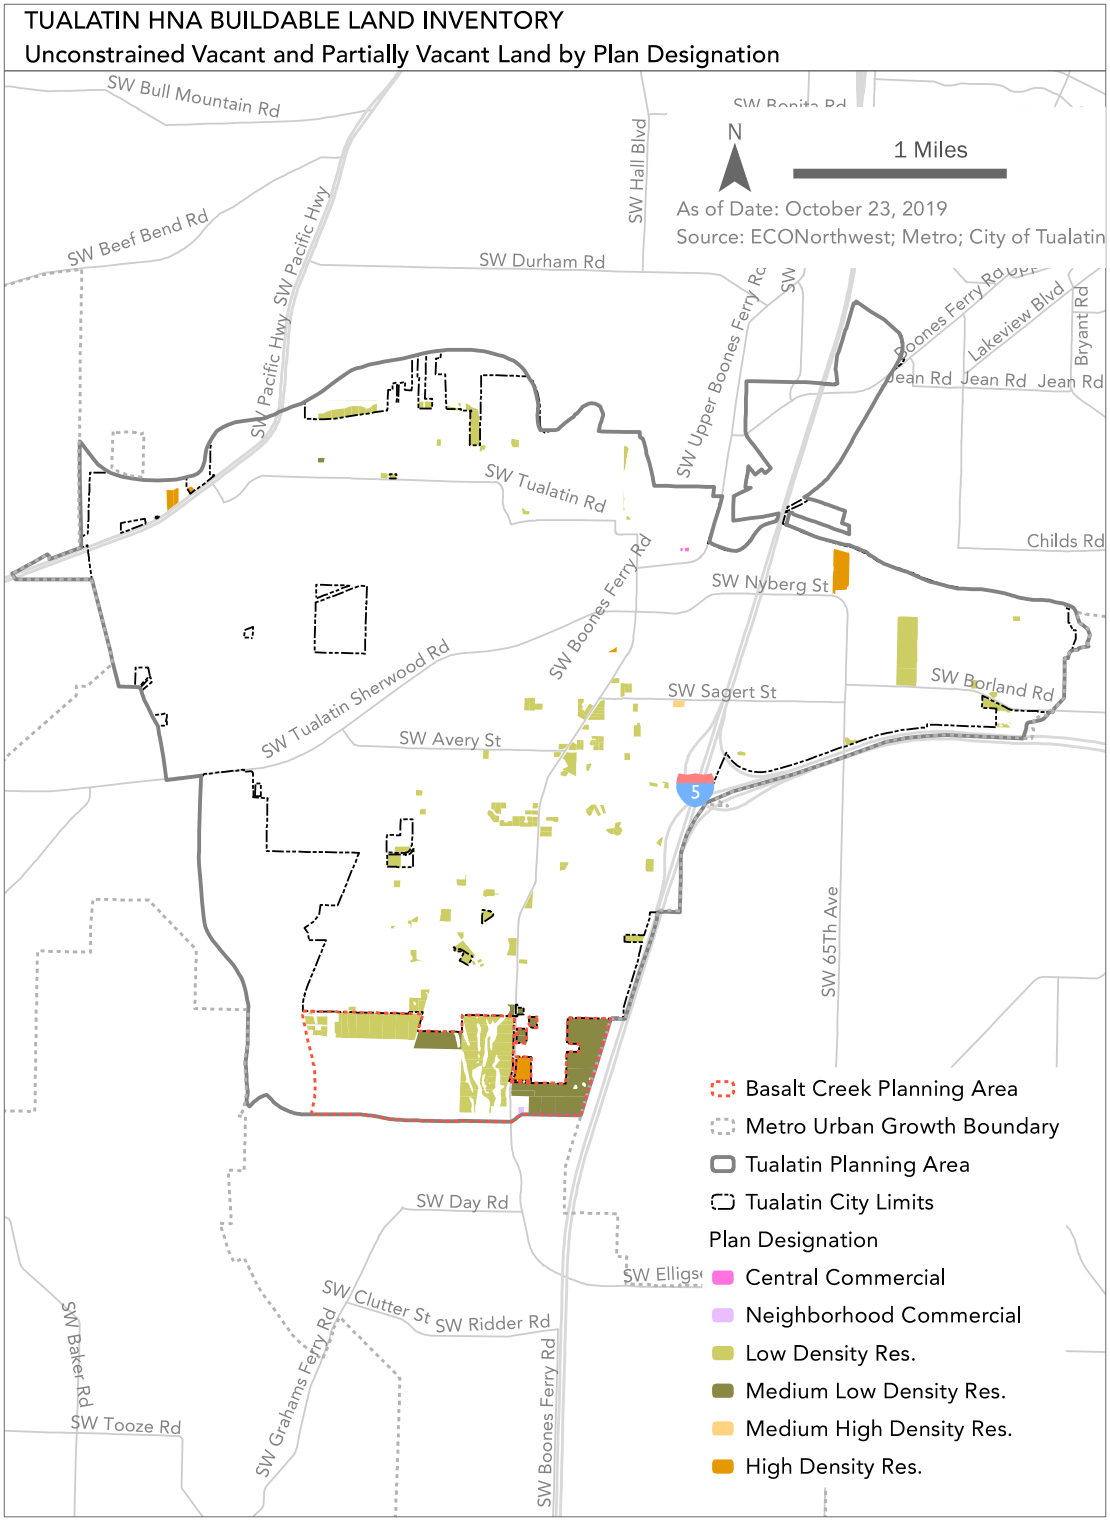


3. Historical and Recent Development Trends

Analysis of historical development trends in Tualatin provides insight into the functioning of the local housing market. The mix of housing types and densities, in particular, are key variables in forecasting the capacity of residential land to accommodate new housing and to forecast future land need. The specific steps are described in Task 2 of the DLCD *Planning for Residential Lands Workbook* as:

1. Determine the time period for which the data will be analyzed.
2. Identify types of housing to address (all needed housing types).
3. Evaluate permit/subdivision data to calculate the actual mix, average actual gross density, and average actual net density of all housing types.

This Housing Needs Analysis examines changes in Tualatin's housing market from 2000 to 2017, as well as residential development from 2002 to 2017. We selected this time period because (1) the period provides information about Tualatin's housing market before and after the national housing market bubble's growth, deflation, and the more recent increase in housing costs and (2) data about Tualatin's housing market during this period is readily available from sources such as the Census and RLIS.

The Housing Needs Analysis presents information about residential development by housing type. There are multiple ways that housing types can be grouped. For example, they can be grouped by:

1. Structure type (e.g., single-family detached, apartments, etc.).
2. Tenure (e.g., distinguishing unit type by owner or renter units).
3. Housing affordability (e.g., subsidized housing or units affordable at given income levels).
4. Some combination of these categories.

For the purposes of this study, we grouped housing types based on: (1) whether the structure is stand-alone or attached to another structure and (2) the number of dwelling units in each structure. The housing types used in this analysis are consistent with needed housing types as defined in ORS 197.303:

- **Single-family detached** includes single-family detached units, manufactured homes on lots and in mobile home parks, and accessory dwelling units.
- **Single-family attached** is all structures with a common wall where each dwelling unit occupies a separate lot, such as row houses or townhouses.
- **Multifamily** is all attached structures (e.g., duplexes, triplexes, quadplexes, and structures with five or more units) other than single-family detached units, manufactured units, or single-family attached units.

In Tualatin, government-assisted housing (ORS 197.303(b)) and housing for farmworkers (ORS 197.303(e)) can be any of the housing types listed above.

Data Used in this Analysis

Throughout this analysis (including the subsequent Chapter 4), we used data from multiple sources, choosing data from well-recognized and reliable data sources. One of the key sources for housing and household data is the U.S. Census. This report primarily uses data from two Census sources, the Decennial and the American Community Survey:

- The **Decennial Census**, which is completed every ten years and is a survey of *all* households in the U.S. The Decennial Census is considered the best available data for information such as demographics (e.g., number of people, age distribution, or ethnic or racial composition), household characteristics (e.g., household size and composition), and housing occupancy characteristics. As of 2010, the Decennial Census does not collect more detailed household information, such as income, housing costs, housing characteristics, and other important household information. Decennial Census data is available for 2000 and 2010.
- The **American Community Survey (ACS)**, which is completed every year and is a *sample* of households in the U.S. From 2013 to 2017, the ACS sampled an average of 3.5 million households per year, or about 2.9% of the households in the nation. The ACS collects detailed information about households, including demographics (e.g., number of people, age distribution, ethnic or racial composition, country of origin, language spoken at home, and educational attainment), household characteristics (e.g., household size and composition), housing characteristics (e.g., type of housing unit, year unit built, or number of bedrooms), housing costs (e.g., rent, mortgage, utility, and insurance), housing value, income, and other characteristics.

This report uses data from the 2013-2017 ACS for Tualatin. Where information is available and relevant, we report information from the 2000 and 2010 Decennial Census. Among other data points, this report includes population, income, and housing price data from Redfin, the Bureau of Labor Services, and the United States Department of Housing and Urban Development. It uses the Oregon Department of Housing and Community Services affordable housing inventory and Oregon's Manufactured Dwelling Park inventory. It uses Metro's Regional Land Information System (RLIS) database, which provides tax lot data for jurisdictions within the three-county Metro Area (Clackamas County, Multnomah County, and Washington County).[5]

The foundation of the housing needs analysis is the population forecast for Tualatin from Metro's *2040 Household Distributed Forecast*.

[5] We use RLIS tax lot data as a proxy for building permit data for Tualatin. The analysis period is 2000-2017, unless otherwise noted.

It is worth commenting on the methods used for the American Community Survey.[6] The American Community Survey (ACS) is a national survey that uses continuous measurement methods. It uses a sample of about 3.54 million households to produce annually updated estimates for the same small areas (census tracts and block groups) formerly surveyed via the decennial census long-form sample. It is also important to keep in mind that all ACS data are estimates that are subject to sample variability. This variability is referred to as "sampling error" and is expressed as a band or "margin of error" (MOE) around the estimate.

This report uses Census and ACS data because, despite the inherent methodological limits, they represent the most thorough and accurate data available to assess housing needs. We consider these limitations in making interpretations of the data and have strived not to draw conclusions beyond the quality of the data.

Trends in Housing Mix

This section provides an overview of changes in the mix of housing types in Tualatin and compares Tualatin to Washington County and to Oregon. These trends demonstrate the types of housing developed in Tualatin historically. Unless otherwise noted, this chapter and the next chapter uses data from the 2000 and 2010 Decennial Census and the 2013-2017 American Community Survey 5-Year Estimates.

This section shows the following trends in housing mix in Tualatin:

- **About half (53%) of Tualatin's housing stock is single-family detached housing units.** Forty-one percent of Tualatin's housing stock is multifamily and 6% is single-family attached (e.g., townhouses, rowhouses, duplexes).
- **Since 2000, Tualatin's housing mix has remained relatively static.** Tualatin's housing stock grew by about 23% (about 2,112 new units) between 2000 and the 2013-2017 period.
- **Single-family housing accounted for the majority of new housing growth in Tualatin between 2000 and 2017.** Sixty percent of new housing built between 2000 and 2017 was single-family housing (detached and attached).

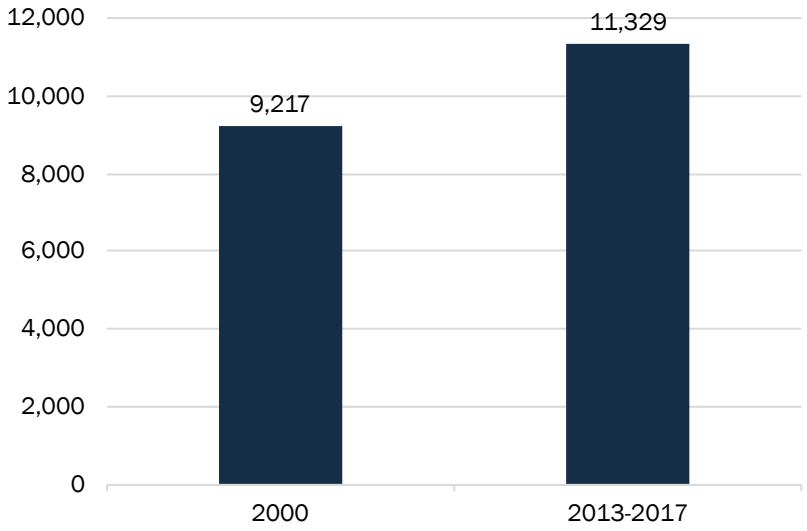
[6] A thorough description of the ACS can be found in the Census Bureau's publication "What Local Governments Need to Know." https://www.census.gov/library/publications/2009/acs/state-and-local.html

Housing Mix

The total number of dwelling units in Tualatin increased by 23% from 2000 to 2013-2017.

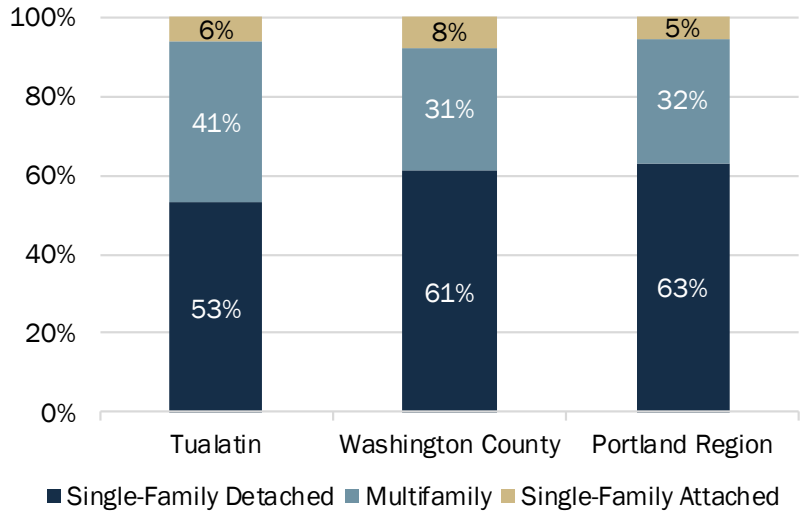
Tualatin added 2,112 units since 2000.

Exhibit 10. Total Dwelling Units, Tualatin, 2000 and 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census, SF3 Table H030, and 2013-2017 ACS Table B25024.



Tualatin had a smaller share of single-family detached housing and a larger share of multifamily housing than Washington County and the Portland Region.

Exhibit 11. Housing Mix, Tualatin, Washington County, Portland Region, 2013-2017
Source: U.S. Census Bureau, 2013-2017 ACS Table B25024.



From 2000 to 2013-2017, Tualatin's housing mix stayed about the same.

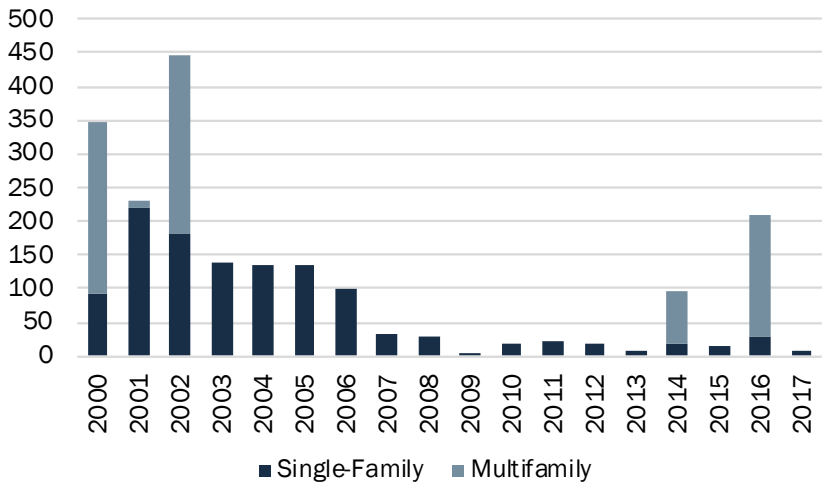
Dwelling Units Built

Over the 2000 to 2017 period, Tualatin added 1,996 dwelling units, with an annual average of 111 dwelling units.

Of these 1,996 units, about 60% were single-family units and 40% were multifamily units.

Exhibit 13. Units Built by Year and Type of Unit, Tualatin, 2000 through 2017

Source: RLIS.



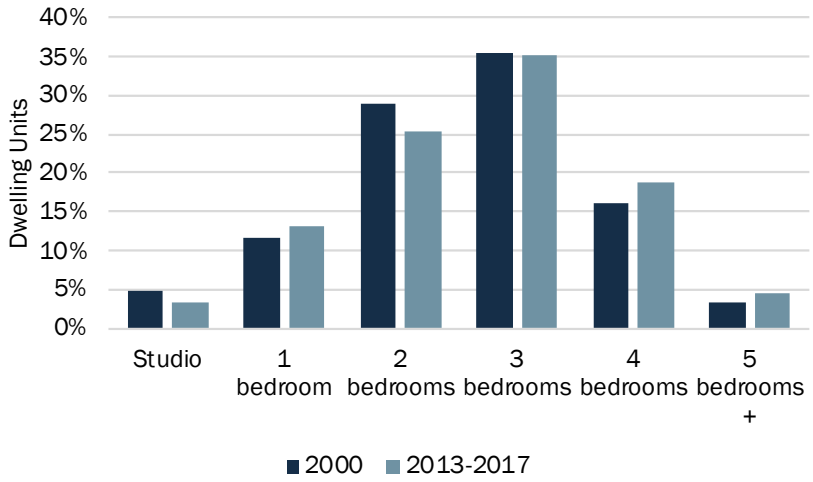
Size of Units

This section provides an overview of dwelling unit size in Tualatin.

In 2000, a larger share of dwelling units in Tualatin were three-bedroom units. As of the 2013-2017 period, this trend continues to persist.

Exhibit 14. Share of Units by Number of Bedrooms, Tualatin, 2000 and 2013-2017

Source: U.S. Census Bureau, 2000 Decennial Census, SF3 Table H041, and 2013-2017 ACS Table B25041. Note: The total number of units in 2000 is 9,217; the total number of units in the 2013-17 period is 11,329.

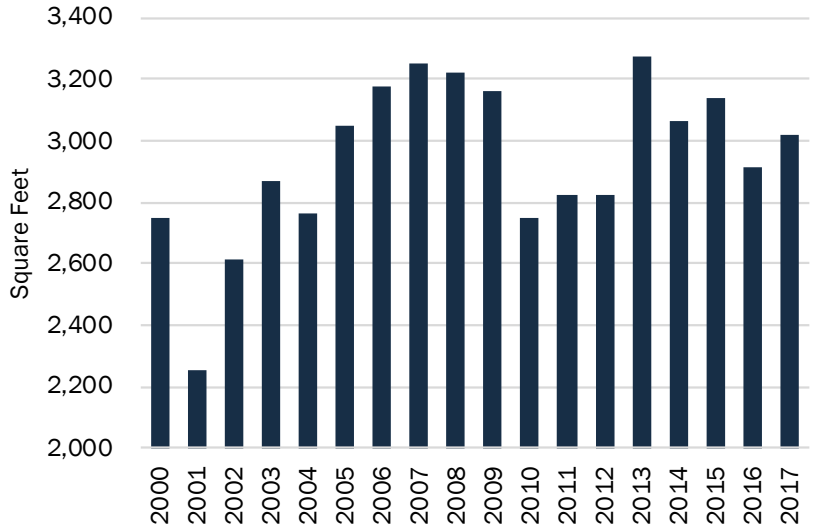


Single-family units built in Tualatin since 2000, averaged 2,773 sq. ft. per unit.

Single-family units built in Tualatin since 2014, averaged 3,015 sq. ft. per unit.

Exhibit 15. Average Size of Single-Family Units Built by Year, Tualatin, 2010 through 2017

Source: RLIS. Note: Single-family units include single-family detached and attached units.



Based on historical trends, condominiums in Tualatin were slightly smaller than single-family dwellings (Exhibit 15) and slightly larger than apartments.

Exhibit 16. Average Size of Multifamily Units Built by Year (including housing description), Tualatin, 2000, 2001, 2002, 2014, and 2016

2016: 977 Sq. Ft.
Apartment

On average, a 2-bedroom multifamily unit in Tualatin is about 928 sq. ft.

Exhibit 17. Average Square Feet of Multifamily Units, Tualatin, 2019
Source: Costar. Note: "All Beds" represent the aggregate of multifamily units in Tualatin (recognizing that bedroom counts are unknown for some units).

Multifamily Unit by Bedroom Count	Average Sq. Ft. (2019)	Inventory (Units)
All Beds	856	3,905
Studio	445	249
1-Bedroom	649	1,206
2-Bedrooms	928	1,739
3-Bedrooms	1,144	608
4+ Bedrooms	1,255	4

Trends in Housing Density

Housing density is the density of housing by structure type, expressed in dwelling units per net or gross acre. The U.S. Census does not track residential development density thus, this study analyzes housing density based on Metro's RLIS database for development between 2000 and 2017.

Between 2000 and 2017, Tualatin permitted 1,996 new dwelling units. Of the 1,996 new units, 1,207 units were single-family (60%) and 789 units were multifamily (40%). During this time, housing in Tualatin developed at an average net density of 8.7 dwelling units per net acre. Exhibit 18 shows average net residential development by structure type for the historical analysis period. Single-family housing (detached and attached) developed at 6.4 units per net acre and multifamily housing developed at 19.9 units per net acre.

Exhibit 18. Net Density by Unit Type and Zone, Tualatin, 2000 through 2017

Source: RLIS.
Note: Single-family includes single-family detached and single-family attached units because RLIS data does not distinguish between the type of single-family unit.

	Single-family (Detached and Attached)			Multifamily			Total, combined		
	Units	Acres	Net Density	Units	Acres	Net Density	Units	Acres	Net Density
Low Density Residential	976	172	5.7				976	172	5.7
Medium Low Density Residential	79	10	8.0	90	5	19.5	169	14	11.7
High Density Residential	152	6	23.4	699	35	19.9	851	42	20.5
Total	1,207	189	6.4	789	40	19.9	1,996	228	8.7

Trends in Tenure

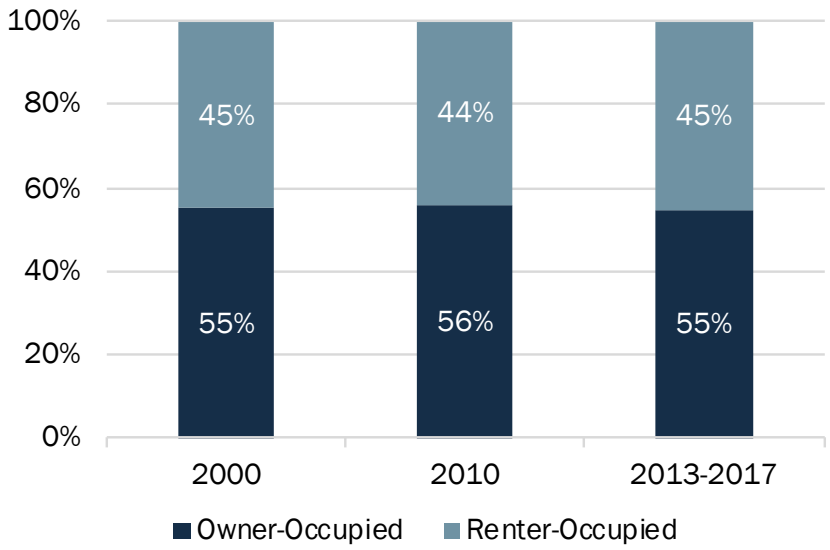
Housing tenure describes whether a dwelling unit is owner- or renter-occupied. This section shows:

- **Homeownership in Tualatin is lower than Washington County's and Oregon's rate.** About 55% of Tualatin's households own their own home. In comparison, 61% of Washington County households and 60% of Oregon households are homeowners.
- **Homeownership in Tualatin stayed about the same between 2000 and 2013-2017.** Homeownership hovered around 55% in 2000, 2010, and the 2013-2017 period.
- **Most of Tualatin homeowners (88%) live in single-family detached housing, while most of Tualatin's renters (82%) live in multifamily housing.**

The homeownership rate in Tualatin stayed about the same since 2000.

Exhibit 19. Tenure, Occupied Units, Tualatin, 2000, 2010, and 2013-2017

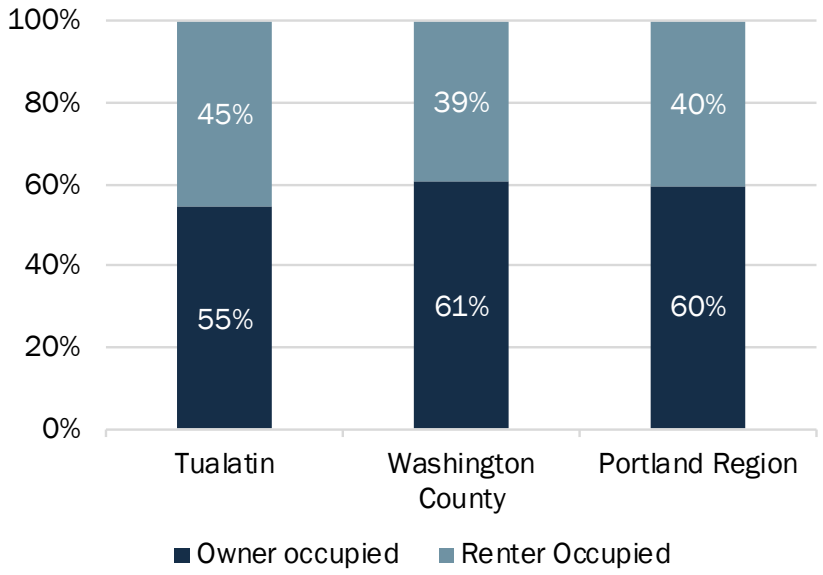
Source: U.S. Census Bureau, 2000 Decennial Census SF1 Table H004, 2010 Decennial Census SF1 Table H4, 2013-2017 ACS Table B24003.



Tualatin had a lower homeownership rate than Washington County and the Portland Region.

Exhibit 20. Tenure, Occupied Units, Tualatin, Washington County, and Portland Region, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS 5-Year Estimates, Table B24003.

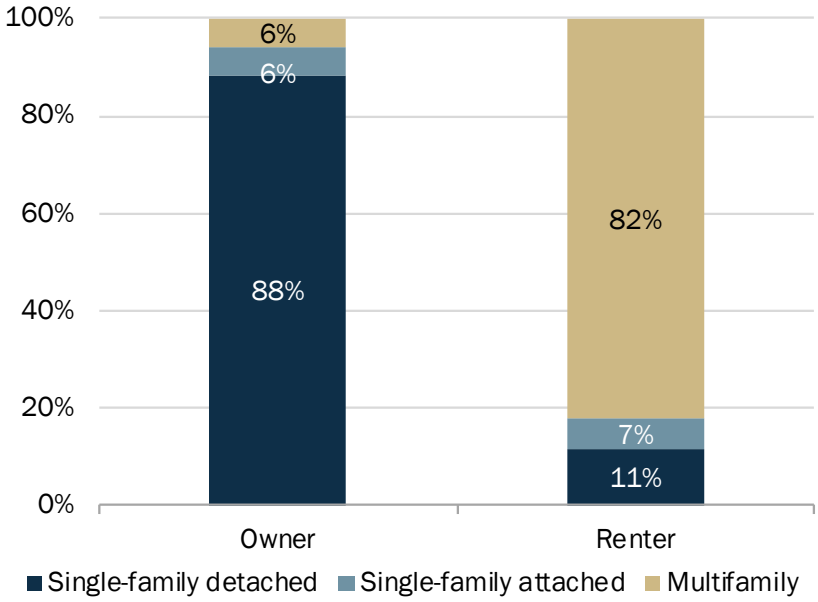


Most of Tualatin homeowners (88%) lived in single-family detached housing.

In comparison, most of Tualatin renters lived in multifamily housing.

Exhibit 21. Housing Units by Type and Tenure, Tualatin, 2013-2017

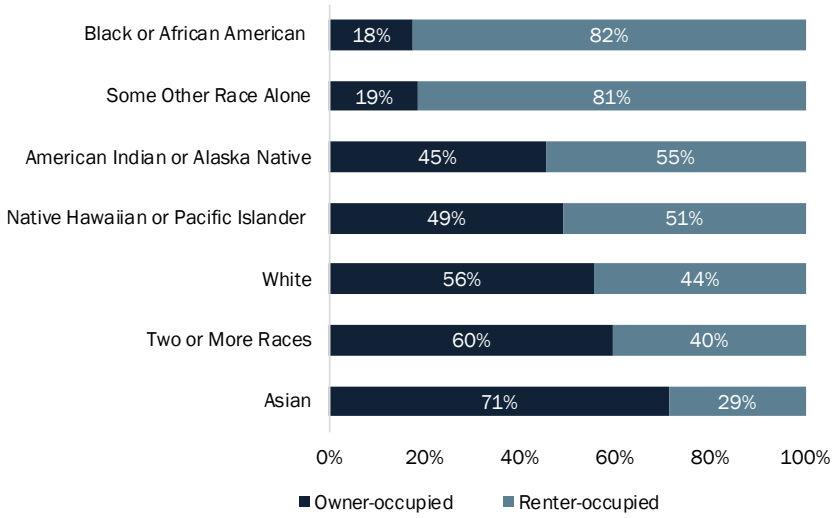
Source: U.S. Census Bureau, 2013-2017 ACS Table B25032.



A proportionately smaller share of households with an African American head of household were homeowners.

Exhibit 22. Tenure by Race of the Head of Household, Tualatin, 2013-2017

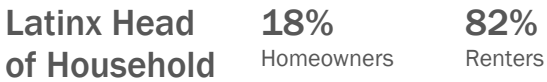
Source: U.S. Census Bureau, 2013-2017 ACS Table B25003A-G.



Most households with a Latinx head of household were renters.

Exhibit 23. Tenure by Latinx Head of Household, Tualatin, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS Table B250031.



Vacancy Rates

Housing vacancy is a measure of housing that is available to prospective renters and buyers. It is also a measure of unutilized housing stock. The Census defines vacancy as: "Unoccupied housing units…determined by the terms under which the unit may be occupied, e.g., for rent, for sale, or for seasonal use only." The 2010 Census identified vacancy through an enumeration, separate from (but related to) the survey of households. Enumerators are obtained using information from property owners and managers, neighbors, rental agents, and others.

According to the 2013-2017 Census, the vacancy rate in Tualatin was 4.3%, compared to 4.8% for Washington County and 5.5% for the Portland Region.

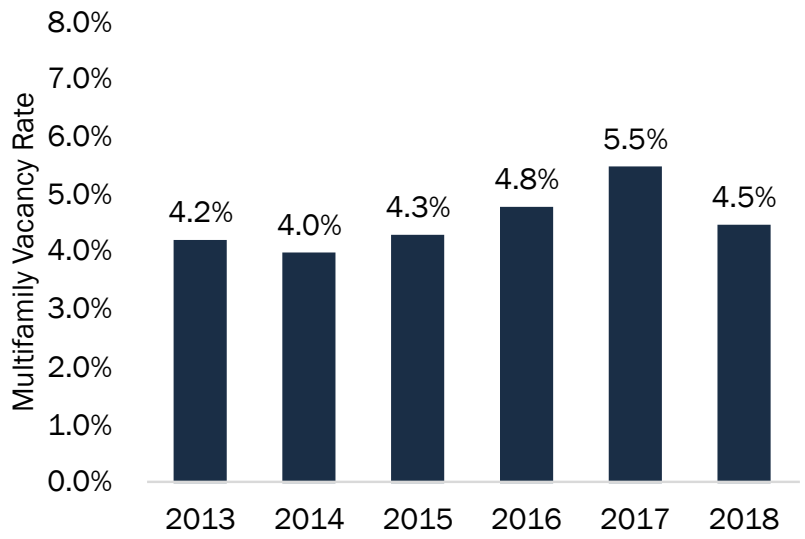
Tualatin's vacancy rate declined from 2000 to the 2013-2017 period.

Exhibit 24. Vacancy Rate, Tualatin, 2000 and 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census SF1 Table H005, 2013-2017 ACS Table B25004.

2000	6.2% Of Total Dwelling Units
2013-2017	4.3% Of Total Dwelling Units

Tualatin's average multifamily vacancy rate dipped to a low of 4% in 2014. In 2018, Tualatin's multifamily vacancy rate was 4.5%.

Exhibit 25. Average Multifamily Vacancy Rate, Tualatin, 2013 through 2018
Source: CoStar.



As of 2013-2017, less than half a percent of Tualatin's dwelling units were vacant for seasonal, recreational, or occasional use (e.g. short-term rentals or vacation homes).

Exhibit 26. Vacancy for Seasonal, Recreational, or Occasional Use, Tualatin, 2000 and 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census SF1 Table H005, 2013-2017 ACS Table B25004.

2000	43 Units	0.5% Share of Total Dwelling Units
2013-2017	44 Units	0.4% Share of Total Dwelling Units

Rent-Restricted Housing

Governmental agencies offer subsidies to support housing development for low- and moderate-income households. Tualatin has three rent-restricted housing developments, with 604 subsidized units.

Exhibit 27. Government-Assisted Housing, Tualatin, December 2019
Source: Oregon Housing and Community Services, Affordable Housing Inventory in Oregon (data pulled December 2019).

Housing Developments	Total Units	Affordable Units	Population Served	Government Subsidy Type	Affordability Contract Expiration
Terrace View	100	100	Family	LIHTC 4%	January 2028
Tualatin Meadows	240	240	Family	LIHTC 4%	January 2031
Woodridge	264	264	Family	OHCS Grants	March 2049
Total	**604**	**604**			

In addition to these rent-restricted units, and as of August 5, 2019, households in Tualatin utilized 113 of Washington County Housing Authority's Housing Choice Vouchers.[7]

[7] More information about Housing Choice Vouchers: https://www.hud.gov/program_offices/public_indian_housing/programs/hcv/about/fact_sheet

Manufactured Homes

Manufactured homes provide a source of affordable housing in Tualatin. They provide a form of homeownership that can be made available to low- and moderate-income households. Cities are required to plan for manufactured homes—both on lots and in parks (ORS 197.475-492).

Generally, manufactured homes in parks are owned by the occupants who pay rent for the space. Monthly housing costs are typically lower for a homeowner in a manufactured home park for several reasons, including the fact that property taxes levied on the value of the land are paid by the property owner, rather than the manufactured homeowner. The value of the manufactured home generally does not appreciate in the way a conventional home would, however. Manufactured homeowners in parks are also subject to the mercy of the property owner in terms of rent rates and increases. It is generally not within the means of a manufactured homeowner to relocate to another manufactured home to escape rent increases. Homeowners living in a park is desirable to some because it can provide a more secure community with on-site managers and amenities, such as laundry and recreation facilities.

OAR 197.480(4) requires cities to inventory the mobile home or manufactured dwelling parks sited in areas planned and zoned or generally used for commercial, industrial, or high-density residential development.[8] Exhibit 28 presents the inventory of mobile and manufactured home parks within Tualatin as of early 2019.

Tualatin has two manufactured housing parks, with a total of 178 spaces within its city limits.

Exhibit 28. Inventory of Mobile/Manufactured Home Parks, Tualatin City Limits, March 2019

Source: Oregon Manufactured Dwelling Park Directory.

Name	Location	Type	Total Spaces	Vacant Spaces	Plan Designation
Angel Haven	18485 SW Pacific Dr	Senior	129	2	RML
Willow Glen	9700 SW Tualatin Rd	Family	49	1	RML
Total			**178**	**3**	

[8] ORS 90.645 regulates rules about closure of manufactured dwelling parks. It requires that the landlord do the following for manufactured dwelling park tenants before closure of the park: give at least one year's notice of park closure, pay the tenant between $5,000 to $9,000 for each manufactured dwelling park space, and refrain from charging tenants demolition costs of abandoned manufactured homes.

4. Demographic and Other Factors Affecting Residential Development in Tualatin

Demographic trends are important for a thorough understanding of the dynamics of the Tualatin housing market. Tualatin exists in a regional economy; trends in the region impact the local housing market. This chapter documents demographic, socioeconomic, and other trends relevant to Tualatin at the national, state, and regional levels.

Demographic trends provide a context for growth in a region; factors such as age, income, migration, and other trends show how communities have grown and how they will shape future growth. To provide context, we compare Tualatin to Washington County and Oregon. We also compare Tualatin to nearby cities where appropriate. Characteristics such as age and ethnicity are indicators of how the population has grown in the past and provide insight into factors that may affect future growth.

A recommended approach to conducting a housing needs analysis is described in *Planning for Residential Growth: A Workbook for Oregon's Urban Areas*, the Department of Land Conservation and Development's guidebook on local housing needs studies. As described in the workbook, the specific steps in the housing needs analysis are:

1. Project the number of new housing units needed in the next 20 years.
2. Identify relevant national, state, and local demographic and economic trends and factors that may affect the 20-year projection of structure type mix.
3. Describe the demographic characteristics of the population and, if possible, the housing trends that relate to demand for different types of housing.
4. Determine the types of housing that are likely to be affordable to the projected households based on household income.
5. Determine the needed housing mix and density ranges for each Plan Designation and the average needed net density for all structure types.
6. Estimate the number of additional needed units by structure type.

This chapter presents data to address steps 2, 3, and 4 in this list. Chapter 5 presents data to address steps 1, 5, and 6 in this list.

Demographic and Socioeconomic Factors Affecting Housing Choice[9]

Analysts typically describe housing demand as the *preferences* for different types of housing (e.g., single-family detached or apartment), and *the ability to pay* for that housing (the ability to exercise those preferences in a housing market by purchasing or renting housing; in other words, income or wealth).

Many demographic and socioeconomic variables affect housing choice. However, the literature about housing markets finds that age of the householder, size of the household, and income are most strongly correlated with housing choice.

- **Age of householder** is the age of the person identified (in the Census) as the head of household. Households make different housing choices at different stages of life. This chapter discusses generational trends, such as housing preferences of Baby Boomers, people born from about 1946 to 1964, and Millennials, people born from about 1980 to 2000.
- **Size of household** is the number of people living in the household. Younger and older people are more likely to live in single-person households. People in their middle years are more likely to live in multiple person households (often with children).
- **Household income** is the household income. Income is probably the most important determinant of housing choice. Income is strongly related to the type of housing a household chooses (e.g., single-family detached, duplex, triplex, quadplex, or a building with more than five units) and to household tenure (e.g., rent or own).

[9] The research in this chapter is based on numerous articles and sources of information about housing, including:

Transportation for America, "Access to Public Transportation a Top Criterion for Millennials When Deciding Where to Live, New Survey Shows," 2014.

This chapter focuses on these factors, presenting data that suggests how changes to these factors may affect housing need in Tualatin over the next 20 years.

National Trends[10]

This brief summary on national housing trends builds on previous work by ECONorthwest, the Urban Land Institute (ULI) reports, and conclusions from *The State of the Nation's Housing, 2018* report from the Joint Center for Housing Studies of Harvard University. The Harvard report summarizes the national housing outlook as follows:

"By many metrics, the housing market is on sound footing. With the economy near full employment, household incomes are increasing and boosting housing demand. On the supply side, a decade of historically low single-family construction has left room for expansion of this important sector of the economy. Although multifamily construction appears to be slowing, vacancy rates are still low enough to support additional rentals. In fact, to the extent that growth in supply outpaces demand, a slowdown in rent growth should help to ease affordability concerns."

However, challenges to a strong domestic housing market remain. High housing costs make housing unaffordable for many Americans, especially younger Americans. In addition to rising housing costs, wages have also failed to keep pace, worsening affordability pressures. Single-family and multifamily housing supplies remain tight, which compound affordability issues. *The State of the Nation's Housing* report emphasizes the importance of government assistance and intervention to keep housing affordable moving forward. Several challenges and trends shaping the housing market are summarized below:

- **Moderate new construction and tight housing supply, particularly for affordable housing.** New construction experienced its eighth year of gains in 2017 with 1.2 million units added to the national stock. Estimates for multifamily starts range between 350,000 to 400,000 (2017). The supply of for sale homes in 2017 averaged 3.9 months, below what is considered balanced (six months) and lower-cost homes are considered especially scarce. The State of the Nation's Housing report cites lack of skilled labor, higher building costs, scarce developable land, and the cost of local zoning and regulation as impediments to new construction.
- **Demand shift from renting to owning.** After years of decline, the national homeownership rate increased from a 50-year low of 62.9% in 2016 (Q2) to 63.7% in 2017 (Q2). Trends suggest homeownership among householders aged 65 and older have remained strong and homeownership rates among young adults have begun stabilizing after years of decline.
- **Housing affordability.** In 2016, almost one-third of American households spent more than 30% of their income on housing. This figure is down from the prior year,

[10] These trends are based on information from: (1) The Joint Center for Housing Studies of Harvard University's publication "The State of the Nation's Housing 2018," (2) Urban Land Institute, "2018 Emerging Trends in Real Estate," and (3) the U.S. Census.

bolstered by a considerable drop in the owner share of cost-burdened households. Low-income households face an especially dire hurdle to afford housing. With such a large share of households exceeding the traditional standards for affordability, policymakers are focusing efforts on the severely cost-burdened. Among those earning less than $15,000, more than 70% of households paid more than half of their income on housing.

- **Long-term growth and housing demand.** The Joint Center for Housing Studies forecasts that nationally, demand for new homes could total as many as 12 million units between 2017 and 2027. Much of the demand will come from Baby Boomers, Millennials,[11] and immigrants. The Urban Land Institute cites the trouble of overbuilding in the luxury sector while demand is in mid-priced single-family houses affordable to a larger buyer pool.
- **Growth in rehabilitation market.**[12] Aging housing stock and poor housing conditions are growing concerns for jurisdictions across the United States. With almost 80% of the nation's housing stock at least 20 years old (40% at least 50 years old), Americans are spending in excess of $400 billion per year on residential renovations and repairs. As housing rehabilitation becomes the go-to solution to address housing conditions, the home remodeling market has grown more than 50% since the recession ended — generating 2.2% of national economic activity (in 2017).

  Despite trends suggesting growth in the rehabilitation market, rising construction costs and complex regulatory requirements pose barriers to rehabilitation. Lower-income households or households on fixed-incomes may defer maintenance for years due to limited financial means, escalating rehabilitation costs. At a certain point, the cost of improvements may outweigh the value of the structure, which may necessitate new responses such as demolition or redevelopment.
- **Changes in housing preference.** Housing preference will be affected by changes in demographics; most notably, the aging of the Baby Boomers, housing demand from Millennials, and growth of immigrants.
  - *Baby Boomers.* The housing market will be affected by continued aging of the Baby Boomers, the oldest of whom were in their seventies in 2018 and the youngest of whom were in their fifties in 2018. Baby Boomers' housing choices will affect housing preference and homeownership. Addressing housing needs for those moving through their 60s, 70s, and 80s (and beyond) will require a

[11] According to the Pew Research Center, Millennials were born between the years of 1981 to 1996 (inclusive). Read more about generations and their definitions here: http://www.pewresearch.org/fact-tank/2018/03/01/defining-generations-where-millennials-end-and-post-millennials-begin/.

To generalize, and because there is no official generation of millennial, we define this cohort as individuals born between 1980 and 2000.

[12] These findings are copied from: Joint Center for Housing Studies. (2019). Improving America's Housing, Harvard University. https://www.jchs.harvard.edu/sites/default/files/Harvard_JCHS_Improving_Americas_Housing_2019.pdf

range of housing opportunities. For example, "the 82-to-86-year-old cohort dominates the assisted living and more intensive care sector" while new or near-retirees may prefer aging in place or active, age-targeted communities.[13] Characteristics like immigration and ethnicity play a role too as "older Asians and Hispanics are more likely than whites or blacks to live in multigenerational households."[14] Senior households earning different incomes may make distinctive housing choices. For instance, low-income seniors may not have the financial resources to live out their years in a nursing home and may instead choose to downsize to smaller, more affordable units. Seniors living in close proximity to relatives may also choose to live in multigenerational households.

Research shows that "older people in western countries prefer to live in their own familiar environment as long as possible," but aging in place does not only mean growing old in their own homes.[15] A broader definition exists which explains that aging in place also means "remaining in the current community and living in the residence of one's choice."[16] Therefore, some Boomers are likely to stay in their home as long as they are able, and some will prefer to move into other housing products, such as multifamily housing or age-restricted housing developments, before they move into to a dependent living facility or into a familial home. Moreover, "the aging of the U.S. population, [including] the continued growth in the percentage of single-person households, and the demand for a wider range of housing choices in communities across the country is fueling interest in new forms of residential development, including tiny houses."[17]

- *Millennials.* Over the last several decades, young adults increasingly lived in multi-generational housing – and increasingly more so than older demographics.[18] Despite this trend, as Millennials age over the next 20 years, they will be forming households and families. In 2018, the oldest Millennials were in their late-30s and the youngest were in their late-teens. By 2040, Millennials will be between 40 and 60 years old.

  At the beginning of the 2007-2009 recession, Millennials only started forming their own households. Today, Millennials are driving much of the growth in new households, albeit at slower rates than previous generations. From 2012 to 2017,

[15] Vanleerberghe, Patricia, et al. The quality of life of older people aging in place: a literature review. 2017.

[16] Ibid.

[17] American Planning Association. Making Space for Tiny Houses, Quick Notes.

[18] According to the Pew Research Center, in 1980, just 11% of adults aged 25 to 34 lived in a multi-generational family household and by 2008, 20% did (82% change). Comparatively, 17% of adults aged 65 and older lived in a multi-generational family household and by 2008, 20% did (18% change).

millennials formed an average of 2.1 million net new households each year. Twenty-six percent of Millennials aged 25 to 34 lived with their parents (or other relatives) in 2017.

Millennials' average wealth may remain far below Boomers and Gen Xers and student loan debt will continue to hinder consumer behavior and affect retirement savings. As of 2015, Millennial's comprised 28% of active home buyers, while Gen Xers comprised 32% and Boomers 31%.[19] That said, "over the next 15 years, nearly $24 trillion will be transferred in bequests," presenting new opportunities for Millennials (as well as Gen Xers).

- *Immigrants.* Research on foreign-born populations find that immigrants, more than native-born populations, prefer to live in multi-generational housing. Still, immigration and increased homeownership among minorities could also play a key role in accelerating household growth over the next 10 years. Current Population Survey estimates indicate that the number of foreign-born households rose by nearly 400,000 annually between 2001 and 2007, and they accounted for nearly 30% of overall household growth. Beginning in 2008, the influx of immigrants was staunched by the effects of the Great Recession. After a period of declines, however, the foreign born are again contributing to household growth. The Census Bureau's estimates of net immigration in 2017–2018 indicate that 1.2 million immigrants moved to the U.S. from abroad, down from 1.3 million immigrants in 2016-2017 but higher than the average annual pace of 850,000 during the period of 2009–2011. However, if recent Federal policies about immigration are successful, growth in undocumented and documented immigration could slow and cause a drag on household growth in the coming years.
- *Diversity.* The growing diversity of American households will have a large impact on the domestic housing markets. Over the coming decade, minorities will make up a larger share of young households and constitute an important source of demand for both rental housing and small homes. The growing gap in homeownership rates between whites and blacks, as well as the larger share of minority households that are cost burdened warrants consideration. Since 1994, the difference in homeownership rates between whites and blacks rose by 1.9 percentage points to 29.2% in 2017. Alternatively, the gap between white and Latinx homeownership rates and white and Asian homeownership rates both decreased during this period but remained sizable at 26.1 and 16.5 percentage points, respectively. Although homeownership rates are increasing for some minorities, large shares of minority households are more likely to live in high-cost metro areas. This, combined with lower incomes than white households,

[19] Srinivas, Val and Goradia, Urval (2015). The future of wealth in the United States, Deloitte Insights. https://www2.deloitte.com/insights/us/en/industry/investment-management/us-generational-wealth-trends.html

leads to higher rates of cost burden for minorities—47% for blacks, 44% for Latinx, 37% for Asians/others, and 28% for whites in 2015.

- **Changes in housing characteristics.** The U.S. Census Bureau's Characteristics of New Housing Report (2017) presents data that show trends in the characteristics of new housing for the nation, state, and local areas. Several long-term trends in the characteristics of housing are evident from the New Housing Report:[20]
  - *Larger single-family units on smaller lots.* Between 1999 and 2017, the median size of new single-family dwellings increased by 20% nationally, from 2,028 sq. ft. to 2,426 sq. ft., and 20% in the western region from 2,001 sq. ft. in 1999 to 2,398 sq. ft in 2017. Moreover, the percentage of new units smaller than 1,400 sq. ft. nationally, decreased by more than half, from 15% in 1999 to 6% in 2017. The percentage of units greater than 3,000 sq. ft. increased from 17% in 1999 to 25% of new one-family homes completed in 2017. In addition to larger homes, a move towards smaller lot sizes is seen nationally. Between 2009 and 2017, the percentage of lots less than 7,000 sq. ft. increased from 25% to 31% of lots.
  - *Larger multifamily units.* Between 1999 and 2017, the median size of new multiple family dwelling units increased by 5.3% nationally and 2.4% in the Western region. Nationally, the percentage of new multifamily units with more than 1,200 sq. ft. increased from 28% in 1999 to 33% in 2017 and increased from 25% to 28% in the Western region.
  - *Household amenities.* Across the U.S. and since 2013, an increasing number of new units had air-conditioning (fluctuating year by year at over 90% for both new single-family and multifamily units). In 2000, 93% of new single-family houses had two or more bathrooms, compared to 97% in 2017. The share of new multifamily units with two or more bathrooms decreased from 55% of new multifamily units to 45%. As of 2017, 65% of new single-family houses in the U.S. had one or more garages (from 69% in 2000).
  - *Shared amenities*. Housing with shared amenities are growing in popularity as it may improve space efficiencies and reduce per-unit costs / maintenance costs. Single-Room Occupancies (SROs)[21], Cottage Clusters, co-housing developments, and multifamily products are common housing types that take advantage of this trend. Shared amenities may take many forms and include shared: bathrooms; kitchens and other home appliances (e.g. laundry facilities, outdoor grills);

[21] Single-room occupancies are residential properties with multiple single room dwelling units occupied by a single individual. From: U.S. Department of Housing and Urban Development. (2001). *Understanding SRO*. https://www.hudexchange.info/resources/documents/Understanding-SRO.pdf

security systems; outdoor areas (e.g. green space, pathways, gardens, rooftop lounges); fitness rooms, swimming pools, and tennis courts; and free parking.[22]

State Trends

Oregon's 2016-2020 Consolidated Plan includes a detailed housing needs analysis as well as strategies for addressing housing needs statewide. The plan concludes that "a growing gap between the number of Oregonians who need affordable housing and the availability of affordable homes has given rise to destabilizing rent increases, an alarming number of evictions of low- and fixed- income people, increasing homelessness, and serious housing instability throughout Oregon."

It identified the following issues that describe housing need statewide:[23]

- For housing to be considered affordable, a household should pay up to one-third of their income toward rent, leaving money left over for food, utilities, transportation, medicine, and other basic necessities. Today, one in two Oregon households pays more than one-third of their income toward rent, and one in three pays more than half of their income toward rent.
- More school children are experiencing housing instability and homelessness. The rate of K-12 homeless children increased by 12% from the 2013-2014 school year to the 2014–2015 school year.
- Oregon has 28,500 rental units that are affordable and available to renters with extremely low incomes. There are about 131,000 households that need those apartments, leaving a gap of 102,500 units.
- Housing instability is fueled by an unsteady, low-opportunity employment market. Over 400,000 Oregonians are employed in low-wage work. Low-wage work is a growing share of Oregon's economy. When wages are set far below the cost needed to raise a family, the demand for public services grows to record heights.
- Women are more likely than men to end up in low-wage jobs. Low wages, irregular hours, and part-time work compound issues.

---

[23] These conclusions are copied directly from the report: Oregon's 2016-2020 Consolidated Plan http://www.oregon.gov/ohcs/docs/Consolidated-Plan/2016-2020-Consolidated-Plan-Amendment.pdf.

- People of color historically constitute a disproportionate share of the low-wage work force. About 45% of Latinx, and 50% of African Americans, are employed in low-wage industries.
- The majority of low-wage workers are adults over the age of 20, many of whom have earned a college degree, or some level of higher education.
- In 2019, minimum wage in Oregon[24] was $11.25, $12.50 in the Portland Metro, and $11.00 for non-urban counties.

Oregon's *2018 Statewide Housing Plan* identified six housing priorities to address in communities across the State over 2019 to 2023, summarized below. It includes relevant data to help illustrate the rationale for each priority. The *2018 Statewide Housing Plan* describes the Oregon Housing and Community Services' (OHCS) goals and implementation strategies for achieving the goals.[25]

- **Equity and Racial Justice.** *Advance equity and racial justice by identifying and addressing institutional and systemic barriers that have created and perpetuated patterns of disparity in housing and economic prosperity.*
  - Summary of the issue: In Oregon, 26% of people of color live below the poverty line in Oregon, compared to 15% of the White population.
  - 2019-2023 Goal: Communities of color will experience increased access to OHCS resources and achieve greater parity in housing stability, self-sufficiency and homeownership. OHCS will collaborate with its partners and stakeholders to create a shared understanding of racial equity and overcome systemic injustices faced by communities of color in housing discrimination, access to housing and economic prosperity.
- **Homelessness.** *Build a coordinated and concerted statewide effort to prevent and end homelessness, with a focus on ending unsheltered homelessness of Oregon's children and veterans.*
  - Summary of the issue: According to the Point-in-Time count, approximately 14,000 Oregonians experienced homelessness in 2017, an increase of nearly 6% since 2015. Oregon's unsheltered population increased faster than the sheltered population, and the state's rate of unsheltered homelessness is the third highest in the nation, at 57%. The state's rate of unsheltered homelessness among people in families with children is the second highest in the nation, at 52%.

[24] The 2016 Oregon Legislature, Senate Bill 1532, established a series of annual minimum wage rate increases beginning July 1, 2016 through July 1, 2022. https://www.oregon.gov/boli/whd/omw/pages/minimum-wage-rate-summary.aspx

[25] Priorities and factoids are copied directly from the report: Oregon Housing and Community Services (November 2018). Breaking New Ground, Oregon's Statewide Housing Plan, Draft. https://www.oregon.gov/ohcs/DO/shp/OregonStatewideHousingPlan-PublicReviewDraft-Web.pdf

- 2019-2023 Goal: OHCS will drive toward impactful homelessness interventions by increasing the percentage of people who are able to retain permanent housing for at least six months after receiving homeless services to at least 85 percent. We will also collaborate with partners to end veterans' homelessness in Oregon and build a system in which every child has a safe and stable place to call home.

- **Permanent Supportive Housing.** *Invest in permanent supportive housing, a proven strategy to reduce chronic homelessness and reduce barriers to housing stability.*
  - Summary of the issue: Oregon needs about 12,388 units of permanent supportive housing to serve individuals and families with a range of needs and challenges.
  - 2019-2023 Goal: OHCS will increase our commitment to permanent supportive housing by funding the creation of 1,000 or more additional permanent supportive housing units to improve the future long-term housing stability for vulnerable Oregonians.
- **Affordable Rental Housing.** *Work to close the affordable rental housing gap and reduce housing cost burden for low-income Oregonians.*
  - Summary of the issue: Statewide, over 85,000 new units are needed to house those households earning below 30% of Median Family Income (MFI) in units affordable to them. The gap is even larger when accounting for the more than 16,000 units affordable at 30% of MFI, which are occupied by households at other income levels.
  - 2019-2023 Goal: OHCS will triple the existing pipeline of affordable rental housing — up to 25,000 homes in the development pipeline by 2023. Residents of affordable rental housing funded by OHCS will have reduced cost burden and more opportunities for prosperity and self-sufficiency.
- **Homeownership.** *Provide more low- and moderate-income Oregonians with the tools to successfully achieve and maintain homeownership, particularly in communities of color.*
  - Summary of the issue: In Oregon, homeownership rates for all categories of people of color are lower than for white Oregonians. For White non-Latinx Oregonians, the home ownership rate is 63%. For Latinx and non-White Oregonians, it is 42%. For many, homeownership rates have fallen between 2005 and 2016.
  - 2019-2023 Goal: OHCS will assist at least 6,500 households in becoming successful homeowners through mortgage lending products while sustaining efforts to help existing homeowners retain their homes. OHCS will increase the number of homebuyers of color in our homeownership programs by 50% as part of a concerted effort to bridge the homeownership gap for communities of color while building pathways to prosperity.
- **Rural Communities.** *Change the way OHCS does business in small towns and rural communities to be responsive to the unique housing and service needs and unlock the opportunities for housing development.*

- Summary of the issue: While housing costs may be lower in rural areas, incomes are lower as well: median family income is $42,750 for rural counties versus $54,420 for urban counties. Additionally, the median home values in rural Oregon are 30% higher than in the rural United States and median rents are 16% higher.
- 2019-2023 Goal: OHCS will collaborate with small towns and rural communities to increase the supply of affordable and market-rate housing. As a result of tailored services, partnerships among housing and service providers, private industry and local governments will flourish, leading to improved capacity, leveraging of resources and a doubling of the housing development pipeline.

Regional and Local Demographic Trends that may affect housing need in Tualatin.

Demographic trends that might affect the key assumptions used in the baseline analysis of housing need are: (1) the aging population, (2) changes in household size and composition, and (3) increases in diversity.

An individual's housing needs change throughout their life, with changes in income, family composition, and age. The types of housing needed by a 20-year-old college student differ from the needs of a 40-year-old parent with children, or an 80-year-old single adult. As Tualatin's population ages, different types of housing will be needed to accommodate older residents. The housing characteristics by age data below reveal this cycle in action in Tualatin.

Housing needs and preferences change in predictable ways over time, such as with changes in marital status and size of family.

Families of different sizes need different types of housing.

Exhibit 29. Effect of demographic changes on housing need

Growing Population

Tualatin's population growth will drive future demand for housing in the City over the planning period. The population forecast in Exhibit 31 is Tualatin's official population forecast, from the Oregon Population Forecast Program. Tualatin must use this forecast as the basis for forecasting housing growth over the 2020 to 2040 period.

Tualatin's population grew by 81% between 1990 and the 2013-2017 period. Tualatin added 12,122 new residents, at an average annual growth rate of 2.2%.

Exhibit 30. Population Growth and Change, Tualatin, Washington County, Portland Region, Oregon, and the United States, 1990, 2000, 2010, and 2018

Source: U.S. Decennial Census 1990, 2000, 2010, and 2018 Quick Facts. Portland State University 2018 Certified Population Estimates.
Note: the Portland Region is the aggregate of Clackamas, Multnomah, and Washington Counties.

					Change 1990 to 2018		
	1990	2000	2010	2018	Number	Percent	AAGR
U.S.	248,709,873	281,421,906	308,745,538	327,167,434	78,457,561	32%	1.0%
Oregon	2,842,321	3,421,399	3,831,074	4,195,300	1,352,979	48%	1.5%
Portland Region	1,174,291	1,444,219	1,641,036	1,839,005	664,714	57%	1.7%
Washington County	311,554	445,342	529,710	606,280	294,726	95%	2.5%
Tualatin	15,013	22,791	26,054	27,055	12,042	80%	2.2%

Tualatin city limits is projected to grow by 627 people between 2020 and 2040, at an average annual growth rate of 0.12%.[26]

Exhibit 31. Forecast of Population Growth, Tualatin city limits, 2020 to 2040

Source: Metro 2040 Population Distributed Forecast, Exhibit A. July 12, 2016.

26,745	27,372	627	2.3% increase
Residents in 2020	Residents in 2040	New residents 2020 to 2040	0.12% Growth Rate

Tualatin's Basalt Creek is project to grow by 1,080 people between 2020 and 2040, at an average annual growth rate of 5.68%[27]

Exhibit 32. Forecast of Population Growth, Basalt Creek, 2020 to 2040

Source: Metro 2040 TAZ Forecast, Population Estimates (TAZ 980 and 981). November 6, 2015.

535	1,616	1,080	202% increase
Residents in 2020	Residents in 2040	New residents 2020 to 2040	5.68% Growth Rate

[26] This forecast of population growth is based on Tualatin's (city limits) official population forecast from Metro 2040 Population Distributed Forecast (2016). ECONorthwest extrapolated the population forecast for 2015 (to 2020) using an average annual growth rate.

[27] This forecast of population growth is based on Basalt Creek's official population forecast from Metro 2040 TAZ Population Forecast (2015). ECONorthwest extrapolated the population forecast for 2015 (to 2020) using an average annual growth rate.

Aging Population

This section shows two key characteristics of Tualatin's population, with implications for future housing demand in Tualatin:

- **Seniors.** Tualatin currently has a smaller share of people over 60 years old than Washington County. As Tualatin's senior population grows, it will have increasing demand for housing that is suitable for older demographics.

  Demand for housing for seniors will grow over the planning period, as the Baby Boomers continue to age and retire. The Washington County forecast share of residents aged 60 years and older will account for 24% of its population in 2040, compared to around 18% in the 2013-2017 period.

  The impact of growth in seniors in Tualatin will depend, in part, on whether older people already living in Tualatin continue to reside there as they retire. National surveys show that, in general, most retirees prefer to age in place by continuing to live in their current home and community as long as possible.[28] Tualatin may be attractive to newly retiring seniors because of its location within the Portland Metro region.

  Growth in the number of seniors will result in demand for housing types specific to seniors, such as small and easy-to-maintain dwellings, assisted living facilities, or age-restricted developments. Senior households will make a variety of housing choices, including: remaining in their homes as long as they are able, downsizing to smaller single-family homes (detached and attached) or multifamily units, moving in with family, or moving into group housing (such as assisted living facilities or nursing homes), as their health declines. The challenges aging seniors face in continuing to live in their community include changes in healthcare needs, loss of mobility, the difficulty of home maintenance, financial concerns, and increases in property taxes.[29]

- **Tualatin has a slightly larger share of younger people than the Portland Region.** About 26% of Tualatin's population and Washington County's population is under 20 years old, compared to 24% of the Portland Region's population. The forecast for population growth in Washington County shows the percent of people under 20 years staying static at 24% of the population in 2013-2017 to 2040.

  People currently aged 20 to 40 are referred to as the Millennial generation and account for the largest share of population in Oregon.[30] By 2040, they will be about 40 to 60 years of age. The forecast for Washington County shows a slight shift in Millennials from about 29% of the population in 2020 to about 25% of the population in 2040.

---

[28] A survey conducted by the AARP indicates that 90% of people 50 years and older want to stay in their current home and community as they age. See http://www.aarp.org/research.

[29] "Aging in Place: A toolkit for Local Governments" by M. Scott Ball.

[30] Pew Research Center. (March 2018). "Defining generations: Where Millennials end and post-Millennials begin" by Michael Dimock. Retrieved from: http://www.pewresearch.org/fact-tank/2018/03/01/defining-generations-where-millennials-end-and-post-millennials-begin/.

Tualatin's ability to attract people in this age group will depend, in large part, on whether the city has opportunities for housing that both appeals to and is affordable to Millennials. Again, Tualatin is attractive because of the amenities of the Portland Metro region.

The long-term housing preference of Millennials is uncertain. Research suggests that Millennials' housing preferences may be similar to the Baby Boomers, with a preference for smaller, less costly units. Recent surveys about housing preference suggest that Millennials want affordable single-family homes in areas that offer transportation alternatives to cars, such as suburbs or small cities with walkable neighborhoods.[31]

A recent survey of people living in the Portland region shows that Millennials prefer single-family detached housing. The survey finds that housing price is the most important factor in choosing housing for younger residents.[32] The survey results suggest Millennials are more likely than other groups to prefer housing in an urban neighborhood or town center.

Growth in Millennials in Tualatin will result in increased demand for both affordable single-family detached housing (such as small single-family detached units like cottages), as well as increased demand for affordable townhouses and multifamily housing. Growth in this population will result in increased demand for both ownership and rental opportunities, with an emphasis on housing that is comparatively affordable.

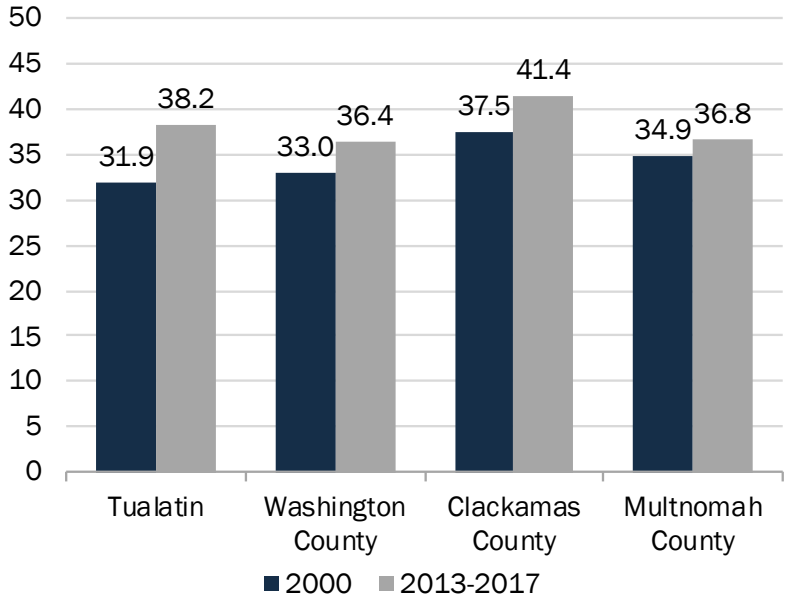
"Access to Public Transportation a Top Criterion for Millennials When Deciding Where to Live, New Survey Shows," Transportation for America.
"Survey Says: Home Trends and Buyer Preferences," National Association of Home Builders International Builders

[32] Davis, Hibbits, & Midghal Research, "Metro Residential Preference Survey," May 2014.

From 2000 to 2013-2017, Tualatin's population grew older on average.

Exhibit 33. Median Age, Tualatin, Washington County, Clackamas County, and Multnomah County, 2000 and 2013-2017

Source: U.S. Census Bureau, 2000 Decennial Census Table B01002, 2013-2017 ACS, Table B01002.

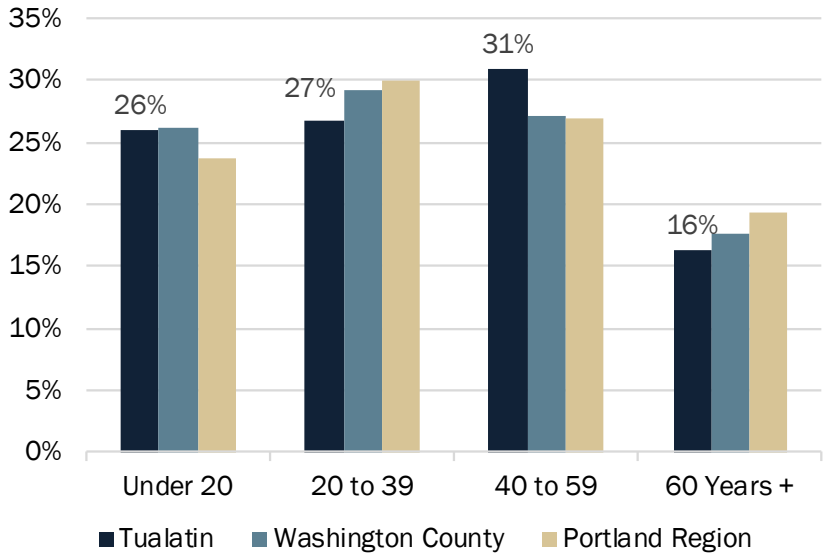


In the 2013-2017 period, about 58% of Tualatin's residents were between the ages of 20 and 59 years.

Tualatin had a slightly smaller share of people over the age of 60 than Washington County and Portland Region.

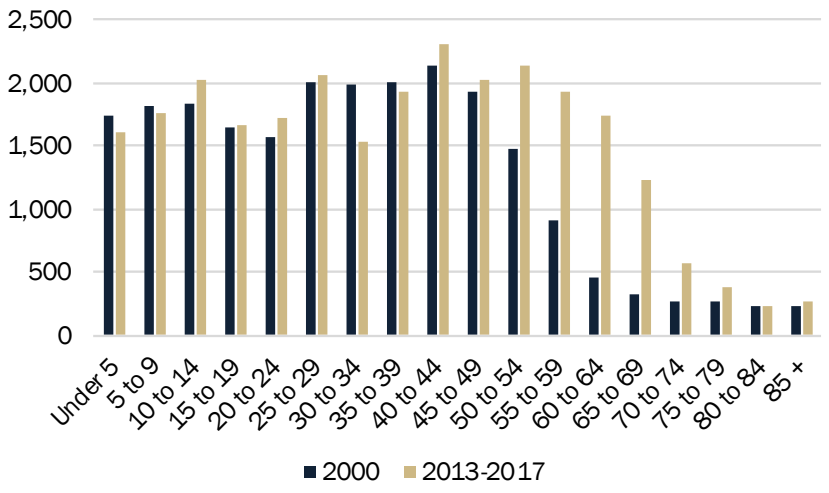
Exhibit 34. Population Distribution by Age, Tualatin, Washington County, and Portland Region, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS, Table B01001.



The number of senior residents in Tualatin grew between 2000 and the 2013-2017 period.

Exhibit 35. Population Distribution by Age, Tualatin, 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census Table P012 and 2013-2017 ACS, Table B01001.

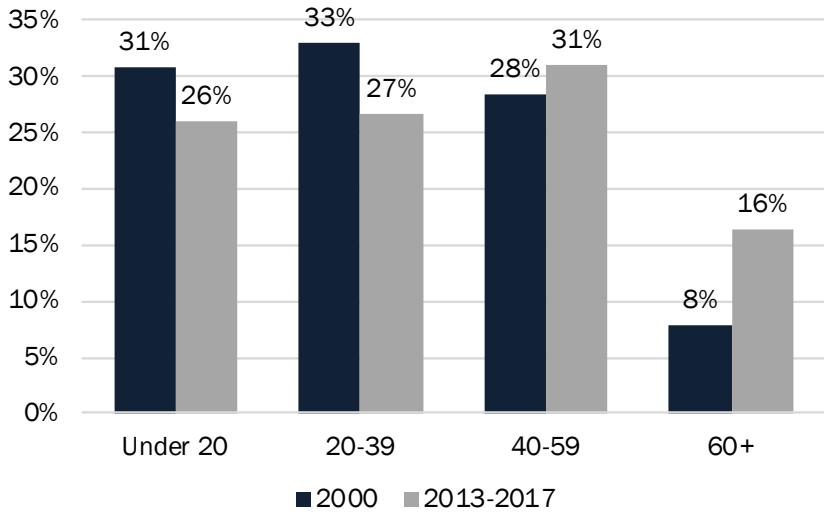


Between 2000 and 2013-2017, the share of Tualatin's population aged 60 years and older doubled.

Tualatin's population aged 60 years and older grew by 2,643 people between 2000 and 2013-2017.

This increase can be explained in part through aging of the Baby Boomers across the Portland Region. Development of senior housing in Tualatin likely attracted seniors to Tualatin, increasing the percentage of people over 60 years old in the city.

Exhibit 36. Population Composition by Age, Tualatin, 2000 and 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census Table P012 and 2013-2017 ACS, Table B01001.



Between 2020 and 2040, Washington County's population over 60 years old is forecast to grow the fastest, by 62%.

Exhibit 37. Fastest-growing Age Groups, Washington County, 2020 to 2040
Source: Portland State University, Population Research Center, Washington County Forecast, June 2017.

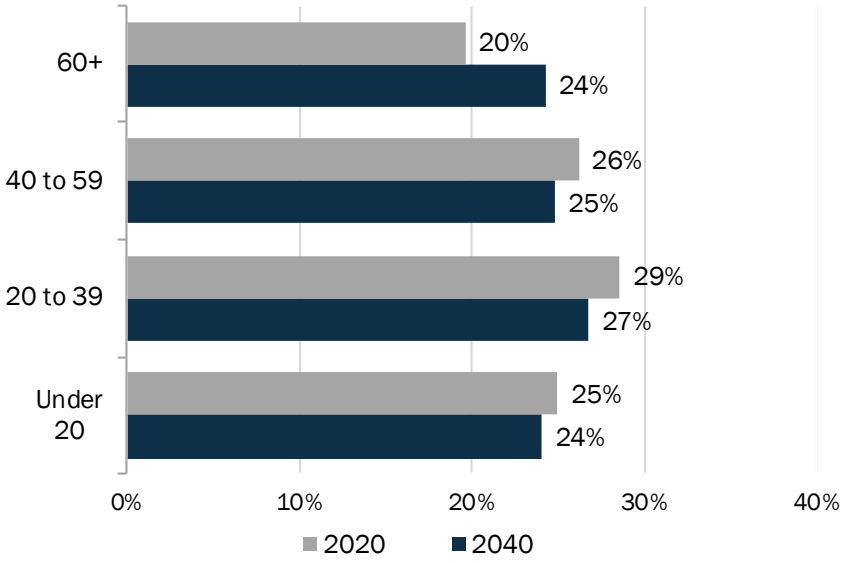
Under 20	20-39 Yrs	40-59 Yrs	60+ Yrs
23%	23%	24%	62%
36,773 People	40,023 People	38,953 People	75,217 People

Between 2020 and 2040, the share of Washington County residents over the age of 40 will make up 49% of the county's total population.

Of the age cohorts shown in Exhibit 38, the share of residents over 60 years of age will increase by 2040, while the share of all other age cohorts will decrease.

Exhibit 38. Population Growth by Age Group, Washington County, 2020 to 2040

Source: Portland State University, Population Research Center, Washington County Forecast, June 2017.



Increased Ethnic Diversity

Tualatin is becoming more ethnically diverse. The Latinx population grew from 12% of Tualatin's population in 2000 to 16% of the population in the 2013-2017 period, adding about 1,774 new Latinx residents. Tualatin is more ethnically diverse than the Portland Region.

The U.S. Census Bureau forecasts that at the national level, the Latinx population will continue growing faster than most other non-Latinx population between 2020 and 2040. The Census forecasts that the Latinx population will increase 93% from 2016 to 2060 and foreign-born Latinx population will increase by about 40% in that same time.[33]

Continued growth in the Latinx population will affect Tualatin's housing needs in a variety of ways.[34] Growth in first and, to a lesser extent, second and third generation Latinx immigrants, will increase demand for larger dwelling units to accommodate the, on average, larger household sizes for these households. Foreign-born households, including Latinx immigrants, are more likely to include multiple generations, requiring more space than smaller household

[33] U.S. Census Bureau, *Demographic Turning Points for the United States: Population Projections for 2020 to 2060,* pg. 7, https://www.census.gov/content/dam/Census/library/publications/2018/demo/P25_1144.pdf

[34] Pew Research Center. *Second-Generation Americans: A Portrait of the Adult Children of Immigrants*, February 7, 2013, Appendix 8, http://www.pewsocialtrends.org/2013/02/07/appendix-1-detailed-demographic-tables/.
National Association of Hispanic Real Estate Professionals. *2017 State of Hispanic Homeownership Report*, 2017.

sizes. As Latinx households integrate over generations, household size typically decreases, and housing needs become similar to housing needs for all households.

According to the *State of Hispanic Homeownership* report from the National Association of Hispanic Real Estate Professionals[35], Latinx accounted for 28.6% of the nation's household formation in 2017. Household formations, for Latinx homeowners specifically, accounted for 15% of the nation's net homeownership growth. The rate of homeownership for Latinx increased from 45.4% in 2014[36] to 46.2% in 2017. The only demographic that increased their rate of homeownership from 2016 to 2017 was for Latinx households.

The *State of Hispanic Homeownership* report also cites the lack of affordable housing products as a substantial barrier to homeownership. The report finds that Latinx households are more likely than non-Latinx households to be nuclear households, comprised of married couples with children, and multiple-generation households in the same home, such as parents and adult children living together. These housing preferences—affordability and larger household size—will influence the housing market as the Latinx population continues to grow.[37] Accordingly, growth in Latinx households will result in increased demand for housing of all types, both for ownership and rentals, with an emphasis on housing that is comparatively affordable.

The share of Tualatin's population that is Latinx increased by 4% (1,774 people) from 2000 to 2013-2017.

Tualatin was more ethnically diverse than the Portland Region.

Exhibit 39. Latinx Population as a Percent of the Total Population, Tualatin, Washington County, Portland Region, 2000, 2013-2017

Source: U.S. Census Bureau, 2000 Decennial Census Table P008, 2013-2017 ACS Table B03002.

[37] Ibid.

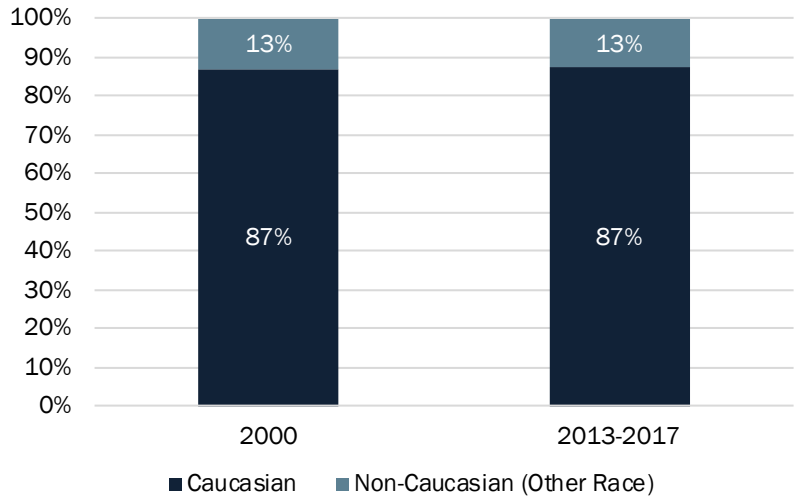
Racial Diversity[38]

The non-Caucasian population is defined as the share of the population that identifies as a race other than "White alone" according to Census definitions. Racial diversity in Tualatin did not increase between 2000 and the 2013-2017 period and. In the 2013-2017 period, Tualatin was less racially diverse than both the county and region.

The share of the non-white population in Tualatin stayed the same from 2000 to 2013-2017.

Exhibit 40. Non-Caucasian Population as a Percent of Total Population, Tualatin, 2000 and 2013-2017

Source: U.S. Census Bureau, 2000 Decennial Census Table P008, 2013-2017 ACS Table B02001.



[38] The US Census Bureau considers race and ethnicity as two distinct concepts. The Census applies two categories for ethnicity, which are Hispanic or Latino (i.e., Latinx) and Not Hispanic or Latino (i.e., Non-Latinx). Latinx is an ethnicity and not a race, meaning individuals who identify as Latinx may be of any race. The share of the population that identifies as Latinx should not be added to percentages for racial categories.

In the 2013-2017 period, Tualatin was less racially diverse than Washington County and the Portland Region.

Household Size and Composition

Tualatin's households are smaller than Washington County's households. Tualatin's household composition shows that households in Tualatin are similar to Washington County and Portland Region averages.

Tualatin's average household size was smaller than Washington County's and Clackamas County's, but larger than Multnomah County's.

Exhibit 44. Average Household Size, Tualatin, Washington County, Clackamas County, Multnomah County, 2013-2017

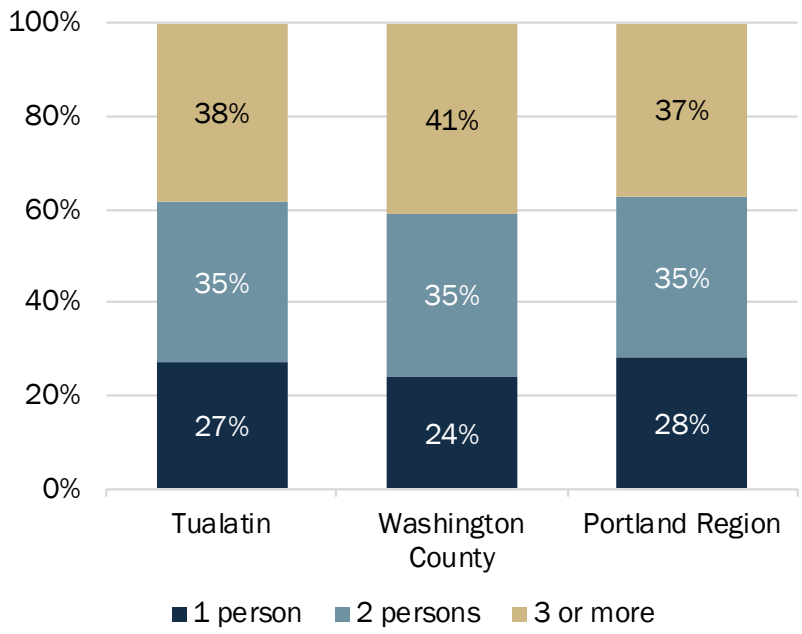
Tualatin, 2000

About 62% of Tualatin's households were 1- or 2-person households, compared to 59% of Washington County's and 63% of the Portland Region's households.

Exhibit 46. Household Size, Tualatin, Washington County, and Portland Region, 2013-2017
Source: U.S. Census Bureau, 2013-2017 ACS 5-year estimate, Table B25010.



Tualatin had a similar household composition to Washington County. Compared to the Portland Region, Tualatin had a smaller share of nonfamily households and a larger share of family households with children.

About a third of Tualatin's households were non-family households (i.e. 1-person households and households composed of roommates).

Exhibit 47. Household Composition, Tualatin, Washington County, and Portland Region, 2013-2017

Income of Tualatin Residents

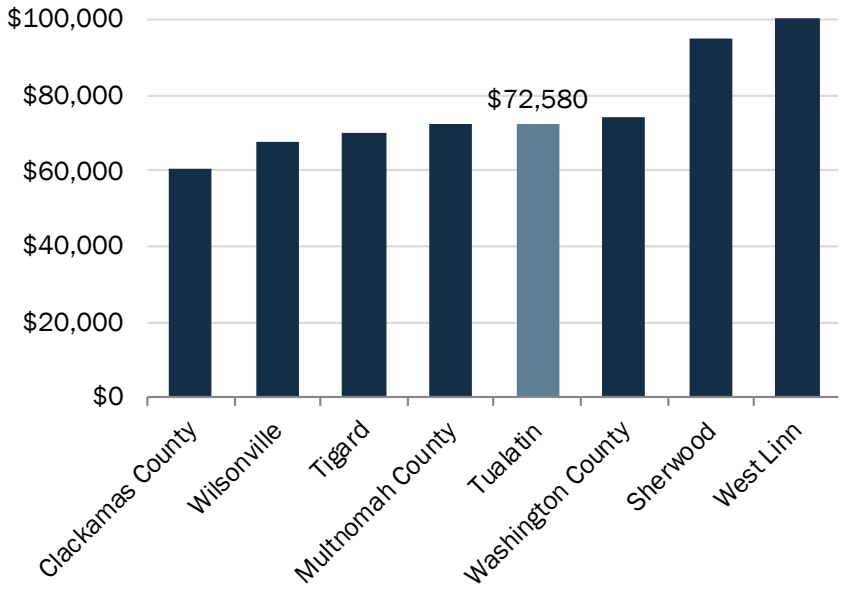
Income is one of the key determinants in housing choice and households' ability to afford housing. Income for residents living in Tualatin was lower than the Washington County median income and the state's.

Over the 2013-2017 period, Tualatin's median household income (MHI) was below that of Washington County's.

Tualatin's MHI was $1,453 lower than Washington County's MHI ($74,033).

Exhibit 49. Median Household Income, Tualatin, Washington County, and Comparison regions, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS 5-year estimate, Table B25119.



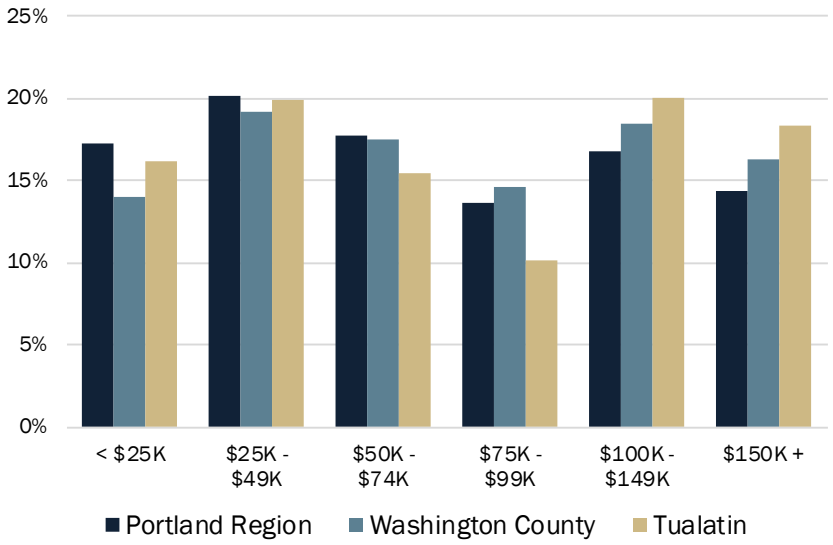
Tualatin had a larger share of higher-earning households.

About 38% of Tualatin's households earned more than $100,000 per year, compared to 35% of Washington County households and 31% of the Portland Region's households.

About 36% of Tualatin's households earned $50,000 or less per year, compared to 33% of Washington County's households and 37% of the Portland Region's households.

Exhibit 50. Household Income, Tualatin, Washington County, and Portland Region, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS 5-year estimate, Table B19001.



After adjusting for inflation, Tualatin's median household income (MHI) decreased by 12%, from $82,488 in 2000 to $72,580 in 2013-2017.

In this same time, Washington County's MHI decreased by 4%, Clackamas County's MHI decreased by 1%, and Multnomah County's MHI decreased by 5%.

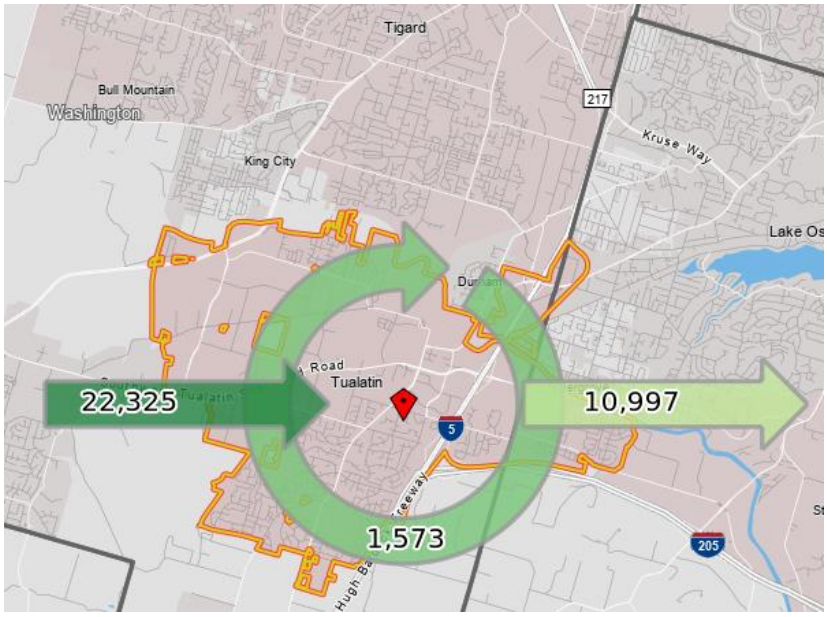
Commuting Trends

Tualatin is part of the complex, interconnected economy of the Portland Region. Of the more than 23,800 people who work in Tualatin, 93% of workers commute into Tualatin from other areas, most notably Portland, Tigard, Beaverton, and Hillsboro. Almost 11,000 residents of Tualatin commute out of the city for work, many of them to Portland.

Tualatin is part of an interconnected regional economy.

More than 22,000 people commuted into Tualatin for work, and nearly 11,000 people living in Tualatin commuted out of the city for work.

Exhibit 57. Commuting Flows, Tualatin, 2015
Source: U.S. Census Bureau, Census On the Map.



About 7% of people who worked at businesses located in Tualatin also lived in Tualatin.

The remainder commuted from Portland and other parts of the Region.

Regional and Local Trends Affecting Affordability in Tualatin

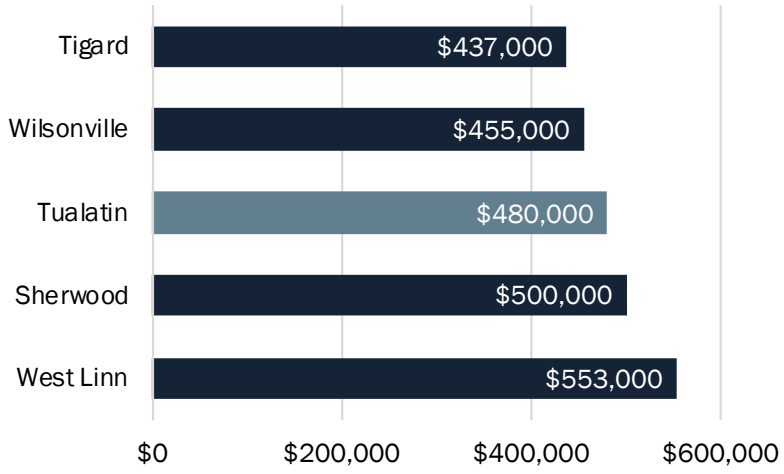
This section describes changes in sales prices, rents, and housing affordability in Tualatin. It uses cities in the region, as well as Washington County and Oregon, as comparisons.

Changes in Housing Costs

With a median sale price of $480,000 in February 2019, Tualatin's housing sales were slightly higher than some comparison cities in this analysis, but below sale prices of other cities. Tualatin's housing prices grew along with comparison cities over the January 2015 to February 2019 analysis period.

Tualatin's median home sale price was within range of comparison cities.

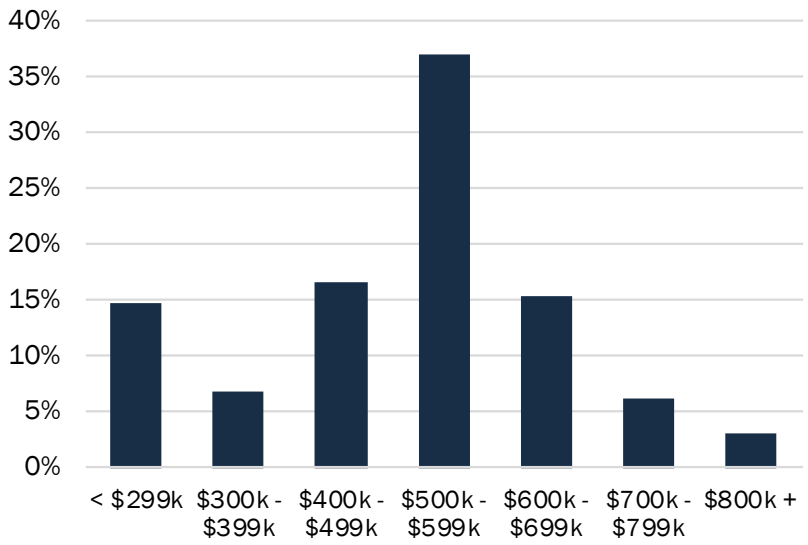
Exhibit 62. Median Home Sale Price, Tualatin and Comparison Cities, February 2019
Source: Redfin.



In 2017 through 2018, more than half of the homes (62%) in Tualatin sold for more than $500,000.

Exhibit 63. Distribution of Home Sale Prices, Tualatin, 2017—2018

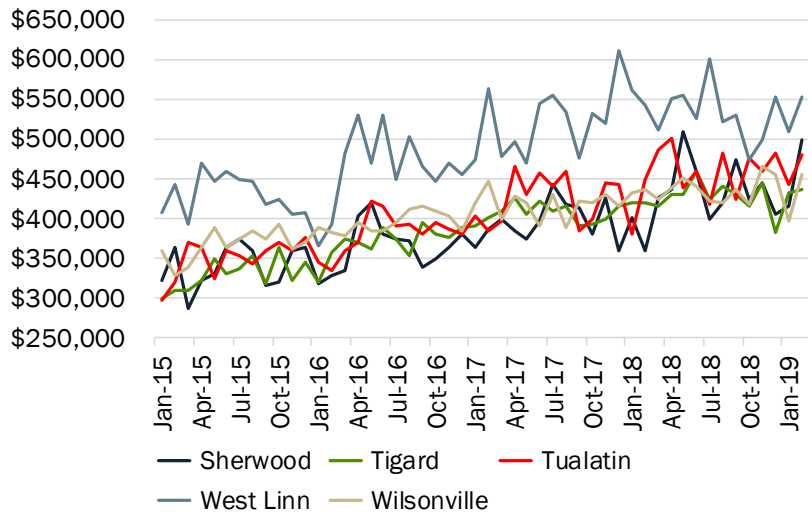
Source: RLIS.



Between January 2015 and February 2019, home sale prices in Tualatin followed similar trends to other nearby cities (with West Linn as an outlier).

Exhibit 64. Median Sale Price, Tualatin and Comparison Cities, January 2016–February 2019

Source: Redfin.



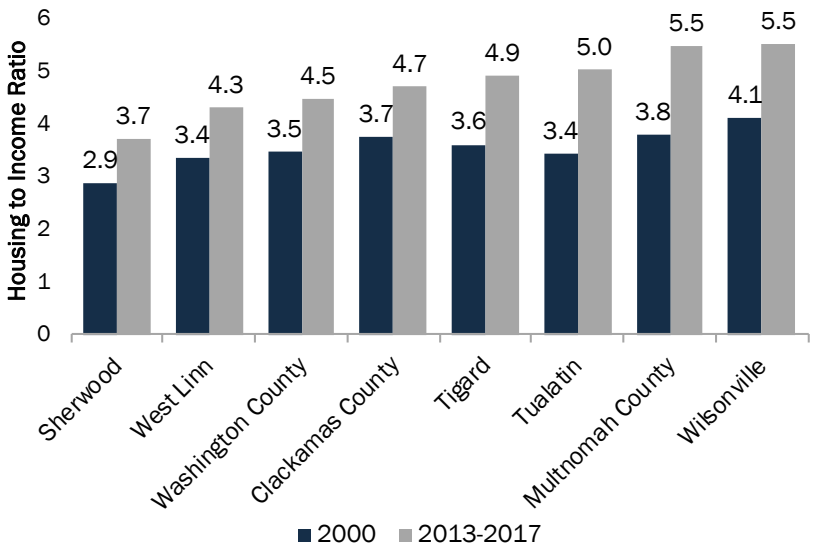
Since 2000, housing costs in Tualatin increased faster than incomes.

The household reported median value of a house in Tualatin was 3.4 times the median household income (MHI) in 2000 and 5.0 times MHI in 2016.

The decline of housing affordability was more extreme than in Washington County overall.

Exhibit 65. Ratio of Median Housing Value to Median Household Income, Tualatin, Washington County, and Comparison Jurisdictions, 2000 to 2013–2017[39]

Source: U.S. Census Bureau, 2000 Decennial Census, Tables HCT012 and H085, and 2012–2016 ACS, Tables B19013 and B25077.



[39] This ratio compares the median value of housing in Tualatin (and other places) to the median household income. Inflation-adjusted median owner values in Tualatin increased from $282,532 in 2000 to $365,700 in 2013–2017. Over the same period, inflation-adjusted median income decreased from $82,488 to $72,580.

Rental Costs

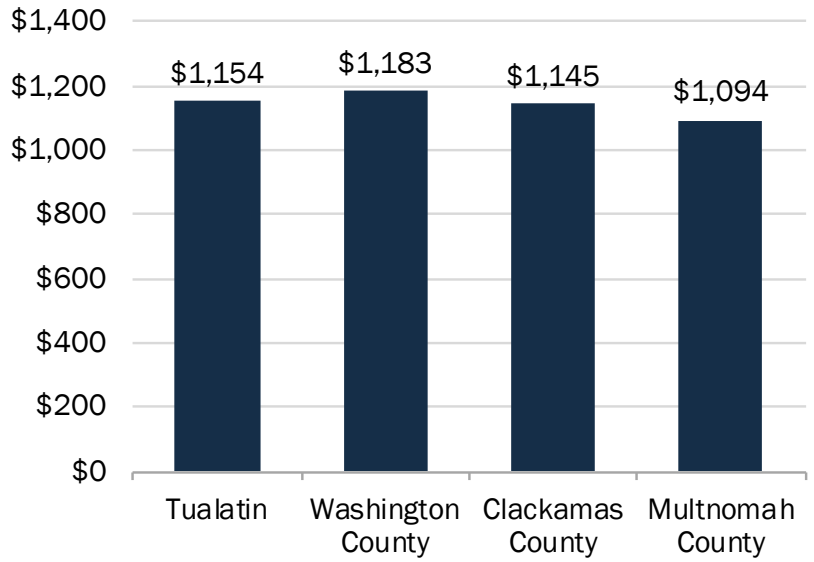
Median multifamily rents in Tualatin and Washington County are about $1,200. The following charts show gross rent (which includes the cost of rent plus utilities) for Tualatin in comparison to Washington County and the Portland Region.

The median gross rent in Tualatin was $1,154 in the 2013-2017 period.

Rent in Tualatin was comparable to that of comparison regions.

Exhibit 66. Median Gross Rent, Tualatin, Washington County, Clackamas County, and Multnomah County, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS 5-year estimate, Table B25064.

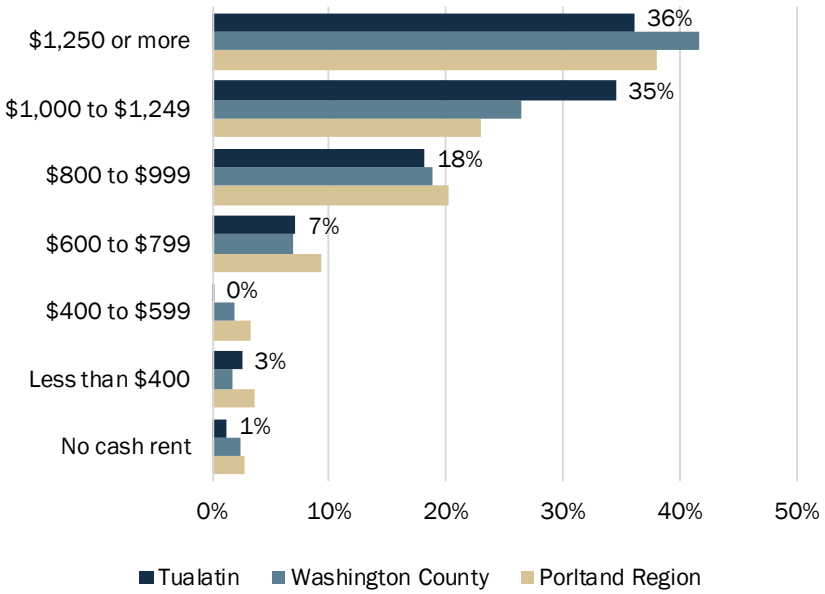


Most renters in Tualatin paid more than $1,000 per month in rent.

About 36% of Tualatin's renters paid $1,250 or more in gross rent per month, a smaller share than renters across Washington County (42%) and the Portland Region (38%).

Exhibit 67. Gross Rent, Tualatin, Washington County, and Portland Region, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS Table B25063.



Tualatin's average asking multifamily rent per unit increased by $372, from $848 in 2010 to $1,220 in 2018.

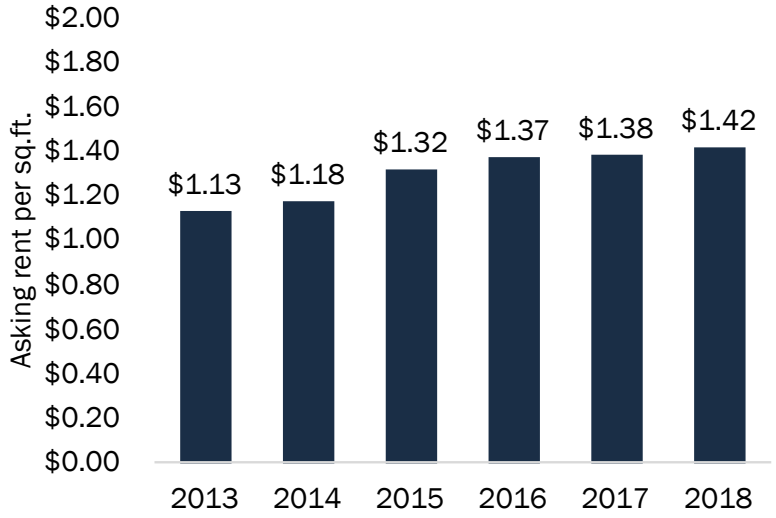
Exhibit 69. Average Asking Multifamily Rent per Square Foot, Tualatin, 2013 through 2018
Source: CoStar.



Housing Affordability

A typical standard used to determine housing affordability is that a household should pay no more than a certain percentage of household income for housing, including payments and interest or rent, utilities, and insurance. The Department of Housing and Urban Development's guidelines indicate that households paying more than 30% of their income on housing experience "cost burden," and households paying more than 50% of their income on housing experience "severe cost burden." Using cost burden as an indicator is one method of determining how well a city is meeting the Goal 10 requirement to provide housing that is affordable to all households in a community.

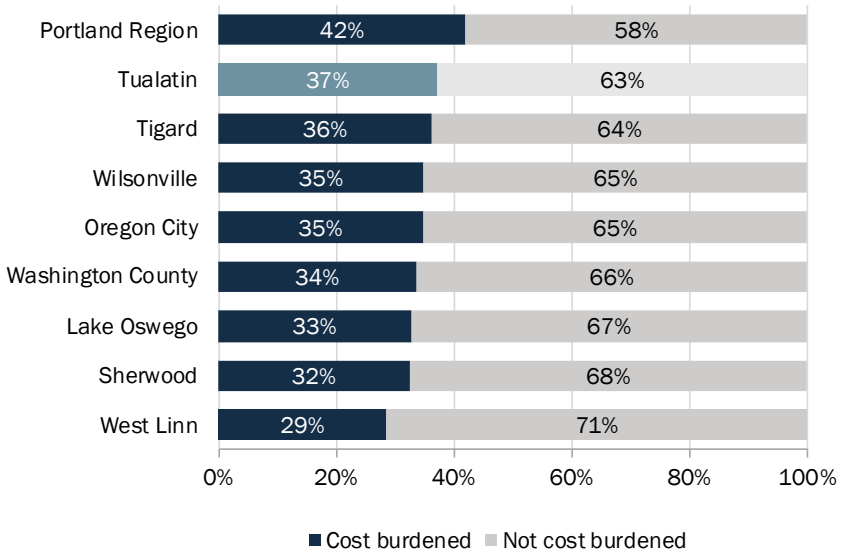
About 37% of Tualatin's households (renters and homeowners) are cost burdened, of which 16% are severely cost burdened. About 56% of renter households (households who rent) are cost burdened, compared with 22% of homeowners (households who own their own home). Twenty-five percent of households in Tualatin are rent burdened households.[40] Overall, Tualatin has a slightly larger share of cost-burdened households than Washington County but a lower share of cost-burdened households that the Portland Region.

Overall, about 37% of all households in Tualatin were cost burdened.

In the 2013-2017 period, Tualatin had one of the highest rates of cost burdened households relative to other comparison areas.

Exhibit 70. Housing Cost Burden, Tualatin, Washington County, and Comparison Areas, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS Tables B25091 and B25070.

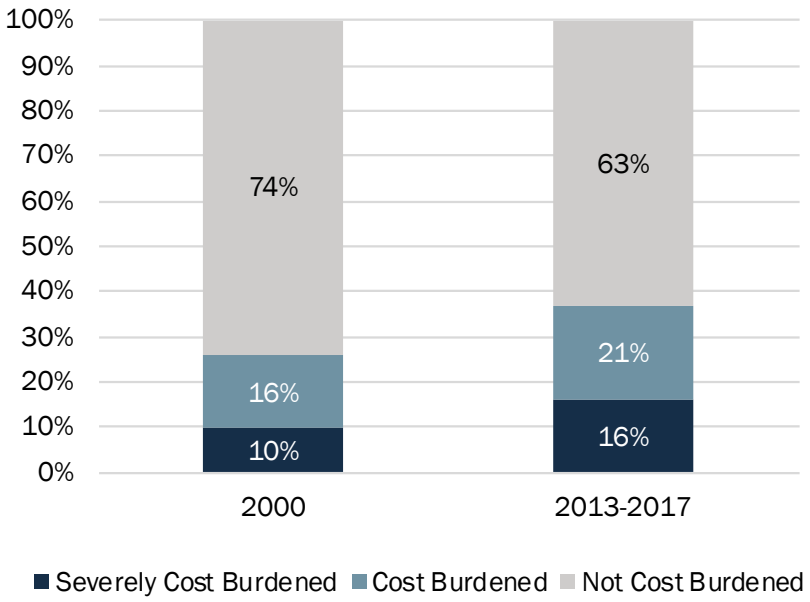


[40] Cities with populations >10,000 are required, per HB 4006, to assess "rent burden" if more than 50% of renters are cost burdened. In Tualatin as of the 2013-2017 period, 56% of total renter households were cost burdened. Upon further assessment, we find that a quarter (25%) of Tualatin's households (renters and homeowners) were cost burdened renters (households that rent housing and pay more than 30% of their income on housing).

From 2000 to the 2013-2017 period, the share of cost burdened and severely cost burdened households in Tualatin grew by 11%.

Exhibit 71. Change in Housing Cost Burden, Tualatin, 2000 to 2013-2017

Source: U.S. Census Bureau, 2000 Decennial Census, Tables H069 and H094 and 2013-2017 ACS Tables B25091 and B25070.

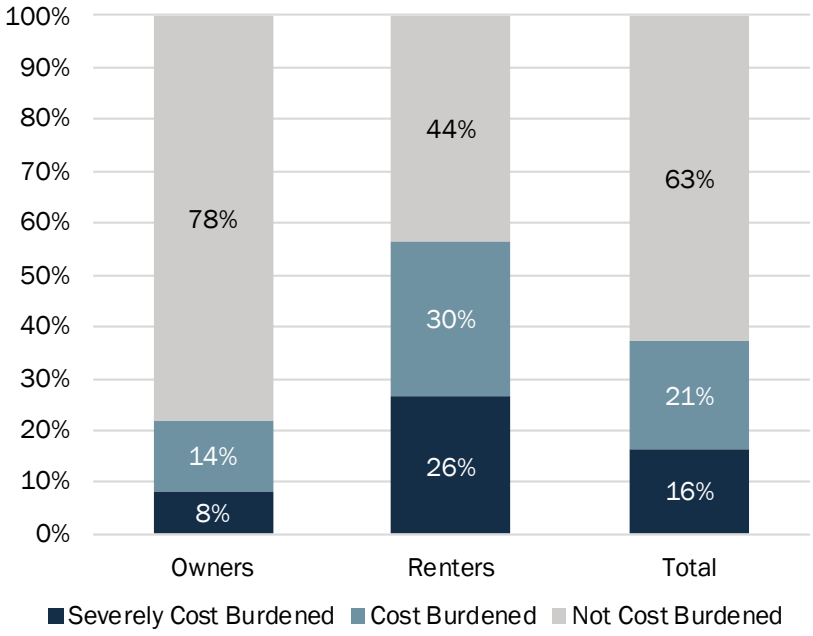


Renters were more likely to be cost burdened than homeowners.

In the 2013-2017 period, about 56% of Tualatin's renters were cost burdened or severely cost burdened, compared to 22% of homeowners.

Exhibit 72. Housing Cost Burden by Tenure, Tualatin, 2013-2017

Source: U.S. Census Bureau, 2013-2017 ACS Tables B25091 and B25070.

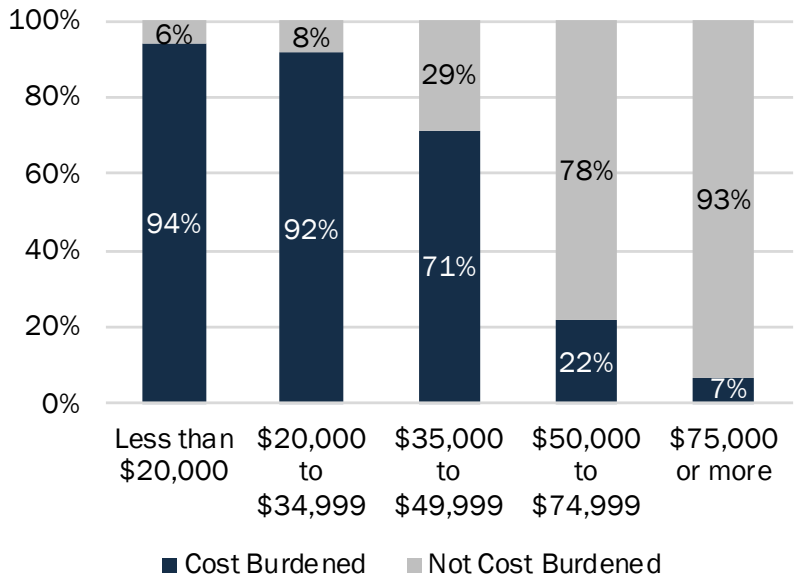


Nearly all renter households earning less than $35,000 per year were cost burdened.

Most households earning between $35,000 and $50,000 per year were cost burdened.

Exhibit 73. Cost Burdened Renter Households, by Household Income, Tualatin, 2013-2017

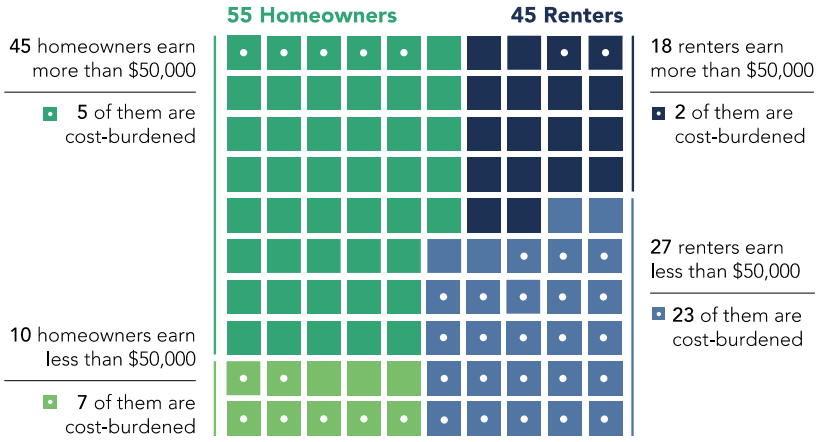
Source: U.S. Census Bureau, 2013-2017 ACS Table B25074.



If all of Tualatin's households were 100 residents, 27 households would be renters earning $50,000 or less per year; 23 of these households (85%) would be cost burdened.

Exhibit 74. Illustration of Cost Burden: If all of Tualatin's Households were 100 Residents

Source: U.S. Census Bureau, 2013-2017 ACS Table S2503.



Another measure of cost burden is considering housing costs plus transportation costs. When examining housing and transportation cost burden, a household is considered cost burdened if they spend more than 45% of gross income on housing and transportation costs combined. Metro's 2*014 Metro Urban Growth Report* contains extensive documentation of housing and transportation cost burden.

Tualatin residents spend between 34% and 40% of their income on housing plus transportation costs.

Compared to the Metro Region, Tualatin residents spend a similar percentage of their income on housing and transportation costs.

Exhibit 75. Average Cost of Transportation and Housing as a Percent of Income, Tualatin and the Metro Region, 2010 and 2035[41]

Source: 2014 Metro Urban Growth Report, Appendix 12.

2010	40% $2,541 per month Tualatin	39% $2,300 per month Metro UGB
2035	34% $2,723 per month Tualatin	35% $2,050 per year Metro UGB

Using Metro's definition for cost burdened, about 15% of households in Tualatin are forecast to be cost burdened by 2035, comparable with the region.

Exhibit 76. Percent of Households with Housing and Transportation Cost Burden, Tualatin and the Metro Region, 2010 and 2035

Source: 2015 Metro Urban Growth Report, Appendix 12.

2010	20% 2,046 households Tualatin	17% 104,100 households Metro UGB
2035	15% 1,838 households Tualatin	15% 119,300 households Metro UGB

[41] 2035 estimates use Metro's Medium Growth forecast.

While cost burden is a common measure of housing affordability, it does have some limitations. Two important limitations are:

- A household is defined as cost burdened if the housing costs exceed 30% of their income, regardless of actual income. The remaining 70% of income is expected to be spent on non-discretionary expenses, such as food or medical care, and on discretionary expenses. Households with higher incomes may be able to pay more than 30% of their income on housing without impacting the household's ability to pay for necessary non-discretionary expenses.
- Cost burden compares income to housing costs and does not account for accumulated wealth. As a result, the estimate of how much a household can afford to pay for housing does not include the impact of a household's accumulated wealth. For example, a household of retired people may have relatively low income but may have accumulated assets (such as profits from selling another house) that allow them to purchase a house that would be considered unaffordable to them based on the cost burden indicator.

Another way of exploring the issue of financial need is to review housing affordability at varying levels of household income.

Fair Market Rent for a 2-bedroom apartment in Washington County was $1,330 in 2018.

Exhibit 77. HUD Fair Market Rent (FMR) by Unit Type, Washington County, 2018
Source: U.S. Department of Housing and Urban Development.

$1,026	$1,132	$1,330	$1,935	$2,343
Studio	1-Bedroom	2-Bedroom	3-Bedroom	4-Bedroom

A household must earn at least $25.58 per hour to afford a two-bedroom unit at Fair Market Rent ($1,330) in Washington County.

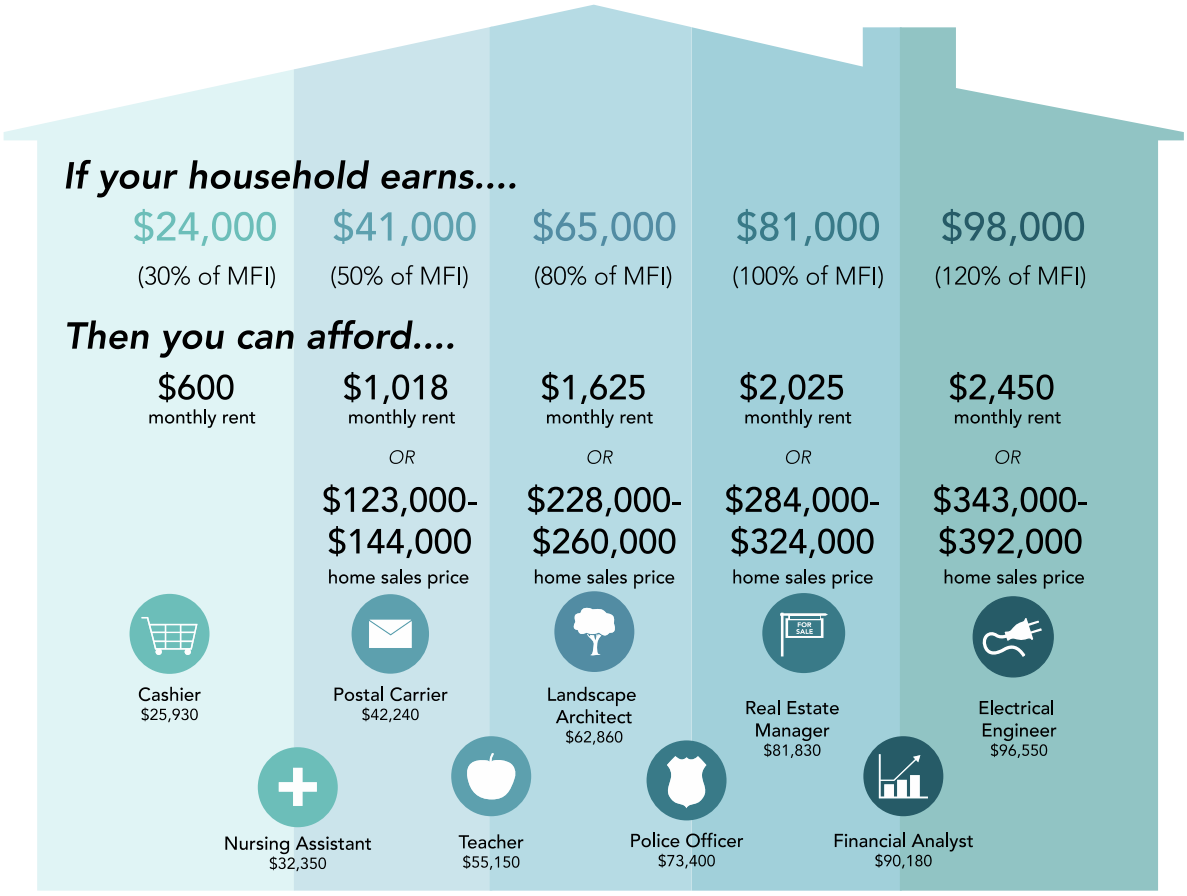
Exhibit 78. Affordable Housing Wage, Washington County, 2018
Source: U.S. Department of Housing and Urban Development; Oregon Bureau of Labor and Industries.

$25.58 per hour
Affordable Housing Wage for two-bedroom Unit in Washington County

Illustrated in Exhibit 79, a household earning median family income in Washington County (about $81,000 per year) can afford a monthly rent of about $2,025 or a home roughly valued between $284,000 and $324,000.

Exhibit 79. Financially Attainable Housing, by Median Family Income (MFI) for Washington County ($81,400), Tualatin, 2018

Source: U.S. Department of Housing and Urban Development, Washington, 2018. Bureau of Labor Services, 2017, for Portland MSA.



About 26% of Tualatin's households had incomes less than $41,000 and cannot afford a two-bedroom apartment at Washington County's Fair Market Rent (FMR) of $1,330.

Exhibit 80. Share of Households, by Median Family Income (MFI) for Washington County ($81,400), Tualatin, 2018

Source: U.S. Department of Housing and Urban Development, Washington County, 2018. U.S. Census Bureau, 2013-2017 ACS Table 19001.

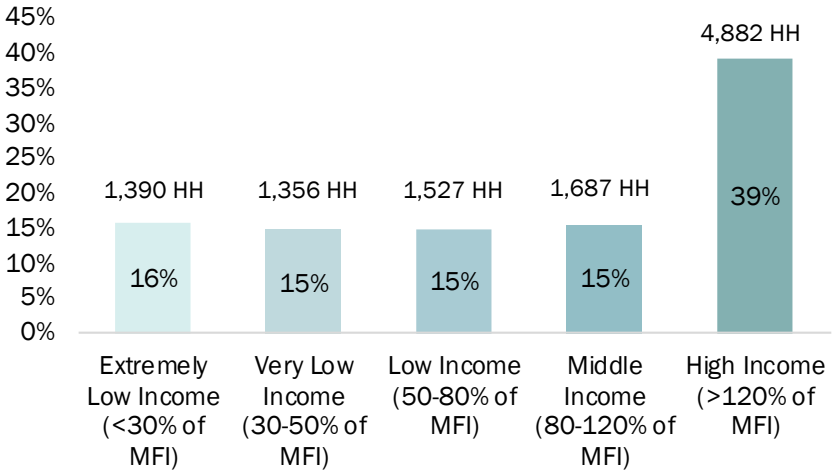


Exhibit 81 illustrates the types of financially attainable housing by income level in Washington County. Generally speaking, lower-income households will be renters occupying existing housing. Newly built housing will be a combination of renters (most likely in multifamily housing) and homeowners. The types of housing affordable for the lowest income households is limited to subsidized housing, manufactured housing, lower-cost single-family housing, and multifamily housing (apartments). The range of financially attainable housing increases with increased income.

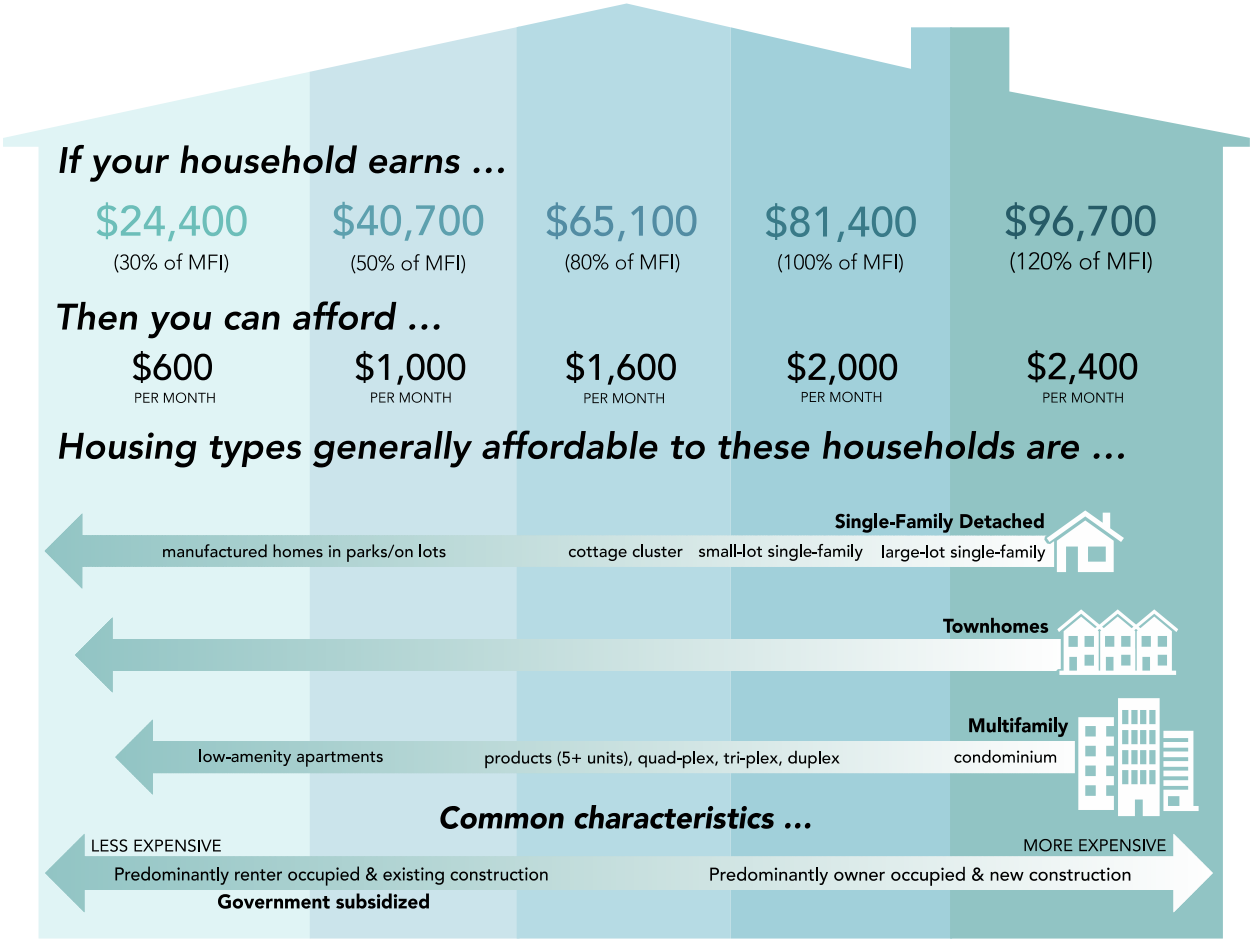
Exhibit 81. Types of Financially Attainable Housing by Median Family Income (MFI) for Washington County ($81,400), Tualatin, 2018

Source: U.S. Department of Housing and Urban Development, Washington County, 2018.



While Exhibit 63 presented a distribution of home sale prices in Tualatin from homes sold in 2017—2018, Exhibit 82 presents a distribution of home sale prices by affordability range for Tualatin in 2016—2018. Most housing sold in Tualatin in 2016, 2017, 2018 these years were affordable to households earning between 150% and 200% of the Median Family Income (MFI), or a household income of about $122,100 to $162,800. If housing prices continue to rise as they have in Exhibit 82, Tualatin may need to consider policies to support development of housing affordable for homeownership for households earning 80% to 150% of MFI, such as allowing smaller lot and smaller unit single-family detached housing or townhouses or policies to lower the costs of housing development such as SDC waivers or other financial support for development of housing affordable for homeownership.

Exhibit 82. Distribution of Home Sale Prices by Affordability Range, Tualatin, 2016, 2017, 2018
Source: RLIS. Note: 2018 data is through September 2018.

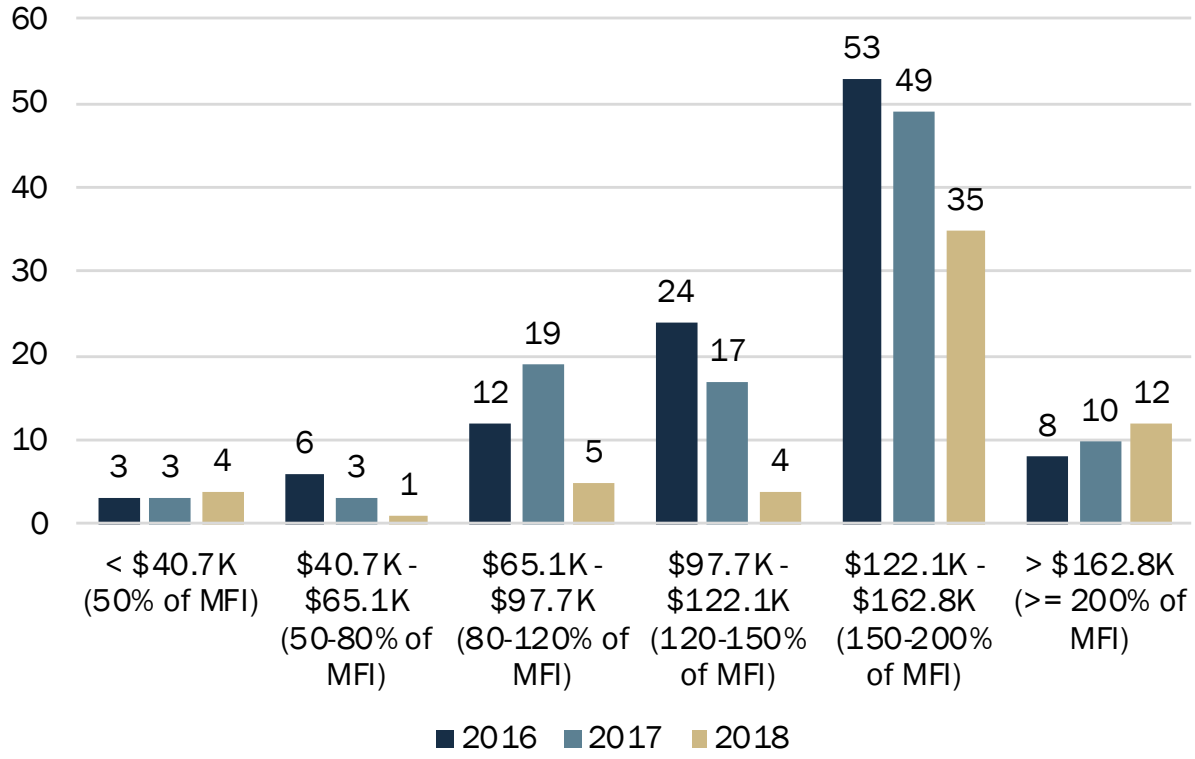


Exhibit 83 compares the number of households by income with the number of units affordable to those households in Tualatin. Tualatin currently has a deficit of housing affordable to households earning less than $35,000. The types of housing that Tualatin has a deficit of are more affordable housing types such as: government-subsidized housing, multifamily products, and more affordable single-family homes (e.g. tiny homes, cottages, manufactured housing). Tualatin also shows a need for higher amenity housing types for households earning more than $150,000 per year or more. Higher amenity housing types include single-family detached housing, single-family attached housing (e.g. townhomes and rowhouses), and higher-end multifamily products (including condominiums).

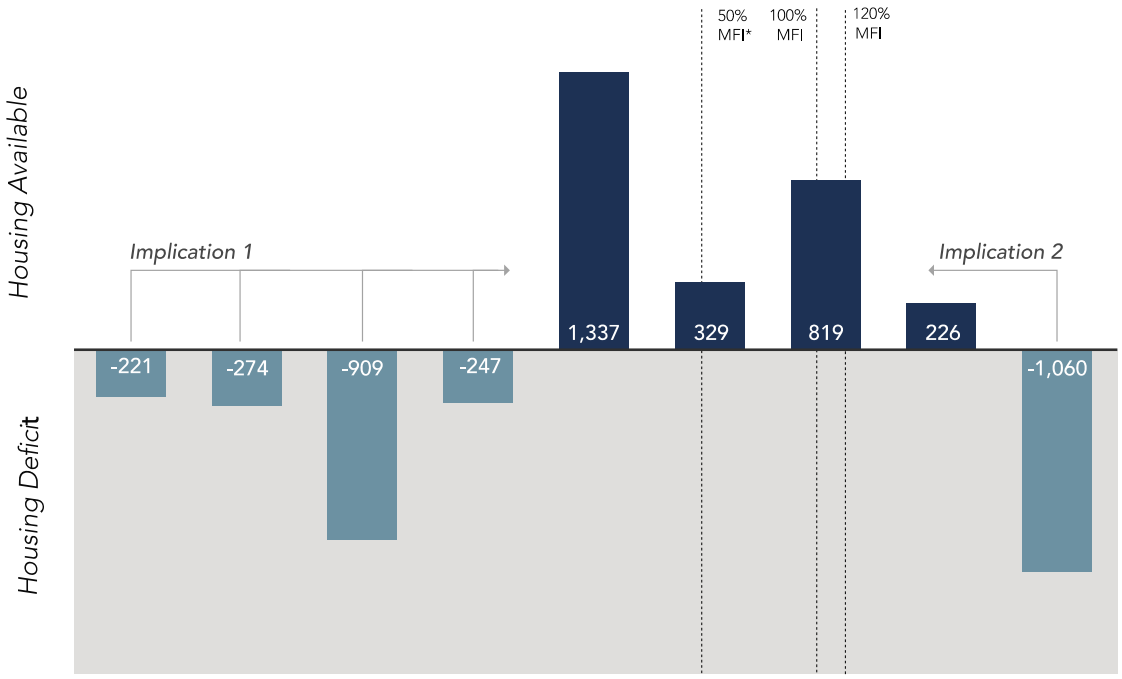
Exhibit 83. Affordable Housing Costs and Units by Income Level, Tualatin, 2018

Source: U.S. Census Bureau, 2013-2017 ACS. *Note: MFI is Median Family Income, determined by HUD for the Portland MSA. Portland MSA's MFI in 2018 was $81,400.*



Household Income	Less than $10,000	$10,000–$14,999	$15,000–$24,999	$25,000–$34,999	$35,000–$49,999	$50,000–$74,999	$75,000–$99,999	$100,000–$149,999	$150,000 or more

Share of Units in each Income Category	1%	1%	1%	7%	23%	18%	18%	22%	9%

*Median Family Income for a family of four.

Implication 1

Some lower-income households live in housing that is more expensive than they can afford because affordable housing is not available. These households are cost burdened.

Implication 2

Some higher-income households choose housing that costs less than they can afford. This may be the result of the household's preference or it may be the result of a lack of higher-cost and higher-amenity housing that would better suit their preferences.

Exhibit 58 shows that 7% of the people who work in Tualatin also live in Tualatin. One of the key questions for Tualatin is whether people who work at businesses in Tualatin can afford housing in Tualatin.

Tualatin has 0.7 residents for every job (Exhibit 84).[42] In comparison, Washington County has 1.6 residents for every job and the Portland Region (Clackamas, Multnomah, and Washington County) has 1.4 residents for every job. The large number of jobs relative to the number of residents in Tualatin was an important part of the discussion in the development of the Housing Needs Analysis, with concerns focusing on the impacts of commuting on Tualatin's transportation system and negative impacts on quality of life in Tualatin (such as heavy traffic congestion).

Tualatin has more jobs per capita than Washington County and the Portland Region.

Exhibit 84. Ratio of Residents to Jobs, Tualatin, 2017
Source: Bureau of Labor Services, Quarterly Census of Employment and Wages.

	Employees	Residents	Residents for every Job
Tualatin	38,838	26,960	0.7
Washington County	595,860	337,127	1.6
Portland Region	1,811,860	1,259,773	1.4

Exhibit 85 shows affordable housing costs for workers at businesses in Tualatin. For example, a household with one individual employed in furniture manufacturing (earning about $39,000 per year) can afford neither the average multifamily rents in Tualatin ($1,220 per month) nor the median housing sale price in Tualatin (about $480,000 as of February 2019) is affordable.

However, Exhibit 85 reflects housing affordability costs for one worker per household. This analysis recognizes that most multi-person households have more than one person employed, and many have dual incomes. According to Census and Oregon Employment Department data, Washington County and Tualatin both have about 1.4 jobs per household, including both full-time and part-time jobs. This shows that most multi-person households in Tualatin have more than one worker. **It is not necessarily reasonable to expect one worker to be able to afford housing costs in Tualatin alone (or any other city in the Portland region), given the prevalence of dual-income households.**

[42] Ratios rely on population estimates from Portland State University's Population Research Center (2017) and Bureau of Economic Analysis (2017).

Exhibit 85. Housing affordability for workers at existing jobs in Tualatin, 2017

Source: Oregon Employment Department. Note: Average multifamily rent in Tualatin is $1,220 (Costar, 2018) and median housing price is $480,000 (Redfin, February 2019).

Distribution and Electronic Commerce	$50,314	$1,258	Yes	$176,099	No
Advanced Manufacturing	$110,756	$2,769	Yes	$387,646	No
Business Services	$89,380	$2,235	Yes	$312,830	No

Summary of the Factors Affecting Tualatin's Housing Needs

The purpose of the analysis thus far has been to provide background on the kinds of factors that influence housing choice. While the number and interrelationships among these factors ensure that generalizations about housing choice are difficult to make and prone to inaccuracies, it is a crucial step to informing the types of housing that will be needed in the future.

There is no question that age affects housing type and tenure. Mobility, the ability to move freely and easily from one community to another, is substantially higher for people aged 20 to 34. People in that age group will also have, on average, less income than people who are older and they are less likely to have children. These factors mean that younger households are much more likely to be renters, and renters are more likely to be in multifamily housing.

The data illustrates what more detailed research has shown and what most people understand intuitively: life cycle and housing choice interact in ways that are predictable in the aggregate; age of the household head is correlated with household size and income; household size and age of household head affect housing preferences; and income affects the ability of a household to afford a preferred housing type. The connection between socioeconomic and demographic factors and housing choice is often described informally by giving names to households with certain combinations of characteristics: the "traditional family," the "never-marrieds," the "dinks" (dual-income, no kids), and the "empty-nesters."[43] Thus, simply looking at the long wave of demographic trends can provide good information for estimating future housing demand.

[43] See *Planning for Residential Growth: A Workbook for Oregon's Urban Areas* (June 1997).

Still, one is ultimately left with the need to make a qualitative assessment of the future housing market. The following is a discussion of how demographic and housing trends are likely to affect housing in Tualatin over the next 20 years:

- **Growth in housing will be driven by growth in households.** Households in Tualatin's city limits are forecast to grow from 10,791 households to 11,362 households, an increase of 571 households between 2020 and 2040.[44] In that same time, households in Basalt Creek are forecast to grow from 203 households to 646 households, an increase of 443 households. Together, Tualatin city limits and Basalt Creek will grow by 1,014 households between 2020 and 2040. Tualatin is planning for 1,014 new dwelling units to meet the needs of its forecasted new households.
- **Housing affordability is a growing challenge in Tualatin.** It is a challenge in most of the region in general, and Tualatin is affected by these regional trends. Housing prices are increasing faster than incomes in Tualatin and Washington County, which is consistent with state and national challenges. Tualatin has a large share of multifamily housing (about 41% of the City's housing stock), but over half of renter households are cost burdened. Tualatin's key challenge over the next 20 years is providing opportunities for development of relatively affordable housing of all types, such as lower-cost single-family housing, townhouses and duplexes, market-rate multifamily housing, and government-subsidized affordable housing.
- **Without substantial changes in housing policy, on average, future housing will look a lot like past housing.** That is the assumption that underlies any trend forecast, and one that is important when trying to address demand for new housing.

  The City's residential policies can impact the amount of change in Tualatin's housing market, to some degree. If the City adopts policies to increase opportunities to build smaller-scale single-family and multifamily housing types (particularly single-family attached that is comparatively affordable to moderate-income households), a larger percentage of new housing developed over the next 20 years in Tualatin may begin to address the city's needs. Examples of policies that the City could adopt to achieve this outcome include: allowing a wider range of housing types (e.g., duplex or townhouses) in single-family zones, ensuring that there is sufficient land zoned to allow single-family attached and multifamily housing development, supporting development of government-assisted affordable housing, and encouraging multifamily residential development in downtown. The degree of change in Tualatin's housing market, however, will depend on market demand for these types of housing in Washington County.
- **If the future differs from the past, it is likely to move in the direction, on average, of smaller units and more diverse housing types.** Most of the evidence suggests that the bulk of the change will be in the direction of smaller average house and lot sizes for

[44] This forecast is based on Metro's 2040 *Population Distributed Forecast* (2016) for Tualatin from 2015 (extrapolated to 2020) to 2040 period, shown in Exhibit 31.

single-family housing. This includes providing opportunities for development of smaller single-family detached homes, townhomes, and multifamily housing.

Key demographic and economic trends that will affect Tualatin's future housing needs are: (1) the aging of the Baby Boomers, (2) the aging of the Millennials, and (3) the continued growth in Latinx population.

- *The Baby Boomer's population is continuing to age.* By 2040, people 60 years and older will account for 24% of the population in Washington County (up from 20% in 2020). The changes that affect Tualatin's housing demand as the population ages are that household sizes and homeownership rates decrease. The majority of Baby Boomers are expected to remain in their homes as long as possible, downsizing or moving when illness or other issues cause them to move. Demand for specialized senior housing, such as age-restricted housing or housing in a continuum of care from independent living to nursing home care, may grow in Tualatin.
- *Millennials will continue to form households and make a variety of housing choices.* As Millennials age and form households, generally speaking, their household sizes will increase, and their homeownership rates will peak by about age 55. Between 2020 and 2040, Millennials (and the generation after) will be a key driver in demand for housing for families with children. The ability to attract Millennials will depend on the City's availability of affordable renter and ownership housing. It will also depend on the location of new housing in Tualatin as many Millennials prefer to live in more urban environments.[45] The decline in homeownership among the Millennial generation has more to do with financial barriers rather than the preference to rent.[46]

- *Latinx population will continue to grow.* The U.S. Census projects that by about 2040, the Latinx population will account for one-quarter of the nation's population. The share of Latinx population in the Western U.S. is likely to be higher. The Latinx population currently accounts for about 16% of Tualatin's population. In addition, the Latinx population is generally younger than the U.S. average, with many Latinx people belonging to the Millennial generation.

  The Latinx population growth will be an important driver in growth of housing demand, both for owner- and renter-occupied housing. Growth in the Latinx population will drive demand for housing for families with children. Given the lower income for Latinx households, especially first-generation immigrants,

[45] Choi, Hyun June; Zhu, Jun; Goodman, Laurie; Ganesh, Bhargavi; Strochak, Sarah. (2018). Millennial Homeownership, Why is it So Low, and How Can We Increase It? Urban Institute. https://www.urban.org/research/publication/millennial-homeownership/view/full_report

[46] Ibid.

growth in this group will also drive demand for affordable housing, both for ownership and renting.[47]

In summary, an aging population, increasing housing costs (although lower than the Region), housing affordability concerns for Millennials and the Latinx populations, and other variables are factors that support the conclusion of need for a broader array of housing choices. Growth of retirees will drive demand for small single-family detached houses and townhomes for homeownership, townhome and multifamily rentals, age-restricted housing, and assisted-living facilities. Growth in Millennials and Latinx populations will drive demand for affordable housing types, including demand for affordable single-family units (many of which may be ownership units), for affordable multifamily units (many of which may be rental units), and for dwellings with a larger number of bedrooms.

- **No amount of analysis is likely to make the distant future completely certain: the purpose of the housing forecasting in this study is to get an approximate idea about the future (so policy choices can be made today).** Economic forecasters regard any economic forecast more than three (or at most five) years out as highly speculative. At one year, one is protected from being disastrously wrong by the sheer inertia of the economic machine. A variety of factors or events could, however, cause growth forecasts to be substantially different.

[47] The following articles describe housing preferences and household income trends for Latinx families, including differences in income levels for first, second, and third generation households. In short, Latinx households have lower median incomes than the national averages. First and second generation Latinx households have median incomes below the average for all Latinx households. Latinx households have a strong preference for homeownership, but availability of mortgages and availability of affordable housing are key barriers to homeownership for this group.

5. Housing Need in Tualatin

Project New Housing Units Needed in the Next 20 Years

The results of the housing needs analysis are based on: (1) Metro's official household forecast for growth in Tualatin over the 20-year planning period, (2) information about Tualatin's housing market relative to Washington County and the Portland Region, and (3) the demographic composition of Tualatin's existing population and expected long-term changes in the demographics of Washington County.

Forecast for Housing Growth

A 20-year household forecast (in this instance for 2020 to 2040) is the foundation for estimating needed new dwelling units. The forecast for Tualatin is based on Metro's 2040 Household Distributed Forecast, 2016 and Metro's 2040 TAZ Forecast for households, 2015. Tualatin city limits will grow from 10,994 households in 2020[48] to 12,008 households in 2040, an increase of 1,014 households.[49]

To accommodate new households, Exhibit 87 shows that Tualatin will have demand for 1,014 new dwelling units over the 20-year period, with an annual average of 51 dwelling units.

Exhibit 87. Forecast of demand for new dwelling units, Tualatin Planning Area (city limits and Basalt Creek), 2020 to 2040

Source: Metro's *2040 Household Distributed Forecast*, July 12, 2016. Metro's 2040 TAZ Forecast for households, November 6, 2015. Calculations by ECONorthwest. Note: DU is dwelling unit.

Variable	New DU City Limits	New DU Basalt Creek	New DU Tualatin Planning Area
Household Forecast 2020	10,791	203	10,994
Household Forecast 2040	11,362	646	12,008
Total New Dwelling Units (2020-2040)	**571**	**443**	**1,014**
Annual Average of New Dwelling Units	**29**	**22**	**51**

[48] Metro's *2040 Household Distributed Forecast* shows that in 2015, the Tualatin city limits had 10,653 households. The Metro forecast shows Tualatin growing to 11,362 households in 2040, an average annual growth rate of 0.26% for the 25-year period. Using this growth rate, ECONorthwest extrapolated the forecast to 2020 (10,791 households).

In addition, ECONorthwest included the forecast for new households in the Basalt Creek Planning Area. The forecast for households in Basalt Creek derive from Metro's 2040 TAZ Forecast for households (TAZ 980 and 981). The Metro forecast shows Basalt Creek growing to 646 households in 2040, an average annual growth rate of 5.96% for the 25-year period. Using this growth rate, ECONorthwest extrapolated the forecast from 2015 (152 households) to 2020 (203 households).

[49] This forecast is based on Tualatin city limits' official household forecast from Metro for the 2020 to 2040 period.

Housing Units Needed Over the Next 20 Years

Exhibit 87 presents a forecast of new housing in Tualatin for the 2020 to 2040 period. This section determines the needed mix and density for the development of new housing developed over this 20-year period in Tualatin.

Exhibit 89 shows that over the next 20-years, the need for new housing developed in Tualatin will generally include a wider range of housing types across the affordability spectrum. This conclusion is consistent with housing need in other in the Portland Region and most cities across the State. This conclusion is based on the following information, found in Chapter 3 and 4 of this report.

- Tualatin's housing mix is predominately single-family detached and multifamily. In the 2013-2017 period, 53% of Tualatin's housing was single-family detached, 41% was multifamily, and 6% was single-family attached. In comparison, the mix of housing for the entire Portland Region was 63% single-family detached, 32% multifamily, and 5% single-family attached.
- Demographic changes across the Portland Region (and in Tualatin) suggest increases in demand for single-family attached housing and multifamily housing. The key demographic trends that will affect Tualatin's future housing needs are the aging of the Baby Boomers, household formation of Millennial households, and growth of Latinx households.
- Tualatin households have incomes about the same as those for the Portland Region. Tualatin's median household income was $72,580, about $1,500 lower than Washington County's median. Approximately 36% of Tualatin households earn less than $50,000 per year, compared to 33% in Washington County and 37% in the Portland Region.
- About 37% of Tualatin's households are cost burdened (paying 30% or more of their household income on housing costs), compared to 42% of households in the Portland Region and 34% in Washington County.[50] About 56% of Tualatin's renters are cost burdened and about 22% of Tualatin's homeowners are cost burdened.
- About 45% of Tualatin's households are renters, 82% of whom live in multifamily housing. Median rents in Tualatin are $1,154 per month, compared to the $1,183 median rent for Washington County as a whole.

  A household earning 60% of Tualatin's median household income ($43,548) could afford about $1,089 per month in rent. A household with median income in Tualatin ($72,580) could afford $1,815 rent per month, compared with the median gross rent of $1,154. About 41% of Tualatin's housing stock is multifamily, compared to 32% of the housing in the Portland Region.

[50] The Department of Housing and Urban Development's guidelines indicate that households paying more than 30% of their income on housing experience "cost burden," and households paying more than 50% of their income on housing experience "severe cost burden."

- Housing sales prices increased in Tualatin over the last four years. From February 2015 to February 2019, the median housing sale price increased by $160,000 (50%), from $320,000 to $480,000. A household would need to earn $120,000 to $160,000 to afford the median sales price in Tualatin. About 36% of Tualatin's households have incomes at or above this amount.
- Tualatin needs more affordable housing types for homeowners and renters. A household earning 100% of Tualatin's median household income of $72,580 could afford about $1,815 per month in rent, compared with the median gross rent of about $1,154. This household could afford to own a home roughly valued between $254,000 and $290,000, which is less than the median home sales price of about $480,000 in Tualatin.[51]

  While a household could begin to afford Tualatin's median rents at about 65% of Tualatin's median household income, the rates of cost burden among renters suggest that Tualatin does not have a sufficient number of affordable rental units. A household can start to afford median home sale prices at about 190% of Tualatin's median household income.

These factors suggest that Tualatin needs a broader range of housing types with a wider range of price points than are currently available in Tualatin's housing stock. This includes providing opportunity for development of housing types such as: single-family detached housing (e.g., small homes like cottages or small-lot detached units, traditional detached homes, and high-amenity detached homes), townhouses, and multifamily products (duplexes, triplexes, quadplexes, and apartments and condominiums).

Tualatin evaluated several scenarios to forecast housing growth (Exhibit 88). The scenario selected, and described below, was a combination between Scenario 2 and Scenario 3 (referred to here as Scenario 4). Scenario 4 was 40% single-family detached, 15% multifamily, and 45% multifamily.

[51] In 2016, 2017, and 2018, 19 homes in Tualatin sold within the $254,000 and $290,000 price range (out of 268 homes).

Exhibit 88. Forecast of demand for new dwelling units, Tualatin Planning Area (city limits and Basalt Creek), 2020 to 2040
Source: Calculations by ECONorthwest. Note: DU is dwelling unit.

Variable	Mix of New Dwelling Units (2020-2040)			
	Scenario 1	Scenario 2	Scenario 3	Scenairo 4
Needed new dwelling units (2020-2040)	1,014	1,014	1,014	1,014
Dwelling units by structure type

Total new multifamily	416	456	507	456
equals Total new dwelling units (2020-2040)	**1,014**	**1,014**	**1,014**	**1,014**

Exhibit 89 shows the final forecast for housing growth in the Tualatin city limits during the 2020 to 2040 period. The projection is based on the following assumptions:

- Tualatin's official forecast for population growth shows that the city will add 1,014 households over the 20-year period. Exhibit 89 shows Metro's forecast for growth of 1,014 new dwelling units over the 20-year planning period.
- The assumptions about the mix of housing in Exhibit 89 are consistent with the requirements of OAR 660-007[52]:
  - **About 40% of new housing will be single-family detached**, a category which includes manufactured housing. In 2013-2017, 53% of Tualatin's housing was single-family detached.
  - **Nearly 15% of new housing will be single-family attached.** In 2013-2017, 6% of Tualatin's housing was single-family attached.
  - **About 45% of new housing will be multifamily**. In 2013-2017, 41% of Tualatin's housing was multifamily.

[52] OAR 660-007-0030(1) requires that most Metro cities "…provide the opportunity for at least 50 percent of new residential units to be attached single family housing or multiple family housing…"

Tualatin will have demand for 1,014 new dwelling units over the 20-year period, 40% of which will be single-family detached housing.

Exhibit 89. Forecast of demand for new dwelling units, Tualatin Planning Area, 2020 to 2040
Source: Calculations by ECONorthwest.

Variable	Mix of New Dwelling Units (2020-2040)
Needed new dwelling units (2020-2040)	1,014
Dwelling units by structure type	
Single-family detached	
Percent single-family detached DU	40%
***equals* Total new single-family detached DU**	406
Single-family attached	
Percent single-family attached DU	15%
***equals* Total new single-family attached DU**	152
Multifamily	
Percent multifamily	45%
Total new multifamily	456
equals Total new dwelling units (2020-2040)	**1,014**

The forecast of new units does not include dwellings that will be demolished and replaced. This analysis does not factor those units in; however, it assumes they will be replaced at the same site and will not create additional demand for residential land.

Exhibit 90 allocates needed housing to Plan Designations in Tualatin. The allocation is based, in part, on the types of housing allowed in the zoning designations in each Plan Designation.

Exhibit 90 shows:

- **Low Residential (RL)** land will accommodate single-family detached housing, including manufactured houses. Low density will also accommodate duplexes, triplexes, quadplexes, cottage clusters, and townhouses based on the requirements of House Bill 2001.
- **Medium Low Residential (RML)** land will accommodate duplexes, townhomes (or rowhouses), and manufactured homes in manufactured housing parks. For consistency with the housing types allowed in Low Residential, this analysis assumes that RML will also allow triplexes and quadplexes.
- **Medium High Residential (RMH)** land will accommodate duplexes, townhomes (or rowhouses), and multifamily housing.
- **High Density Residential (RH)** land will accommodate duplexes, townhomes (or rowhouses), and multifamily housing.
- **High Density High Rise Residential (RH-HR)** land will accommodate duplexes, townhomes (or rowhouses), and multifamily housing.

Exhibit 90. Allocation of needed housing by housing type and Plan Designation, Tualatin Planning Area, 2020 to 2040
Source: ECONorthwest.

Housing Type	Residential Plan Designations					Total
	Low Density	Medium Low Density	Medium High Density	High Density	High High-Rise	
Dwelling Units

Single-family attached	3%	4%	2%	6%	0%	15%
Multifamily	3%	3%	10%	19%	10%	45%
Total	46%	7%	12%	25%	10%	100%

Exhibit 91 presents assumptions about future housing density based on historical densities in Tualatin shown in Exhibit 18. Exhibit 91 converts between net acres and gross acres[53] to account for land needed for rights-of-way by Plan Designation in Tualatin, based on Metro's methodology of existing rights-of-way.[54]

- **Low Residential (RL):** Average density in this Plan Designation was historically 5.7 dwelling units per gross acre in tax lots smaller than 0.38 acres and no land is needed for rights-of-ways based on Metro's assumptions. For lots between 0.38 and 1.0 acres the future density will be 5.1 dwelling units per gross acre, and for lots larger than 1.0 acres the future density will be 4.6 dwelling units per gross acre.
- **Medium Low Residential (RML):** Average density in this Plan Designation was historically 11.7 dwelling units per gross acre in tax lots smaller than 0.38 acres and no land is needed for rights-of-ways based on Metro's assumptions. For lots between 0.38 and 1.0 acres the future density will be 10.5 dwelling units per gross acre, and for lots larger than 1.0 acres the future density will be 9.5 dwelling units per gross acre.
- **Medium High Residential (RMH):** Average density in this Plan Designation was historically 16.1 dwelling units per gross acre in tax lots smaller than 0.38 acres and no land is needed for rights-of-ways based on Metro's assumptions. For lots between 0.38

[53] OAR 660-024-0010(6) uses the following definition of net buildable acre. "Net Buildable Acre" "…consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads." While the administrative rule does not include a definition of a gross buildable acre, using the definition above, a gross buildable acre will include areas used for rights-of-way for streets and roads. Areas used for rights-of-way are considered unbuildable.

[54] Metro's methodology about net-to-gross assumptions are that: (1) tax lots under 3/8 acre assume 0% set aside for future streets; (2) tax lots between 3/8 acre and 1 acre assume a 10% set aside for future streets; and (3) tax lots greater than an acre assumes an 18.5% set aside for future streets. The analysis assumes an 18.5% assumption for future streets.

and 1.0 acres the future density will be 14.5 dwelling units per gross acre, and for lots larger than 1.0 acres the future density will be 13.1 dwelling units per gross acre.

- **High Density Residential (RH):** Average density in this Plan Designation was historically 20.5 dwelling units per gross acre in tax lots smaller than 0.38 acres and no land is needed for rights-of-ways based on Metro's assumptions. For lots between 0.38 and 1.0 acres the future density will be 18.4 dwelling units per gross acre and, for lots larger than 1.0 acres the future density will be 16.7 dwelling units per gross acre.
- **High Density High Rise Residential (RH-HR):** Average density in this Plan Designation was historically 28.0 dwelling units per gross acre in tax lots smaller than 0.38 acres and no land is needed for rights-of-ways based on Metro's assumptions. For lots between 0.38 and 1.0 acres the future density will be 15.2 dwelling units per gross acre, and for lots larger than 1.0 acres the future density will be 22.8 dwelling units per gross acre.

Exhibit 91. Assumed future density of housing built in the Tualatin Planning Area, 2020 to 2040
Source: ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Tax Lots Smaller than 0.38 acre			Tax Lots > 0.38 and < 1.0 acre			Tax Lots larger than 1.0 acre		
	Net Density (DU/net acre)	% for Rights-of-Way	Gross Density (DU/gross acre)	Net Density (DU/net acre)	% for Rights-of-Way	Gross Density (DU/gross acre)	Net Density (DU/net acre)	% for Rights-of-Way	Gross Density (DU/gross acre)
Low Density	5.7	0%	5.7	5.7	10%	5.1	5.7	18.5%	4.6
Medium Low Density	11.7	0%	11.7	11.7	10%	10.5	11.7	18.5%	9.5
Medium High Density	16.1	0%	16.1	16.1	10%	14.5	16.1	18.5%	13.1
High Density	20.5	0%	20.5	20.5	10%	18.4	20.5	18.5%	16.7
High Density / High-Rise	28.0	0%	28.0	28.0	10%	25.2	28.0	18.5%	22.8

Through the Housing Strategy, Tualatin may consider increasing densities in specific zones. For example, the City may consider increasing the allowed densities in High Density / High-Rise (and adjusting related zoning standards, such as building heights) to allow higher density multifamily housing than is currently allowed in Tualatin.

Needed Housing by Income Level

The next step in the housing needs analysis is to develop an estimate of need for housing by income and housing type. This analysis requires an estimate of the income distribution of current and future households in the community. Estimates presented in this section are based on (1) secondary data from the Census, and (2) analysis by ECONorthwest.

The analysis in Exhibit 92 is based on American Community Survey data about income levels for existing households in Tualatin. Income is categorized into market segments consistent with HUD income level categories, using Washington County's 2018 Median Family Income (MFI) of $81,400. The Exhibit is based on existing household income distribution, assuming that approximately the same percentage of households will be in each market segment in the future.

About a third of Tualatin's future households are forecast to be extremely or very low income and nearly 40% are forecast to have high incomes.

Exhibit 92. Future (New) Households, by Median Family Income (MFI) for Washington County ($69,600), Tualatin Planning Area, 2018

Need for Government-Assisted and Manufactured Housing

ORS 197.303, 197.307, 197.312, and 197.314 requires cities to plan for government-assisted housing, manufactured housing on lots, and manufactured housing in parks.

- **Government-assisted housing.** Government subsidies can apply to all housing types (e.g., single-family detached, apartments, etc.). Tualatin allows development of government-assisted housing in all residential Plan Designations, with the same development standards for market-rate housing. This analysis assumes that Tualatin will continue to allow government housing in all of its residential Plan Designations. Because government assisted housing is similar in character to other housing (with the exception being the subsidies), it is not necessary to develop separate forecasts for government-subsidized housing.
- **Farmworker housing.** Farmworker housing can apply to all housing types and the City allows development of farmworker housing in all residential Plan Designations, with the same development standards as market-rate housing. This analysis assumes that Tualatin will continue to allow this housing in all of its residential Plan Designations. Because it is similar in character to other housing (with the possible exception of government subsidies, if population restricted), it is not necessary to develop separate forecasts for farmworker housing.
- **Manufactured housing on lots.** Tualatin allows manufactured homes on lots in Low Density Residential zones.
- **Manufactured housing in parks.** Tualatin allows manufactured homes in parks in Medium Low Density zones. According to the Oregon Housing and Community Services' Manufactured Dwelling Park Directory,[55] Tualatin has two manufactured home parks with 178 spaces.
- ORS 197.480(2) requires Tualatin to project need for mobile home or manufactured dwelling parks based on: (1) population projections, (2) household income levels, (3) housing market trends, and (4) an inventory of manufactured dwelling parks sited in areas planned and zoned or generally used for commercial, industrial, or high density residential.
    - Exhibit 87 shows that Tualatin will grow by 1,014 dwelling units over the 2020 to 2040 period.
    - Analysis of housing affordability shows that about 31% of Tualatin's new households will be considered very low or extremely low income, earning 50% or less of the region's median family income. One type of housing affordable to these households is manufactured housing.

[55] Oregon Housing and Community Services, Oregon Manufactured Dwelling Park Directory, http://o.hcs.state.or.us/MDPCRParks/ParkDirQuery.jsp

- Manufactured homes in manufactured housing parks accounts for about 2% (about 178 dwelling units) of Tualatin's current housing stock.
- National, state, and regional trends since 2000 showed that manufactured housing parks are closing, rather than being created. For example, between 2000 and 2015, Oregon had 68 manufactured parks close, with more than 2,700 spaces. Discussions with several stakeholders familiar with manufactured home park trends suggest that over the same period, few to no new manufactured home parks have opened in Oregon.
- The households most likely to live in manufactured homes in parks are those with incomes between $24,420 and $40,700 (30% to 50% of MFI), which include 15% of Tualatin's households. However, households in other income categories may live in manufactured homes in parks.

  Manufactured home subdivision development is an allowed use in the Medium Low Density Plan Designation. The national and state trends of closure of manufactured home parks, and the fact that no new manufactured home parks have opened in Oregon in over the last 15 years, demonstrate that development of new manufactured home parks or subdivisions in Tualatin is unlikely.

  Our conclusion from this analysis is that development of new manufactured home parks or subdivisions in Tualatin over the 2020 to 2040 planning period is unlikely, although manufactured homes may continue to locate on lots in the Low Density Plan Designation. The forecast of housing assumes that no new manufactured home parks will be opened in Tualatin over the 2020 to 2040 period. The forecast for new dwelling units includes new manufactured homes on lots in the category of single-family detached housing.
- Over the next 20 years (or longer) one or both of Tualatin's manufactured housing parks may close. This may be a result of the manufactured home park landowners selling or redeveloping their land for uses with higher rates of return, rather than lack of demand for spaces in manufactured home parks. Manufactured home parks contribute to the supply of low-cost affordable housing options, especially for affordable homeownership.

  While there is statewide regulation of the closure of manufactured home parks designed to lessen the financial difficulties of this closure for park residents,[56] the City has a role to play in ensuring that there are opportunities for housing for the displaced residents. The City's primary roles are to ensure that there is sufficient land zoned for new multifamily housing and to reduce barriers to residential

[56] ORS 90.645 regulates rules about closure of manufactured dwelling parks. It requires that the landlord must do the following for manufactured dwelling park tenants before closure of the park: give at least one year's notice of park closure, pay the tenant between $5,000 to $9,000 for each manufactured dwelling park space, and cannot charge tenants for demolition costs of abandoned manufactured homes.

development to allow for development of new, relatively affordable housing (i.e. housing affordable to households earning less than 80% of MFI and especially those earning less than 60% of MFI). The City may use a range of policies to encourage development of relatively affordable housing, such as allowing a wider range of moderate density housing (e.g., duplexes or cottages) in Low Density Plan Designation, removing barriers to multifamily housing development, using tax credits to support affordable housing production, developing an inclusionary zoning policy, or partnering with a developer of government-subsidized affordable housing.

6. Residential Land Sufficiency within Tualatin

This chapter presents an evaluation of the sufficiency of vacant residential land in Tualatin to accommodate expected residential growth over the 2020 to 2040 period. This chapter includes an estimate of residential development capacity (measured in new dwelling units) and an estimate of Tualatin's ability to accommodate needed new housing units for the 2020 to 2040 period, based on the analysis in the housing needs analysis. The chapter ends with a discussion of the conclusions and recommendations for the housing needs analysis.

Capacity Analysis

The buildable lands inventory summarized in Chapter 2 (and presented in full in Appendix A) provides a *supply* analysis (buildable land by type), and Chapter 5 provided a *demand* analysis (population and growth leading to demand for more residential development). The comparison of supply and demand allows the determination of land sufficiency.

There are two ways to calculate estimates of supply and demand into common units of measurement to allow their comparison: (1) housing demand can be converted into acres, or (2) residential land supply can be converted into dwelling units. A complication of either approach is that not all land has the same characteristics. Factors such as zone, slope, parcel size, and shape can affect the ability of land to accommodate housing. Methods that recognize this fact are more robust and produce more realistic results. This analysis uses the second approach: it estimates the ability of vacant residential lands within the UGB to accommodate new housing. This analysis, sometimes called a "capacity analysis,"[57] can be used to evaluate different ways that vacant residential land may build out by applying different assumptions.

[57] There is ambiguity in the term *capacity analysis*. It would not be unreasonable for one to say that the "capacity" of vacant land is the maximum number of dwellings that could be built based on density limits defined legally by plan designation or zoning, and that development usually occurs—for physical and market reasons—at something less than full capacity. For that reason, we have used the longer phrase to describe our analysis: "estimating how many new dwelling units the vacant residential land in the UGB is likely to accommodate." That phrase is, however, cumbersome, and it is common in Oregon and elsewhere to refer to that type of analysis as "capacity analysis," so we use that shorthand occasionally in this memorandum.

Tualatin Capacity Analysis Results

The capacity analysis estimates the development potential of vacant residential land to accommodate new housing, based on the needed densities shown in Exhibit 91. Exhibit 95 shows that **Tualatin city limit's** (Exhibit 93) **and Basalt Creek's** (Exhibit 94) **buildable land has capacity to accommodate approximately 1,207 new dwelling units**, based on the following assumptions:

- **Buildable residential land.** The capacity estimates start with the number of buildable acres in residential Plan Designations, per the buildable lands inventory, for city limits. It starts with the number of buildable acres in residential Plan Designations, per the Basalt Creek Concept Plan, for Basalt Creek.
- **Needed densities.** The capacity analysis assumes development will occur at assumed future densities. Those densities were derived from the densities shown in Exhibit 91.
- **Average net density.** Exhibit 93 shows capacity and densities in gross acres. OAR 660-007 requires that Tualatin provide opportunity for development of housing at an overall average density of eight dwelling units per net acre. The average density of dwelling units in Exhibit 93 is 7.9 dwelling units per net acre and 6.7 dwelling units per gross acre. The average net density of dwelling units in Exhibit 95 is approximately 7.9 dwelling units per net acres and 6.6 dwelling units per gross acre.

Exhibit 93. Estimate of residential capacity on unconstrained vacant and partially vacant buildable land, Tualatin City Limits, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Tax Lots Smaller than 0.38 acre			Tax Lots > 0.38 and < 1.0 acre			Tax Lots larger than 1.0 acre			Total, combined	
	Buildable Acres	Density Assumption (DU/gross acre)	Capacity (Dwelling Units)	Buildable Acres	Density Assumption (DU/gross acre)	Capacity (Dwelling Units)	Buildable Acres	Density Assumption (DU/gross acre)	Capacity (Dwelling Units)	Buildable Acres	Capacity (Dwelling Units)
Low Density	18	5.7	100	17	5.1	85	44	4.6	204	79	389
Medium Low Density	0	11.7	5	1	10.5	7	0	9.5	-	1	12
Medium High Density	0	16.1	-	0	14.5	-	1	13.1	13	1	13
High Density	0	20.5	6	0	18.4	7	12	16.7	205	13	218
High High-Rise	0	28.0	-	0	25.2	-	0	22.8	-	0	-
Total	18	-	111	18	-	99	58	-	422	94	632

Exhibit 94. Estimate of residential capacity on unconstrained vacant and partially vacant buildable land, Basalt Creek, 2018

Source: *Basalt Creek Concept Plan. Note: this table uses the Basalt Creek Concept Plan's estimate for capacity and of buildable land; it does not rely on historic net densities by Plan Designation to calculate capacity on buildable lands. Historic net densities in Basalt Creek were not increased as they were in the estimate of capacity for Tualatin city limits. The amount of buildable land in Exhibit 90 is based on the Basalt Creek Concept Plan and is different than the amount of buildable land shown in* Exhibit 7*of the Buildable Lands Inventory.*

Residential Plan Designations	Dwelling Units	Buildable Acres from Basalt Creek Concept Plan	Density Assumption (DU per Gross Acre)
Low Density	134	24.8	5.4
Medium Low Density	374	59.8	6.3
High Density	67	3.4	19.9
Total	575	88	6.5

Exhibit 95. Estimate of residential capacity on unconstrained vacant and partially vacant buildable land, Tualatin Planning Area, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note1: DU is dwelling unit. Note2: Capacity in Basalt Creek uses the Basalt Creek Concept Plan's estimate of capacity (*Exhibit 94*).*

Residential Plan Designations	Dwelling Units		
	Capacity (in City Limits)	Capacity (in Basalt Creek Concept Plan)	Capacity (Total)
Low Density	389	134	523
Medium Low Density	12	374	386
Medium High Density	13	-	13
High Density	218	67	285
High Density / High-Rise	-	-	-
Total	632	575	1,207

The amount of buildable land in Basalt Creek in the BLI (Exhibit 7) is more than the amount of buildable land from the Basalt Creek Concept Plan (Exhibit 94). The reason for the difference in capacity is primarily differences in assumptions about land constraints to development of vacant land. The Concept Plan assumed that more land would have soft constraints (that would decrease development capacity) and be unbuildable than the buildable lands inventory for this analysis.

Exhibit 96 shows an estimate of the additional capacity for development in Basalt Creek, if buildout occurs at densities consistent with development in Tualatin (the densities shown in Exhibit 91) and the amount of buildable land is consistent with the buildable lands inventory in this report (Exhibit 7). Under those conditions, Basalt Creek has capacity for 1,339 dwelling units, which is 764 dwelling units beyond the capacity in the Basalt Creek Concept Plan.

Exhibit 96. Estimate of additional residential capacity on unconstrained vacant and partially vacant buildable land, Basalt Creek, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Capacity for Dwelling Units (using BLI)	Capacity for Dwelling Units (using Concept Plan)	Additional Capacity Potentially Available
Low Density	433	134	299
Medium Low Density	804	374	430
High Density	102	67	35
Total	1,339	575	764

Residential Land Sufficiency

The next step in the analysis of the sufficiency of residential land within Tualatin is to compare the demand for housing by Plan Designation (Exhibit 90) with the capacity of land by Plan Designation (Exhibit 95), which does **not** include the potential additional capacity in Basalt Creek discussed in Exhibit 96.

Exhibit 97 shows that Tualatin has sufficient land to accommodate development in the Low Density Plan Designation, Medium Low Density Plan Designation, and High Density Plan Designation – with a surplus of capacity for 57 dwelling units, 315 dwelling units, and 31 dwelling units respectively. Tualatin has a deficit of capacity for 109 dwelling units in the Medium High Plan Designation and a deficit of capacity for 101 dwelling units in the High Density High-Rise Plan Designation. **The land sufficiency results *are* inclusive of capacity of land in Basalt Creek but *are not* inclusive of capacity which may become available as redevelopment occurs.**

Exhibit 97. Comparison of capacity of existing residential land with demand for new dwelling units and land surplus or deficit, Tualatin City Limits and Basalt Creek, 2020 to 2040
Source: Buildable Lands Inventory; Calculations by ECONorthwest. *Note: DU is dwelling unit.*

Residential Plan Designations	Capacity (Dwelling Units)	Demand for New Housing	Remaining Capacity (Supply minus Demand)	Land Surplus or (Deficit) *Gross Acres*
Low Density	523	466	57	10
Medium Low Density	386	71	315	27
Medium High Density	13	122	(109)	(7)
High Density	285	254	31	2
High Density High-Rise	-	101	(101)	(4)

Tualatin's surplus of Low Density Residential capacity (57 dwelling units) means that the City has an approximate surplus of 10 gross acres of Low Density land (at 5.7 dwelling units per gross acre). Tualatin's surplus of Medium Low Density Residential capacity (315 dwelling units) means that the City has an approximate surplus of 27 gross acres of Medium Low Density land (at 11.7 dwelling units per gross acre).[58] Tualatin's surplus of High Density Residential capacity (31 dwelling units) means that the City has an approximate surplus of two gross acres of High Density Land (at 20.5 dwelling units per gross acre).

This estimate of capacity does **not** include the potential additional capacity in Basalt Creek, shown in Exhibit 96. If Basalt Creek builds out with more housing than shown in the Concept Plan (shown in Exhibit 94), then Tualatin has about 764 dwelling units of additional capacity, all in Low Density, Medium Low Density, and High Density Plan Designations.

[58] This estimate of land is approximate, as densities in Medium Low Density may range from 11.7 to 9.5 dwelling units per gross acre depending on parcel size, as shown in Exhibit 91.

Conclusions and Recommendations

The key findings of the Tualatin Housing Needs Analysis are that:

- **Growth in housing will be driven by growth in households.** Households in Tualatin's city limits is forecast to grow from 10,791 households to 11,362 households, an increase of 571 households between 2020 and 2040. In that same time, households in Basalt Creek are forecast to grow from 203 households to 646 households, an increase of 443 households.
- **To accommodate households in Tualatin city limits and Basalt Creek, Tualatin is planning for 1,014 new dwelling units.** To accommodate the 1,014 dwelling units over the 20-year planning period, Tualatin will average 51 new dwelling units annually.
- **Tualatin will plan for more single-family attached and multifamily dwelling units in the future to meet the City's housing needs.** Historically, about 53% of Tualatin's housing was single-family detached. New housing in Tualatin is forecast to be 40% single-family detached, 15% single-family attached, and 45% multifamily.
    - The factors driving the shift in types of housing needed in Tualatin include changes in demographics and decreases in housing affordability. The aging of senior populations and the household formation of young adults will drive demand for renter- and owner-occupied housing, such as small single-family detached housing, townhouses, duplexes, and apartments / condominiums. Both groups may prefer housing in walkable neighborhoods, with access to services.
    - Tualatin's existing deficit of housing that is affordable for low- and high-income households indicates a need for a wider range of housing types, for renters and homeowners. About 37% of Tualatin's households have affordability problems, including a cost burden rate of 56% for renter households.
    - Without diversification of housing types, lack of affordability will continue to be a problem, possibly growing in the future if incomes continue to grow at a slower rate than housing costs. Under the current conditions, 307 of the forecasted new households will have incomes of $40,700 (in 2018 dollars) or less (50% of MFI income or less). These households cannot afford market rate housing without government subsidy. Another 151 new households will have incomes between $40,700 and $65,120 (50% to 80% of MFI). These households will all need access to affordable housing, such as the housing types described above.
- **Tualatin cannot accommodate all of its housing needs.** Tualatin has a deficit of land in the Medium High Density and High Density High Rise Plan Designations, of 7 acres and 4 acres respectively. The deficits shown in Exhibit 97 may be addressed in multiple ways, such as by re-zoning land, increasing densities allowed in Plan Designations with deficits, or by accommodating housing in Plan Designations with surpluses.

- **Tualatin will need to meet the requirements of House Bill 2001.** The Legislature passed House Bill 2001 in the 2019 Legislative session. The bill requires cities within the Metro UGB to allow "middle" housing types in low-density residential zones. The bill defines middle housing types as: duplexes, triplexes, quadplexes, cottage clusters, and townhouses. To comply with House Bill 2001, Tualatin will need to:
  - Allow cottage cluster as a housing type in the Residential Low Density zone. Tualatin may want to allow cottage cluster housing in the Medium-Low Density and Medium-High Density zones. Tualatin will also need to include development standards in the Tualatin Development Code.
  - Allow duplexes, townhouses, and multifamily housing as a permitted use in the Residential Low Density zone.

Following is a summary of ECONorthwest's recommendations to Tualatin based on the analysis and conclusions in this report. The *Tualatin Housing Strategy* memorandum presents the full list of recommendations for Tualatin.

- **Ensure an adequate supply of land that is available and serviceable.** Tualatin should evaluate opportunities to increase residential development densities by modifying the Development Code, such as increasing densities and height limits in higher density zones. Tualatin should identify opportunities to re-zone land, from lower density usage to higher density usage, to provide additional opportunities for multifamily housing development. Tualatin should plan for long-term development of housing in Tualatin through 2040 and beyond by working with Metro on upcoming Growth Management reports.
- **Encourage development of a wider variety of housing types.** Tualatin should allow duplexes, triplexes, quadplexes, cottage clusters, and townhouses in the Residential Low Density zone and allow cottage cluster housing in the Medium-Low Density and Medium-High Density zones (which already allow for the other housing types mentioned). These changes should be made in a way that makes the City's zoning code compliant with House Bill 2001.
- **Support development and preservation of housing that is affordable for all households.** The City should develop policies to support development of housing affordable to people who live and work in Tualatin. The City should identify opportunities to leverage resources (including funding) from the Metro Bond to support development of housing affordable to households earning less than 60% of Median Family Income in Washington County ($48,900 for a household size of four people). The City should develop policies to prevent and address homelessness, as well as to prevent and mitigate residential displacement resulting from redevelopment and increases in housing costs. These actions will require Tualatin to evaluate adoption of a wide variety of housing policies such as creative financing opportunities for systems development charges, evaluating tax exemption programs, participating in a land bank, and other approaches to supporting development of housing affordable at all income levels.

- **Identify funding tools to support residential development.** The City should evaluate tools such as establishing a new Urban Renewal District and evaluate establishing a construction excise tax.
- **Identify redevelopment opportunities.** The City should identify districts within Tualatin with opportunities for redevelopment for both housing and employment uses, as well as supporting redevelopment of underutilized commercial buildings for housing.
- **Ensure there are connections between planning for housing and other community planning**. Throughout the project, stakeholders emphasized the need to coordinate housing planning with economic development planning, transportation planning, and other community planning. Updates to the Tualatin Transportation System Plan should be coordinated with planning for housing growth. A key approach to accommodating new residential development is redevelopment that results in mixed-use districts, providing opportunities for more housing affordable to people working at businesses in Tualatin and living closer to work (thus reducing transportation issues). In addition, stakeholders would like to see the incorporation of services needed to meet daily needs of residents of neighborhoods without driving.

The *Tualatin Housing Strategy* memorandum presents more details about each of these topics and recommendations for specific actions to implement these recommendations.

Appendix A – Residential Buildable Lands Inventory

The general structure of the standard method BLI analysis is based on the DLCD HB 2709 workbook "*Planning for Residential Growth – A Workbook for Oregon's Urban Areas*," which specifically addresses residential lands.[59] The steps and sub-steps in the supply inventory are:

1. Calculate the gross vacant acres by plan designation, including fully vacant and partially vacant parcels.

2. Calculate gross buildable vacant acres by plan designation by subtracting unbuildable acres from total acres.

3. Calculate net buildable acres by plan designation, subtracting land for future public facilities from gross buildable vacant acres.

4. Calculate total net buildable acres by plan designation by adding redevelopable acres to net buildable acres.

The methods used for this study are consistent with many others completed by ECONorthwest that have been acknowledged by DLCD and LCDC.

Overview of the Methodology

The BLI for Tualatin is based on the data and methods used by Metro. In addition, ECONorthwest's approach updated Metro's results to account for new development (the Metro 2018 UGR is based on 2016 data) and other potential local conditions, such as unique environmental constraints.

Study Area

The BLI for Tualatin includes all residential land designated in the comprehensive plans within city limits and designated planning areas (referred to as Tualatin Planning Area). ECONorthwest used the most recent tax lot shapefile from Metro's Regional Land Information System (RLIS) for the analysis.

Inventory Steps

The BLI consisted of several steps:

1. Generating UGB "land base"
2. Classifying land by development status

[59] We note that Newberg is not required to comply with ORS 197.296.

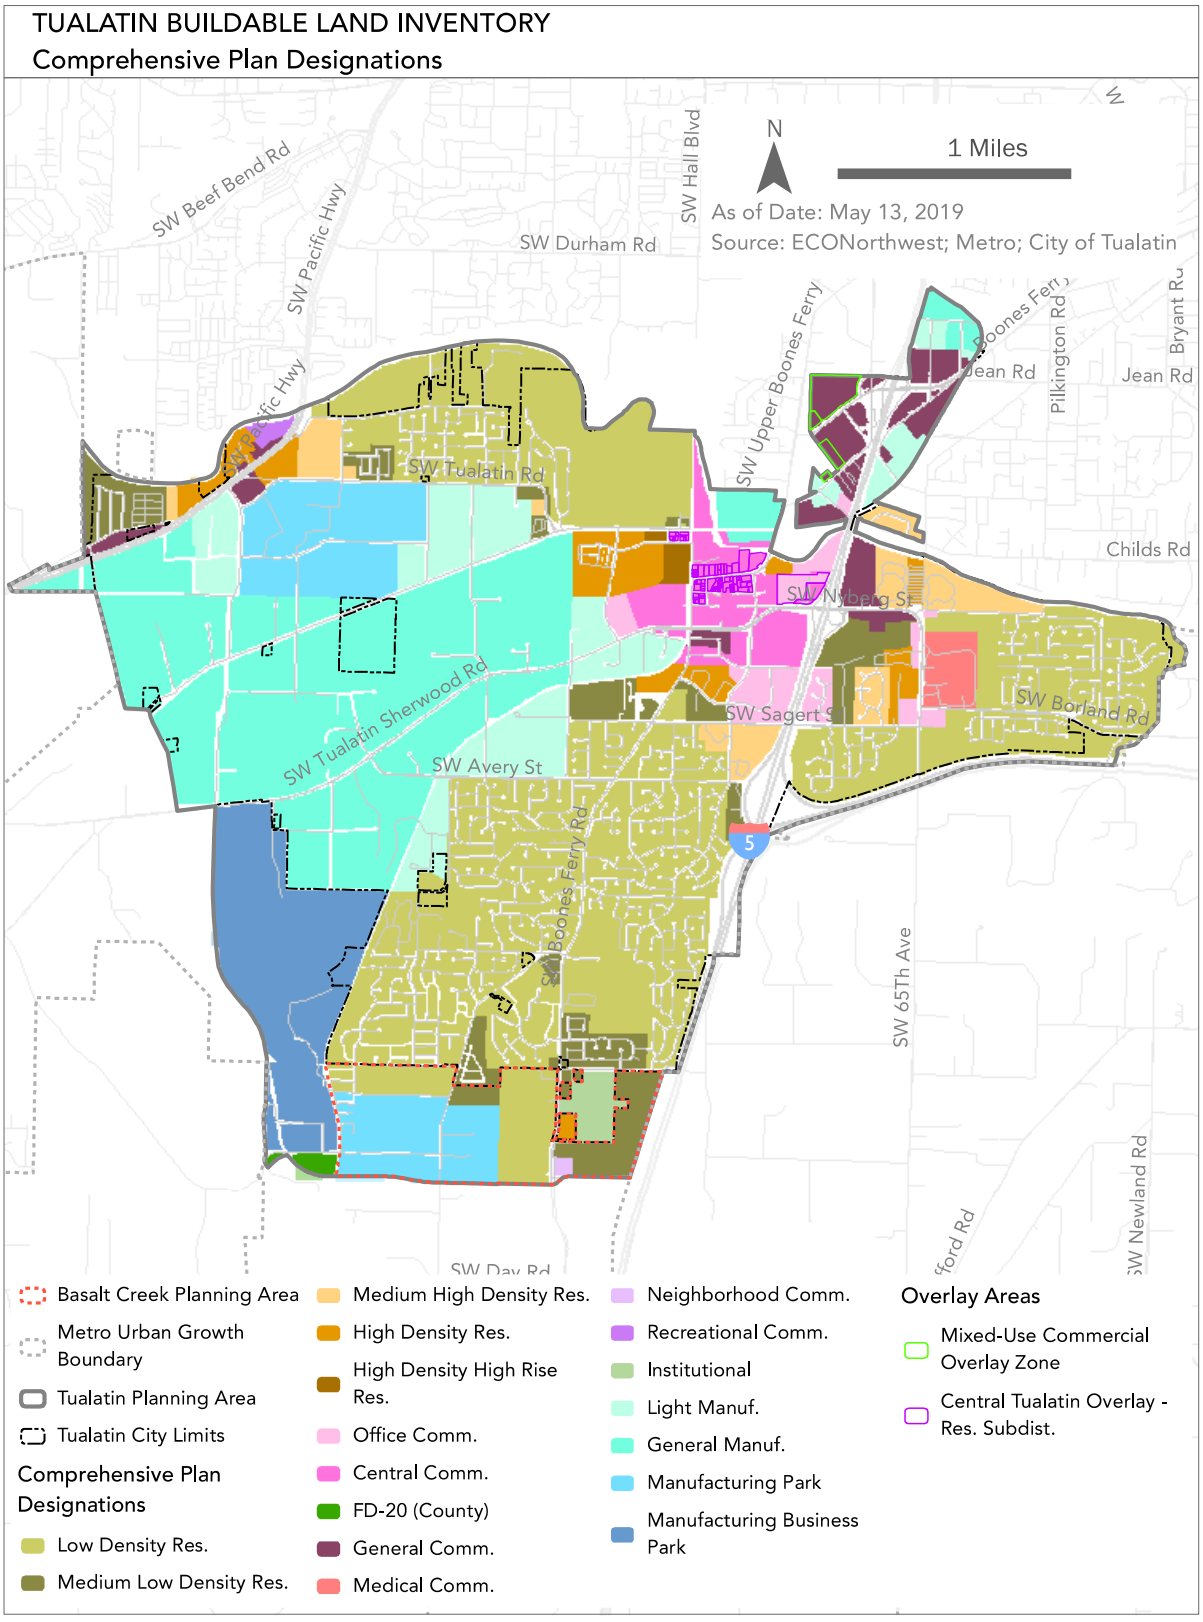
3. Identify constraints
4. Verify inventory results
5. Tabulate and map results

Step 1: Generate "land base."

Per Goal 10 this involves selecting all of the tax lots with residential and other non-employment Plan Designations where residential uses are planned for and allowed by the implementing zones. The City provided ECO with their Comprehensive Plan GIS files and indicated what designations should be included within the inventory.

Exhibit 98 (on the following page) shows Comprehensive Plan designations for the City of Tualatin. This BLI includes lands in the Low Density Residential, Medium Low Density Residential, Medium High Density Residential, High Density Residential, and High Density High Rise Residential Plan Designations. The BLI also includes areas that allow residential use in the Basalt Creek Planning Area, Mixed-Use Commercial Overlay Zone, and Central Tualatin Overlay.

Exhibit 98. Comprehensive Plan Designations, Tualatin Planning Area, 2019



Step 2: Classify lands.

In this step, ECONorthwest classified each tax lot with a plan designation that allows residential uses into one of four mutually exclusive categories based on development status:

- Vacant
- Partially Vacant
- Public or Exempt
- Developed

ECONorthwest used the classification determined through Metro's model: Vacant, Ignore, and Developed. In addition, ECO included a new classification for partially vacant lots. The definitions for each classification are listed below.

Development Status	Definition	Statutory Authority
Vacant	Tax lots designated as vacant by Metro based on the following criteria: 1) Fully vacant based on Metro aerial photo 2) Tax lots with less than 2,000 square feet developed AND developed area is less than 10% of lot 3) Lots 95% or more vacant from GIS vacant land inventory	OAR 660-008-0006(2) "Buildable Land" means residentially designated land within the urban growth boundary, including both vacant and developed land likely to be redeveloped, that is suitable, available and necessary for residential uses.
Partially Vacant	Single-family tax lots that are 2.5 times larger than the minimum lot size and a building value less than $300,000 **or** lots that are 5 times larger than the minimum lots size (no threshold for building value). These lots are considered to still have residential capacity. For this analysis, we are classifying these lots as Partially Vacant. We assume that 0.25 acres of the lot is developed, and the remaining land is available for development, less constraints.	OAR 660-008-0006(2)
Ignore (Public or Exempt uses)	Lands in public or semi-public ownership are considered unavailable for residential development. This includes lands in Federal, State, County, or City ownership as well as lands owned by churches and other semi-public organizations and properties with conservation easements. These lands are identified using the Metro's definitions and categories.	OAR 660-008-0005(2) - Publicly owned land is generally not considered available for residential uses.
Developed	Lands not classified as vacant, partially vacant, or public/exempt are considered developed. Developed land includes lots with redevelopment capacity, which are also included in BLI. The unit capacity of developed but redevelopable lots is based on Metro's estimates.	OAR 660-008-0006(2) "Buildable Land" means residentially designated land within the urban growth boundary, including both vacant and developed land likely to be redeveloped, that is suitable, available and necessary for residential uses.

Step 3: Identify constraints

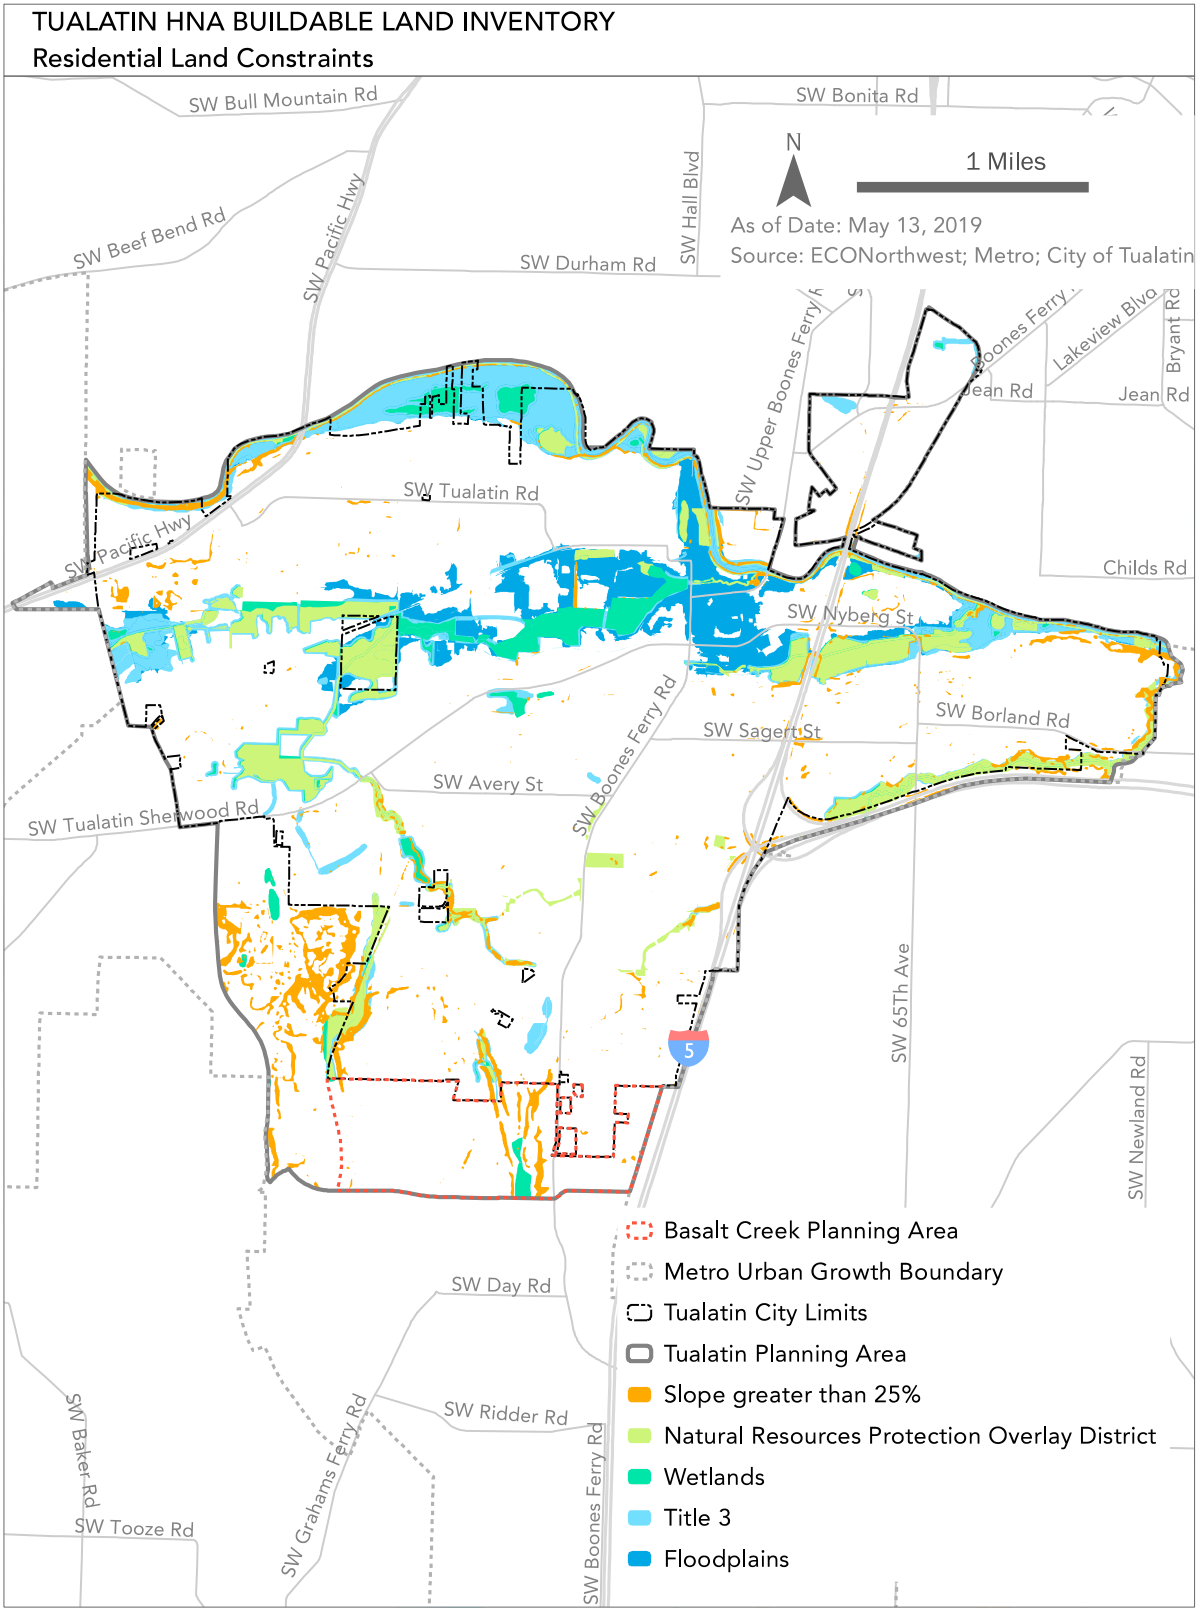
Consistent with OAR 660-008-0005(2) guidance on residential buildable lands inventories, ECO deducted certain lands with development constraints from vacant lands. We used some of the constraints established in Metro's methodology, with modifications to fit local considerations in Tualatin. These constraints are summarized in the table below.

Constraint	Statutory Authority	Threshold
Goal 5 Natural Resource Constraints		
Natural Resources Protection Overlay District	OAR 660-008-0005(2)	Areas in the NRPOD
Riparian Corridors	OAR 660-015-0000(5)	Areas protected by the Stream and Floodplain Plan
Wetlands		
Natural Hazard Constraints		
100 Year Floodplain	OAR 660-008-0005(2	Lands within FEMA FIRM 100-year floodplain
Steep Slopes	OAR 660-008-0005(2	Slopes greater than 25%

The lack of access to water, sewer, power, road or other key infrastructure cannot be considered a prohibitive constraint unless it is an extreme condition. This is because tax lots that are currently unserviced could potentially become serviced over the 20-year planning period.

Exhibit 99 maps the development constraints used for the residential BLI.

Exhibit 99. Development Constraints, Tualatin Planning Area, 2019



Step 4: Verification

ECO used a multi-step verification process. The first verification step will included a "rapid visual assessment" of land classifications using GIS and recent aerial photos. The rapid visual assessment involves reviewing classifications overlaid on recent aerial photographs to verify uses on the ground. ECO reviewed all tax lots included in the inventory using the rapid visual assessment methodology. The second round of verification involved City staff verifying the rapid visual assessment output. ECO amended the BLI based on City staff review and comments, particularly related to vacant land developed since 2016.

Step 5: Tabulation and mapping

The results are presented in tabular and map format. The Tualatin Residential BLI includes all residential land designated in the Comprehensive Plan within the Tualatin Planning Area. From a practical perspective, this means that ECONorthwest inventoried all lands within tax lots identified by Metro that fall within the Tualatin Planning Area. The inventory then builds from the tax lot-level database to estimates of buildable land by Plan Designation.

Executive Summary

This report presents a housing production strategy (HPS) for the City of Tualatin. A housing production strategy is intended to include goals and strategic actions to work together to achieve equitable outcomes for all residents of Tualatin, with an emphasis on improving outcomes for underserved communities, people with lower incomes, and people in state and federal protected classes.[1] This report is intended to meet the requirements of OAR 660-008, as described within the report.

The HPS is intended to address the housing needs identified in the *Tualatin Housing Needs Analysis* (HNA) in 2019, which concluded that Tualatin has very limited land to accommodate future housing growth and that housing needs are changing as a result of demographic changes and need for affordable housing. Specifically, the HNA concluded:

- **Tualatin is forecasted to increase its housing by about 1,014 new dwelling units between 2020 and 2040.**
- **Changes in demographic characteristics will drive need for new housing.** The HNA forecast that Tualatin would need more attached and multifamily housing in the future than the current housing stock provides. The factors driving the shift in types of housing needed in Tualatin include changes in demographics, such as growing senior populations, and the household formation of young adults.

  Tualatin has an existing deficit of housing that is affordable to low and moderate-income households and is likely to have similar future deficits. Tualatin's existing deficit of housing to meet the needs of extremely low to low-income households indicates a need for subsidized affordable housing for renters and affordable homeownership. Moderate income households may benefit from a wider range of housing types, but housing types alone do not necessarily bring the cost down for renters or homeowners. Without the types of solutions proposed in this report, lack of affordability will continue to be a problem and will possibly grow, in the future, if incomes continue to grow at a slower rate than housing costs.
- **Tualatin has a limited amount of vacant, unconstrained buildable residential land, particularly for higher-density multifamily housing.** Tualatin has about 244 acres of vacant, unconstrained buildable land. About 64% of vacant land is in Low Density Residential, 29% is in Medium Low Density Residential, and 8% of land in areas that allow higher-density multifamily housing such as Medium High Density, High Density, High Density High-Rise, and commercial area.

[1] Federal protected classes include race, color, national origin, gender, familial status, and disability. Oregon's additional protected classes include marital status, source of income, sexual orientation, and status as a domestic violence survivor. Under Fair Housing laws, it is illegal to deny access to housing based on the characteristics of people within these protected classes.

- **Tualatin cannot accommodate all of its housing needs on existing vacant land.** Tualatin has a land deficit of seven acres and four acres in the Medium High Density and High Density High Rise Plan Designations, of 7 acres and 4 acres respectively.

The HPS is intended to establish a framework for the evaluation and potential development of policies and strategic actions that address the housing needs described above over a six-year period. Key findings of the HPS are that Tualatin needs:

- **Increased housing diversity.** Nearly two-thirds of Tualatin's housing stock is single-family detached housing. The City's demographic and socioeconomic characteristics suggest a need for a wide variety of housing types to meet the needs of a growing and diverse pool of existing and future residents.
- **Greater housing affordability and availability for homeowners.** Tualatin's homeownership stayed static from 2000 to 2017 at about 55%, however, it was lower than Washington County's (61%) and the Portland Region's (60%) homeownership rate. These statistics highlight a potential need for greater homeownership opportunities as homeownership continues to be one of the most effective (and primary ways) for households and individuals to build wealth.
- **Greater housing affordability and availability for renters.** Competition for lower-priced affordable units in Tualatin is strong and many cannot afford these rents or housing sales prices without cost burdening themselves. In the 2013-2017 period, about 56% of Tualatin's renters were cost burdened, with 26% severely cost burdened.[2] Renters, especially those with lower incomes, are at risk of being displaced through increases in rental costs.
- **Increased income-restricted regulated, emergency, and supportive housing.** Tualatin has about 604 rent-restricted affordable housing units (accounting for about 5% of Tualatin's housing stock) but has about 1,753 households experiencing severe housing cost burden in the city. Washington County has about 530 people experiencing homelessness, about 300 of whom are unsheltered. About 44 people experiencing homelessness are estimated to live in the Tualatin and Tigard area.
- **Need for housing for people to live and work in Tualatin.** Tualatin's Economic Opportunities Analysis report (December 2019) reported that 93% of people working in Tualatin lived in another community (such as Portland, Tigard, Beaverton, or Hillsboro) and commuted into Tualatin each day. Some people who work in Tualatin can afford rent or homeownership in Tualatin, but some would be cost burdened in Tualatin.

This analysis finds disproportionate housing needs for seniors, people of color, people with one or more disabilities, and people experiencing homelessness. Washington County's Consolidated

[2] A household is said to be cost burdened if they spend 30% or more of their gross income on housing costs. A household is said to be severely cost burdened if they spend 50% or more of their gross income on housing costs.

Plan identifies all of these groups as a priority with special housing needs. The following groups have greater-than-average housing needs:

- **Seniors.** People 65 years of age and older are disproportionally cost burdened compared to the average household—many living on fixed incomes in a region with increasing housing costs. Over the next twenty years, people over 65 years are expected to be the fastest-growing age group. As this group grows, Tualatin will need more housing that is affordable, physically accessible, and in proximity to needed services (such as nearby health care or in-home assistance). Seniors will also need improved access to housing without discrimination, especially seniors of color.
- **People of color.** About 25% of Tualatin's population identified as a person of color, who are more likely to be cost burdened when compared to the average household. Broadly, the housing needs for many people of color in Tualatin include improved access to affordable housing units, assistance to avoid displacement, access to housing in locations with "high opportunity" (such as areas near jobs, transit, or services), and access to housing without discrimination.
- **People with disabilities.** Across the Portland Region, people with one or more disabilities experience disproportionate cost burden. Housing needs of people with one or more disabilities vary by type of disability. But in general, housing needs include improved access to an affordable unit, improved physical access to housing units, access to housing with needed services, and access to housing without discrimination.
- **People experiencing homelessness.** People experiencing homelessness are disproportionately affected by the lack of affordable housing. Housing needs for people experiencing homelessness vary by reason for homelessness. In Washington County, the primary reason cited for experiencing homelessness was inability to afford housing. The broad housing needs for this group include the need for immediate assistance (e.g., rent support), permanent supportive housing (with services), and improved access to an affordable unit.

Summary of Goals and Strategic Actions

The HPS presents goals and strategic actions to address the housing needs described above. Implementation of the HPS is expected to occur over a six-year period. Each strategic action will require further consideration, such as additional analysis, engagement of consultants, changes to existing standards or programs, discussions with decision makers, or public hearings. The City may be unable to or not chose to implement some strategic actions because of new information that arises from a detailed evaluation of the specifics of each strategic action. In that case, the City may identify a different action (or actions) to meet the specific housing need addressed by the strategic action.

Exhibit 1 presents a summary of the goals and strategic actions and includes the following information:

- **Goal or strategic action.** This is either the text of the goal or a short summary of the strategic action. Chapter 3 of the report presents additional information about each goal and a description of each strategic action.
- **Incomes of populations served by each strategic action.** Income is based on Median Family Income (MFI) as defined by the US Department of Housing and Urban Services (HUD) for Washington County. The example below is for a family of four people. The HUD terms used to describe housing by income group are:
  - Extremely Low Income: Less than 30% MFI, $28,000 or less for a family of four
  - Very Low Income: 31% to 50% of MFI, $28,000 to $46,000 for a family of four
  - Low Income: 51% to 80% of MFI, $46,000 to $74,000 for a family of four
  - Moderate Income: 81% to 120% of MFI, $74,000 to $110,000 for a family of four
  - High Income: 121% of MFI or more, $110,000 or more for a family of four
- **Potential magnitude of the action for producing new housing.** This is an estimate of the amount of new housing that may be produced over the six-year period as a result of each strategic action. The magnitudes of impact are:
  - A **low** magnitude is anticipated production of 1% or less of the needed new units (1,014 units) or about 10 dwelling units over the six-year period. A low magnitude does not mean a strategic action is unimportant. Some strategic actions are necessary but not sufficient to produce new housing.
  - A **moderate** magnitude is anticipated production of 1% to 5% of the needed new units (1,014 units) or about 10 to 50 dwelling units over the six-year period.
  - A **high** magnitude is anticipated production of 5% or more of the needed new units (1,014 units) or 50 or more dwelling units over the six-year period.
- **Expected year of adoption.** The HPS will be implemented over a six-year period. Each strategic action will be evaluated, and if the City chooses to implement it, then it would be adopted or would have some other official acknowledgement that the City is going to execute the strategic action.

Exhibit 1. Summary of Goals and Strategic Actions

Goal and Strategic Actions	Income Levels Served (MFI)	Magnitude of Impact	Expected Year of Adoption
1. Affordable Housing: Strongly prioritize, encourage, and support affordable rental housing development to increase affordable housing for households earning 0-60% Median Family Income.			
1.a Evaluate a Low-Income Housing Property Tax Exemption Program for Affordable Rental Housing	0-60%	Moderate	2023
1.b Evaluate Changes to Systems Development Charges	0-80%	Low	2026
1.c Evaluate Implementation of a Construction Excise Tax (CET)	Mostly 0-60% Possibly 61-80%	Moderate	2025
1.d Evaluate Support for Affordable and Workforce Rental Housing as part of Urban Renewal	0-80%	Moderate to large	2022
1.e Evaluate Financial Resources for Local Contributions to Affordable Housing Development	0-60%	Moderate	2026
1.f Evaluate Buildable or Redevelopable Public and Institutional Land Potentially Suitable for Affordable Housing	0-60%	Moderate	2023
1.g Evaluate Development Code Changes to Allow and Support Other Affordable Rental Housing Types in Tualatin	0-80%	Indirect, low	2024
1.h Evaluate Municipal Code, Development Code, Public Works Construction Code, and Building Code Processes to Make Building Affordable Housing Easier	0-60%	Low	2024
2. Affordable Homeownership: Encourage and support affordable homeownership to create opportunities for wealth creation.			
2.a Evaluate Impediments to Homeownership and Their Removal	0-120%	Indirect, low	2024
2.b Partner to Encourage Education about Homeownership Opportunities	0-120%	Low to moderate	2022
2.c Partner with Organizations that Develop Affordable Ownership Housing	0-80%	Low to moderate	2023
2.d Evaluate Development Code to Encourage Diverse Housing Types for Affordable Homeownership	0-120%	Indirect, low	2024
3. Preservation of Regulated Affordable Housing: Preserve affordable housing to prevent the loss of existing affordable housing units and to prevent resident displacement.			
3.a Evaluate How to Support Preservation of Regulated Affordable Rental Housing	0-60%	Moderate	2025
3.b Evaluate Developing a Healthy Housing Initiative for Multifamily Housing	0-80%	Moderate to large	2024

Goal and Strategic Actions	Income Levels Served (MFI)	Magnitude of Impact	Expected Year of Adoption
4. Preservation of Naturally Occurring Affordable Housing (NOAH): Preserve naturally occurring affordable housing, where possible, to prevent loss of affordable units and to mitigate resident displacement.			
4.a Evaluate Development of Incentives to Preserve Low-Cost Rentals for Below-Market-Rate Privately Owned Rental Housing	0-80%	Moderate	2026
4.b Evaluate Using the Multiple Unit Property Tax Exemption to Slow Rental Cost Increases	0-80%	Moderate	2026
5. Housing for Underserved Communities: Implement housing policies, projects, programs, and partnerships to further support racial and social equity.			
5.a Consider Development of a Funding Action Plan to Implement the HPS with Attention to Equity	Emphasis on 120% and below	Indirect, large	2023
5.b Evaluate Impediments to Fair Housing to Create an Analysis of Impediments	All income groups	Moderate	2024
5.c Evaluate Ways to Best Ensure Opportunities for Education about Fair Housing Are Provided	All income groups	Moderate	No adoption needed
5.d Evaluate Strategies to Encourage Diverse Housing Types in High-Opportunity Neighborhoods	0-80%	Moderate	2024
6. Workforce Housing: Encourage, plan for, and support the development of workforce housing for households earning 61-80% Median Family Income for both owner and renter, in order to increase the jobs-housing balance, reduce commute time, and provide attainable housing for workers in Tualatin.			
6.a Evaluate Ways to Incentivize Inclusion of Workforce Housing Units within New Multifamily Rental Development	61-80%	Moderate	2026
6.b Evaluate Potential Partnerships with Employers on Employer-Assisted Housing	Less than 120%	Low to moderate	No adoption needed
6.c Evaluate City Partnership to Participate in a Land Bank	0-80%	Low to moderate	2024
7. Housing Stabilization: Prevent and address homelessness to provide safe living conditions for everyone living in Tualatin.			
7.a Evaluate Opportunities to Partner on a Local Rental and Utility Assistance Program	0-80%	Moderate	No adoption needed
7.b Evaluate Ways to Develop Housing Options and Services to Address and Prevent Houselessness	0-30%	Moderate	2026
8. Housing Rehabilitation: Plan for and support housing programs and initiatives that are responsive to the safety and health needs of households earning 0-80% of Median Family Income.			

Goal and Strategic Actions	Income Levels Served (MFI)	Magnitude of Impact	Expected Year of Adoption
8.a Evaluate Establishing Local Housing Rehabilitation Program	0-80%	Low to moderate	2026
8.b Evaluate the Implementation of a Healthy Housing Initiative for Single-Family Housing	0-80%	Moderate to large	2024
9. Accessible Design and Other Specialized Design: Encourage and support Universal Design, Lifelong Housing Certification, and other similar standards.			
9.a Evaluate the Development of Specialized Design Standards and Incentives to Accommodate Special Needs	For Standards: All income groups For Incentives: income qualifying level TBD.	Low	2024
10. Mixed-Use Housing and Redevelopment: Encourage and support development of mixed-use, mixed-income, and multifamily housing in commercial zones and urban renewal areas for households earning 0-80% Median Family Income.			
10.a Evaluate Redevelopment Opportunities for the Creation of Mixed-Use Development Districts to Support Development of Affordable Housing and Workforce Housing	0-80%	Large	2022
10.b Evaluate Opportunities for Conversion of Commercial Buildings to Residential Uses	0-80%	Low to moderate	2023
10.c Evaluate Opportunities to Rezone Land for Mixed-Use	All income groups	Large	2022
10.d Evaluate Establishing Incentives to Support Mixed-Use Development, such as the Vertical Housing Tax Abatement	Typically, over 80% unless affordable housing	Moderate	2023
11. Regulatory and Zoning Changes: Increase housing development opportunities through regulatory and zoning changes to accommodate a diverse range of housing types and price points to meet the housing needs in Tualatin.			
11.a Evaluate Updating Density Standards for Multifamily Housing in Medium-Density, High-Density, and Mixed-Use Zones	All income groups	Large	2022

Goal and Strategic Actions	Income Levels Served (MFI)	Magnitude of Impact	Expected Year of Adoption
11.b Evaluate Opportunities to Rezone Lower-Density Residential Land to Higher Density	All income groups	Moderate to large	2022
11.c Evaluate the Feasibility of Targeted Reductions to Off-Street Parking Requirements	All income levels	Moderate	2022
11.d Evaluate Updating Code to Allow Small Dwelling Unit Developments	Less than 100%	Low	2024
11.e Evaluate Adopting an Expedited Permitting Process for Affordable Rental Housing and Affordable Homeownership	0-80%	Low to moderate	2023
11.f Evaluate Providing Additional Engagement and Information to Developers of Affordable Housing	0-60%	Low to moderate	2022
12. Transportation and Public Infrastructure: Plan for and develop transportation and public infrastructure to support affordable housing, workforce housing, mixed-use housing, and mixed-income housing.			
12.a Evaluate Ways to Prioritize Capital Improvements Programming for Affordable and Workforce Housing	0-80%	Moderate	2023

1. Introduction

A Housing Production Strategy is intended to include goals and strategic actions to work together to achieve equitable outcomes for all residents of Tualatin, with an emphasis on improving outcomes for underserved communities, people with lower incomes, and people in state and federal protected classes. Fair housing law is intended to provide access to housing choice for everyone, free from discrimination. Federal protected classes are: race, color, national origin, gender, familial status, and disability. Oregon's additional protected classes are: marital status, source of income, sexual orientation, and status as a domestic violence survivor. Under Fair Housing laws, it is illegal to deny access to housing based on the characteristics of people within these protected classes.

The Tualatin Housing Production Strategy presents information about Tualatin's housing needs (including the housing needs of people disproportionately affected by insufficient access to affordable housing) and presents goals and strategic actions to address these housing needs. This report is intended to meet the requirements of OAR 660-008, which are presented below.

Background

Tualatin is a city with a unique role and location within the Portland Region. The city is located at the southern portion of the region, along Interstate 5 and very near the intersection of Interstate 5 and Interstate 205. Tualatin had about 27,200 residents in 2020 and approximately 40,500 employees at businesses located in Tualatin.[3] Commuting is common in the Portland Region and in Tualatin. In Tualatin, approximately 93% of working people commute out and 7% of working people who live in Tualatin also work in Tualatin.[4]

Tualatin completed the Tualatin Housing Needs Analysis (HNA) in 2019, which concluded that Tualatin has very limited land to accommodate future housing growth and that housing needs are changing as a result of demographic changes and the need for affordable housing.[5] Specifically, the analysis concluded:

- **Tualatin is forecasted to increase its housing by about 1,014 new dwelling units between 2020 and 2040.** This is anticipated to occur within the city limits (571 new households) and in the Basalt Creek Area (443 new households).

[3] The population estimate from the Portland State University Population Research Center Annual Population Estimate. The employment estimate is based on the Tualatin Economic Opportunities Analysis report.

[4] US Census Bureau, Census On the Map, 2015

[5] Throughout this report, we use information from the Tualatin Housing Needs Analysis report, which is largely based on information from the 2013-2017 US Census Bureau American Community Survey. We updated data about housing sales costs and rents, as they have changed meaningfully since completion of the Housing Needs Analysis. This report does not incorporate data specifically about the impacts of the COVID-19 pandemic on housing affordability because newer information is unavailable on a city level. It is reasonable to assume that, since completion of the HNA, more households are struggling to afford housing.

- **Changes in demographic characteristics will drive the need for new housing.** The HNA forecast that Tualatin would need more attached and multifamily housing in the future than the current housing stock provides. The HNA forecast that 40% of new housing would be single-family detached, 15% single-family attached, and 45% multifamily. The factors driving the shift in types of housing needed in Tualatin include changes in demographics. The aging of senior populations and the household formation of young adults will drive demand for renter and owner-occupied housing, such as small single-family detached housing, town houses, duplexes, and apartments/condominiums. Both groups may prefer housing in walkable neighborhoods with access to services.
- **Tualatin has an existing deficit of housing that is affordable to low and moderate-income households and is likely to have similar future deficits.** Tualatin's existing deficit of housing to meet the needs of extremely low to low-income households indicates a need for subsidized affordable housing for renters and affordable homeownership. Moderate income households may benefit from a wider range of housing types, but housing types alone do not necessarily bring the cost down for renters or homeowners. As of 2017, about 37% of Tualatin's households were cost burdened,[6] including a cost-burden rate of 56% for renter households. As the Tualatin HNA was completed prior to the occurrence of the Covid-19 pandemic in 2020-2021, and the data in this report is based largely on that HNA, it does not include cost-burden data for that more recent period. It is reasonable to assume that, since completion of the HNA, more households are struggling to afford housing.

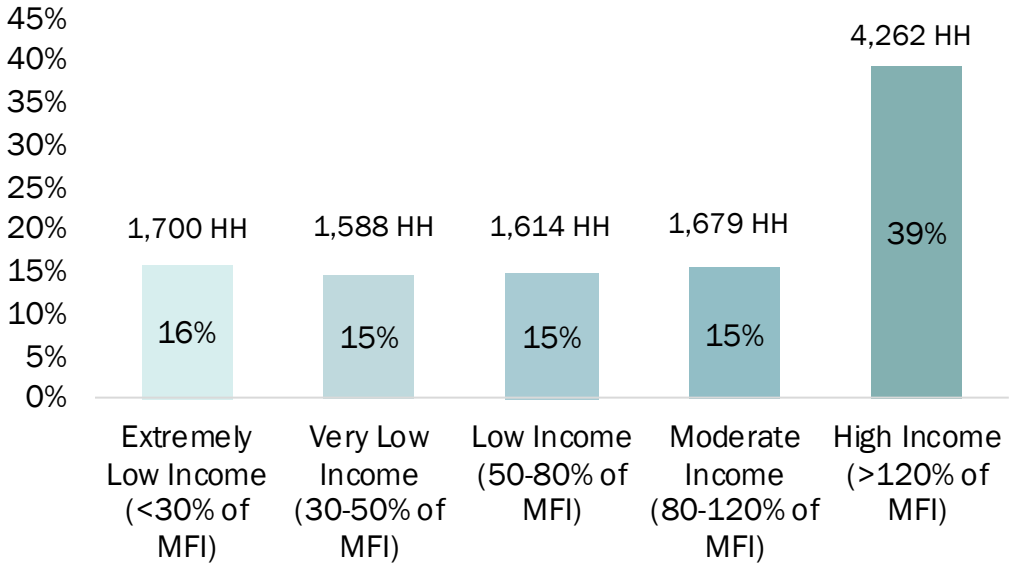
  Exhibit 2 shows that 31% of Tualatin's households had incomes less than 50% of MFI ($41,000) and cannot afford a two-bedroom apartment at Washington County's Fair Market Rent (FMR) of $1,330 in 2018.

[6] A household is considered cost burdened if they pay 30% or more of their gross income on housing costs, such as rent, selected utilities like electricity and heating, and mortgage/interest/insurance. A household is severely cost burdened if they spend 50% or more of their gross income on housing costs

Exhibit 2 Share of Households, by Median Family Income (MFI) for Washington County ($81,400), Tualatin, 2018

Source: US Department of Housing and Urban Development, Washington County, 2018. US Census Bureau, 2013-2017 ACS Table 19001.

Note: Exhibit 2 was based on information from Tualatin's Housing Needs Analysis, with corrections (to fix errors) to the number of existing dwelling units in each income category.



Without the types of solutions proposed in Chapter 3 of this report, lack of affordability will continue to be a problem and will possibly grow in the future if incomes continue to grow at a slower rate than housing costs. Under the current conditions, 307 of the forecasted new households will have incomes of $40,700 (in 2018 dollars) or less (50% of MFI income or less). These households cannot afford market-rate housing and have the largest unmet housing need. Another 151 new households will have incomes between $40,700 and $65,120 (51% to 80% of MFI). All tiers of low-income households need access to subsidized affordable housing or stable below-market-rate housing to be able to afford housing.

- **Tualatin has a limited amount of vacant, unconstrained buildable residential land, particularly for higher-density multifamily housing.** Tualatin has about 244 acres of buildable, unconstrained vacant land. About 64% of vacant land is in Low Density Residential and 29% is in Medium Low Density Residential, both of which allow single-family detached housing and will allow multifamily housing types (such as duplexes, triplexes, quadplexes, and town houses) when the City implements HB 2001. This leaves a very small amount of land (about 19 acres) in areas that allow higher-density multifamily housing such as Medium High Density, High Density, High Density High-Rise, and commercial area.
- **Tualatin cannot accommodate all of its housing needs on existing vacant land.** Tualatin has a deficit of land in the Medium High Density and High Density High Rise Plan Designations, of 7 acres and 4 acres respectively. The deficits may be addressed in multiple ways, such as by re-zoning land, increasing densities allowed in Plan

Designations with deficits, or by accommodating housing in Plan Designations with surpluses. These options are included in the strategic actions in this report.

Housing Production Strategy Purpose

The Housing Production Strategy is intended to establish a framework for the evaluation and potential development of policies and strategic actions that address Tualatin's housing needs. Throughout this report, we discuss housing income based on Median Family Income (MFI) as defined by the US Department of Housing and Urban Services (HUD) for Washington County. The example below is for a family of four people. The information used in this report is generally from the Tualatin HNA, which presents data current as of 2018.[7] The information about Median Family Income below (and throughout the report) use the 2020 MFI for Washington County ($92,000). The HUD terms used to describe housing by income group are:[8]

- Extremely-Low Income: Less than 30% MFI or $28,000 or less for a family of four
- Very-Low Income: 31% to 50% of MFI or $28,000 to $46,000 for a family of four
- Low Income: 51% to 80% of MFI or $46,000 to $74,000 for a family of four
- Moderate Income: 81% to 120% of MFI or $74,000 to $110,000 for a family of four
- High Income: 121% of MFI or more $110,000 or more for a family of four

Throughout this report, the term "workforce housing" is used. In this report, it generally refers to housing affordable at 61% to 80% of MFI.

[7] The date ranges for data vary, with much of the information from the HNA from the U.S. Census 2013-2017 period. In some cases, the report presents data from the 2000 or 2010 Decennial Census to provide historical context. In some cases the report uses more updated data for things like housing sales prices, rents, median family income, people experiencing homelessness, and other subjects.

[8] The actual income limits on specific affordable housing programs, such as LIHTC or CDBG HOME, vary by program. As the City implements the strategic actions presented in this report, the City will need to understand the income limitations of different programs.

Requirements of a Housing Production Strategy

OAR 660-008 describes the requirements of a Housing Production Strategy (HPS) in sections 660-008-0050 through 660-008-0070. This section briefly describes these requirements and review by staff with the Department of Land Conservation and Development (DLCD).

The HPS is required to include the following information. We have noted what chapter this information is included in this report:

- **Contextualized Housing Need and Engagement** (Chapter 2 in this report) should provide information about the socioeconomic and demographic trends of households in Tualatin, the policies the City has adopted to meet housing needs, and a summary of engagement the City has had with stakeholders about housing needs.
- **Strategies to Meet Future Housing Need** (Chapter 3 in this report) identifies specific actions, measures, and policies needed to address housing needs identified in Tualatin's HNA report.
- **Achieving Fair and Equitable Housing Outcomes** (Chapter 4 in this report) evaluates the entire list of strategies to achieve equitable outcomes. The valuation considers factors such as location of housing, affirmatively furthering Fair Housing, facilitating housing choice, identifying housing options for residents experiencing homelessness, supporting development of affordable housing, and increasing housing stability.

The City is required to submit the HPS to DLCD after its adoption by the City Council. Then the City is required to monitor progress on implementation of the HPS and progress on production of housing related to the policies and strategic actions in this report. Linking housing development directly to implementation of the strategic actions in this report may be challenging and difficult to quantify. But City staff will be able to report changes in building activity that occurs before and after implementation of specific strategic actions and will be able to provide qualitative feedback on implementation of strategic actions based on development of partnerships and discussions with stakeholders.

Tualatin will be required to submit a report to DLCD three years after the City adopts the HPS, which includes:

- A **summary** of the strategic actions taken by that time. For strategic actions not adopted on the schedule in the HPS, the City must provide an explanation of the circumstances that posed a barrier to implementation and a plan for addressing the need identified in the strategy.
- An **evaluation** of the efficacy of the strategic actions that the City has implemented for meeting the needs in the HNA and whether the strategic actions are moving the City to achieve more fair and equitable housing outcomes.

Implementation of the HPS will take time because each strategic action will require further consideration, such as additional analysis, engagement of consultants, changes to existing

standards or programs, discussions with decision-makers, or public hearings. The City may be unable to or chose not to implement some strategic actions because of new information that arises from a detailed evaluation of the specifics of each strategic action.

If the City is unable to or chooses not to implement a strategic action within 90 days of the timeline proposed in the HPS, the City must notify DLCD about the action(s) that the City is taking to address this issue. The City may propose an alternative schedule for implementing the strategic action or may identify a different action (or actions) to meet the specific housing need addressed by this strategic action.

Structure of the Report

This report is organized as follows:

- **Chapter 2. Contextualizing Housing Need** summarizes the findings about housing need in Tualatin, with a focus on housing need at varying income levels and housing needs of specific groups of people
- **Chapter 3. Strategies to Meet Future Housing Need** presents the proposed goals and strategic actions to meet the housing need described in Chapter 2.
- **Chapter 4. Evaluation of the Housing Production Strategy for Achieving Fair and Equitable Housing Outcomes** presents an evaluation of the HPS through considerations of the location of housing, Fair Housing, housing choice, and other factors.
- **Appendix A. Contextualizing Tualatin's Housing Needs** presents the data and analysis necessary to understand Tualatin's housing needs in more detail.

2. The Need for Housing in Tualatin

Introduction

The Tualatin Housing Needs Analysis (HNA) describes the housing needs of current and future residents of Tualatin based on demographic and socioeconomic characteristics, such as age and income. It does not provide detailed data about housing needs for other demographic characteristics, such as race, ethnicity, people with one or more disabilities, or people experiencing homelessness.[9]

This chapter provides additional information about the housing needs by income, age, race, ethnicity, disability and for people experiencing homelessness. It uses standard sources of information from the U.S. Census. It adds information from other sources, such as Oregon's Housing and Community Services Department, the United States Department of Housing and Urban Development, RLIS, Redfin, Costar, the City of Tualatin, and the Washington County Consortia 2020-2024 Consolidated Plan.

This chapter presents a description of the housing needs that the Housing Production Strategy is intended to address, as well as existing policies to address Tualatin's housing needs. It ends with a summary of the existing and expected barriers to development of needed housing.

Summary of Tualatin's Housing Needs

Appendix A provides detailed information about housing needs in Tualatin. Appendix A includes discussion of housing need related to demographics and socioeconomic characteristics of people in Tualatin, housing market conditions and trends, housing affordability, and information about outreach and engagement by City staff. This section summarizes these housing needs briefly. For more details about housing needs and the sources of information for this analysis, please refer to Appendix A.

- **Increased housing diversity.** Nearly two-thirds of Tualatin's housing stock is single-family detached housing. Tualatin is a relatively young and ethnically diverse city. While Tualatin comprises many families with and without children, the senior population across the region is growing. Tualatin serves as an important employment hub in the Portland Metro area, drawing workers from across the region. The City's demographic and socioeconomic characteristics suggest a need for a wide variety of housing types to meet the needs of a growing and diverse pool of existing and future residents. Feedback from stakeholders (in Appendix A) indicated that they think Tualatin needs to allow a wider range of housing types, such as more town homes,

[9] Inclusion of detailed information about housing needs for other demographic characteristics—such as race, ethnicity, people with disabilities, or people experiencing homelessness—was not a requirement of the HNA when the Tualatin HNA was completed. This information is required by the HPS, so it has been included in this report.

mixed-use development, duplexes, triplexes, cottage clusters, multigenerational housing, accessory dwelling units, and high-rise apartments (structures that are six to eight stories in height).

- **Greater housing affordability and availability for homeowners.** Tualatin's homeownership stayed static from 2000 to 2017 at about 55%, however, it was lower than Washington County's (61%) and the Portland Region's (60%) homeownership rates. These statistics highlight a potential need for greater homeownership opportunities as homeownership continues to be one of the most effective (and primary ways) for households and individuals to build wealth. In addition, renter households are more likely to be at risk of displacement than homeowners, particularly in Oregon.[10] Plans to increase homeownership can help to prevent displacement due to rising rental costs. Median sales prices in Tualatin continue to increase (more than doubling in Tualatin between 2012 and 2020) consistent with the region, putting homeownership out of reach for many households in the city.
- **Greater housing affordability and availability for renters.** Based on a survey of currently available rental properties in Tualatin, the typical asking rent ranged from about $1,125 for a one-bedroom unit to more than $2,000 per month for a three-bedroom unit. These costs are affordable to households earning 55% to 98% of the region's MFI (about $45,000 to $80,000).

  Competition for lower-priced affordable units is strong, and many cannot afford these rents or housing sales prices without cost burdening themselves. In the 2013-2017 period, about 56% of Tualatin's renters were cost burdened, with 26% severely cost burdened.[11] Renters, especially those with lower incomes, are at risk of being displaced through increases in rental costs. Anecdotal discussions with stakeholders in Tualatin suggest that rising rents are causing people to move out of the city to find more affordable housing.
- **Increased income-restricted regulated, emergency, and supportive housing.** Tualatin has about 604 rent-restricted affordable housing units (accounting for about 5% of Tualatin's housing stock) but has about 1,753 households experiencing severe housing cost burden in the city. Washington County has about 530 people experiencing homelessness, about 300 of whom are unsheltered. Tualatin's Continuum of Care region has 111 emergency shelter beds, 10 safe haven beds, 119 transitional shelter beds, and 725 permanently supportive housing beds supporting persons experiencing homelessness in the region. However, in 2019, 44% of people experiencing homelessness

[10] In Oregon, homeowners are largely insulated from the financial effects of market changes due to the property taxation system, which decouples market sales prices from assessed values, meaning that rising home values only impact property tax amounts in very limited circumstances. However, even after recent changes to state law providing greater protection for renters, renters are still much more vulnerable to changing market conditions and are subject to the decisions of the property owner regarding redevelopment, remodels, rent increases, etc.

[11] A household is said to be cost burdened if they spend 30% or more of their gross income on housing costs. A household is said to be severely cost burdened if they spend 50% or more of their gross income on housing costs.

in the region were unsheltered and about 211 students in the Tualatin/Tigard School District experienced homelessness in some form in the 2018-19 school year (many of them doubled-up[12]).

- **Need for housing for people to live and work in Tualatin.** Tualatin's Economic Opportunities Analysis report (December 2019) reported that 93% of people working in Tualatin lived in another community (such as Portland, Tigard, Beaverton, or Hillsboro) and commuted into Tualatin each day. Some people who work in Tualatin can afford rent or homeownership in Tualatin, but some would be cost burdened in Tualatin.

  - *Lower wage.* A household with 1.8 employees in lower-paying sectors, such as retail (with an average pay of $28,300), would have an income of about 55% of the region's MFI. This household would be unlikely to afford homeownership. They may be able to afford monthly rent of about $1,250, such as a one-bedroom unit in Tualatin. They would not be able to afford a larger unit with two or more bedrooms. This household would likely either live in an overcrowded unit (because a one-bedroom unit is too small for a family of four) or be cost burdened so that they could have a dwelling unit big enough for their household.
  - *Average wage.* The average wage at a job in Tualatin was about $57,300 in 2017. Assuming about 1.8 jobs per household,[13] the average wage for a household with jobs in Tualatin would be approximately $103,000. This income would put the household at about 119% of the region's MFI. A household with this income could afford a house between $360,000 and $412,000. While this is below the median sales price of $491,000, a household with this income may be able to afford a lower-cost home in Tualatin.
  - *Higher wage.* A household with 1.8 employees in higher-paying sectors, such as manufacturing and health care (which has an average pay of $73,400), would have an income of about 144% of the region's MFI. This household could afford to rent or own and could afford the median sales price of $491,000 in Tualatin.

Throughout this analysis, we discuss housing needs for specific populations, such as people of color. The reason for this discussion is that the housing needs of these populations are different from other groups in Tualatin. The Washington County Consolidated Plan describes the issue in the following way:

> "Analyses persistently demonstrate that some population groups, including communities of color and people with disabilities, experience disproportionately high housing cost burdens, are less likely to be homeowners, are disproportionately represented in the criminal justice system, have a school

[12] "Doubled-up" refers to the sharing of other persons' housing due to loss of housing or economic hardship.

[13] This assumption is based on information about jobs per household for the Portland Region, including Clackamas County, Washington County, and Multnomah County. We use this estimate because commuting trends make it difficult to estimate jobs per household in Tualatin, given that so many workers commute into Tualatin for work.

achievement gap and experience other disparities relative to health, wellbeing, wealth, income and life outcomes. In deciding on priorities, the County sought opportunities to address persistent historic imbalances, consider systemic causes and advance a more equitable and fair housing system."[14]

This analysis finds disproportionate housing needs for seniors, people of color, people with one or more disabilities, and people experiencing homelessness. Washington County's Consolidated Plan identifies all of these groups as a priority with special housing needs.

- **Seniors.** People 65 years of age and older are disproportionally cost burdened compared to the average household—many living on fixed incomes in a region with increasing housing costs.[15] About 62% of people aged 65 years of age and older are rent burdened in the Portland Region, compared to an overall average of 46% of renter households cost burden in the Portland Region. [16] Over the next twenty years, people over 65 years are expected to be the fastest-growing age group. As this group grows, Tualatin will need more housing that is affordable, physically accessible, and in proximity to needed services (such as nearby health care or in-home assistance). Seniors will also need improved access to housing without discrimination, especially seniors of color.
- **People of color.** About 25% of Tualatin's population identified as a person of color. In the Portland Region, about 55% of renter households that identified as Latino and 52% of renter households that identified as a non-Asian person of color were cost burdened.[17] Latinos are the largest ethnic group in Tualatin (16% of the population) and have the lowest median income ($30,761) of any race or ethnicity in Tualatin.[18] Broadly, the housing needs for many people of color in Tualatin include improved access to affordable housing units, assistance to avoid displacement, access to housing in locations with "high opportunity" (such as areas near jobs, transit, or services), and access to housing without discrimination.
- **People with disabilities.** Across the Portland Region, people with one or more disabilities experience disproportionate cost burden. In particular, 53% of renters in the

[14] *2020-2024 Consolidated Plan for Washington County and the Cities of Beaverton and Hillsboro, Executive Summary, page 3.*

[15] Some seniors have accumulated wealth, which is not accounted for in this analysis. Information about accumulated wealth is available at the national level but not at the state or city level.

[16] Rent burden by these groups is less available and accurate for Tualatin, given the small size of the city and the quality of available data. As a result, this section presents rent burden for these groups in the Portland Region based on analysis from the report *Implementing a Regional Housing Needs Analysis Methodology in Oregon: Approach, Results, and Initial Recommendations* by ECONorthwest, March 2021.

[17] This information is not available on a city-by-city basis from the US Census ACS. This statistic is pulled from a statewide analysis from the report *Implementing a Regional Housing Needs Analysis Methodology in Oregon: Approach, Results, and Initial Recommendations* by ECONorthwest, August 2020.

[18] Tualatin's largest community of color is Latino, with about 4,475 Latino people living in Tualatin. Other people of color living in Tualatin are Asian (1,013 people), two or more races (795 people), Black or African American (364 people), Native Hawaiian or Pacific Islander (127 people), American Indian or Alaska Native (103 people), and some other race (54 people).

Portland Region with a hearing or vision disability and 65% of renters with a disability other than a hearing or vision-based disability are cost burdened, compared to the average rate of cost burden for all households in the region at 46%. Housing needs of people with one or more disabilities vary by type of disability, but in general housing needs include improved access to an affordable unit, improved physical access to housing units, access to housing with needed services, and access to housing without discrimination—especially for people with one or more disabilities who are also seniors and/or people of color. Feedback from stakeholders (documented in Appendix A) indicates that people with disabilities have a difficult time finding accessible housing, such as housing that is physically accessible.

- **People experiencing homelessness.** People experiencing homelessness are disproportionately affected by the lack of affordable housing. There were 307 people who identified as homeless and unsheltered in Washington County and 44 people in the Tigard/Tualatin area in 2020.[19] In addition, 16% of households in Tualatin are at risk of homelessness because they have income at or below 30% of MFI. More than 90% of these households are cost burdened and likely many are severely cost burdened. Housing needs for people experiencing homelessness vary by reason for homelessness. In Washington County, the primary reason people cited for experiencing homelessness was inability to afford housing. The broad housing needs for this group includes needs for immediate assistance (including rent support), permanent supportive housing (including supportive housing with services), and improved access to an affordable unit. The housing needs of people experiencing homelessness who are also a senior, disabled, or a Person of Color include the housing needs of those groups as well. The housing needs for people at-risk of becoming homeless may be the same as for people experiencing homelessness.

Stakeholder Engagement

The HPS uses stakeholder involvement that was conducted over the last two years: interviews with stakeholders as a part of the Tualatin 2040 engagement process, Tualatin HNA, and public events about severely rent-burdened communities.[20] The key issues identified through stakeholder engagement included the need for an increased variety of housing options (especially multifamily housing), the need for more affordable housing for both renter and owner-occupied housing, the need for housing for people who work at jobs in Tualatin, changes to the Development Code to support development of these housing types, the need for

[19] This is based on the annual Point-in-Time (PIT) data. The PIT count is a snapshot of individuals experiencing homelessness on a single night in a community. Though the PIT count is not a comprehensive survey, it serves as a measure of homelessness at a given point of time and is used for policy and funding decisions.

[20] Annual meetings about severely rent-burdened communities are required in Oregon by HB 4006 or Oregon Laws 2018 Chapter 47. A "severely rent-burdened city" is a city where at least 25 percent of the renter households in the city are severely rent burdened. Tualatin has been designated by the State as a severely rent-burdened city since 2019.

redevelopment and creation of complete neighborhoods, and housing need for specific groups like people with disabilities and people of color.

Appendix A presents a full summary of the stakeholder input from these events. These issues have been incorporated into the goals and strategic actions presented in Chapter 3.

Housing Needs Addressed by the Housing Production Strategy

The housing market produces some types of housing without need for public intervention, such as development of single-family detached housing. The HPS focuses on housing that may require public intervention to ensure production. This section describes the housing needs that are the focus of the HPS: development of income-restricted affordable housing, housing for moderate-income households, and housing to meet the special needs of specific groups. This section describes Tualatin's housing needs based on analyses from the *Tualatin Housing Needs Analysis* report (December 2019)[21] and Appendix A, which includes an analysis of unmet housing needs for underserved groups. The analysis shows income and housing affordability based on the 2020 MFI for Washington County ($92,000).

The housing needs in Exhibit 3 are the basis for the goals and strategic actions presented in Chapter 3.

Exhibit 3. Tualatin's Housing Needs that Are Addressed in the HPS

Description of Need	Tualatin's Housing Need
New housing to accommodate population growth	The HNA projects growth of **1,014** new dwelling units in Tualatin between 2020 and 2040.
Housing Need by Income	
Existing households[22]	Extremely Low Income (< 30% MFI): **1,700** households (16% of households) Very Low Income (30-50% MFI): **1,588** households (15% of households) Low Income (50-80% MFI): **1,614** households (15% of households) Moderate Income (80-120% MFI): **1,679** households (15% of households)
New households [23]	Extremely Low Income: **159** households (16% of new households) Very Low Income: **148** households (15% of new households) Low Income: **151** households (15% of new households)

[21] https://www.tualatinoregon.gov/sites/default/files/fileattachments/planning/page/22631/hna.pdf

[22] The HPS does not anticipate building new units for all existing households in Tualatin that have problems affording housing costs. But the HPS does propose actions to stabilize the housing costs of existing lower-income households and may result in development of housing that is more affordable to these households, enabling them to stay in Tualatin. Information about lower-income households and cost burden for existing households illustrates the existing housing need in Tualatin.

[23] This assumes that future residents of Tualatin have an income distribution that is the same as existing residents. Given the fact that incomes have grown at a relatively slow pace over the last two decades in comparison to housing costs (especially home sales prices), this seems like a conservative assumption about the future affordability of housing.

	Moderate Income: **157** households (15% of new households)
Housing Needs for Extremely Low (< 30% MFI) and Very Low–Income (30-50% MFI) Households	At a minimum, Tualatin has housing need for: ▪ **307** households earning less than 50% of MFI ▫ Tualatin also has **3,288** existing households earning less than 50% of MFI. ▪ These households can afford rents (including basic utility costs) of not more than **$1,150** per month. ▫ A household would need to earn **$58,000** to afford average multifamily rent of **$1,450** for a 2-bedroom unit (about 63% of MFI for a family of four). ▪ Meeting the housing needs of these households will require a combination of preserving existing income-restricted affordable housing and developing new income-restricted affordable housing. Development of income-restricted affordable housing typically requires extensive subsidy, with funding from the State, region, or County, in addition to any support from the City and other partners.
Housing Needs for Low-Income (50-80% MFI) Households	At a minimum, Tualatin has housing need for: ▪ **151** households earning between 50% and 80% of MFI ▫ Tualatin also has **1,614** existing households earning between 50% and 80% of MFI. ▪ These households can afford rents (including basic utility costs) of between **$1,150** and **$1,850** per month. ▫ A household would need to earn **$58,000** to afford average multifamily rent of **$1,450** for a 2-bedroom unit (about 63% of MFI for a family of four). ▫ Households with this income range are likely to live in rental housing predominantly and can likely afford a range of costs from below-average rent to average or above-average rent in Tualatin. ▪ Meeting the housing needs of these households will require a combination of preserving existing "naturally occurring affordable housing" and developing new income-restricted affordable housing in this price range. Development of new housing affordable in this price range generally requires some subsidy or public support, such as tax exemptions, government funding (typically from the State, region, or County, with some level of local contribution being critical), reduced systems development charges, low interest loans, philanthropic contributions, or other financial support. Funding for rental housing for households at 61% MFI and above is very scarce. Homeownership opportunities for this income range will likely be related to housing developed by nonprofit organizations, possibly

	with some form of subsidy, such as land donation, discounted land leasing, and land banking.

Housing Needs for Moderate-Income (80-120% MFI) Households	At a minimum, Tualatin has housing need for:
	▪ **157** households earning between 80% and 120% of MFI
	  ▪ Tualatin also has **1,679** existing households earning between 80% and 120% of MFI
	▪ These households can afford rents (including basic utility costs) of between **$1,850** and **$2,750** per month.
	  ▪ These households can afford rents higher than the average multifamily rent (**$1,450)** for a two-bedroom unit, and many of these households can afford the typical multifamily rent for a three-bedroom unit ($2,000 to $2,400).
	  ▪ These households cannot afford the median sales prices of $491,000 in Tualatin but can likely afford lower-cost housing in the Tualatin housing market.
	  ▪ Some households with income in the higher part of this range are likely to live in rental housing and some are likely to be homeowners. Households with incomes in the lower part of this income range may need assistance in attaining homeownership.
	▪ Meeting the housing needs of these households will be a combination of development of rental housing (without subsidy from local or state government) and lower-cost housing for homeownership. Some homeownership opportunities for this income range will likely be related to housing developed by nonprofit organizations, possible with some subsidy, such as land donation, discounted land leasing, land banking, or a community land trust. Development of smaller and more affordable housing units, such as cottage housing, may provide opportunities for homeownership (without subsidy) for households in this group with higher incomes.

Housing Need of Specific Populations	
Housing Needs of People of Color	Blacks, Latinos, American Indian or Alaska Natives, and Native Hawaiian or Pacific Islanders are more likely to rent their homes and live in multifamily housing than the overall average in Tualatin. People of color are more frequently cost burdened than the average in the Portland Region. About **19%** of Tualatin's population identified as Black, Latino, American Indian or Alaska Native, or Native Hawaiian or Pacific Islander. Meeting the housing needs of these households will require addressing the affordability issues, discussed above, as well as ensuring that people of color have access to housing without discrimination. This will require increasing awareness of Fair Housing rules for property owners and managers, tenants, City decision

	makers, and City staff. It will also require careful decision-making to change policies that have created barriers to housing access for people of color.
Housing Need of People with Disabilities	Disabilities include those that are visible, such as ambulatory or vision disabilities, and those that are not readily apparent, such as self-care, independent-living, or cognitive disabilities. Other conditions may require special accommodations, such as disabling diseases or mental health conditions. The Census reports that about **10%** of Tualatin's population has disabilities, such as ambulatory, vision, hearing, cognitive, self-care, or independent-living disabilities. Meeting the housing needs of these households will require addressing the affordability issues, discussed above, as well as ensuring that people with disabilities have access to housing that addresses their disability and that they have access to housing without discrimination. This will require increasing awareness of Fair Housing rules for property owners and managers, tenants, City decision makers, and City staff. It will also require approaches that encourage development of housing with specialized design standards to accommodate special needs.
Housing Need of People Experiencing Homelessness	The number of people experiencing homelessness in Tualatin is not clearly known. In part, this number is not known because people experiencing homelessness may move between neighboring cities, such as between Tigard and Tualatin. There were approximately **307** people experiencing homelessness in Washington County in 2020, **44** of whom were unsheltered in the Tigard and Tualatin area. Meeting the housing needs of people experiencing homelessness can range from emergency assistance (including rent and utility assistance), rapid rehousing, inclusion of local shelter, permanent supportive housing (including supportive housing with services), and improved access to an affordable housing unit (as discussed above).

Existing Policies to Address Tualatin's Housing Needs

This section lists existing measures that Tualatin has implemented to support housing development and presents preliminary draft measures (or policies or strategies) that may be included in the HPS.

This City of Tualatin has the following housing measures (goals, policies, or strategies) currently in place to address Tualatin's housing needs. These measures include:

- Prohibiting single-family detached housing in most high-density zones in Tualatin.
- Allowing one or more accessory dwelling units (ADUs) in residential zones per lot.[24]
- Applying density standards uniformly across zones that allow dwelling units on fee simple lots and on multifamily sites.
- Ensuring decisions about the types and locations of housing are data-driven and focused on equitable outcomes instead of the best outcomes for those with the most money and/or privilege.
- Removing open space/common amenity requirements for low-density residential.
- Providing information to small, local developers to help them understand land use permitting processes and give them a sense of clarity and certainty about the requirements, so they can better provide smaller-scale housing. Tualatin's existing measures generally focus on land use efficiency, such as allowing development of denser housing types, or measures to reduce development costs, such as removing open space requirements for some housing development. By and large, the types of policies that Tualatin has yet to adopt are policies to support:
- Development of affordable rental housing and preservation of affordable housing stock to prevent displacement of existing residents.
- Prevention and reduction of houselessness.
- Expansion of workforce owner and rental housing to increase the jobs housing balance.
- Expansion of housing for people with special needs and seniors, and the development of housing to meet the cultural needs of diverse populations.
- Greater availability of diverse housing types through regulatory or zoning changes, including mixed-use housing and redevelopment in commercial areas.
- Planning for and developing transportation and public infrastructure to support affordable housing, workforce housing, and mixed-use housing development.

[24] Although, Tualatin's ADU provisions are not yet compliant in regard to HB 2001 off-street parking requirements.

Existing and Expected Barriers to Development of Needed Housing

Barriers to development of needed housing in Tualatin include:

- **Land for housing.** Tualatin has a limited amount of unconstrained, vacant buildable residential land (244 acres) within the city (including in the Basalt Creek Planning Area). About 62% of this buildable land is within the Basalt Creek Planning Area, which is in the process of annexation. The City expects infrastructure development sufficient to support residential development over time. The concentration of buildable land in Basalt Creek may slow new residential development in Tualatin until this area is ready for development.

  More than 90% of Tualatin's unconstrained, vacant buildable land is Low Density or Medium Low Density Residential, providing limited opportunities for development of multifamily housing. Tualatin has 1 acre of unconstrained vacant buildable land that is Medium High Density, 17 acres of High Density, and no unconstrained High Density High Rise Residential land. These are the areas where multifamily housing with five or more units per structure can be built. Scarcity of vacant land, especially for multifamily development, is one of Tualatin's primary barriers to development of needed housing.
- **Complexity and expense of redevelopment**. While Tualatin is able to identify areas that may be ripe for redevelopment (including areas for 4 to 6-story multifamily housing), the costs and complexity of redevelopment are substantial. Barriers to redevelopment include higher site acquisition and preparation costs (sometimes including negotiating with multiple landowners), higher construction costs for 4 to 6-story development (compared to 2 to 3-story development), and costs of upgrades to infrastructure (such as roads, water, stormwater, or sewer) to support increased development density. In a suburban environment, rents may not be high enough to justify these higher development costs. In addition, a number of the sites that the City has identified as potential redevelopment opportunities are located in a floodplain, which precludes federal funding for affordable housing from being used on those sites, or have other site-specific constraints that create challenges for development.
- **Regulatory barriers to multifamily housing**. In addition to a lack of land for multifamily development, existing development regulations for multifamily housing do not support efficient development or redevelopment of the type of housing the zones are intended to allow. Standards that force lower densities reduce the viability of both unregulated affordable housing and income-restricted affordable housing, and they make it even more challenging to build on the few smaller sites that are zoned for multifamily housing.
- **Funding and resources to support development of affordable housing**. Developing income-restricted housing for households with incomes 60% and below of MFI nearly always requires state, local, and/or philanthropic subsidy so that it can cover the costs of

development and operations with restricted rents. Developing new housing affordable to households with incomes of 51% to 80% of MFI also typically requires government subsidy and/or funding from sources such as nonprofits. One of the key barriers to development of affordable housing is identifying sufficient funding to support its development. Options for funding affordable housing development include direct funding (i.e., monetary contributions for housing), contributions of land, and cost reductions (e.g., tax abatements or waiving fees).

- **Capacity of the income-restricted development community to support development of affordable housing**. Capacity for development of affordable housing includes developers willing and able to develop income-restricted housing, such as nonprofits with the capacity to support development of affordable housing. There may be some capacity constraints for development of income-restricted affordable housing based on nonprofit developer capacity. However, availability of funding to support development of affordable housing is more of an issue.
- **Staff capacity to implement the Housing Production Strategy.** Implementing the strategic actions in the HPS will take a considerable amount of City staff capacity. If staff do not have sufficient capacity to work on the items in the HPS, that may slow or halt implementation of the HPS. Insufficient staff time to implement the HPS could be a barrier to development of needed housing. The amount of staff time needed to implement the HPS will only become clear as the City begins the evaluation of each strategic action to determine how much additional research and public engagement will be needed.
- **Need for ongoing engagement to understand housing needs.** Ongoing community engagement, especially with underserved communities or people with specialized housing need, is necessary to ensure that the City understands the current housing needs of these groups. Engagement has been more difficult than usual during the COVID-19 pandemic, especially with underserved communities because they are disproportionately negatively impacted by the pandemic. This is a potential barrier to needed housing development if the City does not have staff capacity to maintain this engagement or is unable to establish relationships with the communities in question.

3. Strategies to Meet Future Housing Need

Developing the Housing Production Strategy

Development of the HPS required attention to a variety of factors, such as the City's housing policy objectives, funding sources to support housing development, and factors that affect both housing development and the range of impact of the strategic actions.

Housing Policy Objectives

The Tualatin 2040 project, which included the Tualatin Housing Needs Analysis, resulted in an update to Tualatin's Comprehensive Plan and set new housing goals, policies, and strategic actions. These goals and policies, as well as the housing needs documented in Exhibit 3, are part of the basis of the goals and strategic actions presented in this chapter. In addition, the HPS requirements place more emphasis on equitable housing, fair housing, and underserved communities. These requirements have also provided part of the basis for the goals and strategic actions in this chapter. The high-level housing goals in Tualatin's Comprehensive Plan are:

- **Goal 3.1 Housing Supply.** Ensure that a 20-year land supply is designated and has urban services planned to support the housing types and densities identified in the Housing Needs Analysis.
- **Goal 3.2 Housing for All.** Encourage development and preservation of housing that is affordable for all households in Tualatin.
- **Goal 3.3 Affordable Housing**. Encourage the establishment of funding sources to support development of affordable housing and related public infrastructure.
- **Goal 3.4 Redevelopment.** Encourage timely strategic planning and redevelopment in Tualatin to create new mixed-use residential and commercial planning districts.
- **Goal 3.5 Housing and Transportation.** Encourage development and redevelopment in Tualatin that supports all modes of transportation, including walking, biking, and mass transit.
- **Goal 3.6 Residential Growth.** Residential growth by annexation or expansion to the Urban Planning Area or Urban Growth Boundary will be coordinated with local, state, and regional governments, districts, and stakeholders.

Funding Sources and Incentives

Potential Funding Sources. One of the key challenges in implementing financial actions in the HPS is likely to be the availability of funding. Funding is needed for staff time to evaluate the feasibility of implementing the HPS, but it is also needed in the form of financial contribution, waiver, or forgone revenue to support development of units, preservation of housing, and redevelopment. Identifying realistic funding sources will be necessary to achieve the outcomes of the HPS, increasing access to housing in Tualatin, especially for low-income households and underserved communities. Strategic Action 5.a is intended as a way to develop a specific funding action plan for implanting the HPS.

Potential local sources of funding could include implementation of a Construction Excise Tax (CET) in Strategic Action 1.c, evaluating other local sources of funding in Strategic Action 1.e, evaluating how to support preservation of regulated affordable housing in Strategic Action 3.a, use of Urban Renewal to support housing development in Strategic Action 10.a, and evaluating the prioritizing of Capital Improvements Programming in Strategic Action 12.a.

Other funding sources may include Washington County's Housing Authority, Metro's grant programs, the State of Oregon's Housing and Community Services Department, other state agencies that fund infrastructure, other programs necessary to support housing development, and other private and nonprofit organizations.

Potential Incentives. Financial incentives are also a critical part of a successful strategy for equitable housing production. In the HPS, potential incentives include property tax exemption in Strategic Action 1.a, changes to Systems Development Charges in Strategic Action 1.b, development of incentives to preserve low-cost rentals for below-market-rate privately owned rental housing in Strategic Action 4.a, Multiple Unit Property Tax Exemption to slow rental cost increases in Strategic Action 4.b, evaluating ways to incentivize inclusion of workforce housing units within new multifamily rental development in Strategic Action 6.a, evaluating the development of specialized design standards and incentives to accommodate special needs in Strategic Action 9.a, and evaluating incentives to support mixed-use development like Vertical Housing Tax Abatement in strategic action 10.d.

Partnerships

Partnerships will also play an important role in supporting housing development. For example, Strategic Action 2.c is about partnering to develop affordable housing for homeownership, Strategic Action 6.b is about partnering with employers on employee-assisted housing, 6.c is about partnerships for land banking, and 7.a is about partnering on existing rental and utility assistance programs.

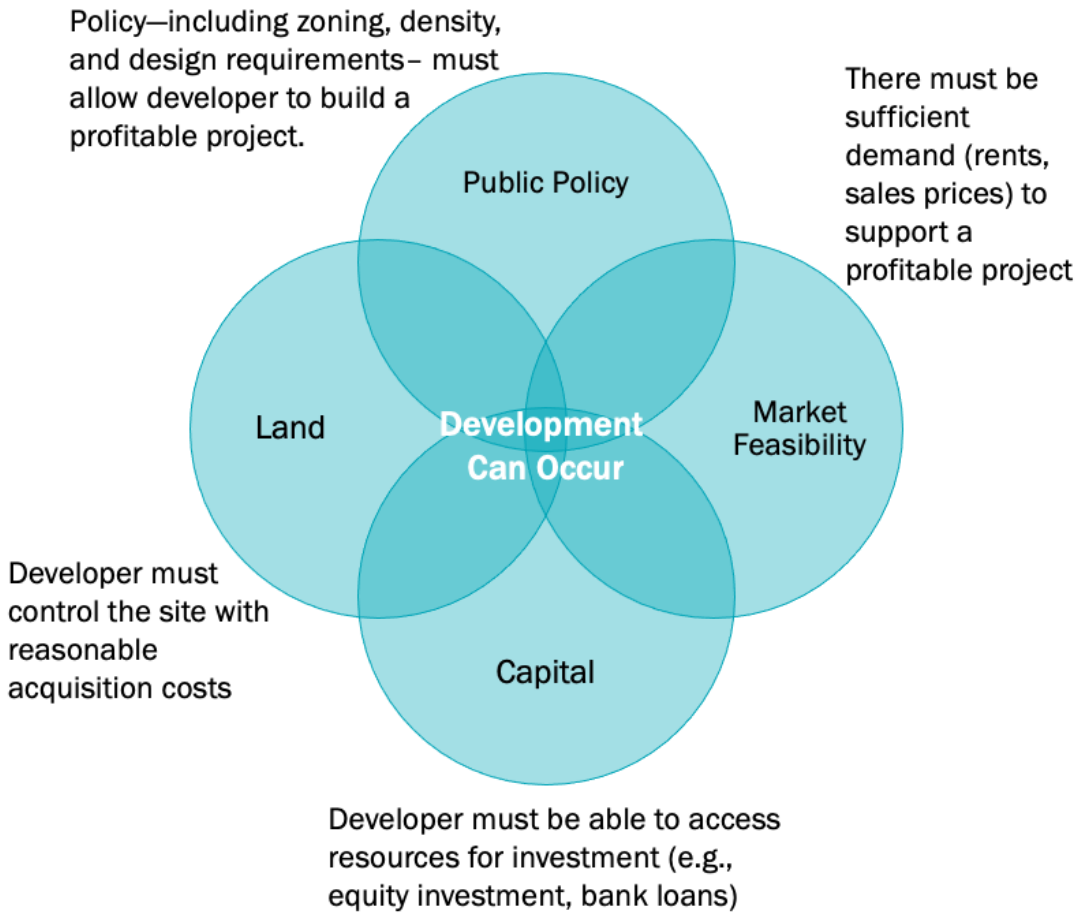
Considerations for Implementing the Housing Production Strategy

In evaluating the implementation of potential strategic actions, it will be important to consider supporting and leveraging the private market's ability to delivery market-rate development at a variety of price points, due to the limited public funding available to support income-restricted housing. In other words, increasing the overall supply of available housing units plays a significant role in overall housing affordability, including increasing opportunities for providing for those at the lower end of the income spectrum as well as historically underserved communities. The emphasis in the HPS is on production of housing that is affordable below 80% of MFI because that need is difficult or impossible to meet through market-rate housing development without public subsidy, such as many of the strategic actions proposed in the HPS. In addition, the HPS has an additional emphasis on the housing needs of underserved communities.

In an area with relatively low housing production per capita, the City has some influence over market-rate development through fees, charges, and development restrictions, despite the number of factors that the City does not control. The graphic in Exhibit 4 illustrates how four factors must intersect so that development can occur and where the City has most influence.

Tualatin does not control all of these factors entirely. Public policy at the local level is shaped through regional policy (by Metro) and the state. Land is generally controlled by the individual landowners, and development of infrastructure necessary to make land development can be prohibitively expensive. Market feasibility is largely affected by market forces, such as construction costs and achievable rents. Access to capital is largely controlled by investors and banks. However, Tualatin can directly influence public policy (through its Development Code) and availability of land (through zoning, density, planning for new land needed for housing, redevelopment, and infrastructure planning). Tualatin can also have a limited influence on market feasibility (through policies that reduce costs like tax abatements or waiving fees).

Exhibit 4. Four Necessary Factors that Allow Development of New Market-Rate Housing
Source: ECONorthwest

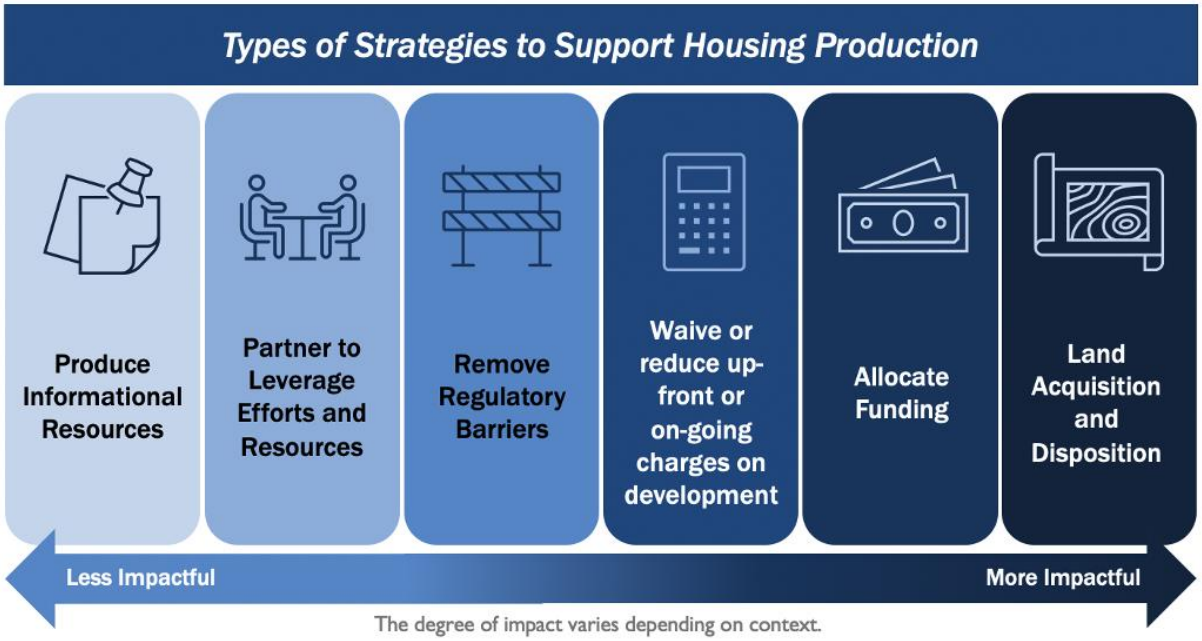


These factors all suggest that Tualatin should consider a wide range of strategic actions. Exhibit 5 shows the range of strategies, characterizing some strategies as more impactful and some as less impactful. More impactful strategies are those that provide funding or direct resources to support housing development (like land acquisition and disposition). These strategies are more impactful because funding and resources are the greatest constraint on development of income-restricted affordable housing (such as housing affordable to households with incomes below 80% of MFI).

While removing regulatory barriers and forming partnerships are shown as less impactful strategies, they are often necessary (but not sufficient on their own) to support housing development. For example, Tualatin's HPS includes a strategic action (10.a) about redevelopment opportunities for creation of mixed-use development districts that supports development of affordable and workforce housing. This strategic action assumes that development densities will allow buildings that are four to six stories tall, with at least 80 dwelling units per acre. However, Tualatin's Development Code does not allow for development of buildings that tall or at those densities. Strategic Action 11.a proposes to remove that regulatory barrier and allow taller and denser residential and mixed-use development.

This example also underscores the fact that many of the strategic actions presented in this chapter build on each other. While a partnership on its own may not be sufficient to support development of housing, it may be key when combined with other strategic actions.

Exhibit 5. Types of Strategies to Support Housing Production
Source: ECONorthwest



As part of development of the strategic actions in this report, ECONorthwest conducted interviews with the following developers, to assess potential use of key strategies: Alma Flores with REACH CDC, Community Development Partners, and Community Partners for Affordable Housing. In addition, ECONorthwest staff frequently discuss the types of strategies discussed in this document with developers in the Portland Region, as well as other developers across Oregon. What we learned from these interviews, as well as other work done for similar projects, is reflected in the goals and strategic actions in this report.

Goals and Strategic Actions

This section presents the goals and proposed strategies for inclusion in the HPS. The goals are intended to clearly describe the intended outcome(s) of the strategic actions, as they relate to Tualatin's Comprehensive Plan. For each strategic action, we include the following information, most of which is required by OAR 660-008-0050:

- A description of the strategic action
- The type of action
- A rationale for inclusion of the strategic action
- The anticipated impact of each strategic action, including:
  - Populations served by the strategic action
  - Income level addressed by the strategic action
  - Housing tenure, either owner or renter
  - Potential Impacts
    - Estimate of production of new units as a result of implementing the strategic action
    - Potential negative impact of the strategic action if it is successfully implemented
  - Magnitude of the action for producing new housing
    - A **low** magnitude is anticipated production of 1% or less of the needed new units (1,014 units) or about 10 dwelling units over the six-year period. A low magnitude does not mean a strategic action is unimportant. Some strategic actions are necessary but not sufficient to produce new housing.
    - A **moderate** magnitude is anticipated production of 1% to 5% of the needed new units (1,014 units) or about 10 to 50 dwelling units over the six-year period.
    - A **high** magnitude is anticipated production of 5% or more of the needed new units (1,014 units) or 50 or more dwelling units over the six-year period.
- Timeline for adoption and implementation of the strategic action, including:
  - A timeline for adoption of the strategic action, which is when the city would adopt the strategic action or otherwise officially decide to implement the strategic action.
  - A timeline for implementation of the strategic action, which is when the city would begin to use or allow use of the strategic action.
  - Time frame of the impact, which is the time period when the impact occurs.
- Implementation steps summarize the steps for implementing the strategic action at a high level.
- Lead agency and potential partners provide information about who will be responsible for implementing the strategic action.

- Funding or revenue implications provide high-level implications of the strategic action.

Implementation Schedule for Strategic Actions

Exhibit 6 presents a draft schedule for implementation of the Housing Production Strategy. The table shows each of the 12 goals with the strategic actions below. Each strategic action will go through a period of evaluation, then potentially adoption and implementation. The activities for each of these are described below.

- **Evaluation:** All strategic actions will require some level of evaluation prior to implementation, which may range from simple logistics (including information on a website) to complicated coordination between multiple internal and external stakeholders (adoption of a construction excise tax). The evaluation period will occur during the time in the tables shown in a teal color, before adoption.
- **Adoption:** This occurs when the City takes official action to adopt (or uses another official acknowledgement that the City is going to execute on the strategic action). The table shows the expected time of adoption in the time period represented by a teal color and "A" in the table.
- **Implementation:** This occurs when the City officially allows the strategic action to be used, represented by a brown color and "I" in the table.

Exhibit 6. Schedule for Evaluating, Adopting, and Implementing the Strategic Actions

Goal and Strategic Actions	On-Going 2021	2022		2023		2024	2025	2026	2027	Beyond 2027
1. Affordable Housing: Strongly prioritize, encourage, and support affordable rental housing development to increase affordable housing for households earning 0-60% Median Family Income.										
1.a Evaluate a Low-Income Housing Property Tax Exemption Program for Affordable Rental Housing				A	I					
1.b Evaluate Changes to Systems Development Charges								A	I	
1.c Evaluate Implementation of a Construction Excise Tax (CET)							A	I		
1.d Evaluate Support for Affordable and Workforce Rental Housing as part of Urban Renewal			A	I						
1.e Evaluate Financial Resources for Local Contributions to Affordable Housing Development								A	I	
1.f Evaluate Buildable or Redevelopable Public and Institutional Land Potentially Suitable for Affordable Housing					A	I				
1.g Evaluate Development Code Changes to Allow and Support Other Affordable Rental Housing Types in Tualatin						A, I				
1.h Evaluate Municipal Code, Development Code, Public Works Construction Code, and Building Code Processes to Make Building Affordable Housing Easier						A, I				
2. Affordable Homeownership: Encourage and support affordable homeownership to create opportunities for wealth creation.										
2.a Evaluate Impediments to Homeownership and their Removal						A	I			
2.b Partner to Encourage Education about Homeownership Opportunities		A	I							
2.c Partner with Organizations that Develop Affordable Ownership Housing					A	I				
2.d Evaluate Development Code to Encourage Diverse Housing Types for Affordable Homeownership						A, I				
3. Preservation of Regulated Affordable Housing: Preserve affordable housing to prevent the loss of existing affordable housing units and to prevent resident displacement.										

Goal and Strategic Actions	On-Going 2021	2022		2023		2024	2025	2026	2027	Beyond 2027
3.a Evaluate How to Support Preservation of Regulated Affordable Rental Housing							A	I		
3.b Evaluate Developing a Healthy Housing Initiative for Multifamily Housing						A	I			
4. Preservation of Naturally Occurring Affordable Housing (NOAH): Preserve naturally occurring affordable housing, where possible, to prevent loss of affordable units and to mitigate resident displacement.										
4.a Evaluate Development of Incentives to Preserve Low-Cost Rentals for Below-Market-Rate Privately Owned Rental Housing								A	I	
4.b Evaluate Using the Multi-Unit Property Tax Exemption to Slow Rental Cost Increases								A	I	
5. Housing for Underserved Communities: Implement housing policies, projects, programs, and partnerships to further support racial and social equity.										
5.a Consider Development of a Funding Action Plan to Implement the HPS with Attention to Equity				A	I			U[25]		
5.b Evaluate Impediments to Fair Housing to Create an Analysis of Impediments						A	I			
5.c Evaluated Ways to Best Ensure Opportunities for Education about Fair Housing Are Provided				I						
5.d Evaluated Strategies to Encourage Diverse Housing Types in High-Opportunity Neighborhoods						A, I				
6. Workforce Housing: Encourage, plan for, and support the development of workforce housing for households earning 61-80% Median Family Income, for both owner and renter, in order to increase the jobs-housing balance, reduce commute time and provide attainable housing for workers in Tualatin.										
6.a Evaluate Ways to Incentivize Inclusion of Workforce Housing Units within New Multifamily Rental Development								A	I	

[25] The Funding Action Plan will likely need to be updated by about 2026.

Goal and Strategic Actions	On-Going 2021	2022		2023		2024	2025	2026	2027	Beyond 2027
6.b Evaluate Potential Partnerships with Employers on Employer-Assisted Housing							I			
6.c Evaluate City Partnership to Participate in a Land Bank						A	I			
7. Housing Stabilization: Prevent and address homelessness to provide for safe living conditions for everyone living in Tualatin.										
7.a Evaluate Opportunities to Partner on a Local Rental and Utility Assistance Program	P[26]	I								
7.b Evaluate Ways to Develop Housing Options and Services to Address and Prevent Houselessness								A	I	
8. Housing Rehabilitation: Plan for and support housing programs and initiatives that are responsive to the safety and health needs of households earning 0-80% of Median Family Income.										
8.a Evaluate Establishing Local Housing Rehabilitation Program								A	I	
8.b Evaluate the Implementation of a Healthy Housing Initiative for Single-Family Housing						A	I			
9. Accessible Design and Other Specialized Design: Encourage and support Universal Design, Lifelong Housing Certification, and other similar standards.										
9.a Evaluate the Development of Specialized Design Standards and Incentives to Accommodate Special Needs						A	I			
10. Mixed-Use Housing and Redevelopment: Encourage and support development of mixed-use, mixed-income, and multifamily housing in commercial zones and urban renewal areas for households earning 0-80% of Median Family Income.										
10.a Evaluate Redevelopment Opportunities for the Creation of Mixed-Use Development Districts to Support Development of Affordable Housing and Workforce Housing			A	I						
10.b Evaluate Opportunities for Conversion of Commercial Buildings to Residential Uses				A	I					

[26] The City is piloting a test for this Strategic Action through December 2021, with potential extension of the partnership into 2022 and beyond.

Goal and Strategic Actions	On-Going 2021	2022		2023		2024	2025	2026	2027	Beyond 2027
10.c Evaluate Opportunities to Rezone Land for Mixed-Use			A	I						
10.d Evaluate Establishing Incentives to Support Mixed-Use Development, such as the Vertical Housing Tax Abatement					A	I				
11. Regulatory and Zoning Changes: Increase housing development opportunities through regulatory and zoning changes to accommodate a diverse range of housing types and price points to meet the housing needs in Tualatin.										
11.a Evaluate Updating Density Standards for Multifamily Housing in Medium-Density, High-Density, and Mixed-Use Zones		A	I							
11.b Evaluate Opportunities to Rezone Lower-Density Residential Land to Higher Density		A	I							
11.c Evaluate the Feasibility of Targeted Reductions to Off-Street Parking Requirements			A	I						
11.d Evaluate Updating Code to Allow Small Dwelling Unit Developments						A, I				
11.e Evaluate Adopting an Expedited Permitting Process for Affordable Rental Housing and Affordable Homeownership				A	I					
11.f Evaluate Providing Additional Engagement and Information to Developers of Affordable Housing		A	I							
12. Transportation and Public Infrastructure: Plan for and develop transportation and public infrastructure to support affordable housing, workforce housing, mixed-use housing, and mixed-income housing.										
12.a Evaluate Ways to Prioritize Capital Improvements Programming for Affordable and Workforce Housing					A	I				

Goals and Strategic Actions

This section presents Goals 1 to 12 and the strategic actions associated with each goal.

Goal 1. Affordable Housing: Strongly prioritize, encourage, and support affordable rental housing development to increase affordable housing for households earning 0-60% Median Family Income.

We recommend that the City pursue the following goal, which supports Goals 3.2 and 3.3 in the Comprehensive Plan:

- Strongly prioritize, encourage, support, and promote the development of affordable rental housing for households earning 0-60% Median Family Income.

Implementing this goal would require developing an affordable rental housing program to encourage and support affordable housing development for households earning 0-60% Median Family Income. The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

1.a	Evaluate a Low-Income Housing Property Tax Exemption Program for Affordable Rental Housing	
Description		**Type of Action**
Evaluate a property tax exemption program for affordable rental housing. Two tax exemptions programs could be used to support affordable housing: ▪ **Low-Income Rental Housing Exemption:** Would provide a 20-year, renewable property tax exemption for rental housing for low-income households (60% of area median income and below). Housing need not be owned or operated by a nonprofit entity; if it is not, only housing built after the program is adopted is eligible. The exemption could also apply to land held for future affordable housing development. Only the City's taxes would be exempted unless there is sufficient support from overlapping taxing districts. Requires that savings be passed on to tenants through rent reductions. ▪ **Nonprofit Low-Income Rental Housing Exemption:** Would provide a full property tax exemption for new and existing		Adopt a Tax Exemption to Reduce Ongoing Charges on Development

affordable housing owned and operated by a nonprofit organization for as long as the property meets eligibility criteria. Tenants must initially qualify at 60% of area median income or below, but once qualified, existing tenant incomes may rise to as much as 80% of area median income over time. The exemption could also apply to land held by a nonprofit for future affordable housing development. Only the City's taxes would be exempted unless there is sufficient support from overlapping taxing districts. The evaluation would include a conclusion as to which of the two available options under state statute is better suited to the needs of housing providers in Tualatin.	
Rationale	With very thin margins for rents in affordable housing developments to be able to cover operating costs (even with subsidies), eliminating the cost of property taxes is an important way to improve the viability of affordable housing. Affordable housing providers sometimes use alternative means to secure tax exemptions (e.g., partnership with the local Housing Authority), but the alternatives add complexity to an already complex process. A locally enabled tax exemption also demonstrates local support for affordable housing development, which can help with securing state and federal funds.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income renter households ▪ **Income:** 0-60% of Median Family Income ▪ **Housing tenure:** Rental ▪ **Potential Benefit:** - **Housing Production (new units).** If this incentive were used for one to two apartment buildings at 50 to 150 units each, this strategy could contribute to development of 50 to 300 affordable units. - **Equitable Outcomes:** This is an opportunity to provide equitable housing for low-income households by serving, for example, underserved communities, people with disabilities, and people with special needs, increasing diversity in neighborhoods. ▪ **Potential Financial Impact:** The City will forgo some property tax income for these properties for the duration of the exemption. This reduces some revenue for city services and some revenue for participating taxing districts. ▪ **Magnitude:** Moderate

Timeline	▪ **Timeline for adoption:** June 30, 2023 ▪ **Implementation to commence:** 2023 ▪ **Time frame of impact:** The property tax exemption can be used after adoption for as long as the City offers the tax exemption.
Implementation Steps	▪ Evaluate viability of adoption, including an analysis of the pros and cons of the two tax exemptions. ▪ Seek input from overlapping taxing districts on their willingness to support the exemption. ▪ Discuss topic with City Council at work sessions and in public hearings. City Council may choose to adopt exemption by resolution or ordinance following a public hearing. ▪ Follow up with overlapping taxing districts to request that they pass resolutions to support the exemption. ▪ If supported, select one of the tax exemptions for adoption.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division and City of Tualatin Finance Department ▪ **Partners:** Overlapping Taxing Districts
Funding or Revenue Implications	Tax exemptions reduce general fund revenues for all overlapping taxing districts, including the City.

1.b Evaluate Changes to Systems Development Charges

Description	Type of Action
Evaluate options for potential changes to System Development Charges (SDCs) and Transportation Development Tax (TDT) to support development of affordable housing. ▪ **SDCs** are fees collected when new development and some redevelopment occurs within the City. Revenues are used to fund growth-related capital improvements. ▪ **TDT** is a voter-approved charge imposed on new development and redevelopment within Washington County (including its cities) to help pay for the impact development has on the transportation system. The City of Tualatin has limited control over SDCs because most are collected on behalf of other service districts and providers, who determine the rates and rate structures. The parks and water SDCs are set by the City. The primary opportunity for changes to SDC is with the parks SDC, which recently went through a review and update process. The water SDC is based on meter size, which makes meaningful changes in SDCs challenging, especially for multiunit projects. Tualatin does not have control over the rate or rate structure for Washington County's TDT, though the City does receive a share of the revenue. The City of Tualatin could evaluate changes to its parks and water SDCs by reducing, deferring, and/or financing SDCs at a low interest rate for regulated affordable housing or other needed housing types.	Evaluate Change to Fee Schedules to Reduce Charges on Development

Rationale	Changes to the City's parks or water SDC rates or methodology could reduce up-front costs for developers of regulated affordable housing and/or encourage specific types of housing development (e.g., smaller units).
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income renter households ▪ Extremely low, very low, and low-income owner households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Owner and Renter ▪ **Potential Benefit:** - **Housing Production (new units):** Tualatin can have an impact on its parks and water SDCs and can backfill the costs to

	County TDTs. - While reducing parks or water SDCs could provide some support for affordable housing development, on its own this action is unlikely to directly result in development of new affordable housing, but it may serve to attract affordable housing developers to Tualatin with this cost reduction. - **Equitable Outcomes:** Providing **i**ncentives like SDC reductions supports the development of equitable housing. ▪ **Potential Financial Impact:** The City will likely need to make up revenue forgone through the changes to SDCs, such as by backfilling with TDTs. ▪ **Magnitude:** Low
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** Changes to SDCs will impact development of needed housing if changes are adopted and in use by 2027.
Implementation Steps	▪ Evaluate options for deferral or financing of parks or water SDCs for affordable housing under the existing methodology, working with current planning and finance divisions. ▪ At the next update to the parks or water SDC methodology, evaluate options to offer full or partial exemptions for affordable housing and/or to adjust the residential rate structure to offer lower rates for smaller units.
Lead Agency and Potential Partners	▪ **Lead Agency** City of Tualatin Parks and Recreation Department, City of Tualatin Finance Department, and City of Tualatin Planning Division.
Funding or Revenue Implications	Changes may reduce or delay SDC revenue to the City.

1.c Evaluate Implementation of a Construction Excise Tax

Description	Type of Action
Evaluate a Construction Excise Tax (CET), a tax assessed on new development and expansions as a percent of the permit value. State statute defines the allowed uses of CET funds and the allowed maximum tax rate. The City of Tualatin could levy a CET on commercial, industrial, and/or residential development. Tualatin has limited land for new residential development within City limits at present; however, revenues from a CET levied on commercial or industrial development could be used for housing programs. At least half of the revenue from a CET on commercial and industrial development would need to be used for local housing programs (capital or programmatic services), but the other half is unrestricted (capital or programmatic services); revenue from a CET on housing would need to go toward housing, with certain percentages toward various specific categories of expenditures. At least eight jurisdictions in Oregon have adopted a CET to fund affordable housing. Most are using or plan to use the revenues to offer grants and/or loans as flexible gap financing for affordable housing development. While it can be used to pay for services, capacity building, etc., the variable nature of the revenues makes it challenging to fund ongoing commitments.	Establish a CET to Allocate Funding

Rationale	CET is one of few options to generate locally controlled funding for affordable housing and could be implemented without a public vote. Industrial development has been strong in Tualatin in recent years. If this continues, a CET on commercial and industrial development could potentially generate enough revenue to allow the City to fund some of its other equitable housing and related strategies.
Anticipated Impact	▪ **Populations served:** Depends on how revenue is used, but would be for extremely low, very low, and low-income and underserved communities. ▪ **Income:** Depends on how revenue is used, but most likely directed toward 0-60% of Median Family Income, however, could be used to meet other income groups, such as contribution to homeownership for households at 61-80% of Median Family Income. ▪ **Housing tenure:** Renter or owner

	▪ **Potential Benefit:** - **Housing Production (new units):** Based on analysis by ECONorthwest, a 0.5-1% CET on commercial and industrial development could generate roughly $200,000-400,000 per year. While this would cover the full cost of only a few units of affordable housing per year, it could pay for SDCs and TDT on roughly 100 units per year. If used as gap financing, it could potentially contribute to funding one or two affordable housing developments per year. - **Equitable Outcomes:** Developing funding sources like CET can support equitable housing programs and development, such as affordable housing and workforce housing. ▪ **Potential Financial Impact:** Homebuyers and businesses that pay the CET will have slightly higher costs for their homes and for commercial or industrial development. The increase in home prices will not exceed 1% as a result of the CET and may be smaller if the City establishes a CET below 1%. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2025 ▪ **Implementation to commence:** 2026 ▪ **Time frame of impact:** If a CET is implemented in 2026, it may take several years for funds to accumulate to an amount that could be used to support development of housing.
Implementation Steps	▪ Evaluate potential approach. Include projections on potential revenue and what programmatic goals could be accomplished with revenue. Include SWOT analysis for both residential and commercial/industrial. ▪ Engage with developers, major employers, and the business community in Tualatin to evaluate tolerance for a CET on commercial and industrial development and where there are shared interests in supporting local housing production. ▪ Seek direction on whether to proceed with adoption from City Council at work sessions. ▪ Tualatin City Council could impose the CET by adoption of an ordinance or resolution that conforms to the requirements of ORS 320.192–ORS 320.195. ▪ If directed, create a plan for the use of CET funds.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division and City of Tualatin Finance Department ▪ **Partners:** Local developers, Chamber of Commerce, major

	employers, and the Tualatin business community
Funding or Revenue Implications	Adopting a CET would provide funding for other strategies. ECONorthwest conducted a preliminary estimate of CET revenue via a backward-looking analysis using the City of Tualatin's permit database for new residential and commercial/industrial construction from the last five years. The results of this analysis are summarized in Appendix B. Because a percentage (4%) of the revenue can be applied to the City's costs for administering the program, there should be minimal additional cost for the City.

1.d Evaluate Support for Affordable and Workforce Rental Housing as Part of Urban Renewal

Description	Type of Action
Evaluate the potential to specifically identify affordable housing (for instance, housing affordable at 0-60% of MFI and workforce affordable housing at 61-80% of MFI) as a goal of existing or future Urban Renewal Plans. As applicable, identify specific affordable housing programs, projects, and/or supportive infrastructure to be included with urban renewal plan(s). TIF funding for affordable housing or other equitable housing would need to gain approval through the City's Urban Renewal process and be consistent with the State Oregon Revised Statute (ORS) 457. TIF (for urban renewal districts) is used as a way to make strategic public investments that spur development in areas where it might not otherwise occur. When successful, the new development leads to an increase in property value and property tax revenue. The increment of new tax revenue from within the district (from the time the district is established) is captured and used to pay off bonds (or directly pay) for the public investments in the area. When the bonds are paid off, the entire valuation of the district is returned to the general property tax rolls. While regulated affordable housing is often tax exempt and does not generate additional tax revenue, some jurisdictions allocate a portion of TIF revenues to fund affordable housing to support equitable development within the TIF district. TIF can be invested in the form of low interest loans and/or grants for housing projects or a variety of capital investments. **Additional Context:** The City of Tualatin is in the process of evaluating two potential new TIF districts: (District 1) the Basalt Creek and Southwest Industrial Area and (District 2) the North Study Area, Bridgeport Village, Town Commons, I-5 Corridor and Tualatin-Sherwood Road. The City also recently modified plans for an existing district (Leveton). While much of the land included in these areas is planned for industrial and commercial use, portions of the potential new districts are planned for residential or mixed-use development. These could be appropriate locations for new affordable housing rehabilitation or mixed-income housing. District 1 potential total TIF revenue over 30 years is estimated to be between $28.4 million and $55.5 million, depending on future growth in assessed value in the area.	Evaluate Affordable Housing Support as Part of Urban Renewal

District 2 potential total TIF revenue over 30 years is estimated to be between $248.2 million and $362.7 million, depending on future growth in assessed value in the area. District 1 is slated to be established in fall of 2021 and District 2 in approximately two years. In determining the resources for affordable housing from TIF, the City would want to consider the specific housing needs of each district. TIF funding for District 1 may be focused more on infrastructure funding to pay for infrastructure needed to support new development. For District 2, the amount of TIF used for housing could be a larger share of TIF funding, as this district may be focused on housing redevelopment.	
Rationale	TIF is one of few available locally controlled sources of funding to build or improve housing. In addition, investing a share of TIF revenues into affordable or mixed-income housing within an area that is a focus for local investment helps support inclusive and equitable housing development in that area.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Renter or Owner ▪ **Potential Benefits:** - **Housing Production (new units):** Urban renewal TIF is the largest source of funding over time that could be made available for affordable housing development. The amount of housing production depends on the funds raised and allotted through urban renewal. TIF can only be spent on capital projects, not operations. - **Equitable Outcomes:** Establishing TIF funding for equitable housing may have the greatest impact over time of any single funding sources on equitable housing development in the city to be used to develop affordable housing, workforce housing, mixed-use housing, and mixed-income housing and related infrastructure. ▪ **Potential Financial Impact:** The financial impacts of a URA are borne by overlapping taxing districts, not by individual taxpayers. The financial capacity of two potential new districts on the horizon in Tualatin would not be available immediately but would build slowly over time. In pursing this strategic action in Tualatin, it will be important to get an early start on setting goals and priorities for TIF funding for affordable housing and other

	equitable housing before the URA districts are established. ▪ **Magnitude:** Moderate to Large
Timeline	▪ **Timeline for adoption:** December 32, 2022 ▪ **Implementation to commence:** 2022 ▪ **Time frame of impact:** It would likely be at least 5 to 10 years before there is sufficient revenue in the Urban Renewal District to have enough funds to make significant investment in housing.
Implementation Steps	▪ As part of urban renewal planning for the two potential new districts, evaluate inclusion of affordable housing as a policy. Additionally, identify affordable housing programs, projects, and/or supportive infrastructure. ▪ Proceed with the planning and adoption processes already underway for the two potential new districts, including establishing priorities for the areas, identifying project lists, confirming financial feasibility, preparing required plan documents, and holding adoption hearings.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division and City of Tualatin Finance Department ▪ **Partners:** Tualatin Development Commission; Overlapping taxing districts
Funding or Revenue Implications	TIF results in foregone tax revenue for the City and other overlapping taxing districts for several decades for a variety of types of development investment, though it can (and should) grow the tax base in the long term by supporting development that would not otherwise have occurred.

1.e	Evaluate Financial Resources for Local Contributions to Affordable Housing Development

Description	Type of Action
Evaluate, develop, and promote financial resources for local contribution to affordable housing development. Funds from this effort could be contributed to a Housing Trust Fund Initiative. The City of Tualatin could consider funding sources including foundation grants, private gifts, or other sources to assist with funding contributions to support affordable housing development. The City may consider other sources of funding, such as money from the City's General Fund, Local Option Levy, Cannabis Tax revenues, and other funding sources. Local contributions to affordable housing development are often critical in helping to fill the funding gap for these projects and to compete successfully for other government funding and foundation grants.	Collect Revenue to Allocate Funding to Housing Programs

Rationale	These funds can be used to support incentives and support for affordable housing development, such as tax exemptions.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income households ▪ **Income:** 0-60% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** The amount of housing production depends on the funds raised and contributed through these resources. - **Equitable Outcomes:** Local contributions to affordable housing development could help underserved communities and demonstrate the City's commitment to equity. ▪ **Potential Financial Impact:** Funds spent on affordable housing will be unavailable for other city services, however, these funds may not have been able to be successfully raised otherwise. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** If this strategic action is implemented in

	2026, it may take several years for funds to accumulate to an amount that could be used to support development of housing.
Implementation Steps	▪ Identify financial sources that the City could use to support affordable housing development. ▪ Develop a Housing Trust Fund as a place to collect funds. ▪ Continue to raise funds over time.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division and Finance Department ▪ **Partners:** State/Federal Agencies, State and National Foundations
Funding or Revenue Implications	Evaluating, developing, and promoting financial resources for local contribution is a comparatively low-cost strategy, primarily relying on the use of staff time. If the City uses General Fund revenue or revenue from other taxes, such as Cannabis Tax revenues, the money from these sources would not be available of use for other purposes in Tualatin.

1.f Evaluate Buildable or Redevelopable Public and Institutional Land Potentially Suitable for Affordable Housing

Description	Type of Action
Periodically evaluate and maintain an inventory of potentially buildable or redevelopable surplus or excess land owned by public agencies and/or institutions to determine its suitability to support development of income-restricted, publicly subsidized, affordable housing. As the facilities needs of public agencies or institutions change over time, properties may not be needed for their originally intended purpose. Also, sometimes sites that are still serving their intended purpose are larger than needed, and the unused portion could be converted to other uses. When these opportunities come up, the City can capitalize on them to support development of affordable housing, but this requires forethought, an intentional approach, and aligning policies and procedures around surplus and excess land and facilities management. Other public agencies and institutions (including religious institutions) may also have land that they no longer need and are willing to make available for affordable housing. Some may be legally required to sell surplus and excess property at fair market value, but others may have flexibility for how they dispose of this land and may be willing to partner with the City to consider opportunities to use this land for affordable housing.	Adopt a Policy or Program to Support Land Acquisition and Disposition

Rationale	Four primary factors influence housing development: (1) ability to secure suitable land, including acquisition costs; (2) access to capital, including equity and bank loans; (3) public policy, such as zoning, density, and design requirements; and (4) market conditions, including depth of demand and rents/sales prices. This strategy allows the City of Tualatin to directly influence the ability to secure land for affordable housing, by offering particular properties only to affordable housing developers. It can also influence the cost of land, by buying down prices to support affordable housing.
Anticipated Impact	▪ **Populations served:** Extremely and very low–income households ▪ **Income:** 0-60% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** The amount of housing production depends on the size and number of properties that

	can be converted to affordable housing as a result of this strategy. If this strategy identified 0.5 to 3 acres of surplus or excess land over the eight-year planning horizon, at 30 to 60 units per acre, this strategy could produce between 15 and 180 units of affordable housing. - **Equitable Outcomes:** Land acquisition and land donation for affordable housing development could result in project feasibility by buying down the cost of the overall project; this could contribute to much needed housing for low-income households. ▪ **Potential Risk:** If certain public land is used for affordable housing, it may not be able to be used for other city functions. However, if the land is deemed surplus or excess land, it may not be needed for other city functions. If the land is owned by an institution, such as a church, it may be able to be used, purchased, or donated for affordable housing. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2023 ▪ **Implementation to commence:** 2024 ▪ **Time frame of impact:** Land may be available to support affordable housing development immediately after adoption of this strategic action (or possibly before it is completed). It is also possible that no land will be available by adoption and that land will become available in the future through implementing this strategic action, especially with potential future conversations with land owned by institutions.
Implementation Steps	▪ Inventory City-owned land within Tualatin that may be suitable for affordable housing development and determine what land is currently surplus or excess or may be deemed so in the next few years. ▪ Reach out to other public agencies and institutions, including faith-based organizations, that own land within Tualatin to determine if these entities are willing to include their lands in the inventory. ▪ Review policies and procedures related to surplus and excess lands to determine whether changes or refinements are needed to enable or encourage them to be made available for affordable housing and to establish protocols for how affordable housing developers would be selected when land is available.

Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Public agencies and/or institutions, including faith-based organizations, in Tualatin; affordable housing developers; City of Tualatin Finance Department; other divisions at the City of Tualatin (as needed)
Funding or Revenue Implications	Leveraging currently owned surplus and excess lands does not require direct funding, other than staff time to manage the process. Coordination with other partners primarily requires staff time; however, if the City were to acquire land from partners to control the disposition process, this would require funding. Disposing of surplus and excess land could relieve the City's existing upkeep costs on those lands, but the City may forego revenue by selling the property at below-market value. Depending on whether the affordable housing development is tax exempt (e.g., Housing Authority) or subject to a City-controlled tax exemption, it is possible that after development, the City of Tualatin could experience an increase in their tax base.

1.g	Evaluate Development Code Changes to Allow and Support Other Affordable Rental Housing Types in Tualatin	
Description		**Type of Action**
Evaluate Development Code Changes to allow and support development of other affordable rental housing types in Tualatin that provide affordable housing, beyond the required housing types in House Bill 2001. Other housing options may include dwelling units designed for multiple unrelated individuals living in the same dwelling with shared kitchen and bathrooms such as "adult dorms"; small-scale homes (dwelling units between 100 and 500 square feet); and other innovative, small housing types (such as cargo containers). Allowing and clarifying standards for a diverse array of housing types would require development of clear and objective standards for these housing types.[27] In addition, Tualatin's Development Code does not currently allow small-scale dwellings, such as those at 100 to 500 square feet in size, at densities that would support development of this housing type as affordable housing.		Evaluate Change to Zoning Code
Rationale	Further diversifying Tualatin' housing stock gives residents and prospective residents a wider range of housing options to meet their financial needs and housing preferences.	
Anticipated Impact	▪ **Populations served:** Extremely low and very low–income, low-income, and moderate-income households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** This action would not directly result in production of new affordable housing units. However, it is a crucial step in the process necessary to open up more opportunities for production of potentially more affordable types of housing in Tualatin.	

[27] Tualatin's Development Code defines household living as "the residential occupancy of a dwelling unit by a family or household, where the dwelling unit is self-contained with cooking, sleeping, and bathroom facilities." In addition, Tualatin's Development Code defines a household as "one or more persons related by blood, marriage, domestic partnership, legal adoption or guardianship, plus not more than five additional persons, who live together in one dwelling unit." These definitions limit options for living situations with separate living quarters but with shared kitchen and bathrooms (such as "adult dorms"), in situations that do not qualify as group living (as defined by Tualatin's Development Code).

	- **Equitable Outcomes:** This is an opportunity to provide more options for lower-cost housing, which may help underserved communities, people with disabilities, and people with special needs, increasing diversity in neighborhoods. ▪ **Potential Risk:** Allowing smaller units may increase density in existing neighborhoods, with the potential to cause concern for some of the existing residents, while others may welcome it. ▪ **Magnitude:** Indirect, small
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2024 or early 2025 ▪ **Time frame of impact:** Impact is small. Impact may be greater if changing the Development Code would allow market-rate and regional affordable housing providers to utilize the new wider range of housing types in Tualatin.
Implementation Steps	▪ Review Development Code to identify and clarify innovative and diverse housing types in the Development Code. Consider housing definitions, types of units permitted, lot dimensions, height standards, and other related standards. ▪ Revise Development Code as needed.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Development community
Funding or Revenue Implications	Evaluating zoning code changes for allowed uses is a comparatively low-cost strategy, primarily relying on the use of staff time.

1.h	Evaluate Municipal Code, Development Code, Public Works Construction Code, and Building Code Processes to Make Building Affordable Housing Easier

Description	Type of Action
Evaluate the City's Municipal, Development, Public Works Construction, and Building Codes processes to identify opportunities to make it easier to develop and build affordable housing. This could include updating the modifications or variance process and requirements, including making allowing modification or variance processes for affordable housing to have a simpler review process than typical, such as not requiring hearings. It could also include prioritizing review of regulated affordable housing development proposals to the maximum extent possible, while also meeting state-required timelines for review of other development proposals. The City has varying administrative roles in land use and building permitting processes. The City could look for opportunities to reduce or expedite these processes, resulting in improved customer service and reduced development timelines. This strategy could include updating the modifications/variance processes and requirements, which would result in making modification/variance processes for affordable housing simpler and quicker (e.g., not requiring hearings).	Evaluate Change to Zoning Code and Other Development Processes

Rationale	Enable easier development of regulated affordable housing in Tualatin. Enable quicker development time frames by demonstrating responsiveness to affordable housing developer needs.
Anticipated Impact	▪ **Populations served:** Extremely and very low–income households ▪ **Income:** 0-60% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** In and of itself, this strategic action is not likely to result in development of more housing. It may make affordable housing more feasible to develop by decreasing the permitting time and may be helpful by attracting affordable housing developers to develop in Tualatin. - **Equitable Outcomes:** This is an opportunity to provide more options for lower-cost housing, which may help underserved communities, people with disabilities, and people with special needs, increasing diversity in neighborhoods.

	▪ **Potential Risk:** This strategic action may result in faster review of affordable housing development, possibly decreasing opportunities for public input. Expediting permitting processes for affordable housing may result in minor increases in the time needed for the permitting processes of other development. ▪ **Magnitude:** Low
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2024 or early 2025 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented in the Municipal Code.
Implementation Steps	▪ Work with City Council to develop goals for the length of time the permitting process may take. ▪ Identify inefficiencies in the permitting process and make the necessary changes to streamline procedures. ▪ Develop a system to measure and monitor the time it takes for affordable housing proposals to get through the City's development processes. ▪ Survey applicants periodically to assess services and areas for improvement.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** City of Tualatin Engineering and Building Divisions and Legal Services Department
Funding or Revenue Implications	Evaluating Development Code and process changes is a comparatively low-cost strategy, primarily relying on the use of staff time. If additional staff time were needed to support faster review/permitting times, that may require additional funding for the applicable division.

Goal 2. Affordable Homeownership: Encourage and support affordable homeownership to create opportunities for wealth creation.

We recommend that the City pursue the following goal, which supports the existing Goal 3.2, Policy 3.2.1, and Goal 3.3 in the Comprehensive Plan:

- Encourage and support affordable homeownership education and development to increase equitable opportunities for homeownership and generational wealth creation.

The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

2.a Evaluate Impediments to Homeownership and Their Removal

Description	Type of Action
Work with development stakeholder to develop a comprehensive review of the impediments to homeownership opportunities and evaluate actionable steps to remove those impediments. Barriers to homeownership and impediments may include saving for a down payment, access to down payment assistance, poor credit scores restricting households' ability to obtain a mortgage, underproduction of homes for sale relative to demand, and lack of affordable homeownership opportunities (particularly in markets with rising home sales prices). The City may form partnerships with organizations that remove barriers by providing financial assistance, such as down payment assistance or paying down interest rates.	Remove Impediments

Rationale	Homeownership is one of the most effective (and primary ways) for households and individuals to build wealth. Further, renter households are more likely to be at risk of displacement than homeowners.
Anticipated Impact	▪ **Populations served:** Extremely low and very low–income, low-income, and moderate-income households ▪ **Income:** 0-120% of Median Family Income ▪ **Housing tenure:** Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This strategic action does not directly result in production of new housing but is intended to

	make it easier for residents to afford homeownership. - **Equitable Outcomes:** Removing barriers to homeownership opportunities can increase equitable outcomes by making it easier for households with lower incomes to become homeowners. ▪ **Potential Risk:** Impacts are likely to have no negative impact. ▪ **Magnitude:** Indirect, small
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2025 ▪ **Time frame of impact:** The strategic action can begin to take effect when it is adopted and implemented, once the impediments to homeownership are removed.
Implementation Steps	▪ Work with partners to better understand impediments to homeownership in Tualatin. ▪ Develop programs or partnerships to lower or remove barriers to homeownership ▪ Provide outreach to eligible, prospective program participants to connect them with homeownership programs.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division Department ▪ **Partners:** Oregon Housing and Community Services; Portland Housing Center or other nonprofits (e.g., Oregon Housing Alliance, Housing Oregon, etc.)
Funding or Revenue Implications	Establishing partnerships and identifying impediments to homeownership are comparatively low-cost strategies, primarily relying on the use of staff time.

2.b Partner to Encourage Education about Homeownership Opportunities

Description	Type of Action
Partner with a nonprofit homeownership education program. Consider partnering with the Portland Housing Center (or other nonprofit) to promote homeownership educational opportunities and to help refer interested people to the program. The Portland Housing Center may be a suitable partner as they currently provide guidance, financial services, and home buyer education to Portland-area residents. Tualatin may provide support to renters in their pursuit of becoming homeowners. The City may also provide support to residents in manufactured housing parks (who own their home but not the lot) to form a cooperative (a group of people organized for the purpose of owning and operating a housing park for the benefit of its members on a not-for-profit basis).	Establish Partnerships

Rationale	Responsible homeownership is one of the most effective (and primary ways) for households and individuals to build wealth. Further, in Oregon, renter households are more likely to be at risk of displacement than homeowners.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households ▪ **Income:** 0-120% of Median Family Income ▪ **Housing tenure:** Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This strategic action does not directly result in production of new housing but is intended to make it easier for residents to afford homeownership. - **Equitable Outcomes:** The City partnering with a homeownership education organization could result in new households actively planning with support for first-time homeownership and potentially attaining it. This could open up new opportunities for underserved communities as well as low-income and moderate-income households and others who are interested yet may never have had access to homeownership education and the possibility of wealth creation. ▪ **Potential Risk:** There are likely to be no or minor negative

	impacts. ▪ **Magnitude:** Low to moderate
Timeline	▪ **Timeline for adoption:** June 30, 2022 ▪ **Implementation to commence:** 2022 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Review state homeownership resources. ▪ Establish a partnership with a nonprofit focused on encouraging and supporting homeownership opportunities in the Portland Region. ▪ Identify opportunities to help Tualatin residents achieve homeownership. ▪ Provide outreach to residents who rent in Tualatin to support their efforts in achieving homeownership. ▪ Consider offering a workshop or series of workshops on homeownership in coordination with partner organizations.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division Department ▪ **Partners:** Portland Housing Center or other nonprofits (e.g., Oregon Housing Alliance, Housing Oregon, etc.); Oregon Housing and Community Services.
Funding or Revenue Implications	Encouraging residents to pursue homeownership education is a comparatively low-cost strategy, primarily relying on the use of staff time and/or community partners with support from staff to reach out to prospective/interested residents.

2.c Partner with Organizations that Develop Affordable Ownership Housing

Description	Type of Action
Explore partnership opportunities with a homeownership development organization, such as Habitat for Humanity or a land trust like Proud Ground, that develops and constructs affordable homes to own for households earning 0-80% Median Family Income. Habitat for Humanity (Portland Region) builds homes purposed for affordable homeownership for qualified, low-income families. Proud Ground is a community land trust that provides permanently affordable housing opportunities through funding that creates affordable home buying opportunities and management of real estate to ensure it remains permanently affordable. Tualatin could partner with these or other affordable housing development organizations, for example, by offering surplus or excess land (see Action 1.f), helping to identify suitable land, assisting with the assemblage of land, and providing support on funding applications for homeownership development in Tualatin or local gap funding contribution if funds are available such as through a Housing Trust Fund.	Establish Partnerships

Rationale	Increase the supply of housing available for homeownership for households with income below 80% of MFI.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Owner ▪ **Potential Benefit:** - **Housing Production (new units):** The amount of housing to be produced over a six-year period as a result of this is likely to be on the order of 10 to 30 units, depending on the land or funds the City has to contribute to this effort. - **Equitable Outcomes:** The City partnering with a homeownership development organization could result in increased opportunities for homeownership for households that cannot generally afford homeownership. This could open up new opportunities for underserved communities as well as low-income and moderate- income households and others who are interested in homeownership and the possibility of wealth creation. ▪ **Potential Risk:** There are likely to be no or minor negative

	impacts. ▪ **Magnitude:** Low to moderate
Timeline	▪ **Timeline for adoption:** December 31, 2023 ▪ **Implementation to commence:** 2024 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Establish a partnership with a homeownership development organization to support development of affordable homeownership opportunities. ▪ Identify funds (or land in Strategic Action 1.f) available to support affordable homeownership development
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Habitat for Humanity, Proud Ground, or other homeownership development organizations
Funding or Revenue Implications	Revenue implications vary depending on the amount of monetary support the City of Tualatin is willing to provide. Monetary support would reduce division budgets or general fund dollars unless a new funding source (tax or fee) is established/enacted.

2.d	Evaluate Development Code to Encourage Diverse Housing Types for Affordable Homeownership

Description	Type of Action
Evaluate Development Code changes to allow and support development of other affordable ownership housing types in Tualatin that provide affordable housing, beyond the required housing types in House Bill 2001. Other housing options may include dwelling units designed for multiple unrelated individuals living in the same dwelling with shared kitchen and bathrooms such as cohousing; small-scale homes (dwelling units between 100 and 500 square feet); and other innovative, small housing types (such as cargo containers). Allowing and clarifying standards for a diverse array of housing types would require development of clear and objective standards for these housing types.[28] In addition, Tualatin's Development Code does not currently allow small-scale dwellings, such as those at 100 to 500 square feet in size, at densities that would support development of this housing type as affordable housing.	Making Zoning Code Changes

Rationale	Comparatively small dwelling units can help meet identified housing needs for Tualatin's workforce, particularly affordable homeownership opportunities.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households ▪ **Income:** 0-120% of Median Family Income ▪ **Housing tenure:** Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This action would not directly result in production of new units. But it is necessary to remove barriers to production of more types of housing in Tualatin. - **Equitable Outcomes:** This is an opportunity to provide more

[28] Tualatin's Development Code defines household living as "the residential occupancy of a dwelling unit by a family or household, where the dwelling unit is self-contained with cooking, sleeping, and bathroom facilities." In addition, Tualatin's Development Code defines a household as "one or more persons related by blood, marriage, domestic partnership, legal adoption or guardianship, plus not more than five additional persons, who live together in one dwelling unit." These definitions limits options for living situations with separate living quarters but with shared kitchen and bathrooms (such as "adult dorms"), in situations that do not qualify as group living (as defined by Tualatin's Development Code).

	lower-cost homeownership opportunities, which may help underserved communities and lower-income households, increasing diversity in neighborhoods. ▪ **Potential Risk:** Allowing smaller units may increase density in existing neighborhoods, with the potential to cause concern for some of the existing residents but may be welcomed by other residents. ▪ **Magnitude:** Indirect, small
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2024 or early 2025 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented in the Development Code.
Implementation Steps	▪ Review Development Code to identify and clarify innovative and diverse housing types in the Development Code. Consider housing definitions, types of units permitted, lot dimensions, height standards, and other related standards. ▪ Revise Development Code as needed.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Development community
Funding or Revenue Implications	Evaluating zoning code changes for allowed uses is a comparatively low-cost strategy, primarily relying on the use of staff time.

Goal 3. Preservation of Regulated Affordable Housing: Preserve affordable housing to prevent the loss of existing affordable housing units and to prevent resident displacement.

We recommend that the City pursue the following goal, which supports the existing Goals 3.2 and 3.3 in the Comprehensive Plan:

- Preserve affordable housing to prevent the loss of existing affordable housing units and to prevent resident displacement.
- Ensure and support no net loss for affordable housing in the City through preservation of one-for-one unit replacement that will retain at least the current number of housing units affordable to households at or below 60% of area Median Family Income (MFI). The City would track and report on the no net loss of affordable housing annually and ensure there are affordability agreements to maintain long-term affordability.

The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

3.a Evaluate How to Support Preservation of Regulated Affordable Rental Housing

Description	Type of Action
Encourage and support preservation of affordable rental housing for households earning 0-60% Median Family Income, working with the State and affordable housing partners to ensure no net loss of regulated affordable housing units. Two of Tualatin's three regulated housing properties have Low-Income Housing Tax Credit (LIHTC) projects that are privately owned and expire in 7 and 10 years, respectively. With nothing in place to protect from loss of these units upon expiration of the LIHTC, especially with the expansion of urban renewal districts and planning for redevelopment, these units could be lost. The City could, at a minimum, track the expiration of the tax credits for these properties. Recent state legislation established a regulatory framework for multifamily rental housing developments with expiring affordability restrictions across a range of state funding programs. Owners must give notice to local government and the state when affordability restrictions will expire, and owners must provide the	Adopt a Program

opportunity for the state, local government, or designee to make an offer to purchase the property and to match a competing offer.[29]

The City could also develop a program to enforce a policy about no net loss of regulated affordable housing, in addition to tracking expiration of the tax credits. If the City develops a policy to avoid losing regulated affordable housing, it will need to identify how to support and enforce that policy, as discussed below.

Two of Tualatin's three regulated housing properties have Low-Income Housing Tax Credit (LIHTC) projects that are privately owned and expire in 7 and 10 years, respectively. Preserving affordability of these properties is a priority for the City. The legislation mentioned above can make it easier for Tualatin to track these properties. The City may also want to have outreach to these property owners to establish relationships with them and better understand their intentions when the tax credits are near to expiration.

For these or other properties in a similar situation, the City could work to identify organizations (e.g., nonprofit affordable housing providers) that might be willing and able to acquire the properties if the owners seek to sell or convert them to market rate. The City could also reach out to the property owner before the end of the affordability period to offer technical assistance with preservation options and make them aware of any City programs or incentives available at that time to support maintaining affordability (e.g., tax exemptions).

Rationale	Preservation of existing and expiring regulated affordable housing is a more cost-effective strategy to maintain the supply than building new affordable housing.
Anticipated Impact	▪ **Populations served:** Extremely low and very low–income residents and households ▪ **Income:** 0-60% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** Tualatin has three regulated affordable housing units with a total of 604 income-restricted units. One of these developments (with 100 units made affordable through the LIHTC) is set to expire in January 2028. Preserving this development, for example, could maintain 100

[29] Oregon Housing and Community Services (OHCS), "Preservation Compliance (for Owners)," https://www.oregon.gov/ohcs/compliance-monitoring/Pages/push.aspx. Accessed 3/18/21.

	units of affordable housing in the city, resulting in no net loss of regulated affordable housing units, which is a significantly positive impact. However, this strategy would not directly result in the production of new units. - **Equitable Outcomes:** Residents living in affordable housing with tax credits coming up for expiration may be particularly vulnerable to displacement. Preservation and no net loss policies for regulated affordable housing may offer a level of protection from displacement for low-income and vulnerable residents living in affordable housing. - **Potential Risk:** There are likely to be no or minor negative impacts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2025 ▪ **Implementation to commence:** 2026 ▪ **Time frame of impact:** This strategic action will begin to take effect in 2026. The impact will really be felt as the existing tax exemptions begin to expire on a property-by-property basis, which will begin to occur after this strategic action is implemented.
Implementation Steps	▪ Reach out to the GSL Properties (property owners of Terrace View, Tualatin Meadows, and Woodridge) to learn their plans for these properties once affordability restrictions expire. If ownership has changed, then reach out to current property owner. ▪ The City may offer assistance or connect the property owner to other supportive options should any of these properties be at risk for converting back to market rate.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** GSL Properties and other property owners of affordable housing in Tualatin.
Funding or Revenue Implications	Outreach to a single property owner is a low-cost strategy, primarily relying on the use of staff time. Depending on the program, a no net loss policy may involve a funding source to carry it out, such as CET.

3.b Evaluate Developing a Healthy Housing Initiative for Multifamily Housing

Description	Type of Action
Evaluate developing a Healthy Housing Initiative to address life safety, mold, lead, and ventilation issues for multifamily housing. A Healthy Housing Initiative could involve proactive inspection of renter-occupied multifamily properties to identify issues similar to those mentioned above. In addition, this initiative could include an educational component to provide information on how to prevent these issues from developing and funding plan to address the issues identified through inspections. This strategic action would be connected with Action 8.b, a Healthy Housing Initiative for Single-Family Housing	Implement a Program to Provide Financial Resources

Rationale	To improve older multifamily properties in Tualatin that are lower cost, unregulated, and deteriorating. The City needs this housing stock, and it is important that housing stays affordable while ensuring habitable and healthy conditions for residents.
Anticipated Impact	▪ **Populations served:** Extremely low and very low–income, and low-income ▪ **Income:** 0-80% Median Family Income ▪ **Housing tenure:** Rental ▪ **Potential Benefit:** - **Housing Production (new units):** This action focuses on addressing safety problems in existing housing, not producing new housing. If this action is used to assist 10 to 25 households per year, it may help 60 to 150 households over the 6-year period for the HPS. - **Equitable Outcomes:** Residents living in rental housing in poor condition are more likely to have lower incomes and fewer housing choices. Supporting a Healthy Housing Initiative can improve the conditions of rental housing, which may help protect vulnerable residents. ▪ **Potential Risk:** Most negative impacts would be borne by the property owner to address identified deficiencies, though there likely would be positive impacts for the property owner too, such as property value increases and longer-term renters, resulting in increased revenue. If the property owner makes substantial changes to the housing and must bear the entire cost, that may

	result in increased rents without some form of rent control agreement. ▪ **Magnitude:** Moderate to large, depending on the outreach of the program
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2025 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented.
Implementation Steps	▪ Evaluate the benefit of establishing a Healthy Housing Initiative with interested stakeholders and the public. Conduct outreach to housing consumers and property owners/managers of older, multifamily rental properties to gauge interest in resources and to identify questions/concerns about a potential inspection program. ▪ If the initiative is deemed important, draft code language that covers mold, lead, ventilation, and other healthy/safety issues. ▪ Develop an educational component of the program in coordination with the Community Development Department with representation between Planning, Building, and Engineering. ▪ Establish program parameters: How can residents file complaints? How are inspections administered? How are alleged issues communicated to property owners? How are mitigation requests enforced? ▪ Establish source of funds to administer the program. ▪ Discuss topic with City Council at work sessions and in a public hearing if desired. Tualatin City Council may adopt the program and code language via ordinance.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Washington County Public Housing Authority, Community Alliance of Tenants (CAT)
Funding or Revenue Implications	A source of funds to administer the program may be needed, such as CET funds. Alternatively, some additional staff time may be needed if the program is primarily informational.

Goal 4. Preservation of Naturally Occurring Affordable Housing (NOAH): Preserve naturally occurring affordable housing, where possible, to prevent loss of affordable units and to mitigate resident displacement.

We recommend that the City pursue the following goal, which supports the existing Goals 3.2 and 3.3 in the Comprehensive Plan:

- Preserve naturally occurring affordable housing to prevent loss of affordable units and to prevent and mitigate resident displacement.

Implementing this goal will require developing a program to preserve "naturally occurring affordable housing" through acquisition, low interest loans/revolving loan fund for preservation, code enforcement, or other approaches. The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

4.a Evaluate Development of Incentives to Preserve Low-Cost Rentals for Below-Market-Rate Privately Owned Rental Housing

Description	Type of Action
Evaluate options to assist with needed improvements to existing low-cost rental housing where the housing is in poor condition. The options may include a tax abatement (such as the Multi-Unit Property Tax Exemption), low interest loan program, or other financial incentives for low-cost market-rate apartments that agree to make needed improvements (e.g., to address code violations or health/safety issues) without displacing existing residents or agree to stabilize or reduce rents. Needed improvements may include addressing code violations or health/safety issues. The City would need to ensure they only grant financial incentives to property owners who agree to stabilize/reduce rents or not displace existing residents. Much of the rental housing in Tualatin that is affordable to low and moderate-income households is older, privately owned rental housing that is not subject to affordability restrictions. This housing may have deferred maintenance issues as a result of a lack of resources to make improvements and pay for repairs (or, in some cases, owner neglect). The City could work with property owners of low-cost unregulated rental housing to support needed repairs without displacing tenants. This could include: ▪ Offer low interest loans and/or grants to property owners for	Establish Financial Incentives

repairs and major rehabilitation, providing they do not displace residents. ▪ Evaluate reducing regulatory requirements and permitting challenges for owners seeking to improve older rental housing. ▪ Provide information/technical assistance to smaller property owners regarding state and local resources to support weatherization and healthy housing. ▪ Use the Multi-Unit Property Tax Exemption (Action 4.b) to support rehabilitation of multifamily housing, as described in Action 4.b. The City may want to begin implementing this strategic action with a limited scope pilot program to test and fine tune this program.	
Rationale	This action focuses on improvement of the condition of existing housing. Keeping low-cost unregulated housing both habitable and affordable reduces the need for subsidized new construction.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy is not anticipated to produce new units, but it could improve the quality of the city's existing supply of low-cost, regulated rental units. - **Equitable Outcomes:** Preservation mechanisms would protect these vulnerable populations from housing displacement. ▪ **Potential Risk:** If there are not effective mechanisms in place to ensure that housing will be affordable for the populations served, the rents may increase, making the housing less affordable and potentially displacing tenants. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented, as the incentives start to be used.
Implementation Steps	▪ Define eligibility for this program based on income. Eligibility requirements should tell whether all units in the multifamily building serve households with incomes 80% of MFI or less or whether a minimum percentage of units should be rented to

	households with incomes below 80% of MFI. In addition, the City should determine whether assistance goes to the property owner or another entity ▪ Develop a list of lower-cost, unregulated rental housing, including property locations, number of units per development, and property owner contact information. ▪ Evaluate programs, technical assistance opportunities, regulatory changes, and other options to support property improvements. This step can include multiple approaches, as noted in the description of this action. ▪ Reach out to property owners (identified in Step 1). Gauge their interest in improving the safety, health, and stability of their property. Determine what kinds of improvements their properties might need and what resources would be most useful to them. ▪ Refine and implement programs, technical assistance opportunities, regulatory changes, and other options (identified in Step 2) based on feedback from property owners. ▪ Connect interested property owners to established programs and opportunities. ▪ Seek additional federal funding through the US Department of Housing and Urban Development's (HUD's) Lead Hazard Control and Healthy Homes program
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Property owners of low-cost, unregulated rental housing
Funding or Revenue Implications	Amending permitting and regulatory requirements or providing technical assistance and information are comparatively low-cost strategies, primarily relying on the use of staff time. Providing low interest loans, grants, or implementing the MUPTE tax exemption would require a funding source to backfill program dollars awarded/loaned. Implementing a new program such as the HUD Lead Hazard Control and Healthy Homes program would take extensive administrative and partner resources to meet federal regulatory requirements, including performance measures.

4.b	Evaluate Using the Multiple Unit Property Tax Exemption to Slow Rental Cost Increases

Description	Type of Action
Evaluate the Multi-Unit Property Tax Exemption (MUPTE) as a tool to incentivize rehabilitation of existing low-cost unregulated affordable multifamily without displacing or increasing rents for existing tenants. The savings from the tax exemption could help the property owner pay for the costs of rehabilitation over time. To qualify, owners of multifamily rental properties who are applying for MUPTE would need to enter into a contract with a public agency (such as the City of Tualatin) that would set affordability restrictions; the terms of the affordability restrictions can be set by the City, and there are no specific income/affordability requirements in the state statute that enable the program. The City must also show that the exemption is necessary to preserve or establish low-income units.[30] The exemption applies to the improvement value of the property (not the land value). The exemption is initially for 10 years (per statute), but it could be extended for as long as the housing is subject to the affordability contract. The exemption would apply only to the City's portion of property taxes unless taxing districts representing 51% or more of the combined levying authority (including the City's tax rate) agree to support the exemption.	Adopt a Tax Exemption to Reduce Ongoing Charges on Development

Rationale	The MUPTE program is flexible and eligibility criteria can be set locally, allowing the City to target solutions to meet its needs. It can offer an incentive for mixed-income housing, providing a way to leverage private, market-rate development to expand affordable housing.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Rental ▪ **Potential Benefit:** - **Housing Production (new units):** If this incentive was used for one to two existing apartment buildings at about 150 units

[30] The statute does not specify how to show that the exemption is necessary.

	each, if 10-20% of units were affordable, this strategy could result in 30 to 60 units below market rate. - **Equitable Outcomes:** This strategic action would preserve naturally occurring affordable housing for tenants, such as those vulnerable to displacement or housing instability if rents increased or rent discounts were not offered. ▪ **Potential Risk:** The City and participating taxing districts would forgo property tax income for the properties that qualify for MUPTE. This would reduce some revenue for city services and for participating taxing districts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented, when property owners begin to apply for the tax exemption.
Implementation Steps	▪ Determine desired eligibility criteria (e.g., affordability requirements and any other public benefit requirements). ▪ Seek input from overlapping taxing districts on their willingness to support the exemption. ▪ Discuss topic with City Council at work sessions and in public hearings. City Council may choose to adopt MUPTE by resolution or ordinance following a public hearing. ▪ Follow up with overlapping taxing districts to request that they pass resolutions to support the exemption.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division and City of Tualatin Finance Department ▪ **Partners:** Overlapping Taxing Districts
Funding or Revenue Implications	MUPTE reduces general fund revenues for all overlapping taxing districts. The City of Tualatin must weigh the loss of tax revenue against value of the rent discounts offered by qualifying development.

Goal 5. Housing for Underserved Communities: Implement housing policies, projects, programs, and partnerships to further support racial and social equity.

We recommend that the City pursue the following goal, which supports the existing Goal 3.2 and Goal 3.3 in the Comprehensive Plan:

- Implement all City housing policies with consideration for racial and social equity, which recognizes historical inequities in housing to underserved communities and aims to rectify inequities going forward by establishing an equitable housing program and a measurable action plan toward equitable housing.
- City of Tualatin affirmatively furthers access to decent, affordable housing in locations near the services and destinations to thrive, ensuring equal access for underserved communities.
- Promote access to opportunity by encouraging and supporting affordable housing, workforce housing, mixed-use housing, and mixed-income housing that meets the cultural needs of diverse populations by providing multiple unit sizes, types, and tenure options in high-opportunity areas.

The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

5.a Consider Development of a Funding Action Plan to Implement the HPS with Attention to Equity

Description	Type of Action
Consider development of a funding action plan that would include how best to implement the strategic actions in the Housing Production Strategy (HPS) through considerations of equity. Implementing housing policies in an equitable way goes beyond affordability—it aims to ensure all people have housing choices that are diverse, high quality, physically accessible, and reasonably priced with access to opportunities, services, and amenities (e.g., transit, schools, childcare, food, and parks). These issues are addressed throughout the 12 goals and the strategic actions in the HPS. A key to implementing the HPS with consideration of equity is identifying and securing resources to implement the HPS. The City could develop an action plan that refines the schedule described in the HPS and develop a confirmed budget with identified funding sources for the implementation of the HPS. This action plan could be adopted by City Council. Part of implementation of the HPS could be ongoing outreach to underserved communities to get feedback on prioritization of action and resources called for in the HPS. This outreach could build on the Equity Resolution adopted by the City Council on February 22, 2021, that confirms the City of Tualatin's commitment to local actions that promote equity and other equity planning the City has recently been engaged in. A part of implementing the HPS will be assessing, aligning, and updating the strategic questions, perhaps at the three-year point of the HPS. Key questions that the City could consider at this point include: • Is there a need to reprioritize the strategic actions based on changing conditions or feedback from stakeholders, including underserved communities? • Are additional actions needed to address new or changing conditions? • How will the City fund implementation of the HPS? • Is staff capacity sufficient to meaningfully advance the strategic actions?	Develop a Funding Action Plan

• What benefits has the City seen from its efforts to date? Are the City's residents, especially its lower-income residents and communities of color, seeing a return on the investments that the City has made? These and other questions could be addressed as part of developing the funding action plan.	
Rationale	The purpose of a HPS is to increase access to housing with an emphasis on low and moderate-income households but also to further racial and social equity.
Anticipated Impact	▪ **Populations served:** Low-income and moderate-income households, underserved communities, communities of color, other state and federal protected classes ▪ **Income:** Emphasis on households with incomes below 120% of Median Family Income ▪ **Housing tenure:** Renter or Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy alone would not result in additional units, but it may result in better housing outcomes for more people. - **Equitable Outcomes:** This strategic action is aimed at developing an equitable action plan to support the HPS work. This may need to be done in two phases (as noted in Exhibit 6) as the evaluation of funding resources and incentives are planned to occur over the course of the six-year HPS. This process may raise community awareness and increase participation from underserved communities. ▪ **Potential Risk:** The strategy will require explicit consideration of funding sources, which may raise issues and considerable dialogue regarding specific funding strategies. This is not necessarily negative, but it could be challenging. ▪ **Magnitude:** Indirect, large
Timeline	▪ **Timeline for adoption:** June 30, 2023 ▪ **Implementation to commence:** 2023 ▪ **Time frame of impact:** This strategic action will begin to have impact when adopted. However, the funding plan resulting from this strategic action is central to the implementation of other parts of HPS.

Implementation Steps	▪ Identify City's overarching policy objectives for equity and understand how housing equity fits into those objectives. ▪ Develop a public engagement plan that can guide conversations with the community, stakeholders, housing producers, and service providers. Focus conversations on opportunities and constraints related to equitable development and the priorities of the strategic actions in the HPS to build equity. ▪ Through these conversations, identify and document recommendations for prioritization of resources and strategic actions to achieve more equitable housing outcomes. ▪ Identify specific sources of funding for implementing the HPS and establish a budget for implementing each action. ▪ Report on the findings of engagement and implementation progress of the HPS, with recommendations for consideration by the Tualatin City Council. ▪ Tualatin City Council should revisit prioritization of the strategic actions in the HPS based on these findings.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Underserved communities in Tualatin, Tualatin TuaLatinos (previously the Diversity Task Force), all residents of Tualatin, Tigard-Tualatin School District, Washington County Housing Authority, Metro, area developers, service providers, nonprofits, and residents of Tualatin.
Funding or Revenue Implications	Research and development of an analysis to impediments is a time-intensive analysis, primarily relying on the use of staff time. The City may consider approaching Metro about funding this type of outreach, as it is closely connected with the equitable housing planning grants that Metro has made since 2016. The next grant funding cycle will start in fall 2021.

5.b Evaluate Impediments to Fair Housing to Create an Analysis of Impediments

Description	Type of Action
Evaluate impediments to Fair Housing and create an Analysis of Impediments, starting with Washington County's Analysis of Impediments completed in May 2020.[31] Fair housing is the right to choose housing free from unlawful discrimination. An analysis of impediments to fair housing is a process that recipients of grant funds from the US Department of Housing and Urban Development (HUD) must go through to receive funds. Jurisdictions can choose to conduct this analysis to affirmatively further fair housing on their own. An analysis of impediments would identify fair housing issues in Tualatin (in the context of Washington County), the factors that contribute to those issues, and strategies to address those issues. Among other topics, the analysis would consider patterns of segregation, racial/ethnic concentrations of poverty, and disproportionate access to opportunity and housing needs. The analysis concludes with a set of recommendations to inform future policies that will promote fair housing choice and inclusivity.	Conduct Research and Develop Policy Recommendations

Rationale	Improving fair housing is foundational to family success and helps to achieve broader equity goals.
Anticipated Impact	▪ **Populations served:** Low-income, moderate-income, and high-income residents and households, communities of color, and all state and federal protected classes ▪ **Income:** All income groups ▪ **Housing tenure:** Renter or Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy alone would not result in additional units, but it may result in better housing outcomes for more people. - **Equitable Outcomes:** Likely to increase community awareness regarding fair and equitable housing and inform future policies. ▪ **Potential Risk:** This strategic action may raise challenging issues

[31] https://www.co.washington.or.us/CommunityDevelopment/Planning/upload/FinalAI.pdf

	and considerable community dialogue, but it is also likely to result in increased community awareness and a useful set of recommendations. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2025 ▪ **Time frame of impact:** The strategic action will begin to have impact once the analysis is completed and the impediments begin to be removed.
Implementation Steps	▪ Establish a planning process to develop an analysis of impediments, following HUD guidelines. Establish recommendations to resolve impediments. ▪ Conduct public and stakeholder outreach to gather feedback on the recommendations. ▪ Pursue action with City Council, should the plan's recommendations lead to a desire to revise or adopt new policies.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** City Council, Tigard-Tualatin School District, Washington County, Metro, Oregon Housing and Community Services, area developers, service providers, nonprofits, and regional foundations.
Funding or Revenue Implications	Research and development of an analysis to impediments is a time-intensive analysis, primarily relying on the use of staff time. If the City hires a consultant to complete the analysis, the amount of staff time required to complete the analysis will decrease and the City will need to fund the cost of the consultant's analysis. The City should consider hiring a consultant to complete this analysis and assist community engagement. The consultant should have considerable expertise in fair housing and fair housing analysis.

5.c	Evaluate Ways to Best Ensure Opportunities for Education about Fair Housing Are Provided

Description	Type of Action
Ensure there are opportunities for education about Fair Housing for residents, property owners, property managers, those involved in real estate transactions, Tualatin City staff, Tualatin Planning Commission, and Tualatin City Council. The City could contract with the Fair Housing Council of Oregon to conduct these trainings.	Provide Education

Rationale	Education about Fair Housing is important to preventing and addressing housing discrimination.
Anticipated Impact	▪ **Populations served:** Low-income, moderate-income, and high-income residents and households, communities of color, and all state and federal protected classes. ▪ **Income:** All income levels ▪ **Housing tenure:** Renter or Owner ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy alone would not result in additional units, but it may result in better housing outcomes for more people. - **Equitable Outcomes:** This strategic action is likely to raise community awareness about this topic and help to prevent discrimination. ▪ **Potential Risk:** There are likely to be no or minor negative impacts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** No need for adoption or official action, as this strategic action is about forming a partnership. ▪ **Implementation to commence:** 2023 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Partner with the Fair Housing Council of Oregon to identify educational needs and conduct trainings. These trainings should occur on a regular basis, such as every few years. ▪ Tualatin could provide written Fair Housing information for residents, property managers, property owners, and those involved with real estate transactions.

Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Fair Housing Council of Oregon
Funding or Revenue Implications	By partnering with the Fair Housing Council of Oregon, this is likely to be a lower-cost strategy, primarily relying on the use of staff time to coordinate education opportunities and funding to pay for the trainings.

5.d Evaluate Strategies to Encourage Diverse Housing Types in High-Opportunity Neighborhoods

Description	Type of Action
Encourage development of diverse housing types in high-opportunity neighborhoods, such as neighborhoods with high environmental quality and access to transit, jobs, good schools, parks, and open spaces. Enable developments that support multiple unit sizes, types, and tenure options to promote diverse housing options in high-opportunity neighborhoods. Use an analysis of "access to opportunity" to decide which zones or locations (via zoning overlay) where this is appropriate. The purpose of this strategy is to promote access to opportunity to households with a range of backgrounds and incomes. This strategy may work well with the incentives for development of affordable and workforce housing.	Provide Education

Rationale	Reverse historical patterns of racial, ethnic, cultural, and socioeconomic exclusion.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households, communities of color, and all state and federal protected classes ▪ **Income:** 0-80% of Median Family Income ▪ **Housing Tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy may result in a modest increase in development of new diverse housing types that are smaller in size across the city, especially on small infill lots. - **Equitable Outcomes:** By locating a diverse range of smaller housing types in high-opportunity areas, it may increase access to amenities for households at 80% MFI and below to better schools, parks, modes of transportation, health-care facilities, shopping, and other neighborhood amenities they might not otherwise have had access to. ▪ **Potential Risk:** Allowing more diverse housing types may increase density in existing neighborhoods, with the potential to cause concern by some of the existing residents. ▪ **Magnitude:** Moderate

Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2024 or early 2025 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented. It may take some years after implementation for development resulting from this strategic action to begin to occur.
Implementation Steps	▪ Identify high-opportunity areas and capacity in these areas to accommodate a range of housing types. ▪ Evaluate incentives and regulatory changes that would support diverse housing in opportunity areas, such as MUPTE or a property tax exemption for regulated affordable housing. ▪ Talk with developers about the incentives most likely to incent them to develop a wider variety of housing types in identified opportunity areas.
Lead Agency and Potential Partners	▪ **Lead Agency:** Tualatin Planning Division ▪ **Partners:** Developers of affordable housing, workforce housing, and market-rate housing.
Funding or Revenue Implications	This is a comparatively low-cost strategy, primarily relying on the use of staff time.

Goal 6. Workforce Housing: Encourage, plan for, and support the development of workforce housing for households earning 61%-80% Median Family Income, for both owner and renter, in order to increase the jobs-housing balance, reduce commute time, and provide attainable housing for workers in Tualatin.

We recommend that the City pursue the following goal, which supports the existing Goal 3.2 in the Comprehensive Plan:

- Encourage, plan for, and support the development of workforce owner and rental housing, 61-80% Median Family Income to increase the jobs-housing balance, reduce commute time, and provide attainable housing for workers in Tualatin.

The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

6.a Evaluate Ways to Incentivize Inclusion of Workforce Housing Units within New Multifamily Rental Development

Description	Type of Action
Evaluate the feasibility of establishing a tax abatement for new multifamily development that includes a portion of units affordable between 61 and 80% of Median Family Income under the Multi-Unit Property Tax Exemption program (MUPTE). The state-authorized, locally implemented MUPTE program would allow Tualatin to offer a partial property tax exemption (limited to the value of the housing, not the land) for multifamily development that meets specific, established criteria by the City, such as having an affordability agreement with the City of Tualatin or another public agency.[32] The terms of the affordability agreement could be set by the City—there are no specific income/affordability requirements in the state statute that enables the program. The exemption would apply only to the City's portion of property taxes, unless taxing districts representing 51% or more of the combined levying authority (including the City's tax rate) agree to support the exemption. It would last for 10 years or longer if the affordability agreement remains in place. The City would need to seek support from overlapping taxing districts to offer the exemption for all property taxes (not just the City's portion).	Adopt a Tax Exemption

[32] If the abatement were being applied to a project that does not have state or federal affordability requirements, the City could enter into the contract directly with the property owner or seek to partner with Washington County, which would administer the affordability agreement.

The City could explore using MUPTE in two possible ways: ▪ To incentivize mixed-income development through inclusion of below-market units in otherwise market-rate developments. ▪ To incentivize owners of existing low-cost unregulated affordable housing to rehabilitate properties without displacing existing tenants or escalating rents (Strategic Action 4.b).	
Rationale	The MUPTE program is flexible and eligibility criteria can be set locally, allowing the City to target the housing to meet its needs. It can offer an incentive for mixed-income housing, providing a way to leverage private, market-rate development to expand affordable housing.
Anticipated Impact	▪ **Populations served:** Low-income residents and households ▪ **Income:** 61-80% of Median Family Income ▪ **Housing tenure:** Renters ▪ **Potential Benefit:** - **Housing Production (new units):** If this incentive was used for one to two apartment buildings at about 150 units each and 10-20% of units were affordable to low-income households,[33] this strategy could result in 30 to 60 workforce-affordable units. - **Equitable Outcomes:** Provides the opportunity for mixed income in multifamily housing, with a portion of units affordable to low-income residents. ▪ **Potential Risk:** The City and participating taxing districts would forgo some property tax income for the duration of the exemption, reducing some revenue for city services and revenue for participating taxing districts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** The strategic action can begin to take effect once it is adopted and implemented, when property owners begin to apply for the tax exemption.

[33] Where jurisdictions are trying to incentivize or require mixed-income housing, it is typically structured so that a certain percentage of units in the building (e.g., 10% to 25%) meet a certain affordability level (e.g., 61% to 80% of MFI).

Implementation Steps	▪ Determine desired eligibility criteria (e.g., affordability requirements and any other public benefit requirements). ▪ Seek input from overlapping taxing districts on their willingness to support the exemption. ▪ Discuss topic with City Council at work sessions and in public hearings. City Council may choose to adopt MUPTE by resolution or ordinance following a public hearing. ▪ Follow up with overlapping taxing districts to request that they pass resolutions to support the exemption.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Tualatin Finance Department and Overlapping Taxing Districts
Funding or Revenue Implications	MUPTE reduces general fund revenues for all overlapping taxing districts. The City of Tualatin must weigh the loss of tax revenue against value of the rent discounts offered by qualifying development.

6.b Evaluate Potential Partnerships with Employers on Employer-Assisted Housing

Description	Type of Action
Evaluate the potential for the City to partner with one or more area employers to develop an Employer Assisted Housing program. Employer Assisted Housing can take many forms, such as: short-term relocation assistance, medium-term rental assistance, and homeownership assistance (such as down payment assistance). The City could talk with major employers to identify opportunities to partner with or support employers who are interested in developing an employer-assisted housing program. The City's role in development of an Employer Assisted Housing program could be to provide support and information to employers and help them connect with partners who can assist them in developing a program.	Establish Partnerships

Rationale	Brings local businesses into the discussion of housing needs and efforts to encourage housing development.
Anticipated Impact	▪ **Populations served:** Employees working in Tualatin who also desires to live in Tualatin ▪ **Income:** Generally less than 120% of MFI ▪ **Housing tenure:** Renter or owner ▪ **Potential Benefit:** - **Housing Production (new units):** Depends on interest and employer's funding potential. An employer may provide rental assistance or down payment assistance for a few employees. Alternatively, a single employer developing a moderate-size apartment complex could produce 20 to 40 units of housing. - **Equitable Outcomes:** There is a significant need for workforce housing in Tualatin, so that workers employed here—particularly in the industrial and commercial sectors—can also afford to live here. This strategic action may help to meet that need. ▪ **Potential Risk:** There are likely to be no or minor negative impacts. ▪ **Magnitude:** Low to moderate depending on interest from employers

Timeline	▪ **Timeline for adoption:** No need for adoption or official action, as this strategic action is about forming a partnership. ▪ **Implementation to commence:** 2025 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Evaluate the potential to periodically host an employer roundtable or focus group to educate, discuss, and work through Tualatin's housing issues. ▪ Inquire if employer-supported housing programs would be of interest to larger employers in Tualatin. What questions do they have about how such a program would function? ▪ Identify ways the City could help interested employers establish an employer-assisted housing program.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Larger employers in Tualatin; Chamber of Commerce
Funding or Revenue Implications	Unless the City wishes to financially support an employer-assisted housing program, this strategy could be a comparatively low-cost option, primarily relying on the use of staff time.

6.c Evaluate City Partnership to Participate in a Land Bank

Description	Type of Action
Evaluate potential partnerships with organization(s) to establish or support a land bank for affordable housing, workforce housing, mixed-use housing, or combination of these types. Land banks can take several forms. Many are administered by a nonprofit or nongovernmental entity with a mission of managing a portfolio of properties to support affordable housing development over many years or decades. A land bank could be set up to manage financial and administrative resources, including strategic property disposal, for the explicit purpose of supporting affordable housing development. Cities can partner with nonprofits or manage their own land banks. Cities may also donate, sell, or lease publicly owned land for the development of affordable housing, even without a formal "land bank" organization. Another source of land for a land bank is religious institutions. If Tualatin determines it is able to contribute publicly owned land or work with partners on land contributions (such as religious institutions), then this action will connect to Strategic Action 1.f.	Establish Partnerships

Rationale	Land banks support affordable housing development by reducing or eliminating land cost from development.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, low-income, and moderate-income households ▪ **Income:** 0-80% of Median Family Income ▪ **Housing tenure:** Renter or Owner ▪ **Potential Benefit:** - **Housing Production (new units):** If this incentive were used for one to two apartment buildings at about 75 units each, and if all of these units were affordable at 80% of MFI or less, this strategy could result in a mix of units affordable to households below 60% of MFI as well as units affordable to households between 61% and 80% of MFI. Alternatively, potential lands could be evaluated for their use to develop affordable owner-occupied housing, likely in housing types such as single-family detached units, town houses, cottage housing, duplexes, triplexes, or quadplexes. If

	Tualatin had about two to five acres of land for land banking for these types of units, that may result in 20 to 45 units, assuming densities of 10 to 15 dwelling units per acre. - **Equitable Outcomes:** Land banking is proposed for the purpose of efficiently developing affordable housing and/or workforce housing. ▪ **Potential Risk:** If public land is used for affordable housing, typically it cannot be used for other city functions. However, if the land were identified as surplus or excess, it would likely not be needed for city functions. If institutional land (such as church land) were land banked, this would not impact city functions. ▪ **Magnitude:** Low to moderate as Tualatin has a highly limited land supply
Timeline	▪ **Timeline for adoption:** December 31, 2024 ▪ **Implementation to commence:** 2025 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Evaluate use of existing GIS tools to inventory publicly and privately owned properties (including properties owned by faith-based organizations) in areas well suited for a land bank purpose. ▪ Partner with and contribute funds or land to an existing nonprofit land bank or participate in the formation of a new nonprofit land bank if one does not exist with sufficient capacity to serve Tualatin. ▪ Incorporate publicly owned land into a bank or acquire new land to incorporate.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** Nonprofit Land Bank; public agencies and/or institutions, including faith-based organizations in Tualatin; affordable housing developers; City of Tualatin Finance Department; and other divisions at the City of Tualatin (as needed)
Funding or Revenue Implications	Partnering is the most administratively efficient and cost-efficient approach to implementing this strategy. If the City is contributing land to the land bank at low or no cost, then the City is forgoing realizing the value of the land if it were sold on the open market.

Goal 7. Housing Stabilization: Prevent and address homelessness to provide safe living conditions for everyone living in Tualatin.

We recommend that the City pursue the following goal, which supports the existing Goals 3.2 and 3.3 in the Comprehensive Plan:

- Prevent and address homelessness to provide safe living conditions for everyone living in Tualatin.

The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

7.a Evaluate Opportunities to Partner on a Local Rental and Utility Assistance Program

Description	Type of Action
Evaluate opportunities to partner with an agency that provides rental and utility assistance partnership to stabilize households and prevent people from losing their homes. The City is currently exploring a partnership or collaboration with the Community Action Agency, including targeted outreach to underserved communities. For rental assistance, the household must be under 80% of Area Median Income. For utility assistance, the household must be under 60% of Oregon's median income. They are two separate programs. The City is in a trial period of this partnership with the Community Action Agency, which lasts through December 2021. The partnership may be extended beyond that date.	Establish Partnerships

Rationale	Rental and utility assistance can provide stability to households at risk of homelessness or loss of utility services.
Anticipated Impact	▪ **Populations served:** Extremely low income, very low–income, and low-income households ▪ **Income:** Under 80% of Area Median Income for rental assistance and under 60% of Oregon Median Income for utility assistance. ▪ **Housing tenure:** Renter ▪ **Potential Benefit:** - **Housing Production (new units):** This strategy will not directly result in the production of more units. - **Equitable Outcomes:** The rental and utility assistance partnership in the planning stages includes targeted outreach

	to historically underserved communities and households in low-income census tracts. ▪ **Potential Risk:** There are likely to be no or minor negative impacts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** This action may not be adopted, as it is a partnership. ▪ **Implementation to commence:** 2021, with potential extension of the partnership into 2022 and beyond ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Work with the Community Action Agency to develop a memorandum of understanding for a rent and utility assistance partnership to support lower-income households in Tualatin.
Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division; Tualatin Finance Department ▪ **Partners:** Community Action of Washington County, nonprofit agency
Funding or Revenue Implications	Unless the City financially supports the rental and utility assistance program, this strategy is a comparatively low-cost option, primarily relying on the use of staff time, possibly using City phones for volunteers to carry out the targeted outreach.

7.b	Evaluate Ways to Develop Housing Options and Services to Address and Prevent Houselessness

Description	Type of Action
Evaluate partnering with agencies and nonprofit organizations that provide housing and services to people experiencing houselessness to address and prevent homelessness. Explore establishing partnerships, programs, or opportunities to rapidly rehouse people experiencing homelessness.	Establish Partnerships

Rationale	To improve livelihoods by reducing the number of people experiencing homelessness in Tualatin and Washington County.
Anticipated Impact	▪ **Populations served:** Extremely low income residents and people currently experiencing houselessness ▪ **Income:** 0-30% of Median Family Income ▪ **Housing tenure:** Renter ▪ **Potential Impacts:** - **Housing Production (new units):** This strategy may not result in production of new units in itself, but it may lead to partnerships that will support production of new units. - **Equitable Outcomes:** This strategic action may result in partnering with another jurisdiction or organization to serve people experiencing houselessness. ▪ **Potential Risk:** There are likely to be no or minor negative impacts. ▪ **Magnitude:** Moderate
Timeline	▪ **Timeline for adoption:** December 31, 2026 ▪ **Implementation to commence:** 2027 ▪ **Time frame of impact:** The strategic action can begin to have impacts when the partnerships are formed and the strategic action has begun to be implemented.
Implementation Steps	▪ Contact staff with City of Tigard to understand what Tigard plans to do around providing services to address and prevent houselessness. Evaluate whether there are opportunities to partner with Tigard. ▪ Contact Washington County to explore options for a partnership with the County to provide services to address and prevent houselessness.

Lead Agency and Potential Partners	▪ **Lead Agency:** City of Tualatin Planning Division ▪ **Partners:** City of Tigard; Washington County
Funding or Revenue Implications	This strategy will depend primarily on staff outreach to Tigard and Washington County to explore options for partnerships. It could result in development of programs that have financial implications for the City, but none are proposed in this strategic action at this point.

Goal 8. Housing Rehabilitation: Plan for and support housing programs and initiatives that are responsive to the safety and health needs of households earning 0-80% of Median Family Income.

We recommend that the City pursue the following goal, which supports the existing Goal 3.2, Policy 3.2.1, and Goal 3.3 in the Comprehensive Plan:

- Plan for and support housing programs and initiatives that are responsive to the safety and health needs of households earning 0-80% of Median Family Income.

Implementing this policy will require researching, evaluating, and developing a housing rehabilitation program, for both ownership and rental housing, suitable for Tualatin. The strategic actions to evaluate and potentially implement this goal are described below. The City may choose to adopt this goal or the results of the strategic actions into the Comprehensive Plan in the future.

8.a Evaluate Establishing Local Housing Rehabilitation Program

Description	Type of Action
