QUALITY

Our finished products are satin smooth. Ball bounce and play meet ITTF standards except for the durable steel nets. Our nets are 3/8" steel with powder coating. Our nets are ALWAYS custom designed for each unique project! Underneath all that beauty, the engineering is overdesigned for long term durability. All Bravado tables are produced using our proprietary triple reinforced concrete. We finish the tables using quality anti-graffiti coating for long term beauty even in the roughest public venues.

- **Why is the equipment so expensive?**

Nice things have a proportional price tag. We have approached this selection with a minimum quality standard that we feel is consonant with the overall aesthetic of our City, long-term durability, low maintenance cost over the lifespan of the equipment, and the safety of our children. There are multiple equipment options that will fit on this property that cost four and five times this proposed amount.

- **Why is the installation cost so high?**

It is very reasonable, actually, at essentially one third of the material cost for the equipment. Typical commercial construction costs are often close to a 1 to 1 ratio between labor and materials. Installation cost does not appear to be a substantial profit center in this proposal.

- **Do we have to choose this playground equipment?**

Absolutely not. This design proposal is exactly that: just a proposal. It is a design concept to start the conversation and set a rough-order-of-magnitude price tag. A great metaphor is “You can’t steer a parked car”.

- **I don’t like the equipment color scheme. It seems loud, and visually unappealing. Can we change the colors?**

Absolutely. The manufacturer has a full color palette, and any color or combination of colors can be chosen for any component of the system. The system is completely custom built to order.

- **Why are we proposing the use of “mulch” as the safety surface surrounding the equipment?**

This is not mulch. It is engineered wood fiber, or EWF. EWF is a composite material made up of large, medium and fine wood particles designed to be impact-forgiving for safety, cohesive for ease of maintenance, and inexpensive to install and replace. EWF costs around \$4.00 per square foot for initial installation, and about \$1.00 per square foot to repair or renew every other year. By comparison, poured in place rubber safety surface will be about \$85,000 in additional cost. This surface has a high initial installation cost, but the only maintenance required is an epoxy re-coat every 4 years that is very inexpensive. And can essentially be done by anyone with a paint roller.

- **I have heard swings are difficult and expensive to maintain. Do we need swings?**

Yes. Playgrounds have swings, and children expect to see them. They are a key component, and a major attraction. The cost and difficulty issues supposedly associated

with swings disappear if the equipment is selected and installed correctly. This equipment has been selected correctly.

- **There doesn't seem to be enough room for parking spaces.**

Where will everyone park?

This proposal is for a neighborhood "Pocket Park". The entire City of Woodcreek is one square mile, and this park is in the center. Foot and bicycle traffic to the park should be encouraged, while additional vehicle traffic and parking should not. This proposal does not recommend substantial parking area apart from the space for three vehicles apparently available. One might propose a single parking space, with a handicapped van-accessible space next to it. Bike racks will be included.

- **Will there be a water fountain available?**

AquaTexas has stated their willingness to furnish the City with a fountain. This would be a good place for it. There are utilities immediately adjacent that could be tapped. A line tap, a ¾" water supply line and a backflow preventer in a valve box would be not an appreciable expense. We can buy local for this service.

- **Will we have to cut down trees to do this?**

Yes, but not to any great extent. The old broken oak in the center of the property is no longer structurally sound and has been examined by a Certified Arborist. It is nice to look at, but it is ready to fall over in the next storm. There are also a pair of stunted cedars that need to be removed. All other trees should be pruned up by an arborist and left in place.

- **What will the neighbors think?**

There has never been a civic project of any kind without opposition. When the aqueducts were built in Rome, there was most likely a series of petitions circulated against it. Park hours should be daylight hours only, with no facility lighting. No Parking signs in the area should be a component of the project. Parking should be extremely limited, if not non-existent. The demand for a playground facility has been illustrated previously through surveys and an informal census.

- **What is the timeline for construction of this playground?**

Upon payment, the manufacturer needs eight weeks to build it at the factory. One week for shipping it to the site, and then one week to install it all, barring weather delays.

- **Are there any additional costs?**

Yes. We will want to look into fences, sidewalks, parking spaces, signs, and landscaping. A value should be assigned to this work, and further design work should be done to incorporate these elements. We will also need to furnish an 8' tall chain-link rental fence to surround the construction site from start to finish. The cost for this is not exorbitant. Funding should be sought based on a ROM number for all of these items.

- **How will we pay for this?**

75% of this cost should be paid for with Hays County funds. The remaining 25% in matching funds should be covered by additional grants, private donations, fundraisers, City funds, and other means. Ideally, the City would pay little or nothing, and we can support local businesses in the buy-out effort. The required yearly maintenance costs can be calculated simply and become a recurring budget allotment by Ordinance for Council to approve.

An accessible water source must be available to the installer. Any site work that is not expressly described is excluded. Standard installation does not include any extra or additional machinery, drillers, etc., for rock excavation. If rock conditions are encountered, additional charges will apply.

Standard installations generally require from 2-10 business days to complete, depending upon the amount and type of equipment, site conditions, weather, and the installer's schedule. Work may or may not be performed in consecutive days. Playcurbs are staked in, not set in concrete. Engineered wood fiber and shredded rubber surfacings are spread, not compacted, rolled, or watered. Any deviations from approved and accepted placement of all items, along with additional work, over and above quoted items, will be chargeable to the customer. Once work is completed the customer will be notified if present at the job site, and all responsibility of any new work will be transferred to the customer. The customer is responsible for maintaining the integrity of completed installation work until all components have seated and/or cured (concrete footings, etc.). Your project site must be completely prepared and ready to receive your equipment before any installation work begins. Acquisition of any and all permits is the sole responsibility of the customer. Additional charges may be billed for any extra hours or trips needed as a result of the work site not being ready. Neither the installation contractor, GameTime nor TRP will be responsible for delays caused by shortages, incorrect parts, weather conditions, other contractors, or lack of site readiness.

If you are receiving your equipment, you are responsible for unloading and accepting delivery from the freight company and reporting any damaged freight or shortages on the freight bill at the time. You will also be responsible for a complete inventory of your received equipment and reporting any discrepancies to us immediately.
